 - 10. Test and adjust controls and safeties.
- B. Verify that vacuum equipment is installed and connected according to the Contract Documents.
- C. Verify that electrical wiring installation complies with manufacturer's submittal and written installation requirements in electrical Sections.
- D. Prepare written report documenting testing procedures and results.

3.7 FIELD QUALITY CONTROL FOR HEALTHCARE-FACILITY MEDICAL VACUUM EQUIPMENT

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.
- B. Tests and inspections:
 - 1. Medical Vacuum Equipment Testing Coordination: Perform tests, inspections, verifications, and certification of medical vacuum equipment concurrently with tests, inspections, and certification of medical vacuum piping systems.
 - 2. Preparation: Perform medical vacuum equipment tests according to requirements in NFPA 99 for the following:
 - a. System operation test.
 - 3. Equipment Verification: Comply with requirements in ASSE 6020, ASSE 6030, and NFPA 99 for verification of medical vacuum equipment.
 - 4. Replace damaged and malfunctioning controls and equipment.
 - 5. Testing Certification: Certify that specified tests, inspections, and procedures have been performed and certify report results. Include the following:

- a. Inspections performed.
- b. Procedures and materials used.
- c. Test methods used.
- d. Results of tests.

C. Components will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate vacuum producers.

END OF SECTION 226219

SECTION 226313 - GAS PIPING FOR LABORATORY AND HEALTHCARE FACILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Ball valves.
 - 2. Gas manifolds.
 - 3. Gas cylinder storage racks.

1.3 DEFINITIONS

- A. CR: Chlorosulfonated polyethylene synthetic rubber.
- B. Medical gas piping systems include medical oxygen for healthcare facility patient care.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer testing agency.
- B. Seismic Qualification Data: Certificates, for gas manifolds, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Brazing certificates.
- D. Field quality-control reports.
- E. Source Quality-Control Reports:
 1. Certificates of Shop Inspection and Data Report for Bulk Gas Storage Tanks: As required by ASME Boiler and Pressure Vessel Code.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For medical gas piping specialties to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Installer Qualifications:
 1. Medical Gas Piping Systems for Healthcare Facilities: In accordance with ASSE Standard #6010 and NFPA 99 for medical-gas-system installers.
 2. Bulk Medical Gas Systems for Healthcare Facilities: According to ASSE Standard #6015 and NFPA 99 for bulk-medical-gas-system installers.
 3. Shape-Memory-Metal Coupling Joints: An authorized representative who is trained and approved by manufacturer.
- C. Testing Agency Qualifications: An independent testing agency, with the experience and capability to conduct the medical gas piping testing indicated, that is an NRTL.
- D. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code, Section IX, "Welding and Brazing Qualifications," or AWS B2.2/B2.2M.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Gas manifolds shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
 1. The term "withstand" means "the gas manifolds will remain in place without separation of any parts when subjected to the seismic forces specified."
- B. Comply with NFPA 55

- C. Comply with NFPA 99.

2.2 PIPES, TUBES, AND FITTINGS

- A. For all medical gases, all positive-pressure gas piping, tubing, and fittings shall have been manufacturer cleaned, purged, and sealed for oxygen service, in accordance with CGA G-4.1.
 - 1. Each length of tubing shall be delivered plugged or capped by the manufacturer and kept sealed until prepared for installation.
 - 2. Fittings and other components shall be delivered manufacturer sealed and labeled, and kept sealed until prepared for installation.
- B. Copper Medical Gas Tube: ASTM B819, Type K, seamless, drawn temper. Include standard color marking "OXY," "MED," "OXY/MED," in green for Type K tube and blue for Type L tube.

2.3 JOINING MATERIALS

- A. Brazing Filler Metals: AWS A5.8M/A5.8, BCuP Series, copper-phosphorus alloys.

2.4 VALVES

- A. General Requirements for Valves: Manufacturer cleaned, purged, and bagged in accordance with CGA G-4.1 for oxygen service.
- B. Zone-Valve Box Assemblies: Box with medical gas valves, tube extensions, and gauges.
 - 1. Positive-pressure medical gas valves, for all medical gas types, shall be manufacturer cleaned, purged, and sealed for oxygen service, in accordance with CGA G-4.1.
 - a. Valves shall be delivered sealed and labeled and kept sealed until prepared for installation.
 - 2. Steel Zone-Valve Box with Stainless Steel Cover:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Amico Corporation.
 - 2) BeaconMedaes.
 - 3) Ohio Medical Corporation.
 - 4) Or approved equal.
 - b. Description: Formed-steel box with cover, anchors for recessed mounting, holes with grommets in box sides for tubing extension protection, and of size for single or multiple valves with pressure gauges and in sizes required to permit manual operation of valves. Medical air and medical vacuum tubing, valves, and gauges may be incorporated in zone valve boxes for medical gases.

- 1) Interior Finish: Factory-applied white enamel.
 - 2) Cover Plate: Stainless steel with frangible or removable windows.
 - 3) Valve-Box Windows: Clear or tinted transparent plastic with labeling that includes rooms served, in accordance with NFPA 99.
- c. Positive-pressure gas valves, for all medical gas types, shall be manufacturer cleaned, purged, and sealed for oxygen service, in accordance with CGA G-4.1.
- 1) Valves shall be delivered sealed and labeled and kept sealed until prepared for installation.

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. BeaconMedaes.
 - c. NIBCO INC.
 - d. Ohio Medical Corporation.
 - e. Oxequip Health Industries; a division of Allied Healthcare Products Inc.
 - f. Or approved equal.
2. Standard: MSS SP-110.
3. Description: Three-piece body, brass or bronze.
4. Pressure Rating: 300 psig minimum.
5. Ball: Full-port, chrome-plated brass.
6. Seats: PTFE or TFE.
7. Handle: Lever.
8. Stem: Blowout proof with PTFE or TFE seal.
9. Positive-pressure gas valves, for all medical gas types, shall be manufacturer cleaned, purged, and sealed for oxygen service, in accordance with CGA G-4.1.
 - a. Valves shall be delivered sealed and labeled and kept sealed until prepared for installation.

2.5 GAS MANIFOLDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Amico Corporation.
 2. BeaconMedaes.
 3. Oxequip Health Industries; a division of Allied Healthcare Products Inc.
 4. Or approved equal.
- B. Manufacturer cleaned, purged, and sealed, for all medical gas type, for oxygen service in accordance with CGA G-4.1.
- C. Comply with NFPA 99 for high-pressure medical gas cylinders.

- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency and marked for intended use.
- E. Central Control-Panel Unit:
 - 1. Weatherproof cabinet.
 - 2. Supply and delivery pressure gauges.
 - 3. Electrical alarm-system connections and transformer.
 - 4. Indicator lights or devices.
 - 5. Manifold connection.
 - 6. Pressure changeover switch.
 - 7. Line-pressure regulator.
 - 8. Shutoff valves.
 - 9. Safety valve.
- F. Manifold and Headers:
 - 1. Duplex, nonferrous-metal header for number of cylinders indicated, divided into two equal banks.
 - 2. Designed for 2000-psig minimum inlet pressure, except nitrous oxide manifolds may be designed for 800 psig, and carbon dioxide manifolds may be designed for 1500 psig.
 - 3. Cylinder-bank headers with inlet (pigtail) connections complying with CGA V-1.
 - 4. Individual inlet check valves, shutoff valve, pressure regulator, check valve, and pressure gauge.
- G. Operation: Automatic, pressure-switch-activated changeover from one cylinder bank to the other when first bank becomes exhausted, without line-pressure fluctuation or resetting of regulators and without supply interruption by shutoff of either cylinder-bank header.
- H. Label manifold control unit with permanent label identifying medical gas type and system operating pressure.
- I. Medical Oxygen Manifolds: For cylinders with 55-psig line pressure.

2.6 GAS CYLINDER STORAGE RACKS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Airgas, Inc.
 - 2. RT Racking Systems.
 - 3. USA Safety.
 - 4. Or approved equal.
- B. Wall Storage Racks: Fabricate racks with chain restraints for upright cylinders, as indicated, or provide equivalent manufactured wall racks.
- C. Freestanding Storage Racks: Fabricate racks as indicated, or provide equivalent manufactured storage racks.
- D. Anchor holes in base to permit securing to the floor with anchor bolts supplied by the manufacturer.

- E. Rack Support Tubing: Minimum 2-inch by 2-inch by 1/8-inch tube steel finished with baked-on exterior grade polyurethane powder paint. All joints wrap-welded and polished.
- F. Tank Restraints: Dual minimum 5/16-inch steel welded link chain, electrically zinc-plated rated for 1900 lb with minimum 5/16-inch zinc-plated carabineer hooks rated for minimum 520 lb.
- G. Comply with NFPA 55.
- H. Comply with NFPA 99.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Cleaning of Medical Gas Tubing: If manufacturer-cleaned and -capped fittings or tubing is not available or if precleaned fittings or tubing must be recleaned because of exposure, have supplier or separate qualified agency perform the following procedures:
 - 1. Clean medical gas tube and fittings, valves, gauges, and other components of oil, grease, and other readily oxidizable materials as required for oxygen service in accordance with CGA G-4.1.
 - 2. Wash medical gas tubing and components in hot, alkaline-cleaner-water solution of sodium carbonate or trisodium phosphate in proportion of 1 lb of chemical to 3 gal. of water.
 - a. Scrub to ensure complete cleaning.
 - b. Rinse with clean, hot water to remove cleaning solution.

3.3 INSTALLATION OF PIPING

- A. General Location and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of gas piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Comply with NFPA 99 for installation of medical gas piping.
- C. Comply with NFPA 55 for installation of laboratory gas piping.
- D. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
 - G. Install piping adjacent to equipment and specialties to allow service and maintenance.
 - H. Install nipples, unions, special fittings, and valves with pressure ratings same as or higher than system pressure rating used in applications specified in "Piping Schedule" Article unless otherwise indicated.
 - I. Install piping to permit valve servicing.
 - J. Install piping free of sags and bends.
 - K. Install fittings for changes in direction and for branch connections.
 - L. Install medical gas piping to medical gas-service connections specified in this Section, to medical gas-service connections in equipment specified in this Section, and to equipment specified in other Sections requiring medical gas service.
 - M. Piping Restraint Installation: Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
 - N. Install medical gas-service connections recessed in walls. Attach roughing-in assembly to substrate; attach finishing assembly to roughing-in assembly.
 - O. Connect gas piping to gas sources and to gas outlets and equipment requiring gas service.
 - P. Install unions in copper tubing adjacent to each valve and at final connection to each specialty and piece of equipment.
 - Q. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
 - R. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
 - S. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."
- 3.4 INSTALLATION OF VALVES
- A. Install shutoff valve at each connection to gas laboratory and healthcare equipment and specialties.
 - B. Install check valves to maintain correct direction of gas flow from laboratory and healthcare gas supplies.
 - C. Install valve boxes recessed in wall and anchored to substrate. Single boxes may be used for multiple valves that serve same area or function.

- D. Install zone valves and gages in valve boxes. Arrange valves so largest valve is lowest. Rotate valves to angle that prevents closure of cover when valve is in closed position.
- E. Install pressure regulators on gas piping where reduced pressure is required.
- F. Install emergency oxygen connection with pressure-relief valve and full-size discharge piping to outside, with check valve downstream from pressure-relief valve, and with ball valve and check valve in supply main from bulk oxygen storage tank.

3.5 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from outside of cleaned tubing and fittings before assembly.
- C. Threaded Joints: Apply appropriate tape to external pipe threads.
- D. Brazed Joints: Join copper tube and fittings in accordance with CDA's "Copper Tube Handbook," Ch. "Brazed Joints." Do not use flux. Continuously purge joint with oil-free, dry nitrogen during brazing.
- E. Shape-Memory-Metal Coupling Joints: Join new copper tube to existing tube according to procedures developed by fitting manufacturer for installation of shape-memory-metal coupling joints.
- F. Soldered Joints: Apply ASTM B813, water-flushable flux to tube end. Join copper tube and fittings in accordance with ASTM B828.
- G. Extruded-Tee Outlets: Form branches in copper tube in accordance with ASTM F2014, with tools recommended by tube manufacturer.
- H. Flanged Joints:
 - 1. Copper Tubing: Install flange on copper tubes. Use pipe-flange gasket between flanges. Join flanges with gasket and bolts in accordance with ASME B31.9 for bolting procedure.
 - 2. PVC Piping: Install PVC flange on PVC pipes. Use pipe-flange gasket between flanges. Join flanges with gasket and bolts in accordance with ASME B31.9 for bolting procedure.

3.6 INSTALLATION OF GAS-SERVICE COMPONENTS

- A. Assemble patient-service console with service connections. Install with supplies concealed in walls. Attach console box or mounting bracket to substrate.
- B. Install nitrogen pressure-control panels in walls. Attach to substrate.
- C. Assemble ceiling columns and install anchored to substrate. Provide structural steel, hanger rods, anchors, and fasteners in addition to components furnished with specialties necessary to fabricate supports.

- D. Assemble ceiling-hose assemblies and install anchored to substrate. Provide structural steel, hanger rods, anchors, and fasteners in addition to components furnished with specialties necessary to fabricate supports.
- E. Install gas cylinders and connect to manifold piping.
- F. Install gas manifolds with seismic restraints.

3.7 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for hangers, supports, and anchor devices specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
- C. Vertical Piping: MSS Type 8 or Type 42, clamps.
- D. Individual, Straight, Horizontal Piping Runs:
 - 1. 100 Feet and Less: MSS Type 1, adjustable, steel, clevis hangers.
 - 2. Longer Than 100 Feet: MSS Type 43, adjustable, roller hangers.
- E. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44 pipe rolls. Support pipe rolls on trapeze. Comply with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for trapeze hangers.
- F. Base of Vertical Piping: MSS Type 52 spring hangers.
- G. Install hangers for copper tubing with maximum horizontal spacing and minimum rod diameters to comply with MSS SP-58, NFPA 99 and the requirements of the NYC Building Code, whichever are most stringent.
- H. Support horizontal piping within 12 inches of each fitting and coupling.
- I. Support vertical runs of copper tubing to comply with MSS SP-58, NFPA 99 and the requirements of the NYC Building Code, whichever are most stringent.

3.8 IDENTIFICATION

- A. Install identifying labels and devices for specialty gas piping, valves, and specialties. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment."

3.9 FIELD QUALITY CONTROL FOR HEALTHCARE FACILITY MEDICAL GAS

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.
- B. Tests and Inspections:

1. Gas Piping Testing Coordination: Perform tests, inspections, verifications, and certification of medical gas piping systems concurrently with tests, inspections, and certification of medical vacuum piping systems.
 2. Preparation: Perform the following Installer tests according to requirements in NFPA 99 and ASSE Standard #6010:
 - a. Initial blowdown.
 - b. Initial pressure test.
 - c. Cross-connection test.
 - d. Piping purge test.
 - e. Standing pressure test for positive-pressure medical gas piping.
 - f. Standing pressure test for vacuum systems.
 - g. Repair leaks and retest until no leaks exist.
 3. System Verification: Perform the following tests and inspections in accordance with NFPA 99, ASSE Standard #6020, and ASSE Standard #6030:
 - a. Standing pressure test.
 - b. Individual-pressurization cross-connection test.
 - c. Valve test.
 - d. Master and area alarm tests.
 - e. Piping purge test.
 - f. Piping particulate test.
 - g. Piping purity test.
 - h. Final tie-in test.
 - i. Operational pressure test.
 - j. Gas concentration test.
 - k. Air-purity test.
 - l. Verify correct labeling of equipment and components.
 - m. Verify medical gas supply sources.
 4. Testing Certification: Certify that specified tests, inspections, and procedures have been performed, and certify report results. Include the following:
 - a. Inspections performed.
 - b. Procedures, materials, and gases used.
 - c. Test methods used.
 - d. Results of tests.
- C. Piping will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.10 PROTECTION

- A. Protect tubing from damage.
- B. Retain sealing plugs in tubing, fittings, and specialties until installation.

- C. Clean tubing not properly sealed, and where sealing is damaged, in accordance with "Preparation" Article.

3.11 DEMONSTRATION

- A. Engage factory-authorized service representative to instruct City of New York's personnel to adjust and operate bulk gas storage tanks.

3.12 PIPING SCHEDULE

- A. Connect new tubing to existing tubing with memory-metal couplings.

3.13 VALVE SCHEDULE

- A. Shutoff Valves: Ball valve with manufacturer-installed ASTM B819, copper-tube extensions.
- B. Zone Valves: Ball valve with manufacturer-installed ASTM B819, copper-tube extensions with pressure gauge on one copper-tube extension.

END OF SECTION 226313

SECTION 230513 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on alternating-current power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 33 feet above sea level.

- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Premium efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F.
- J. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller Than 15 HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 ADDITIONAL REQUIREMENTS FOR POLYPHASE MOTORS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable-Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
 - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width-modulated inverters.
 - 2. Premium-Efficient Motors: Class B temperature rise; Class F insulation.
 - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.

4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:

1. Permanent-split capacitor.
2. Split phase.
3. Capacitor start, inductor run.
4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230513

SECTION 230516 - EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Alignment guides and anchors.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

2.2 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides AG-01:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Adsko Manufacturing LLC.
 - b. Advanced Thermal Systems, Inc.
 - c. Metraflex Company (The).
 - d. Senior Flexonics Pathway.

- e. Or approved equal.
 - 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding slider for bolting to pipe.
- B. Anchor Materials:
- 1. Steel Shapes and Plates: ASTM A36/A36M.
 - 2. Bolts and Nuts: ASME B18.10 or ASTM A183, steel hex head.
 - 3. Washers: ASTM F844, steel, plain, flat washers.
 - 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
 - a. Stud: Threaded, zinc-coated carbon steel.
 - b. Expansion Plug: Zinc-coated steel.
 - c. Washer and Nut: Zinc-coated steel.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF PIPE LOOPS AND SWING CONNECTIONS

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings, including tee in main.
- C. Connect risers and branch connections to terminal units with at least four pipe fittings, including tee in riser.
- D. Connect mains and branch connections to terminal units with at least four pipe fittings, including tee in main.

3.3 INSTALLATION OF ALIGNMENT GUIDES AND ANCHORS

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe, and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

- E. Anchor Attachments:
1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24; U bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
1. Anchor Attachment to Steel Structural Members: Attach by welding.
 2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 230516

SECTION 230517 - SLEEVES AND SLEEVE SEALS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Sleeves.
 2. Stack-sleeve fittings.
 3. Sleeve-seal systems.
 4. Sleeve-seal fittings.
 5. Grout.
 6. Silicone sealants.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Metra-Flex
 2. Grinnel
 3. Link-seal
 4. Or approved equal.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop collar.

- C. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, anti-corrosion coated, with plain ends and integral welded waterstop collar.
- D. Galvanized-Steel Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.
- E. PVC Pipe Sleeves: ASTM D 1785, Schedule 40.
- F. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.
- G. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.2 STACK-SLEEVE FITTINGS

- A. Product: Subject to compliance with requirements, provide one of the following:
 - 1. Jay R. Smith Mfg. Co.
 - 2. Zurn Industries, LLC.
 - 3. Link-seal
 - 4. Or approved equal.
- B. Description: Manufactured, Dura-coated or Duco-coated galvanized cast-iron sleeve with integral cast flashing flange for use in waterproof floors and roofs. Include clamping ring, bolts, and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS

- A. Product: Subject to compliance with requirements, provide one of the following:
 - 1. Advance Products & Systems, Inc.
 - 2. CALPICO, Inc.
 - 3. GPT; an EnPro Industries company.
 - 4. Metraflex Company (The).
 - 5. Proco Products, Inc.
 - 6. Or approved equal.
- B. Description:
 - 1. Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
 - 2. Designed to form a hydrostatic seal of 20-psig .
 - 3. Sealing Elements: EPDM-rubber, High-temperature-silicone or Nitrile (Buna N) interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size.
 - 4. Pressure Plates: Carbon steel, Composite plastic, Stainless steel or Stainless steel, Type 316.

5. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, ASTM B 633, Stainless steel or Stainless steel, Type 316, of length required to secure pressure plates to sealing elements.

2.4 SLEEVE-SEAL FITTINGS

- A. Product: Subject to compliance with requirements, provide one of the following:

1. Advance Products & Systems, Inc.
2. CALPICO, Inc.
3. GPT; an EnPro Industries company.
4. Metraflex Company (The).
5. Proco Products, Inc.
6. Or approved equal

- B. Description:

1. Manufactured plastic, sleeve-type, waterstop assembly, made for imbedding in concrete slab or wall.
2. Plastic or rubber waterstop collar with center opening to match piping OD.

2.5 GROUT

- A. Description: Nonshrink, recommended for interior and exterior sealing openings in nonfire-rated walls or floors.
- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi, 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

2.6 SILICONE SEALANTS

- A. Silicone, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant, ASTM C 920, Type S, Grade NS, Class 25, use NT.
1. Sealant shall have a VOC content of 250 g/L or less.
 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Silicone, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade P, Class 25, Uses T and NT. Grade P Pourable (self-leveling) formulation is for opening in floors and other horizontal surfaces that are not fire rated.
1. Sealant shall have a VOC content of 250 g/L or less.

2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Silicone Foam: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
1. Sealant shall have a VOC content of 250 g/L or less.
 2. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.
1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
 2. Cut sleeves to length for mounting flush with both surfaces.
 - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
 3. Using grout or silicone sealant, seal space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
1. Cut sleeves to length for mounting flush with both surfaces.
 2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
 3. Seal annular space between sleeve and piping or piping insulation; use sealants appropriate for size, depth, and location of joint.

- E. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke-Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 078413 "Penetration Firestopping."

3.3 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
 - 1. Install fittings that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
 - 2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 076200 "Sheet Metal Flashing and Trim."
 - 3. Install section of cast-iron soil pipe to extend sleeve to 3 inches above finished floor level.
 - 4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
 - 5. Using waterproof silicone sealant, seal space between top hub of stack-sleeve fitting and pipe.
- B. Fire-Resistance-Rated, Horizontal Assembly, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping specified in Section 078413 "Penetration Firestopping."

3.4 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal-system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.5 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings as new walls and slabs are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout or silicone sealant, seal space around outside of sleeve-seal fittings.

3.6 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:

1. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.

B. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.

3.7 SLEEVE AND SLEEVE-SEAL SCHEDULE

A. Use sleeves and sleeve seals for the following piping-penetration applications:

1. Exterior Concrete Walls Above Grade:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves.
 - b. Piping NPS 6 and Larger: Steel pipe sleeves.
2. Exterior Concrete Walls Below Grade:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves with sleeve-seal system.
 - b. Piping NPS 6 and Larger: Steel pipe sleeves with sleeve-seal system.
3. Concrete Slabs-on-Grade:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
 - b. Piping NPS 6 and Larger: Steel pipe sleeves with sleeve-seal system.
 - 1) Select sleeve size to allow for 1-inch annular clear space between piping and sleeve for installing sleeve-seal system.
4. Concrete Slabs Above Grade:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves.
 - b. Piping NPS 6 and Larger: Steel pipe sleeves.
5. Interior Partitions:
 - a. Piping Smaller Than NPS 6: Steel pipe sleeves.
 - b. Piping NPS 6 and Larger: Galvanized-steel sheet sleeves.

END OF SECTION 230517

SECTION 230518 - ESCUTCHEONS FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Escutcheons.
 - 2. Floor plates.

1.3 DEFINITIONS

- A. Existing Piping to Remain: Existing piping that is not to be removed and that is not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. BrassCraft Manufacturing Co.; a Masco company.
 - 2. Dearborn Brass.
 - 3. Jones Stephens Corp.

4. Or approved equal.

2.2 ESCUTCHEONS

- A. One-Piece, Cast-iron or Cast-Brass Type deep type to cover sleeve hubs for fitting projections: With polished, chrome-plated polished brass finish and setscrew fastener.

2.3 FLOOR PLATES

- A. Split Floor Plates: Steel with concealed hinge.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. Escutcheons for New Piping and Relocated Existing Piping:

- a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep pattern.
 - b. Insulated Piping: One-piece stainless steel with polished stainless-steel finish.
 - c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece stainless steel with polished stainless-steel finish.
 - d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece stainless steel with polished stainless-steel finish.
 - e. Bare Piping in Unfinished Service Spaces: One-piece steel with polished, chrome-plated finish.
 - f. Bare Piping in Equipment Rooms: One-piece steel with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
 - D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
 1. New Piping: Split floor plate.

3.3 FIELD QUALITY CONTROL

- A. Using new materials, replace broken and damaged escutcheons and floor plates.

END OF SECTION 230518

SECTION 230519 - METERS AND GAGES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Bimetallic-actuated thermometers.
 - 2. Filled-system thermometers.
 - 3. Liquid-in-glass thermometers.
 - 4. Duct-thermometer mounting brackets.
 - 5. Thermowells.
 - 6. Dial-type pressure gages.
 - 7. Gage attachments.
 - 8. Test plugs.
 - 9. Test-plug kits.
 - 10. Sight flow indicators.
 - 11. Flow meters
 - 12. Thermal-energy meters.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
 - 1. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter and gage.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Ashcroft Inc.
 - 2. Miljoco Corporation.
 - 3. Terrice, H. O. Co.
 - 4. Weiss Instruments, Inc.
 - 5. Weksler Glass Thermometer Corp.
 - 6. Or approved equal.
- B. Standard: ASME B40.200.
- C. Case: sealed type(s); stainless steel with 3-inch nominal diameter.
- D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.
- E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.
- F. Connector Size: 1/2 inch , with ASME B1.1 screw threads.
- G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.
- H. Window: Plain glass.
- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus or minus 1 percent of scale range.

2.2 FILLED-SYSTEM THERMOMETERS

- A. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ashcroft Inc.
 - b. Miljoco Corporation.
 - c. Trerice, H. O. Co.
 - d. Weiss Instruments, Inc.
 - e. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Sealed type, cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, dampening type, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Pointer: Dark-colored metal.
8. Window: Glass.
9. Ring: Metal.
10. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device; with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range.

2.3 LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Trerice, H. O. Co.
 - b. Weiss Instruments, Inc.
 - c. Dwyre Instruments
 - d. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Cast aluminum; 6-inch nominal size.
4. Case Form: Back angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass or plastic.
8. Stem: Aluminum or brass and of length to suit installation.
 - a. Design for Air-Duct Installation: With ventilated shroud.
 - b. Design for Thermowell Installation: Bare stem.

9. Connector: 3/4 inch , with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.4 DUCT-THERMOMETER MOUNTING BRACKETS

- A. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

2.5 THERMOWELLS

- A. Thermowells:
 1. Standard: ASME B40.200.
 2. Description: Pressure-tight, socket-type fitting made for insertion in piping tee fitting.
 3. Material for Use with Copper Tubing: CNR or CUNI.
 4. Material for Use with Steel Piping: CRES or CSA.
 5. Type: Stepped shank unless straight or tapered shank is indicated.
 6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
 7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
 8. Bore: Diameter required to match thermometer bulb or stem.
 9. Insertion Length: Length required to match thermometer bulb or stem.
 10. Lagging Extension: Include on thermowells for insulated piping and tubing.
 11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

2.6 DIAL-TYPE PRESSURE GAGES

- A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ashcroft Inc.
 - b. Trerice, H. O. Co.
 - c. Weiss Instruments, Inc.
 - d. Weksler Glass Thermometer Corp.
 - e. Or approved equal.
 2. Standard: ASME B40.100.
 3. Case: Solid-front, pressure relief type(s); cast aluminum or drawn steel; 4-1/2-inch nominal diameter.
 4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
 5. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
 6. Movement: Mechanical, with link to pressure element and connection to pointer.
 7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi .
 8. Pointer: Dark-colored metal.
 9. Window: Glass.

10. Ring: Metal.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.7 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Peterson Equipment Co., Inc.
 2. Weiss Instruments, Inc.
 3. Pete's Plug
 4. Or approved equal.
- B. Description: Test-station fitting made for insertion in piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread Size: NPS 1/2, ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
- F. Core Inserts: EPDM self-sealing rubber.

2.8 TEST-PLUG KITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Weiss Instruments, Inc.
 2. Pete's Plug
 3. Peterson Equipment Co., Inc.
 4. Or approved equal.
- B. Furnish one test-plug kit(s) containing one thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.
- C. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F.
- D. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F.
- E. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch- diameter dial and probe. Dial range shall be at least 0 to 200 psig .
- F. Carrying Case: Metal or plastic, with formed instrument padding.

2.9 SIGHT FLOW INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Dwyer Instruments, Inc.
 - 2. Ernst Flow Industries.
 - 3. KOBOLD Instruments, Inc. - USA.
 - 4. Pentair Valves & Controls; Penberthy Brand.
 - 5. Or approved equal.
- B. Description: Piping inline-installation device for visual verification of flow.
- C. Construction: Bronze or stainless-steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.
- D. Minimum Pressure Rating: 150 psig .
- E. Minimum Temperature Rating: 200 deg F.
- F. End Connections for NPS 2 and Smaller: Threaded.
- G. End Connections for NPS 2-1/2 and Larger: Flanged.

2.10 THERMAL-ENERGY METERS

- A. Ultrasonic, Thermal-Energy Meters:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. EMCO Flow Systems.
 - b. Siemens Industry, Inc.
 - c. Onicon
 - d. Or approved equal.
 - 2. Description: Meter with flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.
 - 3. Flow Sensor: Transit-time ultrasonic type with transmitter.
 - 4. Temperature Sensors: Insertion-type or strap-on transducer.
 - 5. Indicator: Solid-state, integrating-type meter with integral battery pack.
 - a. Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or British thermal units .
 - b. Battery Pack: Five-year lithium battery.
 - 6. Accuracy: Plus or minus 1 percent.
 - 7. Display: Visually indicates total fluid volume in gallons and thermal-energy flow in kilowatts per hour or British thermal units .
 - 8. Operating Instructions: Include complete instructions with each thermal-energy meter system.

9. All BTU Meters shall be BACnet compatible.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install thermowells with socket extending a minimum of 2 inches into fluid and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.
- H. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- I. Install remote-mounted pressure gages on panel.
- J. Install valve and snubber in piping for each pressure gage for fluids (except steam).
- K. Install valve and syphon fitting in piping for each pressure gage for steam.
- L. Install test plugs in piping tees.
- M. Install flow indicators in piping systems in accessible positions for easy viewing.
- N. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.
- O. Install flowmeter elements in accessible positions in piping systems.
- P. Install wafer-orifice flowmeter elements between pipe flanges.

- Q. Install differential-pressure-type flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.
- R. Install permanent indicators on walls or brackets in accessible and readable positions.
- S. Install connection fittings in accessible locations for attachment to portable indicators.
- T. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.
- U. Install thermometers in the following locations:
 - 1. Inlet and outlet of each hydronic boiler.
 - 2. Inlets and outlets of each chiller/air source heat pump.
 - 3. Inlet and outlet of each hydronic coil in air-handling units.
 - 4. Inlets and outlets of each hydronic heat exchanger.
 - 5. Outside-, return-, supply-, and mixed-air ducts.
 - 6. Inlet and outlet of each radiant heating zone
- V. Install energy meters at the following locations:
 - 1. Each air source heat pump module (4) locations
 - 2. Each hot water boiler (2) locations
 - 3. Each domestic hot water heater (4) locations
- W. Install pressure gages in the following locations:
 - 1. Suction and discharge of each pump.
 - 2. Each boiler inlet and outlet
 - 3. Each air source heat pump inlet and outlet
 - 4. Inlet and outlet of each hydronic coil
 - 5. Inlet and outlet of each radiant heating zone

3.3 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow space for service and maintenance of meters, gages, machines, and equipment.
- B. Connect flowmeter-system elements to meters.
- C. Connect flowmeter transmitters to meters.
- D. Connect thermal-energy meter transmitters to meters.
- E. Pipe insertion length of thermometers shall be as follows:
 - 1. 4" to 5" pipe size: 2.5" insertion length
 - 2. 6" to 8" pipe size: 5" insertion length
 - 3. 10" and over: 7" insertion length

3.4 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gages to proper angle for best visibility.

3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 100 deg F.
- B. Scale Range for Heating, Hot-Water Piping: 0 to 200 deg F.
- C. Scale Range for Air Ducts: 0 to 150 deg F.

3.6 PRESSURE-GAGE SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 200 psi .
- B. Scale Range for Heating, Hot-Water Piping: 0 to 200 psi .

END OF SECTION 230519

SECTION 230523.11 - GLOBE VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Bronze angle valves.
 - 2. Bronze globe valves.
 - 3. Iron globe valves.
 - 4. Chainwheels.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Set angle and globe valves closed to prevent rattling.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher-than-ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points unless specifically indicated for this purpose in manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:

1. ASME B1.20.1 for threads for threaded-end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.5 for metric flanges or iron valves.
4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
5. ASME B16.18 for cast-copper soldered fittings.
6. ASME B16.22 for wrought-copper and copper-alloy soldered fittings.
7. ASME B31.1 for power piping valves.
8. ASME B31.9 for building services piping valves.

- B. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are unacceptable.

- C. See HVAC valve schedule articles for applications of valves.

- D. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

- E. Valve Sizes: Same as upstream piping unless otherwise indicated.

- F. Valves in Insulated Piping: With 2-inch stem extensions.

2.3 BRONZE ANGLE VALVES

- A. Bronze Angle Valves, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Valve, Inc.
 - b. Crane Valves; a Crane Co. brand.
 - c. Hammond Valve.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.

- f. WATTS.
 - g. Or approved equal.
2. Description:
- a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: 200 psig.
 - c. Body Material: ASTM B62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded.
 - e. Stem: Bronze.
 - f. Disc: PTFE.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron, bronze, or aluminum.

B. Bronze Angle Valves, Class 150:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. Crane Valves; a Crane Co. brand.
 - b. KITZ Corporation.
 - c. Milwaukee Valve Company.
 - d. Stockham; a Crane Co. brand.
 - e. WATTS.
 - f. Or approved equal.
2. Description:
- a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: 300 psig.
 - c. Body Material: ASTM B62, bronze with integral seat and union-ring bonnet.
 - d. Ends: Threaded.
 - e. Stem: Bronze.
 - f. Disc: PTFE or Stainless steel.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron, bronze, or aluminum.

2.4 BRONZE GLOBE VALVES

A. Bronze Globe Valves, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane; a Crane Co. brand.
 - c. Hammond Valve.
 - d. KITZ Corporation.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Powell Valves.

- h. Red-White Valve Corp.
 - i. Stockham; a Crane Co. brand.
 - j. WATTS.
 - k. Or approved equal.
2. Description:
- a. Standard: MSS SP-80, Type 1.
 - b. CWP Rating: 200 psig.
 - c. Body Material: ASTM B62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded or solder joint.
 - e. Stem: Bronze.
 - f. Disc: PTFE.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron, bronze, or aluminum.

B. Bronze Globe Valves, Class 150:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane; a Crane Co. brand.
 - c. Hammond Valve.
 - d. KITZ Corporation.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Powell Valves.
 - h. Red-White Valve Corp.
 - i. Siemens Industry, Inc., Building Technologies Division.
 - j. Valve Solutions, Inc.
 - k. WATTS.
 - l. Or approved equal.
2. Description:
- a. Standard: MSS SP-80, Type 2.
 - b. CWP Rating: 300 psig.
 - c. Body Material: ASTM B62, bronze with integral seat and union-ring bonnet.
 - d. Ends: Threaded.
 - e. Stem: Bronze.
 - f. Disc: PTFE or Stainless steel.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron, bronze, or aluminum.

2.5 IRON GLOBE VALVES

A. Iron Globe Valves, Class 125:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane; a Crane Co. brand.
 - c. Hammond Valve.
 - d. Jenkins Valves; a Crane Co. brand.
 - e. KITZ Corporation.
 - f. Milwaukee Valve Company.
 - g. NIBCO INC.
 - h. Powell Valves.
 - i. Red-White Valve Corp.
 - j. Siemens Industry, Inc., Building Technologies Division.
 - k. Stockham; a Crane Co. brand.
 - l. Or approved equal.
2. Description:
- a. Standard: MSS SP-85, Type I.
 - b. CWP Rating: 200 psig.
 - c. Body Material: ASTM A126, gray iron with bolted bonnet.
 - d. Ends: Flanged.
 - e. Trim: Bronze.
 - f. Packing and Gasket: Asbestos free.
 - g. Operator: Handwheel or chainwheel.
- B. Iron Globe Valves, Class 250:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane; a Crane Co. brand.
 - c. Hammond Valve.
 - d. Jenkins Valves; a Crane Co. brand.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Siemens Industry, Inc., Building Technologies Division.
 - h. Stockham; a Crane Co. brand.
 - i. Or approved equal.
 2. Description:
 - a. Standard: MSS SP-85, Type I.
 - b. CWP Rating: 500 psig.
 - c. Body Material: ASTM A126, gray iron with bolted bonnet.
 - d. Ends: Flanged.
 - e. Trim: Bronze.
 - f. Packing and Gasket: Asbestos free.
 - g. Operator: Handwheel or chainwheel.

2.6 CHAINWHEELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Babbitt Steam Specialty Co.
 - 2. Roto Hammer Industries; Rotork.
 - 3. Trumbull Industries.
 - 4. Or approved equal.
- B. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to handwheels.
 - 1. Sprocket Rim with Chain Guides: Ductile iron Ductile or cast iron Cast iron Aluminum Bronze, of type and size required for valve. Include zinc or epoxy coating.
 - 2. Chain: Hot-dip-galvanized steel Brass Stainless steel, of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

3.3 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow space for service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed on valves.
- C. Locate valves for easy access and where not blocked by equipment, other piping, or building components.

- D. Install valves so that stems are horizontal or slope upward from centerline of pipe.
- E. Install valves in position that does not project into aisles or block access to other equipment.
- F. Install valves in position to allow full stem and manual operator movement.
- G. Verify that joints of each valve have been properly installed and sealed to ensure that there is no leakage or damage.
- H. Install chainwheels on manual operators for globe valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.
- I. Install valve tags. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.
- J. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve manufacturer's recommended maximum.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- B. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.6 CHILLED-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller: Bronze angle or globe valves, Class 125 Class 150, bronze disc, with threaded ends.
- B. Pipe NPS 2-1/2 and Larger: Iron globe valves, Class 125 Class 250, with flanged ends.

3.7 HEATING-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller: Bronze angle or globe valves, Class 125 Class 150, with bronze disc, and threaded ends.
- B. Pipe NPS 2-1/2 and Larger: Iron globe valves, Class 125 Class 250, with flanged ends.

END OF SECTION 230523.11

SECTION 230523.12 - BALL VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. RPTFE: Reinforced polytetrafluoroethylene.
- C. SWP: Steam working pressure.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, and weld ends.
 - 3. Set ball valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:

1. ASME B1.20.1 for threads for threaded-end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.5 for flanges on steel valves.
4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
5. ASME B16.18 for cast copper solder-joint connections.
6. ASME B16.22 for wrought copper and copper alloy solder-joint connections.
7. ASME B16.34 for flanged and threaded end connections.
8. ASME B31.1 for power piping valves.
9. ASME B31.9 for building services piping valves.

- B. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are not permitted.

- C. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

- D. Valve Sizes: Same as upstream piping unless otherwise indicated.

- E. Valve Actuator Types:

1. Gear Actuator: For quarter-turn valves NPS 4 and larger.
2. Hand Lever: For quarter-turn valves smaller than NPS 4.

- F. Valves in Insulated Piping:

1. For all valves provide 2-inch extended neck stems.
2. Extended operating handles with nonthermal-conductive covering material, and protective sleeves that allow operation of valves without breaking vapor seals or disturbing insulation.
3. Memory stops that are fully adjustable after insulation is applied.

- G. Valve Bypass and Drain Connections: MSS SP-45.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

3.3 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow space for service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access.
- D. Install valves in horizontal piping with stem at or above center of pipe.
- E. Install valves in position to allow full valve actuation movement.
- F. Valve Tags: Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.
- G. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve manufacturer's recommended maximum.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves exhibiting leakage.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valves with specified SWP classes or CWP ratings are unavailable, provide the same types of valves with higher SWP classes or CWP ratings.
- B. Select valves with the following end connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends except where solder-joint valve-end option or press-end option is indicated in valve schedules below.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 - 3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends except where threaded valve-end option is indicated in valve schedules below.
 - 6. For Steel Piping, NPS 5 and Larger: Flanged ends.
 - 7. For Stainless Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 8. For Stainless Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends.

END OF SECTION 230523.12

SECTION 230523.13 - BUTTERFLY VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Iron, single-flange (lug-type) butterfly valves.
 - 2. Iron, flangeless (wafer-type) butterfly valves.
 - 3. Ductile-iron, grooved-end butterfly valves.
 - 4. High-performance butterfly valves.
 - 5. Chainwheels.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene copolymer rubber.
- C. NBR: ABS, Buna-N, or nitrile butadiene rubber.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Set butterfly valves closed or slightly open.

- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:
 - 1. ASME B16.1 for flanges on iron valves.
 - 2. ASME B16.5 for flanges on steel valves.
 - 3. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 - 4. ASME B31.1 for power piping valves.
 - 5. ASME B31.9 for building services valves.
- B. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- C. Valve Sizes: Same as upstream piping unless otherwise indicated.
- D. Valve Actuator Types:
 - 1. Gear Actuator: For valves NPS 8 and larger.
 - 2. Hand Lever: For valves NPS 6 and smaller.
 - 3. Chainwheel: Device for attachment to gear, stem, or other actuator of size and with chain for mounting height, according to "Installation of Valves" Article.

2.3 HIGH-PERFORMANCE BUTTERFLY VALVES

- A. All butterfly valves to be high performance type.
- B. Single-Flange (Lug-Type), High-Performance Butterfly Valves, Class 150:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DeZURIK.
 - b. Flowseal; Crane Energy Flow Solutions.
 - c. Jamesbury; Metso. Figure 815L
 - d. Grinnell
 - e. Or approved equal.
2. Standard: MSS SP-68.
3. CWP Rating: 285 psig at 100 deg F.
4. Body Design: Single flange (lug type), suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
5. Body Material: Carbon stainless steel.
6. Seat: Reinforced PTFE or metal.
7. Stem: Stainless steel; offset from seat plane.
8. Disc: Type 316 stainless steel.
9. Service: Bidirectional.

2.4 CHAINWHEELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Babbitt Steam Specialty Co.
 2. Roto Hammer Industries; Rotork.
 3. Trumbull Industries.
 4. Or approved equal.
- B. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to hand wheels.
 1. Sprocket Rim with Chain Guides: Ductile iron, Ductile or cast iron, Cast iron, Aluminum, or Bronze of type and size required for valve. Include zinc or epoxy coating.
 2. Chain: Hot-dip, galvanized steel, Brass or Stainless steel, of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine mating flange faces for damage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- D. Do not attempt to repair defective valves; replace with new valves. Remove defective valves from site.

3.3 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow space for service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access.
- D. Install valves in horizontal piping with stem at or above center of pipe.
- E. Install valves in position to allow full valve actuation movement.
- F. Install chainwheels on manual actuators for butterfly valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.
- G. Valve Tags: Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. If leakage cannot be repaired, replace valve.

3.5 HEATING-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Larger:
 - 1. Iron, Single-Flange Butterfly Valves, NPS 2-1/2 to NPS 12: Ductile-iron disc, 200 CWP, and EPDM seat.
 - 2. Iron, Single-Flange Butterfly Valves, NPS 14 to NPS 24: Ductile-iron disc, 150 CWP, and EPDM seat.
 - 3. High-Performance Butterfly Valves: Single flange, carbon-steel body, and Class 150.

END OF SECTION 230523.13

SECTION 230523.14 - CHECK VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Bronze swing check valves.
 - 2. Iron, center-guided check valves.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene-propylene-diene monomer.
- C. NBR: Nitrile butadiene rubber (also known as "Buna-N").
- D. SWP: Steam working pressure.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, press connections, and weld ends.
 - 3. Block check valves in either closed or open position.
- B. Use the following precautions during storage:

1. Maintain valve end protection.
 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use stems or other components as lifting or rigging points unless specifically indicated for this purpose in manufacturer's written instructions.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:
1. ASME B1.20.1 for threads for threaded-end valves.
 2. ASME B16.1 for flanges on iron valves.
 3. ASME B16.5 for flanges for metric standard piping.
 4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
 5. ASME B16.18 for cast copper solder joint.
 6. ASME B16.22 for wrought copper solder joint.
 7. ASME B16.51 for press joint.
 8. ASME B31.1 for power piping valves.
 9. ASME B31.9 for building services piping valves.
- B. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.
- C. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are unacceptable.
- D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- E. Valve Sizes: Same as upstream piping unless otherwise indicated.
- F. Valve Bypass and Drain Connections: MSS SP-45.

2.3 BRONZE SWING CHECK VALVES

A. Bronze Swing Check Valves with Bronze Disc, Class 150:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Crane Valves; a Crane Co. brand.
 - c. Hammond Valve.
 - d. Or approved equal.
2. Description:
 - a. Standard: MSS SP-80, Type 3.
 - b. CWP Rating: 300 psig.
 - c. Body Design: Horizontal flow.
 - d. Body Material: ASTM B62, bronze.
 - e. Ends: Threaded.
 - f. Disc: Bronze.

2.4 IRON, CENTER-GUIDED CHECK VALVES

A. Iron, Globe, Center-Guided Check Valves with Resilient Seat, Class 150:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DFT Inc.
 - b. Flomatic Valves.
 - c. Val-Matic Valve & Manufacturing Corp.
 - d. Or approved equal.
2. Description:
 - a. Standard: MSS SP-125.
 - b. NPS 2-1/2 to NPS 12, CWP Rating: 300 psig.
 - c. NPS 14 to NPS 24, CWP Rating: 250 psig.
 - d. Body Material: ASTM A395/A395M or ASTM A536, ductile iron.
 - e. Style: Globe, spring loaded.
 - f. Ends: Flanged.
 - g. Seat: EPDM.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- #### A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Examine press fittings to verify they have been properly pressed.
- F. Do not attempt to repair defective valves; replace with new valves.

3.3 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access and where not blocked by equipment, other piping, or building components.
- D. Install valves with stem at or above center of pipe.
- E. Install valves in position that does not project into aisles or block access to other equipment.
- F. Install valves in position to allow full stem and manual operator movement.
- G. Verify that joints of each valve have been properly installed and sealed to ensure that there is no leakage or damage.
- H. Install check valves for proper direction of flow and as follows:
 - 1. Swing Check Valves: In horizontal position with hinge pin level.
 - 2. Center-Guided Check Valves: In horizontal or vertical position, between flanges.
 - 3. Lift Check Valves: With stem upright and plumb.
- I. Install valve tags. Comply with requirements for valve tags and schedules in Section 230553 "Identification for HVAC Piping and Equipment."
- J. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve of manufacturer's recommended maximum.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Pump-Discharge Check Valves:
 - a. NPS 2 and Smaller: Bronze swing check valves with bronze disc.
 - b. NPS 2-1/2 and Larger: Iron swing check valves with lever and weight or with spring or iron, center-guided, resilient-seat check valves.
- B. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. End Connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends, except where solder-joint or press valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends, except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends, except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, NPS 5 and Larger: Flanged ends.
 - 7. Wafer-Type Valves: Flanged connections.

3.6 CHILLED-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller:
 - 1. Bronze Valves: May be provided with solder-joint or press ends instead of threaded ends.
 - 2. Bronze swing check valves with bronze disc, Class 150.
- B. Pipe NPS 2-1/2 and Larger:
 - 1. NPS 2-1/2 to NPS 4: Iron valves may be provided with threaded ends instead of flanged ends.
 - 2. NPS 2-1/2 to NPS 12: Iron swing check valves with lever and weight-closure control, Class 125.
 - 3. NPS 3 to NPS 12: Iron, flanged end swing check valves, 300 CWP.

3.7 CONDENSER-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Bronze swing check valves with bronze disc, Class 150.

B. Pipe NPS 2-1/2 and Larger:

1. NPS 2-1/2 to NPS 4: Iron valves may be provided with threaded ends instead of flanged ends.
2. NPS 2-1/2 to NPS 12: Iron swing check valves with lever and weight-closure control, Class 125.
3. NPS 2-1/2 to NPS 24: Iron, globe, center-guided check valves with resilient seat, Class 150.

3.8 HEATING-WATER VALVE SCHEDULE

A. Pipe NPS 2 and Smaller:

1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
2. Bronze swing check valves with bronze disc, Class 150.

B. Pipe NPS 2-1/2 and Larger:

1. NPS 2-1/2 to NPS 4: Iron valves may be provided with threaded ends instead of flanged ends.
2. NPS 2-1/2 to NPS 12: Iron swing check valves with lever and weight-closure control, Class 125.

END OF SECTION 230523.14

SECTION 230523.15 - GATE VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Bronze gate valves.
 - 2. Iron gate valves.
 - 3. Chainwheels.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. NRS: Nonrising stem.
- C. OS&Y: Outside screw and yoke.
- D. RS: Rising stem.
- E. SWP: Steam working pressure.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, press connections, and weld ends.

3. Set gate valves closed to prevent rattling.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient-dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels, stems, or other components as lifting or rigging points unless specifically indicated for this purpose in manufacturer's written instructions.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. ASME Compliance:

1. ASME B1.20.1 for threads for threaded-end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.5 for flanges on metric standard piping.
4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
5. ASME B16.18 for cast copper solder joint.
6. ASME B16.22 for wrought copper solder joint.
7. ASME B16.34 for flanged, threaded, and welding ends.
8. ASME B16.51 for press joint.
9. ASME B31.1 for power piping valves.
10. ASME B31.9 for building services piping valves.

B. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.

C. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are unacceptable.

D. Valve Pressure-Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

E. Valve Sizes: Same as upstream piping unless otherwise indicated.

- F. RS Valves in Insulated Piping: With 2-inch stem extensions.
- G. Valve Bypass and Drain Connections: MSS SP-45 and MSS SP-80.

2.3 BRONZE GATE VALVES

A. Bronze Gate Valves, RS, Class 150:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Valves; a Crane Co. brand.
 - b. Hammond Valve.
 - c. Jenkins Valves; a Crane Co. brand.
 - d. Milwaukee Valve Company.
 - e. Stockham; a Crane Co. brand.
 - f. Or approved equal.
2. Description:
 - a. Standard: MSS SP-80, Type 2.
 - b. CWP Rating: 300 psig.
 - c. Body Material: ASTM B62, bronze with integral seat and union-ring bonnet.
 - d. Ends: Threaded.
 - e. Stem: Bronze.
 - f. Disc: Solid wedge; bronze.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron, bronze, or aluminum.

2.4 IRON GATE VALVES

A. Iron Gate Valves, OS&Y, Class 250:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Valves; a Crane Co. brand.
 - b. Hammond Valve.
 - c. Milwaukee Valve Company.
 - d. Or approved equal.
2. Description:
 - a. Standard: MSS SP-70, Type I.
 - b. NPS 2-1/2 to NPS 12, CWP Rating: 500 psig.
 - c. NPS 14 to NPS 24, CWP Rating: 300 psig.
 - d. Body Material: ASTM A126, gray iron with bolted bonnet.
 - e. Ends: Flanged.
 - f. Trim: Bronze.
 - g. Disc: Solid wedge.

- h. Packing and Gasket: Asbestos free.

2.5 CHAINWHEELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Babbitt Steam Specialty Co.
 - 2. Roto Hammer Industries; Rotork.
 - 3. Trumbull Industries.
 - 4. Or approved equal.
- B. Description: Valve actuation assembly with sprocket rim, chain guides, chain, and attachment brackets for mounting chainwheels directly to handwheels.
 - 1. Sprocket Rim with Chain Guides: Cast iron of type and size required for valve. Include zinc or epoxy coating.
 - 2. Chain: Brass of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Examine press joint surfaces. Verify that they are clean and free from dents and burrs and that O-ring seals are in place and undamaged.
- F. Do not attempt to repair defective valves; replace with new valves.

3.3 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access and where not blocked by equipment, other piping, or building components.
- D. Install valves so that stems are horizontal or slope upward from centerline of pipe.
- E. Install valves in position that does not project into aisles or block access to other equipment.
- F. Install valves in position to allow full stem and manual operator movement.
- G. Verify that joints of each valve have been properly installed and sealed to ensure that there is no leakage or damage.
- H. Install chainwheels on manual operators for gate valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.
- I. Install valve tags. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.
- J. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve of manufacturer's recommended maximum.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Gate valves.
- B. If valves with specified SWP classes or CWP ratings are unavailable, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends, except where solder-joint or press valve-end option is indicated in valve schedules.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends, except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends, except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.6 CHILLED-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller: Bronze valves, RS, Class 150, with threaded ends.
- B. Pipe NPS 2-1/2 and Larger: Iron gate valves, OS&Y Class 250.

3.7 HEATING-WATER VALVE SCHEDULE

- A. Pipe NPS 2 and Smaller: Bronze valves, RS, Class 150 with threaded ends.
- B. Pipe NPS 2-1/2 and Larger: Iron gate valves, OS&Y, Class 250.

END OF SECTION 230523.15

SECTION 230523.16 - PLUG VALVES FOR HVAC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Eccentric plug valves.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of valve.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:
 - 1. Protect internal parts against rust and corrosion.
 - 2. Protect threads, flange faces, grooves, and weld ends.
 - 3. Set plug valves open to minimize exposure of functional surfaces.
- B. Use the following precautions during storage:
 - 1. Maintain valve end protection.
 - 2. Store valves indoors and maintain at higher-than-ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels, stems, or other components as lifting or rigging points unless specifically indicated for this purpose in manufacturer's written instructions.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each type of valve from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:

1. ASME B1.20.1 for threads for threaded-end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B16.5 for flanges on metric standard piping.
4. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
5. ASME B16.34 for flanged, threaded, and welding ends.
6. ASME B31.1 for power piping valves.
7. ASME B31.9 for building services piping valves.

- B. Provide bronze valves made with dezincification-resistant materials. Bronze valves made with copper alloy (brass) containing more than 15 percent zinc are unacceptable.

- C. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

- D. Valve Sizes: Same as upstream piping unless otherwise indicated.

- E. Valve Actuator Types: Wrench. Furnish Owner with one wrench for every five plug valves, for each size square plug-valve head.

2.3 ECCENTRIC PLUG VALVES

- A. 175 CWP, Eccentric Plug Valves with Resilient Seating.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DeZURIK.
 - b. Flowserve Corporation.
 - c. GA Industries, Inc.

- d. Milliken Valve Company.
 - e. Nordstrom Valve.
 - f. Or approved equal.
2. Description:
- a. Standard: MSS SP-108.
 - b. CWP Rating: 175 psig minimum.
 - c. Body and Plug: ASTM A48/A48M, gray iron; ASTM A126, gray iron; or ASTM A536, ductile iron.
 - d. Bearings: Oil-impregnated bronze or stainless steel.
 - e. Ends: Flanged.
 - f. Stem-Seal Packing: Asbestos free.
 - g. Plug, Resilient-Seating Material: Suitable for potable-water service unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

3.3 INSTALLATION OF VALVES

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Provide support of piping adjacent to valves such that no force is imposed upon valves.
- C. Locate valves for easy access and where not blocked by equipment, other piping, or building components.
- D. Install valves so that center of rotation is horizontal or slopes upward from centerline of pipe.

- E. Install valves in position that does not project into aisles or block access to other equipment.
- F. Install valves in position to allow full stem and manual operator movement.
- G. Verify that joints of each valve have been properly installed and sealed to ensure that there is no leakage or damage.
- H. Install chainwheels on manual operators for plug valves NPS 4 and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.
- I. Install valve tags. Comply with requirements for valve tags and schedules in Section 230553 "Identification for HVAC Piping and Equipment."
- J. Adhere to manufacturer's written installation instructions. When soldering or brazing valves, do not heat valves above maximum permitted temperature. Do not use solder with melting point temperature above valve of manufacturer's recommended maximum.

3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Plug valves.
- B. If valves with CWP ratings are unavailable, the same types of valves with higher CWP ratings may be substituted.
- C. End Connections:
 - 1. For Copper Tubing, NPS 2 and Smaller: Threaded ends.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4: Flanged ends, except where threaded valve-end option is indicated in valve schedules.
 - 3. For Copper Tubing, NPS 5 and Larger: Flanged ends.
 - 4. For Steel Piping, NPS 2 and Smaller: Threaded ends.
 - 5. For Steel Piping, NPS 2-1/2 to NPS 4: Flanged ends, except where threaded valve-end option is indicated in valve schedules.
 - 6. For Steel Piping, NPS 5 and Larger: Flanged ends.

3.6 HOT-WATER AND CHILLED-WATER VALVE SCHEDULE

- A. Pipe NPS 2-1/2 and Larger:
 - 1. Eccentric Plug Valves: 175 CWP, resilient seating.

END OF SECTION 230523.16

SECTION 230529 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Metal framing systems.
4. Thermal-hanger shield inserts.
5. Fastener systems.
6. Pipe stands.
7. Equipment stands.
8. Equipment supports.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 230516 "Expansion Fittings and Loops for HVAC Piping" for pipe guides and anchors.
3. Section 230548 "Vibration and Seismic Controls for HVAC" Section 230548.13 "Vibration Controls for HVAC" for vibration isolation devices.
4. Section 233113 "Metal Ducts" Section 233346 "Flexible Ducts" for duct hangers and supports.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.

- B. Shop Drawings: Signed and sealed by a qualified professional licensed in the State of New York. Show fabrication and installation details and include calculations for the following; include Product Data for components:

1. Trapeze pipe hangers.

2. Metal framing systems.
3. Pipe stands.
4. Equipment supports.

C. Engineering Services Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional licensed in the State of New York responsible for their preparation.

1. Detail fabrication and assembly of trapeze hangers.
2. Include design calculations for designing trapeze hangers.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions to design trapeze pipe hangers and equipment supports.
- B. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
 3. Design seismic-restraint hangers and supports for piping and equipment and obtain approval from the Commissioner.

2.2 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
 2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
 3. Nonmetallic Coatings: Plastic coated, or epoxy powder-coated.
 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.

5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel or stainless steel.

B. Stainless Steel Pipe Hangers and Supports:

1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

C. Copper Pipe and Tube Hangers:

1. Description: MSS SP-58, Types 1 through 58, copper-plated steel, factory-fabricated components.
2. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-plated steel or stainless steel.

2.3 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.**

2.4 METAL FRAMING SYSTEMS

A. MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-line, an Eaton business.
 - b. Flex-Strut Inc.
 - c. G-Strut.
 - d. Haydon Corporation.
 - e. MIRO Industries.
 - f. Thomas & Betts Corporation; A Member of the ABB Group.
 - g. Unistrut; Part of Atkore International.
 - h. Wesanco, Inc.
 - i. Or approved equal.
2. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
4. Channels: Continuous slotted galvanized steel, stainless steel, Type 304, stainless steel, Type 316 or extruded-aluminum channel with inturred lips.
5. Channel Width: Selected for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel or stainless steel.
8. Metallic Coating: No coating, Plain, Pregalvanized G90, Electroplated zinc, Hot-dip galvanized or Gold (yellow zinc dichromate) galvanized.

B. Non-MFMA Manufacturer Metal Framing Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International.
 - b. CADDY; a brand of nVent.
 - c. Carpenter & Paterson, Inc.
 - d. Empire Industries, Inc.
 - e. Gripple Inc.
 - f. MIRO Industries.
 - g. PHD Manufacturing, Inc.
 - h. RectorSeal HVAC; a CSW Industrials Company.
 - i. Rooftop Support Systems, a division of Eberl Iron Works, Inc.
 - j. Or approved equal.
2. Description: Shop- or field-fabricated, pipe-support assembly made of steel channels, accessories, fittings, and other components for supporting multiple parallel pipes.
3. Standard: Comply with MFMA-4 factory-fabricated components for field assembly.
4. Channels: Continuous slotted carbon-steel or stainless steel channel with inturred lips.
5. Channel Width: Select for applicable load criteria.
6. Channel Nuts: Formed or stamped nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
7. Hanger Rods: Continuous-thread rod, nuts, and washer made of galvanized steel or stainless steel.
8. Metallic Coating: No coating, Plain, Pregalvanized G90 or Hot-dip galvanized.

2.5 FIBERGLASS STRUT SYSTEMS

- A. Description: Structural-grade, factory-formed, glass-fiber-resin channels and angles for supporting multiple parallel pipes.

2.6 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Buckaroos, Inc.
 2. CADDY; a brand of nVent.
 3. Carpenter & Paterson, Inc.
 4. KB Enterprise.
 5. National Pipe Hanger Corporation.
 6. Pipe Shields Inc.
 7. Piping Technology & Products, Inc.
 8. Rilco Manufacturing Co., Inc.
 9. Value Engineered Products, Inc.
 10. Or approved equal.
- B. Insulation-Insert Material for Cold Piping: ASTM C552, Type II cellular glass with 100-psi or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psi minimum compressive strength and vapor barrier.

- C. Insulation-Insert Material for Hot Piping: Water-repellent-treated, ASTM C533, Type I calcium silicate with 100-psi ASTM C552, Type II cellular glass with 100-psi or ASTM C591, Type VI, Grade 1 polyisocyanurate with 125-psi minimum compressive strength.
- D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.7 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Hilti, Inc.
 - b. ITW Ramset/Red Head; Illinois Tool Works, Inc.
 - c. MKT Fastening, LLC.
 - d. Simpson Strong-Tie Co., Inc.
 - e. Or approved equal.
- B. Mechanical-Expansion Anchors: Insert-wedge-type anchors for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-line, an Eaton business.
 - b. Empire Tool and Manufacturing Co., Inc.
 - c. Hilti, Inc.
 - d. ITW Ramset/Red Head; Illinois Tool Works, Inc.
 - e. MKT Fastening, LLC.
 - f. Or approved equal.
 - 2. Indoor Applications: Zinc-coated or stainless steel.
 - 3. Outdoor Applications: Stainless steel.

2.8 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MIRO Industries.
 - b. PHP Systems/Design.
 - c. RectorSeal HVAC; a CSW Industrials Company.
 - d. Rooftop Support Systems, a division of Eberl Iron Works, Inc.
 - e. Or approved equal.
2. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
3. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
 - a. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than percent.
4. Hardware: Galvanized steel or polycarbonate.
5. Accessories: Protection pads.

C. Low-Profile, Single Base, Single-Pipe Stand:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MIRO Industries.
 - b. PHP Systems/Design.
 - c. Rooftop Support Systems, a division of Eberl Iron Works, Inc.
 - d. Or approved equal.
2. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
3. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
 - a. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than percent.
4. Vertical Members: Two, galvanized or stainless-steel, continuous-thread 1/2-inch rods.
5. Horizontal Member: Adjustable horizontal, galvanized stainless-steel pipe support channels.
6. Pipe Supports: Roller Strut clamps Clevis hanger Swivel hanger.
7. Hardware: Galvanized Stainless steel.
8. Accessories: Protection pads.
9. Height: 12 inches above roof .

D. High-Profile, Single Base, Single-Pipe Stand:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MIRO Industries.
 - b. PHP Systems/Design.
 - c. Rooftop Support Systems, a division of Eberl Iron Works, Inc.

- d. Or approved equal.
 2. Description: Single base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
 3. Base: Single vulcanized rubber or molded polypropylene.
 - a. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content.
 4. Vertical Members: Two, galvanized stainless-steel, continuous-thread 1/2-inch rods.
 5. Horizontal Member: One, adjustable height, galvanized- stainless-steel pipe support slotted channel or plate.
 6. Pipe Supports: Roller Clevis hanger Swivel hanger.
 7. Hardware: Galvanized Stainless steel.
 8. Accessories: Protection pads, 1/2-inch continuous-thread galvanized-steel rod , 1/2-inch continuous-thread stainless steel rod.
 9. Height: 36 inches above roof.
- E. High-Profile, Multiple-Pipe Stand:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MIRO Industries.
 - b. PHP Systems/Design.
 - c. RectorSeal HVAC; a CSW Industrials Company.
 - d. Rooftop Support Systems, a division of Eberl Iron Works, Inc.
 - e. Or approved equal.
 2. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
 3. Bases: Two or more; vulcanized rubber molded polypropylene.
 - a. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content.
 4. Vertical Members: Two or more, galvanized stainless-steel channels.
 5. Horizontal Members: One or more, adjustable height, galvanized stainless-steel pipe support.
 6. Pipe Supports: Roller Strut clamps Clevis hanger Swivel hanger.
 7. Hardware: Galvanized Stainless steel.
 8. Accessories: Protection pads, 1/2-inch continuous-thread rod.
 9. Height: 36 inches above roof
- F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

2.9 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.10 OUTDOOR EQUIPMENT STANDS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. MIRO Industries.
 2. RectorSeal HVAC; a CSW Industrials Company.
 3. Rooftop Support Systems, a division of Eberl Iron Works, Inc.
 4. Or approved equal.
- B. Description: Individual foot supports with elevated adjustable channel cross bars and clamps/fasteners/bolts for ground or roof supported outdoor equipment components, without roof membrane penetration, in a pre-fabricated system that can be modularly-assembled on site.
1. Foot Material: Rubber or polypropylene.
 2. Rails Material: Hot dip galvanized carbon steel.
 3. Wind/Sliding Load Resistance: Up to 100 mph.

2.11 MATERIALS

- A. Aluminum: ASTM B221.
- B. Carbon Steel: ASTM A1011/A1011M.
- C. Structural Steel: ASTM A36/A36M, carbon-steel plates, shapes, and bars; galvanized.
- D. Stainless Steel: ASTM A240/A240M.
- E. Threaded Rods: Continuously threaded. Zinc-plated or galvanized steel for indoor applications and stainless steel for outdoor applications. Mating nuts and washers of similar materials as rods.
- F. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
1. Properties: Nonstaining, noncorrosive, and nongaseous.
 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 APPLICATION

- A. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- B. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

3.3 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
 - 2. Field fabricate from ASTM A36/A36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Framing system in first paragraph below requires calculating and detailing at each use.
- D. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled strut systems.
- E. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- F. Fastener System Installation:
 - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- G. Pipe Stand Installation:
 - 1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
 - 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb.
- H. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

- I. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- J. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- K. Install lateral bracing with pipe hangers and supports to prevent swaying.
- L. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- M. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- N. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- O. Insulated Piping:
 - 1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
 - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 - 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
 - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
 - 4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
 - b. NPS 4: 12 inches long and 0.06 inch thick.
 - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
 - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
 - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.

5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.4 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.5 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.6 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods 1".

3.7 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780/A780M.

3.8 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports and attachments for general service applications.
- F. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
- G. Use padded hangers for piping that is subject to scratching.
- H. Use thermal-hanger shield inserts for insulated piping and tubing.
- I. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
 - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
 - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
 - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
 - 5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
 - 6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
 - 7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
 - 8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
 - 9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
 - 10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.

11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
 12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
 13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
 14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
 15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
 16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
 17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
 18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
 19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is unnecessary.
 20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is unnecessary.
 21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- J. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- K. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
 3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
 4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
 5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- L. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.

4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
 8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
 9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
 10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
 11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
 12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 - c. Heavy (MSS Type 33): 3000 lb.
 13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
 15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- M. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- N. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
 2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
 3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
 4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
 5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
 6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
 7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.

8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
 - a. Horizontal (MSS Type 54): Mounted horizontally.
 - b. Vertical (MSS Type 55): Mounted vertically.
 - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- O. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- P. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- Q. Use powder-actuated fasteners mechanical-expansion anchors instead of building attachments where required in concrete construction.

END OF SECTION 230529

SECTION 230548 - VIBRATION AND SEISMIC CONTROLS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Elastomeric isolation pads.
2. Elastomeric isolation mounts.
3. Restrained elastomeric isolation mounts.
4. Open-spring isolators.
5. Housed-spring isolators.
6. Restrained-spring isolators.
7. Housed-restrained-spring isolators.
8. Pipe-riser resilient support.
9. Resilient pipe guides.
10. Air-spring isolators.
11. Restrained-air-spring isolators.
12. Elastomeric hangers.
13. Spring hangers.
14. Snubbers.
15. Restraints - rigid type.
16. Restraints - cable type.
17. Restraint accessories.
18. Post-installed concrete anchors.
19. Concrete inserts.
20. Vibration isolation equipment bases.
21. Restrained isolation roof-curb rails.

B. Related Requirements:

1. Section 210548 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment" for devices for fire-suppression equipment and systems.
2. Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment" for devices for plumbing equipment and systems.

1.3 DEFINITIONS

- A. Designated Seismic System: An HVAC component that requires design in accordance with ASCE/SEI 7, Ch. 13, and for which the Component Importance Factor is greater than 1.0.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 - 2. Include load rating for each wind-force-restraint fitting and assembly.
 - 3. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device and seismic- and wind-force-restraint component.
 - 4. Annotate types and sizes of seismic restraints and accessories, complete with listing markings or report numbers and load rating in tension and compression as evaluated by UL product listing or FM Approvals.
 - 5. Annotate to indicate application of each product submitted and compliance with requirements.
 - 6. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
- B. Shop Drawings:
 - 1. Detail fabrication and assembly of equipment bases.
 - 2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- C. Engineering Services Submittals:
 - 1. For each seismic-restraint and wind-load protection device, including seismic-restrained mounting, pipe-riser resilient support, snubber, seismic restraint, seismic-restraint accessory, concrete anchor and insert, and restrained isolation roof-curb rail that is required by this Section or is indicated on Drawings, submit the following:
 - a. Seismic and Wind-Load Restraint, and Vibration Isolation Base Selection: Select vibration isolators, seismic and wind-load restraints, and vibration isolation bases complying with performance requirements, design criteria, and analysis data.
 - b. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification by professional that riser system was examined for excessive stress and that none exists.
 - c. Concrete Anchors and Inserts: Include calculations showing anticipated seismic and wind loads. Include certification that device is approved by an NRTL for seismic reinforcement use.

- d. Seismic Design Calculations: Submit all input data and loading calculations prepared under "Seismic Design Calculations" Paragraph in "Performance Requirements" Article.
 - e. Wind-Load Design Calculations: Submit all static and dynamic loading calculations prepared under "Wind-Load Design Calculations" Paragraph in "Performance Requirements" Article.
 - f. Qualified Professional: All designated-design submittals for seismic- and wind-restraint calculations are to be signed and sealed by qualified, New York State licensed professional engineer, responsible for their preparation.
2. Seismic- and Wind-Restraint Detail Drawing:
- a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
 - c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply also with requirements in other Sections for equipment mounted outdoors.
3. All engineering services submittals for seismic- and wind-restraint detail Drawings are to be signed and sealed by qualified New York State licensed professional engineer responsible for their preparation.
4. Product Listing, Preapproval, and Evaluation Documentation: By UL or FM Approvals, showing maximum ratings of restraint items and basis for approval (tests or calculations).
5. Design Calculations for Vibration Isolation Devices: Calculate static and dynamic loading due to equipment weight and operating forces required to select proper vibration isolators, and to design vibration isolation bases.
6. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, and spring deflection changes. Include certification that riser system was examined for excessive stress and that none exists.
- D. Coordination Drawings: Show coordination of vibration isolation device installation and seismic bracing for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and restraints, if any.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Air-Spring Isolator Performance Certification: Include natural frequency, load, and damping test data performed by an independent agency.
- C. Field quality-control reports.

- D. **Seismic Qualification Data:** Provide special certification for designated seismic systems as indicated in ASCE/SEI 7-05, ASCE/SEI 7-10, ASCE/SEI 7-16, Paragraph 13.2.2, "Special Certification Requirements for Designated Seismic Systems" for all Designated Seismic Systems identified as such on Drawings or in the Specifications.
1. Provide equipment manufacturer's written certification for each designated active mechanical seismic device and system, stating that it will remain operable following the design earthquake. Certification must be based on requirements of ASCE/SEI 7 and AHRI 1270, including shake table testing per ICC-ES AC156 or a similar nationally recognized testing standard procedure or experience data as permitted by ASCE/SEI 7-05, ASCE/SEI 7-10 or ASCE/SEI 7-16.
 2. Provide equipment manufacturer's written certification that components with hazardous contents maintain containment following the design earthquake by methods required in ASCE/SEI 7-05, ASCE/SEI 7-10 or ASCE/SEI 7-16.
 3. Submit evidence demonstrating compliance with these requirements for approval to the Commissioner after review and acceptance by a licensed professional
 4. The following HVAC systems and components are Designated Seismic Systems and require written special certification of seismic qualification by manufacturer:
 - a. Fuel oil system, Roof Air Handling Units, Roof Air Source Heat pumps, Life safety generator, Roof Stand-by generator, Roof Fans, Roof condensing units
- E. **Wind-Force Performance Certification:** Provide special certification for HVAC components subject to high wind exposure and impact damage and designated on Drawings or in the Specifications to require wind-force performance certification.
1. Provide equipment manufacturer's written certification for each designated HVAC device, stating that it will remain in place and operable following the design wind event and comply with all requirements of NYC Mechanical Code.
 2. Provide manufacturer's written certification for each designated louver, damper, or similar device, stating that it will remain in place and protect opening from penetration of windborne debris and comply with all requirements of the NYC Mechanical Code.
 3. Certification must be based on ICC-ES or similar nationally recognized testing standard procedures acceptable to the Commissioner.
 4. The following HVAC systems and components require special certification for high wind performance. Written special certification of resistance to the effects of high wind force and impact damage must be provided by manufacturer:
 - a. Fuel oil system, Roof Air Handling Units, Roof Air Source Heat pumps, Life safety generator, Roof Stand-by generator, Roof Fans, Roof condensing units.

1.7 CLOSEOUT SUBMITTALS

- A. **Operation and Maintenance Data:** For air-spring isolators and restrained-air-spring isolators to include in operation and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct testing indicated, be an NRTL as defined by OSHA in 29 CFR 1910.7.
- C. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Seismic- and Wind-Load-Restraint Device Load Ratings: Devices to be tested and rated in accordance with applicable code requirements. Devices to be listed by a nationally recognized third party that requires periodic follow-up inspections and has a listing directory available to the public. Provide third-party listing by one or more of the following: ICC-ES product listing, UL product listing or FM Approvals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined DDC General Conditions, to design seismic and wind-load control system.
 - 1. Seismic and Wind-Load Performance: Equipment to withstand the effects of earthquake motions and high wind events determined in accordance with ASCE/SEI 7-05, ASCE/SEI 7-10 or ASCE/SEI 7-16.
- B. Seismic Design Calculations:
 - 1. Perform calculations to obtain force information necessary to properly select seismic-restraint devices, fasteners, and anchorage. Perform calculations using methods required by the NYC Mechanical Code and as presented in ASCE/SEI 7-05, ASCE/SEI 7-10 including supplement No. 1, ASCE/SEI 7-16. Where "ASCE/SEI 7" is used throughout this Section, it is to be understood that the edition referred to in this subparagraph is the edition intended as reference throughout the Section Text.
 - a. Data indicated below to be determined by Contractor furnishing engineering services, must be obtained by Contractor and must be included in individual component submittal packages.
 - b. Coordinate seismic design calculations with wind-load calculations for equipment mounted outdoors. Comply with requirements in other Sections in addition to those in this Section for equipment mounted outdoors.
 - c. Building Occupancy Category: II.
 - d. Building Risk Category: II.
 - e. Building Site Classification: E.
 - f. Seismic Design category: C

2. Calculation Factors, ASCE/SEI 7-16, Ch. 13 - Seismic Design Requirements for Nonstructural Components: All section, paragraph, equation, and table numbers refer to ASCE/SEI 7-16 unless otherwise noted.
 - a. Horizontal Seismic Design Force F_p : Value is to be calculated by Engineering Services Contractor using Equation 13.3-1. Factors below must be obtained for this calculation:
 - 1) S_{DS} = Spectral Acceleration: 0.444%g. Value applies to all components on Project.
 - 2) a_p = Component Amplification Factor: See Drawing Schedule for each component.
 - 3) I_p = Component Importance Factor: See Drawing Schedule for each component.
 - 4) W_p = Component Operating Weight: For each component. Obtain by Engineering Services Contractor from each component submittal.
 - 5) R_p = Component Response Modification Factor: See Drawing Schedule for each component.
 - 6) z = Height in Structure of Point of Attachment of Component for Base: Determine from Project Drawings for each component by Engineering Services Contractor. For items at or below the base, "z" to be taken as zero.
 - 7) h = Average Roof Height of Structure for Base: Determine from Project Drawings by Engineering Services Contractor.
 - b. Vertical Seismic Design Force: Calculated by Engineering Services Contractor using method explained in ASCE/SEI 7-16, Paragraph 13.3.1.2.
 - c. Seismic Relative Displacement D_p : Calculate by Engineering Services Contractor using methods explained in ASCE/SEI 7-10, Paragraph 13.3.2. Factors below must be obtained for this calculation:
 - 1) D_p = Relative Seismic Displacement that Each Component Must Be Designed to Accommodate: Calculate by Engineering Services Contractor in accordance with ASCE/SEI 7-10, Paragraph 13.3.2.
 - 2) I_e = Structure Importance Factor: I. See drawing schedule. Value applies to all components on Project.
 - 3) δ_{xA} = Deflection at Building Level x of Structure A: See Drawing Schedule for each component.
 - 4) δ_{yA} = Deflection at Building Level y of Structure A: see Drawing Schedule for each component.
 - 5) δ_{yB} = Deflection at Building Level y of Structure B: See Drawing Schedule for each component.
 - 6) h_x = Height of Level x to which Upper Connection Point Is Attached: Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 7) h_y = Height of Level y to which Upper Connection Point Is Attached: Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 8) Δ_{aA} = Allowable Story Drift for Structure A: See Drawing Schedules for each component.
 - 9) Δ_{aB} = Allowable Story Drift for Structure B: See Drawing Schedules for each component.

- 10) h_{sx} = Story Height Used in the Definition of Allowable Drift Δ_a : See Drawings Schedules for each component.
- d. Component Fundamental Period T_p : Calculated by Engineering Services Contractor using methods explained in ASCE/SEI 7-16, Paragraph 13.3.3. Factors below must be obtained for this calculation:
 - 1) W_p = Component Operating Weight: Determined by Contractor from Project Drawings and manufacturer's data.
 - 2) g = Gravitational Acceleration: 32.17 fps².
 - 3) K_p = Combined Stiffness of Component, Supports, and Attachments: Determined by engineering services seismic engineer.
3. Calculation Factors, ASCE/SEI 7-10, Ch. 13 - Seismic Design Requirements for Nonstructural Components: All section, paragraph, equation, and table numbers refer to ASCE/SEI 7-10 unless otherwise noted.
 - a. Horizontal Seismic Design Force F_p : Calculated by Engineering Services Contractor by ASCE/SEI 7-10, Equation 13.3-1. Factors below must be obtained for this calculation:
 - 1) S_{DS} = Spectral Acceleration: 0.444%g. Value applies to all components on Project.
 - 2) a_p = Component Amplification Factor: See Drawing Schedule for each component.
 - 3) I_p = Component Importance Factor: See Drawing Schedule for each component.
 - 4) W_p = Component Operating Weight: For each component. Obtain by Engineering Services Contractor from equipment submittal.
 - 5) R_p = Component Response Modification Factor: See Drawing Schedule for each component.
 - 6) z = Height in Structure of Point of Attachment of Component for Base: Determined from Project Drawings for each component by Contractor. For items at or below the base, "z" to be taken as zero.
 - 7) h = Average Roof Height of Structure for Base: Determine from Project Drawings by Engineering Services Contractor.
 - b. Vertical Seismic Design Force: Calculate by Engineering Services Contractor using method explained in ASCE/SEI 7-10, Paragraph 13.3.1.
 - c. Seismic Relative Displacement D_{pl} : Calculate by Engineering Services Contractor using methods explained in ASCE/SEI 7-10, Paragraph 13.3.2. Factors below must be obtained for this calculation:
 - 1) D_p = Relative Seismic Displacement that Each Component Must Be Designed to Accommodate: Calculate by Engineering Services Contractor in accordance with ASCE/SEI 7-10, Paragraph 13.3.2.
 - 2) I_e = Structure Importance Factor: I ; See drawing schedule. Value applies to all components on Project.
 - 3) δ_{xA} = Deflection at Building Level x of Structure A: See Drawing Schedule for each component.
 - 4) δ_{yA} = Deflection at Building Level y of Structure A: see Drawing Schedule for each component.

- 5) δ_{yB} = Deflection at Building Level y of Structure B: See Drawing Schedule for each component.
 - 6) h_x = Height of Level x to which Upper Connection point Is Attached: Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data;
 - 7) h_y = Height of Level y to which Upper Connection Point Is Attached: Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 8) Δ_{aA} = Allowable Story Drift for Structure A: See Drawing Schedule for each component.
 - 9) Δ_{aB} = Allowable Story Drift for Structure B: See Drawing Schedule for each component.
 - 10) h_{sx} = Story Height Used in the Definition of Allowable Drift Δ_a : See Drawing Schedule for each component.
4. Calculation Factors, ASCE/SEI 7-05, Ch. 3 - Seismic Design Requirements for Nonstructural Components: All section, paragraph, equation, and table numbers refer to ASCE/SEI 7-05 unless otherwise noted.
- a. Horizontal Seismic Design Force F_p : Calculated by Engineering Services Contractor by ASCE/SEI 7-05, Equation 13.3-1. Factors below must be obtained for this calculation:
 - 1) S_{DS} = Spectral Acceleration: 0.444%g. Value applies to all components on Project.
 - 2) a_p = Component Amplification Factor: See Drawing Schedule for each component.
 - 3) I_p = Component Importance Factor: See Drawing Schedule for each component.
 - 4) W_p = Component Operating Weight: Obtain by Engineering Services Contractor for each component from component submittal.
 - 5) R_p = Component Response Modification Factor: See Drawing Schedule for each component.
 - 6) z = Height in Structure of Point of Attachment of Component for Base: Determine by Engineering Services Contractor for each component from Project Drawings. For items at or below the base, "z" to be taken as zero.
 - 7) h = Average Roof Height of Structure for Base: Determine by Engineering Services Contractor from Project Drawings.
 - b. Vertical Seismic Design Force: Calculated by Engineering Services Contractor using method explained in ASCE/SEI 7-05, Paragraph 13.3.1.
 - c. Seismic Relative Displacement D_p : Calculated by Engineering Services Contractor using methods explained in ASCE/SEI 7-05, Paragraph 13.3.2. Factors below must be obtained for this calculation:
 - 1) δ_{xA} = Deflection at Building Level x of Structure A: See Drawing Schedule for each component.
 - 2) δ_{yA} = Deflection at Building Level y of Structure A: See Drawing Schedule for each component.
 - 3) δ_{yB} = Deflection at Building Level y of Structure B: See Drawing Schedule for each component.
 - 4) h_x = Height of Level x to which Upper Connection Point Is Attached: Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.

- 5) h_y = Height of Level y to which Upper Connection Point Is Attached: Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
- 6) Δ_{aA} = Allowable Story Drift for Structure A: See Drawing Schedule for each component.
- 7) Δ_{aB} = Allowable Story Drift for Structure B: See Drawing Schedule for each component.
- 8) h_{sx} = Story Height Used in the Definition of Allowable Drift Δ_a : See Drawing Schedule for each component.

C. Wind-Load Design Calculations:

1. Perform calculations to obtain force information necessary to properly select wind-load-restraint devices, fasteners, and anchorage. Perform calculations using methods required by the NYC Mechanical Code and as presented in ASCE/SEI 7-05, ASCE/SEI 7-10, or ASCE/SEI 7-16. Where "ASCE/SEI 7" is used throughout this Section, it is to be understood that the edition referred to in this subparagraph is intended as referenced throughout the Section Text unless otherwise noted.
 - a. Data indicated below that are specific to individual pieces of equipment must be obtained by Contractor and must be included in individual component submittal packages.
 - b. Coordinate design wind-load calculations with seismic load calculations for equipment requiring both seismic and wind-load reinforcement. Comply with requirements in other Sections in addition to those in this Section for equipment mounted outdoors.
2. Design wind pressure "p" for external sidewall-mounted equipment such as louvers is to be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-16, Ch. 30. Perform calculations in accordance with one of the following, as applicable:
 - a. PART 1: Low-Rise Buildings.
 - b. PART 2: Low-Rise Buildings (Simplified).
 - c. PART 3: Buildings with "h" less than 60 feet.
 - d. PART 4: Buildings with "h" greater than 60 feet and less than 160 feet.
 - e. PART 5: Open Buildings.
3. Design wind pressure "p" for rooftop equipment is to be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-16, Ch. 30, PART 6: Building Appurtenances and Rooftop Structures and Equipment.
 - a. Risk Category: II.
 - b. h = Mean Roof Height: See drawing schedule
 - c. V = Basic Wind Speed: 98 mph.
 - d. "Wind directionality factor" value is obtained from ASCE/SEI 7-16 or ASCE/SEI 7-10 Section 26.6 and Table 26.6-1 or other source approved by the Commissioner.
 - e. K_d = Wind Directionality Factor: See drawing schedule.
 - f. Exposure Category: See drawing schedule.
 - g. "Topographic factor" value is obtained from ASCE/SEI 7-16 or ASCE/SEI 7-10 Section 26.8 and Table 26.8-1 or other source approved by the Commissioner.
 - h. K_{zt} = Topographic Factor: See drawing schedule.
 - i. K_e = Ground Elevation Factor: See drawing schedule
 - j. K_z = Velocity Pressure Exposure Coefficient (Evaluated at Height z): See drawing schedule

- k. K_h = Velocity Pressure Exposure Coefficient (Evaluated at Height h): See drawing schedule
 - l. q_z = Velocity Pressure: Value calculated by Contractor furnishing wind-load design calculations using methods detailed in ASCE/SEI 7-16 Section 26.10.1 or other source approved by the Commissioner.
 - m. q_h = Velocity Pressure: Value calculated by Contractor furnishing wind-load design calculations using methods detailed in ASCE/SEI 7-16 Section 26.10.1 or other source approved by the Commissioner.
 - n. G = Gust-Effect Factor: 0.85.
 - o. Enclosure Classification: See drawing schedule.
 - p. GC_{pi} = Internal Pressure Coefficient: See drawing schedule.
4. Design wind pressure "p" for external sidewall-mounted equipment such as louvers are to be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-10, Ch. 30. Perform calculations in accordance with one of the following, as appropriate:
- a. PART 1: Low-Rise Buildings.
 - b. PART 2: Low-Rise Buildings (Simplified).
 - c. PART 3: Buildings with "h" greater than 60 feet.
 - d. PART 4: Buildings with "h" less than 160 feet.
 - e. PART 5: Open Buildings.
5. Design wind pressure "p" for rooftop equipment is to be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-10, Ch. 30, PART 6: Building Appurtenances and Rooftop Structures and Equipment.
- a. Risk Category: II.
 - b. h = Mean Roof Height: See drawing schedule.
 - c. V = Basic Wind Speed: 98 mph.
 - d. K_d = Wind Directionality Factor: See drawing schedule.
 - e. Exposure Category: See drawing schedule.
 - f. K_{zt} = Topographic Factor: See drawing schedule
 - g. K_z = Velocity Pressure Exposure Coefficient: See drawing schedule.
 - h. K_h = Velocity Pressure Exposure Coefficient: See drawing schedule.
 - i. q_z = Velocity Pressure: Value calculated by Contractor furnishing wind-load design calculations using methods detailed in ASCE/SEI 7-16 or ASCE/SEI 7-10 Section 26.10.1 or other source approved by the Commissioner.
 - j. q_h = Velocity Pressure: Value calculated by Contractor furnishing wind-load design calculations using methods detailed in ASCE/SEI 7-16 or ASCE/SEI 7-10 Section 26.10.1 or other source approved by the Commissioner.
 - k. G = Gust-Effect Factor: 0.85.
 - l. Enclosure Classification: See drawing schedule.
 - m. GC_{pi} = Internal Pressure Coefficient: See drawing schedule.
6. Design wind force "F" for rooftop equipment and external sidewall-mounted equipment such as louvers is to be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-05, Ch. 6.
- a. I = Importance Factor: See drawing schedule.
 - b. h = Mean Roof Height: See drawing schedule.

- c. V = Basic Wind Speed: See drawing schedule.
 - d. K_d = Wind Directionality Factor: See drawing schedule.
 - e. Exposure Category: See drawing schedule.
 - f. K_{zt} = Topographic Factor: See drawing schedule.
 - g. K_z = Velocity Pressure Exposure Coefficient (Evaluated at Height z): See drawing schedule.
 - h. K_h = Velocity Pressure Exposure Coefficient (Evaluated at Height h): See drawing schedule.
 - i. q_h = Velocity Pressure at Roof Height h : Value calculated by Contractor furnishing wind-load design calculations using methods detailed in ASCE/SEI 7-05 Section 6.5.10 or other source approved by the Commissioner.
 - j. G = Gust-Effect Factor: 0.85.
 - k. GC_{pi} = Internal Pressure Coefficient: See drawing schedule.
 - l. GC_p = External Pressure Coefficient: See drawing schedule.
 - m. C_f = Force Coefficient: Value determined by Contractor furnishing wind-load design calculations from ASCE/SEI 7-05, Figures 6-21 through 6-23 or other source approved by the Commissioner.
 - n. A_f = Projected Area Normal to the Wind: Except where C_f is specified for the actual surface area, value determined by Contractor furnishing wind-load design calculations from equipment submittal or manufacturer.
- D. Consequential Damage: Provide additional seismic restraints for suspended HVAC components or anchorage of floor-, roof-, or wall-mounted HVAC components as indicated in ASCE/SEI 7-05, or ASCE/SEI 7-10 or ASCE/SEI 7-16 so that failure of a non-essential or essential HVAC component will not cause failure of any other essential architectural, mechanical, or electrical building component.
- E. Fire/Smoke Resistance: Seismic- and wind-load-restraint devices that are not constructed of ferrous metals must have a maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested by an NRTL in accordance with ASTM E84 or UL 723, and be so labeled.
- F. Component Supports:
- 1. Load ratings, features, and applications of all reinforcement components must be based on testing standards of a nationally recognized testing agency.
 - 2. All component support attachments must comply with force and displacement resistance requirements of ASCE 7-05 Section 13.6, ASCE/SEI 7-10 Section 13.6, or ASCE/SEI 7-16 Section 13.6.

2.2 ELASTOMERIC ISOLATION PADS

A. Elastomeric Isolation Pads:

- 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.

- g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Management Corp.
 - k. Vibration Mountings & Controls, Inc.
 - l. Or approved equal.
2. Source Limitations: Obtain elastomeric isolation pads from single manufacturer.
 3. Fabrication: Single or multiple layers of sufficient durometer stiffness for uniform loading over pad area.
 4. Size: Factory or field cut to match requirements of supported equipment.
 5. Pad Material: Oil and water resistant with elastomeric properties. Neoprene rubber, silicone rubber, or other elastomeric material.
 6. Surface Pattern: Smooth, ribbed, or waffle pattern.
 7. Infused nonwoven cotton or synthetic fibers.
 8. Load-bearing metal plates adhered to pads.
 9. Sandwich-Core Material: Resilient and elastomeric compound.
 - a. Surface Pattern: Smooth, ribbed, or waffle pattern.
 - b. Infused nonwoven cotton or synthetic fibers.

2.3 ELASTOMERIC ISOLATION MOUNTS

A. Double-Deflection, Elastomeric Isolation Mounts: .

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Isolation.
 - k. Vibration Management Corp.
 - l. Vibration Mountings & Controls, Inc.
 - m. Or approved equal.
2. Source Limitations: Obtain double-deflection, elastomeric isolation mounts from single manufacturer.
3. Mounting Plates:
 - a. Top Plate: Encapsulated steel load transfer top plates, factory drilled and threaded with threaded studs or bolts.
 - b. Baseplate: Encapsulated steel bottom plates with holes provided for anchoring to support structure.

4. Elastomeric Material: Molded, oil- and water-resistant neoprene rubber, silicone rubber, or other elastomeric material.

2.4 RESTRAINED ELASTOMERIC ISOLATION MOUNTS

A. Restrained Elastomeric Isolation Mounts:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Isolation.
 - k. Vibration Management Corp.
 - l. Vibration Mountings & Controls, Inc.
 - m. Or approved equal.
2. Source Limitations: Obtain restrained elastomeric isolation mounts from single manufacturer.
3. Description: All-directional isolator with seismic restraints containing two separate and opposing elastomeric elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
 - a. Housing: Cast-ductile iron or welded steel.
 - b. Elastomeric Material: Molded, oil-resistant rubber, neoprene, or other elastomeric material.

2.5 OPEN-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.

- i. Vibration Eliminator Co., Inc.
 - j. Vibration Isolation.
 - k. Vibration Management Corp.
 - l. Vibration Mountings & Controls, Inc.
 - m. Or approved equal.
2. Source Limitations: Obtain freestanding, laterally stable, open-spring isolators from single manufacturer.
 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 7. Baseplates: Factory-drilled steel plate for bolting to structure with an elastomeric isolator pad attached to the underside. Baseplates limit floor load to 500 psig.
 8. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

2.6 HOUSED-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators in Two-Part Telescoping Housing:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Vibration Eliminator Co., Inc.
 - i. Vibration Isolation.
 - j. Vibration Management Corp.
 - k. Vibration Mountings & Controls, Inc.
 - l. Or approved equal.
2. Source Limitations: Obtain freestanding, laterally stable, open-spring isolators in two-part telescoping housing from single manufacturer.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
7. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators.

- a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases limit floor load to 500 psig.
- b. Top housing with attachment and leveling bolt or threaded mounting holes and internal leveling device or elastomeric pad.

2.7 RESTRAINED-SPRING ISOLATORS

A. Freestanding, Laterally Stable, Open-Spring Isolators with Vertical-Limit Stop Restraint:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Novia; A Division of C&P.
 - i. Vibration Eliminator Co., Inc.
 - j. Vibration Isolation.
 - k. Vibration Management Corp.
 - l. Vibration Mountings & Controls, Inc.
 - m. Or approved equal.
2. Source Limitations: Obtain restrained-spring isolators from single manufacturer.
3. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
 - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases limit floor load to 500 psig.
 - b. Top plate with threaded mounting holes or elastomeric pad.
 - c. Internal leveling bolt that acts as blocking during installation.
4. Restraint: Limit stop as required for equipment and manufacturer.
5. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
6. Minimum Additional Travel: 50 percent of the required deflection at rated load.
7. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
8. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.8 HOUSED-RESTRAINED-SPRING ISOLATORS

A. Freestanding, Steel, Open-Spring Isolators with Vertical-Limit Stop Restraint in Two-Part Telescoping Housing:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Isolation Technology, Inc.
 - e. Kinetics Noise Control, Inc.
 - f. Korfund.
 - g. Mason Industries, Inc.
 - h. Vibration Eliminator Co., Inc.
 - i. Vibration Isolation.
 - j. Vibration Management Corp.
 - k. Vibration Mountings & Controls, Inc.
 - l. Or approved equal.
2. Obtain freestanding, open-spring isolators with vertical-limit stop restraints from single manufacturer.
3. Two-Part Telescoping Housing: A steel top and bottom frame separated by an elastomeric material and enclosing the spring isolators. Housings are equipped with adjustable or non-adjustable snubbers to limit vertical movement.
 - a. Drilled base housing for bolting to structure with an elastomeric isolator pad attached to the underside. Bases limit floor load to 500 psig.
 - b. Threaded top housing with adjustment bolt and cap screw to fasten and level equipment.
4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.9 PIPE-RISER RESILIENT SUPPORT

- A. All-Directional, Acoustical Pipe Anchor Consisting of Two Steel Tubes Separated by a Minimum 1/2-inch-Thick Neoprene:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. California Dynamics Corporation.
 - b. Kinetics Noise Control, Inc.
 - c. Mason Industries, Inc.
 - d. Vibration Eliminator Co., Inc.
 - e. Vibration Management Corp.
 - f. Or approved equal.
 2. Source Limitations: Obtain all-directional, acoustical pipe anchor from single manufacturer.
 3. Vertical-Limit Stops: Steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions.

4. Maximum Load Per Support: 500 psig on isolation material providing equal isolation in all directions.

2.10 RESILIENT PIPE GUIDES

- A. Telescopic Arrangement of Two Steel Tubes or Post and Sleeve Arrangement Separated by a Minimum 1/2-inch- Thick Neoprene:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. California Dynamics Corporation.
 - b. Kinetics Noise Control, Inc.
 - c. Mason Industries, Inc.
 - d. Vibration Eliminator Co., Inc.
 - e. Vibration Management Corp.
 - f. Vibration Mountings & Controls, Inc.
 - g. Or approved equal.
 2. Source Limitations: Obtain resilient pipe guides from single manufacturer.
 3. Factory-Set Height Guide with Shear Pin: Shear pin to be removable and reinsertable to allow for selection of pipe movement. Guides to be capable of motion to meet location requirements.

2.11 AIR-SPRING ISOLATORS

- A. Freestanding, Single or Multiple, Compressed-Air Bellows: .
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CADDY; a brand of nVent.
 - b. Firestone Industrial Products Company.
 - c. Mason Industries, Inc.
 - d. Vibration Management Corp.
 - e. Or approved equal.
 2. Source Limitations: Obtain air-spring isolators from single manufacturer.
 3. Bellows Assembly: Upper and lower powder-coated steel sections connected by a replaceable, flexible, nylon-reinforced neoprene bellows or similar elastomeric material.
 4. Maximum Natural Frequency: 3 Hz.
 5. Operating Pressure Range: 25 to 100 psig.
 6. Burst Pressure: At least three times manufacturer's published maximum operating pressure.
 7. Automatic leveling valve.

2.12 RESTRAINED-AIR-SPRING ISOLATORS

- A. Freestanding, Single or Multiple, Compressed-Air Bellows with Vertical-Limit Stop Restraint:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CADDY; a brand of nVent.

- b. Firestone Industrial Products Company.
 - c. Mason Industries, Inc.
 - d. Vibration Management Corp.
 - e. Or approved equal.
2. Source Limitations: Obtain restrained-air-spring isolators from single manufacturer.
 3. Housing: Steel housing with vertical-limit stops to prevent spring extension due to weight being removed.
 - a. Base with holes for bolting to structure with an elastomeric isolator pad attached to the underside. Bases to limit floor load to 500 psig.
 - b. Top plate with threaded mounting holes.
 - c. Internal leveling bolt that acts as blocking during installation.
 4. Restraint: Limit stop as required for equipment and Manufacturer.
 5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 8. Bellows Assembly: Upper and lower powder-coated steel sections connected by a replaceable, flexible, nylon-reinforced neoprene bellows or similar elastomeric material.
 9. Maximum Natural Frequency: 3 Hz.
 10. Operating Pressure Range: 25 to 100 psig.
 11. Burst Pressure: At least three times manufacturer's published maximum operating pressure.
 12. Automatic leveling valve.

2.13 ELASTOMERIC HANGERS

A. Elastomeric Mount in a Steel Frame with Upper and Lower Steel Hanger Rods:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Kinetics Noise Control, Inc.
 - e. Mason Industries, Inc.
 - f. Novia; A Division of C&P.
 - g. Vibration Eliminator Co., Inc.
 - h. Vibration Isolation.
 - i. Vibration Management Corp.
 - j. Vibration Mountings & Controls, Inc.
 - k. Or approved equal.
2. Source Limitations: Obtain elastomeric hangers from a single manufacturer.
3. Frame: Steel, fabricated with a connection for an upper threaded hanger rod and an opening on the underside to allow for a maximum of 30 degrees of angular lower hanger-rod misalignment without binding or reducing isolation efficiency.

4. Damping Element: Molded, oil-resistant rubber, neoprene, or other elastomeric material with a projecting bushing for the underside opening preventing steel to steel contact.

2.14 SPRING HANGERS

A. Combination Coil-Spring and Elastomeric-Insert Hanger with Spring and Insert in Compression:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ace Mountings Co., Inc.
 - b. CADDY; a brand of nVent.
 - c. California Dynamics Corporation.
 - d. Kinetics Noise Control, Inc.
 - e. Mason Industries, Inc.
 - f. Novia; A Division of C&P.
 - g. Vibration Eliminator Co., Inc.
 - h. Vibration Isolation.
 - i. Vibration Management Corp.
 - j. Vibration Mountings & Controls, Inc.
 - k. Or approved equal.
2. Source Limitations: Obtain spring hangers from single manufacturer.
3. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
5. Minimum Additional Travel: 50 percent of the required deflection at rated load.
6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
8. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
9. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
10. Self-centering hanger-rod cap to ensure concentricity between hanger rod and support spring coil.

2.15 SNUBBERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CADDY; a brand of nVent.
2. Kinetics Noise Control, Inc.
3. Mason Industries, Inc.
4. Vibration Management Corp.
5. Vibration Mountings & Controls, Inc.
6. Or approved equal.

B. Description: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.

1. Source Limitations: Obtain snubbers from single manufacturer.
2. Post-Installed Concrete Anchor Bolts: Secure to concrete surface with post-installed concrete anchors. Anchors to be seismically prequalified in accordance with ACI 355.2 testing and designated in accordance with ACI 318-08 Appendix D for 2009 IBC, ACI 318-11 Appendix D for 2012 IBC, ACI 318-14 Ch. 17 for 2015 or 2018 IBC.
3. Preset Concrete Inserts: Seismically prequalified in accordance with ICC-ES AC446 testing.
4. Anchors in Masonry: Design in accordance with TMS 402.
5. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
6. Resilient Cushion: Maximum 1/4-inch air gap, and minimum 1/4 inch thick.

2.16 RESTRAINTS - RIGID TYPE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. B-line, an Eaton business.
 2. CADDY; a brand of nVent.
 3. California Dynamics Corporation.
 4. Hilti, Inc.
 5. Isolation Technology, Inc.
 6. TOLCO.
 7. Unistrut; Part of Atkore International.
 8. Vibration Mountings & Controls, Inc.
 9. Or approved equal.
- B. Source Limitations: Obtain rigid-type restraints from single manufacturer.
- C. Description: Shop- or field-fabricated bracing assembly made of AISI S110-07-S1 slotted steel channels, ANSI/ASTM A53/A53M steel pipe as per NFPA 13, or other rigid steel brace member. Includes accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; rated in tension, compression, and torsion forces.

2.17 RESTRAINTS - CABLE TYPE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. B-line, an Eaton business.
 2. CADDY; a brand of nVent.
 3. Gripple Inc.
 4. Loos & Co.
 5. Vibration Mountings & Controls, Inc.
 6. Or approved equal.
- B. Source Limitations: Obtain cable-type restraints from single manufacturer.

- C. Seismic-Restraint Cables: ASTM A1023/A1023M galvanized or ASTM A603 galvanized-steel or ASTM A492 stainless steel cables. End connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for seismic-restraining cable service; with fittings attached by means of poured socket, swaged socket or mechanical (Flemish eye) loop.
- D. Restraint cable assembly with cable fittings must comply with ASCE/SEI 19. All cable fittings and complete cable assembly must maintain the minimum cable breaking force. U-shaped cable clips and wedge-type end fittings do not comply and are unacceptable.

2.18 RESTRAINT ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. B-line, an Eaton business.
 - 2. CADDY; a brand of nVent.
 - 3. Hilti, Inc.
 - 4. Loos & Co.
 - 5. Mason Industries, Inc.
 - 6. TOLCO.
 - 7. Unistrut; Part of Atkore International.
 - 8. Or approved equal.
- B. Hanger-Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections Reinforcing steel angle clamped to hanger rod. Non-metallic stiffeners are unacceptable.
- C. Hinged and Swivel Brace Attachments: Multifunctional steel connectors for attaching hangers to rigid channel bracings and restraint cables.
- D. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- E. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- F. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

2.19 POST-INSTALLED CONCRETE ANCHORS

- A. Mechanical Anchor Bolts:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-line, an Eaton business.
 - b. Hilti, Inc.
 - c. Mason Industries, Inc.
 - d. Powers Fasteners.
 - e. Simpson Strong-Tie Co., Inc.

- f. Unistrut; Part of Atkore International.
 - g. Or approved equal.
2. Source Limitations: Obtain mechanical anchor bolts from single manufacturer.
 3. Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength for anchor and as tested according to ASTM E488/E488M.

B. Adhesive Anchor Bolts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. B-line, an Eaton business.
 - b. Hilti, Inc.
 - c. Mason Industries, Inc.
 - d. Powers Fasteners.
 - e. Simpson Strong-Tie Co., Inc.
 - f. Unistrut; Part of Atkore International.
 - g. Or approved equal.
2. Source Limitations: Obtain adhesive anchor bolts from single manufacturer.
3. Drilled-in and capsule anchor system containing PVC or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E488/E488M.

C. Provide post-installed concrete anchors that have been prequalified for use in wind-load applications. Post-installed concrete anchors must comply with all requirements of ASCE/SEI 7-05, Ch. 13, ASCE/SEI 7-10, Ch. 13, or ASCE/SEI 7-16, Ch. 13.

1. Prequalify post-installed anchors in concrete in accordance with ACI 355.2 or other approved qualification testing procedures.
2. Prequalify post-installed anchors in masonry in accordance with approved qualification procedures.

D. Expansion-type anchor bolts are not permitted for equipment in excess of 10 hp that is not vibration isolated.

1. Undercut expansion anchors are permitted.

2.20 CONCRETE INSERTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. B-line, an Eaton business.
2. Hilti, Inc.
3. Mason Industries, Inc.
4. Powers Fasteners.
5. Simpson Strong-Tie Co., Inc.
6. Unistrut; Part of Atkore International.

7. Or approved equal.

B. Source Limitations: Obtain concrete inserts from single manufacturer.

C. Provide preset concrete inserts that are seismically prequalified in accordance with ICC-ES AC466 testing.

D. Comply with ANSI/MSS SP-58.

2.21 VIBRATION ISOLATION EQUIPMENT BASES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CADDY; a brand of nVent.
2. California Dynamics Corporation.
3. Kinetics Noise Control, Inc.
4. Mason Industries, Inc.
5. Novia; A Division of C&P.
6. Vibration Eliminator Co., Inc.
7. Vibration Isolation.
8. Vibration Management Corp.
9. Or approved equal.

B. Source Limitations: Obtain vibration isolation equipment bases from single manufacturer.

C. Steel Rails: Factory-fabricated, welded, structural-steel rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide rails.
 - a. Include supports for suction and discharge elbows for pumps.
2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Rails to have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

D. Steel Bases: Factory-fabricated, welded, structural-steel bases and rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Bases to have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

- E. Concrete Inertia Base: Factory-fabricated or field-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.
 - 1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.
 - a. Include supports for suction and discharge elbows for pumps.
 - 2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A36/A36M. Bases to have shape to accommodate supported equipment.
 - 3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
 - 4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

2.22 RESTRAINED ISOLATION ROOF-CURB RAILS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CADDY; a brand of nVent.
 - 2. California Dynamics Corporation.
 - 3. Kinetics Noise Control, Inc.
 - 4. Novia; A Division of C&P.
 - 5. Thybar Corporation.
 - 6. Vibration Eliminator Co., Inc.
 - 7. Vibration Management Corp.
 - 8. Vibration Mountings & Controls, Inc.
 - 9. Or approved equal.
- B. Source Limitations: Obtain restrained isolation roof-curb rails from single manufacturer.
- C. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment and to withstand seismic and wind forces.
- D. Upper Frame: To provide continuous support for equipment and to be captive to resiliently resist seismic and wind forces.
- E. Lower Support Assembly: To be formed sheet metal section containing adjustable and removable steel springs that support the upper frame. Lower support assembly to have a means for attaching to building structure and a wood nailer for attaching roof materials, and to be insulated with a minimum of 2 inches of rigid, glass-fiber insulation on inside of assembly. Mount adjustable, restrained-spring isolators on elastomeric vibration isolation pads and provide access ports, for level adjustment, with removable waterproof covers at all isolator locations. Locate isolators so they are accessible for adjustment at any time during the life of the installation without interfering with integrity of roof.
- F. Snubber Bushings: All-directional, elastomeric snubber bushings at least 1/4 inch thick.

- G. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counterflashed over roof materials.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic and wind control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an evaluation service member of ICC-ES.
- B. Hanger-Rod Stiffeners: Install where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength is adequate to carry present and future static, wind load, and seismic loads within specified loading limits.

3.4 INSTALLATION OF VIBRATION-CONTROL, WIND-LOAD CONTROL, AND SEISMIC-RESTRAINT DEVICES

- A. Provide vibration-control devices for systems and equipment where indicated in Equipment Schedules or Vibration-Control Devices Schedules, where indicated on Drawings, or where Specifications indicate they are to be installed on specific equipment and systems.
- B. Provide seismic-restraint and wind-load control devices for systems and equipment where indicated in Equipment Schedules or Seismic-Restraint Devices Schedules, where indicated on Drawings, where Specifications indicate they are to be installed on specific equipment and systems, and where required by applicable codes.

- C. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."
- D. Installation of vibration isolators, wind-load restraints, must not cause any change of position of equipment, piping, or ductwork resulting in stresses or misalignment.
- E. Comply with requirements for installation of roof curbs, equipment supports, and roof penetrations.
- F. Equipment Restraints:
 - 1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
 - 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 - 3. Install seismic-restraint, and wind-load-restraint devices using methods approved by an evaluation service member of ICC-ES that provides required submittals for component.
- G. Piping Restraints:
 - 1. Comply with requirements in MSS SP-127.
 - 2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 - 3. Brace a change of direction longer than 12 feet.
- H. Ductwork Restraints:
 - 1. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by New York City Building Codes. Comply with SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems." , ASCE/SEI 7. See Section 233113 "Metal Ducts" for Seismic Hazard Level (SHL). See Section 233113 "Metal Ducts" for "Connection Level" performance requirement for OSHPD jurisdictions.
 - 2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 - 3. Brace a change of direction longer than 12 feet.
 - 4. Select seismic-restraint devices with capacities adequate to carry static and seismic loads.
 - 5. Install cable restraints on ducts that are suspended with vibration isolators.
- I. Install seismic- and wind-load-restraint cables so they do not bend across edges of adjacent equipment or building structure.
- J. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES that provides required submittals for component.
- K. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.
- L. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

- M. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- N. Mechanical Anchor Bolts:
 - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 - 3. Wedge-Type Anchor Bolts: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors are to be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 - 4. Adhesive-Type Anchor Bolts: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
 - 5. Set anchors to manufacturer's recommended torque, using a torque wrench.
 - 6. Install zinc-coated steel anchors for interior and stainless steel anchors for exterior applications.

3.5 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Provide flexible connections in piping systems where they cross structural seismic joints and other point where differential movement may occur. Provide adequate flexibility to accommodate differential movement as determined in accordance with ASCE/SEI 7. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties" for piping flexible connections.

3.6 INSTALLATION OF AIR-SPRING ISOLATORS

- A. Independent Isolator Installation:
 - 1. Install tank valve into each air isolator.
 - 2. Inflate each isolator to pressure specified on Drawings.
- B. Pressure-Regulated Isolator Installation:
 - 1. Coordinate the constant pressure-regulated air supply to air springs with requirements for piping and connections.
 - 2. Connect all pressure regulators to a single dry, filtered facility air supply.
 - 3. Inflate isolators to height specified on Drawings.

3.7 INSTALLATION OF VIBRATION ISOLATION EQUIPMENT BASES

- A. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."

- B. Coordinate dimensions of steel equipment rails and bases, concrete inertia bases, and restrained isolation roof-curb rails with requirements of isolated equipment specified in this and other Sections. Where dimensions of these bases are indicated on Drawings, dimensions may require adjustment to accommodate actual isolated equipment.
- C. Hot water pumps should be mounted on 8" inertia base.

3.8 ADJUSTING

- A. Adjust isolators after system is at operating weight.
- B. Adjust limit stops on restrained-spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
- D. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a qualified testing agency.
 - 2. Schedule test with Commissioner, before connecting anchorage device to restrained component (unless postconnection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Commissioner's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test no fewer than four of each type and size of installed anchors and fasteners selected by Commissioner.
 - 5. Test to 90 percent of rated proof load of device.
 - 6. Measure isolator restraint clearance.
 - 7. Measure isolator deflection.
 - 8. Verify snubber minimum clearances.
 - 9. Test and adjust restrained-air-spring isolator controls and safeties.
- E. Remove and replace malfunctioning units and retest as specified above.
- F. Units will be considered defective if they do not pass tests and inspections.
- G. Prepare test and inspection reports.

END OF SECTION 230548

SECTION 230553 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Warning tape.
 - 4. Pipe labels.
 - 5. Duct labels.
 - 6. Stencils.
 - 7. Valve tags.
 - 8. Warning tags.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment-Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve-numbering scheme.
- E. Valve Schedules: Provide for each piping system. Include in operation and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Metal Labels for Equipment:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brady Corporation.
 - b. Brimar Industries, Inc.
 - c. Carlton Industries, LP.
 - d. Champion America.
 - e. Craftmark Pipe Markers.
 - f. emedco.
 - g. Kolbi Pipe Marker Co.
 - h. LEM Products Inc.
 - i. Marking Services, Inc.
 - j. Seton Identification Products; a Brady Corporation company.
 - k. Or approved equal.
2. Material and Thickness: stainless steel, 0.025-inch minimum thickness, with predrilled or stamped holes for attachment hardware.
3. Letter and Background Color: As indicated for specific application under Part 3.
4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
6. Fasteners: Stainless steel rivets or self-tapping screws.
7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brady Corporation.
 - b. Brimar Industries, Inc.
 - c. Carlton Industries, LP.
 - d. Champion America.
 - e. Craftmark Pipe Markers.
 - f. emedco.
 - g. Kolbi Pipe Marker Co.
 - h. LEM Products Inc.
 - i. Marking Services, Inc.
 - j. Seton Identification Products; a Brady Corporation company.
 - k. Or approved equal.

2. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
 3. Letter and Background Color: As indicated for specific application under Part 3.
 4. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 7. Fasteners: Stainless steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.

2.2 WARNING SIGNS AND LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Brady Corporation.
 2. Brimar Industries, Inc.
 3. Carlton Industries, LP.
 4. Champion America.
 5. Craftmark Pipe Markers.
 6. emedco.
 7. LEM Products Inc.
 8. Marking Services Inc.
 9. National Marker Company.
 10. Seton Identification Products; a Brady Corporation company.
 11. Stranco, Inc.
 12. Or approved equal.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, with predrilled holes for attachment hardware.
- C. Letter and Background Color: As indicated for specific application under Part 3.
- D. Maximum Temperature: Able to withstand temperatures of up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless steel rivets or self-taping screws.

- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Arc-Flash Warning Signs: Provide arc-flash warning signs in locations and with content in accordance with requirements of OSHA and NFPA70E and other applicable codes and standards.
- J. Label Content: Include caution and warning information plus emergency notification instructions.

2.3 WARNING TAPE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brady Corporation.
 - 2. Brimar Industries, Inc.
 - 3. Craftmark Pipe Markers.
 - 4. National Marker Company.
 - 5. Seton Identification Products; a Brady Corporation company.
 - 6. Or approved equal.
- B. Material: Vinyl.
- C. Minimum Thickness: 0.005 inch.
- D. Letter, Pattern, and Background Color: As indicated for specific application under Part 3.
- E. Waterproof Adhesive Backing: Suitable for indoor or outdoor use.
- F. Maximum Temperature: 160 deg F.
- G. Minimum Width: 4 inches.

2.4 PIPE LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Actioncraft Products, Inc.; a division of Industrial Test Equipment Co., Inc.
 - 2. Brady Corporation.
 - 3. Brimar Industries, Inc.
 - 4. Carlton Industries, LP.
 - 5. Champion America.
 - 6. Craftmark Pipe Markers.
 - 7. emedco.
 - 8. Kolbi Pipe Marker Co.
 - 9. LEM Products Inc.
 - 10. Marking Services Inc.
 - 11. Seton Identification Products; a Brady Corporation company.
 - 12. Or approved equal.

- B. General Requirements for Manufactured Pipe Labels: Preprinted, color coded, with lettering indicating service and showing flow direction in accordance with ASME A13.1.
- C. Letter and Background Color: As indicated for specific application under Part 3.
- D. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.
- E. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- F. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings. Also include:
 - 1. Pipe size.
 - 2. Flow-Direction Arrows: Include flow-direction arrows on distribution piping. Arrows may be either integral with label or applied separately.
 - 3. Lettering Size: Size letters in accordance with ASME A13.1 for piping.

2.5 DUCT LABELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Brady Corporation.
 - 2. Brimar Industries, Inc.
 - 3. Carlton Industries, LP.
 - 4. Champion America.
 - 5. Craftmark Pipe Markers.
 - 6. emedco.
 - 7. Kolbi Pipe Marker Co.
 - 8. LEM Products Inc.
 - 9. Marking Services Inc.
 - 10. Seton Identification Products; a Brady Corporation company.
 - 11. Or approved equal.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- C. Letter and Background Color: As indicated for specific application under Part 3.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances of up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless steel rivets or self-tapping screws.

- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings. Also include the following:
 - 1. Duct size.
 - 2. Flow-Direction Arrows: Include flow-direction arrows on distribution ducts. Arrows may be either integral with label or may be applied separately.
 - 3. Lettering Size: Size letters in accordance with ASME A13.1 for piping At least 1/2 inch for viewing distances of up to 72 inches and proportionately larger lettering for greater viewing distances.

2.6 STENCILS

A. Stencils for Piping:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. Kolbi Pipe Marker Co.
 - d. Marking Services Inc.
 - e. Or approved equal.
- 2. Lettering Size: Size letters in accordance with ASME A13.1 for piping At least 1/2 inch for viewing distances of up to 72 inches and proportionately larger lettering for greater viewing distances.
- 3. Stencil Material: Aluminum, brass, or fiberboard.
- 4. Stencil Paint: Exterior, gloss, alkyd enamel or acrylic enamel in colors complying with recommendations in ASME A13.1 unless otherwise indicated. Paint may be in pressurized spray-can form.
- 5. Identification Paint: Exterior, alkyd enamel or acrylic enamel. Paint may be in pressurized spray-can form.
- 6. Letter and Background Color: As indicated for specific application under Part 3.

B. Stencils for Ducts:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. Kolbi Pipe Marker Co.
 - d. Marking Services Inc.
 - e. Or approved equal.
- 2. Lettering Size: Minimum letter height of 1-1/4 inches for viewing distances of up to 15 ft. and proportionately larger lettering for greater viewing distances.
- 3. Stencil Material: Aluminum, Brass, Fiberboard or metal.
- 4. Stencil Paint: Exterior, gloss, alkyd enamel or acrylic enamel. Paint may be in pressurized spray-can form.

5. Identification Paint: Exterior, alkyd enamel or acrylic enamel. Paint may be in pressurized spray-can form.
 6. Letter and Background Color: Color as indicated for specific application under Part 3.
- C. Stencils for Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Brimar Industries, Inc.
 - b. Craftmark Pipe Markers.
 - c. Kolbi Pipe Marker Co.
 - d. Marking Services Inc.
 - e. Or approved equal.
 2. Lettering Size: Minimum letter height of 1/2 inch for viewing distances of up to 72 inches and proportionately larger lettering for greater viewing distances.
 3. Stencil Material: Aluminum, Brass, Fiberboard or metal.
 4. Stencil Paint: Exterior, gloss, alkyd enamel or acrylic enamel. Paint may be in pressurized spray-can form.
 5. Identification Paint: Exterior, alkyd enamel or acrylic enamel. Paint may be in pressurized spray-can form.
 6. Letter and Background Color: As indicated for specific application under Part 3.

2.7 VALVE TAGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Actioncraft Products, Inc.; a division of Industrial Test Equipment Co., Inc.
 2. Brady Corporation.
 3. Brimar Industries, Inc.
 4. Carlton Industries, LP.
 5. Champion America.
 6. Craftmark Pipe Markers.
 7. emedco.
 8. Kolbi Pipe Marker Co.
 9. LEM Products Inc.
 10. Marking Services Inc.
 11. Seton Identification Products; a Brady Corporation company.
 12. Or approved equal.
- B. Description: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
1. Tag Material: Brass, 0.04-inch stainless steel, 0.024-inch aluminum, 0.031-inch or anodized aluminum, 0.031-inch minimum thickness, with predrilled or stamped holes for attachment hardware.
 2. Fasteners: Brass wire, link chain or beaded chain or S-hook.
- C. Letter and Background Color: As indicated for specific application under Part 3.

D. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Include valve-tag schedule in operation and maintenance data.

2.8 WARNING TAGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Brady Corporation.
2. Brimar Industries, Inc.
3. Champion America.
4. Craftmark Pipe Markers.
5. emedco.
6. Kolbi Pipe Marker Co.
7. LEM Products Inc.
8. Marking Services Inc.
9. Seton Identification Products; a Brady Corporation company.
10. Or approved equal.

B. Description: Preprinted or partially preprinted accident-prevention tags of plasticized card stock with matte finish suitable for writing.

1. Size: 3 by 5-1/4 inches minimum.
2. Fasteners: Brass grommet and wire or Reinforced grommet and wire or string.
3. Nomenclature: Large-size primary caption, such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Letter and Background Color: As indicated for specific application under Part 3.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

3.3 INSTALLATION, GENERAL REQUIREMENTS

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.
- D. Locate identifying devices so that they are readily visible from the point of normal approach.

3.4 INSTALLATION OF EQUIPMENT LABELS, WARNING SIGNS, AND LABELS

- A. Permanently fasten labels on each item of mechanical equipment.
- B. Sign and Label Colors:
 - 1. White letters on an ANSI Z535.1 safety-blue background.
- C. Locate equipment labels where accessible and visible.
- D. Arc-Flash Warning Signs: Provide arc-flash warning signs on electrical disconnects and other equipment where arc-flash hazard exists, as indicated on Drawings, and in accordance with requirements of OSHA and NFPA 70E, and other applicable codes and standards.

3.5 INSTALLATION OF WARNING TAPE

- A. Warning Tape Color and Pattern: Yellow background with black diagonal stripes.
- B. Install warning tape on pipes and ducts, with cross-designated walkways providing less than 6 ft. of clearance.
- C. Locate tape so as to be readily visible from the point of normal approach.

3.6 INSTALLATION OF PIPE LABELS

- A. Piping Color Coding: Painting of piping is specified in Section 099123 "Interior Painting."
- B. Install pipe labels showing service and flow direction with permanent adhesive on pipes.
- C. Stenciled Pipe Label Option: Stenciled labels showing service and flow direction may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels, complying with ASME A13.1, with painted, color-coded bands or rectangles on each piping system.
 - 1. Identification Paint: Use for contrasting background.
 - 2. Stencil Paint: Use for pipe marking.

- D. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
1. Within 3 ft. of each valve and control device.
 2. At access doors, manholes, and similar access points that permit view of concealed piping.
 3. Within 3 ft. of equipment items and other points of origination and termination.
 4. Spaced at maximum intervals of 25 ft. along each run. Reduce intervals to 10 ft. in areas of congested piping, ductwork, and equipment.
- E. Do not apply plastic pipe labels or plastic tapes directly to bare pipes conveying fluids at temperatures of 125 deg F or higher. Where these pipes are to remain uninsulated, use a short section of insulation or use stenciled labels.
- F. Flow-Direction Arrows: Use arrows to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
- G. Pipe-Label Color Schedule:
1. Chilled-Water and Glycol Piping: White letters on an ANSI Z535.1 safety-green background.
 2. Heating Water and Glycol Piping: White letters on an ANSI Z535.1 safety-green background.
 3. Refrigerant Piping: White letters on an ANSI Z535.1 safety-blue background.
 4. Toxic and Corrosive Fluids: Black letters on an ANSI Z535.1 safety-orange background.
 5. Flammable Fluids: Black letters on an ANSI Z535.1 safety-yellow background.
 6. Combustible Fluids: White letters on an ANSI Z535.1 safety-brown background.
 7. Potable and Other Water: White letters on an ANSI Z535.1 safety-green background.
 8. Compressed Air: White letters on an ANSI Z535.1 safety-blue background.

3.7 INSTALLATION OF DUCT LABELS

- A. Install plastic-laminated duct labels showing service and flow direction with permanent adhesive on air ducts.
1. Provide labels in the following color codes:
 - a. For air supply ducts: White letters on blue background.
 - b. For air return ducts: White letters on blue background.
 - c. For exhaust-, outside-, relief-, return-, and mixed-air ducts: White letters on blue background.
- B. Stenciled Duct-Label Option: Stenciled labels showing service and flow direction may be provided instead of plastic-laminated duct labels, at Installer's option.
1. For all air ducts: Black letters on white background.
- C. Locate label near each point where ducts enter into and exit from concealed spaces and at maximum intervals of 20 ft. where exposed or are concealed by removable ceiling system.
- D. Stenciled Access Panels and Door Labels, Equipment Labels, and Similar Operational Instructions:

1. Black letters on White background.

3.8 INSTALLATION OF VALVE TAGS

- A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule in the operating and maintenance manual.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below.
 1. Valve-Tag Size and Shape:
 - a. Chilled Water and Glycol: 2 inches, round.
 - b. Refrigerant: 2 inches, round.
 - c. Hot Water and Glycol: 2 inches, round.
 - d. Gas: 2 inches, round.
 2. Valve-Tag Colors:
 - a. For each piping system, use the same lettering and background coloring system on valve tags as used for the Pipe Label Schedule text and background.

3.9 INSTALLATION OF WARNING TAGS

- A. Warning Tag Color: Black letters on an ANSI Z535.1 safety-yellow background.
- B. Attach warning tags, with proper message, to equipment and other items where indicated on Drawings or scheduled.

END OF SECTION 230553

SECTION 230593 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. BAS: Building automation systems.
- C. NEBB: National Environmental Balancing Bureau.
- D. TAB: Testing, adjusting, and balancing.
- E. TABB: Testing, Adjusting, and Balancing Bureau.
- F. TAB Specialist: An independent entity meeting qualifications to perform TAB work.
- G. TDH: Total dynamic head.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 FIELD CONDITIONS

- A. Full City of New York Occupancy: City of New York will occupy the site and existing building during entire TAB period. Cooperate with City of New York during TAB operations to minimize conflicts with City of New York's operations.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems designs that may preclude proper TAB of systems and equipment.
- B. Examine installed systems for balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are applicable for intended purpose and are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
- F. Examine equipment performance data including fan and pump curves.
 - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
 - 2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
- G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- H. Examine test reports specified in individual system and equipment Sections.
- I. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, filters are clean, and equipment with functioning controls is ready for operation.
- J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.
- K. Examine strainers. Verify that startup screens have been replaced by permanent screens with indicated perforations.
- L. Examine control valves for proper installation for their intended function of throttling, diverting, or mixing fluid flows.
- M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

- N. Examine system pumps to ensure absence of entrained air in the suction piping.
- O. Examine operating safety interlocks and controls on HVAC equipment.
- P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

3.3 PREPARATION

- A. Prepare a TAB plan that includes the following:
 - 1. Equipment and systems to be tested.
 - 2. Strategies and step-by-step procedures for balancing the systems.
 - 3. Instrumentation to be used.
 - 4. Sample forms with specific identification for all equipment.
- B. Perform system-readiness checks of HVAC systems and equipment to verify system readiness for TAB work. Include, at a minimum, the following:
 - 1. Airside:
 - a. Verify that leakage and pressure tests on air distribution systems have been satisfactorily completed.
 - b. Duct systems are complete with terminals installed.
 - c. Volume, smoke, and fire dampers are open and functional.
 - d. Clean filters are installed.
 - e. Fans are operating, free of vibration, and rotating in correct direction.
 - f. Variable-frequency controllers' startup is complete and safeties are verified.
 - g. Automatic temperature-control systems are operational.
 - h. Ceilings are installed.
 - i. Windows and doors are installed.
 - j. Suitable access to balancing devices and equipment is provided.
 - 2. Hydronics:
 - a. Verify leakage and pressure tests on water distribution systems have been satisfactorily completed.
 - b. Piping is complete with terminals installed.
 - c. Water treatment is complete.
 - d. Systems are flushed, filled, and air purged.
 - e. Strainers are pulled and cleaned.
 - f. Control valves are functioning per the sequence of operation.
 - g. Shutoff and balance valves have been verified to be 100 percent open.
 - h. Pumps are started and proper rotation is verified.
 - i. Pump gage connections are installed directly at pump inlet and outlet flanges or in discharge and suction pipe prior to valves or strainers.
 - j. Variable-frequency controllers' startup is complete and safeties are verified.
 - k. Suitable access to balancing devices and equipment is provided.

3.4 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" , ASHRAE 111 , NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" , SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
 - 1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
 - 2. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 233300 "Air Duct Accessories."
 - 3. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 230713 "Duct Insulation," Section 230716 "HVAC Equipment Insulation," and Section 230719 "HVAC Piping Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.5 TOLERANCES

- A. Set HVAC system's airflow rates and water flow rates within the following tolerances:
 - 1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 5 percent.
 - 2. Air Outlets and Inlets: Plus or minus 10 percent.
 - 3. Heating-Water Flow Rate: Plus or minus 10 percent.
 - 4. Cooling-Water Flow Rate: Plus or minus 10 percent.
- B. Maintaining pressure relationships as designed shall have priority over the tolerances specified above.

3.6 PROGRESS REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems balancing devices. Recommend changes and additions to systems balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
- B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.7 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
 2. Include a list of instruments used for procedures, along with proof of calibration.
 3. Certify validity and accuracy of field data.
- B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.
 2. Fan curves.
 3. Manufacturers' test data.
 4. Field test reports prepared by system and equipment installers.
 5. Other information relative to equipment performance; do not include Shop Drawings and Product Data.
- C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
 2. Name and address of the TAB specialist.
 3. Project name.
 4. Project location.
 5. Contractor's name and address.
 6. Report date.
 7. Signature of TAB supervisor who certifies the report.
 8. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
 9. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Notable characteristics of systems.
 - c. Description of system operation sequence if it varies from the Contract Documents.
 10. Nomenclature sheets for each item of equipment.
 11. Data for terminal units, including manufacturer's name, type, size, and fittings.
 12. Notes to explain why certain final data in the body of reports vary from indicated values.
 13. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outdoor-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Face and bypass damper settings at coils.
 - e. Fan drive settings including settings and percentage of maximum pitch diameter.
 - f. Inlet vane settings for variable-air-volume systems.
 - g. Settings for supply-air, static-pressure controller.

- h. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
- 1. Quantities of outdoor, supply, return, and exhaust airflows.
 - 2. Water and steam flow rates.
 - 3. Duct, outlet, and inlet sizes.
 - 4. Pipe and valve sizes and locations.
 - 5. Terminal units.
 - 6. Balancing stations.
 - 7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
- 1. Unit Data:
 - a. Unit identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Unit arrangement and class.
 - g. Discharge arrangement.
 - h. Sheave make, size in inches, and bore.
 - i. Center-to-center dimensions of sheave and amount of adjustments in inches.
 - j. Number, make, and size of belts.
 - k. Number, type, and size of filters.
 - 2. Motor Data:
 - a. Motor make, and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in inches, and bore.
 - f. Center-to-center dimensions of sheave and amount of adjustments in inches.
 - 3. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm.
 - b. Total system static pressure in inches wg.
 - c. Fan rpm.
 - d. Discharge static pressure in inches wg.
 - e. Filter static-pressure differential in inches wg.
 - f. Preheat-coil static-pressure differential in inches wg.
 - g. Cooling-coil static-pressure differential in inches wg.
 - h. Heating-coil static-pressure differential in inches wg.
 - i. Outdoor airflow in cfm.
 - j. Return airflow in cfm.

- k. Outdoor-air damper position.
 - l. Return-air damper position.
 - m. Vortex damper position.
- F. Apparatus-Coil Test Reports:
- 1. Coil Data:
 - a. System identification.
 - b. Location.
 - c. Coil type.
 - d. Number of rows.
 - e. Fin spacing in fins per inch o.c.
 - f. Make and model number.
 - g. Face area in sq. ft..
 - h. Tube size in NPS.
 - i. Tube and fin materials.
 - j. Circuiting arrangement.
 - 2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm.
 - b. Average face velocity in fpm.
 - c. Air pressure drop in inches wg.
 - d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
 - e. Return-air, wet- and dry-bulb temperatures in deg F.
 - f. Entering-air, wet- and dry-bulb temperatures in deg F.
 - g. Leaving-air, wet- and dry-bulb temperatures in deg F.
 - h. Water flow rate in gpm.
 - i. Water pressure differential in feet of head or psig.
 - j. Entering-water temperature in deg F.
 - k. Leaving-water temperature in deg F.
 - l. Refrigerant expansion valve and refrigerant types.
 - m. Refrigerant suction pressure in psig.
 - n. Refrigerant suction temperature in deg F.
 - o. Inlet steam pressure in psig.
- G. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:
- 1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and unit size.
 - e. Manufacturer's serial number.
 - f. Fuel type in input data.
 - g. Output capacity in Btu/h.
 - h. Ignition type.

- i. Burner-control types.
 - j. Motor horsepower and rpm.
 - k. Motor volts, phase, and hertz.
 - l. Motor full-load amperage and service factor.
 - m. Sheave make, size in inches, and bore.
 - n. Center-to-center dimensions of sheave and amount of adjustments in inches.
 2. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm.
 - b. Entering-air temperature in deg F.
 - c. Leaving-air temperature in deg F.
 - d. Air temperature differential in deg F.
 - e. Entering-air static pressure in inches wg.
 - f. Leaving-air static pressure in inches wg.
 - g. Air static-pressure differential in inches wg.
 - h. Low-fire fuel input in Btu/h.
 - i. High-fire fuel input in Btu/h.
 - j. Manifold pressure in psig.
 - k. High-temperature-limit setting in deg F.
 - l. Operating set point in Btu/h.
 - m. Motor voltage at each connection.
 - n. Motor amperage for each phase.
 - o. Heating value of fuel in Btu/h.
- H. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:
 1. Unit Data:
 - a. System identification.
 - b. Location.
 - c. Coil identification.
 - d. Capacity in Btu/h.
 - e. Number of stages.
 - f. Connected volts, phase, and hertz.
 - g. Rated amperage.
 - h. Airflow rate in cfm.
 - i. Face area in sq. ft..
 - j. Minimum face velocity in fpm.
 2. Test Data (Indicated and Actual Values):
 - a. Heat output in Btu/h.
 - b. Airflow rate in cfm.
 - c. Air velocity in fpm.
 - d. Entering-air temperature in deg F.
 - e. Leaving-air temperature in deg F.
 - f. Voltage at each connection.

- g. Amperage for each phase.
- I. Fan Test Reports: For supply, return, and exhaust fans, include the following:
- 1. Fan Data:
 - a. System identification.
 - b. Location.
 - c. Make and type.
 - d. Model number and size.
 - e. Manufacturer's serial number.
 - f. Arrangement and class.
 - g. Sheave make, size in inches, and bore.
 - h. Center-to-center dimensions of sheave and amount of adjustments in inches.
 - 2. Motor Data:
 - a. Motor make, and frame type and size.
 - b. Horsepower and rpm.
 - c. Volts, phase, and hertz.
 - d. Full-load amperage and service factor.
 - e. Sheave make, size in inches, and bore.
 - f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
 - g. Number, make, and size of belts.
 - 3. Test Data (Indicated and Actual Values):
 - a. Total airflow rate in cfm.
 - b. Total system static pressure in inches wg.
 - c. Fan rpm.
 - d. Discharge static pressure in inches wg.
 - e. Suction static pressure in inches wg.
- J. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
- 1. Report Data:
 - a. System and air-handling-unit number.
 - b. Location and zone.
 - c. Traverse air temperature in deg F.
 - d. Duct static pressure in inches wg.
 - e. Duct size in inches.
 - f. Duct area in sq. ft..
 - g. Indicated airflow rate in cfm.
 - h. Indicated velocity in fpm.
 - i. Actual airflow rate in cfm.
 - j. Actual average velocity in fpm.
 - k. Barometric pressure in psig.

K. Air-Terminal-Device Reports:

1. Unit Data:
 - a. System and air-handling unit identification.
 - b. Location and zone.
 - c. Apparatus used for test.
 - d. Area served.
 - e. Make.
 - f. Number from system diagram.
 - g. Type and model number.
 - h. Size.
 - i. Effective area in sq. ft..
2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm.
 - b. Air velocity in fpm.
 - c. Preliminary airflow rate as needed in cfm.
 - d. Preliminary velocity as needed in fpm.
 - e. Final airflow rate in cfm.
 - f. Final velocity in fpm.
 - g. Space temperature in deg F.

L. System-Coil Reports: For reheat coils and water coils of terminal units, include the following:

1. Unit Data:
 - a. System and air-handling-unit identification.
 - b. Location and zone.
 - c. Room or riser served.
 - d. Coil make and size.
 - e. Flowmeter type.
2. Test Data (Indicated and Actual Values):
 - a. Airflow rate in cfm.
 - b. Entering-water temperature in deg F.
 - c. Leaving-water temperature in deg F.
 - d. Water pressure drop in feet of head or psig.
 - e. Entering-air temperature in deg F.
 - f. Leaving-air temperature in deg F.

M. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:

1. Unit Data:
 - a. Unit identification.

- b. Location.
 - c. Service.
 - d. Make and size.
 - e. Model number and serial number.
 - f. Water flow rate in gpm.
 - g. Water pressure differential in feet of head or psig.
 - h. Required net positive suction head in feet of head or psig.
 - i. Pump rpm.
 - j. Impeller diameter in inches.
 - k. Motor make and frame size.
 - l. Motor horsepower and rpm.
 - m. Voltage at each connection.
 - n. Amperage for each phase.
 - o. Full-load amperage and service factor.
 - p. Seal type.
2. Test Data (Indicated and Actual Values):
- a. Static head in feet of head or psig.
 - b. Pump shutoff pressure in feet of head or psig.
 - c. Actual impeller size in inches.
 - d. Full-open flow rate in gpm.
 - e. Full-open pressure in feet of head or psig.
 - f. Final discharge pressure in feet of head or psig.
 - g. Final suction pressure in feet of head or psig.
 - h. Final total pressure in feet of head or psig.
 - i. Final water flow rate in gpm.
 - j. Voltage at each connection.
 - k. Amperage for each phase.

N. Instrument Calibration Reports:

1. Report Data:
- a. Instrument type and make.
 - b. Serial number.
 - c. Application.
 - d. Dates of use.
 - e. Dates of calibration.

3.8 VERIFICATION OF TAB REPORT

- A. TAB specialist shall conduct the inspection in the presence of Commissioner.
- B. Commissioner shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.

- C. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
- D. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
- E. If TAB work fails, proceed as follows:
 - 1. TAB specialists shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
- F. Prepare test and inspection reports.

3.9 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 230593

SECTION 230713 - DUCT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes insulating the following duct services:
1. Indoor, concealed supply and outdoor air.
 2. Indoor, exposed supply and outdoor air.
 3. Indoor, concealed return located in unconditioned space.
 4. Indoor, exposed return located in unconditioned space.
 5. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
 6. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
 7. Outdoor, concealed supply and return.
 8. Outdoor, exposed supply and return.
- B. Related Requirements:
1. Section 230716 "HVAC Equipment Insulation."
 2. Section 230719 "HVAC Piping Insulation."
 3. Section 233113 "Metal Ducts" for duct liners.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
 3. Detail application of field-applied jackets.
 4. Detail application at linkages of control devices.

- C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
1. Sheet Form Insulation Materials: 12 inches square.
 2. Sheet Jacket Materials: 12 inches square.
 3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Test Reports: From a qualified testing agency indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- B. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Commissioner. Use materials indicated for the completed Work.
1. Ductwork Mockups:
 - a. One 10-foot section each of rectangular and round straight duct.
 - b. One each of a 90-degree mitered round and rectangular elbow, and one each of a 90-degree radius round and rectangular elbow.
 - c. One rectangular branch takeoff and one round branch takeoff from a rectangular duct. One round tee fitting.
 - d. One rectangular and round transition fitting.
 - e. Four support hangers for round and rectangular ductwork.
 - f. Each type of damper and specialty.
 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
 4. Obtain Commissioner's approval of mockups before starting insulation application.
 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 7. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers are to be marked with the manufacturer's name, appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a qualified testing agency. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency. All Insulation Installed Indoors and Outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2.2 INSULATION MATERIALS

- A. Comply with requirements in "Duct Insulation Schedule, General" and "Indoor Duct and Plenum Insulation Schedule" articles for where insulating materials are to be applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.

- F. Flexible Elastomeric: Closed-cell or expanded-rubber materials; suitable for maximum use temperature between minus 70 deg F and 220 deg F. Comply with ASTM C534, Type II for sheet materials.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA.
 - b. Armacell LLC.
 - c. K-Flex USA.
 - d. Or approved equal.
- G. Glass-Fiber Blanket: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 450 deg F in accordance with ASTM C411. Comply with ASTM C553, Type II, and ASTM C1290, Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
- H. High-Temperature, Glass-Fiber Blanket: Glass fibers bonded with a thermosetting resin, unfaced; suitable for maximum use temperature up to 1000 deg F. Comply with ASTM C553, Type V.
- I. Glass-Fiber Board Insulation: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 250 deg F for jacketed and between 35 deg F and 450 deg F for unfaced in accordance with ASTM C411. Comply with ASTM C612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
- J. Glass-Fiber, Pipe and Tank: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 850 deg F, in accordance with ASTM C411. Comply with ASTM C1393.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.
 - b. Johns Manville; a Berkshire Hathaway company.

- c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
2. Semirigid board material with factory-applied ASJ jacket.
 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.3 FIRE-RATED INSULATION SYSTEMS

- A. Fire-Rated Board: Structural-grade, press-molded, xonolite calcium silicate, fireproofing board suitable for operating temperatures up to 1700 deg F. Comply with ASTM C656, Type II, Grade 6. Tested and certified to provide a 2-hour fire rating by an NRTL acceptable to authorities having jurisdiction.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Thermal Ceramics
 - d. Unifrax Corporation.
 - e. Or approved equal.
- B. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 2-hour fire rating by a qualified NRTL.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. Thermal Ceramics.
 - c. Unifrax Corporation.
 - d. Or approved equal.

2.4 ADHESIVES

- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
 - e. Or approved equal.
- C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
 - e. Or approved equal.

D. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Dow Consumer Solutions.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. P.I.C. Plastics, Inc.
 - d. Proto Corporation.
 - e. Speedline Corporation.
 - f. Or approved equal.

2.5 MASTICS AND COATINGS

A. Materials are compatible with insulation materials, jackets, and substrates.

B. Vapor-Retarder Mastic: Water based; suitable for indoor use on below ambient services.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Vimasco Corporation.
 - e. Or approved equal.
2. Water-Vapor Permeance: Comply with ASTM C755, Section 7.2.2, Table 2, for insulation type and service conditions.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Comply with MIL-PRF-19565C, Type II, for permeance requirements, with supplier listing on DOD QPD - Qualified Products Database.
5. Color: White.

2.6 LAGGING ADHESIVES

A. Description: Comply with MIL-A-3316C, Class I, Grade A and are compatible with insulation materials, jackets, and substrates.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.

- c. Vimasco Corporation.
 - d. DuroDyne
 - e. Ductmate Industries, Inc.
 - f. Or approved equal.
2. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
 3. Service Temperature Range: 0 to plus 180 deg F.
 4. Color: White.

2.7 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Eagle Bridges - Marathon Industries.
 - c. Foster Brand; H. B. Fuller Construction Products.
 - d. Mon-Eco Industries, Inc.
 - e. Or approved equal.
2. Materials are compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.

B. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Eagle Bridges - Marathon Industries.
 - e. Or approved equal.
2. Materials are compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.

2.8 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.

2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.
5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested in accordance with ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.
6. ASJ+: All-service jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film leaving no paper exposed; complying with ASTM C1136, Types I, II, III, IV, and VII.
7. PSK Jacket: Aluminum foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.

2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets comply with ASTM C921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 - e. Or approved equal.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: Color-code jackets based on system. Color as selected by Commissioner.
- D. Metal Jacket:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 - c. 3M.
 - d. Or approved equal.
 2. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.

- c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - 3. Stainless-Steel Jacket: ASTM A240/A240M.
 - a. Factory cut and rolled to size.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - E. Self-Adhesive Outdoor Jacket (Asphaltic): 60-mil- thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with white aluminum-foil facing.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MFM Building Products Corp.
 - b. Polyguard Products, Inc.
 - c. 3M.
 - d. Johns Manville; a Berkshire Hathaway company
 - e. Or approved equal.
 - F. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket has five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Or approved equal.
 - 2. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
 - 3. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
 - 4. Aluminum Finish: Smooth.
- 2.10 FIELD-APPLIED FABRIC-REINFORCING MESH
- A. Woven Glass-Fiber Mesh: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. in. for covering ducts.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. 3M.
 - d. Johns Manville; a Berkshire Hathaway company.
 - e. Or approved equal.
- B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for ducts.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 - d. 3M.
 - e. Johns Manville; a Berkshire Hathaway company.
 - f. Or approved equal.

2.11 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpha Associates, Inc.
 - b. 3M.
 - c. Johns Manville; a Berkshire Hathaway company.
 - d. Or approved equal.

2.12 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
 2. Width: 3 inches.
 3. Thickness: 11.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
 2. Width: 3 inches.
 3. Thickness: 6.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Ideal Tape Co., Inc., an American Biltrite Company.
 - c. Johns Manville; a Berkshire Hathaway company
 - d. Or approved equal.
 2. Width: 2 inches.
 3. Thickness: 6 mils.
 4. Adhesion: 64 ounces force/inch in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
 2. Width: 2 inches.
 3. Thickness: 3.7 mils.
 4. Adhesion: 100 ounces force/inch in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch in width.

2.13 SECUREMENTS

A. Bands:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 - c. DuroDyne.
 - d. Ductmate Industries, Inc.
 - e. Or approved equal.
2. Stainless Steel: ASTM A240/A240M, Type 304; 0.015 inch thick, 3/4 inch wide with closed seal.
3. Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
 - 5) Or approved equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) CL WARD & Family Inc.
 - 3) Gemco.
 - 4) Midwest Fasteners, Inc.
 - 5) Or approved equal.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Or approved equal.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gemco.
 - 2) Midwest Fasteners, Inc.
 - 3) 3M.
 - 4) Or approved equal.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
 - c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Or approved equal.
 - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.

6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, stainless-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
 - 5) Or approved equal.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
 7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gemco.
 - 2) Midwest Fasteners, Inc.
 - 3) DuroDyne
 - 4) Ductmate Industries, Inc.
 - 5) Or approved equal.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.
- D. Wire: 0.062-inch soft-annealed, stainless steel.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. RPR Products, Inc.
 - d. Or approved equal.

2.14 CORNER ANGLES

- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC in accordance with ASTM D1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum in accordance with ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.

- C. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel in accordance with ASTM A167 or ASTM A240/A240M, Type 304.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket .
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with Contract Documents.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.

- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
 - 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 - 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- L. Cut insulation in a manner to avoid compressing insulation.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.

- B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.

- C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

- D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
 - 1. Comply with requirements in Section 078413 "Penetration Firestopping."

- E. Insulation Installation at Floor Penetrations:
 - 1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC AND POLYOLEFIN INSULATION

- A. Comply with manufacturer's written installation instructions and ASTM C1710.

- B. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

- C. Square and Rectangular Ducts and Plenums:
 - 1. Provide 1/4 inch more per side for a tight, compression fit.
 - 2. Cut sheet insulation with the following dimensions:
 - a. Width of duct plus 1/4 inch, one piece.
 - b. Height of duct plus 1/4 inch, plus thickness of insulation, two pieces.
 - c. Width of duct plus 1/4 inch, plus two times the thickness of insulation, one piece.
 - 3. Insulate the bottom of the duct with the sheet from (a) above, then the sides with the two sheets from (b) above, and finally the top of the duct with the sheet from (c) above.
 - 4. Insulation without self-adhering backing:
 - a. Apply 100 percent coverage of manufacturer adhesive on the metal surface, then the insulation, except for the last 1/4 inch where sheets will butt together.

- b. Roll sheet down into position.
 - c. Press two sheets together under compression and apply adhesive at the butt joint to seal the two sheets together.
5. Insulation with self-adhering backing:
- a. Peel back release paper in 6- to 8-inch increments and line up sheet.
 - b. Press firmly to activate adhesive.
 - c. Align material and continue to line up correctly, pressing firmly while slowly removing release paper.
 - d. Allow 1/4-inch overlap for compression at butt joints.
 - e. Apply adhesive at the butt joint to seal the two sheets together.
6. Insulate duct brackets following manufacturer's written installation instructions.

D. Circular Ducts:

1. Determine the circumference of the duct, using a strip of insulation the same thickness as to be used.
2. Cut the sheet to the required size.
3. Apply 100 percent coverage of manufacturer adhesive on the metal surface then the insulation.
4. Apply manufacturer adhesive to the cut surfaces along 100 percent of the longitudinal seam. Press together the seam at the ends and then the middle. Close the entire seam starting from the middle.

3.7 INSTALLATION OF GLASS-FIBER AND MINERAL-WOOL INSULATION

A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

B. Comply with manufacturer's written installation instructions.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.
 - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
 5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
 6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.
- C. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch-wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.8 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.9 FIRE-RATED INSULATION SYSTEM INSTALLATION

- A. Comply with manufacturer's written installation instructions.
- B. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- C. Insulate duct access panels and doors to achieve same fire rating as duct.
- D. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Section 078413 "Penetration Firestopping."

3.10 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099123 "Interior Painting."
 - 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.11 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Inspect ductwork, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12 DUCT INSULATION SCHEDULE, GENERAL

- A. Insulation shall have an R-value of 1" thick = R5
- B. Plenums and Ducts Requiring Insulation:
 - 1. Indoor, concealed supply air - 1 1/2" Flexible blanket.
 - 2. Indoor, exposed supply air - 1 1/2" Rigid board
 - 3. Indoor, concealed return located in unconditioned space - 1" Flexible blanket.
 - 4. Indoor, exposed return located in unconditioned space - 1" Rigid board.
 - 5. Indoor, concealed exhaust between isolation damper and penetration of building exterior - 2" Rigid board.
 - 6. Indoor, exposed exhaust between isolation damper and penetration of building exterior - 1" Rigid board.
 - 7. Indoor, unused portion of louvers blanked off with sheetmetal - 1-1/2" Rigid Board.
- C. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Flexible connectors.
6. Vibration-control devices.
7. Factory-insulated access panels and doors.

3.13 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Concealed, round and flat-oval, supply-air duct insulation is the following:
 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
- B. Concealed, round and flat-oval, return-air duct insulation is the following:
 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
- C. Concealed, round and flat-oval, outdoor-air duct insulation is the following:
 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
- D. Concealed, round and flat-oval, exhaust-air duct insulation is the following:
 1. Glass-Fiber Blanket: 1-1/2 inches thick and 0.75 lb/cu. ft. nominal density.
- E. Concealed, rectangular, supply-air duct insulation is the following:
 1. Glass-Fiber Board: 1-1/2 inches thick and 6 lb/cu. ft. nominal density.
- F. Concealed, rectangular, outdoor-air duct insulation is the following:
 1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
- G. Concealed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior is the following:
 1. Glass-Fiber Board: 1-1/2 inches thick and 6 lb/cu. ft. nominal density.
- H. Concealed, supply-air plenum insulation is the following:
 1. Glass-Fiber Board: 1-1/2 inches thick and 6 lb/cu. ft. nominal density.
- I. Concealed, return-air plenum insulation is one of the following:
 1. Glass-Fiber Board: 1-1/2 inches thick and 6 lb/cu. ft. nominal density.
- J. Concealed, outdoor-air plenum insulation is one of the following:
 1. Glass-Fiber Board: 1-1/2 inches thick and 6 lb/cu. ft. nominal density.

- K. Concealed, exhaust-air plenum insulation is one of the following:
 - 1. Glass-Fiber Board: 1-1/2 inches thick and 6 lb/cu. ft. nominal density.
- L. Exposed, supply air insulation is one of the following:
 - 1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
- M. Exposed, return air insulation is one of the following:
 - 1. Glass-Fiber Board: 1 inch thick and 3 lb/cu. ft. nominal density.
- N. Exposed, outdoor air insulation is one of the following:
 - 1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
- O. Exposed, exhaust air insulation is one of the following:
 - 1. Glass-Fiber Board: 1 inches thick and 3 lb/cu. ft. nominal density.

3.14 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed:
 - 1. Vapor barrier finish
- D. Ducts and Plenums, Exposed:
 - 1. Vapor barrier finish

END OF SECTION 230713

SECTION 230716 - HVAC EQUIPMENT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes insulating HVAC equipment that is not factory insulated.
- B. Related Sections:
 - 1. Section 230713 "Duct Insulation."
 - 2. Section 230719 "HVAC Piping Insulation."

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied, if any).
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail removable insulation at equipment connections.
 - 2. Detail application of field-applied jackets.
 - 3. Detail application at linkages of control devices.
 - 4. Detail field application for each equipment type.
- C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
 - 1. Sheet Form Insulation Materials: 12 inches square.
 - 2. Sheet Jacket Materials: 12 inches square.
 - 3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Test Reports: From a qualified testing agency indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- B. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Commissioner. Use materials indicated for the completed Work.
 - 1. Equipment Mockups:
 - a. One chilled-water pump and one heating-hot-water pump.
 - b. One tank or vessel.
 - 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 - 3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
 - 4. Obtain Commissioner's approval of mockups before starting insulation application.
 - 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
 - 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - 7. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation system materials are to be delivered to the Project site in unopened containers. The packaging is to include, the name of the manufacturer, fabricator, type, description, and size, as well as ASTM standard designation, and maximum use temperature.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with equipment Installer for equipment insulation application.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84, by a qualified testing agency. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency.
 - 1. All Insulation Installed Indoors and Outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2.2 INSULATION MATERIALS

- A. Comply with requirements in "Breeching Insulation Schedule" and "Indoor Equipment Insulation Schedule" articles for where insulating materials are applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.
- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C533, Type I or Type II.
 - 1. Prefabricated Fitting Covers: Comply with ASTM C450 and ASTM C585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Johns Manville; a Berkshire Hathaway company.
 - 2) Armacell LLC.
 - 3) Thermaxx
 - 4) Or approved equal.

- G. Glass-Fiber Blanket: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 450 deg F in accordance with ASTM C411. Comply with ASTM C553, Type II, and ASTM C1290, Type III, with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
- H. Glass-Fiber Board: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 250 deg F for jacketed and between 35 deg F and 450 deg F for unfaced in accordance with ASTM C411. Comply with ASTM C612, Type IA or Type IB. Provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
- I. Glass-Fiber, Pipe and Tank: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 850 deg F, in accordance with ASTM C411. Comply with ASTM C1393.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
 2. Semirigid board material with factory-applied ASJFSK jacket.
 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- J. Polyisocyanurate: Prefabricated, rigid cellular polyisocyanurate material intended for use as thermal insulation. Comply with ASTM C591.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Thermal Ceramics.
 - d. Or approved equal.
2. Type I or Type IV, except thermal conductivity (k-value) does not exceed 0.19 Btu x in./h x sq. ft. x deg F at 75 deg F after 180 days of aging.
 3. Flame-spread index is 25 or less and smoke-developed index is 50 or less for thicknesses of up to 1.5 inches as tested in accordance with ASTM E84.
 4. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
 5. Factory-Applied Jacket: Requirements are specified in "Factory-Applied Jackets" Article.
 - a. Equipment Applications: field-applied PVDC jacket.

2.3 ADHESIVES

- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Vimasco Corporation.
 - e. Or approved equal.
- C. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. 3M.
 - e. Or approved equal.
- D. ASJ Adhesive and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.

- d. 3M.
 - e. Or approved equal.
- E. PVC Jacket Adhesive: Compatible with PVC jacket.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 - e. The Dow Chemical Company.
 - f. Or approved equal.

2.4 MASTICS AND COATINGS

- A. Vapor-Retarder Mastic, Water Based: Suitable for indoor and outdoor use on below-ambient services.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Mon-Eco Industries, Inc.
 - e. Vimasco Corporation.
 - f. Or approved equal.
 - 2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
 - 3. Service Temperature Range: 0 to plus 180 deg F.
 - 4. Comply with MIL-PRF-19565C, Type II, for permeance requirements.
 - 5. Color: White.

2.5 LAGGING ADHESIVES

- A. Adhesives comply with MIL-A-3316C, Class I, Grade A and are compatible with insulation materials, jackets, and substrates.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 - d. 3M.
 - e. Or approved equal.
 - 2. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over equipment insulation.
 - 3. Service Temperature Range: 20 to plus 180 deg F.
 - 4. Color: White.

2.6 SEALANTS

- A. Materials are as recommended by the insulation manufacturer and are compatible with insulation materials, jackets, and substrates.
- B. Joint Sealants:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Owens Corning.
 - e. Or approved equal.
 - 2. Permanently flexible, elastomeric sealant.
 - 3. Service Temperature Range: Minus 58 to plus 176 deg F.
 - 4. Color: White or gray.
- C. FSK and Metal Jacket Flashing Sealants:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. DuraDyne.
 - e. Ductmate Industries, Inc.
 - f. Or approved equal.
 - 2. Fire- and water-resistant, flexible, elastomeric sealant.
 - 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 - 4. Color: Aluminum.
- D. ASJ Flashing Sealants and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. 3M.
 - d. Thermaxx.
 - e. Or approved equal.
 - 2. Fire- and water-resistant, flexible, elastomeric sealant.
 - 3. Service Temperature Range: Minus 40 to plus 250 deg F.
 - 4. Color: White.

2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
 4. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested in accordance with ASTM E96/E96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.8 FIELD-APPLIED JACKETS

- A. Field-applied jackets comply with ASTM C1136, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 - e. Or approved equal.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: White.
 4. Factory-fabricated tank heads and tank side panels.
- D. Metal Jacket:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 - c. DuraDyne,
 - d. Or approved equal.
 2. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. Factory cut and rolled to size.

- b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
3. Stainless Steel Jacket: ASTM A240/A240M.
- a. Factory cut and rolled to size.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- E. Self-Adhesive Outdoor Jacket (Asphaltic): 60-mil- thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with white aluminum-foil facing.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MFM Building Products Corp.
 - b. Polyguard Products, Inc.
 - c. 3M.
 - d. Or approved equal.
- F. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket has five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Or approved equal.
2. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
3. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
4. Aluminum Finish: Smooth.

G. PVDC Jacket for Indoor Applications: 4-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perm when tested in accordance with ASTM E96/E96M and with a flame-spread index of 10 and a smoke-developed index of 20 when tested in accordance with ASTM E84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.

H. PVDC Jacket for Outdoor Applications: 6-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perm when tested in accordance with ASTM E96/E96M and with a flame-spread index of 25 and a smoke-developed index of 50 when tested in accordance with ASTM E84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.

I. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.

2.9 FIELD-APPLIED FABRIC-REINFORCING MESH

A. Woven Glass-Fiber Mesh: Approximately 4 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. in. for covering equipment.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. 3M.
 - d. Owens Corning.
 - e. Or approved equal.

B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for equipment.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 - d. 3M.
 - e. Owens Corning.
 - f. Or approved equal.

2.10 FIELD-APPLIED CLOTHS

A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd..

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpha Associates, Inc.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.

2.11 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Owens Corning.
 - f. Or approved equal.
2. Width: 3 inches.
3. Thickness: 11.5 mils.

4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
 2. Width: 3 inches.
 3. Thickness: 6.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Ideal Tape Co., Inc., an American Biltrite Company.
 - c. Owens Corning.
 - d. Or approved equal.
 2. Width: 2 inches.
 3. Thickness: 6 mils.
 4. Adhesion: 64 ounces force/inch in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
 2. Width: 2 inches.

3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

E. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.
2. Width: 3 inches.
3. Film Thickness: 6 mils.
4. Adhesive Thickness: 1.5 mils.
5. Elongation at Break: 145 percent.
6. Tensile Strength: 55 psi.

F. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.
2. Width: 3 inches.
3. Film Thickness: 6 mils.
4. Adhesive Thickness: 1.5 mils.
5. Elongation at Break: 145 percent.
6. Tensile Strength: 55 psi.

2.12 SECUREMENTS

A. Bands:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 - c. 3M.
 - d. Owens Corning.
 - e. Or approved equal.
2. Stainless Steel: ASTM A240/A240M, Type 304or; 0.015 inch thick, 3/4 inch wide with closed seal.

3. Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size is determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding; 0.135-inch- diameter shank, length to suit depth of insulation indicated.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
 - 5) Or approved equal.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding; 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) CL WARD & Family Inc.
 - 3) Gemco.
 - 4) Midwest Fasteners, Inc.
 - 5) Or approved equal.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Or approved equal.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank; length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Use product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Gemco.
 - 2) Midwest Fasteners, Inc.
 - 3) 3M.
 - 4) DuroDyne.
 - 5) Or approved equal.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
 - c. Spindle: Nylon, 0.106-inch- diameter shank; length to suit depth of insulation indicated, up to 2-1/2 inches.
 - d. Adhesive: Recommended by hanger manufacturer. Use product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Or approved equal.
 - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - c. Spindle: Stainless steel, fully annealed; 0.106-inch- diameter shank; length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.
6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, stainless steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) AGM Industries, Inc.
 - 2) Gemco.
 - 3) Midwest Fasteners, Inc.
 - 4) Nelson Stud Welding.
 - 5) Or approved equal.

- b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
- 7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.
- D. Wire: 0.062-inch soft-annealed, stainless steel.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. RPR Products, Inc.
 - d. Or approved equal.

2.13 CORNER ANGLES

- A. PVC Corner Angles: 30-mils- thick, minimum 1- by 1-inch PVC in accordance with ASTM D1784, Class 16354-C, white or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040-inch- thick, minimum 1- by 1-inch aluminum in accordance with ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless Steel Corner Angles: 0.024-inch- thick, minimum 1- by 1-inch stainless steel in accordance with ASTM A240/A240M, Type 304.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range of between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 - 2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- B. Install insulation materials, forms, vapor barriers or retarders, and jackets, of thicknesses required for each item of equipment, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with the Contract Documents.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 4 inches o.c.
 4. For below-ambient services, apply vapor-barrier mastic over staples.
 5. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
 6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- L. Cut insulation in a manner to avoid compressing insulation.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- O. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.5 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral Wool, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive, anchor pins, and speed washers.

1. Apply adhesives in accordance with manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 3. Protect exposed corners with secured corner angles.
 4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints and 16 inches o.c. in both directions.
 - d. Do not compress insulation during installation.
 - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins, and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 5. Secure each layer of insulation with stainless steel or aluminum bands. Select band material compatible with insulation materials.
 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
 7. Stagger joints between insulation layers at least 3 inches.
 8. Install insulation in removable and replaceable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
 9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
 10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:

1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a field-adjustable latching mechanism.
2. Fabricate boxes from stainless steel, at least 0.040 inch thick.
3. For below-ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.6 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on Boiler Breechings:

1. Secure single-layer insulation with stainless steel bands at 12-inch intervals, and tighten bands without deforming insulation material.
2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless steel bands at 12-inch intervals.
3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

3.7 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

- A. Install in accordance with manufacturer's written installation instructions and ASTM C1710.
- B. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.8 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 - 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
 - 1. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches or less. 33-1/2-inch- circumference limit allows for 2-inch- overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
 - 2. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.9 FINISHES

- A. Equipment Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099123 "Interior Painting."
 - 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

3.10 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Tests and Inspections: Inspect field-insulated equipment, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to one location(s) for each type of equipment defined in "Indoor Equipment Insulation Schedule" article. For large equipment, remove only a portion adequate to determine compliance.

- C. All insulation applications will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.11 EQUIPMENT INSULATION SCHEDULE, GENERAL

- A. Insulation conductivity and thickness per pipe size comply with schedules in this Section or with requirements of NYC Mechanical Code, whichever is more stringent.
- B. Acceptable insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials is Contractor's option.

3.12 BREECHING INSULATION SCHEDULE

- A. Round, exposed breeching and connector insulation is one of the following:
 - 1. Calcium Silicate: 4 inches thick.
- B. Round, concealed breeching and connector insulation is one of the following:
 - 1. Calcium Silicate: 4 inches thick.
- C. Rectangular, exposed breeching and connector insulation is one of the following:
 - 1. Calcium Silicate: 4 inches thick.
- D. Rectangular, concealed breeching and connector insulation is one of the following:
 - 1. Calcium Silicate: 4 inches thick.

3.13 INDOOR EQUIPMENT INSULATION SCHEDULE

- A. Insulate indoor and outdoor equipment that is not factory insulated.
- B. Chillers: Insulate cold surfaces on chillers, including, but not limited to, evaporator bundles, condenser bundles, heat-recovery bundles, suction piping, compressor inlets, tube sheets, water boxes, and nozzles with the following:
 - 1. Glass-Fiber Board: 2 inch thick and 6 lb/cu. ft. nominal density.
 - 2. Glass-Fiber Pipe and Tank: 1 inch thick.
- C. Heat-exchanger (water-to-water for heating service) insulation is one of the following:
 - 1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
 - 2. Glass-Fiber Pipe and Tank: 2 inches thick.
- D. Chilled-water pump insulation is one of the following:

1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
- E. Dual-service heating and cooling pump insulation is one of the following:
1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
- F. Heating-hot-water pump insulation is one of the following:
1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
- G. Chilled-water expansion/compression tank insulation is one of the following:
1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
 2. Glass-Fiber Pipe and Tank: 2 inches thick.
- H. Dual-service heating and cooling expansion/compression tank insulation is one of the following:
1. Glass-Fiber Board: 2 inch thick and 6 lb/cu. ft. nominal density.
 2. Glass-Fiber Pipe and Tank: 2 inch thick.
- I. Heating-hot-water expansion/compression tank insulation is one of the following:
1. Glass-Fiber Board: 2 inches thick and 6 lb/cu. ft. nominal density.
 2. Glass-Fiber Pipe and Tank: 2 inches thick.
- J. Thermal storage tank (brine, water, ice) insulation is one of the following:
1. Glass-Fiber Board: 3 inches thick and 6 lb/cu. ft. nominal density.
 2. Glass-Fiber Pipe and Tank: 3 inches thick.

END OF SECTION 230716

SECTION 230719 - HVAC PIPING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes insulation for HVAC piping systems.
- B. Related Requirements:
 - 1. Section 230713 "Duct Insulation" for duct insulation.
 - 2. Section 230716 "HVAC Equipment Insulation" for equipment insulation.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied, if any).
- B. Sustainable Design Submittals:
 - 1. Product Data: For adhesives, mastics, and sealants, indicating VOC content.
 - 2. Laboratory Test Reports: For adhesives, mastics, and sealants, indicating compliance with requirements for low-emitting materials.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
 - 3. Detail insulation application at pipe expansion joints for each type of insulation.
 - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
 - 5. Detail removable insulation at piping specialties.
 - 6. Detail application of field-applied jackets.
 - 7. Detail application at linkages of control devices.

- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use.
1. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
 2. Sheet Form Insulation Materials: 12 inches square.
 3. Jacket Materials for Pipe: 12 inches long by NPS 2.
 4. Sheet Jacket Materials: 12 inches square.
 5. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Test Reports: From a qualified testing agency indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- B. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Commissioner. Use materials indicated for the completed Work.
1. Piping Mockups:
 - a. One 10-foot section of NPS 2 straight pipe.
 - b. One each of a 90-degree threaded, welded, and flanged elbow.
 - c. One each of a threaded, welded, and flanged tee fitting.
 - d. One NPS 2 or smaller valve and one NPS 2-1/2 or larger valve.
 - e. Four support hangers, including hanger shield and insert.
 - f. One threaded strainer and one flanged strainer with removable portion of insulation.
 - g. One threaded reducer and one welded reducer.
 - h. One pressure temperature tap.
 - i. One union.
 2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
 3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
 4. Obtain Commissioner's approval of mockups before starting insulation application.
 5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
 6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 7. Demolish and remove mockups when directed.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation system materials are to be delivered to the Project site in unopened containers. The packaging is to include name of manufacturer, fabricator, type, description, and size, as well as ASTM standard designation, and maximum use temperature.

1.8 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.9 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products in accordance with ASTM E84 by a testing agency. Factory label insulation, jacket materials, adhesive, mastic, tapes, and cement material containers with appropriate markings of applicable testing agency.
 - 1. All Insulation Installed Indoors and Outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2.2 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials are applied.
- B. Products do not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come into contact with stainless steel have a leachable chloride content of less than 50 ppm when tested in accordance with ASTM C871.
- D. Insulation materials for use on austenitic stainless steel are qualified as acceptable in accordance with ASTM C795.

- E. Foam insulation materials do not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate: Preformed Pipe Sections: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C533, Type I.
 - 1. Prefabricated Fitting Covers: Comply with ASTM C450 and ASTM C585 for dimensions used in preforming insulation to cover valves, elbows, tees, and flanges.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Johns Manville; a Berkshire Hathaway company.
 - 2) Thermaxx.
 - 3) Armacell LLC
 - 4) Or approved equal.
- G. Flexible Elastomeric: Closed-cell, or expanded-rubber materials; suitable for maximum use temperature between minus 70 deg F and 220 deg F. Comply with ASTM C534/C534M, Type I, for tubular materials, Type II for sheet materials.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA.
 - b. Armacell LLC.
 - c. K-Flex USA.
 - d. Or approved equal.
- H. Glass-Fiber, Preformed Pipe: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature up to 850 deg F in accordance with ASTM C411. Comply with ASTM C547.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. Knauf Insulation.
 - c. Manson Insulation Inc.
 - d. Owens Corning.
 - e. Or approved equal.
 - 2. Preformed Pipe Insulation: Type I, Grade A with factory-applied PSK jacket.
 - 3. Fabricated shapes in accordance with ASTM C450 and ASTM C585.
 - 4. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- I. Glass-Fiber, Pipe and Tank: Glass fibers bonded with a thermosetting resin; suitable for maximum use temperature between 35 deg F and 850 deg F, in accordance with ASTM C411. Comply with ASTM C1393.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Saint-Gobain North America.

- b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Manson Insulation Inc.
 - e. Owens Corning.
 - f. Or approved equal.
2. Semirigid board material with factory-applied PSK jacket.
 3. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.3 ADHESIVES

- A. Materials are compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Vimasco Corporation.
 - e. Or approved equal.
 2. Adhesive: As recommended by calcium silicate manufacturer and with a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- C. Cellular-Glass Adhesive: Two-component, thermosetting urethane adhesive containing no flammable solvents, with a service temperature range of minus 100 to plus 200 deg F.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Foster Brand; H. B. Fuller Construction Products.
 - b. 3M
 - c. Ow
 - d. Or approved equal.
 2. Adhesive: As recommended by cellular glass manufacturer and with a VOC content of 80 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Glass-Fiber and Mineral Wool Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. 3M.
 - e. Owens Corning
 - f. Or approved equal.
2. Adhesive: As recommended by mineral fiber manufacturer and with a VOC content of 80 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- E. ASJ Adhesive and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A, for bonding insulation jacket lap seams and joints.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. 3M.
 - e. Or approved equal.
 2. Adhesives shall have a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- F. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. P.I.C. Plastics, Inc.
 - c. Proto Corporation.
 - d. Speedline Corporation.
 - e. The Dow Chemical Company.
 - f. Or approved equal.
 2. Adhesive: As recommended by Adhesive - PVC Jacket manufacturer and with a VOC content of 50 g/L or less.
 3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.4 MASTICS AND COATINGS

- A. Materials are compatible with insulation materials, jackets, and substrates.

1. Mastics: As recommended by insulation manufacturer and with a VOC content of 50 g/L or less.
2. Mastics shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Vapor-Retarder Mastic, Water Based: Suitable for indoor use on below-ambient services.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Knauf Insulation.
 - d. Mon-Eco Industries, Inc.
 - e. Vimasco Corporation.
 - f. Or approved equal.
2. Water-Vapor Permeance: Comply with ASTM E96/E96M or ASTM F1249.
3. Service Temperature Range: 0 to plus 180 deg F minus 20 to plus 180 deg F.
4. Comply with MIL-PRF-19565C, Type II, for permeance requirements, with supplier listing on DOD QPD - Qualified Products Database.
5. Color: White.

2.5 LAGGING ADHESIVES

A. Adhesives comply with MIL-A-3316C, Class I, Grade A, and are compatible with insulation materials, jackets, and substrates.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 - d. 3M.
 - e. Or approved equal.
2. Adhesive shall be as recommended by insulation manufacturer and shall have a VOC content of 50 g/L or less.
3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
5. Service Temperature Range: 0 to plus 180 deg F.
6. Color: White.

2.6 SEALANTS

A. Materials are as recommended by the insulation manufacturer and are compatible with insulation materials, jackets, and substrates.

B. Joint Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. Owens Corning.
 - e. Or approved equal.
2. Permanently flexible, elastomeric sealant.
 - a. Service Temperature Range: Minus 100 to plus 300 deg F.
 - b. Color: White or gray.
3. Sealant shall have a VOC content of 420 g/L or less.
4. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. FSK and Metal Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Mon-Eco Industries, Inc.
 - d. 3M.
 - e. Or approved equal.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: Aluminum.
5. Sealant shall have a VOC content of 420 g/L or less.
6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

D. ASJ Flashing Sealants and PVDC and PVC Jacket Flashing Sealants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. 3M.
 - d. Or approved equal.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.

5. Sealant shall have a VOC content of 420 g/L or less.
6. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C1136, Type II.
 4. ASJ+: Aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with an outer film leaving no paper exposed; complying with ASTM C1136, Types I, II, III, IV, and VII.
 5. PSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.

2.8 FIELD-APPLIED JACKETS

- A. Field-applied jackets comply with ASTM C1136, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Airex Manufacturing.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. P.I.C. Plastics, Inc.
 - d. Proto Corporation.
 - e. Speedline Corporation.
 - f. Or approved equal.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: Color-code jackets based on system. Color as selected by Commissioner.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

D. Metal Jacket:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. RPR Products, Inc.
 - c. 3M
 - d. DuroDyne.
 - e. Or approved equal.

2. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

3. Stainless Steel Jacket: ASTM A240/A240M.
 - a. Factory cut and rolled to size.
 - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - d. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

- E. Self-Adhesive Outdoor Jacket (Asphaltic): 60-mil- thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with white aluminum-foil facing.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. MFM Building Products Corp.
 - b. Polyguard Products, Inc.
 - c. 3M.
 - d. Or approved equal.

- F. Self-Adhesive Indoor/Outdoor Jacket (Non-Asphaltic): Vapor barrier and waterproofing jacket for installation over insulation located aboveground outdoors or indoors. Specialized jacket has five layers of laminated aluminum and polyester film with low-temperature acrylic pressure-sensitive adhesive. Outer aluminum surface is coated with UV-resistant coating for protection from environmental contaminants.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Or approved equal.
 2. Permeance: 0.00 perm as tested in accordance with ASTM F1249.
 3. Flamespread/Smoke Developed: 25/50 as tested in accordance with ASTM E84.
 4. Aluminum Finish: Smooth.

- G. PVDC Jacket for Indoor Applications: 4-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perm when tested in accordance with ASTM E96/E96M and with a flame-spread index of 10 and a smoke-developed index of 20 when tested in accordance with ASTM E84.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning
 - d. Or approved equal.

- H. PVDC Jacket for Outdoor Applications: 6-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perm when tested in accordance with ASTM E96/E96M and with a flame-spread index of 25 and a smoke-developed index of 50 when tested in accordance with ASTM E84.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.

- I. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Johns Manville; a Berkshire Hathaway company.
- b. 3M.
- c. Owens Corning.
- d. Or approved equal.

2.9 FIELD-APPLIED FABRIC REINFORCING MESH

- A. Woven Glass-Fiber Mesh: Approximately 2 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in. for covering pipe and pipe fittings.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.
- B. Woven Polyester Mesh: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for pipe.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Childers Brand; H. B. Fuller Construction Products.
 - b. Foster Brand; H. B. Fuller Construction Products.
 - c. Vimasco Corporation.
 - d. 3M.
 - e. Owens Corning
 - f. Or approved equal.

2.10 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Cloth: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd..
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alpha Associates, Inc.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.

2.11 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C1136.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
2. Width: 3 inches.
 3. Thickness: 11.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
 2. Width: 3 inches.
 3. Thickness: 6.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M Industrial Adhesives and Tapes Division.
 - b. Ideal Tape Co., Inc., an American Biltrite Company.
 - c. Owens Corning.
 - d. Or approved equal.
 2. Width: 2 inches.
 3. Thickness: 6 mils.
 4. Adhesion: 64 ounces force/inch in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch in width.
- D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. 3M Industrial Adhesives and Tapes Division.
 - b. Avery Dennison Corporation, Specialty Tapes Division.
 - c. Ideal Tape Co., Inc., an American Biltrite Company.
 - d. Knauf Insulation.
 - e. Or approved equal.
2. Width: 2 inches.
 3. Thickness: 3.7 mils.
 4. Adhesion: 100 ounces force/inch in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch in width.
- E. PVDC Tape for Indoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.
 2. Width: 3 inches.
 3. Film Thickness: 2 mils.
 4. Adhesive Thickness: 1.5 mils.
 5. Elongation at Break: 120 percent.
 6. Tensile Strength: 20 psi in width.
- F. PVDC Tape for Outdoor Applications: White vapor-retarder PVDC tape with acrylic adhesive.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.
 - b. 3M.
 - c. Owens Corning.
 - d. Or approved equal.
 2. Width: 3 inches.
 3. Film Thickness: 6 mils.
 4. Adhesive Thickness: 1.5 mils.
 5. Elongation at Break: 145 percent.
 6. Tensile Strength: 55 psi in width.

2.12 SECUREMENTS

A. Bands:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Johns Manville; a Berkshire Hathaway company.

- b. RPR Products, Inc.
 - c. 3M.
 - d. Or approved equal.
- 2. Stainless Steel: ASTM A240/A240M, Type 304; 0.015 inch thick, 3/4 inch wide with closed seal.
 - 3. Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with closed seal.
 - 4. Springs: Twin spring set constructed of stainless steel, with ends flat and slotted to accept metal bands. Spring size is determined by manufacturer for application.
- B. Staples: Outward-clinching insulation staples, nominal 3/4 inch wide, stainless steel or Monel.
- C. Wire: 0.062-inch soft-annealed, stainless steel.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. RPR Products, Inc.
 - d. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 2. Carbon Steel: Coat carbon steel operating at a service temperature of between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and of thicknesses required for each item of pipe system, as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, compress, or otherwise damage insulation or jacket.
- D. Install insulation with longitudinal seams at top and bottom (12 o'clock and 6 o'clock positions) of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during storage, application, and finishing. Replace insulation materials that get wet during storage or in the installation process before being properly covered and sealed in accordance with the Contract Documents.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
1. Install insulation continuously through hangers and around anchor attachments.
 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends attached to structure with vapor-barrier mastic.

3. Install insert materials and insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth, but not to the extent of creating wrinkles or areas of compression in the insulation.
 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward-clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward-clinching staples along edge at 4 inches o.c.
 4. For below-ambient services, apply vapor-barrier mastic over staples.
 5. Cover joints and seams with tape, in accordance with insulation material manufacturer's written instructions, to maintain vapor seal.
 6. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches in similar fashion to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.

3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.

- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.6 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials, except where more specific requirements are specified in various pipe insulation material installation articles below.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, Mechanical Couplings, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, mechanical couplings, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 - 2. Insulate pipe elbows using prefabricated fitting insulation made from same material and density as that of adjacent pipe insulation. Each piece is butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 - 3. Insulate tee fittings with prefabricated fitting insulation of same material and thickness as that used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 - 4. Insulate valves using prefabricated fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using prefabricated fitting insulation of same material, density, and thickness as that used for adjacent pipe. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers, so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges, mechanical couplings, and unions using a section of oversized preformed pipe insulation to fit. Overlap adjoining pipe insulation by not less than 2 times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Stencil or label the outside insulation jacket of each union with the word "union" matching size and color of pipe labels.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket, except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing, using PVC tape.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers. Installation conforms to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as that of adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union at least 2 times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.7 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure single-layer insulation with stainless steel bands at 12-inch intervals, and tighten bands without deforming insulation materials.

2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless steel bands at 12-inch intervals.
3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to insulation surface. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth or tape. Thin finish coat to achieve smooth, uniform finish.

B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
4. Finish flange insulation same as pipe insulation.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When prefabricated insulation sections of insulation are not available, install mitered sections of calcium silicate insulation. Secure insulation materials with wire or bands.
3. Finish fittings insulation same as pipe insulation.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install pipe insulation, quads, hex sections, or beveled lag segments, adhered together, of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
2. Install insulation to flanges as specified for flange insulation application.
3. Finish valve and specialty insulation same as pipe insulation.

3.8 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered or routed sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.9 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as that of pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install sections of pipe insulation and miter if required in accordance with manufacturer's written instructions.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated valve covers manufactured of same material as that of pipe insulation when available.
2. When prefabricated valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.10 INSTALLATION OF GLASS-FIBER AND MINERAL WOOL INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with glass-fiber or mineral-wool blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available.
2. When prefabricated sections are not available, install fabricated sections of pipe insulation to valve body.

3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.11 INSTALLATION OF PHENOLIC INSULATION

A. General Installation Requirements:

1. Secure single-layer insulation with stainless steel bands at 12-inch intervals, and tighten bands without deforming insulation materials.
2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch wire spaced at 12-inch intervals. Secure outer layer with stainless steel bands at 12-inch intervals.

B. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with jackets with vapor retarder on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

C. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of same material and thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.

D. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated insulation sections, or mitered or routed fittings, of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

E. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.12 INSTALLATION OF POLYISOCYANURATE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with tape or bands and tighten without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.
2. For insulation with jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic.
3. All insulation is tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, and same thickness as that of adjacent pipe insulation, not to exceed 1-1/2-inch thickness.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyisocyanurate block insulation of same thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.

C. Insulation Installation on Fittings and Elbows:

1. Install prefabricated sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated sections of polyisocyanurate insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.13 INSTALLATION OF POLYOLEFIN INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Seal split-tube longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polyolefin sheet insulation of same thickness as that of pipe insulation.

4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of polyolefin pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install cut sections of polyolefin pipe and sheet insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties, and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.14 INSTALLATION OF POLYSTYRENE INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation with tape or bands and tighten bands without deforming insulation materials. Orient longitudinal joints between half sections in 3- and 9-o'clock positions on the pipe.
2. For insulation with jackets with vapor barriers, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive or tape, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic.
3. All insulation is tightly butted and free of voids and gaps at all joints. Vapor barrier must be continuous. Before installing jacket material, install vapor-barrier system.

B. Insulation Installation on Pipe Flanges:

1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, and make thickness same as that of adjacent pipe insulation, not to exceed 1-1/2 inches.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of polystyrene block insulation of same thickness that of as pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install prefabricated insulation sections of same material as that of straight segments of pipe insulation. Secure according to manufacturer's written instructions.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install prefabricated section of polystyrene insulation to valve body.

2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.15 INSTALLATION OF FIELD-APPLIED JACKETS

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
 2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated and for horizontal applications, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless steel bands 12 inches o.c. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
1. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
 2. Wrap presized jackets around individual pipe insulation sections, with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of 2 inches over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.
 3. Continuous jacket can be spiral-wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
 4. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches or less. The 33-1/2-inch- circumference limit allows for 2-inch-overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.

5. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.16 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099123 "Interior Painting."
 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless steel jackets.

3.17 FIELD QUALITY CONTROL

- A. Perform tests and inspections with the assistance of a factory-authorized service representative.
- B. Tests and Inspections: Inspect pipe, fittings, strainers, and valves, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection is limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

3.18 PIPING INSULATION SCHEDULE, GENERAL

- A. Insulation conductivity and thickness per pipe size comply with schedules in this Section or with requirements of authorities having jurisdiction, whichever is more stringent.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 1. Underground piping.
 2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.19 INDOOR PIPING INSULATION SCHEDULE

- A. Condensate and Equipment Drain Water below 60 Deg F:
 - 1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- B. Chilled Water and Glycol:
 - 1. NPS 3 and Smaller: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
 - 2. NPS 4 to NPS 12: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 1-1/2 inches thick.
- C. Heating-Hot-Water and Glycol Supply and Return, 200 Deg F and Below:
 - 1. NPS 12 and Smaller: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe, Type I: 2 inches thick.
- D. Refrigerant Suction and Hot-Gas Piping:
 - 1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- E. Refrigerant Liquid Piping:
 - 1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

3.20 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

- A. Chilled Water and Brine:
 - 1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 3 inches thick.
- B. Heating-Hot-Water Supply and Return, 200 Deg F and Below:
 - 1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

C. Refrigerant Suction and Hot-Gas Piping:

1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

D. Dual-Service Heating and Cooling:

1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

E. Fuel Oil Piping, Heated:

1. All Pipe Sizes: Insulation is the following:
 - a. Glass-Fiber, Preformed Pipe Insulation, Type I: 2 inches thick.

3.21 INDOOR AND OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 1. Vapor barrier finish
- D. Piping, Exposed:
 1. Exterior, Stainless Steed, Smooth: 0.016 inch thick.
 2. Interior, Mechanical Room, to a height of 8'-0" AFF, Painted Aluminum, Smooth: 0.016 inch thick.

3.22 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 1. Painted Aluminum, Smooth: 0.016 inch thick.
- D. Piping, Exposed:
 1. Painted Aluminum, Smooth: 0.016 inch thick.

END OF SECTION 230719

SECTION 23 08 00

COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 SUMMARY

- A. This section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.
- B. Related Sections:
 - 1. DDC General Conditions Section 019113 “General Commissioning Requirements for MEP Systems” for general commissioning process requirements.

1.3 DESCRIPTION

- A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the Owner’s Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.
- B. The Commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.
- C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Owner’s Project Requirement’s as detailed in the Contract Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only

secondarily to verify compliance with equipment specifications. The CxA will notify the Contractor, or Commissioner as requested, of items missing or areas that are not in conformance with Contract and which require resubmission.

- B. The CxA will receive a copy of the final approved submittals.
- C. In addition, the Contractor is to provide the following:
 - 1. Certificate of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports
- D. Refer to the DDC General Conditions Sections 013300 “Submittal Procedures” and 019113 “General Commissioning Requirements for MEP Systems” for general commissioning submittal requirements.

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Commissioning Kick-Off Meeting – Construction Team: The Contractor will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.
- B. Commissioning Meetings: The Contractor will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.
- C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process. This will not include 100% meeting attendance, but the CxA shall be provided with the subsequent meeting minutes for review.
- D. Pre-testing Meetings: The Contractor will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers’ authorized service representative services for each system, subsystem, equipment, and component to be tested.

- E. Testing: The Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.
- F. Manufacturers' Inspection and Startup Services: The Contractor will coordinate services of manufacturers' inspection and startup services.
- G. Testing, Adjusting and Balancing: The Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the HVAC&R system and controls system in Division 23. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York's personnel upon completion of the commissioning process.
- C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems. These checklists shall be provided to the Contractor for completion. The CxA shall gather and review the completeness and accuracy of these checklists via site visits.
- B. Red-lined Drawings (As-Builts): Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The Contractor will create the as-built drawings.

- C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 019113 “General Commissioning Requirements for MEP systems” for Contractor’s responsibilities.
- B. The Contractor will attend construction phase controls coordination meetings and ensure that the HVAC and controls subcontractors attend.
- C. The Contractor will attend testing, adjusting, and balancing review and coordination meetings and ensure that the HVAC and balancing subcontractors attend.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Prepare preliminary schedule for mechanical system orientations and inspections, operation and maintenance manual submissions, orientation sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for the City of New York. Distribute preliminary schedule to commissioning team members at the beginning of the construction phase.
- F. Provide measuring instruments and logging devices to record test data and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- G. Provide detailed startup procedures.
- H. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications.
- I. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.
- J. Respond to provided new deficiencies and/or responses within five (5) business days.
- K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the Contract Documents. Submit to CxA 45 days after submittal acceptance.
- L. Coordinate with the CxA to provide 48-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- M. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.

- N. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. HVAC&R equipment including all fans, air handling units, ductwork, dampers, terminals, and all other equipment furnished under this Division.
 - 2. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
 - 3. Fire detection and smoke detection devices furnished under other divisions.
- O. The equipment suppliers shall document the performance of their equipment.
- P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- Q. Test, Adjust and Balance subcontractor, under the direction of the Contractor:
 - 1. Attend initial commissioning coordination meeting scheduled by the CxA.
 - 2. Submit the site-specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
 - 3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
 - 4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the HVAC&R subcontractor and the Contractor.
 - 5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
 - 6. Provided recommended setpoints as determined by testing, adjusting, and balancing, such as static pressure and differential pressure setpoints.
- R. Contractor responsibilities to be completed by Equipment Suppliers:
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York’s personnel, to keep warranties in force.
 - 2. Assist in equipment testing.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

3.3 CxA'S RESPONSIBILITIES

- A. Roles and Responsibilities
 - 1. Refer to the DDC General Conditions section 019113 “General Commissioning Requirements for MEP Systems” for CxA responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

- C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION

- A. Prior to performance of Testing, Adjusting, and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least ten (10) days in advance of testing and balancing Work and provide access for the CxA to witness testing and balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
 - 1. The CxA will notify the Contractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
 - 2. The Contractor will ensure that the testing and balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
 - 3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
 - 4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

- D. The CxA along with the Contractor, who will ensure that the HVAC&R subcontractor, testing and balancing subcontractor, and HVAC&R Instrumentation and Control subcontractor participate, shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections 230923 "Direct Digital Control (DDC) System for HVAC" and 230993.11 "Sequence of Operations for HVAC Direct Digital Control". Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 23 piping Sections. HVAC&R subcontractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:
 - 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
 - 2. Description of equipment for flushing operations.
 - 3. Minimum flushing water velocity.
 - 4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.

- D. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air source heat pump chillers, split AC system, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- E. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.
- F. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. Commissioning shall be performed on equipment and systems including but not limited to the following:
 - 1. Air Handling Units
 - 2. Air Source Heat Pump Chillers
 - 3. Gas Fired Condensing Boilers
 - 4. Fuel Oil System
 - 5. Pumps
 - 6. Radiant Heat
 - 7. Hot Water Unit Heaters
 - 8. Electric Unit Heaters
 - 9. Electric Cabinet Unit Heaters
 - 10. Testing, Adjusting and Balancing
 - 11. Variable Air Volume terminal boxes
 - 12. Split System AC Units
 - 13. Supply & Exhaust Fan

3.8 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT

- A. Deficiencies/Non-Conformance
 - 1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and the Contractor on a standardized form.
 - 2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the Contract Documents in dispute or request further information to clarify the concern.
 - 3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
 - 4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
 - 5. As tests progress and a deficiency is identified, the CxA discusses the issue with the Contractor.
 - 6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once

the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function.

7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.
 8. Deficiencies that are not corrected at the time of documentation, shall be completed by the affected Contractor and photo evidence of the deficiency resolution shall be sent to both the Commissioner and the CxA.
- B. Failure due to Manufacturer Defect
1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CxA and the Commissioner. In such case, the Contractor shall provide the Commissioner with the following:
 - a. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
 - b. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
 - c. Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
 - d. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
 - e. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

3.9 APPROVAL

- A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

3.10 SEASONAL TESTING

- A. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by

the Contractor, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

3.11 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract requirements as stated in the DDC General Conditions Sections 017839 “Contract Record Documents” and 019113 “General Commissioning Requirements for MEP Systems.”
- B. The specific content and format requirements for the standard O&M manuals are detailed in the DDC General Conditions 017839 “Contract Record Documents” and 019113 “General Commissioning Requirements for MEP Systems.” Special requirements for the controls Contractor and TAB Contractor are found in Division 23.
- C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

3.12 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

- A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.
- B. The CxA shall oversee the instruction of the City of New York’s personnel for commissioned equipment and systems.
 - 1. The CxA shall interview the City of New York’s personnel to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor who will ensure participation by the subcontractors.
 - 2. In addition to these general requirements, the specific instruction requirements of the City of New York’s personnel by the Contractor are specified in the DDC’s General Conditions Section 017900 “Demonstration and Owners’ Pre-Acceptance Orientation.”
 - 3. The Contractor shall ensure that each subcontractor and vendor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.
 - 4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:

- a. Equipment (included in instruction)
 - b. Intended audience
 - c. Location of instruction
 - d. Objectives
 - e. Subjects covered (description, duration of discussion, special methods, etc.)
 - f. Duration of instruction on each subject
 - g. Qualified instructor for each subject
 - h. Instructor qualifications
 - i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
5. For the primary HVAC equipment, the Contractor shall ensure that the controls subcontractor provide a discussion of the control of the equipment during the mechanical or electrical instruction conducted by each subcontractor or vendor.
6. Instruction documentation shall include the following items:
- a. Copy of the instruction plan, including schedule, syllabus, and agenda.
 - b. Copy of the Owner's Project Requirements.
 - c. Copy of the Basis of Design.
 - d. Compiled operations manuals.
 - e. Compiled maintenance manuals.
 - f. Completed manufacturer instruction manuals.
 - g. Red-lined drawings.
7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.
8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment.
9. Video recording of the instruction sessions will be verified by the CxA in electrical format, at the discretion of the Commissioner.

END OF SECTION 230800

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230923 - DIRECT DIGITAL CONTROL (DDC) SYSTEM FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Direct digital control system equipment and components for monitoring and controlling of HVAC, exclusive of instrumentation and control devices.

1.3 DEFINITIONS

- A. Algorithm: A logical procedure for solving a recurrent mathematical problem. A prescribed set of well-defined rules or processes for solving a problem in a finite number of steps.
- B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.
- C. BACnet Specific Definitions:
1. BACnet: Building Automation Control Network Protocol, ASHRAE 135. A communications protocol allowing devices to communicate data and services over a network.
 2. BACnet Interoperability Building Blocks (BIBBs): BIBB defines a small portion of BACnet functionality that is needed to perform a particular task. BIBBs are combined to build the BACnet functional requirements for a device.
 3. BACnet/IP: Defines and allows using a reserved UDP socket to transmit BACnet messages over IP networks. A BACnet/IP network is a collection of one or more IP subnetworks that share the same BACnet network number.
 4. BACnet Testing Laboratories (BTL): Organization responsible for testing products for compliance with ASHRAE 135, operated under direction of BACnet International.
- D. Binary: Two-state signal where a high signal level represents "ON" or "OPEN" condition and a low signal level represents "OFF" or "CLOSED" condition. "Digital" is sometimes used interchangeably with "Binary" to indicate a two-state signal.
- E. Controller: Generic term for any standalone, microprocessor-based, digital controller residing on a network, used for local or global control. Three types of controllers are indicated: network controllers, programmable application controllers, and application-specific controllers.

- F. Control System Integrator: An entity that assists in expansion of existing enterprise system and support of additional operator interfaces to I/O being added to existing enterprise system.
- G. COV: Changes of value.
- H. Direct Digital Control System Provider: Authorized representative of, and trained by, Direct Digital Control system manufacturer and responsible for execution of Direct Digital Control system Work indicated.
- I. Distributed Control: Processing of system data is decentralized and control decisions are made at subsystem level. System operational programs and information are provided to remote subsystems and status is reported back. On loss of communication, subsystems to be capable of operating in a standalone mode using the last best available data.
- J. E/P: Voltage to pneumatic.
- K. Gateway: Bidirectional protocol translator that connects control systems that use different communication protocols.
- L. HLC: Heavy load conditions.
- M. I/O: System through which information is received and transmitted. I/O refers to analog input (AI), binary input (BI), analog output (AO) and binary output (BO). Analog signals are continuous and represent control influences such as flow, level, moisture, pressure, and temperature. Binary signals convert electronic signals to digital pulses (values) and generally represent two-position operating and alarm status. "Digital," (DI) and (DO), is sometimes used interchangeably with "Binary," (BI) and (BO), respectively.
- N. I/P: Current to pneumatic.
- O. LAN: Local area network.
- P. LNS: LonWorks Network Services.
- Q. LON Specific Definitions:
 - 1. FTT-10: Echelon Transmitter-Free Topology Transceiver.
 - 2. LonMark International: Association comprising suppliers and installers of LonTalk products. Association provides guidelines for implementing LonTalk protocol to ensure interoperability through a standard or consistent implementation.
 - 3. LonTalk: An open standard protocol developed by Echelon Corporation that uses a "Neuron Chip" for communication. LonTalk is a register trademark of Echelon.
 - 4. LonWorks: Network technology developed by Echelon.
 - 5. Node: Device that communicates using CTA-709.1-D protocol and that is connected to a CTA-709.1-D network.
 - 6. Node Address: The logical address of a node on the network, consisting of a Domain number, Subnet number, and Node number. "Node number" portion of an address is a number assigned to device during installation, is unique within a subnet, and is not a factory-set unique Node ID.
 - 7. Node ID: A unique 48-bit identifier assigned at factory to each CTA-709.1-D device. Sometimes called a "Neuron ID."

8. Program ID: An identifier (number) stored in a device (usually, EEPROM) that identifies node manufacturer, functionality of device (application and sequence), transceiver used, and intended device usage.
 9. Standard Configuration Property Type (SCPT): Pronounced "skip-it." A standard format type maintained by LonMark for configuration properties.
 10. Standard Network Variable Type (SNVT): Pronounced "snivet." A standard format type maintained by LonMark used to define data information transmitted and received by individual nodes. "SNVT" is used in two ways. It is an acronym for "Standard Network Variable Type" and is often used to indicate a network variable itself (i.e., it can mean "a network variable of a standard network variable type").
 11. Subnet: Consists of a logical grouping of up to 127 nodes, where logical grouping is defined by node addressing. Each subnet is assigned a number, which is unique within a Domain. See "Node Address."
 12. TP/FT-10: Free Topology Twisted Pair network defined by CTA-709.3 and is most common media type for a CTA-709.1-D control network.
 13. TP/XF-1250: High-speed, 1.25 Mbps, twisted-pair, doubly terminated bus network defined by "LonMark Interoperability Guidelines" and typically used only to connect multiple TP/FT-10 networks.
 14. User-Defined Configuration Property Type (UCPT): Pronounced "u-keep-it." A Configuration Property format type that is defined by device manufacturer.
 15. User-Defined Network Variable Type (UNVT): Network variable format defined by device manufacturer. UNVTs create non-standard communications that other vendors' devices may not correctly interpret and may negatively impact system operation. UNVTs are not allowed.
- R. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- S. Mobile Device: A data-enabled phone or tablet computer capable of connecting to a cellular data network and running a native control application or accessing a web interface.
- T. Modbus TCP/IP: An open protocol for exchange of process data.
- U. MS/TP: Master-slave/token-passing, ISO/IEC/IEEE 8802-3. Datalink protocol LAN option that uses twisted-pair wire for low-speed communication.
- V. MTBF: Mean time between failures.
- W. Network Controller: Digital controller, which supports a family of programmable application controllers and application-specific controllers, that communicates on peer-to-peer network for transmission of global data.
- X. Network Repeater: Device that receives data packet from one network and rebroadcasts it to another network. No routing information is added to protocol.
- Y. Peer to Peer: Networking architecture that treats all network stations as equal partners.
- Z. POT: Portable operator's terminal.
- AA. RAM: Random access memory.

- BB. RF: Radio frequency.
- CC. Router: Device connecting two or more networks at network layer.
- DD. Server: Computer used to maintain system configuration, historical and programming database.
- EE. TCP/IP: Transport control protocol/Internet protocol.
- FF. UPS: Uninterruptible power supply.
- GG. USB: Universal Serial Bus.
- HH. User Datagram Protocol (UDP): This protocol assumes that the IP is used as the underlying protocol.
- II. VAV: Variable air volume.
- JJ. WLED: White light emitting diode.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

PART 2 - PRODUCTS

2.1 DIRECT DIGITAL CONTROL SYSTEM MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Tridium Niagara Framework
 - 2. (No substitutions accepted)

2.2 PERFORMANCE REQUIREMENTS

- A. ASME Compliance:
 - 1. Direct Digital Control system for monitoring and controlling of HVAC systems.
- B. Delivery of selected control devices to equipment and systems manufacturers for factory installation and to HVAC systems installers for field installation.
- C. Engage a Controls Specialist to design Direct Digital Control system to satisfy requirements indicated.
 - 1. System Performance Objectives:
 - a. Direct Digital Control system manages HVAC systems.

- b. Direct Digital Control system operates HVAC systems to achieve optimum operating costs while using least possible energy and maintaining specified performance.
 - c. Direct Digital Control system responds to power failures, HVAC equipment failures, and adverse and emergency conditions encountered through connected I/O points.
 - d. Direct Digital Control system operates while unattended by an operator and through operator interaction.
 - e. Direct Digital Control system records trends and transactions of events and produces report information such as performance, energy, occupancies, and equipment operation.
- D. Surface-Burning Characteristics: Products installed in ducts, equipment, and return-air paths complying with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- 1. Flame-Spread Index: 25 or less.
 - 2. Smoke-Developed Index: 50 or less.
- E. Direct Digital Control System Speed:
- 1. Response Time of Connected I/O:
 - a. Update AI point values connected to Direct Digital Control system at least every two seconds for use by Direct Digital Control controllers. Points used globally to also comply with this requirement.
 - b. Update BI point values connected to Direct Digital Control system at least every two seconds for use by Direct Digital Control controllers. Points used globally to also comply with this requirement.
 - c. AO points connected to Direct Digital Control system to begin to respond to controller output commands within one second(s). Global commands to also comply with this requirement.
 - d. BO point values connected to Direct Digital Control system to respond to controller output commands within one second(s). Global commands to also comply with this requirement.
 - 2. Display of Connected I/O:
 - a. Update and display analog point COV connected to Direct Digital Control system at least every five seconds for use by operator.
 - b. Update and display binary point COV connected to Direct Digital Control system at least every five seconds for use by operator.
 - c. Update and display alarms of analog and digital points connected to Direct Digital Control system within 15 seconds of activation or change of state.
 - d. Update graphic display refresh within four seconds.
 - e. Point change of values and alarms displayed from workstation to workstation when multiple operators are viewing from multiple workstations to not exceed graphic refresh rate indicated.
- F. Network Bandwidth: Design each network of Direct Digital Control system to include spare bandwidth with Direct Digital Control system operating under normal and heavy load conditions indicated. Calculate bandwidth usage, and apply a safety factor to ensure that requirement is satisfied when subjected to testing under worst case conditions. Minimum spare bandwidth as follows:
- 1. Level 1 Networks: 30.
 - 2. Level 2 Networks: 30.

3. Level 3 Networks: 30.
- G. Direct Digital Control System Data Storage:
1. Include capability to archive not less than 60 consecutive months of historical data for all I/O points connected to system, including alarms, event histories, transaction logs, trends, and other information indicated.
 2. Local Storage:
 - a. Provide server with data storage indicated. Server(s) to use IT industry standard database platforms and be capable of functions described in "Direct Digital Control Data Access" Paragraph.
 3. Cloud Storage:
 - a. Provide application-based and web browser interfaces to configure, upload, download, and manage data and to service plan with storage adequate to store all data for term indicated. Cloud storage uses IT industry standard database platforms and is capable of functions described in "Direct Digital Control Data Access" Paragraph.
- H. Direct Digital Control Data Access:
1. When logged into the system, operator able to also interact with any Direct Digital Control controllers connected to Direct Digital Control system as required for functional operation of Direct Digital Control system.
 2. Use for application configuration; for archiving, reporting, and trending of data; for operator transaction archiving and reporting; for network information management; for alarm annunciation; and for operator interface tasks and controls application management.
- I. Future Expandability:
1. Direct Digital Control system size is expandable to an ultimate capacity of at least two times total I/O points indicated.
 2. Design and install system networks to achieve ultimate capacity with only addition of Direct Digital Control controllers, I/O, and associated wiring and cable. Design and install initial network infrastructure to support ultimate capacity without having to remove and replace portions of network installation.
 3. Operator interfaces installed initially do not require hardware and software additions and revisions for system when operating at ultimate capacity.
- J. Input Point Values Displayed Accuracy: Meet following end-to-end overall system accuracy, including errors associated with meter, sensor, transmitter, lead wire or cable, and analog to digital conversion.
1. Energy:
 - a. Thermal: Within 3 percent of reading.
 - b. Electric Power: Within 1 percent of reading.
 - c. Requirements indicated on Drawings for meters not supplied by utility.
 2. Flow:

- a. Air: Within 5 percent of design flow rate.
 - b. Air (Terminal Units): Within 5 percent of design flow rate.
 - c. Fuel Oil: Within 5 percent of design flow rate.
 - d. Natural Gas: Within 5 percent of design flow rate.
 - e. Water: Within 5 percent of design flow rate.
3. Gas:
- a. N/A
4. Moisture (Relative Humidity):
- a. Air: Within 2 percent RH.
 - b. Space: Within 2 percent RH.
 - c. Outdoor: Within 2 percent RH.
5. Level: Within 2 percent of reading.
6. Pressure:
- a. Air, Ducts and Equipment: 1 percent of instrument.
 - b. Space: Within 1 percent of instrument.

 - c. Water: Within 1 percent of instrument.
7. Speed: Within 5 percent of reading.
8. Temperature, Dew Point:
- a. Air: Within 0.5 deg F.
 - b. Space: Within 0.5 deg F.
 - c. Outdoor: Within 2 deg F.
9. Temperature, Dry Bulb:
- a. Air: Within 0.5 deg F.
 - b. Space: Within 0.5 deg F.
 - c. Outdoor: Within 1 deg F.
 - d. Chilled Water: Within 0.5 deg F.
 - e. Heating Hot Water: Within 0.5 deg F.
 - f. Temperature Difference: Within 0.25 deg F
 - g. Other Temperatures Not Indicated: Within 0.5 deg F.
10. Temperature, Wet Bulb:
- a. Air: Within 0.5 deg F.
 - b. Space: Within 0.5 deg F.
 - c. Outdoor: Within 1 deg F.
11. Vibration: Within 5 percent of reading.

- K. Precision of I/O Reported Values: Values reported in database and displayed to have following precision:
1. Current:
 - a. Milliamperes: Nearest 1/100th of a milliampere.
 - b. Amperes: Nearest 1/10th of an ampere up to 100 A; nearest ampere for 100 A and more.
 2. Energy:
 - a. Electric Power:
 - 1) Rate (Watts): Nearest 1/10th of a watt through 1000 W.
 - 2) Rate (Kilowatts): Nearest 1/10th of a kilowatt through 1000 kW; nearest kilowatt above 1000 kW.
 - 3) Usage (Kilowatt-Hours): Nearest kilowatt through 10,000 kW; nearest 10 kW between 10,000 and 100,000 kW; nearest 100 kW for above 100,000 kW.
 - b. Fuel Oil (Usage): For gallons, nearest 1/10th of a gallon up to 100 gal.; nearest gallon for above 100 gal..
 - c. Natural Gas (Usage): Nearest 1/10th of a unit (cubic feet, MCF, therm) up to 100 units; nearest unit for above 100 units.
 - d. Thermal, Rate:
 - 1) Heating: For British thermal units per hour, nearest British thermal unit per hour up to 1000 Btu/h; nearest 10 Btu/h between 1000 and 10,000 Btu/h; nearest 100 Btu/h for above 10,000 Btu/h. For MBh, round to nearest MBh up to 1000 MBh; nearest 10 MBh between 1000 and 10,000 MBh; nearest 100 MBh above 10,000 MBh.
 - 2) Cooling: For tons, nearest ton up to 1000 tons; nearest 10 tons between 1000 and 10,000 tons; nearest 100 tons above 10,000 tons.
 - e. Thermal, Usage:
 - 1) Heating: For British thermal unit, nearest British thermal unit up to 1000 Btu; nearest 10 Btu between 1000 and 10,000 Btu; nearest 100 Btu for above 10,000 Btu. For MBtu, round to nearest MBtu up to 1000 MBtu; nearest 10 MBtu between 1000 and 10,000 MBtu; nearest 100 MBtu above 10,000 MBtu.
 - 2) Cooling: For ton-hours, nearest ton-hours up to 1000 ton-hours; nearest 10 ton-hours between 1000 and 10,000 ton-hours; nearest 100 tons above 10,000 tons.
 3. Flow:
 - a. Air: Nearest 1/10th of a cubic feet per minute through 100 cfm; nearest cubic feet per minute between 100 and 1000 cfm; nearest 10 cfm between 1000 and 10,000 cfm; nearest 100 cfm above 10,000 cfm.
 - b. Fuel Oil: Nearest 1/10th of a gallon per minute through 100 gpm; nearest gallon per minute between 100 and 1000 gpm.
 - c. Natural Gas: Nearest 1/10th of a cubic feet per hour through 100 cfh; nearest cubic feet per hour between 100 and 1000 cfh; nearest 10 cfh between 1000 and 10,000 cfh; nearest 100 cfh above 10,000 cfh.

- d. Water: Nearest 1/10th of a gallon per minute through 100 gpm; nearest gallon per minute between 100 and 1000 gpm; nearest 10 gpm between 1000 and 10,000 gpm; nearest 100 gpm above 10,000 gpm.
4. Gas:
 - a. Carbon Dioxide (ppm): Nearest ppm.
 - b. Volatile Organic Compounds (ppm): Nearest ppm
5. Moisture (Relative Humidity):
 - a. Relative Humidity (Percentage): Nearest 1 percent.
6. Level: Nearest 1/100th of an inch through 10 inches; nearest 1/10 of an inch between 10 and 100 inches; nearest inch above 100 inches.
7. Speed:
 - a. Rotation (rpm): Nearest 1 rpm.
 - b. Velocity: Nearest 1/10th of feet per minute through 100 fpm; nearest feet per minute between 100 and 1000 fpm; nearest 10 fpm above 1000 fpm.
8. Position, Dampers and Valves (Percentage Open): Nearest 1 percent.
9. Pressure:
 - a. Air, Ducts and Equipment: Nearest 1/10th of an inch water closet.
 - b. Space: Nearest 1/100th of an inch water closet.
 - c. Steam: Nearest 1/10th of pounds per square inch gauge through 100 psig; nearest pounds per square inch gauge above 100 psig.
 - d. Water: Nearest 1/10 of a pound per square inch gauge through 100 psig; nearest pound per square inch gauge above 100 psig.
10. Temperature:
 - a. Air, Ducts and Equipment: Nearest 1/10th of a degree.
 - b. Outdoor: Nearest degree.
 - c. Space: Nearest 1/10th of a degree.
 - d. Chilled Water: Nearest 1/10th of a degree.
 - e. Condenser Water: Nearest 1/10th of a degree.
 - f. Heating Hot Water: Nearest degree.
 - g. Heat Recovery Runaround: Nearest 1/10th of a degree.
 - h. Steam: Nearest degree.
11. Vibration: Nearest 1/10th of an inch per second.
12. Voltage: Nearest 1/10 V up to 100 V; nearest volt above 100 V.
- L. Control Stability: Control variables indicated within the following limits:
 1. Flow:
 - a. Air, Ducts and Equipment, except Terminal Units: Within 5 percent of design flow rate.

- b. Air, Terminal Units: Within 5 percent of design flow rate.
- c. Water: Within 5 percent of design flow rate.
- 2. Gas:
 - a. N/A
- 3. Moisture (Relative Humidity):
 - a. Air: Within 2 percent RH.
 - b. Space: Within 2 percent RH.
 - c. Outdoor: Within 2 percent RH.
- 4. Level: Within 2 percent of reading.
- 5. Pressure:
 - a. Air, Ducts and Equipment: 1 percent of instrument range.
 - b. Space: Within 1 percent of instrument range.
 - c. Water: Within 1 percent of instrument range.
- 6. Temperature, Dew Point:
 - a. Air: Within 0.5 deg F.
 - b. Space: Within 0.5 deg F.
- 7. Temperature, Dry Bulb:
 - a. Air: Within 0.5 deg F.
 - b. Space: Within 0.5 deg F.
 - c. Chilled Water: Within 0.5 deg F.
 - d. Heating Hot Water: Within 0.5 deg F.
- 8. Temperature, Wet Bulb:
 - a. Air: Within 0.5 deg F.
 - b. Space: Within 0.5 deg F.
- M. Environmental Conditions for Controllers, Gateways, and Routers:
 - 1. Products to operate without performance degradation under ambient environmental temperature, pressure, and humidity conditions encountered for installed location.
 - a. If product alone cannot comply with requirement, install product in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure to be internally insulated, electrically heated, cooled, and ventilated as required by product and application.
 - 2. Protect products with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. House products not available with integral enclosures complying with requirements indicated in protective secondary enclosures. Installed location dictates the following NEMA 250 enclosure requirements:

- a. Outdoors, Protected: Type 12.
 - b. Outdoors, Unprotected: Type 4X.
 - c. Indoors, Heated with Filtered Ventilation: Type 1.
 - d. Indoors, Heated with Non-Filtered Ventilation: Type 12.
 - e. Indoors, Heated and Air-Conditioned: Type 1.
 - f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: Type 4X.
 - 2) Air-Moving Equipment Rooms: Type 12.
 - g. Localized Areas Exposed to Washdown: Type 4X.
 - h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: Type 2.
 - i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: Type 4X.
 - j. Hazardous Locations: Explosion-proof rating for condition.
- N. Environmental Conditions for Instruments and Actuators:
- 1. Instruments and actuators to operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - a. If instruments and actuators alone cannot comply with requirement, install instruments and actuators in protective enclosures that are isolated and protected from conditions impacting performance. Enclosure is internally insulated, electrically heated, cooled, and ventilated as required by instrument and application.
 - 2. Protect instruments, actuators, and accessories with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. House instruments and actuators not available with integral enclosures complying with requirements indicated in protective secondary enclosures. Installed location is to dictate the following NEMA 250 enclosure requirements:
 - a. Outdoors, Protected: Type 12.
 - b. Outdoors, Unprotected: Type 4X.
 - c. Indoors, Heated with Filtered Ventilation: Type 1.
 - d. Indoors, Heated with Non-Filtered Ventilation: Type 12.
 - e. Indoors, Heated and Air-conditioned: Type 1.
 - f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: Type 4X.
 - 2) Air-Moving Equipment Rooms: Type 12.
 - g. Localized Areas Exposed to Washdown: Type 4X.
 - h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: Type 2.
 - i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: Type 4X.
 - j. Hazardous Locations: Explosion-proof rating for condition.
- O. Direct Digital Control System Reliability:

1. Design, install, and configure Direct Digital Control controllers, gateways and routers to yield a MTBF of at least 40,000 hours, based on a confidence level of at least 90 percent. MTBF value includes any failure for any reason to any part of products indicated.
2. If required to comply with MTBF indicated, include Direct Digital Control system and product redundancy to maintain DDC system, and associated systems and equipment being controlled, operational, and under automatic control.
3. See Drawings for critical systems and equipment that require a higher degree of Direct Digital Control system redundancy than MTBF indicated.

P. Electric Power Quality:

1. **Power-Line Surges:**

- a. Protect Direct Digital Control system products connected to ac power circuits from power-line surges to comply with requirements of IEEE C62.41.1 and IEEE C62.41.2.
- b. Do not use fuses for surge protection.
- c. Test protection in the normal mode and in the common mode, using the following two waveforms:
 - 1) 10-by-1000-microsecond waveform with a peak voltage of 1500 V and a peak current of 60 A.
 - 2) 8-by-20-microsecond waveform with a peak voltage of 1000 V and a peak current of 500 A.

2. **Power Conditioning:**

- a. Protect Direct Digital Control system products connected to ac power circuits from irregularities and noise rejection. Characteristics of power-line conditioner are as follows:
 - 1) At 85 percent load, output voltage to not deviate by more than plus or minus 1 percent of nominal when input voltage fluctuates between minus 20 percent to plus 10 percent of nominal.
 - 2) During load changes from zero to full load, output voltage to not deviate by more than 2 percent of nominal.
 - 3) Accomplish full correction of load switching disturbances within five cycles, and 95 percent correction within two cycles of onset of disturbance.
 - 4) Total harmonic distortion to not exceed 2 percent at full load.

3. **Ground Fault:** Protect products from ground fault by providing suitable grounding. Products to not fail due to ground fault condition.

Q. Backup Power Source:

1. Serve Direct Digital Control system products that control HVAC systems and equipment served by a backup power source also from a backup power source.

R. UPS:

1. Direct Digital Control system products powered by UPS units are to include the following:

- a. Servers.
 - b. Gateways.
 - c. Direct Digital Control controllers.
 - d. Desktop workstations.
- S. Continuity of Operation after Electric Power Interruption:
- 1. Equipment and associated factory-installed controls, field-installed controls, electrical equipment, and power supply connected to building normal and backup power systems are to automatically return equipment and associated controls to operating state occurring immediately before loss of normal power, without need for manual intervention by operator when power is restored either through backup power source or through normal power if restored before backup power is brought online.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. Verify compatibility with and suitability of substrates.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Examine walls, floors, roofs, and ceilings for suitable conditions where product will be installed.
- E. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 DIRECT DIGITAL CONTROL SYSTEM INTERFACE WITH OTHER SYSTEMS AND EQUIPMENT

- A. Communication Interface to Equipment with Integral Controls:
 - 1. Direct Digital Control system has communication interface with equipment having integral controls and having communication interface for remote monitoring or control.
 - 2. Equipment to Be Connected:

- a. Domestic water booster pumps specified in Section 221123.13 "Domestic-Water Packaged Booster Pumps."
- b. Domestic water pumps specified in Section 221123.21 "Inline, Domestic-Water Pumps"
- c. Sump pumps specified in Section 221429 "Sump Pumps."
- d. Vacuum Equipment for Laboratory specified in Section 226219 "Vacuum Equipment for Laboratory and Healthcare Facilities."
- e. Boilers specified in Section 235216 "Condensing Boilers."
- f. Air Source Heat Pumps specified in Section 236423.13 "Air Source Heat Pumps"
- g. Air-handling units specified in Section 237343.19 "Outdoor, Custom Air-Handling Units."
- h. Computer-room air-conditioning units specified in Section 238126 "Split-System Air-Conditioners"
- i. Switchboards specified in Section 262413 " Switchboards."
- j. Variable-frequency controllers specified in Section 262913.03 "Manual and Magnetic Motor Controllers."
- k. Diesel emergency engine generators specified in Section 263213.13 "Diesel Emergency Engine Generator."
- l. Gaseous emergency engine generators specified in Section 263213.16 "Gaseous Emergency Engine Generator."

B. Communication Interface to Other Building Systems:

1. Direct Digital Control system communicates with systems having communication interface.
2. Systems to Be Connected:
 - a. Elevators specified in Section 142400 "Hydraulic Elevators."
 - b. Fire-alarm system specified in Section 284621.11 "Addressable Fire-Alarm Systems."

3.4 PREINSTALLATION INTEGRATION TESTING

A. Perform the following pretesting of other systems and equipment integration with Direct Digital Control system before field installation:

1. Test all communications in a controlled environment to ensure connectivity.
2. Load software and demonstrate functional compliance with each control sequence of operation indicated.
3. Using simulation, demonstrate compliance with sequences of operation and other requirements indicated including, but not limited to, the following:
 - a. HVAC equipment controlled through Direct Digital Control system, such as boilers, chillers, pumps, and air-handling units.
 - b. Equipment faults and system recovery with fault annunciation.
 - c. Analog and Boolean value alarming and annunciation.
4. Develop a method for testing interfaces before deployment.
5. Submit documentation supporting compliance upon request.

3.5 DIRECT DIGITAL CONTROL SYSTEM INTERFACE WITH EXISTING SYSTEMS

A. Interface with Existing Systems:

1. Interface Direct Digital Control systems with existing systems to achieve integration indicated.
2. Monitoring and Control of Direct Digital Control System by Existing Control System:
 - a. Satisfy Direct Digital Control system performance requirements when monitoring and controlling Direct Digital Control system by existing control system.
 - b. Operator of existing system to upload, download, monitor, trend, control, and program every I/O point in Direct Digital Control system from existing control system using existing control system software and operator workstations.
 - c. Make interface so operator of existing system is not required to learn new software for remote monitoring and control from existing control system.
 - d. Make interface of Direct Digital Control system into existing control system transparent to operators of existing control system and allow operators to program, monitor, and control Direct Digital Control system from any operator workstation connected to existing control system.
3. Integration of Existing Control System into Direct Digital Control System:
 - a. Satisfy existing control system performance requirements when monitoring and controlling existing control system through Direct Digital Control system.
 - b. Operator to upload, download, monitor, alarm, report, trend, control, and program every I/O point in existing system from Direct Digital Control system using operator workstations and software provided. Combined systems to share one database.
 - c. Make interface of existing control system I/O points into Direct Digital Control system transparent to operators. Make all operational capabilities identical regardless of whether I/O already exists, or I/O is being installed.

3.6 CONTROL DEVICES FOR INSTALLATION BY INSTALLERS

- A. Deliver selected control devices, specified in indicated HVAC instrumentation and control device Sections, to identified equipment and systems manufacturers for factory installation and to identified installers for field installation.
- B. Deliver the following to duct fabricator and Installer for installation in ductwork. Include installation instructions to Installer and supervise installation for compliance with requirements.
 1. Control dampers, which are specified in Section 230923.12 "Control Dampers."
 2. Airflow sensors and switches, which are specified in Section 230923.14 "Flow Instruments."
 3. Pressure sensors, which are specified in Section 230923.23 "Pressure Instruments."
- C. Deliver the following to plumbing and HVAC piping installers for installation in piping. Include installation instructions to Installer and supervise installation for compliance with requirements.
 1. Control valves, which are specified in Section 230923.11 "Control Valves."

2. Pipe-mounted flow meters, which are specified in Section 230923.14 "Flow Instruments."
3. Pipe-mounted sensors, switches, and transmitters. Flow meters are specified in Section 230923.14 "Flow Instruments."
4. Tank-mounted sensors, switches, and transmitters. Pressure sensors, switches, and transmitters are specified in Section 230923.23 "Pressure Instruments."
5. Liquid temperature sensors, switches, and transmitters are specified in Section 230923.27 "Temperature Instruments."
6. Pipe- and tank-mounted thermowells. Liquid thermowells are specified in Section 230923.27 "Temperature Instruments."

3.7 CONTROL DEVICES FOR EQUIPMENT MANUFACTURER FACTORY INSTALLATION

A. Deliver the following to air-handling unit manufacturer for factory installation. Include installation instructions to air-handling unit manufacturer and supervise installation for compliance with requirements.

1. Programmable application or application-specific controller.
2. Unit-mounted Direct Digital Control control dampers and actuators, which are specified in Section 230923.12 "Control Dampers."
3. Unit-mounted airflow sensors, switches, and transmitters, which are specified in Section 230923.14 "Flow Instruments."
4. Unit-mounted leak-detection switches, which are specified in Section 230923.18 "Leak Detection Instruments."
5. Unit-mounted pressure sensors, switches, and transmitters, which are specified in Section 230923.23 "Pressure Instruments."
6. Unit-mounted temperature sensors, switches, and transmitters. Air-temperature sensors, switches, and transmitters are specified in Section 230923.27 "Temperature Instruments."
7. Relays.

B. Deliver the following to terminal unit manufacturer for factory installation. Include installation instructions to terminal unit manufacturer.

1. Programmable application or application-specific controller.
2. Electric damper actuator. Damper actuators are specified in Section 230923.12 "Control Dampers."
3. Unit-mounted flow and pressure sensors, transmitters, and transducers. Flow sensors, transmitters, and transducers are specified in Section 230923.14 "Flow Instruments." Pressure sensors, switches, and transmitters are specified in Section 230923.23 "Pressure Instruments."
4. Unit-mounted temperature sensors. Air-temperature sensors, switches, and transmitters are specified in Section 230923.27 "Temperature Instruments."
5. Relays.

C. Deliver the following to fan-coil unit manufacturer for factory installation. Include installation instructions to fan-coil unit manufacturer.

1. Programmable application or application-specific controller.
2. Unit-mounted temperature sensors. Air-temperature sensors, switches, and transmitters are specified in Section 230923.27 "Temperature Instruments."
3. Flow and pressure switches. Air and liquid flow sensors, transmitters, and transducers are specified in Section 230923.14 "Flow Instruments." Pressure sensors, switches, and transmitters are specified in Section 230923.23 "Pressure Instruments."

4. Leak-detection switches, which are specified in Section 230923.18 "Leak Detection Instruments."
5. Relays.

3.8 GENERAL INSTALLATION REQUIREMENTS

- A. Install products to satisfy more stringent of all requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Support products, tubing, piping wiring, and raceways. Brace products to prevent lateral movement and sway or a break in attachment when subjected to 50 LB force.
- D. If NYC Mechanical Code is more stringent than requirements indicated, comply with requirements in codes and referenced standards.
- E. Fabricate openings and install sleeves in ceilings, floors, roof, and walls required by installation of products. Before proceeding with drilling, punching, and cutting, check for concealed work to avoid damage. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- F. Firestop Penetrations Made in Fire-Rated Assemblies: Comply with requirements in Section 078413 "Penetration Firestopping."
- G. Seal penetrations made in acoustically rated assemblies. Comply with requirements in Section 079200 "Joint Sealants."
- H. Welding Requirements:
 1. Restrict welding and burning to supports and bracing.
 2. No equipment is cut or welded without approval. Welding or cutting will not be approved if there is risk of damage to adjacent Work.
 3. Welding, where approved, is to be by inert-gas electric arc process and is to be performed by qualified welders in accordance with applicable welding codes.
 4. If requested on-site, show satisfactory evidence of welder certificates indicating ability to perform welding work intended.
- I. Fastening Hardware:
 1. Wrenches, pliers, and other tools that damage surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening fasteners.
 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- J. If product locations are not indicated, install products in locations that are accessible and that will permit service and maintenance from floor, equipment platforms, or catwalks without removal of permanently installed furniture and equipment.
- K. Corrosive Environments:

1. Avoid or limit use of materials in corrosive airstreams and environments including, but not limited to, the following:
 - a. Laboratory exhaust-air streams.
 - b. Process exhaust-air streams.
2. When conduit is in contact with a corrosive airstream and environment, use Type 316 stainless steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment. Comply with requirements for installation of raceways and boxes specified in Section 260533 "Raceway and Boxes for Electrical Systems."
3. Where instruments are located in a corrosive airstream and are not already corrosive resistant from instrument manufacturer, field install products in NEMA 250, Type 4X instrument enclosure constructed of Type 316L stainless steel.

3.9 INSTALLATION OF WORKSTATIONS

A. Color Graphics Application:

1. Use system schematics indicated on Drawings as starting point to create graphics.
2. Develop Project-specific library of symbols for representing system equipment and products.
3. Incorporate digital images of Project-completed installation into graphics where beneficial to enhance effect.
4. Submit sketch of graphic layout with description of all text for each graphic for Commissioner's review before creating graphic using graphics software.
5. Seek City of New York input in graphics development once using graphics software.
6. Make final editing on-site with Commissioner's review and feedback.
7. Refine graphics as necessary for Commissioner acceptance.
8. On receiving Commissioner acceptance, print a PDF file of each graphic and include with softcopy of Direct Digital Control system operation and maintenance manual.

B. Retractable, Wall-Mounted Cabinet for Portable Operator's Workstation Installation:

1. Install retractable, wall-mounted portable operator's workstation cabinet(s) at location(s) indicated on Drawings.
2. Install retractable, wall-mounted portable operator's workstation cabinet(s) at following location(s) and at additional locations indicated on Drawings:
 - a. Each mechanical room.
 - b. Boiler room.
3. Connect each cabinet to 120 V, single-phase, 60 Hz field power source and install single gang electrical box with NEMA WD 6, Type 20R duplex receptacle and metal cover plate in cabinet. Comply with requirements in Section 262726 "Wiring Devices."
4. Connect each cabinet to Ethernet network and install an Ethernet network port for connection to portable operator workstation Ethernet cable. Comply with requirements in Section 271500 "Communications Horizontal Cabling."

3.10 INSTALLATION OF GATEWAYS

- A. Install gateways if required for Direct Digital Control system communication interface requirements indicated.
 - 1. Install gateway(s) required to suit indicated requirements.
- B. Test gateways to verify that communication interface functions properly.

3.11 INSTALLATION OF ROUTERS

- A. Install routers if required for Direct Digital Control system communication interface requirements indicated.
 - 1. Install router(s) required to suit indicated requirements.
- B. Test routers to verify that communication interface functions properly.

3.12 INSTALLATION OF CONTROLLERS

- A. Install controllers in enclosures to comply with indicated requirements.
- B. Connect controllers to field power supply and to UPS units where indicated.
- C. Install controllers with latest version of applicable software and configure to execute requirements indicated.
- D. Test and adjust controllers to verify operation of connected I/O to achieve performance indicated requirements while executing sequences of operation.

3.13 ELECTRIC POWER CONNECTIONS

- A. Connect electrical power to Direct Digital Control system products requiring electrical power connections.
- B. Design of electrical power to products not indicated with electric power is delegated to Direct Digital Control system provider and installing trade to provide a fully functioning Direct Digital Control system. Work is to comply with NFPA 70 and other requirements indicated.
- C. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers" for electrical power circuit breakers.
- D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power conductors and cables.
- E. Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems" for electrical power raceways and boxes.

3.14 NETWORK NAMING AND NUMBERING

- A. Coordinate with Commissioner and provide unique naming and addressing for networks and devices.
- B. ASHRAE 135 Networks:
 - 1. MAC Address:
 - a. Assign and document a MAC address unique to its network for every network device.
 - b. Ethernet Networks: Document MAC address assigned at its creation.
 - c. MS/TP Networks: Assign from 00 to 64.
 - 2. Network Numbering:
 - a. Assign unique numbers to each new network.
 - b. Provide ability for changing network number through device switches or operator interface.
 - c. Direct Digital Control system, with all possible connected LANs, can contain up to 65,534 unique networks.
 - 3. Device Object Identifier Property Number:
 - a. Assign unique device object identifier property numbers or device instances for each device network.
 - b. Provide for future modification of device instance number by device switches or operator interface.
 - c. LAN is to support up to 4,194,302 unique devices.
 - 4. Device Object Name Property Text:
 - a. Device object name property field to support 32 minimum printable characters.
 - b. Assign unique device "Object Name" property names with plain-English descriptive names for each device.
 - 1) Example 1: Device object name for device controlling heating water boiler plant at Building 1000 would be "Heating Water System Bldg. 1000."
 - 2) Example 2: Device object name for VAV terminal unit controller could be "VAV Unit 102."
 - 5. Object Name Property Text for Other Than Device Objects:
 - a. Object name property field is to support 32 minimum printable characters.
 - b. Assign object name properties with plain-English names descriptive of application.
 - 1) Example 1: "Zone 1 Temperature."
 - 2) Example 2 "Fan Start and Stop."
 - 6. Object Identifier Property Number for Other Than Device Objects:

- a. Assign object identifier property numbers according to Drawings or tables indicated.

If not indicated, object identifier property numbers may be assigned at Installer's discretion but must be approved by Commissioner in advance, be documented, and be unique for like object types within device

3.15 DIRECT DIGITAL CONTROL SYSTEM I/O CHECKOUT PROCEDURES

- A. Check installed products before continuity tests, leak tests, and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation on direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
- D. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.
- E. For pneumatic products, verify that air supply for each product is properly installed.
- F. Control Damper Checkout:
 1. For pneumatic control dampers, verify that pressure gauges are provided in each air line connected to the damper actuator and positioner.
 2. Verify that control dampers are installed correctly for flow direction.
 3. Verify that proper blade alignment, either parallel or opposed, has been provided.
 4. Verify that damper frame attachment is properly secured and sealed.
 5. Verify that damper actuator and linkage attachment are secure.
 6. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
 7. Verify that damper blade travel is unobstructed.
- G. Control Valve Checkout:
 1. For pneumatic control valves, verify that pressure gauges are provided in each air line connected to the valve actuator and positioner.
 2. Verify that control valves are installed correctly for flow direction.
 3. Verify that valve body attachment is properly secured and sealed.
 4. Verify that valve actuator and linkage attachment are secure.
 5. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
 6. Verify that valve ball, disc, or plug travel is unobstructed.
 7. After piping systems have been tested and put into service, but before insulating and balancing, inspect each valve for leaks. Adjust or replace packing to stop leaks. Replace valve if leaks persist.
- H. Instrument Checkout:
 1. Verify that instrument is correctly installed for location, orientation, direction, and operating clearances.
 2. Verify that attachment is properly secured and sealed.
 3. Verify that conduit connections are properly secured and sealed.

4. Verify that wiring is properly labeled with unique identification, correct type, and size and is securely attached to proper terminals.
5. Inspect instrument tag against approved submittal.
6. For instruments with tubing connections, verify that tubing attachment is secure and isolation valves have been provided.
7. For flow instruments, verify that recommended upstream and downstream distances have been maintained.
8. For temperature instruments, verify the following:
 - a. Sensing element type and proper material.
 - b. Length and insertion.

3.16 DIRECT DIGITAL CONTROL SYSTEM I/O ADJUSTMENT, CALIBRATION, AND TESTING

- A. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
- B. Provide written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
- C. For each analog instrument, make three-point test of calibration for both linearity and accuracy.
- D. Equipment and procedures used for calibration to comply with instrument manufacturer's written instructions.
- E. Provide diagnostic and test equipment for calibration and adjustment.
 1. Use field testing and diagnostic instruments and equipment with an accuracy at least twice the instrument accuracy of instrument to be calibrated. For example, test and calibrate an installed instrument with accuracy of 1 percent using field testing and diagnostic instrument with accuracy of 0.5 percent or better.
- F. Calibrate each instrument in accordance with instruction manual supplied by instrument manufacturer.
- G. If after calibration the indicated performance cannot be achieved, replace out-of-tolerance instruments.
- H. Comply with field testing requirements and procedures indicated by ASHRAE's Guideline 11, "Field Testing of HVAC Controls Components," in the absence of specific requirements, and to supplement requirements indicated.
- I. Analog Signals:
 1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
 2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
 3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.
- J. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact making or breaking.

K. Control Dampers:

1. Stroke and adjust control dampers following manufacturer's recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
2. Stroke pneumatic control dampers with pilot positioners. Adjust damper and positioner following manufacturer's recommended procedure, so damper is 100 percent closed, 50 percent closed, and 100 percent open at proper air pressures.
3. Check and document open and close cycle times for applications with cycle time less than 30 seconds.
4. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

L. Control Valves:

1. Stroke and adjust control valves following manufacturer's recommended procedure, from 100 percent open to 100 percent closed and back to 100 percent open.
2. Stroke pneumatic control valves with pilot positioners. Adjust valve and positioner following manufacturer's recommended procedure, so valve is 100 percent closed, 50 percent closed, and 100 percent open at proper air pressures.
3. Check and document open and close cycle times for applications with cycle time less than 30 seconds.
4. For control valves equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

M. Meters: Check meters at zero, 50, and 100 percent of Project design values.

N. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

O. Switches: Calibrate switches to make or break contact at set points indicated.

P. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistant source.

3.17 DIRECT DIGITAL CONTROL SYSTEM CONTROLLER CHECKOUT

A. Verify power supply.

1. Verify voltage, phase, and hertz.
2. Verify that protection from power surges is installed and functioning.
3. Verify that ground fault protection is installed.
4. If applicable, verify if connected to UPS unit.
5. If applicable, verify if connected to backup power source.

6. If applicable, verify that power conditioning units are installed.

B. Verify that wire and cabling are properly secured to terminals and labeled with unique identification.

C. Verify that spare I/O capacity is provided.

3.18 DIRECT DIGITAL CONTROL CONTROLLER I/O CONTROL LOOP TESTS

A. Testing:

1. Test every I/O point connected to Direct Digital Control controller to verify that safety and operating control set points are as indicated and as required to operate controlled system safely and at optimum performance.
2. Test every I/O point throughout its full operating range.
3. Test every control loop to verify that operation is stable and accurate.
4. Adjust control loop proportional, integral, and derivative settings to achieve optimum performance while complying with performance requirements indicated. Document testing of each control loop's precision and stability via trend logs.
5. Test and adjust every control loop for proper operation according to sequence of operation.
6. Test software and hardware interlocks for proper operation. Correct deficiencies.
7. Operate each analog point at the following:
 - a. Upper quarter of range.
 - b. Lower quarter of range.
 - c. At midpoint of range.
8. Exercise each binary point.
9. For every I/O point in Direct Digital Control system, read and record each value at operator workstation, at Direct Digital Control controller, and at field instrument simultaneously. Value displayed at operator workstation, at Direct Digital Control controller, and at field instrument must match.
10. Prepare and submit report documenting results for each I/O point in Direct Digital Control system and include in each I/O point a description of corrective measures and adjustments made to achieve desired results.

3.19 DIRECT DIGITAL CONTROL SYSTEM VALIDATION TESTS

- A. Perform validation tests before requesting final review of system. Before beginning testing, first submit Pretest Checklist and Test Plan.
- B. After review or approval of Pretest Checklist and Test Plan, execute all tests and procedures indicated in plan.
- C. After testing is complete, submit completed Pretest Checklist.
- D. Pretest Checklist: Submit the following list with items checked off once verified:
 1. Detailed explanation for any items that are not completed or verified.

2. Required mechanical installation work is successfully completed and HVAC equipment is working correctly.
3. HVAC equipment motors operate below full-load amperage ratings.
4. Required Direct Digital Control system components, wiring, and accessories are installed.
5. Installed Direct Digital Control system architecture matches approved Drawings.
6. Control electric power circuits operate at proper voltage and are free from faults.
7. Required surge protection is installed.
8. Direct Digital Control system network communications function properly, including uploading and downloading programming changes.
9. Using BACnet protocol analyzer, verify that communications are error free.
10. Each controller's programming is backed up.
11. Equipment, products, tubing, wiring cable, and conduits are properly labeled.
12. All I/O points are programmed into controllers.
13. Testing, adjusting, and balancing work affecting controls is complete.
14. Dampers and actuators zero and span adjustments are set properly.
15. Each control damper and actuator goes to failed position on loss of power and loss of signal.
16. Valves and actuators zero and span adjustments are set properly.
17. Each control valve and actuator goes to failed position on loss of power and loss of signal.
18. Meter, sensor, and transmitter readings are accurate and calibrated.
19. Control loops are tuned for smooth and stable operation.
20. View trend data where applicable.
21. Each controller works properly in standalone mode.
22. Safety controls and devices function properly.
23. Interfaces with fire-alarm system function properly.
24. Electrical interlocks function properly.
25. Operator workstations and other interfaces are delivered, all system and database software is installed, and graphics are created.
26. Record Drawings are completed.

E. Test Plan:

1. Prepare and submit validation Test Plan including test procedures for performance validation tests.
2. Address all specified functions of Direct Digital Control system and sequences of operation in Test Plan.
3. Explain detailed actions and expected results to demonstrate compliance with requirements indicated.
4. Explain method for simulating necessary conditions of operation used to demonstrate performance.
5. Include Test Checklist to be used to check and initial that each test has been successfully completed.
6. Submit Test Plan documentation 10 business days before start of tests.

F. Validation Test:

1. Verify operating performance of each I/O point in Direct Digital Control system.
 - a. Verify analog I/O points at operating value.
 - b. Make adjustments to out-of-tolerance I/O points.
 - 1) Identify I/O points for future reference.
 - 2) Simulate abnormal conditions to demonstrate proper function of safety devices.

- 3) Replace instruments and controllers that cannot maintain performance indicated after adjustments.
 2. Simulate conditions to demonstrate proper sequence of control.
 3. Readjust settings to design values and observe ability of Direct Digital Control system to establish desired conditions.
 4. 24 hours after initial validation test, do as follows:
 - a. Re-check I/O points that required corrections during initial test.
 - b. Identify I/O points that still require additional correction and make corrections necessary to achieve desired results.
 5. 24 Hours after second validation test, do as follows:
 - a. Re-check I/O points that required corrections during second test.
 - b. Continue validation testing until I/O point is normal on two consecutive tests.
 6. Completely check out, calibrate, and test all connected hardware and software to ensure that Direct Digital Control system performs according to requirements indicated.
 7. After validation testing is complete, prepare and submit report indicating results of testing. For all I/O points that required correction, indicate how many validation re-tests it took to pass. Identify adjustments made for each test and indicate instruments that were replaced.
- G. Direct Digital Control System Response Time Test:
1. Simulate HLC.
 - a. Heavy load to be occurrence of 50 percent of total connected binary COV, one-half of which represents "alarm" condition, and 50 percent of total connected analog COV, one-half of which represents "alarm" condition, that are initiated simultaneously on a one-time basis.
 2. Initiate 10 successive occurrences of HLC and measure response time to typical alarms and status changes.
 3. Measure with timer having at least 0.1-second resolution and 0.01 percent accuracy.
 4. Purpose of test is to demonstrate Direct Digital Control system, as follows:
 - a. Reaction to COV and alarm conditions during HLC.
 - b. Ability to update Direct Digital Control system database during HLC.
 5. Passing test is contingent on the following:
 - a. Alarm reporting at printer beginning no more than two seconds after initiation (time zero) of HLC.
 - b. All alarms, both binary and analog, are reported and printed; none are lost.
 - c. Compliance with response times specified.
 6. Prepare and submit report documenting HLC tested and results of test including time stamp and print out of all alarms.
- H. Direct Digital Control System Network Bandwidth Test:

1. Test network bandwidth usage on all Direct Digital Control system networks to demonstrate bandwidth usage under Direct Digital Control system normal operating conditions and under simulated HLC.
2. To pass, none of Direct Digital Control system networks are to use more than 70 percent of available bandwidth under normal and HLC operation.

3.20 VERIFICATION OF Direct Digital Control SYSTEM WIRELESS NETWORK

- A. Direct Digital Control system Installer is to design wireless Direct Digital Control system networks to comply with performance requirements indicated.
- B. Verify wireless network performance through field testing and document results in a field test report.
- C. Testing and verification of all wireless devices to include, but not be limited to, the following:
 1. Speed.
 2. Online status.
 3. Signal strength.

3.21 FINAL REVIEW

- A. Submit written request to Commissioner and Commissioning Agent when Direct Digital Control system is ready for final review. State the following:
 1. Direct Digital Control system has been thoroughly inspected for compliance with Contract Documents and found to be in full compliance.
 2. Direct Digital Control system has been calibrated, adjusted, and tested and found to comply with requirements of operational stability, accuracy, speed, and other performance requirements indicated.
 3. Direct Digital Control system monitoring and control of HVAC systems results in operation according to sequences of operation indicated.
 4. Direct Digital Control system is complete and ready for final review.
- B. Upon receipt of written request for final review, Commissioner and Commissioning Agent to start review within 10 business days and upon completion issue field report(s) documenting observations and deficiencies.
- C. Take prompt action to remedy deficiencies indicated in reviewer's field report(s) and submit second written request after all deficiencies have been corrected. Repeat process until no deficiencies are reported.
- D. Prepare and submit closeout submittals and begin procedures indicated in "Extended Operation Test" Article when no deficiencies are reported.
- E. Part of Direct Digital Control system final review shall to include demonstration to parties participating in final review.
 1. Provide staff familiar with Direct Digital Control system installed to demonstrate operation of Direct Digital Control system during final review.

2. Provide testing equipment to demonstrate accuracy and other performance requirements of Direct Digital Control system that is requested by reviewers during final review.
3. Demonstration to include, but not be limited to, the following:
 - a. Accuracy and calibration of 10 I/O points randomly selected by reviewers. If review finds that some I/O points are not properly calibrated and not satisfying performance requirements indicated, additional I/O points may be selected by reviewers until total I/O points being reviewed that satisfy requirements equals quantity indicated.
 - b. HVAC equipment and system hardwired and software safeties and life-safety functions are operating according to sequence of operation. Up to 10 I/O points to be randomly selected by reviewers. Additional I/O points may be selected by reviewers to discover problems with operation.
 - c. Correct sequence of operation after electrical power interruption and resumption after electrical power is restored for randomly selected HVAC systems.
 - d. Operation of randomly selected dampers and valves in normal-on, normal-off, and failed positions.
 - e. Reporting of alarm conditions for randomly selected alarms, including different classes of alarms, to ensure that alarms are properly received by operators and operator workstations.
 - f. Trends, summaries, logs, and reports set up for Project.
 - g. For up to three HVAC systems randomly selected by reviewers, use graph trends to show that sequence of operation is executed in correct manner and that HVAC systems operate properly through complete sequence of operation including different modes of operations indicated. Show that control loops are stable and operating at set points and respond to changes in set point of 20 percent or more.
 - h. Software's ability to communicate with controllers, operator workstations, and uploading and downloading of control programs.
 - i. Software's ability to edit control programs offline.
 - j. Data entry to show Project-specific customizing capability including parameter changes.
 - k. Step through penetration tree, display all graphics, demonstrate dynamic update, and direct access to graphics.
 - l. Execution of digital and analog commands in graphic mode.
 - m. Spreadsheet and curve plot software and its integration with database.
 - n. Online user guide and help functions.
 - o. Multitasking by showing different operations occurring simultaneously on four quadrants of split screen.
 - p. System speed of response compared to requirements indicated.
 - q. For Each Network and Programmable Application Controller:
 - 1) Memory: Programmed data, parameters, trend, and alarm history collected during normal operation are not to be lost during power failure.
 - 2) Operator Interface: Ability to connect directly to each type of digital controller with portable workstation and mobile device. Show that maintenance personnel interface tools perform as indicated in manufacturer's technical literature.
 - 3) Standalone Ability: Demonstrate that controllers provide stable and reliable standalone operation using default values or other method for values normally read over network.
 - 4) Electric Power: Ability to disconnect any controller safely from its power source.
 - 5) Wiring Labels: Match control drawings.
 - 6) Network Communication: Ability to locate controller's location on network and communication architecture matches Shop Drawings.

- 7) Nameplates and Tags: Accurate and permanently attached to control panel doors, instrument, actuators, and devices.
- r. For Each Operator Workstation:
 - 1) I/O points lists agree with naming conventions.
 - 2) Graphics are complete.
 - 3) UPS unit, if applicable, operates.
- s. Communications and Interoperability: Demonstrate proper interoperability of data sharing, alarm and event management, trending, scheduling, and device and network management. Use ASHRAE 135 protocol analyzer to help identify devices, view network traffic, and verify interoperability. Requirements must be met even if only one manufacturer's equipment is installed.
 - 1) Data Presentation: On each operator workstation, demonstrate graphic display capabilities.
 - 2) Reading of Any Property: Demonstrate ability to read and display any used readable object property of any device on network.
 - 3) Set-Point and Parameter Modifications: Show ability to modify set points and tuning parameters indicated. Modifications are made with messages and write services initiated by operator using workstation graphics, or by completing a field in menu with instructional text.
 - 4) Peer-to-Peer Data Exchange: Network devices are installed and configured to perform without need for operator intervention to implement Project sequence of operation and to share global data.
 - 5) Alarm and Event Management: Alarms and events are installed and prioritized according to City of New York. Demonstrate that time delays and other logic are set up to avoid nuisance tripping. Show that operators with sufficient privileges are permitted.
 - 6) Schedule Lists: Schedules are configured for start and stop, mode change, occupant overrides, and night setback as defined in sequence of operations.
 - 7) Schedule Display and Modification: Ability to display any schedule with start and stop times for calendar year. Show that all calendar entries and schedules are modifiable from any connected operator workstation by an operator with sufficient privilege.
 - 8) Archival Storage of Data: Data archiving is handled by operator workstation and server and local trend archiving and display is accomplished.
 - 9) Modification of Trend Log Object Parameters: Operator with sufficient privilege can change logged data points, sampling rate, and trend duration.
 - 10) Device and Network Management:
 - a) Display of network device status.
 - b) Display of BACnet object information.
 - c) Silencing devices transmitting erroneous data.
 - d) Time synchronization.
 - e) Remote device re-initialization.
 - f) Backup and restore network device programming and master database(s).
 - g) Configuration management of routers.

3.22 EXTENDED OPERATION TEST

- A. Operate Direct Digital Control system for operating period of 14 consecutive calendar days following Substantial Completion. Coordinate exact start date of testing with Commissioner.
- B. Provide operator familiar with Direct Digital Control system installed to man an operator workstation while on-site during eight hours of each normal business day occurring during operating period.
- C. During operating period, Direct Digital Control system to demonstrate correct operation and accuracy of monitored and controlled points as well as operation capabilities of sequences, logs, trends, reports, specialized control algorithms, diagnostics, and other software indicated.
 - 1. Correct defects of hardware and software when they occur.
- D. Definition of Failures and Downtime during Operating Period:
 - 1. Failed I/O point constituting downtime is I/O point failing to perform its intended function consistently and a point physically failed due to hardware and software.
 - 2. Downtime is when any I/O point in Direct Digital Control system is unable to fulfill its required function.
 - 3. Calculate downtime as elapsed time between detected point failure as confirmed by operator, and time point is restored to service.
 - 4. Maximum time interval allowed between Direct Digital Control system detection of failure occurrence and operator confirmation is to be 0.5 hours.
 - 5. Log downtime in hours to nearest 0.1 hour.
 - 6. Power outages do not count as downtime, but do suspend test hours unless systems are provided with UPS and served through a backup power source.
 - 7. Hardware or software failures caused by power outages do count as downtime.
- E. During operating period, log downtime and operational problems are encountered.
 - 1. Identify source of problem.
 - 2. Provide written description of corrective action taken.
 - 3. Record duration of downtime.
 - 4. Maintain log showing the following:
 - a. Time of occurrence.
 - b. Description of each occurrence and pertinent written comments for reviewer to understand scope and extent of occurrence.
 - c. Downtime for each failed I/O point.
 - d. Running total of downtime and total time of I/O point after each problem has been restored.
 - 5. Make log available to Commissioner for review at any time.
- F. For Direct Digital Control system to pass extended operation test, total downtime is limited to 1 percent of total point-hours during operating period.

1. If Direct Digital Control system testing results fail to comply with minimum requirements of passing at end of operating period indicated, extend operating period one consecutive day at a time until Direct Digital Control system passes requirement.

G. Base evaluation of Direct Digital Control system passing test on the following calculation:

1. Count downtime on point-hour basis where total number of Direct Digital Control system point-hours is equal to total number of I/O points in Direct Digital Control system multiplied by total number of hours during operating period.
2. One point-hour of downtime is one I/O point down for one hour. For example, three I/O points down for five hours is total of 15 point-hours of downtime. Four points down for one-half hour is two point-hours of downtime.
3. Example Calculation: Maximum allowable downtime for 30-day test for Direct Digital Control system with 1000 total I/O points (combined analog and binary) and passing score of 1 percent downtime is computed by 30 days x 24 h/day x 1000 points x 1 percent equals 7200 point-hours of maximum allowable downtime.

H. Prepare test and inspection reports.

3.23 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.24 MAINTENANCE SERVICE

- A. Beginning at Substantial Completion, verify that maintenance service includes 12 months' full maintenance by Direct Digital Control system manufacturer's authorized service representative. Include monthly preventive maintenance, repair or replacement of worn or defective components, cleaning, calibration, and adjusting as required for proper operation. Use only manufacturer's authorized replacement parts and supplies.

3.25 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, verify that service agreement includes software support for one year.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year(s) from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.
 1. Upgrade Notice: No fewer than 30 days to allow City of New York to schedule and access system and to upgrade computer equipment if necessary.

3.26 DEMONSTRATION

- A. Engage a factory-authorized service representative with complete knowledge of Project-specific system installed to instruct City of New York's personnel to adjust and operate Direct Digital Control system.
1. Base extent of instruction on scope and complexity of Direct Digital Control system indicated.
 2. Submit outline of instruction for Commissioner's review at least 10 business day before scheduling instruction.
 3. Coordinate with Commissioner location of instruction and schedule instruction a minimum of 20 business days before expected Substantial Completion.
 4. Provide each attendee with hard copies, and DVD or flash-drive with PDF copy of all materials and visual presentations.
 5. Provide City of New York digital video and audio recordings of instruction.

END OF SECTION 230923

SECTION 230923.11 - CONTROL VALVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes control valves and actuators for Direct Digital Control systems.

1.3 DEFINITIONS

- A. Cv: Design valve coefficient.
- B. NBR: Nitrile butadiene rubber.
- C. PTFE: Polytetrafluoroethylene
- D. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label products to comply with ASME Boiler and Pressure Vessel Code where required by Manufacturer.

- C. Engineering Services: Engage a qualified professional engineer licensed in the State of New York as defined in DDC General Conditions, to size products where indicated.
- D. Ground Fault: Products shall not fail due to ground fault condition when suitably grounded.
- E. Backup Power Source: Systems and equipment served by a backup power source shall have associated control valve actuators served from a backup power source.
- F. Environmental Conditions:
 - 1. Provide electric control valve actuators, with protective enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Electric control valve actuators not available with integral enclosures, complying with requirements indicated, shall be housed in protective secondary enclosures.
 - a. Hazardous Locations: Explosion-proof rating for condition.
- G. Determine control valve sizes and flow coefficients by ISA 75.01.01.
- H. Control valve characteristics and rangeability shall comply with ISA 75.11.01.
- I. Selection Criteria:
 - 1. Control valves shall be suitable for operation at following conditions:
 - a. Chilled Water: 150 psig.
 - b. Heating Hot Water: 150 psig.
 - 2. Control valve shutoff classifications shall be FCI 70-2, Class IV or better unless otherwise indicated.
 - 3. Valve pattern, three-way or straight through, shall be as indicated on Drawings.
 - 4. Modulating straight-through pattern control valves shall have equal percentage flow-throttling characteristics unless otherwise indicated.
 - 5. Modulating three-way pattern water valves shall have linear flow-throttling characteristics. The total flow through the valve shall remain constant regardless of the valve's position.
 - 6. Modulating butterfly valves shall have linear flow-throttling characteristics.
 - 7. Fail positions unless otherwise indicated:
 - a. Chilled Water: Open.
 - b. Heating Hot Water: Open.
 - 8. Globe-type control valves shall pass the design flow required with not more than 95 percent of stem lift unless otherwise indicated.
 - 9. Rotary-type control valves, such as ball and butterfly valves, shall have Cv falling between 65 and 75 degrees of valve full open position and minimum valve Cv between 15 and 25 percent of open position.
 - 10. Selection shall consider viscosity, flashing, and cavitation corrections.
 - 11. Valves shall have stable operation throughout full range of operation, from design to minimum Cv.
 - 12. Minimum Cv shall be calculated at 15 percent of design flow, with a coincident pressure differential equal to the system design pump head.

13. In water systems, select modulating control valves at terminal equipment for a design Cv based on a pressure drop of 5 psig at design flow unless otherwise indicated.
14. Two-position control valves shall be line size unless otherwise indicated.
15. In water systems, use ball- or globe-style control valves for two-position control for valves NPS 2 and smaller and butterfly style for valves larger than NPS 2.
16. Pneumatic, two-position control valves shall provide a smooth opening and closing characteristic slow enough to avoid water hammer. Valves with pneumatic actuators shall have an adjustable opening time (valve full closed to full open) and an adjustable closing time (valve full open to full closed) ranging from zero to 10 seconds. Opening and closing times shall be independently adjustable.
17. Control valve, pneumatic-control signal shall not exceed 200 feet. For longer distances, provide an electric/electronic control signal to the valve and an electric solenoid valve or electro-pneumatic transducer at the valve to convert the control signal to pneumatic.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for valves installed in piping to verify actual locations of piping connections before installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 CONTROL VALVE APPLICATIONS

- A. Control Valves:
 1. Select from valves specified in "Control Valves" Article to achieve performance requirements and characteristics indicated while subjected to full range of system operation encountered.
 2. Chilled water System and Hot water System, Two-Way Applications Controlled by Flow: Ball valves with full ball and characterized V-notch or Globe-style, industrial-grade, straight-through valves.
 3. Chilled water System and Hot water System, Two-Way Applications Controlled by Pressure: Ball valves with full ball and characterized V-notch, or Globe-style, two-way valves.
 4. Chilled water System and Hot water System, Two-Way Applications Controlled by Temperature: Ball valves with full ball and characterized V-notch, Globe-style, two-way valves, or Globe-style, industrial-grade, straight-through valves.
 5. Hot water System, Three Way, Controlled by Temperature: Globe-style, three-way valves.

3.4 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy most stringent requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Properly support instruments, tubing, piping, wiring, and conduits to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a 5 force.
- D. Provide ceiling, floor, roof, and wall openings and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- E. Firestop penetrations made in fire-rated assemblies and seal penetrations made in acoustically rated assemblies.
- F. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that will cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- G. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for City of New York's access, confirm unrestricted ladder placement is possible under occupied condition.
- H. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they will be subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to, the following:
 - a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
 - 3. Use Type 316 stainless-steel tubing and fittings when in contact with a corrosive environment.
 - 4. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 - 5. Where control devices are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.5 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.6 CONTROL VALVES

- A. Install pipe reducers for valves smaller than line size. Position reducers as close to valve as possible but at distance to avoid interference and impact to performance. Install with manufacturer-recommended clearance.
- B. Install flanges or unions to allow drop-in and -out valve installation.
- C. Install drain valves in piping upstream and downstream of each control valve installed in a three-valve manifold and for each control valve larger than NPS 2.
- D. Install pressure temperature taps in piping upstream and downstream of each control valve larger than NPS 2.
- E. Valve Orientation:
 - 1. Where possible, install globe and ball valves installed in horizontal piping with stems upright and not more than 15 degrees off of vertical, not inverted.
 - 2. Install valves in a position to allow full stem movement.
 - 3. Where possible, install butterfly valves that are installed in horizontal piping with stems in horizontal position and with low point of disc opening with direction of flow.
- F. Clearance:
 - 1. Locate valves for easy access and provide separate support of valves that cannot be handled by service personnel without hoisting mechanism.
 - 2. Install valves with at least 12 inches of clear space around valve and between valves and adjacent surfaces.
- G. Threaded Valves:
 - 1. Note internal length of threads in valve ends, and proximity of valve internal seat or wall, to determine how far pipe should be threaded into valve.
 - 2. Align threads at point of assembly.
 - 3. Apply thread compound to external pipe threads, except where dry seal threading is specified.

4. Assemble joint, wrench tight. Apply wrench on valve end as pipe is being threaded.

H. Flanged Valves:

1. Align flange surfaces parallel.
2. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

3.7 CONNECTIONS

- A. Connect electrical devices and components to electrical grounding system. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with valve identification on valve and on face of ceiling directly below valves concealed above ceilings.

3.9 CLEANING

- A. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- B. Wash and shine glazing.
- C. Polish glossy surfaces to a clean shine.

3.10 CHECKOUT PROCEDURES

A. Control Valve Checkout:

1. Check installed products before continuity tests, leak tests, and calibration.
2. Check valves for proper location and accessibility.
3. Check valves for proper installation for direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
4. For pneumatic products, verify air supply for each product is properly installed.
5. For pneumatic valves, verify that pressure gauges are provided in each air line to valve actuator and positioner.
6. Verify that control valves are installed correctly for flow direction.
7. Verify that valve body attachment is properly secured and sealed.
8. Verify that valve actuator and linkage attachment are secure.

9. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
10. Verify that valve ball, disc, and plug travel are unobstructed.
11. After piping systems have been tested and put into service, but before insulating and balancing, inspect each valve for leaks. Adjust or replace packing to stop leaks. Replace the valve if leaks persist.

3.11 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Stroke and adjust control valves following manufacturer's recommended procedure, from 100 percent open to 100 percent closed back to 100 percent open.
- B. Stroke control valves with pilot positioners. Adjust valve and positioner following manufacturer's recommended procedure, so valve is 100 percent closed, 50 percent closed, and 100 percent open at proper air pressures.
- C. Check and document open and close cycle times for applications with a cycle time of less than 30 seconds.
- D. For control valves equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

END OF SECTION 230923.11

SECTION 230923.12 - CONTROL DAMPERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 DEFINITIONS

- A. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label products to comply with ASME Boiler and Pressure Vessel Code where required by Manufacturer.
- C. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions, to size products where indicated as engineering services.
- D. Ground Fault: Products shall not fail due to ground fault condition when suitably grounded.
- E. Backup Power Source: Systems and equipment served by a backup power source shall have associated control damper actuators served from a backup power source.
- F. Environmental Conditions:

1. Provide electric control-damper actuators, with protective enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Electric control-damper actuators not available with integral enclosures, complying with requirements indicated, shall be housed in protective secondary enclosures.
 - a. Hazardous Locations: Explosion-proof rating for condition.

G. Selection Criteria:

1. Control dampers shall be suitable for operation at following conditions:
 - a. Supply Air: 110 deg F through minus-20 degree F.
 - b. Return Air: 110 deg F through minus-20 degree F.
 - c. Outdoor Air: 110 deg F through minus-20 degree F.
 - d. Mixed Air: 110 deg F through minus-20 degree F.
 - e. Exhaust Air: 110 deg F through minus-20 degree F.
 - f. Retain first subparagraph below to define fail positions unless otherwise indicated.
2. Fail positions unless otherwise indicated:
 - a. Supply Air: Open.
 - b. Return Air: Open.
 - c. Outdoor Air: Open.
 - d. Mixed Air: Open.
 - e. Exhaust Air: Open.
3. Dampers shall have stable operation throughout full range of operation, from design to minimum airflow over varying pressures and temperatures encountered.
4. Select modulating dampers for a pressure drop of 2 percent of fan total static pressure unless otherwise indicated.
5. Two-position dampers shall be full size of duct or equipment connection unless otherwise indicated.
6. Pneumatic, two-position control dampers shall provide a smooth opening and closing characteristic slow enough to avoid excessive pressure. Dampers with pneumatic actuators shall have an adjustable opening time (valve full closed to full open) and an adjustable closing time (valve full open to full closed) ranging from zero to 10 seconds. Opening and closing times shall be independently adjustable.
7. Control-damper, pneumatic-control signal shall not exceed 200 feet. For longer distances, provide an electric/electronic control signal to the damper and an electric solenoid valve or electro-pneumatic transducer at the damper to convert the control signal to pneumatic.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for dampers and instruments installed in duct systems to verify actual locations of connections before installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 CONTROL-DAMPER APPLICATIONS

- A. Control Dampers:
- B. Select from damper types indicated in "Control Dampers" Article to achieve performance requirements and characteristics indicated while subjected to full range of system operation encountered.
 - 1. Rectangular Exhaust Air Duct Applications with SMACNA Construction Class +4 to -4" and Velocities to 2000 FPM: Rectangular dampers with aluminum airfoil blades
 - 2. Rectangular Outdoor Air Duct Applications with SMACNA Construction Class +4 to -4" and Velocities to 2000 FPM: Rectangular dampers with aluminum airfoil blades .
 - 3. Rectangular Return Air Duct Applications with SMACNA Construction Class +4 to -4"and Velocities to 2000 FPM: Rectangular dampers with aluminum airfoil blades.
 - 4. Rectangular Supply Air Duct Applications with SMACNA Construction Class +4 to -4" and Velocities to 2000 FPM : Rectangular dampers with aluminum airfoil blades .

3.4 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy most stringent requirements indicated.
- B. Properly support dampers and actuators, tubing, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a 50 LB force.
- C. Provide ceiling, floor, roof, and wall openings and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- D. Seal penetrations made in fire-rated and acoustically rated assemblies.
- E. Fastening Hardware:
 - 1. Stillson wrenches, pliers, or other tools that will cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for assembling and tightening nuts.

2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- F. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for access, confirm unrestricted ladder placement is possible under occupied condition.
- G. Corrosive Environments:
1. Use products that are suitable for environment to which they will be subjected.
 2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to, the following:
 - a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
 3. Use Type 316 stainless steel tubing and fittings when in contact with a corrosive environment.
 4. When conduit is in contact with a corrosive environment, use Type 316 stainless steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 5. Where actuators are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.5 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.6 CONTROL DAMPERS

- A. Install smooth transitions, not exceeding 30 degrees, to dampers smaller than adjacent duct. Install transitions as close to damper as possible but at distance to avoid interference and impact to performance. Consult manufacturer for recommended clearance.
- B. Clearance:
 1. Locate dampers for easy access and provide separate support of dampers that cannot be handled by service personnel without hoisting mechanism.
 2. Install dampers with at least 24 inches of clear space on sides of dampers requiring service access.

C. Service Access:

1. Dampers and actuators shall be accessible for visual inspection and service.
2. Install access door(s) in duct or equipment located upstream of damper to allow service personnel to hand clean any portion of damper, linkage, and actuator. Comply with requirements in Section 233300 "Air Duct Accessories."

D. Install dampers straight and true, level in all planes, and square in all dimensions. Install supplementary structural steel reinforcement for large multiple-section dampers if factory support alone cannot handle loading.

E. Attach actuator(s) to damper drive shaft.

F. For duct-mounted and equipment-mounted dampers installed outside of equipment, install a visible and accessible indication of damper position from outside.

3.7 CONNECTIONS

A. Connect electrical devices and components to electrical grounding system. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Install engraved phenolic nameplate with damper identification on damper and on face of ceiling where damper is concealed above ceiling.

3.9 CHECKOUT PROCEDURES

A. Control-Damper Checkout:

1. Check installed products before continuity tests, leak tests, and calibration.
2. Check dampers for proper location and accessibility.
3. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.
4. For pneumatic products, verify air supply for each product is properly installed.
5. For pneumatic dampers, verify that pressure gages are provided in each air line to damper actuator and positioner.
6. Verify that control dampers are installed correctly for flow direction.
7. Verify that proper blade alignment, either parallel or opposed, has been provided.
8. Verify that damper frame attachment is properly secured and sealed.
9. Verify that damper actuator and linkage attachment are secure.
10. Verify that actuator wiring is complete, enclosed, and connected to correct power source.
11. Verify that damper blade travel is unobstructed.

3.10 ADJUSTMENT, CALIBRATION, AND TESTING:

- A. Stroke and adjust control dampers following manufacturer's recommended procedure, from 100 percent open to 100 percent closed back to 100 percent open.
- B. Stroke control dampers with pilot positioners. Adjust damper and positioner following manufacturer's recommended procedure, so damper is 100 percent closed, 50 percent closed, and 100 percent open at proper air pressure.
- C. Check and document open and close cycle times for applications with a cycle time of less than 30 seconds.
- D. For control dampers equipped with positive position indication, check feedback signal at multiple positions to confirm proper position indication.

END OF SECTION 230923.12

SECTION 230923.13 - ENERGY METERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes thermal and electric power energy meters that connect to Direct-Digital Control systems.

1.3 DEFINITIONS

- A. Ethernet: Local area network based on IEEE 802.3.1 standards.
- B. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.
- C. I/O: Input/output.
- D. RMS: Root-mean-square value of alternating voltage, which is the square root of the mean value of the square of the voltage values during a complete cycle.
- E. RS-232: A TIA standard for asynchronous serial data communications between terminal devices.
- F. RS-485: A TIA standard for multipoint communications using two twisted pairs.
- G. RTD: Resistance temperature detector.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 THERMAL ENERGY METERS

- A. Performance Requirements: Manufacturer shall certify that each energy meter indicated complies with specified performance requirements and characteristics.
1. Product certificates are required.
- B. Insertion-Type Thermal Energy Meters:
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ONICON Incorporated.
 - b. Dwyer Instruments.
 - c. Schneider Electric.
 - d. Or approved equal.
 2. Description:
 - a. Factory-packaged meter consisting of supply and return temperature sensors, flow sensor, digital display, keypad user interface, installation hardware, color-coded interconnecting cabling, and installation instructions.
 - b. Each thermal energy meter shall be individually calibrated and provided with calibration certification traceable to NIST.
 3. Alphanumeric display of the following on face of enclosure:
 - a. Total energy consumption.
 - b. Energy rate.
 - c. Flow rate.
 - d. Supply temperature.
 - e. Return temperature.
 - f. Visual indication of power status (on/off) on face of enclosure.
 4. Electronics Enclosure:
 - a. Remote from temperature and flow sensors.
 - b. NEMA 250, Type 12 or Type 13 for indoor applications and NEMA 250, Type 4 or Type 4X for outdoor applications.
 - c. Labeled terminal strip for field wiring connections.
 5. Programming:
 - a. Factory programmed for specific application and field programmable through keypad on face of enclosure.

- b. Programmed parameters and total energy consumption shall be stored in non-volatile EEPROM memory.
6. Output Signals:
 - a. Total Energy Consumption: Isolated solid-state dry contact with 100 mA, 50-V rating and contact duration of 0.5, 1, 2, or 6 seconds.
 - b. Energy Rate, Flow Rate, Supply Temperature, Return Temperature: 4 to 20 mA or zero- to 10-V dc for each.
 - c. In lieu of hardwired analog signals, a serial communication interface may be used.
 7. Serial Communication Interface: Compatible with host to share total energy consumption, energy rate, flow rate, and supply and return temperature data.
 8. Temperature Sensors:
 - a. Temperature range matched to application.
 - b. Differential temperature accuracy within 0.15 deg F over the calibrated range.
 - c. NEMA 250, Type 4 junction box with thermal isolation.
 - d. Stainless-steel thermowell with NPS 1/2 NPT connection for each sensor.
 9. Flow Sensor:
 - a. Suitable for an operating pressure of at least 200 psig .
 - b. Meters in hot-water systems shall be suitable for maximum system temperatures encountered, but not less than 250 deg F.
 - c. Pressure drop not to exceed 1 psig at 20-fps flow velocity in NPS 2 pipe and decreasing in large pipe with lower velocity.
 - d. Sensor Accuracy:
 - 1) Within 1 percent of actual flow between the flow velocity range of 3 to 30 fps.
 - 2) Within 2 percent of actual flow between the flow velocity range of 0.4 to 20 fps.
 - 3) Within 0.5 percent of actual reading at the calibrated velocity.
 - e. Wet calibrate and tag each sensor to standards traceable to NIST, and provide each sensor with a certificate of calibration.
 - f. Provide single turbine sensors for pipe size NPS 2 and smaller. Provide dual turbine sensors for pipe size NPS 2-1/2 and larger. Provide bidirectional dual turbine sensors where installed in bypass piping.
 - g. For sensors with dual contra-rotating turbine elements, provide each turbine element with its own rotational sensing system and an averaging circuit to reduce measurement errors due to a poor flow profile.
 - h. Rotational sensing of each turbine shall be accomplished electronically by sensing impedance change. The sensor shall have an integral frequency output linear with flow rate and individual top and bottom turbine outputs for diagnostic purposes.
 - i. Provide the flow sensor complete with installation hardware necessary to enable insertion and removal from the pipe without system shutdown.
 - j. Construct turbine elements of polypropylene with sapphire jewel bearings and tungsten carbide shafts. Construct wetted metal components of Type 316 stainless steel, including the installation hardware.

- k. House the sensor electronics in a NEMA 250, Type 4 weathertight aluminum enclosure with a gasketed cover. Housing shall include connection for field-installed conduit.
 - l. Sensor cable length shall be sufficient to connect to display module.
 - m. Sensor housing shall have full-port Type 316 stainless-steel ball valve for system isolation.
10. Power Supply:
- a. Field Power: 120-V ac, 60 Hz unless otherwise required by the application.
 - b. Internal Power: As required by flow meter.

2.2 ELECTRIC POWER METERS

A. Fully Programmable Multifunction Electric Power Meter:

- 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Siemens Building Technologies, Inc.
 - b. Dwyer Instruments.
 - c. ONICON Incorporated.
 - d. Or approved equal.
- 2. Hardware:
 - a. Voltage Inputs: Three voltage inputs, capable of measuring from zero- to 347-V rms (line to neutral) or from zero- to 600-V rms (line to line). The device shall have provisions for direct connection for wye (Star) systems up to 347/600-V ac. For higher voltage systems, PTs with 120-, 277-, or 347-V ac secondary shall be supported. Voltage inputs shall provide the following:
 - 1) 1500-V ac continuous surge protection.
 - 2) 25 percent of full-scale voltage over range capability.
 - b. Current Inputs: Three 5-A nominal (10-A full-scale) current inputs. Current inputs shall be transformer coupled and accept CTs with 5-A nominal (10-A full-scale) outputs. Current inputs shall provide the following:
 - 1) 300-A surge protection for one second.
 - 2) 25 percent of full-scale current continuous over range capability.
 - c. Power Supply: 95- to 240-V ac (within 10 percent) at 47 to 440 Hz, 110- to 300-V dc, or 20- to 60-V dc power source. Load shall not exceed 12 W.
 - d. On-board I/O:
 - 1) Four digital (status) inputs.
 - 2) Four optically isolated, Darlington transistor digital (status) outputs with the following features:
 - a) Outputs shall have the ability to be used to provide pulse outputs according to any energy consumption levels.

- b) Outputs shall be scalable to within 1,000,000,000 units per pulse.
- 3) Four analog I/O operator selectable from:
 - a) Milliamp inputs.
 - b) Zero- to 20-mA inputs.
 - c) Four zero- to 1-mA outputs.
 - d) Four zero- to 20-mA outputs.
 - e) Four zero- to 1-mA inputs and four zero- to 1-mA outputs.
 - f) Four zero- to 20-mA inputs and four zero- to 20-mA outputs.
- 4) Analog inputs and outputs shall be accurate to within 0.3 percent of full scale.
- e. Provisions for future external I/O: Instrument shall support the following provisions for I/O for future applications. The external I/O shall support up to four digital output devices and shall support the following devices:
 - 1) 120-V ac, 3.5 A, N.O. solid-state relay.
 - 2) 120-V ac, 3.5 A, zero voltage turn-on, manual override relay.
 - 3) 240-V ac, 3.5 A, N.O. solid-state relay.
 - 4) 240-V ac, 3.5 A, zero voltage turn-on, manual override relay.
 - 5) 60-V dc, 3.5 A, N.O. solid-state relay.
 - 6) 60-V dc, 1.5 mA, zero voltage turn-on, manual override relay.
 - 7) 60-V dc, 1.0 A, low-leakage, N.O. solid-state relay.
 - 8) 200-V dc, 1.0 A, N.O. solid-state relay.
 - 9) 100-V dc, 0.5 A, N.O. mechanical relay.
- f. Communications:
 - 1) Provide the following built-in communication ports of standard technology, as defined by IEEE:
 - a) Two optically isolated RS-485 communication ports, supporting data rates from 1200 to 19200 bits per second.
 - b) One front-panel infrared optical port for RS-232 communications, supporting data rates from 1200 to 19200 bits per second. This port shall support an ANSI Type II optocoupler.
 - c) Ethernet port that has a gateway that allows the host system to communicate through the Ethernet port to additional metering devices connected to the card's COM2 RS-485 port. The device shall have provisions for an internal Ethernet port compatible with 10Base-T Ethernet. The Ethernet port shall be terminated using an RJ-45 connector.
 - d) Internal 33.6-kbps modem that has a gateway that allows the host system to communicate through the modem port to additional metering devices connected to the card's COM1 RS-485 port. The internal modem shall be certified for use on North American telephone systems only. The modem port shall be terminated using either an RJ11 or a captured wire connector.
 - 2) Communication ports shall support the following communication capabilities, independently configurable:

- a) SEAbus/ION protocol.
 - b) Modbus RTU protocol.
 - c) DNP 3.0 protocol.
 - d) Simultaneous access through all communication ports to any measured or derived parameter.
 - e) Protocols shall be field configurable from the front display, or via communication ports, and be capable of being accomplished without resetting the meter or interrupting its operation in any way.
 - f) Provisions for flash firmware that can be field upgraded through any communication port, without de-commissioning the instrument or de-energizing the circuit or equipment. The firmware-upgrade procedure shall be robust and able to recover from power failure during an upgrade.
 - g) Support time synchronization broadcast messages from a host computer system.
- g. Mounting Options:
- 1) 3.6-by-3.6-inch panel cutout, using sliding clamps tightened by thumbscrews.
 - 2) Transducer-type base unit with a remote backlit digital display, with cable for remote display applications.
 - 3) Transducer-type base unit with no display, locally mounted.
 - 4) Allow operator to remove and replace the display panel without removing the instrument from the equipment in which it is mounted.
- h. Front-Panel Display:
- 1) Programmable buttons that allow access to eight data display screens.
 - 2) Display measured parameter with its corresponding label.
 - 3) Display any four parameters simultaneously using alphanumeric characters.
 - 4) Display any two parameter simultaneously using large alphanumeric characters.
 - 5) Display any parameter using very large alphanumeric characters.
 - 6) Display basic voltage, current, and power readings using extra-large alphanumeric characters.
 - 7) Allow the operator to change parameter labels.
 - 8) Feature a programmable time-out interval and adjustable contrast.
- i. Enclosure: If installation requires meter to be installed in a dedicated enclosure, install meter in an NRTL-listed enclosure suitable for operating environment at meter location.
- 1) Indoors: NEMA 250, Type 1 or Type 12.
 - 2) Outdoors: NEMA 250, Type 4 or Type 4X.
- j. Memory: 512 kB of non-volatile RAM to store the following:
- 1) Setup data.
 - 2) A time-stamped event log with the following features:
 - 3) Support at least 500 events.
 - a) Number of records in the log shall be programmable.

- b) Each event record shall record the date and time of the event, the cause and effect of the event, and the priority of the event.
 - c) Events relating to set-point activity, relay operation, and self-diagnostics shall be recorded in the event log.
 - d) Time stamps shall have a resolution of one millisecond.
 - e) Time stamps shall be able to be synchronized to within 100 ms between devices on the same serial communication medium.
 - f) Minimum event recording response time shall be one second.
 - g) The priority of set-point events shall be programmable.
- 4) Two programmable data recorders that can each store up to 16 channels of historical trend data with the following features:
- a) Each data recorder shall be able to record any parameter, either measured or derived.
 - b) Each data recorder shall be enabled and triggered manually or through internal operating conditions, including periodic timer or set-point activity.
 - c) The number of records (depth) of each data recorder and the overflow conditions (stop-when-full or circular) shall be programmable.
 - d) Memory shall be dynamically allocated between data recorders and event log to allow storage of any 16 parameters at 15-minute intervals for not less than 30 days.
- 5) Min/Max data for any monitored parameter.
3. Instrument:
- a. Display Web pages over a standard Internet browser. Web pages shall include real-time instantaneous values, accumulated energy values, and total harmonic distortion.
 - b. Automatically e-mail alarm notifications or scheduled system status updates. E-mail messages sent shall be received as ordinary e-mail message.
 - c. Data logs shall be sent on an event-driven or scheduled basis.
 - d. Accommodate high-speed Modbus TCP communications when connected to Ethernet port.
4. Instrument shall measure and calculate the following information at one-second intervals:
- a. Voltage line-to-neutral and line-to-line for each phase and average of all three phases.
 - b. Current for each phase and average of three phases.
 - c. Percent current unbalance.
 - d. kW for each phase and total of three phases.
 - e. kVAR for each phase and total of three phases.
 - f. kVA for each phase and total of three phases.
 - g. kWh for total of three phases, provided as accumulating import, export, net, and total readings.
 - h. kVARh for total of three phases, provided as accumulating import, export, net, and total readings.
 - i. kVAh for total of three phases, provided as an accumulating net reading.
 - j. Power factor for each phase and total of three phases.
 - k. Frequency.

- l. Harmonic distortion for each voltage and current input, provided as individual harmonic magnitudes up to the 15th harmonic and as total odd, total even, and total overall harmonic distortion; readings given as a percentage of fundamental.
 - m. K-Factor calculations of the first 15 harmonics for all current inputs.
5. Operator interface features are as follows:
- a. Capable of calculating the following information for any reading at one-second intervals:
 - 1) Thermal demand calculations for any parameter, with operator-programmable length of demand period to match local utility billing method.
 - 2) Sliding window demands for any parameter with operator-programmable length of demand period and number of subperiods to match local utility billing method.
 - 3) Predicted Demand calculations of sliding window demand parameters, with operator-programmable predictive response characteristics.
 - 4) Minimum value for any measured parameter.
 - 5) Maximum value for any measured parameter.
 - 6) Derived values for any combination of measured or calculated parameter, using the following arithmetic, trigonometric, and logic functions (equivalent PLC capabilities):
 - a) Arithmetic functions: division, multiplication, addition, subtraction, power, absolute value, square root, average, max, min, rms, sum, sum-of-squares, unary minus, integer ceiling, integer floor, modulus, exponent, PI.
 - b) Trigonometric Functions: COS, SIN, TAN, ARCCOS, ARCSIN, ARCTAN, LN, and LOG10.
 - c) Logic Functions: Equal to, equal to or more than, equal to or less than, more than or less than, less than, more than, and, "OR," "NOT," and "IF."
 - d) Thermocouple Linearization Functions: Type J, Type K, Type R, Type RTD, or Type T.
 - e) Temperature Conversion Functions: C to F, F to C.
 - b. Support direct display of all parameters on the front panel or remote display in user-programmable groups, using plain language labels. Simultaneous access to all parameters shall be available through any communication port.
 - c. Field programmable as follows:
 - 1) Basic Parameters: Voltage input scale, voltage mode (wye, delta, single phase), current input scale, auxiliary input and output scales, and communication setup parameters are programmable from the front panel.
 - 2) Parameters described above, plus additional set-point/relay and data log setup parameters, shall be programmed via the communication port using a portable or remotely located computer terminal.
 - 3) Using ION modules, support customized configurations of all operating parameters.
 - 4) Provisions to ensure that programming through a computer can be secured by user ID and password.
 - 5) Provisions to ensure that programming through the front panel is secured by password.
 - d. Provisions for creating periodic or non-periodic schedules for up to two years. Schedules may be used to perform the following functions:

- 1) Demand control.
 - 2) Load scheduling.
 - 3) Logging.
 - 4) Periodic resetting.
6. Alarming and set-point control shall include following minimum requirements:
- a. Set-point control of internal recording mechanisms and all digital output relays as follows:
 - 1) 12 programmable set points, each of which shall respond to out-of-range and alarm conditions for any measured parameter.
 - a) Each set point shall have one-second minimum response time.
 - b) Each set point shall have programmable pick-up and drop-out levels (high and low limits) and time delays on operate and release.
 - c) Activity of each set point shall generate an event of a programmable priority. Priority levels shall support up to 256 levels of alarm severity.
 - d) Any set point shall be programmable to any operating condition, and any number of available set points shall be concurrently programmable to operate on a particular condition to support multiple threshold conditions.
 - 2) Set points shall be programmable to operate on any over or under condition for the following:
 - a) Any voltage or current input or average.
 - b) Voltage or current imbalance.
 - c) kW or kVAR forward or reverse.
 - d) kVA.
 - e) Power factor lag or lead.
 - f) Frequency.
 - g) kW or current demand on any phase or total or average.
 - h) Individual harmonic distortion on any phase input.
 - i) Total harmonic distortion on any phase input.
 - j) Total even or odd harmonic distortion on any phase input.
 - k) Any maximum or minimum value.
 - l) Multiple energy accumulation conditions.
 - m) Phase reversal.
 - n) Pulse count levels.
 - o) Any internally derived value.
 - 3) Any set-point condition shall be able to control any number of digital output relays in an AND or an OR configuration, using pulse mode or latch mode operation, for control and alarm purposes. Digital outputs shall also be operable remotely via any communication port.
 - 4) Any set-point condition shall be able to provide breaker trip relay operation.
 - 5) Consecutive alarm conditions and triggers shall be supported with no "dead" time between events. There shall be no need for a rearming delay time between events.
 - 6) It shall be possible to use any logical combination of any number of available set-point conditions to control any internal or external function or event.

- 7) Digital outputs shall support pulse output relay operation for kWh total, kWh imported, kWh exported, kVARh total, kVARh imported, kVARh exported, and kVAh values.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 THERMAL ENERGY METER APPLICATIONS

- A. Chilled water - each Air Source Heat Pump (4) locations.
- B. Hot water - each Air Source Heat Pump (4) locations
- C. Two Domestic Hot water heaters

3.4 ELECTRIC POWER METER APPLICATIONS

- A. Main building electric meter.
- B. Tenant spaces (4) locations.

3.5 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.
- B. Support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a 50 LB force.

- C. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for access, confirm unrestricted ladder placement is possible under occupied condition.

3.6 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.7 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of systems and equipment Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate instrumentation and control devices.
- B. Coordinate video with operation and maintenance manuals and classroom instruction for use by City of New York in operating and troubleshooting.
- C. Record videos on DVD disks.
- D. City of New York shall have right to make additional copies of video for internal use.

END OF SECTION 230923.13

SECTION 230923.14 - FLOW INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. Ethernet: Local area network based on IEEE 802.3 standards.
- B. FEP: Fluorinated ethylene propylene.
- C. HART: Highway addressable remote transducer protocol is the global standard for sending and receiving digital information across analog wires between smart devices and control or monitoring systems through bi-directional communication that provides data access between intelligent field instruments and host systems. A host can be any software application from technician's hand-held device or laptop to a plant's process control, asset management, safety, or other system using any control platform.
- D. PEEK: Polyetheretherketone.
- E. PTFE: Polytetrafluoroethylene.
- F. PPS: Polyphenylene sulfide.
- G. RS-485: A TIA standard for multipoint communications using two twisted pairs.
- H. RTD: Resistance temperature detector.
- I. TCP/IP: Transport control protocol/Internet protocol incorporated into Microsoft Windows.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Select and size products to achieve specified performance requirements.
- B. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 GENERAL REQUIREMENTS FOR FLOW INSTRUMENTS

- A. Air sensors and transmitters shall have an extended range of 10 percent above Project design flow and 10 percent below minimum Project flow to signal abnormal flow conditions and to provide flexibility for changes in operation.
- B. Liquid and steam sensors, meters, and transmitters shall have an extended range of 10 percent above Project design flow and 10 percent below Project minimum flow to signal abnormal flow conditions and to provide flexibility for changes in operation.
- C. Source Limitations: For flow instruments, obtain products from single source from single manufacturer.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Provide the services of an independent inspection agency to confirm that proposed mounting locations comply with requirements indicated and approved submittals.
 - 1. Indicate dimensioned locations with mounting height for all surface-mounted products to walls and ceilings on shop drawings.
 - 2. Do not begin installation without submittal approval of mounting location.

- E. Complete installation rough-in only after confirmation by independent inspection is complete and approval of location is documented for review by Commissioner on request.
- F. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTRUMENT APPLICATIONS

- A. Select from instrument types to achieve performance requirements and characteristics indicated while subjected to full range of system operation encountered.
- B. Duct-Mounted Airflow Sensors:
 - 1. Measured Velocities 500 fpm and Less: Thermal airflow station.
 - 2. Measured Velocities Greater than 500 fpm.
- C. Damper-Mounted Airflow Sensors:
 - 1. Measured Velocities 400 fpm and Less: Thermal airflow station.
 - 2. Measured Velocities Greater than 500 fpm.
- D. Fan-Mounted Airflow Sensors:
 - 1. Measured Velocities 500 fpm and Less: Thermal airflow station.
 - 2. Measured Velocities Greater than 500 fpm.

3.4 INSTALLATION, GENERAL

- A. Furnish and install products required to satisfy more stringent of all requirements indicated.
- B. Install products level, plumb, parallel, and perpendicular with building construction.
- C. Properly support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a 50 LB force.
- D. Install ceiling, floor, roof, and wall openings and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.
- E. Install products in locations that are accessible and that will permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for access, confirm unrestricted ladder placement is possible under occupied condition.
- F. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they will be subjected.

2. If possible, avoid or limit use of materials in corrosive environments, including, but not limited to, the following:
 - a. Laboratory exhaust airstreams.
 - b. Process exhaust airstreams.
3. When conduit is in contact with a corrosive environment, use Type 316 stainless steel conduit and fittings or conduit and fittings with a corrosive-resistant coating that is suitable for environment.
4. Where instruments are located in a corrosive environment and are not corrosive resistant from the manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.5 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems."

3.6 INSTRUMENTS, GENERAL INSTALLATION REQUIREMENTS

- A. Mounting Location:
 1. Rough-in: Outline instrument-mounting locations before setting instruments and routing cable, wiring, tubing, and conduit to final location.
 2. Install switches and transmitters for air and liquid flow associated with individual air-handling units and connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
 3. Install liquid and steam flow switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 4. Install airflow switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 5. Mount switches and transmitters not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
 6. Install instruments in steam, liquid, and liquid-sealed-piped services below their process connection point. Slope tubing down to instrument with a slope of 2 percent.
 7. Install instruments in dry gas and non-condensable-vapor piped services above their process connection point. Slope process connection lines up to instrument with a minimum slope of percent.

B. Mounting Height:

1. Mount instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
2. Mount switches and transmitters, located in mechanical equipment rooms and other similar space not subject to code, state, and federal accessibility requirements, within a range of 42 to 72 inches above the adjacent floor, grade, or service catwalk or platform.
 - a. Make every effort to mount at 60 inches.

C. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.

3.7 INSTALLATION OF FLOW INSTRUMENTS

A. Airflow Sensors:

1. Install sensors in straight sections of duct with manufacturer-recommended straight duct upstream and downstream of sensor.
2. Installed sensors shall be accessible for visual inspection and service. Install access door(s) in duct or equipment located upstream of sensor, to allow service personnel to hand clean sensors.

B. Transmitters:

1. Install airflow transmitters serving an air system in a single location adjacent to or within system control panel.
2. Install liquid flow transmitters, not integral to sensors, in vicinity of sensor. Where multiple flow transmitters serving same system are located in same room, co-locate transmitters by system to provide service personnel a single and convenient location for inspection and service.

3.8 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification and on face of ceiling directly below instruments concealed above ceilings.

3.9 CLEANING

- A. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- B. Wash and shine glazing.

- C. Polish glossy surfaces to a clean shine.

3.10 CHECKOUT PROCEDURES

A. Description:

1. Check out installed products before continuity tests, leak tests, and calibration.
2. Check instruments for proper location and accessibility.
3. Check instruments for proper installation with respect to direction of flow, elevation, orientation, insertion depth, or other applicable considerations that will impact performance.
4. Check instrument tubing for proper isolation, fittings, slope, dirt legs, drains, material, and support.

B. Flow Instrument Checkout:

1. Verify that sensors are installed correctly with respect to flow direction.
2. Verify that sensor attachment is properly secured and sealed.
3. Verify that processing tubing attachment is secure and isolation valves have been provided.
4. Inspect instrument tag against approved submittal.
5. Verify that recommended upstream and downstream distances have been maintained.

3.11 ADJUSTMENT, CALIBRATION, AND TESTING

A. Description:

1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
3. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
4. Equipment and procedures used for calibration shall meet instrument manufacturer's recommendations.
5. Provide diagnostic and test equipment for calibration and adjustment.
6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
8. If after-calibration-indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistant source.

- C. Digital Signals:
 - 1. Check digital signals using a jumper wire.
 - 2. Check digital signals using an ohmmeter to test for contact.
- D. Switches: Calibrate switches to make or break contact at set points indicated.

3.12 MAINTENANCE SERVICE

- A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of systems and equipment Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.13 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate instrumentation and control devices.
- B. Coordinate video with operation and maintenance manuals and classroom instruction for use by City of New York in operating, and troubleshooting.
- C. Record videos on DVD disks.
- D. City of New York shall have right to make additional copies of video for internal use.

END OF SECTION 230923.14

SECTION 230923.18 - LEAK-DETECTION INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS (Not Applicable)

2.1 LEAK-DETECTION SWITCHES

- A. Point-Type, Leak-Detection Switches:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. W. E. Anderson Division, Dwyer Instruments, Inc; Series WD2.
 - b. Honeywell.
 - c. Samsung.
 - d. Or approved equal.
 - 2. Features: Audible and visual alarm with relay output for remote indication.
 - 3. Alarm activated based on change in resistance.
 - 4. Performance:
 - a. Service: Water.
 - b. Temperature Limits: 32 to 122 deg F.
 - c. Switch Type: SPDT relay.
 - d. Electric Connection: Cable attached.
 - 5. Construction: Acrylic, ABS plastic.
 - 6. Field Power: 24-V ac or dc.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION, GENERAL

- A. Properly support instruments, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a 50 LB force.
- B. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force, or by oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- C. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for access, confirm unrestricted ladder placement is possible under occupied condition.

3.4 CONNECTIONS

- A. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power connections.

3.5 INSTALLATION

- A. Mount switches not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification and on face of ceiling directly below instruments concealed above ceilings.

3.7 CHECKOUT PROCEDURES

- A. Check installed products before continuity tests and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation for applicable considerations that impact performance.

3.8 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 - 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 - 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 - 3. Equipment and procedures used for calibration shall meet instrument manufacturer's written recommendations.
 - 4. Provide diagnostic and test equipment for calibration and adjustment.
 - 5. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
 - 6. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
 - 7. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.
- B. Digital Signals:
 - 1. Check digital signals using a jumper wire.
 - 2. Check digital signals using an ohmmeter to test for contact.
- C. Switches: Calibrate switches to make or break contact at set points indicated.

END OF SECTION 230923.18

SECTION 230923.23 - PRESSURE INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. HART: Highway addressable remote transducer protocol is the global standard for sending and receiving digital information across analog wires between smart devices and control or monitoring systems through bi-directional communication that provides data access between intelligent field instruments and host systems. A host can be any software application from technician's hand-held device or laptop to a control, asset management, safety, or other system using any control platform.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Environmental Conditions:
 - 1. Instruments must operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - a. If instrument alone cannot comply with requirement, install instrument in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure to be internally insulated, electrically heated, filtered, and ventilated as required by instrument and application.
 - 2. Instruments and accessories are to be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments not available with integral enclosures complying with requirements indicated are to be housed in protective secondary enclosures. Instrument-installed location to dictate following NEMA 250 enclosure requirements:

- a. Outdoors, Protected: Type 12.
- b. Outdoors, Unprotected: Type 4X.
- c. Indoors, Heated with Filtered Ventilation: Type 1.
- d. Indoors, Heated with Nonfiltered Ventilation: Type 12.
- e. Indoors, Heated and Air-Conditioned: Type 1.
- f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: Type 12.
 - 2) Air-Moving Equipment Rooms: Type 12.
- g. Localized Areas Exposed to Washdown: Type 4X.
- h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: Type 2.
- i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: Type 4.
- j. Hazardous Locations: Explosion-proof rating for condition.

2.2 SOURCE QUALITY CONTROL

- A. Factory Tests: Test and inspect assembled pressure instruments, as indicated by instrument requirements. Affix standards organization's certification and label.
- B. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PRESSURE INSTRUMENT APPLICATIONS

A. Duct-Mounted Static Pressure Sensors:

1. Each Roof Mounted AHU System: Duct insertion static pressure sensor.
 - a. AHU-R-1
 - b. AHU-R-2
 - c. AHU-R-3
 - d. AHU-R-4
 - e. AHU-R-5
 - f. AHU-R-6

3.4 INSTALLATION, GENERAL

A. Install products level, plumb, parallel, and perpendicular with building construction.

B. Properly support instruments, tubing, piping wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement, sway, or a break in attachment when subjected to a 50 LB force.

C. Provide ceiling, floor, roof, wall openings, and sleeves required by installation. Before proceeding with drilling, punching, or cutting, check location first for concealed products that could potentially be damaged. Patch, flash, grout, seal, and refinish openings to match adjacent condition.

D. Fastening Hardware:

1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by using excessive force or oversized wrenches.
3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.

E. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for access, confirm unrestricted ladder placement is possible under occupied condition.

F. Corrosive Environments:

1. Use products that are suitable for environment to which they are subjected.
2. If possible, avoid or limit use of materials in corrosive environments.
3. When conduit is in contact with a corrosive environment, use Type 316 stainless steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
4. Where instruments are located in a corrosive environment and are not corrosive resistant from the manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.5 ELECTRICAL POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.6 PRESSURE INSTRUMENT INSTALLATION

- A. Mounting Location:
 - 1. Rough-in: Outline instrument-mounting locations before setting instruments and routing, cable, wiring, tubing, and conduit to final location.
 - 2. Install switches and transmitters for air and liquid pressure associated with individual air-handling units and associated connected ductwork and piping near air-handlings units co-located in air-handling unit system control panel, to provide service personnel a single and convenient location for inspection and service.
 - 3. Install liquid and steam pressure switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 - 4. Install air-pressure switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 - 5. Mount switches and transmitters not required to be mounted within system control panels on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
 - 6. Install instruments (except pressure gages) in steam, liquid, and liquid-sealed piped services below their process connection point. Slope tubing down to instrument with a slope of 3 percent.
 - 7. Install instruments in dry gas and noncondensable vapor piped services above their process connection point. Slope process connection lines up to instrument with a minimum slope of 3 percent.
- B. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.
- C. Duct Pressure Sensors:
 - 1. Install sensors using manufacturer's recommended upstream and downstream distances.
 - 2. Unless indicated on Drawings, locate sensors approximately 50 percent of distance of longest hydraulic run. Location of sensors to be submitted and approved before installation.
 - 3. Install mounting hardware and gaskets to make sensor installation airtight.
 - 4. Route tubing from the sensor to transmitter.
 - 5. Use compression fittings at terminations.

6. Install sensor in accordance with manufacturer's instructions.
7. Support sensor to withstand maximum air velocity, turbulence, and vibration encountered to prevent instrument failure.

D. Outdoor Pressure Sensors:

1. Install roof-mounted sensor in least-noticeable location and as far away from exterior walls as possible.
2. Locate wall-mounted sensor in an inconspicuous location.
3. Submit sensor location for approval before installation.
4. Verify signal from sensor is stable and consistent to all connected transmitters. Modify installation to achieve proper signal.
5. Route outdoor signal pipe full size of sensor connection to transmitters. Install branch connection of size required to match to transmitter.
6. Install sensor signal pipe with dirt leg and drain valve below roof penetration.
7. Insulate signal pipe with flexible elastomeric insulation as required to prevent condensation.
8. Connect roof-mounted signal pipe exposed to outdoors to building grounding system.

3.7 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing to have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification and on face of ceiling directly below instruments concealed above ceilings.

3.8 CHECKOUT PROCEDURES

- A. Check out installed products before continuity tests, leak tests, and calibration.
- B. Check instruments for proper location and accessibility.
- C. Check instruments for proper installation with respect to direction of flow, elevation, orientation, insertion depth, or other applicable considerations that impact performance.

3.9 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 3. For each analog instrument, perform a three-point calibration test for both linearity and accuracy.
 4. Equipment and procedures used for calibration to comply with instrument manufacturer's recommendations.
 5. Provide diagnostic and test equipment for calibration and adjustment.

6. Field instruments and equipment used to test and calibrate installed instruments to have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent to be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
8. If, after calibration, indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements, and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Sensors: Check sensors at zero, 50, and 100 percent of project design values.

E. Switches: Calibrate switches to make or break contact at set points indicated.

F. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of project design values.

3.10 ADJUSTING

- A. Occupancy Adjustments:** When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 230923.23

SECTION 230923.27 - TEMPERATURE INSTRUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. HART (Highway Addressable Remote Transducer) Protocol: The global standard for sending and receiving digital information across analog wires between smart devices and control or monitoring systems through bidirectional communication that provides data access between intelligent field instruments and host systems. A host can be any software application from a technician's hand-held device or laptop to a plant's process control, asset management, safety, or other system using any control platform.
- B. RTD: Resistance temperature detector.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Environmental Conditions:
 - 1. Instruments shall operate without performance degradation under the ambient environmental temperature, pressure, humidity, and vibration conditions specified and encountered for installed location.
 - a. If instrument alone cannot meet requirement, install instrument in a protective enclosure that is isolated and protected from conditions impacting performance. Enclosure shall be internally insulated, electrically heated, filtered, and ventilated as required by instrument and application.

2. Instruments and accessories shall be protected with enclosures satisfying the following minimum requirements unless more stringent requirements are indicated. Instruments not available with integral enclosures complying with requirements indicated shall be housed in protective secondary enclosures. Instrument's installed location shall dictate following NEMA 250 enclosure requirements:
 - a. Outdoors, Protected: Type 12.
 - b. Outdoors, Unprotected: Type 4X.
 - c. Indoors, Heated with Filtered Ventilation: Type 1.
 - d. Indoors, Heated with Non-Filtered Ventilation: Type 12.
 - e. Indoors, Heated and Air Conditioned: Type 1.
 - f. Mechanical Equipment Rooms:
 - 1) Chiller and Boiler Rooms: Type 12.
 - 2) Air-Moving Equipment Rooms: Type 1.
 - g. Localized Areas Exposed to Washdown: Type 4X.
 - h. Within Duct Systems and Air-Moving Equipment Not Exposed to Possible Condensation: Type 2.
 - i. Within Duct Systems and Air-Moving Equipment Exposed to Possible Condensation: Type 4X.
 - j. Hazardous Locations: Explosion-proof rating for condition.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for instruments installed in piping to verify actual locations of connections before installation.
- C. Examine roughing-in for instruments installed in duct systems to verify actual locations of connections before installation.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION, GENERAL

- A. Install products level, plumb, parallel, and perpendicular with building construction.

- B. Properly support instruments, tubing, piping, wiring, and conduit to comply with requirements indicated. Brace all products to prevent lateral movement and sway or a break in attachment when subjected to a 50 LB force.
- C. Fastening Hardware:
 - 1. Stillson wrenches, pliers, and other tools that cause injury to or mar surfaces of rods, nuts, and other parts are prohibited for work of assembling and tightening nuts.
 - 2. Tighten bolts and nuts firmly and uniformly. Do not overstress threads by excessive force or by oversized wrenches.
 - 3. Lubricate threads of bolts, nuts, and screws with graphite and oil before assembly.
- D. Install products in locations that are accessible and that permit calibration and maintenance from floor, equipment platforms, or catwalks. Where ladders are required for access, confirm unrestricted ladder placement is possible under occupied condition.
- E. Corrosive Environments:
 - 1. Use products that are suitable for environment to which they are subjected.
 - 2. If possible, avoid or limit use of materials in corrosive environments.
 - 3. When conduit is in contact with a corrosive environment, use Type 316 stainless-steel conduit and fittings or conduit and fittings that are coated with a corrosive-resistant coating that is suitable for environment.
 - 4. Where instruments are located in a corrosive environment and are not corrosive resistant from manufacturer, field install products in a NEMA 250, Type 4X enclosure constructed of Type 316L stainless steel.

3.4 ELECTRIC POWER

- A. Furnish and install electrical power to products requiring electrical connections.
- B. Furnish and install circuit breakers. Comply with requirements in Section 262816 "Enclosed Switches and Circuit Breakers."
- C. Furnish and install power wiring. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- D. Furnish and install raceways. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems."

3.5 TEMPERATURE INSTRUMENT INSTALLATIONS

- A. Mounting Location:
 - 1. Roughing In:
 - a. Outline instrument mounting locations before setting instruments and routing cable, wiring, tubing, and conduit to final location.

- b. Provide independent inspection to confirm that proposed mounting locations comply with requirements indicated and approved submittals.
 - 1) Indicate dimensioned locations with mounting height for all surface-mounted products on Shop Drawings.
 - 2) Do not begin installation without submittal approval of mounting location.
 - c. Complete installation rough-in only after confirmation by independent inspection is complete and approval of location is documented for review by Commissioner on request.
2. Install switches and transmitters for air and liquid temperature associated with individual air-handling units and associated connected ductwork and piping near air-handling units co-located in air-handling unit system control panel to provide service personnel a single and convenient location for inspection and service.
 3. Install liquid and steam temperature switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 4. Install air temperature switches and transmitters for indoor applications in mechanical equipment rooms. Do not locate in user-occupied space unless indicated specifically on Drawings.
 5. Mount switches and transmitters on walls, floor-supported freestanding pipe stands, or floor-supported structural support frames. Use manufacturer's mounting brackets to accommodate field mounting. Securely support and brace products to prevent vibration and movement.
- B. Special Mounting Requirements:**
1. Protect products installed outdoors from solar radiation, building and wind effect with stand-offs and shields constructed of Type 316 stainless.
 2. Temperature instruments having performance impacted by temperature of mounting substrate shall be isolated with an insulating barrier located between instrument and substrate to eliminate effect. Where instruments requiring insulation are located in finished space, conceal insulating barrier in a cover matching the instrument cover.
- C. Mounting Height:**
1. Mount temperature instruments in user-occupied space to match mounting height of light switches unless otherwise indicated on Drawings. Mounting height shall comply with codes and accessibility requirements.
 2. Mount switches and transmitters located in mechanical equipment rooms and other similar space not subject to code or state and Federal accessibility requirements within a range of 42 to 72 inches above the adjacent floor, grade, or service catwalk or platform.
 - a. Make every effort to mount at 60 inches.
- D. Seal penetrations to ductwork, plenums, and air-moving equipment to comply with duct static-pressure class and leakage and seal classes indicated using neoprene gaskets or grommets.**
- E. Low-Limit Air Temperature Switch Installation:**
1. Install multiple low-limit switches to maintain coverage over entire cross-sectional area of air tunnel.
 2. Fasten and support sensing element with manufacturer-furnished clips to keep element taut throughout entire length.

3. Mount switches outside of airstream at a location and mounting height to provide easy access for switch set-point adjustment and manual reset.
4. Install on entering side of cooling coil unless otherwise indicated on Drawings.

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Each piece of wire, cable, and tubing shall have the same designation at each end for operators to determine continuity at points of connection. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Install engraved phenolic nameplate with instrument identification and on face of ceiling directly below instruments concealed above ceilings.

3.7 CLEANING

- A. Remove grease, mastic, adhesives, dust, dirt, stains, fingerprints, labels, and other foreign materials from exposed interior and exterior surfaces.
- B. Wash and shine glazing.
- C. Polish glossy surfaces to a clean shine.

3.8 CHECK-OUT PROCEDURES

- A. Check installed products before continuity tests, leak tests, and calibration.
- B. Check temperature instruments for proper location and accessibility.
- C. Verify sensing element type and proper material.
- D. Verify location and length.
- E. Verify that wiring is correct and secure.

3.9 ADJUSTMENT, CALIBRATION, AND TESTING

- A. Description:
 1. Calibrate each instrument installed that is not factory calibrated and provided with calibration documentation.
 2. Provide a written description of proposed field procedures and equipment for calibrating each type of instrument. Submit procedures before calibration and adjustment.
 3. For each analog instrument, make a three-point test of calibration for both linearity and accuracy.
 4. Equipment and procedures used for calibration shall meet instrument manufacturer's written instructions.
 5. Provide diagnostic and test equipment for calibration and adjustment.

6. Field instruments and equipment used to test and calibrate installed instruments shall have accuracy at least twice the instrument accuracy being calibrated. For example, an installed instrument with an accuracy of 1 percent shall be checked by an instrument with an accuracy of 0.5 percent.
7. Calibrate each instrument according to instrument instruction manual supplied by manufacturer.
8. If after calibration indicated performance cannot be achieved, replace out-of-tolerance instruments.
9. Comply with field-testing requirements and procedures indicated by ASHRAE Guideline 11, "Field Testing of HVAC Control Components," in the absence of specific requirements and to supplement requirements indicated.

B. Analog Signals:

1. Check analog voltage signals using a precision voltage meter at zero, 50, and 100 percent.
2. Check analog current signals using a precision current meter at zero, 50, and 100 percent.
3. Check resistance signals for temperature sensors at zero, 50, and 100 percent of operating span using a precision-resistance source.

C. Digital Signals:

1. Check digital signals using a jumper wire.
2. Check digital signals using an ohmmeter to test for contact.

D. Sensors: Check sensors at zero, 50, and 100 percent of Project design values.

E. Switches: Calibrate switches to make or break contact at set points indicated.

F. Transmitters:

1. Check and calibrate transmitters at zero, 50, and 100 percent of Project design values.
2. Calibrate resistance temperature transmitters at zero, 50, and 100 percent of span using a precision-resistance source.

3.10 ADJUSTING

- A. Occupancy Adjustments:** When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 230923.27

SECTION 230993.11 - SEQUENCE OF OPERATIONS FOR HVAC DIRECT DIGITAL CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes control sequences for Direct Digital Control for HVAC systems, subsystems, and equipment.

1.3 DEFINITIONS

- A. Analog Output: Proportional output signal (zero- to 10-V dc, 4 to 20 mA).
- B. Binary Output: On/off output signal or contact closure.
- C. Digital Output: Data output that must be interpreted digitally.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 REFERENCES

- A. For HVAC Systems sequence of operation refer to Mechanical Drawings M-100 to M-110
- B. Refer to M-100 series drawings for additional information.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230993.11

SECTION 231113 - FACILITY FUEL-OIL PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Joining materials.

1.3 DEFINITIONS

- A. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- C. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support fuel-oil storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

- C. Store pipes and tubes with protective PE coating to avoid damaging the coating and to protect from direct sunlight.
- D. Store PE pipes and valves protected from direct sunlight.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with ASME B31.9, "Building Services Piping," for fuel-oil piping materials, installation, testing, and inspecting.
- C. Fuel-Oil Valves: Comply with UL 842 and have service mark initials "WOG" permanently marked on valve body.
- D. Comply with requirements of the NY State Dept of Environmental Conservation, EPA and the NYC Mechanical Code, and the NYC Fire Code. Include recording of fuel-oil piping.
- E. Fuel oil piping shall be schedule 80, A53, grade B, SMLS with butt-weld or socket weld main and trim connections. Fuel oil vent piping shall have only butt-weld main connection.
- F. All fuel oil piping to be pre-fabricated as double-pipe containment system. Protect pipe from exterior environment by a secondary containment pipe. Factory fabricate all straight sections, fitting and other accessories to job dimensions and design to minimize the number of field connections. Air test all secondary containment joints completed at the factory. The containment shall be drainable and air pressure testable.
- G. Construct the secondary containment pipe of a multi-layer composite fiberglass reinforced thermosetting resin pipe comprised of a two-part corrosion barrier not less than 45 mils thick and a filament wound structural wall. The glass to resin ratio for the inner service, corrosion barrier and structural wall shall be not greater than 20:80, 30:70 and 70:30, respectively. The outer layer shall contain 0.2 to 0.3% by weight of ultraviolet inhibitors for protection during outdoor storage.
- H. Provide secondary pipe leak detection sensors.

2.2 PERFORMANCE REQUIREMENTS

- A. Maximum Operating-Pressure Ratings: 3-psig fuel-oil supply pressure at oil-fired appliances.
- B. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions, to design restraints and anchors and multiple pipe supports and hangers for fuel-oil piping.

2.3 JOINING MATERIALS

- A. Joint Compound and Tape for Threaded Joints: Suitable for fuel oil.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.
- D. Bonding Adhesive for RTRP and RTRF: As recommended by piping and fitting manufacturer.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas for compliance with requirements for installation tolerances and other conditions affecting performance of fuel-oil piping.
- B. Examine installation of fuel-burning equipment and fuel-handling and storage equipment to verify actual locations of piping connections before installing fuel-oil piping.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Close equipment shutoff valves before turning off fuel oil to premises or piping section.
- B. Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.

3.4 INSTALLATION OF OUTDOOR PIPING

- A. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining, to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer. Review protective coating damage with Commissioner prior to repair.
 - 3. Replace pipe having damaged PE coating with new pipe.
- B. Install double-containment, fuel-oil pipe at a minimum slope of 1 percent downward toward fuel-oil storage tank sump.

- C. Install vent pipe at a minimum slope of 2 percent downward toward fuel-oil storage tank sump.
- D. Assemble and install entry boots for pipe penetrations through sump sidewalls for liquid-tight joints.
- E. Install metal pipes and tubes, fittings, valves, and flexible connectors at piping connections to AST and UST.
- F. Install fittings for changes in direction in rigid pipe.
- G. Install system components with pressure rating equal to or greater than system operating pressure.

3.5 INSTALLATION OF INDOOR PIPING

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction to allow for mechanical installations.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings at a height that allows sufficient space for ceiling panel removal.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Comply with requirements for equipment specifications for roughing-in requirements.
- I. Conceal pipe installations in walls, pipe spaces, or utility spaces; above ceilings; below grade or floors; and in floor channels unless indicated to be exposed to view.
- J. Prohibited Locations:
 - 1. Do not install fuel-oil piping in or through HVAC ducts and plenums, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - 2. Do not install fuel-oil piping in solid walls or partitions.
- K. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- L. Connect branch piping from top or side of horizontal piping.

- M. Install unions in pipes NPS 2 and smaller at final connection to each piece of equipment and elsewhere as indicated. Unions are not required on flanged devices.
- N. Do not use fuel-oil piping as grounding electrode.
- O. Install sleeves and sleeve seals for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- P. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.6 INSTALLATION OF VALVES

- A. Install manual fuel-oil shutoff valves on branch connections to fuel-oil appliance.
- B. Install valves in accessible locations.
- C. Install oil safety valves at inlet of each oil-fired appliance.
- D. Install pressure relief valves in distribution piping between the supply and return lines.
- E. Install one-piece, bronze ball valve with hose end connection at low points in fuel-oil piping. Comply with requirements in Section 230523.12 "Ball Valves for HVAC Piping."
- F. Install manual air vents at high points in fuel-oil piping.
- G. Install emergency shutoff valves at dispensers.

3.7 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to "Quality Assurance" Article.
 - 1. Bevel plain ends of steel pipe.

2. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tubing" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness for service application. Install gasket concentrically positioned.
- G. Flared Joints: Comply with SAE J513. Tighten finger tight then use wrench according to fitting manufacturer's written instructions. Do not overtighten.
- H. Fiberglass-Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.8 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements for hangers, supports, and anchor devices specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- C. Install hangers for , with maximum horizontal spacing and minimum rod diameters, to comply with MSS-58, the NYC Building Code, and the NYC Mechanical Code requirements, whichever are most stringent.
- D. Support horizontal piping within 12 inches of each fitting and coupling.
- E. Support vertical runs of to comply with MSS-58, the NYC Building Code, and the NYC Mechanical Code requirements, whichever are most stringent.

3.9 INSTALLATION OF LEAK-DETECTION AND MONITORING SYSTEM

- A. Install leak-detection and monitoring system. Install alarm panel inside building where indicated.
- B. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor probes at low points in piping.

3.10 CONNECTIONS

- A. Where installing piping adjacent to equipment, allow space for service and maintenance.
- B. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment having threaded pipe connection.
- C. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.
- D. Connect piping to equipment with shutoff valve and union. Install union between valve and equipment.

- E. Install flexible piping connectors at final connection to burners or oil-fired appliances.

END OF SECTION 231113

SECTION 231123 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. CWP: Cold working pressure.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. An example includes rooftop locations.
- C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping in accordance with requirements of the NYC Construction Codes.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

1.6 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by City of New York or others unless permitted under the following conditions, and then only after arranging to provide purging and startup of natural-gas supply in accordance with requirements indicated:
 - 1. Notify Commissioner no fewer than two days in advance of proposed interruption of natural-gas service.
 - 2. Do not proceed with interruption of natural-gas service without Commissioner's written permission.

1.7 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed and concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors and Frames."
- C. Coordinate requirements for piping identification for natural-gas piping. Comply with requirements in Section 220553 "Identification of Plumbing Piping and Equipment."

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain each product type from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 54.
- B. Minimum Operating-Pressure Ratings:
 - 1. Piping and Valves: 150 psig minimum unless otherwise indicated.
 - 2. Service Regulators: 65 psig minimum unless otherwise indicated.
 - 3. Minimum Operating Pressure of Service Meter: 5 psig.
- C. Natural-Gas System Pressure within Buildings:
 - 1. Single Pressure: 0.5 psig or less.
 - 2. Two pressure ranges. Primary pressure is more than 2 psig, but not more than 5 psig, and is reduced to secondary pressure of more than 0.5 psig, but not more than 2 psig.

3. Three pressure ranges. Primary pressure is more than 2 psig, but not more than 5 psig, and is reduced to secondary pressures of more than 0.5 psig, but not more than 2 psig, and is reduced again to pressures of 0.5 psig or less.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Seismic Performance: Natural-gas piping system is to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7. See Section 220548 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
 1. The term "withstand" means "the piping system will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the piping system will be fully operational after the seismic event."
 2. Component Importance Factor: 1.0.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping in accordance with NFPA 54 to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with NFPA 54 requirements for preventing accidental ignition.

3.4 INSTALLATION OF OUTDOOR PIPING

- A. Comply with NFPA 54 for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements for excavating, trenching, and backfilling.
 1. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.

- C. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
 - 3. Replace pipe having damaged PE coating with new pipe.
- D. Copper Tubing with Protective Coating:
 - 1. Apply joint cover kits over tubing to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
- E. Install fittings for changes in direction and branch connections.
- F. Install pressure gauge upstream and downstream from each service regulator. Pressure gauges are specified in Section 230519 "Meters and Gauges for HVAC Piping."

3.5 INSTALLATION OF INDOOR PIPING

- A. Comply with NFPA 54 for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Do not install piping in concealed locations unless sleeved with the sleeve open at both ends.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Where installing piping above accessible ceilings, allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access. Do not locate valves within return air plenums.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.

- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
 2. Install sediment trap on both sides of regulators for gas reduction to 2 psig with valve and capped.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
 2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
 3. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
 4. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
 - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
 5. Prohibited Locations:
 - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install natural-gas piping in solid walls or partitions.
- Q. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- R. Connect branch piping from top or side of horizontal piping.
- S. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- T. Do not use natural-gas piping as grounding electrode.

- U. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- V. Install pressure gauge upstream and downstream from each line regulator. Pressure gauges are specified in Section 230519 "Meters and Gages for HVAC Piping."
- W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.6 INSTALLATION OF SERVICE-METER ASSEMBLIES

- A. Install service-meter assemblies aboveground, on concrete bases.
- B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
- C. Install strainer on inlet of service-pressure regulator and meter set.
- D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
- E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.
- F. Install service meters downstream from pressure regulators.
- G. Install metal bollards to protect meter assemblies. Comply with requirements in Section 055000 "Metal Fabrications" for pipe bollards.

3.7 INSTALLATION OF VALVES

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless steel tubing, aluminum, or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

- F. Do not install valves in return-air plenums.

3.8 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints in accordance with AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints in accordance with AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
- G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, and then use wrench. Do not overtighten.
- H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join in accordance with ASTM D2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.9 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.

- C. Install hangers for steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58 and the requirements of the NYC Building Code, whichever are most stringent.
- D. Install hangers for corrugated stainless steel tubing, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions and the requirements of the NYC Building Code, whichever are most stringent.
- E. Support horizontal piping within 12 inches of each fitting.
- F. Support vertical runs of steel piping to comply with MSS SP-58 and the requirements of the NYC Building Code, whichever are most stringent.
- G. Support vertical runs of corrugated stainless steel tubing to comply with manufacturer's written instructions, locally enforced codes and the requirements of the NYC Building Code, whichever are most stringent.

3.10 PIPING CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous, and bonded to gas-appliance equipment grounding conductor of the circuit powering the appliance in accordance with NFPA 70.
- C. Where installing piping adjacent to appliances, allow space for service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

3.11 LABELING AND IDENTIFICATION

- A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.12 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base in accordance with seismic codes at Project. See Section 230548 "Vibration and Seismic Controls for HVAC."
 - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
 - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.

4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Use 3000 psig, 28-day, compressive-strength concrete and reinforcement as specified in Section 033000 "Cast-in-Place Concrete."

3.13 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate earthquake valves.

END OF SECTION 231123

SECTION 231213 - FACILITY FUEL-OIL PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- C. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Maximum Operating-Pressure Ratings: 3-psig fuel-oil supply pressure at oil-fired appliances.
- B. Engineering Services: Engage a qualified professional engineer licensed in the State of New York , as defined in DDC General Conditions, to design restraint and anchors for fuel-oil pumps, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Seismic Performance: Factory-installed support attachments for pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Listed and labeled for fuel-oil service by an NRTL acceptable to Commissioner.
 1. Viking.
 2. Preferred Utilities
 3. Xylem.
 4. Or approved equal.

2.2 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 1. Enclosure: Totally enclosed, air over.
 2. Enclosure Materials: Cast iron.
 3. Efficiency: Premium efficient.
 4. NEMA Design: B
 5. Service Factor: 1.15.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine roughing-in for fuel-oil pumps to verify actual locations of pump connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 EARTHWORK

- A. Comply with requirements for excavating, trenching, and backfilling.

3.4 PREPARATION

- A. Close equipment shutoff valves before turning off fuel oil to premises or piping section.

- B. Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.

3.5 FUEL-OIL PUMP INSTALLATION

- A. Install two-piece, full-port ball valves at suction and discharge of pumps. Comply with requirements in Section 230523.12 "Ball Valves for HVAC Piping."
- B. Install mechanical leak-detector valves at pump discharge.
- C. Install suction piping with minimum fittings and change of direction.
- D. Install vacuum and pressure gage, upstream and downstream, respectively, at each pump to measure the differential pressure across the pump. Pressure gages are specified in Section 230519 "Meters and Gages for HVAC Piping."

3.6 LABELING AND IDENTIFYING

- A. Install nameplates and signs on each fuel-oil pump. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment."

END OF SECTION 231213

SECTION 231323 - FACILITY ABOVEGROUND FUEL-OIL STORAGE TANKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DEFINITIONS

- A. AST: Aboveground storage tank.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Comply with all New York State and New York City rules and regulations pertaining to above ground fuel-oil storage tanks. Include recording of fuel-oil storage tanks and monitoring of tanks.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified licensed engineer in the State of New York, as defined in DDC General Conditions, to design restraint and anchors for fuel-oil ASTs, and equipment, including comprehensive engineering analysis, using performance requirements and design criteria indicated.
- B. Provide a 300 gallon fuel oil storage tank at 48" diameter and 60" length.
- C. Provide the following connections for the tank:
 - 1. 2" Fuel oil fill
 - 2. 4" Fuel oil vent
 - 3. 4" Fuel oil emergency vent
 - 4. 1.25" back-up high level alarm
 - 5. 3" tank tapping for visible contents gauge
 - 6. 30" diameter manhole with internal and external ladder
 - 7. 4" tapping high level alarm

8. 4" spare
9. 2" Fuel oil overflow
10. 1" Fuel oil relief
11. 2" Fuel oil suction

D. Seismic Performance: Factory-installed support attachments for AST shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.2 FUEL OIL TANK

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Highland Tank.
2. EnviroSafe.
3. RDS Manufacturing.
4. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine roughing-in for aboveground fuel-oil storage tanks to verify actual locations.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 EARTHWORK

- A. Comply with requirements for excavating, trenching, and backfilling.
- B. Allow for cast-in-place, concrete base.

3.4 FUEL-OIL AST INSTALLATION

- A. Install tank bases and supports.
- B. Concrete Bases: Anchor AST to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Use 3000-psig, 28-day, compressive-strength concrete and reinforcement as specified in Section 033000 "Cast-in-Place Concrete."

- C. Connect piping and vent fittings.
- D. Install ground connections.
- E. Install tank leak-detection and monitoring devices.
- F. Install steel ASTs according to STI R912.
- G. Install insulated and concrete-vaulted, steel ASTs according to STI R942.
- H. Fill storage tanks with fuel oil.

3.5 LABELING AND IDENTIFYING

- A. Nameplates, pipe identification, and signs are specified in Section 230553 "Identification for HVAC Piping and Equipment."

END OF SECTION 231323

SECTION 232113 - HYDRONIC PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Copper tube and fittings.
 - 2. Steel pipe and fittings.
 - 3. Joining materials.
 - 4. Dielectric fittings.
 - 5. Bypass chemical feeder.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of the following:
 - 1. Pipe and tube.
 - 2. Fittings.
 - 3. Joining materials.
 - 4. Bypass chemical feeder.
- B. Engineering services Submittal:
 - 1. Design calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the building structure.
 - 2. Locations of pipe anchors and alignment guides and expansion joints and loops.
 - 3. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
 - 4. Locations of and details for penetration and firestopping for fire- and smoke-rated wall and floor and ceiling assemblies.

- C. Coordination Drawings: Piping layout, or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.
- C. Field quality-control reports.
- D. Preconstruction Test Reports:
 - 1. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.
- E. Pressure/leak documentation: Report indicating that the system was tested and passed the manufacturer's pressure/leak test requirements.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Installer Qualifications:
 - 1. Installers of Pressure-Sealed Joints: Installers shall be certified by pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
 - 2. Fiberglass Pipe and Fitting Installers: Installers of RTRF and RTRP shall be certified by manufacturer of pipes and fittings as having been trained and qualified to join fiberglass piping with manufacturer-recommended adhesive.
- C. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
 - 1. Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

1.7 PRECONSTRUCTION TESTING

- A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on water quality.

1.8 WARRANTY

- A. PP-R Manufacturer's Warranty: Manufacturer agrees to repair or replace PP-R pipe and fittings that fail in materials or workmanship within 10 years from date of Substantial Completion.
 - 1. Warranty is to cover labor and material costs of repairing and/or replacing defective materials and repairing any incidental damage caused by failure of the piping system due to defects in materials or manufacturing.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature unless otherwise indicated:
 - 1. Hot-Water Heating Piping: 150 psig at 200 deg F.
 - 2. Chilled-Water Piping: 150 psig at 73 deg F.
 - 3. Glycol Cooling-Water Piping: 150 psig at 150 deg F.
 - 4. Makeup-Water Piping: 150 psig at 73 deg F.
 - 5. Condensate-Drain Piping: 150 deg F.
 - 6. Blowdown-Drain Piping: 180 deg F.
 - 7. Air-Vent Piping: 200 deg F.
 - 8. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.
 - 9. Refrigerant Piping: 300 psig at 200 degF

2.2 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tube: ASTM B88, Type K, ASTM B88, Type L and ASTM B88, Type M.
- B. Annealed-Temper Copper Tube: ASTM B88, Type K, ASTM B88, Type L ASTM B88, Type M.
- C. DWV Copper Tube: ASTM B306, Type DWV.
- D. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
- E. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, pressure fittings.
- F. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
- G. Cast Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces and solder-joint or threaded ends.
- H. Wrought Copper Unions: ASME B16.22.

I. Copper-Tube, Pressure-Seal-Joint Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elkhart Products Corporation.
 - b. Mueller Industries, Inc.
 - c. NIBCO INC.
 - d. Viega LLC.
 - e. Or approved equal.
2. Fittings: Cast-brass, cast-bronze, or wrought-copper with EPDM O-ring seal in each end.
3. Minimum 200-psig working-pressure rating at 250 deg F.

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A53/A53M, black steel with plain ends; welded and seamless, Grade B, and wall thickness as indicated in "Piping Applications" Article.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in "Piping Applications" Article.
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in "Piping Applications" Article.
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in "Piping Applications" Article.
- E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in "Piping Applications" Article.
- F. Wrought-Steel Fittings: ASTM A234/A234M, wall thickness to match adjoining pipe.
- G. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 1. Material Group: 1.1.
 2. End Connections: Butt welding.
 3. Facings: Raised face.
- H. Steel Pipe Nipples: ASTM A733, made of same materials and wall thicknesses as pipe in which they are installed.

2.4 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless otherwise indicated.

- a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
 - C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.
 - D. Solder Filler Metals: ASTM B32, lead-free alloys. Include water-flushable flux according to ASTM B813.
 - E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
 - F. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
 - G. Solvent Cements for CPVC Piping: ASTM F493.
 - H. Solvent Cements for PVC Piping: ASTM D2564. Include primer according to ASTM F656.
 - I. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.5 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. A.Y. McDonald Mfg. Co.
 - b. Capitol Manufacturing Company.
 - c. Central Plastics Company.
 - d. HART Industrial Unions, LLC.
 - e. Jomar Valve.
 - f. Matco-Norca.
 - g. WATTS.
 - h. Wilkins.
 - i. Zurn Industries, LLC.
 - j. Or approved equal.
 - 2. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: 250 psig
 - c. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Matco-Norca.
 - d. WATTS.
 - e. Wilkins.
 - f. Zurn Industries, LLC.
 - g. Or approved equal.
2. Description:
 - a. Standard: ASSE 1079.
 - b. Factory-fabricated, bolted, companion-flange assembly.
 - c. Pressure Rating: 250 psig.
 - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Insulating Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 - e. Or approved equal.
2. Description:
 - a. Nonconducting materials for field assembly of companion flanges.
 - b. Pressure Rating: 150 psig.
 - c. Gasket: Neoprene or phenolic.
 - d. Bolt Sleeves: Phenolic or polyethylene.
 - e. Washers: Phenolic with steel backing washers.

E. Dielectric Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elster Perfection Corporation.
 - b. Grinnell G-Fire by Johnson Controls Company.
 - c. Matco-Norca.
 - d. Precision Plumbing Products.
 - e. Victaulic Company.
 - f. Or approved equal.

2. Description:
 - a. Standard: IAPMO PS 66.
 - b. Electroplated steel nipple, complying with ASTM F1545.
 - c. Pressure Rating: 300 psig at 225 deg F.
 - d. End Connections: Male threaded or grooved.
 - e. Lining: Inert and noncorrosive, propylene.

2.6 BYPASS CHEMICAL FEEDER

- A. Description: Welded steel construction; 125-psig working pressure; 5-gal. capacity; with fill funnel and inlet, outlet, and drain valves.
 1. Chemicals: Specially formulated, based on analysis of makeup water, to prevent accumulation of scale and corrosion in piping and connected equipment.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

- A. Hot-water heating piping, aboveground, NPS 2 and smaller, shall be any of the following:
 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
 2. Schedule 40, Grade B steel pipe; Class 150, malleable-iron fittings; cast-iron flanges and flange fittings; and threaded joints.
- B. Hot-water heating piping, aboveground, NPS 2-1/2 and larger, shall be the following:
 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- C. Hot-water heating piping installed belowground and within slabs shall be the following:
 1. Type K, drawn- temper copper tubing, wrought-copper fittings, and brazed joints. Use the fewest possible joints.
- D. Chilled-water piping, aboveground, NPS 2 and smaller, shall be any of the following:
 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
 2. Schedule 40 steel pipe; Class 150, malleable-iron fittings; cast-iron flanges and flange fittings; and threaded joints.

- E. Chilled-water piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:
 - 1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- F. Makeup-water piping installed aboveground shall be the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
- G. Makeup-Water Piping Installed Belowground and within Slabs: Type K, annealed-temper copper tubing, wrought-copper fittings, and soldered joints. Use the fewest possible joints.
- H. Condensate-Drain Piping, Copper: Type L, drawn-temper copper tubing, wrought-copper fittings, and soldered joints or Schedule 80 PVC plastic pipe and fittings and solvent-welded joints.
- I. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.
- J. Air-Vent Piping:
 - 1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to piping manufacturer's written instructions.
 - 2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.
- K. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems according to piping manufacturer's written instructions.

3.3 EARTHWORK

- A. Comply with requirements for excavating, trenching, and backfilling.

3.4 INSTALLATION OF PIPING

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.

- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to the following:
 - 1. Section 230523.11 "Globe Valves for HVAC Piping."
 - 2. Section 230523.12 "Ball Valves for HVAC Piping."
 - 3. Section 230523.13 "Butterfly Valves for HVAC Piping."
 - 4. Section 230523.15 "Gate Valves for HVAC Piping."
 - 5. Section 230523.16 "Plug Valves for HVAC Piping."
- Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.
- S. Install shutoff valve immediately upstream of each dielectric fitting.
- T. Comply with requirements in Section 230516 "Expansion Fittings and Loops for HVAC Piping" for installation of expansion loops, expansion joints, anchors, and pipe alignment guides.
- U. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for identifying piping.
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.5 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Soldered Joints: Apply ASTM B813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B32.
- D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8/A5.8M.
- E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- F. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
- G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- H. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - 1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
 - 2. CPVC Piping: Join according to ASTM D2846/D2846M Appendix.
 - 3. PVC Pressure Piping: Join ASTM D1785 schedule number, PVC pipe and PVC socket fittings according to ASTM D2672. Join other-than-schedule number PVC pipe and socket fittings according to ASTM D2855.
 - 4. PVC Nonpressure Piping: Join according to ASTM D2855.
- I. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.
- J. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

- K. Plain-End Mechanical-Coupled Joints: Prepare, assemble, and test joints in accordance with manufacturer's written installation instructions.
- L. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tools and procedure, and brazed joints.
- M. Pressure-Sealed Joints: Use manufacturer-recommended tools and procedure. Leave insertion marks on pipe after assembly.

3.6 INSTALLATION OF DIELECTRIC FITTINGS

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric nipples unions.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric nipples.
- D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.7 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
- C. Install hangers for copper tubing and steel piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS-58 and the requirements of the NYC Building Code, whichever are most stringent.
- D. Install hangers for plastic piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions and the requirements of the NYC Building Code, whichever are most stringent.
- E. Install hangers for fiberglass piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions and the requirements of the NYC Building Code, whichever are most stringent.
- F. Support horizontal piping within 12 inches of each fitting and coupling.
- G. Support vertical runs of copper tubing and steel piping to comply with MSS-58, and the requirements of the NYC Building Code, whichever are most stringent.
- H. Support vertical runs of CPVC, PVC and PP-R piping to comply with manufacturer's written instructions, and the requirements of the NYC Building Code, whichever are most stringent.

- I. Support vertical runs of fiberglass piping to comply with manufacturer's written instructions, and the requirements of the NYC Building Code, whichever are most stringent.

3.8 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gauges and thermometers at coil inlet and outlet connections. Comply with requirements in Section 230519 "Meters and Gages for HVAC Piping."

3.9 CHEMICAL TREATMENT

- A. Perform an analysis of makeup water to determine type and quantities of chemical treatment needed to keep system free of scale, corrosion, and fouling, and to sustain the following water characteristics:
 - 1. pH: 9.0 to 10.5.
 - 2. "P" Alkalinity: 100 to 500 ppm.
 - 3. Boron: 100 to 200 ppm.
 - 4. Corrosion Inhibitor:
 - a. Sodium Nitrate: 1000 to 1500 ppm.
 - b. Molybdate: 200 to 300 ppm.
 - c. Chromate: 200 to 300 ppm.
 - d. Sodium Nitrate Plus Molybdate: 100 to 200 ppm each.
 - e. Chromate Plus Molybdate: 50 to 100 ppm each.
 - 5. Soluble Copper: Maximum of 0.20 ppm.
 - 6. Tolyriazole Copper and Yellow Metal Corrosion Inhibitor: Minimum of 10 ppm.
 - 7. Total Suspended Solids: Maximum of 10 ppm.
 - 8. Ammonia: Maximum of 20 ppm.
 - 9. Free Caustic Alkalinity: Maximum of 20 ppm.
 - 10. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maximum of 1000 organisms/mL.
 - b. Total Anaerobic Plate Count: Maximum of 100 organisms/mL.
 - c. Nitrate Reducers: 100 organisms/mL.
 - d. Sulfate Reducers: Maximum of zero organisms/mL.
 - e. Iron Bacteria: Maximum of zero organisms/mL.
- B. Install bypass chemical feeders in each hydronic system where indicated.
 - 1. Install in upright position with top of funnel not more than 48 inches above the floor.

2. Install feeder in minimum NPS 3/4 bypass line, from main with full-size, full-port, ball valve in the main between bypass connections.
 3. Install NPS 3/4 pipe from chemical feeder drain to nearest equipment drain and include a full-size, full-port, ball valve.
- C. Fill system with fresh water and add liquid alkaline compound with emulsifying agents and detergents to remove grease and petroleum products from piping. Circulate solution for a minimum of 24 hours, drain, clean strainer screens, and refill with fresh water.
- D. Add initial chemical treatment and maintain water quality in ranges noted above for the first year of operation.
- E. Fill systems that have antifreeze or glycol solutions with the following concentrations:
1. Hot-Water Heating Piping: Minimum of 30 percent propylene glycol.
 2. Chilled-Water Piping: Minimum of 30 percent propylene glycol.
 3. Glycol Cooling-Water Piping: Minimum of 30 percent propylene glycol.

3.10 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 230553 "Identification for HVAC Piping and Equipment."

3.11 FIELD QUALITY CONTROL

- A. Prepare hydronic piping according to ASME B31.9 and as follows:
1. Leave joints, including welds, uninsulated and exposed for examination during test.
 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
 5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on hydronic piping:
1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
 3. Isolate expansion tanks and determine that hydronic system is full of water.

4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times the "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
 5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
 6. Prepare written report of testing.
- C. Perform the following before operating the system:
1. Open manual valves fully.
 2. Inspect pumps for proper rotation.
 3. Set makeup pressure-reducing valves for required system pressure.
 4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
 5. Set temperature controls so all coils are calling for full flow.
 6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
 7. Verify lubrication of motors and bearings.

END OF SECTION 232113

SECTION 232116 - HYDRONIC PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Hydronic specialty valves.
2. Air vents.
3. Expansion tanks and fittings.
4. Air/dirt separators and purgers.
5. Strainers.
6. Flexible connectors.

B. Related Requirements:

1. Section 230516 "Expansion Fittings and Loops for HVAC Piping" for expansion fittings and loops.
2. Section 230523.11 "Globe Valves for HVAC Piping" for specification and installation requirements for globe valves common to most piping systems.
3. Section 230523.12 "Ball Valves for HVAC Piping" for specification and installation requirements for ball valves common to most piping systems.
4. Section 230523.13 "Butterfly Valves for HVAC Piping" for specification and installation requirements for butterfly valves common to most piping systems.
5. Section 230523.15 "Gate Valves for HVAC Piping" for specification and installation requirements for gate valves common to most piping systems.
6. Section 230923.11 "Control Valves" for automatic control valve and sensor specifications, installation requirements, and locations.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product:

1. Include construction details and material descriptions for hydronic piping specialties.
2. Include rated capacities, operating characteristics, and furnished specialties and accessories.

3. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For hydronic piping specialties to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

- A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Pipe Welding: Qualify procedures and operators in accordance with ASME BPVC, Section IX.
- C. Pressure-relief and safety-relief valves and pressure vessels bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME BPVC, Section VIII, Division 1.

PART 2 - PRODUCTS

2.1 HYDRONIC SPECIALTY VALVES

- A. Bronze, Calibrated-Orifice, Balancing Valves:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Armstrong Fluid Technology.
 - c. Nexus Valve, Inc.
 - d. Tour & Andersson; available through Victaulic Company.
 - e. Or approved equal.
 2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
 3. Ball: Brass or stainless steel.
 4. Plug: Resin.
 5. Seat: PTFE.
 6. End Connections: Threaded or socket.
 7. Pressure Gauge Connections: Integral seals for portable differential pressure meter.
 8. Handle Style: Lever, with memory stop to retain set position.
 9. CWP Rating: Minimum 125 psig.
 10. Maximum Operating Temperature: 250 deg F.

B. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Armstrong Fluid Technology.
 - c. Nexus Valve, Inc.
 - d. Tour & Andersson; available through Victaulic Company.
 - e. Or approved equal.
2. Body: Cast-iron or steel body, ball, butterfly, plug, or globe pattern with calibrated orifice or venturi.
3. Ball: Brass or stainless steel.
4. Stem Seals: EPDM O-rings.
5. Disc: Glass- and carbon-filled PTFE.
6. Seat: PTFE.
7. End Connections: Flanged or grooved.
8. Pressure Gauge Connections: Integral seals for portable differential pressure meter.
9. Handle Style: Lever, with memory stop to retain set position.
10. CWP Rating: Minimum 125 psig.
11. Maximum Operating Temperature: 250 deg F.

C. Diaphragm-Operated, Pressure-Reducing Valves: ASME labeled.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bell & Gossett; a Xylem brand.
 - c. NIBCO INC.
 - d. Taco Comfort Solutions.
 - e. Or approved equal.
2. Body: Bronze or brass.
3. Disc: Brass.
4. Seat: Brass.
5. Stem Seals: EPDM O-rings.
6. Diaphragm: EPDM.
7. Low inlet-pressure check valve.
8. Inlet Strainer: removable without system shutdown.
9. Valve Seat and Stem: Noncorrosive.
10. Valve Size and Capacity: As indicated on Drawings.
11. Operating Pressure: Factory set and field adjustable.

D. Diaphragm-Operated Pressure-Relief Valves: ASME labeled.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bell & Gossett; a Xylem brand.
 - b. Amtrol
 - c. Armstrong

- d. Or approved equal.
 - 2. Body: Bronze or brass.
 - 3. Disc: Brass.
 - 4. Seat: Brass.
 - 5. Stem Seals: EPDM O-rings.
 - 6. Diaphragm: EPDM.
 - 7. Valve Seat and Stem: Noncorrosive.
 - 8. Valve Size, Capacity, and Operating Pressure: Comply with ASME BPVC, Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
- E. Automatic Flow-Control Valves:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Apollo Valves; a part of Aalberts Integrated Piping Systems.
 - b. Bell & Gossett; a Xylem brand.
 - c. Griswold Controls.
 - d. Nexus Valve, Inc.
 - e. NuTech Hydronic Specialty Products.
 - f. Or approved equal.
 - 2. Body: Brass or ferrous metal.
 - 3. Combination Assemblies: Include bronze or brass-alloy ball valve.
 - 4. Identification Tag: Marked with zone identification, valve number, and flow rate.
 - 5. Size and Capacity: For each application, provide a valve with rated capacity equal to or greater than capacity of device being served.
 - 6. Performance: Maintain constant flow within plus or minus 10 percent, regardless of system pressure fluctuations.
 - 7. Minimum CWP Rating: 300 psig.
 - 8. Maximum Operating Temperature: 200 deg F.

2.2 AIR VENTS

- A. Manual Air Vents:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bell & Gossett; a Xylem brand.
 - b. Sarco.
 - c. Amtrol
 - d. Armstrong
 - e. Or approved equal.
 - 2. Body: Bronze.
 - 3. Internal Parts: Nonferrous.
 - 4. Operator: Screwdriver or thumbscrew.
 - 5. Inlet Connection: NPS 1/2.
 - 6. Discharge Connection: NPS 1/8.

7. CWP Rating: 150 psig.
8. Maximum Operating Temperature: 225 deg F.

B. Automatic Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bell & Gossett; a Xylem brand.
 - b. Taco Comfort Solutions.
 - c. Hoffman
 - d. Armstrong
 - e. Or approved equal.
2. Body: Bronze or cast iron.
3. Internal Parts: Nonferrous.
4. Operator: Noncorrosive metal float.
5. Inlet Connection: NPS 1/2.
6. Discharge Connection: NPS 1/4.
7. CWP Rating: 150 psig.
8. Maximum Operating Temperature: 240 deg F.

2.3 EXPANSION TANKS AND FITTINGS

A. Diaphragm-Type ASME Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. Armstrong Fluid Technology.
 - c. Bell & Gossett; a Xylem brand.
 - d. Taco Comfort Solutions.
 - e. Or approved equal.
2. Tank: Welded steel, rated for 125 psig working pressure and 375 deg F maximum operating temperature. Factory test after tanks are fabricated and supports installed and are labeled in accordance with ASME BPVC, Section VIII, Division 1.
3. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
4. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

2.4 AIR/DIRT SEPARATORS AND PURGERS

A. In-Line Air Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. Armstrong Fluid Technology.
 - c. Bell & Gossett; a Xylem brand.

- d. Taco Comfort Solutions.
 - e. Or approved equal.
2. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
 3. Maximum Working Pressure: Up to 175 psig.
 4. Maximum Operating Temperature: Up to 300 deg F.

2.5 STRAINERS

A. Y-Pattern Strainers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Zurn Industries, LLC.
 - b. Sarco
 - c. Hoffman
 - d. Crane
 - e. Mueller
 - f. Or approved equal.
2. Body: ASTM A126, Class B, cast iron with bolted cover and bottom drain connection.
3. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
4. Strainer Screen: Stainless steel, 60-mesh strainer, or perforated stainless steel basket.
5. CWP Rating: 125 psig.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine all piping specialties for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Examine threads on all devices for form and cleanliness.
- C. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- D. Do not attempt to repair defective piping specialties; replace with new devices. Remove defective piping specialties from site.

3.3 INSTALLATION OF VALVES

- A. Install calibrated-orifice balancing valve at each branch connection to return main.
- B. Install calibrated-orifice, balancing valve in the return pipe of each heating or cooling terminal.
- C. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.
- D. Install pressure-relief and safety-relief valves at hot-water generators and elsewhere as required by ASME BPVC. Pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME BPVC, Section VIII, Division 1, for installation requirements.

3.4 HYDRONIC SPECIALTIES INSTALLATION

- A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- B. Install automatic air vents at high points of system piping in mechanical equipment rooms only.
 - 1. Provide air outlet drain line full size of air outlet to floor drain or to other point indicated on Drawings.
- C. Install manual vents at heat-transfer coils and elsewhere as required for air venting.
- D. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 and larger.
- E. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve full size of separator outlet; extend full size to nearest floor drain.
- F. Install expansion tanks having direct air/water interface above the air separator or air purger. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
 - 1. Install tank fittings that are shipped loose.
 - 2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, and fittings, plus tank full of water. Do not overload building components and structural members.
 - 3. Install piping from air separator or air purger to expansion tank with a 2 percent upward slope toward tank to avoid air entrapment.
- G. Install diaphragm- or bladder-type expansion tanks on the floor.
- H. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.

END OF SECTION 232116

SECTION 232123 - HYDRONIC PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Close-coupled, in-line centrifugal pumps.
 - 2. Separately coupled, vertically mounted, in-line centrifugal pumps.

1.3 DEFINITIONS

- A. ECM: Electronically commutated motor.
- B. EPDM: Ethylene propylene diene monomer.
- C. EPR: Ethylene propylene rubber.
- D. FKM: Fluoroelastomer polymer.
- E. HI: Hydraulic Institute.
- F. NBR: Nitrile rubber or Buna-N.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Engineering services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions, to design vibration isolation and seismic restraints.
- C. Seismic Performance: Pumps shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Component Importance Factor: 1.0.

2.2 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Armstrong Pumps, Inc.
 - 2. Grundfos Pumps Corporation.
 - 3. PACO Pumps; Grundfos Pumps Corporation, USA.
 - 4. TACO Comfort Solutions, Inc.
 - 5. Or approved equal.
- B. Source Limitations: Obtain pumps from single source from single manufacturer.
- C. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically.
- D. Pump Construction:
 - 1. Casing: Radially split, cast iron, with threaded gauge tappings at inlet and outlet, replaceable bronze wear rings, and threaded companion-flange connections.
 - 2. Impeller: ASTM B584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For constant-speed pumps, trim impeller to match specified performance.
 - 3. Pump Shaft Sleeve: Bronze or Type 304 stainless steel.
 - 4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless steel spring, and NBR,EPDM or FKM rubber bellows and gasket. Include water slinger on shaft between motor and seal.
 - 5. Seal Flushing: Flush, cool, and lubricate pump seal by directing pump discharge water to flow over the seal.

- E. Shaft Coupling: Rigid, axially-split spacer coupling to allow service of pump seal without disturbing pump or motor.
- F. Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 1. Enclosure : Totally enclosed, fan cooled.
 - 2. NEMA Premium Efficient motors as defined in NEMA MG 1.
 - 3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
 - 5. Variable-speed motor.
 - 6. Provide integral pump motor variable-speed controller.

2.3 SEPARATELY COUPLED, VERTICALLY MOUNTED, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following::
 - 1. Armstrong Pumps, Inc.
 - 2. PACO Pumps; Grundfos Pumps Corporation, USA.
 - 3. Peerless Pump Company.
 - 4. TACO Comfort Solutions, Inc.
 - 5. Or approved equal.
- B. Source Limitations: Obtain pumps from single source from single manufacturer.
- C. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, separately coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted vertically.
- D. Pump Construction:
 - 1. Casing: Radially split, cast iron, with threaded gauge tappings at inlet and outlet, replaceable bronze wear rings, and threaded companion-flange or union-end connections.
 - 2. Impeller: ASTM B584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. For pumps that are not frequency-drive controlled, trim impeller to match specified performance.
 - 3. Pump Shaft: Carbon steel, with copper-alloy shaft sleeve Type 304 stainless steel Type 316 stainless steel.
 - 4. Seal: Mechanical seal consisting of carbon rotating ring against a ceramic seat held by a stainless steel spring, and NBR, EPDM or FKM bellows and gasket.
- E. Shaft Coupling: Molded-rubber insert with interlocking spider or Interlocking frame with interconnecting springs capable of absorbing vibration.
- F. Motor: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Enclosure: Totally enclosed, fan cooled.
2. NEMA Premium Efficient motors as defined in NEMA MG 1.
3. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
4. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
5. Variable-speed motor.
6. Provide integral pump motor variable-speed controller.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PUMP INSTALLATION

- A. Comply with HI 1.4 and HI 2.4.
- B. Install pumps to provide access for periodic maintenance including removing motors, impellers, couplings, and accessories.
- C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- D. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.
- E. Equipment Mounting:
 1. Install base-mounted pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

- F. Equipment Mounting: Install in-line pumps with continuous-thread hanger rods and spring hangers with vertical-limit stop of size required to support weight of in-line pumps.
 - 1. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
 - 2. Comply with requirements for hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

3.4 ALIGNMENT

- A. Engage a factory-authorized service representative to perform alignment service.
- B. Perform alignment service. When required by manufacturer to maintain warranty coverage, engage a factory-authorized service representative to perform it.
- C. Comply with requirements in HI standards for alignment of pump and motor shaft. Add shims to the motor feet and bolt motor to base frame. Do not use grout between motor feet and base frame.
- D. Comply with pump and coupling manufacturers' written instructions.
- E. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.5 PIPING CONNECTIONS

- A. Comply with requirements for piping specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to pump, allow space for service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Install check, shutoff, and throttling valves on discharge side of pumps.
- F. Install Y-type strainer and shutoff valve on suction side of pumps.
 - 1. Use startup strainer for initial system startup. Install permanent strainer element before turnover of system to City of New York.
- G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.

- H. Install pressure gauges on pump suction and discharge or at integral pressure-gauge tapping, or install single gauge with multiple-input selector valve.
- I. Install check valve on each condensate pump unit discharge unless unit has a factory-installed check valve.

3.6 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.7 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Check piping connections for tightness.
 - 3. Clean strainers on suction piping. Use startup strainer for initial startup.
 - 4. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in correct direction.
 - 5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
 - 6. Start motor.
 - 7. Open discharge valve slowly.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate hydronic pumps.

END OF SECTION 232123

SECTION 232300 - REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Copper tube and fittings.
 - 2. Steel pipe and fittings.
 - 3. Refrigerants.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.5 PRODUCT STORAGE AND HANDLING

- A. Store piping with end caps in place to ensure that piping interior and exterior are clean when installed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-134a:
 - 1. Suction Lines for Air-Conditioning Applications: 115 psig.
 - 2. Suction Lines for Heat-Pump Applications: 225 psig.
 - 3. Hot-Gas and Liquid Lines: 225 psig.
- B. Line Test Pressure for Refrigerant R-407C:
 - 1. Suction Lines for Air-Conditioning Applications: 230 psig.

2. Suction Lines for Heat-Pump Applications: 380 psig.
3. Hot-Gas and Liquid Lines: 380 psig.

C. Line Test Pressure for Refrigerant R-410A:

1. Suction Lines for Air-Conditioning Applications: 300 psig.
2. Suction Lines for Heat-Pump Applications: 535 psig.
3. Hot-Gas and Liquid Lines: 535 psig.

2.2 COPPER TUBE AND FITTINGS

- A. Copper Tube: ASTM B 88, Type K or L.

2.3 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as selected in piping application articles.

2.4 REFRIGERANTS

- A. ASHRAE 34, R-134a: Tetrafluoroethane.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arkema Inc.
 - b. DuPont Fluorochemicals Div.
 - c. Genetron Refrigerants; Honeywell International Inc.
 - d. Mexichem Fluor Inc.
 - e. Or approved equal.

- B. ASHRAE 34, R-407C: Difluoromethane/Pentafluoroethane/1,1,1,2-Tetrafluoroethane.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arkema Inc.
 - b. DuPont Fluorochemicals Div.
 - c. Genetron Refrigerants; Honeywell International Inc.
 - d. Mexichem Fluor Inc.
 - e. Or approved equal.

- C. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arkema Inc.
 - b. DuPont Fluorochemicals Div.
 - c. Genetron Refrigerants; Honeywell International Inc.
 - d. Mexichem Fluor Inc.

- e. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS FOR REFRIGERANT R-134a

- A. Suction Lines NPS 1-1/2 and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with soldered joints.
- B. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications:
 - 1. Copper, Type L, drawn-temper tubing and wrought-copper fittings with soldered joints.
- C. Safety-Relief-Valve Discharge Piping, Steel: Schedule 40, black-steel and wrought-steel fittings with welded joints.

3.3 PIPING APPLICATIONS FOR REFRIGERANT R-407C

- A. Suction Lines NPS 1-1/2 and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with soldered joints.
- B. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications:
 - 1. Copper, Type L, drawn-temper tubing and wrought-copper fittings with soldered joints.
- C. Safety-Relief-Valve Discharge Piping, Steel: Schedule 40, black-steel and wrought-steel fittings with welded joints.

3.4 PIPING APPLICATIONS FOR REFRIGERANT R-410A

- A. Suction Lines NPS 1-1/2 and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with soldered joints.
- B. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications:
 - 1. Copper, Type L, annealed- or drawn-temper tubing and wrought-copper fittings with soldered joints.
- C. Safety-Relief-Valve Discharge Piping: Schedule 40 black steel and wrought steel fittings with welding joints.

3.5 VALVE AND SPECIALTY APPLICATIONS

- A. Install valves in suction and discharge lines of compressor.
- B. Install service valves for gauge taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.
- C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.
- D. Except as otherwise indicated, install valves on inlet and outlet side of filter dryers.
- E. Install a full-size, three-valve bypass around filter dryers.
- F. Install filter dryers in liquid line between compressor and thermostatic expansion valve, and in the suction line at the compressor.
- G. Install receivers sized to accommodate pump-down charge.
- H. Install flexible connectors at compressors.
- I. Provide refrigerant locking caps on refrigerant charging ports that are located outdoors unless otherwise protected from unauthorized access by a means acceptable to the Commissioner.

3.6 INSTALLATION OF PIPING, GENERAL

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.
- B. Install refrigerant piping according to ASHRAE 15.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping adjacent to machines to allow service and maintenance.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Select system components with pressure rating equal to or greater than system operating pressure.

- J. Refer to Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC Direct Digital Control" for solenoid valve controllers, control wiring, and sequence of operation.
- K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- L. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Section 083113 "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.
- M. Install refrigerant piping in protective conduit where installed belowground.
- N. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- O. Slope refrigerant piping as follows:
 - 1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
 - 2. Install horizontal suction lines with a uniform slope downward to compressor.
 - 3. Install traps and double risers to entrain oil in vertical runs.
 - 4. Liquid lines may be installed level.
- P. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- Q. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
 - 1. Shot blast the interior of piping.
 - 2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
 - 3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
 - 4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
 - 5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
 - 6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.
- R. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- S. Identify refrigerant piping and valves according to Section 230553 "Identification for HVAC Piping and Equipment."
- T. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."

- U. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 230517 "Sleeves and Sleeve Seals for HVAC Piping."
- V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230518 "Escutcheons for HVAC Piping."

3.7 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.
- D. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
 - 1. Use Type BCuP (copper-phosphorus) alloy for joining copper socket fittings with copper pipe.
 - 2. Use Type BAg (cadmium-free silver) alloy for joining copper with bronze or steel.
- F. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and to restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.
- H. Welded Joints: Construct joints according to AWS D10.12M/D10.12.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.8 INSTALLATION OF HANGERS AND SUPPORTS

- A. Comply with requirements for seismic restraints in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Comply with Section 230529 "Hangers and Supports for HVAC Piping and Equipment" for hangers, supports, and anchor devices.
- C. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
 2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
 4. Spring hangers to support vertical runs.
 5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- D. Install hangers for copper tubing, with maximum horizontal spacing and minimum rod diameters, in compliance with the requirements of the NYC Building Code.
- E. Support horizontal piping within 12 inches of each fitting.
- F. Support vertical runs of copper tubing to comply with the requirements of the NYC Building Code.

3.9 SYSTEM CHARGING

- A. Charge system using the following procedures:
1. Install core in filter dryers after leak test but before evacuation.
 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
 4. Charge system with a new filter-dryer core in charging line.

3.10 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
1. Open shutoff valves in condenser water circuit.
 2. Verify that compressor oil level is correct.
 3. Open compressor suction and discharge valves.
 4. Open refrigerant valves except bypass valves that are used for other purposes.
 5. Check open compressor-motor alignment and verify lubrication for motors and bearings.
- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION 232300

SECTION 232513 - WATER TREATMENT FOR CLOSED-LOOP HYDRONIC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes the following water treatment for closed-loop hydronic systems:
 - 1. chemical-feed equipment.

1.3 DEFINITIONS

- A. RO: Reverse osmosis.
- B. TDS: Total dissolved solids consist of salts and other materials that combine with water as a solution.
- C. TSS: Total suspended solids include both organic and inorganic solids that are suspended in the water. These solids may include silt, plankton, and industrial wastes.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Provide all hardware, chemicals, and other material necessary to maintain HVAC water quality in all systems, as indicated in this Specification. Water quality for hydronic systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of hydronic equipment without creating a hazard to operating personnel or the environment.

- B. Base HVAC water treatment on quality of water available at Project site, hydronic system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements of NYC Mechanical and Building Code.
- C. Closed hydronic systems, including hot-water heating below 250 deg F, glycol heating and glycol cooling shall have the following water qualities:
 - 1. pH: Maintain a value within the range required by the Glycol solution manufacturer.
 - 2. Alkalinity: Maintain a value within the range required by the Glycol solution manufacturer.
 - 3. Steel Corrosion Inhibitors: Provide sufficient inhibitors to limit mild steel corrosion to 3 mils per year.
 - 4. Yellow Metal Corrosion Inhibitor: Provide sufficient copper and brass corrosion inhibitors to limit copper corrosion to 1 mils per year.
 - 5. Scale Control: Provide softened water for initial fill and makeup. Where softened water is not used, provide sufficient scale inhibitors to prevent formation of scale and maintain all scale-forming material in solution.
 - 6. Dispersants: Provide sufficient dispersants to prevent sedimentation of fine particulate matter.
 - 7. Microbiological Limits:
 - a. Total Aerobic Plate Count: Maintain a maximum value as required by the Glycol solution manufacturer.
 - b. Total Anaerobic Plate Count: Maintain a maximum value as required by the Glycol solution manufacturer.
 - c. Nitrate Reducers: Maintain a maximum value as required by the Glycol solution manufacturer.
 - d. Sulfate Reducers: Maintain a maximum value as required by the Glycol solution manufacturer.
 - e. Iron Bacteria: Maintain a maximum value as required by the Glycol solution manufacturer.

2.2 CHEMICAL WATER TREATMENT

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Nalco.
 - 2. Towerwater.
 - 3. Chemtreat.
 - 4. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install chemical-application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units, so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate. Install all chemical application equipment within a spill-containment area without floor drain.
- B. Install seismic restraints for equipment and floor-mounting accessories, and anchor to building structure. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraints.
- C. Install water-testing equipment on wall near water-chemical-application equipment.
- D. Install interconnecting control wiring for chemical-treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.
- F. Install automatic fluid make-up equipment for glycol water system, and include the following:
 - 1. Water meter in makeup supply to system.
 - 2. Pressure switch to operate injection pump as necessary to maintain glycol system pressure.

3.3 PIPING CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to equipment, allow space for service and maintenance.
- C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Section 232113 "Hydronic Piping."
- D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Section 230523.11 "Globe Valves for HVAC Piping," Section 230523.12 "Ball Valves for HVAC Piping," Section 230523.13 "Butterfly Valves for HVAC Piping," and Section 230523.15 "Gate Valves for HVAC Piping."
- E. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for backflow preventers required in makeup-water connections to potable-water systems.

3.4 ELECTRICAL CONNECTIONS

- A. Confirm applicable electrical requirements in electrical Sections for connecting electrical equipment.
- B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

- C. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 MAINTENANCE SERVICE

- A. Scope of Maintenance Service: Provide chemicals and service program to maintain water conditions required above, to inhibit corrosion and scale formation for hydronic piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion and shall include the following:
 - 1. Initial water analysis and HVAC water-treatment recommendations.
 - 2. Startup assistance for Contractor to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
 - 3. Periodic field service and consultation.
 - 4. Customer report charts and log sheets.
 - 5. Laboratory technical analysis.
 - 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate HVAC water-treatment systems and equipment.

END OF SECTION 232513

SECTION 233113 - METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Double-wall rectangular ducts and fittings.
3. Single-wall round and flat-oval ducts and fittings.
4. Double-wall round and flat-oval ducts and fittings.
5. Sheet metal materials.
6. Duct liner.
7. Sealants and gaskets.
8. Hangers and supports.

B. Related Requirements:

1. Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraint devices and installation.
2. Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
3. Section 233346 "Flexible Ducts" for insulated flexible ducts and flexible duct connectors.
4. Section 233300 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of the following products:

1. Liners and adhesives.
2. Sealants and gaskets.
3. Seismic-restraint devices.

B. Sustainable Design Submittals:

1. Product Data: For ventilation equipment, indicating compliance with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top and bottom of ducts.
5. Dimensions of all duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.

D. Engineering Services Submittals:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Engineering Calculations: Calculations, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York, responsible for their preparation for selecting hangers and supports and seismic restraints.

E. Coordination Drawings: A single set of plans or BIM model, drawn to scale, showing the items described in this Section, and coordinated with all building trades.

1.5 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

- B. Welding Qualifications: Qualify procedures and personnel in accordance with the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
3. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for duct joint and seam welding.

C. Mockups:

1. Before installing duct systems, build mockups representing static-pressure classes in excess of 3 inch wg. Build mockups to comply with the following requirements, using materials indicated for the completed Work:
 - a. Five transverse joints.
 - b. One access door(s).
 - c. Two typical branch connections, each with at least one elbow.
 - d. Two typical flexible duct or flexible-connector connections for each duct and apparatus.
 - e. One 90-degree turn(s) with turning vanes.
 - f. One fire damper(s).
 - g. One smoke damper(s).
 - h. Perform leakage tests specified in "Field Quality Control" Article. Revise mockup construction and perform additional tests as required to achieve specified minimum acceptable results.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Ductwork: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and with performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports and seismic restraints are to withstand the effects of gravity and seismic loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and ASCE/SEI 7. Seismically brace duct hangers and supports in accordance with SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."
 1. Seismic Hazard Level (SHL): C; See drawing schedule.
- C. Seismic Performance: Ductwork to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7. See Section 230548 "Vibration and Seismic Controls for HVAC."
 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Component Importance Factor: 1.0.
- D. Wind Performance: Ducts are to withstand the effects of wind determined in accordance with to ASCE/SEI 7. See Section 230548 "Vibration and Seismic Controls for HVAC."
- E. Airstream Surfaces: Surfaces in contact with airstream comply with requirements in ASHRAE 62.1.

- F. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Startup."
- G. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."
- H. Duct Dimensions: Unless otherwise indicated, all duct dimensions indicated on Drawings are inside clear dimensions and do not include insulation or duct wall thickness.

2.2 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
 - 1. Construct ducts of galvanized sheet steel unless otherwise indicated.
 - 2. For ducts exposed to weather, construct of Type 304 Type 316 stainless steel indicated by manufacturer to be suitable for outdoor installation.
- B. Transverse Joints: Fabricate joints in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 1. For ducts with longest side less than 36 inches, select joint types in accordance with Figure 2-1.
 - 2. For ducts with longest side 36 inches or greater, use flange joint connector Type T-22, T-24, T-24A, T-25a, or T-25b. Factory-fabricated flanged duct connection system may be used if submitted and approved by engineer of record.
 - 3. Where specified for specific applications, all joints are to be welded.
- C. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." All longitudinal seams are to be Pittsburgh lock seams unless otherwise specified for specific application.
 - 1. Where specified for specific applications, all joints are to be welded.
- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.3 DOUBLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. McGill AirFlow LLC.

2. MKT Metal Manufacturing.
 3. Sheet Metal Connectors, Inc.
 4. Or approved equal.
- B. Source Limitations: Obtain double-wall rectangular ducts and fittings from single manufacturer.
- C. Rectangular Ducts: Fabricate ducts with indicated dimensions for clear internal dimensions of the inner duct.
- D. Outer Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
1. Construct ducts of galvanized sheet steel unless otherwise indicated.
 2. For ducts exposed to weather, construct outer duct of Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
- E. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. For ducts with longest side less than 36 inches, select joint types in accordance with Figure 2-1.
 2. For ducts with longest side 36 inches or greater, use flange joint connector Type T-22, T-24, T-24A, T-25a, or T-25b. Factory-fabricated flanged duct connection system may be used if submitted and approved by engineer of record.
 3. Where specified for specific applications, all joints are to be welded.
- F. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." All longitudinal seams are to be Pittsburgh lock seams unless otherwise specified for specific application.
1. Where specified for specific applications, all joints are to be welded.
- G. Interstitial Insulation, Fibrous Glass: Duct liner complying with ASTM C1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
1. Maximum Thermal Conductivity: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
 2. Install spacers that position the inner duct at uniform distance from outer duct without compressing insulation.
 3. Coat insulation with antimicrobial coating.
 4. Cover insulation with polyester film complying with UL 181, Class 1.
- H. Inner Duct: Minimum 24-gauge perforated galvanized sheet steel having 3/32-inch- diameter perforations, with overall open area of 23 percent solid galvanized sheet steel.

2.4 SINGLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
1. Construct ducts of galvanized sheet steel unless otherwise indicated.
 2. For ducts exposed to weather, construct of Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Elgen Manufacturing.
 - b. GSI; a DMI Company.
 - c. MKT Metal Manufacturing.
 - d. Nordfab Ducting.
 - e. Set Duct Manufacturing.
 - f. Spiral Manufacturing Co., Inc.
 - g. Or approved equal.
- B. Source Limitations: Obtain single-wall round and flat oval ducts and fittings from single manufacturer.
- C. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- D. Transverse Joints: Select joint types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
- E. Longitudinal Seams: Select seam types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
 2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
- F. Tees and Laterals: Select types and fabricate in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.5 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials are to be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
 - 1. Galvanized Coating Designation: G90.
 - 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A653/A653M.
 - 1. Galvanized Coating Designation: G90.
 - 2. Minimum Thickness for Factory-Applied PVC Coating: 4 mils thick on sheet metal surface of ducts and fittings exposed to corrosive conditions, and minimum 1 mil thick on opposite surface.
 - 3. Coating Materials: For use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.
- D. Carbon-Steel Sheets: Comply with ASTM A1008/A1008M, with oiled, matte finish for exposed ducts.
- E. Stainless Steel Sheets: Comply with ASTM A480/A480M, Type 304 or 316, as indicated in "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish is to be No. 2B, No. 2D, No. 3, or No. 4 as indicated in "Duct Schedule" Article.
- F. Aluminum Sheets: Comply with ASTM B209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
- G. Factory- or Shop-Applied Antimicrobial Coating:
 - 1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating is to be applied to the exterior surface.
 - 2. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 - 3. Coating containing the antimicrobial compound is to have a hardness of 2H, minimum, when tested in accordance with ASTM D3363.
 - 4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.
 - 5. Shop-Applied Coating Color: White.
 - 6. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.
- H. Reinforcement Shapes and Plates: ASTM A36/A36M, steel plates, shapes, and bars; black and galvanized.
 - 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

- I. Tie Rods: Galvanized steel, 1/4-inch- minimum diameter for lengths 36 inches or less; 3/8-inch- minimum diameter for lengths longer than 36 inches.

2.6 DUCT LINER

- A. Fibrous-Glass Duct Liner: Comply with ASTM C1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Certainteed; SAINT-GOBAIN.
 - b. Johns Manville; a Berkshire Hathaway company.
 - c. Knauf Insulation.
 - d. Owens Corning.
 - e. Sekisui Voltek, LLC.
 - f. Or approved equal.
- 2. Source Limitations: Obtain fibrous-glass duct liner from single manufacturer.
- 3. Maximum Thermal Conductivity:
 - a. Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
 - b. Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
- 4. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
- 5. Solvent or Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C916.

- B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C534/C534M, Type II, Grade 1; and with NFPA 90A or NFPA 90B.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Aeroflex USA.
 - b. Armacell LLC.
 - c. Ductmate Industries, Inc.
 - d. K-Flex USA.
 - e. Sekisui Voltek, LLC.
 - f. Or approved equal.
- 2. Source Limitations: Obtain flexible elastomeric duct liner from single manufacturer.
- 3. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.

- C. Insulation Pins and Washers:

1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick stainless steel; with beveled edge sized as required to hold insulation securely in place, but not less than 1-1/2 inches in diameter.

D. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."

1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
3. Butt transverse joints without gaps, and coat joint with adhesive.
4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm or greater.
7. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
 - a. Fan discharges.
 - b. Intervals of lined duct preceding unlined duct.
 - c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm or where indicated.
9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
 - a. Sheet Metal Inner Duct Perforations: 3/32-inch diameter, with an overall open area of 23 percent.
10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

2.7 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets are to be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested in accordance with UL 723; certified by an NRTL.

B. Two-Part Tape Sealing System:

1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
2. Tape Width: 4 inches.
3. Sealant: Modified styrene acrylic.
4. Water resistant.
5. Mold and mildew resistant.
6. Maximum Static-Pressure Class: 10 inch wg, positive and negative.
7. Service: Indoor and outdoor.
8. Service Temperature: Minus 40 to plus 200 deg F.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.

C. Water-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
3. Shore A Hardness: Minimum 20.
4. Water resistant.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. Maximum Static-Pressure Class: 10 inch wg, positive and negative.
8. Service: Indoor or outdoor.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Solvent-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
9. Service: Indoor or outdoor.
10. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

E. Flanged Joint Sealant: Comply with ASTM C920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.

- F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- G. Round Duct Joint O-Ring Seals:
 - 1. Seal is to provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and is to be rated for 10-inch wg static-pressure class, positive or negative.
 - 2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
 - 3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.8 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Galvanized-steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A603.
- E. Steel Cables for Stainless Steel Ducts: Stainless steel complying with ASTM A492.
- F. Steel Cable End Connections: Galvanized-steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
 - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 - 2. Supports for Stainless Steel Ducts: Stainless steel shapes and plates.
 - 3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and coordination drawings.
- B. Install ducts in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install ducts in maximum practical lengths with fewest possible joints.
- D. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- E. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- F. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- G. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- H. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- I. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.
- J. Install fire, combination fire/smoke, and smoke dampers where indicated on Drawings and as required by the NYC Building Code. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers and specific installation requirements of the damper UL listing.
- K. Install heating coils, cooling coils, air filters, dampers, and all other duct-mounted accessories in air ducts where indicated on Drawings.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials both before and after installation. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."
- M. Elbows: Use long-radius elbows wherever they fit.
 - 1. Fabricate 90-degree rectangular mitered elbows to include turning vanes.
 - 2. Fabricate 90-degree round elbows with a minimum of three segments for 12 inches and smaller and a minimum of five segments for 14 inches and larger.
- N. Branch Connections: Use lateral or conical branch connections.

3.3 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.4 DUCTWORK EXPOSED TO WEATHER

- A. All external joints are to be welded. Seal all openings to provide weatherproof construction.
- B. Construct ductwork to resist external loads of wind, snow, ice, and other effects of weather. Provide necessary supporting structures.
- C. Single Wall:
 - 1. Ductwork is to be Type 304 stainless steel.
 - 2. Ductwork is to be galvanized steel.
 - a. If duct outer surface is uninsulated, protect outer surface with suitable paint.
 - 3. Where ducts have external insulation, provide weatherproof aluminum jacket. See Section 230713 "Duct Insulation."
- D. Double Wall:
 - 1. Ductwork complies with requirements in "Double-Wall Rectangular Ducts and Fittings" or "Double-Wall Round and Flat-Oval Ducts and Fittings" Article.
 - 2. Ductwork outer wall is to be Type 304 stainless steel indicated by manufacturer to be suitable for outdoor installation.
 - 3. Provide interstitial insulation.

3.5 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- B. Seal ducts at a minimum to the following seal classes in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 2. Outdoor, Supply-Air Ducts: Seal Class A.
 3. Outdoor, Exhaust Ducts: Seal Class C.
 4. Outdoor, Return-Air Ducts: Seal Class C.
 5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class B.
 6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class A.
 7. Unconditioned Space, Exhaust Ducts: Seal Class C.
 8. Unconditioned Space, Return-Air Ducts: Seal Class B.
 9. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class C.
 10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class B.
 11. Conditioned Space, Exhaust Ducts: Seal Class B.
 12. Conditioned Space, Return-Air Ducts: Seal Class C.

3.6 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
1. Where practical, install concrete inserts before placing concrete.
 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
 5. Do not use powder-actuated concrete fasteners for seismic restraints. Coordinate with Section 230548 "Vibration and Seismic Controls for HVAC."
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.7 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. See Section 230548 "Vibration and Seismic Controls for HVAC" for seismic restraint installation requirements.

3.8 DUCTWORK CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Section 233300 "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.9 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 099113 "Exterior Painting" and Section 099123 "Interior Painting."

3.10 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
 - 1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
 - 2. Test the following systems:
 - a. Ducts with a Pressure Class Higher Than 3-Inch wg: Test representative duct sections totaling no less than 25 percent of total installed duct area for each designated pressure class.
 - b. Supply Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.
 - c. Return Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.
 - d. Exhaust Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.
 - e. Outdoor-Air Ducts with a Pressure Class of 2- Inch wg or Higher: Test representative duct sections totaling no less than 50 percent of total installed duct area for each designated pressure class.
 - 3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
 - 4. Testing of each duct section is to be performed with access doors, coils, filters, dampers, and other duct-mounted devices in place as designed. No devices are to be removed or blanked off so as to reduce or prevent additional leakage.

5. Test for leaks before applying external insulation.
6. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
7. Give seven days' advance notice for testing.

C. Duct System Cleanliness Tests:

1. Visually inspect duct system to ensure that no visible contaminants are present.
2. Test sections of metal duct system, chosen randomly by the Commissioner, for cleanliness in accordance with "Description of Method 3 - NADCA Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
 - a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media is to not exceed 0.75 mg/100 sq. cm.

D. Duct system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.11 DUCT CLEANING

A. Clean new duct system(s) before testing, adjusting, and balancing.

B. Use duct cleaning methodology as indicated in NADCA ACR.

C. Use service openings for entry and inspection.

1. Provide openings with access panels appropriate for duct static-pressure and leakage class at dampers, coils, and any other locations where required for inspection and cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 233300 "Air Duct Accessories" for access panels and doors.
2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
3. Remove and reinstall ceiling to gain access during the cleaning process.

D. Particulate Collection and Odor Control:

1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.

E. Clean the following components by removing surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.

3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components and makeup air systems.

F. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans in accordance with NADCA ACR. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide drainage and cleanup for wash-down procedures.
7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents in accordance with manufacturer's written instructions after removal of surface deposits and debris.

3.12 STARTUP

- A. Air Balance: Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.13 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:

1. Fabricate all ducts to achieve SMACNA pressure class, seal class, and leakage class as indicated below.

B. Supply Ducts:

1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units :
 - a. Pressure Class: Positive 1- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2 .
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.

2. Ducts Connected to Constant-Volume Air-Handling Units :

- a. Pressure Class: Positive 2- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2 .
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
3. Ducts Connected to Variable-Air-Volume Air-Handling Units :
- a. Pressure Class: Positive 2-inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
4. Ducts Connected to Equipment Not Listed Above:
- a. Pressure Class: Positive 2- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- C. Return Ducts:
1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units :
 - a. Pressure Class: Positive or negative 1- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2. 2. Ducts Connected to Air-Handling Units :
 - a. Pressure Class: Positive or negative 2- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2. 3. Ducts Connected to Equipment Not Listed above:
 - a. Pressure Class: Positive or negative 2- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- D. Exhaust Ducts:
1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
 - a. Pressure Class: Negative 2- inch wg.
 - b. Minimum SMACNA Seal Class: A if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.

2. Ducts Connected to Air-Handling Units :
 - a. Pressure Class: Positive or negative 2- inch wg.
 - b. Minimum SMACNA Seal Class: A if negative pressure, and A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
 3. Ducts Connected to Equipment Not Listed above:
 - a. Pressure Class: Positive or negative 2- inch wg.
 - b. Minimum SMACNA Seal Class: A if negative pressure; A if positive pressure.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- E. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:
1. Ducts Connected to Fan Coil Units, Furnaces, Heat Pumps, and Terminal Units Boilers:
 - a. Pressure Class: Positive or negative 1- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 8.
 - d. SMACNA Leakage Class for Round and Flat Oval: 8.
 2. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Positive or negative 2- inch wg.
 - b. Minimum SMACNA Seal Class: A.
 - c. SMACNA Leakage Class for Rectangular: 2.
 - d. SMACNA Leakage Class for Round and Flat Oval: 2.
- F. Intermediate Reinforcement:
1. Galvanized-Steel Ducts: Galvanized steel .
 2. Stainless Steel Ducts:
 - a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: Galvanized.
 3. Aluminum Ducts: Aluminum.
- G. Liner:
1. Supply-Air Ducts: Fibrous glass, Type I , 1 inch thick.
 2. Return-Air Ducts: Fibrous glass, Type I , 1 inch thick.
 3. Exhaust-Air Ducts: Fibrous glass, Type I , 1 inch thick.
 4. Supply Fan Plenums: Fibrous glass, Type II , 1 inch thick.
 5. Return- and Exhaust-Fan Plenums: Fibrous glass, Type II, 1 inches thick.

H. Double-Wall Duct Interstitial Insulation:

1. Supply-Air Ducts: 1 inch thick.
2. Return-Air Ducts: 1 inch thick.
3. Exhaust-Air Ducts: 1 inch thick.

I. Elbow Configuration:

1. Rectangular Duct - Requirements for Different Velocities: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Velocity 1000 fpm or Lower:
 - 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 4 without vanes.
 - b. Velocity 1000 to 1500 fpm:
 - 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
 - c. Velocity 1500 fpm or Higher:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
2. Rectangular Duct - Requirements for All Velocities: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.

- 1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
 - 2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
 - 3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
 - 4) Radius-to Diameter Ratio: 1.5.
- b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
 - c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam.

J. Branch Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Conical spin in.
2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1000 fpm or Lower: 90-degree tap.
 - b. Velocity 1000 to 1500 fpm: Conical tap.
 - c. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 233113

SECTION 233300 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Backdraft and pressure relief dampers.
 - 2. Manual volume dampers.
 - 3. Control dampers.
 - 4. Fire dampers.
 - 5. Combination fire and smoke dampers.
 - 6. Turning vanes.
 - 7. Remote damper operators.
 - 8. Duct-mounted access doors.
 - 9. Duct access panel assemblies.
 - 10. Duct accessory hardware.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with NFPA 90A and NFPA 90B.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Greenheck Fan Corporation.
 2. Lloyd Industries, Inc.
 3. Nailor Industries Inc.
 4. Ruskin Company.
 5. Or approved equal.
- B. Description: Gravity balanced.
- C. Construction:
1. Frame:
 - a. Hat shaped.
 - b. 0.093-inch- thick extruded aluminum, with welded or mechanically attached corners and mounting flange.
 2. Blades:
 - a. Multiple single-piece blades.
 - b. Center pivoted, maximum 6-inch width, 0.050-inch- thick aluminum sheet with sealed edges.
 3. Blade Action: Parallel.
- D. Blade Seals: Extruded vinyl, mechanically locked.
- E. Blade Axles:
1. Material: Aluminum.
 2. Diameter: 0.20 inch.
- F. Return Spring: Adjustable tension.
- G. Accessories:
1. Adjustment device to permit setting for varying differential static pressure.
 2. Counterweights and spring-assist kits for vertical airflow installations.
 3. Screen Type: Bird.
 4. 90-degree stops.

2.3 MANUAL VOLUME DAMPERS

- A. Standard, Steel, Manual Volume Dampers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Air Balance; a division of MESTEK, Inc.
 - b. Greenheck Fan Corporation.
 - c. Lloyd Industries, Inc.
 - d. Nailor Industries Inc.
 - e. Ruskin Company.
 - f. Or approved equal.
2. Construction:
 - a. Linkage out of airstream.
 - b. Suitable for horizontal or vertical airflow applications.
 3. Frames:
 - a. Hat-shaped, 16-gauge- thick, galvanized sheet steel.
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
 4. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Stainless steel; 16 gauge thick.
 5. Blade Axles: Stainless steel.
 6. Tie Bars and Brackets: Galvanized steel.
 7. Locking device to hold damper blades in a fixed position without vibration.
- B. Standard, Aluminum, Manual Volume Dampers:**
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arrow United Industries.
 - b. Nailor Industries Inc.
 - c. Ruskin Company.
 - d. Or approved equal.
 2. Construction:
 - a. Linkage out of airstream.
 - b. Suitable for horizontal or vertical airflow applications.
 3. Frames:
 - a. Hat-shaped, 0.10-inch- thick, aluminum sheet channels.
 - b. Flanges for attaching to walls and flangeless frames for installing in ducts.

4. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Extruded-Aluminum Blades: 0.050-inch- thick extruded aluminum.
5. Blade Axles: Galvanized steel.
6. Tie Bars and Brackets: Aluminum.
7. Locking device to hold damper blades in a fixed position without vibration.

C. Jackshaft:

1. Size: 0.5-inch diameter.
2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

D. Damper Hardware:

1. Zinc-plated, die-cast core with dial and handle, made of 3/32-inch- thick zinc-plated steel, and a 3/4-inch hexagon locking nut.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform for insulated duct mounting.

2.4 CONTROL DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Arrow United Industries.
2. Greenheck Fan Corporation.
3. Metal Form Manufacturing, Inc.
4. Nailor Industries Inc.
5. Ruskin Company.
6. Or approved equal.

B. General Requirements:

1. Unless otherwise indicated, use parallel-blade configuration for two-position control, equipment isolation service, and when mixing two airstreams. For other applications, use opposed-blade configuration.
2. Factory or field assemble multiple damper sections to provide a single damper assembly of size required by the application.

C. Performance:

1. AMCA Certification: Test and rate in accordance with AMCA 511.
2. Pressure Drop: 0.05 inch wg at 1500 fpm across a 24-by-24-inch damper when tested in accordance with AMCA 500-D, Figure 5.3.
3. Velocity: Up to 3000 fpm.
4. Temperature: Minus 25 to plus 180 deg F.
5. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.

D. Construction:

1. Linkage out of airstream.
2. Suitable for horizontal or vertical airflow applications.
3. Frames:
 - a. Hat, U, or angle shaped.
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
4. Blades:
 - a. Multiple blade with maximum blade width of 8 inches.
 - b. Stainless steel.
5. Blade Edging Seals:
 - a. Inflatable seal blade edging, or replaceable rubber seals.
6. Blade Jamb Seal: Flexible stainless steel, compression type.
7. Blade Axles: 1/2-inch diameter; stainless steel.
8. Blade-Linkage Hardware: Zinc-plated steel and brass; ends sealed against blade bearings. Linkage mounted out of air stream.
9. Bearings:
 - a. Dampers mounted with vertical blades to have thrust bearings at each end of every blade.

E. Damper Actuator - Electric:

1. Electric - 120 V ac.
2. UL 873, plenum rated.
3. Fully modulating.
 - a. Sufficient motor torque and spring torque to drive damper fully open and fully closed with adequate force to achieve required damper seal.
 - b. Minimum 90-degree drive rotation.
4. Clockwise or counterclockwise drive rotation as required for application.
5. Environmental Operating Range:

- a. Temperature: Minus 40 to plus 130 deg F.
 - b. Humidity: 5 to 95 percent relative humidity noncondensing.
6. Environmental enclosure: NEMA 2.
 7. Actuator to be factory mounted and provided with a single-point wiring connection.
- F. Controllers, Electrical Devices, and Wiring:
1. Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 2. Electrical Connection: 115 V, single phase, 60 Hz.

2.5 FIRE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Air Balance; a division of MESTEK, Inc.
 2. Greenheck Fan Corporation.
 3. Pottorff.
 4. Prefco.
 5. Ruskin Company.
 6. Or approved equal.
- B. Type: and; rated and labeled in accordance with UL 555 by an NRTL.
- C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 fpm velocity.
- D. Fire Rating: 1-1/2 hours.
- E. Frame: Curtain type with blades outside airstream; fabricated with roll-formed galvanized steel; with mitered and interlocking corners; gauge in accordance with UL listing.
- F. Mounting Sleeve: Factory- or field-installed, stainless steel; gauge in accordance with UL listing.
- G. Mounting Orientation: Vertical or horizontal as indicated.
- H. Blades: Roll-formed stainless steel, . Material gauge is to be in accordance with UL listing.
- I. Horizontal Dampers: Include blade lock and stainless steel closure spring.

2.6 COMBINATION FIRE AND SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Air Balance; a division of MESTEK, Inc.
 2. NCA Manufacturing, Inc.
 3. Ruskin Company.
 4. Or approved equal.

B. General Requirements:

1. Label to indicate conformance to UL 555 and UL 555S by an NRTL.
2. Label to indicate conformance to NFPA 80 and NFPA 90A by an NRTL.
3. Unless otherwise indicated, use parallel-blade configuration.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 2000 fpm velocity.

D. Fire Rating: 1-1/2 hours.

E. Performance:

1. AMCA Certification: Test and rate in accordance with AMCE Publication 511.
2. Leakage:
 - a. Class I: Leakage shall not exceed 4 cfm/sq. ft. against 1-inch wg differential static pressure.
 - b. Class II: Leakage shall not exceed 10 cfm/sq. ft. against 1-inch wg differential static pressure.
3. Pressure Drop: 0.05 in. wg at 1500 fpm across a 24-by-24-inch damper when tested in accordance with AMCA 500-D, Figure 5.3.
4. Velocity: Up to 3000 fpm.
5. Temperature: Minus 25 to plus 180 deg F.
6. Pressure Rating: Damper close-off pressure equal to fan shutoff pressure with a maximum blade deflection of 1/200 of blade length.

F. Construction:

1. Suitable for horizontal or vertical airflow applications.
2. Linkage out of airstream.
3. Frame:
 - a. Hat shaped.
 - b. Galvanized sheet steel, with corners.
 - c. Gauge is to be in accordance with UL listing.
4. Blades:
 - a. Roll-formed, horizontal, galvanized sheet steel.
 - b. Maximum width and gauge in accordance with UL listing.
5. Blade Edging Seals:
 - a. Silicone rubber.
6. Blade Jamb Seal: Flexible stainless steel, compression type.

G. Mounting Sleeve:

1. Factory installed, galvanized sheet steel.

2. Length to suit wall or floor application with factory-furnished silicone caulking.
3. Gauge in accordance with UL listing.

H. Heat-Responsive Device:

1. Resettable, 165 deg F rated, fusible links.

I. Master control panel for use in dynamic smoke-management systems.

J. Damper Actuator - Electric:

1. Electric - 120 V ac.
2. UL 873, plenum rated.
3. Designed to operate in smoke-control systems complying with UL 555S requirements.
4. Two position with fail-safe spring return.
 - a. Sufficient motor torque and spring torque to drive damper fully open and fully closed with adequate force to achieve required damper seal.
 - b. Maximum 15-second full-stroke closure.
 - c. Minimum 90-degree drive rotation.
5. Clockwise or counterclockwise drive rotation as required for application.
6. Environmental Operating Range:
 - a. Temperature: Minus 40 to plus 130 deg F.
 - b. Humidity: 5 to 95 percent relative humidity noncondensing.
7. Environmental Enclosure: NEMA 2.
8. Actuator to be factory mounted and provided with single-point wiring connection.

K. Controllers, Electrical Devices, and Wiring:

1. Comply with requirements for electrical devices and connections specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
2. Electrical Connection: 115 V, single phase, 60 Hz.

L. Accessories:

1. Auxiliary switches for position indication.
2. Test and reset switches, damper mounted.
3. Smoke Detector: Integral, factory wired for single-point connection.

2.7 TURNING VANES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aero-Dyne Sound Control Co.
2. Ductmate Industries, Inc.
3. Duro Dyne Inc.

4. DynAir; a Carlisle Company.
 5. Or approved equal.
- B. **Manufactured Turning Vanes for Metal Ducts:** Fabricate curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
1. **Acoustic Turning Vanes:** Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. **General Requirements:** Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
- D. **Vane Construction:**
1. Double wall.

2.8 REMOTE DAMPER OPERATORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. DynAir; a Carlisle Company.
 2. United Enertech.
 3. Young Regulator Company.
 4. Or approved equal.
- B. **Description:** Cable system designed for remote manual damper adjustment.
- C. **Tubing:** Aluminum.
- D. **Cable:** Stainless steel.
- E. **Wall-Box Mounting:** Recessed.
- F. **Wall-Box Cover-Plate Material:** Stainless steel.

2.9 DUCT-MOUNTED ACCESS DOORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Cesco Products; a division of MESTEK, Inc.
 2. CL WARD & Family Inc.
 3. Ductmate Industries, Inc.
 4. Duro Dyne Inc.
 5. Ruskin Company.
 6. Or approved equal.
- B. **Duct-Mounted Access Doors:** Fabricate access panels in accordance with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figure 7-2 (7-2M), "Duct Access Doors and Panels," and Figure 7-3, "Access Doors - Round Duct."

1. Door:
 - a. Double wall, rectangular.
 - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
 - c. 24-gauge- thick stainless steel door panel.
 - d. Vision panel.
 - e. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
 - f. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
 - a. 24-gauge- thick galvanized steel or 0.032-inch- thick aluminum frame.
3. Number of Hinges and Locks:
 - a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
 - b. Access Doors up to 18 Inches Square: Two hinges and two sash locks.
 - c. Access Doors up to 24 by 48 Inches: Continuous and two compression latches with outside and inside handles.
 - d. Access Doors Larger Than 24 by 48 Inches: Continuous and two compression latches with outside and inside handles.

2.10 DUCT ACCESS PANEL ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. CL WARD & Family Inc.
 2. Ductmate Industries, Inc.
 3. Flame Gard, Inc.
 4. Or approved equal.
- B. Access panels used in cooking applications:
 1. Labeled compliant to NFPA 96 for grease duct access doors.
 2. Labeled in accordance with UL 1978 by an NRTL.
- C. Panel and Frame: Minimum thickness 16-gauge stainless steel.
- D. Fasteners: Stainless steel. Panel fasteners shall not penetrate duct wall.
- E. Gasket: Comply with NFPA 96, grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F.
- F. Minimum Pressure Rating: 10 inches wg positive or negative.

2.11 DUCT ACCESSORY HARDWARE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CL WARD & Family Inc.
2. Ductmate Industries, Inc.
3. Duro Dyne Inc.
4. Ventfabrics, Inc.
5. Or approved equal.

- B. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- C. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

2.12 MATERIALS

- A. Galvanized Sheet Steel: Comply with ASTM A653/A653M.
1. Galvanized Coating Designation: G90.
 2. Exposed-Surface Finish: Mill phosphatized.
- B. Stainless Steel Sheets: Comply with ASTM A480/A480M, Type 304, and having a No. 2 finish.
- C. Aluminum Sheets: Comply with ASTM B209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, one-side bright finish for exposed ducts.
- D. Extruded Aluminum: Comply with ASTM B221, Alloy 6063, Temper T6.
- E. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless steel ducts.
- F. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install duct accessories in accordance with applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116 for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless steel accessories in stainless steel ducts, and aluminum accessories in aluminum ducts.

- C. Install control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Where multiple damper sections are necessary to achieve required dimensions, provide reinforcement to fully support damper assembly when fully closed at full system design static pressure.
- E. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- F. Set dampers to fully open position before testing, adjusting, and balancing.
- G. Install test holes at fan inlets and outlets and elsewhere as indicated and as needed for testing and balancing.
- H. Install firedampers in accordance with UL listing.
- I. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
 - 1. On both sides of duct coils.
 - 2. Upstream and downstream from duct filters.
 - 3. At outdoor-air intakes and mixed-air plenums.
 - 4. At drain pans and seals.
 - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 - 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 - 7. At each change in direction and at maximum 50-ft. spacing.
 - 8. Upstream and downstream from turning vanes.
 - 9. Upstream or downstream from duct silencers.
 - 10. For grease ducts, install at locations and spacing as required by NFPA 96.
 - 11. Control devices requiring inspection.
 - 12. Elsewhere as indicated.
- J. Install access doors with swing against duct static pressure.
- K. Access Door Sizes:
 - 1. One-Hand or Inspection Access: 8 by 5 inches.
 - 2. Two-Hand Access: 12 by 6 inches.
 - 3. Head and Hand Access: 18 by 10 inches.
 - 4. Head and Shoulders Access: 21 by 14 inches.
 - 5. Body Access: 25 by 14 inches.
 - 6. Body plus Ladder Access: 25 by 17 inches.

- L. Label access doors according to Section 230553 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
- M. Install flexible connectors to connect ducts to equipment.
- N. For fans developing static pressures of 5 inches wg and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
- O. Install duct test holes where required for testing and balancing purposes.
- P. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

END OF SECTION 233300

SECTION 233346 - FLEXIBLE DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Insulated flexible ducts.
 - 2. Flexible duct connectors

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 INSULATED FLEXIBLE DUCTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Flexmaster U.S.A., Inc.
 - 2. Thermaflex; a Flex-Tek Group company.
 - 3. Ward Industries; a brand of Hart & Cooley, Inc.
 - 4. Or approved equal.
- B. Insulated, Flexible Duct: UL 181, Class 1, multiple layers of aluminum laminate supported by helically wound, spring-steel wire; fibrous-glass insulation; vapor-barrier film.
 - 1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
 - 2. Temperature Range: Minus 20 to plus 210 deg F.
 - 3. Insulation R-Value: R4.2.

2.2 FLEXIBLE DUCT CONNECTORS

- A. Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action in sizes 3 through 18 inches, to suit duct size.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install flexible ducts according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install in indoor applications only. Flexible ductwork should not be exposed to UV lighting.
- C. Connect diffusers or light troffer boots to ducts with maximum 12-inch lengths of flexible duct clamped or strapped in place.
- D. Connect flexible ducts to metal ducts with .
- E. Install duct test holes where required for testing and balancing purposes.
- F. Installation:
 - 1. Install ducts fully extended.
 - 2. Do not bend ducts across sharp corners.
 - 3. Bends of flexible ducting shall not exceed a minimum of one duct diameter.
 - 4. Avoid contact with metal fixtures, water lines, pipes, or conduits.
 - 5. Install flexible ducts in a direct line, without sags, twists, or turns.
- G. Supporting Flexible Ducts:
 - 1. Suspend flexible ducts with bands 1-1/2 inches wide or wider and spaced a maximum of 48 inches apart. Maximum centerline sag between supports shall not exceed 1/2 inch per 12 inches.
 - 2. Install extra supports at bends placed approximately one duct diameter from center line of the bend.
 - 3. Ducts may rest on ceiling joists or truss supports. Spacing between supports shall not exceed the maximum spacing per manufacturer's written installation instructions.
 - 4. Vertically installed ducts shall be stabilized by support straps at a maximum of 72 inches o.c.

END OF SECTION 233346

SECTION 233413 - AXIAL HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Engineering Services: Engage a qualified professional engineer licensed in the State of New York as defined DDC General Conditions, to design vibration isolation, supports, and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- F. Seismic Performance: Axial HVAC fans shall withstand the effects of earthquake motions determined according to ASCE/SEI 7. See Section 230548 "Vibration and Seismic Controls for HVAC."
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Component Importance Factor: 1.0.

G. Capacities and Characteristics: Refer to mechanical drawings M-700 series - Fan schedule for capacities

1. Drive Type: Belt.
2. Motor:
 - a. Motor Enclosure: Open, dripproof or Totally enclosed, air over.
 - b. Efficiency: Premium efficiency.
 - c. Electrical Characteristics: See fan schedule in M-700 series drawings
3. Sound Power: See fan schedule in M-700 series drawings
4. Vibration Isolators: Spring isolators with a static deflection of 1 inch.
5. Spark Resistance Class: Classified in accordance with AMCA 99, Section 8.

2.2 AXIAL FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Greenheck Fan Corporation.
2. Loren Cook Company.
3. New York Blower Company (The).
4. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION, GENERAL

- A. Install axial fans level and plumb.
- B. Disassemble and reassemble units, as required for moving to the final location, in accordance with manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.
- D. Equipment Mounting:
 1. Install floor-mounted axial fans on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 2. Unit Support: Install axial fans level on structural curbs. Coordinate with duct connections. Coordinate wall penetrations and flashing with wall construction or Secure units to structural support with anchor bolts.

3. Support duct-mounted and other hanging axial fans directly from the building structure, using suitable hanging systems as specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
4. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

E. Install units with adequate clearances for service and maintenance.

F. Label fans in accordance with requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.3 DUCTWORK CONNECTIONS

A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."

B. Where installing ducts adjacent to fans, allow space for service and maintenance.

3.4 ELECTRICAL CONNECTIONS

A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.6 STARTUP SERVICE:

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Verify that shipping, blocking, and bracing are removed.
 - 3. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 4. Verify that cleaning and adjusting are complete.
 - 5. For direct-drive fans, verify proper motor rotation direction and verify fan wheel free rotation and smooth bearing operation.
 - 6. For belt-drive fans, disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 - 7. Adjust belt tension.
 - 8. Adjust damper linkages for proper damper operation.
 - 9. Verify lubrication for bearings and other moving parts.
 - 10. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 - 11. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
 - 12. Shut unit down and reconnect automatic temperature-control operators.
 - 13. Remove and replace malfunctioning units and retest as specified above.

3.7 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.
- D. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.8 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean fans internally to remove foreign material and construction dirt and dust.

END OF SECTION 233413

SECTION 233416 - CENTRIFUGAL HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Tubular in-line centrifugal fans.
 - 2. Plenum fans.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of unit components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Startup."
- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Engineering Services: Engage a qualified professional engineer licensed in the State of New York as defined in DDC General Conditions, to design vibration isolation and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance and design criteria indicated.

- F. Seismic Performance: Centrifugal fans shall withstand the effects of earthquake motions determined according to ASCE/SEI 7. See Section 230548 "Vibration and Seismic Controls for HVAC."
1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Component Importance Factor: 1.0.
- G. Capacities and Characteristics: Refer to Fan schedule in M-700 series drawings for capacities and types
1. Class: AMCA 99, Section 14, Class I.
 2. Drive Type: Belt.
 3. Motor:
 - a. Motor Enclosure Type: Open, dripproof Totally enclosed, air over.
 - b. Efficiency: Premium efficiency.
 - c. Service Factor: 100 percent.
 - d. Electrical Characteristics: See Fan schedule
 4. Vibration Isolators:
 - a. Type: Spring.
 - b. Static Deflection: 1 inch.
 5. Spark-Resistance Class: Classified according to AMCA 99, Section 8 .

2.2 TUBULAR IN-LINE CENTRIFUGAL FANS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Product: Subject to compliance with requirements, provide one of the following:
1. Aerovent; a division of Twin City Fan Companies, Ltd.
 2. Greenheck Fan Corporation.
 3. Loren Cook Company.
 4. PennBarry.
 5. Or approved equal.
- C. Description: Tubular in-line centrifugal fans.
- D. Housing:
1. Housing Material: Stainless steel.
 2. Housing Coating: See schedule.
 3. Housing Construction: Split, spun aluminum with aluminum straightening vanes, inlet and outlet flanges, and support bracket adaptable to floor, side wall, or ceiling mounting.
- E. Fan Wheels: Steel, airfoil blades welded to aluminum hub.

F. Motor Enclosure: Totally enclosed, air over.

G. Accessories:

1. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
2. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
3. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.
4. Companion Flanges: For inlet and outlet duct connections.
5. Fan Guards: 1/2- by 1-inch mesh of galvanized steel in removable frame. Provide guard for inlet or outlet for units not connected to ductwork.
6. Motor and Drive Cover (Belt Guard): Epoxy-coated steel.

2.3 PLENUM FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Product: Subject to compliance with requirements, provide one of the following:

1. Canarm Ltd.
2. Chicago Blower Corporation.
3. Loren Cook Company.
4. Northern Blower, Inc.
5. Or approved equal.

C. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt- driven centrifugal fans, consisting of wheel, fan shaft, bearings, motor, drive assembly, and support structure.
2. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations.
3. Factory-installed and -wired disconnect switch.

D. Wheels:

1. Wheel Configuration: SWSI construction with curved inlet flange and heavy backplate; fastened to shaft with setscrews.
2. Backward-Inclined Airfoil Blades: Hollow, die-formed, airfoil-shaped blades continuously welded at tip flange and backplate.

E. Shafts:

1. Statically and dynamically balanced, and selected for continuous operation at maximum-rated fan speed and motor horsepower, with adjustable alignment and belt tensioning.
2. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
3. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Bearings:

1. Prelubricated and Sealed Shaft Bearings:
 - a. Self-aligning, pillow-block-type ball bearings.
 - b. Ball-Bearing Rating Life: ABMA 9, L(10) at 500,000 hours.

G. Belt Drives:

1. Factory mounted, with adjustable alignment and belt tensioning.
2. Service Factor Based on Fan Motor Size: 1.5.
3. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.

H. Motor Enclosure: Open, dripproof or Totally enclosed, air over.

I. Accessories:

1. Inlet Safety Screen: Comply with OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards." Diamond mesh wire screen is welded to steel angle frame or equivalent, prime coated.
2. Safety Enclosure: Comply with OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards." Diamond mesh wire screen is welded to steel angle frame or equivalent, prime coated.
3. Belt Guard: Comply with OSHA and fabricate according to SMACNA's "HVAC Duct Construction Standards." Diamond mesh wire screen is welded to steel angle frame or equivalent, prime coated.
4. Inlet Companion Flange: Rolled flanges for duct connections of same material as housing.
5. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
6. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
7. Piezometer Ring: Piezometer ring mounted at fan inlet cone for airflow measurement.

2.4 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
- B. Where variable-frequency drives are indicated or scheduled, provide fan motor compatible with variable-frequency drive.

2.5 SOURCE QUALITY CONTROL

- A. AMCA Certification for Fan Sound Performance Rating: Test, rate, and label in accordance with AMCA 311.
- B. AMCA Certification for Fan Aerodynamic Performance Ratings: Test, rate, and label in accordance with AMCA 211.
- C. AMCA Certification for Fan Energy Index (FEI): Test, rate, and label in accordance with AMCA 211.
- D. Operating Limits: Classify fans in accordance with AMCA 99, Section 14.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION, GENERAL

- A. Install centrifugal fans level and plumb.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.
- D. Equipment Mounting:
 - 1. Install floor- or roof-mounted centrifugal fans on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Support duct-mounted and other hanging centrifugal fans directly from the building structure, using suitable hanging systems as specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
 - 3. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- E. Curb Support, Field Built-Up: Install roof curb on roof structure, level and secure, according to "The NRCA Roofing and Waterproofing Manual," detail "Equipment Support Curb," number "SPF-9" (page 1409) and detail "Equipment Support Curb," number "SPF-9S" (page 1410). Install and secure centrifugal fans on curbs, and coordinate roof penetrations and flashing with roof construction. Secure units to curb support with anchor bolts.
- F. Curb Support, Prefabricated: Rail-type wood support provided by fan manufacturer.
- G. Unit Support: Install centrifugal fans level on structural curbs. Coordinate with duct connections. Coordinate wall penetrations and flashing with wall construction or Secure units to structural support with anchor bolts.
- H. Isolation Curb Support: Install centrifugal fans on isolation curbs, and install flexible duct connectors and vibration-isolation and seismic-control devices.
 - 1. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

- I. Install units with clearances for service and maintenance.
- J. Label fans according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

3.3 DUCTWORK AND PIPING CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."
- B. Install ducts adjacent to fans to allow service and maintenance.
- C. Install piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain with pipe sizes matching the drain connection.
- D. Install heat tracing on all drain piping subject to freezing temperature and as indicated on Drawings. Furnish and install heat tracing according to Section 230533 "Heat Tracing for HVAC Piping."

3.4 ELECTRICAL CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Verify that shipping, blocking, and bracing are removed.

3. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
4. Verify that cleaning and adjusting are complete.
5. For direct-drive fans, verify proper motor rotation direction and verify fan wheel free rotation and smooth bearing operation.
6. For belt-drive fans, disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
7. Adjust belt tension.
8. Adjust damper linkages for proper damper operation.
9. Verify lubrication for bearings and other moving parts.
10. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
11. Disable automatic temperature-control operators, energize motor and confirm proper motor rotation and unit operation, adjust fan to indicated rpm, and measure and record motor voltage and amperage.
12. Shut unit down and reconnect automatic temperature-control operators.
13. Remove and replace malfunctioning units and retest as specified above.

3.7 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Lubricate bearings.
- D. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.8 CLEANING

- A. After completing system installation and testing, adjusting, and balancing and after completing startup service, clean fans internally to remove foreign material and construction dirt and dust

END OF SECTION 233416

SECTION 233600 - AIR TERMINAL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Modulating, single-duct air terminal units.
 - 2. Exhaust single-duct terminal units.
 - 3. Casing liner.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of air terminal unit.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for air terminal units.
 - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For air terminal units.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
- C. Engineering Services Submittal: For vibration isolation and supports, , and seismic restraints indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified, New York State licensed professional engineer responsible for their preparation.
 - 1. Materials, fabrication, assembly, and spacing of hangers and supports.
 - 2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints.
- D. Coordination Drawings: Floor plans and other details, or BIM model, drawn to scale, indicating the items described in this Section, and coordinated with all building trades.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Data: For air terminal units, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals.
 - 1. In addition to requirements of DDC General Conditions, include the following:
 - a. Instructions for resetting minimum and maximum air volumes.
 - b. Instructions for adjusting software set points.

1.7 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fan-Powered-Unit Filters: Furnish one spare filter(s) for each filter installed.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a Qualified Electrical Testing Laboratory, and marked for intended location and application.
- B. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment," and Section 7 - "Construction and System Start-up."
- C. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, "Section 6 - Heating, Ventilating, and Air Conditioning."

- D. Engineering Services: Engage a qualified professional engineer, licensed State of New York as defined in DDC General Conditions, to design vibration isolation, supports, and seismic restraints, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- E. Seismic Performance: Air terminal units shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7. See Section 230548 "Vibration and Seismic Controls for HVAC."
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Component Importance Factor: 1.0.

2.2 MODULATING, SINGLE-DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Price Industries.
 - 3. Titus, a division of Air System Components; Johnson Controls, Inc.
 - 4. Or approved equal.
- B. Description: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: Minimum 20-gauge- thick galvanized steel.
 - 1. Casing Liner: Comply with requirements in "Casing Liner" Article below for "Casing Liner, Flexible Elastomeric" Paragraph and the with "Perforated Metal Liner" Subparagraph.
 - 2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
 - 3. Air Outlet: S-slip and drive connections, size matching inlet size.
 - 4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
- D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
 - 1. Maximum Damper Leakage: AHRI 880 rated, 1 percent of nominal airflow at 3-inch wg inlet static pressure.
- E. Velocity Sensors: Multipoint array with velocity inlet sensors.
- F. Attenuator Section: Casing material and thickness matching associated air terminal unit casing. Provide absorptive packless attenuator integral with the air terminal unit, with noise transmission loss performance as required in schedules on Drawings.
- G. Hydronic Heating Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch. Include manual air vent and drain valve. Provide hydronic heating coils for air terminal units scheduled on Drawings.

H. Direct Digital Controls:

1. Terminal Unit Controller: Pressure-independent, VAV controller and integrated actuator, and electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes.
 - a. Occupied and unoccupied operating mode.
 - b. Remote reset of airflow or temperature set points.
 - c. Adjusting and monitoring with portable terminal.
 - d. Communication with temperature-control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 2. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.
- I. Control Sequence: See Section 230993.11 "Sequence of Operation for HVAC Direct Digital Control" and Drawings for control sequences.

2.3 EXHAUST SINGLE-DUCT TERMINAL UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Anemostat Products; a Mestek company.
2. Nailor Industries Inc.
3. Price Industries.
4. Titus
5. Or approved equal.

B. Description: Volume-damper assembly inside unit casing with control components inside a protective metal shroud, for exhaust applications where pressurization control via exhaust and supply airflow control is desired.

C. Casing: Minimum 20-gauge- thick galvanized steel.

1. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
2. Air Outlet: S-slip and drive connections, size matching inlet size.
3. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: AHRI 880 rated, 1 percent of nominal airflow at 3-inch wg inlet static pressure.

E. Direct Digital Controls:

1. Terminal Unit Controller: Pressure-independent, controller and integrated fail and last position actuator , and electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes.
 - a. Occupied and unoccupied operating mode.
 - b. Remote reset of airflow or temperature set points.
 - c. Adjusting and monitoring with portable terminal.
 - d. Communication with temperature-control system specified in Section 230923 "Direct Digital Control (DDC) System for HVAC."
 2. Room Sensor: Wall mounted with differential pressure set-point adjustment and access for connection of portable operator terminal.
 3. Damper Actuator: 24 V, fail in last position.
- F. Control Sequence: See Section 230993.11 "Sequence of Operation for HVAC Direct Digital Control" and Drawings for control sequences.

2.4 CASING LINER

- A. Casing Liner, Fibrous Glass: Fibrous-glass duct liner, complying with ASTM C1071, NFPA 90A or NFPA 90B, and with NAIMA AH124.
1. Minimum Thickness: 3/4 inch.
 - a. Maximum Thermal Conductivity:
 - 1) Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
 - 2) Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
 2. Antimicrobial Erosion-Resistant Coating: Apply to surface of liner that will form interior surface of duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound is to be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 3. Foil-Faced Liner: Minimum 0.001-inch reinforced, nonporous aluminum foil applied to matted insulation airstream face. Encapsulate all insulation edges with sheet metal angles and channels, or tape.
 4. Solid Metal Liner: Solid galvanized sheet metal encapsulating matted insulation face from airstream.
 5. Perforated Metal Liner: Perforated galvanized sheet metal encapsulating matted insulation face from airstream.
 6. Specialty Liner: Insert specialty liner in coordination with manufacturers.
 7. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C916.

2.5 SOURCE QUALITY CONTROL

- A. AHRI 880 Certification: Test, rate, and label assembled air terminal units in accordance with AHRI 880.
- B. AHRI 880: Test and rate assembled air terminal units in accordance with AHRI 880.
- C. Water Coils: Factory pressure test to 300 psig in accordance with AHRI 410 and ASHRAE 33.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION, GENERAL

- A. Comply with Section 230529 "Hangers and Supports for HVAC Piping and Equipment" and Section 233113 "Metal Ducts" for hangers and supports.
- B. Install air terminal units according to NFPA 90A.
- C. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- D. Install wall-mounted thermostats.

3.3 PIPING CONNECTIONS

- A. Where installing piping adjacent to air terminal unit, allow space for service and maintenance.
- B. Hot-Water Piping: Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties," and connect heating coils to supply piping with shutoff valve, strainer, control valve, and union or flange; and to return piping with balancing valve and union or flange.

3.4 DUCTWORK CONNECTIONS

- A. Comply with requirements in Section 233113 "Metal Ducts" for connecting ducts to air terminal units.
- B. Make connections to air terminal units with flexible connectors complying with requirements in Section 233300 "Air Duct Accessories."

3.5 ELECTRICAL CONNECTIONS

- A. Install field power to each air terminal unit electrical power connection. Coordinate with air terminal unit manufacturer and installers.
- B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

- E. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 2 inch high.

3.6 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.7 IDENTIFICATION

- A. Label each air terminal unit with drawing designation, nominal airflow, maximum and minimum factory-set airflows, and coil type. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
 - 3. Verify that controls and control enclosure are accessible.
 - 4. Verify that control connections are complete.
 - 5. Verify that nameplate and identification tag are visible.
 - 6. Verify that controls respond to inputs as specified.

3.9 ADJUSTING

- A. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air terminal unit testing, adjusting, and balancing.

3.10 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.
- B. Tests and inspections:
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.

2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Air terminal unit will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate air terminal units.

END OF SECTION 233600

SECTION 233713.13 - AIR DIFFUSERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Rectangular and square ceiling diffusers.
2. Perforated diffusers.
3. Louver face diffusers.
4. Linear bar diffusers.
5. Linear slot diffusers.
6. Ceiling-integral continuous slot diffusers.
7. High-capacity, modular-core supply grille diffusers.

B. Related Requirements:

1. Section 233300 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers.
2. Section 233713.23 "Air Registers and Grilles" for adjustable-bar register and grilles, fixed-face registers and grilles, and linear bar grilles.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
2. Diffuser Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

- B. Samples: For each exposed product and for each color and texture specified. Actual size of smallest diffuser indicated.

- C. Samples for Initial Selection: For diffusers with factory-applied color finishes. Actual size of smallest diffuser indicated.
- D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Ceiling suspension assembly members.
 - 2. Method of attaching hangers to building structure.
 - 3. Size and location of initial access modules for acoustical tile.
 - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 - 5. Duct access panels.

1.5 INFORMATIONAL SUBMITTALS

- A. Source quality-control reports.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 RECTANGULAR AND SQUARE CEILING DIFFUSERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Price Industries.
 - 3. Titus.
 - 4. Or approved equal.
- B. Devices shall be specifically designed for variable-air-volume flows.
- C. Material: Aluminum.
- D. Finish: Baked enamel, color selected by Commissioner or Anodized aluminum.
- E. Face Size: 24 by 24 inches or 20 by 20 inches or 12 by 12 inches.
- F. Face Style: Refer to Drawings
- G. Mounting: T-bar.
- H. Pattern: Fixed.

I. Dampers: Radial opposed blade.

J. Accessories:

1. Equalizing grid.
2. Plaster ring.
3. Safety chain.
4. Wire guard.
5. Sectorizing baffles.
6. Operating rod extension.

2.2 PERFORATED DIFFUSERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Anemostat Products; a Mestek company.
2. Price Industries.
3. Titus.
4. Or approved equal.

B. Devices shall be specifically designed for variable-air-volume flows.

C. Material: Steel backpan and pattern controllers, with aluminum face.

D. Finish: Baked enamel, color selected by Commissioner.

E. Face Size: 12 by 12 inches, 24 by 12 inches, 36 by 12 inches, 48 by 12 inches, 16 by 16 inches, 20 by 20 inches 24 by 24 inches, 36 by 24 inches and 48 by 24 inches.

F. Duct Inlet: Refer to Mechanical Drawings

G. Face Style: Refer to Mechanical Drawings

H. Mounting: T-bar.

I. Pattern Controller: Fixed with curved blades at inlet.

J. Dampers: Opposed blade .

K. Accessories:

1. Equalizing grid.
2. Plaster ring.
3. Safety chain.
4. Wire guard.
5. Sectorizing baffles.
6. Operating rod extension.

2.3 LOUVER FACE DIFFUSERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Price Industries.
 - 3. Titus.
 - 4. Or approved equal.
- B. Devices shall be specifically designed for variable-air-volume flows.
- C. Material: Aluminum.
- D. Finish: Baked enamel, color selected by Commissioner .
- E. Mounting: T-bar.
- F. Pattern: Refer to Mechanical Drawings
- G. Dampers: Radial opposed blade.
- H. Accessories:
 - 1. Square to round neck adaptor.
 - 2. Adjustable pattern vanes.
 - 3. Throw reducing vanes.
 - 4. Equalizing grid.
 - 5. Plaster ring.
 - 6. Safety chain.
 - 7. Wire guard.
 - 8. Sectorizing baffles.
 - 9. Operating rod extension.

2.4 LINEAR BAR DIFFUSERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Price Industries.
 - 3. Titus.
 - 4. Or approved equal.
- B. Devices shall be specifically designed for variable-air-volume flows.
- C. Material: Aluminum.
- D. Finish: Baked enamel, color selected by Commissioner.

- E. Narrow Core Spacing Arrangement: 1/8-inch- thick blades spaced 1/4 inch apart; 15-degree deflection.
- F. Wide Core Spacing Arrangement: 1/8-inch- thick blades spaced 1/2 inch apart; 15-degree deflection.
- G. Wide Core Spacing Arrangement: 3/16-inch- thick blades spaced 1/2 inch apart; 15 -degree deflection.
- H. Pencil-Proof Core Spacing Arrangement: 3/16-inch- thick blades spaced 7/16 inch apart; 15 -degree deflection.
- I. One -Way Deflection Vanes: Extruded construction fixed louvers with removable core.
- J. Frame: 1-1/4 inches wide.
- K. Mounting Frame: Tbar.
- L. Mounting: Spring clip.
- M. Damper Type: Adjustable opposed-blade assembly.
- N. Accessories: Blank-off strips.

2.5 LINEAR SLOT DIFFUSERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Price Industries.
 - 3. Titus.
 - 4. Or approved equal.
- B. Devices shall be specifically designed for variable-air-volume flows.
- C. Material - Shell: Aluminum, noninsulated.
- D. Material - Pattern Controller and Tees: Aluminum.
- E. Finish - Face and Shell: Baked enamel, black.
- F. Finish - Pattern Controller: Baked enamel, black.
- G. Finish - Tees: Baked enamel, color selected by Commissioner
- H. Slot Width: 1/2 inch, 3/4 inch, 1 inch, and 1-1/2 inches.
- I. Number of Slots: One, Two, Three, and Four.
- J. Length: 24 inches, 30 inches, 36 inches, 48 inches, and 60 inches.
- K. Accessories: T-bar slot.

2.6 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas where diffusers are installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install diffusers level and plumb.
- B. Install diffusers with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.4 ADJUSTING

- A. After installation, adjust diffusers to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 233713.13

SECTION 233713.23 - AIR REGISTERS AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Adjustable blade face registers and grilles.
2. Fixed face registers and grilles.
3. Linear bar grilles.

B. Related Requirements:

1. Section 233300 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to registers and grilles.
2. Section 233713.13 "Air Diffusers" for various types of air diffusers.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
2. Register and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

B. Samples: For each exposed product and for each color and texture specified. Smallest size register and grille indicated.

C. Samples for Initial Selection: For registers and grilles with factory-applied color finishes. Smallest size register and grille indicated.

D. Samples for Verification: For registers and grilles, in manufacturer's standard sizes to verify color selected. Smallest size register and grille indicated.

- E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Ceiling suspension assembly members.
 2. Method of attaching hangers to building structure.
 3. Size and location of initial access modules for acoustical tile.
 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
 5. Duct access panels.

1.5 INFORMATIONAL SUBMITTALS

- A. Source quality-control reports.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 REGISTERS

- A. Adjustable Blade Face Register :
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Price Industries.
 - c. Titus.
 - d. Seiho
 - e. Or approved equal.
 2. Material: Aluminum.
 3. Finish: Baked enamel, color selected by Commissioner.
 4. Face Blade Arrangement: Horizontal or Vertical spaced 1/2 inch apart.
 5. Core Construction: Removable.
 6. Rear-Blade Arrangement: Horizontal or Vertical spaced 1/2 inch apart.
 7. Frame: 1-1/4 inches wide.
 8. Mounting Frame: Filter.
 9. Mounting: Concealed.
 10. Damper Type: Adjustable opposed blade.
 11. Accessories:
 - a. Front -blade gang operator.
 - b. Filter.

B. Fixed Face Register :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Price Industries.
 - c. Titus.
 - d. Seiho
 - e. Or approved equal.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Commissioner.
4. Face Blade Arrangement: Horizontal or Vertical spaced 1/2 inch apart.
5. Face Arrangement: Perforated core.
6. Core Construction: Removable.
7. Frame: 1-1/4 inches wide.
8. Mounting Frame: Filter.
9. Mounting: Concealed or Lay in.
10. Damper Type: Adjustable opposed blade.
11. Accessory: Filter.
12. Registers with Balancing Dampers installed for Animal Housing must be confirmed by the Commissioner.

2.2 GRILLES

A. Adjustable Blade Face Grille :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Titus.
 - c. Seiho
 - d. Price
 - e. Or approved equal.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Commissioner.
4. Face Blade Arrangement: Horizontal or Vertical spaced 3/4 inch apart.
5. Core Construction: Removable.
6. Rear-Blade Arrangement: Horizontal or Vertical spaced 3/4 inch 1/2 inch apart.
7. Frame: 1-1/4 inches wide.
8. Mounting Frame: Filter.
9. Mounting: Concealed or Lay in.
10. Accessories:
 - a. Front -blade gang operator.
 - b. Filter.

B. Fixed Face Grille :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Price Industries.
 - c. Titus.
 - d. Seiho
 - e. Or approved equal.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Commissioner
4. Face Blade Arrangement: Horizontal or Vertical; spaced 1/2 inch apart.
5. Face Arrangement: Perforated core.
6. Core Construction: Integral Removable.
7. Frame: 1-1/4 inches wide.
8. Mounting Frame: Filter.
9. Mounting: Concealed or Lay in.
10. Accessory: Filter.

C. Linear Bar Grilles

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anemostat Products; a Mestek company.
 - b. Price Industries.
 - c. Titus.
 - d. Or approved equal.
2. Material: Aluminum.
3. Finish: Baked enamel, color selected by Commissioner
4. Face Blade Arrangement: Horizontal or Vertical; spaced 1/2 inch apart.
5. Face Arrangement: Perforated core.
6. Core Construction: Removable.
7. Distribution plenum.
 - a. Internal insulation.
 - b. Inlet damper.
8. Frame: 1-1/4 inches wide.
9. Mounting Frame: Filter.
10. Mounting: Concealed or Lay in.
11. Damper Type: Adjustable opposed blade.

2.3 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate registers and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas where registers and grilles are installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install registers and grilles level and plumb.
- B. Outlets and Inlets Locations: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Commissioner for a determination of final location.
- C. Install registers and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.4 ADJUSTING

- A. After installation, adjust registers and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 233713.23

SECTION 234100 - PARTICULATE AIR FILTRATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Metal panel filters.
2. Flat panel filters.
3. Pleated panel filters.
4. Ring panel filters.
5. Nonsupported bag filters.
6. Supported bag filters.
7. Rigid cell box filters.
8. V-bank cell filters.
9. Self-supported pocket filters.
10. Bulk media.
11. Front- or back-access filter frames.
12. Side-access filter housings.
13. Filter gauges.

B. Related Requirements:

1. Section 233416 "Centrifugal HVAC Fans" for customized fan and filter units.

1.3 DEFINITIONS

- A. HIPS: High-impact polystyrene.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.

B. Sustainable Design Submittals:

1. Product data showing compliance with ASHRAE 62.1.

C. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.

1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.

1.6 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates, for filters, accessories, and components from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Test Reports: For each filter, for tests performed by manufacturer and witnessed by a qualified testing agency.

C. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Testing Agency Qualifications: An NRTL.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in a clean, dry place.

B. Comply with manufacturer's written rigging and installation instructions for unloading and moving to final installed location.

C. Handle products carefully to prevent damage, breaking, denting, and scoring. Do not install damaged products.

D. Protect products from weather, dirt, dust, water, construction debris, and physical damage.

1. Retain factory-applied coverings on equipment to protect finishes during construction and remove just prior to operating unit.
2. Cover unit openings before installation to prevent dirt and dust from entering inside of units. If required to remove coverings during unit installation, reapply coverings over openings after unit installation and remove just prior to operating unit.
3. Replace installed products damaged during construction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Filters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Component Importance Factor: 1.0
- B. ASHRAE Compliance:
 1. Comply with applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality"; Section 5 - "Systems and Equipment"; and Section 7 - "Construction and Startup."
 2. Comply with ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.
- C. Comply with NFPA 90A and NFPA 90B.
- D. Comply with UL 900.

2.2 METAL PANEL FILTERS

- A. Efficiency: Minimum 90 percent efficiency on particles 10 microns and larger.

2.3 FLAT PANEL FILTERS

- A. Description: Factory-fabricated, self-supported, flat, nonpleated, panel-type, disposable air filters with holding frames.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. Flanders Corporation.
 - c. Glasfloss Industries.
 - d. Or approved equal.
- B. Source Limitations: Obtain from single source from single manufacturer.

C. Capacities and Characteristics:

1. Face Size: 24 by 24 inches.
2. Depth: 4 inches nominal.
3. Maximum or Rated Face Velocity: 500 fpm.
4. Initial Resistance: 0.15-inch wg at 500 fpm.
5. Recommended Final Resistance: 0.5 inches wg.
6. Minimum Efficiency Reporting Value and Average Arrestance: MERV 8 with "Composite Average Particle Size Efficiency, Percent in Size Range, Micrometers" and "Average Arrestance" according to ASHRAE 52.2.
7. Access: Side.

D. Media: Interlaced glass or Cotton and synthetic fibers coated with nonflammable adhesive.

1. Media shall be coated with an antimicrobial agent.
2. Metal Retainer: Upstream side and downstream side.

E. Filter-Media Frame: Cardboard with perforated metal retainer sealed or bonded to the media.

2.4 PLEATED PANEL FILTERS

A. Description: Factory-fabricated, self-supported, extended-surface, pleated, panel-type, disposable air filters with holding frames.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. 3M.
 - b. AAF International.
 - c. Camfil Farr.
 - d. Flanders Corporation.
 - e. Or approved equal.

B. Source Limitations: Obtain from single source from single manufacturer.

C. Capacities and Characteristics:

1. Face Size: 24 by 24 inches.
2. Depth: 2 inches nominal.
3. Maximum or Rated Face Velocity: 500 fpm.
4. Initial Resistance: 0.25-inch wg at 500 fpm.
5. Recommended Final Resistance: 0.5 inches wg.
6. Minimum Efficiency Reporting Value: MERV 13, with "Composite Average Particle Size Efficiency, Percent in Size Range, Micrometers" according to ASHRAE 52.2.
7. Access: Side.

D. Media: Interlaced glass or Cotton and synthetic fibers coated with nonflammable adhesive. Coat media with an antimicrobial agent.

1. Separators shall be bonded to the media to maintain pleat configuration.
2. Welded-wire grid shall be on downstream side to maintain pleat.
3. Media shall be bonded to frame to prevent air bypass.
4. Support members on upstream and downstream sides to maintain pleat spacing.

E. Filter-Media Frame: Cardboard frame with perforated metal retainer sealed or bonded to the media.

2.5 FRONT- OR BACK-ACCESS FILTER FRAMES

A. Description: Galvanized-steel framing members with access for either upstream (front) or downstream (back) filter servicing, cut to size and prepunched for assembly into modules. Vertically support filters to prevent deflection of horizontal members without interfering with filter installation or operation.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AAF International.
 - b. AirGuard; Clarcor Air Filtration Products, Inc.
 - c. Flanders Corporation.
 - d. Koch Filter Corporation.
 - e. Or approved equal.

B. Source Limitations: Obtain from single source from single manufacturer.

C. Prefilters: Incorporate a separate track with spring clips, removable from front or back.

D. Sealing: Factory-installed, positive-sealing device for each row of filters, to ensure seal between gasketed filter elements and to prevent bypass of unfiltered air.

2.6 FILTER GAUGES

A. Diaphragm-type gauge with dial and pointer in metal case, vent valves, black figures on white background, and front recalibration adjustment.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AirGuard; Clarcor Air Filtration Products, Inc.
 - b. Dwyer Instruments, Inc.
 - c. DuroDyne
 - d. Or approved equal.

B. Source Limitations: Obtain from single source from single manufacturer.

1. Diameter: 4-1/2 inches.
2. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5-Inch wg or Less: 0- to 0.5-inch wg.
3. Scale Range for Filter Media Having a Recommended Final Resistance of 0.5- to 1.0-Inch wg or Less: 0- to 1.0-inch wg.

4. Scale Range for Filter Media Having a Recommended Final Resistance of 1.0- to 2.0-Inch wg or Less: 0- to 2.0-inch wg.
 5. Scale Range for Filter Media Having a Recommended Final Resistance of 2.0- to 3.0-Inch wg or Less: 0- to 3.0-inch wg.
 6. Scale Range for Filter Media Having a Recommended Final Resistance of 3.0- to 4.0-Inch wg or Less: 0- to 4.0-inch wg.
- C. Manometer-Type Filter Gauge: Molded plastic, with epoxy-coated aluminum scale and logarithmic-curve tube gage with integral leveling gage, graduated to read from 0- to 3.0-inch wg, and accurate within 3 percent of the full-scale range.
- D. Accessories: Static-pressure tips, tubing, gauge connections, and mounting bracket.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION OF FILTERS

- A. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- B. Install filters in position to prevent passage of unfiltered air.
- C. Install filter gauge for each filter bank.
- D. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
- E. Coordinate filter installations with duct and air-handling-unit installations.

3.4 INSTALLATION OF FILTER GAUGES

- A. Install filter gauge for each filter bank.
- B. Install filter-gauge, static-pressure tips upstream and downstream from filters. Install filter gauges on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gauges on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gauges.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring between pressure sensors and Direct Digital Control system.
- C. Connect control wiring between controlled devices.
- D. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative.
- D. Tests and Inspections:
 - 1. Test for leakage of unfiltered air while system is operating.
- E. Air filter will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.

3.7 CLEANING

- A. After completing system installation and testing, adjusting, and balancing of air-handling and air-distribution systems, clean filter housings and install new filter media.

END OF SECTION 234100

SECTION 235133 - INSULATED SECTIONAL CHIMNEYS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Listed chimney liners.
 2. Listed building-heating-appliance chimneys.
 3. Listed, refractory-lined stacks.
 4. Field-fabricated metal chimneys.
 5. Guying and bracing materials.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for product.
- B. Shop Drawings: For chimneys and stacks.
1. Include plans, elevations, sections, and attachment details.
 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 3. Detail fabrication and assembly of hangers and seismic restraints.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For factory-fabricated chimneys and stacks, accessories, and components from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity, and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 2. AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in stacks.
- C. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.

1.7 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, structural failures caused by expansion and contraction.
 2. Warranty Period: 25 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 LISTED CHIMNEY LINERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Industrial Chimney Company.
 2. M&G DuraVent, Inc.; a member of the M&G Group.
 3. Metal-Fab, Inc.
 4. Selkirk Corporation.
 5. Or approved equal.
- B. Description: Straight, single-wall chimney liner tested according to UL 1777 and rated for 1000 deg F continuously or 2100 deg F for 10 minutes; with negative or positive flue pressure complying with NFPA 211.
- C. Straight Liner Materials: ASTM A 666, Type 316 stainless steel.
- D. Corrugated Liner Materials: ASTM A 959, Type 29-4C stainless steel.
- E. Accessories:

1. Fittings: Tees, elbows, increasers, draft-hood connectors, metal caps with bird barriers, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar or compatible materials and designs.
2. Sealant: Manufacturer's standard high-temperature sealant.
3. Insulating Fill: Manufacturer's standard high-temperature insulation fill material in annular space surrounding chimney liner, including high-temperature, ceramic-fiber insulation required to seal chimney at top and bottom.

2.2 LISTED BUILDING-HEATING-APPLIANCE CHIMNEYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Industrial Chimney Company.
 2. M&G DuraVent, Inc.; a member of the M&G Group; Dura-Tech.
 3. Metal-Fab, Inc.
 4. Selkirk Corporation; Selkirk Metalbestos and Air Mate.
 5. Or approved equal.
- B. Description: Double-wall metal vents tested according to UL 103 and rated for 1000 deg F continuously or 1700 deg F for 10 minutes; with neutral or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a 2-inch annular space filled with high-temperature, ceramic-fiber insulation.
- D. Inner Shell: ASTM A 666, Type 316 stainless steel.
- E. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
1. Termination: Stack cap designed to exclude minimum 90 percent of rainfall.
 2. Termination: Round chimney top designed to exclude minimum 98 percent of rainfall.
 3. Termination: Exit cone with drain section incorporated into riser.

2.3 LISTED, REFRACTORY-LINED METAL CHIMNEYS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Van-Packer Company, Inc.
 2. Warren Environment, Inc.\
 3. Selkirk.
 4. Or approved equal.
- B. Comply with ASME STS-1.
- C. Design Wind Loads: 150 mph.
- D. Design for seismic conditions at Project site.

- E. Chimney Outer Jacket: Aluminized steel with welded seams.
 - F. Refractory Lining: Tested according to UL 959 for temperature and acid resistance and bearing the testing laboratory label.
 - 1. Temperature Rating: 1800 deg F continuously and 2000 deg F intermittently.
 - 2. Acid Extraction: Maximum of 0.2 percent.
 - 3. Cold Crushing Strength: Minimum of 3200 psig.
 - 4. Thickness: Minimum of 2 inches.
 - G. Finish: Factory-applied, high-heat-resistant paint; color as selected by Commissioner.
 - H. Base Section: Acid-resistant-coated, cast-iron anchor lugs for securing stack to foundation with anchorage designed by manufacturer.
 - I. Reinforced Cleanout Section: Smoke-tight connection, with gasketed and bolt-tightened inspection plate; neck shall be welded to stack section.
 - J. T or Y Sections: Smoke-tight connection, with welded joints and refractory lining; finished with smooth transition and with no exposed metal on inside.
 - K. Spark Screen: ASTM A 666, Type 316 stainless steel; 0.0625 inch thick; maximum 1/2-by-1/2-inch mesh; with ASTM A 666, Type 304 stainless-steel rolled angle and drawband.
 - L. Guy Bands: 8-inch- wide bands of same material as jacket, with bolted fasteners.
 - M. Roof Penetration: Factory-fabricated thimbles, flashings, and counterflashings.
 - N. Fabricate sections, fittings, and accessories as individual pieces or in combination lengths for field handling.
 - O. Fabricate components with centrifugally cast refractory lining in lengths suitable for connection with drawbands.
 - P. Bond refractory to steel jacket with calcium aluminate cement to prevent separation in finished product during shipping, handling, and installation.
 - Q. Fabricate stacks with anchor lugs; cleanout; T sections; flashings and counterflashings; and provisions for support, expansion, and contraction.
- 2.4 FIELD-FABRICATED METAL CHIMNEYS
- A. Fabricate freestanding chimneys according to SMACNA's "Guide for Free Standing Steel Stack Construction." Design for minimum 10 feet high and 10 inches in diameter.
 - B. Fabricate chimneys from ASTM A 1011/A 1011M hot-rolled steel with continuously welded joints, complying with NFPA 211 for minimum metal thickness.

1. Equal to or Less Than 1.069 Sq. Ft. or 14 Inches in Diameter: 0.053 inch.
 2. Up to 1.396 Sq. Ft. or 16 Inches in Diameter: 0.067 inch.
 3. Up to 1.764 Sq. Ft. or 18 Inches in Diameter: 0.093 inch.
 4. Larger Than: 0.123 inch.
- C. Fabricate chimneys and vent connectors from galvanized steel, complying with NFPA 211 for minimum metal thickness.
1. Equal to or Less Than 6 Inches in Diameter: 0.019 inch.
 2. Up to 10 Inches in Diameter: 0.024 inch.
 3. Up to 16 Inches in Diameter: 0.029 inch.
 4. Larger Than: 0.056 inch.
- D. Fabricate chimneys and vent connectors from ASTM B209, Type 1100 or 3003, aluminum or stainless steel, complying with NFPA 211 for the following minimum metal thicknesses:
1. Aluminum: 0.027 inch.
 2. Stainless Steel: 0.012 inch.
- E. Fabricate cleanout doors from compatible material, same thickness as breeching, bolted and gasketed.
- F. Fabricate engine exhaust from ASTM A 53/A 53M, Type E (electric-resistance welded), Grade B; or ASTM A 106/A 106M, Type S, Grade B, Schedule 80 pipe; with welded joints and carbon-steel fittings and flanges.
1. Wrought-Steel Fittings: ASME B16.9, wall thickness to match adjoining pipe.
 2. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, Class 150, including bolts, nuts, and gaskets.

2.5 GUYING AND BRACING MATERIALS

- A. Cable: Four galvanized, stranded wires of the following thickness:
1. Minimum Size: 1/4 inch in diameter.
 2. For ID Sizes 4 to 15 Inches: 5/16 inch.
 3. For ID Sizes 18 to 24 Inches: 3/8 inch.
 4. For ID Sizes 27 to 30 Inches: 7/16 inch.
 5. For ID Sizes 33 to 36 Inches: 1/2 inch.
 6. For ID Sizes 39 to 48 Inches: 9/16 inch.
 7. For ID Sizes 51 to 60 Inches: 5/8 inch.
- B. Pipe: Three galvanized steel, NPS 1-1/4.
- C. Angle Iron: Three galvanized steel, 2 by 2 by 0.25 inch.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATION

- A. Listed Chimney Liners: High-efficiency boiler or furnace vents in masonry chimney.
- B. Listed Building-Heating-Appliance Chimneys: Dual-fuel boilers, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- C. Listed, Refractory-Lined Metal Chimneys: Freestanding dual-fuel boiler vents, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- D. Field-Fabricated Metal Chimneys: Dual-fuel boilers, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.

3.4 INSTALLATION OF LISTED CHIMNEYS

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Comply with requirements in Section 033000 "Cast-in-Place Concrete" for concrete, reinforcement, and formwork.
- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.
- C. Comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.
- D. Seal between sections of positive-pressure vents according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- E. Lap joints in direction of flow.
- F. Connect base section to foundation using anchor lugs of size and number recommended by manufacturer.
- G. Join sections with acid-resistant joint cement to provide continuous joint and smooth interior finish.
- H. Erect stacks plumb to finished tolerance of no more than 1 inch out of plumb from top to bottom.

3.5 INSTALLATION OF UNLISTED, FIELD-FABRICATED CHIMNEYS

- A. Suspend chimneys independent of their appliance connections.
- B. Install seismic restrains according to manufacturer's written instructions. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC."
- C. Lap joints in direction of flow.
- D. Support chimneys from building structure with bolts, concrete inserts, steel expansion anchors, welded studs, C clamps, or beam clamps according to manufacturer's written instructions.

3.6 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.
- B. Provide temporary closures at ends of chimneys and stacks that are not completed or connected to equipment.

END OF SECTION 235133

SECTION 235216 - CONDENSING BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes gas-fired, pulse-combustion water-tube condensing boilers, trim, and accessories for generating hot water.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for boilers.
 - 2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
- B. Sustainable Design Submittals:
 - 1. Product data showing compliance with ASHRAE 90.1.
- C. Shop Drawings: For boilers, boiler trim, and accessories.
 - 1. Include plans, elevations, sections, and mounting details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include diagrams for power, signal, and control wiring.
- D. Engineering Services Submittal: For each boiler.
 - 1. Design calculations and vibration isolation base details, signed and sealed by a qualified professional engineer licensed in the State of New York.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

- b. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- E. Coordination Drawings: Plans and sections, drawn to scale and coordinated with each other, using input from installers of the items involved.

1.5 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Data: Certificates, for boiler, accessories, and components, from manufacturer.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Source quality-control reports.
- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.
- E. Product Certificates:
 - 1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, and document hydrostatic testing of piping external to boiler.

1.6 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 WARRANTY

- A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period. Where "prorated" is indicated, the boiler manufacturer will cover the indicated percentage of cost of replacement parts. With "prorated" type, covered cost decreases as age of equipment increases.
 - 1. Warranty Period for Pulse-Combustion Boilers:

- a. Heat Exchanger Damaged by Thermal Shock: 10 years from date of Substantial Completion.
 - b. Flue-Gas Condensate Corrosion of Heat Exchanger: Prorated Year 0 to 7 - 100 percent; Year 8 - 50 percent; Year 9 - 30 percent; Year 10 - 20 percent for 10 years from date of Substantial Completion.
2. Warranty Period for Floor-Mounted Fire-Tube Condensing Boilers:
- a. Heat Exchanger and Tank: Free from defects in material and workmanship.
 - b. Warranty Coverage: Prorated Year 0 to 5 - 100 percent; Year 6 to 7 - 50 percent; Year 8 to 9 - 30 percent; Year 10 - 10 percent for 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- C. ASHRAE/IES 90.1 Compliance: Boilers shall have minimum efficiency in accordance with Table 6.8.1-6 and other requirements in Ch. 6 of ASHRAE/IES 90.1.
- D. ASHRAE 90.2 Compliance: Boilers shall have minimum efficiency in accordance with Ch. 6 of ASHRAE 90.2.
- E. DOE Compliance: Minimum efficiency shall comply with 10 CFR 431, Subpart E, Appendix N.
- F. Mounting Base: For securing boiler to concrete base.
 1. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler pressure vessel, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.2 PULSE-COMBUSTION, FIRE-TUBE CONDENSING BOILERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Fulton Boiler Works, Inc.
 2. Aerco
 3. Riello
 4. Or approved equal.
- B. Description: Factory-fabricated, -assembled, and -tested, pulse-combustion condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls.

- C. Combustion Chamber: Type 316L stainless steel.
 - D. Heat Exchangers: Type 316L stainless steel.
 - E. Pressure Vessel: Carbon steel with welded heads and tube connections.
 - F. Exhaust Decoupler: Fiberglass composite material in a corrosion-resistant steel box.
 - G. Burner: Natural gas, self-aspirating and self-venting after initial start.
 - H. Blower: Centrifugal fan to operate only during start of each burner sequence.
 - 1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Large enough so driven load will not require motor to operate in service factor range above 1.0.
 - I. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
 - J. Ignition: Direct-spark ignition with transformer and 100 percent main-valve shutoff with electronic flame supervision.
 - K. Casing:
 - 1. Jacket: Sheet metal, with snap-in or interlocking closures.
 - 2. Control Compartment Enclosure: NEMA 250, Type 1A.
 - 3. Finish: Stainless steel protective finish.
 - 4. Insulation: Minimum 2-inch- thick, mineral-fiber insulation surrounding heat exchanger.
 - 5. Combustion-Air Connection: Inlet duct collar and sheet metal closure over burner compartment.
 - L. Mufflers: Carbon-steel intake muffler and stainless steel exhaust.
 - M. Condensate Trap: Cast-iron body with stainless steel internal parts.
 - N. Capacities and Characteristics: Refer to Boiler Schedule in M-700 series drawings
- 2.3 FLOOR-MOUNTED, FORCED-DRAFT, FIRE-TUBE CONDENSING BOILERS
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AERCO; A WATTS Brand.
 - 2. Lochinvar, LLC.
 - 3. Riello
 - 4. Or approved equal.

- B. Description: Factory-fabricated, -assembled, and -tested, fire-tube, forced-draft, condensing boiler with heat exchanger sealed pressure tight, built on a steel base, including insulated jacket; flue-gas vent; combustion-air intake connections; water supply, return, and condensate drain connections; and controls. Units are to be for water-heating service only.
 - C. Primary Heat Exchanger: Corrosion-resistant Type 316 stainless steel or aluminum.
 - D. Secondary Heat Exchanger: Corrosion-resistant Type 316 stainless steel or aluminum.
 - E. Combustion Chamber and Flue Pipes: Corrosion-resistant stainless steel or aluminum.
 - F. Pressure Vessel: Carbon steel with welded heads and tube connections.
 - G. Burner: Natural gas, forced draft.
 - H. Blower: Centrifugal fan to operate during each burner-firing sequence and to prepurge and postpurge the combustion chamber.
 - 1. Motors: Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - a. Motor Sizes: Large enough so driven load will not require motor to operate in service factor range above 1.0.
 - I. Gas Train: Combination gas valve with manual shutoff and pressure regulator.
 - J. Ignition: Direct-spark ignition or silicone carbide hot-surface ignition with 100 percent main-valve shutoff and electronic flame supervision.
 - K. Casing:
 - 1. Jacket: Sheet metal, with snap-in or interlocking closures.
 - 2. Control Compartment Enclosures: NEMA 250, Type 1A.
 - 3. Finish: Stainless steel protective finish.
 - 4. Insulation: Minimum 2-inch- thick, mineral-fiber insulation surrounding the heat exchanger.
 - 5. Combustion-Air Connections: Inlet and vent duct collars.
 - L. Capacities and Characteristics: Refer to Boiler schedule in M-700 series drawings
- 2.4 TRIM - FOR HOT-WATER BOILERS
- A. Include devices sized to comply with ASME B31.1.
 - B. Aquastat Controllers: Operating, firing rate, and high limit with automatic reset.
 - C. Safety Relief Valve: ASME rated.

- D. Pressure and Temperature Gauge: Minimum 3-1/2-inch- diameter, combination water-pressure and -temperature gauge. Gauges shall have operating-pressure and -temperature ranges, so normal operating range is about 50 percent of full range.
- E. High and low gas-pressure switches.
- F. Alarm bell with silence switch.
- G. Boiler Air Vent: Automatic.
- H. Drain Valve: Minimum NPS 3/4 hose-end gate valve.
- I. Circulation Pump: Nonoverloading, in-line pump with split-capacitor motor having thermal-overload protection and lubricated bearings; designed to operate at specified boiler pressures and temperatures.

2.5 CONTROLS

- A. Boiler operating controls shall include the following devices and features:
 - 1. Control transformer.
 - 2. Set-Point Adjust: All set points shall be adjustable.
 - 3. Electric, factory-fabricated and factory-installed panel to modulate burner to maintain space temperature in response to thermostat with heat anticipator located in heated space.
 - a. Include automatic, alternating-firing sequence for multiple boilers to ensure maximum system efficiency throughout the load range and to provide equal runtime for boilers.
- B. Burner Operating Controls: To maintain safe operating conditions, burner safety controls limit burner operation.
 - 1. High Cutoff: Automatic reset stops burner if operating conditions rise above maximum boiler design temperature.
 - 2. Low-Water Cutoff Switch: Electronic probe shall prevent burner operation on low water. Cutoff switch shall be automatic-reset type.
 - 3. Blocked Inlet Safety Switch: Manual-reset pressure switch factory mounted on boiler combustion-air inlet.
 - 4. Audible Alarm: Factory mounted on control panel with silence switch; shall sound alarm for above conditions.
- C. Building Automation System Interface: Factory install hardware and software to enable building automation system to monitor, control, and display boiler status and alarms.
 - 1. Hardwired Points:
 - a. Monitoring: On/off status, common trouble alarm.
 - b. Control: On/off operation, hot-water-supply temperature set-point adjustment.

2. A BACnet communication interface with building automation system shall enable building automation system operator to remotely control and monitor the boiler from an operator workstation. All monitoring and control features, which are available at the local boiler control panel, shall also be available at the remote operator workstation through the building automation system.

2.6 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are shown on Drawings and specified in electrical Sections.
- B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.
 1. House in NEMA 250, Type 1 enclosure.
 2. Wiring shall be numbered and color coded to match wiring diagram.
 3. Install factory wiring outside of an enclosure in a metal raceway.
 4. Field power interface shall be to fused disconnect switch .
 5. Provide branch power circuit to each motor and to controls with a disconnect switch or circuit breaker.
 6. Provide each motor with overcurrent protection.

2.7 VENTING KITS

- A. Kit: Complete system, ASTM A959, Type 29-4C stainless steel pipe, vent terminal, thimble, indoor plate, vent adapter, condensate trap and dilution tank, and sealant.
- B. Combustion-Air Intake: Complete system, stainless steel pipe, vent terminal with screen, inlet air coupling, and sealant.

2.8 CONDENSATE-NEUTRALIZATION UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Neutra-Safe Corporation.
 2. SFA Saniflo USA.
 3. Skidmore Pump.
 4. Wessels Company.
 5. Or approved equal.
- B. Description: Factory-fabricated and -assembled condensate-neutralizing tank assembly of corrosion-resistant plastic material with threaded or flanged inlet and outlet pipe connections. Device functions to prevent acidic condensate from damaging grain system. It is to be piped to receive acidic condensate discharged from condensing boiler and neutralize it by chemical reaction with replaceable neutralizing agent. Neutralized condensate is then piped to suitable drain.
- C. Tank features:

1. All corrosion-resistant material.
2. Suitable for use on all natural gas and propane boilers.
3. Includes initial charge of neutralizing agent.
4. Neutralizing agent to be easily replaceable when exhausted.
5. Inlet and outlet pipe connections.

D. Capsule Configuration:

1. Low-profile design for applications where boiler condensate drain is close to the floor.
2. Easily removed and opened for neutralizing agent replacement.
3. Multiple units may be used for larger capacity.

E. Tank Configuration:

1. Utilized where boiler is elevated or where tank is installed in a pit with tank top flush with floor.
2. Top easily removed for neutralizing agent replacement.
3. Internal baffles to channel flow for complete neutralization.
4. Integral bypass to prevent condensate backflow into appliance.
5. Multiple units may be used for larger capacity.

2.9 SOURCE QUALITY CONTROL

- A. UL Compliance: Test gas-fired boilers having input of more than 400,000 Btu/h for compliance with UL 795. Boilers shall be listed and labeled by a testing agency acceptable to Manufacturer.
- B. UL Compliance, Gas-Fired: Test gas-fired boilers for compliance with UL 2764. Boilers shall be listed and labeled by a testing agency acceptable to Manufacturer.
- C. Performance Testing: Test and label boilers for efficiency to comply with AHRI 1500.
- D. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test.
- E. Test and inspect factory-assembled boilers, before shipping, in accordance with 2017 ASME Boiler and Pressure Vessel Code. Factory test boilers for safety and functionality; fill boiler with water, and fire throughout firing range, to prove operation of all safety components.
- F. Allow Commissioner access to source quality-control testing of boilers. Notify Commissioner 14 days in advance of testing.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance of the Work.
 - 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 BOILER INSTALLATION

- A. Equipment Mounting:
 - 1. Install floor-mounted boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Install wall-hung boilers where indicated on Drawings using suitable hangers. Comply with manufacturer's mounting instructions.
 - 3. Comply with requirements for vibration isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- B. Install gas-fired boilers according to NFPA 54.
- C. Assemble and install boiler trim.
- D. Install electrical devices furnished with boiler but not specified to be factory mounted.
- E. Install control wiring to field-mounted electrical devices.

3.4 PIPING CONNECTIONS

- A. Comply with requirements for hydronic piping specified in Section 232113 "Hydronic Piping."
- B. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Section 232116 "Hydronic Piping Specialties."
- C. Drawings indicate general arrangement of piping, fittings, and specialties.
- D. When installing piping adjacent to boiler, allow space for service and maintenance of condensing boilers. Arrange piping for easy removal of condensing boilers.

- E. Install condensate drain piping to condensate-neutralization unit and from neutralization unit to nearest floor drain. Piping shall be at least full size of connection. Install piping with a minimum of 2 percent downward slope in direction of flow.
- F. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas-train connection. Provide a reducer if required.
- G. Connect hot-water piping to supply- and return-boiler tappings with shutoff valve, and union or flange at each connection.
- H. Install piping from safety relief valves to nearest floor drain.

3.5 DUCT CONNECTIONS

- A. Boiler Venting:
 - 1. Install flue-venting kit and combustion-air intake.
 - 2. Comply with all boiler manufacturer's installation instructions.
 - 3. Field fabricate and install boiler vent and combustion-air intake.
 - 4. Utilize vent and intake duct material, size, and configuration as indicated in boiler manufacturer's instructions and to comply with UL 1738.
 - 5. Comply with all boiler manufacturer's installation instructions.
 - 6. Connect boiler vent full size to boiler connections.
 - 7. Comply with requirements in Section 235123 "Gas Vents."
 - 8. Comply with all boiler manufacturer's installation instructions.

3.6 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.7 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.

- B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."
- C. Install nameplate for each control connection, indicating field control panel designation and I/O control designation feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
 - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency, Contractor: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections with the assistance of a factory-authorized service representative:
- D. Tests and Inspections:
 - 1. Perform installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and water temperature.
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- E. Boiler will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports.
- G. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate boilers. Video record the training sessions and provide electronic copy to Commissioner.
 - 1. Instructor shall be factory trained and certified.
 - 2. Provide not less than two hours of instruction.
 - 3. Instruct personnel in operation to obtain maximum efficiency in plant operation.
 - 4. Provide instructional videos that are coordinated with operation and maintenance manuals.

5. Obtain Commissioner sign-off that instruction is complete.
6. Instruction shall be held at Project site.

END OF SECTION 235216

SECTION 236423.13 - AIR SOURCE HEAT PUMPS / CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes modular air source heat pumps/chillers or packaged, air-cooled, electric-motor-driven, scroll water chillers.

1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in Btu/h to the total power input given in watts at any given set of rating conditions.
- D. GFI: Ground fault interrupt.
- E. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and referenced to AHRI standard rating conditions.
- F. I/O: Input/output.
- G. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
- H. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit for a single chiller calculated per the method defined by AHRI 550/590 and intended for operating conditions other than the AHRI standard rating conditions.
- I. SCCR: Short-circuit current rating.
- J. TEAO: Totally enclosed air over.
- K. TENV: Totally enclosed nonventilating.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1. Include refrigerant, rated capacities, operating characteristics, and furnished specialties and accessories.
2. Performance at AHRI standard conditions and at conditions indicated.
3. Performance at AHRI standard unloading conditions.
4. Minimum evaporator flow rate.
5. Refrigerant capacity of water chiller.
6. Oil capacity of water chiller.
7. Fluid capacity of evaporator.
8. Characteristics of safety relief valves.
9. Force and moment capacity of each piping connection.

- B. Sustainable Design Submittals:

1. Product Data for EA Prerequisite "Fundamental Refrigerant Management": For refrigerants, indicating compliance with refrigerant management practices.
2. Product Data: For energy performance.

- C. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:

1. Assembled unit dimensions.
2. Weight and load distribution.
3. Required clearances for maintenance and operation.
4. Size and location of piping and wiring connections.
5. Diagrams for power, signal, and control wiring.

- D. Coordination Drawings:

1. Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - a. Structural supports.
 - b. Piping roughing-in requirements.
 - c. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 - d. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
2. Coordination drawings showing plan, section and elevation views, drawn to 3/8": 1'-0" scale or the same scale as the piping shop drawings.
3. Each view to show screened background with the following:

- a. Column grids, beams, columns, and concrete housekeeping pads.
 - b. Layout with walls, floors, and roofs, including each room name and number.
- E. Equipment and products of other trades that are located in vicinity of chillers and part of final installation, such as plumbing systems.

1.6 INFORMATIONAL SUBMITTALS

- A. Certificates: For certification required in "Quality Assurance" Article.
- B. Seismic Qualification Data: Certificates, for water chillers, accessories, and components, from manufacturers.
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Installation instructions.
- D. Source quality-control reports.
- E. Startup service reports.
- F. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.
- B. Spare Parts List: Recommended spare parts list with quantity for each.
- C. Touchup Paint Description: Detailed description of paint used in application of finish coat to allow for procurement of a matching paint.
- D. Instructional Videos: Including those that are prerecorded and those that are recorded during instruction.

1.8 MAINTENANCE MATERIAL SUBMITTALS

- A. Tool kit to include the following:
 - 1. A tool kit specially designed by chiller manufacturer for use in servicing chiller(s) furnished.
 - 2. Special tools required to service chiller components not readily available to service personnel.

3. Lockable case with hinged cover, marked with large and permanent text to indicate the special purpose of tool kit, such as "Chiller Tool Kit." Text size shall be at least 1 inch high.
 4. A list of each tool furnished. Permanently attach the list to underside of case cover. Text size shall be at least 1/2 inch high.
- B. Touchup Paint: 32 oz. container of paint used for finish coat. Label outside of container with detailed description of paint to allow for procurement of a matching paint in the future.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. AHRI Certification: Certify chiller according to AHRI 590 certification program.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.
- B. Package water chiller for export shipping.

1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified warranty period.
 1. Extended warranties include, but are not limited to, the following:
 - a. Complete chiller including refrigerant and oil charge.
 - b. Complete compressor and drive assembly including refrigerant and oil charge.
 - c. Refrigerant and oil charge.
 - 1) Loss of refrigerant charge for any reason due to manufacturer's product defect and product installation.
 - d. Parts and labor.
 2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Scroll water chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified."

2. Component Importance Factor: 1.0.
- B. Site Altitude: Chiller shall be suitable for altitude at which installed without affecting performance indicated. Make adjustments to affected chiller components to account for site altitude.
- C. Performance Tolerance: Comply with the following in lieu of AHRI 550/590:
1. Allowable Capacity Tolerance: Zero percent.
 2. Allowable Full-Load Energy Efficiency Tolerance: Zero percent.
 3. Allowable Part-Load Energy Efficiency Tolerance: Zero percent.
- D. AHRI Rating: Rate water chiller performance according to requirements in AHRI 550/590.
- E. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
- F. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- G. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- H. Comply with NFPA 70.
- I. Comply with requirements of UL 1995, "Heating and Cooling Equipment," and include label by a qualified testing agency showing compliance.
- J. Operation Following Loss of Normal Power:
1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
 2. See drawings for equipment served by backup power systems.
 3. Provide means and methods required to satisfy requirement even if not explicitly indicated.
- K. Outdoor Installations:
1. Chiller shall be suitable for outdoor installation indicated. Provide adequate weather protection to ensure reliable service life over a 25 -year period with minimal degradation due to exposure to outdoor ambient conditions.
 2. Chillers equipped to provide safe and stable operation while achieving performance indicated when operating at extreme outdoor temperatures encountered by the installation. Review historical weather database and provide equipment that can operate at extreme outdoor temperatures recorded over past 30 -year period.

2.2 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following manufacturers:
1. Carrier Corporation; a unit of United Technologies Corp.
 2. Trane.
 3. Arctic Chill
 4. Or approved equal.

2.3 MANUFACTURED UNITS

- A. Description: Factory-assembled and run-tested water chiller complete with compressor(s), compressor motors and motor controllers, evaporator, condenser with fans, electrical power, controls, and indicated accessories.
- B. Fabricate water chiller mounting base with reinforcement strong enough to resist water chiller movement during a seismic event when water chiller is anchored to field support structure.
- C. Sound-reduction package shall have the following:
1. Acoustic enclosure around compressors.
 2. Reduced-speed fans with acoustic treatment.
 3. Designed to reduce sound level without affecting performance.
- D. Security Package: Security grilles with fasteners for additional protection of compressors, evaporator, and condenser coils. Grilles shall be coated for corrosion resistance and shall be removable for service access.
- E. Each module shall be assembled on a powder coated, formed galvanized sheet metal frame and panels. The module shall be shipped individually and assembled on site. Each module shall be fully charged with refrigerant and factory tested for capacity and controller functions prior to shipment. Chiller system must be built for a single point power supply connection. The power distribution panel shall incorporate a circuit breaker for overload protection to each module. Electrical supply to each module shall consist of flexible conduit. No electrical connection to a module shall carry the load of more than that module. The electrical supply connections for each module shall be factory assembled and shipped with each module for field connection into the power distribution panel located on the tank and pump module. The maximum overcurrent protection for the chiller system should be sized to carry the load of current and future modules.

2.4 CABINET

- A. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.
- B. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported from base.

- C. Casing: Galvanized steel panels that shall be easily removable for servicing via stainless steel fasteners and retaining clips.
- D. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a 500 -hour salt-spray test according to ASTM B 117.

2.5 COMPRESSORS

- A. Hermetically sealed, scroll compressor on each refrigeration circuit each with rotalock connections, oil level sight glass, suction gas-cooled motor with solid-state sensors in the windings for overload protection, and circuit breaker protection. There shall be two independent compressors and refrigerant circuits per module. Compressors shall be mounted to the heavy gauge steel frame with rubber-in-shear vibration isolators.
- B. Compressor Motor Controllers:
 - 1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.

2.6 EVAPORATOR/CONDENSERS HEAT EXCHANGERS

- A. Dual circuit brazed plate heat exchangers for use as evaporators or condensers in a heat pump operation. The fluid connections to each heat exchanger shall use victaulic roll grooved couplings and neoprene gasket, for service convenience and ease of installation and shall be insulated with 3/4" closed cell insulation.

2.7 ISOLATION VALVES:

- A. Each evaporator branch line shall include a manual inlet and an electronic discharge butterfly valve that allows system flow to each active module to match the cooling requirements of the system. By isolating individual modules that are not operating, this allows the hydronic system to have variable primary flow. The valves shall be the slow opening type to minimize the sudden change in flow to the previously active modules. The valves shall have a minimum opening cycle time of 30 seconds between the fully closed and open position and shall have roll grooved connections. The valves shall have a minimum close off pressure of not less than 75 psi and shall be rated for a maximum working pressure of 250 psi. The actuators shall be rated for 24 VAC.

2.8 FILTERS:

- A. A 40-mesh industrial grade filter strainer shall be factory installed between the header system and each brazed plate heat exchanger and condenser inlet. The strainer shall be serviceable by isolation valves that permit each strainer to be removed and cleaned without shutting down fluid flow or power to the entire system and allowing the remaining modules to continue to operate. In-line strainers that require complete system shutdown for service and isolation are not acceptable.

2.9 CONDENSER FAN MOTORS:

- A. The condenser fan motors shall be maintenance free, quiet, highly efficient electronically commutated motors (ECM) with energy reduction capabilities of up to 35%. These variable speed fan assemblies shall vary fan motor RPM to maintain the refrigeration pressure of the chiller modules and allow operation of the chiller down to 0 F ambient.

2.10 CONDENSER FAN DIFFUSER:

- A. Each fan contains a diffuser that shall improve the efficiency and reduce the noise of the ECM fans. By increasing the fan efficiency, the motor speed can be reduced thereby lowering the sound pressure.

2.11 CONDENSER COIL:

- A. Aluminum fins mechanically bonded to coppers tubes with integral subcooling circuits. Fin spacing shall not exceed 16 fins per inch. The coils shall be factory tested to a minimum of 600 psig.

2.12 FREE-COOLING COIL

- A. Aluminum fins mechanically bonded to fluid filled copper tubes installed integral to the chiller module for partial and full free cooling. Fin spacing shall not exceed 16 fpi. The coils shall be sized to provide partial free cooling starting at an ambient temperature 5 degrees below the chilled fluid temperature entering the chiller system. The tubes and headers shall be sized for a maximum velocity of no more than 7 ft/sec. Brass Turbuspirals shall be installed within the coil tubes to increase the amount of turbulence in the fluid flow thereby increasing the rate of heat transfer.
- B. Three-way Valve: The modules shall include a 3-way, 2-position valve to divert the system fluid to the free cooling coils when the ambient temperature falls about 5 degrees F below the chilled fluid temperature entering the chiller system. The valve actuator is housed in a Nema 3R weather resistant enclosure. The module piping shall include isolation valves on all three ports to allow the 3-way valve to be removed from the piping without shutting down the system for service and replacement. The valve shall be supported from the cabinet framing and not from the system piping.
- C. Controls: The modules shall include controls to allow the system fluid to be cooled by the free cooling coils upon a drop in ambient temperature below the free-cooling set point. The set point shall be clearly displayed via a digital LCD display. This set point is field adjustable. Systems with analog indication are not acceptable. The unit shall incorporate field adjustable fan speed thermostatic controls to vary the fan speed when there is no mechanical cooling to limit the leaving fluid temperature from the module to the acceptable minimum.

2.13 LIQUID PIPING

- A. The fluid piping shall be Schedule 40 steel, and be insulated using closed cell pipe insulation to prevent condensation. The chiller shall have service valves for the independent isolation of each heat exchanger, without affecting the fluid flow to the remaining heat exchangers. Each heat pump shall connect to the adjacent module using Victaulic type roll grooved steel couplings and neoprene gaskets. Any type of module-to-module connection external to the modules is unacceptable.

2.14 REFRIGERANT PIPING

- A. Refrigerant piping shall be Type K seamless copper, insulated with closed cell pipe insulation on the suction lines.
- B. Refrigerant: R-410A. Classified as Safety Group A1 according to ASHRAE 34.
- C. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
- D. Refrigerant Circuit: Each circuit shall include an electronic or a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.
- E. Refrigerant Isolation: Factory install positive shutoff isolation valves in the compressor discharge line and the refrigerant liquid-line to allow the isolation and storage of the refrigerant charge in the chiller condenser.
 - 1. For multiple compressor assemblies, it is acceptable to isolate each compressor assembly in each circuit in lieu of each compressor.
- F. Pressure Relief Device:
 - 1. Comply with requirements in ASHRAE 15, ASHRAE 147, and applicable portions of ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
 - 2. Select and configure pressure relief devices to protect against corrosion and inadvertent release of refrigerant.
- G. ASME-rated, spring-loaded, pressure relief valve; single- or multiple-reseating type. Pressure relief valve(s) shall be provided for each heat exchanger.

2.15 REFRIGERANT ACCESSORIES

- A. Each refrigerant circuit shall include compressor rotalock service valves, solenoid valves for compressor pumpdown, and Schrader service valves in the suction, discharge, and liquid lines, liquid line sight glass with moisture indicator and a filter dryer.

2.16 REFRIGERATION REVERSING VALVE

- A. Each module will contain a refrigeration reversing valve on each refrigeration circuit to allow the refrigeration system to operate in either heating or cooling.

2.17 CONTROLS

- A. The Master chiller module shall incorporate the Master microprocessor controller. The Master microprocessor shall communicate with the remaining Slave microprocessors in each module via a local network communications protocol. The master microprocessor shall include a phase monitor to protect against low voltage, phase unbalance, phase loss, and phase reversal conditions. The Master controller shall read all analog and fault port values from all Slave module controllers and shall pass these values to the Building Automation System via BACnet, Modbus or Lonworks protocols.
- B. Each chiller control system shall include operational switches for each compressor; high and low pressure transmitters to provide indication of refrigeration pressures in each circuit; high and low refrigeration pressure alarms including shutting shut down the responsible compressor(s); anti-short cycling compressor timers; minimum compressor run timers; connection to Building Automation System.

2.18 MICROPROCESSOR:

- A. The microprocessor shall provide the following minimum functions and alarms:
 - 1. Adjustable fluid temperature set point
 - 2. Multiple stage compressor control, including compressor rotation to provide even compressor usage and wear
 - 3. High and low fluid temperature alarm set point
 - 4. Water inlet and outlet temperature
 - 5. Suction and discharge refrigeration pressure
 - 6. Compressor run status
 - 7. Current alarm status
 - 8. Demand load
 - 9. Compressor run hours
 - 10. Alarm logging with minimum of previously 100 logged alarms with time and date of each occurrence
 - 11. Remote start stop input
 - 12. Dry contact for general alarm

2.19 INTERFACE PANEL

- A. An operator 7” touch screen interface panel with graphical display shall be installed on the master module to allow chiller operation monitoring, adjustment of user set points, and alarm monitoring.

2.20 CHILLED-WATER HYDRONIC PACKAGE

- A. Factory-furnished and -installed hydronic package consisting of the following:
1. Pumps: Single or dual pumps with capacity, as indicated.
 - a. Vertical in-line type, single-stage design, serviceable without disturbing piping connections.
 - b. Cast-iron, ductile-iron, bronze, or stainless-steel body.
 - c. Bronze or stainless-steel impeller keyed to shaft and secured with screw.
 - d. Premium efficient motor with TEFC motor enclosure.
 - e. Dual pump packages to provide for servicing and replacement of failed pump with other pump operating.
 - f. Variable-speed pumps with variable-frequency controllers integral to pump motor or provided with chiller electrical package.
 2. Expansion Tank: Replaceable bladder type.
 3. Storage Tank: Insulated carbon-steel tank with internal baffles, drain and vent connections; with capacity indicated.
 4. Piping: carbon-steel pipe.
 5. Strainers: Y-type at suction side of each pump.
 6. Valves:
 - a. Ball- or butterfly-style valves for isolation and balancing.
 - b. Check valve on each pump discharge for dual pump packages.
 - c. Drain valves to be positioned to drain isolated sections of pipe and equipment.
 - d. Option to use combination valves.
 7. Hydronic Specialties:
 - a. Air Vents: Automatic air vents located and arranged to vent air from high points and locations capable of trapping air.
 - b. Test Plugs: Located to measure pressure difference across each pump and strainer.
- B. Hydronic package rated for same pressure as evaporator.
- C. Pressure and leak tested before apply insulation.
- D. Insulation on hydronic package shall match evaporator.
- E. Controls:
1. Lead/lag operation for dual pump packages.
 2. Controlled to automatically equalize run time.

3. Control of variable-speed pumps.
4. Integral to chiller control package.
5. Remotely controlled through field interface with building controls.

F. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the heat recovery condenser to minus 20 deg F.

2.21 INSULATION

A. Closed-cell, flexible, elastomeric thermal insulation complying with ASTM C 534/C 534M, Type I for tubular materials and Type II for sheet materials.

1. Thickness: 3/4 inch.

B. Adhesive: As recommended by insulation manufacturer.

C. Factory-applied insulation over all cold surfaces of chiller capable of forming condensation. Components shall include, but not be limited to, evaporator, evaporator water boxes including nozzles, refrigerant suction pipe from evaporator to compressor, cold surfaces of compressor, refrigerant-cooled motor, and auxiliary piping.

1. Apply adhesive to 100 percent of insulation contact surface.
2. Before insulating steel surfaces, prepare surfaces for paint, and prime and paint as indicated for other painted components. Do not insulate unpainted steel surfaces.
3. Seal seams and joints to provide a vapor barrier.
4. After adhesive has fully cured, paint exposed surfaces of insulation to match other painted parts.
5. Manufacturer has option to factory or field insulate chiller components to reduce potential for damage during installation.
6. Field-Applied Insulation:
 - a. Components that are not factory insulated shall be field insulated to comply with requirements indicated.
 - b. Manufacturer shall be responsible for chiller insulation whether factory or field installed to ensure that manufacturer is the single point of responsibility for chillers.
 - c. Manufacturer's factory-authorized service representative shall instruct and supervise installation of field-applied insulation.
 - d. After field-applied insulation is complete, paint insulation to match factory-applied finish.

2.22 ELECTRICAL

A. Factory installed and wired, and functionally tested at factory before shipment.

B. Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to water chiller.

C. House in a unit-mounted, NEMA 250, Type 3R enclosure with hinged access door with lock and key or padlock and key.

D. Wiring shall be numbered and color-coded to match wiring diagram.

- E. Factory wiring shall be located outside of an enclosure in a metal raceway. Terminal connections shall be made with not more than a 24-inch length of liquidtight conduit.
- F. Field power interface shall be to NEMA KS 1, heavy-duty, nonfused disconnect switch. Minimum SCCR according to UL 508 shall be as required by electrical power distribution system, but not less than 100,000 A.
- G. Each motor shall have branch power circuit and controls with one of the following disconnecting means having SCCR to match main disconnecting means:
 - 1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
 - 2. NEMA KS 1, heavy-duty, nonfusible switch.
 - 3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
- H. Each motor shall have overcurrent protection.
- I. Overload relay sized according to UL 1995, or an integral component of water chiller control microprocessor.
- J. Phase-Failure and Undervoltage: Solid-state sensing with adjustable settings.
- K. Power Factor Correction: Capacitors to correct power factor to 0.90 at full load.
- L. Controls Transformer: Unit-mounted transformer with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
- M. Control Relays: Auxiliary and adjustable time-delay relays, or an integral to water chiller microprocessor.
- N. Service Receptacle:
 - 1. Unit-mounted, 120-V GFI duplex receptacle.
 - 2. Power receptacle from chiller internal electrical power wiring.
- O. Indicate the following for water chiller electrical power supply:
 - 1. Current, phase to phase, for all three phases.
 - 2. Voltage, phase to phase and phase to neutral for all three phases.
 - 3. Three-phase real power (kilowatts).
 - 4. Three-phase reactive power (kilovolt amperes reactive).
 - 5. Power factor.
 - 6. Running log of total power versus time (kilowatt hours).
 - 7. Fault log, with time and date of each.

2.23 CONTROLS

- A. Factory installed and wired, and functionally tested at factory before shipment.

- B. Standalone, microprocessor based, with all memory stored in nonvolatile memory so that reprogramming is not required on loss of electrical power.
- C. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.
- D. Operator Interface: Keypad or pressure-sensitive touch screen. Multiple-character, digital display. Display the following:
 - 1. Date and time.
 - 2. Operating or alarm status.
 - 3. Operating hours.
 - 4. Outside-air temperature if required for chilled-water reset.
 - 5. Temperature and pressure of operating set points.
 - 6. Chilled-water entering and leaving temperatures.
 - 7. Refrigerant pressures in evaporator and condenser.
 - 8. Saturation temperature in evaporator and condenser.
 - 9. No cooling load condition.
 - 10. Elapsed time meter (compressor run status).
 - 11. Pump status.
 - 12. Antirecycling timer status.
 - 13. Percent of maximum motor amperage.
 - 14. Current-limit set point.
 - 15. Number of compressor starts.
 - 16. Alarm history with retention of operational data before unit shutdown.
 - 17. Superheat.
 - 18. Chiller enable/disable
 - 19. Compressor run status
 - 20. System evaporator and condenser temperatures
 - 21. Adjustment of all system set points
 - 22. Review and resetting of all non-active faults
 - 23. Interrogation and display of all sensor faults
- E. Control Functions:
 - 1. Manual or automatic startup and shutdown time schedule.
 - 2. Capacity control based on evaporator leaving-fluid temperature.
 - 3. Capacity control compensated by rate of change of evaporator entering-fluid temperature.
 - 4. Chilled-water entering and leaving temperatures, control set points, and motor load limit. Chilled-water leaving temperature shall be reset based on space temperature.
 - 5. Current limit and demand limit.
 - 6. Condenser-water temperature.
 - 7. External water chiller emergency stop.
 - 8. Antirecycling timer.
 - 9. Automatic lead-lag switching.
 - 10. Ice-building mode.

- F. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
1. Low evaporator pressure or high condenser pressure.
 2. Low chilled-water temperature.
 3. Refrigerant high pressure.
 4. High or low oil pressure.
 5. High oil temperature.
 6. Loss of chilled-water flow.
 7. Loss of condenser-water flow.
 8. Control device failure.
- G. Direct-Digital Control System Interface: Factory-install hardware and software to enable system to monitor, control, and display chiller status and alarms.
1. Hardwired I/O Points:
 - a. Monitoring: On/off status, common trouble alarm, electrical power demand (kilowatts) and electrical power consumption (kilowatt hours).
 - b. Control: On/off operation, chilled-water discharge temperature set-point adjustment and electrical power demand limit.
 2. Communication Interface: ASHRAE 135 (BACnet) communication interface shall enable control system operator to remotely control and monitor the water chiller from an operator workstation. Control features and monitoring points displayed locally at water chiller control panel shall be available through Direct-Digital Control system for HVAC.
- H. Factory-installed wiring outside of enclosures shall be in NFPA 70-complaint raceway. Make terminal connections with liquidtight or flexible metallic conduit.

2.24 ACCESSORIES

- A. Factory-furnished spring isolators with seismic restraints for field installation.
1. Spring Deflection: 1 inch.

2.25 CAPACITIES AND CHARACTERISTICS

- A. See heat pump schedule in M-700 drawing series.

2.26 MATERIALS

- A. Steel:
1. ASTM A36/A36M for carbon structural steel.
 2. ASTM A568/A568M for steel sheet.

- B. Stainless Steel:
 - 1. Manufacturer's standard grade for casing.
 - 2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.
- C. Galvanized Steel: ASTM A653/A653M.
- D. Aluminum: ASTM B209.
- E. Comply with Section 230546 "Coatings for HVAC" for corrosion-resistant coating.
- F. Corrosion-Resistant Coating: Coat with a corrosion-resistant coating capable of withstanding a 3000 -hour salt-spray test according to ASTM B117.
 - 1. Standards:
 - a. ASTM B117 for salt spray.
 - b. ASTM D2794 for minimum impact resistance of 100 in-lb
 - c. ASTM B3359 for cross hatch adhesion of 5B.
 - 2. Application: Spray.
 - 3. Thickness: 1 mil.
 - 4. Gloss: Minimum gloss of 60 on a 60-degree meter.

2.27 SOURCE QUALITY CONTROL

- A. Perform functional test of water chillers before shipping.
- B. Factory performance test water chillers, before shipping, according to AHRI 550/590.
 - 1. Test the following conditions:
 - a. Design conditions indicated.
 - b. AHRI 550/590 part-load points.
 - 2. Allow Commissioner access to place where water chillers are being tested. Notify Commissioner 30 days in advance of testing.
- C. Factory test and inspect evaporator according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.
- D. For water chillers located outdoors, rate sound power level according to AHRI 370 procedure.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, controls, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
 - 1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping, controls, and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 HEAT PUMP INSTALLATION

- A. Coordinate sizes and locations of bases with actual equipment provided. Cast anchor-bolt inserts into concrete bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures with actual equipment provided.
- C. Install water chillers on support structure indicated.
- D. Equipment Mounting:
 - 1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. Maintain clearances required by Manufacturer and Drawings.
- G. Chiller manufacturer's factory-trained service personnel shall charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
- H. Install separate devices furnished by manufacturer and not factory installed.
 - 1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-trained service personnel.

3.4 PIPING CONNECTIONS

- A. Comply with requirements in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Where installing piping adjacent to chillers, allow space for service and maintenance.
- D. Evaporator Fluid Connections:
 - 1. Connect to evaporator inlet with shutoff valve, strainer, thermometer, and plugged tee with pressure gage.
 - 2. Connect to evaporator outlet with shutoff valve, balancing valve, flow switch, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
 - 3. Make connections to water chiller with a flange.
- E. Connect each drain connection with a drain valve, full size of drain connection. Connect drain pipe to drain valve with union and extend drain pipe to terminate over floor drain.
- F. Connect each chiller vent connection with a manual vent, full size of vent connection.

3.5 ELECTRICAL POWER CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Provide nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch high. Locate nameplate where easily visible.

3.6 CONTROLS CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring between chillers and other equipment to interlock operation as required to provide a complete and functioning system.
- C. Connect control wiring between chiller control interface and Direct Digital Control system for remote monitoring and control of chillers. Comply with requirements in Section 230923 "Direct Digital Control (DDC) System for HVAC."
- D. Provide nameplate on face of chiller control panel indicating control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch high.

3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 - 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
 - 2. Verify that pumps are installed and functional.
 - 3. Verify that thermometers and gages are installed.
 - 4. Operate water chiller for run-in period.
 - 5. Check bearing lubrication and oil levels.
 - 6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
 - 7. Verify proper motor rotation.
 - 8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
 - 9. Verify and record performance of chilled- and heat recovery condenser-water flow and low-temperature interlocks.
 - 10. Verify and record performance of water chiller protection devices.
 - 11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- D. Visually inspect chiller for damage before starting. Repair or replace damaged components, including insulation. Do not start chiller until damage that is detrimental to operation has been corrected.
- E. Prepare a written startup report that records results of tests and inspections.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate water chillers. Video record the instruction sessions and provide electronic copy to City of New York.
 - 1. Instructor shall be factory trained and certified.
 - 2. Provide not less than eight hours of instruction.
 - 3. Instruct personnel in operation and to obtain maximum efficiency in plant operation.
 - 4. Obtain Commissioner sign-off that instruction is complete.
 - 5. Instruction shall be held at Project site.

END OF SECTION 236423.13

SECTION 237343.19 - OUTDOOR, CUSTOM AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes outdoor, custom air-handling units with capacities, characteristics and configurations indicated on Drawings.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.5 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by an NRTL, and marked for intended location and application.
- B. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- C. ASHRAE 62.1 Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

- D. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- E. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions, to design air-handling units, vibration isolation, and seismic restraints including comprehensive engineering analysis, using performance requirements and design criteria indicated.
- F. Casing Structural Performance:
1. Floor: Capable of withstanding positive/negative 8 inches wg of internal static pressure, without exceeding a deflection of L/300 of span.
 2. Walls and Roof: Capable of withstanding positive/negative 8 inches wg of internal static pressure, without exceeding a midpoint deflection of L/200 of span.
- G. Casing Leakage Performance: Comply with more stringent of the following requirements:
1. ASHRAE 111, Class 3 leakage or better at plus or minus 8 inches wg.
 2. Not more than 0.5 percent of the total unit airflow at 8 inches wg.
- H. Casing Thermal Performance:
1. Surface Condensation: Air-handling manufacturer shall evaluate potential for condensation and design and manufacture entire unit casing to prevent condensation at most extreme operating conditions encountered.
 2. Thermal Break: Incorporate a thermal break at each through metal path to prevent condensation from occurring on interior and exterior of casing.
 3. U-Value: Overall U-value or equivalent R-value of casing shall not exceed governing codes and ASHRAE/IES 90.1 while considering the effects of metal-to-metal contact and thermal bridging in calculations.
- I. Air Tunnel Aerodynamic Performance: Position air-handling unit internal components and transition between internal components to maintain uniform airflow; minimize sound levels and energy consumption. Use methods indicated and other means to ensure compliance.
1. Use turning vanes if necessary to direct the air path.
 - a. Design, manufacture, and install vanes in accordance with applicable requirements in ASHRAE and SMACNA guidelines, handbooks, and standards.
 - b. Install vanes firmly in place so that no vane movement occurs at worst-case airflow capacity possible.
 2. Use fan inlet and discharge transitions and other devices to maximize system regain and minimize airborne sound levels.
 3. Center system components such as coils, fans, and filters, vertically and horizontally, in the airstream.
 4. Maintain spacing between components such that airflow patterns to adjacent components are as uniform as possible and that component "dead spots" or "jetted areas" are avoided.
 5. Design and install internal structural supports, piping, and conduit that do not block airflow and impede performance of coils, fans, filters, and other unit components, and service space clearances.

- J. Durability Performance: Design and manufacture air-handling units with underlying requirement to provide a highly durable piece of equipment.
1. Unit Life Expectancy: 25 years.
 2. Supporting Documentation: Submit documentation showing proposed products to consider and include design features, components, and materials to satisfy requirement.
- K. Safety:
1. Comply with OSHA regulations.
 2. Exposed sharp edges and corners of metal shall be protected or rounded to prevent injury to personnel not wearing gloves.
 3. Cover exposed ends of screws with plastic or metal covers to prevent injury to personnel coming in contact with screws.
- L. Serviceability:
1. Hoisting Provisions: Fans and motors weighing more than 200 lb to have full-length hoist rails mounted over the equipment to facilitate service, removal, and replacement.
 2. Mounting Location: Install internal components in readily accessible locations to facilitate ease of service and replacement.
 3. Service Access:
 - a. Internal components shall be serviceable through access sections with doors indicated on Drawings.
 - b. Internal components shall be removable and replaceable through access doors or panels.
 - c. Review requirements for access doors and panels indicated and recommend additional access doors and panels if required for uninhabited service, removal, and replacement of components.
 4. Tripping Hazards: Floors in accessible sections of air-handling unit shall be free of standing seams, reinforcing, supports, or section splits located in the walking path that is capable of causing a tripping hazard. Locate section splits immediately adjacent to internal walls.
- M. Quality: Type and thickness of materials indicated are the minimum acceptable. Provide better-quality materials of a heavier thickness if required to comply with performance requirements indicated.
1. If manufacturer's standard construction exceeds requirements indicated, use manufacturer's standard construction.
 2. If manufacturer's standard construction does not comply with requirements indicated, modify manufacturer's standard construction to comply with requirements.
- N. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Component Importance Factor: 1.0.

- O. Vibration Performance: Air-handling unit manufacturer shall evaluate vibration of internal components installed inside of air-handling units and include internal vibration isolation required to limit the vibration transmitted to the building at a low enough level that vibration is not perceived by building occupants.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Examine air handling units before installation. Reject units with physical damage, and air-handling unit components that are wet, moisture damaged, or mold damaged.
- B. Equipment Mounting: Install air-handling units at locations indicated on Drawings. Unless, otherwise indicated on Drawings, install air-handling units on concrete equipment bases.
 - 1. Install air-handling units on curbs following air-handling unit manufacturer's written procedures.
 - a. Install gaskets before setting air-handling units on curbs.
 - b. Secure air-handling units to curbs using stainless steel fasteners.
 - c. Install curb and fasten to structure.
 - d. Coordinate curb requirements, attachment, and location before installation.
 - e. Inner divider required to separate the supply and exhaust air.
- C. Roof Openings:
 - 1. Provide exact size and location of roof openings to trade installing structural framing and roof structure.
 - 2. Supervise framing of openings to ensure coordinated installation with air-handling units.
- D. Seismic Control: Comply with requirements for seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- E. Equipment Clearances and Access:
 - 1. Arrange installation of air-handling units to provide access space around air-handling units for service and maintenance and for removal and replacement of internal components.
 - 2. Provide clearance and access required by governing codes and NFPA 70.
 - 3. At a minimum, comply with requirements indicated on Drawings and air-handling unit manufacturer's written instructions.

3.3 PROTECTION DURING CONSTRUCTION

- A. Exterior Covers: Cover air-handling units during construction with sealed covers to protect air-handling unit casing and externally mounted components from physical damage, dirt, dust and debris, paint splatter, and any other construction materials.
 - 1. Replace air-handling units with damage that in any way compromises the performance indicated.
 - 2. Open access doors only during periods authorized work inside air-handling units is required.

3.4 DUCT CONNECTIONS

- A. Connect ducts and plenums to air-handling unit connections. Comply with requirements in Section 233113 "Metal Ducts."
- B. Connect ducts and plenums to air-handling unit connections with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."
- C. Provide duct transitions required to make field connections to air-handling units.
- D. Arrange ducts and plenums to provide unobstructed access to inside of air-handling units.

3.5 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."
- C. Install nameplate for each control connection, indicating field control panel designation and I/O control designation feeding connection.
 - 1. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.6 STARTUP SERVICE

- A. Engage an air-handling unit factory service representative to perform startup service.
 - 1. Complete installation and startup checks in accordance with manufacturer's written instructions.
 - 2. Verify that shipping, blocking, and bracing are removed.
 - 3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, controls, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
 - 4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.

5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
6. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
7. Comb coil fins for parallel orientation.
8. Verify that proper thermal-overload protection is installed for electric heaters.
9. Install new, clean filters.
10. Verify that automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.

B. Starting procedures for air-handling units include the following:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm.
2. Measure and record motor electrical values for voltage and amperage.
3. Manually operate dampers from fully closed to fully open position and record fan performance.

C. Heat Wheel Startup Service:

1. After field installation is complete, a final checkout and startup shall be completed to ensure proper purge adjustment, seal adjustment, control settings, and other key operational functions.
2. Service shall be completed by trained factory service personnel employed by heat wheel manufacturer.
3. Submit a report summarizing findings, adjustments made, and final settings.

3.7 ADJUSTING

- A. Adjust damper linkages for proper damper operation.
- B. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.
- C. Before turning equipment over to City of New York for use, adjust air-handling unit components that require further adjustment for proper operation per manufacturer's instructions.
- D. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
- E. Seasonal Adjustments: Make seasonal visits during guarantee period to inspect and review operation of equipment. Make necessary adjustments for components observed to require adjustments for proper operation. Prepare and submit a report of each visit to Commissioner.

3.8 CLEANING

- A. Cleaning Schedule: After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems, and after completing startup service, and immediately before City of New York use, clean air-handling units to remove foreign material and construction dirt and dust.

- B. Unit Interior: Clean air-handling units internally to factory clean condition. Remove foreign material and construction debris, dirt, and dust.
 - 1. Vacuum clean with HEPA-filtered vacuum and then wipe down with cleaning solution.
 - 2. Clean casing floors, roofs, wall surfaces, access doors, and panels.
 - 3. Clean all internal components, such as, coils, dampers, filter frames, fans, and motors.
 - 4. Clean light fixtures and control devices.
- C. Unit Exterior: Clean external surfaces of air-handling units to factory clean condition. Remove foreign material and construction debris, dirt and dust. Vacuum clean with HEPA-filtered vacuum and then wipe down all surfaces with cleaning solution.
- D. Cleaning Materials: Use cleaning materials and products recommended in writing by air-handling unit manufacturer.
- E. Acceptance: Following unit cleaning submit a written request for review and Commissioner acceptance. Acceptance for cleaning of air-handling units must pass a white glove test.

3.9 OPERATION DURING CONSTRUCTION

- A. Operation of air-handling units for temporary cooling, heating, and ventilation is not allowed without Commissioner authorization.
 - 1. Submit written request for Commissioner approval by signature with detailed description of operating procedures to be followed.
 - 2. Interior and exterior of air-handling units shall be cleaned to a factory-cleaned condition and clean condition must be accepted by Commissioner.
- B. Filtration during Temporary Use:
 - 1. Protect air-handling system ducts (exhaust air, outdoor air, and return air) with temporary filters installed and supported to prevent filter media from collapse and bypass of unfiltered air. Temporary media shall be installed at each inlet and shall have a published filtration efficiency of MERV 13 in accordance with ASHRAE 52.2.
 - 2. Protect air-handling units with open inlets that are not ducted with temporary filters installed and supported to prevent filter media from collapse and by-pass of unfiltered air. Temporary media shall be installed at each inlet and shall have a published filtration efficiency of MERV 13 in accordance with ASHRAE 52.2.
 - 3. Do not operate air-handling units until both temporary and scheduled permanent air-handling unit particulate filters are in place. Temporary filters must be installed upstream of permanent filters while units are operating.
 - 4. Replace temporary and permanent filters used during construction when dirty. After end of temporary use, replace permanent filters with new, clean filters before beginning testing, adjusting and balancing.
- C. Comply with SMACNA 008, "IAQ Guidelines for Occupied Buildings under Construction," for procedures to protect HVAC system.

3.10 DEMONSTRATION

- A. Engage air-handling unit manufacturer or factory-authorized service representative to instruct City of New York's personnel to adjust and operate air-handling units.
- B. Instruction to include, but not be limited to, procedures and schedules related to performance, safety, startup and shut down, troubleshooting, servicing, preventive procedures, and how to obtain replacement parts.
- C. Schedule and Duration:
 - 1. Schedule instruction with Commissioner at least 20 business days before first training session.
 - 2. Instruction location to be coordinated with Commissioner and to occur before occupancy by the City of New York.
 - 3. Instruction shall be held at mutually agreed date and time during normal business hours.
- D. Instruction Video Recording: Video record instruction and submit an electronic copy to City of New York.
- E. Written Acceptance: Obtain Commissioner written acceptance that instruction is complete and requirements indicated have been satisfied.

END OF SECTION 237343.19

SECTION 238126 - SPLIT-SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes split-system air-conditioning and heat-pump units consisting of separate evaporator-fan and compressor-condenser components.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- B. Sustainable Design Submittals:
 - 1. Refrigerant: Product Data for refrigerants, indicating compliance with refrigerant management practices.
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 2. Wiring Diagrams: For power, signal, and control wiring.
- D. Samples for Initial Selection: For units with factory-applied color finishes.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. ASHRAE Compliance:
 - 1. Fabricate and label refrigeration system to comply with ASHRAE 15, "Safety Standard for Refrigeration Systems."
 - 2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4 - "Outdoor Air Quality," Section 5 - "Systems and Equipment," Section 6 - " Procedures," and Section 7 - "Construction and System Start-up."
- D. ASHRAE/IES Compliance: Applicable requirements in ASHRAE/IES 90.1.

1.7 COORDINATION

- A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period:
 - a. For Compressor: Five year(s) from date of Substantial Completion.
 - b. For Parts: Five year(s) from date of Substantial Completion.
 - c. For Labor: Five year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Carrier Corporation; a unit of United Technologies Corp.
 - 2. Lennox Industries, Inc.; Lennox International.
 - 3. Mitsubishi Electric & Electronics USA, Inc.
 - 4. Or approved equal.

2.2 INDOOR UNITS (5 TONS OR LESS)

A. Concealed Evaporator-Fan Components:

1. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.
2. Insulation: Faced, glass-fiber duct liner.
3. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
4. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
5. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.
6. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - c. Wiring Terminations: Connect motor to chassis wiring with plug connection.
7. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
8. Filters: Permanent, cleanable.
9. Condensate Drain Pans:
 - a. Fabricated with two percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
 - 1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
 - 2) Depth: A minimum of 2 inches deep.
 - b. Single-wall, stainless-steel sheet.
 - c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
 - 1) Minimum Connection Size: NPS 1.
 - d. Pan-Top Surface Coating: Asphaltic waterproofing compound.
 - e. Units with stacked coils shall have an intermediate drain pan to collect condensate from top coil.

B. Floor-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Commissioner.

- a. Discharge Grille: Steel with surface-mounted frame Welded steel bars forming a linear grille and welded into supporting panel.
 - b. Insulation: Faced, glass-fiber duct liner.
 - c. Drain Pans: Galvanized steel, with connection for drain; insulated.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
 3. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
 4. Fan: Direct drive, centrifugal.
 5. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 6. Air Filtration Section:
 - a. General Requirements for Air Filtration Section:
 - 1) Comply with NFPA 90A.
 - 2) Minimum MERV according to ASHRAE 52.2.
 - 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
 - b. Disposable Panel Filters:
 - 1) Factory-fabricated, viscous-coated, flat-panel type.
 - 2) Thickness: 1 inch.
 - 3) MERV according to ASHRAE 52.2: 5.
 - 4) Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
 - 5) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.
 - c. Extended-Surface, Disposable Panel Filters:
 - 1) Factory-fabricated, dry, extended-surface type.
 - 2) Thickness: 2 inches.
 - 3) MERV according to ASHRAE 52.2: 7.
 - 4) Media: Fibrous material formed into deep-V-shaped pleats with antimicrobial agent and held by self-supporting wire grid.
 - 5) Media-Grid Frame: Nonflammable cardboard.
 - 6) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

C. Wall-Mounted, Evaporator-Fan Components:

1. Cabinet: Enameled steel with removable panels on front and ends in color selected by Commissioner, and discharge drain pans with drain connection.
2. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and thermal-expansion valve. Comply with ARI 206/110.
3. Electric Coil: Helical, nickel-chrome, resistance-wire heating elements; with refractory ceramic support bushings, automatic-reset thermal cutout, built-in magnetic contactors, manual-reset thermal cutout, airflow proving device, and one-time fuses in terminal box for overcurrent protection.
4. Fan: Direct drive, centrifugal.
5. Fan Motors:
 - a. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - b. Multitapped, multispeed with internal thermal protection and permanent lubrication.
 - c. Enclosure Type: Totally enclosed, fan cooled.
 - d. NEMA Premium (TM) efficient motors as defined in NEMA MG 1.
 - e. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
 - f. Mount unit-mounted disconnect switches on exterior of unit.
6. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
7. Condensate Drain Pans:
 - a. Fabricated with one percent slope in at least two planes to collect condensate from cooling coils (including coil piping connections, coil headers, and return bends) and humidifiers, and to direct water toward drain connection.
 - 1) Length: Extend drain pan downstream from leaving face to comply with ASHRAE 62.1.
 - 2) Depth: A minimum of 1 inch deep.
 - b. Single-wall, stainless-steel sheet.
 - c. Drain Connection: Located at lowest point of pan and sized to prevent overflow. Terminate with threaded nipple on one end of pan.
 - 1) Minimum Connection Size: NPS 1.
 - d. Pan-Top Surface Coating: Asphaltic waterproofing compound.
8. Air Filtration Section:
 - a. General Requirements for Air Filtration Section:
 - 1) Comply with NFPA 90A.
 - 2) Minimum MERV according to ASHRAE 52.2.

- 3) Filter-Holding Frames: Arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
- b. Disposable Panel Filters:
 - 1) Factory-fabricated, viscous-coated, flat-panel type.
 - 2) Thickness: 1 inch.
 - 3) MERV according to ASHRAE 52.2: 5.
 - 4) Media: Interlaced glass fibers sprayed with nonflammable adhesive and antimicrobial agent.
 - 5) Frame: Galvanized steel, with metal grid on outlet side, steel rod grid on inlet side, and hinged; with pull and retaining handles.
- c. Extended-Surface, Disposable Panel Filters:
 - 1) Factory-fabricated, dry, extended-surface type.
 - 2) Thickness: 1 inch.
 - 3) MERV according to ASHRAE 52.2: 7.
 - 4) Media: Fibrous material formed into deep-V-shaped pleats with antimicrobial agent and held by self-supporting wire grid.
 - 5) Media-Grid Frame: Nonflammable cardboard.
 - 6) Mounting Frames: Welded, galvanized steel, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

2.3 OUTDOOR UNITS (5 TONS OR LESS)

A. Air-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by Commissioner, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.
 - b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
 - c. Refrigerant: R-407C or R-410A.
 - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.
3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
4. Fan: Aluminum-propeller type, directly connected to motor.
5. Motor: Permanently lubricated, with integral thermal-overload protection.
6. Low Ambient Kit: Permits operation down to 45 deg F.
7. Mounting Base: Polyethylene.

2.4 OUTDOOR UNITS (6 TONS OR MORE)

A. Air-Cooled, Compressor-Condenser Components:

1. Casing: Steel, finished with baked enamel in color selected by Commissioner, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.
2. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation device. Compressor motor shall have thermal- and current-sensitive overload devices, start capacitor, relay, and contactor.
 - a. Compressor Type: Scroll.
 - b. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.
 - c. Refrigerant: R-407C or R-410A.
 - d. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins and liquid subcooler. Comply with ARI 206/110.
3. Heat-Pump Components: Reversing valve and low-temperature-air cutoff thermostat.
4. Fan: Aluminum-propeller type, directly connected to motor.
5. Motor: Permanently lubricated, with integral thermal-overload protection.
6. Low Ambient Kit: Permits operation down to 45 deg F.
7. Mounting Base: Polyethylene.

2.5 ACCESSORIES

- A. Control equipment and sequence of operation are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC Direct Digital Control."
- B. Automatic-reset timer to prevent rapid cycling of compressor.
- C. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.
- D. Drain Hose: For condensate.
- E. Monitoring:
 1. Monitor constant and variable motor loads.
 2. Monitor variable-frequency-drive operation.
 3. Monitor economizer cycle.
 4. Monitor cooling load.
 5. Monitor air distribution static pressure and ventilation air volumes.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install units level and plumb.
- B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.
- C. Install roof-mounted, compressor-condenser components on equipment supports. Anchor units to supports with removable, cadmium-plated fasteners.
- D. Equipment Mounting:
 - 1. Install ground-mounted, compressor-condenser components on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Comply with requirements for vibration isolation and seismic control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
 - 1. Water Coil Connections: Comply with requirements specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect hydronic piping to supply and return coil connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
 - 2. Remote, Water-Cooled Condenser Connections: Comply with requirements specified in Section 232113 "Hydronic Piping" and Section 232116 Hydronic Piping Specialties." Connect hydronic piping to supply and return connections with shutoff-duty valve and union or flange on the supply connection and with throttling-duty valve and union or flange on the return connection.
- B. Where piping is installed adjacent to unit, allow space for service and maintenance of unit.

- C. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Section 233300 "Air Duct Accessories."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Tests and Inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Prepare test and inspection reports.

3.5 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate units.

END OF SECTION 238126

SECTION 238216.11 - HYDRONIC AIR COILS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.4 FIELD CONDITIONS

- A. Altitude above Mean Sea Level: 100 feet.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. ASHRAE 62.1 Compliance: Comply with applicable requirements in ASHRAE 62.1, Section 5, "Systems and Equipment," and Section 7, "Construction and Startup."
- B. Performance Ratings: Tested and rated in accordance with AHRI 410 and ASHRAE 33.
- C. Minimum Working-Pressure/Temperature Ratings: 200 psig/300 deg F.
- D. Select cooling coils for no moisture carryover at design conditions. Provide moisture eliminators on discharge face of cooling coil if necessary to eliminate moisture carryover.

2.2 MATERIALS

- A. Aluminum: ASTM B209.
- B. Copper Tube: ASTM B75/ASTM 75M annealed temper or ASTM B280 drawn temper.
- C. Copper Sheet: ASTM B152.

- D. 90/10 Cupronickel Alloy: ASTM B122/ASTM B122M.
- E. Steel:
 - 1. Pipe Connections: ASTM A53/A53M.
- F. Corrosion-Resistant Coating: Where indicated on Drawings, coat coils with a corrosion-resistant coating capable of withstanding a 3000 -hour salt-spray test in accordance with ASTM B117.
 - 1. Standards:
 - a. ASTM B117 for salt spray.
 - b. ASTM D2794 for minimum impact resistance of 100 in. lb.
 - c. ASTM D3359 for cross-hatch adhesion of 5B.
 - 2. Application:Immersion.
 - 3. Thickness: 1 mil.
 - 4. Gloss: Minimum gloss of 60 on a 60-degree meter.

2.3 SOURCE QUALITY CONTROL

- A. Hydronic Coils: Factory tested with air while coil is completely submerged underwater to design pressure indicated, but not less than 300-psig internal pressure.
- B. Coils to display a tag with inspector's identification as proof of testing.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine ducts, plenums, and casings to receive air coils for compliance with requirements for installation tolerances and other conditions affecting coil performance.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before coil installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install coils level and plumb.

- B. Install coils in metal ducts and casings constructed in accordance with SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."
- C. Install stainless steel drain pan under each cooling coil.
 - 1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
 - 2. Construct drain pans to extend beyond coil length and width and to connect to condensate trap and drainage.
 - 3. Extend drain pan upstream and downstream from coil face.
 - 4. Extend drain pan under coil headers and exposed supply piping.
- D. Install moisture eliminators for cooling coils. Extend drain pan under moisture eliminator.
- E. Straighten bent fins on air coils.
- F. Clean coils using materials and methods recommended in writing by manufacturers, and clean inside of casings and enclosures to remove dust and debris.

3.4 PIPING CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to coils to allow service and maintenance.
- C. Connect water piping with unions and shutoff valves to allow coils to be disconnected without draining piping. Control valves are specified in Section 230923.11 "Control Valves," and other piping specialties are specified in Section 232116 "Hydronic Piping Specialties."

END OF SECTION 238216.11

SECTION 238236 - FINNED-TUBE RADIATION HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes hydronic, finned-tube radiation heaters.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include details and dimensions of custom-fabricated enclosures.
 - 4. Indicate location and size of each field connection.
 - 5. Indicate location and arrangement of piping valves and specialties.
 - 6. Include enclosure joints, corner pieces, access doors, and other accessories.
- C. Samples: For each exposed product and for each color and texture specified.
- D. Color Samples for Initial Selection: For finned-tube radiation heaters with factory-applied color finishes.
- E. Color Samples for Verification: For each type of exposed finish.
- F. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Structural members, including wall construction, to which finned-tube radiation heaters will be attached.
 - 2. Method of attaching finned-tube radiation heaters to building structure.

3. Penetrations of fire-rated wall and floor assemblies.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 HOT-WATER FINNED-TUBE RADIATION HEATERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 1. Embassy Industries, Inc.
 2. Engineered Air.
 3. Sterling HVAC Products; a Mestek company.
 4. Or approved equal.
- B. Performance Ratings: Rate finned-tube radiation heaters according to Hydronics Institute's "I=B=R Testing and Rating Standard for Finned-Tube (Commercial) Radiation."
- C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on element supports. One end of tube shall be belled.
 1. Tube Diameter: NPS 3/4.
 2. Fin Size: 4 by 4 inches.
 3. Fin Spacing: 50 per foot.
 4. Number of Tiers: Refer to drawings for number of tiers (three, two and one tier).
 5. Heat Output: 550 Btu/h per ft..
 6. Entering-Air Temperature: 65 deg F.
 7. Average Water Temperature: 92 Deg F.
 8. Minimum Water Velocity: 1/2 fps.
- D. Element Supports: Ball-bearing cradle type to permit longitudinal movement on enclosure brackets.
- E. Front Panel: Minimum 0.0428-inch- thick steel.
- F. Wall-Mounted Back Panel: Minimum 0.0329-inch- thick steel, full height, with full-length channel support for front panel without exposed fasteners.
- G. Floor-Mounted Pedestals: Conceal insulated piping at maximum 36-inch spacing. Pedestal-mounted back panel shall be solid panel matching front panel. Provide stainless-steel escutcheon for floor openings at pedestals.
- H. Support Brackets: Locate at maximum 36-inch spacing to support front panel and element.
- I. Finish: Baked-enamel finish in manufacturer's custom color as selected by Commissioner.

- J. Damper: Knob-operated internal damper at enclosure outlet.
- K. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches, integral with enclosure.
- L. Enclosure Style: Flat top.
 - 1. Front Inlet Grille: Punched louver; painted to match enclosure.
 - 2. Top Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Painted to match enclosure.
- M. Accessories: Filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas to receive finned-tube radiation heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for hydronic-piping connections to verify actual locations before installation of finned-tube radiation heaters.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 FINNED-TUBE RADIATION HEATER INSTALLATION

- A. Install units level and plumb.
- B. Install enclosure continuously around corners, using outside and inside corner fittings.
- C. Join sections with splice plates and filler pieces to provide continuous enclosure.
- D. Install access doors for access to valves.
- E. Install enclosure continuously from wall to wall.
- F. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

- G. Install valves within reach of access door provided in enclosure.
- H. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.
- I. Install piping within pedestals for freestanding units.

3.4 CONNECTIONS

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect hot-water finned-tube radiation heaters and components to piping according to Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
 - 1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
- C. Install control valves as required by Section 230923.11 "Control Valves."
- D. Install piping adjacent to finned-tube radiation heaters to allow service and maintenance.

3.5 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

END OF SECTION 238236

SECTION 238239.13 - CABINET UNIT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes cabinet unit heaters with centrifugal fans and hot-water and electric-resistance heating coils.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. DDC: Direct digital control.
- C. PTFE: Polytetrafluoroethylene plastic.
- D. TFE: Tetrafluoroethylene plastic.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Sustainable Design Submittals:
 - 1. Product data showing compliance with ASHRAE 62.1.
- C. Shop Drawings:
 - 1. Include plans, elevations, sections, and details.
 - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 3. Include location and size of each field connection.

4. Include details of anchorages and attachments to structure and to supported equipment.
5. Include equipment schedules to indicate rated capacities, operating characteristics, furnished specialties, and accessories.
6. Indicate location and arrangement of piping valves and specialties.
7. Indicate location and arrangement of integral controls.
8. Wiring Diagrams: Power, signal, and control wiring.

D. Samples: For each exposed product and for each color and texture specified.

E. Samples for Initial Selection: Finish colors for units with factory-applied color finishes.

F. Samples for Verification: Finish colors for each type of cabinet unit heater indicated with factory-applied color finishes.

G. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Suspended ceiling components.
2. Structural members to which cabinet unit heaters will be attached.
3. Method of attaching hangers to building structure.
4. Size and location of initial access modules for acoustical tile.
5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
6. Perimeter moldings for exposed or partially exposed cabinets.

1.6 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Submit certification that cabinet unit heaters, accessories, and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Include detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - 1. Airtherm; a Mestek company.
 - 2. Berko; Marley Engineered Products.
 - 3. INDEECO.
 - 4. Markel Products; TPI Corporation.
 - 5. Marley Engineered Products.
 - 6. QMark; Marley Engineered Products.
 - 7. Or approved equal.

2.2 DESCRIPTION

- A. Factory-assembled and -tested unit complying with AHRI 440.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with UL 2021.

2.3 PERFORMANCE REQUIREMENTS

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- C. Seismic Performance: Cabinet unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2.4 COIL SECTION INSULATION

- A. Insulation Materials: ASTM C 1071; surfaces exposed to airstream shall have aluminum-foil facing or erosion-resistant coating to prevent erosion of glass fibers.
1. Thickness: 1/2 inch.
 2. Thermal Conductivity (k-Value): 0.26 Btu x in./h x sq. ft. at 75 deg F mean temperature.
 3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
 4. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.
 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.
- B. Insulation Materials: Comply with NFPA 90A or NFPA 90B. Unicellular polyethylene thermal plastic, preformed sheet insulation complying with ASTM C 534, Type II, except for density.
1. Thickness: 1/2 inch.
 2. Thermal Conductivity (k-Value): 0.24 Btu x in./h x sq. ft. at 75 deg F mean temperature.
 3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM C 411.
 4. Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.
 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

2.5 CABINETS

- A. Material: Steel with factory prime coating, ready for field painting, baked-enamel finish with manufacturer's standard paint, in color selected by Commissioner or baked-enamel finish with manufacturer's custom paint, in color selected by Commissioner.
1. Vertical Unit, Exposed Front Panels: Minimum 0.0677-inch- thick galvanized sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
 2. Horizontal Unit, Exposed Bottom Panels: Minimum 0.0677-inch- thick galvanized sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.
 3. Recessed Flanges: Steel, finished to match cabinet.
 4. Control Access Door: Key operated.
 5. Base: Minimum 0.0528-inch- thick steel, finished to match cabinet, 4 inches high with leveling bolts.
 6. Extended Piping Compartment: 8-inch- wide piping end pocket.
 7. False Back: Minimum 0.0428-inch- thick steel, finished to match cabinet.

2.6 FILTERS

- A. Minimum Efficiency Reporting Value and Average Arrestance: According to ASHRAE 52.2.

- B. Minimum Efficiency Reporting Value: According to ASHRAE 52.2.
- C. Material: Washable Foam, MERV 3.
- D. Material: Glass fiber treated with adhesive, MERV 5.
- E. Material: Pleated cotton-polyester media, MERV 7.

2.7 COILS

- A. Hot-Water Coil: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F. Include manual air vent and drain.
- B. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, mounted in ceramic inserts in galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

2.8 CONTROLS

- A. Fan and Motor Board: Removable.
 - 1. Fan: Forward curved, high static, double width, centrifugal, directly connected to motor; thermoplastic or painted-steel wheels and aluminum, painted-steel, or galvanized-steel fan scrolls.
 - 2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."
 - 3. Wiring Terminations: Connect motor to chassis wiring with plug connection.
- B. Factory, Hot-Water Piping Package: ASTM B 88, Type L copper tube with wrought-copper fittings and brazed joints. Label piping to indicate service, inlet, and outlet.
 - 1. Two-way, two-position control valve.
 - 2. Hose Kits: Minimum 400-psig working pressure, and operating temperatures from 33 to 211 deg F. Tag hose kits to equipment designations.
 - a. Length: As shown on Mechanical Drawings.
 - b. Minimum Diameter: Equal to cabinet unit-heater connection size.
 - 3. Two-Piece, Ball Valves: Bronze body with full-port, chrome-plated bronze ball; PTFE or TFE seats; and 600-psig minimum CWP rating and blowout-proof stem.
 - 4. Calibrated-Orifice Balancing Valves: Bronze body, ball type, 125-psig working pressure, 250 deg F maximum operating temperature; with calibrated orifice or venture, connection for portable differential pressure meter with integral seals, threaded ends, and equipped with a memory stop to retain set position.

5. Automatic Flow-Control Valve: Brass or ferrous-metal body, 300-psig working pressure at 250 deg F, with removable, corrosion-resistant, tamperproof, self-cleaning piston spring; factory set to maintain constant indicated flow within plus or minus 10 percent of differential pressure range of 2 to 80 psig.
 6. Y-Pattern, Hot-Water Strainers: Cast-iron body (ASTM A 126, Class B); 125-psig minimum working pressure; with threaded connections, bolted cover, perforated stainless-steel basket, and bottom drain connection. Include minimum NPS 1/2 threaded pipe and full-port ball valve in strainer drain connection.
 7. Wrought-Copper Unions: ASME B16.22.
- C. Control devices and operational sequences are specified in Section 230923 "Direct Digital Control (DDC) System for HVAC" and Section 230993.11 "Sequence of Operations for HVAC Direct Digital Control."
- D. Basic Unit Controls:
1. Control voltage transformer.
 2. Wall -mounted thermostat with the following features:
 - a. Heat-off switch.
 - b. Fan on-auto switch.
 - c. Manual fan-speed switch.
 - d. Adjustable deadband.
 - e. Exposed set point.
 - f. Exposed indication.
 - g. Deg F indication.
 3. Unit-mounted temperature sensor.
 4. Unoccupied period override push button.
 5. Data entry and access port.
 - a. Input data includes room temperature and occupied and unoccupied periods.
 - b. Output data includes room temperature, supply-air temperature, entering-water temperature, operating mode, and status.
- E. Direct Digital Control Terminal Controller:
1. Scheduled Operation: Occupied and unoccupied periods on seven-day clock with a minimum of four programmable periods per day.
 2. Unoccupied Period Override: Two hours.
 3. Unit Supply-Air Fan Operations:
 - a. Occupied Periods: Fan runs continuously.
 - b. Unoccupied Periods: Fan cycles to maintain setback room temperature.
 4. Heating-Coil Operations:
 - a. Occupied Periods: Modulate control valve to provide heating if room temperature falls below thermostat set point.
 - b. Unoccupied Periods: Start fan and open control valve if room temperature falls below setback temperature.

5. Outdoor-Air Damper Operation:
 - a. Occupied Periods: Open dampers. Delay damper opening if room temperature is more than three degrees below set point.
 - b. Unoccupied Periods: Close damper.
6. Controller shall have volatile-memory backup.

F. Interface with Direct Digital Control System for HVAC Requirements:

1. Interface relay for scheduled operation.
2. Interface relay to provide indication of fault at central workstation.
3. Interface shall be BAC-net or LonWorks compatible for central Direct Digital Control system for HVAC workstation and include the following functions:
 - a. Adjust set points.
 - b. Cabinet unit-heater start, stop, and operating status.
 - c. Data inquiry, including supply-air and room-air temperature.
 - d. Occupied and unoccupied schedules.

G. Electrical Connection: Factory-wired motors and controls for a single field connection.

2.9 CAPACITIES AND CHARACTERISTICS

A. Cabinet:

1. Vertical, Surface Mounted: Downflow.
 - a. Top: Flat.
 - b. Air Inlet: Front, punched louver.
 - c. Air Outlet: Front, punched louver.
2. Vertical, Semirecessed: Downflow.
 - a. Air Inlet: Front or top, punched louver.
 - b. Air Outlet: Front, punched louver.

B. Concealed Unit Heater:

1. Vertical: Upflow or Downflow.
 - a. Air Inlet: Open bottom, Front, punched louver or Front, extruded-aluminum bar grille.
 - b. Air Outlet: Front or top, quad louver, punched louver or extruded-aluminum bar grille.
2. Horizontal: Upflow.
 - a. Air Inlet: Open bottom , Front, punched louver or Front, extruded-aluminum bar grille.
 - b. Air Outlet: Front or top, quad louver ,punched louver or extruded-aluminum bar grille.

- C. Filters:
 - 1. Thickness: 1/2 inch.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."
- B. Install cabinet unit heaters to comply with NFPA 90A.
- C. Suspend cabinet unit heaters from structure with elastomeric hangers and seismic restraints. Vibration isolators and seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.
- E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.4 CONNECTIONS

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping," Section 232116 "Hydronic Piping Specialties," and Section 232300 "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.

- C. Connect piping to cabinet unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
- D. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Section 233300 "Air Duct Accessories."
- E. Comply with safety requirements in UL 1995.
- F. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of cabinet unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
- G. Unless otherwise indicated, install union and gate or ball valve on steam-supply connection and union, strainer, steam trap, and gate or ball valve on condensate-return connection of cabinet unit heater.
- H. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- I. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
 - 1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
 - 3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
- B. Units will be considered defective if they do not pass tests and inspections.
- C. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate cabinet unit heaters.

END OF SECTION 238239.13

SECTION 238239.16 - PROPELLER UNIT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes propeller unit heaters with coils.

1.3 DEFINITIONS

- A. CWP: Cold working pressure.
- B. PTFE: Polytetrafluoroethylene plastic.
- C. TFE: Tetrafluoroethylene plastic.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 DESCRIPTION

- A. Assembly including casing, coil, fan, and motor in vertical and horizontal discharge configuration with adjustable discharge louvers.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with UL 2021.
- D. Comply with UL 823.

2.2 PERFORMANCE REQUIREMENTS

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- C. Seismic Performance: Propeller unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas to receive propeller unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for piping and electrical connections to verify actual locations before unit-heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install propeller unit heaters to comply with NFPA 90A.
- B. Install propeller unit heaters level and plumb.
- C. Suspend propeller unit heaters from structure with all-thread hanger rods and spring hangers. Hanger rods and attachments to structure are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Vibration hangers are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
- D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

3.4 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties. Piping installation requirements are specified in the following Sections:
 - 1. Section 232113 "Hydronic Piping."
 - 2. Section 232116 "Hydronic Piping Specialties."
 - 3. Section 232300 "Refrigerant Piping."
- B. |Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to propeller unit heater's factory, hot-water piping package. Install the piping package if shipped loose.
- D. Comply with safety requirements in UL 1995.
- E. Unless otherwise indicated, install union and gate or ball valve on supply-water connection and union and calibrated balancing valve on return-water connection of propeller unit heater. Hydronic specialties are specified in Section 232113 "Hydronic Piping" and Section 232116 "Hydronic Piping Specialties."
- F. Unless otherwise indicated, install union and gate or ball valve on steam-supply connection and union, strainer, steam trap, and gate or ball valve on condensate-return connection of propeller unit heater.
- G. |Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 ADJUSTING

- A. Adjust initial temperature set points.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate propeller unit heaters.

END OF SECTION 238239.16

SECTION 260010 - SUPPLEMENTAL REQUIREMENTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Supplemental requirements applicable to Work specified in Division 26. This Section is also referenced by related Work specified in other Divisions.

1.3 REFERENCES

- A. Abbreviations and Acronyms for Electrical Terms and Units of Measure:
1. 8P8C: An 8-position 8-contact modular jack.
 2. A: Ampere, unit of electrical current.
 3. AC or ac: Alternating current.
 4. AFCI: Arc-fault circuit interrupter.
 5. AIC: Ampere interrupting capacity.
 6. AL, Al, or ALUM: Aluminum.
 7. ASD: Adjustable-speed drive.
 8. ATS: Automatic transfer switch.
 9. AWG: American wire gauge; see ASTM B258.
 10. BAS: Building automation system.
 11. BIL: Basic impulse insulation level.
 12. BIM: Building information modeling.
 13. CAD: Computer-aided design or drafting.
 14. CATV: Community antenna television.
 15. CB: Circuit breaker.
 16. cd: Candela, the SI fundamental unit of luminous intensity.
 17. CO/ALR: Copper-aluminum, revised.
 18. COPS: Critical operations power system.
 19. CU or Cu: Copper.
 20. CU-AL or AL-CU: Copper-aluminum.
 21. dB: Decibel, a unitless logarithmic ratio of two electrical, acoustical, or optical power values.
 22. dB(A-weighted) or dB(A): Decibel acoustical sound pressure level with A-weighting applied in accordance with IEC 61672-1.
 23. dB(adjusted) or dBa: Decibel weighted absolute noise power with respect to 3.16 pW (minus 85 dBm).

24. dBm: Decibel absolute power with respect to 1 mW.
25. DC or dc: Direct current.
26. DCOA: Designated critical operations area.
27. DDC: Direct digital control (HVAC).
28. EGC: Equipment grounding conductor.
29. ELV: Extra-low voltage.
30. EMF: Electromotive force.
31. EMI: Electromagnetic interference.
32. EPM: Electrical preventive maintenance.
33. EPS: Emergency power supply.
34. EPSS: Emergency power supply system.
35. ESS: Energy storage system.
36. EV: Electric vehicle.
37. EVPE: Electric vehicle power export equipment.
38. EVSE: Electric vehicle supply equipment.
39. fc: Footcandle, an internationally recognized unit of illuminance equal to one lumen per square foot or 10.76 lx. The simplified conversion 1 fc = 10 lx in the Specifications is common practice and considered adequate precision for building construction activities. When there are conflicts, lux is the primary unit; footcandle is specified for convenience.
40. FLC: Full-load current.
41. ft: Foot.
42. ft-cd: Foot-candle, the antiquated U.S. Standard unit of illuminance, equal to one international candle measured at a distance of one foot, that was superseded in 1948 by the unit "footcandle" after the SI unit candela (cd) replaced the international candle; see "fc,"
43. GEC: Grounding electrode conductor.
44. GFCI: Ground-fault circuit interrupter.
45. GFPE: Ground-fault protection of equipment.
46. GND: Ground.
47. HACR: Heating, air conditioning, and refrigeration.
48. HDPE: High-density polyethylene.
49. HID: High-intensity discharge.
50. HP or hp: Horsepower.
51. HVAC: Heating, ventilating, and air conditioning.
52. Hz: Hertz.
53. IBT: Intersystem bonding termination.
54. inch: Inch. To avoid confusion, the abbreviation "in." is not used.
55. IP: Ingress protection rating (enclosures); Internet protocol (communications).
56. IR: Infrared.
57. IS: Intrinsically safe.
58. IT&R: Inspecting, testing, and repair.
59. ITE: Information technology equipment.
60. kAIC: Kiloampere interrupting capacity.
61. kcmil or MCM: One thousand circular mils.
62. kV: Kilovolt.
63. kVA: Kilovolt-ampere.
64. kVA_r or kVAR: Kilovolt-ampere reactive.
65. kW: Kilowatt.
66. kWh: Kilowatt-hour.
67. LAN: Local area network.

68. lb: Pound (weight).
69. lbf: Pound (force).
70. LCD: Liquid-crystal display.
71. LCDI: Leakage-current detector-interrupter.
72. LED: Light-emitting diode.
73. Li-ion: Lithium-ion.
74. lm: Lumen, the SI derived unit of luminous flux.
75. LNG: Liquefied natural gas.
76. LP-Gas: Liquefied petroleum gas.
77. LRC: Locked-rotor current
78. LV: Low voltage.
79. lx: Lux, the SI derived unit of illuminance equal to one lumen per square meter.
80. m: Meter.
81. MCC: Motor-control center.
82. MDC: Modular data center.
83. MG set: Motor-generator set.
84. MIDI: Musical instrument digital interface.
85. MLO: Main lugs only.
86. MV: Medium voltage.
87. MVA: Megavolt-ampere.
88. mW: Milliwatt.
89. MW: Megawatt.
90. MWh: Megawatt-hour.
91. NC: Normally closed.
92. Ni-Cd: Nickel cadmium.
93. Ni-MH: Nickel-metal hydride.
94. NIU: Network interface unit.
95. NO: Normally open.
96. NPT: National (American) standard pipe taper.
97. OCPD: Overcurrent protective device.
98. ONT: Optical network terminal.
99. PC: Personal computer.
100. PCS: Power conversion system.
101. PCU: Power-conditioning unit.
102. PF or pf: Power factor.
103. PHEV: Plug-in hybrid electric vehicle.
104. PLC: Programmable logic controller.
105. PLFA: Power-limited fire alarm.
106. PoE: Power over Ethernet.
107. PV: Photovoltaic.
108. PVC: Polyvinyl chloride.
109. pW: Picowatt.
110. RFI: (electrical) Radio-frequency interference; (contract) Request for interpretation.
111. RMS or rms: Root-mean-square.
112. RPM or rpm: Revolutions per minute.
113. SCADA: Supervisory control and data acquisition.
114. SCR: Silicon-controlled rectifier.
115. SPD: Surge protective device.
116. sq.: Square.

117. SWD: Switching duty.
118. TCP/IP: Transmission control protocol/Internet protocol.
119. TEFC: Totally enclosed fan-cooled.
120. TR: Tamper resistant.
121. TVSS: Transient voltage surge suppressor.
122. UL: (standards) Underwriters Laboratories, Inc.; (product categories) UL, LLC.
123. UL CCN: UL Category Control Number.
124. UPS: Uninterruptible power supply.
125. USB: Universal serial bus.
126. UV: Ultraviolet.
127. V: Volt, unit of electromotive force.
128. V(ac): Volt, alternating current.
129. V(dc): Volt, direct current.
130. VA: Volt-ampere, unit of complex electrical power.
131. VAR: Volt-ampere reactive, unit of reactive electrical power.
132. VFC: Variable-frequency controller.
133. VOM: Volt-ohm-multimeter.
134. VPN: Virtual private network.
135. VRLA: Valve regulated lead acid; also called "sealed lead acid (SLA)" or "valve regulated sealed lead acid."
136. W: Watt, unit of real electrical power.
137. Wh: Watt-hour, unit of electrical energy usage.
138. WPT: Wireless power transfer.
139. WPTe: Wireless power transfer equipment.
140. WR: Weather resistant.

B. Abbreviations and Acronyms for Electrical Single-Conductor and Multiple-Conductor Cable Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.
4. EMT-SS: Stainless steel electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. EPEC: Electrical HDPE underground conduit.
7. EPEC-40: Schedule 40 electrical HDPE underground conduit.
8. EPEC-80: Schedule 80 electrical HDPE underground conduit.
9. EPEC-A: Type A electrical HDPE underground conduit.
10. EPEC-B: Type B electrical HDPE underground conduit.
11. ERMC: Electrical rigid metal conduit.
12. ERMC-A: Aluminum electrical rigid metal conduit.
13. ERMC-S: Steel electrical rigid metal conduit.
14. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
15. ERMC-S-PVC: PVC-coated-steel electrical rigid metal conduit.
16. ERMC-SS: Stainless steel electrical rigid metal conduit.
17. FMC: Flexible metal conduit.
18. FMC-A: Aluminum flexible metal conduit.
19. FMC-S: Steel flexible metal conduit.
20. FMT: Steel flexible metallic tubing.
21. FNMC: Flexible nonmetallic conduit. See LFNC.

22. HDPE: See EPEC.
23. IMC: Steel electrical intermediate metal conduit.
24. LFMC: Liquidtight flexible metal conduit.
25. LFMC-A: Aluminum liquidtight flexible metal conduit.
26. LFMC-S: Steel liquidtight flexible metal conduit.
27. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
28. LFNC: Liquidtight flexible nonmetallic conduit.
29. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
30. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
31. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
32. PVC: Rigid PVC conduit.
33. PVC-40: Schedule 40 rigid PVC conduit.
34. PVC-80: Schedule 80 rigid PVC Conduit.
35. PVC-A: Type A rigid PVC concrete-encased conduit.
36. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.
37. RGS: See ERMCM-S-G.
38. RMC: See ERMCM.
39. RTRC: Reinforced thermosetting resin conduit.
40. RTRC-AG: Low-halogen, aboveground reinforced thermosetting resin conduit.
41. RTRC-AG-HW: Heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
42. RTRC-AG-SW: Standard wall, low-halogen, aboveground reinforced thermosetting resin conduit.
43. RTRC-AG-XW: Extra heavy wall, low-halogen, aboveground reinforced thermosetting resin conduit.
44. RTRC-BG: Low-halogen, belowground reinforced thermosetting resin conduit.

C. Abbreviations and Acronyms for Electrical Cable Types:

1. AC: Armored cable.
2. CATV: Coaxial general-purpose cable.
3. CATVP: Coaxial plenum cable.
4. CATVR: Coaxial riser cable.
5. CI: Circuit integrity cable.
6. CL2: Class 2 cable.
7. CL2P: Class 2 plenum cable.
8. CL2R: Class 2 riser cable.
9. CL2X: Class 2 cable, limited use.
10. CL3: Class 3 cable.
11. CL3P: Class 3 plenum cable.
12. CL3R: Class 3 riser cable.
13. CL3X: Class 3 cable, limited use.
14. CM: Communications general-purpose cable.
15. CMG: Communications general-purpose cable.
16. CMP: Communications plenum cable.
17. CMR: Communications riser cable.
18. CMUC: Under-carpet communications wire and cable.
19. CMX: Communications cable, limited use.
20. DG: Distributed generation cable.
21. FC: Flat cable.
22. FCC: Flat conductor cable.
23. FPL: Power-limited fire-alarm cable.

24. FPLP: Power-limited fire-alarm plenum cable.
25. FPLR: Power-limited fire-alarm riser cable.
26. IGS: Integrated gas spacer cable.
27. ITC: Instrumentation tray cable.
28. ITC-ER: Instrumentation tray cable, exposed run.
29. MC: Metal-clad cable.
30. MC-HL: Metal-clad cable, hazardous location.
31. MI: Mineral-insulated, metal-sheathed cable.
32. MTW: (machine tool wiring) Moisture-, heat-, and oil-resistant thermoplastic cable.
33. MV: Medium-voltage cable.
34. NM: Nonmetallic sheathed cable.
35. NMC: Nonmetallic sheathed cable with corrosion-resistant nonmetallic jacket.
36. NMS: Nonmetallic sheathed cable with signaling, data, and communications conductors, plus power or control conductors.
37. NPLF: Non-power-limited fire-alarm circuit cable.
38. NPLFP: Non-power-limited fire-alarm circuit cable for environmental air spaces.
39. NPLFR: Non-power-limited fire-alarm circuit riser cable.
40. NUCC: Nonmetallic underground conduit with conductors.
41. OFC: Conductive optical fiber general-purpose cable.
42. OFCG: Conductive optical fiber general-purpose cable.
43. OFCP: Conductive optical fiber plenum cable.
44. OFCR: Conductive optical fiber riser cable.
45. OFN: Nonconductive optical fiber general-purpose cable.
46. OFNG: Nonconductive optical fiber general-purpose cable.
47. OFNP: Nonconductive optical fiber plenum cable.
48. OFNR: Nonconductive optical fiber riser cable.
49. P: Marine shipboard cable.
50. PLTC: Power-limited tray cable.
51. PLTC-ER: Power-limited tray cable, exposed run.
52. PV: Photovoltaic cable.
53. RHH: (high heat) Thermoset rubber, heat-resistant cable.
54. RHW: Thermoset rubber, moisture-resistant cable.
55. SA: Silicone rubber cable.
56. SE: Service-entrance cable.
57. SER: Service-entrance cable, round.
58. SEU: Service-entrance cable, flat.
59. SIS: Thermoset cable for switchboard and switchgear wiring.
60. TBS: Thermoplastic cable with outer braid.
61. TC: Tray cable.
62. TC-ER: Tray cable, exposed run.
63. TC-ER-HL: Tray cable, exposed run, hazardous location.
64. THW: Thermoplastic, heat- and moisture-resistant cable.
65. THHN: Thermoplastic, heat-resistant cable with nylon jacket outer sheath.
66. THHW: Thermoplastic, heat- and moisture-resistant cable.
67. THWN: Thermoplastic, moisture- and heat-resistant cable with nylon jacket outer sheath.
68. TW: Thermoplastic, moisture-resistant cable.
69. UF: Underground feeder and branch-circuit cable.
70. USE: Underground service-entrance cable.
71. XHH: Cross-linked polyethylene, heat-resistant cable.

72. XHHW: Cross-linked polyethylene, heat- and moisture-resistant cable.

D. Abbreviations and Acronyms for Electrical Flexible Cord Types:

1. SEO: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
2. SEOW: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
3. SEOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
4. SEOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
5. SJEO: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
6. SJEOW: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
7. SJEOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
8. SJEOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
9. SJO: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp locations.
10. SJOW: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
11. SJOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp locations.
12. SJOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
13. SJTO: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
14. SJTOW: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
15. SJTOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
16. SJTOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
17. SO: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp locations.
18. SOW: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
19. SOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp locations.
20. SOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
21. STO: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
22. STOW: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.

23. STOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
24. STOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.

E. Definitions:

1. 8-Position 8-Contact (8P8C) Modular Jack: An unkeyed jack with up to eight contacts commonly used to terminate twisted-pair and multiconductor Ethernet cable. Also called a "TIA-1096 miniature 8-position series jack" (8PSJ), or an "IEC 8877 8-pole jack."
 - a. Be careful when suppliers use "RJ45" generically. Obsolete RJ45 jacks used for analog telephone cables have rejection keys. 8P8C jacks used for digital telephone cables and Ethernet cables do not have rejection keys.
2. Basic Impulse Insulation Level (BIL): Reference insulation level expressed in impulse crest voltage with a standard wave not longer than 1.5 times 50 microseconds and 1.5 times 40 microseconds.
3. Cable: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "cable" is (1) a conductor with insulation, or a stranded conductor with or without insulation (single-conductor cable); or (2) a combination of conductors insulated from one another (multiple-conductor cable).
4. Communications Jack: A fixed connecting device designed for insertion of a communications cable plug.
5. Communications Outlet: One or more communications jacks, or cables and plugs, mounted in a box or ring, with a suitable protective cover.
6. Conductor: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "conductor" is (1) a wire or combination of wires not insulated from one another, suitable for carrying an electric current; (2) (National Electrical Safety Code) a material, usually in the form of wire, cable, or bar, suitable for carrying an electric current; or (3) (general) a substance or body that allows a current of electricity to pass continuously along it.
7. Designated Seismic System: A system component that requires design in accordance with Ch. 13 of ASCE/SEI 7 and for which the Component Importance Factor is greater than 1.0.
8. Direct Buried: Installed underground without encasement in concrete or other protective material.
9. Enclosure: The case or housing of an apparatus, or the fence or wall(s) surrounding an installation, to prevent personnel from accidentally contacting energized parts or to protect the equipment from physical damage. Types of enclosures and enclosure covers include the following:
 - a. Cabinet: An enclosure that is designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.
 - b. Concrete Box: A box intended for use in poured concrete.
 - c. Conduit Body: A means for providing access to the interior of a conduit or tubing system through one or more removable covers at a junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
 - d. Conduit Box: A box having threaded openings or knockouts for conduit, EMT, or fittings.
 - e. Cutout Box: An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the enclosure.
 - f. Device Box: A box with provisions for mounting a wiring device directly to the box.

- g. Extension Ring: A ring intended to extend the sides of an outlet box or device box to increase the box depth, volume, or both.
 - h. Floor Box: A box mounted in the floor intended for use with a floor box cover and other components to complete the floor box enclosure.
 - i. Floor-Mounted Enclosure: A floor box and floor box cover assembly with means to mount in the floor that is sealed against the entrance of scrub water at the floor level.
 - j. Floor Nozzle: An enclosure used on a wiring system, intended primarily as a housing for a receptacle, provided with a means, such as a collar, for surface-mounting on a floor, which may or may not include a stem to support it above the floor level, and is sealed against the entrance of scrub water at the floor level.
 - k. Junction Box: A box with a blank cover that joins different runs of raceway or cable and provides space for connection and branching of the enclosed conductors.
 - l. Outlet Box: A box that provides access to a wiring system having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for the entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting an outlet box cover, but without provisions for mounting a wiring device directly to the box.
 - m. Pedestal Floor Box Cover: A floor box cover that, when installed as intended, provides a means for typically vertical or near-vertical mounting of receptacle outlets above the floor's finished surface.
 - n. Pull Box: A box with a blank cover that joins different runs of raceway and provides access for pulling or replacing the enclosed cables or conductors.
 - o. Raised-Floor Box: A floor box intended for use in raised floors.
 - p. Recessed Access Floor Box: A floor box with provisions for mounting wiring devices below the floor surface.
 - q. Recessed Access Floor Box Cover: A floor box cover with provisions for passage of cords to recessed wiring devices mounted within a recessed floor box.
 - r. Ring: A sleeve, which is not necessarily round, used for positioning a recessed wiring device flush with the plaster, concrete, drywall, or other wall surface.
 - s. Ring Cover: A box cover, with raised center portion to accommodate a specific wall or ceiling thickness, for mounting wiring devices or luminaires flush with the surface.
 - t. Termination Box: An enclosure designed for installation of termination base assemblies consisting of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors, or both.
10. Emergency Systems: Those systems legally required and classed as emergency by municipal, state, federal, or other codes, or by any governmental agency having jurisdiction that are designed to ensure continuity of lighting, electrical power, or both, to designated areas and equipment in the event of failure of the normal supply for safety to human and animal life.
11. Essential Electrical Systems: (Animal Care facilities) Those systems designed to ensure continuity of electrical power to designated areas and functions of a healthcare facility during disruption of normal power sources, and also to minimize disruption within the internal wiring system.
12. Fault Limited: Providing or being served by a source of electrical power that is limited to not more than 100 W when tested in accordance with UL 62368-1.
- a. The term "fault limited" is intended to encompass most Class 1, 2, and 3 power-limited sources complying with Article 725 of NFPA 70; Class ES1 and ES2 electrical energy sources that are Class PS1 electrical power sources (e.g., USB); and Class ES3 electrical energy sources that are Class PS1 and PS2 electrical power sources (e.g., PoE). See UL 62368-1 for discussion of classes of electrical energy sources and classes of electrical power sources.

13. High-Performance Building: A building that integrates and optimizes on a life-cycle basis all major high-performance attributes, including energy conservation, environment, safety, security, durability, accessibility, cost-benefit, productivity, sustainability, functionality, and operational considerations.
14. Jacket: A continuous nonmetallic outer covering for conductors or cables.
15. Luminaire: A complete lighting unit consisting of a light source such as a lamp, together with the parts designed to position the light source and connect it to the power supply. It may also include parts to protect the light source or the ballast or to distribute the light.
16. Mode: The terms "Active Mode," "Off Mode," and "Standby Mode" are used as defined in the Energy Independence and Security Act (EISA) of 2007.
17. Multi-Outlet Assembly: A type of surface, flush, or freestanding raceway designed to hold conductors, receptacles, and switches, assembled in the field or at the factory.
18. Plenum: A compartment or chamber to which one or more air ducts are connected and that forms part of the air distribution system.
19. Receptacle: A fixed connecting device arranged for insertion of a power cord plug. Also called a power jack.
20. Receptacle Outlet: One or more receptacles mounted in a box with a suitable protective cover.
21. Sheath: A continuous metallic covering for conductors or cables.
22. UL Category Control Number (CCN): An alphabetic or alphanumeric code used to identify product categories covered by UL's Listing, Classification, and Recognition Services.
23. Voltage Class: For specified circuits and equipment, voltage classes are defined as follows:
 - a. Control Voltage: Having electromotive force between any two conductors, or between a single conductor and ground, that is supplied from a battery or other Class 2 or Class 3 power-limited source.
 - b. Line Voltage: (1) (controls) Designed to operate using the supplied low-voltage power without transformation. (2) (transmission lines, transformers, SPDs) The line-to-line voltage of the supplying power system.
 - c. Extra-Low Voltage (ELV): Not having electromotive force between any two conductors, or between a single conductor and ground, exceeding 30 V(ac rms), 42 V(ac peak), or 60 V(dc).
 - d. Low Voltage (LV): Having electromotive force between any two conductors, or between a single conductor and ground, that is rated above 30 V but not exceeding 1000 V.
 - e. Medium Voltage (MV): Having electromotive force between any two conductors, or between a single conductor and ground, that is rated about 1 kV but not exceeding 69 kV.
 - f. High Voltage: (1) (circuits) Having electromotive force between any two conductors, or between a single conductor and ground, that is rated above 69 kV but not exceeding 230 kV. (2) (safety) Having sufficient electromotive force to inflict bodily harm or injury.
24. Wire: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "wire" is a slender rod or filament of drawn metal. A group of small wires used as a single wire is properly called a "stranded wire." A wire or stranded wire covered with insulation is properly called an "insulated wire" or a "single-conductor cable." Nevertheless, when the context indicates that the wire is insulated, the term "wire" will be understood to include the insulation.

1.4 COORDINATION

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by City of New York unless permitted under the following conditions:

1. Notify Commissioner no fewer than seven days in advance of proposed interruption of electrical service.
2. Do not proceed with interruption of electrical service without Commissioner's written permission.
3. Coordinate interruption with systems impacted by outage including, but not limited to, the following:
 - a. Exercising generators.
 - b. Emergency lighting.
 - c. Elevators.
 - d. Fire-alarm systems.

- B. Arrange to provide temporary electrical service in accordance with requirements in DDC General Conditions, Section 015000 "Temporary Facilities, Services, and Controls."

1.5 SEQUENCING

- A. Conduct and submit results of power system studies before submitting Product Data and Shop Drawings for electrical equipment.

1.6 SCHEDULEING

- A. Contractor to submit and coordinate unusual scheduling.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.8 QUALIFICATIONS

- A. Qualified Regional Manufacturer: Manufacturer, possessing qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," that maintains a service center capable of providing training, parts, and emergency on-site repairs to Project site with response time less than eight hours .
- B. Structural Professional Engineer: Professional engineer licensed in the State of New York, possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," with expertise in structural engineering including seismic.
- C. Electrical Professional Engineer: Professional engineer licensed in the State of New York, possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," with expertise in electrical engineering, including electrical power system modeling and analysis of electrical safety in accordance with NFPA 70E.
- D. Lighting Professional Engineer: Professional engineer possessing active qualifications in accordance with DDC General Conditions Section 014000 "Quality Requirements" and the following:
1. Expertise in electrical engineering, lighting design, and structural requirements for exterior poles and standards.

2. Lighting Certified (LC) Professional by the National Council on Qualifications for the Lighting Professions (NCQLP).
- E. EPM Specialist: Recognized experts possessing the following qualifications in accordance with DDC General Conditions Section 014000 "Quality Requirements" and NFPA 70B:
1. Technical Competence: Person should, by education, training, and experience, be well-rounded in all aspects of electrical maintenance.
 2. Administrative and Supervisory Skills: Person should be skilled in planning and development of long-range objectives to achieve specific results and should be able to command respect and solicit cooperation of persons involved in EPM Program development.
- F. Welder: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," with training and certification in accordance with AWS D1.1/D1.1M and AWS D1.2/D1.2M.
- G. ERMC-S-PVC Installers: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by ERMC-S-PVC manufacturer prior to starting installation.
- H. Electrical Power Monitoring Installers: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by manufacturer prior to starting installation.
- I. EVSE Installers: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by EVSE manufacturer prior to starting installation.
- J. Generator Set Installers: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by generator set manufacturer prior to starting installation.
- K. Theatrical Lighting Installers: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by theatrical lighting manufacturers prior to starting installation.
- L. Exterior Parking Lighting Installers: Installer possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," and able to present unexpired certified Installer credentials issued by exterior athletic lighting manufacturer prior to starting installation.
- M. Power Quality Specialist: Recognized experts possessing active credentials from a qualified electrical testing laboratory and able to present unexpired NICET Level 4 credentials with documented experience in power quality testing for installations similar in complexity to this Project.
- N. Control-Voltage Electrical Testing Agency: Entity possessing active credentials from a qualified electrical testing laboratory.
- O. Structural Testing and Inspecting Agency: Entity possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements" with documented training and experience with testing structural concrete, seismic controls, and wind-load controls.

- P. Outdoor Pole Testing and Inspecting Agency: Entity possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements" with documented training and experience in accordance with ASTM C1093 for foundation testing and inspections.

1.9 FIELD CONDITIONS

- A. Modeling, analysis, product selection, installation, and quality control for Work specified in Division 26 must comply with requirements specified in Section 260011 "Facility Performance Requirements for Electrical."
- B. Service Conditions for Electrical Power Equipment: Besides conditions specified in Section 260011 "Facility Performance Requirements for Electrical," specified electrical power equipment must be suitable for operation under service conditions specified as usual service conditions in applicable NEMA PB series, IEEE C37 series, and IEEE C57 series standards, except for the following:
 - a. Exposure to significant solar radiation.
 - b. Exposure to fumes, vapors, or dust.
 - c. Exposure to explosive environments.
 - d. Ambient temperature not exceeding 122 deg F.
 - e. Exposure to hot and humid climate or to excessive moisture, including steam, salt spray, and dripping water.
 - f. Unusual transportation or storage conditions.
 - g. Unusual grounding resistance conditions.
 - h. Unusual space limitations.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 DEVELOPMENT OF FACILITY EPM PROGRAM

- A. Facility EPM Program must be developed by qualified EPM specialist.
- B. Conduct Facility EPM Program analysis in accordance with NFPA 70B recommendations.
- C. Compile operation and maintenance data from Facility EPM program analysis and submit Facility EPM program Binder

3.3 INSTALLATION OF ELECTRICAL WORK

- A. Unless more stringent requirements are specified in the Contract Documents or manufacturers' written instructions, comply with NFPA 70 and NECA NEIS 1 for installation of Work specified in Division 26. Consult Commissioner for resolution of conflicting requirements.

3.4 CLOSEOUT ACTIVITIES

A. Demonstration:

1. With assistance from factory-authorized service representatives, demonstrate to City of New York's personnel how to operate the following systems and equipment:
 - a. Lighting control devices specified in Section 260923 "Lighting Control Devices."
 - b. Electronic metering and billing software specified in Section 262713 "Electricity Metering."
2. Provide video recordings of demonstrations to City of New York.

B. Instruction:

1. With assistance from factory-authorized service representatives, instruct City of New York's personnel on the following topics:
 - a. How to implement Facility EPM Program.
 - b. How to operate normal and emergency electrical systems, including justifications for, and limitations of, protective device settings recommended in study report specified in Section 260573.16 "Coordination Studies."
 - c. Electrical power safety fundamentals refresher including arc-flash hazard safety features of electrical power distribution equipment in facility, interpreting arc-flash warning labels, selecting appropriate personal protective equipment, and understanding significance of findings documented in study report specified in Section 260573.19 "Arc-Flash Hazard Analysis."
 - d. How to adjust and operate devices specified in Section 260923 "Lighting Control Devices."
 - e. How to adjust and operate switchboards, overcurrent protective devices, instrumentation, and accessories, and to use and reprogram microprocessor-based trip, monitoring, and communication units specified in Section 262413 "Switchboards."
 - f. How to adjust and operate hardware and software specified in Section 262713 "Electricity Metering."
 - g. How to adjust and operate equipment specified in Section 262743 "Electric-Vehicle Service Equipment - AC Level 1 and Level 2."
 - h. How to adjust and operate equipment specified in Section 262913.03 "Manual and Magnetic Motor Controllers."
 - i. How to adjust and operate equipment specified in Section 262913.06 "Soft-Start Motor Controllers."
 - j. How to adjust and operate equipment specified in Section 263213.13 "Diesel Emergency Engine Generators".
 - k. How to adjust and operate equipment specified in Section 263213.16 "Gaseous Emergency-Engine Generators."

- l. How to adjust and operate transfer switches and related equipment, including ground-fault protection system, specified in Section 263600 "Transfer Switches."
 - m. How to adjust and operate devices specified in Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits."
2. Provide video recordings of demonstration sessions to City of New York.

END OF SECTION 260010

SECTION 260011 - FACILITY PERFORMANCE REQUIREMENTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:

1. Field conditions and other facility performance requirements applicable to Work specified in Division 26.

1.3 FIELD CONDITIONS

- A. Seismic Hazard Design Loads:

1. Unless otherwise indicated on Contract Documents, specified Work must withstand seismic hazard design loads determined in accordance with requirements specified in this Section, adjusted for installed elevation above or below grade.
 - a. The term "withstand" means "unit must remain in place without separation of parts from unit when subjected to specified seismic hazard design loads and unit must be fully operational after seismic event."
2. Perform calculations to obtain force information necessary to properly select seismic-restraint devices, fasteners, and anchorage. Perform calculations using methods acceptable to and as presented in ASCE/SEI 7-05, ASCE/SEI 7-10 including supplement No. 1, ASCE/SEI 7-16.
 - a. Data indicated below to be determined by Engineering Services Contractor must be obtained by Contractor and must be included in individual component submittal packages.
 - b. Coordinate seismic design calculations with wind-load calculations for equipment mounted outdoors.
3. Calculation Factors, ASCE/SEI 7-16, Ch. 13 - Seismic Design Requirements for Nonstructural Components: All section, paragraph, equation, and table numbers refer to ASCE/SEI 7-16 unless otherwise indicated.
 - a. Horizontal Seismic Design Force F_p : Value must be calculated by Engineering Services Contractor using Equation 13.3-1. Factors below must be obtained for this calculation:
 - 1) Spectral Acceleration (SDS): Value applies to all components on Project.

- 2) Component Amplification Factor (a_p): See Drawing Schedule for each component.
 - 3) Component Importance Factor (I_p): See Drawing Schedule for each component.
 - 4) Component Operating Weight (W_p): For each component. Obtain by Engineering Services Contractor from each component submittal.
 - 5) Component Response Modification Factor (R_p): See Drawing Schedule for each component.
 - 6) Height in Structure of Point of Attachment of Component for Base (z): Determine from Project Drawings for each component by Engineering Services Contractor. For items at or below the base, " z " must be taken as zero.
 - 7) Average Roof Height of Structure for Base (h): Determine from Project Drawings by Engineering Services Contractor.
- b. Vertical Seismic Design Force: Calculated by Engineering Services Contractor using method explained in ASCE/SEI 7-16, Paragraph 13.3.1.2.
- c. Seismic Relative Displacement (D_{pl}): Calculated by Engineering Services Contractor using methods explained in ASCE/SEI 7-16, Paragraph 13.3.2. Factors below must be obtained for this calculation:
- 1) Relative Seismic Displacement that Each Component Must Be Designed to Accommodate (D_p): Calculated by Engineering Services Contractor in accordance with ASCE/SEI 7-16, Paragraph 13.3.2.
 - 2) Structure Importance Factor (I_e): Value applies to all components on Project.
 - 3) Deflection at Building Level x of Structure A (δ_{xA}): See Drawing Schedule for each component.
 - 4) Deflection at Building Level y of Structure A (δ_{yA}): See Drawing Schedule for each component.
 - 5) Deflection at Building Level y of Structure B (δ_{yB}): See Drawing Schedule for each component.
 - 6) Height of Level x to Which Upper Connection Point Is Attached (h_x): Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 7) Height of Level y to Which Upper Connection Point Is Attached (h_y): Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 8) Allowable Story Drift for Structure A (Δa_A): See Drawing Schedule for each component.
 - 9) Allowable Story Drift for Structure B (Δa_B): See Drawing Schedule for each component.
 - 10) Story Height Used in the Definition of the Allowable Drift Δa (h_{sx}): See Drawings Schedules for each component.
- d. Component Fundamental Period (T_p): Calculated by Engineering Services Contractor using methods explained in ASCE/SEI 7-16, Paragraph 13.3.3. Factors below must be obtained for this calculation:
- 1) Component Operating Weight (W_p): Determined by Contractor from Project Drawings and manufacturer's data.
 - 2) Gravitational Acceleration (g): 32.17 ft/s².

- 3) Combined Stiffness of the Component, Supports, and Attachments (K_p): Determined by professional engineer, licensed in the state of NY retained by the contractor.
4. Calculation Factors, ASCE/SEI 7-10, Ch. 13 - Seismic Design Requirements for Nonstructural Components: All section, paragraph, equation, and table numbers refer to ASCE/SEI 7-10 unless otherwise indicated.
 - a. Horizontal Seismic Design Force (F_p): Calculated by Engineering Services Contractor by ASCE/SEI 7-10, Equation 13.3-1. Factors below must be obtained for this calculation:
 - 1) Spectral Acceleration (SDS): . Value applies to all components on Project.
 - 2) Component Amplification Factor (a_p): See Drawing Schedule for each component.
 - 3) Component Importance Factor (I_p): See Drawing Schedule for each component.
 - 4) Component Operating Weight (W_p): For each component. Obtained by Engineering Services Contractor from equipment submittal.
 - 5) Component Response Modification Factor (R_p): See Drawing Schedule for each component.
 - 6) Height in Structure of Point of Attachment of Component for Base (z): Determined from Project Drawings for each component by Contractor. For items at or below the base, "z" must be taken as zero.
 - 7) Average Roof Height of Structure for Base (h): Determined from Project Drawings by Engineering Services Contractor.
 - b. Vertical Seismic Design Force: Calculated by Engineering Services Contractor using method explained in ASCE/SEI 7-10, Paragraph 13.3.1.
 - c. Seismic Relative Displacement (D_{pl}): Calculated by Engineering Services Contractor using methods explained in ASCE/SEI 7-10, Paragraph 13.3.2. Factors below must be obtained for this calculation:
 - 1) Relative Seismic Displacement that Each Component Must Be Designed to Accommodate (D_p): Calculated by Engineering Services Contractor in accordance with ASCE/SEI 7-10, Paragraph 13.3.2.
 - 2) Structure Importance Factor (I_e): Value applies to all components on Project.
 - 3) Deflection at Building Level x of Structure A (δ_{xA}): See Drawing Schedule for each component.
 - 4) Deflection at Building Level y of Structure A (δ_{yA}): See Drawing Schedule for each component.
 - 5) Deflection at Building Level y of Structure B (δ_{yB}): See Drawing Schedule for each component.
 - 6) Height of Level x to Which Upper Connection Point Is Attached (h_x): Determined for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 7) Height of Level y to Which Upper Connection Point Is Attached (h_y): Determined for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 8) Allowable Story Drift for Structure A (Δa_A): See Drawing Schedule for each component.
 - 9) Allowable Story Drift for Structure B (Δa_B): See Drawing Schedule for each component.

- 10) Story Height Used in the Definition of the Allowable Drift Δa (hsx): See Drawing Schedule for each component.
5. Calculation Factors, ASCE/SEI 7-05, Ch. 13 - Seismic Design Requirements for Nonstructural Components: All section, paragraph, equation, and table numbers refer to ASCE/SEI 7-05 unless otherwise indicated.
 - a. Horizontal Seismic Design Force (Fp): Calculated by Engineering Services Contractor by ASCE/SEI 7-05, Equation 13.3-1. Factors below must be obtained for this calculation:
 - 1) Spectral Acceleration (SDS): See Structural Drawing set. Value applies to all components on Project.
 - 2) Component Amplification Factor (ap): See Drawing Schedule for each component.
 - 3) Component Importance Factor (Ip): See Drawing Schedule for each component.
 - 4) Component Operating Weight (Wp): Obtained by Engineering Services Contractor for each component from component submittal.
 - 5) Component Response Modification Factor (Rp): See Drawing Schedule for each component.
 - 6) Height in Structure of Point of Attachment of Component for Base (z): Determine by Engineering Services Contractor for each component from Project Drawings. For items at or below the base, "z" must be taken as zero.
 - 7) Average Roof Height of Structure for Base (h): Determine by Engineering Services Contractor from Project Drawings.
 - b. Vertical Seismic Design Force: Calculated by Engineering Services Contractor using method explained in ASCE/SEI 7-05, Paragraph 13.3.1.
 - c. Seismic Relative Displacement (Dp): Calculated by Engineering Services Contractor using methods explained in ASCE/SEI 7-05, Paragraph 13.3.2. Factors below must be obtained for this calculation:
 - 1) Deflection at Building Level x of Structure A (δx_A): See Drawing Schedule for each component.
 - 2) Deflection at Building Level y of Structure A (δy_A): See Drawing Schedule for each component.
 - 3) Deflection at Building Level y of Structure B (δy_B): See Drawing Schedule for each component.
 - 4) Height of Level x to Which Upper Connection Point Is Attached (hx): Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 5) Height of Level y to Which Upper Connection Point Is Attached (hy): Determine for each component by Engineering Services Contractor from Project Drawings and manufacturer's data.
 - 6) Allowable Story Drift for Structure A (Δa_A): See Drawing Schedule for each component.
 - 7) Allowable Story Drift for Structure B (Δa_B): See Drawing Schedule for each component.
 - 8) Story Height Used in the Definition of the Allowable Drift Δa (hsx): See Drawing Schedule for each component.

B. Wind Hazard Design Loads:

1. Perform calculations to obtain force information necessary to properly select wind-load restraint devices, fasteners, and anchorage. Perform calculations using methods acceptable to Commissioner if required and as presented in wind-load calculation method required by Commissioner. Where "ASCE/SEI 7" is used throughout this Section, it must be understood that the edition referred to in this subparagraph is intended as referenced throughout the Section Text unless otherwise indicated.
 - a. Data indicated below that are specific to individual pieces of equipment must be obtained by Contractor and must be included in individual component submittal packages.
 - b. Coordinate design wind-load calculations with seismic-load calculations for equipment requiring both seismic- and wind-load reinforcement. Comply with requirements in other Sections in addition to those in this Section.
2. Design wind pressure "p" for external sidewall-mounted equipment must be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-16, Ch. 30. Perform calculations according to one of the following, as appropriate:
 - a. PART 1: Low-Rise Buildings.
 - b. PART 2: Low-Rise Buildings (Simplified).
 - c. PART 3: Buildings with "h" less than 60 ft.
 - d. PART 4: Buildings with "h" greater than 60 ft and less than 160 ft
 - e. PART 5: Open Buildings.
3. Design wind pressure "p" for rooftop equipment must be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-16, Ch. 30, PART 6: Building Appurtenances and Rooftop Structures and Equipment.
4. Design wind pressure "p" for external sidewall-mounted equipment must be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-10, Ch. 30. Perform calculations according to one of the following, as appropriate:
 - a. PART 1: Low-Rise Buildings.
 - b. PART 2: Low-Rise Buildings (Simplified).
 - c. PART 3: Buildings with "h" greater than 60 ft.
 - d. PART 4: Buildings with "h" less than 160ft.
 - e. PART 5: Open Buildings.
5. Design wind pressure "p" for rooftop equipment must be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-10, Ch. 30, PART 6: Building Appurtenances and Rooftop Structures and Equipment.
6. Design wind-load "F" for rooftop equipment and external sidewall-mounted equipment must be calculated by Engineering Services Contractor using methods in ASCE/SEI 7-05, Ch. 6.

C. Altitude:

1. Sea level to 1000 ft..

D. Ambient Temperature:

1. 50F.

E. Temperature Variation: Allow for thermal movements from the following differential temperatures:

1. Ambient Temperature Differential: 120 deg f.
2. Material Surface Temperature Differential: 180 deg f.
3. Ground Surface Temperature Differential to 10 ft Depth:.

F. Ground Water:

1. Assume ground-water level is at grade level unless a lower water table is noted on Drawings.
2. Assume ground-water level is 36 inch below ground surface unless a higher water table is indicated on Drawings.

G. Hazardous Material Environmental Conditions

H. Corrosive Environmental Conditions:

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 260011

SECTION 260519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Copper building wire.
 2. Aluminum building wire.
 3. Nonmetallic underground conduit with conductors, Type NUCC.
 4. Mineral-insulated cable, Type MI.
 5. Tray cable, Type TC.
 6. Connectors and splices.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Product Data: for each type of conductor, connectors and termination assemblies.
- C. Field Test Reports and Certifications.
- D. Provide manufacturer's installation instructions

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
1. Underwriters' Laboratories labeling of all insulations and jackets.
 2. NFPA
 3. NRTL
 - a. 486A & 486B.
 - b. Mineral Insulated (MI) Cable AnSI/U.L. 2196.
 4. NEMA

PART 2 - PRODUCTS

2.1 NONMETALLIC UNDERGROUND CONDUIT WITH CONDUCTORS, TYPE NUCC

- A. Description: A factory assembly of conductors or cables inside a nonmetallic, smooth wall raceway with a circular cross section.
- B. Applicable Standards:
 - 1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
 - 2. General Characteristics:

2.2 WIRE AND CABLE

- A. General
 - 1. Provide wire and cable with a minimum insulating rating of 600 volts, except for wire used in 50 volts or below applications. For control or signal systems, use 300 volt minimum or 600 volt where permitted to be incorporated with other wiring systems.
- B. Conductors
 - 1. Provide factory fabricated electrical grade, annealed copper conductors and fabricated in accordance with ASTM B3 standards.
- C. Stranding and Number of Conductors
 - 1. No. 12 and 10 AWG conductors shall be solid.
 - 2. Conductors larger than No. 10 AWG shall be stranded in accordance with ASTM Class B stranding designations.
 - 3. Control wires shall be stranded in accordance with ASTM Class B stranding designations.
- D. Insulated Single Conductors
 - 1. Type THW or THWN - Thermoplastic insulation suitable for use in wet locations up to 75°C.
 - 2. Type THHN - Flame Retardant: Heat-resistant thermoplastic insulation, nylon jacket rated for 90°C temperature rating.
- E. Multi-Conductor Control and Supervisory Control Cables
 - 1. Size No. 16 AWG, minimum.
 - 2. Suitable for direct burial, open air, duct or conduit installation.
 - 3. Temperature Rating: 75°C Wet or Dry.
 - 4. Uninsulated ground wire.
 - 5. Cross-linked polyethylene conductor insulation; thickness satisfying requirements of ICEA.

6. Flame-retardant overall polyvinyl jacket satisfying the requirements of ICEA.
7. Individual conductors bound together with overall binder tape prior to jacket application.
8. Individual conductors rating of 300 volts (instead of 600 volts) for cables designated Supervisory Control Cable.
9. Factory color coded.

F. Manufacturers

1. Products by any manufacturer meeting the performance requirements specified herein may be utilized, but are not limited to, the following manufacturers:
 - a. American Insulated Wire Corp.
 - b. General Cable Corporation
 - c. Southwire Company
 - d. Belden
 - e. Pyrotenax
 - f. Or Approved Equal

2.3 CONNECTORS

A. Wire No. 10 AWG and Smaller

1. Hand-Applied:
 - a. Coiled tapered, spring wound devices with a conducting corrosion-resistant coating over the spring steel and a plastic cover and skirt providing full insulation for splice and wired ends. Screw connector on by hand.
2. Tool-Applied:
 - a. Steel cap, with conduction and corrosion resistant metallic plating, open at both ends, fitted around the twisted ends of the wire and compressed or crimped by means of a special die designed for the purpose. Specifically fitted plastic or rubber insulating cover wrap over each connector.
 - b. Hydraulic tool of same manufacturer as lug which shall emboss on the connector the proper die number for inspection.

B. Manufacturers

1. Hubbell
2. OZ/Gedney
3. ABB
4. Or Approved Equal

2.4 INSULATING TAPE

- A. Provide vinyl plastic tape that meets the requirements of UL 510 and has the following characteristics:

1. 8.5 mil minimum thickness.
2. ASTM D-3005 Standard Specification for Low-Temperature Resistant Vinyl Chloride Plastic Pressure-Sensitive Electrical Insulating Tape – Type 1.
3. Rated 600 volts and 105°C, suitable for indoor and outdoor applications.
4. Retains flexibility, adhesion, and applicable at temperature ranges from 0 through 100°F without loss of physical or electrical properties.
5. Resistant to abrasion, moisture, alkalis, acid, corrosion, and sunlight.

B. Manufacturer:

1. 3M
2. Avery Dennison
3. Merco
4. or Approval Equal

2.5 WIRE PULLING LUBRICANT

- A. Provide wire pulling lubricant that is compatible with the conductor insulation, has a maximum coefficient of friction of 0.055, and is stable up to a temperature of 180°F. For cold weather installations, provide wire pulling lubricant suitable for conduit temperature.
- B. Compatibility with conductor insulation shall be determined in accordance with IEEE Std 1210 Standard Tests for Determining Compatibility of Cable-Pulling Lubricants with Wire and Cable.

2.6 MINERAL INSULATED CABLE

- A. Factory assembly of one (1) or more conductors insulated with highly compacted magnesium oxide insulation, enclosed in a seamless, liquid, and gas tight continuous copper sheath.
- B. Conductors shall be solid, high electrical conductivity copper with a cross sectional area corresponding to standard sizes.
- C. Insulation shall allow for proper spacing of conductors. Thickness on insulation shall be at least 55 mils for cable from No. 14 AWG through 250 MCM.
- D. Mineral insulated cable shall be classified by Underwriters Laboratories as having a two (2) hour fire resistive rating.
- E. MI Cables, terminations and fittings shall be rated for 90° C and 600 volts.
- F. MI cable termination and fittings shall be identified for the use.
- G. Provide required gland conduit fitting; three (3) terminal kits; two (2) 3-hole brass plates, and required tools for each termination point.

H. Manufacturer:

1. Pyrotenax
2. Raychem
3. Omega
4. or Approved Equal. .

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 WIRE AND CABLE

- A. Provide a complete system of conductors in a raceway system. Mount wiring through a specified raceway, regardless of voltage application.
- B. Contract Drawings do not indicate size of branch circuit wiring; use No. 12 AWG as a minimum. For 20 ampere branch circuits whose length from the panel to the furthest outlet exceeds 100 feet for 120-volt circuits or 150 feet for 265-volt circuits, use No. 10 AWG or larger for the entire branch circuit installation. For circuit length greater than 200 feet, utilize No. 8 AWG conductors.
- C. Provide dedicated neutral conductor and equipment ground conductor for each branch circuit serving laboratory equipment. If isolated grounds are shown as required, they shall also be dedicated.
- D. Provide dedicated neutral conductor for each dimmer branch circuit and for each ground fault interrupter branch circuits.
- E. Provide a shared neutral conductor, one (1) standard wire size greater than the branch circuit phase conductors, for all office branch circuits to receptacle loads.
- F. Conductor Types
1. Type THW or THWN - Use for lighting, receptacle and motor circuits and for panel and equipment feeders.
- G. Do not install wire in incomplete conduit runs nor until after concrete work and plastering is completed and moisture is swabbed from the conduits. Eliminate splices wherever possible. Where necessary, splice in readily accessible pull, junction, or outlet box.
- H. Provide cable supports for all vertical risers where required by the NEC not to exceed the following for copper conductors.

Copper Minimum Conductor Size	Vertical Supports
No. 18 AWG to No. 8 AWG	100 ft.
No. 6 AWG to No. 0 AWG	100 ft.
No. 00 AWG to No. 0000 AWG	80 ft.
211,601 CM to 350,000 CM	60 ft.
350,001 CM to 500,000 CM	50 ft.
500,001 CM to 750,000 CM	40 ft.

- I. Flashover or insulation value of joints to be equal to that of the conductor. Use Underwriters' Laboratories listed connectors rated at 600 volts for general use and 1,000 volts for use between ballasts and lamps of gaseous discharge lighting fixtures.
- J. Use terminating fittings, connectors, etc., of a type suitable for the specified cable furnished. Make bends in cable at termination prior to installing compression device. Make fittings tight per NETA standards.
- K. Color Coding

- 1. Provide consistent color coding of all AC feeders, sub-feeders, motor circuits and the likes as follows:

	208Y/120 Volts Code	460Y/265 Volts Code
Phase A	Black	Brown
Phase B	Red	Orange
Phase C	Blue	Yellow
Neutral	White	Grey
Ground	Green	Green
Isolated Ground	Green/Yellow Striped	N/A

- 2. Factory color code wire No. 2 AWG and smaller. Where color coding cannot be readily provided because of limited quantities involved, provide either of the following:
 - a. Plastic adhesive tape applied spirally and half-lapped over exposed portions of conductors within manholes, boxes, and similar enclosures. Tape shall be 3/4" minimum.
 - b. Colored tubing cut and inserted over ends of wire prior to installing terminals.
 - c. Provide black conductor insulation where colored tape is used to for color coding.
- 3. Wire No. 1 AWG and larger may be color coded by color taping of the entire length of the exposed ends.
- 4. Color code wiring for control systems installed in conjunction with mechanical and/or miscellaneous equipment in accordance with the wiring diagrams furnished with the equipment.
- L. DC power system conductors shall be color coded; Positive – Red; Negative – Black

3.3 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders:

- 1. Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- 2. Copper for feeders smaller than No. 4 AWG; copper or aluminum for feeders No. 4 AWG and larger. Conductors must be solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

- B. Branch Circuits:
 - 1. Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
 - 2. Copper. Solid for No. 12 AWG and smaller; stranded for No. 10 AWG and larger.
 - C. ASD Output Circuits Cable: Extra-flexible stranded for all sizes.
 - D. Power-Limited Fire Alarm and Control: Solid for No. 12 AWG and smaller.
 - E. PV Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
- 3.4 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS
- A. Service Entrance: Type USE, single conductor in raceway
 - B. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspace: Type THHN/THWN-2, single conductors in raceway and Mineral-insulated, metal-sheathed cable, Type MI.
 - C. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Underground feeder cable, Type UF.
 - D. Feeders in Cable Tray: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors larger than No. 1/0 AWG, Armored cable, Type AC, Mineral-insulated, metal-sheathed cable, Type MI, Nonmetallic-sheathed cable, Type NM.
 - E. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN/THWN-2, single conductors in raceway, Armored cable, Type AC, Metal-clad cable, Type MC, Mineral-insulated, metal-sheathed cable, Type MI and Nonmetallic-sheathed cable, Type NM.
 - F. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors in raceway, Underground branch-circuit cable, Type UF.
 - G. Branch Circuits Installed below Raised Flooring: Type THHN/THWN-2, single conductors in raceway, Armored cable, Type AC, Metal-clad cable, Type MC, Mineral-insulated, metal-sheathed cable, Type MI.
 - H. Branch Circuits in Cable Tray: Type THHN/THWN-2, single conductors in raceway, Type XHHW-2, single conductors larger than No. 1/0 AWG, Armored cable, Type AC, Metal-clad cable, Type MC.
 - I. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless steel, wire-mesh, strain relief device at terminations to suit application.
- 3.5 INSTALLATION, GENERAL
- A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.

- B. Complete raceway installation between conductor and cable termination points according to Section 260533 "Raceways and Boxes for Electrical Systems" prior to pulling conductors and cables.
- C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- F. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."
- G. Complete cable tray systems installation according to Section 260536 "Cable Trays for Electrical Systems" prior to installing conductors and cables.

3.6 INSTALLATION OF FIRE-ALARM WIRE AND CABLE

- A. Comply with NFPA 72.
- B. Wiring Method: Install wiring in metal pathway according to Section 260529 "Hangers and Supports for Electrical Systems."
 - 1. Install plenum cable in environmental airspaces, including plenum ceilings.
 - 2. Fire-alarm circuits and equipment control wiring associated with fire-alarm system must be installed in a dedicated pathway system.
 - a. Cables and pathways used for fire-alarm circuits, and equipment control wiring associated with fire-alarm system, must not contain any other wire or cable.
 - 3. Fire-Rated Cables: Use of two-hour, fire-rated fire-alarm cables, NFPA 70, Types MI and CI, is not permitted.
 - 4. Signaling Line Circuits: Power-limited fire-alarm cables must not be installed in the same cable or pathway as signaling line circuits.
- C. Wiring within Enclosures: Separate power-limited and non-power-limited conductors as recommended by manufacturer. Install conductors parallel with or at right angles to sides and back of the enclosure. Bundle, lace, and train conductors to terminal points with no excess. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with fire-alarm system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.
- D. Cable Taps: Use numbered terminal strips in junction, pull, and outlet boxes; cabinets; or equipment enclosures where circuit connections are made.

- E. Color-Coding: Color-code fire-alarm conductors differently from the normal building power wiring. Use one color-code for alarm circuit wiring and another for supervisory circuits. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices. Paint fire-alarm system junction boxes and covers red.
- F. Risers: Install at least two vertical cable risers to serve the fire-alarm system. Separate risers in close proximity to each other with a minimum one-hour-rated wall, so the loss of one riser does not prevent receipt or transmission of signals from other floors or zones.
- G. Wiring to Remote Alarm Transmitting Device: 1 inch conduit between the fire-alarm control panel and the transmitter. Install number of conductors and electrical supervision for connecting wiring as needed to suit monitoring function.

3.7 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- B. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
 - 1. Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inch of slack.
- D. Comply with requirements in Section 284621.11 "Addressable Fire-Alarm Systems" for connecting, terminating, and identifying wires and cables.

3.8 MINERAL INSULATED CABLE INSTALLATION

- A. Examination
 - 1. Verify that the factory installed temporary end seals are intact.
 - 2. Verify that no moisture has entered cable installation.
- B. Storage
 - 1. Cables shall be shipped from the manufacturer with ends sealed against moisture.
 - 2. Protect the exposed cable ends with shrinkable, molded polyolefin end caps or other suitable means such as standard conduit sealing compound and PVC tape.
 - 3. Cable shall be stored in a clean dry location.
- C. Handling
 - 1. Cable shall be uncoiled by rolling or rotating supply reel.
 - 2. Take precautions necessary to prevent damage to cable from contact with sharp objects, such as when pulled over foreign material on sheaves.

D. Installation

1. The wiring cable shall be installed according to the manufacturer's recommendations, the instructions in the Installation Specification or Manual and the requirements of the UL Fire Resistance Directory listing.

E. Field Quality Control

1. Inspect cable for physical damage and proper connection.
2. Measure tightness of any bolted connections and compare torque measurements with manufacturer's recommended values.
3. Verify continuity of each conductor.
4. Prior to energizing cables, measure insulation resistance of each cable. Tabulate and submit for approval.
5. Provide certification from the cable manufacturer that installation is in accordance with their requirements.

3.9 IDENTIFICATION

- A. Identify and color-code conductors and cables according to Section 260553 "Identification for Electrical Systems."
- B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.10 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.11 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 078413 "Penetration Firestopping."

END OF SECTION 260519

SECTION 260523 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 REMOTE CONTROL AND SIGNALING CABLE

- A. Refer to Section 284621.11 for requirements for cable to be used on fire alarm systems.
- B. All other systems cabling shall meet the requirements of NEC Article 725 and the following:
 - 1. Cable for Class 1 Remote-Control, Signaling and Power-Limited Circuits: 600 volt insulation, individual conductors twisted together, shielded, and covered with an overall PVC jacket. Cable shall be Listed, temperature rated, and suitable Type (general purpose, riser or plenum) for the application as required in the National Electrical Code.
 - 2. Cable for Class 2 or Class 3 Remote-Control, Signaling and Power-Limited Circuits shall be Listed, temperature rated, and suitable Type (general purpose, riser or plenum) for the application as required in the National Electrical Code.
- C. WIRING CONNECTORS
 - 1. Split Bolt Connectors: Not acceptable.
 - 2. Spring Wire Connectors: Solderless spring type pressure connector with insulating covers for copper wire splices and taps. Use for conductor sizes 10 AWG and smaller.
 - 3. All wire connectors used in underground or exterior pull boxes shall be gel filled twist connectors or a connector designed for damp and wet locations.

2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Flame Travel and Smoke Density in Plenums: As determined by testing identical products according to NFPA 262, by a qualified testing agency. Identify products for installation in plenums with appropriate markings of applicable testing agency.
 - 1. Flame Travel Distance: 60 inch or less.
 - 2. Peak Optical Smoke Density: 0.5 or less.
 - 3. Average Optical Smoke Density: 0.15 or less.
- C. Flame Travel and Smoke Density for Riser Cables in Non-Plenum Building Spaces: As determined by testing identical products according to UL 1666.
- D. Flame Travel and Smoke Density for Cables in Non-Riser Applications and Non-Plenum Building Spaces: As determined by testing identical products according to UL 1685.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Test each pair of twisted pair cable for open and short circuits.

3.3 INSTALLATION OF RACEWAYS AND BOXES

- A. Comply with requirements in Section 260533 "Raceways and Boxes for Electrical Systems" for raceway selection and installation requirements for boxes, conduits, and wireways as supplemented or modified in this Section.
 - 1. Outlet boxes must be no smaller than 2 inch wide, 3 inch high, and 2-1/2 inch deep.
 - 2. Outlet boxes for cables must be no smaller than 4 inch square by 1-1/2 inch 2-1/8 inch deep with extension ring sized to bring edge of ring to within 1/8 inch of the finished wall surface.
 - 3. Flexible metal conduit must not be used.
- B. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.
- C. Install manufactured conduit sweeps and long-radius elbows if possible.
- D. Raceway Installation in Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed, or in the corner of the room if multiple sheets of plywood are installed around perimeter walls of the room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard if entering the room from overhead.
4. Extend conduits 3 inch above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

3.4 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA-568-C Series of standards.
2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems."
3. Terminate all conductors; cable must not contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced and must be continuous from terminal to terminal. Do not splice cable between termination, tap, or junction points.
5. Cables serving a common system may be grouped in a common raceway. Install network cabling and control wiring and cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
6. Secure and support cables at intervals not exceeding 30 inch and not more than 6 inch from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
8. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Do not use heat lamps for heating.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Monitor cable pull tensions.
11. Support: Do not allow cables to lie on removable ceiling tiles.
12. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
13. Provide strain relief.
14. Keep runs short. Allow extra length for connecting to terminals. Do not bend cables in a radius less than 10 times the cable OD. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
15. Ground wire must be copper, and grounding methods must comply with IEEE C2. Demonstrate ground resistance.

C. Balanced Twisted Pair Cable Installation:

1. Comply with TIA-568-C.2.
2. Install termination hardware.

3. Do not untwist balanced twisted pair cables more than 1/2 inch at the point of termination to maintain cable geometry.
- D. Open-Cable Installation:
1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
 2. Suspend copper cable not in a wireway or pathway a minimum of 8 inch above ceilings by cable supports not more than 30 inch apart.
 3. Cable must not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.
- E. Installation of Cable Routed Exposed under Raised Floors:
1. Install plenum-rated cable only.
 2. Install cabling after the flooring system has been installed in raised floor areas.
 3. Below each feed point, neatly coil a minimum of 36 inch of cable in a coil not less than 12 inch in diameter.
- F. Separation from EMI Sources:
1. Comply with BICSI TDMM and TIA-569-D recommendations for separating unshielded copper voice and data communications cable from potential EMI sources including electrical power lines and equipment.
 2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment must be as follows:
 - a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of 5 inch.
 - b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 12 inch.
 - c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 24 inch.
 3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment must be as follows:
 - a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of 2-1/2 inch.
 - b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 6 inch.
 - c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 12 inch.
 4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures must be as follows:
 - a. Electrical Equipment or Circuit Rating Less Than 2 kVA: No requirement.
 - b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 3 inch.
 - c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 6 inch.
 5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or 5 HP and Larger: A minimum of 48 inch.
 6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inch.

3.5 REMOVAL OF CONDUCTORS AND CABLES

- A. Remove abandoned conductors and cables. Abandoned conductors and cables are those installed that are not terminated at equipment and are not identified with a tag for future use.

3.6 FIRESTOPPING

- A. Comply with requirements in Section 078413 "Penetration Firestopping."
- B. Comply with TIA-569-D, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping" Chapter.

3.7 GROUNDING

- A. For data communication wiring, comply with TIA-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.
- B. For control-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION

- A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Identify data and communications system components, wiring, and cabling according to TIA-606-B; label printers must use label stocks, laminating adhesives, and inks complying with UL 969.
- C. Identify each wire on each end and at each terminal with a number-coded identification tag. Each wire must have a unique tag.

END OF SECTION 260523

SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Provide a low impedance grounding system in accordance with the Contract Documents and National Electric Code 2008 with amendments.
- B. Section Includes:
 - 1. Ground Connectors and Clamp.
 - 2. Welding Type Ground Connectors.
 - 3. Compression Type Grid Connectors.
 - 4. Ground Rods, Plates, and Clamps.
 - 5. Bonding Jumpers for Hinged Joints in Cable Trays.
 - 6. Electrical Insulating Tape.
 - 7. Compound for Compression Connectors.
 - 8. Grounding Test Well

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings
 - 1. Provide a complete set of shop drawings showing service and all grounding methods as called for on the Contract Documents and required by the NEC and all applicable codes.
 - 2. Submit wiring diagrams for electrical grounding and bonding work which indicates layout of ground rods, location of system grounding electrode connections, and routing of conductors. Diagrams shall indicate sizes of all equipment to be used, including all connection details.
 - 3. Product data of all equipment to be used.
 - 4. Testing procedures which will be used for all field test reports.
 - 5. Qualification data for the testing agency and the agency's field supervisor.
- C. Test Reports
 - 1. Submit test reports certifying resistance values for all grounds

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
 - 1. Underwriters Laboratory Standard No. U.L. 467 and 486A.
 - 2. ANSI/IEEE C2 – National Electrical Safety Code.
 - 3. IEEE Standard No. 142-1982, 1100-1992, and 80-2000 and IEEE 837-2002.
 - 4. ANSI/TIA/EIA 607 – Commercial Building Ground and Bonding Requirements for Telecommunications.
 - 5. NFPA 780 and UL 96.
 - 6. NETA.
 - 7. NFPA 70 – National Electric Code (NEC).
 - 8. ASTM B3, B8, and B33.
 - 9. NEMA GR1.
- C. Testing Agency Qualifications: An independent agency that is a member company of a nationally recognized testing laboratory (NRTL) as defined by OSHA.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Grounding conductor reels shall be handled, and conductors shall be unreeled and laid so as to avoid nicking strands, pulling kinks or otherwise causing damage.

1.6 COORDINATION

- A. Coordinate with other Work, as necessary, to interface installation of electrical grounding and bonding systems and components with other Work.
- B. Verify field measurements.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Ground Conductors: Bare or green color coded, insulated, annealed stranded tinned copper conductor as indicated on the Contract Documents; insulated conductor to conform to the requirements of the conductor specification section herein.
- B. Provide green THW insulated for 600V copper equipment grounding conductor between the ground bus of the source distribution panel or switchboard and each load being served. Provide separate grounding conductor for each feeder and branch circuit, unless otherwise indicated on Contract Documents.

- C. Mechanical Connectors: Tin-plated aluminum alloy, U.L. approved and stamped for use with copper conductors. Connectors shall be two (2) bolt type, heavy duty type and be highly conductive.
- D. Ground Rods
 - 1. Copper-clad steel core and electrolytic-grade copper outer sheath fabricated by molten welding process.
 - 2. Diameter: 3/4 inch.
 - 3. Length: 10 feet.
- E. Ground rods shall be copper-clad steel not less than 3/4 inch in diameter, ten (10) feet long, driven full length into the earth. The maximum resistance shall not exceed five (5) ohms. If this resistance cannot be obtained with a single rod, additional rods shall be installed not less than ten (10) feet on center. If sectional type rods are used, two (2) additional sections may be coupled and driven with the first rod. Ground plates can be used as alternates for rods in hard soil/rock conditions; however, resistance criteria must remain.
- F. Plate Electrode: Highly conductive copper plates, minimum 1/4" thick, 24-inch square.
- G. Ground Lugs and Connectors for Cable Tray: Tin-plated aluminum alloy, suitable for use with copper conductors.
- H. Bonding Jumper Braid: Copper braided tape, constructed of 30-gauge bare copper wires and properly sized for indicated applications.
- I. Grounding Bus: Bare, annealed copper bars of rectangular cross section (1/4" x 4"), with insulators and a minimum length of 24". Utilize type 304 stainless steel bolts, washers and nuts.
- J. Ground Test Wells
 - 1. Flush grade precast concrete box.
 - 2. Diameter: 8 inches; depth: 12 inches.
 - 3. Cover: lifting holes with inscription: "GROUND ROD."
 - 4. Steel plate for traffic areas.

2.2 IDENTIFICATION AND LABELING

- A. Grounding conductors shall be marked with tie wrap style cable markers.

2.3 MANUFACTURERS

- A. ABB/Blackburn – Installation Products
- B. Erico Products, Inc. – A Division of Pentair
- C. Appleton Electric Company, a Division of Emerson
- D. Kearney, a Division of Eaton.

- E. O-Z/Gedney Electric Company, a Division of Emerson
- F. Raco, Inc., a Division of Hubbell, Inc.
- G. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine facility's grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of electrical system.
- B. Inspect test results of grounding system measured at point of electrical service equipment connection.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Proceed with connection of electrical service equipment only after unsatisfactory conditions have been corrected.

3.3 SELECTION OF BUSBARS

- A. Grounding Bus: Install in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
 - 1. Install bus horizontally, on insulated spacers 2 inch minimum from wall, 6 inch above finished floor unless otherwise indicated.
 - 2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, and down; connect to horizontal bus.

3.4 SELECTION OF GROUNDING AND BONDING CONDUCTORS

- A. Conductors: Install solid conductor for 8 AWG and smaller, and stranded conductors for 6 AWG and larger unless otherwise indicated.
- B. Custom-Length Insulated Equipment Bonding Jumpers: 6 AWG, 19-strand, Type THHN.
- C. Bonding Cable: 28 kcmil, 14 strands of 17 AWG conductor, 1/4 inch in diameter.
- D. Bonding Conductor: 4 AWG or 6 AWG, stranded conductor.

- E. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch wide and 1/16 inch thick.
- F. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch wide and 1/16 inch thick.
- G. Underground Grounding Conductors: Install bare copper conductor, 3/0 AWG minimum.
 - 1. Bury at least 30 inch below grade.
 - 2. Duct-Bank Grounding Conductor: Bury 12 inch above duct bank when indicated as part of duct-bank installation.

3.5 SELECTION OF CONNECTORS

- A. Conductor Terminations and Connections:
 - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
 - 2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
 - 3. Connections to Ground Rods at Test Wells: Bolted connectors.
 - 4. Connections to Structural Steel: Welded connectors.

3.6 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Reference Standards:
 - 1. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
 - 2. Consult Commissioner for resolution of conflicting requirements.
- C. Special Techniques:
 - 1. Conductors:
 - a. Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
 - 2. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
 - a. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.

- b. Make connections with clean, bare metal at points of contact.
 - c. Make aluminum-to-steel connections with stainless steel separators and mechanical clamps.
 - d. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
 - e. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
 - f. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.
 - 1) Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate adjacent parts.
 - 2) Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
 - 3) Use exothermic-welded connectors for outdoor locations; if disconnect-type connection is required, use bolted clamp.
 - g. Grounding and Bonding for Piping:
 - 1) Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use bolted clamp connector or bolt lug-type connector to pipe flange by using one of lug bolts of flange. Where dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
 - 2) Water Meter Piping: Use braided-type bonding jumpers (#4/0) to electrically bypass water meters. Connect to pipe with bolted connector. Do not damage water pipe
 - 3) Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
 - h. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.
 - i. Grounding for Steel Building Structure: Install driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 ft apart.
3. Electrodes:
- a. Ground Rods: Provide a minimum of three (3) rods and locate a minimum of one (1)-rod length from each other and at least the same distance from any other grounding electrode.
 - 1) Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
 - 2) Use exothermic welds for below-grade connections.
 - b. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least same distance from other grounding electrodes, and connect to service grounding electrode conductor.

- c. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems," and must be at least 12 inch deep, with cover.
 - 1) Install at least one test well for each service unless otherwise indicated. Install at ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.
4. Grounding at Service:
 - a. Equipment grounding conductors and grounding electrode conductors must be connected to ground bus. Install main bonding jumper between neutral and ground buses.
 - b. Provide a bare copper bus bar mounted within the electrical service room. Bus shall be 4" H x 1/4" W x 2' L minimum, equipped with type 304 stainless steel mounting brackets and fasteners. Provide the required insulators.
 - c. Extend bar service grounding connectors in separate raceways from the ground bus to the ground bus in the switchboard.
5. Grounding Separately Derived Systems:
 - a. Equipment grounding conductors shall be provided for separately derived systems and shall be grounded to building steel, cold water pipes, etc., or an alternate grounding means. Equipment grounding shall consist of but is not to be limited to the following:
 - 1) Lighting transformers.
 - 2) Power transformers.
 - 3) Electric generator sets.
 - 4) Required IT equipment grounding;
 - b. Generator: Install grounding electrode(s) at generator location. Electrode must be connected to equipment grounding conductor and to frame of generator.
 - c. Dry Type transformer: Provide grounding in accordance with NEC Article 250. Install bonding jumper across flexible conduit from the transformer housing to the rigid conduit.
6. Grounding Underground Distribution System Components:
 - a. Duct-Bank Grounding Conductor: Bury 12 inch above duct bank when indicated as part of duct-bank installation.
 - b. Comply with IEEE C2 grounding requirements.
 - c. Grounding Manholes and Handholes: Install driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inch will extend above finished floor. If necessary, install ground rod before manhole is placed and provide 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inch above to 6 inch below concrete. Seal floor opening with waterproof, nonshrink grout.

- d. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields in accordance with manufacturer's published instructions with splicing and termination kits.
 - e. Pad-Mounted Transformers and Switches: Install two ground rods and ring electrode around pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than 2 AWG for ring electrode and for taps to equipment grounding terminals. Bury ring electrode not less than 6 inch from foundation.
7. Equipment Grounding:
- a. Install insulated equipment grounding conductors with feeders and branch circuits.
 - b. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
 - 1) Feeders and branch circuits.
 - 2) Lighting circuits.
 - 3) Receptacle circuits.
 - 4) Single-phase motor and appliance branch circuits.
 - 5) Three-phase motor and appliance branch circuits.
 - 6) Flexible raceway runs.
 - 7) Armored and metal-clad cable runs.
 - 8) Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
 - 9) X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment.
 - c. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
 - d. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
 - e. Isolated Grounding Receptacle Circuits: Install insulated equipment grounding conductor connected to receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of applicable derived system or service unless otherwise indicated.
 - f. Isolated Equipment Enclosure Circuits: For designated equipment supplied by branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of applicable derived system or service unless otherwise indicated.

- g. Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.
 - h. Bond each section of the switchboard, unit substation, and primary switchgear housing and service conduits entering same to the ground bus bar.
 - i. Metallic Fences: Comply with requirements of IEEE C2.
 - 1) Grounding Conductor: Bare copper, not less than 8 AWG.
 - 2) Gates: Must be bonded to grounding conductor with flexible bonding jumper.
 - 3) Barbed Wire: Strands must be bonded to grounding conductor.
 - j. Fences within 100 ft of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 ft .
 - 1) Gates and Other Fence Openings: Ground fence on each side of opening.
 - a) Bond metal gates to gate posts.
 - b) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use 2 AWG wire and bury it at least 18 inch below finished grade.
 - k. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at maximum distance of 150 ft on each side of crossing.
 - l. Grounding Method: At each grounding location, drive grounding rod vertically until top is 6 inch below finished grade. Connect rod to fence with 6 AWG conductor. Connect conductor to each fence component at grounding location.
 - m. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
 - n. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground fence and bond fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.
8. Receptacles
- a. Receptacles shall be grounded to the outlet box by means of a bonding jumper between the outlet box and the receptacle grounding terminal.
9. Isolated ground receptacles.
- a. Isolated ground receptacles shall not be connected to the respective outlet boxes.
 - b. Provide an insulated ground conductor for each isolated ground receptacle circuit. The isolated ground conductor shall serve only those receptacles which are isolated. Route the isolated ground conductor together with phase and neutral conductors in a common raceway. Provide a dedicated ground conductor for each receptacle circuit.
 - c. Terminate isolated ground conductor at the ground bar from the separately derived system serving the isolated ground receptacles. Where not supplied by a transformer, run the isolated ground conductor to the service ground bus.
10. Panelboards

- a. Install bonding jumpers inside all panelboards to bond the feeder conduit to the panelboards, except ground panelboards containing branch circuits each having less than 150 amperes current carrying capacity, with two (2) standard locknuts and bushings, one (1) inside and one (1) outside, run up wrench tight.
11. Sheet Metal Boxes
 - a. Install bonding jumpers inside all sheet metal boxes containing one (1) or more feeders with current carrying capacity of 150 amperes or greater, to bond one (1) conduit with another.
 - b. Ground boxes containing branch circuits only or feeders each less than 150 amperes current carrying capacity, with two (2) standard locknuts and bushings, one (1) inside and one (1) outside, run up wrench tight. Two (2) standard locknuts and bushings, one (1) inside and one (1) outside, run up wrench tight.
 12. Floor Boxes
 - a. Install grounding jumpers where adequate ground connections are not provided through locking screws between high potential power service fittings, cover plates, and conduit system.
 13. Telecommunications Grounding Systems
 - a. Telecommunications grounding systems include the following items:
 - b. Telecommunications Bonding Backbone (TBB) – A copper ground conductor that extends from the telecommunications main grounding busbar (TMGB) to each telecommunications grounding busbar (TGB) in a star configuration to avoid ground loops.
 - c. Telecommunications Main Grounding Busbar (TMGB) – The TMGB serves as a dedicated extension of the building grounding electrode system for telecommunications infrastructure. The TMGB is located in the main telecommunications room (MDF) and shall be connected to the electrical service ground busbar. The TMGB shall be a minimum of ¼” thick x 4” high x 36” long and made of tin plated copper.
 - d. Telecommunications Grounding Busbar (TGB) – A busbar shall be placed in an accessible location in each telecommunications room (TR or IDF) that is connected back to the TMGB. All equipment served from the TR shall be connected to the local TGB. The TGB shall be a minimum of ¼” thick x 4” high x 24” long and made of tin plated copper.
 - e. All ground busbars shall be mounted on 2” insulators off the wall. Utilize stainless steel type 304 mounting brackets and accessories.
 - f. Bond all telecommunication equipment chassis, ladder racks, cable trays, conduits, equipment frames, cabinets and other telecommunications room and equipment room metallic components to a local TGB with No. 6 AWG, 600 volt, insulated copper conductor (minimum).
 - g. Bonding of grounding conductors shall be with the following methods as specified herein.
 - h. Grounding conductors shall be marked per ANSI/TIA/EIA 606. Mark each cable end using tie wrap style cable markers.

3.7 LIGHTNING ARRESTERS

- A. Lightning (surge) arrester grounding conductors shall be separate from other grounding conductors, but shall have a bond from the equipment ground, at the transformer. Ground conductors shall not be smaller than No. 1/0 AWG for secondary class, distribution class, and intermediate class. Station-class shall be No. 4/0 AWG. Ground conductors shall be connected to a ground rod. Ground resistance shall not be greater than 25 ohms for distribution-class arrestors, 10 ohms for intermediate-class arrestors, and 5 ohms for station-class arrestors.

3.8 FIELD TESTING

- A. Visual inspection of all systems, raceway and equipment grounds shall be made to determine the adequacy and integrity of the grounding. All ground testing results shall be properly recorded, witnessed, and reported to the Contractor.
- B. After installing the grounding system, but before permanent electrical circuits have been energized, test for compliance with requirements.
- C. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before any conductors are connected.
 - 1. Measure ground resistance not less than two (2) full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 - 2. Perform tests by fall-of-potential method according to IEEE 81.
 - a. Measure ground resistance without the soil being moistened by any means other than natural precipitation or natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 - b. Ground tests shall be performed using a low resistance, null balance type, ground testing ohmmeter, with test lead resistance compensated for. Measure the resistance of the ground under test and remote earth or a reference ground as specified. The test instrument shall be the type which compensates for potential and current rod resistances.
 - c. Test completed grounding system at the service disconnect enclosure grounding terminal and at ground test wells. Perform tests, by the fall-of-potential method according to IEEE 81.
 - d. Testing record shall include drawings locating each ground rod and ground rod assembly and other grounding electrodes, identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

3.9 PROTECTION

- A. After installation, protect grounding and bonding cables and equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 260526

SECTION 260529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly. Construct with 9/16" dia. holes, nominal 2" o.c. on top surface, with standard factory finish, and with the all necessary fittings which mate and match with U-channel. Select channel dimensions for applicable load criteria. Metallic Coatings shall be hot-dip galvanized after fabrication and threading, and applied according to MFMA-4. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Allied Tube & Conduit
 - 2. Caddy
 - 3. Cooper B-Line, Inc.; a division of Cooper Industries
 - 4. ERICO International Corporation
 - 5. GS Metals Corporation
 - 6. Hilti
 - 7. Powers
 - 8. Thomas & Betts Corporation

9. Unistrut; Tyco International, Ltd.
 10. Wesanco, Inc.
 11. Perma-Cote
 12. Or Approved Equal
- B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
1. Riser clamps for supporting rigid metal conduit; galvanized steel; with 2 bolts and nuts, and 4" ears.
 2. Clevis hangers: For supporting rigid metal conduit; galvanized steel; with 1/2" dia. hole for round steel rod.
 3. Galvanized steel clamps; 1/2" rod size.
 4. Galvanized steel clamps, 1-1/4" x 3/16" stock; 3/8" cross bolt; flange width 2".
 5. One-hole conduit straps for supporting 3/4" rigid metal conduit; galvanized steel.
 6. Two-hole conduit straps for supporting 3/4" rigid metal conduit, galvanized steel; 3/4" strap width; and 2-1/8" between center of screw holes.
 7. Offset conduit clamps for supporting rigid metal conduit; galvanized steel.
- D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- E. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following.
1. Products: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Cooper B-Line, Inc.; a division of Cooper Industries.
 - b. Empire Tool and Manufacturing Co., Inc.
 - c. Hilti, Inc.
 - d. ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.

- e. MKT Fastening, LLC.
 - f. Simpson Strong-Tie Co., Inc.
 - g. Or Approved Equal
2. Capacities: Provide materials and installed systems with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used, plus 100% safety factor.
 3. Adverse and/or Corrosive Environment Areas: Provide stainless steel anchors. Provide hot-dipped galvanized (after fabrication) product and material versions of what is specified in this section for steel hangers, supports, systems, etc. (supported from stainless steel anchors), unless stainless steel is specified or otherwise indicated. Such applications and areas include, but are not limited to:
 - a. Outdoors.
 - b. Unconditioned Areas.
 - c. Area subject to hosed wash.
 - d. Miscellaneous high-humidity or otherwise corrosive environments
 4. Mechanical-Expansion Anchors in Dry Conditioned Areas: Insert-wedge-type, zinc-coated steel, for use in hardened Portland cement Provide stainless steel anchors where located in areas subject to moisture or corrosion.
 5. Drop-In Anchors: AISI Type 303 stainless steel, drop-in, shell or flush type, equivalent to Hilti HDI series.
 6. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
 7. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
 8. Through Bolts: Steel structural type, hex head, and high strength. Comply with ASTM A 325. Toggle Bolts: All-steel galvanized springhead type, minimum 3/16" x 4".
 9. Hanger Rods: Threaded steel, Galvanized steel rods; 1/2" minimum diameter.
 10. Clevis hangers: For supporting rigid metal conduit; galvanized steel; with 1/2" minimum diameter hole for round steel rod.
 11. Galvanized steel rod reducing couplings: 1/2" x 5/8" minimum.
 12. Galvanized steel clamps: 1/2" minimum rod size; Galvanized steel clamps:
 13. Minimum 1-1/4" x 3/16" stock; minimum 3/8" cross bolt; minimum flange width 2".

14. Hexagon nuts: Galvanized steel.
15. Expansion anchors: Minimum 1/2".

2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified structural professional engineer licensed in the State of New York as defined in DDC General Conditions, to design hanger and support system.
- B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 1. Flame Rating: Class 1.
 2. Self-extinguishing according to ASTM D635.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SELECTION

- A. Comply with the following standards for selection and installation of hangers and supports, except where requirements on Drawings or in this Section are stricter:
 1. NECA NEIS 101
 2. NECA NEIS 102.
 3. NECA NEIS 105.
 4. NECA NEIS 111.
- B. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation for penetrations through fire-rated walls, ceilings, and assemblies.
- C. Comply with requirements for raceways and boxes specified in Section 260533 "Raceway and Boxes for Electrical Systems."
- D. Provide vibration and seismic controls with hangers and supports in accordance with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- E. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and ERMC as required by scheduled in NECA NEIS 1, where its Table 1 lists maximum spacings that are less than those stated in NFPA 70. Minimum rod size must be 1/4 inch in diameter.

- F. **Multiple Raceways or Cables:** Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
 - 1. Secure raceways and cables to these supports with two-bolt conduit clamps single-bolt conduit clamps single-bolt conduit clamps using spring friction action for retention in support channel.
- G. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2 inch and smaller raceways serving branch circuits and communication systems above suspended ceilings, and for fastening raceways to trapeze supports.

3.3 INSTALLATION OF SUPPORTS

- A. Comply with NECA NEIS 101 for installation requirements except as specified in this article.
- B. **Raceway Support Methods:** In addition to methods described in NECA NEIS 1, EMT, IMC and ERMC may be supported by openings through structure members, in accordance with NFPA 70.
- C. **Strength of Support Assemblies:** Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination must be weight of supported components plus 200 lb.
- D. **Mounting and Anchorage of Surface-Mounted Equipment and Components:** Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
 - 1. To Wood: Fasten with lag screws or through bolts.
 - 2. To New Concrete: Bolt to concrete inserts.
 - 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 - 4. To Existing Concrete: Expansion anchor fasteners.
 - 5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inch thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inch thick.
 - 6. To Steel: Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69 .
 - 7. To Light Steel: Sheet metal screws.
 - 8. **Items Mounted on Hollow Walls and Nonstructural Building Surfaces:** Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that comply with seismic-restraint strength and anchorage requirements.
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated, but not less than 4 inch larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000 psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Section 033000 "Cast-in-Place Concrete."
- C. Anchor equipment to concrete base as follows:
 - 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.5 PAINTING

- A. Touchup:
 - 1. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - a. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
 - 2. Comply with requirements in Section 099611 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.

END OF SECTION 260529

SECTION 260533 - RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Raceways
2. Fittings
3. Boxes
4. Enclosures
5. Cabinets
6. Termination boxes.
7. Cabinets, cutout boxes, junction boxes, pull boxes, and miscellaneous enclosures.
8. Cover plates for device boxes.
9. Hoods for outlet boxes.

- B. Provide raceways, fittings, boxes, enclosures, and cabinets for electrical wiring in accordance with the Contract Documents

C. Work Included

1. Rigid Steel Conduit.
2. Rigid Aluminum Conduit.
3. Electrical Metallic Tubing (EMT).
4. Armor Clad (AC) Cable.
5. Flexible Metal Conduit.
6. Liquid-Tight Flexible Metal Conduit.
7. Conduit Fittings.
8. Wireways and Auxiliary Gutters.
9. Outlet, Junction, Cable Support Boxes and Pull Boxes.
10. Identification Labels.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawing

1. Full erection drawings where wireways and/or auxiliary gutters are employed. Drawings shall include plan views, elevations, size of wireways, type and quantity of conductors proposed to be installed therein, etc.
2. Indicate duct banks on multi-trade coordinated shop drawings. indicate all cable support boxes on all submittals.

C. Product Data

1. Submit dimensioned detailed drawings for boxes exceeding 24 inches in any one (1) dimension.
2. Submit manufacturer's catalog data for all raceways, fittings, enclosures, cabinets, floor boxes and accessories.

D. Samples

1. Provide samples when requested by the Commissioner.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:

1. Rigid Steel and PVC Coated Rigid Galvanized Steel Conduit:

- a. U.L. Standard 6.
- b. ANSI C80-1 Conduit.
- c. ANSI C80.4 Fittings.
- d. NEMA RN-1 2005.
- e. Federal Specification WW-C-581E.

2. Rigid Aluminum Conduit:

- a. ANSI C80-5.

3. Electrical Metallic Tubing:

- a. U.L. Standard 797.
- b. ANSI C80.3.
- c. Federal Specification WW-C-563.

4. Armor Clad Cable:

- a. U.L. Standard 4.
- b. Federal Specification J-C-30B.
- c. NEC Article 333.

5. Flexible Metal Conduit:

- a. U.L. Standard 1.

6. Liquid-Tight Flexible Metal Conduit:
 - a. U.L. Standard 360.
 - b. UL514B Conduit, Tubing and Cable Fittings.
 - c. UL 1660 Liquid Tight Flexible Nonmetallic Conduit.
7. Wireways and Auxiliary Gutters:
 - a. U.L. Standard UL-870.

1.5 COORDINATION

- A. Coordinate layout and installation of raceways with other construction elements to ensure adequate headroom, working clearance and access. Coordinate with other Work, as necessary, to interface installation of electrical raceways and components with other Work.
- B. Verify field measurements

PART 2 - PRODUCTS

2.1 RACEWAYS

- A. Rigid Steel Conduit
 1. Rigid steel conduit shall be heavy wall, galvanized type.
- B. PVC Coated Galvanized Rigid Steel Conduit
 1. PVC coated galvanized rigid steel conduit shall fully comply with all sections of UL6, NEMA RN-1 2005 and ANSI C80.1 without exception. PVC coated galvanized conduit shall have hot dipped galvanized threads. The external PVC coating shall be a nominal 40 mils of external PVC coating and 2 mils of internal urethane coating. The PVC coating shall be applied by the same manufacturer of the hot dipped galvanized rigid steel conduit.
 2. The galvanized coating of the hot dipped galvanized conduit shall not be disturbed in any fashion prior to the application of the PVC coating in accordance to UL6 and NEMA RN-1 2005 3.1.1.
 3. The PVC coated galvanized rigid steel conduit shall comply with all UL listings, providing the hot dipped galvanized coating as the primary means of protection for the conduit and the PVC coating shall be listed as a secondary means of corrosion protection as required by UL6 and NEMA RN-1 2005.
 4. All PVC coated galvanized conduit bodies and fittings shall also be manufactured with 40 mils of PVC coating and 2 mils of internal urethane. All conduit bodies shall be NEMA 4X Rated with encapsulated stainless steel screws.
 5. Manufacturers
 - a. Calbond
 - b. ABB
 - c. Rob Roy Industries

- d. Or Approved Equal
- C. Rigid Aluminum Conduit
 - 1. Rigid aluminum conduit shall be heavy wall type.
 - 2. Manufacturers
 - a. Allied Tube & Conduit
 - b. Wheatland Tube
 - c. Thomas & Betts
 - d. Or Approved Equal
- D. Electrical Metallic Tubing
 - 1. Continuous, seamless tubing galvanized or sheradized on exterior, coated on interior with smooth hard finish of lacquer, varnish or enamel.
 - 2. Manufacturers
 - a. Republic Conduit
 - b. Wheatland Tube
 - c. Western Tube
 - d. Or Approved Equal
- E. Armor Clad Cable
 - 1. Conductors rated at 90°C as specified elsewhere herein, uninsulated ground wire, moisture and fungi resistant fillers, and an interlocking steel armor shield.
 - 2. Manufacturers
 - a. AFC Cable
 - b. Southwire
 - c. Thomas & Betts
 - d. Or Approved Equal
- F. Flexible Metal Conduit
 - 1. Single strip, continuous, flexible interlocked double-wrapped steel, galvanized inside and outside forming smooth internal wiring channel.
- G. Liquid-Tight Flexible Metal Conduit
 - 1. Liquid Tight flexible metal conduit shall have external PVC jacket and shall be UV stable and shall be machine tool grey in color. Internal construction shall be light-weight aluminum core.
 - 2. Manufacturers
 - a. OZ Gedney / A Division of Atkore
 - b. Hubbell Inc.
 - c. ABB Installation Products
 - d. Or Approved Equal

2.2 CONDUIT FITTINGS

A. Rigid Steel Conduit

1. Threaded type fittings.

B. Rigid Aluminum Conduit

1. Threaded type fittings.

C. Conduit Expansion Joints and Deflection Fittings, Rigid Galvanized Steel Conduit. Weather tight, internal ground, expansion joint for galvanized rigid steel conduit.

1. Manufacturers
 - a. Crouse Hinds / A Division of Eaton – Type XJG & XD
 - b. OZ Gedney / A Division of Atkore – Type AX & DX
 - c. ABB – Type XJG & XD
 - d. Or Approved Equal

D. Electrical Metallic Tubing

1. 2½-inch in size and larger may be set screw type. 2-inch in size and smaller, steel compression gland.
2. In slab or concrete work, concrete-tight fittings.

E. Armor Clad Cable

1. Malleable iron or die-cast zinc with insulating bushing.

F. Flexible Metal Conduit

1. Compression-type metal fittings.

G. Liquid-Tight Flexible Metal Conduit

1. Body, gland and lock nut shall be steel of malleable iron. Ground cone shall be steel, sealing ring and insulator shall be blue molded thermoplastic rated at 150°C (221°F) maximum.

H. Manufacturers

1. All fittings shall comply with UL, NEMA and ANSI Standards as shall be provided by same manufacturer as approved conduit type manufacturers.

2.3 WIREWAYS AND AUXILIARY GUTTERS

- ### A. Wireways and gutters shall be of sizes and shapes indicated on the Contract Documents and as required to meet the field conditions. Equipment shall be sheet metal, with enamel finish, NEMA 250 rated.

- B. Provide all necessary elbows, tees, connectors, adaptors, etc.
- C. Provide hinged cover secured with captive screws.
- D. Wire retainers shall be provided not less than twelve (12) inches on center.
- E. Manufacturers
 - 1. Square D
 - 2. Wiremold/Legrand
 - 3. Hubbell, Inc.
 - 4. Or Approved Equal

2.4 OUTLET, JUNCTION AND PULL BOXES

- A. Cast Type Conduit Boxes, Outlet Bodies, and Fittings
 - 1. For rigid steel conduit, ferrous alloy box with inside threaded hubs.
 - 2. For rigid aluminum conduit, aluminum box with inside threaded hubs.
 - 3. For electrical metallic tubing, ferrous alloy box with compression or inside threaded hubs with adapter.
 - 4. Covers: Cast or sheet metal unless otherwise required.
 - 5. Tapered threads for hubs.
- B. Galvanized Pressed Steel Outlet Boxes
 - 1. General: Pressed steel, galvanized or cadmium-plated, minimum of 4" octagonal or square with galvanized cover or extension ring as required.
 - 2. Concrete Box: 4" octagon with removable backplate and 3/8" fixture stud, if required. Depth of box shall allow for a minimum of 1" of concrete to be poured above the backplate.
 - 3. Receptacle Box; Indoors: Nominal 4" square, 1½" or 2-1/8" deep as required, with raised cover unless otherwise indicated on the Contract Documents.
- C. Sheet Steel Boxes Indoors
 - 1. No. 12 USS gauge sheet steel for boxes with a maximum side less than 40 inches, and a maximum area not exceeding 1,000 square inches; riveted or welded 3/4 inch flanges at exterior corners.
 - 2. No. 10 USS gauge sheet steel for boxes with a maximum side 40 to 60 inches, and a maximum area 1,000 to 1,500 square inches; riveted or welded 3/4 inch flanges at exterior corners.
 - 3. No. 10 USS gauge sheet steel riveted or welded to 1½" by 1½" by ¼" welded angle iron framework for boxes with a maximum side exceeding 60 inches and more than 1,500 square inches in area.
 - 4. Covers:
 - a. Same gauge steel as the box.
 - b. Subdivided single covers so no section of the cover exceeds 50 pounds.
 - c. Machine bolts, machine screws threaded into tapped holes or sheet metal screws as required; maximum spacing of 12 inches.

5. Paint: Rust inhibiting primer; ANSI No. 61 light gray finish coat.
- D. Pull and Splice Boxes, Outdoors
1. Aluminum reinforced, with removable covers secured by stainless steel machine screws.
- E. Junction Box, Sidewalk Type
1. Cast iron, hot-dipped galvanized with threaded conduit entrance hubs, flanged, reinforced checkered cover, gasketed with pry bar slots and countersunk stainless steel screws.
- F. Manufacturers:
1. Cooper Industries
 2. Appleton Electric Company / A Division of Emerson
 3. Erickson Electrical Equipment Co.
 4. Hoffman
 5. RACO
 6. OZ Gedney / A Division of Atkore
 7. ABB / Steel City
 8. Or Approved Equal
- G. Floor Boxes
1. General:
 - a. Class I, UL 514B Rated watertight, normal depth cast iron construction Type I, fully adjustable, for use in concrete.
 - b. Single Gang: Round type.
 2. Floor Box Covers:
 - a. Rugged construction, impervious to cleaning detergents.
 - b. Compatible with floor covering.
 - c. Finish as selected by the Commissioner. Satin Aluminum metallic finish minimum or approved equal by the Commissioner.
 - d. Providing continuous ground path to the box.
 - e. Cover plates shall accept duplex power receptacles and communication devices to match the Contract Documents.
 - f. All cover plates shall be equipped with flip up lids.
 3. Manufacturers:
 - a. Single or Double Gang for duplex receptacle and/or communication devices: Round with four (4) 1” hubs and single flush or double cover.
 - 1) Hubbell Inc.
 - 2) ABB – Steel City
 - 3) Wiremold/Legrand

- 4) Or Approved Equal
- b. Single Gang for Communication devices: Round with four (4) 1¼" hubs and single flush cover.
 - 1) Hubbell Inc.
 - 2) ABB – Steel City.
 - 3) Wiremold/Legrand
 - 4) Or Approved Equal
- c. Multi-gang with Interior Partitions and ¾" Hubs:
 - 1) Hubbell Inc.
 - 2) ABB – Steel City
 - 3) Wiremold/Legrand
 - 4) Or Approved Equal
- d. Single Gang Rectangular Covers for Multi-Gang Boxes:
 - 1) Hubbell Inc.
 - 2) ABB - Steel City
 - 3) Wiremold/Legrand
 - 4) Or Approved Equal
- e. Dual service round floor box with ¾" and 1½" conduit hubs:
 - 1) Hubbell Inc.
 - 2) ABB – Steel City
 - 3) Wiremold/Legrand
 - 4) Or Approved Equal

2.5 IDENTIFICATION LABELS

- A. Plasticized Cloth
 1. Non-conductive.
 2. Waterproof.
 3. Capable of withstanding continuous temperatures of 235°F and intermittent temperatures to 300°F.
 4. Overcoating for protection against oil, solvents, chemicals, moisture, abrasion and dirt.
- B. Heavy, thermo-resistant industrial grade adhesive for adhesion of label to any surface without curling, peeling, or falling off.
- C. Legends: Sharp, bold-face, two (2) inch black letters on "Alert" orange background.
- D. Label Designations, Nominal System Voltages
 1. 208 volts
 2. 460 volts

- E. Manufacturers
 - 1. W.H. Brady Company
 - 2. ABB
 - 3. DYMO
 - 4. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SELECTION OF RACEWAYS

- A. Unless more stringent requirements are specified in Contract Documents or manufacturers' written instructions, comply with NFPA 70 for selection of raceways. Consult Commissioner for resolution of conflicting requirements.

- B. Outdoors:

- 1. Exposed and Subject to Severe Physical Damage: ERMCM
- 2. Exposed and Subject to Physical Damage: ERMCM.
 - a. Locations less than 2.5 m (8 ft) above finished floor.
- 3. Exposed and Not Subject to Physical Damage: IMC.
- 4. Concealed Aboveground: EMT.
- 5. Direct Buried: PVC-80.
- 6. Concrete Encased Not in Trench: PVC-80
- 7. Concrete Encased in Trench: PVC-80Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.

- C. Indoors:

- 1. Hazardous Classified Locations: ERMCM.
- 2. Exposed and Subject to Severe Physical Damage: ERMCM. Subject to severe physical damage includes the following locations:
 - a. Loading docks.
 - b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
 - c. Mechanical rooms.
 - d. Gymnasiums.
- 3. Exposed and Subject to Physical Damage: ERMCM. Subject to physical damage includes the following locations:

- a. Locations less than 2.5 m (8 ft) above finished floor.
 - b. Stub-ups to above suspended ceilings.
- 4. Exposed and Not Subject to Physical Damage: EMT.
 - 5. Concealed in Ceilings and Interior Walls and Partitions: EMT.
 - 6. Damp or Wet Locations: Corrosion-resistant EMT.
 - 7. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
 - 8. Circuits Operating Above 60 Hz: EMT-A. Provide nonmetallic sleeve where aluminum raceways pass through concrete.
- D. Expansion Joints.
- 1. Provide flexible connection for all conduits passing through the building expansion joints including the feeders, branch circuits, fire alarm wiring conduits, and signal wiring conduits.
- E. Raceway Fittings: Select fittings in accordance with NEMA FB 2.10 guidelines.
- 1. ERMC and IMC: Provide threaded type fittings unless otherwise indicated.

3.3 SELECTION OF BOXES AND ENCLOSURES

- A. Unless more stringent requirements are specified in Contract Documents or manufacturers' written instructions, comply with NFPA 70 for selection of boxes and enclosures. Consult Commissioner for resolution of conflicting requirements.
- B. Degree of Protection:
- 1. Outdoors:
 - a. Type 3R unless otherwise indicated.
 - b. Locations Exposed to Hosedown: Type 4.
 - c. Locations Subject to Potential Flooding: Type 6P.
 - d. Locations Aboveground Where Mechanism Must Operate When Ice Covered: Type 3S.
 - e. Locations in-Ground or Exposed to Corrosive Agents: Type 4X.
 - f. Locations in-Ground or Exposed to Corrosive Agents Where Mechanism Must Operate When Ice Covered: Type 3SX.
 - 2. Indoors:
 - a. Type 1 unless otherwise indicated.
 - b. Damp or Dusty Locations: Type 4.
 - c. Surface Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12.
 - d. Flush Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12K.
 - e. Locations Exposed to Airborne Dust, Lint, Fibers, or Flyings: Type 6.
 - f. Locations Exposed to Hosedown: Type 6.
 - g. Locations Exposed to Brief Submersion: Type 6.
 - h. Locations Exposed to Prolonged Submersion: Type 6P.

- i. Locations Exposed to Corrosive Agents: Type 4X .
- j. Locations Exposed to Spraying Oil or Coolants: Type 13.

C. Exposed Boxes Installed Less Than 2.5 m (8 ft) Above Floor:

1. Provide cast-metal boxes.
2. Provide exposed cover. Flat covers with angled mounting slots or knockouts are prohibited.

3.4 INSTALLATION OF RACEWAYS

A. Installation Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' written instructions, comply with NFPA 70 for installation of raceways. Consult Commissioner for resolution of conflicting requirements.
2. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies and number of floors.
3. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and supports.
4. Comply with NECA NEIS 101 for installation of steel raceways.
5. Comply with NECA NEIS 102 for installation of aluminum raceways.
6. Comply with NECA NEIS 111 for installation of nonmetallic raceways.
7. Install raceways square to the enclosure and terminate at enclosures without hubs with locknuts on both sides of enclosure wall. Install locknuts hand tight, plus one-quarter turn more.
8. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to metric designator 35 (trade size 1-1/4) and insulated throat metal bushings on metric designator 41 (trade size 1-1/2) and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.
9. Raceway Terminations at Locations Subject to Moisture or Vibration:
 - a. Provide insulating bushings to protect conductors, including conductors smaller than No. 4 AWG. Install insulated throat metal grounding bushings on service conduits.

B. General Requirements for Installation of Raceways:

1. Complete raceway installation before starting conductor installation.
2. Provide stub-ups through floors with coupling threaded inside for plugs, set flush with finished floor. Plug coupling until conduit is extended above floor to final destination or a minimum of 2 ft above finished floor.
3. Install no more than equivalent of three 90-degree bends in conduit run except for control wiring conduits, for which no more than equivalent of two 90-degree fewer bends are permitted;. Support within 12 inch of changes in direction.
4. Make bends in raceway using large-radius preformed ells except for parallel bends. Field bending must be in accordance with NFPA 70 minimum radii requirements. Provide only equipment specifically designed for material and size involved.
5. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
6. Support conduit within 12 inch of enclosures to which attached.

7. Install raceway sealing fittings at accessible locations in accordance with NFPA 70 and fill them with listed sealing compound. For concealed raceways, install fitting in flush steel box with blank cover plate having finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings in accordance with NFPA 70.
8. Install devices to seal raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal interior of raceways at the following points:
 - a. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 - b. Where an underground service raceway enters a building or structure.
 - c. Conduit extending from interior to exterior of building.
 - d. Conduit extending into pressurized duct and equipment.
 - e. Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
 - f. Where otherwise required by NFPA 70.
9. Do not install raceways or electrical items on "explosion-relief" walls or rotating equipment.
10. Do not install conduits within 2 inch of the bottom side of a metal deck roof.
11. Keep raceways at least 6 inch away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
12. Cut conduit perpendicular to the length. For conduits metric designator 53 (trade size 2) and larger, use roll cutter or a guide to make cut straight and perpendicular to the length. Ream inside of conduit to remove burrs.
13. Install pull wires in empty raceways. Provide polypropylene or monofilament plastic line with not less than 200 lb tensile strength. Leave at least 12 inch of slack at both ends of pull wire. Cap underground raceways designated as spare above grade alongside raceways in use.
14. Provide separate raceways for all wiring systems, including security, data, paging, low voltage et al. All 460Y/265 volt wiring must be kept independent of 208Y/120 volt wiring. Emergency system wiring must be kept independent of the normal system wiring. Provide grounding conductor within all circuit raceways. Minimum size 3/4-inch for home runs and 1-inch minimum for power distribution. Wiring of each type and system must be installed in separate raceways.
15. Install capped bushings on the raceways as soon as they are installed and remove only when cables are pulled. Securely tie embedded raceway in place prior to embedment. Raceways installed below or in floor slabs must extend a minimum of four (4) inches above the finished slab to the first connector. Lay out work in advance to avoid excessive concentrations of multiple raceway runs.
16. Locate raceways so that the strength of structural members is unaffected and they do not conflict with services of other trades. Install 1-inch or larger raceways in or through structural members (beams, slabs, etc.) only when and in a manner accepted by the Commissioner. Draw up couplings and fittings full and tight. Protect exposed threads from corrosion with one (1) coat or zinc chromate after installation.
17. Provide raceway installation (with appropriate seal-offs, explosion-proof fittings, etc.) in special occupancy area, as required. Provide conduit seal-offs where portions of the interior raceway system pass through walls, ceiling or floors which separate adjacent rooms having substantially different maintained temperatures, as in refrigeration or cold storage rooms.
18. Provide labeled pull wire in all spare or empty raceways. Allow five (5) feet of slack at each end and in each pull box. Tag both ends of the cable denoting opposite and termination location with black india ink on flameproof linen tag.

C. Requirements for Installation of Specific Raceway Types:

1. Types EMT-A, ERMC-A, and FMC-A:
 - a. Do not install aluminum raceways or fittings in contact with concrete or earth.
 2. Types ERMC and IMC:
 - a. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound that maintains electrical conductivity to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.
 3. Type ERMC-S-PVC:
 - a. Follow manufacturer's installation instructions for clamping, cutting, threading, bending, and assembly.
 - b. Provide PVC-coated sealing locknut for exposed male threads transitioning into female NPT threads that do not have sealing sleeves, including transitions from PVC couplings/female adapters to Type ERMC-S-PVC elbows in direct-burial applications. PVC-coated sealing locknuts must not be used in place of conduit hub. PVC-coated sealing locknut must cover exposed threads on Type ERMC-S-PVC raceway.
 - c. Coat field-cut threads on PVC-coated raceway with manufacturer-approved corrosion-preventing conductive compound prior to assembly.
 4. Types FMC, LFMC, and LFNC:
 - a. Comply with NEMA RV 3. Provide a maximum of 36 inch of flexible conduit for recessed and semi recessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.
 5. Types PVC and EPEC:
 - a. Do not install Type PVC or Type EPEC conduit where ambient temperature exceeds 122 deg F. Conductor ratings must be limited to 75 deg C except where installed in a trench outside buildings with concrete encasement, where 90 deg C conductors are permitted.
 - b. Comply with manufacturer's written instructions for solvent welding and fittings.
 6. Type RTRC:
 - a. Do not install Type RTRC conduit where ambient temperature exceeds 230 deg F.
- D. Raceways Embedded in Slabs:
1. Arrange raceways to cross building expansion joints with expansion fittings at right angles to the joint.
 2. Arrange raceways to ensure that each is surrounded by a minimum of 2 inch of concrete without voids.
 3. Do not embed threadless fittings in concrete unless locations have been specifically approved by Commissioner.
 4. Change from ENT to PVC-80 before rising above floor.
- E. Stub-ups to Above Recessed Ceilings:

1. Provide EMT, IMC, or ERMC for raceways.
2. Provide a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

F. Raceway Fittings: Install fittings in accordance with NEMA FB 2.10 guidelines.

1. ERMC-S-PVC: Provide only fittings listed for use with this type of conduit. Patch and seal joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Provide sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
2. EMT: Provide setscrew fittings. Comply with NEMA FB 2.10.
3. Flexible Conduit: Provide only fittings listed for use with flexible conduit type. Comply with NEMA FB 2.20.

G. Expansion-Joint Fittings:

1. ERMC-S-PVC: Provide only fittings listed for use with this type of conduit. Patch and seal joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Provide sealant recommended by fitting manufacturer and apply in thickness and number of coats recommended by manufacturer.
2. EMT: Provide setscrew, and steel fittings. Comply with NEMA FB 2.10.
3. Flexible Conduit: Provide only fittings listed for use with flexible conduit type. Comply with NEMA FB 2.20.
 - a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
 - b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
 - c. Indoor Spaces Connected with Outdoors without Physical Separation: 125 deg F temperature change.
4. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
5. Install expansion fittings at locations where conduits cross building or structure expansion joints.
6. Install expansion-joint fitting with position, mounting, and piston setting selected in accordance with manufacturer's written instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

H. Raceways Penetrating Rooms or Walls with Acoustical Requirements:

1. Seal raceway openings on both sides of rooms or walls with acoustically rated putty.

3.5 INSTALLATION OF SURFACE RACEWAYS

- A. Install surface raceways only where indicated on Drawings.
- B. Install surface raceway with a minimum 2 inch radius control at bend points.

- C. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inch and with no less than two supports per straight raceway section. Support surface raceway in accordance with manufacturer's written instructions. Tape and glue are unacceptable support methods.

3.6 INSTALLATION OF BOXES AND ENCLOSURES

- A. Provide boxes in wiring and raceway systems wherever required for pulling of wires, making connections, and mounting of devices or fixtures.
- B. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
- C. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box, whether installed indoors or outdoors.
- D. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
- E. Locate boxes so that cover or plate will not span different building finishes.
- F. Support boxes in recessed ceilings independent of ceiling tiles and ceiling grid.
- G. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for purpose.
- H. Fasten junction and pull boxes to, or support from, building structure. Do not support boxes by conduits.
- I. Set metal floor boxes level and flush with finished floor surface.
- J. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
- K. Do not install aluminum boxes, enclosures, or fittings in contact with concrete or earth.
- L. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to ensure a continuous ground path.
- M. Boxes and Enclosures in Areas or Walls with Acoustical Requirements:
 - 1. Seal openings and knockouts in back and sides of boxes and enclosures with acoustically rated putty.
 - 2. Provide gaskets for wallplates and covers.

3.7 FIRESTOPPING

- A. Install firestopping at penetrations of fire-rated floor and wall assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

3.8 PROTECTION

- A. Protect coatings, finishes, and cabinets from damage and deterioration.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

3.9 CLEANING

- A. Boxes: Remove construction dust and debris from device boxes, outlet boxes, and floor-mounted enclosures before installing wallplates, covers, and hoods.

END OF SECTION 260533

SECTION 260536 - CABLE TRAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings
 - 1. Complete floor plans with cable tray routings, members identified, and supporting means and locations shown.
- C. Product Data
 - 1. Descriptive literature for each type of individual component to be utilized.

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
 - 1. NEMA VE1
 - 2. ASTM A525

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions to design cable tray supports and seismic bracing.

2.2 CABLE TRAY

- A. Straight section of one-piece construction with integral ventilated corrugated bottom. Side rails with minimum 5/8-inch-wide top flanges projecting horizontally outwards. Fittings of corrugated bottom design to match straight sections.
- B. Steel tray and fittings with hot-dipped mill-galvanized commercial coating. Steel, zinc electro-plated nuts, bolts and washers.
- C. Dimensions
 - 1. Straight Sections and Fittings of Cable Tray System:
 - a. Inside clear width and load depth as shown on drawings and as measured between side rails. Overall width not to exceed inside width by more than 2½ inches.
 - b. Length of straight sections without connectors to be 12 feet.
 - c. Radius of fittings 24 inches minimum measured from center of curvature to outer surface of nearest flange for vertical fittings and to cable-side of inside side rails on horizontal fittings.
 - d. Tolerances of installed tray shall be:
 - 1) Width $\pm 1/4$ in.
 - 2) Inside depth $\pm 3/8$ in.
 - 3) Overall length of straight
 - 4) Section (excl. connectors) $\pm 5/16$ in.
 - 5) Radius $\pm 3/4$ in.
- D. Load Capacity: NEMA Class 12A.
- E. Divider Strips
 - 1. Galvanized steel of height to match tray depth.
 - 2. Punched and slotted for field adjustment for horizontal bends.
 - 3. Factory formed for vertical bends.

2.3 GENERAL REQUIREMENTS FOR CABLE TRAY

- A. Provide complete cable tray raceway system with basic equipment as shown on Drawings and as required including but not limited to tees, elbows, couplings, tray stiffeners, inside and outside vertical risers, cable hanger elbows, horizontal elbows, tray to box connectors, conduit bushing dropout, divider strips, supports, fittings, fire stops, etc.
- B. Cable Trays and Accessories: Identified as defined in NFPA 70 and marked for intended location, application, and grounding.
 - 1. Source Limitations: Obtain cable trays and components from single manufacturer.
- C. Sizes and Configurations: See the Cable Tray Schedule on Drawings for specific requirements for types, materials, sizes, and configurations.

- D. Structural Performance: See articles on individual cable tray types for specific values for the following parameters:
 - 1. Uniform Load Distribution: Capable of supporting a uniformly distributed load on the indicated support span when supported as a simple span and tested according to NEMA VE 1.
 - 2. Concentrated Load: A load applied at midpoint of span and centerline of tray.
 - 3. Load and Safety Factors: Applicable to both side rails and rung capacities.

2.4 MANUFACTURERS

- A. Square D
- B. Globe
- C. Chalfant Manufacturing Co.
- D. Husky Products, Inc.
- E. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF CABLE TRAY

- A. Install cable tray and support systems according to NEMA VE 2.
- B. Install cable tray as a complete system, including fasteners, hold-down clips, support systems, barrier strips, adjustable horizontal and vertical splice plates, elbows, reducers, tees, crosses, cable dropouts, adapters, covers, and bonding.
- C. Install cable tray, so that the tray is accessible for cable installation and all splices are accessible for inspection and adjustment.
- D. Remove burrs and sharp edges from cable trays.
- E. Join aluminum cable tray with splice plates; use four square-neck carriage bolts and locknuts.
- F. Fasten cable tray supports to building structure and install seismic restraints.
- G. Design fasteners and supports to carry cable tray, cables, and a concentrated load of 200 lb. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems".

- H. Place supports, so that spans do not exceed maximum spans on schedules, and provide clearances shown on Drawings. Install intermediate supports when cable weight exceeds the load-carrying capacity of tray rungs.
- I. Construct supports from channel members, threaded rods, and other appurtenances furnished by cable tray manufacturer. Arrange supports in trapeze or wall-bracket form as required by application.
- J. Support assembly to prevent twisting from eccentric loading.
- K. Install center-hung supports for single-rail trays designed for 60 versus 40 percent eccentric loading condition, with a safety factor of 3.
- L. Do not install more than one cable tray splice between supports.
- M. Make connections to equipment with flanged fittings fastened to cable trays and to equipment. Support cable trays independent of fittings. Do not carry weight of cable trays on equipment enclosure.
- N. Install expansion connectors where cable trays cross building expansion joints and in cable tray runs that exceed recommended dimensions. Space connectors and set gaps according to applicable standard.
- O. Make changes in direction and elevation using manufacturer's recommended fittings.
- P. Make cable tray connections using manufacturer's recommended fittings.
- Q. Seal penetrations through fire and smoke barriers. Comply with requirements in Section 078413 "Penetration Firestopping."
- R. Install capped metal sleeves for future cables through firestop-sealed cable tray penetrations of fire and smoke barriers.
- S. Install cable trays with enough workspace to permit access for installing cables.
- T. Install barriers to separate cables of different systems, such as power, communications, and data processing, or of different insulation levels, such as 600 V.
- U. Install permanent covers and cover clamps, if used, after installing cable.
- V. Clamp covers on cable trays installed outdoors with heavy-duty clamps.
- W. Install warning signs in visible locations on or near cable trays after cable tray installation.

3.3 CABLE TRAY GROUNDING

- A. Ground cable trays according to NFPA 70 unless additional grounding is specified. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Cable trays with electrical power conductors must be bonded together with splice plates listed for grounding purposes or with listed bonding jumpers.

- C. Cable trays with single-conductor power conductors must be bonded together with a grounding conductor run in the tray along with the power conductors and bonded to the tray at 72 inch intervals. The grounding conductor must be sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors," and Article 392, "Cable Trays."
- D. When using epoxy- or powder-coat painted cable trays as a grounding conductor, completely remove coating at all splice contact points or ground connector attachment. After completing splice-to-grounding-bolt attachment, repair the coated surfaces with coating materials recommended by cable tray manufacturer.
- E. Bond cable trays to power source for cables contained within with bonding conductors sized according to NFPA 70, Article 250.122, "Size of Equipment Grounding Conductors."

3.4 INSTALLATION OF CABLES

- A. Install cables only when each cable tray run has been completed and inspected.
- B. Fasten cables on horizontal runs with cable clamps or cable ties. Tighten clamps only enough to secure the cable, without indenting the cable jacket. Install cable ties with a tool that includes an automatic pressure-limiting device.
- C. Fasten cables on vertical runs to cable trays every 18 inch.
- D. Fasten and support cables that pass from one cable tray to another or drop from cable trays to equipment enclosures. Fasten cables to the cable tray at the point of exit and support cables independent of the enclosure. The cable length between cable trays or between cable tray and enclosure must be no more than 72 inch.
- E. Tie mineral-insulated cables down every 36 inch where required to provide a two-hour fire rating and every 72 inch elsewhere.
- F. In existing construction, remove inactive or dead cables from cable trays.

3.5 CONNECTIONS

- A. Remove paint from all connection points before making connections. Repair paint after the connections are completed.
- B. Connect raceways to cable trays according to requirements in NEMA VE 2 and NEMA FG 1.

3.6 PROTECTION

- A. Protect installed cable trays and cables.
 - 1. Install temporary protection for cables in open trays to safeguard exposed cables against falling objects or debris during construction. Temporary protection for cables and cable tray can be constructed of wood or metal materials and must remain in place until the risk of damage is over.

2. Rectify damage to galvanized finishes with zinc-rich paint recommended by cable tray manufacturer.
3. Rectify damage to paint finishes with matching touchup coating recommended by cable tray manufacturer.

END OF SECTION 260536

SECTION 260543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Underground conduit, ducts, and duct accessories for concrete-encased duct banks,
 - 2. Raceways.
 - 3. Concrete reinforced rods, etc.
 - 4. Excavation and backfill for the underground duct-bank systems
 - 5. Duct sealing.

1.3 DEFINITIONS

- A. Duct: A single raceway or multiple raceways, installed singly or as components of a duct bank.
- B. Duct Bank: Two or more ducts installed in parallel, direct buried or with additional casing materials such as concrete.
- C. Handhole: An underground chamber containing electrical cables, sized such that personnel are not required to enter in order to access the cables.
- D. Manhole: An underground chamber containing electrical cables and equipment, sized to provide access with working space clearances.
- E. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Product Data:
 - 1. Duct-bank materials, including separators and miscellaneous components.
 - 2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
 - 3. Warning tape.

4. Warning planks.
 - C. Shop Drawings for dimensioned Underground Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:
 1. Duct entry provisions, including locations and duct sizes.
 2. Reinforcement details.
 3. Grounding details.
 - D. Duct-Bank Coordination Drawings: Show dimensioned duct profiles and coordination with other utilities and underground structures.
 1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
 - E. Submit results of field tests.
 - F. Record Documents: show dimensional locations of all underground ducts, handholes, and manholes
- 1.5 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
 - B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
 - C. Comply with ANSI CS.
 - D. Comply with NFPA 70.
 - E. U.L. listing of all products
- 1.6 REGULATORY AGENCY APPROVALS
- A. Shop Drawing submittals for electric utility duct banks and structures must be signed and sealed by qualified New York State licensed electrical professional engineer responsible for their preparation. for action by Commissioner prior to submitting for approval by electric utility.
 - B. Submit Shop Drawings for electric utility duct banks and structures for action by Commissioner prior to submitting for approval by electric utility.
- 1.7 COORDINATION
- A. Coordinate layout and installation of ducts with final arrangement of other utilities, site grading, and surface features as determined in the field.
 - B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of ducts and duct banks as determined by the coordination with other utilities, underground obstructions, and surface features.

PART 2 - PRODUCTS

2.1 UNDERGROUND DUCT SYSTEM

- A. Contractor shall furnish and install raceways and fittings for an underground duct system, as indicated on the Contract Drawings and specified herein.
- B. All bends at underground duct system shall be per the manufacturer's bending requirements.
- C. Bending for the medium voltage service lines shall also comply with the Utility Company requirements.
- D. The minimum bend radius for Telco carrier conduit, under any circumstances shall be greater than 12 times the conduit diameter. Also refer to telecom drawings and Comply with Utility Company requirements.
- E. Raceways shall transform from EPC (electrical plastic conduit) PVC to rigid galvanized steel conduit within 10 feet of any foundation walls. Run EPC PVC duct bank to the manholes. Contractor shall furnish and install proper couplings to accommodate afore-mentioned transition.
- F. Where offsets are required to clear obstructions and other underground services, a maximum of 5° angle will be allowed at duct joints.
- G. Ducts shall be installed so as to drain to the manholes. Ducts entering into the point of entry (P.O.E.) room shall be installed with upward slope of minimum of 0.125 inch/foot.
- H. All raceways as previously described shall utilize a mandrel of sufficient size to thoroughly clear raceways of all obstructions prior to the installation of any wiring.
- I. All concrete construction, excavation and backfill for the underground ductbank system shall be described under other sections of the project specifications. Red dye shall be added to the concrete mixture.
- J. All conduits penetrating into the buildings shall be totally sealed in order to prevent any migration of water through the ductbank into the building.
- K. Prior to backfilling of the underground duct system, provide a yellow (with black, lettering) warning tape, 1'-0" from finished grade, stating, "CAUTION ELECTRIC LINE BURIED BELOW" above all electrical ductbank, and "CAUTION TELECOMMUNICATIONS CABLE BELOW" above all Telecom ductbank.

2.2 CONDUITS

- A. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.
- B. PVC NEMA TC 2, Type EPC-80-PVC, UL 651, with matching fittings by the same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.3 NON-METALLIC DUCTS AND DUCT ACCESSORIES

A. General

1. Schedule EPC-80-PVC conduit shall be used for all concrete encased duct banks.
 - a. PVC conduits shall not be used within the building area.
2. All penetrations through floor slabs or foundation walls shall be rigid steel conduits. No EPC conduit shall be used in or through any floor slab.
3. PVC conduits shall not be allowed under paved areas, which are subjected to vehicular traffic. Concrete encased rigid steel conduit shall be used.
4. Manufacturers:
 - a. Carlon Product Corporation
 - b. Excelon
 - c. Southern Pipe, Inc.
 - d. Or Approved Equal

B. Duct Accessories:

1. Duct Separators (Spacers)
 - a. Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
 - b. Duct bank shall be encased in concrete with at least three inches of concrete at the top and bottom and two inches on each side. A horizontal and vertical separation between the ducts of 3 inches shall be maintained by installing Underground Devices High Impact Polystyrene Spacers. Spacers shall be interlocked horizontally only. Along the length of the duct run spacers shall be staggered at least 6 inches vertically and shall be placed at an interval of 4 spacers per 20 feet.
 - c. Electrical ducts shall be separated from Telco carrier ducts by a minimum of 36” and shall cross Teleco carrier ducts at 90-degree angle only, when unavoidable.

- C. In general, duct spacers should be of the type recommended by the conduit manufacturers and approved by the Utility Company. Maximum spacing for 4” - 6” conduits shall not exceed 10 feet.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

- B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct and duct bank will drain to manholes and handholes, and as approved by Commissioner.
- C. Clear and grub vegetation to be removed, and protect vegetation to remain in.

3.2 SELECTION OF UNDERGROUND DUCTS

- A. Duct for Electrical Feeders 600 V and Less:PVC-80, unless otherwise indicated.
- B. Duct for Electrical Branch Circuits: EPEC-80 unless otherwise indicated.
- C. Stub-ups: Concrete encased, IMC.

3.3 SELECTION OF UNDERGROUND ENCLOSURES

- A. Handholes and Boxes:
 - 1. Units in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Precast concrete, AASHTO HB 17, H-20 structural load rating.
 - 2. Units in Sidewalk and Similar Applications with Safety Factor for Nondeliberate Loading by Vehicles: Heavy-duty fiberglass units with polymer concrete frame and cover, SCTE 77, Tier 8 structural load rating.
 - 3. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resinstructurally tested in accordance with SCTE 77 with 3000 lbf (13 345 N) vertical loading.
 - 4. Cover design load must not exceed load rating of handhole or box.

3.4 EARTHWORK

- A. Excavation and Backfill: Comply with Contract Document but do not use heavy-duty, hydraulic-operated, compaction equipment.
- B. Restoration: Restore area to the requirement as per Civil drawings.
- C. Restore surface features at areas disturbed by excavation, and re-establish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- D. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching.
 - 1. Cut and patch existing pavement in path of underground duct, duct bank, and underground structures in accordance with "Cutting and Patching" requirements in DDC General Conditions Section 017300 "Execution."

3.5 INSTALLATION OF DUCTS AND DUCT BANKS

A. Reference Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NEMA TCB 2 for installation of underground ducts and duct banks.
2. Consult Commissioner for resolution of conflicting requirements.

B. Special Techniques:

1. Where indicated on Drawings, install duct, spacers, and accessories into duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
2. Slope: Pitch duct minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from high point between two manholes to drain in both directions.
3. Expansion and Deflection Fittings: Install expansion and deflection fitting in each duct in area of disturbed earth adjacent to manhole or handhole.
4. Install expansion fitting near center of straight line duct with calculated expansion of more than 3/4 inch (19 mm).
5. Curves and Bends:
 - a. Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with minimum radius , both horizontally and vertically, at other locations unless otherwise indicated.
6. Field bending must be in accordance with NFPA 70 minimum radii requirements, except bends over 45 degrees must be made with minimum radius of 48 inch (1200 mm). Use only equipment specifically designed for material and size involved. Use PVC heating bender for bending PVC conduit.
7. Joints: Use solvent-cemented joints in nonmetallic duct and fittings and make watertight in accordance with manufacturer's published instructions. Stagger couplings so those of adjacent duct do not lie in same plane. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with minimum 3 inch (75 mm) of concrete for minimum of 12 inch (300 mm) on each side of coupling.
 - a. Install insulated grounding bushings on steel raceway terminations that are less than 12 inch (300 mm) below grade or floor level and do not terminate in hubs.
8. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing duct will not be subject to environmental temperatures above 104 deg F (40 deg C). Where environmental temperatures are calculated to rise above 104 deg F (40 deg C), and anywhere duct crosses above underground steam line, install insulation blankets listed for direct burial to isolate duct bank from steam line to maintain maximum environmental temperature of 104 deg F (40 deg C)
9. [End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inch (250 mm) o.c. for 5 inch (125 mm) duct, and vary proportionately for other duct sizes.

10. Duct Terminators for Entrances to Cast-in-Place Manholes and Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inch (150 mm) o.c. for 4 inch (100 mm) duct, and vary proportionately for other duct sizes.
11. Begin change from regular spacing to terminator spacing 10 ft (3 m) from terminator, without reducing duct line slope and without forming trap in line.
12. Building Wall Penetrations: Make transition from underground duct to steel raceway at least 10 ft (3 m) outside building wall, without reducing duct line slope away from building and without forming trap in line. Use fittings manufactured for transition to steel raceway type installed. Install steel raceway penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
13. Install manufactured steel raceway elbows for stub-ups at poles unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
 - a. Couple steel elbows to ducts with adapters designed for this purpose, and encase coupling with minimum 3 inch (75 mm) of concrete for minimum of 12 inch (300 mm) on each side of coupling.
14. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least 15 psig (1.03 MPa) hydrostatic pressure.
15. Pulling Cord: Install 200 lbf (1000 N) test nylon cord in empty ducts.
16. Concrete-Encased Ducts and Duct Bank:
 - a. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Contract Documents for pipes 6 inch or less in nominal diameter.
 - b. Width: Excavate trench 12 inch (300 mm) wider than duct on each side.
 - c. Depth: Install so top of duct envelope is at least 24 inch (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inch (750 mm) below finished grade in deliberate traffic paths for vehicles unless otherwise indicated. Install so top of duct envelope is below local frost line.
 - d. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
 - e. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 ft (6 m) of duct. Place spacers within 24 inch (600 mm) of duct ends. Stagger spacers approximately 6 inch (150 mm) between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 - f. Minimum Space between Ducts: 3 inch (75 mm) between edge of duct and exterior envelope wall, 2 inch (50 mm) between ducts for like services, and 4 inch (100 mm) between power and communications ducts.
 - g. Elbows:
 - 1) Use manufactured duct elbows for stub-ups and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.
 - 2) Use manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct run.
 - h. Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch (1500 mm) from edge of equipment base.

- 1) Stub-ups must be minimum 4 inch (100 mm) above finished floor and minimum 3 inch (75 mm) from conduit side to edge of slab.
 - i. Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
 - 1) Stub-ups must be minimum 4 inch (100 mm) above finished floor and no less than 3 inch (75 mm) from conduit side to edge of slab.
 - j. Reinforcement: Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
 - k. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
 - l. Concrete Cover: Install minimum of 3 inch (75 mm) of concrete cover between edge of duct to exterior envelope wall, 2 inch (50 mm) between duct of like services, and 4 inch (100 mm) between power and communications ducts.
 - m. Place minimum 6 inch (150 mm) of engineered fill above concrete encasement of duct.
 - n. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
 - 1) Start at one end and finish at other, allowing for expansion and contraction of duct as its temperature changes during and after pour. Use expansion fittings installed in accordance with manufacturer's published instructions, or use other specific measures to prevent expansion-contraction damage.
 - 2) If more than one pour is necessary, terminate each pour in vertical plane and install 3/4 inch (15 mm) reinforcing-rod dowels extending minimum of 18 inch (450 mm) into concrete on both sides of joint near corners of envelope.
 - o. Pouring Concrete: Comply with requirements in "Concrete Placement" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-installation application.
17. Direct-Buried Duct:
- a. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Contract Documents or preparation of trench bottoms for pipes less than 6 inch in nominal diameter.
 - b. Width: Excavate trench minimum 3 inch wider than duct on each side.
 - c. Depth: Install top of duct at least 36 inch below finished grade unless otherwise indicated.
 - d. Set elevation of top of duct bank below frost line.
 - e. Place minimum 3 inch of sand as bed for duct. Place sand to minimum of 6 inch above top level of duct.

- f. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
 - g. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 ft of duct. Place spacers within 24 inch of duct ends. Stagger spacers approximately 6 inch between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
 - h. .Install duct with minimum of 3 inch between ducts for like services and 6 inch between power and communications duct.
 - i. .Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
 - j. Install manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct.
 - 1) Couple RNC duct to steel raceway with adapters designed for this purpose, and encase coupling with minimum 3 inch (75 mm) of concrete.
 - 2) Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch (1500 mm) from edge of base. Install insulated grounding bushings on terminations at equipment.
 - a) Stub-ups must be minimum 4 inch (100 mm) above finished base and minimum 3 inch (75 mm) from conduit side to edge of base.
 - 3) Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally on exterior of wall minimum of 60 inch (1500 mm) from edge of wall. Install insulated grounding bushings on terminations at equipment.
 - 4) Stub-ups through interior floors must be minimum 6 inch (100 mm) above finished floor and no less than 3 inch (75 mm) from conduit side to edge of equipment pad or floor slab.
 - k. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inch (100 mm) over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Contract Documents for installation of backfill materials.
18. Warning Planks: Bury warning planks approximately 12 inch (300 mm) above direct-buried duct, placing them 36 inch (900 mm) o.c. Align planks along width and along centerline of duct or duct bank. Provide additional plank for each 12 inch (300 mm) increment of duct-bank width over nominal 18 inch (450 mm). Space additional planks 12 inch (300 mm) apart, horizontally across width of ducts.
19. Ground ducts and duct banks in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for electrical underground raceway with other trades

3.6 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Reference Standards:

1. Precast Concrete Handholes: Comply with ASTM C891 unless otherwise indicated.
2. Consult Commissioner for resolution of conflicting requirements.
3. Hardware: Install removable hardware, including pulling eyes, cable stanchions, and cable arms, as required for installation and support of cables and conductors and as indicated.
4. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inch (97 mm) for manholes and 2 inch (50 mm) for handholes, for anchor bolts installed in field. Use minimum of two anchors for each cable stanchion.
5. Ground manholes, handholes, and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Interfaces with Other Work:

- C. Coordinate installation of new products for electrical underground raceway and handholes with other trades

3.7 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Reference Standards:

1. Consult Commissioner for resolution of conflicting requirements.

B. Special Techniques:

1. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.
2. Unless otherwise indicated, support units on level bed of crushed stone or gravel, graded from 1/2 inch (12.5 mm) sieve to No. 4 (4.75 mm) sieve and compacted to same density as adjacent undisturbed earth.
3. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.
4. Install handholes and boxes with bottom below frost line, below grade.
5. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
6. Field cut openings for duct in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

7. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour concrete ring encircling, and in contact with enclosure entry, and with top surface screeded to top of box cover frame. Bottom of ring must rest on compacted earth
 - a. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with troweled finish.
 - b. Dimensions: 10 inch wide by 12 inch deep (250 mm wide by 300 mm deep).
8. Ground handholes and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products for electrical underground raceway with other trades.

3.8 CLEANING

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
- B. Clean internal surfaces of manholes, including sump, and building interiors affected by Work.
 1. Sweep floor, removing dirt and debris.
 2. Remove foreign material.

END OF SECTION 260543

SECTION 260544 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Wall Sleeves:
 - 1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
- B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.
- C. Sleeves for Rectangular Openings:
 - 1. Material: Galvanized sheet steel.
 - 2. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches and with no side larger than 16 inches thickness shall be 0.052 inch.
 - b. For sleeve cross-section rectangle perimeter 50 inches or more and one or more sides larger than 16 inches thickness shall be 0.138 inch
- D. Sleeve-Seal Fittings

1. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.
2. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
 - a. MFP seals
 - b. Link-Seal
 - c. Metrafex
 - d. Or Approved Equal

E. Grout

1. Nonshrink and recommended for interior and exterior sealing openings in non-fire-rated walls or floors. Standard type shall be ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout. Design Mix shall be 5000-psi 28-day compressive strength. Packaging shall be premixed and factory packaged.

F. Silicone Sealants

1. Silicone Sealants: Single-component, silicone-based, neutral-curing sealants of grade indicated below.
 - a. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.
2. Silicone Foams: Multicomponent, silicone-based liquid elastomers expand and cure in place to produce a flexible, non-shrinking foam.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF SLEEVES FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

- A. Sleeves for Conduits Penetrating Above-Grade, Non-Fire-Rated, Concrete and Masonry-Unit Floors and Walls:
 1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

- a. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall or floor so no voids remain. Tool exposed surfaces smooth; protect material while curing.
 - b. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 3. Size pipe sleeves to provide 1/4 inch annular clear space between sleeve and raceway or cable, unless sleeve-seal system is to be installed.
 4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
 5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inch above finished floor level. Install sleeves during erection of floors.
- B. Sleeves for Conduits Penetrating Non-Fire-Rated Wall Assemblies:
1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
 2. Seal space outside of sleeves with approved joint compound for wall assemblies.
- C. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- D. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve-seal systems. Size sleeves to allow for 1 inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- E. Underground, Exterior-Wall and Floor Penetrations:
1. Install steel pipe sleeves with integral waterstops. Size sleeves to allow for 1 inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system. Install sleeve during construction of floor or wall.

END OF SECTION 260544

SECTION 260548 - VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Provide vibration isolation and seismic restraints in accordance with the Contract Documents.
- B. Provide vibration isolation for engine generator set, dry type transformers, UPS equipment, and at electrical connections to rotating or vibrating equipment.
- C. Provide seismic restraints for all emergency electrical systems and equipment.

1.3 DEFINITIONS

- A. Designated Seismic System: An Electrical component that requires design in accordance with ASCE/SEI 7-10, Ch. 13, and for which the Component Importance Factor is greater than 1.0.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
 - 2. Include load rating for each wind-force-restraint fitting and assembly.
 - 3. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of vibration isolation device and seismic- and wind-force-restraint component.
 - 4. Annotate types and sizes of seismic restraints and accessories, complete with listing markings or report numbers and load rating in tension and compression as evaluated by UL product listing or FM Approvals.
 - 5. Annotate to indicate application of each product submitted and compliance with requirements.
- B. Shop Drawings:
 - 1. Detail fabrication and assembly of equipment bases.

2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
- C. Engineering Services Submittals:
1. For each seismic-restraint and wind-load protection device, including seismic-restrained mounting, conduit-riser resilient support, seismic restraint, seismic-restraint accessory, concrete anchor and insert, and restrained isolation roof-curb rail that is required by this Section or is indicated on Drawings, submit the following:
 - a. Seismic and Wind-Load Restraint, and Vibration Isolation Base Selection: Select vibration isolators, seismic and wind-load restraints, and vibration isolation bases complying with performance requirements, design criteria, and analysis data.
 - b. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification by licensed professional engineer in the state of New York that riser system was examined for excessive stress and that none exists.
 - c. Concrete Anchors and Inserts: Include calculations showing anticipated seismic and wind loads. Include certification that device is approved by an NRTL for seismic reinforcement use.
 - d. Seismic Design Calculations: Submit all input data and loading calculations prepared under "Seismic Design Calculations" Paragraph in "Performance Requirements" Article.
 - e. Wind-Load Design Calculations: Submit all static and dynamic loading calculations prepared under "Wind-Load Design Calculations" Paragraph in "Performance Requirements" Article.
 - f. Qualified Professional: All designated-design submittals for seismic- and wind-restraint calculations are to be signed and sealed by qualified, New York State licensed professional engineer, responsible for their preparation.
 2. Seismic- and Wind-Restraint Detail Drawing:
 - a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
 - c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply also with requirements in other Sections for equipment mounted outdoors.
 3. All engineering services submittal for seismic- and wind-restraint detail Drawings are to be signed and sealed by qualified New York State licensed professional engineer responsible for their preparation.
 4. Product Listing, Preapproval, and Evaluation Documentation: By UL or FM Approvals, showing maximum ratings of restraint items and basis for approval (tests or calculations).
 5. Design Calculations for Vibration Isolation Devices: Calculate static and dynamic loading due to equipment weight and operating forces required to select proper vibration isolators, and to design vibration isolation bases.

6. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, and spring deflection changes. Include certification that riser system was examined for excessive stress and that none exists.
- D. Coordination Drawings: Show coordination of vibration isolation device installation and seismic bracing for Electrical conduit and equipment with other systems and equipment in the vicinity, including other supports and restraints, if any.
- E. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Vibration isolators and seismic restraints shall be of the same manufacturer.
- C. Seismic restraint external force acceleration criteria shall be 1.0 G for life safety equipment (emergency power system, and equipment connected to the emergency power system). External force acceleration criteria shall be 0.5 G for non-life safety equipment.
- D. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct testing indicated, be an NRTL as defined by OSHA in 29 CFR 1910.7.
- E. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- F. Seismic- and Wind-Load-Restraint Device Load Ratings: Devices to be tested and rated in accordance with applicable code requirements. Devices to be listed by a nationally recognized third party that requires periodic follow-up inspections and has a listing directory available to the public. Provide third-party listing by one or more of the following: ICC-ES product listing, UL product listing or FM Approvals.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For testing agency.
- B. Air-Spring Isolator Performance Certification: Include natural frequency, load, and damping test data performed by an independent agency.
- C. Field quality-control reports.
- D. Seismic Qualification Data: Provide special certification for designated seismic systems as indicated in ASCE/SEI 7-05, ASCE/SEI 7-10, ASCE/SEI 7-16, Paragraph 13.2.2, "Special Certification Requirements for Designated Seismic Systems" for all Designated Seismic Systems identified as such on Drawings or in the Specifications.

1. Provide equipment manufacturer's written certification for each designated active mechanical seismic device and system, stating that it will remain operable following the design earthquake. Certification must be based on requirements of ASCE/SEI 7 and AHRI 1270 (AHRI 1271), including shake table testing per ICC-ES AC156 or a similar nationally recognized testing standard procedure or experience data as permitted by ASCE/SEI 7-05, ASCE/SEI 7-10 or ASCE/SEI 7-16.
2. Provide equipment manufacturer's written certification that components with hazardous contents maintain containment following the design earthquake by methods required in ASCE/SEI 7-05, ASCE/SEI 7-10 or ASCE/SEI 7-16.
3. Submit evidence demonstrating compliance with these requirements for approval to the Commissioner after review and acceptance by a licensed professional.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-spring isolators and restrained-air-spring isolators to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage qualified structural professional engineer licensed in the State of New York to design seismic control system in accordance with criteria specified in Section 260010 "Supplemental Requirements for Electrical" and Section 260011 "Facility Performance Requirements for Electrical."
 1. Seismic and Wind-Load Performance: Equipment to withstand the effects of earthquake motions and high wind events determined in accordance with ASCE/SEI 7-05, ASCE/SEI 7-10 or ASCE/SEI 7-16.
- B. Seismic-Restraint Device Load Ratings: Seismic-restraint devices to be tested, UL rated and listed by a nationally recognized third party that requires periodic follow-up inspections.
- C. Consequential Damage: Provide additional seismic restraints for suspended components or anchorage of floor-, roof-, or wall-mounted components so that failure of a non-essential or essential component will not cause failure of any other essential building component.
- D. Fire/Smoke Resistance: Seismic-restraint devices that are not constructed of ferrous metals must have a maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested by an NRTL in accordance with ASTM E84 or UL 723, and be so labeled.
- E. Component Supports:
 1. Load ratings, features, and applications of reinforcement components must be based on testing standards of a nationally recognized testing agency.

2.2 MANUFACTURERS

- A. VMC Amber-Booth Company, Inc.
- B. Mason Industries
- C. Ace Mountings Co., Inc.
- D. Vibration Eliminator Co., Inc.
- E. Kinetics Noise Control Inc.
- F. Or Approved Equal

2.3 VIBRATION ISOLATION AND SEISMIC RESTRAINTS

A. General

- 1. Devices installed outdoors shall be weatherproof; steel components shall be hot dipped galvanized, hardware shall be cadmium plated, and springs shall be neoprene coated.
- 2. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load.
- 3. Springs shall have an additional minimum travel to solid equal to 50% of the rated deflection.

B. Mounting Method Type A

- 1. Floor mounted captive spring isolators for seismic and restrained service.
- 2. Snubbing shall take place in all modes with adjustment to limit upward, downward, and horizontal travel to a maximum of ¼ inch before contacting snubbers.
- 3. Leveling bolts for rigid bolting to equipment.
- 4. Ports for spring inspection.
- 5. Minimum of ¾” thick neoprene pad between concrete housekeeping pad and bottom of isolator.

C. Mounting Method Type B

- 1. Hanger rod spring isolators.
- 2. 45° slack seismic restraint cables.
- 3. Neoprene spring cup with a projecting bushing to prevent steel to steel contact.
- 4. Steel retainer box encasing the spring and neoprene spring cup.
- 5. Rod shall be able to swing 30° before contacting resilient bushing.

D. Mounting Method Type C

- 1. Floor mounted bridge bearing neoprene mounts with all directional seismic capability.
- 2. Two separated and opposing molded bridge bearing neoprene elements contained in a ductile iron casting.
- 3. Mounting holes in bottom plate for bolting to concrete housekeeping pad.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION PROCEDURES

- A. Installation shall be in accordance with seismic restraint calculations and manufacturer's installation instructions.
- B. Verify that mounting methods provide the required vibration isolation and seismic restraint and that there are no vibration short circuits.
- C. Conduit connected to rotating or vibrating equipment shall be flexible metal conduit or liquid tight flexible conduit. Any conduits that are supported by the building shall have resilient hangers or supports to isolate vibrations.

3.3 MOUNTING SCHEDULE

Equipment	Mounting Method	Static Deflection
Engine Generator Set	A	3 inches
Dry Type Transformers-Suspended	B	1.0 inch
Dry Type Transformers, UPS Equipment	C	1.5 inches
PV System Inverter	B	1.0 inch

3.4 EXAMINATION

- A. Examine areas and equipment to receive seismic control devices for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.5 APPLICATIONS

- A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by an evaluation service member of ICC-ES.

- B. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry static and seismic loads within specified loading limits.

3.6 INSTALLATION OF SEISMIC-RESTRAINT DEVICES

- A. Provide seismic restraint devices for systems and equipment where indicated in Equipment Schedules or Seismic and Wind-Load Controls Schedule, where indicated on Drawings, where the Specifications indicate they are to be installed on specific equipment and systems, and where required by NYC Building Code.
 - 1. Install equipment and devices to withstand the effects of earthquake motions.
- B. Coordinate location of embedded connection hardware with supported equipment attachment and mounting points and with requirements for concrete reinforcement and formwork specified in Section 033000 "Cast-in-Place Concrete."
- C. Installation of seismic restraints must not cause any stresses, misalignment, or change of position of equipment or conduits.
- D. Equipment Restraints:
 - 1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 - 2. Install seismic-restraint devices using methods approved by that provides required submittals for component.
- E. Raceway, Cable, Wireway, Cable Tray, and Busway Support and Hanger Restraints:
 - 1. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 - 2. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES that provides required submittals for component.
 - 3. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
 - 4. Install seismic-restraint devices using methods approved by an evaluation service member of ICC-ES providing required submittals for component.
- F. Install cables so they do not bend across edges of adjacent equipment or building structure.
- G. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- H. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

3.7 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where connection is terminated to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

END OF SECTION 260548

SECTION 260553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DESCRIPTION

- A. Provide fixed identification of all distribution equipment and conductors in accordance with the Contract Documents.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Identification procedures shall be noted and scheduled on the applicable shop drawings.
- C. Provide samples to illustrate composition, size, colors, lettering style, mounting provisions, and graphic features of all identification products.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
 - 1. Industry standards shall apply.
 - 2. NFPA 70.
 - 3. ANSI A13.1 and ANSI Z535-4.
 - 4. 29 CFR 1910.144/29 and CFR 1910.145
 - 5. OSHA Standards.
 - 6. IEEE C2-2017
 - 7. UL 969

1.5 WORK INCLUDED

- A. Fixed identification for:
 - 1. Switchboards and Switchgears.
 - 2. Panelboards.
 - 3. Meters.

4. Transformers.
5. Disconnect Switches/Enclosed Circuit Breakers.
6. Motor Controllers.
7. Fused Feeder Switches.
8. Wall Plates.
9. Pullboxes, Enclosures and Cable Terminations.
10. Freeze Protection.
11. Automatic Transfer Switches.
12. Generator Control Panels.
13. Special equipment, such as EV charging station, garbage compactors.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Comply with ASME A13.1.
- B. Comply with 29 CFR 1910.144 for color identification of hazards; 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs and tags; and the following:
 1. Fire-protection and fire-alarm equipment, including raceways, must be finished, painted, or suitably marked safety red.
 2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than 7.7 ft above finished floor.
- C. Signs, labels, and tags required for personnel safety must comply with the following standards:
 1. Safety Colors: NEMA Z535.1.
 2. Facility Safety Signs: NEMA Z535.2.
 3. Safety Symbols: NEMA Z535.3.
 4. Product Safety Signs and Labels: NEMA Z535.4.
 5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.
- D. Comply with NFPA 70E and Section 260573.19 "Arc-Flash Hazard Analysis" requirements for arc-flash warning labels.
- E. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, must comply with UL 969.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

- G. Unless otherwise noted, nameplates shall be black bakelite plates with white engraved uppercase letters enclosed by white border on beveled edge.
- H. Nameplates for equipment supplied by the emergency system shall be red bakelite with white lettering.
- I. All nameplates must be engraved and must be secured with rivets, brass or cadmium plate screws. The use of vinyl type adhesives or the like is unacceptable, with the exception of fire alarm devices and wall plates.
- J. Cable tags must be flameproof and secured with flameproof non-metallic cord.

K. Lettering heights unless otherwise noted must be as follows:

Item	Lettering Height
Switchboards and Switchgears	2"
Panelboards	1/2"
Meter Centers	1/2"
Transformers	1/2"
Disconnect Switches/Enclosed Circuit Breakers	1/2"
Motor Controllers	1/4"
Fused Feeder Switches	1/4"
Fire Alarm Devices	1/8"
Wall Plates	1/8"
Pullbox, Enclosures and Cable Terminations	1/8"
Medium Voltage Raceways	1"
Freeze Protection	1/4"
Automatic Transfer Switches	1/2"
Generator Control Panels	1"
UPS Equipment	2"
PV System Equipment	1"

- L. Nameplate inscriptions must bear the name and number of the equipment to which they are attached as indicated on the Contract Documents. The Commissioner reserves the right to make modifications in the inscriptions as necessary.
- M. The Commissioner reserves the right to request additional nameplates at the time of review of shop drawings and upon site observations. These shall be furnished at no additional cost to the City of New York.
- N. Do not manufacture or install nameplates until approved by the city Of New York.
- O. Apply adhesive identification labels after work is completed and all surfaces have been properly cleaned.
- P. Warning Labels and Signs
 1. Provide and comply with NFPA 70 and 29 CFR 1910.145.
 2. Metal-back, Butyrate Warning Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized steel backing; and with colors, legend, and size required for application. 1/4-inch grommets in corners for mounting. Nominal size, 10 by 14 inches.
 3. Warning Label and sign shall include, but not be limited to, the following legends:

- a. Multiple Power Source Warning: “DANGER-ELECTRICAL SHOCK HAZARD EQUIPMENT HAS MULTIPLE POWER SOURCES”
- b. Workspace Clearance Warning: “WARNING – OSHA REGULATION – AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES.”

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.
- B. Install identifying devices before installing acoustical ceilings and similar concealment.
- C. Verify identity of item before installing identification products.
- D. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.
- E. Apply identification devices to surfaces that require finish after completing finish work.
- F. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.
- G. System Identification for Raceways and Cables under 1000 V: Identification must completely encircle cable or conduit. Place identification of two-color markings in contact, side by side.
 1. Secure tight to surface of conductor, cable, or raceway.
- H. System Identification for Raceways and Cables over 1000 V: Identification must completely encircle cable or conduit. Place adjacent identification of two-color markings in contact, side by side.
 1. Secure tight to surface of conductor, cable, or raceway.
- I. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.
- J. Emergency Operating Instruction Signs: Install instruction signs with white legend on red background with minimum 3/8 inch high letters for emergency instructions at equipment used for power transfer.
- K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from floor.

- L. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:
 - 1. "EMERGENCY POWER. FROM DIESEL GENERATOR".
 - 2. "EMERGENCY POWER. FROM GAS GENERATOR".
 - 3. "POWER."
 - 4. "AUTOMATIC TRANSFER SWITCH".

- M. Snap-Around Color-Coding Bands: Secure tight to surface at location with high visibility and accessibility.

- N. Heat-Shrink, Preprinted Tubes: Secure tight to surface at location with high visibility and accessibility.

- O. Write-on Tags:
 - 1. Place in location with high visibility and accessibility.
 - 2. Secure using cable ties.

END OF SECTION 260553

SECTION 260573.13 - SHORT-CIRCUIT STUDIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Computer-based, fault-current study to determine minimum interrupting capacity of circuit protective devices.

1.3 WORK INCLUDED

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices (OCPD) proposed for this project shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of both normal and emergency power. Best available settings shall be provided for the normal power system. Emergency power coordination shall coordinate to a level of 0.1 seconds.

1.4 DEFINITIONS

- A. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- B. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion of the circuit from the system.
- C. SCCR: Short-circuit current rating.
- D. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- E. Single-Line Diagram: See "One-Line Diagram."

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

- B. The following submittals shall be made for system protective devices specified in all electrical specification sections. The release of electrical equipment submittals (panelboards, engine generators, switchboards, bus ducts, fused switches, circuit breakers, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Commissioner requires a full submittal review period as delineated within these specifications to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by the project requirements shall provide for this review time in the action submittal process. The following submittal shall be in digital and hard copy form:
1. Coordination-study input data, including completed computer program input data sheets. Provide editable electronic media, including all SKM files and breaker TCC's.
 2. Study and Equipment Evaluation Reports.
 3. Coordination-Study Report, signed, dated, and sealed by a qualified professional engineer in the state of the project.
 4. Product Data: For computer software program to be used for the studies.
 5. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399. For arc-flash analysis software, certifying compliance with IEEE 1584 and NFPA 70E.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this section. Manual calculations are not acceptable.
- C. System Study Specialist Qualifications: Comprehensive engineering analysis by a qualified Professional Engineer or personnel trained and employed by the equipment manufacturer in required calculation methodology.
1. Analysis shall be performed by a Professional Engineer or personnel trained, employed, and supervised by a registered Professional Engineer.
 2. Registered professional engineer shall be a full-time employee of the electrical equipment manufacturer or a professional engineering firm.
 3. Report shall be signed and sealed by a Professional Engineer licensed in the state of New York.
 4. All reports shall be prepared by the same entity and delivered as a single report with tabbed sections for each study.
- D. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- E. Comply with IEEE 399 for general study procedures

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Computer Software Developers: Subject to compliance with requirements, provide products by the following:
1. SKM Systems Analysis, Inc.
 2. Power Analytics Corporation.
 3. Easy Power LLC.
 4. or Approved Equal.

2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399 for fault-current and overcurrent protective device coordination studies.
- B. Comply with IEEE 1584 and NFPA 70E for arc-flash hazard analysis.
- C. Analytical features of fault-current-study computer software program shall include “mandatory,” “very desirable,” and “desirable” features as listed in IEEE 399.
- D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate coordination by computer-generated, time-current coordination plots.

2.3 SHORT-CIRCUIT STUDY REPORT CONTENT

- A. Executive Summary
- B. Study descriptions, purpose, basis and scope of the study.
- C. One-line diagram, showing the following:
1. Protective device designations and ampere ratings.
 2. Cable size and lengths.
 3. Transformer kilovolt ampere (kVA) and voltage ratings.
 4. Motor and generator designations and kVA ratings.
 5. Switchgear, switchboard, and panelboard designations.
 6. For both normal and emergency power systems.
 7. Automatic Transfer Switches.
 8. Fused switches and circuit breakers.
 9. Photovoltaic system equipment.
- D. Study Input Data: As described in “Power System Data” Article 3.2.

E. Short-Circuit Study Output:

1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage
 - b. Calculated symmetrical fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. No AC Decrement (NACD) ratio.
 - e. Equivalent impedance.
 - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
 - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.
 - h. Incident Energy and Flash Protection Boundary Calculations
2. Arcing fault magnitude.
3. Protective device clearing time.
4. Duration of arc.
5. Arc-flash boundary.
6. Working distance.
7. Incident energy.
8. Hazard risk category.
9. Recommendations for arc-flash energy reduction.

F. Fault study input data, case descriptions, and fault-current calculations, including a definition of terms and guide for interpretation of the computer printout.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 POWER SYSTEM DATA

- A. Obtain data necessary for conduct of study.
1. Verify completeness of data supplied on one-line diagram. Call discrepancies to Commissioner's attention.
 2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
- B. Gather and tabulate required input data to support short-circuit study. Record data on Record Document copy of one-line diagram. Comply with recommendations in IEEE 551 as to amount of detail that is required to be acquired in field. Field data gathering must be by, or under supervision of, qualified electrical professional engineer. Data include, but are not limited to, the following:

1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Obtain electrical power utility impedance at service.
3. Power sources and ties.
4. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
5. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
6. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
7. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
8. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
9. Motor horsepower and NEMA MG 1 code letter designation.
10. Conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
11. Derating factors.

3.3 SHORT-CIRCUIT STUDY

- A. A short-circuit current ratings indicated in the Contract Documents are based on Fault-Current study prepared by the Commissioner and are based on available information and anticipated feeder lengths. Calculate the maximum available short-circuit current in amperes RMS symmetrical at circuit-breaker positions of the electrical power distribution system based on proposed feeder routing and actual equipment being proposed for the project. The calculation shall be for a current immediately after initiation and for a three-phase bolted short-circuit at each of the following:
1. Electric Utility's supply termination point.
 2. Switchgear and switchboard buses.
 3. Transformers.
 4. Distribution panelboards.
 5. Branch circuit panelboards.
 6. Standby Generators and Automatic Transfer Switches.
 7. Enclosed Fused Switches.
 8. Enclosed Circuit Breakers.
- B. Study the electrical distribution system from normal and emergency power sources throughout electrical distribution system for the Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.
- C. Calculate momentary and interrupting duties on the basis of maximum available fault current.
- D. Perform study following general study procedures contained in IEEE 399.
- E. Calculate short-circuit currents according to IEEE 551.

- F. Base study on device characteristics supplied by device manufacturer.
- G. Extent of electrical power system to be studied is indicated on Drawings.
- H. Begin short-circuit current analysis at service, extending down to system overcurrent protective devices as follows:
 - 1. To normal system low-voltage load buses where fault current is 5 kA or less.
 - 2. Exclude equipment supplied by single transformer smaller than 75 kVA.
- I. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
- J. Include ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement to address asymmetrical requirements of interrupting equipment.
- K. Calculate short-circuit momentary and interrupting duties for three-phase bolted fault and single line-to-ground fault at each equipment indicated on one-line diagram.
 - 1. For grounded systems, provide bolted line-to-ground fault-current study for areas as defined for three-phase bolted fault short-circuit study.
- L. Include in report identification of protective device applied outside its capacity.
- M. Study Report:
 - 1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on the electrical distribution system diagram.
- N. Equipment Evaluation Report:
 - 1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated ½-cycle symmetrical fault current.
 - 2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to ½-cycle symmetrical fault current.
 - 3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated ½-cycle symmetrical fault current.
 - 4. Notify the Commissioner, in writing, of any existing circuit protective devices improperly rated for the calculated available fault current.

END OF SECTION 260573.13

SECTION 260573.16 - COORDINATION STUDIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Computer-based, overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.
 - a. Study results must be used to determine coordination of series-rated devices.
2. Overcurrent Protective Device Coordination: All overcurrent protective devices (OCPD) proposed for this project shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of both normal and emergency power. Best available settings shall be provided for the normal power system. Emergency power coordination shall coordinate to a level of 0.1 seconds
3. Protective devices shall be provided and based on results of this coordination study

1.3 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled. Existing to remain items must remain functional throughout construction period.
- B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of electric circuit or system of circuits and the component devices or parts used therein.
- C. Protective Device: A device that senses when abnormal current flow exists and then removes the affected portion of the circuit from the system.
- D. SCCR: Short-circuit current rating.
- E. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

- F. Single-Line Diagram: See "One-Line Diagram."

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Refer to Section 260573.13 "Short-Circuit Studies" for additional requirement.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS(NOT USED)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance of the Work. Devices to be coordinated are indicated on Drawings.
 - 1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.3 POWER SYSTEM DATA

- A. Obtain data necessary for conduct of overcurrent protective device study.

1. Verify completeness of data supplied in one-line diagram on Drawings. Call discrepancies to Commissioner's attention.
 2. For equipment included as Work of this Project, use characteristics submitted under provisions of action submittals and information submittals for this Project.
- B. Gather and tabulate required input data to support coordination study. List below is guide. Comply with recommendations in IEEE 551 for amount of detail required to be acquired in field. Field data gathering must be by, or under supervision of, qualified electrical professional engineer. Data include, but are not limited to, the following:
1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 2. Electrical power utility impedance at service.
 3. Power sources and ties.
 4. Short-circuit current at each system bus (three phase and line to ground).
 5. Full-load current of loads.
 6. Voltage level at each bus.
 7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
 8. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
 9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
 10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
 11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
 12. Maximum demands from service meters.
 13. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.
 14. Motor horsepower and NEMA MG 1 code letter designation.
 15. Low-voltage cable sizes, lengths, number, conductor material, and conduit material (magnetic or nonmagnetic).
 16. Medium-voltage cable sizes, lengths, conductor material, cable construction, metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).
 17. Data sheets to supplement electrical distribution system one-line diagram, cross-referenced with tag numbers on diagram, showing the following:
 - a. Special load considerations, including starting inrush currents and frequent starting and stopping.
 - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
 - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
 - d. Generator thermal-damage curve.
 - e. Ratings, types, and settings of utility company's overcurrent protective devices.
 - f. Special overcurrent protective device settings or types stipulated by utility company.

- g. Time-current-characteristic curves of devices indicated to be coordinated.
- h. Manufacturer, frame size, interrupting rating in amperes root mean square (rms) symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
- i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
- j. Switchgear, switchboards, motor-control centers, and panelboards ampacity, and SCCR in amperes rms symmetrical.
- k. Identify series-rated interrupting devices for condition where available fault current is greater than interrupting rating of downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

3.4 COORDINATION STUDY

- A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.
- B. Comply with IEEE 399 for general study procedures.
- C. Base study on device characteristics supplied by device manufacturer.
- D. Extent of electrical power system to be studied is indicated on Drawings.
- E. Begin analysis at service, extending down to system overcurrent protective devices as follows:
 - 1. To normal system low-voltage load buses where fault current is 5 kA or less.
 - 2. Exclude equipment supplied by single transformer smaller than 75 kVA.
- F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study cases of system-switching configurations and alternate operations that could result in maximum fault conditions.
- G. Transformer Primary Overcurrent Protective Devices:
 - 1. Device must not operate in response to the following:
 - a. Inrush current when first energized.
 - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
 - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
 - 2. Device settings must protect transformers according to IEEE C57.12.00, for fault currents.
- H. Motor Protection:
 - 1. Select protection for low-voltage motors according to IEEE 242 and NFPA 70.
 - 2. Select protection for motors served at voltages more than 600 V according to IEEE 620.

- I. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands maximum short-circuit current for time equivalent to tripping time of primary relay protection or total clearing time of fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.
- J. Generator Protection: Select protection according to manufacturer's instructions and to IEEE 242.
- K. Include ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase ac systems. Also account for fault-current dc decrement, to address asymmetrical requirements of interrupting equipment.
- L. Calculate short-circuit momentary and interrupting duties for three-phase bolted fault and single line-to-ground fault at each equipment indicated on one-line diagram.
 - 1. For grounded systems, provide bolted line-to-ground fault-current study for areas as defined for three-phase bolted fault short-circuit study.
- M. Protective Device Evaluation:
 - 1. Evaluate equipment and protective devices and compare to short-circuit ratings.
 - 2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
 - 3. Application of series-rated devices must be recertified, complying with requirements in NFPA 70.
 - 4. Include in report identification of protective device applied outside its capacity.

3.5 LOAD-FLOW AND VOLTAGE-DROP STUDY

- A. Perform load-flow and voltage-drop study to determine steady-state loading profile of system. Analyze power system performance two times as follows:
 - 1. Determine load flow and voltage drop based on full-load currents obtained in "Power System Data" Article 3.3.
 - 2. Determine load flow and voltage drop based on 80 percent of design capacity of load buses.
 - 3. Prepare load-flow and voltage-drop analysis and report to show power system components that are overloaded, or might become overloaded; show bus voltages that are less than as prescribed by NFPA 70.

3.6 MOTOR-STARTING STUDY

- A. Perform motor-starting study to analyze transient effect of system's voltage profile during motor starting. Calculate significant motor-starting voltage profiles and analyze effects of motor starting on power system stability.
- B. Prepare motor-starting study report, noting light flicker for limits proposed by IEEE 141 and voltage sags so as not to affect operation of other utilization equipment on system supplying motor.

3.7 FIELD ADJUSTING

- A. Adjust relay and protective device settings according to recommended settings provided by coordination study.
- B. Make minor modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.
- C. Testing and adjusting must be by qualified low-voltage electrical testing and inspecting agency.
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA ATS. Certify compliance with test parameters. Perform NETA tests and inspections for adjustable overcurrent protective devices.

END OF SECTION 260573.16

SECTION 260573.19 - ARC-FLASH HAZARD ANALYSIS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Computer-based, arc-flash study to determine arc-flash hazard distance and incident energy to which personnel could be exposed during work on or near electrical equipment.

1.3 WORK INLCUED

- A. Overcurrent Protective Device Coordination: All overcurrent protective devices (OCPD) proposed for this project shall be selected to be selectively coordinated with the overcurrent protective devices installed on their supply side such that an overcurrent event (overload, short-circuit, or ground-fault) occurring at the lowest level in the system (branch circuit) cannot cause the feeder protective device supplying the branch circuit panelboard to open. This coordination shall be carried through each level of distribution for all branches of both normal and emergency power. Best available settings shall be provided for the normal power system. Emergency power coordination shall coordinate to a level of 0.1 seconds.
- B. Engineering Services for Arc Flash Hazard Analysis: Prepare a computer-based, arc-flash study to determine the arc-flash hazard distance and the incident energy to which personnel could be exposed during work on or near electrical equipment.
- C. Protective devices shall be provided and based on results of this coordination study.

1.4 DEFINITIONS

- A. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
- B. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
- C. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.

- D. p.u.: Per unit. The reference unit, established as a calculating convenience, for expressing all power system electrical parameters on a common reference base.
- E. SCCR: Short-circuit current rating.
- F. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
- G. Single-Line Diagram: See "One-Line Diagram."
- H. PPE: Personal protective equipment.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Refer to Sections 26 05 73.13 and 26 05 73.16 for additional requirement.
- C. The following submittals shall be made for system protective devices specified in all electrical specification sections. The release of electrical equipment submittals (panelboards, engine generators, switchboards, bus ducts, fused switches, circuit breakers, switchgear, etc.) is dependent on the receipt of a complete and accurate overcurrent protective device coordination study. The Commissioner requires a full submittal review period as delineated within these specifications to adequately review the OCPD study against the submitted electrical components prior to release of submittals for equipment procurement. The submittal schedule required by the project requirements shall provide for this review time in the action submittal process. The following submittals shall be in digital and hard copy form:
 - 1. Arc-flash study input data, including completed computer program input data sheets.
 - 2. Arc-Flash Hazard Analysis Report; signed, dated, and sealed by a qualified professional engineer in the state of the project.
 - 3. Product Data: For computer software program to be used for the studies.
 - 4. Qualification Data: For Coordination Study Specialist and Arc-Flash Hazard Analysis Specialist.
 - 5. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399. For arc-flash analysis software, certifying compliance with IEEE 1584 and NFPA 70E.
 - 6. Maintenance procedures according to requirements in NFPA 70E shall be provided in the equipment manuals.
 - 7. Operation and Maintenance Procedures: Provide maintenance procedures for use by the City of New York personnel that comply with requirements in NFPA 70E.
 - 8. Sample of all warning labels

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this section. Manual calculations are not acceptable.
- C. Engineering Services System Study Specialist Qualifications: Comprehensive engineering analysis by a qualified Professional Engineer or personnel trained and employed by the equipment manufacturer in required calculation methodology.
 - 1. Analysis shall be performed by a Professional Engineer or personnel trained, employed, and supervised by a registered Professional Engineer.
 - 2. Registered professional engineer shall be a full-time employee of the electrical equipment manufacturer or a professional engineering firm.
 - 3. Report shall be signed and sealed by a Professional Engineer with current registration in the state of the project.
 - 4. All reports shall be prepared by the same entity and delivered as a single report with tabbed sections for each study.
- D. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- E. Comply with IEEE 399 for general study procedures.
- F. Comply with IEEE 1584 for Guide for Performing Arc Flash Hazard Calculations.

1.7 REGULATORY AGENCY APPROVALS

- A. Submittals for arc-flash hazard analysis requiring approval by the Commissioner must be signed and sealed by qualified electrical professional engineer responsible for their preparation.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Computer Software Developers: Subject to compliance with requirements, provide products by the following:
 - 1. SKM Systems Analysis, Inc.
 - 2. Power Analytics Corporation.
 - 3. Easy Power LLC.
 - 4. Or Approved Equal.

2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399 for fault-current and overcurrent protective device coordination studies.
- B. Comply with IEEE 1584 and NFPA 70E for arc-flash hazard analysis.
- C. Analytical features of fault-current-study computer software program shall include “mandatory,” “very desirable,” and “desirable” features as listed in IEEE 399.
- D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate coordination by computer-generated, time-current coordination plots.
- E. Short-Circuit Study Output:
 - 1. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:
 - a. Voltage
 - b. Calculated symmetrical fault-current magnitude and angle.
 - c. Fault-point X/R ratio.
 - d. No AC Decrement (NACD) ratio.
 - e. Equivalent impedance.
 - f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
 - g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.
 - h. Incident Energy and Flash Protection Boundary Calculations
 - 2. Arcing fault magnitude.
 - 3. Protective device clearing time.
 - 4. Duration of arc.
 - 5. Arc-flash boundary.
 - 6. Working distance.
 - 7. Incident energy.
 - 8. Hazard risk category.
 - 9. Recommendations for arc-flash energy reduction.
- F. Fault study input data, case descriptions, and fault-current calculations, including a definition of terms and guide for interpretation of the computer printout.
- G. Equipment specific Arc Flash Warning Labels.
- H. Recommendations for system improvements, where needed.

2.3 ARC-FLASH WARNING LABELS

- A. Provide a 3.5-by-5-inch thermal transfer label of high-adhesion polyester for each work location included in the analysis.

- B. The label shall have an orange header with the wording, “WARNING, ARC-FLASH HAZARD,” and shall include the following information taken directly from the final arc-flash hazard analysis.
 - 1. Flash Hazard Boundary
 - 2. Short Circuit Current Available
 - 3. Shock Hazard when Cover is Removed
 - 4. Limited Approach Boundary
 - 5. Restricted Approach Boundary
 - 6. Prohibited Approach Boundary
 - 7. PPE Requirements, including the following:
 - a. Hazard Risk Category
 - b. Required Minimum Arc Rating of PPE in cal/cm²
 - c. Clothing Description
 - 8. Engineering report number, revision number, and issue date.
- C. Labels shall be machine printed, with no field-applied markings.
- D. Labels shall provide all flash boundaries, flash hazard levels, voltage levels, shock hazards and recommended PPE.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine Project overcurrent protective device submittals. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

3.3 ARC-FLASH HAZARD ANALYSIS

- A. Comply with NFPA 70E and its Annex D for hazard analysis study.
- B. Preparatory Studies: Perform Short-Circuit and Protective Device Coordination study prior to starting Arc-Flash Hazard Analysis as per contract documents.
- C. Calculate maximum and minimum contributions of fault-current size.
 - 1. Maximum calculation must assume maximum contribution from utility and must assume motors to be operating under full-load conditions.

2. Calculate arc-flash energy at 85 percent of maximum short-circuit current in accordance with IEEE 1584 recommendations.
 3. Calculate arc-flash energy at 38 percent of maximum short-circuit current in accordance with NFPA 70E recommendations.
 4. Calculate arc-flash energy with utility contribution at minimum and assume no motor contribution.
- D. Calculate arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts. The flash protection boundary and the incident energy shall be calculated at all significant locations in the electrical distribution system where work could be performed on energized parts, including, but not limited to, the following:
1. Disconnect switches. Electrical switchgear and switchboards.
 2. Enclosed circuit breakers.
 3. Meter Sockets and assemblies.
 4. Motor starters.
 5. Panelboards.
 6. Automatic or Manual Transfer Switches.
 7. Transformers.
 8. Emergency Generator
- E. Include medium- and low-voltage equipment locations, except equipment fed from transformers smaller than 75 kVA.
- F. Calculate limited, restricted, and prohibited approach boundaries for each location.
- G. Incident energy calculations must consider accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations must take into account changing current contributions, as sources are interrupted or decremented with time. Fault contribution from motors and generators must be decremented as follows:
1. Fault contribution from induction motors must not be considered beyond three to five cycles.
 2. Fault contribution from synchronous motors and generators must be decayed to match actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 p.u. to 3 p.u. after 10 cycles).
- H. Arc-flash energy must generally be reported for maximum of line or load side of circuit breaker. However, arc-flash computation must be performed and reported for both line and load side of circuit breaker as follows:
1. When circuit breaker is in separate enclosure.
 2. When line terminals of circuit breaker are separate from work location.
- I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.
- J. For each equipment location with a separately enclosed main device, calculations for incident energy and flash protection boundary shall include both the line and load side of the main breaker.
1. When performing incident energy calculations on the line side of a main breaker, the line side and load side contributions must be included in the fault calculation.

- K. Arc Flash calculation shall be based on actual overcurrent protective device clearing time. Maximum clearing time will be capped at 2 seconds based on IEEE 1584 section B.1.2. Where it is not physically possible to move outside of the flash protection boundary in less than 2 seconds during an arc flash even, a maximum clearing time based on the specific location shall be utilized.
- L. Complete Arc Flash report shall be used for the preparation of Arc Flash Warning labels for electrical equipment. Labels shall not be made until the Commissioner has no further comments to the final report.
- M. Provide an 8-hour instructor led "Electrical Safety Course" which includes NFPA 70E materials, including the selection of personal protective equipment. The instruction shall be certified and provided by an OSHA authorized Instructor. Instruction shall occur at the City of New York facility. Instruction materials shall be provided by the Contractor.

3.4 POWER SYSTEM DATA

- A. Obtain data necessary for conduct of arc-flash hazard analysis.
 - 1. Verify completeness of data supplied on one-line diagram on Drawings. Call discrepancies to Commissioner's attention.
 - 2. For new equipment, use characteristics from approved submittals under provisions of action submittals and information submittals for this Project.
- B. Electrical Survey Data: Gather and tabulate the following input data to support study. Comply with recommendations in IEEE 1548 and NFPA 70E as to amount of details that is required to be acquired in field. Field data gathering must be under direct supervision and control of the contractor's professional engineer in charge of performing study and must be by or under supervision of qualified electrical professional engineer. Data include, but are not limited to, the following:
 - 1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 - 2. Obtain electrical power utility impedance or available short circuit current at service.
 - 3. Power sources and ties.
 - 4. Short-circuit current at each system bus (three phase and line to ground).
 - 5. Full-load current of loads.
 - 6. Voltage level at each bus.
 - 7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
 - 8. For reactors, provide manufacturer and model designation, voltage rating and impedance.
 - 9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
 - 10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
 - 11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
 - 12. Busway manufacturer and model designation, current rating, impedance, lengths, size, and conductor material.

13. Motor horsepower and NEMA MG 1 code letter designation.
14. Low-voltage conductor sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).
15. Medium-voltage conductor sizes, lengths, conductor material, conductor construction and metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).

3.5 LABELING

- A. Apply one arc-flash label on front cover of each section of equipment and on side or rear covers with accessible live parts and hinged doors or removable plates for each equipment included in study. Base arc-flash label data on highest values calculated at each location.
- B. Each piece of equipment listed below not fed by single transformer smaller than 75 kVA must have arc-flash label applied to it:
 1. Low-voltage switchgear.
 2. Switchboards.
 3. Panelboards.
 4. Low voltage transformers.
 5. Safety switches.
 6. Control panels.
- C. Note on record Drawings location of equipment where personnel could be exposed to arc-flash hazard during their work.
 1. Indicate arc-flash energy.
 2. Indicate protection level required.

3.6 APPLICATION OF WARNING LABELS

- A. Install arc-flash warning labels under direct supervision and control of qualified electrical professional engineer licensed in the state of New York.

END OF SECTION 260573.19

SECTION 26 08 00

COMMISSIONING OF ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 SUMMARY

- A. This section includes commissioning process requirements for Electrical systems, assemblies, and equipment.
- B. Related Sections:
 - 1. DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for general commissioning process requirements.

1.3 DESCRIPTION

- A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the Owner's Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.
- B. The Commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.
- C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Owner's Project Requirement's as detailed in the Contract Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only

secondarily to verify compliance with equipment specifications. The CxA will notify the Contractor, or Commissioner as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

- B. The CxA will receive a copy of the final approved submittals.
- C. In addition, the Contractor is to provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports
- D. Refer to the DDC General Conditions Section 013300 “Submittal Procedures” and Section 019113 “General Commissioning Requirements for MEP Systems” for general commissioning submittal requirements.

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractor will comply with test manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Commissioning Kick-Off Meeting – Construction Team: The Contractor will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.
- B. Commissioning Meetings: The Contractor will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.
- C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process.
- D. Pre-testing Meetings: The Contractor will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures,

testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.

- E. Testing: The Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.
- F. Manufacturers' Inspection and Startup Services: The Contractor will coordinate services of manufacturers' inspection and startup services.
- G. Testing, Adjusting and Balancing: The Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the electrical systems and controls systems in Division 26. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor and the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems.
- B. Red-lined Drawings (As-Builts): The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start

of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The Contractor will create the as-built drawings.

- C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for Contractor's responsibilities.
- B. Attend construction phase controls coordination meetings.
- C. Provide information requested by the CxA for final commissioning documentation.
- D. Prepare preliminary schedule for electrical system orientations and inspections, operation and maintenance manual submissions, orientation sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.
- E. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- F. Provide detailed startup procedures.
- G. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications.
- H. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.
- I. Respond to provided new deficiencies and/or responses within five (5) business days.
- J. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the Contract Documents. Submit to CxA 45 days after submittal acceptance.
- K. Coordinate with the CxA to provide 48-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- L. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.

- M. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. Electrical equipment including switchgear, panel boards, motor control centers, lighting, receptacles, dimmers and all other equipment furnished under Division 26.
 - 2. Emergency generators, ATS switches and emergency power systems.
- N. The equipment suppliers shall document the performance of their equipment.
- O. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- P. Contractor responsibilities to be completed by Equipment Suppliers:
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York’s personnel, to keep warranties in force.
 - 2. Assist in equipment testing.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

3.3 CxA'S RESPONSIBILITIES

- A. Roles and Responsibilities
 - 1. Refer to the DDC General Conditions Section 019113 “General Commissioning Requirements for MEP Systems” for general CxA responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that Electrical systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Electrical testing shall include the entire Electrical installation, from the incoming power equipment throughout the distribution system. Testing shall include measuring, but not be limited to resistance, voltage, and amperage of system(s) and devices.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the Contractor shall prepare detailed testing plans, procedures, and checklists for Electrical systems, subsystems, and equipment. The Contractor shall ensure the participation of the electrical subcontractor.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Electrical system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 26 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CxA.
- B. Electrical Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections 230923 "Direct Digital Control (DDC) System for HVAC" and 230993.11 "Sequence of Operations for HVAC Direct Digital Control". Assist the CxA with preparation of testing plans.
- C. Emergency Generator Testing and Acceptance Procedures: Provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

- D. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- E. Electrical Distribution System Testing: Provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested
- F. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. Commissioning shall be performed on equipment and systems including but not limited to the following:
 - 1. Automatic temperature controls integrated with the electrical systems
 - 2. Automatic Transfer Switch
 - 3. Emergency Generator
 - 4. Fire Alarm System
 - 5. Switchboard
 - 6. Panelboards
 - 7. Lighting Controls

3.7 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT

- A. Deficiencies/Non-Conformance
 - 1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractor on a standardized form.
 - 2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall indicate the proposed means of correcting the issue and the anticipated date of correction. If further information is required to clarify the issue, the Contractor's response shall include a request such clarification. If the Contractor understands that the issue has been resolved or was noted in error, the Contractor's response shall provide an explanation of their reasoning, including reference to Contract Documents as necessary.
 - 3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
 - 4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
 - 5. As tests progress and a deficiency is identified, the CxA discusses the issue with the Contractor.
 - 6. When the issue does not require further clarification for the Contractor to resolve, the CxA documents the deficiency and the Contractor's response and corrections or plans for correction. The CxA and the Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated to demonstrate correct operation or function.
 - 7. When additional information is required about any deficiency, whether to clarify the issue or to clarify the means of resolution or acceptance, the CxA documents the deficiency and the Contractor's response. The CxA will send the deficiency to the Commissioner and the

Contractor, who shall forward to any subcontractors required for the correction. Once all parties are in agreement as to the means of resolving the issue, the CxA will document the agreed-upon resolution process. The CxA will document the correction or resolution. If the correction requires work by the Contractor, the Contractor and CxA will reschedule the test to demonstrate correct operation and function.

B. Failure due to Manufacturer Defect

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CxA and the Commissioner. In such case, the Contractor shall provide the Commissioner with the following.
 - a) Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
 - b) Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
 - c) The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
 - d) Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
 - e) Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

3.8 APPROVAL

- A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

3.9 SEASONAL TESTING

- A. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the Contractor, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

3.10 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in the DDC General Conditions Section 017839 “Contract Record Documents and Section” 019113 “General Commissioning Requirements for MEP Systems.”
- B. The specific content and format requirements for the standard O&M manuals are detailed in the DDC General Conditions Section 017839 “Contract Record Documents” and Section 019113 “General Commissioning Requirements for MEP Systems.” Special requirements for the controls subcontractor and TAB subcontractor are found in Division 23.
- C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

3.11 INSTRUCTION OF NEW YORK CITY PERSONNEL

- A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.
- B. The CxA shall oversee the instruction of the City of New York’s personnel for commissioned equipment and systems.
 - 1. The CxA shall interview the City of New York’s personnel to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor who will ensure participation of the subcontractor.
 - 2. In addition to these general requirements, the specific instruction requirements of the City of New York’s personnel by the Contractor who will ensure the subcontractors and vendors are specified in the individual sections listed in DDC’s General Conditions Section 017900 “Demonstration and Owners’ Pre-Acceptance Orientation.”
 - 3. The Contractor shall ensure that each subcontractor and vendor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.
 - 4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
 - a. Equipment (included in instruction)
 - b. Intended audience
 - c. Location of instruction
 - d. Objectives

- e. Subjects covered (description, duration of discussion, special methods, etc.)
 - f. Duration of instruction on each subject
 - g. Qualified instructor for each subject
 - h. Instructor qualifications
 - i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
5. For the primary equipment, the Contractor will ensure the controls subcontractor provides a discussion of the control of the equipment during the instruction conducted by each subcontractor or vendor.
 6. Instruction documentation shall include the following items:
 - a. Copy of the instruction plan, including schedule, syllabus, and agenda.
 - b. Copy of the Owner's Project Requirements.
 - c. Copy of the Basis of Design.
 - d. Compiled operations manuals.
 - e. Compiled maintenance manuals.
 - f. Completed manufacturer instruction manuals.
 - g. Red-lined drawings.
 7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.
 8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment
 9. Video recording of the instruction sessions will be verified by the CxA in electrical format, at the discretion of the Commissioner.

END OF SECTION 260800

SECTION 260923 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DESCRIPTION

- A. The lighting control system shall consist of intelligent lighting relay control panels and dimmer cabinets with programmable switch inputs. The control system shall provide total networking between control panels. Programming the system shall be through a personal computer running the Arena control software. Operation of the system shall be through the PC or by a manual control console. Lighting control system shall be independent of all other building systems and independently powered.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Product Data: Submit manufacturer's data on lighting control system and components.
- C. One Line Diagram: Submit a one line diagram of the system configuration proposed.
- D. Typical Wiring Diagrams: Submit typical wiring diagrams for components including, but not limited to, relay panels, relays, low voltage switches, occupancy sensors, programmable panel master switches, programmable system switch panels, telephone override modules, data communications devices and wire, and the central operator PC.
- E. Provide a demonstration of components of control system, how they function, and the graphic capabilities of the software.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Manufacturers: Firms regularly engaged in manufacture of lighting control equipment whose products have been in satisfactory use in similar service for not less than three (3) years.
- C. Component Pretesting: All components and assemblies shall be factory pretested and burned-in prior to installation.

- D. System Checkout: Factory-trained technicians shall be available to functionally test each component in a programmable system after installation to verify proper operation and confirm that the panel wiring and addressing conform to the wiring documentation.
- E. System Support: Factory applications engineers shall be available for on-site training as well as telephone support.
- F. U.L. Approvals: Remote panels are to be U.L. listed under UL 916 Energy Management Equipment.
- G. FCC Emissions: All assemblies shall be in compliance with FCC emissions standards specified in Part 15, Subpart 'J' for Class 'A' application.

1.5 IDENTIFICATION

- A. Provide an identification nameplate for each equipment cabinet.
- B. A wiring schedule directory card shall be affixed to the rear of the cover to allow ready identification of circuits/relays/loads controlled when the door is open.

1.6 SEQUENCE OF OPERATION

A. Control Zone Types

1. The following lighting systems in the Animal Shelter are controlled by the Lighting Control System only:
 - a. House/Emergency
 - b. Cleaning
 - c. Steplights
 - d. Suits Soffits
 - e. Acousitical Cloud
2. The following areas shall be controlled by the Lighting Control System and be provided with a momentary contact switch for local override.
 - a. Office
 - b. Public Toilets
 - c. Locker room
3. The following areas shall have local on/off control and be part of the Lighting Control Systems. Local control is only operable when master control for these areas is on:
 - a. Exterior buildings,
 - b. Open Parking Areas
4. The following areas shall have local on/off control and not be part of the Lighting Control System:
 - a. MEP rooms
 - b. Offices
 - c. Loading Dock
 - d. Suite Toilet

- e. Storage Room
- f. Animal Exam/Surgery/House

B. Control Description

1. Animal Shelter/House

- a. Emergency Fixtures - These LED fixtures have a dual purpose; they are used as emergency egress exit lighting connected to the emergency life safety power source. All these fixtures are controlled together on a two-zone basis, alternate fixtures. In the event of a power failure these fixtures shall be on a full output.
- 2. Cleaning Fixtures - All these metal halide fixtures are controlled together
- 3. Steplights shall be connected to the emergency life safety power source. In the event of a power failure these fixtures shall be on.
- 4. Suites - Lighting in the suites shall be activated only when the building is open to the public or for maintenance. When activated, lights shall have local on/off control. Entrance hall bathroom and bar shall be on/off locally with no system override. In the event of a controlled blackout lights shall flash prior to blackout as a warning to suite occupants.
- 5. Momentary contact bypass shall be provided in areas where temporary access is required for maintenance or cleaning. This switch will activate a percentage of the lights in these spaces. One switch will be provided per floor per quadrant and located in the janitor's closet. The Lighting Control System will monitor these lights and turn them off automatically after a predetermined length of time.

C. Location of Controls

- 1. The main control shall be located in the building entrance lobby. and determined by the Commissioner.
- 2. Other control stations shall be located in the first floor. Additional control locations shall be provided at the Commissioner's request

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Acuity nLight -No Substitutions.

2.2 OPERATOR'S INTERFACE HARDWARE

- A. The main control station shall include the following interconnected components capable of providing functions as specified herein:
- B. UPS - Battery back-up shall be capable of maintaining operation of the Lighting Control System for the duration of an event should the power source for the Lighting Control System fail.

- C. Switchbank - This piece of equipment shall serve as a manual means of controlling the building wide relays and shall be redundant of the PC based control of the lighting relays. The switchbank shall be capable of initiating on/off, preset and dimming functions from a panel or console that requires no special knowledge of programming. Provide control for up to 100 lighting control zones or combinations of control zones. The switchbank shall be capable of being locked against unauthorized use.

2.3 SYSTEM SOFTWARE

- A. System software shall be specifically designed or customized to meet the requirements of Contract Documents. The PC shall provide simple means of creating, editing and downloading user defined programming for the relay panels.
- B. Operational features shall be accessed through the use of pulldown menus - VIEW, ACTIVATE, EDIT and MAINTENANCE shall indicate the type of functions. Four levels of log-on password protection shall be keyed to the four main menu functions and shall restrict operators to shoes functions authorized by their password.
- C. The system shall monitor lamp burning hours and total lamp starts for selected relays. Hours shall be continuously compared to user defined maximums indicating need for maintenance or relamping. A warning message shall be displayed on the screen when maximums are exceeded.
- D. The system shall respond to programmed operating schedules as defined by the user that will function automatically once initiated.
- E. Graphics Package
 - 1. The visual display aspects of the software shall be color graphic based.
 - 2. Reflected ceiling and catwalk level plans shall be transposed to graphic displays indicating all fixtures and their locations. Creating or editing of control zones shall be accomplished by selecting a fixture and setting the status to on or off. While selected, the fixture type, wattage and status shall be displayed on the screen.

2.4 LIGHTING RELAY CABINETS

- A. The lighting relay panels shall be mounted in electrical closets as indicated on the drawings.
- B. Modular relay panels shall consist of the following:
 - 1. NEMA 1 enclosure sized to accept an interior with up to 64 relays.
 - 2. Interior: Bracket and circuit board backplane with pre-mounted relays. Each relay shall be capable of direct On/Off control by a low voltage switch. Relays shall be momentary-pulsed mechanically latching contactors rated at 20 amps, 120-277 VAC.
 - 3. Cover: Hinged, lockable configuration. Surface hinged locking covers shall provide an LED status viewing window and a lockable door for access to low voltage wiring compartment.
- C. Relay panels shall be intelligent via programmable switch inputs. Each panel shall be part of the system wide network and be capable of stand alone control. Data resident in each panel shall be transferable to the PC for editing. Panel intelligence shall have a battery back-up against loss due to power failure.

2.5 CONTROL DEVICES

A. Momentary Contact Switch

1. The system shall allow dry contacts for override purposes. An input shall be linkable to any number of relays for override control.

B. Photocell

1. The control system shall accept indoor, outdoor, and skylight, photo sensing heads. Photocell control shall permit the user to specify the actual footcandle level where desired switching shall occur. An internal device shall exist to prevent the photo sensor control to toggle inadvertently as the sensor passes through the control threshold.

2.6 DIMMERS

- ### A.
- Dimming control shall be provided for designated circuits. Dimming mode shall have a variable automatic fade in/fade out. Dimming control shall interface with the Lighting Control System so that on/off and dimming functions are by the Lighting Control System.

2.7 TELEPHONE OVERRIDE

- ### A.
- Three (3) telephone override modules shall be connected to the dataline. Each module will have its own extension number and associated RJ11 jack. The phone override module will allow existing touchtone phones to override any relay or group of relays in the system. The operation will be the same as that of a direct override switch to the relay.

2.8 SYSTEM NETWORK

- ### A.
- The controllers in each intelligent panel shall be linked over a single dataline. The dataline shall provide a highly reliable high speed communications bus for transferring control and status data to and from the lighting automation panels.

B. Hardware Features

1. Dataline shall be 18/2 twisted pair with shield meeting Class 2P. 1 turn per 3 inches, min. 50 pf/ft. max.
2. Maximum Length: 4,000 feet.
3. Maximum number of panels on a dataline: 500.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- ### A.
- Refer to DDC General Conditions for execution requirements.

3.2 GENERAL - DOCUMENTATION

- A. Manufacturer shall provide as-built drawings to the City of New York to include:
 - 1. System 1-line showing all panels, number and type of switches and sensors, dataline, programmable system switches, telephone override modules and central PC.
 - 2. Drawings for each panel showing hardware configuration and numbering.
 - 3. Panel wiring schedule.
 - 4. Typical wiring diagrams for each component.

3.3 INITIAL PROGRAMMING

- A. The system shall be turned over to the City of New York preprogrammed with complete site specific panel and load documentation installed. Programming shall be completed prior to the City of New York staff instruction.

3.4 SYSTEM START-UP

- A. Provide a trained technician to confirm proper installation and operation of all system components

3.5 EXAMINATION

- A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.
- B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.6 INSTALLATION OF SENSORS

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
- B. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's instructions.

3.7 INSTALLATION OF CONTACTORS

- A. Mount electrically held lighting contactors with elastomeric isolator pads to eliminate structure-borne vibration unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.8 INSTALLATION OF WIRING

- A. Wiring Method: Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size is 1/2 inch.
- B. Wiring within Enclosures: Separate power-limited and nonpower-limited conductors in accordance with conductor manufacturer's instructions.
- C. Size conductors in accordance with lighting control device manufacturer's instructions unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, device, and outlet boxes; terminal cabinets; and equipment enclosures.

3.9 IDENTIFICATION

- A. Identify components and power and control wiring in accordance with Section 260553 "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
 - 2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
- B. Label time switches and contactors with a unique designation.

3.10 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
 - 1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit City of New York's operations.
 - 2. For daylighting controls, adjust set points and deadband controls to suit City of New York's operations.
 - 3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.11 OPERATION ASSISTANCE

- A. Provide a trained technician to assist the lighting control system operator for the first three (3) events.
- B. Factory telephone support shall be available at no cost to the City of New York for the duration of the guarantee period. Factory assistance shall consist of solving programming or application questions concerning the control equipment. The manufacturer shall be capable of trouble shooting the software aspects of the system from a factory location via modem. This does not include operation of the system in real time.

3.12 MAINTENANCE

A. Software and Firmware Service Agreement:

1. **Technical Support:** Beginning at Substantial Completion, verify that software and firmware service agreement includes software support for one (1) year.
2. **Upgrade Service:** At Substantial Completion, update software and firmware to latest version. Install and program software upgrades that become available within one (1) year from date of Substantial Completion. Verify upgrading software includes operating system and new or revised licenses for using software.
 - a. **Upgrade Notice:** No fewer than 30 days to allow City of New York to schedule and access the system and to upgrade computer equipment if necessary.
3. **Upgrade Reports:** Prepare written report after each update, documenting upgrades installed.

END OF SECTION 260923

SECTION 262213 - LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Low-voltage distribution transformers rated 1000V or less, as specified herein and in accordance with the Contract Documents.
- B. Products Furnished, but Not Installed, under This Section:
1. Concrete pad.
- C. Work included under , under This Section:
1. Dry Type Transformers
 2. Vibration Isolation.
 3. Mounting Supports.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Manufacturer
1. Submit manufacturer's data, including voltages, electrical kVA ratings, heat release data, impedance ratings and characteristics, tap quantities and configurations, insulation type, rated temperature rise, physical dimensions, noise ratings and weights for each type and size dry type transformer as indicated on the Contract Documents.
 2. Factory Test Results.
 3. Certified vibration isolation and seismic restraint details and product data indicating the number and location of each support and restraint; and the exact number, size and type of each anchor.
 4. Field Quality Control test reports, per Part 3 of these specifications.
 5. Detailed wiring diagrams identifying terminals for tap changing and connecting field-installed wiring.
 6. Operation and Maintenance Data.
 7. Termination Lugs Quantity and Size
 8. Indicate all required access points and minimum required clearances.

1.4 REFERENCE STANDARDS

- A. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
1. U.L. Standard 506 - Transformers
 2. U.L. Standard 1561 – K-Factor Rated Transformers
 3. ANSI/IEE C57.12.01 – General Requirements for Dry-Type Distribution and Power Transformers.
 4. ANSI/IEEE C57.12.91 – Test Code Dry-Type Distribution and Power Transformers.
 5. ANSI/IEEE C57.110 – Recommended Practice for Establishing Transformer Capability When Supplying Non-sinusoidal Load Currents.
 6. NEMA ST 1 – Specialty Transformers
 7. NEMA ST 20 – Dry-Type Transformers for General Applications
 8. DOE2016 – U.S. Department of Energy, Energy Conservation Program.
 9. Distribution Transformers Energy Conservation Standards DOE 10 CFR Part 431, Latest Edition.
 10. All dry type transformers shall be of the quiet type, operating at sound levels below NEMA ST 20 standards as follows: Sound levels shall be warranted by the manufacturer.

Size in kVA	Specification*	NEMA ST 20
0-9	35 dB	40 dB
10-50	40 dB	45 dB
51-150	45 dB	50 dB
151-300	50 dB	55 dB
301-500	55 dB	60 dB
501-700	60 dB	62 dB
701-1000	62 dB	64 dB

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. All equipment and material provided on this Project shall be UL listed, in accordance with the Contract Documents and suitable for its intended use on this Project.
- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.
- D. Source Limitations: Obtain each transformer type through one (1) source from a single manufacturer.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers".

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Inspection: On receipt, inspect for and note shipping damage to packaging and transformer.
 - 1. If manufacturer packaging is removed for inspection, and transformer will be stored after inspection, re-package transformer using original or new packaging materials that provide protection equivalent to manufacturer's packaging.
- B. Storage: Store in warm, dry, and temperature-stable location in original shipping packaging.
- C. Temporary Heating: Apply temporary heat in accordance with manufacturer's published instructions within enclosure of ventilated-type units, throughout periods during which equipment is not energized and when transformer is not in space that is continuously under normal control of temperature and humidity.
- D. Handling: Follow manufacturer's instructions for lifting and transporting transformers.

1.7 WARRANTY

- A. Provide two (2) year warranty for all distribution transformers for the project from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GENERAL TRANSFORMER REQUIREMENT

- A. Description: Factory-assembled and -tested, air-cooled units for 60 Hz service.
- B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory, and marked for intended location and application.
- C. Transformers Rated 15 kVA and Larger:
 - 1. Comply with 10 CFR 431 (DOE 2016) efficiency levels.
 - 2. Marked as compliant with DOE 2016 efficiency levels by qualified electrical testing laboratory.
- D. Shipping Restraints: Paint or otherwise color-code bolts, wedges, blocks, and other restraints that are to be removed after installation and before energizing. Use fluorescent colors that are easily identifiable inside transformer enclosure.

2.2 DRY TYPE TRANSFORMERS

- A. Transformers shall be 80°C. temperature rise above 40°C. ambient. Transformers shall be capable of carrying a 30% continuous overload without exceeding a 150°C. rise in a 40°C. ambient.
- B. All insulating materials shall exceed NEMA standards and be suitable for 220°C. U.L. component recognized insulation system.

C. Coils

1. Coil conductors shall be continuous with terminations welded without auxiliary flux material. Coils shall be wound with copper magnet wire, vacuum impregnated with non-hydroscopic, thermosetting varnish. Coils shall be protected with an outer layer of glass tape or similar quality insulation. Provide each layer with end-fillers or tie-downs to ensure maximum mechanical strength. Tap terminations shall be to magnet wire. Primary and secondary magnet wire shall be braced directly to bus studs or lugs. Windings shall be continuous with no splices. One (1) coil per phase in the primary and secondary.
2. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

D. Core

1. Core shall be manufactured from a high-grade, non-aging 29 gauge silicon steel with high magnetic permeabilities, low hysteresis and eddy current losses. Magnetic flux densities shall be kept well below saturation to allow for a minimum of ten (10) percent over-voltage excitation.
2. Laminations shall be cut with the direction of the grain and free from burrs. All laminations shall be core plated or annealed and firmly butted. The core laminations shall be clamped tightly and compressed to provide quiet operation and to prevent damage during shipment or rough handling.
3. Taps for Transformers 25kVA and Larger: Provide NEMA Standard taps: two (2) 2.5% above and four (4) 2.5% below normal full capacity. For step-up transformers: provide two (2) 2.5% above and two (2) 2.5% below normal full capacity.
4. Taps for Transformers 7.5 to 24kVA: One (1) 5% tap above and one (1) 5% tap below normal full capacity.
5. The core and coil assembly shall be grounded to the enclosure by means of a flexible copper grounding strap of adequate size.

E. Enclosures

1. Provide lifting brackets on all sizes.
2. Ventilated openings shall be such as to avoid accidental access to live parts
3. The entire enclosure shall be degreased, cleaned, phosphatized and painted with one (1) coat of zinc chromate primer and two (2) coats of ANSI 61 gray enamel.
4. NEMA 250, Type 2, ventilated, unless otherwise indicated on contract document
5. The following enclosure requirements shall be in accordance with UL Standard 506:
 - a. Ventilation Openings
 - b. Corrosion Resistance
 - c. Cable Bending Space
 - d. Grounding Provisions
 - e. Surface Temperatures
 - f. Wiring Compartment Temperature Rise Terminations

F. Mounting

1. Ventilated units up to 750 lb: Suitable for wall, floor or ceiling mounting
2. Ventilated units over 750 lb: Suitable for floor mounting only.

G. Vibration Isolation

1. All transformers shall have vibration isolation that isolates the enclosure from the core and the coil assembly. Additional vibration isolators shall be provided between trapeze or universal hangers of suspended transformer and its case and between transformer enclosure and floor for floor mounted units. Use flexible metallic conduit of 24 inch minimum length, with external grounding jumper for final connection to transformer enclosure.
2. Each dry type transformer shall be resiliently suspended on double deflection neoprene in the shear hanger rod isolator assemblies, capable of providing minimum 3/8 inch static deflection.
3. Trapeze mounted assemblies shall be equipped with seismic cables appropriate for building seismic zone.

2.3 EFFICIENCY LEVELS

- A. All transformers shall meet DOE 2016 efficiencies as identified in the table below

Single Phase			Three Phase		
KVA	DOE	2016	KVA	DOE	2016
	Efficiency			Efficiency	
15	97.70		15	97.89	
25	98.00		30	98.23	
37.5	98.20		45	98.40	
50	98.30		75	98.60	
75	98.50		112.5	98.74	
100	98.60		150	98.83	
167	98.70		225	98.94	
250	98.80		300	99.02	
333	98.90		500	99.14	
N/A	-		750	99.23	
N/A	-		1000	99.28	

2.4 SHIELDED ISOLATION (K-RATED) TRANSFORMERS

- A. Transformers indicated on the Contract Documents to be shielded isolation type or K-rated shall be provided with an electrostatic shield consisting of a single turn of copper placed between the primary and secondary windings and grounded to the transformer core.
- B. Shielded isolation type or K-rated transformers indicated on the Contract Documents shall be U.L. listed as suitable for non-sinusoidal current loads with a minimum K factor of K-13. The secondary neutral conductor and neutral pad shall be rated to carry 200% of the nominal phase current.
 1. Core and winding design shall be such as to minimize eddy current losses and to reduce the core flux density well below the saturation point to prevent core overheating caused by harmonic distortion

2.5 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following:

Bronx Animal Care Center and Veterinary Clinic
2060 Bartow Ave, Bronx 10475

LOW-VOLTAGE DISTRIBUTION TRANSFORMERS

1. ABB
2. Square 'D'
3. Eaton
4. Siemens
5. Or Approved Equal

2.6 SOURCE QUALITY CONTROL

- A. Testing Administrant: Engage qualified electrical testing agency to evaluate transformer.
- B. Factory Tests and Inspections: Test and inspect assembled system, by, or under supervision of, qualified electrical testing laboratory, in accordance with IEEE C57.12.01 and IEEE C57.12.91 before delivering to site. Affix label with name and date of qualified nationally recognized electrical testing laboratory's (NRTL) as defined by OSHA in 29 CFR 1910.7 with certification of system compliance on control units.
 1. Resistance measurements of windings at rated voltage connections and at tap connections.
 2. Ratio tests at rated voltage connections and at tap connections.
 3. Phase relation and polarity tests at rated voltage connections.
 4. No load losses, and excitation current and rated voltage at rated voltage connections.
 5. Impedance and load losses at rated current and rated frequency at rated voltage connections.
 6. Applied and induced tensile tests.
 7. Regulation and efficiency at rated load and voltage.
 8. Insulation-Resistance Tests:
 - a. Line-side to ground.
 - b. Load-side to ground.
 - c. Line-side to load-side.
 9. Temperature tests.
 10. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project. Submit manufacturer's sound testing prior to equipment shipping.
 11. Source Limitations: Obtain each transformer type through one (1) source from a single manufacturer.
 12. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
 13. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers".
- C. Nonconforming Work:
 1. System equipment that does not pass tests and inspections will be considered defective.
- D. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Where transformers are to be floor mounted, transformers shall be installed on a 4" high concrete housekeeping pad. Provide ¾" thick neoprene pads between the transformer stand and housekeeping pad. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Contractor to confirm transformer is leveled.
- B. Provide grounding conductor from the transformer secondary to the nearest building ground for each separately derived system. Grounding electrode conductor shall be sized in accordance with NEC Section 250 for the derived phase conductors.
- C. Transformer taps shall be adjusted for rated output voltage under normal operating conditions. Adjust as required.
- D. Correct any deficiencies identified by tests and retest until acceptable results are achieved.
- E. Provide engraved nameplates for each transformer. Nameplate for transformer to include the following.
 - 1. Manufacturer Information.
 - 2. UL Stamps.
 - 3. kVA Rating.
 - 4. Primary and Secondary Voltages.
 - 5. Tap Voltages and Percentages.
 - 6. Insulation Class.
 - 7. Temperature Rise.
 - 8. Weight.
 - 9. Impedance.
 - 10. Wiring Configuration.
 - 11. Enclosure Type.
 - 12. Date of Installation.

3.3 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

3.4 FACTORY TESTING

- A. Ratio tests at the rated voltage connection and at all tap locations.

- B. Polarity and phase relation tests on the rated voltage connection.
- C. Applied and induced potential tests.
- D. No load and excitation current at rated voltage on the related voltage connection.
- E. Efficiency at 25, 50, 75 and 100 percent rated loads.
- F. Sound levels.

3.5 FIELD QUALITY CONTROL TESTING

- A. At a minimum, perform the following field quality tests and visual inspections, in accordance with NETA Acceptance Testing Specifications.
- B. Verify Transformer Secondary Voltage.
 - 1. Ensure proper primary and secondary voltages.
 - 2. Compile a comprehensive listing of transformers, including ratings, locations and mounting type.
 - 3. Compare equipment nameplate data with the Contract Documents and specifications.
 - 4. Inspect physical and mechanical condition.
 - 5. Verify that resilient mounts are free and that any shipping brackets have been removed.
 - 6. Verify ground has been installed.
 - 7. Measure primary and secondary voltages.
 - 8. Insulation Resistance Tests.
 - 9. Perform an Infrared Scan of all transformer connections.
- C. Submit all test results. All tests shall be certified by the testing agency.

3.6 EXAMINATION

- A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for transformers.
- B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's published instructions.
- C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.
- D. Verify that ground connections are in place and requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 Ω at location of transformer.
- E. Environment: Enclosures must be rated for environment in which they are located. Covers for UL 50E, Type 4X enclosures may not cause accessibility problems.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.7 INSTALLATION

- A. Install wall-mounted transformers level and plumb with wall brackets fabricated from design drawings signed and sealed by qualified structural professional engineer licensed in the state of New York.
 - 1. Coordinate installation of wall-mounted and structure-hanging supports with actual transformer provided.
 - 2. Brace wall-mounted transformers as specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems".
- B. Install transformers level and plumb on concrete base with vibration-dampening supports. Locate transformers away from corners and not parallel to adjacent wall surface.
- C. Construct concrete bases and anchor floor-mounted transformers in accordance with manufacturer's published instructions, seismic requirements applicable to Project, and requirements in Section 260529 "Hangers and Supports for Electrical Systems."
 - 1. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- D. Secure transformer to concrete base in accordance with manufacturer's published instructions.
- E. Secure covers to enclosure and tighten bolts to manufacturer-recommended torques to reduce noise generation.
- F. Remove shipping bolts, blocking, and wedges.

3.8 CONNECTIONS

- A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- C. Tighten electrical connectors and terminals in accordance with manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- D. Provide flexible connections at conduit and conductor terminations and supports to eliminate sound and vibration transmission to building structure.

3.9 ADJUSTING

- A. Record transformer secondary voltage at unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 5 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare written report recording output voltages and tap settings.

3.10 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

3.11 FOLLOW UP SERVICE

A. Infrared Scanning: Two months after Substantial Completion, perform infrared scan of transformer connections.

1. Use infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
2. Perform two follow-up infrared scans of transformers, one at four months and another at 11 months after Substantial Completion.
3. Prepare certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial actions taken, and scanning observations after remedial action.

END OF SECTION 262213

SECTION 262413 - SWITCHBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Switchboards.
 - 2. Service Switches
 - 3. Disconnecting and Overcurrent Protective Devices
 - 4. Surge Protection Devices (SPD)
 - 5. Utility Metering and C.T. Equipment
 - 6. Mimic Bus
 - 7. Short Circuit Analysis and Arc Flash Study
 - 8. Instrumentation and Control Power
 - 9. Mimic Bus

1.3 COORDINATION

- A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings:
 - 1. Include fully detailed and dimensioned plans, sections and elevations of each section of the switchboards. Include information on type and size of structural supports, metal thicknesses, surface finishes, bus cross sections, and provisions for lifting. Drawings shall be a minimum of 1/4" scale.
 - 2. All concrete housekeeping pads must be sized and illustrated.
 - 3. Detail utility company's metering and C.T. cabinet provisions with indication of approval by the utility company.
 - 4. Include all required code and maintenance clearance space around each piece of equipment.

5. Detail descriptive documentation of any barriers specified for electrical insulation and/or isolation.
6. Conduit entrance locations and requirements must be identified.
7. Indicate shipping splits coordinated with the project delivery path to assure all equipment can be moved into place.

C. Product Data

1. Single line diagram of switch, fuse, circuit breakers, bus arrangements, ground fault protection, surge protective devices, fuse cut outs, metering arrangements, etc.
2. Furnish complete schematic wiring diagrams and a full set of equipment wiring diagrams for protective equipment relays, over current protection devices, pilot lights, alarms, controls, etc. Provide narratives for all wiring diagrams submitted.
3. Include full load heat rejection in BTU per hour for total components by switchboard.
4. All fuse and circuit breaker sizes and types must be indicated.
5. All nameplate information must be complete.
6. All mimic bus arrangements must be illustrated.
7. Short circuit and coordination study must be provided at the time of the switchboard submission. The switchboard submission must be coordinated with the study results.
8. All diagrams shall include system voltage, phase, frequency, bus current ratings and withstanding ratings.
9. Detail features, characteristics, ratings, and factory settings of the individual overcurrent protection devices and auxiliary components.
10. Detail enclosure types for each type other than NEMA 250, Type 1.
11. Include time-current coordination curves for each type and rating of overcurrent protective device included in the switchboards. Submit on translucent log-log graft paper, include selectable ranges for each type of overcurrent protective device.
12. Submit testing procedures which will be used for field quality testing.

D. Test Reports

1. Submit test data verification of fault current withstand rating.
2. Submit certified reports of field quality testing.
3. Seismic restraint calculations and certificate of compliance.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:

1. Ground Fault Circuit Protection UL 1053.
2. QMQB Operators UL E1818.
3. Bolted Pressure Switches UL 977.
4. Switchboards NEMA Standards PB-2, PB-2.1, PB-2.2; UL 891 and UL Service Entrance Label.
5. Meters ANSI Specification C 39.1.
6. ANSI C37.13.
7. ANSI C37.51.
8. NETA

- 9. Molded Case Circuit Breakers UL 489 and NEMA AB1.
- 10. NRTL labeled for service equipment.

- C. Each switchboard as a complete and finished product shall receive a single integrated equipment rating by the manufacturer. The integrated equipment short-circuit rating shall certify that all equipment is capable of withstanding the thermal and magnetic stress of a fault equal to the value calculated by the Contractor/manufacturer's coordination study. Such rating shall be established by actual tests by the manufacturer on similar equipment. This certification shall be permanently affixed to each switchboard. Test data shall be submitted to the Commissioner at the time of submission of Submittal Drawings.
- D. Obtain all switchboards, overcurrent protection devices, components, and accessories from a single manufacturer.

1.6 SHORT CIRCUIT AND COORDINATION STUDY

- A. Refer to the Overcurrent Protective Device Coordination Study specification section 260573.16 for all requirements.

1.7 ARC-FLASH HAZARD ANALYSIS

- A. Refer to the Overcurrent Protective Device Coordination Study specification section 260573.16 for all requirements.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.
- B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating. Provide minimum of 250Watts per section and provide required power connection to each heater to prevent condensation.
- C. Handle and prepare switchboards for installation in accordance with NEMA PB 2.1 and NPFA 70E.

1.9 WARRANTY

- A. Provide a five (5)-year warranty from the date of substantial completion for all defects in materials and workmanship.

PART 2 - PRODUCTS

2.1 SWITCHBOARDS

- A. General

1. Provide switchboards of the free standing, totally enclosed dead-front safety type, consisting of an assembly of bolted pressure switches; self-contained switch units; and thermal magnetic molded-case chassis mounted feeder circuit breakers of the number, size and arrangement shown on the Contract Documents.
2. If a front-only accessible switchboard is installed more than 12 inches from the wall, access must be sealed at each end per New York City Electrical Code.
3. Each switchboard shall be of front accessible type where all connections are accessible from the front.
4. Overcurrent devices shall be provided as individually mounted devices in switchboards of 1,600 amperes or more. Provide group mounted in switchboards rated below 1,600 amperes.
5. Carefully check the physical space limitations for each switchboard and furnish switchboards to match those conditions. Nothing in these specifications shall preclude the use of a custom designed switchboard (as reviewed by the Commissioner) to meet those limitations.
6. Switchboard enclosures shall be steel, NEMA 250, Type 1 and fully gasketed.
7. Provide service entrance label where required.
8. Provide dedicated switchboard cubicles for switches or circuit breaker taps serving fire pump(s). These cubicles shall be provided with steel barriers and painted red. The fire pump take-off shall be tapped ahead of the main service switch and after the main utility meter. Fire pump switches or breakers shall be in stand-alone sections, independent of the switchboard tap and any other overcurrent device or metering.
9. Provide High Pressure Contact (HPC) type switches when feeding step-up or step-down transformers. Switches must have a closing rating of twelve times (12x) the continuous current rating compared to a standard bolted pressure switch which has six times (6x) the closing rating.
10. All switchboards and service switches shall be rated for 200,000 AIC bracing, U.O.N.

B. Construction

1. The enclosure shall be formed structural steel, forming a rigid structure. Turned down peripheral edge on front and rear panels.
2. Completely enclosed on the back, front, and sides with removable panels. All closure plates shall be small enough for easy handling by the operator.
3. All sections shall be the same height, 90 inches, except as otherwise required due to physical space limitations. All sections shall be the same depth.
4. The switchboard enclosure shall be painted on all exterior surfaces. The paint finish shall be a medium gray, ANSI 49, applied by the electro-deposition process over an iron phosphate pre-treatment.
5. Provide steel barriers between each section of the switchboard.
6. Compartments indicated as "SPACE" or "FUTURE" shall be equipped with mounting brackets, supports, bus connections, and appurtenances at full rating of the overcurrent device compartment.

2.2 PULLBOX OVER SWITCHBOARD

- A. Where required for conduit terminations, provide a pullbox of the same type of construction and finish as the switchboard. Adequate ventilation to maintain temperature in the pullbox within the same limits as the switchboard.
- B. Provide cable supports for horizontal support of cables. Construct supports of ¾-inch conduit loosely enclosed by strong fiber tubes. Space supports no more than 24 inches horizontally and 6 inches vertically.

- C. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into the switchboard.
- D. Removable covers shall form top, front and sides. Top covers at rear shall be easily removable.

2.3 BUSES

- A. Bus bars shall be arranged throughout A-B-C left to right, top to bottom, and front to rear.
- B. Conductor material shall be copper of 98% conductivity silver plated.
- C. Bus shall be sized at 1,000 amperes per square inch, but, in no case, less than of sufficient cross section to limit temperature rise to 55°C above an ambient temperature of 40°C.
- D. Horizontal bus shall be full-size, tapered bus is not permitted. Provide bolt holes drilled and tapped for future extension at the end of the bus bars including the neutral and ground buses. The provisions shall include bus bars installed and extended to the extreme side of the section and shall be fabricated in such a fashion that the addition of a future section would require only the installation of standard bolted splice plates.
- E. All bus bars shall be rigidly braced to comply with the integrated equipment rating of the switchboard.
- F. Neutral bus shall be rated 100 percent of the ampacity of the phase buses.
- G. Bus bars shall be extended vertically to the fullest extent to allow the installation of future devices, space permitting.

2.4 FEEDER INSTALLATION AND TERMINATION

- A. Bolted and accessible from the front for front access type.

2.5 BOLTED PRESSURE SWITCHES

- A. Switches 1600 amperes and above and all main switches and service switches shall be bolted pressure type.
- B. Manually operated and, where indicated, electrically tripped. Dead front, totally enclosed in a cabinet designed as a complete magnetic circuit. Interlock to prevent access to a closed switch. Interlock capable of intentional bypass by knowledgeable personnel.
- C. Fuse compartment shall be interlocked to prevent access when a switch is in the “CLOSED” position.
- D. Maximum temperature rise at full load - 30°C spot temperature.
- E. Short-Circuit Rating: 200,000 amperes Root Mean Square symmetrical.
- F. Capable of being opened when carrying 750 percent of its rated load. Opening under these conditions requires no major physical effort.

- G. Arc barriers and replaceable arcing contacts shall be provided.
- H. Switch shall be of the charge before closing type.
- I. U.L. listed for continuous operation.
- J. Handle shall be capable of being padlocked in the "OFF" position.
- K. Ground Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
 - 1. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - 2. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
 - 3. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - 4. Test Control: Simulates ground fault to test relay and switch (or relay only if "NO TRIP" mode is selected).

2.6 SELF-CONTAINED SWITCH UNITS

- A. Switches 1200 amperes and below shall be self-contained type, in accordance with NEMA KS1.
- B. Switches shall be quick-make, quick-break, dead-front type. Each switch shall be a self-contained unit, externally operated from the front.
- C. Fuse and switch compartment shall be interlocked to prevent access to the fuse compartment until the switch is thrown to the "OFF" position. Interlock shall be intentionally releasable by an externally applied tool to permit checking of the switch and fuses under load.
- D. Switches shall be equipped with rejection type clips suitable for Class L fuses.
- E. Handle shall be capable of being padlocked in the "OFF" position.

2.7 FEEDER CIRCUIT BREAKERS

- A. Circuit breaker(s) shall be group mounted bolt-on type with mechanical restraint on a common pan or rail assembly.
- B. The interior shall have three (3) flat bus bars stacked and aligned vertically with glass reinforced polyester insulators laminated between phases. The molded polyester insulators shall support and provide phase isolation to the entire length of bus.
- C. Circuit breaker(s) equipped with line terminal jaws shall not require additional external mounting hardware. Circuit breaker(s) shall be held in a mounted position by a self-contained bracket secured to the mounting pan by fasteners. Circuit breaker(s) of different frame sizes shall be capable of being mounted across from each other.

- D. Line-side circuit breaker connections shall be jaw type.
- E. All unused spaces provided, unless otherwise specified, shall be fully equipped for future devices, including all appropriate connectors and mounting hardware.
- F. Thermal magnetic molded case circuit breakers shall:
 - 1. Molded case circuit breakers shall have integral and instantaneous thermal magnetic trip in each pole. Provide adjustable trip setting for circuit breaker frame sizes 250A and larger; adjustable instantaneous trip circuit branches; or magnetic trip element with front-mounted field adjustable trip setting.
 - 2. Circuit breaker(s) shall be standard interrupting ratings. Ampere ratings shall be as shown on the Contract Documents. Manufacturer shall submit one (1) set of published Ip and I2t let-through curves (as required by UL) to the Commissioner
- G. Electronic trip circuit breakers with RMS sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:
 - 1. Instantaneous trip.
 - 2. Long and short-time pickup levels.
 - 3. Long and short-time time adjustments.
 - 4. Ground-fault pickup level, time delay, and I2t response.
- H. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
- I. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
- J. Molded-Case Circuit Breaker (MCCB) Features and Accessories:
 - 1. Standard frame sizes, trip ratings, and number of poles.
 - 2. Lugs: Suitable for number, size, trip ratings, and conductor material.
 - 3. Ground-Fault Circuit Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - 4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 - 5. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified.
 - 6. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
 - 7. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
 - 8. Auxiliary Contacts: Two (2) SPDT switches with “a” and “b” contacts; “a” contacts mimic circuit-breaker contacts, “b” contacts operate in reverse of circuit-breaker contacts.
 - 9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in “OFF” position.
- K. Insulated-Case Circuit Breaker (ICCB): 100 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.

1. Drawout circuit-breaker mounting.
2. Two-step, stored-energy closing.
3. Full-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long and short-time time adjustments.
 - c. Ground-fault pickup level, time delay, and I2t response.
4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
5. Remote trip indication and control.
6. Communication Capability: Integral communication module with functions and features compatible with power monitoring and control system specified.
7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removed only when circuit breaker is in “OFF” position.
8. Control Voltage: 125-V DC.

2.8 GROUNDING

- A. Provide ground bus of at least 33 percent of capacity of the switchboard extending along the full length of the switchboard.

2.9 GROUND FAULT PROTECTION

- A. Ground fault protection (GFP) shall be provided where indicated on the Contract Documents and on all overcurrent protection devices rated 1000 amperes or more as required by the National Electrical Code.
- B. The ground fault protection shall consist of the following:
 1. Current Sensors: Provide zero sequence current sensors for feeder and branch devices and ground return sensors for main service device; inputs compatible to relay. Construct sensor frame so it can be opened to permit removal or installation around conductors without disturbing conductors. Provide test winding in sensor for testing operation of GFP unit, including sensor pick-up, relay, and circuit protection device operation.
 2. Ground-Fault Relay: Provide solid-state ground-fault relay, which requires no external source of electrical power, drawing energy to operate GFP system directly from output of current sensor. Construct with adjustable pick-up current sensitivity for GF currents from 200 to 1200 amperes, with calibrated dial to show pick-up point settings. Provide factory-set time delay of 0.5 seconds and which precludes tampering with setting after installation.
 3. Monitor Panel: Provide monitor panel capable of indicating relay operation, and provide means for testing system with or without interruption of service. Construct so GFP system cannot be left in an inactive or “OFF” state. Provide indicator lamps and TEST and RETEST control switches. The panel shall be installed in the front of the switchboard adjacent to the device being protected.
 4. Shunt-Trip: Each device, switch, or circuit breaker, with ground fault protection, shall be provided with a shunt-trip mechanism which shall automatically “OPEN” the device when signaled by the ground-fault sensor.

- C. Provide a fuse protected central power transformer from the switchboard line side for the ground fault systems. Ground fault and shunt-trip device shall be capable of operation at 55% of the rated voltage.
 - 1. Settings
 - a. The electrical trade shall set each ground fault sensor pick up setting at 25% of the rating of the over-current device with a 6-cycle time delay unless specifically indicated otherwise in the short circuit and coordination study.

2.10 UTILITY METERING

- A. Utility Metering Compartment: Fabricated, barrier compartment and section complying with the Consolidated Edison company's requirements; hinged sealed door, buses provisioned for mounting the utility company's current transformers and potential transformers or potential taps as required by the utility company. If a separate vertical section is required for utility metering, match and align with the entire switchboard. Provide service entrance label and necessary applicable service entrance features.
- B. Utility meters shall not be mounted in or on the switchboard.
- C. Utility meter to comply with Local power supply company – Con Ed requirement.

2.11 METERING

- A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:
 - 1. Potential Transformers: IEEE C57.13; 120 V, 60 Hz, secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
 - 2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
 - 3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
 - 4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.
- B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for four-wire systems and with the following features:
 - 1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Megawatts: Plus or minus 2 percent.
 - e. Megavars: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.

- h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.
 - i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from 5 to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
2. Mounting: Display and control unit flush mounted in the instrument compartment door.

2.12 ELECTRONIC METERING

- A. Metering shall consist of an independent enclosure, revenue grade digital power meter/analyzer with the following requirements:
1. Measurements: True RMS 3-phase voltage, current and power, kw kwh, kVAR, harmonics, K-factor, symmetrical components, and sag/swell data.
 2. Communications: ION/Modbus/DNP 3.0 protocols, RS-485 port with built-in modem, one front panel optical port, GPS synchronized meter clock, and remote alarm notification.
 3. Data Logging: Sequence of events and min./max. logging, scheduled event-driven logging of up to 32 parameters concurrently on-board data logging features.
 4. Set Points: Setpoint on any parameter or condition for 1 second.
 5. Outputs: Serial port communications connection.
 6. Security: Multi-user, multilevel security, customizable up to 16 users with multiple levels of access.

2.13 MIMIC BUS

- A. Provide a factory installed mimic bus on the switchboard, accurately depicting phase bus work, take-offs, connections, meters and disconnecting means per the factory record as-built drawings.
- B. Mimic bus shall be ¼ inch thick, heat and impact resistant, beveled bakelite, ½ inch wide, secured to the switchboard enclosure with cadmium plated screws.
- C. Mimic bus on the normal switchboards shall be ivory colored and red colored on the emergency switchboards.
- D. Mimic bus shall be installed prior to energizing the equipment.

2.14 EMERGENCY SWITCHES

- A. Devices or enclosures serving the normal side of fire alarm systems or fire pumps shall have the cover of that device enclosure painted high gloss red and suitably labeled.

2.15 MANUFACTURERS

- A. Switchboards and Service Switches
1. All City Switchboard
 2. Electrotech

3. Lincoln Electric
4. General Electric
5. Square D
6. Siemens.
7. Eaton
8. Or Approved Equal

B. Bolted Pressure Switches and High-Pressure Contact Switches

1. Pringel Switch Company/Eaton
2. General Electric
3. Siemens
4. Boltswitch Company
5. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SWITCHBOARD INSTALLATION

- A. Install switchboards on 4-inch-high concrete housekeeping pads which shall follow the contour of the switchboards with 4 inch clear all around, per the factory record drawing.
- B. Provide steel channel sills below each switchboard where the switchboard frame is not suitable for use as a floor sill.

3.3 EXAMINATION

- A. Receive, inspect, handle, and store switchboards in accordance with NEMA PB 2.1 and NFPA 70E.
1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's published instructions.
 2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
 3. Protect from moisture, dust, dirt, and debris during storage and installation.
 4. Install temporary heating during storage in accordance with manufacturer's published instructions.
- B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.
- C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work or that affect performance of equipment.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4 PREPARATION

- A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

3.5 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Reference Standards:
 - 1. Switchboards and Accessories: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NECA 400, NEMA PB 2.1.
 - 2. Consult Commissioner for resolution of conflicting requirements.
- C. Special Techniques:
 - 1. Equipment Mounting: Install switchboards on concrete base, 4 inch nominal thickness. Comply with requirements for concrete base specified in Section 260529 "Hangers and Supports for Electrical Systems."
 - a. Install conduits entering underneath switchboard, entering under vertical section where conductors will terminate. Install with couplings flush with concrete base. Extend 2 inch above concrete base after switchboard is anchored in place.
 - b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18 inch centers around full perimeter of concrete base.
 - c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, published instructions, and directions furnished with items to be embedded.
 - e. Install anchor bolts to elevations required for proper attachment to switchboards.
 - f. Anchor switchboard to building structure at top of switchboard if required or recommended by manufacturer.
 - 2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.
 - 3. Comply with mounting and anchoring requirements specified in Section 260548.16 "Seismic Controls for Electrical Systems."
 - 4. Operating Instructions: Frame and mount printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
 - 5. Install filler plates in unused spaces of panel-mounted sections.
 - 6. Install overcurrent protective devices, surge protection devices, and instrumentation.
 - a. Set field-adjustable switches and circuit-breaker trip ranges.
 - 7. Install spare-fuse cabinet.

3.6 CONNECTIONS

- A. Comply with requirements for terminating feeder bus specified in Section 262816 "Enclosed Switches and Circuit Breakers". Drawings indicate general arrangement of bus, fittings, and specialties.
- B. Comply with requirements for terminating cable trays specified in Section 260536 "Cable Trays for Electrical Systems." Drawings indicate general arrangement of cable trays, fittings, and specialties.
- C. Bond conduits entering underneath switchboard to equipment ground bus with bonding conductor sized in accordance with NFPA 70.
- D. Support and secure conductors within switchboard in accordance with NFPA 70.
- E. Extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.

3.7 FEEDER INSTALLATION AND TERMINATION

- A. Group cables paralleling one another and arranged so as to permit easy insertion of a clamp-on ammeter on each cable.
- B. All line and load side conductors emanating from the top or bottom of the switchboards shall be lashed to cable braces provided in the switchboard. Lashing shall be performed as per the manufacturer's recommendations to maintain the integrated equipment rating. Lashing material shall be nonmetallic fire and heat resistant with a tensile strength of 2,000 pounds. In general, on service entrance cable, run and bend the cable in a manner so as to rest directly against the cable braces. Make six (6) revolutions around the "A" and "B" phase and the six (6) revolutions around the "B" and "C" phase cables. With the remaining lashing material make four (4) to five (5) revolutions between each of the phase cables tying a knot to the cable braces as the last revolution is complete. All revolutions must be as tight as possible to prevent magnetic stress during short circuits. Load cables in general should be lashed with four (4) revolutions around the cable and the brace, then tied in a knot after the last revolution.
- C. At the completion of the work, the switchboard shall be field tested by a manufacturer's representative as described below. A report recording each item of the testing shall be certified by the manufacturer and submitted to the Commissioner.
 - 1. Operation of each disconnecting means under load.
 - 2. Operation of all metering equipment.
 - 3. Operation of all alarm devices.
 - 4. Observation of cable bracing, both incoming and outgoing, certifying that it is in accordance with the manufacturer's recommendations.
 - 5. Verification of setting of all ground fault protection (GFP) systems. Test each system by checking coordination between ground fault and phase to ground fault of a single pole lighting branch circuit.

6. Verification of torque for all nuts and bolts on buswork. Tighten connections in accordance with the manufacturer's specifications.
7. Measure, using a megger, the insulation of each bus section phase-to-phase; and phase-to-ground for one (1) minute each, at a minimum test voltage of 1000 VDC for 480 volt and 500 VDC for 208 volt systems. Minimum acceptable value for insulation resistance is one (1) megaohms. Coordinate testing with the equipment manufacturer prior to any testing.

3.8 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- B. Switchboard Nameplates: Label each switchboard compartment with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- D. Mimic Bus:
 1. Entire single-line switchboard bus work, as depicted on factory record drawing, on minimum 0.032 inch thick anodized aluminum photoengraved nameplate, located at eye level on front cover of switchboard incoming service section.
 2. Entire single-line switchboard bus work, as depicted on factory record drawing, on engraved minimum 0.0625 inch thick laminated-plastic (Gravoply) nameplate, located at eye level on front cover of switchboard incoming service section.
 3. Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram.
 4. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce concise visual presentation of principal switchboard components and connections.
 5. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.
- E. Service Equipment Label: Labeled, by qualified electrical testing laboratory for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

3.9 FLOOR MAT:

- A. Provide a 36-inch-wide x ¼" thick insulation mat in the front and rear of the entire switchboard, rated for a dielectric test voltage of 30,000 volts.

3.10 UTILITY METER

- A. Provide all required wiring and conduit between the Utility company C.T. compartment to the remote meter(s). Coordinate this work with the Con Edison Company during the application of service process.

3.11 FIELD QUALITY TESTING

- A. Perform field testing in accordance with NETA Acceptance Testing Standards and to include, but not limited to, the following:
 - 1. Perform resistance tests through all bus joints with a low-resistance ohmmeter. Any joints that cannot be directly measured due to permanently installed insulation wrap shall be indirectly measured from closest accessible connection.
 - 2. Perform insulation-resistance tests on each bus section, phase-to-phase and phase-to-ground.
 - 3. Bolt-torque levels shall be in accordance with the manufacturer specifications.
 - 4. Compare bus connection resistances to values of similar connections.
 - 5. Insulation-resistance values for bus, control wiring, and control power transformers shall be in accordance with the manufacturer's published data. Overpotential tests should not proceed until insulation-resistance levels are raised above minimum values.
 - 6. Apply overpotential test voltages in accordance with the manufacturer's recommendations. The insulation shall withstand the overpotential test voltage applied.
- B. Perform the following infrared scan tests and inspections and prepare reports:
 - 1. Initial Infrared Scanning: After substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front and rear panels so joints and connections are accessible to portable scanner.
 - a. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
 - 2. Instruments and Equipment
 - a. Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
- C. Switchboard will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports; including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken and observations after remedial action.

3.12 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573.16 "Coordination Studies."
- C. The Contractor shall perform field adjustments of the protective devices as required to place the equipment in final operating condition. The settings shall be in accordance with the final short-circuit study, ground fault protective device evaluation study, and protective device coordination study.
- D. Necessary field settings of devices and adjustments and minor modifications to equipment to accomplish conformance with the final short-circuit and protective device coordination study shall be carried out by the Contractor at no additional cost to the City of New York.

3.13 PROTECTION

- A. Temporary Heating: Apply temporary heat, to maintain temperature in accordance with manufacturer's published instructions, until switchboard is ready to be energized and placed into service.

3.14 AS-BUILT RISER DIAGRAM

- A. Provide an as-built riser diagram of each distribution system mounted in a glass covered-frame. Media shall be high quality presentation type paper. Diagrams shall be located in the respective electrical room. A digital electronic version shall be submitted to the Commissioner.

3.15 OPERATING AND MAINTENANCE MANUAL

- A. Provide the manufacturer's operating and maintenance manuals for all switchboards. Manuals shall include spare parts data listing, source of replacement parts and supplies and as-built drawings.
- B. Provide the manufacturer's installation and maintenance instructions. Instructions shall be affixed to the cover of the incoming section of each equipment.
- C. Demonstration: Engage a factory authorized service representative to instruct the the City of New York maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories.
- D. Include time current coordination curves for each type and rating of overcurrent protective device.

END OF SECTION 262413

SECTION 262416 - PANELBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Panelboards.
 - 2. Circuit Breakers.
 - 3. Fusible Switches.
 - 4. Surge Protective Devices (SPD)
 - 5. Electronic Sub-Metering.

1.3 DEFINITIONS

- A. GFEP: Ground-fault equipment protection.
- B. MCCB: Molded-case circuit breaker.
- C. VPR: Voltage protection rating.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings:
 - 1. Submit manufacturer's data, including main devices and lug sizes; branch circuit device sizes and arrangement; bus ampacities; voltage, ampere, withstandability and short circuit rating of the panelboard and overcurrent protective devices; dimensions and construction; gutter and backbox dimensions; nameplate and legend; protective coating; and all pertinent details of the panel, enclosure, cover, and method of securing cover and lock.
 - 2. Include fully detailed and dimensioned plan elevations of each panel at a minimum of 1/4" scale.
 - 3. Submit plans indicating maximum dimensions for panelboards including clearances between the panelboards and adjacent surfaces and other items to meet the NEC. Contract Documents indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

4. Submit wiring diagrams for all panelboards showing all connections to incoming and outgoing feeders.

C. Product Data

1. Submit manufacturer's catalog data for all circuit breakers and switch assemblies.
2. Submit certification of U.L. compliance to integrated short circuit withstand requirements.
3. Seismic restraint calculations and certificates. Panels shall be fabricated and tested in accordance with IEEE 344 to withstand seismic forces defined in the specifications.
4. Short circuit and coordination study. Equipment submission made without this study will be returned un-reviewed

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and recommendations of the following:

1. Panelboards:
 - a. U.L. Standards #50 and #67.
 - b. Federal Specification W-P-115A Type II, Class 1.
 - c. NEMA Standard PB-1.
 - d. CSA Standard C22.2 No. 29-M.
 - e. NFPA 70
2. Circuit Breakers:
 - a. U.L. Standard #489.
 - b. Federal Specification W-C-375B
 - c. NEMA Standard AB-1.
 - d. CSA Standard C22.2 N. 5-M91.
3. Fusible Switches:
 - a. Federal Standard W-S-865C.
 - b. U.L. Standard 98.
 - c. NEMA KS-1.
4. Ground Fault Circuit Interrupters (GFCI):
 - a. UL 943.

C. Testing Agency Qualifications

1. Member company of NETA and NRTL

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.
- B. Handle and prepare panelboards for installation in accordance with NEMA PB 1 and NFPA 70E.

1.7 WARRANTY

- A. Provide a two (2) year manufacturer's warranty from the date of substantial completion.

PART 2 - PRODUCTS

2.1 PANELBOARDS

- A. Provide panelboards consisting of an assembly of branch circuit switching and protective devices (circuit breakers, switch and fuse units, or combination thereof) mounted inside a dead front enclosure. All panelboards shall be door-in-door construction. Provide the number and size of these branch circuit devices as indicated by the circuiting, on the Contract Drawings, and in the Schedules. Locations of circuit breakers shall be as indicated in the schedules.
- B. Rate equipment for continuous operation under the following conditions unless otherwise noted:
 - 1. Ambient temperature not exceeding minus 22°F to plus 104°F.
 - 2. Altitude not exceeding 6,600 feet.
- C. Provide the following modifications and additional equipment as shown on the Contract Drawings:
 - 1. Main circuit breakers.
 - 2. Shunt trip circuit breakers.
 - 3. Ground fault circuit interrupting (GFCI) circuit breakers.
 - 4. Split buses.
 - 5. Integral remote control switches.
 - 6. Subfeed switches.
 - 7. Panelboard integral mounted relays and contactors.
 - 8. Feed-through lugs and/or bus.
 - 9. Feed-through cabling arrangement.
 - 10. Double lugs for multiple cables or for future provisions.
 - 11. Oversized gutters.
 - 12. Extra Capacity Neutral Bus – rated 200% of phase bus.
 - 13. Surge suppression breakers.
 - 14. Electronic sub-metering CT (On main and/or branch circuits) and wiring.
- D. Interiors

1. Provide a rigid removable assembly of copper bus bars and interchangeable bolted branch circuit devices.
2. Material: Hard-drawn copper, 98 percent conductivity.
 - a. Copper bus bars shall have sufficient cross-sectional area to provide a current density of 1000A per square inch.
 - b. Bus bars shall be sized per NYC Electrical Code Section 408.60(E).
3. Bus bars drilled to permit branch circuit devices of all sizes and number of poles to be interchangeable and installed in any spare space of sufficient size, without disturbing adjacent units; without removing main bus or branch circuit connectors and without machining, drilling, or tapping in the field.
4. Bus shall be arranged in sequence or distributed phasing so that a multi-pole circuit breaker can replace any group of single circuit breakers of the same size.
5. Provide full-size neutral bus in each panelboard, unless otherwise noted.
6. Neutral bus shall be 200% rated when supplied from an oversized neutral feeder. Neutral bus shall be capable of terminating one (1) conductor per panelboard pole position minimum.
7. Provide ground bus in each panelboard. On 208Y/120 volt panelboards provide isolated ground bus when served from a feeder that includes an isolated ground conductor. Each isolated ground bus shall be capable of terminating one (1) conductor per panelboard pole position minimum.
8. Bus bars shall be designed, supported and braced for a minimum short circuit equal to the short circuit interrupting rating of the panelboard as described on the Contract Documents.
9. Bus bars shall be sized to limit the temperature rise within the panelboard to 50°C over a 40°C ambient temperature.

E. Enclosure

1. Enclosure shall be code gauge hot zinc dipped galvanized steel box, in accordance with UL 50 requirements.
2. Provide a bolt-on ground connector to inside of enclosure.
3. Enclosure shall be flush mounted in finished areas and where indicated. Enclosure shall be surface mount elsewhere.
4. Provide stainless steel covers for all panelboards located in kitchens, laundries and laboratories. Enclosure shall be rated NEMA Type 4X.
5. Gutter Extension and Barrier: Same gauge and finish as the panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.

F. Front

1. Doors shall be provided on all lighting and power panels. On switch and fuse panelboards doors, over overcurrent devices shall not be provided unless rated for same.
2. Doors shall be heavy code gauge galvanized steel as required to maintain panel face flat.
3. Front shall be held closed with trim clamps.
4. Front door frame shall be hinged with captive screws. Circuit breaker section door shall be hinged.
5. Provide as-built typewritten directory for total number of poles. Install behind plastic transparent protective cover on the panel frame.
6. Provide approved lock. All panels shall be keyed alike. Furnish four (4) sets of matching keys to the City of New York.

7. Provided welded angle rest at the bottom of the door to facilitate cover installation.
8. Doors over 48" in height shall have auxiliary fasteners at top and bottom of door in addition to lock and catch.
9. Enclosure shall be factory finished in ANSI 61 gray enamel or two (2) coats of air-drying lacquer over a rust inhibiting primer.

G. Multiple Section Panelboards

1. Each section of multiple section panelboards shall be the same height.
2. Multiple sections shall each contain the same number of poles (e.g., 72 poles equals 2-36 pole panels).
3. When a multi-section panel is served from a transformer, the main circuit breaker shall be provided in the first section to adequately protect the transformer secondary.
4. All multi-section panelboards shall be connected with conductors of a capacity equal to or greater than the panelboard main bus ampere capacity.

H. Terminal Lugs

1. Terminal lugs shall be bolted type, labeled for copper conductors.
2. Main lugs shall be located properly at top or bottom, depending where main feeder enters.
3. Lugs shall be rated for 75°C terminations.
4. All panel main lug size shall be coordinate with aluminum cable size as per the design document.

I. Electrical Ratings

1. Panelboards shall be rated 208Y/120 volts or 460Y/265 volts, 3 phase, 4 wire, full neutral with ampacities as indicated on the Contract Drawings (unless otherwise noted).
2. Panelboards shall be fully rated for the available short circuit current indicated on the Contract Drawings. Each panelboard, as a complete and finished product, shall receive a single U.L. approved integrated equipment rating by the manufacturer. The integrated equipment short-circuit rating shall certify that all equipment is capable of withstanding the thermal and magnetic stress of a fault equal to the value specified on the Contract Drawings. Such rating shall be established by actual tests by the manufacturer on similar equipment. This certification shall be permanently affixed to each panelboard.
3. Where indicated, provide panelboards having a "service entrance" Type U.L. label with neutrals factory bonded to the frame or enclosure.
4. Provide surge protective devices as indicated on the Contract Documents and per specification section 264313.

J. Circuit Breaker Devices

1. Circuit breakers shall be plastic molded case bolt on type with a completely sealed enclosure and toggle type operating handle. Trip ampere rating and "ON/OFF" indication shall be clearly visible. Plug-in type circuit breakers shall not be permitted.
2. Circuit breakers shall be thermal-magnetic trip-free, trip-indicating, quick-make/quick-break, with inverse time delay characteristics. Single-handle and common tripping multi-pole breakers shall be provided.
3. Provide with silver alloy contacts with auxiliary arc-quenching devices.
4. Panelboard shall be of the type which will accept the field installation of shunt trip devices of 60 amperes or less on the branch devices.

5. Interrupting capacities shall be as indicated on the Contract Drawings. As a minimum, 208Y/120 volt devices shall be not less than 10,000 AIC; 460Y/265 volt devices shall not be less than 14,000 AIC; and 42,000 AIC interrupting capacity for distribution style panels.
6. For lighting circuits provide devices labeled "SWD" for switching purposes.
7. Provide with bolted type terminals U.L. listed for either copper 75°C conductors.
8. Provide main breakers in panels served from transformers unless separate transformer secondary protection is provided. Main circuit breakers shall be provided in the first section only when multi-section panelboards are provided.
9. Each breaker or space unit shall be provided with an individual number.
10. Circuit breakers serving computer equipment shall include a shunt trip coil, when a remote breakglass station or EPO is provided.
11. Shunt trip breakers shall be supplied with 120 volt coils. Provide 120 volt circuit from nearest 120 volt panel to coil. Where shunt trip breakers are in emergency panels provide emergency 120 volt source for same from nearest 120 volt emergency panel. Utilize UPS power if on a UPS system.
12. Provide handle padlocking device for designated breakers.
13. For HVAC equipment provide U.L. listed "HACR" type devices.
14. Provide UL listed tie-bars on all single pole circuit breakers serving multi-wire branch circuits in compliance with NEC Article 210.4(B). The disconnecting means shall simultaneously disconnect all ungrounded conductors at the point where the branch circuit originates.
15. Should fixed in-feeds require more than one (1) branch circuit, all circuit breakers shall be equipped with tie-bars to allow all circuits to be disconnected during maintenance events.

K. Ground Fault Circuit Interrupters (GFCI)

1. Ground fault circuit interrupter branch circuit breakers shall be provided as indicated on the Contract Drawings. Circuit breakers shall be circuit interrupting which will operate manually for normal switching functions and automatically under overload, short circuit, and 0.005 amp line-to-ground fault conditions. The operating mechanism shall be entirely trip-free so that contact cannot be held closed against an abnormal overcurrent, short circuit, or ground fault condition. The device shall be bolt-on type with insulated case construction and shall be interchangeable with standard single pole breakers utilized in the panelboard.

L. Switch and Fuse Devices

1. Provide a quick-make/quick-break, horsepower rated, dead-front type of switch. Each switch shall be a self-contained unit, externally operable from the front. Provision for padlocking handle in "OFF" position shall be provided.
2. Fuse and switch compartment shall be interlocked to prevent access to the fuse compartment until switch is switched to "OFF" position. Interlock shall be intentionally releasable by externally applied tool to permit investigating switch and fuses under load.
3. Switch units shall be interchangeable for replacement, without disturbing balance of distribution panelboard's operation.
4. Switches shall be equipped with rejection type clips for U.L. Class R fuses up to 600A, suitable for U.L. Class L fuses above 600A.
5. Switches shall reject fuses other than those specified.
6. Provide spare fuses as specified in the fuse specification section 262813.

2.2 MANUFACTURERS

- A. Electrotech
- B. All City Switchboard
- C. Lincoln Electric.
- D. ABB
- E. Square 'D'
- F. Eaton
- G. Siemens
- H. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.
- B. Receive, inspect, handle, and store panelboards in accordance with NEMA PB 1.1.
- C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.
- D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Reference Standards:

1. Panelboards: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NEMA PB 1.1.
2. Consult Commissioner for resolution of conflicting requirements.

C. Special Techniques:

1. Equipment Mounting:
 - a. Install panelboards on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - b. Attach panelboard to vertical finished or structural surface behind panelboard.
 - c. Mount surface-mounted panelboards to steel slotted supports 5/8 inch, 1-1/4 inch in depth. Orient steel slotted supports vertically.
 - d. Comply with requirements for seismic control devices specified in Section 260548 "Seismic Controls for Electrical Systems."
2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
3. Comply with mounting and anchoring requirements specified in Section 260548 "Seismic Controls for Electrical Systems."
4. Mount top of trim 7.5 ft above finished floor unless otherwise indicated. All panels shall be mounted at a maximum height of six feet six inches to the top disconnect switch or circuit breaker unless otherwise noted
5. Mount panelboard cabinet plumb and rigid without distortion of box.
6. Surface mounted panelboards shall be mounted a minimum one (1) inch off the wall on channels.
7. Install overcurrent protective devices and controllers not already factory installed.
 - a. Set field-adjustable, circuit-breaker trip ranges.
 - b. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver in accordance with manufacturer's published instructions.
8. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
9. Install filler plates in unused spaces.
10. Stub four 1 inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in future. Stub four 1 inch empty conduits into raised floor space or below slab not on grade.
11. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing with nylon pre-manufactured cable ties at four inch intervals.
12. Mount spare fuse cabinet in accessible location.
13. Feed-through panels shall be connected to a main feeder by insulated parallel gutter taps. Full-size tap shall be provided for two (2) or more panels on a common feeder.
14. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels

D. Interfaces with Other Work:

1. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with requirements in Section 260553 "Identification for Electrical Systems."
- B. Panelboard Nameplates: Label each panelboard with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- C. Device Nameplates: Label each branch circuit device in power panelboards with nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
- D. Install warning signs complying with requirements in Section 260553 "Identification for Electrical Systems" identifying source of remote circuit.
- E. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles must be located on interior of panelboard door.
- F. Breaker Labels: Faceplate must list current rating, UL and IEC certification standards, and AIC rating.
- G. Circuit Directory:
 1. Provide type written/computer print_out directory card inside panelboard door, mounted in metal frame with transparent protective cover.
 - a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.
 2. Provide computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.
 - a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.
 3. Create directory to indicate installed circuit loads after balancing panelboard loads incorporate City of New York's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.

3.5 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as indicated.

- C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform Commissioner of effect on phase color coding.
 - 1. Measure loads during period of normal facility operations.
 - 2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by Commissioner. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
 - 3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
 - 4. Tolerance: Maximum difference between phase loads, within panelboard, may not exceed 20 percent.

3.6 PROTECTION

- A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature in accordance with manufacturer's published instructions.

3.7 FIELD QUALITY TESTING

- A. Perform the following field quality tests and visual inspections, in accordance with NETA Acceptance Testing Specifications.
 - 1. Exterior of the equipment.
 - 2. Interior of the enclosure.
 - 3. Interior bus/cable systems.
 - 4. Bus support insulators and spacing.
 - 5. Doors/panels/brackets.
 - 6. Door handles/locking bars/mechanisms.
 - 7. Instruments/relay covers.
 - 8. Control/metering transformers/instruments.
 - 9. Grounding/neutral bar installation is correct per application.
 - 10. Wiring/terminal connections.
 - 11. Proper electrical clearances are maintained.
 - 12. Complete circuit directories are properly installed.
 - 13. Surge protection devices are installed properly.
 - 14. Load current readings are balanced per Code.
- B. Verify circuit breaker identification, sizing and operation in all distribution panelboards.
 - 1. Compile a comprehensive listing of all distribution panelboards, as well as, their respective directories, feeder sizes and designation from where panels are served from.
 - 2. Compare equipment nameplate data with the Contract Drawings and specifications.
 - 3. Inspect circuit breaker for correct mounting.
 - 4. Inspect case for cracks or other defects.
 - 5. Test all ground fault devices.
- C. Verify that conductor size is appropriate for breaker size.

1. De-energize each panelboard breaker while observing respective loads served by the breaker.
2. Re-energize each panelboard breaker verifying equipment is re-energized.
3. Each tested breaker, when placed in the “OFF” position, breaks electrical power to the respective (labeled) load.
4. Each tested breaker, when placed in the “ON” position, supplies electrical power to the respective (labeled) load.
5. No visible and/or audible arcing is present.
6. There shall be no short circuits.
7. Lugs shall all be torqued per manufacturer’s requirements.
8. Panelboards shall be clean and neat. Panelboard covers shall be reinstalled.

D. Verify Circuit Loads on Distribution Panels.

1. Ensure all distribution panels have the proper breaker feeding each load.
2. Compile a comprehensive listing of all distribution panelboards, as well as, their respective directories.
3. Verify breaker matches breaker load.
4. Check breaker balance phase-to-phase.
5. Check line to ground resistance.
6. Check setting on the breaker for trip to motor loads.
7. Verify settings and trip on breakers to match the calculated reports.
8. Load shall not be higher than 80% of the breaker.
9. Phases are properly balanced.
10. No more than 0.005 ohm to ground.

E. Submit all field quality test results. All tests shall be certified by the testing agency.

F. Perform the following infrared scan tests and inspections and prepare reports:

1. Initial Infrared Scanning: After substantial completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
2. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of substantial completion.
 - a. Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

END OF SECTION 262416

SECTION 262713 - ELECTRICITY METERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DESCRIPTION

- A. Work under this section is subject to the requirements of the Contract Documents, including the General Conditions and Supplementary Conditions.
 - 1. Contractor shall provide the Electronic Sub-Metering System for lighting, power and mechanical load to monitor the energy usage.
 - 2. The property's utility services shall be metered from Con Ed
- B. Contractor shall furnish, install and verify as operational an electric, computerized metering system which shall be microprocessor controlled, consisting of all solid-state components. Electricity meters shall be manually readable using local Liquid Crystal Display (LCD) and pushbutton, and automatically readable utilizing one or more of the following methods: A hard-wired Data Link network (RS-485), Telephone Modem Communication, RS-232 Serial Port Communication.
- C. The system shall be capable of using all of these methods of communication at the same property. In lieu of hardwired data link network, using power wiring to pull the sub-metering data is also acceptable, if selected vendor's sub-metering system is capable of transmitting the data via power wiring and distribution bus ducts.
 - 1. Metering equipment is to be provided to the panelboard manufacturer for installation into their completed assembly.
- D. Each meter shall be complete with internal CT terminating and shorting and fuse block.
- E. The distribution contains all sub-metering for residential apartments, the width of the panel shall not exceed 48". Equipment width exceeding 50" will be rejected.
- F. Meters shall be configured for leased space and lighting, power mechanical load type circuits application and applied on 120/208V or 265/460V nominal system or as indicated on drawings for 120/208V or 265/460V, three phases.
 - 1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
 - 2. Section 260011 "Facility Performance Requirements for Electrical" for seismic-load, wind-load, acoustical, and other field conditions applicable to Work specified in this Section.

1.3 DEFINITIONS

- A. KY or KYZ Pulse: Term used by metering industry to describe method of measuring consumption of electricity (kWh) that is based on relay opening and closing in response to rotation of disk in meter. Electronic meters generate pulses electronically.

1.4 COORDINATION

- A. Electrical Service Connections:
 - 1. Coordinate with utility companies and utility-furnished components.
 - a. Comply with requirements of utility providing electrical power services.
 - b. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings: Submit shop drawings and manufacturer's data for each component of the system, installation and user instructions, installation verification instructions and field test requirements. Include riser drawings.
- C. Documentation of testing for accuracy of revenue grade compliance.
- D. Submit dimensional shop drawing of typical residential tower electrical closet layout with proposed sub-metering distribution panel and all equipment (bus duct, other plug devices, etc.). Equipment larger than shown Contract Document and not able to fit will be rejected.
- E. Data communication one line riser diagram with all sub-metering connected to remote computer.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements".

1.7 WARRANTY

- A. All equipment shall be free from defect in materials and workmanship under normal use and service for the period of thirty-six (36) months from the date of substantial completion. The warranty does not apply if equipment has been improperly installed, subjected to misuse, neglect, accident or abnormal conditions of operation.
- B. Manufacturer's obligation under this warranty is limited to replacing or repairing any equipment that conforms to the warranty.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
- B. Comply with UL 916.
- C. The system shall be a fully automated, microprocessor based utilities measurement system. At its minimum configuration it will measure and record the usage of electricity in non-volatile memory (CMOS RAM), and communicate the reading to an on-site or remote computer (i.e., the billing computer) or the internet.
- D. Each meter shall interface to the electrical load being measured with a direct voltage tap, up to 600VAC, and with current transformers (solid or split core). The preferred current transformers shall have a 100mA secondary, but provision shall be available to interface with 5A secondary current transformers.
- E. Each meter shall be equipped with a clock/calendar that automatically accommodates leap years and daylight savings time. The daylight savings time feature can be disabled when not required. The clock/calendar shall be backed up by battery and continue operating during power outages. The time and date can be reset by the billing computer.
- F. Revenue related metering parameters (i.e., Demand intervals and Time-of-Use schedules) shall be permanent and stored in each individual meter. There shall be no way to change metering parameters through unauthorized access to the system.
- G. Each meter shall measure and record peak kW Demand along with the time and date at which it occurs. Peak demands shall be capable of being read and reset by the billing computer. The demand interval shall be factory programmed in each meter and shall be permanent.
- H. Each meter shall maintain a forty (40) day log of daily Time-of-Use consumption and peak demand readings along with the time and date at which the daily peak demands occur. The consumption recorded shall be the reading at the end of the Time-of-Use period of the end of the day. The peak demand recorded in the log shall be the peak demand for the Time-of-Use period for that day. The log shall include reactive and apparent energy consumption and peak demands, with time and date stamp, if those options are enabled. The log shall contain a single “All Hours” Time-of-Use period even when the Time-of-Use feature is not explicitly used.
- I. Each meter shall perform Phase Diagnostics. Phase Diagnostic Registers shall include multipliers for amperage, voltage and watts, and line frequency. On a Per phase basis Phase Diagnostics shall include voltage, VAR phase shift, accumulated kWh and kVARh, and instantaneous amps, watts, VAR’s, VA’s, phase angel (degrees displacement between current and voltage waveforms), and Power Factor.

- J. Each meter shall perform Event Diagnostics. The Event Diagnostic Registers shall include Time and Date and the number of times the time has been changed, number of tampers and number of times the box was closed with the time and date of last occurrence number of power downs, power ups and startups (POST) with time and date of last occurrence, and the number of times the accumulated peak demand has been reset, also with the time and date of the last occurrence. Meters that communicate by Power Line Carrier shall also include counts of properly received messages, rejected messages and the number of transmissions without reply.
- K. The system shall be capable of the options noted below:
1. Each meter shall be capable of measuring and recording reactive energy: kVARh consumption and kVAR demand. Demand shall be recorded along with the time and date at which it occurs. Peak demands shall be capable of being read and reset by the billing computer. The demand interval shall be factory programmed in each meter and shall be permanent.
 2. Each meter shall be capable of measuring and recording apparent energy: kVAh consumption and kVA demand. Demand shall be recorded along with the time and date at which it occurs. Peak demands shall be capable of being read and reset by the billing computer. The demand interval shall be factory programmed in each meter and shall be permanent.
 3. Each meter shall be capable of time-of-Use metering. Time-of-Use (TOU) schedules programmed in each meter allow consumption and demand of all metered parameters occurring during different periods of the day to be recorded in separate registers. Each meter shall have up to four TOU rats. Each meter shall be capable of having different TOU schedules for every day of the week, and for holidays. TOU schedules shall be factory programmed in each individual meter and shall be permanent.
 4. Each meter shall be capable of reading up to three (3) dry contact, Form A pulse inputs to automate the reading of other utilities such as gas, water or BTU's. The pulse inputs shall be individually factory programmable as counter, as above, or as timers for such applications as run-time measurement.
- L. Each meter shall be capable of providing a KYZ, (dry contact, Form C), pulse output to interface with energy management or building automation systems. The KYZ output can be factory programmed as Kwh, kVARh, or kVAh. The value of an output pulse can also be factory programmed to meet customer requirements.
- M. Each meter shall be capable of maintaining a one hundred twenty (120) day log of fifteen (15) minute demands with time and date stamp. The log is capable of being used as a 120 day log for a single energy parameter (e.g. kW), as two 60 day logs for two parameters (e.g. kW and kVAR or kVA), or as three 40 day logs for three parameters (e.g. kW, kVAR and kVA).
- N. The system shall be able to communicate with the billing computer by one or more of the methods noted below:

1. Data Link. Each meter shall be capable of communication over a twisted, shielded pair of wires. Up to 30 meters may be connected to a single Data Link Segment. Multiple Data Link segments may be connected to each other with RS-232 Bridge Links. There is no limit on the number of Data Link segments that can be connected together via RS-232 Bridge Links. Communications with meters in a Data Link system are real-time. One meter in the system is equipped with a modem and/or RS-232 serial port for communication with the billing computer. There are two (2) electrical closets and risers in the tower. Two (2) data communications are required for tower metering.
- O. The number of meters reporting to a single Scan Transponder is determined by the information to be communicated and the amount of non-volatile memory in the Scan Transponder. The range is from 1 to 2,048 meters.
 1. All communication shall be direct between Scan Transponder and each meter, and under control of the Scan Transponder. Meters will not repeat messages from other meters nor will message routing be determined by meters.
 2. Each Scan Transponder shall be equipped with an RS-232 serial port. One Scan Transponder at the site shall be equipped with a Modem if the billing computer is remote.
 3. Multiple Scan Transponders shall be connected by Data Link. Meters may also be connected to the Scan Transponder by Data Link.
- P. Modem. Individual meters shall be capable of being equipped with a modem for direct connection to a telephone line.
- Q. RS-232 Serial Port. All meters shall be capable of being equipped with a local serial port for direct connection to a terminal or PC.

2.2 INCLUDED OPTIONS

- A. One AMR Master Meter shall be provided capable of recording energy (kWh) data recorded at 15 minute intervals minimum and minimum 30 day data storage capacity in non-volatile memory.
- B. Meters must have memory backup in the event of a power loss.
- C. Any communications infrastructure necessary to collect data remotely and relay to third party data center is to be provided by the contractor .
 1. Each master meter and collector must be capable of transmitting data to a third party data center on a daily basis.in Comma-delimited ASCII data files.
 2. The metering data shall be compatible with the HVAC direct digital control system requirement for BACnet as per specification section 230923

2.3 COMPONENTS

- A. The Branch-Feeder-Monitor may be a design where no external enclosures are required for the metering of the feeder breakers. If the switchboard or panel board does not have sufficient room for the embedded solution, a separate enclosure may be mounted externally from the desired panel or switchboard. The metering units may be incorporated into the electrical manufactures panelboards as one contained unit and include the metering unit, data logger, digital display if needed and a fused disconnect.
- B. This system shall monitor all the specified types of loads to be sub-metered.
- C. The metering operating system shall have a user friendly interface for managing the load of each type and summation of load of each type.
- D. The metering operating software shall be capable of providing metering information for electricity, water, air and natural gas usage.
- E. The metering operating software shall allow selection of billing period (start date/time and end date/time) for billing purposes.
- F. The metering operating software database shall support reading “interval data” directly from a PAS operating database to execute the database queries and to minimize the query times.
- G. The metering operating software have a minimum of 4 virtual channel totalization sub-meters, allowing automatic totalization of multiple sub-meters.
- H. Branch-Feeder-Monitoring system is defined to include, but not limited to, remote metering devices embedded in the electrical manufactures panelboards, pre-wired current transformers in the manufactures panelboard, central display for monitoring the system, web based software, software configuration, ancillary equipment, start-up and training services.
- I. A kWh total display shall be available as an option at the branch-feeder-monitor unit for energy consumption and in a mechanical numeric digit format.
- J. A central display shall be available that will display all individual meters consumption readings.
- K. The branch-feeder-monitor shall be configured in the following: Eighteen (18) 120/208V, three-phase circuits, or eighteen (18) 120/208V, single-phase circuits, or any combination (refer to Contract Drawings).
- L. The units may be mounted in single NEMA 1 enclosures.
- M. The metering units will provide daily load profile data for up to 120 days
- N. A minimum of 8MB of non-volatile memory is required
- O. A local LCD display will view all basic measurement requirements.
- P. The metering units shall use metering grade current transformers.

- Q. Remote Web Based software shall be available for managing the tenant bills and monitoring the properties load via the internet over a computers internet explorer.
- R. Provide revenue class solid core current transformer.

2.4 MANUFACTURERS

- A. Qadlogic
- B. SATEC
- C. General Electric
- D. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Reference Standards:
 - 1. Install modular meter center according to switchboard installation requirements in NECA 400.
 - 2. Install arc-flash labels as required by NFPA 70.
- C. Special Techniques:
 - 1. Install meters furnished by utility company. Install raceways and equipment according to utility company's published instructions. Provide empty conduits for metering leads and extend grounding connections as required by utility company.
 - 2. Wiring Methods:
 - a. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - b. Install unshielded, twisted-pair cable for control and signal transmission conductors.
 - c. Minimum conduit size is metric designator 16 (trade size 1/2).

3.3 ADJUSTING CLEANING

- A. The meters shall be adjusted so that accurate readings appear and that the readings are within the meters accuracy range.

- B. Clean exposed surfaces using manufacturer recommended materials and methods.

3.4 IDENTIFICATION

- A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."
 - 1. Series Combination Warning Label: Self-adhesive labels, with text as required by NFPA 70.
 - 2. Equipment Identification Labels: Self-adhesive labels with clear protective overlay. For residential meters, provide additional card holder suitable for printed, weather-resistant card with occupant's name.

3.5 TESTING

- A. Perform factory and installation tests in accordance with applicable NEC, NEMA and UL requirements.
- B. The sub-meter system field tested shall use a calibrated metered source that has voltage and amperage outputs. The source should have a voltage output equal to the required voltage of the system. The system can be connected to systems with 90 to 120 volt phase to neutral. Current output should be synchronous to the voltage output in the test set.
- C. Disconnect all line system power from the sub-metering system to be checked. System power must never be connected to the sub-metering system while testing.
- D. Test Procedure
 - 1. Open all breaker/relays being metered by the sub-metering panel.
 - 2. Connect Field Tester to sub-metering distribution panel using the voltage reference info above. And check:
 - a. Voltage taps are per the instructions
 - b. Current loop is in the CT to be tested with the current synchronous to the voltage by phase.
 - c. Ethernet communications with the controller are established. (See manufacturer's User Manual. Note if the system has a display the display may be used to check the accuracy rather than the web pages for multi-phase test setups. Test results when a single phase test setup is used must either use the Controller web pages or Modbus register to get the per-phase Kw.
 - 3. Using the test set the Field Tester injects current synchronized to phase voltage into current loop. For multi-phase test sets multiple pole meters may be checked at the same time.
 - 4. Field Tester compares energy or power measurements of all sub-meters connected to phases versus the test set reference power meter.
 - 5. Field Tester generates Pass/Fail report for all meters.
 - 6. Disconnect Field Tester from the sub-metering distribution panel and return all connections to their factory locations.
 - 7. Test all sub-metering reading to compare with the system component and calibrate as required.

3.6 PROTECTION

- A. After installation, protect metering equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 262713

SECTION 262719 - MULTI-OUTLET ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Multi-Outlet Assemblies
 - 2. Wall Plates.
- B. Provide wiring devices in accordance with the Contract Documents.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Submit manufacturer's catalog cuts and specifications for all types for each product indicated. Highlight exact model being proposed in the submittal.
- C. Submit samples for finish, color and texture as requested by the Commissioner.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
 - 1. Receptacles:
 - a. NEMA Standards WD-1 and WD-6
 - b. Federal Specification WC596-D.
 - c. U.L. 943 (GFCI receptacles).
 - d. U.L. 514 (Poke Through Assemblies)
- C. Obtain each type of wiring device through a single manufacturer, where available.

1.5 WARRANTY

- A. Provide a five (5) year manufacturer’s warranty for all components.

PART 2 - PRODUCTS

2.1 MULTI-OUTLET ASSEMBLIES

- A. Provide multi-outlet assemblies consisting of surface mounted multi-compartment metal raceways, lengths as indicated on the Contract Documents.
- B. The raceways shall be utilized for power branch circuits, data network voice, and other low voltage wiring. Each wiring system shall be installed in the respective dedicated channel of the raceway.
- C. Raceways shall be one (1)- or two (2)-piece design with base and snap-on cover, or three (3)-piece design with base and two (2) snap-on covers which snap side by side on a common base. Base shall be dividable with a fixed barrier for up to four (4) compartments. Raceway shall be in widths of ¾” to 10” and depths of 17/32” to 5” as indicated on the Contract Documents.
- D. Provide the required fittings, device brackets, and plates to accommodate a complete code compliant system.
- E. The raceway shall be aluminum with a finish color as selected by the Commissioner.
- F. Provide receptacle types, quantities, and spacing as indicated on the Contract Documents. Provide device cover plates (power & communication) in a satin finish with circuiting identification tags. Colors of power and communication devices shall be by the Commissioner.
- G. Manufacturers
1. Legrand/Wiremold
 2. Hubbell
 3. Eaton
 4. Or Approved Equal

2.2 WALL PLATES

- A. Provide wall plates for all receptacles and outlets, of 430 stainless steel with satin finish, unless otherwise noted. When two (2) or more switches or devices are shown in one (1) location, provide a common wall plate.
- B. Provide cast aluminum metal plate with stainless steel spring loaded, gasketed, double flap lift cover to provide protection for the receptacle and plug when “IN USE” for all exterior receptacles, those in mechanical rooms, loading docks, and where indicated on the Contract Documents. These covers shall be labeled and listed as “extra duty” type.

- C. Cover plates for hospital grade receptacles shall be nylon of same color as device with nylon attachment screw.
- D. Provide lockable type covers where indicated on the Contract Documents.
- E. Provide RED wall plates for all receptacles circuited to emergency power. Provide ORANGE wall plates for all receptacles circuited to GAS emergency power.
- F. Manufacturers
 - 1. By same manufacturer as device utilized.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Comply with NECA 1 for device mounting heights, except where requirements on Drawings or in this Section are stricter.
- B. Comply with NECA 101 for installation requirements for steel raceways, except where requirements on Drawings or in this Section are stricter.
- C. Comply with NECA 102 for installation requirements for aluminum raceways, except where requirements on Drawings or in this Section are stricter.
- D. Comply with NFPA 70 limitations for types of raceways allowed in specific occupancies.
- E. Provide terminations, adapters, boxes, and other fittings required for installation.
- F. Install surface raceway with a minimum 2 inch radius control at bend points.
- G. Secure metallic surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inch and with no fewer than two supports per straight raceway section. Support surface raceway in accordance with manufacturer's instructions. Tape and glue are unacceptable support methods.
- H. Do not install aluminum raceways or fittings in contact with concrete.
- I. Secure nonmetallic surface raceway with screws or other anchor-type devices in each wiring channel at intervals not exceeding 18 inch and with no fewer than two supports per straight raceway section in each wiring channel. Support nonmetallic surface raceway in accordance with manufacturer's instructions. Tape and glue are unacceptable support methods.
- J. Do not install PVC raceways where ambient temperature exceeds 122 deg F (50 deg C)

- K. Conductors with insulation rated higher than 75 deg C installed in PVC raceways may not be operated at a temperature greater than 75 deg C.
- L. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- M. Comply with requirements in Section 260529 "Hangers and Supports for Electrical Systems" for hangers and support.
- N. Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems" for installation of raceways and additional requirements for floor boxes.
- O. Coordination with Work of Other Trades:
 - 1. Adjust locations of multi-outlet assemblies to suit arrangement of partitions and furnishings. Locate outlets to avoid blocking by supports, furnishings, and other architectural fixtures.
 - 2. Provide outlets with special requirements, such as GFCI, AFCI, or special environmental requirements, where required by Drawings or to meet NEC codes.
 - 3. Adjust locations of poke-through assembly penetrations to coordinate with locations of structural members, concealed piping, and concealed conduit. Obtain written approval from Commissioner prior to drilling penetrations in floors other than where dimensioned on architectural Drawings. Comply with requirements in Section 078413 "Penetration Firestopping."

3.3 IDENTIFICATION

- A. Comply with Section 260553 "Identification for Electrical Systems."

END OF SECTION 262719

SECTION 262726 - WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 WORK INCLUDED

- A. Receptacles.
- B. Wall Plates.
- C. Poke Through Assemblies
- D. Special Receptacles.

1.3 DEFINITIONS

- A. Commercial/Industrial-Use Cord Reel: A cord reel subject to severe use in factories, commercial garages, construction sites, and similar locations requiring a harder service-type cord.
- B. UL 1472 Type I Dimmer: Dimmer in which air-gap switch is used to energize preset lighting levels.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Submit manufacturer's catalog cuts and specifications for all types for each product indicated. Highlight exact model being proposed in the submittal.
- C. Submit samples for finish, color and texture as requested by the Commissioner.

1.5 QUALITY ASSURANCE

- A. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
- B. Receptacles:
 - a. NEMA Standards WD-1 and WD-6
 - b. U.L. Standard 498

- c. Federal Specification WC596-D.
- d. U.L. 943 (GFCI receptacles).
- e. U.L. 514 (Poke Through Assemblies)

C. Obtain each type of wiring device through a single manufacturer, where available.

1.6 WARRANTY

A. Provide a five (5) year manufacturer's warranty for all components

PART 2 - PRODUCTS

2.1 RECEPTACLES

- A. Receptacles shall be two-pole, three-wire, grounding, simplex or duplex NEMA 5-20R, rated for 20 amperes at 125 volt electrical alternating current as indicated on the Contract Documents and ANSI standard type, commercial specification grade, with brass contacts that accepts a plug with two (2) parallel blades and one (1) grounding blade. Receptacles shall be equipped with terminals to accept up to No. 10 AWG conductors. Enclosures shall be heat-resistant plastic with nylon face and two (2) grounding screws. Provide break-off terminals for 2-circuit wiring. Provide rectangular decora style type. Utilize hospital grade type receptacles in the clinical areas on the 1st floor.
- B. Ground fault circuit interrupter (GFCI) receptacles shall interrupt ground leakage currents between 4-6 mA having a maximum circuit current of 20 amperes. Employ feed through or non-feed through devices as indicated, or required. Configuration shall be straight blade type NEMA 5-20R. Utilize 2 ¾" deep outlet boxes without any adaptors. Long life LED light shall be provided, within the receptacle. Device shall have a minimum nominal tripping time of 0.025 seconds. Do not use feed through terminals to protect downstream devices. Each GFCI location shall be protected by a GFCI type receptacle.
- C. GFCI Receptacle shall be lockable protection type as per NEC. If critical components are damaged and ground fault protection is lost or mis-wired, power to the receptacle shall be disconnected.
- D. Provide RED receptacles when circuited to diesel generator emergency power, unless otherwise noted. Utilize BLUE receptacles when circuited to UPS power, unless otherwise noted. Provide ORANGE receptacles when circuited to standby emergency power (gas generator).
- E. Provide commercial specification grade twist lock type receptacles as indicated on the Contract Documents.
- F. Isolated-Ground Receptacles: Straight Blade, Commercial specification grade, single duplex NEMA 5-20R receptacle, with equipment grounding contacts connected only to the green grounding screw terminal of the device and with inherent electrical isolation from the mounting strap.
 - 1. Devices: Listed and labeled as isolated-ground receptacles.
 - 2. Isolation Method: Integral to receptacle construction and not dependent on removable parts.
 - 3. Color shall be orange, unless otherwise noted.
- G. USB Charger Receptacle: Shall be equipped with one (1) USB style 'A' and one (1) USB style "C" charging outlets with a 20A simplex tamper resistant receptacle.

- H. Outdoor Receptacles: All receptacles installed outdoors shall be Weather-Resistant type. Receptacles shall be provided with weatherproof covers.
- I. Switched duplex receptacles shall be wired so that only the top receptacle is switched. The lower receptacle shall be unswitched.
- J. Surge Protective Device (SPD) Receptacles shall have integral surge suppression in line to ground, line to neutral, and neutral to ground modes.
 - 1. SPD Components: Multiple metal-oxide varistors; with a nominal clamp-level rating of 400 Volts and minimum single transient pulse energy dissipation of 210 Joules.
 - 2. Active SPD Indication: LED, visible in the face of the device to indicate device is active or no longer in service.
- K. Cable Reel Receptacles
 - 1. Reel shall have a heavy-duty spring motor, with self-contained rewind power and non-sparking ratchet assembly, a 4-way roller and adjustable cable stop, and a safety chain. Reel shall lock when desired cable has been pulled out, and unlock and retract when cable is pulled to release lock.
 - 2. Reel shall be provided with a minimum 20-foot cable rated for 30A with required phase conductors, neutral, and equipment grounding conductors. Provide device with NEMA configuration as shown on the Contract Documents.
 - 3. Cable reels shall be securely fastened to the structure per the manufacturer's requirements. Fastening to the ceiling grid only is not acceptable.
- L. The color of all normal devices shall be selected by the Commissioner.
- M. Manufacturers
 - 1. Receptacles:
 - a. Leviton
 - b. Hubbell
 - c. Thomas & Betts
 - d. Pass & Seymour/Legrand
 - e. Or Approved Equal

2.2 WALL PLATES

- A. Provide wall plates for all receptacles and outlets, of 430 stainless steel with satin finish, unless otherwise noted. When two (2) or more switches or devices are shown in one (1) location, provide a common wall plate.
- B. Provide cast aluminum metal plate with stainless steel spring loaded, gasketed, double flap lift cover to provide protection for the receptacle and plug when "IN USE" for all exterior receptacles, those in mechanical rooms, loading docks, and where indicated on the Contract Documents. These covers shall be labeled and listed as "extra duty" type.

- C. Cover plates for hospital grade receptacles shall be nylon of same color as device with nylon attachment screw.
- D. Provide lockable type covers where indicated on the Contract Documents.
- E. Provide RED wall plates for all receptacles circuited to diesel generator backed up emergency power. Provide ORANGE wall plates for all receptacles circuited to gas generator backed up emergency power. Provide BLUE wall plates for all receptacles circuited to UPS backed up power.
- F. Manufacturers
 - 1. By same manufacturer as device utilized.

2.3 POKE THROUGH ASSEMBLIES

- A. A minimum fire rating of two (2) hours for all through-floor power and communication wiring devices shall be provided.
- B. Dedicated power poke through assemblies shall be factory prewired units with 120V, 20 amp rated grounded receptacles, with one (1) through floor conduit, junction box, and a self-supporting fitting without attachment of above floor fitting.
- C. Combination power & communication poke through assemblies shall be factory prewired with two (2) 120V, 20 amp rated grounded simplex receptacles, and internal barrier such that power will occupy one-half of the outlet box and telecommunication the remaining half of outlet box (space for two (2) category 6 RJ-45 jacks minimum). Furniture fed type service assembly shall be provided as indicated on the Contract Documents.
- D. Provide an integral fire barrier to incorporate cold smoke barrier to prevent passage of smoke when heat is not present.
- E. Poke through assemblies shall be for use with slab floors as well as corrugated metal decks. Metal boxes with corrosion protection suitable for installation in concrete shall be provided. Aluminum alloy boxes are not considered acceptable for installation in concrete or cinder fill unless protected by asphalt paint or equivalent. Selected to fit in nominally 4” cored holes.
- F. Provide each outlet with a heavy gauge steel work plate that is clearly marked - power-communication. Do not install service fittings until floor finishing is completed.
- G. Contoured, flush mounted, die-cast cover shall be provided for all types of assemblies. Finish shall be as selected by the Commissioner.
- H. Contractor shall verify thickness of the floor and select through floor components that fit the floor thickness.
- I. Manufacturers
 - 1. Thomas & Betts

2. Hubbell
3. Legrand/Wiremold
4. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Receptacles:
 1. Verify that receptacles to be procured and installed for City of New York-furnished equipment are compatible with mating attachment plugs on equipment.
 2. Unless otherwise noted, mount receptacles vertically with U-shaped ground position at the top.
 3. Coordinate device layouts and installation with all other adjacent devices and any wall obstruction prior to any work.
- B. Cord Reels:
 1. Examine roughing-in for cord reel mounting and power connections to verify actual locations of mounts and power connections before cord reel installation.
 2. Examine walls, floors, and ceilings for suitable conditions where cord reel will be installed.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 ELECTION OF GFCI RECEPTACLES

- A. Healthcare Facilities: Unless protection of downstream branch-circuit wiring, cord sets, and power-supply cords is required by NFPA 70 or NFPA 99, provide non-feed-through GFCI receptacles.

3.4 INSTALLATION OF SWITCHES

- A. Comply with manufacturer's instructions.
- B. Reference Standards:
 1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
 2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
 3. Consult Commissioner for resolution of conflicting requirements.
- C. Identification:

- a. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
- b. Mark cover or cover plate using hot, stamped, or engraved machine printing with white filled lettering, and provide durable wire markers or tags inside device box or outlet box.
- c. Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.
- d. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.5 INSTALLATION OF STRAIGHT-BLADE RECEPTACLES

A. Comply with manufacturer's instructions.

B. Reference Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
3. Receptacle Orientation: Unless otherwise indicated in Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.
 - a. Hospital-Grade Receptacle Orientation: Orient receptacle with ground pin or neutral pin at top.
4. Consult Commissioner for resolution of conflicting requirements.

C. Identification:

1. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
 - a. Mark cover or cover plate using hot, stamped, or engraved machine printing with white -filled lettering, and provide durable wire markers or tags inside device box or outlet box.
 - b. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

D. Interfaces with Other Work:

1. Do not install Type 3 SPD, including surge-protected relocatable taps and power strips, on branch circuit downstream of GFCI device.

3.6 GROUND FAULT CIRCUIT INTERRUPTERS (G.F.C.I.)

A. Swab all conduits and outlet boxes clear of moisture.

- B. Do not combine G.F.C.I. protected circuits with other circuits in the same raceway; only one (1) G.F.C.I. circuit per raceway.
- C. Do not substitute G.F.C.I. circuit breakers for G.F.C.I. receptacles.
- D. All G.F.C.I. receptacles shall be installed in a readily accessible location per the NEC.
- E. All receptacles located in toilets, kitchens, outdoors, elevator machine rooms, elevator pits, loading docks, garages and within six (6) feet of any sink shall be GFCI type.

3.7 DEVICE GROUNDING

- A. Provide a No. 12 AWG grounding conductor from the device grounding terminal to the panelboard ground bus.
- B. Provide a No. 12 AWG grounding conductor from the device grounding terminal to the outlet box.

3.8 INSTALLATION OF LOCKING RECEPTACLES

- A. Comply with manufacturer's instructions.
- B. Reference Standards:
 - 1. Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with installation instructions in NECA NEIS 130.
 - 2. Mounting Heights: Unless otherwise indicated in Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
 - 3. Receptacle Orientation: Unless otherwise indicated in Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.
 - 4. Consult Commissioner for resolution of conflicting requirements.
- C. Identification:
 - 1. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
 - a. Mark cover or cover plate using hot, stamped, or engraved machine printing with white filled lettering, and provide durable wire markers or tags inside device box or outlet box.
 - b. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.9 INSTALLATION OF CONNECTORS, CORDS, AND PLUGS

- A. Comply with manufacturer's instructions.

1. Reference Standards: Unless more stringent requirements are specified in Contract Documents or manufacturers' instructions, comply with New York City Building Department standards.
2. Consult Commissioner for resolution of conflicting requirements.

3.10 SYSTEM STARTUP FOR SWITCHES

A. Perform startup service.

1. Complete installation and startup checks for momentary switches, dimmer switches, and fan-speed controller switches in accordance with manufacturer's instructions.
2. Provide a factory-certified field service engineer to visit the site to ensure proper system installation and operation under the following parameters:
 - a. Qualifications for factory-certified field service engineer:
 - 1) Experience in the electrical/electronic field.
 - 2) Certified by the equipment manufacturers on the systems installed.
 - b. Perform site visits upon completion of the wiring device systems installation and:
 - 1) Verify connections and locations of all control devices.
 - 2) Verify systems operation control, zone by zone.
 - 3) Verify proper integration of the manufacturers' interfacing equipment.
 - 4) Obtain sign-off on all system functions.

3.11 ADJUSTING

- A. Occupancy Adjustments for Controlled Receptacles: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to **two** visits to Project during other-than-normal occupancy hours for this purpose.
- B. Cord Reels and Fittings: Adjust spring mechanisms and moving parts of cord reels and fittings to function smoothly, and lubricate as recommended in writing by manufacturer.

3.12 PROTECTION

A. Devices:

1. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.
2. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

B. Cord Reels and Fittings:

1. After installation, protect cord reels and fittings from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

C. Connectors, Cords, and Plugs:

1. After installation, protect connectors, cords, and plugs from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

END OF SECTION 262726

SECTION 262726.11 - GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 WORK INCLUDED

- A. Switches
- B. Dimmers
- C. Fan Speed Controller

1.3 DEFINITIONS

- A. UL 1472 Type I Dimmer: Dimmer in which air-gap switch is used to energize preset lighting levels.
- B. UL 1472 Type II Dimmer: Dimmer with air-gap switch that opens and closes load circuit at minimum output voltage setting only.
- C. UL 1472 Type IIa Dimmer: Dimmer with air-gap switch that opens and closes load circuit at maximum output voltage setting only.
- D. UL 1472 Type III Dimmer: Dimmer incorporating solid-state components providing preestablished rectified output settings.
- E. UL 1472 Type IV Dimmer: Dimmer not covered by UL 1472 Types I through III.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Submit manufacturer's catalog cuts and specifications for all types for each product indicated. Highlight exact model being proposed in the submittal.
- C. Submit samples for finish, color and texture as requested by the Commissioner.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
 - 1. Switches.
 - a. NEMA Standards WD-1 and WD-6.
 - b. Federal Specification Standard WS-896E.
 - c. U.L. 20.

1.6 WARRANTY

- A. Provide a five (5) year manufacturer's warranty for all components.

PART 2 - PRODUCTS

2.1 SWITCHES

- A. Switches shall be commercial specification grade, flush mounting, quiet-operating AC type, decora rocker type, heat-resistant plastic housing and self-grounding metal strap. Provide silver alloy contacts. Switches shall be rated 20A at 120-277V and capable of full capacity on all lamp loads. Switches shall be designed for side or back wiring with up to No. 10 AWG wire. Switches shall be rectangular (decorator) style in all areas.
- B. Provide single-pole, double-pole, 3-way, 4-way, pilot or keyed type switches, as indicated on the Contract Drawings or required.
- C. Switch with Pilot Light: Switches indicated with an illuminated rocker switch in the "OFF" position for visual load monitoring shall be provided as indicated on the Contract Drawings.
- D. Provide 3-position, momentary contact, center "OFF" type switches, which control lighting by way of a low voltage lighting control relays as indicated on the Contract Drawings.
- E. Provide illuminated type switches controlling lighting connected to emergency power – illuminated when switches are in the "OFF" position.
- F. Dimmer Switches: Modular, full-wave, solid-state units with integral, quiet "ON/OFF" slide switches and audible frequency and EMI/RFI filters.
 - 1. Control: Continuously adjustable; with single-pole or three-way switching to suit connections.
 - 2. LED Lamp Dimmer Switches: Modular; compatible with dimmer drivers to adjust low-end dimming; dimmer drivers combination capable of consistent dimming with low end not greater than 20 percent of full brightness.

3. Conference and meeting room dimmers shall be capable of dimming 0-10 volt.
- G. The color of all devices shall be selected by the Commissioner.
- H. Manufacturers
1. Switches
 - a. Leviton
 - b. Hubbell
 - c. Bryant
 - d. Pass & Seymour/Legrand
 - e. Lutron
 - f. Or Approved equal
 2. Dimmers
 - a. Lutron
 - b. Leviton
 - c. Pass & Seymour/Legrand
 - d. Or Approved Equal
 3. Fan Speed Controller
 - a. Control
 - b. Dayton
 - c. Johnson Control
 - d. Or Approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Switches
1. Install all switches vertically with the “ON” position on top, unless noted or specified otherwise.
 2. Where switches are indicated near doors, corner walls, etc., install not less than two (2) inches and not more than twelve (12) inches from the trim.
 3. Carefully coordinate locations of switches to ensure locations are at the strike side of doors.
 4. Furnish and install an engraved legend for each switch that controls motors, equipment systems, etc., not located within the sight of the controlling switch.
 5. Install wall dimmers to achieve indicated rating after derating for ganging according to the manufacturer’s written instructions.

6. Install unshared neutral conductors on the line and load sides of the dimmers according to the manufacturers' written instructions.

B. Fan Speed Controller

1. Install fan speed controller vertically with the "ON" position on top, unless noted or specified otherwise.
2. Where controllers are indicated near doors, corner walls, etc., install not less than two (2) inches and not more than twelve (12) inches from the trim.
3. Carefully coordinate locations of the fan to be controller with the fan locations.
4. Furnish and install an engraved legend for each controller that controls the fans. being located within the sight of the controller.
5. Provide grounding wire for the fan speed.

3.3 IDENTIFICATION:

- A. Identify cover or cover plate for device with panelboard identification and circuit number in accordance with Section 260553 "Identification for Electrical Systems."
 1. Mark cover or cover plate using hot, stamped, or engraved machine printing with white-filled lettering, and provide durable wire markers or tags inside device box or outlet box.
 2. Healthcare Facilities: Distinctively identify covers or cover plates of device boxes and outlet boxes that are supplied from life safety and critical branch power supplies following facility's standard practice.

3.4 SYSTEM STARTUP

- A. Perform startup service.
 1. Complete installation and startup checks for momentary switches, dimmer switches, and fan-speed controller switches in accordance with manufacturer's instructions.

3.5 PROTECTION

- A. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.
- B. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

END OF SECTION 262726.11

SECTION 262743 - ELECTRIC-VEHICLE SERVICE EQUIPMENT - AC LEVEL 2

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes EVSE that provides AC Level 2 EV charging.

1.3 DEFINITIONS

- A. EV: Electric vehicle.
- B. EV Cable: The off-board cable containing the conductor(s) to connect the EV power controller to the EV that provides both power and communications during energy transfer.
- C. EV Charger or EV Charging Equipment: See "EVSE."
- D. EV Connector: A conductive device that, when electrically coupled to an EV inlet, establishes an electrical connection to the EV for the purpose of power transfer and information exchange. This device is part of the EV coupler.
- E. EV Coupler: A mating EV inlet and connector set.
- F. EV Inlet: The device in the vehicle into which the EV connector is inserted, and a conductive connection is made for the transfer of power and communication. This device is part of the EV coupler.
- G. EVSE: Electric-Vehicle Supply Equipment. It includes the EV charging equipment and conductors, including the ungrounded, grounded, and equipment grounding conductors and EV cables, attachment plugs, and all other fittings, devices, power outlets, or apparatus installed specifically for transferring energy between the premise wiring and the EV.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 FIELD CONDITIONS

- A. Wireless Survey: Complete wireless survey to determine if wireless provider signals meet or exceed manufacturer's recommended minimum values.

- B. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
1. Ambient Temperature: Not exceeding minus 22 to plus 122 deg F.
 2. Altitude: Not exceeding 6600 feet.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: EVSE shall withstand the effects of earthquake motions determined according to ASCE/SEI 7
1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Component Importance Factor: 1.0.
- B. Ambient Temperature: -10 to 110deg F.
- C. Relative Humidity: Zero to 95 percent.
- D. Altitude: Sea level to 1000 feet.
- E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.
- F. Surge Withstand: 6 kV at 3000 A.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- H. EV Charging Levels:
1. Single vehicle, AC Level 2 at up to 19.2 kW per vehicle.
 2. Dual vehicles, AC Level 2 at up to 19.2 kW per vehicle.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Examine roughing-in for EVSE electrical conduit to verify actual locations of conduit connections before equipment installation.
- C. Examine pavement for suitable conditions where EVSE will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Comply with NECA 1 and NECA 413.
- B. Concrete Base Mounting:
 - 1. Install EVSE on 6-inch nominal-thickness concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
 - a. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 - b. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - c. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - d. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - e. Secure EVSE to concrete base according to manufacturer's written instructions.
 - 2. Install EVSE on 12-inch nominal-diameter and 48-inch- deep concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
 - a. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - b. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - c. Secure EVSE to concrete base according to manufacturer's written instructions.
- C. Comply with mounting and anchoring requirements specified in Section 260548 " Vibration and Seismic Controls for Electrical Systems."
- D. Wiring Method: Install cables in raceways and cable trays. Conceal raceway and cables except in unfinished spaces.
 - 1. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
 - 2. Comply with requirements for underground raceways and enclosures specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems."
- E. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
- F. Wiring Method: For underground raceway, refer to Section 260543 "Underground Ducts And Raceways For Electrical Systems". Include underground raceway for data wiring.

- G. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- H. Disconnect: Install disconnect in a readily accessible location according to Section 262816 "Enclosed Switches and Circuit Breakers."
- I. Circuit Breakers: Comply with Section 262816 "Enclosed Switches and Circuit Breakers."
- J. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking from enclosures and components.
- K. Secure covers to enclosure.
- L. Cybersecurity:
 - 1. Software:
 - a. Coordinate security requirements with the Commissioner.
 - b. Ensure that latest stable software release is installed and properly operating.
 - c. Disable or change default passwords to password of at least eight characters in length, using a combination of uppercase and lower letters, numbers, and symbols. Record passwords and turn over to party responsible for system operation and administration.
 - 2. Hardware:
 - a. Coordinate location and access requirements with the Commissioner.
 - b. Enable highest level of wireless encryption that is compatible with City of New York's ICT network.
 - c. Disable dual network connections.

3.4 CONNECTIONS

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Comply with grounding requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Comply with requirements for installation of conduit in Section 260533 "Raceways and Boxes for Electrical Systems." Drawings indicate general arrangement of conduit, fittings, and specialties.
- D. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
- E. Verify that all electrical connections have been made according to the manufacturer's instructions. Remove all burrs, shavings, and detritus from inside the enclosure.
- F. After confirming all connections, install covers and tighten fasteners to according to manufacturer's instructions.

3.5 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.6 SOFTWARE SERVICE AGREEMENT

- A. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for one year.
- B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.
 - 1. Upgrade Notice: At least 30 days to allow City of New York to schedule and access the system and to upgrade computer equipment if necessary.

END OF SECTION 262743

SECTION 262813 - FUSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 DESCRIPTION

- A. Provide 600 Volt and less fuses in accordance with the Contract Documents.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Product Data
 1. Provide a complete set of let-through curves for each type of fuse.
 2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
 3. Submit listing of all types, sizes and quantity of fuses which will be installed including location of each.
 4. Submit listing of all spare fuses by types, sizes and quantities, which will be furnished for placement in the respective fuse cabinets.
 5. Upon completion of a coordination study, provide and coordinate appropriate fuse components, as required by the study.
 6. Short circuit current analysis is based upon the propose manufacturers fuse characteristics for let-through currents. Provide appropriate fuse curves and let-through values which correspond to m values shown on the Contract Documents.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
 1. U.L. Standard #198.
 2. U.L. Standard #977.
 3. NFPA 70, Article 100.
 4. ANSI.
 5. IEEE 242.

- C. All fuses shall be the same type within a piece of equipment.

1.5 FIELD CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F apply manufacturer's ambient temperature adjustment factors to fuse ratings.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Mains, Feeders and Branch Circuits

1. Circuits 601 to 6000 amperes shall be protected by Low Peak Yellow Time-Delay fuses, with 200,000 RMS symmetrical interrupting current rating.
2. Circuits 0 to 600 amperes shall be protected Low Peak Yellow dual element fuses, type LPN-RK (amp) SPI for 250 volt applications and LPS RK (amp) SPI for 600 volt applications, with 200,000 RMS symmetrical interrupting current rating. Provide open fuse indicator.
3. A minimum 2:1 ratio must be allowable between the ampere rating of the main fuse and that of the feeder fuse, and between the feeder fuse and branch circuit fuse to obtain selective coordination and minimize switch size.
4. Metal end caps of fuses rated 61 through 600 amperes shall be electrically connected to the fuse blades to facilitate voltage testing during OSHA required lock out/tag out procedures.
5. All fuses shall be of the same manufacturer.

B. Motor Protection

1. All the individual motor circuits shall be protected by class RK1, Class J, or Class L time delay type fuses. Motors under 10 HP may utilize Class CC fuses with blown indicators.
2. Fuse size for motor protection shall be appropriate for starting current of the motor.

C. Spares: Upon completion of the project, provide the City of New York with spare fuses as indicated below:

1. 10 percent (minimum of 3) of each type and rating of installed fuses shall be supplied as spares.
2. Spare fuse cabinets shall be provided to store the above spares. The cabinet shall be constructed of minimum .080 heavy duty aluminum, with baked ASA61 gray enamel paint. The wall mounted cabinet door shall be equipped with a locking handle and cylinder lock. Mounting holes with key slots 16 inches on center shall be provided.
3. Spare fuse cabinets shall be provided as a minimum in the following locations:
 - a. Each main normal and emergency rooms.
 - b. Each major mechanical equipment room.

D. Labels

1. "Low-Peak Yellow" or equivalent notice labels to alert the end user of the engineered level of protection of the electrical equipment shall be field installed. They shall be obtained from the fuse manufacturer, marked with the proper fuse rating per the specifications and placed in a visible location in the enclosure.

2. Label each spare fuse cabinet.

2.2 MANUFACTURERS

- A. Fuses
 1. Cooper Bussmann
 2. Mersen
 3. Littelfuse
 4. Or Approved Equal
- B. Spare Fuse Cabinet
 1. By fuse supplier.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.
- B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.
- C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare-fuse cabinet(s) in location shown on the Drawings or as indicated in the field by Commissioner.

END OF SECTION 262813

SECTION 262816 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:

1. Fusible switches.
2. Nonfusible switches.
3. Manual Control Switches.
4. Molded-case circuit breakers (MCCBs).
5. Enclosures.

- B. DESCRIPTION

1. Provide disconnect switches in accordance with the Contract Documents.

1.3 DEFINITIONS

- A. GFEP: Ground-fault circuit-interrupter for equipment protection.
- B. GFLS: Ground-fault circuit-interrupter for life safety.
- C. SPDT: Single pole, double throw.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Product Data

1. Submit manufacturers' data for each type of disconnect switches, including dimensional data, ratings, fuse ratings and types, and cable terminal sizes.
2. Identify motor or equipment served by each switch; indicate nameplate inscription.
3. All test reports.

1.5 QUALITY ASSURANCE

- A. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest applicable recommendations of the following:
1. U.L. Standards 98.
 2. NEMA Standard KS1.
 3. U.L. 20 and Federal Specification Test Standards for Toggle Switches.
 4. NFPA 70

PART 2 - PRODUCTS

2.1 SAFETY SWITCHES

- A. Provide heavy-duty, horsepower rated, single-throw knife switch with quick-make/quick-break mechanism, capable of full load operations. Switches shall meet NEMA and U.S. Government specifications for Class A switches.
- B. Provide with contact arc-quenching devices, such as magnetic blowouts or snuffing plates. Provide self-aligning switchblades with silver alloy contact areas, designed so that arcing upon making and breaking does not occur on final contact surfaces. Provide with high-pressure, spring-loaded contact. Switch parts shall be mounted on high-grade insulating base.
- C. Enclosure: Shall be NEMA 1 with hinged door, and defeatable interlock when switch is in "ON" position, able to be padlocked in "ON" and "OFF" positions. Provide NEMA 3R (rain-tight) enclosure for exterior installations.
- D. Size, fusing and number of poles shall be provided as shown on the Contract Documents or as required. Where fused, the switch shall be provided with U.L. listed rejection feature to reject all but Class R fuses. Provide horsepower rated switch to match motor load if size is not shown. Provide 3 pole plus solid neutral switches on four wire circuits and 3 pole switches on all other circuits, unless otherwise noted.
- E. Lugs shall be U.L. listed for copper conductors and be front removable. Coordinate lug sizes and quantities with the respective line and load feeder and provide accordingly.
- F. Provide six (6) pole switches for connection to motors with the following starter types:
1. Non-reversing - two step - part winding - star connected.
 2. Non-reversing - full voltage - two speed separate winding.
 3. Non-reversing - full voltage - two speed single winding.
 4. Where otherwise required.
- G. Provide auxiliary contacts for switches where required or where indicated on the Contract Documents.
- H. Viewing Windows – Provide viewing windows for all safety switches to provide blade visibility when the switch door is closed.

2.2 TOGGLE TYPE MANUAL CONTROL SWITCHES

- A. Provide switches which operate at their full rating with fluorescent, tungsten, and resistance loads and at 80% of their rated capacity with motor loads.
- B. Switches shall be heavy duty type and shall have:
 - 1. Arc-resisting bodies.
 - 2. Slow make-and-break mechanisms.
 - 3. Silver alloy contact buttons.
 - 4. Side or back wiring with up to No. 10 AWG solid conductors.

2.3 MANUFACTURERS

- A. Safety Switches
 - 1. Square 'D'
 - 2. Eaton
 - 3. ABB
 - 4. Siemens
 - 5. Or Approved Equal
- B. Toggle Type Manual Control Switches
 - 1. Square 'D'
 - 2. Eaton
 - 3. ABB
 - 4. Siemens
 - 5. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
 - 1. Commencement of work will indicate Installer's acceptance of areas and conditions as satisfactory.

3.3 SELECTION OF ENCLOSURES

- A. Indoor, Dry and Clean Locations: UL 50E, Type 1.
- B. Outdoor Locations: UL 50E, Type 3R.
- C. Wash-Down Areas: UL 50E, Type 4X.
- D. Other Wet or Damp, Indoor Locations: UL 50E, Type 4.
- E. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: UL 50E, Type 12.
- F. Hazardous Areas Indicated on Drawings: UL 50E, Type 9 with cover attached by Type 316 stainless steel bolts.

3.4 INSTALLATION

- A. Comply with manufacturer's published instructions.
- B. Special Techniques:
 - 1. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
 - 2. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
 - 3. Comply with mounting and anchoring requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
 - 4. Temporary Lifting Provisions: Remove temporary lifting of eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
 - 5. Install fuses in fusible devices.

3.5 APPLICATIONS

- A. Provide each motor over ½ HP with a horsepower rated safety-type disconnect switch.
- B. Provide each piece of equipment utilizing multi-phase power with a safety-type disconnect switch.
- C. Provide each piece of equipment utilizing single-phase power but protected at over 30 amperes with a safety-type disconnect switch.
- D. Equipment other than that mentioned above shall utilize toggle type manual control switch properly sized and rated for equipment it disconnects.
- E. Factory installed disconnect switches may be used to satisfy the above requirements.
- F. Disconnect switches serving the fire alarm system and fire pumps shall be painted RED.

3.6 IDENTIFICATION

- A. Comply with requirements in Section 260553 "Identification for Electrical Systems."
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.7 MOUNTING

- A. Provide connections and wiring to and from each disconnect switch.
- B. Provide all frame supports, backboards and the like for proper mounting of all starting, control and disconnect equipment installed under this Division. Angle iron frames, racks and backboards shall be of adequate dimensions to permit an orderly arrangement of equipment and conduit connections therein.
- C. Disconnect switches shall be mounted on adjacent wall or from the floor with independent supports. Switches shall not be mounted on the equipment housings. Where switches are floor mounted, provide 4” high concrete housekeeping pad.
- D. Switch enclosure shall be rigidly mounted and with proper alignment on building structure or steel supports with centerline of operating handle not more than 6 feet above finished floor unless otherwise required. Steel supports fabricated from standard rolled structural steel shapes or framing channel shall be used to provide one-inch separation between enclosure and building wall for vertical flow of air.
- E. Fuses shall be installed as specified in this Division.
- F. Completed installation shall contain no extraneous openings.
- G. All viewing windows shall be cleaned.
- H. Ground and bond all circuit and equipment disconnect switches.
- I. Tighten connector and terminal bolts in accordance with the manufacturer’s published torque-tightening values. Where manufacturer’s torque values are not indicated, use those specified in UL 486A.
- J. Field tests and inspections must be witnessed by Commissioner.

3.8 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573.16 "Coordination Studies."

3.9 PROTECTION

- A. After installation, protect enclosed switches and circuit breakers from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 262816

SECTION 262913.03 - MANUAL AND MAGNETIC MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Combination Starters and Disconnect Switches.
 - 2. Electric motor controllers.

1.3 DEFINITIONS

- A. CPT: Control power transformer.
- B. MCCB: Molded-case circuit breaker.
- C. MCP: Motor circuit protector.
- D. NC: Normally closed.
- E. OCPD: Overcurrent protective device.
- F. SCCR: Short-circuit current rating.
- G. SCPD: Short-circuit protective device.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings
 - 1. Submit a list of motor controllers required for the project. This list should include equipment tag, equipment motor size, starter type, starter features.
 - 2. Submit a statement of compliance, or non-compliance for each clause of this specification section.
 - 3. Submit a statement of understanding that each starter has a withstand rating that is coordinated with the electrical system installation.
 - 4. Submit shop drawings and manufacturer's data for all items in accordance with the conditions of the contract.

5. Include control diagrams, unit wiring diagram for each motor controller, assembly outline drawings, summary sheets, shop interwiring diagrams, field connection diagrams, and nameplates with legends.
- C. Include a statement verifying coordination with the automatic temperature controls and the fire alarm system.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Motor Controllers: Comply with Underwriters' Laboratories standard UL-508 (being transitioned to WL 60947) and National Electrical Manufacturers Association Standard ICS 2-2000.
- C. Disconnect Switches: Comply with National Electrical Manufacturers Standard ICS 2-1996, Part 8 (R 2004, R 2009).

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; connect factory-installed space heaters to temporary electrical service.

1.7 FIELD CONDITIONS

- A. Ambient Environment Ratings: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 1. Ambient Temperature: Not less than 23 deg F and not exceeding 104 deg F.
 2. Altitude: Not exceeding 6600 feet for electromagnetic and manual devices.
 3. The effect of solar radiation is not significant.

1.8 WARRANTY

- A. Warranty shall be for five (5) years from date of substantial completion and shall cover replacement parts on all components.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

- B. UL Compliance: Fabricate and label magnetic motor controllers to comply with UL 508 and UL 60947-4-1.
- C. NEMA Compliance: Fabricate motor controllers to comply with ICS 2.
- D. Seismic Performance: Magnetic controllers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - 1. The term "withstand" means "the controller will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Component Importance Factor: 1.0.

2.2 COMBINATION STARTERS AND DISCONNECT SWITCHES

- A. Provide suitable fully coordinated starting and controlling equipment for motors as required. Arrange the starting equipment as indicated in other sections of these specifications.
- B. Consult with each trade affected to determine the exact requirements for each device.
- C. Coordinate with the Building Management and Control System (BMCS) Sub-Contractor and the Fire Alarm Sub-Contractor to establish required auxiliaries, including relays, contacts, terminals and the like. All three phase starters to have a minimum of two (2) normally open and two (2) normally closed auxiliary contacts.
- D. All starter interface and termination points for the Building Controls Sub-Contractor and the Fire Alarm Sub-Contractor shall be made at a terminal strip provided with the motor controller.
- E. Provide individual starters fully enclosed in neatly finished ventilated boxes of code gauge steel, machine formed and welded. Provide boxes arranged for floor, wall or angle iron frame mounting including a door with a spring catch handle with facility to lock handle in open position.
- F. Provide engraved nameplates for each unit, nomenclature of each to be approved prior to fabrication.
- G. Provide starters for motors less than 1/2 horsepower, as 120 volt, 1-phase, 60 cycle, or 277 volt 1-Phase, 60 cycle, alternating current service with pilot light. Provide manual starters with overload protection and lockout type disconnect switch to control such motors, except where interlocks or automatic controls are required. In such cases, provide magnetic across-the-line starters.
- H. Fire smoke dampers, smoke dampers and automatic louver dampers will be started using addressable relay modules provided by the fire alarm or building control compactor.
- I. Provide starters for motors 1/2 horsepower to 100 horsepower as magnetic across-the-line, combination Motor Circuit Protector or Circuit Breaker type. Such starters to be 208 or 480 volt, 3-phase, 60 cycle, alternating current service.
- J. Provide magnetic starters subject to manual start and in direct view of the motors they control with momentary contact start and stop buttons built into cover. Provide magnetic starters subject to electrical interlock or automatic control with Hand-Off-Automatic switches built into cover. Provide selector switches in starters to be of the maintained-contact type, water tight and dust tight.

- K. Provide starters with water tight and dust tight, (5) pilot lights on the following indications: Hand, Off, Auto, Run, and Overload.
- L. Provide starters for service at voltages higher than 120 volt with transformers for 120 volt secondary service built into each starter casing to serve control circuits.
- M. Provide each starter subject to electrical interlock and/or automatic control with the necessary auxiliary contacts plus one spare set of normally open and normally closed auxiliary contacts. Provide one set of terminals for each control circuit.
- N. Provide magnetic starters with Solid State Electronic Overload Relay which shall protect all three phases with a wide range current setting and trip class to allow field adjustment for specific motor FLA. Interchangeable heater elements are not acceptable. Overload relay shall provide phase failure, phase loss, locked rotor and stall protection.
- O. Provide coils, cores, resistance, insulation, contacts, trippers, etc., for starters and relays. The motor circuit protector shall be UL listed 508 current limiting manual motor starters with magnetic trip elements only. The breaker shall carry a UL 508F rating which provides for coordinated short circuit rating for use with the NEMA rated motor contactor and provides a minimum interrupting rating of 30 KAIC for the combination starter.
- P. Provide over/under voltage and phase monitoring capability. Monitor shall be field adjustable for both over and under voltage levels and a delay time before returning to normal operation after a trip.
- Q. Mount individual motor controllers in NEMA Type 1A enclosures for typical indoor locations. Utilize NEMA Type 3R for outdoor locations and NEMA Type 4 for other wet locations or locations subject to water spray or very high humidity.
- R. Coordinate the withstand rating of all starter components with the Electrical trade and with the requirements of the electrical system. Starters that do not have appropriate withstand rating shall be removed from the project – at no cost – for operator safety.

2.3 MANUFACTURERS

- A. Cerus
- B. General Electric
- C. Square Dee
- D. Siemens
- E. Eaton/Cutler Hammer
- F. Allen Bradley

- G. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for motor controllers, their relationship with the motors, and other conditions affecting performance of the Work.

3.3 INSTALLATION

- A. Comply with NECA 1.
- B. Wall-Mounted Controllers: Install magnetic controllers on walls with tops at uniform height indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems" unless otherwise indicated.
- C. Floor-Mounted Controllers: Install controllers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
- D. Comply with requirements for seismic control devices specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- E. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- F. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- G. Setting of Overload Relays: Select and set overloads on the basis of full-load current rating as shown on motor nameplate. Adjust setting value for special motors as required by NFPA 70 for motors that are high-torque, high-efficiency, and so on.
- H. Motor controllers will be installed under work of Division 26.
- I. Various pieces of packaged equipment will be provided with starters installed by manufacturer at the factory. Coordinate the Division 23 work with these starters.

- J. Review Division 23 and Automatic Temperature Control or Building Management Control System (BMCS) Documents for required accessories, interlocks, etc. Failure to fully coordinate this item with the other Divisions in no way relieves the Contractor from providing a complete, functional, and coordinated system as described

3.4 SYSTEM FUNCTION TESTS

- A. System function tests shall prove the correct interaction of sensing, processing, and action devices. Perform system function tests after field quality control tests have been completed and all components have passed specified tests.
 - 1. Develop test parameters and perform tests for the purpose of evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
 - 2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
 - 3. Verify the correct operation of sensing devices, alarms, and indicating devices.
- B. Motor controller will be considered defective if it does not pass the system function tests and inspections.
- C. Prepare test and inspection reports.

END OF SECTION 262913.03

SECTION 262913.06 - SOFT-START MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes soft-start motor controllers that are designed for reduced-voltage start and full-voltage run duty.
- B. Provide soft starter for the motor as indicated on contract document and fire pump

1.3 DEFINITIONS

- A. CPT: Control power transformer.
- B. FLA: Full-load current.
- C. MCCB: Molded-case circuit breaker.
- D. MCP: Motor circuit protector.
- E. NC: Normally closed.
- F. NO: Normally open.
- G. OCPD: Overcurrent protective device.
- H. SCCR: Short-circuit current rating.
- I. SCPD: Short-circuit protective device.
- J. SCR: Silicon-controlled rectifier.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings

1. Submit a list of motor controllers required for the project. This list should include equipment tag, equipment motor size, starter type, starter features.
2. Submit a statement of compliance, or non-compliance for each clause of this specification section.
3. Submit a statement of understanding that each starter has a withstand rating that is coordinated with the electrical system installation.
4. Submit shop drawings and manufacturer's data for all items in accordance with the conditions of the contract.
5. Include control diagrams, unit wiring diagram for each motor controller, assembly outline drawings, summary sheets, shop interwiring diagrams, field connection diagrams, and nameplates with legends.

- C. Include a statement verifying coordination with the automatic temperature controls and the fire alarm system.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Motor Controllers: Comply with Underwriters' Laboratories standard UL-508 (being transitioned to WL 60947) and National Electrical Manufacturers Association Standard ICS 2-2000.
- C. Disconnect Switches: Comply with National Electrical Manufacturers Standard ICS 2-1996, Part 8 (R 2004, R 2009).

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Store soft-start controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect soft-start controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage
- B. If stored in areas subject to weather, cover soft-start controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; connect factory-installed space heaters to temporary electrical service.

1.7 FIELD CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
1. Ambient Temperature: Not less than 32 deg F and not exceeding 104 deg F, humidity noncondensing.
 2. Altitude: Not exceeding 3300 feet.
 3. The effect of solar radiation is insignificant.

1.8 WARRANTY:

- A. Warranty shall be for five (5) years from date of substantial completion and shall cover replacement parts on all components.

PART 2 - PRODUCTS

2.1 MOTOR CONTROLLER PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
- B. UL Compliance: Fabricate and label enclosed controllers to comply with UL 508.
- C. NEMA Compliance: Fabricate motor controllers to comply with NEMA ICS 2.
- D. Seismic Performance: Soft-start controllers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Component Importance Factor:1.0.

2.2 COMBINATION STARTERS AND DISCONNECT SWITCHES

- A. Provide suitable fully coordinated starting and controlling equipment for motors as required. Arrange the starting equipment as indicated in other sections of these specifications.
- B. Consult with each trade affected to determine the exact requirements for each device.
- C. Coordinate with the Building Management and Control System (BMCS) Sub-Contractor and the Fire Alarm Sub-Contractor to establish required auxiliaries, including relays, contacts, terminals and the like. All three phase starters to have a minimum of two (2) normally open and two (2) normally closed auxiliary contacts.
- D. All starter interface and termination points for the Building Controls Sub-Contractor and the Fire Alarm Sub-Contractor shall be made at a terminal strip provided with the motor controller.
- E. Provide individual starters fully enclosed in neatly finished ventilated boxes of code gauge steel, machine formed and welded. Provide boxes arranged for floor, wall or angle iron frame mounting including a door with a spring catch handle with facility to lock handle in open position.
- F. Provide engraved nameplates for each unit, nomenclature of each to be approved prior to fabrication.
- G. Provide starters for motors over 100 horsepower or as indicated on the contract document to be magnetic, combination Soft Start with Motor Circuit Protector Switch. Such starters to be 208 or 460 volt, 3-phase, 60 cycle, alternating current service.
- H. Provide magnetic starters subject to manual start and in direct view of the motors they control with momentary contact start and stop buttons built into cover. Provide magnetic starters subject to electrical interlock or automatic control with Hand-Off-Automatic switches built into cover. Provide selector switches in starters to be of the maintained-contact type, water tight and dust tight.

- I. Provide starters with water tight and dust tight, (5) pilot lights on the following indications: Hand, Off, Auto, Run, and Overload.
- J. Provide starters for service at voltages higher than 120 volt with transformers for 120 volt secondary service built into each starter casing to serve control circuits.
- K. Provide each starter subject to electrical interlock and/or automatic control with the necessary auxiliary contacts plus one spare set of normally open and normally closed auxiliary contacts. Provide one set of terminals for each control circuit.
- L. Provide magnetic starters with Solid State Electronic Overload Relay which shall protect all three phases with a wide range current setting and trip class to allow field adjustment for specific motor FLA. Interchangeable heater elements are not acceptable. Overload relay shall provide phase failure, phase loss, locked rotor and stall protection.
- M. Provide coils, cores, resistance, insulation, contacts, trippers, etc., for starters and relays. The motor circuit protector shall be UL listed 508 current limiting manual motor starters with magnetic trip elements only. The breaker shall carry a UL 508F rating which provides for coordinated short circuit rating for use with the NEMA rated motor contactor and provides a minimum interrupting rating of 30 KAIC for the combination starter.
- N. Provide over/under voltage and phase monitoring capability. Monitor shall be field adjustable for both over and under voltage levels and a delay time before returning to normal operation after a trip.
- O. Mount individual motor controllers in NEMA Type 1A enclosures for typical indoor locations. Utilize NEMA Type 3R for outdoor locations and NEMA Type 4 for other wet locations or locations subject to water spray or very high humidity.
- P. Coordinate the withstand rating of all starter components with the Electrical trade and with the requirements of the electrical system. Starters that do not have appropriate withstand rating shall be removed from the project – at no cost – for operator safety.

2.3 MANUFACTURERS

- A. Cerus
- B. General Electric
- C. Square Dee
- D. Siemens
- E. Eaton/Cutler Hammer
- F. Allen Bradley
- G. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and space conditions for compliance with requirements for motor controllers, their relationship with the motors, and other conditions affecting performance of the Work.

3.3 INSTALLATION

- A. Comply with NECA 1.
- B. Wall-Mounted Controllers: Install controllers on walls with tops at uniform height indicated, and by bolting units to wall or mounting on slotted support systems complying with Section 260529 "Hangers and Supports for Electrical Systems," and bolted to wall.
- C. Freestanding Controllers: Provide slotted support systems complying with Section 260529 "Hangers and Supports for Electrical Systems."
- D. Floor-Mounted Controllers: Install controllers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
- E. Comply with requirements for seismic control devices specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- F. Maintain minimum clearances and workspace at equipment according to manufacturer's written instructions and NFPA 70.
- G. Control Wiring: Separate control wiring from power wiring. Where unavoidable, use twisted pair cabling or shielded cables for control wiring.
- H. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- I. Setting of Overload Relays: Select and set overloads on the basis of FLA rating as shown on motor nameplate. Adjust setting value for special motors as required by NFPA 70 for high-torque, high-efficiency, and so on motors.
- J. Review Division 26 and Automatic Temperature Control or Building Management Control System (BMCS) Documents for required accessories, interlocks, etc. Failure to fully coordinate this item with the other Divisions in no way relieves the Contractor from providing a complete, functional, and coordinated system as described.

3.4 SYSTEM FUNCTION TESTS

- A. System function tests shall prove the correct interaction of sensing, processing, and action devices. Perform system function tests after field quality-control tests have been completed and all components have passed specified tests.
 - 1. Develop test parameters and perform tests for the purpose of evaluating performance of integral components and their functioning as a complete unit within design requirements and manufacturer's published data.
 - 2. Verify the correct operation of interlock safety devices for fail-safe functions in addition to design function.
 - 3. Verify the correct operation of sensing devices, alarms, and indicating devices.
- B. Motor controllers will be considered defective if they do not pass the system function tests and inspections.
- C. Prepare test and inspection reports.

END OF SECTION 262913.06

SECTION 263213.13 - DIESEL-ENGINE-DRIVEN GENERATOR SETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Provide standby engine generator per size voltage rating as indicated on electrical riser diagram and accessories in accordance with the Contract Documents. The diesel generator will back up the fire pump, life safety load and fire alarm system.
- B. Section Includes:
 - 1. Engine/Generator(s).
 - 2. Exhaust Silencer(s).
 - 3. Batteries.
 - 4. Battery Charger(s).
 - 5. Outdoor Sound Attenuated Weatherproof Enclosures.
 - 6. Resistive Type Unit Mounted Load Bank.
 - 7. Vibration Isolation and Seismic Restraints.
 - 8. Base Mounted Double Lined Fuel Day Tank.
 - 9. Remote Annunciators.
 - 10. Warranty.
 - 11. Testing (Field and Factory).

1.3 DEFINITIONS

- A. EPS: Emergency power supply.
- B. EPSS: Emergency power supply system.
- C. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings

1. A complete ½" = 1'-0" scaled elevation and plan drawings showing the exact generator system layout including all components and accessories being provided or required for operation as specified herein.
2. All seismically restraint concrete housekeeping pads must be sized and illustrated. This must be signed and sealed by a professional engineer in the State of New York.
3. Indicate any shipping splits and weights.
4. For outdoor installation, indicate required access clearances and all external stairs, platforms and landings.

C. Product Data

1. Engine manufacturer's catalog cut sheets, performance data, detailed drawings, power output curves, and fuel consumption curves which relate to the design criteria specified.
2. Generator manufacturer's catalog cut sheets, detailed drawings and performance data.
3. Complete list of materials and catalog cuts of all components being provided.
4. Complete detailed wiring diagram of the system, including power and controls.
5. Starting battery sizing calculations showing compliance with specifications at ambient conditions.
6. After the engine generator system is accepted, submit a completed permit application for the DEP, ready for submission.
7. Name and location of certified testing agency.
8. Weights of all equipment.
9. Engine mechanical data at varying loads up to full load, including heat rejection, exhaust gas flows, combustion air and ventilation air flows, noise data, fuel consumption, etc.
10. General electrical data including temperature and insulation data, cooling requirements, excitation ratings, voltage regulation, efficiencies, waveform distortion, and telephone influence factor.
11. Generator resistances, reactances, and time constraints.
12. Generator current decrement curve.
13. Generator motor starting capability.
14. Generator thermal damage curve.
15. Jacket water heater connection diagram.
16. Control panel schematics.
17. Manufacturer's dealer warranty.
18. Emissions data, complying with all applicable regulations.
19. All warranty data.
20. Sound data for mechanical and engine exhaust in octave band frequencies between 31.5 Hz to 8,000 Hz and sound data for manufacturer engine exhaust silencer options, complying with all applicable regulations.
21. Vibration Isolation Base Detail must be signed and sealed by a professional engineer in the state of New York. This includes detail fabrication, anchorage and attachments to the structure and to supported equipment.
22. Exterior enclosure color samples.

D. Test Reports

1. Certified factory test report.
2. Certified field test reports.
3. Report of sound generation.
4. Report of exhaust emissions showing compliance with all applicable regulations.
5. Field quality control test reports.

E. Permits

1. Provide all necessary documents required to obtain New York City Building Department permit for installing a generator and a petroleum bulk storage tank which includes, but is not limited to:
 - a. As-built drawings, signed and sealed by a Professional Engineer in the State of New York, passing tightness testing for the new fuel oil storage tank with a list of materials used in the installation.
 - b. Site plan on 8-1/2x11 paper which includes property lines, buildings, adjacent streets with names, tanks identified by ID number, storm drains, and non-stationary tank storage areas. Plans must be signed and sealed by the vendor's professional engineer licensed in the State of New York.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Comply with the latest applicable provisions and the latest recommendations of the following:
 1. Alternator
 - a. NEMA MG-1-22
 - b. ASTM D396
 2. Batttery Charger
 - a. U.L. 1236
 3. Engine Generator
 - a. New York Air Quality Management District.
 - b. U.L. 2200, as a complete assembly.
 4. Control and Status Panels
 - a. NFPA 110
 5. Testing:
 - a. NETA.
- C. Equipment suppliers shall have local representation and shall have been actively engaged in the assembly, installation and service of this equipment for emergency power purposes. The engine-generator supplier shall have service facilities within proximity of the project site.
- D. The equipment supplier must be the manufacturer's local authorized distributor. Generators provided by a 3rd Party dealer with limited authority to perform any type of warranty service of all components incorporated into the generator set will not be acceptable.

- E. Equipment suppliers shall have full parts backup and a 24 hour per day service availability for this equipment.
- F. The emergency generator shall be adaptable to the emerging technologies that may be required with new regulations. At a minimum, the generator shall comply with EPA off-road diesel engine Tier standards for standby applications.
- G. The metering data shall be compatible with the HVAC direct digital control system requirement for BACnet as per specification section 230923 Same for gas generator section

1.6 WARRANTY

- A. The manufacturer's standard warranty shall in no event be for a period of less than five (5) years from date of substantial completion of the system and shall include repair parts, labor, reasonable travel expense necessary for repairs at the job site, and expendables (lubricating oil, filters, antifreeze, and other service items made unusable by the defect) used during the course of repair. Include a temporary generator set at no cost to the City of New York should a warrantable repair take an extended period of time. Submittals received without written warranties as specified will be rejected in their entirety.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Engine generator housing, subbase fuel tank engine generator, batteries, battery racks, silencers, load banks, sound attenuating equipment, accessories, and components shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 Retain first subparagraph below to define the term "withstand" as it applies to this Project. Definition varies with type of building and occupancy and is critical to valid certification. Option is used for essential facilities where equipment must operate immediately after an earthquake.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Shake-table testing shall comply with ICC-ES AC156. Testing shall be performed with all fluids at worst-case normal levels.
 - 3. For life-safety components required to function after an earthquake (such as fire-sprinkler systems, components that contain hazardous content, and storage racks in structures open to the public), the Component Importance Factor is 1.5. For other components, the Component Importance Factor is 1.0 unless the structure is in Seismic Use Group III and component is necessary for continued operation of facility or failure of component could impair continued operation of facility, in which case the Component Importance Factor is 1.5. Component Importance Factor: 1.5
- B. B11 Compliance: Comply with B11.19.
- C. NFPA Compliance:

1. Comply with NFPA 37.
2. Comply with NFPA 70.
3. Comply with NFPA 99.
4. Comply with NFPA 110 requirements for Level 1EPSS.

D. UL Compliance: Comply with UL 2200.

E. Engine Exhaust Emissions: Comply with EPA Tier 2 requirements and New York state and New York City Department of Environmental Protection requirements.

F. Noise Emission: Comply with New York state and New York City government requirements for maximum noise level at adjacent property boundaries due to sound emitted by engine generator including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

G. Environmental Conditions: Engine generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:

1. Ambient Temperature: -30 to 110 deg F.
2. Altitude: Sea level to 1000 feet

H. Generator Criteria

1. The generators shall share real and reactive load proportionally within plus or minus 5% with all other generator sets in the system.
2. Frequency regulation shall be isochronous from steady state no load to steady state rated load. Random frequency variation with any steady load from no load to full load shall not exceed plus or minus 0.25%.
3. The diesel engine-generator sets shall be capable of single step load pick up of 100% nameplate kW and power factor, less applicable derating factors, with the engine-generator set at operating temperature.

2.2 ENGINE

A. The engine shall be diesel fueled with number 2 diesel oil, 1800 rpm, compression ignition type, four stroke-cycle, water cooled, solid injection, V configuration.

B. The engine shall be EPA Tier Certified and in compliance with the State Emission regulations at the time of installation/commissioning. Actual engine emissions values must be in compliance with EPA Tier emissions standards per ISO 8178 – D2 Emissions Cycle at specified kW/bHP rating. Utilization of the “Transition Program for Equipment Manufacturers” also known as “Flex Credits” to achieve Tier certification is not acceptable. Unit shall be Tier rated as required for an Emergency standby system given the generator set HP rating as defined by EPA.

C. Fuel consumption of the engine generator shall be substantiated by means of manufacturer's published curves.

- D. The engine shall be equipped with an electronic governor to maintain engine speed within limits specified herein. Governor shall be adjustable from isochronous to five (5) percent droop. Provision shall be made to run the engine at idle speed for test and startup purposes.
- E. Engine safety devices, including high water temperature switch, overspeed sensing switch, low oil pressure switch, and low water temperature switch, shall be mounted on the engine and connected to the engine/generator control panel instruments and alarms as specified herein.
- F. Engine wiring shall be high quality, heat resistant, insulated, stranded copper conductor. Wiring shall be protected with suitable woven loom protection and shall be isolated from high temperature engine parts. Wiring for alternating current power circuits shall be protected by rigid or flexible metallic conduit.
- G. Engine shall be equipped with integral radiator mounted fuel oil coolers. It shall be mounted on the radiator in the cooling air stream before it enters the radiator core. It shall be capable of reducing the return fuel temperature to a level acceptable to the manufacturer's requirement, given the project ambient requirements.
- H. The complete engine block shall be machined from one (1) casting. Designs incorporating multiple blocks bolted together are not acceptable.
- I. The engine shall utilize a gear type positive displacement, full pressure lubricating oil pump and water-cooled lube oil cooler. Pistons shall be spray cooled. Provide oil filters, oil pressure gauge, dipstick, and oil drain.
- J. Fuel filters and serviceable fuel system components shall be located to prevent fuel from spilling onto generator set batteries.
- K. The engine governor shall be Electronic Load Sharing and Speed Control type. Speed droop shall be externally adjustable from 0 (isochronous) to 10% from no load to full rated load. Steady state frequency regulation shall be +/-0.25 percent. It shall be capable of sharing load with 5% when paralleled with similarly equipped engines. Speed shall be sensed by a magnetic pickup off the engine flywheel ring gear. A provision for remote speed adjustment shall be included. The governor shall incorporate provisions for limiting fuel during start-up, and include capability for actuator compensation adjustment. Protection from voltage spikes and reverse polarity shall be included. In the event of a DC power loss, the forward acting actuator will move to the minimum fuel position.

2.3 ELECTRIC STARTING SYSTEM

- A. Dual starting motor with solenoid and either Bendix or overrunning clutch drive shall be furnished on the engine. The starting motor shall be of the required voltage and ampere rating.
- B. Provide a system of nickel cadmium (sealed lead acid) batteries sized such that the set may complete four (4) sixty-second complete cranking cycles at firing speed and specified room temperature. Provide a matching metal frame rack and cables of sufficient ampacities. Floor mounted batteries will not be acceptable.

- C. Provide a wall mounted 120 volt AC battery charger to recharge the batteries to full capacity within 8 hours. Battery charger shall have both a high rate and low rate charging system. The battery charger shall be current limiting and shall not require cranking cutout contacts for charger protection when cranking. Accessories shall include: D.C. ammeter, fused input, D.C. voltmeter, high/low DC output voltage relay and input voltage failure relay. Battery charger output shall be rated ten (10) amperes minimum at required voltage.
- D. The entire electric starting system shall be rated for 24 VDC operation.

2.4 ENGINE HEATING SYSTEM

- A. Jacket water heaters, rated for operation on 208 VAC, single phase power shall be provided and shall be sized to ensure that the generator set will start within the specified time period and ambient conditions. Heaters shall include thermostats, oil pressure disconnecting device and required connection boxes.
- B. Provide isolation valves that allow for change out of the heater without draining the entire cooling system.
- C. The capacity of the jacket heaters shall be sized by the engine manufacturer to maintain criteria listed above.

2.5 ENGINE COOLING SYSTEM

- A. The engine shall be liquid cooled by means of an engine mounted vertical core radiator. The radiator shall be adequately sized to cool the engine on a continuous basis at the maximum ambient temperature (122°F) and altitude specified. Ambient temperature stated shall be for actual ambient capability, and the manufacturer shall allow for a minimum of seven (7) degree rise across the engine as measured at the fan. Suitable expansion space, either by means of surge tanks or radiator top tank shall be provided. The cooling system shall allow proper deaeration for the engine. An engine driven propeller type fan shall be provided with 1 inch water (H₂O) column static pressure external to the radiator and radiator assembly to allow for proper air-flow. Engine coolant shall be a mixture of fifty (50) percent ethylene glycol based antifreeze and fifty (50) percent water. A duct adaptor flange shall be included for flex connection provided by another trade.
- B. The engine shall be liquid cooled by means of a remote fan radiator. The radiator shall be adequately sized to cool the engine on a continuous basis at the maximum ambient temperature and altitude specified. Radiator shall be suitable for outdoor application and include fan, fan guard, core guard, steel supporting legs, cooling coils, steel frame, filler neck and pressure cap. Fan motor shall be single speed, totally enclosed fan cooled (TEFC) for 3 phase, 60 Hertz, 480 volt (208 volt) operation. Radiators without integral surge space must be supplied with a 20 gallon minimum expansion tank, (tank shall be sized at 15% of the system capacity), complete with mounting angles, sight glass, fittings and filler neck with pressure cap. Engine coolant shall be a mixture of fifty (50) percent ethylene glycol based antifreeze and fifty (50) percent water. Provide coolant solution.
- C. The engine cooling system shall include one (1) or more spin-on type engine water filters which will treat the coolant and prevent corrosion and scale deposits inside the cooling system.

2.6 AIR INTAKE AND EXHAUST SYSTEM

- A. An air cleaner/silencer shall be furnished as recommended by the engine manufacturer. Air cleaners shall be dry heavy-duty type with built-in restriction gauge to monitor.
- B. Engine exhaust outlets shall be coupled to the exhaust silencer(s) by means of an adequately sized section of stainless steel corrugated flexible tubing. Flexible tubing connector(s) shall be flanged at both ends for mating to the engine and exhaust system.
- C. A critical grade exhaust silencer(s) shall be provided. Sound levels shall be rated no more than 80 dBA average sound level when measured five (5) feet from the exhaust outlet and 60 dBA at 5 feet. Exhaust silencer(s) shall be sized to limit exhaust back pressure to acceptable values. The exhaust silencer(s) shall be suitable for horizontal mounting and shall be equipped with flanged bottom inlet and flanged end outlet. The exhaust silencer(s) shall be double wall construction and shall have a high temperature anti-corrosion coating applied uniformly on the outside surface.
- D. Silencer configuration shall be pancake type, unless otherwise noted.
- E. Provide a stainless steel bellows flexible connections between the engine outlet and the muffler inlet. Flex shall allow for proper thermal expansion and vibration during engine operation. Flanges shall match the engine outlet and muffler inlet. Provide all nut bolt and gasket kits for each flange on the engine, muffler inlet and outlet.
- F. The generator shall meet most stringent of the applicable EPA Tier off-road diesel engine standards without the use of pipe exhaust treatments.

2.7 FUEL SYSTEM

- A. Provide a 330-gallon, “ready supply”, package base mounted double-lined (200% rupture basin) fuel day tank to provide an immediate fuel supply to the engine fuel pump upon engine start-up. Tank shall comply with all Code requirements. Fuel shall be supplied to the tank by means of 120 volt electric fuel transfer pump mounted on the day tank. Equip tank with an automatic float to control the day tank level with a low-level contact (set at 25% capacity) for remote alarm indication and a high-level contact set at 95% of the tank capacity for remote alarm indications. Provide independent fuel pumps control floats/contacts set at pump on 35% capacity and pump off at 90% capacity. Supply and return pumps connects shall be brought to the outside of each generator enclosure for contractor connection. A drain cock and valve shall be provided in the tank and rupture basin. Rupture basin shall contain a leak detection system for remote indication to the alarm panel.
- B. The fuel tank shall be rated for 25 psi construction to comply with NYC Code. The fuel tank shall be rated to comply with UL 142.
- C. Fuel lines between injection pumps and valves shall be of heavy seamless tubing and to eliminate irregularity of fuel injections, shall be of the same length for all cylinders.
- D. Provide fusible link type safety shutoff valves to fail close.

- E. The fuel system shall be equipped with a fuel filter having replaceable elements which may be easily removed from their housing for replacing without breaking any fuel line connections or disturbing the fuel pumps or any other parts of the engine. All fuel filters shall be conveniently located in one accessible housing, ahead of the injection pumps, so that the fuel will have been thoroughly filtered before it reaches the pumps. No screens or filters requiring cleaning or replacement shall be used in the injection pump or injection assemblies. Filters shall be duplex type and have a valve arrangement so filters can be changed during operation. Filter flow rate shall allow for engine operation while one (1) filter is being serviced and not in operation.
- F. Provide crankcase fumes reclamation system. System shall collect engine crankcase emissions, filter out airbourne lube oil, and reintroduce the emissions back into the engine combustion air system.

2.8 ALTERNATOR

- A. Generator shall be rated 265/460 volt, three phase, four wire, 60 hertz, 0.8 power factor of a kilowatt capacity as indicated on the Contract Documents.
- B. The alternator shall be a four (4) pole, synchronous brushless type. The alternator shall be dual bearing type coupled directly to the engine flywheel by means of a flexible disc coupling.
- C. The alternator voltage regulator shall be solid state type, three phase true RMS sensing and shall incorporate an under-frequency protective circuit to limit generator excitation at lower than normal operating speeds. The voltage regulator shall be equipped with a voltage adjusting rheostat capable of plus or minus five (5) percent rated voltage adjustment. The voltage regulator shall maintain the voltage within the limits specified.
- D. The alternator insulation system shall be NEMA Class H and shall be a combination of epoxy coating and varnish. The alternator shall be sized and properly derated according to NEMA MG1-22 to yield a maximum temperature rise required by UL 220 Certification using resistance method above an ambient temperature of 40°C at rated altitude.
- E. Excitation shall be provided by a direct connected brushless permanent magnetic rotating exciter. The armature shall be of the three-phase design and connected to a full wave three phase rotating bridge. Diodes used shall be of the silicon type mounted on proper heat sinks with surge protector to prevent voltage spikes during parallel operation.
- F. Exciter field power shall be provided by a separate permanent magnet generator directly connected to the brushless exciter. The PMG shall provide sufficient power to the excitations system to produce 300% short circuit from the main operator armature during a three-phase fault with sufficient duration for protective devices to operate.
- G. The sub transient reactions shall be 12% or less.

2.9 MAIN LINE CIRCUIT BREAKER

- A. Main line circuit breaker which shall operate both manually as an isolation switch and automatically during overload and short circuit conditions. The trip unit for each pole shall have elements providing inverse time delay features during overload conditions and instantaneous magnetic tripping for short circuit protection. Circuit breaker shall be suitable for 100% load. The circuit breaker shall be provided with an auxiliary contact to provide a trouble indication should the breaker be in the “OFF” or tripped position.
- B. Provide a 3 pole 80% rated molded case circuit breaker for the radiator mounted load bank.
- C. The circuit breaker(s) shall be mounted in a NEMA 1 generator mounted cabinet. The cabinet shall be formed frame design to support the weight of the installed devices. Cabinet shall be welded construction, no bolt together structures will be allowed. Box material shall be minimum 12 gauge construction. Cabinet will be provided with a bolt-on front access door. Cabinet shall be finish painted to match the generator. Circuit breaker shall be equipped with load side, full rated bus to accommodate 2-hole, long barrel copper compression lugs. Bus hole centers shall be NEMA standard 1.75” hole centers. A neutral disconnect link shall be provided for the neutral connection. Bus shall accept fully rated feeders for neutral and ground connections. Neutral and ground connections shall be isolated from the box frame. Circuit breaker shall be equipped with a minimum 1a/1b auxiliary contacts and 24 VDC-shunt trip. An external zero sequence ground fault protection system will be installed for the circuit breaker for trip activation upon ground fault sensing. A light shall be provided for local annunciation. The mainline circuit breaker shall be cabled from the line side to the generator. The circuit breaker shall be provided with an identification labeling.
- D. Provide fused disconnect switches, painted red, for the fire alarm system taps. Coordinate location of switches prior to any work.

2.10 CONTROL PANEL

- A. A generator mounted control panel shall be provided with lockable hinged front door for complete control and monitoring of the respective generator set functions. Panel shall be environmentally sealed in a NEMA 1 enclosure.
- B. The following shall be included in the control panel:
 - 1. Automatic start/stop operation.
 - 2. Adjustable cycle cranking.
 - 3. Digital engine monitoring.
 - 4. Shutdown sensors and alarms with horns and reset.
 - 5. Adjustable cool down timer.
 - 6. Emergency stop button.
 - 7. Self-diagnostic capabilities and fault logging.
 - 8. AC digital ammeter, .5% true RMS accuracy, with phase selector.
 - 9. AC digital voltmeter.
 - 10. Frequency digital meter.
 - 11. Elapse time digital meter.
 - 12. Engine water temperature digital readout.
 - 13. Engine oil temperature digital readout.

14. Engine oil pressure digital readout.
15. Voltage adjusting rheostat.
16. All items specified under remote status panels.
17. Provide a fixed nameplate consisting of red bakelite with white, 1-inch lettering, identifying the generator controlled.
18. Engine speed digital readout.
19. Modbus interface to BMCS and for fire alarm system monitoring.

2.11 AUTOMATIC ELECTRIC-SET PROTECTION

- A. Protection System: Provide power for sensors, trips, indicator lights, and alarm by engine cranking batteries. Provide fault sensors to cause emergency engine shutdown when any of the following faults occur:
1. High water temperature sensors set to trip at 205°F ±3°F, 96°C ±2°C.
 2. Approach to high water temperature sensors set to pre-alarm at 190°F.
 3. Low water temperature sensors set to trip at 80°F.
 4. Overspeed sensors set to trip at 2050 revolutions per minute.
 5. Low lube oil pressure sensors set to trip at the engine manufacturer's recommendation for lowest permissible oil pressure.
 6. Overcrank sensors set to trip after four (4) 15-second attempts to start.
 7. Low water level shut down.

2.12 REMOTE STATUS PANELS

- A. Provide one (1) panels per generator set. One (1) at the main entrance lobby. Provide alarm indicators per NFPA No. 110 and as specified herein. When actuated, these alarms shall sound audible alarms and indicate, by means of individual lights at the annunciator panels, which particular malfunction is initiating the alarm. Provide 3/16-inch high (minimum) labeling to identify the alarm.
- B. Provide a horn at each panel with silencing (override) switch to silence alarm. Override switch shall have flashing pilot lamp labeled "Override" to indicate that alarm is silenced. Provide power for alarm system from generator battery system. Alarm annunciators shall indicate the following malfunctions:

	Item	Lens Cap Color
1.	High water temperature**	Red
2.	Low water temperature*	Red
3.	Approach to high water temperature*	Yellow
4.	Approach to low oil pressure*	Yellow
5.	Overspeed*	Red
6.	Cranking failure (after 60 seconds)*	Red
7.	Generator in operation*	Green
8.	High and low battery charge**	Red
9.	Battery charger input failure**	Red
10.	Automatic transfer switch position lights for each automatic transfer switch. Two (2) lamps for each switch.*	Red & Green

	Item	Lens Cap Color
11.	Pilot light denoting engine selector switch in "OFF" position*	Red
12.	Start/stop switch (Fire Command Center Only)	--
13.	Test switch (Fire Command Center only)	--
14.	Main circuit breaker tripped open*	Red
15.	Running pilot lights for each fuel oil pump (Fire Command Center only)	Red
16.	Hand/off/automatic switch for each fuel oil pump*	--
17.	Low and high fuel oil (day tank)*	Red
18.	Low fuel oil (main tank)*	Red
19.	Load bank cooling failure*	Red
20.	Remote shutdown activation (via break glass station at the generator)	Red
21.	Spare	--

* Provide one (1) set of normally closed = normal dry contacts for BMCS interface.

**Provide one (1) set of normally closed = normally dry contacts summary alarm for BMCS interface. If Modbus is available, all alarms shall be monitored through such system.

1. Connection to Data Link: A separate terminal block, factory wired to Form C contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals for “Electrical Power Monitoring and Control.”
2. Provide serial port (RS 232, RS 422, or RS 485) to communicate with the power monitoring system.

2.13 GENERATOR SET PERFORMANCE

A. The completed generator set shall meet or exceed the following performance criteria:

1. Voltage regulation shall be ± 1 percent rated voltage.
2. Steady state voltage stability ± 0.5 percent rated voltage.
3. Balanced telephone interference factor (TIF) shall not exceed 50.
4. Frequency regulation from no load to full load shall be adjustable from isochronous to 5 percent.
5. Steady state frequency stability shall be ± 0.5 percent.
6. Maximum recovery time to return to frequency stability, bandwidth shall not exceed 6-8 seconds.
7. Generator set shall be capable of start-up and accepting rated load within 10 seconds.

2.14 OUTDOOR SOUND ATTENUATED WEATHERPROOF ENCLOSURE

A. The emergency generator set and related equipment shall be housed in an approved factory fabricated, UL listed outdoor weatherproof sound attenuated enclosure. The design and placement shall be such that the generator will function properly without overheating in the ambient conditions specified.

- B. Enclosure shall be of the skintight type secured to an approved reinforced concrete foundation via iron angle frame. The enclosure shall be of sufficient size and volume to accommodate acoustical attenuation and vibration isolation equipment.
- C. Panels shall be a minimum of 14 gauge formed aluminum, welded to a 10 gauge welded galvanized steel base channel. All seams welded or bolted and sealed to prevent leaks. Doors shall be gasketed and mounted on piano type hinges. Provide key lock for each door. All side, front and rear panels shall be removable to facilitate installation and/or removal of equipment.
- D. Roof shall be aluminum construction flanged on all edges, pitched for drainage and overlapping on all sides. Roof shall be secured to side panels with self-tapping cadmium plated screws. Exhaust pipe opening shall be fitted with approved sealing material and a drip shield shall be provided around the opening.
- E. External vertical seams shall be covered with "U" channel, welded in place. All doors shall be gasketed and mounted on piano type hinges. Each door shall be equipped with a key lock.
- F. Fixed stormproof louvers shall be provided as necessary permitting the generator set to operate at rated conditions with all enclosure doors closed. All louvers shall be configured to avoid any snow or rain infiltration.
- G. Exhaust silencer shall be mounted internal of the enclosure. Silencer shall be painted with heat and weather resistant paint. End port shall be fitted with an approved bird screen. All exhaust piping and muffler shall be fully insulated within the enclosure.
- H. Radiator exhaust outlet shall be ducted through the end of the enclosure in an approved manner.
- I. All exterior surfaces shall be factory painted with ANSI 61 grey chlorinated vinyl lacquer in a color selected by the Commissioner
- J. Unit shall have sufficient guards to prevent entrance by small animals.
- K. Batteries shall fit inside the enclosure and alongside the engine. (Batteries installed under the generator are not acceptable.)
- L. Unit shall have coolant and oil drains outside the unit. Each drain line shall have a valve located near the fluid source. The enclosure floor shall include a 2” high environmental protection barrier placed around all electrical stub-up areas and the enclosure exterior wall to prevent liquid spills or leaks from contaminating the environment.
- M. Fuel filter must be inside the base perimeter and located so spilled fuel cannot fall on hot parts of engine or generator. A cleanable primary fuel strainer shall be used to collect water and sediment between the tank and main engine fuel filter.
- N. The enclosure shall be equipped with exterior emergency break glass stations to shut down the generator. A minimum of two (2) are required, one (1) per side. Break glass stations must have multiple contacts for customer use. Provide nameplate to read “EMERGENCY STOP OF GENERATOR” at each break glass station.

- O. Two (2) –5kW – 208V, 3 phase space heaters shall be provided with built-in, adjustable thermostatic controls and engine cutout relay to maintain interior enclosure temperature above freezing. The heaters will be supported from interior roof with aluminum brackets and threaded rods. The heaters shall be wired to the auxiliary breaker panel.
- P. All necessary fittings, hoses, shut-off valves, etc. shall be provided to facilitate lube oil and water drain at the exterior of the enclosure. Valves shall be ¾” minimum and rated industrial service. These ports shall be labeled on exterior of enclosure for their identification. In addition, engines equipped with a crankcase breather tube shall have this tube terminate at the exterior of the enclosure directly under the radiator air discharge louver. The engine cooling system shall be provided with a 50% mixture of engine manufacturer approved glycol solution. Jacket water heater isolation valves shall be installed for service isolation of the heaters.
- Q. The silencer shall be critical grade, mounted and thermally insulated outside the enclosure. For heat rejection reduction and personnel protection, insulation shall be provided for the silencer, flex and all discharge piping. The weight of the silencer shall not be supported by engine. An integral square tube frame support stand shall be provided to support the weight of the silencer. This stand shall also protect the silencer from movement during shipping and rigging. The exhaust pipe size shall be sufficient to ensure that exhaust backpressure does not exceed the maximum limitations specified by the engine manufacturer. The exhaust silencer outlet roof penetration shall be adequately sealed to prevent the entrance of rain, snow and sleet. A stainless steel bellowed flex shall be provided. Nut, bolt, and gasket kits shall be provided for all exhaust connections. Exhaust silencer shall be space conserving, low-profile size “pancake style muffler” suitable for horizontal mounted within the enclosure and supported by interior exhaust silencer stand.
- R. Intake louvers shall be motorized 208 VAC, parallel bladed, spring open motor close, for fail-safe operation. Discharge louvers shall be gravity actuated. Gravity discharge louver frames shall be galvanized steel construction with aluminum blades with felt seals. Motorized intake louvers shall be galvanized frame and blade construction with blade seals installed within the frames. Motorized louvers shall be provided with louver control wiring box which shall incorporate time delay relays and ventilation fan controls. Provide an access hatch to allow for inspection and maintenance of each louver motor and spring mechanism where required.
- S. The prime mover shall be mounted to the fuel tank base structure via spring loaded isolators. Isolators shall be installed on weld-pads that shall be solid welded to under-frame base structure. No steel tapping plates on top of light duty floor plate with OSB wood underlayment board shall be allowed. No top mount, side to side span, light duty beams that rely on outboard weight transfer of engine load will be allowed. A 4” square tube with ½” wall shipping blocks shall be provided to secure prime mover for transportation with removable bolts and shims for field adjustment.

- T. Two (2) wide flange structural I beam or channel iron main runners, spanning the full length of the enclosure shall be used. Formed steel metal or plate bases will not be allowed. Cross members shall be fabricated of structural carbon steel and placed on centers to carry floor loads as required. Under no circumstance will OSB plywood be allowed as any part of sub-base structure. Floor shall be 1/8” diamond deck floor plate. Base will be equipped with threaded ground bosses for customer site grounding connections. Base shall be able to carry internal loads applied without relying on site structures to provide additional support. Base shall be designed to support internal loads on cross beams. No light duty, top mounted cross beams that rely on transferring load to exterior edge of frame or base shall be allowed. Base shall be designed to be perimeter supported only. Provide adequately sized conduit stub-up areas in the floor end/or roof of enclosure for generator power cable, engine-generator control wiring and enclosure auxiliary 208Y/120 volt panelboard and transformer.
- U. The enclosure shall be acoustically treated to provide a maximum noise level of 80 dBA at 5’ from the enclosure (all around – all walls, top and bottom) and 60 dBA at 50’ from the enclosure.
- V. In addition to internal spring isolators, external spring isolators shall be provided with a minimum static deflection of 3”.
- W. Provide a lockable cap at the fuel fill port. Provide keying tool to the City of New York.
- X. The enclosure shall have two (2) means of egress from the enclosure. The enclosure manufacturer shall provide the required stairs, platform and catwalk needed to exit the enclosure safely. This equipment shall not block any fuel fill parts or other items requiring access. The equipment shall be welded and galvanized.

2.15 VIBRATION ISOLATION AND SEISMIC RESTRAINTS

- A. Installation shall be in accordance with the reviewed vibration isolation and seismic restraint submittal.
- B. Fuel oil and coolant line shall be flexible braided bronze hoses.
- C. Raceway connections to the generator shall be in liquid tight flexible metal conduits.

2.16 GENERATOR OVERCURRENT AND FAULT PROTECTION

- A. Generator Circuit Breaker: Insulated-case or power breaker, electronic-trip type; 100 percent rated; complying with UL 489.
 - 1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 - 2. Trip Settings: Selected to coordinate with generator thermal damage curve.
 - 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 4. Mounting: Adjacent to or integrated with control and monitoring panel.

- B. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions: Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
1. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
 2. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
 3. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.
- C. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

2.17 LOAD BANK

- A. Provide an engine radiator mounted airflow cooled permanent resistive load bank. Load bank shall be for local manual operation.
- B. The load bank shall be installed within the air discharge of the engine unit mounted radiator and cooled by the radiator airflow. Load bank shall be solidly attached to radiator and provided with a flexible coupling to attach to the discharge plenum.
- C. Load bank shall be rated 100 kW max at 460 volts. A separate load bank feeder breaker and feeder shall be provided in the generator terminal compartment.
- D. The load bank shall be completely self-contained, including resistive load elements, load control devices, load element branch circuit fuse protectors, main load bus and terminals, control terminals, system protection devices and enclosure.
- E. Enclosure shall be NEMA 3R, galvanized steel construction. Control components shall be sub-panel mounted and isolated from load elements and cooling airflow. Airflow through the load elements shall be horizontal. Provide mounting adaptors suitable for the installation method.
- F. Load elements shall be totally enclosed, sealed and weatherproofed with an electrically grounded outlet sheath such that the element cannot be electrically short-circuited by external foreign objects and personnel are protected against accidental electrical shock. Elements shall be individually replaceable.
- G. Provide branch circuit fuses for each 25 kW load branch circuit. Fuses shall be 200,000 RMS symmetrical amperes, current limiting type.
- H. Load step control shall utilize one (1) magnetic contactor per each fused branch circuit. Load bank power wiring shall be 150°C insulated.

- I. Main terminals shall be copper bus sized at 1,000A per square inch.
- J. Control panel shall be serviced internally from the main load bus. Control and protective circuits shall operate at 120 volts using a central power transformer.
- K. The load bank shall include a protection system to protect against overheating. The system shall disconnect the load elements from the power source and activate an alarm upon sensing a loss of cooling airflow or an exhaust air temperature greater than 300°F.
 - 1. Control Panel NEMA 3R enclosure.
 - 2. Control power on-off pushbuttons.
 - 3. "NORMAL OPERATION" indicating lamp.
 - 4. Master load control switch.
 - 5. Load step control switches.
 - 6. "COOLING FAILURE" alarm indication lamps with alarm contact.
 - 7. Load bank disconnect circuit to disconnect load bank on engine start signal.
 - 8. Load bank disconnect circuit bypass to allow the load bank to supplement the actual building load.
 - 9. Provide directional air flow hoods on top of the load bank as shown on the Contract Documents.
 - 10. In the event that a utility company power outage occurs while testing, the load bank shall shed from the bus automatically.
- L. Provide remote emergency shut-off buttons (breakglass stations) for the generator. Locate in the field (relocated in fuel oil tank room on first floor) and provide all required wiring and conduit. The shut-down wiring includes the remote fuel oil delivery pump system.

2.18 MANUFACTURERS

- A. The Contractor shall be responsible for modifications necessary in the use of a proposed manufacturer. These modifications are to include all mechanical and electrical work, architectural work and structural work.
- B. Subject to compliance to requirements, provide products by one of the following manufacturers:
 - 1. Prime Mover and Generator:
 - a. Caterpillar
 - b. Cummins
 - c. Genrac
 - d. Or Approved Equal
 - 2. Exhaust Silencer:
 - a. Harco
 - b. GT Exhaust
 - c. Silex
 - d. Or Approved Equal

3. Day Tank:
 - a. Simplex
 - b. Pryco
 - c. Tramont
 - d. Or Approved Equal

4. Vibration Isolators:
 - a. Mason Industries, Inc.
 - b. Kinetic Noise Control
 - c. Amber Booth Company
 - d. Ace Mountings
 - e. Or Approved Equal

5. Governor:
 - a. Woodward
 - b. Basler
 - c. Generac
 - d. Or Approved Equal.

6. Batteries:
 - a. Nife
 - b. Exide
 - c. C&D
 - d. Interstate
 - e. Or Approved Equal

7. Battery Charger:
 - a. Lamarche
 - b. Sens
 - c. Charles
 - d. Or Approved Equal

8. Voltage Regulations:
 - a. Basler
 - b. Power-Tronics
 - c. Generac
 - d. Approved Equal.

9. Circuit Breakers:
 - a. ABB
 - b. Siemens
 - c. Square D

- d. Eaton
 - e. Or Approved Equal
10. Load Bank
- a. Avtron
 - b. Simplex
 - c. Loadtec
 - d. Or Approved Equal
11. Enclosures
- a. Acoustical Sheetmetal Inc. (ASI)
 - b. International Supply Co.
 - c. Robinson Enclosure Co.
 - d. Professional Power Products
 - e. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Install the emergency generator system as shown on the Contract Documents, as indicated in the manufacturer's instructions and as required for a neat workmanlike and fully operational system. Ensure that the manufacturer's recommended clearances are maintained.
- B. Provide an empty raceway system capable of supporting the elevator supply wiring. The raceway system shall meet the requirements of the elevator supplier. As a minimum, provide one (1) two-inch empty conduit with pull cord from each elevator shaft to the Fire Command Center.
- C. Provide a minimum of two (2) remote emergency shut off buttons for the generator. Locate in the field and provide all control wiring and conduit.
- D. Provide equipment grounding connections for the generator. Tighten connections to comply with tightening torque levels specified in UL Std 486A.
- E. Provide all control and monitoring wiring and conduit between the generator and all remote status panels.

3.3 VIBRATION ISOLATION

- A. Isolate the generator set at the base by means of combination spring type isolators and neoprene pads. Provide isolators of not less than 98% efficiency of a sufficient quantity such that each is loaded to not more than 75% of its rated value. Provide a minimum static deflection of 3”.

- B. All fuel oil and coolant lines shall be isolated by means of flexible light tight braided metallic hoses. Provide automatic fusible link valve on the fuel supply connections to the engine. The fusible link shall fail close.
- C. All raceway connections to the generator set shall be in flexible metal conduit.
- D. Entire run of engine exhaust piping shall be supported on spring hangers or mounts as per manufacturers requirements. Isolators shall be sized for 1” minimum static deflection.

3.4 SEQUENCE OF OPERATION

- A. Engine start contacts shall signal generator to start when the voltage of the normal source drops below 80% on any phase, after a time delay of one (1) second to allow for momentary dips. The voltage sensing relay shall be field adjustable while energized.
- B. The automatic transfer switch shall transfer to emergency when 90% of rated voltage and frequency of the emergency source have been reached.
- C. After restoration of normal power of all phases to 90% of rated voltage, an adjustable time delay period shall delay retransfer to allow stabilization of normal power. If the emergency power source should fail during this time delay period, the automatic transfer switch shall bypass the timing relay and transfer to the normal source.
- D. After retransfer to normal, the engine generator shall be allowed to operate at no load for five (5) minutes.
- E. A test on the automatic transfer switch shall simulate normal power failure.
- F. When the generator begins to start (and is cranking) the following shall occur:
 - 1. Fuel oil solenoids shall “OPEN”.
 - 2. Air intake motorized dampers shall “OPEN”.
 - 3. Air exhaust motorized dampers shall “OPEN”.
 - 4. The fuel oil transfer pumps shall be “ON”.
- G. When the generator is “OFF”, the following shall occur:
 - 1. Fuel oil solenoid valves shall “CLOSE”.
 - 2. Air intake motorized dampers shall “CLOSE”.
 - 3. Air exhaust motorized dampers shall “CLOSE”.
 - 4. The fuel oil transfer pumps shall be “OFF”.

3.5 FUEL OIL

- A. Upon acceptance of field testing and prior to final payment, the main fuel oil tank and the day tank shall be topped off by the contractor.

3.6 TESTNIG

A. Factory Testing

1. Prior to shipment of the engine-generator set from the factory, a certified load test shall be performed in the presence of the Commissioner. The results shall be submitted to the Commissioner for review before shipment of the unit. The tests shall verify the proper operation of all alarms and shut down circuits.
2. Provide costs for the Commissioner to witness the testing.
3. The tests shall also demonstrate compliance with the generator performance criteria as specified herein.
4. Testing shall be performed as follows:
 - a. Verify operation of all shut down and alarm points specified.
 - b. Perform transient response testing to verify performance as specified. Load steps shall be performed as follows: 0% - 25% - 0%
 - 1) 0% - 50% - 0%
 - 2) 0% - 75% - 0%
 - 3) 0% - 100% - 0%
 - 4) 0% - 25% - 75% - 25% - 0%
 - 5) 0% - 50% - 100% - 50% - 0%
 - c. All load steps shall be recorded on a chart recorder or light beam oscilloscope.
 - d. In a period of four (4) hours with a loading 25, 50, 75 and 100 percent of rated load. Step loading procedure shall be utilized (i.e., 25 percent first hour, 50 percent second hour, etc.).
 - e. Maintain 100% load for 1 hour.
 - f. Factory testing shall be accomplished using resistive and reactive load banks to match kW and kVA requirements set forth in the Contract Documents.
 - g. The factory testing shall include the "Generator Set Performance criteria."

B. Field Testing

1. After completion of the installation, the Contractor shall perform a certified load test, in accordance with NFPA 110, of the engine generator and related automatic transfer switches. The generator shall be required to start-up and accept full load within 10 seconds. The unit shall continue to operate for not less than four (4) hours at 100 percent rated load. The test shall also include demonstrating that all alarms, signals, shut down devices, elevator recall, etc., are functioning properly. The Contractor shall be responsible for securing all temporary load-banks, temporary cables, etc., required for the tests.

2. The full load test shall utilize all required load banks sufficient to provide a load equal to 100 percent of the generator nameplate rating. Contractor shall secure all such load banks, cabling, hoisting, and terminations needed to perform the full load test.
3. Supply all fuel for the testing. Upon acceptance by the City of New York, the day tank and main fuel oil tank shall be filled to capacity after each testing.

C. Certified Test Reports

1. Field testing shall be performed by the manufacturer's certified factory field service technicians.
2. Test procedures shall be in accordance with NFPA 110.
3. Verify that the installation is in accordance with the manufacturer's instructions.
4. Verify that the equipment has been fully tested and is operational.
5. Perform reactive testing and compile detailed test reports for each piece of equipment and system tested.
6. Perform pull-the-plug test to demonstrate proper operation of the entire emergency electrical system.

D. Miscellaneous – Provide the following:

1. Location of a factory authorized service center.
2. The response time for service calls. There should be a maximum response time of two hours on-site.

3.7 CLASSROOM INSTRUCTION

- A. The generator set supplier shall provide a minimum of four (4) hours of classroom instruction on maintenance and operation of the emergency power system. Classes shall be held at the supplier's facility, shall be administered by a full-time instructor and shall be open to up to three (3) representatives of the the City of New York maintenance staff.
- B. Instruction shall be videotaped and turned over to the City of New York.
- C. Provide all necessary wiring and conduit to each remote alarm panel.
- D. Bond generator weatherproof enclosure to the lightning protection system.

3.8 HOUSEKEEPING PADS

- A. Provide a six-inch high concrete housekeeping pad beneath each generator.
- B. Provide a concrete curb around the fuel oil day tank to contain the full capacity of fuel plus 50% in the event of a day tank leak.
- C. Provide a concrete curb under each door of the generator room to prevent migration of spilled liquids out of the room.
- D. Provide a leak detection system for fuel containment and connect to the Building Management System for monitoring. Provide a 120 volt power supply from nearest emergency panel location.

3.9 FIELD REPRESENTATION

- A. Provide services of manufacturer's field representative (factory trained) for a period of five (5) working days to supervise start-up, testing and two (2) instruction sessions for operating personnel.
- B. The generator set distributor shall be responsible for coordination between all related generator control wiring, regulator and governor equipment, testing and start-up and all associated systems that affect the coordination of the switchgear with the generator sets. All submittal packages relating to the two systems shall be supplied as a one (1) source package for review by the Commissioner. The one (1) source of responsibility criteria would rest upon the generator supplier to ensure a smooth transition in every step of the installation process, as well as being available for coordination meetings with the associated sub-vendor.
- C. The City of New York reserves the right along with its authorized representatives to visit the factory during the course of fabrication of equipment to observe progress, quality control, schedule of completion, etc. All costs shall be paid by the Contractor.

3.10 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine generator performance.
- B. Examine roughing-in for piping systems and electrical connections. Verify actual locations of connections before packaged engine generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.11 INSTALLATION

- A. Comply with NECA 1 and NECA 404.
- B. Comply with packaged engine generator manufacturers' written installation and alignment instructions and with NFPA 110.
- C. Equipment Mounting:
 - 1. Install packaged engine generators on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Coordinate size and location of concrete bases for packaged engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and form work requirements are specified with concrete.
 - 3. Install packaged engine generator having a minimum deflection of 1 inch on 4-inch- high concrete base. Secure set to anchor bolts installed in concrete bases. Concrete base construction is specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- D. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.

- E. Cooling System: Install Schedule 40 black steel piping with welded joints for cooling water piping between engine generator and . Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
 - 1. Install isolating thimbles where exhaust piping penetrates combustible surfaces. Provide a minimum of 9 inches of clearance from combustibles.
 - 2. Insulate cooling-system piping and components according to requirements in Section 230719 "HVAC Piping Insulation."
- F. Exhaust System: Install Schedule 40 black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet.
 - 1. Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
 - 2. Install flexible connectors and steel piping materials according to requirements in Section 232116 "Hydronic Piping Specialties."
 - 3. Insulate muffler/silencer and exhaust system components according to requirements in Section 230719 "HVAC Piping Insulation."
 - 4. Install isolating thimbles where exhaust piping penetrates combustible surfaces with a minimum of 9 inches of clearance from combustibles.
- G. Drain Piping: Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40 black steel pipe with welded joints.
 - 1. Piping materials and installation requirements are specified in Section 232113 "Hydronic Piping."
 - 2. Drain piping valves, connectors, and installation requirements are specified in Section 232116 "Hydronic Piping Specialties."
- H. Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.12 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping and specialties.
- B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow space for service and maintenance.
- C. Connect cooling-system water piping to engine generator and heat exchanger with flexible connectors.
- D. Connect engine exhaust pipe to engine with flexible connector.
- E. Connect fuel piping to engines with a gate valve and union and flexible connector.
- F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Provide a minimum of one 90-degree bend in flexible conduit routed to the engine generator from a stationary element.

- H. Balance single-phase loads to obtain a maximum of 10 percent unbalance between any two phases.

3.13 IDENTIFICATION

- A. Identify system components according to Section 230553 "Identification for HVAC Piping and Equipment" and Section 260553 "Identification for Electrical Systems."
- B. Install a sign indicating the generator neutral is bonded to the main service neutral at the main service location.

3.14 TECHNICAL LITERATURE – CLOSE-OUT SUBMITTALS

- A. Provide the City of New York with three (3) copies of technical literature on all system components consisting of a manual of sequential operations, recommended preventive maintenance, parts list with recommended spares, and all pertinent control manuals and wiring diagrams.
- B. Provide a list of tools and replacement items recommended to be stored at the project for ready access.

3.15 LOAD BANK FIELD TESTING

- A. Prior to energizing the load bank, the insulation resistance on the bus shall be measured from phase-to-phase and phase-to-ground.
- B. After installation is completed, all switches shall be functionally tested.
- C. All protective functions shall be tested and all remote functions simulated to determine if the units have been wired properly.
- D. All testing of the completed installations shall be performed in the presence of and as directed by the Commissioner. The Contractor shall notify the Commissioner when the equipment is installed and ready for testing.
- E. Testing shall be performed in the following manner.
 - 1. All control and power cable connections shall pass inspection for workmanship, tightness, and continuity.
 - 2. All load banks shall be tested for equipment grounds. Maximum acceptable resistance shall be 1 ohm.
 - 3. The unit shall be given a phase-to-phase and phase-to-ground megger test and all feeder load terminals grounded.
 - 4. Megger tests shall be applied between each phase and ground with phases not under test also grounded.
 - 5. All alarm devices shall be adjusted and set.
 - 6. All control circuits shall be given operational tests from the supply source for which they were designated. This shall include normal operation three (3) times from each control point, and activation of alarm devices.

7. Upon completion of all field testing and before handing the system to the City of New York, refill the main oil tank to full.

F. All test results shall be in accordance with the manufacturer's recommendations.

3.16 GUARANTEE SERVICE

A. Initial Service: Beginning at Substantial Completion, service shall include 12 months' full maintenance by skilled employees of manufacturer's authorized service representative. Include quarterly preventive maintenance and exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Parts shall be manufacturer's authorized replacement parts and supplies.

B. The generator set manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall regularly perform preventive maintenance and service on equipment similar to that specified. The service must be available and shall include system operation under simulated operating conditions; adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the City of New York maintenance log of repairs made and function tests performed on all systems.

3.17 DEMONSTRATION

A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate packaged engine generators.

END OF SECTION 263213.13

SECTION 263213.16 - GAS-ENGINE-DRIVEN GENERATOR SETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Provide a standby natural gas fired engine generator and accessories in accordance with the Contract Documents
- B. Work Includes:
1. Engine/Generator.
 2. Exhaust Silencer.
 3. Batteries.
 4. Battery Charger.
 5. Generator mounted Radiator.
 6. Outdoor Sound Attenuated Weatherproof Enclosure.
 7. Outdoor Enclosure Stairs, Catwalk and Platform.
 8. Emergency distribution board.
 9. Resistive Type Unit Mounted Load Bank.
 10. Vibration Isolation and Seismic Restraints.
 11. Remote Annunciators.
 12. Warranty.
 13. Testing (Field and Factory).

1.3 DEFINITIONS

- A. EPS: Emergency power supply.
- B. EPSS: Emergency power supply system.
- C. LP: Liquefied petroleum.
- D. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

B. Shop Drawings

1. A complete 1/2" = 1'-0" scaled elevation and plan drawings showing the exact generator system layout including all components and accessories being provided or required for operation as specified herein.
2. All seismically restraint concrete housekeeping pads must be sized and illustrated. This must be signed and sealed by a licensed professional engineer in New York State.
3. Indicate any shipping splits and weights.
4. For outdoor installation, indicate required access clearances and all external stairs, platforms and landings.

C. Product Data

1. Engine manufacturer's catalog cut sheets, performance data, detailed drawings, power output curves, and fuel consumption curves which relate to the design criteria specified.
2. Generator manufacturer's catalog cut sheets, detailed drawings and performance data.
3. Complete list of materials and catalog cuts of all components being provided.
4. Complete detailed wiring diagram of the system, including power and controls.
5. Starting battery sizing calculations showing compliance with specifications at ambient conditions.
6. After the engine generator system is accepted, submit a completed permit application for the New York Air Quality Management District, ready for submission.
7. Weights of all equipment.
8. Engine mechanical data at varying loads up to full load, including heat rejection, exhaust gas flows, combustion air and ventilation air flows, noise data, fuel consumption, etc.
9. General electrical data including temperature and insulation data, cooling requirements, excitation ratings, voltage regulation, efficiencies, waveform distortion, and telephone influence factor.
10. Generator resistances, reactances, and time constraints.
11. Generator current decrement curve.
12. Generator motor starting capability.
13. Generator thermal damage curve.
14. Jacket water heater connection diagram.
15. Control panel schematics.
16. Manufacturer's dealer warranty.
17. Emissions data, complying with all applicable regulations.
18. All warranty data.
19. Sound data for mechanical and engine exhaust in octave band frequencies between 31.5 Hz to 8,000 Hz and sound data for manufacturer engine exhaust silencer options, complying with New York State regulations.
20. Vibration Isolation Base Detail must be signed and sealed by a licensed Professional Engineer in the State of New York. This includes detail fabrication, anchorage and attachments to the structure and to supported equipment.
21. Exterior enclosure color sample.

D. Test Reports

1. Certified factory test report.
2. Certified field test reports.
3. Report of sound generation.
4. Report of exhaust emissions showing compliance with all applicable regulations.

5. Field quality control test results and reports.

E. Permits

1. Provide all necessary documents required to obtain New York State and New York City approvals for the installation of the generator.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Comply with the latest applicable provisions and the latest recommendations of the following:

1. Alternator:

- a. NEMA MG-1-22
- b. ASTM D396

2. Battery Charger:

- a. U.L. 1236

3. Engine Generator:

- a. Local Air Quality Management District.
- b. U.L. 2200

4. Control and Status Panels:

- a. NFPA 110

5. Testing:

- a. NETA

C. Equipment suppliers shall have local representation and shall have been actively engaged in the assembly, installation and service of this equipment for emergency power purposes. The engine-generator supplier shall have service facilities within proximity of the project site.

D. The equipment supplier must be the manufacturer's local authorized distributor. Generators provided by a third-party dealer with limited authority to perform any type of warranty service of all components incorporated into the generator set will not be acceptable.

E. Equipment suppliers shall have full parts backup and a 24-hour per day service availability for this equipment.

1.6 LOCATION CRITERIA

A. Altitude: 1000 feet below sea level.

B. Seismic: IBC Ss (Short Period Spectral Response Acceleration).

C. Wind Loading: IBC Force: 150 mph.

1.7 WARRANTY

- A. The manufacturer's standard warranty shall in no event be for a period of less than five (5) years from date of substantial completion of the system and shall include repair parts, labor, reasonable travel expense necessary for repairs at the job site, and expendables (lubricating oil, filters, antifreeze, and other service items made unusable by the defect) used during the course of repair. Include a temporary generator set at no cost to the City of New York should a warrantable repair take an extended period of time. Submittals received without written warranties as specified will be rejected in their entirety.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Engine generator housing, engine generator, batteries, battery racks, silencers, generator mounted load banks, and sound attenuating equipment, accessories, and components shall withstand the effects of earthquake motions determined according to ASCE/SEI 7
1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Shake-table testing shall comply with ICC-ES AC156. Testing shall be performed with all fluids at worst-case normal levels.
 3. Component Importance Factor: 1.0
- B. B11 Compliance: Comply with B11.19.
- C. NFPA Compliance:
1. Comply with NFPA 37.
 2. Comply with NFPA 70.
 3. Comply with NFPA 99.
 4. Comply with NFPA 110 requirements for Level 2 EPSS
- D. UL Compliance: Comply with UL 2200.
- E. Engine Exhaust Emissions: Comply with EPA 2 gram NOX requirements as per New York state and the City of New York regulations.
- F. Noise Emission: Comply with contract documents with for maximum noise level at adjacent property boundaries due to sound emitted by engine generator including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.
- G. Environmental Conditions: Engine generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
1. Ambient Temperature: -30 to 110 deg F.
 2. Relative Humidity: Zero to 95 percent.
 3. Altitude: Sea level to 1000 feet

2.2 SOUND ATTENUATOR OUTDOOR WEATHERPROOF GENERATOR-SET ENCLOSURE

- A. Structural Design and Anchorage: Comply with ASCE/SEI 7 for wind loads up to 100 mph.
- B. Seismic Design: Comply with seismic requirements in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- C. Hinged Doors: With padlocking provisions.
- D. Thermal Insulation: Manufacturer's standard materials and thickness selected in coordination with space heater to maintain winter interior temperature within operating limits required by engine generator components.
- E. Provide air-inlet and exhaust louvers with automatic controls
- F. Provide environment control unit heater sin the walk-in enclosure
- G. Interior Lights with Switch: Factory-wired, vapor-proof fixtures within housing; arranged to illuminate controls and accessible interior. Arrange for external electrical connection.
 - 1. AC lighting system and connection point for operation when remote source is available.
 - 2. DC lighting system for operation when remote source and generator are both unavailable.
- H. Convenience Outlets: Factory wired, GFCI. Arrange for external electrical connection.
- I. The emergency generator set and related equipment shall be housed in an approved factory fabricated outdoor weatherproof sound attenuated enclosure. The design and placement shall be such that the generator will function properly without overheating in the ambient conditions specified.
- J. Enclosure shall be of the walk-in, type secured to an approved reinforced concrete foundation via iron angle frame. The enclosure shall be of sufficient size and volume to accommodate acoustical attenuation and vibration isolation equipment.
- K. Exhaust silencer shall be mounted above roof of enclosure. Silencer shall be painted with heat and weather resistant paint. End port shall be fitted with an approved bird screen. All exhaust piping and muffler shall be fully insulated within the enclosure.
- L. Radiator exhaust outlet shall be ducted through the end of the enclosure in an approved manner.
- M. All exterior surfaces shall be factory painted with ANSI 61 grey chlorinated vinyl lacquer in a color selected by the Commissioner.
- N. Unit shall have sufficient guards to prevent entrance by small animals.
- O. Batteries shall fit inside the enclosure and alongside the engine. (Batteries installed under the generator are not acceptable.)

- P. Unit shall have coolant and oil drains outside the unit. Each drain line shall have a valve located near the fluid source
- Q. The enclosure shall be equipped with exterior emergency break glass stations to shut down the generator. A minimum of two (2) are required, one (1) per side. Break glass stations must have multiple contacts for customer use. Provide nameplate to read "EMERGENCY STOP OF GENERATOR" at each break glass station.
- R. The enclosure shall be equipped with an auxiliary circuit breaker panel as a single entry point for commercial power supply conduits and wiring by the Contractor. All the accessories shall be pre-wired to the auxiliary circuit breaker panel; i.e., battery charger, jacket water heater(s), lighting, receptacles, space heater, etc. The breaker panel shall be mounted within the enclosure and allow for site conduit entry and code clearances. Power supplied to the enclosure auxiliary circuit breaker panel shall be 460 volts, 30 kVA – 208Y/120 VAC 3-phase, 4 wire Mini Power Zone. Panel shall have a 50A main disconnect breaker serving the 30 kVA transformer and a 100 amp, 3 pole main breaker at 208 volts and all branch breakers sized for proper voltages required by the accessories. The placement of this breaker panel shall be shown on the submittal drawings. All internal wiring and conduit runs to the various auxiliary equipment supplied with the package shall be pre-wired at the factory by the enclosure manufacturer. Enclosure shall contain a summer ventilation fan (with necessary louvers) and thermostat; two (2) battery two-head lights, eight (8) interior LED type lights with associated 3-way toggle switches at enclosure doors; four (4) GFI 20A duplex receptacles; two (2) exterior weatherproof LED type lights above door with photoelectric cells, mounted on the exterior of the enclosure, all installed and wired to the local 3 phase, 4 wire, 208Y/120 volt, 100 ampere panel. All exterior wiring devices and fixtures shall be weatherproof. All generator enclosure devices (lights, heaters, receptacles, etc.) shall be completely wired in EMT conduit to the panel.
- S. Two (2) –5kW – 208V, 3 phase space heaters shall be provided with built-in, adjustable thermostatic controls and engine cutout relay to maintain interior enclosure temperature above freezing. The heaters will be supported from interior roof with aluminum brackets and threaded rods. The heaters shall be wired to the auxiliary breaker panel.
- T. All necessary fittings, hoses, shut-off valves, etc. shall be provided to facilitate lube oil and water drain at the exterior of the enclosure. Valves shall be ¾" minimum and rated industrial service. These ports shall be labeled on exterior of enclosure for their identification. In addition, engines equipped with a crankcase breather tube shall have this tube terminate at the exterior of the enclosure directly under the radiator air discharge louver. The engine cooling system shall be provided with a 50% mixture of engine manufacturer approved glycol solution. Jacket water heater isolation valves shall be installed for service isolation of the heaters.

- U. The silencer shall be critical grade, mounted and thermally insulated inside the enclosure. For heat rejection reduction and personnel protection, insulation shall be provided for the silencer, flex and all discharge piping. The weight of the silencer shall not be supported by engine. An integral square tube frame support stand shall be provided to support the weight of the silencer. This stand shall also protect the silencer from movement during shipping and rigging. The exhaust pipe size shall be sufficient to ensure that exhaust backpressure does not exceed the maximum limitations specified by the engine manufacturer. The exhaust silencer outlet roof penetration shall be adequately sealed to prevent the entrance of rain, snow and sleet. A stainless steel bellowed flex shall be provided. Nut, bolt, and gasket kits shall be provided for all exhaust connections. Exhaust silencer shall be space conserving, low-profile size “pancake style muffler” suitable for horizontal mounted within the enclosure and supported by interior exhaust silencer stand.
- V. Intake louvers shall be motorized 208 VAC, parallel bladed, spring open motor close, for fail-safe operation. Discharge louvers shall be gravity actuated. Gravity discharge louver frames shall be galvanized steel construction with aluminum blades with felt seals. Motorized intake louvers shall be galvanized frame and blade construction with blade seals installed within the frames. Motorized louvers shall be provided with louver control wiring box which shall incorporate time delay relays and ventilation fan controls. Provide an access hatch to allow for inspection and maintenance of each louver motor and spring mechanism where required.
- W. Enclosure shall be provided with an appropriately sized ventilation fan. Fan shall be roof mounted. Fan shall be provided with an adjustable thermostat wired to louver control circuitry. Fresh air intake for fan shall utilize one (1) of the enclosure motorized intake louvers. Fan shall be equipped with a discharge hood directed downward and a gravity draw louver at fan. Framed opening in roof shall be provided with appropriate framing for support and flashing for prevention of weather ingress. No wall mount fans will be allowed.
- X. Two (2) wide flange structural I beam or channel iron main runners, spanning the full length of the enclosure shall be used. Formed steel metal or plate bases will not be allowed. Cross members shall be fabricated of structural carbon steel and placed on centers to carry floor loads as required. Under no circumstance will OSB plywood be allowed as any part of sub-base structure. Floor shall be 1/8” diamond deck floor plate. Base will be equipped with threaded ground bosses for customer site grounding connections. Base shall be able to carry internal loads applied without relying on site structures to provide additional support. Base shall be designed to support internal loads on cross beams. No light duty, top mounted cross beams that rely on transferring load to exterior edge of frame or base shall be allowed. Base shall be designed to be perimeter supported only. Provide adequately sized conduit stub-up areas in the floor end/or roof of enclosure for generator power cable, engine-generator control wiring and enclosure auxiliary 208Y/120 volt panelboard and transformer.
- Y. The enclosure shall be acoustically treated to provide a maximum noise level of 80 dBA at 5’ from the enclosure (all around – all walls, top and bottom) and 60 dBA at 50’ from the enclosure.
- Z. In addition to internal spring isolators, external spring isolators shall be provided with a minimum static deflection of 3”.

- AA. The enclosure shall have two (2) means of egress from the enclosure. The enclosure manufacturer shall provide the required stairs, platform and catwalk needed to exit the enclosure safely. This equipment shall not block any fuel fill parts or other items requiring access. This equipment shall be welded, primed and painted. Stairs shall be galvanized.

2.3 ENGINE

- A. The engine shall be liquid-cooled, spark-ignited natural gas-fired, 1800 rpm, compression ignition type, four stroke-cycle, water cooled, solid injection, V configuration.
- B. Fuel consumption of the engine generator shall be substantiated by means of manufacturer's published curves.
- C. The engine shall be equipped with an electronic governor to maintain engine speed within limits specified herein. Governor shall be adjustable from isochronous to five (5) percent droop. Provision shall be made to run the engine at idle speed for test and startup purposes.
- D. Engine safety devices, including high water temperature switch, overspeed sensing switch, low oil pressure switch, and low water temperature switch, shall be mounted on the engine and connected to the engine/generator control panel instruments and alarms as specified herein.
- E. Engine wiring shall be high quality, heat resistant, insulated, stranded copper conductor. Wiring shall be protected with suitable woven loom protection and shall be isolated from high temperature engine parts. Wiring for alternating current power circuits shall be protected by rigid or flexible metallic conduit.
- F. The complete engine block shall be machined from one (1) casting. Designs incorporating multiple blocks bolted together are not acceptable.
- G. The engine shall utilize a gear type positive displacement, full pressure lubricating oil pump and water-cooled lube oil cooler. Pistons shall be spray cooled. Provide oil filters, oil pressure gauge, dipstick, and oil drain.
- H. Fuel filters and serviceable fuel system components shall be located to prevent interference with the generator set batteries.

2.4 ELECTRIC STARTING SYSTEM

- A. Dual starting motor with solenoid and either Bendix or overrunning clutch drive shall be furnished on the engine. The starting motor shall be of the required voltage and ampere rating.
- B. Provide a system of nickel cadmium batteries sized such that the set may complete four (4) sixty-second complete cranking cycles at firing speed and specified room temperature. Provide a matching metal frame rack and cables of sufficient ampacities. Floor mounted batteries will not be acceptable.

- C. Provide a wall mounted 120 volt AC battery charger to recharge the batteries to full capacity within eight (8) hours. Battery charger shall have both a high rate and low rate charging system. The battery charger shall be current limiting and shall not require cranking cutout contacts for charger protection when cranking. Accessories shall include: D.C. ammeter, fused input, D.C. voltmeter, high/low DC output voltage relay and input voltage failure relay. Battery charger output shall be rated ten (10) amperes at required voltage.
- D. The entire electric starting system shall be rated for 24 VDC operation.

2.5 ENGINE HEATING SYSTEM

- A. Jacket water heaters, rated for operation on 208 VAC, single phase power shall be provided and shall be sized to ensure that the generator set will start within the specified time period and ambient conditions. Heaters shall include thermostats, oil pressure disconnecting device and required connection boxes.
- B. Provide isolation valves that allow for change out of the heater without draining the entire cooling system.
- C. The capacity of the jacket heaters shall be sized by the engine manufacturer to maintain criteria listed above

2.6 ENGINE COOLING SYSTEM

- A. The engine shall be liquid cooled by means of an engine mounted vertical core radiator. The radiator shall be adequately sized to cool the engine on a continuous basis at the maximum ambient temperature (122°F) and altitude specified. Ambient temperature stated shall be for actual ambient capability, and the manufacturer shall allow for a minimum of seven (7) degree rise across the engine as measured at the fan. Suitable expansion space, either by means of surge tanks or radiator top tank shall be provided. The cooling system shall allow proper deaeration for the engine. An engine driven propeller type fan shall be provided with 1 inch water (H₂O) column static pressure external to the radiator and radiator assembly to allow for proper air-flow. Engine coolant shall be a mixture of fifty (50) percent ethylene glycol-based antifreeze and fifty (50) percent water. A duct adaptor flange shall be included for flex connection provided by another trade.

2.7 AIR INTAKE AND EXHAUST SYSTEM

- A. An air cleaner/silencer shall be furnished as recommended by the engine manufacturer. Air cleaners shall be dry heavy-duty type with built-in restriction gauge to monitor.
- B. Engine exhaust outlets shall be coupled to the exhaust silencer(s) by means of an adequately sized section of stainless steel corrugated flexible tubing. Flexible tubing connector(s) shall be flanged at both ends for mating to the engine and exhaust system.
- C. A critical grade exhaust silencer(s) shall be provided. Sound levels shall be rated no more than 80 dBA average sound level when measured five (5) feet from the exhaust outlet and 60 dBA at five (5) feet. Exhaust silencer(s) shall be sized to limit exhaust back pressure to acceptable values. The exhaust silencer(s) shall be suitable for horizontal mounting and shall be equipped with flanged bottom inlet and flanged end outlet. The exhaust silencer(s) shall be double wall construction and shall have a high temperature anti-corrosion coating applied uniformly on the outside surface.

- D. Silencer configuration shall be pancake type, unless otherwise noted.
- E. Provide a stainless steel bellows flexible connections between the engine outlet and the muffler inlet. Flex shall allow for proper thermal expansion and vibration during engine operation. Flanges shall match the engine outlet and muffler inlet. Provide all nut bolt and gasket kits for each flange on the engine, muffler inlet and outlet.

2.8 FUEL SYSTEM

- A. Fuel lines shall be of heavy seamless tubing and to eliminate irregularity of fuel injections, shall be of the same length for all cylinders.
- B. Provide fusible link type safety shutoff valves to fail close.
- C. The fuel system shall be equipped with a fuel filter having replaceable elements which may be easily removed from their housing for replacing without breaking any fuel line connections or disturbing the gas booster pumps or any other parts of the engine. All fuel filters shall be conveniently located in one (1) accessible housing, ahead of the injection pumps, so that the fuel will have been thoroughly filtered before it reaches the pumps. No screens or filters requiring cleaning or replacement shall be used in the injection pump or injection assemblies. Filters shall be duplex type and have a valve arrangement so filters can be changed during operation.

2.9 ALTERNATOR

- A. Generator shall be rated 460Y/265 volt, 3-phase, four wire, 60 hertz, 0.8 power factor of a kilowatt capacity as indicated on the Contract Documents.
- B. The alternator shall be a four (4) pole, synchronous brushless type. The alternator shall be dual bearing type coupled directly to the engine flywheel by means of a flexible disc coupling.
- C. The alternator voltage regulator shall be solid state type, 3-phase true RMS sensing and shall incorporate an under-frequency protective circuit to limit generator excitation at lower than normal operating speeds. The voltage regulator shall be equipped with a voltage adjusting rheostat capable of plus or minus five (5) percent rated voltage adjustment. The voltage regulator shall maintain the voltage within the limits specified.
- D. The alternator insulation system shall be NEMA Class H and shall be a combination of epoxy coating and varnish. The alternator shall be sized and properly derated according to NEMA MG1-22 to yield a maximum temperature rise of 130°C by resistance above an ambient temperature of 40°C at rated altitude.
- E. Excitation shall be provided by a direct connected brushless permanent magnetic rotating exciter. The armature shall be of the 3-phase design and connected to a full wave 3-phase rotating bridge. Diodes used shall be of the silicon type mounted on proper heat sinks with surge protector to prevent voltage spikes during parallel operation.

- F. Exciter field power shall be provided by a separate permanent magnet generator directly connected to the brushless exciter. The PMG shall provide sufficient power to the excitations system to produce 300% short circuit from the main operator armature during a 3-phase fault with sufficient duration for protective devices to operate.
- G. The sub transient reactions shall be 15% or less.

2.10 MAIN LINE CIRCUIT BREAKER

- A. Main line circuit breaker which shall operate both manually as an isolation switch and automatically during overload and short circuit conditions. The trip unit for each pole shall have elements providing inverse time delay features during overload conditions and instantaneous magnetic tripping for short circuit protection. Circuit breaker shall be suitable for 100% load. The circuit breaker shall be provided with an auxiliary contact to provide a trouble indication should the breaker be in the “OFF” or tripped position.
- B. Provide a 3 pole 80% rated molded case circuit breaker for the radiator mounted load bank.
- C. The circuit breakers shall be mounted in a NEMA 1 generator mounted cabinet. The cabinet shall be formed frame design to support the weight of the installed devices. Cabinet shall be welded construction, no bolt together structures will be allowed. Box material shall be minimum 12 gauge construction. Cabinet will be provided with a bolt-on front access door. Cabinet shall be finish painted to match the generator. Circuit breaker shall be equipped with load side, full rated bus to accommodate 2-hole, long barrel copper compression lugs. Bus hole centers shall be NEMA standard 1.75” hole centers. A neutral disconnect link shall be provided for the neutral connection. Bus shall accept fully rated feeders for neutral and ground connections. Neutral and ground connections shall be isolated from the box frame. Circuit breaker shall be equipped with a minimum 1a/1b auxiliary contacts and 24 VDC-shunt trip. An external zero sequence ground fault protection system will be installed for the circuit breaker for trip activation upon ground fault sensing. A light shall be provided for local annunciation. The mainline circuit breaker shall be cabled from the line side to the generator. The circuit breaker shall be provided with an identification labeling. Position of this mainline cabinet must be at the rear side of generator with the face of the breaker facing the enclosure access door.
- D. Provide a fused disconnect switch, painted RED, for the fire alarm system tap. Coordinate location of the switch prior to any work.

2.11 CONTROL PANEL

- A. A generator mounted control panel shall be provided with lockable hinged front door for complete control and monitoring of the respective generator set functions. Panel shall be environmentally sealed in a NEMA 1 enclosure.
- B. The following shall be included in the control panel:
 - 1. Automatic start/stop operation.
 - 2. Adjustable cycle cranking.
 - 3. Digital engine monitoring.
 - 4. Shutdown sensors and alarms with horns and reset.

5. Adjustable cool down timer.
6. Emergency stop button.
7. Self-diagnostic capabilities and fault logging.
8. AC digital ammeter, .5% true RMS accuracy, with phase selector.
9. AC digital voltmeter.
10. Frequency digital meter.
11. Elapse time digital meter.
12. Engine water temperature digital readout.
13. Engine oil temperature digital readout.
14. Engine oil pressure digital readout.
15. Voltage adjusting rheostat.
16. All items specified under remote status panels.
17. Provide a fixed nameplate consisting of red bakelite with white, 1-inch lettering, identifying the generator controlled.
18. Engine speed digital readout.
19. Serial interface to BMS (BACnet MSTP or Modbus RTU).
20. Load bank shedding control upon ATS calls for generator starting

2.12 AUTOMATIC ELECTRIC-SET PROTECTION

- A. Protection System: Provide power for sensors, trips, indicator lights, and alarm by engine cranking batteries. Provide fault sensors to cause emergency engine shutdown when any of the following faults occur:
1. High water temperature sensors set to trip at 205°F ±3°F, 96°C ±2°C.
 2. Approach to high water temperature sensors set to pre-alarm at 190°F.
 3. Low water temperature sensors set to trip at 80°F.
 4. Overspeed sensors set to trip at 2050 revolutions per minute.
 5. Low lube oil pressure sensors set to trip at the engine manufacturer's recommendation for lowest permissible oil pressure.
 6. Overcrank sensors set to trip after four (4) 15-second attempts to start.
 7. Low water level shut down.

2.13 REMOTE STATUS PANELS

- A. Provide three (2) panels per generator set. One (1) in the Maintenance office, another in the Fire Command Center, and the remaining shall be furnished as part of the generator control panel. Provide alarm indicators per NFPA No. 110 Level 1 and as specified herein. When actuated, these alarms shall sound audible alarms and indicate, by means of individual lights at the annunciator panels, which particular malfunction is initiating the alarm. Provide 3/16-inch-high (minimum) labeling to identify the alarm.
- B. Provide a horn at each panel with silencing (override) switch to silence alarm. Override switch shall have flashing pilot lamp labeled "Override" to indicate that alarm is silenced. Provide power for alarm system from generator battery system. Alarm annunciators shall indicate the following malfunctions:

	Item	Lens Cap Color
1.	High water temperature**	Red
2.	Low water temperature*	Red
3.	Approach to high water temperature*	Yellow

	Item	Lens Cap Color
4.	Approach to low oil pressure*	Yellow
5.	Overspeed*	Red
6.	Cranking failure (after 60 seconds)*	Red
7.	Generator in operation*	Green
8.	High and low battery charge**	Red
9.	Battery charger input failure**	Red
10.	Automatic transfer switch position lights for each automatic transfer switch. Two (2) lamps for each switch.*	Red & Green
11.	Pilot light denoting engine selector switch in "OFF" position*	Red
12.	Start/stop switch (Fire Command Center Only)	--
13.	Test switch (Fire Command Center only)	--
14.	Main circuit breaker tripped open*	Red
15.	Running pilot lights for each gas booster pump (Fire Command Center only)*	Red
16.	Load bank cooling failure*	Red
17.	Remote shutdown activation (via break glass station at the generator)	Red
18.	Spare	--

**Provide one (1) set of normally closed = normally dry contacts summary alarm for BMS interface

1. Provide a serial interface (BACnet MSTP or Modbus RTU) for integration with the Building Management System (BMS). The BMS shall be able to monitor all alarms and status through this interface. Refer to Section 230923 for more information.
2. Connection to Data Link: A separate terminal block, factory wired to Form C contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals. Data system connections to terminals for "Electrical Power Monitoring and Control."
3. Provide serial port (RS 232, RS 422, or RS 485) to communicate with the power monitoring system.

2.14 GENERATOR SET PERFORMANCE

A. The completed generator set shall meet or exceed the following performance criteria:

1. Voltage regulation shall be ± 1 percent rated voltage.
2. Steady state voltage stability ± 0.5 percent rated voltage.
3. Balanced telephone interference factor (TIF) shall not exceed 50.
4. Frequency regulation from no load to full load shall be adjustable from isochronous to 5 percent.
5. Steady state frequency stability shall be ± 0.5 percent.
6. Maximum recovery time to return to frequency stability, bandwidth shall not exceed 6-8 seconds.
7. Generator set shall be capable of start-up and accepting rated load within 10 seconds.

2.15 EMERGENCY POWER DISTRIBUTION BOARD AND LOAD CENTER

A. Installation of emergency distribution board as per the electrical riser diagram (E-500).

- B. Installation of load center for the generator enclosure, including local disconnect switch, 460/120-208V transformer and load center within the generator enclosure, and all branch circuit connections to enclosure space electrical devices, including but not limited to lighting, power receptacles, battery, unit heater, louvers and other generator accessories within the generator enclosure, etc. Refer to electrical riser diagram E-500 for power supply details.

2.16 VIBRATION ISOLATION AND SEISMIC RESTRAINTS

- A. Installation shall be in accordance with the reviewed vibration isolation and seismic restraint submittal.
- B. Natural gas and coolant lines shall be flexible liquid tight braided hoses.
- C. Raceway connections to the generator shall be in liquid tight flexible metal conduits.

2.17 GENERATOR OVERCURRENT AND FAULT PROTECTION

- A. Generator Circuit Breaker: Insulated-case or power breaker, electronic-trip type; 100 percent rated; complying with UL 489.
 - 1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 - 2. Trip Settings: Selected to coordinate with generator thermal damage curve.
 - 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 4. Mounting: Adjacent to or integrated with control and monitoring panel.
- B. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:
 - 1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
 - 2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to ten (10) seconds.
 - 3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
 - 4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.
- C. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

2.18 LOAD BANK

- A. Provide an engine radiator mounted airflow cooled permanent resistive load bank. Load bank shall be for local manual operation.
- B. Load bank shall be rated 50% of generator capacity kW at 460 volts. A separate load bank feeder breaker and feeder shall be provided in the generator terminal compartment.
- C. The load bank shall be completely self-contained, including resistive load elements, load control devices, load element branch circuit fuse protectors, main load bus and terminals, control terminals, system protection devices and enclosure.
- D. Enclosure shall be NEMA 3R, galvanized steel construction. Control components shall be sub-panel mounted and isolated from load elements and cooling airflow. Airflow through the load elements shall be horizontal. Provide mounting adaptors suitable for the installation method.
- E. Load elements shall be totally enclosed, sealed and weatherproofed with an electrically grounded outlet sheath such that the element cannot be electrically short-circuited by external foreign objects and personnel are protected against accidental electrical shock. Elements shall be individually replaceable.
- F. Provide branch circuit fuses for each 50 kW load branch circuit. Fuses shall be 200,000 RMS symmetrical amperes, current limiting type.
- G. Load step control shall utilize one (1) magnetic contactor per each fused branch circuit. Load bank power wiring shall be 150°C insulated.
- H. Main terminals shall be copper bus sized at 1,000A per square inch.
- I. Control panel shall be serviced internally from the main load bus. Control and protective circuits shall operate at 120 volts using a central power transformer.
- J. The load bank shall include a protection system to protect against overheating. The system shall disconnect the load elements from the power source and activate an alarm upon sensing a loss of cooling airflow or an exhaust air temperature greater than 300°F.
- K. Control Panel
 - 1. NEMA 3R enclosure.
 - 2. Control power on-off pushbuttons.
 - 3. "NORMAL OPERATION" indicating lamp.
 - 4. Master load control switch.
 - 5. Load step control switches.
 - 6. "COOLING FAILURE" alarm indication lamps with alarm contact.
 - 7. Load bank disconnect circuit to disconnect load bank on engine start signal.
 - 8. Load bank disconnect circuit bypass to allow the load bank to supplement the actual building load.
 - 9. Provide directional air flow hoods on top of the load bank as shown on the Contract Documents.
 - 10. In the event that a utility company power outage occurs while testing, the load bank shall shed from the bus automatically.

11. Load bank shall have AutoLoad feature to add load when actual connected load falls below 30% and shall disconnect when actual load increases to 50%.
- L. Provide remote emergency shut-off buttons (breakglass stations) for the generator. Locate in the field and provide all required wiring and conduit. Including the wire to shut down the gas solenoid valve on the generator gas supply line which could be located on the main gas main incoming room if required and refer to Plumbing drawings for details.
- M. The documents are based upon engine generator physical sizing criteria of one (1) particular manufacturer. The Contractor shall be responsible for any field installation coordination required due to the use of substitute manufacturer from the proposed. This coordination is to include all mechanical and electrical work, architectural work and structural work.

2.19 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following:
 1. Prime Mover and Generator:
 - a. Caterpillar
 - b. Cummins
 - c. Detroit Diesel
 - d. Or Approved Equal
 2. Fan Radiator:
 - a. IEA
 - b. Young
 - c. Modine
 - d. Or Approve Equal
 3. Exhaust Silencer:
 - a. Harco
 - b. GT Exhaust
 - c. Terrance & Pembro
 - d. Or Approved Equal
 4. Vibration Isolators:
 - a. Mason Industries, Inc.
 - b. Kinetic Noise Control
 - c. Amber Booth Company
 - d. Ace Mountings
 - e. Or Approved Equal
 5. Governor:
 - a. Woodward

- b. Basler
 - c. Generac
 - d. Or Approved Equal.
6. Batteries:
- a. Nife
 - b. Exide
 - c. C&D
 - d. Interstate
 - e. Or Approved Equal
7. Battery Charger:
- a. Lamarche
 - b. Sens
 - c. Charles
 - d. Or Approved Equal
8. Voltage Regulations:
- a. Basler
 - b. Generac
 - c. Eaton
 - d. Approved Equal.
9. Circuit Breakers:
- a. General Electric/ABB
 - b. Siemens
 - c. Square D
 - d. Eaton
 - e. Or Approved Equal
10. Load Bank
- a. Avtron
 - b. Simplex
 - c. Loadtec
 - d. Or Approved Equal
11. Enclosures
- a. Acoustical Sheetmetal Inc. (ASI)
 - b. International Supply Co.
 - c. Robinson Enclosure Co.
 - d. Professional Power Products
 - e. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Install the emergency generator system as shown on the Contract Documents, as indicated in the manufacturer's instructions and as required for a neat workmanlike and fully operational system. Ensure that the manufacturer's recommended clearances are maintained.
- B. Provide an empty raceway system capable of supporting the elevator supply wiring. The raceway system shall meet the requirements of the elevator supplier. As a minimum, provide one (1) two-inch empty conduit with pull cord from each elevator shaft to the Fire Command Center.
- C. Provide a minimum of two (2) remote emergency shut off buttons for the generator. Locate in the field and provide all control wiring and conduit.
- D. Provide equipment grounding connections for the generator. Tighten connections to comply with tightening torque levels specified in UL Std 486A.
- E. Provide all control and monitoring wiring and conduit between the generator and all remote status panels

3.3 VIBRATION ISOLATION

- A. Isolate the generator set at the base by means of combination spring type isolators and neoprene pads. Provide isolators of not less than 98% efficiency of a sufficient quantity such that each is loaded to not more than 75% of its rated value. Provide a minimum static deflection of 3”.
- B. All natural gas and coolant lines shall be isolated by means of flexible light tight braided hoses.
- C. All raceway connections to the generator set shall be in flexible metal conduit.
- D. Entire run of engine exhaust piping shall be supported on spring hangers or mounts as per the manufacturer requirements. Isolators shall be sized for 1” minimum static deflection.

3.4 SEQUENCE OF OPERATION

- A. Engine start contacts shall signal generator to start when the voltage of the normal source drops below 80% on any phase, after a time delay of one (1) second to allow for momentary dips. The voltage sensing relay shall be field adjustable while energized.

- B. The automatic transfer switch shall transfer to emergency when 90% of rated voltage and frequency of the emergency source have been reached.
- C. After restoration of normal power of all phases to 90% of rated voltage, an adjustable time delay period shall delay retransfer to allow stabilization of normal power. If the emergency power source should fail during this time delay period, the automatic transfer switch shall bypass the timing relay and transfer to the normal source.
- D. After retransfer to normal, the engine generator shall be allowed to operate at no load for five (5) minutes.
- E. A test on the automatic transfer switch shall simulate normal power failure.
- F. When the generator begins to start (and is cranking) the following shall occur:
 - 1. Fuel solenoids shall “OPEN”.
 - 2. Air intake motorized dampers shall “OPEN”.
 - 3. Air exhaust motorized dampers shall “OPEN”.
- G. When the generator is “OFF”, the following shall occur:
 - 1. Fuel solenoid valves shall “CLOSE”.
 - 2. Air intake motorized dampers shall “CLOSE”.
 - 3. Air exhaust motorized dampers shall “CLOSE”.

3.5 TESTING

- A. Factory Testing
 - 1. Prior to shipment of the engine-generator set from the factory, a certified load test shall be performed, and the results shall be submitted to the Commissioner for review before shipment of the unit. The tests shall verify the proper operation of all alarms and shut down circuits.
 - 2. Provide costs for the Commissioner to witness the testing. This includes all travel and lodging costs.
 - 3. The tests shall also demonstrate compliance with the generator performance criteria as specified herein.
 - 4. Testing shall be performed as follows:
 - a. Verify operation of all shut down and alarm points specified.
 - 5. Perform transient response testing to verify performance as specified. Load steps shall be performed as follows:
 - a. 0% - 25% - 0%
 - b. 0% - 50% - 0%
 - c. 0% - 75% - 0%
 - d. 0% - 100% - 0%

- e. 0% - 25% -75% - 25% - 0%
 - f. 0% - 50% -100% - 50% - 0%
- 6. All load steps shall be recorded on a chart recorder or light beam oscilloscope.
 - 7. In a period of four (4) hours with a loading 25, 50, 75 and 100 percent of rated load. Step loading procedure shall be utilized (i.e., 25 percent first hour, 50 percent second hour, etc.).
 - 8. Maintain 100% load for one (1) hour.
 - 9. Factory testing shall be accomplished using resistive and reactive load banks to match kW and kVA requirements set forth in the Contract Documents.
- B. Field Testing**
- 1. After completion of the installation, the Contractor shall perform a certified load test, in accordance with NFPA 110, of the engine generator and related automatic transfer switches. The generator shall be required to start-up and accept full load within 10 seconds. The unit shall continue to operate for not less than four (4) hours at 100 percent rated load. The test shall also include demonstrating that all alarms, signals, shut down devices, elevator recall, etc., are functioning properly. The Contractor shall be responsible for securing all temporary load-banks, temporary cables, etc., required for the tests.
 - 2. The full load test shall utilize all required load banks sufficient to provide a load equal to 100 percent of the generator nameplate rating. Contractor shall secure all such load banks, cabling, hoisting, and terminations needed to perform the full load test.
- C. Certified Test Reports**
- 1. Field testing shall be performed by the manufacturer's certified factory field service technicians.
 - 2. Test procedures shall be in accordance with NFPA 110.
 - 3. Verify that the installation is in accordance with the manufacturer's instructions.
 - 4. Verify that the equipment has been fully tested and is operational.
 - 5. Perform reactive testing and compile detailed test reports for each piece of equipment and system tested.
 - 6. Perform pull-the-plug test to demonstrate proper operation of the entire emergency electrical system.
- D. Miscellaneous – Provide the following:**
- 1. Location of a factory authorized service center.
 - 2. The response time for service calls. There should be a maximum response time of two (2) hours on-site.
 - 3. Provide all necessary wiring and conduit to each remote alarm panel.
 - 4. Bond generator weatherproof enclosure to the electrical grounding system.

3.6 CLASSROOM INSTRUCTION

- A. The generator set supplier shall provide a minimum of eight (8) hours of classroom instruction on maintenance and operation of the emergency power system. Classes shall be held at the supplier's facility, shall be administered by a full-time instructor and shall be open to up to three (3) representatives of the City of New York maintenance staff.
- B. Instruction shall be videotaped and turned over to the City of New York.

3.7 HOUSEKEEPING PADS

- A. Provide a 6-inch high concrete housekeeping pad beneath the generator.

3.8 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine generator performance.
- B. Examine roughing-in for piping systems and electrical connections. Verify actual locations of connections before packaged engine generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.9 INSTALLATION

- A. Comply with NECA 1 and NECA 404.
- B. Comply with packaged engine generator manufacturers' written installation and alignment instructions and with NFPA 110.
- C. Equipment Mounting:
 - 1. Install packaged engine generators on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Coordinate size and location of concrete bases for packaged engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
 - 3. Install engine generator in a walk-in enclosure with having a minimum deflection of 1 inch on 4-inch-high concrete base. Secure enclosure to anchor bolts installed in concrete bases. Concrete base construction is specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- D. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.
- E. Exhaust System: Install Schedule 40, black steel piping with welded joints and connect to engine muffler. Install thimble at wall. Piping shall be same diameter as muffler outlet.

1. Install flexible connectors and steel piping materials according to requirements in Section 232116 "Hydronic Piping Specialties."
2. Insulate muffler/silencer and exhaust system components according to requirements in Section 230719 "HVAC Piping Insulation."
3. Install isolating thimbles where exhaust piping penetrates combustible surfaces with a minimum of 9-inch clearance from combustibles.

F. Drain Piping: Install condensate drain piping to muffler drain outlet with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe, the full size of the drain connection, with welded joints.

G. Gaseous Fuel Piping:

1. Natural gas piping, valves, and specialties for gas distribution are specified in Section 231123 "Facility Natural Gas Piping."
2. LP gas piping, valves, and specialties for gas piping are specified in Section 231126 "Facility Liquefied-Petroleum Gas Piping."

H. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.10 CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping and specialties.

B. Connect fuel, cooling-system, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.

C. Connect cooling-system water piping to engine generator and heat exchanger with flexible connectors.

D. Connect engine exhaust pipe to engine with flexible connector.

E. Gaseous Fuel Connections:

1. Connect fuel piping to engines with a gate valve and union and flexible connector.
2. Install manual shutoff valve in a remote location to isolate gaseous fuel supply to the generator.
3. Vent gas pressure regulators outside building a minimum of 60 inches from building openings.

F. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Provide a minimum of one 90-degree bend in flexible conduit routed to the engine generator from a stationary element.

H. Balance single-phase loads to obtain a maximum of 10 percent unbalance between any two phases.

3.11 IDENTIFICATION

- A. Identify system components according to Section 230553 "Identification for HVAC Piping and Equipment" and Section 260553 "Identification for Electrical Systems."
- B. Install a sign indicating the generator neutral is bonded to the main service neutral at the main service location.

3.12 GUARANTEE SERVICE

- A. Initial Service: Beginning at Substantial Completion, provide 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
- B. The generator set manufacturer and its distributor shall maintain a 24-hour parts and service organization. This organization shall perform preventive maintenance and service on equipment similar to that specified including system operation under simulated operation conditions, adjustment to the generator set, transfer switch, and switchgear controls as required, and certification in the City of New York's maintenance log of repairs made and function tests performed on all systems.

3.13 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate packaged engine generators.

3.14 FIELD REPRESENTATION

- A. Provide services of manufacturer's field representative (factory trained) for a period of five (5) working days to supervise start-up, testing and two (2) instruction sessions for operating personnel.
- B. The generator set dealer shall be responsible for coordination between all related generator control wiring, regulator and governor equipment, testing and start-up and all associated systems that affect the coordination of the switchgear with the generator sets. All submittal packages relating to the two (2) systems shall be supplied as a one source package for review by the Commissioner. The one (1) source of responsibility criteria would rest upon the generator supplier to ensure a smooth transition in every step of the installation process, as well as being available for coordination meetings with the associated sub-vendor.
- C. The City of New York reserves the right along with its authorized representatives to visit the factory during the course of fabrication of equipment to observe progress, quality control, schedule of completion, etc. All costs shall be paid by the Contractor.

3.15 TECHNICAL LITERATURE – CLOSEOUT SUBMITTALS

- A. Provide the City of New York with three (3) copies of technical literature on all system components consisting of a manual of sequential operations, recommended preventive maintenance, parts list with recommended spares, and all pertinent control manuals and wiring diagrams.
- B. Provide a list of tools and replacement parts recommended to be stored at the Project for ready access.

3.16 LOAD BANK FIELD TESTING

- A. Prior to energizing the load bank, the insulation resistance on the bus shall be measured from phase-to-phase and phase-to-ground.
- B. After installation is completed, all switches shall be functionally tested.
- C. All protective functions shall be tested, and all remote functions simulated to determine if the units have been wired properly.
- D. All testing of the completed installations shall be performed in the presence of and as directed by the Commissioner. The Contractor shall notify the Commissioner when the equipment is installed and ready for testing.
- E. Testing shall be performed in the following manner.
 - 1. All control and power cable connections shall pass inspection for workmanship, tightness, and continuity.
 - 2. All load banks shall be tested for equipment grounds. Maximum acceptable resistance shall be 1 ohm.
 - 3. The unit shall be given a phase-to-phase and phase-to-ground megger test and all feeder load terminals grounded.
 - 4. Megger tests shall be applied between each phase and ground with phases not under test also grounded.
 - 5. All alarm devices shall be adjusted and set.
 - 6. All control circuits shall be given operational tests from the supply source for which they were designated. This shall include normal operation three (3) times from each control point, and activation of alarm devices.
 - 7. All test results shall be in accordance with the manufacturer's recommendations.

END OF SECTION 263213.16

SECTION 263600 - TRANSFER SWITCHES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Automatic Transfer Switches.
2. Automatic Transfer and Bypass – Isolation Switches.
3. Automatic Closed Transition Transfer Switches.
4. Interconnecting control wiring, conduit, and programming for the complete requirements of the standby power generation system.
5. Remote Annunciators.

B. Description:

1. Provide automatic transfer switches (ATS) in accordance with the Contract Documents.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

B. Shop Drawings:

1. Detailed drawings which relate to the design criteria specified, including single line diagram.
2. Submission shall be coordinated with the short circuit study submitted with the project switchboard shop drawings for the entire electrical system. Equipment submissions made without this study shall be returned un-reviewed.
3. All concrete housekeeping pads shall be sized and illustrated on the submittal.

C. Product Data

1. Manufacturer's catalog cut sheets and performance data.
2. Complete detailed wiring diagram of the system including all remote connections.
3. All nameplate information.
4. All warranty data.
5. Certified factory test report.

6. Complete list of materials and components being furnished, including capacities, weights, operating ratings, and all accessories

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Comply with the latest applicable provisions and latest recommendations of the following:
 1. U.L. 1008 – Standard for Transfer Switch Equipment
 2. NFPA 110 – Emergency and Standby Systems
 3. U.L. 508 – Industrial Control Equipment
 4. U.L. 1008 – Transfer Switch Equipment
 5. NFPA 70 – National Electrical Code
 6. IEEE Standard 446 – IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Application
 7. NEMA Standard ICS10 – AC Automatic Transfer Switches
- C. Equipment suppliers shall have local representation and shall have been actively engaged in the assembly, installation and service of this equipment for emergency power purposes for a period of not less than 3 years in the job site area.
- D. Equipment suppliers shall have full parts backup and a 24 hour per day service availability for this equipment.
- E. Equipment supplier shall have factory direct service employees specifically trained for work on automatic transfer switches and all related devices.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 WARRANTY

- A. Provide a manufacturer's standard warranty for a period of two (2) years from substantial completion by the City of New York

PART 2 - PRODUCTS

2.1 GENERAL

- A. Rating: The automatic transfer switches shall be furnished as shown on the Contract Documents and shall be listed under UL-1008. All three phase, four wire transfer switches shall be the four-pole switched neutral type with overlapping neutral contacts to eliminate transients and optimize the integrity of the neutral path. The automatic transfer switches shall be capable of switching all classes of load and shall be rated for continuous duty when installed in a non-ventilated enclosure constructed in accordance with Underwriters' Laboratories, Inc. Standard UL-1008. Rating and configuration of the switches shall be as indicated on the Contract Documents.
- B. Construction and Performance: The automatic transfer switch shall be double throw, actuated by a single or dual electrical operator momentarily energized and connected to the transfer mechanism by a simple over-center type linkage with a total transfer time not to exceed one-sixth of a second. The automatic transfer switch shall be capable of transferring successfully in either direction with 80 percent of rated voltage applied to the switch terminals.
- C. The normal and emergency contacts shall be positively interlocked mechanically and electrically to prevent simultaneous closing. Main contacts shall be mechanically locked in position in both the normal and emergency positions without the use of hooks, latches, magnets, or springs and shall be silver-tungsten alloy protected by arcing contacts, with arc grids on each pole. Interlocked molded case circuit breakers or contactors are not acceptable.
- D. The transfer switch shall be equipped with a maintenance operator that is designed to operate with switch de-energized. The switch shall operate with a slow movement to allow for inspection of the contact travel. The transfer switch shall be equipped with a safe external manual operator designed to prevent injury to operating personnel. The manual operator shall provide the same contact to contact transfer speed as the electrical operator to prevent a flashover from switching the main contacts slowly. The external manual operator shall be safely operated from outside of the transfer switch enclosure while the enclosure door is closed.
- E. Transfer switches shall be mounted in NEMA 250, Type 1 enclosures as indicated on the Contract Documents.
- F. When conducting temperature rise tests to paragraph 17 of UL-1008, the manufacturer shall include post-endurance temperature rise tests to verify the ability of the transfer switch to carry full rated current after completing the overload and endurance tests.
- G. The automatic transfer switches shall have the short circuit withstand and close-in ratings consistent with the available short circuit current as indicated on the Contract Documents and a result of the Contractor's short circuit analysis.
- H. Nameplate: Provide a nameplate of red bakelite with white lettering containing the following information:
 ATS # _____ (1/2" lettering)
 Serves Panel _____ (1/4" lettering)
 Normal Power from Panel _____ CKT _____ (1/4" lettering)

Emergency Power from Panel ____ CKT ____ (1/4" lettering)

2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. Comply with NEMA ICS 1.
- C. Comply with NFPA 99.
- D. Comply with NFPA 110.
- E. Comply with UL 1008 unless requirements of these Specifications are stricter.
- F. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- G. Tested Fault-Current Closing and Short-Circuit Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
 - 1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
- H. Repetitive Accuracy of Solid-State Controls: All settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- I. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.62. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- J. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism. Switches for emergency or standby purposes shall be mechanically and electrically interlocked in both directions to prevent simultaneous connection to both power sources unless closed transition.
- K. Service-Rated Transfer Switch:
 - 1. Comply with UL 869A and UL 489.
 - 2. Provide terminals for bonding the grounding electrode conductor to the grounded service conductor.
 - 3. In systems with a neutral, the bonding connection shall be on the neutral bus.
 - 4. Provide removable link for temporary separation of the service and load grounded conductors.
 - 5. Surge Protective Device: Service rated.
 - 6. Ground-Fault Protection: Comply with UL 1008 for normal and alternative buses.
- L. Service Disconnecting Means: Externally operated, manual electrically actuated

- M. Neutral Terminal: Solid and fully rated unless otherwise indicated.
- N. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.
- O. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater.
- P. Battery Charger: For generator starting batteries.
 - 1. Float type, rated 2A.
 - 2. Ammeter to display charging current.
 - 3. Fused ac inputs and dc outputs.
- Q. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.
- R. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, by color-code or by numbered or lettered wire and cable with printed markers at terminations. Color-coding and wire and cable markers are specified in Section 260553 "Identification for Electrical Systems."
 - 1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
 - 2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
 - 3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.
 - 4. Accessible via front and side access.
- S. Enclosures: General-purpose NEMA 250, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.3 AUTOMATIC TRANSFER BYPASS – ISOLATION SWITCH

- A. A two-way bypass-isolation switch shall provide manual bypass of the load to either the emergency or normal source and permit isolation of the automatic transfer switch from all source and load power conductors. All main contacts shall be manually driven. Electrically-driven contacts are prohibited.
- B. Separate bypass and isolation handles shall provide clear distinction between the two functions. The bypass handle shall provide three operating modes: “Bypass to Normal”, “Automatic” and “Bypass to Emergency”. Bypass to the selected source shall be affected without any interruption of power to the load (make-before-break contacts). The operating speed of the bypass contacts shall be the same as that of the associated transfer switch and shall be independent of the speed at which the manual bypass handle is operated. In the “Automatic” mode, bypass contacts shall be fully open to prevent subjecting to fault currents.
- C. The isolation handle shall provide three (3) operating modes: “Closed”, “Test” and “Open”.

1. The “Test” mode shall permit testing of the entire emergency power system, including the automatic transfer switch, without interruption of power to the load.
 2. The “Open” mode shall completely isolate the automatic transfer switch from all source and load power conductors. When in the “Open” mode it shall be possible to completely withdraw the automatic transfer switch for inspection or maintenance without removal of power conductors or the use of tools.
- D. With the isolation switch in the “Test” or “Open” mode, the bypass switch shall function as a manual transfer switch allowing transfer and retransfer of load between the two available sources without the feedback of load-regenerated voltage to the transfer switch.
- E. The bypass/isolation switch shall have the same electrical ratings of ampacity, voltage, short circuit withstand, and temperature rise capability as the associated ATS. The isolating portion of the bypass/isolation shall allow the automatic transfer switch to be disconnected from all sources of power and control without opening the enclosure door. The transfer switch shall have a true draw out configuration which does not require disconnection of any electricity or mechanical devices by maintaining personnel. The automatic transfer switch shall be provided with rollers or casters to allow it to be removed from its enclosure simply by rolling it out. Positive mechanical interlocks shall be provided to ensure that the bypass/isolation functions can be accomplished without the danger of a short circuit.
- F. The isolating portion of the bypass/isolation shall allow the automatic transfer switch to be disconnected from all sources of power and control without opening the enclosure door. The transfer switch shall have a true draw out configuration which does not require disconnection of any electricity or mechanical devices by maintaining personnel. The automatic transfer switch shall be provided with rollers or casters to allow it to be removed from its enclosure simply by rolling it out. Positive mechanical interlocks shall be provided to ensure that the bypass/isolation functions can be accomplished without the danger of a short circuit. Overlapping contact bypass/isolation switches, that are dependent upon the position of the automatic transfer switch for proper operation, are not acceptable.

2.4 OPERATION

A. Microprocessor Control Module

1. A microprocessor control module shall be provided to direct the operation of the transfer switch. The control module shall be connected to the transfer switch by an interconnecting wiring harness which shall include a keyed disconnect plug to enable disconnecting for routine maintenance.
2. A full duplex RS422 interface shall be built-in to the control module to enable digital communications with remotely-located annunciators and/or network supervisors.
3. Provide serial port (RS232; RS422; or RS485) to communicate with the power monitoring system.

B. Relays, Contacts and Controls

1. Close differential voltage sensing on all phases of normal system.
 - a. Drop out field adjustable from 75 to 98%. Factory set at 80%.
 - b. Pick up field adjustable from 85 to 100%. Factory set at 90%.
2. Voltage sensing on at least one (1) phase of emergency system.

- a. Pick up field adjustable from 85% to 100%. Factory set at 90%.
3. Frequency sensing of emergency system.
 - a. Pick up field adjustable from 90 to 100%. Factory set at 95%.
4. Time delay of momentary normal source outages.
 - a. Field adjustable from 0 to 6 seconds. Factory set at 1 second.
5. Time delay on transfer back to normal.
 - a. Field adjustable from 0 to 30 minutes. Factory set at 10 minutes.
 - b. Immediate bypass and transfer to normal source if emergency service fails.
 - c. Shall cause a normally open set of contacts to close 10-15 seconds prior to transfer back to normal for switches serving elevator loads. This signal shall be adjustable from 0-60 seconds and shall be set as required by the elevator vendor.
6. Time delay of transfer to emergency.
 - a. Field adjustable from 0 to 5 minutes. Factory set at 0 minutes.
 - b. Where multiple transfer switches are employed, set the time delay at 5 seconds apart between each switch (i.e., 4 switches total transfer of last switch 20 seconds). Switch priority assignments shall be assigned by the Commissioner.
7. Unloaded engine run cool down time delay.
 - a. Field adjustable from 0 to 60 minutes. Factory set at 5 minutes.
8. Engine start contacts.
 - a. Two (2) sets, one (1) set to close the other set to open upon failure of normal source.
 - b. Signal to start respective generator after time out of transfer to emergency relay as specified in article 6 above.
9. Test switch.
 - a. Momentary type mounted through the enclosure.
 - b. Simulates failure of normal source.
 - c. System to remain in test position until delay on transfer back to normal has timed out.
 - d. A test reset switch shall be included and shall bypass the delay on transfer back to normal. It shall not bypass the unloaded engine run cool down delay or the presignal specified in 5c above.
 - e. During test conditions (operation of test switch) a normally open set of contacts shall be caused to close 10-15 seconds prior to transfer to emergency. The signal shall be adjustable from 0-60 seconds and shall be set as required by the elevator vendor.
10. Spare contacts.

- a. Four (4) spare auxiliary contacts; two (2) closed with the switch in the emergency position, the others closed with the switch in the normal position.
11. Switch indicating lights.
 - a. Mounted on enclosure door.
 - b. Red when the switch is in the emergency position.
 - c. Green when the switch is in the normal position.
 - d. Green to indicate normal source is available.
 - e. Red to indicate emergency source is available.
 - f. Lights shall be paralleled at the remote annunciator panels.
 - g. Amber when the switch is in the bypass-isolation switch position.
 12. In phase monitor.
 13. Service manual shall be supplied inside of the enclosure when shipped.

2.5 REMOTE ANNUNCIATORS

- A. Provide a U.L. listed remote annunciator with a built-in microprocessor to monitor and test remotely-located transfer switches.
- B. The annunciator shall have a full duplex RS422 or RS485 interface for connection to twin twisted pair #22 gauge wire in a shielded, jacketed cable suitable for digital communications. The annunciator shall be capable of monitoring and testing via a single communications cable, eight (8) transfer switches and expandable up to 32 switches.
- C. The annunciator shall provide indication by LED indicators, as follows:
 1. Transfer switch position.
 2. Availability of each source.
 3. Indication of time delays in operation.
 4. Flashing indicator for each transfer switch being tested.
 5. Indicator labeled “Operational” to identify that one (1) unit has power applied and that it is operating correctly.
- D. The annunciator shall be capable of testing individual automatic transfer switches by simulating a normal source failure with override if the emergency source fails.
- E. The annunciator shall include a push-button to bypass the time delay on transfer or time delay on retransfer when activated for each automatic transfer switch.
- F. A key-operated switch shall be provided to prevent unauthorized operation of the controls.
- G. Each remote annunciator shall be wired separately and its cabling installed in separate conduits.

2.6 NETWORK SUPERVISOR

- A. Provide a microcomputer-based network supervisor system with a computer, keyboard, and monitor which can monitor and control remotely-located transfer switches. The system shall be desk-top mounted.
- B. The communications method shall be digital and the annunciator shall be provided with a full duplex RS422 or RS485 interface for connection to twin twisted pairs of #22 gauge wire in a shielded, jacketed cable suitable for digital communications. The annunciator shall enable communication over a cable length of up to 4,000 feet or beyond 4,000 feet with the use of repeaters. The system shall continually monitor the communication network and indicate a loss of communications with any connected device. All cabling shall be in conduit.
- C. The network supervisor system shall be capable of monitoring and controlling up to 32 transfer switches per port for a maximum of 128 switches. It shall also be capable of supporting up to 6 remote annunciators per port for a maximum of 24.
- D. The system shall provide the following:
 - 1. Indication of each transfer switch position.
 - 2. Indication of availability of each source as defined by the actual pick-up and drop out settings.
 - 3. Indication of time delay in operation.
 - 4. Testing individual transfer switches by simulating a normal source failure with override if the emergency source fails. An indicator shall be activated for each transfer switch being tested.
 - 5. Bypass the time delay on transfer or time delay on retransfer when activated for each transfer switch.
 - 6. Display the actual voltage and frequency pick-up and drop out, and time delay setting of each connected transfer switch.
 - 7. Continuously display the actual voltage of the normal and emergency sources and the elapsed time delay status for each connected transfer switch.
 - 8. Provide a continuous event log of the following events for each transfer switch with time and date stamped on the printouts.
 - a. Engine start signal.
 - b. Change of transfer switch position.
- E. A user-programmable test function shall be included to provide for automatic testing of all transfer switches.
- F. The network supervisor shall be menu-driven and utilize a maximum of ten function keys for primary operations. A password function shall be included to prevent unauthorized operation. The system shall provide three (3) basic display types:
 - 1. Menus – to access major system functions.
 - 2. Data Display – to provide information from transfer switches.
 - 3. Utility Displays – to enable user input.

2.7 MANUFACTURERS

- A. Automatic Switch Co.
- B. Russelectric Co.
- C. General Electric
- D. Or Approved Equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Floor-Mounting Switch: Anchor to floor by bolting.
 - 1. Install transfer switches on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
 - 2. Comply with requirements for seismic control devices specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."
 - 3. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases.
 - 4. Provide workspace and clearances required by NFPA 70.
- B. The automatic transfer switches shall be installed as shown on the contract documents, in conjunction with the engine generator system as indicated in the manufactures instruction and as required for a neat workmanship like and fully operational system.
- C. Annunciator and Control Panel Mounting: Flush in wall unless otherwise indicated.
- D. Identify components according to Section 260553 "Identification for Electrical Systems."
- E. Set field-adjustable intervals and delays, relays, and engine exerciser clock.
- F. Comply with NECA 1.

3.3 CONNECTIONS

- A. Wiring to Remote Components: Match type and number of cables and conductors to generator sets, control, and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to City of New York if necessary to accommodate required wiring.

- B. Wiring Method: Install cables in raceways and cable trays except within electrical enclosures. Conceal raceway and cables except in unfinished spaces.
 - 1. Comply with requirements for raceways and boxes specified in Section 260533 "Raceways and Boxes for Electrical Systems."
- C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii.
- D. Provide the following in conjunction with each and every automatic transfer switch (daisy chain of switches is unacceptable):
 - 1. 2#12-3/4"C. from the auxiliary contact (closed when switch is in the emergency position) on each automatic transfer switch to each elevator machine room which is served via an emergency generator. Terminate where required by the elevator vendor.
 - 2. 2#12-3/4"C. from the auxiliary contact (closed before the switch returns to normal power) on each automatic transfer switch serving elevators to each elevator machine room which is served via that transfer switch. Terminate where required by the elevator vendor.
 - 3. 2#12-3/4"C from the auxiliary contact (closed before the switch moves to the emergency position) on each automatic transfer switch serving elevators to each elevator machine room which is served via that transfer switch. Terminate as and where required by the elevator vendor.
 - 4. 2#12-3/4"C. from the engine start contact on each automatic transfer switch to the respective emergency generator control panel.
- E. Wiring as necessary from each automatic transfer switch to the remote annunciator panels and the engine control panel for each automatic transfer switch position indicator lights.
- F. Control wiring shall be kept in independent raceways from power conductors. Each control wiring shall be in dedicated and independent raceways. Control wiring shall not be looped to other switches (no daisy chain allowed).
- G. Provide 6#12, 2 hour rated control cables (MC Vitalink or MI cable) between each fire pump ATS/controller and the generator control panel.
- H. Provide all necessary dedicated wiring and conduit to each remote alarm panel.
- I. Provide 4" high concrete housekeeping pads for all floor mounted equipment.
- J. Provide a 24-inch-wide isolation mat in the front and rear of all automatic transfer switches.
- K. All equipment shall be labeled
- L. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- M. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- N. Connect twisted pair cable according to Section 260523 "Control-Voltage Electrical Power Cables."
- O. Route and brace conductors according to manufacturer's written instructions.
- P. Brace and support equipment according to Section 260548.16 "Vibration and Seismic Controls for Electrical Systems."
- Q. Final connections to equipment shall be made with liquidtight, flexible metallic conduit no more than 18 inches in length.

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing, startup and commissioning.
 - 2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.
 - 5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
 - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
 - c. Verify time-delay settings.
 - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
 - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
 - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microohms and values for 1 pole deviating by more than 50 percent from other poles.
 - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
 - 6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.

- a. Verify grounding connections and locations and ratings of sensors.
- B. Testing Agency's Tests and Inspections:
1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
 2. Perform each visual and mechanical inspection and electrical test as per contract documents. Certify compliance with test parameters.
 3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.
 4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
 - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
 - c. Verify time-delay settings.
 - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
 - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
 - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
 - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
 5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
 - a. Verify grounding connections and locations and ratings of sensors.
- C. Coordinate tests with tests for the generator and run them concurrently.
- D. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- E. Remove and replace malfunctioning units and retest as specified above.
- F. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate transfer switches and related equipment.
- B. Instruction to include testing ground-fault protective devices and instructions to determine when the ground-fault system shall be retested. Include instructions on where ground-fault sensors are located and how to avoid negating the ground-fault protection scheme during testing and circuit modifications.
- C. Coordinate this instruction with that for generator equipment.

END OF SECTION 263600

SECTION 264313 - SURGE PROTECTIVE DEVICES FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract ."

1.2 SUMMARY

- A. Section Includes:
 - 1. Type 1 surge protective devices.
 - 2. Type 2 surge protective devices.
 - 3. Conductors and cables.

1.3 DESCRIPTION

- A. Provide surge protection devices (SPD) for the protection of all AC electrical circuits and electronic equipment from the effects of lightning induced voltages, external switching transients and internally generated switching transients, in accordance with the Contract Documents.

1.4 DEFINITIONS

- A. I_n : Nominal discharge current.
- B. Maximum Continuous Operating Voltage (MCOV): The maximum designated RMS value of the power frequency voltage that may be continuously applied to the mode of protection of an SPD.
- C. Metal-Oxide Varistor (MOV): An electronic component with a significant bidirectional, nonlinear current-voltage characteristic.
- D. Mode(s), Modes of Protection, or Protection Modes: Electrical paths where the SPD offers defense against transient overvoltages. Examples include: line to neutral (L-N), line to ground (L-G), line to line (L-L), and neutral to ground (N-G).
- E. SCCR: Short-circuit current rating.
- F. Type 1 SPDs: Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service disconnect overcurrent device.
- G. Type 2 SPDs: Permanently connected SPDs intended for installation on the load side of the service disconnect overcurrent device, including SPDs located at the branch panel.

- H. Type 3 SPDs: Point of utilization SPDs.
- I. Type 4 SPDs: Component SPDs, including discrete components, as well as assemblies.
- J. Type 5 SPDs: Discrete component surge suppressors, such as MOVs that may be mounted on a printed wiring board, connected by its leads or provided within an enclosure with mounting means and wiring terminations.
- K. Voltage Protection Rating (VPR): A rating selected from UL 1449 list of preferred values assigned to each mode of protection.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. The surge protective device submittals shall include, but shall not be limited to, the following information:
 - 1. Data for each suppressor type indicating ratings, capacities, operating weight, conductor sizes, conductor types, and connection configuration and lead lengths.
 - 2. Manufacturer's certified test data indicating the ability of the product to meet or exceed requirements of this specification.
 - 3. Drawings, with dimensions, indicating SPD mounting arrangement and lead length configuration, and mounting arrangement of any optional remote diagnostic equipment and assemblies.
 - 4. List and detail all protection systems such as fuses, disconnecting means and protective materials.
 - 5. SPD wiring, bonding, and grounding connections shall be indicated on the wiring diagrams for each system. Include installation details demonstrating mechanical and electrical connections to equipment to be protected.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. The latest edition of the following standards and publications shall comply to the work of this section:
 - 1. ANSI/IEEE C62.41, Recommended Practice on Surge Voltages in Low-Voltage AC Power Circuits
 - 2. ANSI/IEEE C62.45, Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage AC Power Circuits
 - 3. Underwriters Laboratories UL 1449
 - 4. Underwriters Laboratories, UL 1283
 - 5. National Fire Protection Association, NFPA 70 and 780 - National Electrical Code
 - 6. National Electrical Manufacturer's Association LS-1, (NEMA LS-1)
 - 7. ISO 9001: Quality Systems - Model for Quality Assurance in Design, Development, Production, Installation and Servicing
 - 8. UL 96A – UL Lightning Protection System Master Label

- C. All surge protective devices for service entrance, distribution, and branch circuit protection within a facility shall be provided by a single manufacturer.
- D. The manufacturer must be regularly engaged in the manufacture of surge suppression products for the specified categories for no less than three (3) years.

1.7 WARRANTY

- A. The SPD and supporting components shall be guaranteed by the manufacturer to be free of defects in material and workmanship for a period of ten (10) years from the date of substantial completion of service and activation of the system to which the suppressor is attached. Any additional diagnostic circuits (LEDs, surge counter, etc.) must meet the same warranty period and conditions listed within these specifications.
- B. An SPD that shows evidence of failure or incorrect operation during the warranty period shall be replaced free of charge. The warranty is to cover the effects of lightning, single phasing, and all other electrical anomalies. The warranty shall cover the entire device, not just various components, such as modules only.
- C. The installation of SPDs in or on electrical distribution equipment shall in no way compromise or violate equipment listing, labeling, or warranty of the distribution equipment.

PART 2 - PRODUCTS

2.1 PERFORMANCE

- A. General
 - 1. SPDs installed in switchgear, switchboards, or power panels shall have an integral non-fused disconnect, independently tested to the maximum surge current rating of the device. SPDs installed in lighting panels shall be either direct connected to the main bus or via a dedicated branch breaker. Use of plug-in type suppression modules is not allowed.
 - 2. SPDs installed external to switchgear, switchboards, or power panels shall be fed by a dedicated 30A/3P circuit breaker or disconnect switch. The SPD shall be connected directly to the side of the equipment enclosure.
 - 3. The SPD shall protect all modes and there shall be seven (7) discrete suppression circuits: three (3) modes connected Line to Ground, three (3) modes connected Line to Neutral, and one (1) mode connected Neutral to Ground for a 3-phase, 4-wire, plus ground voltage system. Line to Neutral to Ground is not an acceptable substitute for Line to Ground. Line to Neutral to Line and Line to Ground to Line (in combination) will be acceptable for Line to Line protection.
 - 4. All SPDs must have passed the UL 1449 Fault Current Test with a Rating of 200,000 AIC. Documentation substantiating this claim must be provided.
 - 5. SPDs shall use a separate path to building ground; the equipment safety ground is not to be used as a transient ground path. Ground to ground bar in the main service room. Provide cabling and conduit per manufacturer's requirement.

6. Each metal-oxide varistors (MOV) shall be individually fused with a dual-purpose fuse at the component level (one (1) fuse system for each MOV). The fusing system must be comprised of a portion that will open in the event of a high fault current condition and a portion that will open in the event a limited fault current condition. This feature must be a standard design feature and not an optional feature of the product. The individual component level fusing shall allow a reduction of protection rather than a complete loss of protection. Individually fused modules are not acceptable where there is more than one (1) MOV per module.
7. The maximum continuous operating voltage (MCOV) of all components shall not be less than 115% for 460Y/265V systems and 125% for 208Y/120V systems.
8. Standard diagnostic features are to include green LEDs (one (1) per phase - normally “ON”) indicating power and suppression status, one (1) red LED indicating protection status (normally “OFF”) and a form C dry relay contact.
9. Extended diagnostics must include an audible alarm and surge counter to be displayed on an LCD display on the front of the suppressor. The surge counter must include a reset option. Products requiring diagnostic test kits will not be acceptable.

2.2 SERVICE ENTRANCE PROTECTION

- A. The SPD for this location shall be as indicated on the Contract Documents.
- B. The service entrance SPD equipment shall meet or exceed the minimum performance criteria as follows:
 1. The single-impulse surge-current rating shall be a minimum of 300,000 Amperes per phase (150,000 Amperes per mode).
 2. Nominal discharge current rating (In): 20kA.
 3. Any SPD mounted on the line side of the service disconnect(s) shall be TYPE 1 rated. SPDs mounted on the secondary side of the service disconnect shall be TYPE 2 or TYPE 1.
 4. Minimum Surge Life Rating: 20,000 pulses.
 5. The UL 1449 Suppressed Voltage Protection Rating (VPR) for the following configurations shall not exceed the following:

SPD Voltage Configuration	L-G	L-N	N-G	L-L
460Y/265V	1800V	1800V	1800V	2500V
208V/120V	1200V	1200V	1500V	1500V
460V/Delta	2000V	-V	-V	-V

- C. SPDs shall be of compact design. The mounting position of the SPD shall allow a straight and short lead-length connection between the SPD and the point of connection in the equipment.
- D. Visual indication of proper SPD connection and operation shall be easily viewed on the front panel of the enclosure. The indicator lights shall indicate suppression circuit status, phase status, phase loss, reduced protection level and suppression fault.

- E. Whereas there is no dedicated breaker in the protected electrical distribution equipment, the SPD shall be equipped with an integral disconnect switch.
- F. A set of normally open/normally closed form “C” dry contacts shall be provided for remote monitoring.
- G. The enclosure type shall be NEMA 1 rated for indoor installations and NEMA 4 rated for all outdoor.
- H. SPDs shall have a diagnostics LCD panel display providing information surge/transient event count.
- I. SPDs shall be equipped with an audible alarm with mute, reset and acknowledge features.
- J. The maximum value for the attenuation for the suppressor must exceed a minimum of 36 dB. All measurements for this requirement must be taken using the MIL STD 220A method and with only six (6) inches of lead length extending outside of the normal exit location of leads for the enclosure. Test results taken with leads extending past six (6) inches are not acceptable or compliant. Additional or excessive lead length used in the test setup is not acceptable.

2.3 SECONDARY DISTRIBUTION

A. Secondary Distribution Locations

- 1. Maximum Single Impulse Surge Current Rating: 80kA per mode.
- 2. Normal Discharge Current Rating (In): 20kA.
- 3. Minimum Surge Life Rating: 5,000 impulses.

B. Lighting Panels

- 1. Maximum Single Impulse Surge Current Rating: 60kA per mode (120kA per phase).
- 2. Nominal Discharge Current Rating (In): 20kA.
- 3. Minimum Surge Life Rating: 5,000.

C. Protection modes and UL 1449 VPR for grounded wye circuits with voltages of 460Y/265, 3-phase, 4-wire circuits shall be as follows:

- 1. Line to Neutral: 1200V.
- 2. Line to Ground: 1200V.
- 3. Neutral to Ground: 1200V.
- 4. Line to Line: 2000V.

D. Protection modes and UL 1449 VPR for grounded wye circuits with voltages of 208Y/120, 3-phase, 4-wire circuits shall be as follows:

- 1. Line to Neutral: 700V.
- 2. Line to Ground: 700V.
- 3. Neutral to Ground: 700V.
- 4. Line to Line: 1200V.

2.4 MANUFACTURERS

- A. General Electric
- B. Eaton
- C. Asco Power
- D. Siemens
- E. Square D
- F. Surge Suppression Inc.
- G. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Provide correct fusing, circuit breaker or OCPD and disconnect for installation of SPD in accordance with UL 1449 and manufacturer's instructions.
- B. At Service Entrance or Transfer Switch, a UL listed disconnect switch shall be provided as a means of servicing disconnect if not connected to at least a 30A or 40A breaker.
- C. At distribution or branch, SPD shall have an independent means of servicing disconnect such that the protected panel remains energized. A 30A breaker (or larger) may serve this function.
- D. Installer may rearrange breaker locations to ensure short & straightest possible leads to SPDs. The location of field-mounted SPD devices must allow adequate clearances for maintenance.
- E. Install leads between disconnects and SPDs short, straight, twisted, and in accordance with manufacturer's instructions. Comply with wiring methods in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
 - 1. Do not splice and extend SPD leads unless specifically permitted by manufacturer.
 - 2. Do not exceed manufacturer's recommended lead length.
 - 3. Do not bond neutral and ground.
- F. Use crimped connectors and splices only. Wire nuts are unacceptable.

3.3 STARTUP SERVICE

- A. Complete startup checks in accordance with manufacturer's instructions.
- B. Do not perform insulation-resistance tests of the distribution wiring equipment with SPDs installed. Disconnect SPDs before conducting insulation-resistance tests; reconnect them immediately after the testing is over.
- C. Energize SPDs after power system has been energized, stabilized, and tested.
- D. Before energizing, installer shall verify service or separately derived system Neutral to Ground bonding jumpers per the NEC.
- E. Energize only after initial system voltages have stabilized and testing is completed. Warning, voltages are typically unstable during initial start-up of generators and voltage stabilizing transformers and can damage SPDs.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York maintenance personnel to operate and maintain SPDs.

3.5 CLEANING AND ADJUSTMENT

- A. After completion, clean the interior and exterior of dirt, paint, and construction debris.
- B. Touch up paint all scratched or marred surfaces with factory furnished touch-up paint of the same color as the factory applied paint.
- C. Adjust and align equipment interior and trim in accordance with manufacturers' recommendations, and to eliminate gaps between the two.

END OF SECTION 264313

SECTION 265119.10 - LED LIGHTING - ARCHITECTURAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 GENERAL REQUIREMENTS

- A. Work of this section will be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver, and install all work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.
- B. The work will include but not be limited to the following:
 - 1. Complete shop fabrication
 - 2. Delivery to job site
 - 3. Installation at designated locations, and controls as noted
 - 4. Lamping and lamps
 - 5. Lamp focusing
 - 6. Cleaning and protection

1.3 DESCRIPTION OF WORK

- A. Furnish and install a lighting fixture of the type indicated by letter at each location shown on the drawings
- B. All materials, accessories, and any other equipment necessary for the complete and proper installation of all lighting fixtures included in this Contract must be furnished by the Contractor.
- C. Conformance: Fixtures must be manufactured in strict accordance with the Contract Drawings and Specifications.
- D. Codes: Materials and installation must be in accordance with the latest revision of the National Electrical Code and any applicable New York City regulations.
- E. All fixtures and components of must be manufactured in accordance with the appropriate and current requirements of UL or ETL and have appropriate labeling affixed to each fixture in a position that is concealed from normal view.

1.4 LIGHTING FIXTURE SCHEDULE

- A. Refer to end of this Section for lighting fixture schedule.

1. Any discrepancies between the catalog numbers, fixture description, remarks, lamp and supply voltage should be brought to the attention of the Commissioner prior to the release of a purchase order.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions, Section 014000 " Quality Requirements "
- B. Manufacturer Qualifications:
 1. Driver manufacturer: an entity meeting the requirements of DDC General Conditions Section 014000 "Quality Requirements" Article 1.7.C.5.
 2. Fixture manufacturer: an entity meeting the requirements of DDC General Conditions Section 014000 "Quality Requirements" Article 1.7.C.5.

1.6 WARRANTY

- A. Warranties must be provided in an acceptable form and must be signed and notarized by a person or persons authorized to execute such a document on behalf of the company.
 1. The Manufacturer must guarantee all lighting fixtures and major components a period of three (3) years from Substantial Completion.
 - a. Drivers (for LED fixtures) must carry five (5) year warranty.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 013300 " Submittal Procedures".

1.8 SUBMITTALS

- A. The Contractor must coordinate all aspects of the lighting fixture package and installation with the drawings and details of the Architectural, Structural, Electrical, Mechanical, and all other related trades.
- B. No variation from the general arrangement and details indicated on the drawings must be made in the submittal unless required to suit the actual conditions on the premises, and then only with the written approval of the Commissioner.
- C. Submittal document(s) for all lighting fixtures must be received no later than sixty days after award of Contract.
- D. Review of shop drawings or samples does not waive contract requirements.
- E. Provide manufacturer's product data sheets for each type of lamp specified.
- F. LEED submittals:

1. Mean light output (in lumens)
2. Rated lamp life to failure or percentage of light output per number of hours (as appropriate to the source)
3. BUG rating

1.9 CLOSE OUT SUBMITTALS

- A. The Contractor will be responsible for obtaining from the supplying lighting manufacturers, for each type of lighting fixture, a recommended maintenance manual including:
1. Tools required.
 2. Types of cleaners to be used.
 - a. Replacement parts identification lists.

1.10 SHOP DRAWINGS

- A. Provide for each fixture type submitted clearly indicated and complete “fixture type specific • ordering code”.
- B. Narrative descriptions, cut sheets and verbatim copies of catalogue numbers, and submittals that do not include manufacturer’s current submittal sheets are not acceptable for review.
- C. Catalogue cuts lacking sufficient detail to indicate compliance with contract documents will not be acceptable.
- D. Manufacturer’s shop drawings:
1. Must be provided for all fixture components. Include detailed information on the fixture housing / mounting tray, mounting accessories, power supplies, and any other significant component of the fixture assembly and installation
 2. Shop drawings should include:
 - a. Details and cut sheets of each fixture type
 - b. Clearly indicated fixture tag (Type designation)
 - c. Lamping / source details
 - d. Power requirements (input voltage and wattage)
 - e. Power Supply Unit (PSU) details (when relevant)
 - f. Graphic diagrams of all major fixture components, with overall fixture dimensions, and all other relevant technical details (ex: housing construction, optics, lenses, accessories, baffles, method of support, power feed locations, gasketing, fixture and housing finish, and others.)
 - g. Contractor’s field verified overall run lengths, layouts, and details that have been fully coordinated (with site conditions, construction by “others”, etc.), when relevant.
 - 1) All non-standard layouts must be clearly documented, coordinated, and verified with field conditions, and any architectural integration as appropriate.
 - 2) Submit reflected ceiling plans, sections and/or details clearly identifying and locating each iteration of the fixture in the shop drawing

- h. Any modified fixtures must be so noted and include Manufacturer's fabrication drawings and/or Manufacturer's statement demonstrating a clear understanding of the requirements and documentation of the product as it will be provided.
- i. Photometric data;
 - 1) For all optical fixtures supply complete photometric data for the fixture, including optical performance rendered by independent testing laboratory, developed according to methods of U. S. A. Illuminating Engineering Society
 - 2) Fixtures used for general illumination, photometric data must include:
 - a) Coefficients of utilization.
 - b) Candlepower data to be presented graphically and numerically in 5-degree increments. For all "up/down light" fixtures and fixture with asymmetrical light distribution, present additional values at normal, parallel, and at 22-1/2°, 45°, 167-1/2° to the fixture.
 - c) Zonal lumens stated numerically in 10-degree increments
- j. Custom fabrications must clearly indicate the contract drawing number of fixture details used as reference in the development of the fixture, the name of the job, and of the Commissioner.
- k. Indicate work to be provided by other trades
- l. Indicate wiring and control circuits.
- m. Indicate supplementary support when required to meet seismic code requirements.

1.11 SAMPLES

- A. For final approval after initial qualifying shop drawing review, and prior to release for manufacturing, the Contractor must furnish one sample of each fixture on the fixture schedule and contract drawings for which sample requirement is noted.
- B. Shipping: The samples must be complete with specified lamp(s), ready for hanging, energizing, and examining, and must be shipped, prepaid by Contractor, to the Commissioner, or as otherwise advised.
- C. Sufficient time must be allowed for thorough examination of the samples by the Commissioner.
- D. Samples are not returnable, nor included in quantities listed for a project.
- E. Samples must be actual working unit of materials to be supplied.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name, and manufacturer's name. Delivered material must be identical to the reviewed submittals.
- B. Store materials under cover in a dry and clean location, off the ground. Remove materials which are damaged, or otherwise not suitable for installation from the job site and replace with acceptable materials.

- C. The fixtures must be delivered to the job site fully fabricated and assembled and ready for installation. Lamps will be shipped separately.

PART 2 - PRODUCTS

2.1 FIXTURE CONSTRUCTION (GENERAL)

- A. All materials, accessories, and other related fixture parts must be new and free from defects which in any manner may impair their character, appearance, strength, durability and function, and be effectively protected from any damage or injury from the time of fabrication to the time of delivery and until final acceptance of the work.
- B. Sheet Metal Work: All sheet metal work must be free from tool marks and dents, and must have accurate angles bent as sharp as compatible with the gauges of the required metal. All intersections and joints must be formed true of adequate strength and structural rigidity to prevent any distortion after assembly.
- C. Housings must be so constructed that all electrical components, including power supply units (ballasts / drivers) are easily accessible and replaceable without removing fixtures from their mountings, or disassembly of adjacent construction.
- D. Castings: All castings must be exact replicas of the approved patterns and must be free of sand pits, blemishes, scales and rust, and must be smoothly finished. Tolerance must be provided for any shrinkage of the metal castings in order that the finished castings will accurately fit in their designated locations.
- E. All lamp sockets in lighting fixtures must be suitable for the indicated lamps and must be set so that lamps are positioned in optically correct relation to all lighting fixture components. If adjustable socket positions are provided, socket should be preset in factory for lamp specified. If different socket positions are specified for same fixture, sockets must be preset for each type, and cartons marked accordingly.
- F. All fixtures must be completely wired at the factory.
- G. All fixtures supplied for recessing in suspended ceilings must be supplied with prewired junction boxes.
- H. Mounting Frames and Rings: If ceiling system requires, each recessed and semi-recessed fixture must be furnished with a mounting frame or ring compatible with the ceiling in which they are to be installed. The frames and rings must be one piece or constructed with electrically-welded butt joints, and of sufficient size and strength to sustain the weight of the fixture.
- I. There must be no light leaks between ceiling trims of recessed lighting equipment and the ceiling. Fixture is used in partially transparent ceilings must have no light leaks above the ceiling line.
- J. Yokes, brackets and supplementary supporting members needed to mount lighting fixtures to carrier channels or other suitable ceiling members must be furnished and installed by the Contractor.
- K. Hardware:

1. Steel and aluminum fixtures: all screws, bolts, nuts and other fastening and latching hardware must be cadmium or equivalent plated.
 2. Stainless steel fixtures: all hardware must be stainless steel.
- L. Temperature: All fixtures must operate within the temperature limits of their design and in the applications and mounting conditions herein specified.
- M. Adjustable Angle Fixtures: Each lighting fixture which has a beam angle adjustment must have reliable angle locking devices.

2.2 LENSES

- A. Plastic for lenses and diffusers must be formed of colorless 100% virgin acrylic as manufactured by Evonik Industries or as acceptable. The quality of the raw material must exceed IES, SPI, and NEMA Specifications by at least 100% which, as a minimum standard, must not exceed a yellowness factor of 3 after 2,000 hours of exposure in the Fade-meter or as tested by an independent test laboratory. Acrylic plastic lenses and diffusers must be properly cast, molded or extruded as specified, and must remain free of any dimensional instability, discoloration, embrittlement, or loss of light transmittance for at least 15 years.
- B. Where optical lenses are used, they must be free from spherical and chromatic aberrations and other imperfections which may hinder the functional performance of the lenses.
- C. All lenses, louvers, or other light diffusing elements must be removable, but positively held so that hinging or other normal motion will not cause them to drop out.
- D. All lenses must be turned over to the City of New York clean and free of dust.

2.3 FINISHES

- A. Painted Surfaces: Synthetic enamel, with acrylic, alkyd, epoxy, polyester, or polyurethane base, light stabilized, baked on at 350° Fahrenheit minimum, catalytically or photo-chemically polymerized after application.
- B. White finishes: minimum of 85 percent reflectance.
- C. Ceiling opening frames must either be manufactured of non-ferrous metal, or be suitably rustproofed after fabrication.
- D. Selection: Unless otherwise noted, finishes must be as selected by the Commissioner.
- E. Undercoat: Except for stainless steel give ferrous metal surfaces a five stage phosphate treatment or other acceptable base bonding treatment before final painting and after fabrication.
- F. Unpainted non-reflecting surfaces must be satin finished and coated with a baked-on clear lacquer to preserve the surface. Where aluminum surfaces are treated with an anodic process, the clear lacquer coating may be omitted.

- G. Unpainted Aluminum Surfaces: Finish interior aluminum trims with an anodized coating of not less than 7 mg. per square inch, of a color and surface finish as selected by the Commissioner. Finish exterior aluminum and aluminum trims with an anodized coating of not less than 35 mg. per square inch, of a color and surface finish as selected by the Commissioner.

2.4 LED LIGHTING

- A. Luminaire manufacturers must only utilize LEDs that have been tested and comply with the relevant standards.
- B. Testing must be in accordance with
 - 1. ASTME methods
 - 2. IESNA current LM-79 standards by an independent DOE approved participating lab
- C. LED chip manufacturers' recommended specifications must be adhered to:
 - 1. Power to the LEDs must not be overdriven
 - 2. Thermal characteristics of the luminaire coupled with the specified current must not exceed acceptable temperature.
 - 3. The fixture must be designed to maintain LED junction temperatures below the specified maximum temperature.
- D. LED color
 - 1. Consistency for static white LEDs must not exceed 2 SDCM (2 stem MacAdam binning)
 - 2. CRI must be at least 80 with an R9 value greater than (80) - unless otherwise specified on the fixture schedule.
 - 3. The average color shift must be less than 0.0026du'v' after 10,000 hours; 0.007du'v' after 60,000 hours (based on LM80)
- E. Luminaire must exhibit 50,000 hours of life to 70% lumen output (based on LM-80 and extrapolated via the TM-21 calculation from 9000 hours of data at the testing temperature - unless otherwise specified on the fixture schedule.)

2.5 INSTRUCTIONS

- A. Each lighting fixture must be packaged with complete instructions and illustrations showing how to install.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for luminaire to verify actual locations of luminaire and electrical connections before luminaire installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 TEMPORARY LIGHTING

- A. If approved by the Commissioner, use selected permanent luminaires for temporary lighting. When construction is sufficiently complete, clean luminaires used for temporary lighting and install new lamps.

3.4 INSTALLATION

- A. Do not scale electrical drawings for exact location of the lighting fixtures. In general, the architectural reflected ceiling plans indicate the proper locations of lighting fixtures.
- B. Install each fixture properly and safely, fixtures in strict conformance with manufacturer's recommendations and instructions.
- C. Comply with NECA 1.
- D. Install luminaires level, plumb, and square with ceilings and walls unless otherwise indicated.
- E. Install reflector cones, baffles, aperture plates, light controlling element for air handling fixtures, and decorative elements after completion of ceiling tiles, painting and general cleanup.
- F. Replace blemished, damaged or unsatisfactory fixtures as directed.
- G. Concealment: Whenever a fixture or its hanger canopy is applied to a surface mounted outlet box, a finishing ring must be utilized to conceal the outlet box.
- H. Secondary voltages must be tested at the power supply unit, the connection to the fixture, and such other locations on the distribution system as necessary. The inductance at the point of connection to the fixtures must be within the manufacturer's allowable range. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.
- I. Supports:
 - 1. Sized and rated for luminaire weight.
 - 2. Able to maintain luminaire position after cleaning and relamping.
 - 3. Provide support for luminaire without causing deflection of ceiling or wall.
 - 4. Luminaire-mounting devices must be capable of supporting a horizontal force of 100 percent of luminaire weight and a vertical force of 400 percent of luminaire weight.

J. Flush-Mounted Luminaires:

1. Secured to outlet box.
2. Attached to ceiling structural members at four points equally spaced around circumference of luminaire.
3. Trim ring flush with finished surface.

K. Wall-Mounted Luminaires:

1. Attached to structural members in walls. Attached using through bolts and backing plates on either side of wall.
2. Do not attach luminaires directly to gypsum board.

L. Suspended Luminaires:

1. Ceiling Cable Mount:
 - a. Two 5/32-inch-diameter aircraft cable supports adjustable to 10 feet in length.
2. Pendant Stems and Rods: Where longer than 48 inches, brace to limit swinging
 - a. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with approved outlet box and accessories that hold stem and provide damping of luminaire oscillations. Support outlet box vertically to building structure using approved devices.
 - b. Continuous Rows of Luminaires: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of luminaire chassis, including one at each end.
 - c. Do not use ceiling grid as support for pendant luminaires. Connect support wires or rods to building structure.

M. Ceiling-Grid-Mounted Luminaires:

1. Secure to any required outlet box.
2. Secure luminaire to the luminaire opening using approved fasteners in a minimum of four locations, spaced near corners of luminaire.
3. Use approved devices and support components to connect luminaire to ceiling grid and building structure in a minimum of four locations, spaced near corners of luminaire.

N. Mechanical Rooms: Lighting fixture locations in mechanical and electrical equipment rooms are approximate. Coordinate mounting height and location of lighting fixtures to clear mechanical, electrical and plumbing equipment and to illuminate adequately meters, gauges and equipment.

3.5 AIMING AND ADJUSTMENTS

- A. All adjustable lighting units must be aimed, focused, locked, etc., under the supervision of the Commissioner.
1. The Commissioner will indicate the number of crews (foreman and apprentice) required.
 2. All aiming and adjusting will be carried out after the entire installation is complete.

3. All ladders, scaffolds, etc. required must be furnished by the Contractor at the direction of the Commissioner.
 4. As aiming and adjusting is completed, locking set-screws and bolts and nuts must be tightened securely.
- B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting the direction of aim of luminaires to suit occupied conditions. Make up to two visits to Project during other-than-normal hours for this purpose. Some of this work may be required during hours of darkness.
- C. During adjustment visits, inspect all luminaires. Replace lamps or luminaires that are defective.
1. Parts and supplies must be manufacturer's authorized replacement parts and supplies.
 2. Adjust the aim of luminaires in the presence of the Commissioner.

3.6 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.7 CLEANUP

- A. At the time of final acceptance by the City of New York, all lighting fixtures must have been thoroughly cleaned with materials and methods recommended by the manufacturers, all broken parts must have been replaced, and all lamps must be operative.

3.8 INSTALLATION CHECKOUT

- A. Upon completion of initial installation and fixture cleaning, the Contractor must notify the Commissioner that the installation has been completed. At this time, the Contractor must verify that the installation has been done in full accordance with the contract documents and is in full and complete working order.

3.9 LIGHTING FIXTURE SCHEDULE

- A. TYPE TA: Gotham Evo 4" Round Downlight; EVO4-30/15-WR-WD-LS-MVOLT*-GZ1-*. Recessed, trimmed, fixed downlight with wide flood optics, 13.7W load, 1527 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 15-7/8" W x 13-13/16" L x 6-9/16" D housing with self-flanged trim (suitable for installation in ceilings up to 1½" thick).
1. Location in project: ACT ceiling corridors
 2. Verify with Commissioner for reflector and flange color to be white with specular finish
 3. Verify with Commissioner for voltage and emergency requirements

4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following
 - a. LF Illumination - VF150 Series - 8601 Trim
 - b. USAI - BeveLED 2.2 - B4RD Series
 - c. or approved equal

- B. TYPE TA-1: Gotham Evo 4" Round Downlight; EVO4-30/45-WR-WD-LD-MVOLT*-GZ1-*. Recessed, trimmed, fixed downlight with medium wide flood optics, 50W load, 4500 nominal lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 15-7/8" W x 13-13/16" L x 6-9/16" D housing with flangeless trim (suitable for installation in ceilings up to 1½" thick).
 1. Location in project: ACT Animal Housing
 2. Verify with Commissioner: reflector color to be white with specular finish
 3. Coordinate with Commissioner: voltage and emergency requirements
 4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF150 Series - 8601 Trim
 - b. USAI - BeveLED 2.2 - B4RD Series
 - c. or approved equal

- C. TYPE TA-2: Gotham Evo 4" Round Downlight; EVO4-30/45-WR-FL-WD-LD-MVOLT*-GZ1-*. Recessed, trimless, fixed downlight with wide flood optics, 50W load, 4500 nominal lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 15-7/8" W x 13-13/16" L x 6-9/16" D housing with flangeless trim (suitable for installation in ceilings up to 1½" thick).
 1. Location in project: GWB lounge and break area
 2. Verify with Commissioner: reflector color to be white with specular finish
 3. Contractor to coordinate: flangeless installation
 4. Coordinate with Commissioner: voltage and emergency requirements
 5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9411 Trim
 - b. USAI - BeveLED 2.2 - B4RD Series
 - c. or approved equal

D. TA-4: Gotham Evo 4" Round Downlight; EVO4-30/10-WR-FL-MWD-LS-MVOLT*-GZ1-*. Recessed, trimless, fixed downlight with medium wide flood optics, 8.8W load, 1001 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 15-7/8" W x 13-13/16" L x 6-9/16" D housing with flangeless trim (suitable for installation in ceilings up to 1½" thick). * Fixture must include frosted lens to be installed in the factory.

1. Location in project: GWB bathrooms
2. Verify with Commissioner: reflector color to be white with specular finish
3. Contractor to coordinate: flangeless installation
4. Coordinate with Commissioner: voltage and emergency requirements
5. Manufacturer to Provide: frosted lens, installed in the factory
6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9411 Trim
 - b. USAI - BeveLED 2.2 - B4RD Series
 - c. or approved equal

E. TYPE TA-5: Gotham Evo 4" Round Downlight; EVO4-30/10-WR-MWD-LS-MVOLT*-GZ1-*. Recessed, trimmed, fixed downlight with medium wide flood optics, 8.8W load, 1001 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 15-7/8" W x 13-13/16" L x 6-9/16" D housing with self-flanged trim (suitable for installation in ceilings up to 1½" thick).

1. Location in project: ACT office and small work spaces
2. Verify with Commissioner: reflector and flange color to be white with specular finish
3. Coordinate with Commissioner: voltage and emergency requirements
4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF150 Series - 8601 Trim
 - b. USAI - BeveLED 2.2 - B4RD Series
 - c. or approved equal

F. TYPE TB: Gotham Incito 4" Round Adjustable Downlight; IC04ADJ-30/10-WR-T*0-LSS-30D-*-GZ1-*. Recessed, trimless, adjustable downlight with 30 degree optics, 9.8W load, 934 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge black painted steel mounting frame with mounting bars, galvanized steel junction box with hinged access covers and spring latch, and optical assembly consists of a Bounding Ray design with 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with 0-40 degree vertical tilt and 365 degree horizontal rotation. Fixture has a 4-5/16" diameter aperture, with 16-9/16" W x 17" L x 8-3/4" D housing with flangeless trim (suitable for installation in ceilings up to 5/8" thick).

1. Location in project: GWB lobby, double height space (Fixture layout is arranged in pairs)
2. Verify with Commissioner: reflector color to be white with semi-specular finish
3. Contractor to coordinate: flangeless installation
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9421 Trim
 - b. USAI - BeveLED 2.2 - B4RA Series
 - c. or approved equal

G. TYPE TB-1: Gotham Incito 4" Round Adjustable Downlight; IC04ADJ-30/15-WR-T*0-LSS-40D-*-GZ1-*. Recessed, trimless, adjustable downlight with 40 degree optics, 15.1W load, 1359 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge black painted steel mounting frame with mounting bars, galvanized steel junction box with hinged access covers and spring latch, and optical assembly consists of a Bounding Ray design with 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with 0-40 degree vertical tilt and 365 degree horizontal rotation. Fixture has a 4-5/16" diameter aperture, with 16-9/16" W x 17" L x 8-3/4" D housing with flangeless trim (suitable for installation in ceilings up to 5/8" thick).

1. Location in project: GWB lobby, single height space
2. Verify with Commissioner: reflector color to be white with semi-specular finish
3. Contractor to coordinate: flangeless installation
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9421 Trim
 - b. USAI - BeveLED 2.2 - B4RA Series
 - c. or approved equal

H. TYPE TB-2: Gotham Incito 4" Round Adjustable Downlight; IC04ADJ-30/07-WR-T*0-LSS-40D.*-GZ1-*. Recessed, trimless, adjustable downlight with 40 degree optics, 7.5W load, 710 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge black painted steel mounting frame with mounting bars, galvanized steel junction box with hinged access covers and spring latch, and optical assembly consists of a Bounding Ray design with 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with 0-40 degree vertical tilt and 365 degree horizontal rotation. Fixture has a 4-5/16" diameter aperture, with 16-9/16" W x 17" L x 8-3/4" D housing with flangeless trim (suitable for installation in ceilings up to 5/8" thick).

1. Location in project: GWB lobby, single height space (Fixture layout is arranged in pairs)
2. Verify with Commissioner: reflector color to be white with semi-specular finish
3. Contractor to coordinate: flangeless installation
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9421 Trim
 - b. USAI - BeveLED 2.2 - B4RA Series
 - c. or approved equal

I. TYPE TB-3: Gotham Incito 4" Round Adjustable Downlight; IC04ADJ-30/10-WR-T*0-LSS-25D.*-GZ1-*. Recessed, trimless, adjustable downlight with 25 degree optics, 9.8W load, 934 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge black painted steel mounting frame with mounting bars, galvanized steel junction box with hinged access covers and spring latch, and optical assembly consists of a Bounding Ray design with 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with 0-40 degree vertical tilt and 365 degree horizontal rotation. Fixture has a 4-5/16" diameter aperture, with 16-9/16" W x 17" L x 8-3/4" D housing with flangeless trim (suitable for installation in ceilings up to 5/8" thick).

1. Location in project: GWB stairwell, double height space (Fixture layout is arranged in pairs)
2. Verify with Commissioner: reflector color to be white with semi-specular finish
3. Contractor to coordinate: flangeless installation
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9421 Trim
 - b. USAI - BeveLED 2.2 - B4RA Series
 - c. or approved equal

J. TYPE TB-5: Gotham Incito 4" Round Adjustable Downlight; IC04ADJ-30/07-WR-T00-LSS-40D.*-GZ1.*-TR*. Recessed, trimmed, adjustable downlight with 40 degree optics, 7.5W load, 710 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge black painted steel mounting frame with mounting bars, galvanized steel junction box with hinged access covers and spring latch, and optical assembly consists of a Bounding Ray design with 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with 0-40 degree vertical tilt and 365 degree horizontal rotation. Fixture has a 4-5/16" diameter aperture, with 16-9/16" W x 17" L x 8-3/4" D housing with flangeless trim (suitable for installation in ceilings up to 5/8" thick).

1. Location in project: ACT meeting room, single height space (Fixture layout is arranged in pairs)
2. Verify with Commissioner: reflector and trim color to be white with semi-specular finish
3. Contractor to coordinate: mounting at ACT ceiling
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 8421 Trim
 - b. USAI - BeveLED 2.2 - B4RA Series
 - c. or approved equal

K. TYPE TB-6: Gotham Incito 4" Round Adjustable Downlight; IC04ADJ-30/10-WR-T00-LSS-50D.*-GZ1.*-TR*. Recessed, trimmed, adjustable downlight with 30 degree optics, 9.8W load, 934 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge black painted steel mounting frame with mounting bars, galvanized steel junction box with hinged access covers and spring latch, and optical assembly consists of a Bounding Ray design with 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with 0-40 degree vertical tilt and 365 degree horizontal rotation. Fixture has a 4-5/16" diameter aperture, with 16-9/16" W x 17" L x 8-3/4" D housing with flangeless trim (suitable for installation in ceilings up to 5/8" thick).

1. Location in project: Exterior soffits
2. Verify with Commissioner: reflector and trim color to be white with semi-specular finish
3. Contractor to coordinate: mounting at exterior ceiling condition
4. Coordinate with Commissioner: voltage and emergency requirement
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following: LF Illumination - VF100 Series - 8421 Trim
 - a. USAI - BeveLED 2.2 - B4RA Series
 - b. LF Illumination - VF100 Series - 8421 Trim
 - c. or approved equal

- L. TYPE TC: Gotham Evo 4" Lensed Wallwash; EVO4LW-30/15-WR-FL-LS-MVOLT*-GZ1-*. Recessed, trimless, wallwash, 14.7W load, 1116 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 9-1/16" W x 9-13/16" L x 6-5/8" D housing with flangeless trim (suitable for installation in ceilings up to 1½" thick).
1. Location in project: GWB Reception
 2. Verify with Commissioner: reflector color to be white with specular finish
 3. Contractor to coordinate: flangeless installation
 4. Coordinate with Commissioner: voltage and emergency requirements
 5. Manufacturer to Provide: frosted lens, installed in the factory
 6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination- VF100 Series - 9431 Trim
 - b. USAI - BeveLED 2.2 - B4RW-G1 Series
 - c. or approved equal
- M. TYPE TC-1: Gotham Evo 4" Lensed Wallwash; EVO4LW-30/20-WR-FL-LS-MVOLT*-GZ1-*. Recessed, trimless, wallwash, 19.7W load, 1462 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 9-1/16" W x 9-13/16" L x 6-5/8" D housing with flangeless trim (suitable for installation in ceilings up to 1½" thick).
1. Location in project: GWB Lobby
 2. Verify with Commissioner: reflector color to be white with specular finish
 3. Contractor to coordinate: flangeless installation
 4. Coordinate with Commissioner: voltage and emergency requirements
 5. Manufacturer to Provide: frosted lens, installed in the factory
 6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF100 Series - 9431 Trim
 - b. USAI - BeveLED 2.2 - B4RW-G1 Series
 - c. or approved equal

N. TYPE TD: Mark Lighting Slot 4 LED Surface Mount
S4LS-*FT-MSL7*-90CRI-30K-1000LMF-MIN10-LVRRRA-MVOLT*-WHT*-ZT-DPL. LED surface mounted linear lensed fixture with aluminum regressed louver and a 9.33W/LF load at 1026 delivered lumens per foot, 3000K CCT, 90 CRI, 2.5 step MacAdams binning, and a lamp life of 60000 hours / L80, with an integral 0-10V dimmable driver(s) to 10%. Fixture is damp location listed. Luminaire is constructed of extruded aluminum at the housing with powdercoat finish, formed steel reflector with high reflectance white, and an extruded 90% transmissive acrylic lens with a textured surface providing diffuse illumination and a uniform appearance for direct Lambertian distribution and aluminum louver. Fixture is 3 1/2" W x 3 3/4" T x *standard length(s) to be measured in field.

1. Location in project: Locker room
2. Verify with Commissioner: white fixture finish
3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation
4. Coordinate with Commissioner: voltage
5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Prudential - BionicPro3 Series
 - b. Axis - Beam 3 Series
 - c. or approved equal

O. TYPE TE: Mark Lighting Slot 4 LED Direct Pendant
S4LD-*FT-MSL*-90CRI-30K-600LMF-MIN1-LVRR-MVOLT*-WHT*-ZT-F2/*A-RDCY-WHT*CY-*R
D. LED pendant mounted linear lensed fixture with aluminum regressed louver and a 5.88W/LF load at 677 delivered lumens per foot, 3000K CCT, 90 CRI, 2.5 step MacAdams binning, and a lamp life of 60000 hours / L80, with an integral 0-10V dimmable driver(s) to 1%. Luminaire is constructed of extruded aluminum at the housing with powdercoat finish, formed steel reflector with high reflectance white, extruded 90% transmissive acrylic lens with a textured surface providing diffuse illumination and a uniform appearance for direct Lambertian distribution and aluminum louver, round canopy and cord. Fixture is 3 1/2" W x 3 3/4" T x *standard length(s) to be measured in field.

1. Location in project: GWB offices
2. Verify with Commissioner: white fixture, canopy and cord finishes
3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation
4. Coordinate with Commissioner: voltage
5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Prudential - BionicPro3 Series
 - b. Axis - Beam 3 Series
 - c. or approved equal

P. TYPE TE-1: Mark Lighting Slot 4 LED Direct Pendant
S4LD-*FT-MSL*-90CRI-30K-600LMF-MIN1-LVRR-MVOLT*-WHT*-ZT-F2/*A-RDCY-WHT*CY-*R
D. LED pendant mounted linear lensed fixture with aluminum regressed louver and a 5.88W/LF load at 677 delivered lumens per foot, 3000K CCT, 90 CRI, 2.5 step MacAdams binning, and a lamp life of 60000 hours / L80, with an integral 0-10V dimmable driver(s) to 1%. Luminaire is constructed of extruded aluminum at the housing with powdercoat finish, formed steel reflector with high reflectance white, extruded 90% transmissive acrylic lens with a textured surface providing diffuse illumination and a uniform appearance for direct Lambertian distribution and aluminum louver, round canopy and cord. Fixture is 3 1/2" W x 3 3/4" T x *standard length(s) to be measured in field.

1. Location in project: Plaster ceiling offices
2. Verify with Commissioner: white fixture, canopy and cord finishes
3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation
4. Coordinate with Commissioner: voltage
5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Prudential - BionicPro3 Series
 - b. Axis - Beam 3 Series
 - c. or approved equal

Q. TYPE TE-3: Mark Lighting Slot 4 LED Direct Pendant
S4LD-*FT-MSL*-90CRI-30K-600LMF-MIN1-LVRR-MVOLT*-WHT*-ZT-F2/*A-RDCY-WHT*CY-*R
D. LED pendant mounted linear lensed fixture with aluminum regressed louver and a 5.88W/LF load at 677 delivered lumens per foot, 3000K CCT, 90 CRI, 2.5 step MacAdams binning, and a lamp life of 60000 hours / L80, with an integral 0-10V dimmable driver(s) to 1%. Luminaire is constructed of extruded aluminum at the housing with powdercoat finish, formed steel reflector with high reflectance white, extruded 90% transmissive acrylic lens with a textured surface providing diffuse illumination and a uniform appearance for direct Lambertian distribution and aluminum louver, round canopy and cord. Fixture is 3 1/2" W x 3 3/4" T x *standard length(s) to be measured in field.

1. Location in project: ACT ceiling offices
2. Verify with Commissioner: white fixture, canopy and cord finishes
3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation
4. Coordinate with Commissioner: voltage
5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Prudential - BionicPro3 Series
 - b. Axis - Beam 3 Series
 - c. or approved equal

R. TYPE TF: Gotham Evo 6" Shower Downlight;
EVO6SH-30/35-DFFAMF-SOL-MVOLT*-EZ1*-CTAEVO6*. Recessed, wipe down flush lens trimmed, fixed, wet location downlight with an IP66 rating, 33.8W load, 3062 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 6-1/4" diameter aperture, with 10-15/16" W x 11-3/4" L x 7-1/2" D housing with self-flanged trim. *Ceiling thickness adapter allows for installation in ceilings up to 5" thick.

1. Location in project: Cementitious acoustic plaster, dog kennels
2. Verify with Commissioner: reflector and flange color to be white with specular finish
3. Contractor to coordinate: mounting at this specific ceiling condition
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - Bullet Large Series - Wet Location IP66
 - b. USAI - True Zero - 3701 Series
 - c. or approved equal

S. TYPE TG: Juno UCES LED Switchable White LED Undercabinet UCES *IN SWW4 90CRI WH M6. LED surface mounted undercabinet light with a 6.7W/LF load at 415-430 delivered lumens per foot, 3000K-4000K CCT, and a lamp life of 50000 hours / L70, with direct-wire access through rear and dimmable with standard incandescent dimmers. Fixture is damp location rated. Luminaire is constructed of rugged post-painted low-profile steel housing with white finish and acrylic white diffuser with soft widespread illumination with zip-lock design for easy installation, cleaning and lens retention. Fixture is 2.55" W x 1.07" T x *standard length(s) to be measured in field.

1. Location in project: cabinetry throughout
2. Contractor to coordinate: fixture lengths; clean connection to power; all mounting accessories
3. Coordinate with Commissioner: voltage, local switching
4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Lithonia Lighting - UCEL LED Linkable Cabinet Light Series
 - b. Tech Lighting - Unilume LED Slimline Series
 - c. or approved equal

T. TYPE TH: Luxx Box Linea Terrain LX-LNT-L-H*-30-D-U1-SB. LED pendant mounted linear lensed fixture with direct output, felt covered acoustic paneled sides and a 55W load at 5460 delivered lumens for a 5.8ft. fixture (L), 3000K CCT, 90 CRI, with an integral 0-10V dimmable driver(s) to 1%. Luminaire includes PET technology for the embossed, acoustic, three-dimensional paneling, height adjustable cables, minimal canopy and cord. Fixture is 3.15" W x * T x 5.8' L.

1. Location in project: conference room
2. Verify with Commissioner: felt pattern and finish, mounting height and height of fixture
3. Contractor to coordinate: all mounting accessories for a clean, tidy installation
4. Coordinate with Commissioner: voltage

5. Manufacturer to Provide: shop drawings to verify fixture runs, lengths and finishes
 6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Focal Point Lights - Seem 2 Acoustic Series
 - b. Axis Lighting - Sculpt SoftZone Series
 - c. or approved equal
- U. TYPE TJ: dweLED Mallow Pendant DWEP154726. LED diffuse, decorative pendant with an 18W load at 1620 lumens, 3000K CCT, 90 CRI, and a lamp life of 39000 hours / L70 with integral dimmable 120V power. Luminaire includes die-cast aluminum construction, a brush nickel finish, mouth-blown etched triplex glass, round canopy, 10ft of wire, and rigid stems/ downrods. Fixture is ETL damp listed. Fixture is 14" Dia x 9" T with 6.5" Dia x 2" T canopy and hanging length of up to 53".
1. Location in project: lactation room
 2. Verify with Commissioner: finishes, mounting height
 3. Contractor to coordinate: all mounting accessories for a clean, tidy installation
 4. Coordinate with Commissioner: voltage
 5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Fabbian - Lumi Mochi Pendant Series
 - b. TAF Studio - Rime Pendant Lamp
 - c. or approved equal
- V. TYPE TK: Artemide Teti wall/ceiling A048128 with TCP lamp LFF60A19D1530KCQ. Surface mounted lamp holder with a lamp allowance of 40W load for an E26/A19 lamp. Lamp should be LED, 3000K CCT, 90 CRI. Fixture includes 120V, 2-wire dimmability. Fixture is made of thermoplastic resin in a white finish. Fixture is 5 1/2" Dia x 2 3/4" D without a lamp.
1. Location in project: restrooms
 2. Verify with Commissioner: finish, mounting height
 3. Coordinate with Commissioner: voltage
 4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Carpyen - Punt Wall/Ceiling Light
 - b. Visual Comfort - Boswell Wall Sconce
 - c. or approved equal
- W. TYPE TL: Bartco BL6400-34-D-SM-SN-* with BNL6-34-30. Surface mounted vertically, linear sconce with Nippo Seamlessline LED lamp and a 12.7W load at 1132 lumens, 3000K CCT, 83 CRI, 3 step MacAdams binning, and a lamp life of 50000 hours / L70, with an integral 0-10V dimmable driver(s) to 10%. Fixture is damp location listed. Luminaire is constructed of formed and welded, 20 ga. Steel, chemically treated to resist corrosion and enhance paint adhesion, and machined aluminum lamp socket covers. Fixture is 1 9/16" W x 2 7/16" T x 34 15/32" L.
1. Location in project: restroom
 2. Verify with Commissioner: fixture finish and mounting height
 3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation

4. Coordinate with Commissioner: voltage
 5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
 6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Sonneman - Keel LED Bath Bar Series
 - b. Interlux - Sigma Series
 - c. or approved equal
- X. TYPE TL-1: Bartco BL6400-50-D-SM-SN-* with BNL6-50-30. Surface mounted horizontally, linear sconce with Nippo Seamlessline LED lamp and a 18.4W load at 1720 lumens, 3000K CCT, 83 CRI, 3 step MacAdams binning, and a lamp life of 50000 hours / L70, with an integral 0-10V dimmable driver(s) to 10%. Fixture is damp location listed. Luminaire is constructed of formed and welded, 20 ga. Steel, chemically treated to resist corrosion and enhance paint adhesion, and machined aluminum lamp socket covers. Fixture is 1 9/16" W x 2 7/16" T x 49 9/32" L.
1. Location in project: restrooms
 2. Verify with Commissioner: fixture finish and mounting height
 3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation
 4. Coordinate with Commissioner: voltage
 5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
 6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Sonneman - Keel LED Bath Bar Series
 - b. Interlux - Sigma Series
 - c. or approved equal
- Y. TYPE TM: Interlux ProTools 60 Linear Wall Graze Recessed WG-60PTLWG-RPT-S-*-930-RLW-WG-P4-E1-*. LED recessed mounted linear grazer light with louver at ceiling edge and a 15W/LF load at 1460 delivered lumens per foot, 3000K CCT, 90 CRI with an integral 0-10V dimmable driver(s) to 0.1%. Luminaire is constructed of extruded, housing with wall-to-wall dimensioning compatibility, brightness control, flicker free dimming, recessed plaster trim, recessed louver, and graze light to 30ft wall height. Fixture is 2.9" W x 4.3" T x *continuous length(s) to be measured in field.
1. Location in project: Lobby
 2. Verify with Commissioner: white fixture and louver finish
 3. Contractor to coordinate: fixture lengths; all mounting accessories for a clean, tidy installation; mounting detail at ceiling
 4. Coordinate with Commissioner: voltage
 5. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
 6. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Prudential - P43 Series
 - b. Axis Lighting - Graze Perfekt Series
 - c. or approved equal

Z. TYPE TQ: Gotham Evo 4" Round Wallwash; EVO4DWW-30/45-WR*-FL-LD*-MVOLT*-GZ1-*-TRW*. Recessed, trimmed, double wallwash, 50W load, 4500 nominal lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 9-1/16" W x 9-13/16" L x 6-5/8" D housing with a self-flanged trim (suitable for installation in ceilings up to 1½" thick).

1. Location in project: ACT Animal Housing
2. Verify with Commissioner: reflector color to be white with specular finish
3. Coordinate with Commissioner: voltage and emergency requirements
4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination- VF100 Series - VFS-2BA-S
 - b. USAI - BeveLED 5.0 - 6021 Series
 - c. or approved equal

AA. TYPE TQ-1: Gotham Evo 4" Round Wallwash; EVO4WW-30/45-WR*-FL-LD*-MVOLT*-GZ1-*-TRW*. Recessed, trimmed, single wallwash, 50W load, 4500 nominal lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 9-1/16" W x 9-13/16" L x 6-5/8" D housing with a self-flanged trim (suitable for installation in ceilings up to 1½" thick).

1. Location in project: ACT Animal Housing
2. Verify with Commissioner: reflector color to be white with specular finish
3. Coordinate with Commissioner: voltage and emergency requirements
4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination- VF100 Series - 8432
 - b. USAI - BeveLED 5.0 - 6021 Series
 - c. or approved equal

BB. TYPE TAA: Bega wall luminaire; 24 503-K3-*. Wall mounted luminaire with a directed light distribution to allow for a further throw of light. Fixture has an integral LED light source with a 22.0W load at 2021 initial lumens, 3000K CCT, 80+ CRI, and a lamp life of 220000 hours / L70, with a 0-10V integral dimmable driver to 10%. Fixture has an IP64 rating for wet locations and a BUG Rating of B1-U0-G0. Luminaire housing is constructed of die-cast, marine grade, copper free A360.0 aluminum alloy, clear safety glass, pure anodized aluminum reflector, plasma treated silicone at casting, silicone gasket and mechanically captive stainless steel fasteners with matte, textured polyester powder coat finish with minimum 3mm thickness. Fixture is 5 1/8" W x 9 1/8" T x 6" D.

1. Location in project: Exterior
2. Verify with Commissioner: finish color

3. Coordinate with Commissioner: voltage and emergency requirements
 4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. WAC Lighting - Endurance Fin Series
 - b. BK Lighting - Hume Series
 - c. or approved equal
- CC. TYPE TAA-1: Bega wall luminaire; 24 502-K3-*. Wall mounted luminaire with a directed light distribution to allow for a further throw of light. Fixture has an integral LED light source with a 14.0W load at 1216 initial lumens, 3000K CCT, 80+ CRI, and a lamp life of 220000 hours / L70, with a 0-10V integral dimmable driver to 10%. Fixture has an IP64 rating for wet locations and a BUG Rating of B1-U1-G0. Luminaire housing is constructed of die-cast, marine grade, copper free A360.0 aluminum alloy, clear safety glass, pure anodized aluminum reflector, plasma treated silicone at casting, silicone gasket and mechanically captive stainless steel fasteners with matte, textured polyester powder coat finish with minimum 3mm thickness. Fixture is 4 3/8" W x 7 1/2" T x 4 5/8" D.
1. Location in project: Exterior
 2. Verify with Commissioner: finish color
 3. Coordinate with Commissioner: voltage and emergency requirements
 4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. WAC Lighting - Endurance Fin Series
 - b. BK Lighting - Hume Series
 - c. or approved equal
- DD. TYPE TAC: Luce & Light Litus 2.8 in-grade upright: LT280115PNV-2 with WC4020, WE0602S, and WL0100. Recessed exterior adjustable upright with sharp tiltable 35 degree optic, a 3.5W load at 196 lumens, 3000K CCT, 90+ CRI, lamp life of 50,000h, with a remote power supply. Housing is black-anodized anticorrosional aluminum with a screen in tempered, serigraphed-grey and transparent extra-clear glass. Fixture has an IP67 rating for wet locations. Optical accessories to include outer casing, anti-glare screen and suction cup. Overall fixture dimensions are 2.8" Dia x 2.8"D.
1. Location in project: Exterior
 2. Contractor to coordinate: mounting details; remote driver size/ location
 3. Coordinate with Commissioner: voltage and emergency requirements
 4. Manufacturer to Provide:
 5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Targetti - Jupiter Series
 - b. Deltalight - Logic 60 R Wallwash
 - c. or approved equal

ZONAL LUMEN SUMMARY

EE. TYPE TAD: Bega bollard; 84239-K3-BLK*-79817. Bollard with shielded asymmetric distribution, direct burial anchorage, with a 18W load at 1743 lumens, 3000K CCT, 80+ CRI, with an integral 0-10V dimmable driver. Fixture has an IP65 rating for wet locations and a BUG Rating of B0-U0-G1. Luminaire housing is constructed of die-cast and extruded marine grade, copper free aluminum alloy with heavy cast aluminum mounting plate, stainless steel screws, pure anodized aluminum reflector, and clear safety glass. Fixture is 7-1/2" Dia x 39-3/8"H.

1. Location in project: Exterior Dog Housing
2. Verify with Commissioner: finish color
3. Contractor to coordinate: direct burial mounting; remote driver size/ location
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Designplan - Periscope 3 Series
 - b. Tech Lighting - Arkay Two Series
 - c. or approved equal

FF. TYPE TAF: Bega path light; 77 218-*. Path light with well shielded optics, direct burial anchor post, integral LED light source with a 6.4W load at 350 lumens, 3000K CCT, 80+ CRI, with a remote MLV dimmable transformer to 10%. Fixture has an IP65 rating for wet locations and a BUG Rating of B0-U0-G0. Luminaire post is constructed of one piece of marine grade, copper free, extruded aluminum, and the anchor base is constructed of galvanized steel. Lamp enclosure is constructed of one piece of die cast aluminum housing, stainless steel screws, polycarbonate lens with optical texture with one piece molded silicone gasket. Fixture is 6 1/4" W x 27 1/2" T x 9" D.

1. Location in project: Exterior, mounted in planter
2. Verify with Commissioner: finish color
3. Contractor to coordinate: direct burial mounting; remote driver size/ location
4. Coordinate with Commissioner: voltage and emergency requirement
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Designplan - Periscope 3 Series
 - b. WAC Lighting - Eclipse 6031
 - c. or approved equal

GG. TYPE TAF-1: Bega path light; 77 218-*. Same as Type TAF but with direct burial in pavement.

1. Location in project: Exterior, mounted in pavemen
2. Verify with Commissioner: finish color
3. Contractor to coordinate: direct burial mounting; remote driver size/ location
4. Coordinate with Commissioner: voltage and emergency requirements
5. Additional Manufacturers: Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. Designplan - Periscope 3 Series
 - b. WAC Lighting - Eclipse 6031
 - c. or approved equal

HH. TYPE TAH: i2 Systems - Gen 3; V3-E-4W-30K-H-30x65-B*-VLA-14-BB-D1-* with LL-205-10V, 685-02026-100, E05PW 75W, 810-50956-*, VLA-14. LED surface mounted striplight with rigid form factor for exterior use with a 30x60 degree optic, adjustable mounting brackets, baffle accessory, 4W/LF load, 3000K CCT, 90+ CRI, with a remote 0-10V dimmable driver(s) to 1%. Fixture has an IP66 rating for wet locations, anodized aluminum housing, and UV Resistant acrylic lens. Fixture is 1.25" W x 1.475" H x *continuous length(s) to be measured in field.

1. Location in project: Exterior signage
2. Contractor to coordinate: fixture lengths, remote driver size/location; all mounting accessories
3. Coordinate with Commissioner: voltage
4. Manufacturer to Provide: shop drawings to verify fixture runs and lengths
5. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. KKDC-MoMo-L512 Series
 - b. LEDLinear - Adonis IP67 Series
 - c. or approved equal

6. Zonal Lumen Summary:

ZONAL LUMEN SUMMARY

Zone	Lumens	%Lamp	%Fixt

Total Luminaire Efficiency = N.A. %

ZONAL LUMEN SUMMARY

II. TYPE TAJ: Gotham Evo 4" Round Downlight; EVO4-30/15-WR-MD-LS-MVOLT*-GZ1-*. Recessed, trimmed, fixed downlight with medium flood optics, 13.7W load, 1527 delivered lumens, 3000K CCT, 85 CRI, and a lamp life of 60000 hours / L70 with 0-10V integral driver dimmable to 1%. Luminaire housing is constructed of 16-gauge galvanized steel with preinstalled telescoping mounting bars, and optical assembly consists of unitized optics with mechanical attachment of the light engine to the lower reflector for complete optical alignment and a 45 degree cutoff to the source and source image. Fixture is fully serviceable from below the ceiling with tool-less adjustability. Fixture has a 4-5/16" diameter aperture, with 15-7/8" W x 13-13/16" L x 6-9/16" D housing with flangeless trim (suitable for installation in ceilings up to 1½" thick).

1. Location in Project: Exterior metal soffit
2. Verify with Commissioner: reflector color to be white with specular finish
3. Coordinate with Commissioner: voltage and emergency requirements
4. Additional Manufacturers. Subject to compliance with requirements, provide above basis-of-design product or comparable product by one of the following:
 - a. LF Illumination - VF150 Series - HV-1 Trim
 - b. USAI - BeveLED 2.2 - B4RDF Series
 - c. or approved equal

END OF SECTION 265119.10

SECTION 265213 - EMERGENCY AND EXIT LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Emergency lighting.
 - 2. Exit signs.
 - 3. Materials.
 - 4. Luminaire support components.

1.3 DEFINITIONS

- A. Correlated Color Temperature (CCT): The absolute temperature, measured in kelvins, of a blackbody whose chromaticity most nearly resembles that of the light source.
- B. Color Rendering Index (CRI): Measure of the degree of color shift that objects undergo when illuminated by the light source as compared with the color of those same objects when illuminated by a reference source.
- C. Emergency Lighting Unit: A lighting unit with internal or external emergency battery powered supply and the means for controlling and charging the battery and unit operation.
- D. Lumen (lm): The SI derived unit of luminous flux equal to the luminous flux emitted within a unit solid angle by a unit point source (1 lm = 1 cd-sr).

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Shop Drawings
 - 1. Provide scaled and dimensioned detail drawings of all emergency and exit signs.
 - 2. All non-applicable information shall be crossed out. Submittals must be prepared by the manufacturer or manufacturer's local representative agency and clearly indicate the manufacturer's name and representative agency's name on the submittals.

3. For all submittals, manufacturer shall provide submittals within two (2) weeks of receipt of order. All submittals shall have project name and fixture type clearly shown.
 4. Fixture cuts and shop drawings shall be submitted in quantities and format as described in the General Conditions Section of these Specifications.
 5. The Commissioner shall make the final determination as to whether or not the submittal contains sufficient information, and reserves the right to request a shop drawing if the fixture cut is insufficient.
- C. Submit fixture data with mounting details that include appropriate mounting accessories for each ceiling type.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Except as modified by governing codes and by the Contract Documents, comply with the latest applicable provisions and latest recommendations of the following:
1. Underwriters Laboratories (U.L.)
 2. National Electric Code (N.E.C.)
 3. National Fire Protection Agency (N.F.P.A.)
 4. Illuminating Engineering Society (I.E.S.)
 5. American Society for Testing and Materials (A.S.T.M.)
 6. American National Standards Institute (A.N.S.I.)
 7. National Electrical Manufacturers Association (N.E.M.A.)
 8. ETL (Intertek Testing Service)
- C. Emergency and exit lighting shall comply with UL924.
- D. Luminaires installed in outdoor protected areas (such as building soffits) and indoors in area subject to water or extreme humidity shall be UL Listed for damp locations. Luminaires in outdoor protected areas shall be UL Listed for damp and wet locations.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Protect finishes of exposed surfaces by applying a strippable, temporary protective covering before shipping.

PART 2 - PRODUCTS

2.1 EMERGENCY LIGHTING

- A. General
1. Provide emergency lighting as required by referenced standards and indicated on the Contract Documents. The main function of emergency lighting is to direct building occupants safely out of the building in the event of an emergency.

2. Connect emergency lighting to the emergency life safety power distribution systems.
3. Provide integral battery ballast power for emergency lighting where an emergency power distribution system does not exist. Provide all long-life batteries. High temperature, maintenance free, nickel-cadmium batteries are acceptable, however, lead-calcium type are not.
4. All battery ballasts shall be capable of providing full illumination in emergency mode.

B. Exit Signs

1. Exit signs shall have cast-aluminum housings and stencil edge-lit faces. Letters shall be red and 8” high. Light source shall be light emitting diodes (LED). Exit signs shall employ a diffuser lens for even illumination of letters. Products that exhibit “dots” or “hot spots” shall not be acceptable. Exit signs shall have internal sealed lead calcium maintenance free battery rated for 90 minutes.

C. LED Battery Systems

1. Emergency battery power supply suitable for installation remote from or in the driver compartment of the LED luminaire. Unit shall be capable of providing normal fixture operation in a switched fixture. Include “TEST” switch and “AC ON” indicator light capable of installation in the luminaire or remote from the luminaire. Power supply shall have self-test diagnostic feature.
2. Emergency battery power supply shall be capable of operating the LED fixtures specified.
3. Provide LED battery with the following:
 - a. Rated input and output voltage and wattages.
 - b. Temperature rating.
 - c. Illumination time (minimum 90 minutes)
 - d. Suitable for indoor and damp locations and for sealed and gasketed features.
4. LED battery shall meet all associated UL ratings, including UL924.
5. Manufacturers
 - a. Bodine Co.
 - b. Dual-Life.
 - c. Lithonia.
 - d. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for conditions affecting performance of luminaires.
- B. Examine roughing-in for luminaire to verify actual locations of luminaire and electrical connections before luminaire installation.

- C. Examine walls, floors, roofs, and ceilings for suitable conditions where emergency lighting luminaires will be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install luminaires level, plumb, and square with ceilings and walls unless otherwise indicated.
- B. Install lamps in each luminaire.
- C. Supports:
 - 1. Sized and rated for luminaire and emergency power unit weight.
 - 2. Able to maintain luminaire position when testing emergency power unit.
 - 3. Provide support for luminaire and emergency power unit without causing deflection of ceiling or wall.
 - 4. Luminaire-mounting devices must be capable of supporting a horizontal force of 100 percent of luminaire and emergency power unit weight and vertical force of 400 percent of luminaire weight.
- D. Wall-Mounted Luminaire Support:
 - 1. Attached to a minimum 20-gauge backing plate attached to wall structural members.
 - 2. Do not attach luminaires directly to gypsum board.
- E. Suspended Luminaire Support:
 - 1. Pendants and Rods: Where longer than 48 inch, brace to limit swinging.
 - 2. Stem-Mounted, Single-Unit Luminaires: Suspend with twin-stem hangers. Support with approved outlet box and accessories that hold stem and provide damping of luminaire oscillations. Support outlet box vertically to building structure using approved devices.
 - 3. Continuous Rows of Luminaires: Use tubing or stem for wiring at one point and tubing or rod using wire support for suspension for each unit length of luminaire chassis, including one at each end.
 - 4. Do not use ceiling grid as support for pendant luminaires. Connect support wires or rods to building structure.
- F. Ceiling Grid Mounted Luminaires:
 - 1. Secure to outlet box, if provided.
 - 2. Secure emergency power unit using approved fasteners in a minimum of four locations, spaced near corners of emergency power unit.
 - 3. Use approved devices and support components to connect luminaire to ceiling grid and building structure in a minimum of four locations, spaced near corners of luminaire.

3.4 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 SYSTEM STARTUP

A. Perform startup service:

1. Charge emergency power units and batteries minimum of one hour and depress switch to conduct short-duration test.
2. Charge emergency power units and batteries minimum of 24 hours and conduct one-hour discharge test.

3.6 ADJUSTING

A. Adjustments: Within 12 months of date of Substantial Completion, provide on-site visit and manpower to do the following after working hours, whenever necessary, at no additional cost of the City of New York:

1. Inspect luminaires. Replace lamps, emergency power units, batteries, exit signs, and luminaires that are defective.
 - a. Parts and supplies must be manufacturer's authorized replacement parts and supplies.
2. Conduct short-duration tests on all emergency lighting.

3.7 PROTECTION

A. Remove and replace luminaires and exit signs that are damaged or caused to be unfit for use by construction activities.

END OF SECTION 265213

SECTION 270500 - COMMON WORK RESULTS FOR COMMUNICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. This Section includes:

1. Communications equipment coordination and installation
2. Grounding and bonding for communications systems
3. Hangers and supports for communications systems
4. Conduits and back boxes for communications systems
5. Cable trays for communications systems
6. Surface raceways for communications systems
7. Underground ducts and raceways for communications systems
8. Utility poles for communications systems
9. Vibration and seismic controls for communications systems
10. Identification for communications systems
11. Common communications installation requirements

- B. Related Requirements:

1. Section 271100 "Communications Room Fittings"
2. Section 271500 "Communications Horizontal Cabling"
3. Section 271600 "Communications Connecting Cords Devices and Adapters"

- C. Abbreviations:

1. ARC: Aluminum rigid conduit

2. Coated RMC: PVC Coated Rigid Metallic Conduit
3. EPDM: Ethylene-propylene-diene terpolymer rubber
4. EMI: Electromagnetic Interference
5. EMT: Electrical Metallic Tubing
6. ENT: Electrical Non-metallic Tubing
7. ER: Equipment Room
8. GRC: Galvanized rigid steel conduit
9. IMC: Intermediate metal conduit
10. IDF: Intermediate Distribution Frame
11. LAN: Local Area Network
12. LMC: Liquidtight Metal Conduit
13. MDF: Main Distribution Frame
14. NBR: Acrylonitrile-butadiene rubber
15. RCDD: Registered Communications Distribution Designer
16. RGS: Rigid Galvanized Steel
17. UTP: Unshielded Twisted Pairs

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 SUBMITTALS

- A. List of submittals:
 1. Pre-Construction Submittals:
 - a. Qualifications and Certificates
 - b. Product Data for every product installed
 - c. Manufacturer quality assurance tests and source quality control reports
 - d. Shop drawings
 - e. Samples
 - f. Pull-schedules

- d. Cable type
 - e. Origination room (TR/IDF)
 - f. Rack ID
 - g. Termination panel and port ID
 - h. Ending room (TR/IDF)
 - i. Rack ID
 - j. Termination panel and port ID
 - k. Cable type
 - l. Comments
- E. Shop Drawings:
- 1. For communications equipment room fittings.
 - a. Include plans, elevations, sections, details, and attachments to other work.
 - b. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - c. Equipment Racks and Cabinets: Include workspace requirements and access for cable connections.
 - d. Grounding: Indicate location of grounding bus bar and its mounting detail showing standoff insulators and wall mounting brackets.
 - 2. For backbone and horizontal distribution
 - a. Include plans showing outlet locations
 - b. Show backbone and horizontal pathways and cable routing
 - c. Wiring diagrams to show typical wiring schematics including the following:
 - 1) Cross-connects.
 - 2) Patch panels.
 - 3) Patch cords.
 - d. Cabling pathways and routes to include:
 - 1) Pathways to include cable tray (or other wireway) route to scale, relationship to structural electrical and mechanical elements.
 - 2) Clearances and access above and to the side.
 - 3) Vertical elevations above floor or bottom of ceiling structure.
 - 4) Vertical and horizontal offsets and transitions
 - 5) Load calculations showing compliance with the maximum live and still load rating.
 - 3. Labeling scheme and samples
- F. Test Results
- 1. Test results will show compliance with the testing requirements for the specific cabling system.
 - 2. Provide test results for 100% of the backbone and station cables installed.
 - 3. Provide test results in the format(s) requested.

G. Qualifications

1. Installer Qualifications:

- a. Installer must be trained or approved by the manufacturer of the cabling system provided.

H. Warranties

1. Provide manufacturer extended warranty (Min 15 years) for the complete end-to-end structured cabling system including all components.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. All products will be installed new, best of their respective kinds, free from defects, listed by Underwriter's Laboratories for the intended use, and bearing their label.

C. Installation will be done by staff properly trained.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Telecommunications Pathways and Spaces: Comply with TIA/EIA-569-A.

F. Grounding: Comply with ANSI-J-STD-607-A.

G. Seismic Performance Requirements:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation earthquake motions determined according to SEI/ASCE 7.
2. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install equipment frames and cable trays until spaces are enclosed and weather tight, wet work in spaces is complete and dry, and work above ceilings is complete.

1.7 COORDINATION

A. Coordinate layout and installation of communications equipment with The City of New York's LAN equipment and telecommunications service suppliers.

- B. Meet jointly with the Commissioner to exchange information and agree on details of equipment arrangements and installation interfaces.
- C. Record agreements reached in meetings and distribute them to other participants.
- D. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.
- E. Coordinate layout and installation of communications pathways with the other trades. Survey the facility to locate conduits, sleeves and other pathways provided by others.
- F. Coordinate furniture mounted components with the furniture vendor.
- G. Coordinate cable routing in the ceiling with the other trades.

PART 2 - PRODUCTS

2.1 GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

- A. Refer to Section 260526 “Grounding and Bonding for Electrical Systems”.
- B. Comply with ANSI-J-STD-607-A.

2.2 HANGERS AND SUPPORTS FOR COMMUNICATIONS SYSTEMS

- A. Cable Support: NRTL labeled.
- B. Comply with NFPA 70 and UL 2043 for fire-resistant and low-smoke-producing characteristics.
- C. Cable hangers and non-continuous supports will be designed to prevent degradation of cable performance and pinch points that could damage cable. Cable tie slots fasten cable ties to brackets.
- D. Will have various attachment options for: wall, ceiling, joist, beam, flange, raised floor pedestal and others type of mounting.
- E. Support brackets with cable tie slots for fastening cable ties to brackets.
- F. Lacing bars, spools, J-hooks, and D-rings, straps and other devices.
- G. Cable straps (ties) will be reusable Velcro-style with hook and loop or d-ring, available in various colors and sizes. Plenum rated straps will be used in plenum spaces.
- H. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - 1. ERICO Caddy.

2. Eaton B-Line
3. Panduit
4. Or approved equal

2.3 CONDUITS AND BACKBOXES FOR COMMUNICATIONS SYSTEMS

A. Conduits and Backboxes:

1. Provide where indicated on drawings or as required.
2. Conduit and boxes sizes as shown on the communications drawings.
3. Comply with requirements in Section 260533 "Raceway and Boxes for Electrical Systems."

B. Flexible metal conduit will not be used unless specifically noted.

2.4 SLEEVES FOR PATHWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral water-stop, unless otherwise indicated.

2.5 SLEEVE SEALS AND FIRESTOPPING FOR COMMUNICATIONS PATHWAYS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.

B. Comply with requirements in Division 078413 Section "Penetration Firestopping".

C. Comply with TIA/EIA-569-A, Annex A, "Firestopping."

D. Sealing Elements: Interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of pathway or cable.

E. Pressure Plates: Stainless steel. Include two for each sealing element.

F. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

G. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:

1. Advance Products & Systems, Inc.

2. Calpico, Inc.
3. Pipeline Seal and Insulator, Inc.
4. Hilti
5. Or approved equal

2.6 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

2.7 IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

- A. Comply with requirements of TIA/EIA-606-A and UL969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- B. Comply with requirements of Division 260553 Section "Identification for Electrical Systems".
- C. The identification for the communications systems will meet all the requirements of a Class 3 facility as defined by ANSI/TIA/EIA 606-A, Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
- D. Comply with TIA/EIA-606-A and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- E. Identify all the components of the communications systems.
- F. For fire-resistant plywood, do not paint over manufacturer's label.
- G. All labels will be preprinted or computer-printed type.
- H. Type, format, wording, printing, and placement of labels will be coordinated with The City of New York's existing administration plan. Items and/or issues not addressed in The City of New York's established administration plan will be addressed in accordance with TIA/EIA 606-A Standard (e.g., cable tray, conduits, junction boxes, grounding systems, etc.).
- I. Labeling System
 1. PC-based software, Windows compatible, capable of supporting alpha numeric characters and Windows True Type Fonts.
 2. Compatible with laser printers.
 3. Label sizes supported:

- a. Minimum: 0.8" W x 0.2" H.
- b. Maximum: 3.0" W x 12.0" H.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 COMMON REQUIREMENTS FOR COMMUNICATIONS INSTALLATION

- A. Complete work according to the agreed upon schedule. Cooperate in coordinating your activities with other planned and ongoing work at the site in a manner that facilitates meeting the schedule. This includes coordination with the various trades in determining work schedules and in resolving physical installation issues.
- B. All materials, cables, components, and all aspects of the installation must meet all local, state, and federal laws, as well as applicable code and regulatory requirements.
- C. Designate a Project Manager to act as the technical and managerial interface with the Commissioner.
- D. At the request of the Commissioner, participate in meetings covering technical, installation, and management issues.
- E. Perform all work required under this specification in a skillful and professional manner in accordance with standards and practices documented and/or accepted by industry, such as the ANSI/TIA/EIA, NECA standards and codes and the BICSI TDMM manuals. The contractor's technicians must be familiar with the proper assembly and installation of all components they are working with and must follow manufacturer's specific installation requirements.
- F. Provide all materials, and the necessary labor and services required to ensure all components of the system are completely installed in accordance with the intent of the Contract Documents.
- G. Compliance by the contractor with the provisions of this specification does not relieve the contractor of the responsibilities of furnishing materials, equipment and systems of proper design, mechanically and electrically suited to meet operating guarantees at the specified service conditions.
- H. Report the Commissioner in writing within 1 business day about the discovery of, but not limited to, the following:
 - 1. Problematic or missing pathways
 - 2. Field conflicts
 - 3. Work by other trades that is impeding the telecommunications installation resulting in a possible schedule, cost, or quality impact

4. Unsafe working conditions
5. Materials with problematic lead times
6. Media exceeding length limitations as defined by the governing standards for that media and its application
7. Live systems put at risk by the installations activities
8. Access required to live rooms

- I. All materials will be installed as per the manufacturers' instructions, unless noted otherwise.
- J. Comply with NECA 1.
- K. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- L. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange, and install components and equipment to provide maximum possible headroom consistent with these requirements.
- M. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications' equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- N. Right of Way: Give to piping systems installed at a required slope.
- O. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- P. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

3.3 SERVICE CONTINUITY

- A. Maintain continuity of communications services to all functioning portions of the telecommunications systems throughout the installation.
- B. If a temporary outage of a live system is required that outage must be scheduled as far in advance as possible to allow The City of New York enough time to prepare and accommodate. Should this notice not be given in advance, the contractor will be required to perform the work outside of standard business hours at their own cost.

3.4 GROUNDING AND BONDING

- A. Comply with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.

- B. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.
 - C. Comply with ANSI-J-STD-607-A.
 - D. Locate grounding bus bar to minimize the length of bonding conductors. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.
 - E. Bonding to all non-active (non-current carrying) metal support structures, rack, runway etc. within each Telecommunication Room or Space. Coordinate this bonding with the supplier and installer of rack, runway etc.
 - F. The TMGB/TGB is to provide a single point ground reference within the room and is not to be used as an AC equipment ground.
 - G. All cabling used to bond grounds are to be tagged with labels with the point of origin i.e. going to/coming from, with printed labels.
- 3.5 PATHWAYS INSTALLATION FOR COMMUNICATIONS SYSTEMS (HANGERS AND SUPPORTS, CONDUITS AND BACKBOXES, CABLE TRAYS AND RACEWAYS)
- A. Comply with NECA 1
 - B. Cable Trays: Comply with NEMA VE 2, TIA/EIA-569-A and manufacturer's installation procedures.
 - C. Comply with TIA/EIA-569-A for pull-box sizing and length of conduit and number of bends between pull points.
 - D. Comply with requirements in Division 26 Section 260533 "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.
 - E. Install manufactured conduit sweeps and long-radius elbows whenever possible.
 - F. All metal cable trays, metal cable raceways, or other metallic pathways must be grounded. Joined sections must preserve ground continuity.
 - G. Install cable tray systems as shown in construction drawings. The locations shown may need to be adjusted slightly in the field to assure proper placement.
 - H. All cable tray sections will be field cut to length as required with a minimum number of splice points. All field cuts will be made using the manufacturers recommended equipment.
 - I. Cable tray supports must be suited to the cable tray types they are employed with and loads they will carry. Manufacturer's recommendations on support spacing must be followed.
 - J. Cable trays and cable raceways will be mounted at heights as called for in the construction documents. In areas where a minimum of 300 mm (12 in) access headroom is not available, the contractor will notify the Commissioner.

- K. The inside of cable trays will be free of burrs, sharp edges or projections that can damage cable insulation. Abrasive supports (e.g., threaded rod) installed within the cable fill area will have that portion within the tray protected with a smooth, non-scratching covering so that cable can be pulled without physical damage.
- L. Care will be taken to ensure that access to other building components (e.g., air conditioning ducts) is not restricted by cable pathways.
- M. Cable trays will not be used as walkways, ladders, or equipment supports.
- N. Cable management and support hardware must be UL listed for use in the environments in which they will be employed.
- O. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
- P. Install cable trays to route cables if conduits cannot be located in these positions.
- Q. Secure conduits to backboard when entering room from overhead.
- R. Extend conduits 3 inches above finished floor.
- S. Provide metal conduits with grounding bushings and connect with grounding conductor to grounding system.
- T. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- U. Pathway Installation in Communications Equipment Rooms:
 - 1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
 - 2. Install cable trays to route cables if conduits cannot be located in these positions.
 - 3. Secure conduits to backboard when entering room from overhead.
 - 4. Extend conduits 3 inches above finished floor.
 - 5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

3.6 SLEEVES INSTALLATION FOR COMMUNICATIONS SYSTEMS

- A. Communications penetrations occur when pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.
- F. Extend sleeves installed in floors 50 mm above finished floor level.
- G. Size pipe sleeves to provide 6.4-mm annular clear space between sleeve and pathway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
 - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 079200 Section "Joint Sealants."
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with firestop materials.
- K. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Above ground, Exterior-Wall Penetrations: Seal penetrations using steel or cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 25-mm annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 25-mm annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.
- N. Provide sound proofing of all penetrations as required. Refer to Commissioner and electrical drawings for details.

3.7 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.

- B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.8 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for communications installations to restore original fire-resistance rating of assembly.
- B. Comply with TIA/EIA-569-A, Annex A, "Firestopping."
- C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.9 IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

- A. Identify ALL system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements in Division 260553 Section "Identification for Electrical Systems." Comply with requirements in Division 099123 Section "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- B. See Evaluations for discussion of TIA/EIA standard as it applies to this Section. Paint and label colors for equipment identification will comply with TIA/EIA-606-A for Class 3 level of administration including optional identification requirements of this standard.
- C. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.
- D. All permanent labels must be durable and legible and suited for long term use in the environments in which they will be located. Labels will be preprinted or computer-printed type. Handwritten labels are unacceptable unless approved by the Commissioner
- E. Label all racks and cabinets as detailed in the construction drawings. Cabinet and rack labels must be large enough to be viewed from 15' away from the rack or cabinet. Cabinets and racks will be labeled with professionally made signage.
- F. Grounding and Bonding
 - 1. All system components will be labeled complying with TIA/EIA-606-A. Comply with requirements in Division 260553 Section "Identification for Electrical Systems".
 - 2. Labels will be located on conductors as close as practicable to their point of termination in a readable position.
 - 3. Provide nonmetallic pre-printed labels, white background with black printing that can be permanently mounted to the busbar.

4. The bonding conductors for telecommunications, TBB conductor, and each grounding equalizer will be green or marked with a distinctive green color.
- G. Labeling scheme for all communications systems is subject to prior approval by the Commissioner.

END OF SECTION 270500

SECTION 270800 - TESTING OF COMMUNICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Contractor to notify the Commissioner three (3) days prior to testing any cabling.
- B. Work Included: Provide labor, materials, and equipment necessary to complete the work of this Section, including but not limited to the following:
1. Copper cable test device
 2. Optical fiber cable test device
 3. Cable Test Results
 4. As-built drawings
- C. Related Requirements:
1. Section 270500 - " Common Work Results for Communications "
 2. Section 271500 - " Communications Horizontal Cabling"

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 QUALITY REQUIREMENTS

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 COPPER CABLE TEST DEVICE

- A. Manufacturer's List:
1. Fluke Networks
 2. Trend Networks
 3. Platinum Tools

4. Or approved equal

B. Product Options

1. The indicated manufacturers will be the basis of the design and each assembly selected will address the particular infrastructure requirements.
2. Select analyzer to comprehensively certify each category rated connection and record results verifying compliance with TIA/EIA performance specifications to meet the category rating of the system.
3. Manufacturer's software:
 - a. Fluke Versiv ProjX Management System.
 - b. Trend Networks, LanTEK Software
 - c. Platinum Tools, Cable Prowler Application
 - d. Or approved equal

C. Description:

1. Must meet or exceed TIA Level IV compliant network cable-testing device certification by an independent laboratory, such as Intertek, for verification of high speed, TIA/EIA T568 compliant cables.
2. Copper test equipment must be capable of certifying Category-3, Category-5e, and Category-6A UTP or F/UTP links or channels independent of termination hardware configuration (RJ45 port or 110-style) for each level of performance.
3. Provide full 2-way Auto test of Category-3, 5e, 6 and 6A twisted pair links.
4. All test equipment will be capable of storing full frequency sweep data for all tests and printing color graphical reports for all swept measurements.

D. Accessory Products:

1. Interface Adapters
 - a. TIA Category-3, 5e, 6 and 6A: 100 ohms
 - b. Category/Class E permanent link adapters for TIA Cat 3, 5e, 6 and 6A unshielded and shielded cables.
 - c. Manufacturer's interface adapter:
 - 1) Fluke Networks DTX ten (10) Gigabit Kit - DTX 10 Gig over Copper Test solution, Model No. DTX-10GKIT
 - 2) Tend Network SignalTEK NT Model No R156005
 - 3) Platinum Tools, Net Chaser Deluxe Test Kit Model No P/N TNC950DX
 - 4) Or approved equal

2.2 OPTICAL FIBER CABLE TEST DEVICE

A. Manufacturer List:

1. Fluke Networks
2. Trend Networks

3. Platinum Tools
4. Or approved equal

B. Product Options:

1. Select analyzer to comprehensively certify each optical fiber connection and record results verifying compliance with TIA/EIA performance standards and manufacturer specifications.
2. Manufacturer's software
 - a. Fluke Versiv ProjX Management System.
 - b. Trend Networks, LanTEK Software
 - c. Platinum Tools, Cable Prowler Application
 - d. Or approved equal

C. Description:

1. The optical fiber source will permit full end to end testing of Multimode, Single-mode and LOMMF optical fiber cabling fully compliant with industry standards and manufacturer recommendations.
2. Available source types and wavelengths will be as follows:
 - a. Single-mode - 1310nm FP Laser and 1550nm FP Laser.
3. The power meter will be calibrated to read 850, 1300, 1310 and 1550nm wavelengths.

D. Accessory Products:

1. Interface Adapters by manufacturer
 - a. Fluke DTX Fiber Module for Single mode cable @ 1310 and 1500 nm - Model No. DTX-SFM2
 - b. Trend Networks fiber module
 - c. Platinum Tools
 - d. Or approved equal
2. Provide any required accessories.
3. Fiber Microscope
 - a. Magnification of 200X or 400X for end face inspection
 - b. Optional requirements
 - 1) Video camera systems are preferred.
 - 2) Camera probe tips that permit inspection through adapters are preferred.
 - 3) It is preferable to use test equipment capable of saving and reporting the end face image.
 - c. Manufacturer:
 - 1) Fluke fiberInspector Mini Video Microscope - Model No. FT500.
 - 2) Trend Networks fiber module.
 - 3) Platinum Tools
 - 4) Or approved equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATIONS

- A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section.
- B. Verify telecommunications cabling is installed and supported, terminated, mounted in an appropriate housing or terminated on the applicable component and labeled prior to certification testing and documentation.
- C. Verify certification tester universal interface adapters and manufacturer patch cords that enable permanent link verification are in new condition not indicating any twisting or kinking resulting from incorrect storage of the tester interface adapters.
- D. Optical fiber patch cords will be inspected to ensure connector surfaces are clean and free of defects that may affect testing results.

3.3 COPPER CABLE TESTING GENERAL REQUIREMENTS

- A. Process:
 - 1. Certification test 100% of the installed cabling plant including all backbone and horizontal four (4) pair UTP/ or F/UTP copper connections.
 - 2. Follow manufacturers' instructions and recommended industry standards and guidelines to complete all TIA testing procedures to verify performance levels.
 - 3. Follow manufacturer requirements for self-calibration procedures.
 - 4. Perform all tests required by local authorities in addition to tests specified herein.
 - 5. Update tester software to show specific project information including but not limited to:
 - a. Date and time of testing
 - b. Project name
 - c. Field technicians name
 - d. Cable identification number
 - e. Cable manufacturer, type and part number

3.4 CATEGORY 6A COPPER CABLE TESTING REQUIREMENTS

- A. General Requirements

1. Every cabling link in the installation will be tested for:
 - a. Wire Map
 - b. Length
 - c. Insertion Loss
 - d. NEXT Loss
 - e. PS NEXT Loss
 - f. ACR-F Loss
 - g. PS ACR-F Loss
 - h. Return Loss
 - i. Propagation Delay
 - j. Delay Skew
2. The installed twisted-pair horizontal links will be tested from the IDF in the telecommunications room to the telecommunication wall outlet in the work area for compliance with the "Permanent Link" performance specification as defined in the Category 6A Standard.
3. One hundred percent of the installed cabling links must pass the requirements of the Category 6A Standard mentioned in 3.4.A.1 above and as further detailed in Section B. Any failing link must be diagnosed and corrected. The corrective action will be followed with a new test to prove that the corrected link meets the performance requirements. The final and passing result of the tests for all links will be provided in the test results documentation in accordance with Section C below.
4. Trained technicians who have successfully attended an appropriate training program and have obtained a certificate as proof thereof will execute the tests. Appropriate training programs include but are not limited to installation certification programs provided by BICSI or the ACP (Association of Cabling Professionals).
5. The test equipment (tester) will comply with the accuracy requirements for level IIIe field testers as defined in ANSI/TIA-1152. The tester including the appropriate interface adapter must meet the specified accuracy requirements. The accuracy requirements for the permanent link test configuration (baseline accuracy plus adapter contribution) are specified in Table 3 of ANSI/TIA-1152 (Table 3 in this TIA document also specifies the accuracy requirements for the Channel configuration).
6. The RJ45 test plug will fall within the values specified in ANSI/TIA-568-C Annex C for NEXT, FEXT and Return Loss.
7. The tester will be within the calibration period recommended by the vendor in order to achieve the vendor-specified measurement accuracy.
8. The tester interface adapters must be of high quality and the cable will not show any twisting or kinking resulting from coiling and storing of the tester interface adapters. In order to deliver optimum accuracy, preference is given to a permanent link interface adapter for the tester that can be calibrated to extend the reference plane of the Return Loss measurement to the permanent link interface. The contractor will provide proof that the interface has been calibrated within the period recommended by the vendor. To ensure that normal handling on the job does not cause measurable Return Loss change, the adapter cord cable will not be of twisted-pair construction.
9. The Pass or Fail condition for the link-under-test is determined by the results of the required individual tests (detailed in Section 4.2.2 of ANSI/TIA-1152). Any Fail or Fail* result yields a Fail for the link-under-test. To achieve an overall Pass condition, the results for each individual test parameter must Pass or Pass*.

10. A Pass or Fail result for each parameter is determined by comparing the measured values with the specified test limits for that parameter. The test result of a parameter will be marked with an asterisk (*) when the result is closer to the test limit than the accuracy of the field tester. The field tester manufacturer must provide documentation as an aid to interpret results marked with asterisks. To which extent '*' results will determine approval or disapproval of the element under test will be defined in the relevant detail specification, or agreed on as a part of a contractual specification.
11. Invite Commissioner to witness field testing. The Commissioner will be notified of the start date of the testing phase five business days before testing commences.
12. Commissioner has the right (at their discretion) to select a random sample of 5% of the installed links. The Commissioner will test these randomly selected links and the results are to be stored in accordance with the prescriptions in Section C.1. The results obtained will be compared to the data provided by the installation contractor. If more than 2% of the sample results differ in terms of the pass/fail determination, the installation contractor under supervision of the end-user Commissioner will repeat 100% testing and the cost will be borne by the installation contractor.

B. Performance Test Parameters

1. The test parameters for Category 6A cabling are defined in the ANSI/TIA-568-C.2 and are all tested automatically using the Category 6A Auto test with:
 - a. Fluke DTX-1800 or Fluke DSX-5000 Cable Analyzer
 - b. Trend Networks fiber module
 - c. Platinum Tools
 - d. Or approved equal

C. Test Result Documentation

1. The test results/measurements will be transferred into a Windows Excel and in the tester native Software format. A guarantee must be made that the measurement results are transferred to the PC unaltered, i.e., "as saved in the tester" at the end of each test and that these results cannot be modified at a later time.
2. The database for the completed job will be stored and delivered on CD-ROM or DVD including the software tools required to view, inspect, and print any selection of test reports.
3. General Information to be provided in the electronic database with the test results information for each link:
 - a. The identification of the customer site as specified by the end-user
 - b. The identification of the link in accordance with the naming convention defined in the overall system documentation
 - c. The overall Pass/Fail evaluation of the link-under-test
 - d. The name of the test limit selected to execute the stored test results
 - e. The cable type and the value of NVP used for length calculations
 - f. The date and time the test results were saved in the memory of the tester
 - g. The brand name, model and serial number of the tester
 - h. The identification of the tester interface
 - i. The revision of the tester software and the revision of the test standards database in the tester
 - j. The test results information must contain information on each of the required test parameters that are listed in Section B and as further detailed below under paragraph C5.

4. The detailed test results data to be provided in the electronic database for must contain the following information:

For each of the frequency-dependent test parameters, the value measured at every frequency during the test is stored. The PC-resident database program must be able to process the stored results to display and print a color graph of the measured parameters. The PC-resident software must also provide a summary numeric format in which some critical information is provided numerically as defined by the summary results (minimum numeric test results documentation) as outlined above for each of the test parameters.

- a. Length: Identify the wire-pair with the shortest electrical length, the value of the length rounded to the nearest 0.1 m (1) and the test limit value
- b. Propagation delay: Identify the pair with the shortest propagation delay, the value measured in nanoseconds (ns) and the test limit value
- c. Delay Skew: Identify the pair with the largest value for delay skew, the value calculated in nanoseconds (ns) and the test limit value
- d. Insertion Loss (Attenuation): Minimum test results documentation as explained in Section B for the worst pair
- e. Return Loss: Minimum test results documentation as explained in Section B for the worst pair as measured from each end of the link
- f. NEXT, ACR-F: Minimum test results documentation as explained in Section B for the worst pair combination as measured from each end of the link
- g. PS NEXT and PS ACR-F: Minimum test results documentation as explained in Section B for the worst pair as measured from each end of the link

⁽¹⁾: Nominal Velocity of Propagation (NVP) expresses the speed of the electrical signals along the cabling link in relation to the speed of light in vacuum (3×10^8 m/second). Insulation characteristics and twist rate of the wire pair influence NVP in minor ways. Typically, an 'average' value for NVP is published for all four wire-pairs in a data cable.

⁽²⁾: 'Margin' designates the difference between the measured value and the corresponding test limit value. For passing links, 'worst case margin' identifies the smallest margin over the entire frequency range; the point at which the measured performance is "closest" to the test limit.

3.5 FIBER OPTIC CABLE TESTING REQUIREMENTS

A. General

1. All tests performed on optical fiber cabling that use a laser or LED in a test set will be carried out with safety precautions in accordance with ANSI Z136.2.
2. All outlets, cables, patch panels and associated components will be fully assembled and labeled prior to field-testing. Any testing performed on incomplete systems will be redone on completion of the work.

B. Optical fiber cable testing

1. Field-test instruments will have the latest software and firmware installed.

2. Link and channel test results from the OLTS will be recorded in the test instrument upon completion of each test for subsequent uploading to a PC in which the administrative documentation (reports) may be generated.
3. Fiber end faces will be inspected at 200X or 400X magnification. 200X magnification is suitable for inspecting multimode and single mode fibers. 400X magnification may be used for detailed examination of single mode fibers. Scratched, pitted or dirty connectors will be diagnosed and corrected.
 - a. It is preferable that the end face images be recorded in the memory of the test instrument for subsequent uploading to a PC and reporting.
4. Testing will be performed on each cabling segment (connector to connector).
5. Testing will be performed on each cabling channel (equipment to equipment) that is planned for use per The City of New York's instructions.
6. Testing of the cabling will be performed using high-quality test cords of the same fiber type as the cabling under test. The test cords for OLTS testing will be between 1 m and 5 m in length.
7. Optical loss testing
 - a. Backbone link
 - 1) Single mode (OS2) backbone links will be tested at 1310 nm and 1550 nm in accordance with ANSI /TIA-526-7, Method A.1, Insertion Loss Using an Optical Power Meter - One Jumper Cable Measurement.
 - 2) Link attenuation does not include any active devices or passive devices other than cable, connectors, and splices, i.e. link attenuation does not include such devices as optical bypass switches, couplers, repeaters, or optical amplifiers.
 - 3) Use the One Reference Jumper Method specified by ANSI/TIA -526-14-B, Annex A and ANSI/TIA -526-7, Method A.1. The user will follow the procedures established by these standards or application notes to accurately conduct performance testing.
8. Magnified End Face Inspection
 - a. Fibers will be inspected at 250X or 400X magnification. 250X magnification is suitable for inspecting multimode and single mode fibers.
9. Length Measurement
 - a. The length of each fiber will be recorded.
 - b. It is preferable that the optical length be measured using an OLTS.
10. Polarity Testing
 - a. Paired duplex fibers in multi-fiber cables will be tested to verify polarity in accordance with Clause E.5.3 of ANSI/TIA 568 C.0. The polarity of the paired duplex fibers will be verified using an OLTS.

C. Administration

1. Test results documentation

- a. Test results saved within the field-test instrument will be transferred into a Windows™-Excel and in the Fluke LinkWare Cable Test Management Software format. These test records will be uploaded to the PC unaltered, i.e., "as saved in the field-test instrument". The file format, CSV (comma separated value), does not provide adequate protection of these records and will not be used.
- b. The test results documentation will be available for inspection by The City of New York or the Commissioner during the installation period and will be passed to the Commissioner within 5 working days of completion of tests on cabling served by a telecommunications room or of backbone cabling. The installer will retain a copy to aid preparation of as built information.
- c. The database for the complete project, including twisted-pair copper cabling links, if applicable, will be stored and delivered on CD-ROM, DVD or USB prior to The City of New York's acceptance of the building. CD-ROM, DVD or USB will include the software tools required to view, inspect, and print any selection of the test reports.
- d. Circuit IDs reported by the test instrument should match the specified label ID.
- e. The detailed test results documentation data is to be provided in an electronic database for each tested optical fiber and will contain the following information
 - 1) The identification of the customer site as specified by the end-user
 - 2) The name of the test limit selected to execute the stored test results
 - 3) The name of the personnel performing the test
 - 4) The date and time the test results were saved in the memory of the tester
 - 5) The manufacturer, model and serial number of the field-test instrument
 - 6) The version of the test software and the version of the test limit database held within the test instrument
 - 7) The fiber identification number
 - 8) The length for each optical fiber (Optionally the index of refraction used for length calculation when using a length capable OLTS)
 - 9) Test results to include OLTS attenuation link and channel measurements at the appropriate wavelength(s) and the margin (difference between the measured attenuation and the test limit value).
 - 10) The overall Pass/Fail evaluation of the link-under-test for OLTS measurements
 - 11) A picture or image of each fiber end-face and a pass/fail status of the end-face based upon visual inspection.

3.6 ACCEPTANCE OF TEST RESULTS

- A. Unless otherwise specified by Commissioner, each cabling link will be in compliance with the following test limits:

1. Optical loss testing

- a. Multimode and Single mode links
 - 1) The link attenuation will be calculated by the following formulas as specified in ANSI/TIA-568-C.0.
 - a) $\text{Link Attenuation (dB)} = \text{Cable_Attn (dB)} + \text{Connector_Attn (dB)} + \text{Splice_Attn (dB)}$
 - b) $\text{Cable_Attn (dB)} = \text{Attenuation_Coefficient (dB/km)} * \text{Length (Km)}$

- c) Connector_Atnn (dB) = number_of_connector_pairs * connector_loss (dB)
- d) Maximum allowable connector_loss = 0.50 dB
- e) Splice_Atnn (dB) = number_of_splices * splice_loss (dB)
- f) Maximum allowable splice_loss = 0.3 dB
- g) The values for the Attenuation_Coefficient (dB/km) are listed in the table below:

Type of Optical Fiber	Wavelength (nm)	Attenuation coefficient (dB/km)	Wavelength (nm)	Attenuation coefficient (dB/km)
Multimode 50/125 μm	850	3.5	1300	1.5
Single mode (Inside plant)	1310	1.0	1550	1.0
Single mode (Outside plant)	1310	0.5	1550	0.5

2. Magnified end face inspection

- a. Fiber connections will be visually inspected for end face quality.
 - b. Scratched, pitted or dirty connectors will be diagnosed and corrected.
- B. All installed cabling links and channels will be field-tested and pass the test requirements and analysis as described in Section 3.4. Any link or channel that fails these requirements will be diagnosed and corrected. Any corrective action that must take place will be documented and followed with a new test to prove that the corrected link or channel meets performance requirements. The final and passing result of the tests for all links and channels will be provided in the test results documentation in accordance with paragraph 3.4.C.1.
- C. Acceptance of the test results will be given in writing after the project is fully completed and tested in accordance with Contract Documents and to the satisfaction of the Commissioner.

1. Performance specification for MM fiber at 850 nm

2. Fiber Type		Bandwidth	1000BASE-SX		10GBASE-SR		40GBASE-SR4	
	μm	(MHz• Km)	Length (m)	Loss (dB)	Length (m)	Loss (dB)	Length (m)	Loss (dB)
OM1	62.5	200	275	2.38	33	2.5		2.4
OM2	50	500	550	3.56	82	2.3		2.2
OM3	50	1500		3.56	300	2.6	100	1.9
OM4	50	3500			400	2.9	150	1.5

3.7 REPAIR

- A. Any connections failing to meet referenced standards or more stringent performance requirements stated above, must be removed and replaced with connections that prove, in additional testing, to meet or exceed the performance standards set forth.

3.8 RE-INSTALLATION

- A. No additional burden to The City of New York regarding costs, network down-time and/or end user interruption will result from the re-installation of specified components. Scheduling for re-installation work will be coordinated, in writing, with the Commissioner prior to beginning the work.

3.9 CLOSEOUT ACTIVITIES

- A. Contractor to submit all test results and any test documentation required prior to acceptance by the Commissioner.
- B. Record copy and as-built drawings
- C. Provide record copy drawings periodically throughout the project as requested by the Commissioner at end of the project on CD-ROM, DVD or USB. Record copy drawings at the end of the project will be in CAD format and include notations reflecting the as built conditions of any additions to or variation from the drawings provided such as, but not limited to cable paths and termination point. CAD drawings are to incorporate test data imported from the test instruments.
- D. The as-built drawings will include, but are not limited to block diagrams, frame and cable labeling, cable termination points, equipment room layouts and frame installation details. The as-built will include all field changes made up to construction completion:
 - 1. Field directed changes to pull schedule.
 - 2. Field directed changes to cross connect and patching schedule.
 - 3. Backbone cable routing or location changes.
 - 4. Associated detail drawings.

END OF SECTION 270800

SECTION 271313 - COMMUNICATIONS BACKBONE CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. This section describes the components and practices to be used when installing backbone cabling.
- B. Section Includes:
 - 1. Pathways for tie cables
 - 2. Single mode Fiber Optic Backbone cable
 - 3. Copper cable connecting hardware, patch panels, and cross-connects.
 - 4. Cable identification products
- C. Provide 12-Strand OS2 tie fiber cable and termination hardware, as shown on the drawings.

1.3 RELATED REQUIREMENTS:

- A. Division 07 Section 078413 "Penetration firestopping"
- B. Division 26 Section 260536 "Cable Trays for Electrical Systems"
- C. Division 26 Section 260553 "Identification for Electrical Systems"
- D. Division 26 Section 260526 "Grounding and Bonding for Electrical Systems"
- E. Division 26 Section 260529 "Hangers and Supports for Electrical Systems"
- F. Division 26 Section 260548 "Vibration and Seismic Controls for Electrical Systems"
- G. Division 26 Section 260533 "Raceway and Boxes for Electrical Systems"
- H. Division 27 Section 270500 "Common Work Results for Communications"
- I. Division 27 Section 270800 "Testing of Communications"
- J. Division 27 Section 271500 "Communications Horizontal Cabling"

1.4 DEFINITIONS

- A. Refer to Division 27 05 00 Section “Common Work Results for Communication”.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."
- B. Refer to Division 27 05 00 Section “Common Work Results for Communications”.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Refer to Division 27 05 00 Section “Common Work Results for Communication”.

1.7 PROJECT CONDITIONS

- A. Refer to Division 27 05 00 Section “Common Work Results for Communication”.

1.8 COORDINATION

- A. Refer to Division 27 05 00 Section “Common Work Results for Communication”.

PART 2 - PRODUCTS

2.1 BACKBONE SINGLE MODE FIBER OPTIC CABLE

A. Manufacturer's List:

1. Superior Essex
2. OCC
3. Corning
4. Or approved equal

B. Description:

1. Tight-buffered Multimode fiber optic cable with a plenum-rated outer jacket.
2. Total strand count as noted in drawings.
3. ISO/IEC 11801 – OM4 grade fiber optic cable.
4. Multimode Distribution Cable Elements. The Multimode Optical Fiber Cable shall as a minimum conform to the following specifications.

- 1) 50/125-micron multimode optical fiber cable (tolerances 50 +/-2 micron, 125 +/-2 micron) with glass core and cladding
 - 2) Graded refractive index profile
 - 3) Attenuation coefficient at 850 nm of 0.7 dB/km or less
 - 4) Attenuation coefficient at 1300 nm of 0.7 dB/km or less
 - 5) Serial 1 Gigabit Ethernet distance of 1000m at the 850 nm wavelength.
 - 6) Serial 10 Gigabit Ethernet distance of 550m at the 1300 nm wavelength
 - 7) Core non-circularity +/- 6% maximum
 - 8) Core/ cladding offset 3.0-micron maximum
 - 9) Numerical aperture 0.275 (+/- 0.015)
 - 10) Individual optical elements distinguishable at ends by color-coded buffered coatings conforming to ANSI/TIA 598-C - Color Coding of Fiber Optic Cables.
 - 11) Individual glass elements proof tested at 100 Kpsi (100,000 lbs. per square inch)
5. UL listed, Type OFNP, used for:
- a. Intrabuilding IDF, MDF data backbone cabling distribution
 - b. Manufacturer part Number:
 - 1) 12 Strand Single mode Fiber Optic: Superior Essex P/N: 12012KD0L.
 - 2) 12 Strand Single mode Fiber Optic P/N: OCC DX012TSLX9YP.
 - 3) 12 Strand Single mode Fiber Optic P/N: Corning 012EWP-T4101DA3
 - 4) Or approved equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 COMMON REQUIREMENTS FOR COMMUNICATIONS BACKBONE CABLING INSTALLATION

- A. Check actual site conditions prior to start of any work. Ensure all preceding trade work associated with the telecommunications system is accurate and complete before proceeding with installation or use of products specified in this section. Examples of work which must be checked include, but are not limited to:
1. Electrical requirements (conduit installation and capacity)
 2. Adequate clearances of doors, riser spaces and ceilings for all component of the telecommunications system.
 3. Examine and compare the telecommunications drawings and specifications with the drawings and specifications of other trades. Report any discrepancies between them to the Commissioner and obtain written instructions for changes or revisions.

3.3 OPTICAL FIBER CABLE

- A. Process:

1. Install all backbone cable per the manufacturer's recommended installation instructions, under the guidelines of TIA 568-C and BICSI, and in quantities indicated in the series drawings.
2. Install all cables with proper attention paid to bend radii, pulling method, attachment method, and pulling forces. The cable manufacturer's specifications for each particular cable type shall be followed exactly.
3. Backbone cable shall be visually inspected for insufficient bend radius during and after pulling. Damaged cables, or those installed under questionable methods and/or circumstances shall be replaced at no additional cost to the owner.
4. All cable shall be pulled using an appropriate measuring device to ensure that the specified force is not exceeded as noted in BICSI guidelines.
5. Install backbone cables with attention paid to aesthetic means and methods when routing cabling within IT spaces. No backbone cable shall be left unsupported for more than three (3) feet vertically or horizontally at any time.
6. All backbone cable shall be securely fastened to the termination shelf in a way that does not damage the optical fiber strands or impede the performance of the media. This secure fastening method shall also serve to insure a secure termination environment.
7. A minimum of three feet (3'-0") of each optical fiber strand shall be left protected within the termination shelf for any future re-termination of a particular optical fiber strand.
8. All backbone cables shall be clearly labeled on both ends and in an accessible location no more than one (1) foot from each cable end.

3.4 RE-INSTALLATION

- A. No additional burden to the City of New York regarding costs, network down-time and/or end user interruption will result from the re-installation of specified components. Scheduling for re-installation work will be coordinated, in writing, with the Commissioner prior to beginning the work.

3.5 CLOSEOUT ACTIVITIES

- A. Contractor will provide documentation of all telecommunications system components under this section utilized throughout the site for review and reference by the Commissioner.
- B. Contractor to submit all as-built drawings and any test documentation required prior to acceptance by the City of New York.

END OF SECTION 271313

SECTION 271500 - COMMUNICATIONS HORIZONTAL CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract “City of New York Standard Construction Contract”.

1.2 SUMMARY

- A. This section describes the components and practices to be used when installing horizontal cabling.
- B. Related sections:
 - 1. Section 260533 “Raceway and Boxes for Electrical Systems”
 - 2. Section 270500 “Common Work Results for Communications”
 - 3. Section 271500 “Communications Horizontal Cabling”
- C. Section Includes:
 - 1. Pathways for horizontal cables
 - 2. Horizontal copper cables
 - 3. Cable connecting hardware: connectors, patch panels, outlets
 - 4. Cable identification products
- D. Provide Category 6 and 6A UTP horizontal cabling system.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. List of submittals:
 - 1. Refer to Section 270500 “Common Work Results for Communications”.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following manufacturers:
 - 1. Panduit/General Cable
 - 2. Leviton/Berk-Tek
 - 3. Ortronics/Superior Essex
 - 4. Or approved equal

2.2 UNSHIELDED TWISTED PAIR (UTP) HORIZONTAL CABLES

- A. Category 6/6A, 100-ohm 4-pair UTP cables, blue jacket
- B. Electrical and transmission will meet or exceed:
 - 1. ISO/IEC 11801 Class Ea for electrical performance specifications.
 - 2. ANSI/TIA-568-C for performance specifications.
- C. Topology will comply with the requirements of TIA/EIA-568-C.1
- D. Listed and labeled by an NRTL acceptable to authorities having jurisdiction as complying with UL 444, UL 1651, and NFPA 70 for the following types:
 - 1. Plenum Rated, Conductive: Type CMP complying with NFPA 262 for cable runs in plenum spaces.
 - 2. Route cables above the finished ceiling to the exiting IT room located in the exiting building. Exact routing through the exiting building to be coordinated in the field.
- E. Provide Category 6A cables for the wireless access point outlets and category 6 cables for all other outlets.

2.3 UTP TERMINATION HARDWARE

- A. General Requirements for UTP Cable Connecting Hardware: Comply with TIA/EIA-568-B.2, IDC type, with modules designed for punch-down caps or tools. Cables will be terminated with connecting hardware of same category or higher.
- B. Mechanical and transmission for UTP hardware will meet or exceed:
 - 1. ICEA S-90-661 for mechanical properties.
 - 2. TIA/EIA-568-B.2 for performance specifications.
- C. 24/48-Port Category 6/6A UTP Patch Panels.
 - 1. 2U mountable in 19-inch rack.
 - 2. 100-ohm balanced four-pair, eight-position modular category 6A connector.

3. Cable management bar.
4. Patch panels to be installed in the exiting IT Room. Exact location will be coordinated with the Commissioner at the time of installation.

D. Connectors:

1. 100-ohm, balanced, twisted-pair connector; four-pair, eight-position modular, Category 6/6A.
2. Provide blue connectors for voice, yellow for voice and white for spare connectors.
3. Colors for WAPs, cameras, security and AV connector to be coordinated with the Commissioner.

2.4 WORK AREA OUTLETS

A. Connectors:

1. 100-ohm, balanced, twisted-pair connector; four-pair, eight-position modular, category 6/6A.
2. Mechanical and transmission will meet or exceed:
 - a. ICEA S-90-661 for mechanical properties.
 - b. TIA/EIA-568-B.2 for performance specifications.
 - c. Connector colors to match the color to match the color of the faceplate they are mounted in. Colors and finishes to be approved by Commissioner via submittals.
3. Provide color coded icons for each connector.
4. Colors will be approved via submittals.

B. Faceplates

1. Wall phone, 2-port faceplates, furniture bezels and surface boxes for use with snap-in jacks accommodating any combination of UTP work area cords. Refer to detail drawings for configurations.
2. Colors to be approved from full range of colors by Commissioner via submittals.
3. Single gang blank faceplate for use with the F-Type connectors.
4. Metal Faceplate: Stainless steel, complying with requirements in Division 26 Section 262726 "Wiring Devices."
 - a. Steel wall phone faceplate with studs.
5. Plastic faceplate: High-impact plastic. Coordinate colors Commissioner and with Division 26 Section 262726 "Wiring Devices."
6. Exact faceplates for floor mounted outlets to be coordinated.

C. Coordinate exact outlet location and mounting with Commissioner and the other trades, at the time of installation.

D. Camera and WAP outlets may require direct connects (field terminated male connector) for some locations.

E. Color and finishes of the faceplates and connectors will be approved via submittals.

- F. Provide blank insert, dust covers and color-coded inserts. Specific colors for color coded inserts to be coordinated with the Commissioner before ordering.
- G. Factory labeled by silk-screening or engraving for stainless steel faceplates.
- H. Machine printed, in the field, using adhesive-tape label.
- I. Snap-in, clear-label covers and machine-printed paper inserts.

2.5 PATHWAYS

- A. Refer to Section 270500 “Common Work results for Communications”.

2.6 GROUNDING AND BONDING

- A. Refer to Section 270500 “Common Work results for Communications”.

2.7 IDENTIFICATION

- A. Refer to Section 270500 “Common Work results for Communications”.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL EXECUTION INSTRUCTIONS

- A. All materials will be installed as per the manufacturers’ instructions, unless noted otherwise.
- B. Comply with NECA 1.
- C. Comply with BICSI TDMM for installation and testing of communications horizontal cabling.
- D. All work will be performed in a professional manner.
- E. Install cable after interior of building has been physically protected from the weather and as much mechanical work that is likely to damage cabling as possible has been completed without impacting the overall schedule.
- F. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters.
- G. Conceal raceways and cables except in unfinished spaces.

- H. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.
- I. Terminate conductors; no cable will contain un-terminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
- J. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches (760 mm) and not more than 6 inches (150 mm) from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
- K. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
- L. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
- M. Cold-Weather Installation: Bring cable to room temperature before de-reeling. Heat lamps will not be used for heating.
- N. In the communications equipment room, install a 10-foot- (3-m-) long service loop neatly coiled.
- O. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
- P. All UTP cables, links, and their termination hardware must comply with the applicable specifications included in the most current versions of the ANSI/TIA 568-C.0, 568-C.1 and 568-B.2 standards and its relevant addenda (including 568-B.2-1 and 568-B.2-10), as well as their referenced and associated documents unless otherwise noted in this specification. Termination practices must follow manufacturers' guidelines and the requirements of these standards. Any discrepancies must be brought to the attention of the Commissioner prior to termination for resolution.
- Q. Unless otherwise noted, optical fiber cables, links, and components must comply with ANSI/TIA 568-C.0, ANSI/TIA 568-C.1, and ANSI/TIA 658-C.3 requirements.
- R. Surface mounted communications outlet boxes must be securely fastened so that they will not come loose over time. Use of double backed adhesive tape or Velcro is not acceptable.
- S. All exposed cabling entering or exiting modular furniture and tables will be protected with spiral wrap, flexible conduit or similar.
- T. All metallic communications cables must be listed and marked as per Article 800 of the NEC (NFPA 70). All fiber optic cables must be listed and marked as per Article 770 of the NEC (NFPA 70) Listings of cables employed on the project (e.g., CMP, CMR, OFNP, OFNR, etc.) must be in accordance with the requirements of this specification and its associated documents.
- U. In situations where there is a high density of cabling in racks, the contractor must utilize techniques, and if necessary, provide additional support structures in addition to the specified racks and cable trays, to be sure that cable support, routing, and termination are properly performed

- V. Any cable damaged or exceeding recommended installation parameters during installation or testing will be replaced by the contractor prior to final acceptance at no cost to The City of New York.

3.3 HORIZONTAL CABLING INSTALLATION

A. General Requirements for Cabling:

1. Comply with TIA/EIA-568-B.1.
2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices".
3. Terminate all conductors; no cable will contain un-terminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, racks, frames, and terminals.
5. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
6. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
7. Install service loop on each end of cable, as required. Provide minimum 10-foot loop at the telecom room end and 10-foot loop at the outlet end (coiled in the ceiling above outlet location), unless cables exceed maximum length.
8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

B. UTP Cable Installation

1. Comply with TIA/EIA-568-B.2.
2. Do not untwist UTP cables more than 1/2 inch from the point of termination to maintain cable geometry.
3. Cables will be dressed and terminated in accordance with manufacturer's recommendations and best industry practices, such as those in the BICSI TDMM manuals and the NECA/BICSI 568-2006 standard.
4. All 4 pair cables will be terminated on the jack and patch panels using T568-B wiring scheme.
5. For Category rated 4-pair UTP cables (i.e., recognized under the TIA 568-standards), pair untwist at the termination will not exceed 12 mm (0.5 inch).
6. For Category rated 4-pair UTP cables (i.e., recognized under the TIA 568-standards), the cable jacket will be maintained as close as possible to the termination point. Not more than 1.0" of cable jacket will be removed.
7. Cables will be neatly bundled and dressed to their respective patch panels or wiring blocks. Each panel or block will be fed by an individual bundle separated and dressed back to the point of cable entrance into the rack or frame. Cable bundles must be neat, but should not be perfectly groomed to avoid potential "alien crosstalk" problems.
8. When terminating to patch panels, 4-pair cables must be routed from both sides of racks and cabinets to their termination points on a given patch panel, rather than being run to the panel from a single direction.
9. Cable minimum bend radius limit and maximum pulling tension limit will not be violated. Bend radius limit for 4-pair UTP = 4 X Cable OD. Pulling tension on 4-pair UTP cables will not exceed 25-lbf.

10. In office environments, UTP cable runs must provide for ten feet of slack above the ceiling at the telecom outlet end and fifteen feet in the Telecom Room unless otherwise specified or unless the total cable length exceeds 295 feet. Slack must be stored neatly and safely as appropriate to the location. Wherever practical, slack must be in an extended loop or in a figure eight shape rather than in a circular loop, and attention to bend radius must be taken into account.
 11. Where possible, fiber cables and copper cables running in the same cable tray must be kept separated. In situations where they have to run together, or where they must cross each other, the fiber cables must be on top.
 12. Suitable coverings must protect station jacks and faceplates until work is completed in the areas, they are situated in. Locations with terminated jacks prior to installation in faceplates must have the jacks protected in a suitable covering and stored in a manner that minimizes the possibility of damage to the jacks as well as to the cables terminated on them.
 13. Cables will be dressed and terminated in accordance with manufacturer's recommendations and best industry practices, such as those in the BICSI TDMM manuals and the NECA/BICSI 568-2006 standard.
 14. All 4 pair cables will be terminated on the jack and patch panels using T568-B wiring scheme.
 15. Cables will be neatly bundled and dressed to their respective patch panels or wiring blocks. Each panel or block will be fed by an individual bundle separated and dressed back to the point of cable entrance into the rack or frame. Cable bundles must be neat but should not be perfectly groomed to avoid potential "alien crosstalk" problems.
- C. Open-Cable Installation:
1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
 2. Suspend UTP cable not in a pathway, a minimum of 8 inches above ceilings by cable supports not more than 60 inches apart.
- D. Cable will not be run through structural members or in contact with pipes, ducts, or other potentially damaging items
1. Comply with BICSI TDMM and TIA-569-B recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
 2. Provide the following minimum separation distances between pathways for copper communications cables and power wiring.
 - a. For branch circuits of 5 kVA or less, a minimum physical separation of (2.5 in) between the communications cabling and power cabling is required. When power or communications cable, or both, are in enclosed grounded metal pathway (i.e. conduit), if it is not possible to keep the minimum separation distance for certain segments of the pathways, then the separation for those segments may be less if approved by the Commissioner prior to installation.
 - b. Minimum separation from possible sources of electromagnetic interference exceeding 5kVA will be as follows:
- E. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-B recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Provide the following minimum separation distances between pathways for copper communications cables and power wiring.
 - a. For branch circuits of 5 kVA or less, a minimum physical separation of (2.5 in) between the communications cabling and power cabling is required. When power or communications cable, or both, are in enclosed grounded metal pathway (i.e. conduit), if it is not possible to keep the minimum separation distance for certain segments of the pathways, then the separation for those segments may be less if approved by the Commissioner prior to installation.
 - b. A minimum clearance of 5" from fluorescent fixtures must be maintained.
 - c. Minimum separation from possible sources of electromagnetic interference exceeding 5kVA will be as follows:

Condition	Minimum Separation
1) Unshielded power lines or electrical equipment in proximity to open or non-metal communications cabling pathways	24" 12"
2) Unshielded power lines or electrical equipment in proximity to a grounded fully enclosed metal communications cabling pathway	
3) Power lines enclosed in a grounded metal conduit (or equivalent shielding) in proximity to a grounded fully enclosed metal communications cabling pathway	6"
4) Electrical motors or transformers	47"

3.4 PATHWAYS AND SUPPORT INSTALLATION

- A. Refer to Section 270500 “Common Work results for Communications”.
- B. Certain cable pathways might be provided by other trades. Notify the Commissioner in writing of any pathway that is not provided.
- C. Before installing cabling inspect all pathways installed by others including but not limited to conduit, cable trays and innerduct and promptly report any problems to the Commissioner.
- D. Cable support hardware and its placement, tie wrapping practices, etc. must not degrade the physical, electrical, or optical characteristic of any of the installed cable types. Plenum spaces require plenum rated cable ties.
- E. Velcro cable ties may be used in lieu of plastic cable ties.

- F. Provide abrasion protection for any cable or wire bundles which pass through holes or across edges of sheet metal or punched metal studs.
- G. Suspended cable runs (e.g. ceiling) must be supported at least every five (5) feet. Cable bundle size and weight must be well within the support manufacturer's specifications, and the support must be suited to the type of cable it is being used with. Suspended cable bundles must be tie wrapped at least every four (4) feet, but the ties must not be so tight as to crimp or deform the cable sheath. The distances between supports, between ties, or between supports and ties need not be exactly uniform, but for UTP copper cables, must exhibit some randomness to avoid potential electrical problems that can arise from a periodic cable deformation.
- H. Where possible, route cables in overhead cable trays and inside wire management systems attached to the equipment cabinets and racks. Use Velcro ties or ducts to restrain cabling installed outside of wire management systems on racks or in cabinets.
- I. Cable pathways will not be filled greater than the maximum fill for the particular raceway or cable tray type as per relevant sections of the applicable version of the National Electrical Code (NFPA-70) and the TIA-569-B standard.
- J. A pull cord (nylon; 1/8" minimum) will be co-installed with all cable installed in any conduit, where none exists and where it is practical to do so.
- K. Cable, cable trays and support will be installed above fire-sprinkler systems and will not be attached to the sprinkler system or any ancillary equipment or hardware. The cable system and support hardware will be installed so that it does not obscure any valves, fire alarm conduit, boxes, or other control devices.
- L. Cables must not be laid on top of, or fastened to, such items as lighting fixtures, electrical machinery, ceiling grid, ceiling tiles, HVAC ducts, removable ceiling supports, conduits, sprinkler pipes, or other distribution pipes, but must be properly and independently supported above the ceiling as required by codes, standards, and good industry practice. The contractor will install appropriate carriers to support the cabling. Steel, masonry, independent rods, independent support wires or other structural parts of the building will be used for cable support attachment points up to the total weight for which the fastener is approved. Rods or wires that are employed for other functions (e.g. suspended ceiling grid support) will not be utilized as attachment points.
- M. UTP copper cables must be kept away from lighting fixtures, parallel runs of electrical cables and electrical conduits, and other potential sources of interference.
- N. Cables run in the ceiling must be as high up as practical to avoid other services, but in no event lower than 3" above the ceiling grid, and in no case must they interfere with other services or the ability to lift, remove, or replace ceiling tiles.
- O. All cables must follow prescribed pathways.
- P. In areas with raised floors, cables must be supported and kept off the under floor.
- Q. Any cables that penetrate raised floor must be protected with split loom tubing or bushings.

- R. Cables routed from floor or column in-feeds to system furniture raceway will be protected with spiral wrap, flexible plastic innerduct or similar means.

3.5 FIRESTOPPING INSTALLATION

- A. Refer to Section 270500 “Common Work results for Communications”.

3.6 IDENTIFICATION FOR COMMUNICATIONS SYSTEMS

- A. Refer to Section 270500 "Common Work results for Communications".
- B. All horizontal cables will be labeled at both ends prior to termination. The labels should be typed or produced with a labeling making device and not handwritten. Labels will be installed between 6" and 12" from the cable termination point and placed in a visible location. In the telecom rooms, labels will be placed between the cable bundle and the termination hardware. Cable IDs will be visible and readable after cable installation is completed. If the cable is re-terminated resulting in the above condition not being met, a new label will be generated and installed.
- C. When the cable terminates within an enclosed housing, e.g., in a fiber patch cabinet, the cable must be labeled within 6"-12" of entering the termination housing.
- D. All permanent labels must be durable and legible and suited for long term use in the environments in which they will be located. Labels must be machine created. Handwritten labels are unacceptable unless approved in writing by the Commissioner.
- E. All cables, patch panels, punch down blocks, and other items specifically identified by the Commissioner must be fully labeled. The requirements of the ANSI/TIA/EIA-606-A standard, subject to the Commissioner’s approval, must be followed for items required to be labeled that are not addressed in detail by the contract documents.
- F. Cabling must be labeled within 12 inches of entry/exit of wall or floor penetrations or entry/exit into conduits that penetrate walls or floors. Depending on the length of the run, intermediate cable labels may be needed on open pathway cabling as well as on raceways and cable trays. Refer to construction documents for detail on labeling placement.
- G. Ensure all labeling is included in the same manner as it was shown in the construction drawings and is accurate.
- H. Labeling scheme for all communications systems is subject to prior approval by the Commissioner.

3.7 SOURCE QUALITY CONTROL

- A. Upon receipt of the cable shipment at the project site, the Contractor will be responsible for inspecting and testing the cables on the reels to verify and validate the manufacturer's factory testing certifications.
- B. Factory test copper cables on reels according to TIA/EIA-568-B.1.

- C. Factory test UTP cables according to TIA/EIA-568-B.2.
- D. Cable will be considered defective if it does not pass tests and inspections.
- E. Prepare and submit test and inspection reports.
- F. The contractor will accept all cables meeting the manufacturer's factory testing certifications and be held responsible for their performance thereafter.

3.8 FIELD QUALITY CONTROL

- A. All testing of all equipment and cables will be performed by a testing crew and foreman not previously involved in any way or form in this project.
- B. Cable tests will be performed utilizing the procedures documented herein on 100% of all installed cabling.
- C. All testing procedures will be performed in accordance with the manufacturers' recommended testing guidelines and the procedures specified herein. All cables will be tested in accordance with this document, the ANSI/TIA/EIA standards, and best industry practice. If any of these are in conflict, the Contractor will bring any discrepancies to the attention of the Commissioner for clarification and resolution.
- D. The Commissioner will have the right to inspect and monitor any or all of the field tests. Provide minimum of one week notice before testing commences.
- E. The Commissioner will have the right to request the contractor's testing crew to perform a 10% random testing to confirm and verify all testing results submitted.
- F. This 10% testing will be performed in the presence of the Commissioner. This request will be given to the with two days prior notice and will be performed at no additional cost to The City of New York.
- G. Tests and Inspections:
 - 1. Visually inspect cable jacket materials for NRTL certification markings. Inspect cabling terminations in the Telecommunications room for compliance with color-coding for pin assignments and inspect cabling connections for compliance with TIA/EIA-568-B.1.
 - 2. Visually confirm cable performance/category, marking of outlets, cover plates, outlet/connectors, and patch panels.
 - 3. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
 - 4. Test all UTP copper cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.
 - 5. Test instruments will meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

6. Perform Category 6 Permanent Link Test for all cables. In addition, test all the interconnect cables between the LAN switches and the interconnect field patch panels.

H. Procedures:

1. Test results and remediation will be required prior to move-in and may be requested prior to Telecom Room ready or customer patching. The following testing schedule should be completed by the contractor and submitted to the Commissioner at project commencement.

Infrastructure Type	Date
Backbone Cabling	No later than 3 weeks before move-in
Horizontal Cabling (not including modular furniture)	No later than 2 weeks before move-in
Horizontal Cabling (only modular furniture)	No later than 1.5 weeks before move-in

2. No asterisk (*) test results will be accepted. These results will be retested and submitted after a PASS is received. All cables and termination hardware will be 100% tested for defects in installation and to verify cabling system performance under installed conditions according to the requirements of ANSI/TIA/EIA-568-B.2 and 568-C.0. Any defect in the cabling system installation including but not limited to cable, connectors, patch panels, and connector blocks will be repaired or replaced in order to ensure 100% useable conductors in all cables installed.
3. All cables will be tested in accordance with this document, the ANSI/TIA/EIA standards, and best industry practice. If any of these are in conflict, the Contractor will bring any discrepancies to the attention of the Commissioner for clarification and resolution.
4. Cables, jacks, connecting blocks, and patch panels will be tested when in their final locations.
5. Labeling must be completed prior to testing to ensure that mislabeled outlets are identified during the testing process.
6. The Commissioner reserves the right to observe testing.
7. All tests must be performed by technicians with training in the methods that will be employed. The technicians must have field experience with the instruments that will be used for testing.
8. Test equipment must be in good working order and must have been calibrated within the time specified by the manufacturer and to specified accuracy.
9. Where applicable, the testing instrument must utilize an appropriate test head.
10. Identify the manufacturer and model of all test equipment to be used, and supply specifications if requested to do so by the Commissioner. The Commissioner reserves the right to reject the use of any equipment it deems inadequate.
11. Adapter cables and other accessories associated with test equipment must be of high quality and must not be degraded from use or improper storage.
12. Pass/Fail criteria for all UTP and optical fiber link tests must be based upon the limits contained in this specification, or if not stated, then upon the applicable portions of the ANSI/TIA 568-C and 568B.2 (and relevant addenda) group of standards cited in this specification covering the measured parameters for Cat 6A, CAT 6, CAT 5e, CAT 3 and optical fiber cables.
13. Links failing any test must be fixed and fully re-tested.

I. Unshielded Twisted Pair cable (4-pair) testing

1. Horizontal cabling will be tested using an instrument certified compliant to ANSI/TIA/EIA-568-B.2-10 Level IV for Cat 6A; ANSI/TIA/EIA-568-B.2-1 Level IV for Cat 6A; and ANSI/TIA/EIA-568-B.2 Level IIe for Cat 5e and Cat 3.

2. UTP link parameters must be tested against their respective "Permanent Link" specification limits defined in the most current versions of the ANSI/TIA-568-C.0 and ANSI/TIA/EIA-568-B.2 standards and their relevant addenda including 568-B.2-1 and 568-B.2-10.
3. The following parameters must be included for all cable Categories:
 - a. Wire Map (continuity, shorts, reversed pairs, split pairs, transposed pairs)
 - b. Insertion Loss (each pair)
 - c. Length (each pair)
 - d. Propagation Delay (each pair)
 - e. Delay Skew (worst case)
 - f. NEXT (pair to pair) from each end of the link
4. Additionally, the following parameters must be included for Cat 5e, Cat 6 and Cat 6A testing:
 - a. PSNEXT (each pair) from each end of the link
 - b. ACRF (pair to pair) from each end of the link
 - c. ACRN (pair to pair) from each end of the link
 - d. PSACRF (pair to all other pairs) from each end of the link
 - e. PSACRN (pair to all other pairs) from each end of the link
 - f. Return Loss (each pair) from each end of the link
5. Category 6 and Category 6A links might be required to be tested for alien crosstalk parameters. If so, the conditions of test (e.g., the percentage of installed cables to test, which will be the victim and which the disturber cables) will be specified elsewhere, and the following parameters will have to be included:
 6. PSANEXT from each end of the link
 7. PSAACRF from each end of the link
 8. The test instrument must be set for the correct Nominal Velocity of Propagation (NVP) of the specific Cat 6A, Cat 6, Cat 5e or Cat 3 cable being tested and not for a generic cable of the respective category.
 9. Any failed test results that cannot be remedied through re-termination must be reported in writing to the Commissioner immediately, along with a copy of the test results.

J. Test Results

1. Document data for each measurement. Data for submittals will be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.
2. Test results must be recorded in the memory of the field test instrument (except for fiber length if this is derived from cable jacket markers) and then be transferred unaltered to a Windows PC using the recommended software from the manufacturer to output the test results into the formats detailed below.
3. Test results must be returned to the Commissioner in the following formats:

For cable testers	. flw and .pdf
Other cable testers	.sdf or .mdb and .pdf
Printed copies	Two binders containing full test results for each cable

4. For UTP Permanent Links, all the parameters listed in this specification under the "Unshielded Twisted Pair cable (4-pair) testing" section must be included in the test results database and in the printed copy. The Nominal Velocity of Propagation (NVP) set in the test instrument for these measurements must be included as well.
5. Fiber optic links must show the measured attenuation values, as well as the limits against which they have been tested, and the link length in the database and in the printed copy.
6. As part of the testing documentation package the following information must also be included: date(s) of test, name(s) of test personnel, identification of field test instrument used to include manufacturer, model and serial number, and date of most recent calibration of the test instrument.
7. Required UTP and fiber test results must be sent to the manufacturer in a timely manner so that they can validate the results.

K. Close-Out Documentation

1. As-Built Drawings
 - a. These drawings must document all changes from the construction drawings
 - b. These drawings must add the routes of all backbone cables, backbone cable pathways and station cable trunks
2. Cable test result required.
3. Copy of form submitted to obtain warranties (min 15 years) for the horizontal and backbone systems.

END OF SECTION 271500

SECTION 280500 - COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Work Included:

1. Provide labor, materials, and equipment necessary to complete the work of this Section, including but not limited to the following:
 - a. Grounding and bonding for Electronic Safety and Security (ESS).
 - b. Pathways for ESS.
 - c. Lightning and Surge Protection for ESS.
 - d. Vibration and Seismic Controls for ESS.
 - e. Equipment Enclosures for ESS.
 - f. Electronic Components for ESS.
 - g. Exposed Components.
 - h. Cables for ESS.
 - i. Identification for ESS.
 - j. Electronic Safety and Security (ESS) equipment coordination and installation.
2. The Electronic Security Systems (ESS) will include, but not be limited to the following:
 - a. Security Management System (SMS) consisting of unified Access Control and video surveillance management.
 - b. Intrusion Detection System (IDS)
 - c. Associated cabling, enclosures, and uninterruptible power supplies.

1.3 RELATED SECTIONS

- A. Division 08 Section 087100 "Door Hardware"
- B. Division 26 Section 260536 "Cable Trays for Electrical Systems"
- C. Division 26 Section 260553" Identification for Electrical Systems"
- D. Division 26 Section 260526" Grounding and Bonding for Electrical Systems"
- E. Division 26 Section 260529" Hangers and Supports for Electrical Systems"

- F. Division 26 Section 260548" Vibration and Seismic Controls for Electrical Systems
- G. Division 26 Section 260533" Raceway and Boxes for Electrical Systems"
- H. Division 27 Section 271500" Communications Horizontal Cabling"

1.4 STANDARDS AND CODES

- A. Ensure that the design and fabrication of the equipment is in accordance with applicable codes and standards. When specific requirements are stated in this Section that exceed and/or overlap those requirements of the codes and standards referenced here, this Section will govern.
- B. Provide a complete fully operational turnkey security system as specified within these documents.
- C. The publications listed below form a part of this Specification to the extent referenced. The publications are referred to in the text by the basic designation only. The most current version of the following standards will be referenced.
 - 1. American National Standards Institute (ANSI) Publications:
 - a. National Electrical Safety Code
 - 2. American Society for Testing and Materials (ASTM) Publications:
 - a. Standard Practice for Security Engineering Symbols
 - 3. National Fire Protection Association (NFPA) Publications:
 - a. National Electrical Code
 - b. Guide for Premises Security
 - c. Standard for the Installation of Premises Security Systems
 - d. Life Safety Code
 - e. Code for Means of Egress for Buildings and Structures
 - 4. National Electrical Manufacturers Association (NEMA) Publications:
 - a. Industrial Control Devices and Assemblies.
 - b. Enclosures for Industrial Controls and Systems
 - c. Enclosures for Industrial Controls and Systems
 - d. Enclosures for Electrical Equipment
 - 5. Telecommunications Industry Association/Electronic Industries Alliance
 - a. ANSI/TIA-568.0-D, Generic Telecommunications Cabling for Customer Premises
 - b. ANSI/TIA-568.1-D, Commercial Building Telecommunications Cabling Standard
 - c. ANSI/TIA-568-C.2, Balanced Twisted-Pair Telecommunication Cabling and Components Standard
 - d. ANSI/TIA-568.3-D, Optical Fiber Cabling And Components Standard, Ed. D

- e. ANSI/TIA-568-C.4, Broadband Coaxial Cabling and Components Standard, Ed
- 6. Underwriters Laboratories, Inc., Standard for Safety:
 - a. UL 5 Surface Metal Raceways and Fittings
 - b. UL 6 Rigid Metal Conduit
 - c. UL 50 Cabinets and Boxes
 - d. UL 65 Electric Wired Cabinets
 - e. UL 83 Thermoplastic-Insulated Wires
 - f. UL 96 Lightning Protection Components
 - g. UL 193 Fuses
 - h. UL 294 Access Control System Units
 - i. UL 437 Key Locks
 - j. UL 444 Communication Cables
 - k. UL 486A/B Wire Connectors and Soldering Lugs
 - l. UL 493 Thermoplastic-Insulated Underground Feeder and Branch Circuit Cables
 - m. UL 497B - Protectors for Data Communication and Fire Alarm Circuits
 - n. UL 512 Fuse Holders
 - o. UL 514B Boxes, Fittings for Conduit and Outlets
 - p. UL 603 Power Supplies For Use With Burglar-Alarm Systems
 - q. UL 609 Local Burglar Alarm Units and Systems
 - r. UL 611 Central-Station Burglar-Alarm Systems
 - s. UL 632 Electrically Actuated Transmitters
 - t. UL 634 Connectors and Switches For Use With Burglar Alarms Systems
 - u. UL 639 Intrusion Detection Units
 - v. UL 651 Conduit, Schedule 40' and 80' Rigid PVC
 - w. UL 796 Electrical Printed Wiring Boards
 - x. UL 797 Electrical Metallic Tubing
 - y. UL 827 Central Stations For Watchman, Fire-Alarm, and Supervisory Services
 - z. UL 1037 Anti-theft Alarms and Devices
 - aa. UL 1076 Proprietary Burglar Alarm Units and Systems
 - bb. UL 1773 Boxes, Termination
- 7. Nothing in this Section, including revocation of certain specific codes, standards, or specifications, will relieve the Security Subcontractor of the responsibility for compliance with the codes, standards or specifications which are generally recognized to be applicable to the Work specified herein.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions section 013300 "Submittal Procedures."
- B. If processing time for a particular submittal will be critical to progress of the work, advise and notify the Commissioner accordingly. Submit for approval, details of all materials, equipment, and systems to be furnished. Work shall not proceed without approval of the submitted items.
- C. General Description and Requirements:
 - 1. Submit pre-fabrication submittals in accordance with the construction schedule.

2. Pre-fabrication submittals shall consist of product data, Shop Drawings, samples, and a detailed completion schedule. Partial submittals will not be accepted without prior written approval.
 3. No portion of the Work shall commence, nor shall any equipment be procured until approval of the pre-fabrication submittals has been given in writing.
 4. A letter of transmittal identifying the name of the Project, Contractor's name, and date submitted for review shall accompany pre-fabrication submittals along with a list of items transmitted.
- D. Product data required as part of the pre-fabrication submittal shall include the following:
1. Equipment schedules listing all system components, manufacturer, model number and the quantity of each
 2. General functional descriptions for each system
 3. Manufacturer's data specification sheets for all system components, including any guaranteed information (sheets containing more than one device or component model number shall be clearly marked to delineate items included in the Work)
 4. A complete list of cable and wiring types, sizes, manufacturer, and model number
 5. A complete list of finishes and sample graphics, including custom artwork and custom graphics (if applicable)
 6. List of parts inventory to provide manufacturer recommended service and maintenance of the Work.
- E. Shop Drawings shall include the following:
1. Floor plan drawings indicating device locations with device legends
 2. System riser diagram with all devices, wire runs, and wire designations
 3. Schematic block diagrams for each system showing all equipment, interconnects, data flow, etc.
 4. Wiring diagrams for each subsystem defining the interconnection of all inputs and outputs for all equipment
 5. Wiring diagram for fail-safe release of electric locking mechanical
 6. Fabrication Shop Drawings for all custom equipment (if applicable)
 7. Plans and elevations of the security console(s) and equipment racks quantifying all equipment to be mounted therein
 8. Elevations of security closet layouts showing panel locations, power supply locations, conduit, wire ways, wire molds, and all other equipment
 9. Submit samples of any equipment components upon request.
 10. Samples submitted shall be the latest version of equipment.
 11. It is the responsibility of the Contractor to confirm all dimensions, quantities, and the coordination of materials and products supplied by the Contractor with other trades. Approval of Shop Drawings containing errors does not relieve the Contractor from making corrections at their expense.
 12. Submittals for individual systems and equipment assemblies that consist of more than one item or component shall be made for the system or assembly as a whole. Partial submittals will not be considered, reviewed, or stored and such submittals will not be approved.
 13. Shop Drawings shall include equipment racks, patch panels, termination blocks, connection details, rack mounting details, and any other details not included in the Construction Drawings.
- F. Any materials and equipment listed that are not in accordance with Specification's requirements may be rejected.

- G. The approval of material, equipment, systems, and Shop Drawings is a general approval subject to the Drawings, Specifications, and verification of all measurements at the job. Approval does not relieve the responsibility of shop drawing errors. Carefully check and correct all Shop Drawings prior to submission for approval.

1.6 INSTRUCTING

- A. Upon completion of the installation, provide on-site instruction in the complete operation of the system.
- B. Engage factory-authorized service representatives to instruct the City of New York's maintenance personnel to adjust, operate, and maintain security access systems.
- C. The following establishes basic and minimum instruction requirements: Provide technical services and materials to instruct operators, maintenance persons, and programmers/database set-up personnel to operate, maintain and program the system.
- D. Provide minimum four (4) hours onsite instruction for the video surveillance and four (4) hours of onsite instruction access control system which will include instruction in the proper installation and programming of all related hardware and software and include instruction of the department end-user.
- E. Instruction will include:
 - 1. Instruct a minimum of two (2) operators and two (2) maintenance personnel. The instruction will be provided by a competent factory instructed Engineer or professional instructor (that has completed manufacturer's instructing) representing the Security Subcontractor. Self-study or self-paced courses are not acceptable. All instruction courses will be led by a qualified instructor.
 - 2. Provide each operator with complete, printed operating instructions and a brief sub system description in manual or handbook form. Instruction manuals will be delivered for each student with two additional copies delivered for archiving at the project site. The manuals will include an agenda, defined objectives for each lesson, and a detailed description of the subject matter for each lesson.
 - 3. The operators will be instructed in preventative maintenance of equipment.
 - 4. Certification of successful operators will be provided upon the completion of instructing.
- F. Where the portions of the course are presented by audio-visual material, copies of the audio-visual material will be delivered to the Commissioner either as a part of the printed instruction manuals or on the same media as that used during the instruction sessions.
- G. Approval of the planned instruction schedule will be obtained from the Commissioner at least 10 days prior to the instructing.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Unless otherwise specifically noted, all equipment, material, and articles to be installed will be new, best of their respective kinds, free from defects, listed by Underwriter's Laboratories for the intended use, bearing their label and of the most suitable grade for the purpose intended.

- C. Non-compliant products installed as a part of this Section will be removed and replaced and all costs for removal and replacement will be borne solely by the Contractor.
- D. Unless otherwise specifically noted, reference to any equipment, material, article, or patented process, by trade name, make or catalog number will be regarded as establishing a standard of performance and quality. Provide the name of the manufacturer, the model number and other identifying data and information respecting the performance, capacity, nature, and rating of the electrical, mechanical, and other equipment that the Contractor will incorporate in the work.
- E. When so directed, samples will be submitted for approval at no cost to the City of New York. Equipment, material, and articles procured, installed, or used without required approval will be at the risk of subsequent rejection.
- F. The services of a qualified manufacturer's technical representative, thoroughly experienced in the installation and operation of the type of system being provided will be obtained by the Security Subcontractor, at no cost to the City of New York, to consult on equipment selection, installation, and testing of the specified systems if and as requested by the Commissioner.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- H. Grounding: Comply with ANSI-J-STD-607-A.
- I. Modularity: Provide components designed for modular increase or decrease of system capability by installation or removal of plug-in modules. System components will be designed to facilitate modular subassembly and part replacement.
- J. Reliability: Provide only new, unused components free from flaws or imperfections, which are in current manufacturing production. Components will be manufactured to meet all the requirements specified herein and will be free from characteristics or defects which affect the appearance, or which might affect the serviceability or render the equipment unsuitable for the intended purpose. The workmanship will be of superior quality. The MTBF for any sensor component will not be less than five thousand (5000) hours. Provide components designed for continuous operation. Electronic components of the system will be of the solid-state type, mounted on printed circuit boards conforming to UL seven-hundred-ninety-six (UL-796). Boards will be plug-in, quick-disconnect type. Circuitry will not be so densely placed as to impede maintenance. Power-dissipating components will incorporate safety margins of not less than twenty-five (25) percent with respect to dissipation ratings, maximum voltages, and current-carrying capacity. Light duty relays and similar switching devices will be solid-state type or hermetically sealed electro-mechanical type.
- K. Maintainability: The components will be capable of being maintained using commercially available standard tools and equipment. Components will be so arranged and assembled that they are readily accessible to maintenance personnel without compromising the defeat resistance of the various ESS subsystems.
- L. Availability: Provide products and services available within the project schedule established for this scope of work.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Comply with the requirements of the Construction Indoor Air Quality Management Plan and the Construction Waste Management Plan.
- B. Deliver materials in original packaging, bearing brand name and identification of manufacturer or supplier.
- C. Store materials to keep them dry and protected from soiling, dirt, or damage. Neatly stack gypsum boards flat to prevent sagging.
- D. Handle gypsum boards to prevent damage to edges, ends, or surfaces. Protect trim accessories from being bent or damaged.

1.9 PROJECT CONDITIONS

- A. Waste Management: Comply with the requirements of the Construction Waste Management Plan.
- B. Environmental Limitations: Do not deliver or install equipment frames and cable trays until spaces are enclosed and weather tight, wet work in spaces is complete and dry, and work above ceilings is complete.

1.10 COORDINATION

- A. Coordinate schedule, site access and other administrative and general items with the Commissioner.
- B. Coordinate layout and installation of security equipment in the telecommunications rooms, copper and/or fiber backbone and LAN requirements with the Commissioner and the Structured Cabling System (SCS) installer.
- C. Meet with Commissioner to exchange information and agree on details of equipment arrangements and installation interfaces.
- D. Record agreements reached in meetings and distribute them to other participants.
- E. Coordinate location of power raceways and receptacles with locations of security equipment requiring electrical power to operate.
- F. Coordinate arrangement, mounting, and support of electronic safety and security equipment:
 - 1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
 - 2. To provide for ease of disconnecting the equipment with minimum interference to other installations. To allow right of way for piping and conduit installed at required slope.
 - 3. So, connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.
- G. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

- H. Coordinate location of access panels and doors for electronic safety and security items that are behind finished surfaces or otherwise concealed.
- I. Coordinate sleeve selection and application with selection and application of firestopping specified in the Electrical Section.
- J. Coordinate routing of the security cables with the other trades.
- K. Coordinate credential and reader selection with the building security to ensure that the same credentials can be used for both building access and AIP Publishers office space access. Coordinate the credential procurement and programming with the building security.
- L. Coordinate the installation of the door/frame security package with the door hardware supplier. Security door hardware includes an electrified lock, electric strike, electrified panic hardware, electric power transfers or electrified hinges, magnetic door contacts, lock power supplies, termination cabinets, and final connection of wiring to door security devices and to the appropriate screw terminals on the screw-type termination strips located in the termination box. Responsibility for furnishing and installing a typical Door/Frame Security Package is divided as follows:
 - 1. Door Hardware Supplier responsibilities:
 - a. Will furnish and install factory-prepared door frame fitted with factory prepared cut-outs and appropriate pre-welded outlet boxes to accept the door security devices.
 - b. Will furnish and install all non-security mechanical hardware. This will include but not limited to mechanical hardware, hinges, door closers, door stops, etc.
 - c. Will furnish all electronic locksets, power transfer hinges, door monitoring contacts, request-to-exit devices for the new doors.
 - 2. Security Subcontractor under the direction of the Contractor responsibilities:
 - a. Will install all door monitoring contacts, electromagnetic locks, shear locks, and request to exit devices for the existing doors. Devices will be retrofitted to the existing doors, as specified on the drawings.
 - b. Will install all magnetic contacts and electronic locksets and power transfer hinges, provided by the door hardware supplier, as specified on the drawings.
 - c. Will furnish and install termination cabinet furnished with screw-type termination block(s). The termination block(s) will include additional screw terminals to accept the wiring interconnect inputs from the card reader(s), request-to-exit passive infrared detectors and/or the request-to-exit push button switch, and shunt switch, as required, which are not part of the door/frame security hardware package.
 - d. Will coordinate with the Electrical Subcontractor who will be providing power to security equipment as required, including but not limited to, the types and sizes of interconnecting wiring, outlet box sizes, electrical contacts needed and screw terminal sizes.
 - e. Will coordinate with Telecommunications Subcontractor who will be providing data connections for the cameras, control panels, servers, workstations, and any other security equipment that requires data or telephone connectivity.
 - 3. Electrical Subcontractor under the direction of the Contractor responsibilities:

- a. Will furnish, install and final connect all security door conduits and interconnect wires from door power supply and termination cabinet and/or junction box to all security devices associated with a door/frame security door location.
- b. Will furnish and install all other security system interconnecting conduits, junction boxes, outlet boxes, electrical troughs, and other associated mounting hardware. Interconnecting security conduits will be installed with a nylon pull string inside the conduits for installation of interconnecting conductors.

PART 2 - PRODUCTS

2.1 GROUNDING AND BONDING FOR SECURITY SYSTEMS

- A. Comply with requirements in Division 26 Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.
- B. Comply with ANSI-J-STD-607-A.

2.2 PATHWAYS FOR ELECTRONIC SAFETY AND SECURITY

- A. Hangers and Supports.
 1. Cable Support: NRTL labeled.
 2. Comply with NFPA 70 and UL 2043 for fire-resistant and low-smoke-producing characteristics.
 3. Cable hangers and non-continuous supports will be designed to prevent degradation of cable performance and pinch points that could damage cable. Cable tie slots fasten cable ties to brackets.
 4. Will have various attachment options for: wall, ceiling, joist, beam, flange, raised floor pedestal and others type of mounting.
 5. Support brackets with cable tie slots for fastening cable ties to brackets.
 6. Lacing bars, spools, J-hooks, and D-rings, straps, and other devices.
 7. Cable straps (ties) will be reusable Velcro-style with hook and loop or d-ring, available in various colors and sizes. Plenum rated straps will be used in plenum spaces.
- B. Conduits and Back Boxes:
 1. Provide where indicated on drawings or as required.
 2. Conduit and boxes sizes as shown on the communications drawings.
 3. Comply with requirements in Division 26 Section 260533 "Raceway and Boxes for Electrical Systems."
 4. Flexible metal conduit will not be used unless specifically noted.
- C. Sleeves
 1. Refer to Division 26 Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling".
- D. Sleeve Seals and Firestopping

1. Install to seal exterior wall penetrations.
2. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
3. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.

E. Grout

1. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

2.3 LIGHTING AND SURGE PROTECTION

- A. Intrusion detection, access monitoring and control, video circuitry, and communication circuits that connect to outdoor mounted equipment will be protected at both ends against excessive voltages.
- B. This requirement will apply for circuits that are routed both in underground conduits and overhead runs. As a minimum, both primary detection devices, such as three (3) electrode gas-type surge arrester, and secondary protectors will be installed to reduce dangerous voltages to levels that will cause no damage. Fuses will not be permitted as lightning and power surge protection devices.
- C. Provide fail-safe gas tube type surge arrestors on all exposed security data circuits. Breakdown voltage for the unit will be three hundred to five hundred (300-500) VDC. The unit will have equal performance for bi-polar operation with an automatic reset feature, and a minimum life of one thousand (1000) surges with ten (10) times one thousand (1000) microsecond waveform at one thousand (1000) amperes.

2.4 VIBRATION AND SEISMIC CONTROLS FOR ESS

- A. Security systems components will withstand the effects of earthquake motions determined according to ASCE/SEI 7.
- B. The term "withstand" means "the unit will remain in place without separation from any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event".
- C. Equipment will be seismically rated and braced according to IBC 1621.

2.5 IDENTIFICATION FOR SECURITY ESS

- A. Comply with requirements of Division 26 Section 260533 "Identification for Electrical Systems".

- B. The identification for the communications systems will meet all the requirements of a Class 3 facility as defined by ANSI/TIA/EIA 606-A, Administration Standard for the Telecommunications Infrastructure of Commercial Buildings.
- C. Comply with TIA/EIA-606-A and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.
- D. Identify all the components of the security systems.
- E. For fire-resistant plywood, do not paint over manufacturer's label.
- F. All labels will be preprinted or computer-printed type.
- G. Type, format, wording, printing, and placement of labels will be coordinated with Commissioner's existing administration plan.
- H. Labeling System
 - 1. PC-based software, WINDOWS compatible, capable of supporting alpha numeric characters and Windows True Type Fonts.
 - 2. Compatible with laser printers.
 - 3. Label sizes supported:
 - 4. Minimum: 0.8" W x 0.2" H.
 - 5. Maximum: 3.0" W x 12.0" H.

2.6 EQUIPMENT ENCLOSURES FOR ESS

- A. Cabinets or housings, power supply enclosures, terminal cabinets, multiplexer, data gathering panels, wiring gutters, and other component housings, collectively referred to as enclosures, will be so formed and assembled as to be sturdy and rigid.
- B. Thickness of metal in cast and sheet metal enclosures of all types will not be less than those in Tables I and II, UL six-hundred-eleven (UL-611). Sheet steel used in fabrication of enclosures will be not less than fourteen (14) gauge. Doors and covers will be flanged. Where doors are mounted on hinges with exposed pins, the hinges will be of the tight pin type, or the ends of hinge pins will be tack welded to prevent ready removal. Doors having a latch edge length of less than twenty-four (24) inches will be provided with a single lock. Where the latch edge of a hinged door is twenty-four (24) inches or more in length, the door will be provided with a three (3)-point latching device with lock; or alternatively with two (2) locks, one (1) located near each end.
- C. Any ventilator openings in enclosures and cabinets will conform to the requirements of UL six-hundred-eleven (UL-611).

- D. Unless otherwise indicated, sheet metal enclosures, excluding control console enclosures, will be designed for wall mounting with top holes slotted. Mounting holes will be in positions which remain accessible when all major operating components are in place and the door is open but will be inaccessible when the door is closed. Covers of pull and junction boxes provided to facilitate initial installation of the system will be held in place by tack welding, brazing, or one-way screws. Zinc labels will be affixed to such boxes indicating they contain no connections. These labels will not indicate that the box is part of the security system.
- E. Excluding the cabinets and other enclosures located in Security or Telecommunications Rooms, all enclosures, cabinets, housings, boxes, raceways, and fittings of every description having hinged doors or removable cover plates which contain circuits of the security system and its power supplies, will be provided with cover-operated corrosion-resistant tamper switches, arranged to initiate an alarm signal when the door is moved as little as one quarter (1/4) inch from its normally closed position.

2.7 EXPOSED COMPONENTS

- A. Components exposed and accessible to the public will be of a design and construction typical and suitable for such use. All device fasteners will be an approved security type. All components and materials will be resistant to vandalism and waterproof.
- B. Colors and finishes and mounting details of all exposed components will be approved by Commissioner via submittals.

2.8 ELECTRONIC COMPONENTS FOR ESS

- A. All electronic components of the system will be of the solid-state type, mounted on printed circuit boards conforming to UL seven-hundred-ninety-six (UL 796). Boards will be plug-in, quick-disconnect type. Circuitry will not be so densely placed as to impede maintenance. All power dissipating components will incorporate safety margins of not less than twenty-five (25) percent with respect to dissipation ratings, maximum voltages, and current-carrying capacity. All electronic printed circuit boards furnished and installed will be provided with a mildew/fungus-resistant and moisture inhibiting coating.

2.9 CABLES FOR ESS

- A. All cables installed in plenum spaces will be plenum rated.
- B. PVC-Jacketed, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; PVC jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 - 1. NFPA 70, Type CM.
 - 2. Flame Resistance: UL 1581 Vertical Tray.

3. Plenum-Type, RS-232 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, and individual aluminum foil-polyester tape shielded pairs with 100 percent shield coverage; plastic jacket. Pairs are cabled on common axis with No. 24 AWG, stranded (7x32) tinned copper drain wire.
 4. NFPA 70, Type CMP.
 5. Flame Resistance: NFPA 262 Flame Test.
- C. PVC-Jacketed, RS-485 Cable: Paired, 2 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, PVC insulation, unshielded, PVC jacket, and NFPA 70, Type CMG. RS-485 communications require 2 twisted pairs, with a distance limitation of 4000 feet.
1. Plenum-Type, RS-485 Cable: Paired, 2 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, unshielded, and fluorinated-ethylene-propylene jacket.
 2. NFPA 70, Type CMP.
 3. Flame Resistance: NFPA 262 Flame Test.
- D. Multi-conductor, PVC Readers and Wiegand Keypads Cables: No. 22 AWG, paired and twisted multiple conductors, stranded (7x30) tinned copper conductors, semirigid PVC insulation, overall aluminum foil-polyester tape shield with 100 percent shield coverage, plus tinned copper braid shield with 65 percent shield coverage, and PVC jacket.
1. NFPA 70, Type CMG.
 2. Flame Resistance: UL 1581 Vertical Tray.
 3. For TIA/EIA-RS-232 applications.
- E. Paired PVC Readers and Wiegand Keypads Cables: Paired, 3 pairs, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, individual aluminum foil-polyester tape shielded pairs each with No. 22 AWG, stranded tinned copper drain wire, 100 percent shield coverage, and PVC jacket.
1. NFPA 70, Type CM.
 2. Flame Resistance: UL 1581 Vertical Tray.
- F. Paired PVC Readers and Wiegand Keypads Cable: Paired, 3 pairs, twisted, No. 20 AWG, stranded (7x28) tinned copper conductors, polyethylene (polyolefin) insulation, individual aluminum foil-polyester tape shielded pairs each with No. 22 AWG, stranded (19x34) tinned copper drain wire, 100 percent shield coverage, and PVC jacket.
1. NFPA 70, Type CM.
 2. Flame Resistance: UL 1581 Vertical Tray.
- G. Plenum-Type, Paired, Readers and Wiegand Keypads Cable: Paired, 3 pairs, No. 22 AWG, stranded (7x30) tinned copper conductors, plastic insulation, individual aluminum foil-polypropylene tape shielded pairs each with No. 22 AWG, stranded tinned copper drain wire, 100 percent shield coverage, and fluorinated-ethylene-propylene jacket.
1. NFPA 70, Type CMP.
 2. Flame Resistance: NFPA 262 Flame Test.

- H. Plenum-Type, Multiconductor, Readers and Wiegand Keypads Cable: 6 conductors, No. 20 AWG, stranded (7x28) tinned copper conductors, fluorinated-ethylene-propylene insulation, overall aluminum foil-polyester tape shield with 100 percent shield coverage plus tinned copper braid shield with 85 percent shield coverage, and fluorinated-ethylene-propylene jacket.
1. NFPA 70, Type CMP.
 2. Flame Resistance: NFPA 262 Flame Test.
- I. Paired Lock Cable: 1 pair, twisted, No. 16 AWG, stranded (19x29) tinned copper conductors, PVC insulation, unshielded, and PVC jacket.
1. NFPA 70, Type CMG.
 2. Flame Resistance: UL 1581 Vertical Tray.
- J. Plenum-Type, Paired Lock Cable: 1 pair, twisted, No. 16 AWG, stranded (19x29) tinned copper conductors, PVC insulation, unshielded, and PVC jacket.
1. NFPA 70, Type CMP.
 2. Flame Resistance: NFPA 262 Flame Test.
- K. Paired Lock Cable: 1 pair, twisted, No. 18 AWG, stranded (19x30) tinned copper conductors, PVC insulation, unshielded, and PVC jacket.
1. NFPA 70, Type CMG.
 2. Flame Resistance: UL 1581 Vertical Tray.
- L. Plenum-Type, Paired Lock Cable: 1 pair, twisted, No. 18 AWG, stranded (19x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, unshielded, and plastic jacket.
1. NFPA 70, Type CMP.
 2. Flame Resistance: NFPA 262 Flame Test.
- M. Paired Input Cable: 1 pair, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, polypropylene insulation, overall aluminum foil-polyester tape shield with No. 22 AWG, stranded (7x30) tinned copper drain wire, 100 percent shield coverage, and PVC jacket.
1. NFPA 70, Type CMR.
 2. Flame Resistance: UL 1666 Riser Flame Test.
- N. Plenum-Type, Paired Input Cable: 1 pair, twisted, No. 22 AWG, stranded (7x30) tinned copper conductors, fluorinated-ethylene-propylene insulation, aluminum foil-polyester tape shield (foil side out), with No. 22 AWG drain wire, 100 percent shield coverage, and plastic jacket.
1. NFPA 70, Type CMP.
 2. Flame Resistance: NFPA 262 Flame Test.
- O. Camera Category 6A Cabling: Comply with Division 28 Section "Conductors and Cables for Electronic Safety and Security."

1. NFPA 262.

P. Composite Cable:

1. Element 1 (Lock Power): 18 AWG, 4 Conductor Non-Shielded Plenum
2. Element 2 (Card Reader): 22 AWG, 3 Pair Overall Shielded Plenum
3. Element 3 (Door Position Switch): 22 AWG, 2 Conductor Non-Shielded Plenum
4. Element 4 (Request to Exit Device): 22 AWG, 4 Conductor Non-Shielded Plenum

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 COMMON REQUIREMENTS FOR SECURITY SYSTEMS INSTALLATION

- A. All materials will be installed as per the manufacturers' instructions, unless noted otherwise.
- B. Comply with NECA 1.
- C. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- D. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange, and install components and equipment to provide maximum possible headroom consistent with these requirements.
- E. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both communications' equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- F. Right of Way: Give to piping systems installed at a required slope.
- G. Bundle, lace, and instruct conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- H. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.
- I. Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.
- J. Thoroughly clean areas and spaces where work is performed or used as access to work. Remove completely, paint, mortar, oils, putty, and items of similar nature. Thoroughly clean piping, conduit, and similar features before painting or other finishing is applied. Restore all surfaces to their original condition.

- K. All wall-mounted equipment will be mounted square and plumb.
- L. Complete work according to the agreed upon schedule. Cooperate in coordinating your activities with other planned and ongoing work at the site in a manner that facilitates meeting the schedule. This includes coordination with the various trades in determining work schedules and in resolving physical installation issues.
- M. The Commissioner reserves the right to require the Security Subcontractor to remove from the project any employee that it deems careless, problematic, or is identified by competent authority as not conforming to required safety codes, regulations, or standards, or is cited for performing or acting in an objectionable manner, thus affecting the safety or productivity of others.
- N. Take all necessary safety and health precautions and warnings required by codes and regulations to protect the project, its workers, the public, and the property of others.
- O. Accept responsibility for all damages to persons or property that occurs as a result of its fault or negligence.
- P. Participate in meetings covering technical, installation, and coordination and management issues.
- Q. Perform all work required under this specification in a skillful and professional manner in accordance with standards and practices documented and/or accepted by industry, such as the ANSI/TIA/EIA, NECA standards and codes. The Security Subcontractor's technicians must be familiar with the proper assembly and installation of all components they are working with and must follow manufacturer's specific installation requirements.
- R. Maintain its installation and storage areas free from an accumulation of waste material and rubbish and dispose of them in a manner acceptable to the Commissioner, building management and the Contractor.
- S. Provide all tools needed to perform its required work. Upon completion of the project, all tools, equipment, and materials not designated as belonging to the Commissioner must be removed. After completion, the work areas must be left in a clean and unobstructed condition.
- T. Security Subcontractor must be responsible for the security of all its installation materials, whether purchased by, or supplied to the Security Subcontractor, as well as tools and ancillary components and documents.
- U. Order all components in a timely manner so that installation dates are not compromised. Materials must either be on hand, or available on short notice, so that the installation may be expedited if required, or if the opportunity to do so presents itself.
- V. Obtain all necessary permits.
- W. Ensure that any excess materials are ordered for the project they are kept in their original condition and packaging for restocking.

3.3 ENCLOSURES FOR ESS

- A. All enclosures that are not installed in a secured space, such as Security Room/Closet or Telecommunications Rooms, will have tamper provision.
- B. Tamper switches will be mechanically mounted to maximize the defeat time when enclosure covers are opened and removed. The minimum amount of time required to depress or defeat the tamper switch after opening or removing the cover will be greater than one (1) second.
- C. Enclosure and tamper switch will function in such a manner as to not allow direct line of sight to any internal components or the tampering of the switch or circuit wiring. Tamper switches will be inaccessible until the switch is activated; have mounting hardware concealed so that location of the switch cannot be observed from the exterior of the enclosure; be under electrical supervision at all times, irrespective of the protection mode in which the circuit is operating; will be spring-loaded and held in the closed position by the door protected; and will be wired so that they break the circuit when the door is disturbed.
- D. Tamper switches on doors which must be opened to make normal maintenance adjustments to the system and to service the power supplies will be of the push/pull set, automatic-reset type. Covers of pull and junction boxes provided to facilitate initial installation of the system need not be provided with tamper switches.

3.4 ALARM ANNUNCIATION

- A. Alarm annunciation will include intrusion detection, tamper, fail safe, line fault, and power loss.
- B. Intrusion Detection: Intrusion detection alarms will include the full range of interior point protection sensors, volumetric space, access control protection sensors, and duress alarms. Duress alarms will be annunciated to clearly distinguish them from other intrusion detection alarms.
- C. Tamper: Enclosures, cabinets, housings, boxes, raceways, and fittings having hinged doors or removable covers, and which contain circuits for the security system and its power supplies, will be provided with cover operated, corrosion-resistant tamper switches, arranged to initiate an alarm signal when the door or cover is moved as little as one quarter (1/4) inch from the normally closed position. Tamper switches will be mechanically mounted to maximize the defeat time when enclosure covers are opened or removed. The minimum amount of time required to depress or defeat the tamper switch after opening or removing the cover will be one (1) second. Enclosure and tamper switch will prevent direct line of sight to any internal components and prevent switch or circuit tampering. Tamper switches will be inaccessible until the switch is activated; conceal mounting hardware so that location of the switch cannot be observed from the exterior of the enclosure; be under electrical supervision at all times, irrespective of the protection mode in which the circuit is operating; will be spring-loaded and held in the closed position by the door or cover protected; and will be wired to break the circuit when the door or cover is disturbed. Tamper switches on doors which must be opened to make normal maintenance adjustments to the system and to service the power supplies will be of the push/pull set, automatic reset type. Tamper alarms will be annunciated to be clearly distinguishable from intrusion detection alarms.

- D. **Fail-Safe Alarms:** Provide a fail-safe capability in all critical elements of the system. Fail-safe is defined as the capability to monitor for proper system functions and to report an alarm when a failure is detected in any critical system function. This will include, but not be limited to, the capability to monitor communication link integrity and to provide self-test. When diminished functional capabilities are detected, the system will provide annunciation of the fault. Fail-safe alarms will be annunciated to clearly distinguish them from other types of alarms.
- E. **Fail-Safe Locking:** All locking will be fail-safe to the extent that such locking is permitted by appropriate and pertinent life-safety and building codes. Fail-safe locking will be understood to mean that upon failure, locks will fail in the "unlocked" and "unsecured" position. All locking will be interconnected into the building's fire alarm system and, upon activation of the fire alarm system, will immediately "unlock" to permit emergency egress from the building. Coordinate all interface requirements with the fire alarm system installer. Furnish and install the necessary interface relays and interconnecting wiring, conduits, and mounting hardware, etc. to effect this operation.
- F. **Line Fault:** As a minimum, fault isolation at the systems level will have the same geographic resolution as provided for intrusion detection. The communication links of the security system will have an active mode for line fault detection. Active mode is defined as that in which some type of signal is continuously sent across the link, resulting in simple link breaks being readily detected. The system will be either a static system or a dynamic system. In a static system, the "no-alarm" condition will always be represented by the same signal, which will be different than the signal originally transmitted. The dynamic system will represent "no-alarm" with a signal which continually changes with time.
- G. **Power Loss:** Provide the capability to detect when any critical component of the system experiences loss of primary power and/or is switched over to either emergency power or uninterruptible power and to declare an alarm. The alarm will clearly annunciate the identity of the component experiencing the power loss.

3.5 GROUNDING AND BONDING

- A. Comply with requirements in Division 26 Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.
- B. Comply with ANSI-J-STD-607-A.
- C. All cabling used to bond grounds are to be tagged with labels with the point of origin i.e., going to/coming from, with printed labels.

3.6 PATHWAYS INSTALLATION FOR SECURITY SYSTEMS

- A. Comply with NECA 1.
- B. Comply with requirements in Division 26 Section 260533 "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.

- C. All conduits will be electrical metallic tubing (EMT), except where otherwise noted. Exceptions will be requested in writing as appropriate, such as for different conduit types for various classes of construction, such as for cast-in-place concrete, and placement in cable ducts. Minimum size of conduit will be three quarter (3/4) inch. Connections will be threadless type fittings or couplings.
- D. Submit conduit and wire layout drawings showing circuit numbers, wiring and conduit routings for approval by the Commissioner prior to the initiation of Work. Shop drawings of the security systems conduit routing will be coordinated by Security Subcontractor with fire wall construction, mechanical duct work, structural components, fire protection, and plumbing.
- E. Install manufactured conduit sweeps and long-radius elbows whenever possible.
- F. Care will be taken to ensure that access to other building components (e.g., air conditioning ducts) is not restricted by cable pathways.
- G. Cable management and support hardware must be UL listed for use in the environments in which they will be employed.
- H. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.
- I. Secure conduits to backboard when entering room from overhead.
- J. Extend conduits 3 inches above finished floor.
- K. Provide metal conduits with grounding bushings and connect with grounding conductor to grounding system.
- L. Bundle, lace, and instruct conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.
- M. Pathways will be installed parallel or perpendicular to walls, structural members, or intersections of vertical planes and ceilings. Changes in direction of runs will be made with symmetrical bends or cast metal fittings.
- N. All conduits will be affixed or supported at intervals and using prescribed methods and devices in accordance with governing codes. No run of conduit between outlets or fittings will contain more than four quarter bends (360 degrees). Bends will be made such that the conduit will not be injured, and that the interval diameter will be effectively reduced.
- O. All conduit connections will be tight so as not to create intermittent loss of ground protection. All cut ends entering into fittings will be reamed smooth or have a bushing inserted to prevent damage to wire insulation.
- P. Conduit, raceways, and other pathways will be kept at least six inches from uninsulated flues, steam pipes or any pipe containing a hot gas or liquid. So far as practical, avoid traps and dips in conduit runs, which might collect moisture.

- Q. Strict attention will be given to all conduits containing fiber optic cabling to ensure that manufacturer's recommended conduit bend radii limitations/restrictions are followed.
- R. Where conduits connect to sheet steel enclosures, they will be fastened with two (2) locknuts where insulating bushings are used. Bushings will be installed on ends of all conduits where they terminate in pull boxes, outlet boxes, cabinets, etc. and will be of the insulating type and will be securely fastened with locknuts on each side. Crushed or deformed conduits will not be installed. Bushings will not be used as locknuts. Open ends will be sealed around security conductors to be liquid tight using an approved air-drying sealer after capping ends with insulated bushings.
- S. Conduits crossing expansion joints in concrete slabs will be provided with suitable expansion fittings, or other suitable means, to compensate for building expansion and contraction. Conduits traversing hazardous areas will use the penetrations and fittings shown on the drawings and provided under other sections of the contract. Seal the fittings subsequent to verifying the integrity of the contained conductors.
- T. Pathways will not block ceiling or equipment access doors. Where conduit or raceway is passed through walls, floors, ceilings or roofs, annular space will be sealed or patched. Openings in firewalls and all corridor walls will be sealed with mineral wool or an approved silicone sealant.
- U. No pathways will be fastened to other pipe or conduit or installed so as to prevent the ready removal of other pipe or conduit for repairs.
- V. Conduit, panels, devices, and boxes will be secured by means of shields in concrete, machine screws on metal surfaces and wood screws on wood construction material. Threaded studs driven in by power charge and provided with either lock-washers and nuts or nail type nylon anchors are not acceptable in lieu of machine screws. Wood plugs will not be used as expansion shields. Unless conditions or Drawings dictate otherwise, panels will be located between 3'-6" and 6'-0" above floor level.

3.7 SLEEVES INSTALLATION FOR SECURITY SYSTEMS

- A. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- B. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- C. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- D. Cut sleeves to length for mounting flush with both surfaces of walls.
- E. Extend sleeves installed in floors 50 mm above finished floor level.
- F. Size pipe sleeves to provide 6.4-mm annular clear space between sleeve and pathway or cable, unless indicated otherwise.
- G. Seal space outside of sleeves with grout for penetrations of concrete and masonry

1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- H. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 7 Section 079200 "Joint Sealants."
- I. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with firestop materials.
- J. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- K. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel or cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 25-mm annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- L. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 25-mm annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.

3.8 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electronic safety and security installations to restore original fire-resistance rating of assembly.
- B. Cable/wire runs, and conduit will be installed in accordance with NEC and EIA/TIA codes as well as manufacturers' specifications of installed equipment.

3.9 CABLE/WIRES INSTALLATION

- A. Cable/wire runs, and conduit will be installed in accordance with NEC and EIA/TIA codes as well as manufacturers' specifications of installed equipment.
- B. All ESS conductors will be separated from 240V primary power lines. ESS conductors will not share any conduit in which primary power conductors are run. Junction and receptacle boxes carrying 120V, or higher voltage, will not in any way be attached to or carry security systems conductors.
- C. Conductors will be copper and will not have a diameter less than eighteen (18) AWG unless otherwise indicated. Exceptions will be made for vendor-provided leads and internal equipment wiring. If required, modify equipment wiring fittings which will not accept eighteen (18) AWG minimum conductors. Conductors for intercom systems and for multiplexer data communications will be a minimum of twenty-two (22) AWG. Other exceptions may be granted for use of smaller gauge conductors upon approval by the Commissioner.
- D. Conductors interconnected to equipment subject to movement will be stranded or will be of a type manufactured specifically for such interconnections.

- E. Wire fill, conductors, and conduit will be sized in compliance with the National Electrical Code. The number of conductors required may vary on the basis of the manufacturers of the selected equipment. In no event, will conduit fill exceed 40%.
- F. In the event that ESS conductors must share conduit with other low voltage conductors, prior approval is required. All system conductors will be run concealed wherever practical and will be placed in conduit.
- G. All conductors will be run continuously between sensors, processors, junction boxes, terminal strips or panels, and other approved devices. Splices between such locations are not to be permitted. Necessary junctions will be made using screw-type terminal blocks, or in accordance with manufacturer's requirements for equipment connections.
- H. Line supervision requirements will be observed.
- I. All conductors will be color coded and tagged consistently. Coordination with the Commissioner regarding the exact wire coding and tagging is mandatory. Transposing or changing color coding of conductors will not be permitted. Conductor identification will be provided within each enclosure where a tap, splice or termination is made, and at the equipment terminal of each conductor. Terminal and conductor identification will match that shown on approved shop drawings. Hand lettering or marking will not be accepted. Marking will be an approved permanent type utilizing an approved method. Tagging devices will be approved and will be permanent, not subject to inadvertent separation. All conductors at control consoles will be bundled, neatly fanned out, and tagged. Cables and wires will be tagged to clearly indicate their electrical characteristics, circuit number and panel designation. Tagging will be such that several conductors may be disconnected and reconnected without the use of drawings.
- J. If required by manufacturers' specifications, shielding requirements will be observed.
- K. Only approved pulling compounds will be used. Pull strengths will not exceed standards established by the National Electrical Code.
- L. Submit conduit and wire layout drawings showing circuit numbers, wiring and conduit routings for approval by the Commissioner prior to the initiation of Work. Shop drawings of the security systems conduit routing will be coordinated by Security Subcontractor with fire wall construction, mechanical duct work, structural components, fire protection, and plumbing.

3.10 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.11 IDENTIFICATION FOR SECURITY SYSTEMS

- A. Identify ALL system components, wiring, and cabling complying with TIA/EIA-606-A. Comply with requirements for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.
- B. See evaluations for discussion of TIA/EIA standard as it applies to this Section. Paint and label colors for equipment identification will comply with TIA/EIA-606-A for Class 3 level of administration including optional identification requirements of this standard.
- C. All permanent labels must be durable and legible and suited for long term use in the environments in which they will be located. Labels will be preprinted or computer-printed type. Handwritten labels are unacceptable unless approved by the Commissioner.
- D. Label all equipment, enclosures, cables, terminations, and any other components using unique identifiers.
- E. Labeling scheme for all communications systems is subject to prior approval by the Commissioner.
- F. All cables will be color coded and tagged consistently. Transposing or changing color coding of conductors will not be permitted. Conductor identification will be provided within each enclosure where a tap, splice or termination is made, and at the equipment terminal of each conductor. Terminal and conductor identification will match that shown on approved shop drawings. Hand lettering or marking will not be accepted. Marking will be an approved permanent type utilizing an approved method. Tagging devices will be approved and will be permanent, not subject to inadvertent separation. All conductors at control consoles will be bundled, neatly fanned out, and tagged. Cables and wires will be tagged to clearly indicate their electrical characteristics, circuit number and panel designation. Tagging will be such that several conductors may be disconnected and reconnected without the use of drawings.

3.12 CLEAN, SQUARE INSTALLATION

- A. All equipment will be clean and free of paint and other defacing materials. All installations will be square and plumb. Take care that other trades do not deface equipment and do not move equipment out of square and plumb.

3.13 ELECTRICAL POWER

- A. High Voltage Power:
 - 1. The Contractor will furnish and install wiring, conductors, conduit, and termination for the supply of power to security system components. Except for the interconnection into the door hardware furnished devices, it will be the responsibility of the Security Subcontractor to furnish and install all low-voltage conductors and to make all final connections of same. The Security Subcontractor will provide the Electrical Subcontractor with complete information regarding high voltage power requirements.
- B. Low Voltage Power:

1. Low voltage power will be provided through the use of two-winding isolation-type transformers and rectifier circuits and will supply DC voltages, where and as required. Voltage levels will be as rated for the various systems' operational requirements. All low voltage power supplies will be fully regulated, float type, with battery back-up, capable of supporting the operation of all equipment for a minimum of four hours. Low voltage power supplies will be required to provide central lock power, camera power, advanced processor controller power and sensor devices power.

C. Batteries:

1. Provide backup power by dedicated batteries in remotely located system elements such as remote access control panel units. Batteries will be sized to provide continuous stand-by operation for a minimum of four (4) hours without recharge or replacement.

3.14 TESTING

- A. General: Verify that all requirements of this specification are met. Verification will be through a combination of analyses, inspections, demonstrations, and tests, as described below.
- B. Verification by Inspection: Verification by inspection includes examination of an item and the comparison of pertinent characteristics against the qualitative or quantitative standard set forth in the cited paragraph. Inspection may require moving or partially disassembling the item to accomplish the verification. Inspection will be made of all equipment installations, proper functioning of all locking hardware and lock controls, mounting and wiring of electrical and signal distribution cabinets and components, and mounting and placement of sensors, VSS cameras, etc. to ensure compliance to the specifications and that the overall installation is accomplished in a professional and workmanlike manner. The Commissioner will have full opportunity to witness the required Security Subcontractor inspections or to conduct their own inspections of the installation.
- C. Verification by Test and Demonstration: Verify by formal demonstrations or tests that the requirements of this Specification have been met.
- D. Test Verification Requirements: Paragraphs 1-3 below list specific requirements which will be verified by formal demonstration/test. The Commissioner will be afforded a fourteen (14) day advance notice of all subsystem demonstrations/tests. The Commissioner reserves the right to witness any and/or all of the tests described below.
 1. Preliminary Tests: Following installation, individually test each sensor and other components and verify the proper functioning of each component within a particular subsystem. Each subsystem will be similarly tested until all detection zones, alarm assessment components, alarm reporting and display and access control functions have been verified. Any deficiency pertaining to these requirements will be corrected by the Security Subcontractor prior to final functional and operational tests of the system. When subsystem verification is complete, the entire system will be tested to assure that all elements are compatible and function properly as a complete system.

2. **System Operation Test:** Following completion of the preliminary tests and the security system and component formal demonstrations, the Security Subcontractor will conduct a formal test, to be known as the "System Operation Test", in which all components and subsystems of the security system are demonstrated to operate together as an integrated system. This test will be performed over a continuous seventy-two (72) hour period. A testing plan and test procedures for each portion of the test will be prepared by the Security Subcontractor and submitted 30 days prior to the start of any testing for approval in accordance with this Specification. Approval of the test procedures must be obtained prior to notification of testing to Commissioner. The Security Subcontractor will demonstrate that the security system components and subsystems meet specification requirements in the "as-installed" operating environment during the "System Operation Test". While no formal environmental testing is required, the Security Subcontractor will measure and record the temperature and humidity. Environmental parameters and will include this data in the test report to document the environmental parameters and the environment conditions which were encountered during the "System Operation Test"
3. **Tests Upon Completion of Work:** Upon completion of the Work, the system will be subjected to complete functional and operational tests. When all required corrections have been accomplished, the system will be retested. The Commissioner will be notified in writing fourteen days in advance of the proposed final acceptance testing and inspection date. The advance notice will include certification that the installation is complete and operable and has satisfactorily performed the final tests specified herein. The acceptance testing and final inspection will be coordinated with the Commissioner. Prior to the test date, prepare and submit for approval a complete and detailed final acceptance test check off list ("punch list"). The list will be a complete representation of all specified functions and conditions, including contingency, priority, and abnormal modes of operation. The arrangement of the list will be such as to provide an orderly method of tabulating checks of system features, response, and operation. The tests will be structured so that all sensors and controls are stimulated directly in their installed and finally adjusted positions and all audible and visual displays, signals, alarms, and other responses are observed and printed. At the time of final acceptance testing all required tests will be repeated and all defects will be corrected until the system is found to be acceptable to the Commissioner. A log of all test activities and results will be maintained by the Security Subcontractor. Typed copies of this log will be submitted within seven days of the testing. Final tests will include, but not limited to the following:
 - a. Test of all central CPU's, peripherals, and all panel control functions.
 - b. Test all graphic control and annunciation panel functions and displays.
 - c. Test electrical supervision of all input/output sensor and data communication bus circuits.
 - d. Test of all alarm initiating devices.
 - e. Test of remote battery and battery chargers.
 - f. Test of the UPS system including a battery discharge test.
 - g. Test of access control system to include tie-in to fire alarm system.
 - h. Complete operation tests under emergency power.
 - i. Test of fiber optics signal transmission system.
 - j. Visual inspection of all wiring;
 - k. Verification that all required submittals have been provided and have been accepted;
 - l. Demonstrate software and programming/reprogramming functions of all micro-processor systems.
 - m. Verification of systems response time.

- n. Carefully plan and coordinate the final acceptance tests so that all tests can be satisfactorily completed during one continuous testing period. Provide all necessary instruments, labor and materials required for tests, the equipment manufacturer's technical representative, and qualified technicians in sufficient numbers to perform the tests within the time limits imposed by this Specification.
4. Reliability/Maintainability Data: Record hours of component, subsystem, and system operation, together with failure and repair data. This information will be incorporated into the System Test Report to be submitted.

3.15 MAINTENANCE AND OPERATING INSTRUCTIONS

- A. Prior to completion of the work provide field operating instructions with respect to operation functions and maintenance procedures for the equipment and systems installed. Prepare six (6) copies of maintenance and operating instruction manuals prior to application for final payment. Organize operating and maintenance data into suitable sets of manageable size.
- B. All equipment provided under this Section of the Specifications will be placed in operation and will function continuously in an operation test for a period of one week, without shut down due to mechanical failure.
- C. Prior to scheduling the project final inspection and after completion of the entire installation period, provide all work required to adjust all controls, and all maintenance to place the systems in operation to meet the requirements of this Section of the Specifications and Contract Documents.
- D. Provide operating, service, maintenance instruction manuals containing replacement data for the equipment which will require operating, maintenance, or replacement and one copy of this literature will be available during the instruction of the operating personnel while the others are checked for completeness.
- E. Sufficient advance notice will be given to the City of New York's designated operating personnel for the specific instruction period. Upon completion of instruction, obtain from the representative(s) written verification that the above-mentioned instruction has been performed. Such verification will be forwarded to the Commissioner.
- F. Each copy of the approved operating and maintenance manual will contain copies of approved shop drawings, equipment literature, cuts, bulletins performance charts, pump curves, details, equipment and Commissioner's data sheets and typewritten instructions relative to the care and maintenance for the operation of the equipment, all properly indexed and bound in a hard back three ring binder. Fly sheets will be placed before instructions covering each section. The instruction sheets will be in 8 1/2 inches by 11 inches with large sheets of drawings folded in neatly. Each manual will have the following minimum contents:
 - 1. Table of Contents
 - 2. Maintenance
 - a. Maintenance and Lubricating Instructions
 - b. Replacement Charts
 - c. Preventive Maintenance Recommendations
 - d. Trouble-shooting Charts for Equipment Components

- e. Testing Instructions for each Typical Component
 - f. System Draining and Filling Instructions
 - g. Two typed sets of charts indicating equipment tag number, location of equipment, specific equipment service, greasing and lubricating requirements as recommended, lubricant type and intervals of lubrication.
 - h. Two typed set of instructions for ordering spare parts. Each set will include name, telephone number and address of where they may be obtained.
3. Manufacturer's Literature
- a. The equipment for which shop drawings have been submitted and approved.
 - b. Wiring Diagrams
 - c. Installation Drawings
 - d. Manufacturer's Representative and Contract Information
 - e. Guarantees

3.16 CLEANING AND ADJUSTING

- A. Subsequent to installation, clean each system component of dust, dirt, grease, or oil incurred or accrued from other project activities, and prepare for system activation by manufacturer's recommended procedures for adjustment, alignment, or synchronization.
- B. Each component will be prepared in accordance with the appropriate provisions of the component's installation, operations, and maintenance manuals.
- C. Any damage caused by the Security Subcontractor to parts of the building, its finish, or furnishings, will be repaired by Security Subcontractor at no increase in Contract costs.
- D. All items of equipment will be thoroughly inspected, and any items dented, scratched, or otherwise damaged, in any manner, will be replaced or repaired and painted to match the original finish. All items so repaired and refinished will be brought to the attention of the Commissioner for inspection and approval.

3.17 SPECIAL TOOLS

- A. Provide any and all special tools, recommended by the manufacturer of items furnished, noted as not being commonly available.

END OF SECTION 280500

SECTION 28 08 00

COMMISSIONING OF FIRE ALARM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 SUMMARY

- A. This section includes commissioning process requirements for Fire Alarm systems, assemblies, and equipment.
- B. Related Sections:
 - 1. DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for general commissioning process requirements.

1.3 DESCRIPTION

- A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the Owner's Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.
- B. The Commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.
- C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Owner's Project Requirement's as detailed in the Contract Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This

review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The CxA will notify the Contractor, or Commissioner as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

- B. The CxA will receive a copy of the final approved submittals.
- C. In addition, the Contractor is to provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports
- D. Refer to the DDC General Conditions Section 013300 Submittal Procedures and Section 019113 “General Commissioning Requirements for MEP Systems” for general commissioning submittal requirements.

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Commissioning Kick-Off Meeting – Construction Team: The Contractor will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.
- B. Commissioning Meetings: The Contractor will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.
- C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process.

- D. Pre-testing Meetings: The Contractor will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.
- E. Testing: The Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.
- F. Manufacturers' Inspection and Startup Services: The Contractor will coordinate services of manufacturers' inspection and startup services.
- G. Testing, Adjusting and Balancing: The Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the Fire Alarm systems in Division 28. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With the assistance from the Contractor and the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems.

- B. Red-lined Drawings (As-Builts): The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The Contractor will create the as-built drawings.
- C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for Contractor's responsibilities.
- B. Attend construction phase controls coordination meetings.
- C. Provide information requested by the CxA for final commissioning documentation.
- D. Prepare preliminary schedule for fire alarm system orientations and inspections, operation and maintenance manual submissions, orientation sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.
- E. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- F. Provide detailed startup procedures.
- G. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications.
- H. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.
- I. Respond to provided new deficiencies and/or responses within five (5) business days.
- J. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the Contract Documents. Submit to CxA 45 days after submittal acceptance.
- K. Coordinate with the CxA to provide 48-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.

- L. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
- M. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. Fire alarm system
- N. The equipment suppliers shall document the performance of their equipment.
- O. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- P. Contractor responsibilities to be completed by Equipment Suppliers:
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.
 - 2. Assist in equipment testing.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

3.3 CxA'S RESPONSIBILITIES

- A. Roles and Responsibilities
 - 1. Refer to the DDC General Conditions Section 019113 General Commissioning Requirements for MEP Systems for general CxA responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that fire alarm systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that fire alarm instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of fire alarm testing shall include the new fire alarm system installation. Testing shall include all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- C. The CxA along with the Contractor shall prepare detailed testing plans, procedures, and checklists for fire alarm systems, subsystems, and equipment. The Contractor shall ensure the participation of the fire alarm subcontractor.
- D. Tests will be performed using design conditions whenever possible.
- E. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- F. The CxA may direct that set points be altered when simulating conditions is not practical.
- G. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- H. If tests cannot be completed because of a deficiency outside the scope of the fire alarm system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- I. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 FIRE ALARM SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 28 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CA.
- B. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- C. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. Commissioning shall be performed on equipment and systems including but not limited to the following:
 - 1. Fire Alarm System

3.7 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT**A. Deficiencies/Non-Conformance**

1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractor on a standardized form.
2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall indicate the proposed means of correcting the issue and the anticipated date of correction. If further information is required to clarify the issue, the Contractor's response shall include a request such clarification. If the Contractor understands that the issue has been resolved or was noted in error, the Contractor's response shall provide an explanation of their reasoning, including reference to Contract Documents as necessary.
3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
5. As tests progress and a deficiency is identified, the CxA discusses the issue with the Contractor.
6. When the issue does not require further clarification for the Contractor to resolve, the CxA documents the deficiency and the Contractor's response and corrections or plans for correction. The CxA and the Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated to demonstrate correct operation or function.
7. When additional information is required about any deficiency, whether to clarify the issue or to clarify the means of resolution or acceptance, the CxA documents the deficiency and the Contractor's response. The CxA will send the deficiency to the Commissioner and the Contractor, who shall forward to any subcontractors required for the correction. Once all parties are in agreement as to the means of resolving the issue, the CxA will document the agreed-upon resolution process. The CxA will document the correction or resolution. If the correction requires work by the Contractor, the Contractor and CxA will reschedule the test to demonstrate correct operation and function.

B. Failure due to Manufacturer Defect

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CxA and the Commissioner. In such case, the Contractor shall provide the Commissioner with the following.
 - a. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
 - b. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.

- c. The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
- d. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
- e. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

3.8 APPROVAL

- A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

3.9 SEASONAL TESTING

- A. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the Contractor, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

3.10 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in the DDC General Conditions Section 017839 Contract Record Documents and Section 019113 General Commissioning Requirements for MEP Systems.
- B. The specific content and format requirements for the standard O&M manuals are detailed in the DDC General Conditions Section 017839 Contract Record Documents and Section 019113 General Commissioning Requirements for MEP Systems. Special requirements for the controls subcontractor and TAB subcontractor are found in Division 23.
- C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

3.11 INSTRUCTION OF NEW YORK CITY PERSONNEL

- A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.

- B. The CxA shall oversee the instruction of the City of New York for commissioned equipment and systems.
1. The CxA shall interview the City of New York to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor who will ensure participation of the subcontractor.
 2. In addition to these general requirements, the specific instruction requirements of the City of New York by the Contractor who will ensure the subcontractors and vendors are specified in the individual sections listed in DDC's General Conditions Section 017900 Demonstration and Owners' Pre-Acceptance Orientation.
 3. The Contractor shall ensure that each subcontractor and vendor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.
 4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
 - a. Equipment (included in instruction)
 - b. Intended audience
 - c. Location of instruction
 - d. Objectives
 - e. Subjects covered (description, duration of discussion, special methods, etc.)
 - f. Duration of instruction on each subject
 - g. Qualified instructor for each subject
 - h. Instructor qualifications
 - i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
 5. For the primary equipment, the Contractor will ensure the controls subcontractor provides a discussion of the control of the equipment during the instruction conducted by each subcontractor or vendor.
 6. Instruction documentation shall include the following items:
 - a. Copy of the instruction plan, including schedule, syllabus, and agenda.
 - b. Copy of the Owner's Project Requirements.
 - c. Copy of the Basis of Design.
 - d. Compiled operations manuals.
 - e. Compiled maintenance manuals.
 - f. Completed manufacturer instruction manuals.
 - g. Red-lined drawings.
 7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.

8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment
9. Video recording of the instruction sessions will be verified by the CxA in electrical format, at the discretion of the Commissioner.

END OF SECTION 280800

SECTION 284621.11 - ADDRESSABLE FIRE-ALARM SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 WORK INCLUDED

- A. The work covered by this Section of the Specification shall include all labor, equipment, materials and services to furnish and install a complete addressable sprinkler and smoke detection system. It shall be complete with all necessary hardware, software and memory specifically tailored for this installation. It shall be possible to permanently modify the software on site by using a plug-in programmer. The system shall consist of, but not be limited to, the following:

1. Fire Alarm Control Panel (FACP) and related remote data gathering panels.
2. Remote Annunciators in addition to the FACP is located in the building lobby. Refer to contract drawings.
3. Addressable manual fire alarm station – one (1) located by the FACP. A second shall be located next to the lobby remote annunciator, if provided.
4. Addressable analog area smoke detectors. Include provisions for additional smoke detectors in areas with ceiling beams having depths more than 10% of the ceiling height in compliance with NFPA 72, 2010 section 17.7.3.2.
5. Addressable analog duct smoke detectors for supply fans over 2,000 cfm. Supply and return for fans over 2,000 cfm.
6. Addressable analog heat detectors.
7. Central monitoring station alarm connection control.
8. Air handling systems shutdown control.
9. Fire Pump Supervision.
10. Magnetic door holder release.
11. Dry pipe sprinkler release valve/deluge valve control.
12. Sprinkler supervisory switches and tamper switch supervision.

13. Battery standby.

- B. ALL NYC Fire Alarm peripherals (listed as such but as required by FDNY to meet the 2014 NYC Building Code Requirements), such as placards, riser diagram, necessary switches, LED's, clock, fire sign, manual central office trip, fused disconnect switch, fuse cutout, FDNY approved locks with enclosed Purge switches, and other shall be included in the system price. Data gathering panels shall be fed by 20A, 120V dedicated circuits from a fuse cutout panel.

1.3 DEFINITIONS

- A. DACT: Digital alarm communicator transmitter.
- B. EMT: Electrical metallic tubing.
- C. FACU: Fire-alarm control unit.
- D. High-Performance Building: A building that integrates and optimizes on a life-cycle basis all major high-performance attributes, including energy conservation, environment, safety, security, durability, accessibility, cost-benefit, productivity, sustainability, functionality, and operational considerations.
- E. Mode: The terms "Active Mode," "Off Mode," and "Standby Mode" are used as defined in the 2007 Energy Independence and Security Act (EISA).
- F. PC: Personal computer.
- G. Voltage Class: For specified circuits and equipment, voltage classes are defined as follows:
1. Control Voltage: Listed and labeled for use in remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power supply having rated output not greater than 150 V and 5 A, allowing use of alternate wiring methods complying with NFPA 70, Article 725.
 2. Low Voltage: Listed and labeled for use in circuits supplied by a Class 1 or other power supply having rated output not greater than 1000 V, requiring use of wiring methods complying with NFPA 70, Article 300, Part I.

1.4 RELATED WORK

- A. The Contractor shall coordinate work in this Section with all related trades. Work and/or equipment provided in other sections and related to the alarm system shall include but limited to:
1. Elevator recall control circuits shall be provided by the elevator control equipment. The operation of the elevators shall be in accordance with NYC Building Code Chapter 9 and 30 as well as Appendix Q and K.
 2. Dry pipe/deluge sprinkler system release valve control circuits and supervision contacts shall be provided by the dry pipe/deluge sprinkler system control equipment.
 3. Fire pumps (manual, automatic and special service) status monitoring.

4. Pump failure (fail to start) indication
5. Pump running indication
6. Phase reversal indication
7. Emergency generators(2) status monitoring
8. Running indication
9. Fail to start indication
10. Raceways and Boxes: Section 260533.

- B. 600 Volt Wire and Cables: Section 260519. Approved Permit Submittal: Submittals must be approved by the NYC Department of Buildings prior to submitting them to Commissioner.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 SUBMITTALS

- A. Provide list of all types of equipment and components provided. This shall be incorporated as part of a Table of Contents which will also indicate the manufacturer's part number, the description of the part, and the part number of the manufacturer's product datasheet on which the information can be found.
- B. Provide description of operation of the system (Sequence of Operation), similar to that provided on contract documents. The sequence of operation shall be project specific, and shall provide individual sequences for every type of alarm, supervisory, or trouble condition that may occur as part of normal or off-normal system use. the manufacturers product data sheet on which the information can be found.
- C. Provide manufacturer's printed product data, catalog cuts and description of any special installation procedures. Poorly photocopied and/or illegible product data sheets shall not be acceptable and shall be rejected. All product datasheets shall be highlighted or stamped with arrows to indicate the specific components being submitted for approval.
- D. Provide manufacturer's installation instruction manual for specified system.
- E. Provide samples of various items when requested.
- F. Provide copy of NYS License to perform such work
- G. Provide copies of NICET Level II Fire Alarm certifications for the two (2) technicians assigned to this project.
- H. Provide shop drawings as follows:

1. Coversheet with project name, address and drawing index.
2. General notes drawing with peripheral device backbox size information, part numbers, device mounting height information, and the names, addresses, point of contact, and telephone numbers of all contract project team members.
3. Device riser diagram that individually depicts all control panels, annunciators, addressable devices, and notification appliances. Riser shall include a specific, proposed point descriptor above each addressable device. Riser shall include a specific, discrete point address that shall correspond to addresses depicted on the device layout floor plans. Drawing shall provide wire specifications, and wire tags shown on all conductors depicted on the riser diagram. All circuits shall have designations that shall correspond with those required on the control panel and floor plan drawings. End-of-line resistors (and values) shall be depicted.
4. Control panel termination drawing(s) shall depict internal component placement and all internal and field termination points. Drawing shall provide a detail indicating where conduit penetrations shall be made, as to avoid conflicts with internally mounted batteries. For each additional data gathering panel, a separate control panel drawing shall be provided, which clearly indicated the designation, service and location of the control enclosure. End-of-line resistors (and values) shall be depicted.
5. Device typical wiring diagram drawing(s) shall be provided which depict all system components, and their respective field wiring and conduit termination points. Wire type, gauge, and jacket shall also be indicated. When an addressable module is used in multiple configurations for monitoring or controlling various types of equipment, different device typical diagrams shall be provided. End-of-line resistors (and values) shall be depicted.
6. Device layout floor plans shall be created for every area served by the alarm system. CAD Files shall be provided by the Commissioner for the use of the alarm system equipment vendor in the preparation of the floor plans. Floor plans shall indicate accurate locations for all control and peripheral devices. Drawings shall be no less than 1/8-inch scale. All addressable devices shall be depicted with a discrete address that corresponds with that indicated on the Riser Diagram. All notification appliances shall also be provided with a circuit address that corresponds to that depicted on the Riser Diagram. If individual floors need to be segmented to accommodate the 1/8" scale requirements, key plans and break-lines shall be provided on the plans in an orderly and professional manner. End-of-line resistors (and values) shall be depicted.
7. Contained in the title block of each drawing shall be symbol legends with device counts, wire tag legends, circuit schedules for all addressable and notification appliance circuits, the project name/address, and a drawing description which corresponds to that indicated in the drawing index on the coversheet drawing. A section of each drawing title block shall be reserved for revision numbers and notes. The initial submission shall be Revision 0, with Revision A, B, or C as project modifications require.
8. Battery calculations shall be provided on a per power supply/charger basis based on 24 hours of supervision and 15 minutes of alarm. These calculations shall clearly indicate the quantity of devices, the device part numbers, the supervisory current draw, the alarm current draw, totals for all categories, and the calculated battery requirements. Battery calculations shall also reflect all control panel component, remote annunciator, and auxiliary relay current draws. Failure to provide these calculations shall be grounds for the complete rejection of the submittal package.

9. Table of contents, product data sheets, sequences of operation, battery calculations, installation instructions, licenses, NICET certifications and B-Size (blackline) reduced shop drawings shall be provided by the alarm vendor as part of a single, spiral bound submittal book. The submittal book shall have laminated covers indicating the project address, SED number, system type, and contractor. The book shall consist of labeled dividers, and shall not exceed 9 ½” in width, and 11 ½” in height. No less than three (3) sets of submittal booklets shall be provided to the Commissioner for review and comment. Additional copies may be required at no additional cost to the project.
10. Scale drawing sets shall be submitted along with the submittal booklets. These drawings may be either D-Size or E-Size Blueline drawings and of a sufficient resolution to be completely read. Sets shall be bound and folded as to not take up more than 100 square inches of space. No less than three (3) sets of scale drawing sets shall be provided to the Commissioner for review and comment. Additional copies may be required at no additional cost to the project.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 FIELD CONDITIONS

- A. Seismic Conditions: Unless otherwise indicated on Contract Documents, specified Work in this Section withstand the seismic hazard design loads determined in accordance with ASCE/SEI 7 for installed elevation above or below grade.
 1. The term "withstand" means "unit must remain in place without separation of parts from unit when subjected to specified seismic design loads and unit must be fully operational after seismic event."

1.9 WARRANTY

- A. All work performed and all material and equipment furnished under this contract shall be free from defects and shall remain so for a period of at least one (1) year from the date of Substantial Completion

PART 2 - PRODUCTS

2.1 ADDRESSABLE FIRE-ALARM SYSTEM

- A. Description:
 1. Noncoded, UL-certified addressable system, with multiplexed signal transmission and voice and-strobe notification for evacuation
- B. Performance Criteria:
 1. Fire-Alarm Components, Devices, and Accessories: Listed and labeled by a NRTL in accordance with NFPA 70 for use with selected fire-alarm system and marked for intended location and application.

C. General Characteristics:

1. Automatic sensitivity control of certain smoke detectors.
2. Fire-alarm signal initiation must be by one or more of the following devices and systems:
 - a. Manual stations.
 - b. Heat detectors.
 - c. Flame detectors.
 - d. Smoke detectors.
 - e. Duct smoke detectors.
 - f. Air-sampling smoke-detection system.
 - g. Carbon monoxide detectors.
 - h. Combustible gas detectors.
 - i. Automatic sprinkler system water flow.
 - j. Preaction system.
 - k. Fire-extinguishing system operation.
 - l. Fire standpipe system.
 - m. Dry system pressure flow switch.
 - n. Fire pump running.
3. Fire-alarm signal must initiate the following actions:
 - a. Continuously operate alarm notification appliances, including voice evacuation notices.
 - b. Identify alarm and specific initiating device at FACU, connected network control panels, and remote annunciator.
 - c. Transmit alarm signal to remote alarm receiving station.
 - d. Unlock electric door locks in designated egress paths.
 - e. Release fire and smoke doors held open by magnetic door holders.
 - f. Activate voice/alarm communication system.
 - g. Switch HVAC equipment controls to fire-alarm mode. location and application.
 - h. Activate smoke-control system (smoke management) at firefighters' smoke-control system panel.
 - i. Close smoke dampers in air ducts of designated air-conditioning duct systems.
 - k. Recall elevators to primary or alternate recall floors.
 - l. Activate emergency shutoffs for gas and fuel supplies, except for shutoffs serving
 - m. legally required life-safety systems such as emergency generators and fire pumps.
 - n. Record events in system memory.
 - o. Record events by system printer.
 - p. Indicate device in alarm on graphic annunciator.

D. Supervisory signal initiation must be by one or more of the following devices and actions:

1. Valve supervisory switch.
2. High- or low-air-pressure switch of dry-pipe or wet sprinkler system.
3. Alert and Action signals of air-sampling detector system.
4. Independent fire-detection and -suppression systems.
5. Fire pump is running.
6. Fire pump has lost power.

7. Power to fire pump has phase reversal.
 8. Zones or individual devices have been disabled.
 9. FACU has lost communication with network.
 10. Each generator starting signal and running status
- E. System trouble signal initiation must be by one or more of the following devices and actions:
1. Open circuits, shorts, and grounds in designated circuits. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
 2. Loss of communication with addressable sensor, input module, relay, control module, remote annunciator, printer interface, or Ethernet module.
 3. Loss of primary power at FACU.
 4. Ground or single break in internal circuits of FACU.
 5. Abnormal ac voltage at FACU.
 6. Break in standby battery circuitry.
 7. Failure of battery charging.
 8. Abnormal position of switch at FACU or annunciator.
 9. Voice signal amplifier failure.
 10. Hose cabinet door open.
- F. System Supervisory Signal Actions:
1. Initiate notification appliances.
 2. Identify specific device initiating event at FACU, connected network control panels, and remote annunciators.
 3. Record event on system printer.
 4. After time delay of 200 seconds transmit trouble or supervisory signal to remote alarm receiving station
 5. Transmit system status to building management system.
 6. Display system status on graphic annunciator.
- G. Network Communications:
1. Provide network communications for fire-alarm system in accordance with fire-alarm manufacturer's written instructions.
 2. Provide network communications pathway per manufacturer's written instructions and requirements in NFPA 72 and NFPA 70.
 3. Provide integration gateway using Tridium Niagara Framework for connection to building automation system.
- H. Device Guards:
1. Description: Welded wire mesh of size and shape for manual station, smoke detector, gong, or other device requiring protection.
 - a. Factory fabricated and furnished by device manufacturer.
 - b. Finish: Paint of color to match protected device.
- I. Document Storage Box:

1. Description: Enclosure to accommodate standard 8-1/2-by-11 inch manuals and loose document records. Legend sheet will be permanently attached to door for system required documentation, key contacts, and system information. Provide two key ring holders with location to mount standard business cards for key contact personnel.
 2. Material and Finish: 18-gauge cold-rolled steel; four mounting holes.
 3. Color: Red powder-coat epoxy finish.
 4. Labeling: Permanently screened with 1 inch high lettering "SYSTEM RECORD DOCUMENTS" with white indelible ink.
 5. Security: Locked with 3/4 inch barrel lock. Provide solid 12 inch stainless steel piano hinge.
- J. Fire-Alarm Annunciator: Arranged for interface between human operator at FACU and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and programming and control menu.
1. Annunciator and Display: LCD, 80 characters, minimum.
 2. Keypad: Arranged to permit entry and execution of programming, display, and control commands.

2.2 MANUFACTURER:

- A. The catalog numbers used are those of Edwards - EST. No substitutions.
- B. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes must be finished in red with molded, raised-letter operating instructions in contrasting color; must show visible indication of operation; and must be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.

2.3 CIRCUITING GUIDELINES

- A. Audible Signals: Provide sufficient spare capacity to assure that the addition of five (5) audible devices can be supported without the need for addition control components (power supplies, signal circuit modules, amplifiers batteries, etc.)
- B. Visual Signals Provide sufficient spare capacity to assure that the addition of three (3) visual devices can be supported without the need for addition control components (power supplies, signal circuit modules, batteries, etc.)
- C. The network riser shall be wired NFPA Class X.
- D. Door holder circuits shall be Class D.
- E. Where it is necessary to interface conventional initiating devices provide intelligent input modules to supervise Class B zone wiring.
- F. Each of the following types of devices or equipment shall be provided with supervised circuits as shown on the contract drawings but shall be typically as follows:
 1. Sprinkler Valve Supervisory Switches: Provide one (1) supervisory module circuit for each sprinkler valve supervisory switch.

2. When odd numbers of devices exist at a single location, provide additional single input addressable modules. batteries, etc.)
 3. Each of the following types of remote equipment associated with the fire alarm system shall be provided with a form control relay contact, but shall be typically as follows:
 - a. Sprinkler Valve Supervisory Switches: Provide one (1) supervisory module circuit for each sprinkler valve supervisory switch.
 - b. When waterflow and tamper switches are at the same location, provide one (1) dual input addressable module. When odd numbers of devices exist at a single location, provide additional single input addressable modules.
 4. ‘C’ control relay contact, but shall be typically as follows:
 - a. HVAC Fan Systems: Provide one (1) shutdown control relay contact for each HVAC fan system.
 - b. HVAC Supply Fans: Provide one (1) shutdown control relay contact for each HVAC supply fan.
 - c. HVAC Return Fans: Provide one (1) shutdown control relay contact for each HVAC return fan.
 - d. Dampers: Provide one (1) control relay for each damper.
- G. Provide a dedicated 24VDC circuit to feed all auxiliary relays required for inductive loads. Circuits shall be supervised via an end-of-line relay and addressable input module. Auxiliary relays shall not derive their power from the starter or load being controlled.
- H. Each control or data gathering panel shall have a dedicated minimum 20Amp-120VAC feed. An appropriate fuse disconnect shall be included, wired as indicated in the Electrical Code for the City of NY.
- I. In no case shall any fire alarm circuit be sized beyond 80% of circuit capacity.

2.4 FIRE ALARM SYSTEM SEQUENCE OF OPERATION

- A. Refer to sequence of operation matrix indicated on fire alarm drawings.

2.5 SUPPORT FOR INSTALLER AND MAINTENANCE

- A. Provide a coded one-man walk test feature. Allow audible or silent testing. Signal alarms and troubles during test.
- B. Provide internal system diagnostics and maintenance user interface controls to display/report the power, communication, and general status of specific panel components, detectors, and modules.
- C. Provide loop controller diagnostics to identify common alarm, trouble, ground fault, Class A fault, and map faults. Map faults include wire changes, device type changes by location, device additions/deletions and conventional open, short, and ground conditions. Ground faults on the circuit wiring of remote module shall be identified by device address.

- D. Allow the user to display/report the condition of addressable analog detectors. Include device address, device type, percent obscuration, and maintenance indicator. The maintenance indicator shall provide the user with a measure of contamination of a device upon which cleaning decisions can confidently be made.
- E. Allow the user to report history for alarm, supervisory, monitor, trouble, smoke verification, watchdog, and restore activity. Include Facility Name, Licensee, Project Program Compilation date, Compiler Version, Project Revision Number, and the time and date of the History Report.
- F. Allow the user to disable/enable devices, zones, actions, timers and sequences. Protect the disable function with a password.
- G. Allow the user to activate/restore outputs, actions, sequences, and simulate detector smoke levels.
- H. Allow the service user to enter time and date, reconfigure an external port for download programming, initiate auto programming and change passwords. Protect these functions with a password.
- I. The City of new York shall retain complete rights and ownership to all software running in the system. The alarm equipment vendor shall provide useable hard and soft copies of the software database to the City of New York at the end of the warranty period. The database provided shall be useable by any authorized and certified distributor of the product line, and shall include all applicable passwords necessary for total and unrestricted use and modification of the database. The Commissioner shall define the extent of hardcopy database documentation to be provided.

2.6 UL LISTED AND APPROVED EQUIPMENT

- A. FACP Requirements: The FACP and all system devices (speaker-strobes, strobes, pull stations, smoke and heat FACP Requirements: The FACP and all system devices (speaker-strobes, strobes, pull stations, smoke and heat detectors, etc. shall be Edwards type EST3 series (or equal). All under one (1) label “UL listed and approved” for the use of fire alarm systems in this area of the United States of America. The operating controls shall be located behind locked door with viewing window. All control modules shall be labeled, and all zone locations shall be identified.
- B. System Controllers: The main controller 3-CPU shall be supervised, site programmable, and of modular design supporting up to 125 detectors and 125 remote modules per addressable Signaling line Circuit (SLC). The CPU shall support up to 10 SLC's per panel for a total system capacity of 2500 Intelligent Addressable points. The system shall be designed with peer-to-peer networking capability for enhanced survivability, with support for up to 64 modes, each with up to 2500 points and an overall capacity of 160,000 points. The cabinets shall be steel, with a red finish. The cabinets shall be steel with a red finish.
- C. The system shall store all basic system functionality and job specific data in non-volatile memory. All site specific and operating data shall survive a complete power failure intact. Passwords shall protect any changes to system operations.

- D. The Main Controller Module shall control and monitor all local or remote peripherals. It shall support a large 960-character LCD, power supply, remote LCD and zone display annunciators, printers, and support communication interface standard protocol (CSI) devices such as color computer annunciators and color graphic displays. Remote LCD annunciators shall also display each and every point in the system and be sized with the same number of characters as in the main FACP display. The panel shall have an interface module for remote site monitoring. The control panel shall include built-in (part of the FACP) Digital Alarm Communicator Transmitter (DACT)) module to transmit smoke, supervisory, waterflow, trouble, CO Alarm, pump running, and pump trouble events to a Central Monitoring Station (CMS) company. The DACT shall support dual telephones lines, Contact I.D. communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC power failure reports, auto test call, and be site programmable. The DACT shall be capable of transmitting every individual condition to the central monitoring station via Contact I.D. format. Selection of Contact I.D. format shall be of the discretion of the Commissioner but shall be an available option. Contractors who choose a separate dialer must meet all of the above options and are responsible for all necessary added connections such as power (with FCO/FDS), conduit, wire, addressable interface modules etc.
- E. The panel shall have an interface module for remote site monitoring. The control panel shall include built-in (part of the FACP) Digital Alarm Communicator Transmitter (DACT)) module to transmit smoke, supervisory, waterflow, trouble, CO Alarm, pump running, and pump trouble events to a Central Monitoring Station (CMS) company. The DACT shall support dual telephones lines, Contact I.D. communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC power failure reports, auto test call, and be site programmable. The DACT shall be capable of transmitting every individual condition to the central monitoring station via Contact I.D. format. Selection of Contact I.D. format shall be of the discretion of the Commissioner but shall be an available option. Contractors who choose a separate dialer must meet all of the above options and are responsible for all necessary added connections such as power (with FCO/FDS), conduit, wire, addressable interface modules etc.
- F. The system shall have built-in automatic system programming to automatically address and map all system devices attached to the main controller. A minimum default single stage alarm system operation shall be supported with alarm silence, event silence, drill, lamp test, and reset common controls.
- G. Advanced Windows-based System Definition Utility with Program Version Reporting to document any, and all, changes made during system start-up or system commissioning shall be used to maintain site specific programming. Time and Date Stamps of all modifications made to the program must be included to allow full retention of all previous program version data. It shall support programming of any input point to any output point. The system shall support the use of Bar Code readers to assist custom programming functions. It shall allow authorized customization of fundamental system operations using initiating events to start actions, timers, sequences and logical algorithms. The system program shall meet the requirements of this project, current codes and standards.
- H. The system shall support distributed processor intelligent detectors with the following operational attributes; integral multiple differential sensors, automatic device mapping, electronic addressing, environmental compensation, pre-alarm, dirty detector identification, automatic day/night sensitivity adjustment, normal/alarm LEDs, relay bases, sounder bases and isolator bases.

- I. The system shall use full digital communications to supervise all addressable loop devices for placement, correct location, and operation. It shall allow swapping of “same type” devices without the need of addressing and impose the “location” parameters on replacement device. It shall initiate and maintain a trouble if a device is added to a loop and clear the trouble when the new device is mapped and defined into the system.
- J. Each controller shall contain a RS232 printer/programming port for programming locally via an IBM PC. When operational, each controller shall support a printer through the RS232 port and be capable of message routing.
- K. Single stage operation shall be provided.
- L. The system shall have a UL Listed Detector Sensitivity test feature, which will be a function of the smoke detectors and performed automatically every four (4) hours.
- M. The system shall support 100% of all remote devices in alarm and provide support for a 100% compliment of detector isolator bases.
- N. All panel modules shall be supervised for placement and return trouble if damaged or removed.
- O. The system shall have a CPU watchdog circuit to initiate trouble should the CPU fail.
- P. The Fire Alarm / Life Safety System shall incorporate the ability to code Notification Appliance circuits per the NYC building code.
- Q. Audible notification appliances shall be affected by signal silence features. Visual signal appliance shall not be affected by signal silence features.
- R. User Interface: The 3-LCDXL Display Module shall be of membrane style construction with a 24-line by 40-character (960 total characters) Liquid Crystal Display (LCD). The LCD shall use super-twist technology and backlighting for high contrast visual clarity and a colored gray/black and white display. In the normal-mode the LCD shall display the time, a customer facility name, and the number of history events. In the alarm-mode the LCD display the total number of events and the type of event on display. The LCD shall reserve 42 characters of display space for each user custom message by addressable device. The module shall have visual indicators for the following common control functions; Power, Alarm, Supervisory, Monitor, Trouble, Disable, Ground Fault, CPU fail, and Test. There shall be common control keys and visual indicators for reset, alarm silence, panel silence, and drill. Provide four (4) pairs of display control keys for selection of event display by type (alarm, supervisory, monitor and trouble) and forward / backward scrolling through event listings. The operation of these keys shall be integrated with the related common control indicators to flash the indicators when undisplayed events are available for display and turn on steady when all events have been displayed. The LCD shall display the first event of the highest priority as well as the previous seven (7) alarm events “hands free” in chronological order so that the arriving firefighter may track the fires progression. Provide system function keys; status, reports, enable, disable, activate, restore, program, and test. The module shall have a numeric keypad, zero through nine with delete and enter keys.

- S. Power Supplies: The power supply shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 VDC at 7.0A continuous for notification appliance circuits. The power supply shall be capable of providing 7A to output circuits for a maximum period of 100 ms. All outputs shall be power limited. The battery shall be sized to support the system for 24 hours of supervisory and trouble signal current plus general alarm for five (5) minutes.
- T. Auxiliary power supplies shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 VDC at 7.0A continuous for notification appliance circuits. The power supply shall be capable of providing 7A to output circuits for a maximum period of 100 ms. All outputs shall be power limited. The battery shall be sized to support the system for 24 hours of supervisory and trouble signal current plus general alarm for 45 minutes.
- U. Network alphanumeric annunciators shall be located throughout the facility as indicated on the plans. The system shall have the capacity to support 64 network annunciators or EST3 network panel nodes. Each annunciator shall contain a supervised, back lit, liquid crystal with a minimum of eight (8) line with 21 characters per line. Where required, the annunciator shall include additional zonal annunciation and manual control without additional enclosures. The annunciator shall support full ability to serve as the operating interface to the system and shall include the following features; matched appearance with other system displays. Each LCD Display on each node (cabinet) in the system shall be configurable to show the status of any, or all, of the following functions anywhere in the system: Alarm, Supervisory, Trouble; Monitor.
- V. Each annunciator must be capable of supporting custom messages as well as system event annunciation. It must be possible to filter unwanted annunciation of trouble, alarm or supervisory functions on a by point or by geographic area. The annunciators shall be mounted in stand-alone enclosures or integrated into the network panels as indicated on the plans.
- W. One Way Voice – Communication to Stair Speakers: The Fire Alarm / Life Safety System shall incorporate a true digital integrated audio system into the network, multiplexing eight (8) independent audio channels over a single pair of wires. The system shall include distributed audio amplifiers, one (1) for each speaker circuit, and Class A / NFPA Style Z speaker circuits. The system shall provide a local temporal back up tone at each amplifier to allow evacuation signals to be broadcast in the protected premises in the event of a loss of data communication from the multiplexed audio riser.
- X. Audio Source Unit (3-ASU): The Fire Alarm / Life safety System shall be provided with a fully integrated Emergency Communications System. The Emergency Communications System shall include a paging microphone, digital message playback unit, and eight (8) fully digitized and multiplexed Audio Channels. Four (4) dedicated page mode control switches shall provide the emergency operator with instantaneous one (1) touch paging to safely control the staged evacuation of building occupants. Page select switches shall be included by stairwell and by floor.

- Y. Audio Amplifiers: Each audio power amplifier shall have integral audio signal de-multiplexers, allowing the amplifier to select any one (1) of eight (8) digitized audio channels. The channel selection shall be directed by the system software. Each amplifier output shall include a dedicated, supervised 25/70 Vrms speaker circuit which is suitable for connection of emergency speaker appliances. Standby Audio amplifiers shall be provided, which automatically sense the failure of a primary amplifier, and automatically program themselves to select and de-multiplex the same audio information channel of the failed primary amplifier, and fully replace the function of the failed amplifier.
1. In the event of a total loss of audio data communications, all amplifiers will default to the local “EVAC tone generator channel. If the local panel has an alarm condition, then all amplifiers will sound the EVAC signal on their connected speaker circuits.
 2. In the event of a loss of the fully digitized, multiplexed audio riser, the audio amplifiers shall automatically default to an internally generated alarm tone which shall be operated at a 3-3-3 a temporal pattern. Audio amplifiers shall automatically detect a short circuit condition on the connected speaker circuit wiring, and shall inhibit itself from driving into that short circuit condition

2.7 COMPONENTS

- A. Intelligent Devices — General: Each remote device shall have a microprocessor with non-volatile memory to support its functionality and serviceability. Each device shall store as required for its functionality the following data: device serial number, device address, device type, personality code, date of manufacture, hours in use, time and date of last alarm, amount of environmental compensation left/used, last maintenance date, job/project number, current detector sensitivity values, diagnostic information (trouble codes) and algorithms required to process sensor data and perform communications with the loop controller. Each device shall be capable of electronic addressing, either automatically or application programmed assigned, to support physical/electrical mapping and supervision by location. Setting a device’s address by physical means shall not be necessary.

- B. **Intelligent Detectors — General:** The System Intelligent Detectors shall be capable of full digital communications using both broadcast and polling protocol. Each detector shall be capable of performing independent fire detection algorithms. The fire detection algorithm shall measure sensor signal dimensions, time patterns and combine different fire parameters to increase reliability and distinguish real fire conditions from unwanted deceptive nuisance alarms. Signal patterns that are not typical of fires shall be eliminated by digital filters. Devices not capable of combining different fire parameters or employing digital filters shall not be acceptable. Each detector shall have an integral microprocessor capable of making alarm decisions based on fire parameter information stored in the detector head. Distributed intelligence shall improve response time by decreasing the data flow between detector and analog loop controller. Detectors not capable of making independent alarm decisions shall not be acceptable. Maximum total analog loop response time for detectors changing state shall be 0.5 seconds. Each detector shall have a separate means of displaying communication and alarm status. A green LED shall flash to confirm communication with the analog loop controller. A red LED shall flash to display alarm status. The detector shall be capable of identifying up to 32 diagnostic codes. This information shall be available for system maintenance. The diagnostic code shall be stored at the detector. Each smoke detector shall be capable of transmitting pre-alarm and alarm signals in addition to the normal, trouble and need cleaning information. It shall be possible to program control panel activity to each level. Each smoke detector may be individually programmed to operate at any one (1) of five (5) sensitivity settings. Each detector microprocessor shall contain an environmental compensation algorithm that identifies and sets ambient “Environmental Thresholds” approximately six (6) times an hour. The microprocessor shall continually monitor the environmental impact of temperature, humidity, other contaminants as well as detector aging. The process shall employ digital compensation to adapt the detector to both 24-hour long term and 4-hour short-term environmental changes. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches 80% and 100% of the allowable environmental compensation value. Differential sensing algorithms shall maintain a constant differential between selected detector sensitivity and the “learned” base line sensitivity. The base line sensitivity information shall be updated and permanently stored at the detector approximately once every hour. The intelligent analog detectors shall be suitable for mounting on any Signature Series detector mounting base.
- C. **Fixed Temperature/Rate of Rise Heat Detector, SIGA2-HRS:** Provide intelligent combination fixed temperature/rate-of-rise heat detectors SIGA2-HRS. The heat detector shall have a low mass thermistor heat sensor and operate at a fixed temperature and at a temperature rate-of-rise. It shall continually monitor the temperature of the air in its surroundings to minimize thermal lag to the time required to process an alarm. The integral microprocessor shall determine if an alarm condition exists and initiate an alarm based on the analysis of the data. Systems using central intelligence for alarm decisions shall not be acceptable. The intelligent heat detector shall have a nominal fixed temperature alarm point rating of 135°F and a rate-of-rise alarm point of 15°F per minute. The heat detector shall be rated for ceiling installation at a minimum of 70 ft centers and be suitable for wall mount applications.

- D. Photoelectric Smoke Detector, SIGA2-PS: Provide intelligent photoelectric smoke detectors SIGA2-PS. The analog photoelectric detector shall utilize a light scattering type photoelectric smoke sensor to sense changes in air samples from its surroundings. The integral microprocessor shall dynamically examine values from the sensor and initiate an alarm based on the analysis of data. Systems using central intelligence for alarm decisions shall not be acceptable. The detector shall continually monitor any changes in sensitivity due to the environmental effects of dirt, smoke, temperature, aging and humidity. The information shall be stored in the integral processor and transferred to the analog loop controller for retrieval using a laptop PC or the SIGA-PRO Signature Program/Service Tool. The photo detector shall be rated for ceiling installation at a minimum of 30 ft centers and be suitable for wall mount applications. The photoelectric smoke detector shall be suitable for direct insertion into air ducts up to 3 ft high and 3 ft wide with air velocities up to 5,000 ft/min. without requiring specific duct detector housings or supply tubes. The percent smoke obscuration per foot alarm set point shall be field selectable to any of five sensitivity settings ranging from 1.0% to 3.5%. The photo detector shall be suitable for operation in the following environment: Temperature: 32°F to 120°F. Humidity: 0-93% RH, non-condensing, Elevation: no limit.
- E. Standard Detector Mounting Bases, SIGA-SB / SIGA-SB4: Provide standard detector mounting bases SIGA-SB suitable for mounting on North American 1-gang, 3½” or 4” octagon box and 4” square box. The base shall, contain no electronics, support all Signature Series detector types and have the following minimum requirements: Removal of the respective detector shall not affect communications with other detectors, Terminal connections shall be made on the room side of the base, bases that must be removed to gain access to the terminals shall not be acceptable. The base shall be capable of supporting one (1) Signature Series SIGA-LED Remote Alarm LED Indicator. Provide remote LED alarm indicators where shown on the contract drawings or required by field conditions.
- F. Duct Detector Housing, SIGA-SD: Provide model SIGA-SD Low profile intelligent addressable DUCT smoke detector as indicated on the contract drawings. Provide for variations in duct air velocity between 100 and 4,000 feet per minute and include a wide sensitivity range of .79 to 2.46%/ft. Obscuration. Include one (1) Form-C shut down relay rated 2.0 amps @ 30 Vdc and also include slave high contact relays if required. Provide an air exhaust tube and an air sampling inlet tube that extends into the duct air stream up to ten feet. The addressable DUCT housing shall be suitable for extreme environments, including a temperature range of –20 to 158 degrees F and offer a harsh environment gasket option. Provide Remote Alarm LED Indicators SIGA-LED and/or remote test station model SD-TRK as indicated on the contract drawings or required by field conditions.
- G. Intelligent Modules — General: It shall be possible to address each Intelligent Signature Series module without the use of DIP or rotary switches. Devices using DIP switches for addressing shall not be acceptable. The personality of multifunction modules shall be programmable at site to suit conditions and may be changed at any time using a personality code downloaded from the Analog Loop Controller. Modules requiring EPROM, PROM, ROM changes or DIP switch and/or jumper changes shall not be acceptable. The modules shall have a minimum of two (2) diagnostic LEDs mounted behind a finished cover plate. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The module shall be capable of storing up to 24 diagnostic codes which can be retrieved for troubleshooting assistance. Input and output circuit wiring shall be supervised for open and ground faults. The module shall be suitable for operation in the following environment: Temperature: 32°F to 120°F, Humidity: 0-93% RH, non-condensing.

- H. Single Input Module, SIGA-CT1 (Waterflow Detectors, Tamper Switches etc.): Provide intelligent single input modules SIGA-CT1. The Single Input Module shall provide one (1) supervised Class B input circuit capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on North American 2 ½” deep 1-gang boxes and 1 ½” deep 4” square boxes with 1-gang covers. The single input module shall support the following circuit types: Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.), Normally-Open Alarm Delayed Latching (Waterflow Switches), Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.), Normally-Open Active Latching (Supervisory, Tamper Switches).
- I. Dual Input Module, SIGA-CT2: Provide intelligent dual input modules SIGA-CT2. The Dual Input Module shall provide two (2) supervised Class B input circuits each capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on North American 2 ½” deep 1-gang boxes and 1 ½” deep 4” square boxes with 1-gang covers. The dual input module shall support the following circuit types: Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.), Normally-Open Alarm Delayed Latching (Waterflow Switches), Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.), Normally-Open Active Latching (Supervisory, Tamper Switches).
- J. Single Input Signal Module, SIGA-CC1: Provide intelligent single input signal modules SIGA-CC1. The Single Input (Single Riser Select) Signal Module shall provide one (1) supervised Class B output circuit capable of a minimum of two (2) personalities, each with a distinct operation. When selected as a telephone power selector, the module shall be capable of generating its own “ring tone”. The module shall be suitable for mounting on North American 2 ½” deep 2-gang boxes and 1 ½” deep 4” square boxes with 2-gang covers. The single input signal module shall support the following operations: Audible/Visible Signal Power Selector (Polarized 24 VDC @ 2A).
- K. Control Relay Module, SIGA-CR: Provide intelligent control relay modules SIGA-CR. The Control Relay Module shall provide one (1) form “R” dry relay contact rated at 2 amps @ 24 VDC to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware. The control relay module shall be suitable for mounting on North American 2 ½” deep 1-gang boxes and 1 ½” deep 4” square boxes with 1-gang covers.
- L. Manual Pull Station, SIGA-270: Provide intelligent single action, single stage fire alarm stations SIGA-270. The fire alarm station shall be of metal construction with an internal toggle switch. Provide a locked test feature. Finish the station in red with white “PULL IN CASE OF FIRE” English lettering. The manual station shall be suitable for mounting on North American 2 ½” deep 1-gang boxes and 1 ½” deep 4” square boxes with 1-gang covers.
- M. Multi-Voltage Control Relays, MR-200 Series: Provide remote control relays connected to supervised ancillary circuits for control of fans, dampers, door releases, etc. Relay contact ratings shall be DPDT and rated for 10 amperes at 115 VAC. A single relay may be energized from a voltage source of 24 VDC, 24 VAC, 115 VAC. A red LED shall indicate the relay is energized. A metal enclosure shall be provided.

- N. Electromagnetic Door Holders: Provide Wall Mounted, EST Edwards 1504/1505/1508/1509 Series. Provide flush, semi-flush or surface wall mounted electromagnetic door holder/releases rated at 24 VAC/DC. Finish shall be brushed zinc. Electromagnetic door holders submitted for use must have written proof of their compatibility for the purposes intended. Such proof shall be in the form of documentation from all manufacturers that clearly states that their equipment (as submitted) is 100% compatible with each other for the purposes intended.
- O. Manual Pull Station Guard with Cover: Manual pull stations that are provided with Guards shall include non-audible alarms. They shall be surface or flush mounting, as required for each individual device. Stopper Covers shall only be included on devices shown on the contract drawings to include them.
- P. Projected Beam Detector – Single End – Model EST EC-50/100R. The projected beam type smoke detector shall be a 4-wire 12/24 VDC device monitored by the FACP through a two (2) circuit SIGA-CT2 monitor module (one (1) zone for alarm and one (1) for trouble). The unit shall be listed to UL 268 and shall consist of an integrated transmitter and receiver. The beam detector shall operate between a range of 15 and 160 feet or 160 and 330 feet. It shall feature automatic gain control, which will compensate for gradual signal deterioration due to dirt accumulation on the lenses. The unit shall include a wall mounting bracket. Testing shall be carried out using a calibrated test filter. It shall be possible to test the detector without direct access to it by means of a remotely installed key-operated test station.
- Q. Fused Disconnect Switch: Fire alarm equipment shall be powered through an approved Fused Disconnect Switch (FDS) connected ahead of the main service switch. The FDS shall be heavy duty (200,000 rms short circuit amps) safety switch with ampere rating as indicated on contract drawings, painted red, include a ground and neutral kit with grounding screw (to bond neutral), include a padlock with Y1 cylinder keyed to a NYC/FDNY 2642 key (use ABUS re-keyable 83-45 or equivalent lock). All wiring shall be #10 minimum THHN or equivalent run in ¾ inch EMT/RGS and in accordance with NYC requirements. The ground to the FDS shall be made using a NYC accepted method (see NYC Electrical Code), and the ground wire to the FDS shall be #8 minimum (larger if necessary to meet feeder size). The equipment ground leaving from the FDS connecting to the fire alarm equipment shall include a #10 green ground minimum. The FDS panel shall bear an engraved white-core phenolic or bakelite identification nameplate stating in minimum one-quarter inch (1/4”) high white letters on a red background “FIRE ALARM FUSED DISCONNECT”.
- R. Fused Cut Out: Where additional circuits are required by the fire alarm, a Fused Cutout, properly sized shall be included, wired after the FDS. The size of the fuses shall be sized appropriately but be twenty (20) amperes minimum. The fused cut-out panel shall bear an engraved white-core phenolic or bakelite identification nameplate stating in minimum one-quarter inch (1/4”) high white letters on a red background “FIRE ALARM FUSED CUT-OUT”. The neutral shall not be bonded in the fused cutout.
- S. Stand-Alone 120 VAC / 9 VDC Smoke Alarms, Kidde model PE120. Provide Stand-Alone 120 Volt line operated photoelectric smoke alarms with 9 VDC battery backup. Smoke alarms shall be installed in each sleeping room, 15 ft from any sleeping room, and on every level of each apartment as required by NYC Code chapter 9. Smoke alarms shall be interconnected and wired in tandem so that all smoke alarm sounders within the apartment activate together. Smoke Alarms shall be installed in accordance with the latest requirements of NYC code.

- T. Stand-Alone Combination Smoke and Carbon Monoxide (CO) Alarms: Provide Stand-Alone combination 120 VAC line operated photoelectric smoke alarms with 9 VDC battery backup. Smoke and CO alarms shall be installed in each sleeping room, 15 ft from any sleeping room, and in the path of egress as required by NYC Code chapter 9. Smoke alarms shall be MEA approved, Interconnected and installed in accordance with the latest requirements of NYC code.
- U. Stairwell Speakers: Provide speakers with a 4” cone as manufactured by EST, Cat. No. G4-S7 Genesis Series. The rear of the speaker shall be completely sealed protecting the cone during and after installation. Screw terminals shall be provided for wiring and the speaker housings shall be red and include "FIRE" labeling. Speakers shall be provided for use with 70V systems and shall provide power taps at 1/4w, 1/2w, 1w, and 2w. Speakers shall provide UL confirmed 90 dBA sound output at 2w. Speakers shall mount in a North American 4” electrical box with extension ring using the 2 screws provided with ring. It must not be necessary to completely remove the screws to facilitate mounting.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.
 - 1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.
- B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Preinstallation Testing: Perform verification of functionality of installed components of existing system prior to starting work. Document equipment or components not functioning as designed.
- B. Protection of In-Place Conditions: Protect devices during construction unless devices are placed in service to protect facility during construction.

3.4 INSTALLATION OF EQUIPMENT

- A. Comply with NECA 305, NFPA 72, NFPA 101, and requirements the NYC Building Code for installation and testing of fire-alarm equipment. Install electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems." The entire system shall be installed in a workmanlike manner, in accordance with approved manufacturer's wiring diagram. The contractor shall furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation. All wiring shall be of the type recommended by the manufacturer, approved by the NYC Fire Department, NYC Fire Code, NYC Electrical Code, and specified with in. Wiring shall be installed in conduit as indicated herein.
1. Devices placed in service before other trades have completed cleanup must be replaced.
 2. Devices installed, but not yet placed, in service must be protected from construction dust, debris, dirt, moisture, and damage in accordance with manufacturer's written storage instructions.
- B. Equipment Floor Mounting: Install FACU on concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."
1. Install seismic bracing comply with requirements in Section 260548 "Vibration and Seismic Controls for Electrical Systems".
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18 inch centers around full perimeter of concrete base.
 3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Equipment Floor and Wall Mounting: Install FACU on finished floor.
1. Comply with requirements for seismic-restraint devices as per manufacturer recommended.
- D. Install wall-mounted equipment, with tops of cabinets not more than 78 inch above finished floor.
1. Comply with requirements for seismic-restraint devices as per manufacturer recommended.
- E. Manual Fire-Alarm Boxes:
1. Install manual fire-alarm box in normal path of egress within 60 inch of exit doorway.
 2. Mount manual fire-alarm box on background of contrasting color.
 3. Operable part of manual fire-alarm box must be between 42 and 48 inch above floor level. Devices must be mounted at same height unless otherwise indicated.
 4. Comply with "Smoke-Sensing Fire Detectors" section in "Initiating Devices" chapter in NFPA 72, for smoke-detector spacing.
 5. Comply with "Heat-Sensing Fire Detectors" section in "Initiating Devices" chapter in NFPA 72, for heat-detector spacing.

6. Smooth ceiling spacing must not exceed 30 ft. .
 7. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas must be determined in accordance with Annex A in NFPA 72.
 8. HVAC: Locate detectors not closer than 60 inch from air-supply diffuser or return-air opening.
 9. Lighting Fixtures: Locate detectors not closer than 12 inch from lighting fixture and not directly above pendant mounted or indirect lighting.
-
- F. Install cover on each smoke detector that is not placed in service during construction. Cover must remain in place except during system testing. Remove cover prior to system turnover.
 - G. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend full width of duct. Tubes more than 36 inch long must be supported at both ends.
 - H. Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location. Do not install smoke detectors in sprinklered elevator shafts.
 - I. Remote Status and Alarm Indicators: Install in visible location near each smoke detector, sprinkler water-flow switch, and valve-tamper switch that is not readily visible from normal viewing position.
 - J. Audible Alarm-Indicating Devices: Install not less than 6 inch below ceiling. Install bells and horns on flush-mounted back boxes with device-operating mechanism concealed behind grille. Install devices at same height unless otherwise indicated.
 - K. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inch below ceiling. Install devices at same height unless otherwise indicated.
 - L. All audio/visual devices shall be mounted 80 inches above the finished floor, as measured to the bottom of the lens. Devices shall be mounted no less than 6 inches from the ceiling. Audio visual devices shall be mounted per NFPA 72
 - M. Device Location-Indicating Lights: Locate in public space near device they monitor.
 - N. Antenna for Radio Alarm Transmitter: Mount to building structure where indicated. use mounting arrangement and substrate connection that resists wind load of 100 mph with gust factor of 1.3 without damage.
 - O. All penetration of floor slabs and firewalls shall be sleeved (1” conduit minimum) fire stopped in accordance with the NYC Building code.
 - P. End of Line Resistors shall be furnished as required for mounting as directed by the manufacturer. Devices containing end-of-line resistors shall be appropriately labeled. Devices should be labeled so removal of the device is not required to identify the EOL device.
 - Q. All manual pull stations shall be mounted 42 - 48 inches above the finished floor, as measured to the top of handle, in accordance with ADA.
 - R. No area smoke detectors shall be mounted within 36 inches of any HVAC supply, return air register or lighting fixture.

- S. No area smoke or heat detector shall be mounted within 12 inches of any wall. All detectors shall be installed in strict accordance with NFPA 72 as amended in Appendix Q guidelines for such devices.
- T. All mechanical rooms, garages, loading docks, roof, boiler rooms, gymnasiums, wiring electrical closets, custodian rooms, attic spaces, etc. or areas with no hung ceilings shall be piped with 3/4" conduit and installed as necessary by the electrical code. All areas in public view shall be in metal conduit. All boxes must be painted red and labeled "FIRE ALARM".
- U. All addressable modules shall be mounted within 36 inches of the monitored or controlled point of termination. This shall include, but is not necessarily limited to, fan shutdown, elevator recall, shunt trip, sprinkler status points, or door release. Label all addressable modules as to their function.
- V. New door holders shall derive their 24VAC/VDC power from FACP or nearest DGP. The door holders shall be circuited on a per floor or area basis. Locations and quantities of door holders shall be referenced and submitted in the submission package.
- W. All low voltage wiring terminated to the fire alarm system shall be plenum rated with no exceptions and no less than No. 12 AWG in size for NAC circuits and 16 AWG for Initiating Circuits, and solid copper per the NYC Electrical code. Exposed wire above 8ft AFF shall be 150 degrees C and as specified in the electrical code, unless in rooms / locations identified above.
- X. All line voltage (120VAC) wiring shall be no less than No. 12 AWG in size, and solid copper. This shall include all system grounding. FACP must have a dedicated fused disconnect arranged per the NYC Electrical code.
- Y. All wiring shall be color-coded throughout, to National Electrical Code standards.
- Z. Power-limited/Non-power-limited NEC wiring standards shall be observed.
- AA. All junction box covers shall be painted red and labeled FIRE ALARM SYSTEM.
- BB. Fire alarm system wiring shall not co-mingle with any other system wiring in the facility. Conduits shall not be shared under any circumstance. Only when fire alarm wiring enters the enclosure of a monitored or controlled system will co-habitation be permitted (i.e. at fan starters or elevator controllers).
- CC. FACP enclosures shall have engraved labels indicating, "FIRE ALARM SYSTEM", and the areas of the building served by that panel.
- DD. Auxiliary relays shall be appropriately labeled to indicate "FIRE ALARM SYSTEM" and their specific function (i.e. FAN S-1 SHUTDOWN).
- EE. All fire alarm wiring shall be continuous and unspliced. Terminations shall only occur at fire alarm devices or control panel enclosures under terminal screws. All other splicing methods are specifically disallowed (i.e. plastic wirenuts).
- FF. All fire alarm wiring shall be installed using a dedicated system of supports (i.e. bridle rings). Fire alarm wiring shall not be bundled or strapped to conduit, pipe or wire in the facility.

- GG. All fire alarm wiring shall be sleeved when passing through any wall, using conduit sleeves (1” min.) with bushings, and fire stopped in accordance with Code.
- HH. All low voltage operation shall be provided from the FACP.
- II. All fire alarm devices shall be accessible for periodic maintenance. Should a device location indicated on the Contract Drawings not meet this requirement, it shall be the responsibility of the installing contractor to bring it, in writing, to the attention of the Commissioner . Failure to bring such issues to the attention of the Commissioner shall be the exclusive liability of the Contractor.
- JJ. A separate ground (isolated from conduit ground) must be pulled to all cabinets.
- KK. Conduit sizes, in general, are not indicated on the contract drawings. Provide all conduits sized as required to accommodate all the fire alarm system wiring, as previously described per NYCEC. All conduit sizes, routing, wire count, etc., shall be clearly indicated on shop drawing submittals.
- LL. Contractor should not install uncovered smoke detector heads until final checkout time to ensure that dirt and dust does not contaminate the detectors.
- MM. All smoke area detectors and heat detectors shall be located to be serviceable and visible from floor.
- NN. Final acceptance test shall include, among other requirements, that the system perform for a 30-day time-period completely free of any defects of system origin prior to system certification.

3.5 ELECTRICAL CONNECTIONS

- A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.
- D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.
 - 1. Nameplate must be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
 - 2. Nameplate must be laminated acrylic or melamine plastic signs with black background and engraved white letters at least 1/2 inch high.

3.6 FIELD QUALITY CONTROL

- A. The system shall be installed and fully tested under the supervision of a trained manufacturer’s representative. The system shall be demonstrated to perform all of the function as specified.
- B. Contractor shall have no less than two (2) NICET Level II fire alarm technicians dedicated to this project.

- C. Contractor and the Alarm System Vendor shall, upon the request of the Commissioner , attend any, and all, project meetings for the purpose of accurately determining progress.
- D. Contractor to assure that construction debris does not adversely affect any sensing devices installed as part of this project. Should it be deemed necessary by the Commissioner, contractor shall be responsible for the cleaning of all smoke detectors prior to final acceptance.

3.7 CONTROL CONNECTIONS

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."
- C. Install nameplate for each control connection, indicating field control panel designation and I/O control designation feeding connection.

3.8 PATHWAYS

- A. Pathways above recessed ceilings and in inaccessible locations may be routed exposed.
 - 1. Exposed pathways located less than 96 inch above floor must be installed in EMT.
- B. Pathways must be installed in EMT.
- C. Exposed EMT must be painted red enamel.

3.9 CONNECTIONS

- A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Section 087100 "Door Hardware." Connect hardware and devices to fire-alarm system.
 - 1. Verify that hardware and devices are listed for use with installed fire-alarm system before making connections.
- B. Make addressable connections with supervised interface device to the following devices and systems. Install interface device less than 36 inch from device controlled. Make addressable confirmation connection when such feedback is available at device or system being controlled.
 - 1. Alarm-initiating connection to smoke-control system (smoke management) at firefighters' smoke-control system panel.
 - 2. Alarm-initiating connection to stairwell and elevator-shaft pressurization systems.
 - 3. Smoke dampers in air ducts of designated HVAC duct systems.
 - 4. Magnetically held-open doors.
 - 5. Electronically locked doors and access gates.
 - 6. Alarm-initiating connection to elevator recall system and components.
 - 7. Alarm-initiating connection to activate emergency lighting control.

8. Alarm-initiating connection to activate emergency shutoffs for gas and fuel supplies.
9. Supervisory connections at valve supervisory switches.
10. Supervisory connections at low-air-pressure switch of each dry-pipe sprinkler system.
11. Data communication circuits for connection to building management system.
12. Data communication circuits for connection to mass notification system.
13. Supervisory connections at fire-extinguisher locations.
14. Supervisory connections at fire-pump power failure including dead-phase or phase-reversal condition.
15. Supervisory connections at fire-pump engine control panel.

3.10 IDENTIFICATION

- A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified.
- B. Install framed instructions in location visible from FACU.

3.11 GROUNDING

- A. Ground FACU and associated circuits in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Ground shielded cables at control panel location only. Insulate shield at device location.

3.12 LABELING OF DEVICES

- A. A permanent label shall be placed on the base of each device with the address number of that device. The label size shall be large enough to be read from the floor and approved by the Fire Department.

3.13 TESTS

- A. The completed fire alarm system shall be fully tested in accordance with NFPA-72 and Fire Department of New York requirements by the Contractor in the presence of the Commissioner and New York City Fire Department. The manufacturer shall provide a factory trained representative to assist the Contractor in testing:
 1. The operation of the control panel and all functions.
 2. The operation of all peripheral initiating devices (smoke detectors, manual stations, etc.) for proper alarm
 3. The supervisory feature of all initiating, signaling and control circuits
- B. The manufacturer's representative shall provide a set of instructions to all parties at the time of final test
- C. The contractor shall notify the manufacturer and all parties at least one (1) week (five (5) working days) before final tests.
- D. Upon completion of a successful test, the manufacturer's representative shall provide a complete test report, in writing, to the Commissioner

- E. Testing shall be completed for the New York City Fire Department, New York City Building Department, the City of New York, and Commissioner . Testing shall be completed on the normal day of the weekly job meeting.
- F. Each individual system operation on a device by device basis shall be tested for its complete operation. The procedure for testing the entire fire alarm system shall be set forth with the consent of the Commissioner and the manufacturer.

3.14 DOCUMENTATION

- A. The contractor shall provide three (3) complete manual on the completed system to include site specific operating and maintenance instruction, catalog cuts of all equipment and components, as-built wiring diagrams and a manufacturer’s suggested spare parts list. In addition to the above manuals, provide the services of the manufacturer’s trained representative for four (4) separate calendar days for a period of eight (8) hours per day to instruct the City of New York personnel on the operation and maintenance of the entire system. Instruction must cover the basic operations (interrogating the system, sending commands, acknowledgment of alarms, smoke detector maintenance).
- B. All instruction shall be conducted on the system as installed in the building and include a tour of the building and adequate instructional manuals.
- C. As-built drawings shall be prepared and shall consist of the following:
 - 1. Complete revision of all previously submitted drawings.
 - 2. Point-to-point depiction of all device wiring on the device layout floor plans.
 - 3. One (1) set of B-size, laminated as-built drawings.
 - 4. Two (2) sets of 30”x 42”inch 1\16”=1’ scale drawings showing all points of fire alarm.
 - 5. One (1) set shall be submitted with the close-out documents. Second set shall be mounted in frame with a lexan cover. These drawing must be submitted to the Commissioner for approval.
 - 6. Fire Alarm Matrix designed per NFPA 72: FIGURE A.10.6.2.3(9).
 - 7. The contractor shall prepare the FDNY required as-built drawings as outlined in Technology Management Bulletins #3-1/2010, #3-2/2012. The drawings shall include riser diagram, input/output matrix, border and title block. The contractor shall include, sign and seal FDNY required functionality statement on the as-built drawings. Three (3) sets of 11x17 hard copies of completed as-built drawings shall be provided to the Commissioner for review and will be in turn signed and sealed by the Commissioner prior to submission to the FDNY. These sets shall be legible.
- D. Turnover of all software database hard/soft copies shall be required. This shall include all possible programming software logs, diskettes or CDs containing exported project files, hard copies of all device maps, the revision number of the version of programming utility used, and all required passwords. The turnover of all database information shall occur prior to the end of the One (1) year warranty period.

3.15 GUARANTEE SERVICE

- A. **Guarantee Service:** Beginning at Substantial Completion, maintenance service must include 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies must be manufacturer's authorized replacement parts and supplies.
 - 1. Include visual inspections in accordance with "Visual Inspection Frequencies" table in "Testing" paragraph of "Inspection, Testing and Maintenance" chapter in NFPA 72.
 - 2. Perform tests in "Test Methods" table in "Testing" paragraph of "Inspection, Testing and Maintenance" chapter in NFPA 72.
 - 3. Perform tests per "Testing Frequencies" table in "Testing" paragraph of "Inspection, Testing and Maintenance" chapter in NFPA 72.

3.16 SOFTWARE SERVICE AGREEMENT

- A. Comply with UL 864.
- B. **Technical Support:** Beginning at Substantial Completion, service agreement must include software support for one year.
- C. **Upgrade Service:** At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.
 - 1. **Upgrade Notice:** At least 30 days to allow City of New York to schedule access to system and to upgrade computer equipment if necessary.

END OF SECTION 284621.11

SECTION 310000 - EARTHWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 RELATED SECTIONS

- A. Sanitary Sewerage Piping.Section 333100
- B. Stormwater Utilities.Section 334000

1.3 SCOPE OF WORK

- A. Work of this Section includes conducting unclassified excavation in bulk and in trenches/pits, filling and backfilling with specified soil materials, compacting, grading, and the following:
 - 1. Earthwork must occur within, around, and for site conditions as required to provide foundation elements, appurtenant structures, sub-bases and base courses, site landscaping and improvements, utility lines, and other miscellaneous elements of respective work. Earthwork must further include:
 - a. Protection of excavations, utilities, adjacent conditions, and previously installed work of the Project to remain.
 - b. It must be the responsibility of the contractor to locate all existing utilities whether shown hereon or not, and to protect them from damage. The contract drawings are not inclusive of all utilities that may be present within the project work area. If damaged, the contractor must bear all expense of restoration or replacement of any utility damaged.
 - c. Over excavation must be filled with lean concrete or approved compacted structural fill material.
 - d. Designing, furnishing, installing, and removing temporary excavation supports, dewatering, and other temporary protection including erosion control required for and incidental to performing and maintaining earthwork.
 - e. Preparing sub-grades and placing base / sub-base courses for utility structures and related distribution lines, wall systems, pavement systems, and site drainage systems.
 - f. Placing fill/backfill materials including, but not limited to, the following:
 - 1) Coarse Sand material and Washed Gravel material as indicated at and around foundation areas of structures and for utility trenches.
 - 2) Washed Gravel drainage material for filling vertical drains/weepers at drain units.

- g. Grading and compacting of site filled and backfilled areas to design grades with allowance for design thicknesses of planting soils, paving systems, and the like, and allowing for even flow of grade transitions to adjacent site areas.
 - h. Perform Soil Material Testing as specified herein.
2. Use of soil materials properly segregated during excavation operations must be only as approved by the City of New York.
 3. Obtaining imported (borrow) material from off-site sources to extent required and of materials specified and tested for approved use in earthwork operations.
 - a. Soil materials specified in this Section include the following:
 - 1) Washed Gravel material for use as sub-base course on grade, and at other conditions indicated.
 - 2) Aggregate for use as base course over Washed Gravel sub-base course at pavement conditions as indicated.
 - 3) Sand used for base course at pavement.
 - 4) Stone Screenings used as base course under sand setting beds.
 - 5) Sand Based Structural Soil
 4. Providing accessory materials including items related to other work of Contract and respective Sections of Work. Accessories include but may not be limited to the following:
 - a. Filter and soil separation fabrics.
 5. Field survey / layout work including staking out lines and grades, topographic surveys, verification of job site elevations, and other identification of site work locations.
 6. Providing Field Samples/Mock-ups for filling, grading, and compaction of different fill soil installations and for other conditions as specified including mock-up installations for paving systems.
 7. Preservation and protection of existing and concurrently installed site work and structures including related structures, curbs, walls, decorative surfaces and pavements, in-place soil materials, and utilities.
 - a. Perform hand excavation and hand backfilling within new and existing to remain planting and paving areas and at other conditions as required to limit damage and protect adjacent finishes.
 8. Disposal of excess and unsuitable soil or other materials resulting from earthwork operations.
 9. Coordinating this work between and together with related work of Contract and with adjacent work of separate contractors, including sequencing and scheduling of construction operations and use of site areas.

1.4 DEFINITIONS

- A. Backfill: General reference for soil materials to be used and the operation to fill an excavation.
 1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
 2. Final Backfill: Backfill placed over initial backfill to fill a trench.

- B. Base Course: Layer placed between the compacted sub-grade and structure or paving system.
- C. Bedding Course: Layer placed over the excavated sub-grade in a trench before laying pipe and/or conduit.
- D. Borrow: Suitable soil or washed gravel imported from off-site for use as fill or backfill material.
- E. Bulk Excavation: Excavation of soils and unclassified or classified materials in any areas not defined as trench or pit excavation.
- F. Debris and/or Obstructions: See definition in DDC General Conditions.
- G. Design Bearing Grades or Elevations: The design vertical levels of foundation bottoms indicated by Contract Documents.
- H. Excavation: Removal of unclassified or classified material encountered above design sub-grade elevations.
 - 1. Additional Excavation: Excavation below design sub-grade elevations as directed by Commissioner.
 - 2. Unauthorized Excavation: Excavation below design sub-grade elevations or beyond indicated dimensions without direction by Commissioner. Unauthorized excavation, as well as remedial work directed by the Commissioner must be without additional compensation.
- I. Excavation Grades or Elevations: The design vertical levels specified or indicated by Contract Documents or revised during construction by Commissioner to accommodate field conditions and to which excavation must be conducted.
- J. Finish(ed) Grade: Elevation of top most surface indicated by Contract Documents for hardscape surfacing such as paving areas, for planting soil including planting soil surface at planting bed areas.
- K. Pit Excavation: Small, local excavations, such as for utility structures, column footings, pile caps, and other item footings where the plan dimensions do not exceed 10 feet in either length or width.
- L. Sub-grade: Surface or elevation of subsoil remaining after completing excavation before placing utility component bedding, Drainage Layer, Structural Planting Soil, or planting soil layers or top surface of a fill or backfill immediately below a base course or sub-base. Typically a Design Bearing Grade or Excavation Grade.
- M. Suitable Fill Materials: Classified as specified for each type and condition of use such as described in Part 2 “Products” of this or other related Section.
- N. Transition Layer: An on-site mixed, non-uniform heterogeneous mixture of Planting Soil Mix “B” material and Drainage Layer Coarse Sand material as described in Section 329300 “Plants.” Layer must be located in designated planting bed areas.
- O. Trench Excavation: Excavations where the required depth is greater than twice the width such as required for installation of utilities and pipes.

- P. **Unclassified Excavation:** Removal of materials encountered within the required excavations between the existing ground surface and design excavation grade to the top of suitable sub-grade material, whichever is deeper, regardless of the nature of the materials encountered, their geologic definitions, the water contents thereof, and the means of excavation required. Resultant Unclassified Excavation material will be further classified as "Suitable Fill Material" or "Unsuitable Material". Classification of material(s) must be approved by the Commissioner whose decision must be final and binding upon Contractor.
- Q. **Unsuitable Material(s):** Whenever the words "Unsuitable Material" or words of similar meaning are used, they are taken to include combustible, organic and frozen materials, vegetation, bricks, ashes, wood, cinders, trash, snow, ice and fill previously placed on the site in an uncontrolled manner or with "uncontrolled material", material with excessive water content, material with an inability to obtain necessary compaction, and material which is not in conformance with approved test results of "Suitable Fill Material". Classification of material(s) must be approved by the Commissioner whose decision must be final and binding upon Contractor.
- R. **Utilities:** Existing and proposed new utilities including on-site underground pipes, conduits, ducts, and cables, wiring, or other underground services on-site or within buildings.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."
- B. **Qualifications:**
1. For Fill Soil Installation Work: Submit to confirm requirements specified in Part 1 Article 1.6 "Quality Assurance" of this Section.
 2. For EPS Geofilm Installation Work: Submit to confirm requirements specified in Part 1 Article 1.6 "Quality Assurance" of this Section.
- C. **Product Data:** Submit to include and confirm material sizes, performance criteria, composition, and other characteristics for the following:
1. Imported bedding, fill, and backfill material of each type specified in this Section.
 2. EPS fill material, each type, and related lateral restraint components. Include instructions for field handling, protection, and cutting of EPS fill.
 - a. Submit confirmation that EPS geofilm fill blocks for Project will be produced by a manufacturer with an in-place, third party certification, Quality Control Program that is monitored by an independent testing organization.
 - b. Include copies of the third-party certified test report(s) showing that the EPS geofilm fill blocks meet the physical properties and standards required and/or specified.
 3. Drainage mat. Include instructions for field handling, protection, and cutting.
 4. Geotextile and soil separation filter fabric materials, each type with identification of proposed function on Project. Relate to and arrange together with specified requirements of other Sections applying like material.
 5. Each type of plastic warning tape.
 6. Soil protection fencing system (for temporary use).

7. Submit technical descriptive data for each manufactured or packaged product of this Section. Include manufacturer's product testing and analysis and installation instructions for manufactured or processed items and materials. Include guaranteed analysis and weight of pre-packaged material as specified for certification of material not pre-packaged.
- D. Samples: Allow sufficient time for submittal review and confirmation testing and evaluation of material test results by the Commissioner before start of earthwork and material procurement.
1. For Soil Testing: Submit samples of each type soil, aggregate, and bedding material specified from the proposed source of supply as required for testing (Soil Certification and Analysis) specified herein and for confirmation review of characteristics to Commissioner for approval. Samples to be submitted for testing prior to the start of work, and of the material delivered to the site per Commissioner's request.
 - a. Submit samples for testing directly to Contractor's soil testing laboratory/agency, a bagged minimum quantity indicated for each test clearly identified for each material type and each source and with copy of transmittal and material type identification to the Commissioner.
 - b. Submit additional quantities if requested.
 - c. Certification and analysis of horticultural soil materials and amendment materials must be documented and reported based on testing by a licensed independent agricultural testing laboratory engaged by Contractor using material samples proposed for Project Work and as specified herein. See Article 1.6 "Quality Assurance" herein for additional criteria.
 2. For Quality Control: Other soil samples must be submitted as requested by Commissioner or allowed to be taken as required for quality control services.
 3. Samples For Verification:
 - a. Soils: For visual characteristics, submit to the Commissioner, a bagged clearly identified 10-pound quantity of each type soil material. Submit from each material source if any material from is multiple sources.
 - b. Aggregates: Submit a bagged clearly identified 10-pound quantity of each type aggregate material. Submit from each material source if any material is from multiple sources.
 - c. Plastic warning tape, each type, 24" long.
 - d. EPS fill, 12" cube, each type.
 - e. Drainage mat, 12" square. Geotextile and soil separation filter fabrics, each type, 12" square.
- E. Test Reports:
1. Submit agricultural material test reports as specified herein for confirmation of each soil type specified in this Section and soil material sample tested.
 2. Each soil test report must include the following as a minimum and such other information required specific to the material tested:
 - a. Date Issued.
 - b. Project Title and names, addresses and telephone number(s) of Contractor and material supplier, and Soil type tested.
 - c. Testing laboratory name, address and telephone number, and name(s) as applicable, of each field and laboratory inspector.
 - d. Date, place, and time of sampling or test, with record of temperature and weather conditions.
 - e. Location of sampling material source.

- f. Type of test including ASTM reference and/or written description of testing parameters used.
 - g. Particle size analysis/distribution as defined below as well as by hydrometer method.
 - h. Particle size analysis report for each soil type must include the material gradation(s) and must indicate percent passing and retained together with Dimension Class.
 - i. Cation exchange capacity.
 - j. Results of tests including identification of deviations from acceptable ranges. Identify any toxic substance(s) harmful to plant growth or life.
 - k. Organic matter content.
 - l. pH
 - m. Percolation test describing the material drainage rate percentage passing and retained.
 - n. Hydrometer Test describing percentage of sand, clay, and silt.
 - o. Bulk Density.
3. Include Laboratory compaction curve according to ASTM D1557 (Modified Proctor) for each existing on-site or borrow soil material of this Section proposed for bedding, fill and backfill.
- F. **Equipment Data:** Submit descriptive information including wheel type and load data for each proposed item of equipment to be used for execution of earthwork and related operations of Contract work. Equipment Data will be evaluated for conformance to site restrictions of use and must show selection of equipment type to maximize protection of horticultural soil installations.
1. Include identification of operation function for each type of equipment to be used including but not limited to the following:
 - a. Bulk, trench, and pit excavation to sub-grade and/or design elevation.
 - b. Handling and transporting soils on site.
 - c. Utility and structure backfilling.
 - d. Placing, compaction, and grading of the different soil types and layers.
 - e. Finish grading of soils in planting bed areas.
- G. **Work and Protection Plans And Related Scheduling:**
1. **Schedule and Protection Plan:** Submit a detailed plan prior to any site clearing or excavation work for scheduling and sequencing of all Contract work and for protection of horticultural soil mixes and other completed work including coordination with separate trades on-site or requiring access through the site. Indicate the following with schedules and work plans:
 - a. Utilization and maintenance of protection measures for subsoil (sub-grade level) and fill and/or horticultural planting soil surfaces at proposed planting bed installation areas.
 - b. Utilization of finished work protection measures over the work area of construction operations concurrent with all construction operations until Contract Substantial Completion.
 2. **On-site Soil Storage:** Submit locations, means and methods for storage/stockpiling of soil materials on-site. Reference Part 1 Article 1.7 "Delivery, Storage, and Handling" herein.
 3. **Soil Placement, Compaction, and Settlement Plans: Settlement Methodology:** Submit a plan of implementation with a schedule describing the proposed methods intended for placing horticultural planting soils, compaction of each lift and soil layer, and for allowing natural settling of installed soils.

- a. Relate operational plans together with Part 1 Article 1.5 "Submittal Procedures" Section F "Equipment Data."
- b. Include preparation of a drawing(s) to show location(s) of proposed Mock-ups (see Article 1.6 "Quality Assurance" herein) with conditions of installation, materials, and placement method(s) to be used for each mock-up.
- c. After mock-up installations, re-submit drawing(s) to record any deviations from materials or methods used, other conditions that may have affected placement, observed natural settlement, and to record locations of each on-site compaction test reported by Testing Laboratory / Agency.

H. Certificates:

1. Submit certified analysis for each soil treatment and amendment material to be used and not submitted as Product Data pre-packaged material. Include guaranteed analysis and weight of material as delivered to site of work. Analysis must be by a recognized laboratory according to methods established by the Association of Official Analytical (Agricultural) Chemists.
2. Herbicides: Prior to the use on site of any chemical weed control materials, submit a list of the weed control materials and quantities per acre intended for use in controlling the weed types expected on the site. Submittal must include data demonstrating the compatibility of the weed control materials and methods of installation or application with the intended planting and seed varieties.
3. Certificates of Supply: Upon delivery of soil materials (including bedding and aggregate material) to Project Site include Certificate of Supply together with Supplier material tickets for each soil material load delivered to site.

I. Survey Drawings:

1. Include Certifications of Elevations as specified in Part 3 Article 3.13 "Field Quality Control" herein. Submit during soil placement operations and at completion.

J. Data Submitted for Information and Reference:

1. Copies of permits necessary to transport materials off site.
2. Location of legal disposal sites for waste materials of this Project.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."

B. Inspections and Testing of Earthwork:

1. Materials Testing: Contractor must engage and pay for the services of a qualified Soils Testing Laboratory/Agency to perform materials testing and inspections of Project related earthwork. Qualifications of Contractor's Testing Laboratory/Agency must be submitted to and approved by Commissioner prior to the start of soil material procurement and earthwork operations on Project. Soil delivered to the site to be tested for conformance to specifications at the Commissioner's request.
 - a. Reference, relate together, and comply with additional qualification criteria and list of acceptable Soil Testing Laboratories specified in Section 329300 "Plants."

- b. Include material testing and certified reporting of on-site existing soils; bedding, fill and backfill materials specified in this Section; material replacements; and, if questionable material conditions, as additionally directed by the Commissioner.
 - c. **Materials Source Testing:** Tests of import (borrow) material must be made prior to borrow material delivery, and test reports submitted and approved by Commissioner prior to delivery or use on site.
 - 1) A minimum of 5 tests must be made from samples taken at random at each material source with report submitted of each analysis. Commissioner and/or Contractor's Testing Laboratory / Agency may, at their discretion, direct random selection at source.
 - 2) Each soil type specified in this Section, minimum 50 lbs. packaged. Submit additional quantity, if requested.
 - d. **Materials Field Testing:** Tests of material as delivered on site will be required to be made from time to time, the circumstance and extent of which must be subject to approval or direction of Commissioner based on the following:
 - 1) One (1) fifty-lb. (50-lb.) bag sample for quality control confirmation testing of import fill materials must be taken at random from haul trucks for, as a minimum, each 100 (One hundred) cubic yards of material delivered to site for placement and compaction. Sample must be identified with copy of truck delivery slips containing pertinent information of source and type as approved.
 - 2) Samples taken must be laboratory tested and reports made as specified for soil analysis of respective material in Part 2 herein to confirm compliance with or note discrepancy from previously approved material testing and Soil Certifications and Analysis of materials at source.
 - e. Materials in question must not be used, pending test results of conformance to specified requirements.
2. **On-site Quality Control Testing and Inspections:** Engage and pay for the services of a qualified Testing Laboratory / Inspection Agency to perform on-site observations, testing, and inspections. Sub-grade preparation, soil placement, and other earthwork will be subject to quality control inspections and testing by Testing Laboratory / Agency as specified or, if any questionable conditions, additionally as directed by the Commissioner.
 - a. Tests of on-site fill placements and compacted materials will be required to be made on a regular basis as additionally specified in Part 3 Article 3.13 "Field Quality Control", herein.
 - b. Contractor must cooperate in obtaining samples and performing tests of in-place materials and must furnish incidental field labor in connection with any tests to be performed by Testing Laboratory / Agency.
 3. **Construction Monitoring:**
 - a. During construction operations, in addition to Testing Laboratory / Agency, Commissioner may be present at the site to observe and monitor earthwork operations and must be permitted free and unrestricted access to the site and work.
 - b. Commissioner may, at their discretion, take additional tests or order additional tests made by Testing Laboratory/Agency respective to conditions.

- c. Based on observations and evaluation of quality control tests, the Testing Laboratory/Agency must make recommendations to Commissioner regarding conformance of the earthwork to Contract Documents and compatibility of actual subsurface conditions at design grades to required subsurface conditions and sub-grade conditions in preparation for other specified work.
- d. The Commissioner will evaluate the recommendations of the Testing Laboratory/Agency and, together with the Commissioner, will judge the compliance of the work with Contract Documents, issue any changes or revisions required to Contract Documents to accommodate subsurface or sub-grade conditions which differ from design assumptions, or advise Commissioner to direct remedial work where the completed work does not comply with Contract Documents.

C. Reference Standards

1. American Society for Testing and Materials (ASTM):

 - j. ASTM D 3017 - Standard Test Method for Water Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth).
 - k. ASTM D 4318 - Test Method for Liquid Limit, Plastic Limit and Plasticity Index of Soils
 - l. ASTM D 6637 - Determining Tensile Properties of Geogrids by the Single or Multi-Rib Test Method; 2001.
 - m. D6817: “Standard Specification for Rigid Cellular Polystyrene Geofoam”.
2. New York State Department of Environmental Conservation, Division of Solid and Hazardous Materials:
3. Recycling of Organic Waste Through Composting, Land Application, and Other Means; 6 NYCRR Subparts 360-1 through 360-5.

D. Qualifications For Fill Soil Installations:

1. Work of fill soil installation must be performed with personnel familiar and experienced with horticultural related fill soil preparation and related requirements associated horticultural installations under the supervision of a foreman experienced in landscape work.

2. Foreman on the job must be able to exhibit 5 years experience in the installation of horticultural soils and soil mixes.
- E. Pre-Installation Conferences: Pre-installation conferences must be held prior to commencement of earthwork or other field operations and prior to installation of any fill soils. The purpose of both conferences must be to review submitted Work and Protection Plans And Related Scheduling and to establish any other procedures for maintaining optimum working conditions, to afford protection of horticultural conditions of Project, and to coordinate this Work with related and adjacent work.
- F. Field Samples/Mock-ups: Construct at earliest possible time before proceeding with respective work using same materials and equipment as will be used on Project Work.
1. Fill and Compaction Sample(s): For placement condition of fills drainage layer proposed in planting areas, identify an area on-site, approved by the Commissioner, to verify and establish understanding of fill placement and compaction methods for the soil conditions and density specified.
 2. Each area must be of size to suit method for typical fill soil conditions specified with a minimum finished surface of 200 square feet.
 - a. Excavate to sub-grade level and proof roll.
 - b. Prepare sub-grade and place each soil layer respective to Mock-up.
 - c. Allow for quality control testing of each soil layer as placed and at completion.
 3. Provide the following Mock-up areas:
 - a. Full depth (from sub-grade) planting bed area profile.
 4. Method of fill placement and compaction, when approved, will establish a basis for standard of acceptance for this portion of earthwork.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Comply with requirements for Packaged Materials, Soil Materials Deliveries, and Soil Storage / Stockpiling as specified in DDC General Conditions and the following.
1. Prevent compaction of fill soils and soil mixes in stockpile.
 2. Maintain separation of different fill soil and soil mix types.
 3. Maintain separation of contaminated and unsuitable materials during handling and temporary stockpiling well clear of materials to be used for Project work. Remove these materials or items promptly.
 4. Protect stockpiles from erosion as specified.
- B. Handling and Storage of Soil Material Removed as Part of Excavation Work: As specified in Article 3.5 “Excavation, General.”

1.8 PROJECT/ SITE CONDITIONS

- A. Acquaintance with Existing Site Conditions:

1. Through study of all Contract Documents, and by careful examination of the site, become informed as to the nature and location of the Work, the nature of subsurface soil conditions, the location of the groundwater table and groundwater conditions, the character, quality and quantity of materials to be encountered in excavations, the character of equipment and facilities needed preliminary to and during the prosecution of the Work, the general and local conditions, and all other matters which can in anyway affect the Work.
2. Investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of this work site. Conform to all governmental regulations in regard to the transportation of materials to, from and at the job site, and secure in advance such permits as may be necessary.
3. Surface and Subsurface Conditions: Review available information and make an independent interpretation of the surface and subsurface conditions that may affect work. Be responsible for any damage or injury that may result from working on or near utilities, substructures, and around existing surface finishes.

B. Existing Utilities and Services

1. Verify that utilities have been disconnected and capped as specified elsewhere before proceeding with Work.
2. Should uncharted, or incorrectly charted, piping or other active utilities be encountered during excavation, consult the utility owner immediately for directions. Cooperate with City of New York and utility companies in keeping respective services and facilities in operation. Restore or replace damaged utilities to satisfaction of the Commissioner.
3. Where inactive subsurface piping, conduit, or other items are encountered during excavation and grading operations, properly cap or otherwise dispose of items as specified and as approved by Commissioner.

C. Environmental Requirements:

1. Perform site mixing and on-site soil work only during suitable weather conditions. Do not disc, rototill, or work soil when frozen, excessively wet, or in otherwise unsatisfactory condition.
2. Soil mixes must not be handled, hauled, or placed during rain or wet weather or when wet near or above field capacity.

1.9 SEQUENCING AND SCHEDULING

- A. Adjust, relate together, and otherwise coordinate work of this Section with work of the Project and all other documents and Sections of the Contract Documents.

1.10 REGULATORY REQUIREMENTS

- A. Comply with all the New York City Administrative Code and the Rules of the City of New York. Provide labor, materials, equipment, and services necessary to make Work comply with such requirements without additional cost to City of New York.
- B. Procure and pay for permits and licenses required for work of this Contract and Section. Process in sufficient time so as not to delay start of scheduled Contract work.

PART 2 - PRODUCTS

2.1 FILL AND BEDDING MATERIALS

A. Existing On-site Soil As Fill Material.

1. Existing site soil obtained from excavation operations on-site, subject to verification testing and classification as specified, may be used for limited filling and backfilling at certain fill conditions below the sub-grade level and as specified. Contactor must test and otherwise demonstrate that the existing soil, if proposed for use, is suitable, can be compacted to the specified density at condition of use, and is not otherwise unsuitable.

B. Imported (Borrow) Material, General Requirements:

1. All materials obtained from off-site sources must be new materials mined exclusively for use in this Contract Work.
2. Recycled Material: If any recycled material is utilized as soil material or soil components proposed for Project in lieu of naturally deposited off-site material, Contractor must perform additional material testing to demonstrate that the recycled material does not exceed heavy metal content as specified and that the material otherwise complies with the criteria specified herein. Testing and related test reports submitted for approval must be at Contractor’s sole expense and must not cause delay in the work.
3. Sources of Borrow Material: The following sources are acceptable for acquisition of soil, subject to availability and conformance with the requirements specified herein for each soil type:
 - a. East Coast Mines, 41 Lewis Road, East Quogue, NY 11959; (Phone 631/653-5445, Fax 631/653-5743).
 - b. George Schofield Company, Inc., 831 Main Street, Bridgewater, NJ 08807; (Phone 570/704-3330).
 - c. Roanoke Sand & Gravel, 104 Rocky Point Road, Middle Island, NY 11953; (Phone 631/924-4100).
 - d. Approved equal.

C. Washed Gravel: Where Washed Gravel is indicated; use materials as specified herein.

1. Washed Gravel must consist of washed, clean, hard, durable crushed rock consisting of angular fragments obtained by breaking and crushing solid or shattered natural rock free from loam, clay, or mica. Material must be free (one percent maximum) from a detrimental quantity of flat, elongated (where average width exceeds 4 times the average thickness) pieces, or other objectionable pieces. Material must also be free of recycled materials such as concrete, masonry, glass, ceramics, etc.
2. Washed Gravel must have the following gradation as determined by ASTM Designation C33, No. 8 Gradation:

<u>Passing Sieve</u>	<u>Percent Passing by Weight</u>
1 inch	95-100
3/4 inch	85-100
1/2 inch	25 to 60
3/8 inch	5 to 20
No. 4	0 to 10

No. 8

0 to 5

3. Provide processed Washed Gravel material obtained from off-site sources.

D. Sand and Gravel Mix Material for Under Drainage (Subdrainage) Systems:

1. Sand and Gravel Mix Material must be naturally occurring, manufactured, coarse sand and gravel consisting of clean, inert, rounded grains of quartz or other durable rock and free from loam or clay, surface coatings, mica, other deleterious materials. Sand and Gravel Mix material must comply with the following gradation as determined by combined hydrometer and wet sieving in compliance with ASTM D422 after destruction of organic matter by ignition:

U.S. Sieve Size No	% Passing Minimum.	% Passing Maximum
3 inch	100	-
1 inch	85	-
4	65	100
10	25	60
18	15	40
35	7	20
60	3	12
140	0	7
270	0	3
0.002mm	0	0.5

2. Test results must be submitted for both percent (%) retained and percent (%) passing for all sieve sizes.

E. Bedding Material: Generally, bedding material for utilities and the like installations must be the same as Washed Gravel material as specified herein except for the following conditions:

1. For installation of Subdrainage System (Under Drainage) as porous pipe filter: Use Sand and Gravel Mix material as specified elsewhere in this Section.
2. Where Sand is indicated for specific condition of use as bedding, provide Sand material as specified:
 - a. Sand for Bedding: Sand must consist of natural mineral soils or processed mineral materials free of combustible, organic and frozen materials, roots, topsoil, loam, trash, snow, ice, wood and other objectionable materials that may be compressible or cannot be compacted as specified. Gradation of sand to be used for indicated bedding condition must conform to ASTM C33 for Fine Aggregate.
 - b. Sand (for bedding) must be supplied from off-site sources.

F. Structural Fill: Clean sand or other porous material as accepted, containing not more than 10% by weight of materials finer than No. 200 mesh sieve and not more than 10% retained on a ¾-inch sieve. Fill must not contain organic soil, large boulders, metal, wood or any construction debris.

2.2 ACCESSORY MATERIALS

A. Geotextile (Filter) Fabric:

1. For use with installation of Under Drainage (Subdrainage) Systems under planting bed areas and at other locations indicated.
 2. Provide a woven geotextile, specifically manufactured for use as a separation geotextile; made from polyolefins, polyesters, or polyamides; and with the following minimum properties determined according to ASTM D4759 and referenced standard test methods:
 - a. Grab Tensile Strength: 365 lbf; ASTM D4632.
 - b. Tear Strength: 115 lbf; ASTM D4533.
 - c. Puncture Resistance: 100 lbf; ASTM D4833.
 - d. Water Flow Rate: 100 gpm per sq.ft.; ASTM D4491.
 - e. Apparent Opening Size: No. 40; ASTM D4751.
 3. Basis of Design Product: Subject to compliance with the requirements, provide Geotextile (Filter) Fabric TC Mirafi; Mirafi Filterweave FW402 Woven Geotextile or comparable product by one of the following:
 - a. Carthage Mills; FX Woven Slit-Film Polypropylene Geotextiles
 - b. SRW Products; SRW SS5
 - c. Propex Geotextile Systems; Geotex 200ST
 - d. ADS; Tensile Strength Slit Tape Woven Geotextile
 - e. Or approved equal.
- B. Soil Separation Geotextile (Filter) Fabric:**
1. Provide non-woven type, 4 oz. weight.
 2. Soil Separation (Filter) Fabric for use with utility installations, excluding Under Drainage (Subdrainage) System, and for soil protection after completed installation and before planting work.
 3. Basis of Design Product: Subject to compliance with the requirements, provide Soil Separation Geotextile (Filter) Fabric TC Mirafi; Mirafi 140N Non-Woven Geotextile or comparable product by one of the following:
 - a. Carthage Mills; FX-HS Series of Nonwoven Geotextiles
 - b. SRW Products; SRW LS3
 - c. Propex Geotextile Systems; Geotex 401
 - d. ADS; Spun Bonded Geotextile
 - e. Or approved equal.
- C. Drainage Mat:**
1. Provide composite drainage system consisting of a three-dimensional, crush-proof, dimpled drainage core and bonded woven monofilament polypropylene filter fabric;
 2. Basis of Design Product: Subject to compliance with the requirements, provide Drainage Mat Dörken Systems Inc.; Delta-Drain 9000 HI-X or comparable product by one of the following:
 - a. Sika USA; Sika Drainage Mat 1000
 - b. Carlisle Coatings & Waterproofing; MiraDRAIN 9000
 - c. Or approved equal.

3. Drainage mat is available in roll form with filter fabric extending on one side 4 inches beyond core. Comply with following physical properties:
 - a. Core:
 - 1) Thickness, ASTM D1777: 0.40 inch.
 - 2) Compressive Strength, ASTM D6364: 18,000 psf.
 - 3) Geocomposite Flow Rates, ASTM D4716: 27 gpm/foot width (72 inches) at hydraulic gradient 1.0 and 5.4 gpm/foot width at hydraulic gradient 0.10.
 - b. Fabric:
 - 1) Flow Rate, ASTM D4491: 145 gpm/sq.ft.
 - 2) U.V. Resistance, ASTM D4355: 90% @ 500 hours.
 - 3) Apparent Opening size, ASTM D4751: 40 Sieve (0.42mm)
 - 4) Grab Tensile, ASTM D4362: 365 lbs.
 4. For use as continuous placement at walls (vertical) or other conditions as indicated.
- D. PVC Pipe: Conform to ASTM D1785, Schedule 40.
- E. Warning Tape, Detectable Type: Acid and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, minimum 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored as follows:
1. Red: Electric.
 2. Yellow: Gas and/or other dangerous materials.
 3. Orange: Telephone, data, site security and other communications.
 4. Blue: Water supply systems.
 5. Green: Site storm and sanitary systems.
- F. Herbicides:
1. Herbicides to control undesirable seed germination on-site must be approved by Commissioner before use, including confirmation of location, type and rate of application, and applicator. In addition, conditions of use and material type must be in conformance with NYC and NYS requirements.
 2. Basis of Design Product: Subject to compliance with the requirements, provide Herbicide Monsanto Agricultural Products Company; Roundup or comparable product by one of the following:
 - a. Nufarm; Cheetah Pro
 - b. Spectrum Brands, Inc.; Spectracide Weed & Grass Killer
 - c. Or approved equal.

2.3 SOIL AMENDMENT MATERIALS

- A. Limestone: Lime as a soil amendment material to raise pH levels of soils must only be used pending results of soil analysis and test recommendations and as approved by Commissioner to suit each condition.

1. Provide Agricultural Limestone, ASTM C602, Class T, in form of dolomitic limestone with a minimum of 80% of calcium carbonate equivalent. Material must have a minimum 99% passing the 8-mesh sieve and a minimum 75% passing the No. 60 mesh sieve.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 RESOURCES

- A. Contractor must furnish all labor, equipment, and materials required for earthwork; for obtaining, preparing, testing, amending, and placing of soil materials and fill soil mix types, and for performing related work. Accept actual conditions existing at site. Utilize appropriate equipment, in sufficient quantity and sizes, to perform work.
 1. To control compaction and to avoid over compaction in planting areas, excavation and placement and grading of soil mixes must be conducted with a small tractor with broad rubber tires (generally less than 10 psi load distribution), track type dozer (3 psi or less load distribution), or other similar vehicle.
 2. Equipment used is subject to approval of Commissioner. On-site blending of soil mixes and amendments must only be performed by hand operated walk-behind type equipment. No trucks or other mechanized equipment must be allowed in areas where horticultural soil mixes have been placed without prior approval of Commissioner and then subject to replacing of the soil areas disturbed.

3.3 VERIFICATION OF CONDITIONS

- A. Prior to construction and soil placement operations at planting areas, ascertain the location of all existing electric cables, conduits, piping, irrigation, under-drainage systems and utility lines.
 1. Take proper precautions so as not to disturb or damage subsurface elements. Contractors failing to take these precautions must be responsible for making requisite restoration to damaged utilities at Contract's own expense.
 2. If subsurface elements are uncovered at a specific location for a utility, irrigation, or other system item, notify the Commissioner immediately for approved relocation of item(s).
- B. Verify that all work requiring access through or adjacent to areas where horticultural soil mixes are to be placed has been completed and no further access (other than exterior planting installation) will be required. In the event that access will be required, access must be approved by the Commissioner and will be subject to replacing of the soil areas disturbed.

3.4 PREPARATION

A. Layout and Field Survey Work:

1. Use established benchmarks and surveyed control base lines of Project site survey for control of lines and elevations. Refer to and comply with DDC General Conditions for qualifications and additional Project related survey requirements.
2. Staking Out of Work:
 - a. Locate excavation and grading limit lines, backfill material of different types, site improvements, paving area layouts, and planting area layouts, and their proposed elevations. Locations, including park areas, must be referenced to bench marked control base lines indicated in the Contract Documents and to Project limit lines of survey prepared for Project.
 - b. At areas of fill/backfill and grading, in order to maintain correct elevations and slopes, provide as a minimum a network of 25-foot spaced reference stakes installed around the perimeter to be filled including every corner, high point, low point, grade break, and like points of control. Control stakes, on a 25-foot grid and additionally as required, must be placed in the interior fill zones to monitor thickness and tolerances of the filled and graded areas.
 - c. Contractor must advise the Commissioner when the staking out of Work is completed. Re-stake as work progresses to include necessary and Commissioner approved corrections for implementation and, as otherwise determined, install secondary reference points for and related to subsequent planting layouts.
3. Topographic and Location Surveys: As specified in Article 3.13 "Field Quality Control" herein.

B. Protection, General: Protective measures must include temporary construction in addition to protection provisions specified in DDC General Conditions. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earthwork operations.

1. Existing Items to Remain: Protect construction indicated to remain against damage and soiling during work operations that may cause damage.
 - a. Protect adjacent existing park and playground structures from damage.
 - b. Protect existing and/or temporary drainage systems from intrusion of debris and clogging.
 - c. Protect adjacent surfaces and finishes including existing fences.
 - d. Protect other existing structures, copings and edgings adjacent to work areas as well as, any equipment, piping, conduits, etc. in the work area and adjoining areas, and leave the same in a safe and satisfactory condition as approved by the Commissioner.
 - e. Protect existing vegetation as indicated on Construction Documents.
2. Contractor must take actions and provide temporary installations necessary, subject to concurrence of Commissioner, to allow the progress of the Work to continue and to make the work accessible to construction equipment and working persons.
3. Use water, mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental protection regulations. Do not use water when it may damage adjacent construction or create hazardous or objectionable conditions, such as ice, flooding and pollution.

4. Take precautions to guard against movement, settlement, or collapse of any adjacent conditions, sidewalks or street passages, adjoining property, and adjacent structures. Be liable for any such movement, settlement, or collapse. If such damage does accidentally occur, safeguard the public and restore promptly.
5. Dust and Debris Control:
 - a. The Contractor is responsible for any and all dust, debris, sedimentation and any other controls required by the work permits granted by the NYC DEP, NYC DOT, NYC OER, and NYS DEC. Contractor must submit proposed spill, dust, debris and sedimentation control methods and procedures to Commissioner for review and acceptance prior to use.
6. Noise Control: Comply with governing regulations pertaining to noise levels during operations.

C. Temporary Erosion Control Measures:

1. Provide and maintain all temporary control measures as required, as necessary for protection of on-site or adjacent site conditions, or as directed by the Commissioner for duration of Contract to control soil erosion, sediment, and dust as may be related to respective Contract Work.
2. Temporary erosion control measures must be used to correct conditions which develop during construction or that are temporarily needed to control erosion that develops during normal construction practices. Work must include, but not be limited to, the installation and maintenance of berms, ditches, fiber mats, straw, netting, silt traps and fences, mulches, straw bales, grasses, and other approved erosion control devices or methods.
3. Conduct operations to minimize erosion of soils and to prevent silting and muddying adjacent Hudson River and lands adjacent to or affected by the Work. Construction of drainage facilities and performance of the Contract Work that will contribute to the control of erosion and sedimentation must be carried out in conjunction with the earthwork operations. Existing or previously installed drainage facilities must be filtered, screened, and maintained to prevent debris or soil infiltration or sedimentation into the drainage system(s).
4. Comply with requirements of the permits issued for the Project and applicable Federal, State, and City statutes and ordinances related to the prevention and abatement of soil erosion, sediment, and dust.

D. Dewatering:

1. Prevent surface water and ground water from entering excavations, from ponding on prepared sub-grades, planting soil surfaces, and from flooding Project site and surrounding area.
2. Protect sub-grades and soil fill areas from softening, undermining, washout, and damage by rain or water accumulation. Protect compacted soil areas so that compaction densities and bearing capacities are not altered.
 - a. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.
 - b. If necessary for protection or as directed by Commissioner, install a dewatering system to keep sub-grades dry and to convey ground water out of and away from excavations.
 - c. Maintain dewatering and/or other protections until completion of excavations and protection from water accumulations are no longer required.

E. Excavation Support and Protection:

1. Design, furnish, install, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting soil and hydrostatic pressure and superimposed and construction loads when an excavation exceeds five (5'-0") feet in depth and the side slopes are not laid back to a safe gradient as set forth in Title 29 Code of Federal Regulations, Part 1926, Safety and Health Regulation for Construction (OSHA).
 - a. Furnish qualified professional engineering services needed to assume engineering responsibility for constructed excavation supports.
 - b. Install excavation support and protection systems without damaging existing pavements and other improvements adjacent to excavation. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.
 - c. Shore, support, and protect utilities encountered.
2. Monitor excavation support and protection systems daily during excavation progress and for as long as excavation remains open. Promptly correct bulges, breakage, or other evidence of movement to ensure that excavation support and protection systems remain stable.
3. Properly slope sides of excavation or provide shoring, sheeting and bracing to prevent caving, erosion, or gulying of sides of excavations.
4. Maintain sides and slope of excavation in safe condition until backfilling or other work is complete. Maintain shoring and bracing in place until the completion of work.

3.5 EXCAVATION, GENERAL

A. General Requirements:

1. All trenches for utility components must be excavated in accordance with the Details on the Contract Drawings, after approval of staked locations by the Commissioner. Sequence and schedule work at times and under conditions specified.
2. Excavate trenches with sides as shown and with bottoms at the correct level.
3. During excavation, maintain separation and identification of excavated materials for use as backfill. Failure to maintain separation and identification of excavated materials must be cause for rejection of that material. Commissioner will make determination on suitability of excavated material for reuse.
4. Excavation work includes the unclassified excavation of pavement systems, obstructions, and other items visible on surface and underground not otherwise previously cleared or removed as work of another Contract Section.
 - a. See Section 022050 "Protection of Existing Utilities."
 - b. The use of explosives is prohibited.
5. Carry all excavations for structural elements (footings, foundations, piers, utility structures, etc.) as a minimum to sub-grade level(s) indicated and to firm soil with required bearing capacities. Allow for depths of indicated base course(s) and transitions to adjacent conditions.
6. Carry all excavations for areas of planting beds, and paving with tree pits to allow for indicated horticultural planting soil mix layers.
7. Excavate surfaces under pavement systems and for utility and sub-drainage lines to indicated cross sections, elevations, and grades with firm required bearing capacities.

8. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. Extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing utility services and other construction, and for inspections.
 - a. Do not disturb bottom of excavation intended for bearing surface. Excavate by hand to final grade just before placing concrete foundation/footing reinforcement. Trim bottoms by hand to required lines and grades to leave solid/firm base with bearing capacity to receive other work.
 - b. At areas of previously placed or existing paving or areas with in-place planting soils or where machine excavation could damage conditions to remain, perform excavation by hand (without machines).
 9. Storage of Soil Material From Excavation Work:
 - a. Stockpile soil materials away from edge of bulkhead and excavations; without intermixing different soils; with stockpiles placed, graded, and shaped to drain surface water; and as specified in Part 1 Article 1.7 "Delivery, Storage, and Handling" herein.
 - b. Separate contaminated and unsuitable material upon excavation of same. Place and cover contaminated and questionable contaminated material on and with non-porous plastic sheets
 - c. Comply with temporary erosion controls.
 - d. Remove unsuitable material and excess excavated material as specified.
 10. Open excavations must be secured and made safe daily.
- B. Unclassified Excavation:** Excavation to sub-grade elevations regardless of the character of surface and subsurface conditions encountered, including rock, soil materials, and sub surface obstructions.
1. Unclassified excavation consists of removal and subsequent disposal of unsuitable materials encountered when establishing indicated or required sub-grade elevations. Maintain separation and identification of unsuitable materials from materials approved as suitable for use.
 2. Excavate unclassified materials utilizing appropriate equipment, in sufficient quantity and sizes, to perform the excavation.
 3. If excavated materials intended for fill/backfill material or sub-grade surface includes unsatisfactory soil materials, sub surface obstructions and/or debris, or rock, replace with soil materials classified as suitable and approved by Commissioner.
- C. Unauthorized Excavation:**
1. Unauthorized excavation consists of removal of material beyond indicated design sub-grade elevations or dimensions without specific direction.
 2. Unauthorized excavation, as well as remedial work directed by the Commissioner must be at Contractor's expense.
 - a. Fill unauthorized excavation under foundations or footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill may be used when approved by the Commissioner.
 - b. Fill unauthorized excavations under other construction or utility pipe / conduit as directed by Commissioner.
- D. Approval of Sub-Grades:** Extent of each sub-grade area, as a portion of Project work, must be prearranged with and approved by Commissioner.

1. Notify Commissioner when excavations have reached required sub-grade and allow time for observation and review of completed sub-grade conditions together with Contractor's arranged Verification of Elevation survey.
2. Comply with requirements specified for "Preparation of Sub-Grades" in Article 3.6 "Item Excavations" and Article 3.13 "Field Quality Control" herein.
3. If Commissioner determine that unsatisfactory soil is present, continue excavation and replace with compacted suitable fill/backfill material as directed by Commissioner.
4. Reconstruct sub-grades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by the Commissioner.
5. Be prepared to continue earthwork operations, installation of utilities, and fill/backfill placements upon Commissioner acceptance of sub-grade so that possible damage to sub-grade is minimized.

3.6 ITEM EXCAVATION

A. Excavation For Structures:

1. Relate to and adjust excavation together with work required for specific type of construction, material to be used (cast-in place concrete, precast concrete, masonry, etc.), and item requirements.

B. Excavation For Utility Trenches:

1. Relate to and adjust trench excavation together with work required for specific utility system.
2. Excavate trenches to indicated gradients, lines, depths, and elevations. Excavate trenches and pits to uniform width required for particular item to be installed with sufficient width to provide ample working room.
3. Excavate trenches to uniform widths to provide a working clearance on each side of pipe or conduit or a multiple of these items. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.
 - a. Working Clearance: 12 inches minimum or as otherwise indicated on each side of pipe or conduit.
4. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit or a multiple of these items. Shape sub-grade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench sub-grade.
 - a. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support pipe and conduit on an undisturbed sub-grade and, unless greater depth shown, to allow for minimum 4 inches bedding course.
 - b. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference.
 - c. Proof roll trench bottoms and remove unsuitable and soft spot material to minimum 12" depth. Fill depressions with Washed Gravel or tamped sand bedding/backfill material as indicated for utility item.
 - d. Excavate trenches that have an unyielding bearing material at least 6 inches deeper than required elevation to allow for bedding course.
 - e. See Article 3.8 for "Utility Trench Backfill".

5. For Under Drainage (Subdrainage) Systems: A system network of subsurface drainage lines must be installed as specified in Contract Documents prior to the installation of the Drainage Layer Coarse Sand soil material or other planting soils. All subsurface drainage lines must have a minimum 0.5 percent gradient for drainage.
 - a. Under Drainage (Subdrainage) System must be installed in excavated trenches below the compacted sub-grade level or, as indicated and approved, at conditions on or at sub-grade within bottom portion of Drainage Layer. Comply with typical trench excavation requirements specified herein.

C. Excavation For Planting Areas:

1. Excavate site areas for Planting Beds and areas under paving with tree pits to depths required for placement of Fill and Planting Soil systems as specified. Provide sub-grade level with required slope for subdrainage piping and to suit other related work.
2. Excavation around existing tree root zones to be done by hand and in a manner that will not damage the ex. Root system.
3. Shape (profile) sub-grade to suit tree pit depths and tree pit diameter sizes in planting bed areas with allowance for Drainage Layer and subsequent planting soil fills.

D. Preparation of Sub-grades:

1. Confirm completion of excavation and grading to required elevations.
2. Scarify the resulting sub-grade to a depth of at least 6 inches and compact to percentages specified in Article 3.10 "Compaction of Fills/Backfills and Graded Areas" herein as obtainable by the ASTM D1557 (Modified Proctor) test method of compaction.
3. Perform proof rolling of graded sub-grade surface in presence of City of New York's Special Inspection Agency. Make corrections to surface conditions as necessary including removal of unsuitable soil or other material (organic, soft clay, etc) at sub-grade to at least 6 inches depth, backfilling resultant areas of removal with acceptable material, and re-grading.
4. Obtain Commissioner's approval of sub-grade before proceeding with fill/backfilling operations.

3.7 FILL AND BACKFILL

A. General Installation Requirements:

1. Use only fill material that has been approved and/or determined to be suitable as approved by Commissioner. Place in lifts for compaction, layers, and to required elevations.
 - a. Rock, concrete, masonry, or rubble materials must not be used for general filling.
 - b. All fill/backfill, amendment, and other like materials placed on-site must be free of heavy metals and, as a minimum, must comply with requirements of New York State Department of Environmental Conservation, Division of Solid and Hazardous Materials; Recycling of Organic Waste Through Composting, Land Application, and Other Means; 6 NYCRR Subparts 360-1 through 360-5 to extent specified.
 - c. If a questionable material is noted, Contractor must test to confirm content and replace if found to be unsuitable.

2. Receive borrow materials on-site and place in designated areas for stockpiling and/or for immediate placement at locations on-site to be filled/backfilled.
 3. In all areas of fill, all vegetation such as roots, brush, heavy sods, growth of grass, and all decayed vegetable matter, rubbish, and unsuitable material within the area must be removed before filling. In no case must such objectionable material be allowed to remain in or under fill area.
 4. No fill material must be placed, spread, or compacted during freezing weather or other unfavorable weather conditions. When work is interrupted by heavy rain, fill operations must not be resumed unless the moisture content and density of the fill are as specified.
 5. The fill/backfill surface must be made smooth and free from ruts or indentations at the end of any work day, when significant precipitation is forecast, and at the completion of area compaction operations to prevent possible saturation of the fill material.
- B. Prior to Backfill and Fill Placement: Perform backfilling and filling as work permits, but not until completion of the following:
1. Acceptance of other construction within or below levels of fill and backfill.
 2. Construction below finish grade.
 3. Surveying locations of underground utilities and related sleeves as applicable for record documents.
 4. Inspecting and testing underground utilities.
 5. Removing concrete formwork.
 6. Inspection, testing, and recording of soil conditions at design elevations and with respective approval by Commissioner.
 7. Removal of shoring and bracing, and backfilling of resulting voids with compacted approved materials. Remove shoring and bracing in manner to prevent settlement of the foundations, fills, utilities, or adjacent conditions.
 8. Removal of trash and debris.
 9. Removal of saturated fills and water.
- C. Concurrent with Backfill and Fill Placement: As applicable to item and to suit on-site design and installation conditions, install materials and items as specified and related to earthwork operations. Comply with installation requirements further specified in Article 3.12 "Installation of Accessory Materials" herein or, if item furnished as part of other work or Section, as additionally specified in the respective Section of work.
- D. Fill/Backfill, Soil Placement Conditions:
1. Fill of different material types must be constructed at the locations and to lines and grades indicated. The completed soil fill installation must conform to the shape of the typical sections indicated, compacted design conditions, and must meet the requirements of the particular case.
 2. Fill must be placed in lifts as specified and compatible with type of material and the type of compaction equipment used. The thickness of the compacted fill layer must not exceed the maximum allowable thickness of compaction layer specified (Article 3.10 "Compaction of Fills/Backfills And Graded Areas").
 3. Washed Gravel:

- a. Washed Gravel base course material must be evenly spread on the prepared sub-grade in the position shown on the Contract Documents or as otherwise approved by the Commissioner. Washed Gravel material must be laid in six (6") inch lifts (maximum) and must be compacted to the thickness shown.
 - b. At Platform, Washed Gravel sub-base course material must be evenly spread on the prepared surfaces in the position shown on the Contract Documents or as otherwise approved by the Commissioner . Washed Gravel material must be laid in six (6") inch lifts (maximum) and must be compacted to the thickness shown.
 - c. Washed Gravel under footings, concrete utility structures, concrete slabs on ground, and at other conditions indicated must be placed to comply with requirements as may be additionally specified, with respect to constructed item, in Section 033000 "Cast In Place Concrete." Where otherwise specified, or as indicated, Washed Gravel must be placed so that any water that may collect is effectively drained.
 - d. Place Washed Gravel used at and adjacent to foundations, retaining walls, planting and other areas as shown with Soil Separator (Filter) Fabric or Geotextile Fabric between Washed Stone and underlying soils as indicated to prevent migration and intrusion of adjacent soils and clogging of drainage system.
 - 1) Extend Soil Separator (Filter) Fabric on to adjacent surfaces and/or wrap stone as indicated.
 - 2) Overlap fabric piece ends, sides, and edges at least 6 inches.
4. Aggregate base course material over sub-base course must be evenly spread on the prepared sub-base in the position shown on the Contract Documents or as otherwise approved by the Commissioner. Aggregate material must be laid and compacted to the thickness shown in preparation for paving systems in another Section.

3.8 UTILITY TRENCH BACKFILL

- A. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.
- B. Place and compact initial backfill with backfill material indicated, free of particles larger than 1 inch, on sides and to a height of 12 inches minimum over the utility pipe or conduit installation.
 1. Carefully compact material under pipe haunches and bring backfill evenly up on both sides and along the full length of utility piping or conduit at height specified or shown to avoid damage or displacement of utility system.
 2. At shallow depth utility placement conditions as indicated, place a continuous galvanized steel protection plate over the utility pipe or item.
 3. Continue with final backfill using materials to heights as indicated for each layer of cover.
 4. Compact each course or lift of trench backfill material as typically specified for fill/backfill.
- C. Coordinate sequencing and completion of trench backfilling with utility system / component testing.
- D. Fill voids with approved backfill materials while shoring and bracing, and as sheeting is removed.

- E. Warning Tape: Install warning tape directly and continuously above each utility line (including sleeves for future use as applicable), 10 inches to 12 inches below finished soil grade, except 6 inches below sub-base under proposed pavements and on-site slabs. Detectable type warning tape must in no instance be buried more than 24 inches below finished surface.
 - 1. Use warning tape of correct color for utility to be marked.
 - 2. For conditions with multiple utilities in a single trench, use a warning tape for each utility.
- F. Place and compact final backfill to final sub-grade or grade as applicable to condition.

3.9 FILL SOIL LAYERS

A. General:

- 1. Each layer of fill soils must be completed prior to the placement of subsequent soil layers.
- 2. Proposed compaction equipment and methodology for placing fill soils must be submitted to and approved the Commissioner prior to the start of soil placement operations.

B. Drainage Layer Soil (Coarse Sand) Installation (At Planting Bed Areas):

- 1. After complete installation of the Subdrainage System and other utilities, structures, and foundations to be placed at or below sub-grade level, the entire compacted sub-grade must be loosened to a minimum depth of two (2) inches using the teeth of a backhoe or by deep raking.
- 2. Place Coarse Sand Drainage Layer soil over the entire previously loosened sub-grade level, excluding under paved areas and other areas specifically noted on the Contract Drawing details. Install to the following compacted depths (includes allowance for subsequent transition layer placement) as measured in-place and to suit detail conditions:
- 3. At Typical Planting Bed Installations: Depth as indicated by Contract Drawings, shown as minimum (sloped to drain).
- 4. Shape (profile) sub-grade and Drainage Layer to suit tree pit depths and tree pit diameter sizes in planting bed areas.
- 5. The Coarse Sand Drainage Layer soil must be compacted to a minimum of 85% Modified Proctor using the tracks of a bulldozer, by vibratory roller, or by other suitable equipment approved by Commissioner.

3.10 COMPACTION OF FILLS/BACKFILLS AND GRADED AREAS

A. General:

- 1. Control soil compaction during construction for compliance with the percentage of density specified. Utilize appropriate equipment in sufficient quantity and sizes to perform compaction work.
- 2. Keep rollers and other heavy equipment at least 8-feet from footings, foundations, piers, and building walls and 3-feet from appurtenances and other structures on site.
- 3. Compact placed fill/backfill materials to required elevations evenly on all sides of structures and uniformly along the full length of each structure.
- 4. At horizontal transition between different zones of compacted density, care must be taken not to over compact soils.

5. All areas and extents of compacted fill/backfill must be confirmed at job site with Commissioner prior to fill/backfill and compaction operations.
- B. Moisture Control for Compaction:
1. Fill/backfill material must be treated so that the moisture content at the time of compaction is at or 2 percent above the optimum moisture content for the compacted soil.
 2. Uniformly moisten or aerate sub-grade and each subsequent fill/backfill layer before compaction to within 2 percent of optimum moisture content specified as approved by Commissioner.
 - a. Do not place fill/backfill soil material or perform grading operations on surfaces that are muddy, frozen, or contain frost or ice.
 - b. If soil material becomes too dry for required compaction, moisten soil prior to commencing or continuing operations.
 - c. Remove and replace, or scarify and air-dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit density.
 3. All fill soils must be placed in a dry to damp (not wet) condition.
- C. Compaction levels with material dry density as determined by ASTM D1557 (Modified Proctor) must be as follows:
1. Compact each layer of fill/backfill material to the minimum percentage of the maximum dry density as specified or as otherwise indicated for specific areas and conditions. Compaction by hand-operated equipment must be required where machine access is restricted or is otherwise not feasible.
 2. Compaction Criteria: The following fill/backfill and grading compaction criteria must be used for full depth of backfill, including sub-grade level(s), to extent laterally indicated by Contract Documents and required by on-site conditions as approved by Commissioner:
 - a. Under footings, slabs on grade, utility structures, and other structural elements of on-site conditions: 95%, Modified Proctor.
 - b. Under areas of paving systems: 95%, Modified Proctor.
 - c. At planting areas: As specified in Section 329300 "Plants" for each planting Soil installation condition. Uniform in any defined area.
 - 1) Compaction rates and any natural settlement considerations for each planting soil mix material must be field verified prior to start of soil placement work using specified Mock-ups. Any adjustment to specified compaction rates must be as directed or otherwise approved by Commissioner.
 - 2) Care must be taken not to over compact planting area soils.
 - d. Density Tolerances: Refer to Part 3 Article 3.13 "Field Quality Control" herein, for allowable density tolerances of compaction.
- D. Lift Thickness: Lifts for each soil type must be as specified for soil placement. Compaction lift thickness must be as follows unless otherwise indicated specific to a fill layer:
1. At on-site areas by heavy equipment: maximum 12" thick, loose.
 2. At conditions compacted by hand-operated equipment: 6" thick, loose.

- E. Comply with specified requirements for moisture content at the time of compaction.
- F. Compaction must be continuous over the entire area as indicated for each density value and in uniform layer depths (after compaction) at thickness specified. Equipment must make sufficient passes to obtain uniformly the desired density.
- G. Each soil layer must be completed with approved compaction before the overlaying lift or soil layer is placed.

3.11 GRADING

- A. General: Uniformly grade areas to a smooth surface, free from irregular surface changes. Uniformly smooth grades of all areas including excavated and fill sections and adjacent transition areas as sub-grade or base for subsequent work.
 - 1. The sub-grade must be reasonably smooth, compacted, and free from irregular surface changes.
 - 2. Comply with compaction requirements specified and grade to cross sections, lines, and elevations indicated.
 - a. Provide a smooth transition between adjacent existing grades and new grades.
 - b. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.
 - c. The required sub-grade elevation must be such that when fill, sub-base, and indicated construction are added, the final elevations will be those indicated by the Contract Documents.
- B. Site Grading: Grades not otherwise indicated must be uniform levels or slopes between such points and existing grades, except that the surface must be rounded at abrupt changes or slopes. Grade all flat areas so as to prevent low spots and water pockets. The locations and elevations of constructions are indicated by the Contract Documents and unless inconsistencies are brought to the written attention of the Commissioner prior to the commencement of work, the Contractor will be held responsible to obtain the proper and approved location(s) and elevations of the completed work.
 - 1. All areas that cannot be compacted with a self-propelling roller must be hand-tamped with rammers.
 - 2. Remove from the sub-grade and subsequent fill layer all debris, foreign materials, and all other undesirable material.
 - 3. Hollows and depressions that develop under rolling must be filled with acceptable material, corresponding to layer being rolled, and must again be rolled. This process of shaping, filling, and rolling must be repeated until no depressions develop.
 - 4. Compact the sub-grade of all areas with appropriate compacting equipment or by other means to such degree as will ensure against settlement of the subsequently constructed work.
- C. Rough Grading must result in surfaces within plus or minus 0.1-foot of soil layer depths and the elevations indicated by the Contract Documents.
- D. Before any Washed Gravel or planting soils or, as specified in other Sections, paving, or other systems or materials are placed upon the sub-grade or subsequent soil fill layer, verify preparation of graded areas to design line and grade.

- E. During the course of rough grading and final site grading, Commissioner may make minor adjustments to grading at no additional cost to the City of New York.

3.12 INSTALLATION OF ACCESSORY MATERIALS

- A. Geotextile and Soil Separation Fabrics and Planter Insulation: Place for each condition of use as shown on Contract Drawings and/or specified in this Section.
- B. Warning Tape, Detectable Type: Install Warning Tape as specified for Utility Trench Backfill installations.
- C. Herbicides: For possible use if there is undesirable seed germination on-site after planting soil material installation. Under no circumstances are herbicide materials to be applied without specific approval and/or instruction from Commissioner.
 - 1. Spray all vegetation on sub-grade with an emergent weed killer at a rate of application approved by the Commissioner .

3.13 FIELD QUALITY CONTROL

- A. Notices: Furnish to Commissioner and, as applicable, New York 811, NYC DOB and Special Inspector, NYC DEP Construction Stormwater Permits and Qualified Inspector (5 business days notice) prior to start of each or any phase of earthwork operations.
- B. Allow in schedule of operations for the Commissioner to observe sub-grades and fill layers before further construction work or operations are performed. Placement of fill/backfill and compaction will be monitored and observed by the City of New York's Testing / Inspection Agency at the discretion of the Commissioner for Special Inspection. Construction monitoring will be as additionally specified in Part 1 Article 1.6 "Quality Assurance."
- C. Quality Control Testing During Construction:
 - 1. Contractor Testing: Material testing to confirm that materials on-site and as delivered comply with specified requirements must be by Contractor's Soil Testing Laboratory/Agency as additionally specified in Part 1 Article 1.6 "Quality Assurance."
 - a. Prior to on-site soil placement, laboratory testing of soil materials must be performed by Contractor's Testing Laboratory/Agency and used to determine maximum density and optimum water content for each soil material type in accordance with ASTM D1557 (Modified Proctor) and as directed by the Commissioner.
 - 2. City of New York's Field Density Testing for Special Inspection: Field density tests to check the degree of compaction of subgrades, fill, and backfill must be taken by the City of New York's Testing Laboratory/Agency as specified in Part 1 Article 1.6 "Quality Assurance" and additionally as follows:
 - a. Allow testing agency to inspect and test sub-grades and each fill and backfill lift and soil layer. Proceed with subsequent earthwork only after test results for previously completed work confirms compliance with requirements.

- b. The type, location, and frequency of tests for quality control must be as specified herein and additionally will be at the discretion of the Commissioner.
 - c. City of New York's Testing Agency will perform field density tests in accordance with ASTM D1556 (sand cone method), ASTM D2167 (rubber balloon method), or ASTM D2922 (nuclear method) as approved by the Commissioner to suit material and installation condition for special inspection. Tests will be performed at the following locations and frequencies as a minimum to verify design bearing capacities:
 - 1) Footing/Foundation and Utility Structure Sub-grade Areas/Conditions: At least one (1) field density test (nuclear method) of each sub-grade soil stratum at a single footing or maximum 150 feet long footing sub-grade in a defined site area with recognized like soil condition. Subsequent verification and approval of other footing sub-grades in the same site area may be based on a visual comparison of sub-grade with previously tested sub-grade when approved by Commissioner.
 - 2) Trench Conditions (Below Sub-grade Level): At sub-grade and at completion of each compacted initial and final backfill layer, at least one (1) field density test for each condition and for each 150 feet or less of trench length, but no fewer than two (2) tests in any one-day operation. Subsequent verification and approval of other trench sub-grades in the same site area may be based on a visual comparison of sub-grade with previously tested sub-grade when approved by Commissioner.
 - 3) Paved Areas: At sub-grade and at completion of each compacted fill/backfill lift, at least one (1) test field density for every 2000 sq. ft. or less of paved area, but no fewer than three (3) tests in any one-day operation.
 - 4) Planting Bed Areas: At sub-grade and at completion of each compacted fill layer, at least one (1) field density test every one thousand (1,000) square feet or less of filled planting bed area, but no less than three (3) tests in any one-day operation.
 - d. The results of density tests of soil-in-place will be considered satisfactory if the average of any three (3) consecutive density tests which may be selected are in each instance equal to or, except planting areas, greater than the specified density, and if not more than one (1) density test out of five (5) has a value more than two percent (2%) below the required density.
 - 1) At planting areas, densities must not be greater than the specified density.
- D. Survey Verifications of Elevations: Contractor must submit dimensioned topographic and location survey and written certification by, as specified, a qualified surveyor upon completion of earthwork operations that grades are within the tolerances specified.
- 1. Include interim submittals of topographic surveys for excavated sub-grade level and each resultant horticultural planting soil layer to confirm appropriate depths of soil placement. Coordinate preparation with requirements for recording underground utility and subdrainage systems.
 - 2. Include locations, extent of operations, and surface elevations of excavations and site fill areas related to benchmarks. Relate to existing adjacent grades of Project.
 - 3. Completed survey will be used for measurements, subsequent earthwork, monitoring of layout progress, and other work on the Project. Relate and coordinate with "as built" survey requirements.
- E. Corrections: If correction of fill or backfill conditions is required in the opinion of the Commissioner, based on test reports or other data, Contractor must make the following corrections at no additional costs to the City of New York.

1. If fill or backfill at structural conditions have been placed below specified density or on improperly prepared sub-grades, Contractor must remove and replace in-place soils as directed and provide additional compaction of material to comply with specified requirements.
2. If fill or backfill conditions at planting areas have been placed above the specified density, Contractor must remove and re-place the soils or, at the discretion of the Commissioner, must loosen the soils using agricultural equipment and procedures, then re-compact to comply with specified requirements.
3. If fill or backfill have been placed at incorrect elevations or to incorrect layer depths, Contractor must remove and replace in-place soils as directed and provide additional compaction of material to comply with specified requirements.

3.14 MAINTENANCE AND PROTECTION

A. Maintenance:

1. Protection of Graded Areas:

- a. Protect newly graded areas from traffic and erosion. Keep free of trash and debris.
 - b. Restore and reestablish grades in settled, eroded, and rutted areas to the specific tolerances.
2. Reconditioning Compacted Areas: Where completed and compacted soil or sub-base areas are disturbed by subsequent construction operations or adverse weather, scarify the surface, reshape, and compact to the required density prior to further construction.
 3. Restore and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
 - a. Scarify or remove and replace soil material to depth as directed by Commissioner; reshape and recompact.
 4. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with approved fill, compact, and reconstruct surfacing.
 - a. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to the greatest extent possible.

B. Cleaning: Promptly remove soil and debris created by work from paved areas of Project or adjacent to Project. Clean wheels of vehicles before leaving site to avoid tracking soil onto roadways, walks, or other paved areas.

C. Any soils contaminated by gasoline, oil, plaster, construction debris, concrete washout, unacceptable soils, or other substances that would render sub-grade, finish grade, or a planting soil material unsuitable for proper plant growth must be removed from the premises whether or not such pollution occurs or exists prior to or during the Contract period. In the event that contaminated material is placed, this material must be removed and replaced with approved material. All remedial operations associated with use of planting soil mixes must be reviewed and approved by the Commissioner.

3.15 DISPOSAL OF SURPLUS AND WASTE MATERIALS

- A. Disposal: Remove surplus satisfactory soil that is in excess of fill/backfill requirements; waste material, including unsatisfactory soil, trash, obstructions and/or debris; and legally dispose of these materials off of City of New York's property.
- B. Remove materials resulting from construction operations as the work progresses and/or at direction of Commissioner.

END OF SECTION 310000

SECTION 312316.13 - TRENCHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 RELATED SECTIONS

- A. Protection of Existing Utilities.Section 022050
- B. Earthwork.Section 310000

1.3 SCOPE OF WORK

- A. Excavating trenches for the installation of utilities including but not limited to electrical and other utilities.
- B. Backfilling trench with bedding material as specified and finish filling trenches with suitable material to proposed subgrade.
- C. Compacting subgrade, bedding, and backfill materials in an acceptable manner.
- D. Compliance with all environmental and health and safety regulations.

1.4 REFERENCE STANDARDS

- A. American Society for Testing and Materials (ASTM) Latest Edition
 - 1. D 422 Method for Particle Size Analysis
 - 2. D 698 Test of Moisture Density Relations of Soils - Standard Proctor Method
 - 3. D 1557 Test for Moisture Density Relations of Soils Using 10 lb. (4.5 Kg) Hammer and 18 inch (457 mm) Drop (Modified Proctor)
 - 4. D 2216 Laboratory Determination of Moisture Content of Soil
 - 5. D 2487 Classification of Soils for Engineering Purposes
 - 6. D 2922 Tests for Density of Soil and Soil Aggregate in Place by Nuclear Methods (Shallow Depth)
 - 7. D 3017 Test for Moisture Content of Soil and Soil Aggregate in Place by Nuclear Methods (Shallow Depth)
 - 8. D 4318 Test for Plastic Limit, Liquid Limit, & Plasticity Index of Soils
- B. American Society for Testing and Materials (ASTM) Latest Edition
 - 1. T 88 Mechanical Analysis of Soils

1.5 PERFORMANCE REQUIREMENTS

- A. Contractor must maintain access for vehicular and pedestrian traffic as required for other construction activities. Utilize temporary striping, flagmen, barricades, warning signs, and warning lights as required.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."
- B. No work must be performed until shop drawings, if required, have been accepted by the Commissioner.
- C. The Contractor must contact all utility companies and identify any requirements. Contractor must provide written confirmation of the status of all utility construction to the Commissioner at the time of the preconstruction conference or no later than 30 days following the project possession date.
- D. Submit a sample of each type of offsite fill and/or bedding material that is to be used in backfilling.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."
- B. The Contractor must submit the required submittals to the Commissioner at least one week prior to the start of construction for approval.
- C. An independent testing agency to perform the required tests. The Contractor must provide any necessary assistance to the testing agency and provide the testing agency with the intended construction schedule at least one week prior to the start of construction.
- D. Protect all adjacent structures and site features during the course of construction. Any damage to adjacent property or site features the contractor to be responsible for restoration.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Stone Bedding Material: AASHTO No. 57 processed sand and gravel free from debris, clay lumps, organic, or other deleterious material, and complying with following gradation requirements:

<u>U. S. Sieve Size</u>	<u>Percent Passing (by weight)</u>
1-1/2 Inch	100
1 Inch	95-100
1/2 Inch	25-60
No. 4	0-10
No. 8	0-5

- B. Sand Bedding Material: Natural or processed sand free from debris, clay lumps, organic, or other deleterious material; and complying with the following gradation requirements:

<u>U. S. Sieve Size</u>	<u>Percent Passing (by weight)</u>
3/4 Inch	100
No. 4	95-100
No. 16	45-85
No. 50	3-29
No. 100	0-10

- C. Acceptable filter/drainage fabrics as required and if needed for proper execution of the work. See construction documents for filter fabric type.
- D. Fill materials - See Section 310000

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Set all lines, elevations, and grades for utility and drainage system work and maintain for the duration of work. Provide careful maintenance of benchmarks, property corners, monuments, or other reference points.
- B. Protect and maintain in operating condition, existing utilities encountered during utility installation. Restore any damage to surface or subsurface improvements shown on Drawings.
- C. Verify location, size, elevation, and other pertinent data required to make connections between existing utilities and drainage systems, and proposed construction indicated on Drawings. Coordinate all building utility connection locations and elevations with architectural plans. Contractor must comply with The New York City Administrative Code and The Rules of the City of New York.
- D. Install dewatering systems that will be required to construct the proposed utilities to the design elevations and using the methods described herein. Water pumped out of excavations must be disposed of on-site, and will not be discharged directly to the City’s storm drainage system without prior approval of NYCDEP.
- E. Over excavate and properly prepare areas of subgrade that are not capable of supporting the proposed systems. These areas are to be stabilized by using acceptable backfill materials and/or additional bedding material placed and compacted as specified to the satisfaction of the Commissioner.

3.3 EXCAVATION

- A. Contact local utility companies before excavation begins. Dig trenches at proper width and depth for laying pipe, conduit, or cable and in accordance with utility company requirements. Cut trench banks for safety and remove stones as necessary to avoid point bearing.
- B. All trench excavation side walls must be sloped, shored, sheeted, braced or otherwise supported by means of sufficient strength to protect the workmen within them in accordance with the applicable rules and regulations established for construction by the Department of Labor, Occupational Safety and Health Administration (OSHA), and by local ordinances. Lateral travel distance to an exit ladder or steps must not be greater than 25 feet in trenches 4 feet or deeper.
- C. Trench width requirements below the top of the pipe must not be less than 12 inches wider than outside surface of any pipe or conduit that is to be installed. All other trench width requirements for pipe, conduit, or cable must be the minimum practical width that will allow for proper compaction of trench backfill and satisfy safety and utility company regulations.
- D. Accurately grade trench bottom to an elevation 6 inches below the pipe, as per bedding details in construction drawings. Provide uniform bearing and support for each section of pipe on bedding material at every point along the entire length, except where necessary to excavate for bell holes, pipe joints, or other required connections. Dig bell holes and depressions for joints after trench bottom has been graded. Dig no deeper, longer, or wider than needed to make the joint connection properly.
- E. During excavation, stockpile excavated material suitable for backfilling in an orderly manner far enough from the trench to avoid overloading, slides, or cave ins.
- F. Remove excavated materials from the site which are not suitable for backfill.
- G. Any abandoned structures, utilities, or debris discovered during excavation must be removed and disposed of, or capped.
- H. Utility alignments have been designed to avoid expected obstructions wherever possible. If unanticipated significant obstructions are encountered during utility installation work immediately notify the City of New York and Commissioner.
- I. Prevent surface water from flowing into trenches or other excavations by temporary grading or other methods, as required. Remove accumulated water in trenches or other excavations by pumping or other acceptable methods. Water must not be directly pumped to the city sewer system.
- J. Utility installation must meet the following minimum pipe installation depths, or applicable codes and ordinances, measured from finished grade or the paved surface.
 - 1. Electrical Conduits: Coordinate with Con Edison Requirements.

3.4 LATERALS

- A. All utilities intended to connect to services within building will be extended to within 5 ft of the exterior face of foundation wall in the direction and elevation to connect at those geometrical locations indicated or inferred on the drawings. All utility ends will be plugged and marked by a 2” x 4” piece of wood extending from the utility invert to 4 feet above final grade. Paint end or otherwise mark stake to adequately identify type of utility marked.

3.5 PIPE BEDDING

- A. Accurately cut trenches for pipe or conduit to designated line and grade 6 inches below the bottom of the pipe, to width as specified previously. Compact trench bottoms a minimum of 95% of the maximum dry density as determined by ASTM D1557, Modified Proctor Test.
- B. Over excavate wet or unstable soil, if encountered, from trench bottom as necessary to provide a suitable base for continuous and uniform bedding.
- C. Place bedding material and compact in 6 inch loose lifts to obtain at least 95% of the maximum dry density. Accurately shape bedding material to conform to lower portion of pipe barrel. After pipe installation, place and compact bedding material as specified above in maximum 6 inch loose layers to the springline of the pipe.

3.6 BACKFILLING

- A. After pipe or conduit has been installed, bedded and tested as necessary, backfill trench to finish grade in maximum 6 inch thick loose lifts of approved fill soils, compacting and testing each lift.
- B. Systematically backfill to allow maximum time for natural settlement. Do not backfill over porous, wet, frozen or spongy subgrade surfaces. Should these conditions exist, the areas should be removed, replaced and re-compacted.
- C. Approved fill must be compacted to at least 95% of the maximum dry density as determined by ASTM D-1557.
- D. Electric conduits not encased in concrete must be backfilled with clean sand bedding material. Sand bedding material must not contain any gravel or angular pieces that can puncture the conduits.
- E. Pipes, conduits and cables must be protected against any damage that may occur due to compaction operations.
- F. No utility must be backfilled until the Commissioner has completed their inspection.

3.7 COMPACTION

- A. All off-site materials used for backfill must be approved by the Commissioner.

- B. Exercise proper caution when compacting immediately over top of pipes or conduits.
- C. Maintain optimum moisture content of fill materials to attain required compaction density.
- D. Perform density testing at intervals not exceeding 200 linear ft of trench for the subgrade, bedding, and the first and every other eight inch lift of compacted trench backfill, and must furnish copies of test results as specified.
- E. All off-site materials used for backfill must be tested in accordance with this specification.

END OF SECTION 312316.13

SECTION 316216 - STEEL PILES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. This section includes the general requirements on steel H-Pile fabrication, installation and pile load testing programs.
- B. The contractor must furnish all labor, tools, equipment and material required to handle, store and install all H-Piles as shown on Contractor Drawings, and as specified herein.
- C. H-Piles and all necessary components and miscellaneous appurtenances may be of the form, weights, shapes and lengths as shown on the Contract Drawings and specified in the Specifications.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at project site; 2060 Bartow Ave, Bronx, New York 10475.
- B. Prior to starting pile driving operations, the Contractor, and Commissioner will make a joint inspection of the accessible existing structures, utilities, pavement and improvements adjacent to the pile driving site to examine and document their present condition.
- C. Photographs and measurements will be taken by the Contractor to record any conditions that may become subject of possible damage claims.
- D. The contractor will prepare report of such conditions, verified by the photographs, and signed by the personnel of the Contractor, and Commissioner participating in the investigation.
- E. The structures and utilities deemed as "protection needed" will be identified, and the protection plan will be submitted by the Contractor for the approval of the Commissioner.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 SUBMITTALS

- A. The contractor must submit working drawings, shop drawings and material specifications for the approval of the Commissioner. Working drawings and shop drawings must include, but not be limited to:
 - 1. Details of pile driving equipment
 - 2. Certification that materials meet ASTM requirements
 - 3. Schedule of procedures and operations
 - 4. Sample of driving record forms
 - 5. H-Pile installation sequence
 - 6. Pile location survey (project record documents)
 - 7. Pile load test report
- B. After locations of utilities and other underground obstructions have been confirmed, provide drawings showing the actual locations of existing utilities, structures or other interferences in relation to the proposed locations of H-Piles.
- C. Any variations proposed by the Contractor between the Contract drawings and requirements in this Section must be submitted for review and approval by the Commissioner. For all proposed variations or alternatives, the Contractor must submit engineering calculations and design assumptions for approval to the Engineer. These calculations must be prepared and stamped by a Professional Engineer licensed in the State of New York.
- D. After installation, prepare as-built CAD drawings including coordinates of piles.
- E. Detail drawings must include tip and top elevations of piles.
- F. Before commencing any H-Pile installation, the Contractor must submit to the Commissioner for approval, a schedule of the procedures the Contractor intends to use.
- G. The schedule must show in detail the proposed method, sequence and timing of all pile driving operations, catalog data and manufacturer's specification for all hammers and anvils to be used, method of lifting, handling and cutting off of H-Piles.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Installer's Qualifications: an entity meeting the requirements of the DDC General Conditions Section 014000 "Quality Assurance" Article 1.7.C.1. Installer's responsibility includes engaging a qualified professional engineer licensed in the State of New York to prepare pile-driving records.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 PRECONSTRUCTION TESTING

- A. General: Static pile tests are used to verify driving criteria and pile lengths and to confirm allowable load of piles.
- B. The Contractor must provide all equipment, labor, material and incidental items necessary to perform the pile load tests as indicated on the Contract Drawings or specified in the Specifications.
- C. Pile load tests must conform to the New York City Building Code and the Specifications.
- D. The working load of the piles must be as shown on the Contract Drawings or specified in the Specifications.
- E. Test piles which pass the load tests and are within tolerance at permanent locations may be reset for use as permanent piles, the Contractor must obtain the Commissioner's approval for each pile so tested and so reset.
- F. Piles which do not meet the requirements for the working load of the piles must be rejected and additional testing must be performed on other piles at no additional cost to the City.
- G. Submittals: The Contractor must also submit a complete report the Commissioner at the completion of each pile load test. The Contractor must engage the services of a Professional Engineer, licensed in the State of New York, experienced in pile load testing and load test analysis for the supervision of load test procedures and preparation of the report. The report must include, but not be limited to:
 - 1. Pile identification and location.
 - 2. A description of the pile driving equipment.
 - 3. Driving records for both test piles and reaction piles.
 - 4. Complete test data.
 - 5. Analysis of test data.
 - 6. Description of subsurface conditions.
 - 7. Recommended pile installation criteria.
- H. Schedule of Operations: Load tests of pies must be scheduled sufficiently in advance of production pile driving to prevent delay in the progress of the work. No production piles will be driven until the load test report is approved by the Commissioner. Notify Commissioner at least 48 hours in advance of performing tests. On completion of testing, remove testing structure, anchor piles, equipment and instrumentation.
- I. Allow a minimum of 14 days to elapse after driving test piles before starting pile testing.
- J. Number of Test Piles:
 - 1. For each type of pile, three piles for compressive load test. One test pile will be located at the northern part of site; one test pile will be located in the middle of site; one test pile will be located at the southern part of site.
 - 2. For each type of pile, three piles for uplift load test. One test pile will be located at the northern part of site; one test pile will be located in the middle of site; one test pile will be located at the southern part of site.

- 3. For each type of pile, two piles for lateral load test. Production piles can be used upon the approval of Commissioner.
- K. Drive test piles at locations indicated to the minimum penetration or driving resistance indicated. Use test piles identical to those required for Project, and drive with appropriate pile-driving equipment operating at rated driving energy to be used in driving permanent piles.
- L. Pile Design Load: indicated as following.
 - 1. Approval Criteria: Allowable load will be the load acting on the test pile when the lesser of the following criteria are met, divided by a factor of safety of 2.

H-Pile	Design Compressive Capacity	Design Capacity	Uplift Design Capacity	Lateral Design Capacity (strong axis)	Lateral Design Capacity (weak axis)
W14X132	970 kips	95.2 kips	17 kips		11 kips
HP12X84	615 kips	79 kips	11 kips		7 kips

M. Pile Compressive Load Tests:

- 1. General: Compressive pile load tests must be in accordance with ASTM D1143 and NYCBC. The load tests at locations shown on the Contract Drawings or specified in the Specifications must be made on test piles placed to the tip elevation and/or driving resistance used for establishing lengths of piles, unless otherwise directed by the Commissioner. Loading, testing and recording of data must be under the direct supervision of the licensed Professional Engineer engaged by the Contractor.
- 2. Testing Apparatus: The proposed testing apparatus and structures to be used in making the pile load tests must be designed by a Professional Engineer licensed in the State of New York engaged by the Contractor. The Contractor must submit working drawings to the Commissioner for approval. Approval by the Commissioner will not relieve the Contractor of complete responsibility for the adequacy of the pile load test setup. Load tests will be performed by a method that will maintain constant concentric load under increasing settlement. Settlement observations must be made by means of dial extensometers. A minimum of three (3) extensometers will be used. The extensometers must provide readings to the nearest 0.001 inch. In addition, settlement observations will be taken using an engineer's level reading to 0.001 feet properly referenced to a well-established benchmark.
- 3. Load tests: The contractor must drive test piles of the same size and materials as the permanent piles. Test piles must be driven with the same equipment and in the same manner as the permanent piles. In cases where test piles will develop resistance during testing by nonbearing materials to be excavated, the test pile must be cased off in that materials. Permanent piles may be used as reaction piles.
- 4. The Contractor must provide all equipment, instruments, personnel, accessories and appurtenances required for the tests. The Contractor must place reaction piles and beams, as required, to transmit load into the test pile. Calibrated pressure gauges will be used to determine the actual load placed on the test pile. Calibrations must have been made within three (3) months of load testing.
- 5. The Contractor must prepare complete detailed shop drawings showing how the test will be performed, how the reaction piles will be placed, and how the jacking beams will be anchored to the test piles and reaction piles. The Contractor's shop drawings must include date and calibration curves on all instruments and accessories used in the tests. The entire setup and test procedure will be subject to the approval of the Commissioner. A table of pile loads and test pressures for each test will be submitted. A foundation stability analysis where dead weights are used for test reactions will be submitted.

6. Test loads may be applied by direction weight or by means of a hydraulic jack. The loading platform or box must be carefully constructed to provide a concentric load on the pile. If direct weight is employed, the loading increments may be applied without impact of jar. The weight of the loading platform or box must be obtained prior to the test, and this weight will be considered as the first increment of load. If a hydraulic jack is employed, equipment for maintaining each increment of desired load constant under increasing settlement must be provided. The gauge and the jack must be calibrated as a unit and have a rated capacity to achieve twice the maximum test pile load.
7. The test load must be twice the proposed working load of the pile. The standard procedure of ASTM D1143 must be used except as follows: the test load must be applied in 7 increments at a load of 50 percent, 75 percent, 100 percent, 125 percent, 150 percent, and 200 percent of the proposed working load.
8. After the proposed working load has been applied, and for each increment thereafter, the test load must remain in place until there is no measurable settlement (0.001 inches) in a 2-hour period. The total test load must remain in place until settlement does not exceed 0.001 foot in 48 hours. The total test load must be removed in decrements not exceeding 25 percent of the total test load at not less than 1 hour intervals. The rebound will be recorded after each decrement is removed, and the final rebound must be recorded 24 hours after the entire test load has been removed.
9. Under each load increment, settlement observations must be made and recorded at ½ minute, 1 minute, 4 minute, and thereafter after application of load increment, except in the instance of the total load where after the 4-minute reading, the time interval will be successively doubled until the final settlement limitation is reached and the load is removed.
10. The maximum allowable pile load must be such that 50 percent of the applied load will not cause a net settlement of the pile of more than 0.01 inch per ton of total applied load or will be 50 percent of the applied load which causes a gross settlement of 1 inch, whichever is less.

N. Pile Uplift Load Tests:

1. Pile uplift load tests must be in accordance with ASTM D3689 and NYCBC. The load tests at locations shown on the Contract Drawings or specified in the Specifications must be made on test piles placed to the tip elevation and/or driving resistance used for establishing lengths of piles, unless otherwise directed by the Commissioner. Loading, testing and recording of data must be under the direct supervision of the licensed Professional Engineer engaged by the Contractor. A report must be submitted in accordance with the general requirements on submittals.
2. The proposed testing apparatus and structures to be used in making the pile load tests must be designed by the Professional Engineer engaged by the Contractor. The Contractor must prepare complete detailed working drawings showing how the uplift load test will be performed including the layout of reaction, jack, and test pile. The drawings must include date and calibration curves of all equipment and instruments. The entire test setup and procedure will be subject to the approval of the Commissioner.
3. Uplift (tensile) load tests must be conducted in accordance with Section 7.2 of ASTM D3689 until the test load has reached 200 percent of the design load unless failure occurs first. The allowable uplift load must be 50 percent of the last load increment before failure or of the test load for a completed test.
4. Apply tensile test loads in line with the central longitudinal axis of the pile. Movement must be measured with dial gauges to the nearest 0.01 inch referenced to a beam which is supported at least 8 feet away from the test pile and reactions.

O. Pile Lateral Load Tests:

1. Pile lateral load tests must be in accordance with ASTM D3966 and NYCBC. The load tests at locations shown on the Contract Drawings or specified in the Specifications must be made on test piles placed to the tip elevation and/or driving criteria used for establishing lengths of piles, unless otherwise directed by the Commissioner. Loading, testing and recording of data must be under the direct supervision of the licensed Professional Engineer engaged by the Contractor. A report must be submitted in accordance with the general requirements on submittals.
2. The proposed testing apparatus and structures to be used in making the pile load tests must be designed by the Professional Engineer engaged by the Contractor. The Contractor must prepare complete detailed working drawings showing how the lateral load test will be performed including the layout of reaction, jack, and test pile. The drawings must include date and calibration curves of all equipment and instruments. The entire test setup and procedure will subject to the approval of the Commissioner.
3. Piles must be tested as free-head piles. Lateral load tests must be conducted in accordance with Section 6.1 of ASTM D3966 until either 1 inch of gross lateral movement has occurred or the test load has reached 200% of the design load. For both cases, the allowable lateral pile load must be 50% percent of the test value.
4. Reaction for lateral load test may be an adjacent pile. Movement must be measured with dial gauges to the nearest 0.001 inch referenced to a beam which is supported at least 10 feet away from the test pile and reactions. For H-Piles, the direction of the test must be as indicated in the Specification or the Contract Drawings.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver piles to Project site in such quantities and at such times to ensure continuity of installation. Handle and store piles at Project site to prevent buckling or physical damage.
- B. Storage of H-Piles must be such that sagging which would produce eccentric load along the pile body must be prevented. Concentrated loads which occur during stacking or lifting must be kept below the level which would produce permanent deformation of the material.
- C. Material and equipment storage must prevent corrosion and environment damage and natural hazard.
 1. Painted Piles: Protect finish and touch up paint damage before driving piles.

1.9 FIELD CONDITIONS

- A. Protect structures, underground utilities, and other construction from damage caused by pile driving.
- B. Subsurface investigation data are available from the City in the report entitled “Final Geotechnical Report, Design and Construction Support Services for Bronx Animal Care Center and Veterinary Clinic, Borough of the Bronx, New York”, dated May 2021, by EnTech Engineering, P.C. Contractor must review and understand the information contained in the report. The geotechnical report is made available to the Contractor for information on factual data only and may not be interpreted as a warranty of subsurface conditions whether interpreted from written text, boring logs or other data.

- C. Preconstruction Photographs: Inventory and record the condition of adjacent structures, underground utilities, and other construction. Document conditions that might be misconstrued as damage caused by pile driving. Comply with DDC General Conditions "Photographic Documentation."

PART 2 - PRODUCTS

2.1 STEEL H PILES

- A. High-Strength, Low-Alloy, Columbium-Vanadium Structural Steel: ASTM A 572/A 572M, Grade 50 will be used to fabricate H-Piles.
- B. The H-Piles will be fabricated by HP 12X84 and W14X132 as designated on the Contract Drawings. Any alterations must be submitted for the approval of the Commissioner prior to construction.

2.2 PILE ACCESSORIES

- A. Driving Points: Manufacturer's standard one-piece driving point, fabricated from steel castings as follows to provide full bearing of web and flange of pile tip:
 - 1. High-Strength Steel Castings: ASTM A 148/A 148M, Grade 90-60.
- B. Splice Unit: Manufacturer's standard splice unit, fabricated from two connected steel plats, of same materials as steel H pile or material of equal strength, shaped to encase web and part of each flange. The splicing must not compromise the pile body strength.
- C. Pile shoes: As pile toe treatment for H-Piles, pile shoes will be APF77750 or equivalent with a hard bite point for sloping rock situation to avoid the pile being battered on the rock surface.

2.3 PAINT

- A. Paint: coal-tar epoxy polyamide, or other as approved by the Commissioner.

2.4 FABRICATION

- A. The contractor must submit the pile fabrication details for the approval of the Commissioner. Fabricate and assemble piles in shop to greatest extent possible.
- B. The H-Piles are designed to be driven into the bedrock. The bedrock depth generally ranges from 35ft to 72ft below the existing grade. The H-Piles must be fabricated in such a manner to avoid splicing in field. It is recommended that the H-Piles may be fabricated in certain groups of piles of certain lengths. The pile lengths can be determined based on the rock profile as included in the Geotechnical Report. The number of piles in each group can be determined based on the pile layout plan as included in the Contract Drawings.

- C. Fabricate full-length piles by splicing lengths of steel H pile together. Accurately mill meeting ends of piles and bevel for welding. Maintain axial alignment of pile lengths. Maintain structural properties of pile across splice.
 - 1. Splice Units: Notch web of pile, fit splice unit into position, and weld according to manufacturer's written instructions and AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.
 - 2. Continuously Welded Splices: Splice piles by continuously welding according to AWS D1.1/D1.1M for procedures, appearance and quality of welds, and methods used in correcting welding work.
- D. The webs of H-Piles must be reinforced to meet the requirements in Section 1809.7.3 in NYCBC.
- E. All materials used for fabrication must be free from defects that impair their required properties.

2.5 SHOP PAINTING

- A. General: Shop paint steel pile surfaces, except for surfaces to be encased in concrete, as follows:
 - 1. Extend painting to a depth of 25 feet below finished grade to top of exposed pile.
- B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and loose mill scale, spatter, slag, and flux deposits. Prepare surfaces according to SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
- C. Painting: Immediately after surface preparation, apply coat of paint according to manufacturer's written instructions to provide a dry film thickness of not less than 8 mils (0.2 mm). Mark pile lengths after shop painting.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Site Conditions: Do not start pile-driving operations until earthwork fills have been completed or excavations have reached an elevation of 6 to 12 inches above bottom of footing or pile cap.

3.3 DRIVING EQUIPMENT

- A. Pile hammer must have a sufficient reserve capacity for driving the piles to the design requirements, including any contingencies occurring during driving. The minimum hammer energy and maximum hammer energy in foot-pounds per blow must be as shown in the Contractor's shop drawing and in accordance with NYCBC.

- B. Leads: Use fixed, semifixed, or hanging-type pile-driver leads that hold the full length of pile firmly in position and in axial alignment with hammer.

3.4 DRIVING PILES

- A. General: Continuously drive piles to elevations or penetration resistance indicated or established by static load testing of piles. Establish and maintain axial alignment of leads and piles before and during driving.
- B. H-Piles must be carefully positioned at the locations shown on the Contract Drawings and driven in a plumb position, to the minimum tip elevations shown on the Contract Drawings or specified in the Specifications, or in the Contractor's shop drawings.
- C. In the event the H-Pile cannot be driven to the minimum tip elevation, the Contractor must immediately notify the Commissioner for corrective measures.
- D. The Special Inspector must keep records for confirmation of the pile driving. The Contractor must cooperate with the Special Inspector so that all necessary data may be obtained. The data will include the following:
 - 1. Project name and number.
 - 2. Name of Contractor.
 - 3. Pile location in pile group and designation of pile group.
 - 4. Sequence of driving in pile group.
 - 5. Type and dimensions of the pile.
 - 6. Type and size of hammer.
 - 7. Steam or air pressure used to activate hammer.
 - 8. Type and dimensions of the cushion block.
 - 9. Actual number of blows per minute delivered by the hammer.
 - 10. Number of blows required for each foot of penetration and blows per inch for last six (6) inches.
 - 11. Elevation of ground.
 - 12. Elevation to which the pile penetrated under its own weight and under the weight of the hammer.
 - 13. Final elevation of tip of pile.
 - 14. Records of re-driving
 - 15. Length of delays due to splicing or for any other reason and elevation of pile tip at such time.
 - 16. Location of pile splices.
 - 17. Pile deviations from location and plumb.
 - 18. Preboring, jetting, or special procedures used.
 - 19. Such other information as the Commissioner may deem necessary.
- E. H-Piles must be driven plumb to the lines, grades and depths shown on the Contract Drawings or specified in the Specifications, or as shown in the Contractor's shop drawing.
- F. Driving must be done with fixed leads to hold the H-Piles firmly in position and in axial alignment with the hammer.
- G. Tolerance in the location of pile head must be limited to 3 inches from the designed location. Out of plumb tolerance of the pile axis must not exceed 2 percent (0.25inch/foot).

- H. Any obstructions encountered in driving the H-Piles must be removed or otherwise disposed by the Contractor so as to permit the proper installation of the H-Piles. Pre-drill holes where indicated, to depths indicated. Drill holes with a diameter less than the largest cross-section dimension of pile. Firmly seat pile in pre-drilled hole by driving with reduced energy before starting final driving.
- I. After the removal of the obstructions, the H-Piles must be re-driven to the required penetration. It is essential that the Contractor be familiar with the site conditions and the subsurface conditions at the site so as to be prepared for removal of obstructions. The Contractor must have on hand suitable equipment of removing obstructions, and must employ this equipment, in a manner satisfactory to the Commissioner.
- J. Any H-Pile, which at any time becomes damaged, displaced or otherwise injured, must be withdrawn and replaced with new piles at the expense of the Contractor. Withdraw damaged or defective piles and piles that exceed driving tolerances, and install new piles within driving tolerances. Fill holes left by withdrawn piles using cohesionless soil material such as gravel, broken stone, and gravel-sand mixtures. Place and compact in lifts not exceeding 72 inches (1830 mm).
- K. All damaged piles must be removed from the site by the Contractor.

3.5 SURVEY

- A. The Contractor must engage the services of a licensed surveyor, approved by the Commissioner, to prepare a piles survey showing final location of piles in relation to the property survey and existing benchmarks.
- B. Before starting work, the Contractor must survey adjacent structures and improvements, establishing exact elevations at fixed points to act as benchmarks. The Contractor must clearly identify benchmarks and record existing elevations. Datum level used to establish benchmark elevations must be located at a sufficient distance so as not to be affected by movement resulting from construction operations.
- C. During construction, the Contractor must resurvey benchmarks as required by the Specifications. The Contractor must maintain an accurate log of surveyed elevations for comparison with original elevations, and must promptly notify the Commissioner if changes occur or if cracks, sags or other damage is evident.
- D. The installed location of the H-Piles must be established by survey and shown on drawings prepared for this purpose as project record documents. Notify Commissioner when deviations from locations exceed allowable tolerances. Upon completion of the pile installation, the Contractor must submit Contract Record Drawings to the City. Contract Record Drawings must be prepared in accordance with the requirements of the DDC General Conditions Section 017839 "Contract Record Documents".
- E. The Contractor must submit a plan showing the locations of proposed monitoring points for review and approval of the Commissioner prior to any pile driving. The plan must be prepared in a manner to protect the structural safety of the adjacent building and utilities.
- F. During the construction, record elevations at each point within 100ft of the work. Readings must be taken at least once daily during construction work that may affect the structure being monitored.
- G. Report movements to the Commissioner the same day as the readings are taken.

- H. The Contractor must protect the existing structures and utilities within or adjacent to the work areas. The Contractor is responsible for any damage caused by their operations and must restore the structures or utilities to equal or better condition at no additional cost to the City.

3.6 VIBRATION MONITORING AND NOISE CONTROL

- A. Before driving H-Piles, the Contractor must submit the instrumentation and monitoring plan for approval to the Commissioner.
- B. All pile driving, removal of piling, demolition and related pile driving activities must be performed in a manner to mitigate the risks on the structural safety of the adjacent buildings and utilities.
- C. The Commissioner reserves the right to change the locations of the monitoring stations, as required during construction. The Contractor must engage the services of an approved geotechnical consultant (who must be a licensed Professional Engineer in the State of New York) experienced in the monitoring of vibrations, to install, maintain and monitor an approved seismic monitoring system.
- D. Particle velocity must be measured by using seismographs capable of measuring peak component particle velocities in the range of 0.2 to 0.4 in/sec. All pile driving vibrations must be monitored for the duration of pile driving unless otherwise ordered to be discontinued by the Commissioner.
- E. All vibration monitoring of specified locations must be implemented in such a manner that peak component particle velocity can be determined shortly after instances where the vibrations exceed the above criteria. Both the Contractor and the Commissioner must be notified within 30 minutes after any such occurrence and the actual peak particle velocity identified.
- F. Permanent vibrations monitoring records of each day's work must be maintained until the completion of the work or until such time when monitoring is ordered to be discontinued. Such records will be turned over to the Commissioner upon completion of all seismic monitoring work. Monthly reports must include a tabulation of all instances of vibration levels in excess of the seismic criteria noted above.
- G. The noise must be restricted to mitigate the disturbance on the surrounding environment in accordance with NYC Noise Code.

3.7 FIELD QUALITY CONTROL

- A. Special Inspections: City of New York will engage a qualified special inspector to perform the following special inspections:
 - 1. Pile Driving and Dynamic Testing Inspection:
 - a. The driving of each pile is a mandatory hold point for which prior notification of the Commissioner is required, and driving each pile must be performed in the presence of the Inspector. Driving records will be kept by the Inspector.
 - b. The Contractor must cooperate with the Inspector in determining the resistance of penetration and must mark each piling section at one foot intervals before driving or as required by the Commissioner.

- c. **Dynamic Pile Testing:** High-strain dynamic monitoring must be performed and reported according to ASTM D 4945 during initial driving and during restriking on 20 percent of piles. The first production pile of each type must be tested.
2. **Weld Testing:** In addition to visual inspection, welds must be tested and inspected according to AWS D1.1/D1.1M and inspection procedures listed below, at testing agency's option. Correct deficiencies in Work that test reports and inspections indicate do not comply with the Contract Documents.
3. Steel H piles will be considered defective if they do not pass tests and inspections.

3.8 TOUCHUP PAINTING

- A. Clean field welds, splices, and abraded painted areas and field-apply paint according to SSPC-PA 1. Use same paint and apply same number of coats as specified for shop painting.
 1. Apply touchup paint before driving piles to surfaces that are immersed or inaccessible after driving. Coatings can be applied before the pile is driven. If the pile has to be spliced in field then the coating can be stopped about 1 foot from the ends of the pile. These areas are then field coated after the splicing take place.

3.9 DISPOSAL

- A. Remove withdrawn piles and cutoff sections of piles from site, and legally dispose of them off City of New York's property.

END OF SECTION 316216

SECTION 321216 - ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Warm-mix asphalt paving.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review methods and procedures related to warm-mix asphalt paving including, but not limited to, the following:
 - a. Review proposed sources of paving materials, including capabilities and location of plant that will manufacture warm -mix asphalt.
 - b. Review requirements for protecting paving work, including restriction of traffic during installation period and for remainder of construction period.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: Include technical data and tested physical and performance properties.
 - 1. Herbicide.
- B. Warm -Mix Asphalt Designs:
 - 1. Certification, by the New York City DOT, of approval of each warm -mix asphalt design proposed for the Work.
 - 2. For each warm -mix asphalt design proposed for the Work.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For paving-mix manufacturer and testing agency.
- B. Material Certificates:
 - 1. Aggregates.
 - 2. Asphalt binder.
 - 3. Asphalt cement.
 - 4. Cutback prime coat.
 - 5. Emulsified asphalt prime coat.
 - 6. Tack coat.
- C. Field quality-control reports.

1.7 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A paving-mix manufacturer registered with and approved by the New York City Department of Transportation.
- B. Testing Agency Qualifications: Qualified in accordance with ASTM D3666 for testing indicated.
- C. Regulatory Requirements: Requirements for Asphaltic concrete, including, but not limited to handling, equipment, transportation etc., not specified herein shall conform to the more stringent requirements of the latest editions of the New York City Department of Transportation's Standard Highway Specifications, New York State Department of Transportation Standard Specifications, and AASHTO "Standard Specification for Transportation, Materials, Methods of Sampling and Testing."

1.8 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:
 - 1. Prime Coat: Minimum surface temperature of 60 deg F (15.6 deg C).
 - 2. Tack Coat: Minimum surface temperature of 60 deg F (15.6 deg C).
 - 3. Asphalt Base Course and Binder Course: Minimum surface temperature of 40 deg F (4.4 deg C) and rising at time of placement.
 - 4. Asphalt Surface Course: Minimum surface temperature of 60 deg F (15.6 deg C) at time of placement.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Asphaltic Concrete

1. Materials shall comply with Sections 2.05, 3.01, 4.01 and 4.02 of NYCDOT Standard Specifications for each item that is required.

B. Prime Coat

1. Cut-back asphalt type, AASHTO M82, (ASTM D2027) MC-30, MC-70 or MC-250.

C. Tack Coat

1. Emulsified Asphalt; AASHTO M140 (ASTM D977) or M208 (ASTM D2397); SS-1h, CSS-1 or CSS-1h, Diluted with one part water to one part emulsified asphalt.

D. Subbase Material

1. Base material shall consist of Size No. 3 broken stone and conform to NYCDOT Type 1, Grade B: Broken Stone, Moderately Resistant to Abrasion; or other approved granular material containing not more than five (5) percent material passing a No. 200 mesh sieve and not more than (5) percent retained on a 2” square sieve.
2. Aggregate shall be broken, clean, hard, unweathered stone of uniform quality. It shall consist of fragments roughly cubicle or pyramidal in shape. Aggregate shall comply with the following sieve analysis (percent by weight passing square sieve openings) TABLE 2.02-I - COARSE AGGREGATE - SIEVE ANALYSIS from NYCDOT Specifications.

2.2 CONSTRUCTION METHODS AND COMPACTION EQUIPMENT

- A. Compaction: Compaction of both base course and top course along the area of asphalt replacement shall be compacted utilizing a hand operated compactor. Compact with a minimum of 2 passes of the compaction equipment over the entire surface of the course.
- B. Provide proper compaction equipment to properly compact asphaltic concrete pavement sections. Hand operated compactor shall be utilized.

2.3 MIXES

- A. Bituminous material shall come from one source only.
- B. Bitumen and aggregate composition shall be plant mixed entirely.

	BINDER		TOP		
	Type 3 RA		Type 6F RA		Extra Fine
Screen Size	Design General Limits % Passing	Production Tol. %	Design General Limits % Passing	Production Tol. %	Design General Limits % Passing
1 1/2"	100	--			
1"	95-100	--	--		
3/4"	74-93	+5	100	--	
1/2"	58-73	+5	95-100	--	100
3/8"					98-100
1/4"	38-53	+5	58-72	+5	
1/8"	26-40	+4	36-54	+4	
4					70-90
8					38-65
20	9-23	+4	15-32	+4	
40	4-18	+4	8-25	+4	
50					6-25
80	3-13	+3	4-16	+3	
200	2-6	+2	2-6	+2	2-8
% Asphalt	4.0-6.0	+7 of Design A.C. %	5.0-6.2	+7 of Design A.C. %	5.0-8.0

a. NOTES:

- 1) All aggregate percentages are based on the total weight of the aggregate. The asphalt content is based on the total weight of the mix.
- 2) The "F" designation in the mix type indicates that high friction coarse aggregates are required.
- 3) When slag aggregates are used in the mix, the asphalt content shall be increased accordingly -- minimum 25 percent for an all slag mix.
- 4) The asphalt cement shall be introduced into the pugmill at a temperature compatible with that of the aggregate as determined by the Commissioner, between the limits of 225° and 350° Fahrenheit.

2.4 SOURCE QUALITY CONTROL

A. Inspection

1. Assign an inspector at the plant to ensure that the mix provided is that of the design mix.
2. Provide the inspector with any required testing apparatus to ensure conformance.
3. Notify the Commissioner 72 hours in advance of each asphaltic concrete placement so that the inspector can cover the work at the plant.

B. Testing

1. The Testing Laboratory will determine the maximum theoretical density of each mix in accordance with ASTM D2041 and do an extraction and gradation test from samples obtained in the field.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A.** Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A.** Verify that subgrade is dry and in suitable condition to begin paving.
- B.** Proceed with paving only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A.** Protection: Provide protective materials, procedures, and worker training to prevent asphalt materials from spilling, coating, or building up on curbs, driveway aprons, manholes, and other surfaces adjacent to the Work.
- B.** Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.
1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
 2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
 3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by the Commissioner, and replace with compacted backfill or fill as directed.

3.4 SURFACE PREPARATION

- A.** Ensure that prepared subgrade has been proof-rolled and is ready to receive paving. Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces.
- B.** Herbicide Treatment: Apply herbicide in accordance with manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.

1. Mix herbicide with prime coat if formulated by manufacturer for that purpose.
- C. Cutback Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of 0.15 to 0.50 gal./sq. yd.. Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.
1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
 2. Protect primed substrate from damage until ready to receive paving.
- D. Emulsified Asphalt Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of 0.10 to 0.30 gal./sq. yd. per inch depth. Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.
1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
 2. Protect primed substrate from damage until ready to receive paving.
- E. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd..
1. Allow tack coat to cure undisturbed before applying warm -mix asphalt paving.
 2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.5 WARM -MIX ASPHALT PLACEMENT

- A. Machine place warm -mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand in areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.
1. Place warm -mix asphalt base course and binder course in number of lifts and thicknesses indicated.
 2. Place warm -mix asphalt surface course in single lift.
 3. Spread mix at a minimum temperature of 250 deg F.
 4. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes unless otherwise indicated.
 5. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.
- B. Place paving in consecutive strips not less than 10 feet wide unless infill edge strips of a lesser width are required.
1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Overlap mix placement about 1 to 1-1/2 inches from strip to strip to ensure proper compaction of mix along longitudinal joints.
 2. Complete a section of asphalt base course and binder course before placing asphalt surface course.

- C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with warm -mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.6 JOINTS

- A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.
 - 1. Clean contact surfaces and apply tack coat to joints.
 - 2. Offset longitudinal joints, in successive courses, a minimum of 6 inches.
 - 3. Offset transverse joints, in successive courses, a minimum of 24 inches.
 - 4. Construct transverse joints at each point where paver ends a day's work and resumes work at a subsequent time. Construct these joints using either "bulkhead" or "papered" method in accordance with AI MS-22, for both "Ending a Lane" and "Resumption of Paving Operations."
 - 5. Compact joints as soon as warm -mix asphalt will bear roller weight without excessive displacement.
 - 6. Compact asphalt at joints to a density within 2 percent of specified course density.

3.7 COMPACTION

- A. General: Begin compaction as soon as placed warm -mix paving will bear roller weight without excessive displacement. Compact warm -mix paving with hot hand tampers or with vibratory-plate compactors in areas inaccessible to rollers.
 - 1. Complete compaction before mix temperature cools to 185 deg F.
- B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.
- C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while warm -mix asphalt is still warm enough to achieve specified density. Continue rolling until warm -mix asphalt course has been uniformly compacted to the following density:
 - 1. Average Density, Marshall Test Method: 96 percent of reference laboratory density in accordance with ASTM D6927 or AASHTO T 245, but not less than 94 percent or greater than 100 percent.
 - 2. Average Density, Rice Test Method: 92 percent of reference maximum theoretical density in accordance with ASTM D2041/D2041M, but not less than 90 percent or greater than 96 percent.
- D. Finish Rolling: Finish roll paved surfaces to remove roller marks while warm -mix asphalt is still warm.
- E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still warm ; compact thoroughly.
- F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, warm -mix asphalt. Compact by rolling to specified density and surface smoothness.
- G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

- H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.8 INSTALLATION TOLERANCES

- A. Pavement Thickness: Compact each course to produce thickness indicated within the following tolerances:
 - 1. Base Course and Binder Course: Plus or minus 1/2 inch.
 - 2. Surface Course: Plus 1/4 inch, no minus.
- B. Pavement Surface Smoothness: Compact each course to produce surface smoothness within the following tolerances as determined by using a 10-foot straightedge applied transversely or longitudinally to paved areas:
 - 1. Base Course and Binder Course: 1/4 inch.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Thickness: In-place compacted thickness of warm -mix asphalt courses will be determined in accordance with ASTM D3549/D3549M.
- C. Surface Smoothness: Finished surface of each warm -mix asphalt course will be tested for compliance with smoothness tolerances.
- D. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement in accordance with ASTM D979/D979M or AASHTO T 168.
 - 1. Reference maximum theoretical density will be determined by averaging results from four samples of warm -mix asphalt-paving mixture delivered daily to site, prepared in accordance with ASTM D2041/D2041M, and compacted in accordance with job-mix specifications.
 - 2. In-place density of compacted pavement will be determined by testing core samples in accordance with ASTM D1188 or ASTM D2726/D2726M.
 - a. One core sample will be taken for every 1000 sq. yd. or less of installed pavement, with no fewer than three cores taken.
 - b. Field density of in-place compacted pavement may also be determined by nuclear method in accordance with ASTM D2950/D2950M and coordinated with ASTM D1188 or ASTM D2726/D2726M.
- E. Replace and compact warm -mix asphalt where core tests were taken.
- F. Remove and replace or install additional warm -mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.10 WASTE HANDLING

- A. General: Handle asphalt-paving waste according to approved waste management plan.

END OF SECTION 321216

SECTION 321313 - CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes
 - 1. Pervious and Impervious Concrete Paving.

1.3 DEFINITIONS

- A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.
- B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Review methods and procedures related to concrete paving, including but not limited to, the following:
 - a. Concrete mixture design, including admixtures.
 - b. Quality control of concrete materials and concrete paving construction practices.
 - 2. Require representatives of each entity directly concerned with concrete paving to attend, including the following:
 - a. Independent testing agency responsible for concrete design mixtures.
 - b. Ready-mix concrete manufacturer.
 - c. Manufacturer's representative of stamped concrete paving system used for stamped detectable warnings.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Sustainable Design Submittals:
 - 1. Environmental Product Declaration (EPD): For each product.
 - 2. Laboratory Test Reports: For concrete paving mixtures, documentation indicating that cured concrete complies with Solar Reflectance Index requirements.
- C. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer of stamped detectable warnings, ready-mix concrete manufacturer and testing agency.
- B. Material Certificates: For the following, from manufacturer:
 - 1. Cementitious materials.
 - 2. Steel reinforcement and reinforcement accessories.
 - 3. Fiber reinforcement.
 - 4. Admixtures.
 - 5. Applied finish materials.
 - 6. Bonding agent or epoxy adhesive.
 - 7. Joint fillers.
- C. Material Test Reports: For each of the following:
 - 1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.
- D. Field quality-control reports.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Stamped Detectable Warning Installer Qualifications: An employer of workers who are properly trained by manufacturer of stamped concrete paving systems.
- C. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").
 2. Personnel conducting field tests must be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Build mockups of full-thickness sections of concrete paving to demonstrate typical joints; surface finish, texture, and color; curing; and standard of workmanship.
 2. Build mockups of concrete paving in the location and of the size indicated or, if not indicated, build mockups where directed by Commissioner and not less than 96 inches by 96 inches. Include full-size detectable warning.
 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 PRECONSTRUCTION TESTING

- A. TR3 (Technical Report for Concrete Design Mix): Contractor must be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.
1. Include the following information in each test report:
 - a. Admixture dosage rates.
 - b. Slump.
 - c. Air content.
 - d. Seven-day compressive strength.
 - e. 28-day compressive strength.
 - f. Permeability.

1.10 FIELD CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.
- B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
1. When air temperature has fallen to or is expected to fall below 40 deg F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F and not more than 80 deg F at point of placement.
 2. Do not use frozen materials or materials containing ice or snow.

3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
- C. Hot-Weather Concrete Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:
1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
 3. Fog-spray forms and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. General: Comply with New York City DOT Highway Specifications for concrete mix and accessories.
- B. Dynamic Coefficient of Friction: For concrete walkway surfaces, provide products with the following values as determined by testing identical products per ANSI 137.1:
 1. Level Surfaces: Minimum 0.6.

2.2 CONCRETE, GENERAL

- A. ACI Publications: Comply with ACI 301 unless otherwise indicated.

2.3 FORMS

- A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.
 1. Use flexible or uniformly curved forms for curves with a radius of 100 feet or less. Do not use notched and bent forms.
- B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.4 STEEL REINFORCEMENT

- A. Epoxy-Coated Welded-Wire Reinforcement: ASTM A884/A884M, Class A, plain steel.
- B. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M or ASTM A934/A934M; with ASTM A615/A615M, Grade 60 deformed bars.

- C. Epoxy-Coated-Steel Wire: ASTM A884/A884M, Class A; coated, plain or deformed.
- D. Epoxy-Coated, Joint Dowel Bars: ASTM A775/A775M; with ASTM A615/A615M, Grade 60 plain-steel bars.
- E. Tie Bars: ASTM A615/A615M, Grade 60; deformed.
- F. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:
 - 1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
 - 2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.
- G. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.

2.5 CONCRETE MATERIALS

- A. Cementitious Materials: Use the following cementitious materials, of same type, brand, and source throughout Project:
 - 1. Portland Cement: ASTM C150/C150M, light gray, green grey and dark grey white portland cement, Type I or Type III. Type I/II Type III Type V.
 - 2. Fly Ash: ASTM C618, Class C or Class F.
 - 3. Slag Cement: ASTM C989/C989M, Grade 100 or 120.
- B. Normal-Weight Aggregates: ASTM C33/C33M, Class 4S Class 4M Class 1N Insert class, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 3 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.
 - 1. Maximum Coarse-Aggregate Size: 1-1/2 inches 1 inch 3/4 inch nominal.
- C. Air-Entraining Admixture: ASTM C260/C260M.
- D. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
 - 1. Hydrophilic Crystalline Admixture: ASTM C494 Type S.
- E. Color Pigment: ASTM C979/C979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, nonfading, and resistant to lime and other alkalis.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Euclid Chemical Company (The); an RPM company.
 - b. Lambert Corporation.
 - c. SureCrete Design Products.
 - d. Or approved equal.
2. Color: As indicated by manufacturer's designation Match Commissioner's sample As selected by Commissioner from manufacturer's full range Insert color.

F. Water: Potable and complying with ASTM C94/C94M.

2.6 FIBER REINFORCEMENT

- A. Synthetic Fiber, Monofilament Fibers: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, 1/2 to 1-1/2 inches long.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 2. Product: Subject to compliance with requirements, provide one of the following:
 - a. Euclid Chemical Company (The); an RPM company; PSI Fiberstrand 100,PSI Fiberstrand 150,PSI Fiberstrand Multi-Mix 80.
 - b. GCP Applied Technologies Inc.; Grace MicroFiber.
 - c. Sika Corporation; Sika Fiber HP,Sika Fiber PPM.
 - d. Or approved equal.

2.7 CURING MATERIALS

- A. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.
- B. Water: Potable.

2.8 RELATED MATERIALS

- A. Joint Fillers: ASTM D1751, asphalt-saturated cellulosic fiber,ASTM D1752, cork or self-expanding cork or ASTM D8139, semirigid, closed-cell polypropylene foam in preformed strips.
- B. Bonding Agent: ASTM C1059/C1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

2.9 STAMPED DETECTABLE WARNING MATERIALS

- A. Detectable Warning Stamp: Semirigid polyurethane mats with formed underside capable of imprinting detectable warning pattern on plastic concrete; perforated with a vent hole at each dome.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ADA Solutions, Inc.
 - b. Advanced Surfaces Inc.

- c. Stampcrete International, Ltd.
- d. Or approved equal.

2.10 CONCRETE MIXTURES

- A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
 - 1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
 - 2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that comply with or exceed requirements.
- B. Cementitious Materials: Use fly ash, pozzolan, slag cement, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent. Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:
 - 1. Fly Ash or Pozzolan: 25 percent.
- C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 0.30 percent by weight of cement.
- D. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.0 lb/cu. yd. 1.5 lb/cu. yd. Insert requirement.
- E. Concrete Mixtures: Normal-weight concrete.
 - 1. Compressive Strength (28 Days): 4500 psi 4000 psi 3500 psi 3000 psi Insert strength.

2.11 CONCRETE MIXING

- A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M and ASTM C1116/C1116M. Furnish batch certificates for each batch discharged and used in the Work.
 - 1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.
- B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.
 - 1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.
 - 2. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch according to requirements in Section 310000 "Earthwork."
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.4 EDGE FORMS AND SCREED CONSTRUCTION

- A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.
- B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.5 INSTALLATION OF STEEL REINFORCEMENT

- A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.
- C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.
- D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.
- E. Zinc-Coated Reinforcement: Use galvanized-steel wire ties to fasten zinc-coated reinforcement. Repair cut and damaged zinc coatings with zinc repair material.

- F. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D3963/D3963M.
- G. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch overlap of adjacent mats.

3.6 JOINTS

- A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.
 - 1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.
- B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.
 - 1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
 - 2. Provide tie bars at sides of paving strips where indicated.
 - 3. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
- C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.
 - 1. Locate expansion joints at intervals of 20 feet unless otherwise indicated.
 - 2. Extend joint fillers full width and depth of joint.
 - 3. Terminate joint filler not less than 1/2 inch or more than 1 inch below finished surface if joint sealant is indicated.
 - 4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
 - 5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
 - 6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
- D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows:
 - 1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
 - a. Tolerance: Ensure that sawed joints are within 3 inches either way from centers of dowels.

2. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

- E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.7 CONCRETE PLACEMENT

- A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.
- B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.
- C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
- D. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.
- E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.
- F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.
- G. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.
 1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels and joint devices.
- H. Screed paving surface with a straightedge and strike off.
- I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.
- J. Slip-Form Paving: Use design mixture for automatic machine placement. Produce paving to required thickness, lines, grades, finish, and jointing.
 1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.

3.8 FLOAT FINISHING

- A. General: Do not add water to concrete surfaces during finishing operations.
- B. Float Finish (Where Indicated): Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.
 - 1. Medium-to-Fine-Textured Broom Finish (Where Indicated): Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.

3.9 INSTALLATION OF DETECTABLE WARNINGS

- A. Stamped Detectable Warnings: Install stamped detectable warnings as part of a continuous concrete paving placement and according to stamp-mat manufacturer's written instructions.
 - 1. Before using stamp mats, verify that the vent holes are unobstructed.
 - 2. Apply liquid release agent to the concrete surface and the stamp mat.
 - 3. Stamping: While initially finished concrete is plastic, accurately align and place stamp mats in sequence. Uniformly load, gently vibrate, and press mats into concrete to produce imprint pattern on concrete surface. Load and tamp mats directly perpendicular to the stamp-mat surface to prevent distortion in shape of domes. Press and tamp until mortar begins to come through all of the vent holes. Gently remove stamp mats.
 - 4. Trimming: After 24 hours, cut off the tips of mortar formed by the vent holes.
 - 5. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.

3.10 CONCRETE PROTECTION AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
- B. Comply with ACI 306.1 for cold-weather protection.
- C. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.
- D. Curing Methods: Cure concrete by moisture-retaining-cover curing as follows:
 - 1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.

2. **Moisture-Retaining-Cover Curing:** Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period, using cover material and waterproof tape.

3.11 PAVING TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:

1. Elevation: 3/4 inch.
2. Thickness: Plus 3/8 inch, minus 1/4 inch.
3. Surface: Gap below 10-feet- long; unleveled straightedge not to exceed 1/2 inch.
4. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches of tie bar.
5. Lateral Alignment and Spacing of Dowels: 1 inch.
6. Vertical Alignment of Dowels: 1/4 inch.
7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches of dowel.
8. Joint Spacing: 3 inches.
9. Contraction Joint Depth: Plus 1/4 inch, no minus.
10. Joint Width: Plus 1/8 inch, no minus.

3.12 FIELD QUALITY CONTROL

- A. **Special Inspections:** City of New York will engage a qualified testing agency to perform tests and inspections.
- B. Perform field inspection and testing in accordance with New York City COT Highway Specifications.
- C. **Concrete Tests:** Testing and inspecting of composite samples of fresh concrete obtained according to ASTM C172/C172M will be performed according to the following requirements:
 1. **Testing Frequency:** Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.
 - a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing to be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 2. **Slump:** ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
 3. **Air Content:** ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 4. **Concrete Temperature:** ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F and below and when it is 80 deg F and above, and one test for each composite sample.

5. Compression Test Specimens: ASTM C31/C31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C39/C39M; test one specimen at seven days and two specimens at 28 days.
 - a. A compressive-strength test is to be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.
- D. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
- E. Test results to be reported in writing to Commissioner, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests to contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
- F. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Commissioner but will not be used as sole basis for approval or rejection of concrete.
- G. Additional Tests: Testing and inspecting agency will make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Commissioner.
- H. Concrete paving will be considered defective if it does not pass tests and inspections.
- I. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.13 CORRECTIVE WORK AND PROTECTION

- A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Commissioner.
- B. Drill test cores, where directed by Commissioner, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.
- C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.
- D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 321313

SECTION 321400 - UNIT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Concrete pavers.
 - 2. Pedestals for unit paver assemblies indicated.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data:
 - 1. For the following:
 - a. Pavers.
 - b. Pedestals.
- B. Sustainable Design Submittals:
 - 1. Environmental Product Declaration (EPD): For each product.
- C. Samples for Verification: For full-size units of each type of unit paver indicated. Include full sized sample of pedestals and associated accessories.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

- B. Adhesion and Compatibility Test Reports: From latex-additive manufacturer for mortar and grout containing latex additives.
- C. Material Certificates: For unit pavers. Include statements of material properties indicating compliance with requirements, including compliance with standards. Provide for each type and size of unit.
- D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for unit pavers, indicating compliance with requirements.
 - 1. For solid interlocking paving units, include test data for freezing and thawing according to ASTM C67.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
 - 1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Submit to latex-additive manufacturer, for testing as indicated below, Samples of flooring materials that will contact or affect mortar and grout that contain latex additives.
 - 1. Use manufacturer's standard test methods to determine whether mortar and grout materials will obtain optimal adhesion with, and will be nonstaining to, installed brick and other materials constituting brick flooring installation.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.
- B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
- C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
- D. Store liquids in tightly closed containers protected from freezing.

1.10 FIELD CONDITIONS

- A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.
- B. Weather Limitations for Bituminous Setting Bed:
 - 1. Install bituminous setting bed only when ambient temperature is above 40 deg F and when base is dry.
 - 2. Apply asphalt adhesive only when ambient temperature is above 50 deg F and when temperature has not been below 35 deg F for 12 hours immediately before application. Do not apply when setting bed is wet or contains excess moisture.
- C. Weather Limitations for Mortar and Grout:
 - 1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 - 2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6. Provide artificial shade and windbreaks and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg F and higher.
 - a. When ambient temperature exceeds 100 deg F, or when wind velocity exceeds 8 mph and ambient temperature exceeds 90 deg F, set pavers within 1 minute of spreading setting-bed mortar.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 CONCRETE PAVERS

- A. Concrete Pavers, Solid Paving Units, Lightweight Concrete: Solid paving units complying with ASTM C1491, made from lightweight concrete.
 - 1. Thickness For Rooftops: 2 inches.
 - 2. Face Size and Shape: 2 feet by 2 feet.
 - 3. Color: Match Commissioner's approved sample.

2.3 STONE PAVERS

- A. Granite Pavers: Rectangular paving slabs made from granite complying with ASTM C615/C615M.

2.4 PEDESTAL SUPPORT SYSTEM FOR PAVERS

- A. Pedestals: Basis of Design: Subject to compliance with requirements, provide “Hercules Adjustable Screwjack Pedestal” as manufactured by Plaza Concepts, or a comparable product manufactured by one of the following manufacturers:
 - 1. Hanover.
 - 2. Tiletech Stak-Cappedestal System.
 - 3. Or approved equal.
- B. Polystyrene Leveler Adhesive: As recommended by the pedestal support system manufacturer.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine surfaces indicated to receive unit paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Where unit paving is to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations, including areas where waterproofing system is turned up or flashed against vertical surfaces.
- C. Proceed with installation only after unsatisfactory conditions have been corrected and waterproofing protection is in place.

3.3 PREPARATION

- A. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.
- B. Sweep substrates to remove dirt, dust, debris, and loose particles.

3.4 INSTALLATION, GENERAL

- A. Do not use unit pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.
- B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.
- C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
 - 1. For concrete pavers, a block splitter may be used.
- D. Paver Pedestals: Install pedestals according to manufacturer's written instructions and in compliance with approved Shop Drawings.
- E. Joint Pattern: As indicated..
- F. Pavers over Waterproofing: Exercise care in placing pavers and pedestals over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.
 - 1. Provide joint filler at waterproofing that is turned up on vertical surfaces unless otherwise indicated; where unfilled joints are indicated, provide temporary filler or protection until paver installation is complete.
- G. Tolerances:
 - 1. Do not exceed 1/32-inch unit-to-unit offset from flush (lippage) or 1/8 inch in 10 feet from level, or indicated slope, for finished surface of paving.

3.5 CORRECTIVE WORK AND CLEANING

- A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

END OF SECTION 321400

SECTION 321613 - CURBS AND GUTTERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 RELATED SECTIONS

- A. Sidewalks.....Section 321623

1.3 SUMMARY

- A. This Section includes Concrete Curb:
 - 1. Concrete Curb must be made of concrete six (6") inches wide on top, eight (8") inches wide on the bottom, eighteen (18") inches deep or as otherwise specified, measured on the back.

1.4 REFERENCE STANDARDS

- A. ACI 304 Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete.
- B. New York City Department of Transportation Standard Details of Construction, latest edition.
- C. New York City Department of Transportation Standard Specifications, latest edition.
- D. ANSI/ASTM D1751 Preformed Expansion Joints Fillers for Concrete Paving and Structural Construction
- E. ANSI/ASTM D1752 Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction.
- F. ASTM C33 Concrete Aggregates.
- G. ASTM C94 Ready Mix Concrete.
- H. ASTM C150 Portland Cement.
- I. ASTM C260 Air Entraining Admixtures for Concrete.
- J. ASTM C309 Liquid Membrane Forming Compounds for Curing Concrete.
- K. ASTM C494 Chemical Admixtures for Concrete.

- L. FS TT C 800 - Curing Compound Concrete for New and Existing Surfaces.
- M. ANSI/ASTM A185 Welded Steel Wire Fabric for Concrete.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."
- B. Certificates and Mixes: Provide certificates or certifications for the following:
 - 1. Concrete design mix.
 - 2. Gradation analysis for aggregate base course and subbase course.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."
- B. The Contractor must submit the required submittals to the Commissioner at least one week prior to the start of construction for approval.
- C. Retain an independent testing agency to perform the required tests. The Contractor must provide any necessary assistance to the testing agency and provide the testing agency with the intended construction schedule at least one week prior to the start of construction.
- D. Sweep concrete pavement and wash free of stains, discolorations, dirt, and other foreign material just prior to final inspection.
- E. Protect concrete from damage until acceptance of work.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Forms: Steel, wood, or other suitable material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects. Use flexible spring steel forms or laminated boards to form radius bends as required. The forms must be of a depth equal to the depth of curbing and so designed as to permit secure fastening together at the tops. Coat forms with nonstaining type coating that will not discolor or deface surface of concrete.
- B. Concrete Materials:
 - 1. Concrete for curb must comply with the requirements of Section 3.05, Class B-32, Type IIA. Cement must be Type II Portland. Coarse aggregate must be broken stone or gravel and comply with the requirements of Section 2.02, Type 1, Grade B, or Type 2, Size No. 57. An approved air-entraining agent must be added at the time concrete ingredients are mixed with water.

2. Joint Fillers: Resilient premolded bituminous impregnated fiberboard units complying with ASTM D 1751 FS HH F 341, Type II, Class A; or AASHTO M 153, Type I.
3. Joint Sealers: Type 2 - Cold Application Sealer must be a one-component, cold-applied, silicone material that cures with atmospheric moisture to form a flexible, low-modulus 100% silicone rubber joint seal which meets or exceeds both Federal Specifications TT-S-001543A Class A (one-part silicone sealants) and TT-S-00230C Class A (one-part silicone sealants), and listed in the NYS Department of Transportation's Materials and Equipment Approved List for "SILICONE JOINT SEALANTS FOR PAVEMENTS (705-05)".

2.2 MIX DESIGN AND TESTING

- A. Design mix to produce normal weight concrete consisting of Portland cement, aggregate, water-reducing admixture, air-entraining admixture, and water to produce the following properties:
 1. Compressive Strength: 4,000 psi, minimum at 28 days, unless otherwise indicated on the Drawings.
 2. Slump Range: 3" maximum.
 3. Air Entrainment: 4% to 7%.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Proof-roll prepared base material surface to check for unstable areas. The paving work must begin after any unsuitable areas have been corrected and are ready to receive paving. Compaction testing for the base material must be completed prior to the placement of the paving.
- B. Surface Preparation: Remove loose material from compacted base material surface to produce a firm, smooth surface immediately before placing concrete.

3.3 INSTALLATION

- A. Form Construction
 1. Set forms to require grades and lines, rigidly braced and secured.
 2. Install sufficient quantity of forms to allow continuance of work and so that forms remain in place a minimum of 24 hours after concrete placement.
 3. Check completed formwork for grade and alignment to following tolerances:
 - a. Top of forms not more than 1/8" in 10' 0".
 - b. Vertical face on longitudinal axis, not more than 1/4" in 10' 0".

4. Clean forms after each use, and coat with form release agent as often as required to ensure separation from concrete without damage.

B. Concrete Placement

1. Do not place concrete until base material and forms have been checked for line and grade. Moisten base material if required to provide uniform dampened condition at time concrete is placed. Concrete must not be placed around manholes or other structures until they are at the required finish elevation and alignment.
2. Place concrete using methods which prevent segregation of mix. Consolidate concrete along face of forms and adjacent to transverse joints with internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Consolidate with care to prevent dislocation of dowels, and joint devices.
3. Automatic machine may be used for curb placement at Contractor's option. Machine placement must produce curbs to required cross section, lines, grades, finish, and jointing as specified for formed concrete. If results are not acceptable, remove and replace with formed concrete as specified.
4. Concrete placement in severe weather conditions must be preapproved by the Commissioner and must be conducted in accordance with related ACI recommended procedures.

C. Joint Construction

1. **Contraction Joints:** The joints between sections must be formed either by steel templates 1/8 inch in thickness, of a length equal to the width of the curb and with a depth which will penetrate at least 2 inches below the surface of the curb or with 3/4-inch thick preformed expansion joint filler cut to the exact cross section of the curb; or by sawing to a depth of at least 2 inches while the concrete is between 4 to 24 hours old. If steel templates are used, they must be left in place until the concrete has set sufficiently to hold its shape, but must be removed while the forms are still in place. Spacing to be determined by the Commissioner.
2. **Expansion Joints:** Transverse expansion joint in curb must have the filler cut to the exact cross section of the curb. Joint spacing at 10 feet unless noted otherwise.
3. **Joint Fillers:** Extend joint fillers full-width and depth of joint, and not less than 2" or more than 1" below finished surface where joint sealer is indicated. Furnish joint fillers in one-piece lengths for full width being placed, wherever possible. Where more than one length is required, lace or clip joint filler sections together.
4. **Joint Sealants:** All joints must be sealed with approved exterior pavement joint sealants and must be installed per manufacturer's recommendations.

3.4 CONCRETE FINISHING

- A. After striking off and consolidating concrete, smooth surface by screening and floating. Adjust floating to compact surface and produce uniform texture. After floating, test surface for trueness with 10'-0" straightedge. Distribute concrete as required to remove surface irregularities, and refloat restored areas to provide continuous smooth finish.
- B. Work back top edge of integral curb, and formed joints with an edging tool, and round to 1/2" radius. Eliminate tool marks on concrete surface. After completion of floating and troweling when excess moisture or surface sheen has disappeared.

- C. Do not remove forms for 24 hours after concrete has been placed. After form removal, clean ends of joints and point up any minor honeycombed areas. Remove and replace areas or sections with major defects, as directed.

END OF SECTION 321613

SECTION 321623 - SIDEWALKS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Provide Concrete sidewalks in accordance with the requirements of the Contract Documents. Work includes:
 - 1. Concrete sidewalk & driveway aprons installed on site (private & public) property and consisting of single course concrete laid on a stone base, meeting all requirements of New York City Department of Transportation (NYCDOT).

1.3 REFERENCES

- A. New York City Department of Transportation Standard Specifications (USC), the latest edition.
- B. New York City Department of Transportation Standard Details of Construction, the latest edition.
- C. ASTM C33 – Standard Specification for Concrete Aggregates
- D. ASTM C143 – Standard Test Method for Slump of Hydraulic Cement Concrete
- E. ASTM C150 – Standard Specification for Portland Cement
- F. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types)
- G. ASTM A185 -- Welded Steel Wire Fabric for Concrete Reinforcement.
- H. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field
- I. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."

- B. Concrete Formula: Before the Contractor begins to manufacture concrete, the Contractor must secure the Commissioner's approval of the proposed formula. The Contractor must submit for this purpose a statement, in writing, of the sources of all ingredient materials, the type and brand of the cement and the number of pounds of each of the materials in a saturated surface-dry condition making up on cubic yard of concrete. The range of water-cement ratios within which the concrete will be manufactured and the method of mixing to be employed must also be stated. The approved formula must not be changed without written permission of the Commissioner.
- C. Welded Wire Fabric: Shop drawings of reinforcing steel showing the location and type of supports and tie wires must be submitted to the Commissioner for approval before any work covered by these drawings is undertaken.
- D. Material Certificates: Submit materials certificate to the Commissioner which is signed by material producer and Contractor, certifying that materials comply with, or exceed, the requirements herein.
- E. Contractor must prepare and obtain all required permits prior to construction unless otherwise directed by City of New York. Supply permits to Commissioner.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 MATERIAL

- A. Joint Fillers: Resilient premolded bituminous impregnated fiberboard units complying with ASTM D 1751 FS HH F 341, Type II, Class A; or AASHTO M 153, Type I.
- B. Joint Sealers: Type 2 - Cold Application Sealer must be a one-component, cold-applied, silicone material that cures with atmospheric moisture to form a flexible, low-modulus 100% silicone rubber joint seal which meets or exceeds both Federal Specifications TT-S-001543A Class A (one-part silicone sealants) and TT-S-00230C Class A (one-part silicone sealants), and listed in the NYS Department of Transportation's Materials and Equipment Approved List for "SILICONE JOINT SEALANTS FOR PAVEMENTS (705-05)".
- C. Forms: Steel, wood, or other suitable material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects. Use flexible spring steel forms or laminated boards to form radius bends as required. The forms must be of a depth equal to the depth of curbing and so designed as to permit secure fastening together at the tops. Coat forms with nonstaining type coating that will not discolor or deface surface of concrete.

- D. Base material must consist of Size No. 3 broken stone and conform to NYCDOT Type 1, Grade B: Broken Stone, Moderately Resistant to Abrasion; or other approved granular material containing not more than five (5) percent material passing a No. 200 mesh sieve and not more than (5) percent retained on a 2” square sieve. Aggregate must be broken, clean, hard, unweathered stone of uniform quality. It must consist of fragments roughly cubicle or pyramidal in shape. Aggregate must comply with the following sieve analysis (percent by weight passing square sieve openings)

Size No. (ASTM) (C 33)	Nominal Size (inches)	3.5”	3”	2.5”	2”	1.5”	1”	3/4”	1/2”	3/8”	#4
3	2 to1	-	-	100	90-100	35-70	0-15	-	0-5	-	-

2.2 CONCRETE SIDEWALK

- A. Concrete must conform to NYCDOT Class B-32 Type IA: Normal Air-entrained concrete; a homogeneous mixture of the following:

1. Portland Cement

- a. Portland cement must conform to NYCDOT Type 1: Normal. Cement must be uniform in color. The brand must have an established reputation of uniformity of character and have been successfully used for at least two (2) years. Cement must be stored in such a manner as to permit easy inspection and to protect the cement from dampness and minimize warehouse set. Portland cement must comply with the requirements of ASTM Designation C 150.

2. Fine Aggregate

- a. Sand must consist of clean, hard, durable, angular, rough-surfaced mineral particles and conform to NYCDOT Type 2 and comply with the following requirements:

Sieve Number	Total Passing - Percent By Weight
3/8”	100
No. 4	95-100
No. 8	--
No. 16	45-85
No. 50	10-30
No. 100	0-6

- b. Fineness Modulus of all sands must not vary more than plus or minus 0.20 from the first approved test sample.
- c. Sand must not contain any deleterious substances in excess of that shown in Table 1 of ASTM Designation C 33. The calculated quantity of sodium chloride must not exceed three-tenths (0.3) of one percent, by weight.

3. Coarse Aggregate

- a. Coarse Aggregate must be broken, clean, hard, unweathered stone of uniform quality and conform to NYCDOT Type 1, Grade B: Moderately Resistant to Abrasion, Size No. 57, ASTM Designation C-33, and comply with the following requirements:

Size No. (AST M) (C 33)	Nominal Size (inches) (except as noted)	2"	1.5"	1"	3/4"	1/2"	3/8"	#4	#8	#16
57	1 to #4	-	100	95-100	-	25-60	-	0-10	0-5	-

- B. Based on dry-rodded volumetric measurement of ingredient materials, concrete must conform to the following properties, approximately equal to a “1:2:3¼” mix:

Class Of Concrete	Nominal Size Of Coarse Aggregate Used - Inches	Bags of Cement Per Cubic Yard Of Freshly Mixed Concrete – Minimum	Fine Aggregate Percentage By Weight of Total Aggregate
Class B-32	1.5	6.0	29 to 37

- C. The volume of freshly mixed concrete must be assumed to be the absolute volume of the cement, plus the volume of the unabsorbed water, plus the absolute volume of the aggregates in a saturated surface-dry condition, plus entrained air.
- D. Quantity of fine aggregate may be varied within the limits indicated according to the type of coarse aggregate used, in order to obtain a smooth, dense, homogeneous and plastic mixture.
- E. Air-entrained concrete must have an air content of 5.5% with a tolerance of 1.5%.

2.3 WELDED WIRE FABRIC

- A. Welded wire fabric must be 6x6 W29xW29 or approved equal and comply with the requirements of ASTM Designation A185, Welded Steel Wire Fabric for Concrete Reinforcement.

2.4 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition and correct breakdowns in a manner that will not delay or be detrimental to progress of paving operations.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXCAVATION AND SUBGRADE

- A. Excavation must be made to dimensions sufficient to permit the setting of forms. The earth subgrade, immediately before foundation material is placed on it, must be compacted, smooth, parallel to and at the required depth below the finished sidewalk surfaced and be dampened with water sufficient only to be absorbed by the subgrade. The Subgrade must not be in a muddy or frozen condition and unsuitable material must be removed and replaced with acceptable material thoroughly compacted.

3.3 STONE BASE

- A. Base material must be placed on the prepared subgrade and thoroughly compacted into lifts equal to the smaller of 6" in the full section thickness. Unsatisfactory subgrade material must be removed and replaced with acceptable material and must be thoroughly compacted to the satisfaction of the Commissioner. The excavated material must become the property of the Contractor and must be removed from the site to the Commissioner's satisfaction. The top surface must be parallel to the finished grade and at a distance below the grade equal to the specified thickness of concrete. Additional depth of base material for special conditions must be placed as required by the Commissioner.

3.4 CONCRETE SIDEWALK

- A. Forms must be made of substantial material with suitable metal dividing plates and of sufficient strength to satisfactorily resist distortion when fastened together and secured in place. Forms and dividing plates must be of a depth not less than that of the concrete sidewalk, be properly located with tops set to the designated sidewalk surface and be left in place until the concrete has hardened.
- B. Concrete sidewalk must be built in approximately five (5) foot slabs between expansion joints. Expansion joints in sidewalk must coincide with expansion joints in curb. Tooled dummy joints not less than on-half (1/2) inch in depth must be provided five (5) feet on center.
- C. Sidewalk scoring must be per NYCDOT requirements unless otherwise noted on drawings.
- D. Expansion joints must be one-quarter (1/4) inch in width and must be filled with preformed joint filler within one (1) inch of the sidewalk surface. The top one (1) inch must be sealed with poured joint filler.
- E. Base material must be wetted immediately before concrete is placed. The concrete must be placed within the forms and thoroughly tamped until the surface is at the finished grade.
- F. Welded Wire Fabric
 - 1. Steel wire fabric must be made up in sections of the length and width required. They must be fastened together in an approved manner at each intersection.
 - 2. Steel wire fabric must be protected from moisture, and, when placed in the work, must be free from grease, injurious rust, dirt or other foreign substances.
 - 3. Steel wire fabric must have transverse or longitudinal end members overlapping each other by not less than a full mesh length or width respectively. Overlapping sheets must be securely and properly fastened.

4. Steel reinforcement must be supported at the specified depth in such a manner that no displacement will occur during concreting operations. It must be supported either on approved devices or upon a layer of concrete which has been evenly struck off. The method of supporting the steel at the proper elevation must be approved by the Commissioner.
 5. Steel wire fabric must be laid in sheets which must be straight and true to form and must be securely held in position by approved methods so that they will be in their prescribed position after the concrete has been thoroughly compacted.
- G. Concrete sidewalk top surfaces must be finished to true smooth planes by screeding, and finally by wooden floats. Each rectangular slab must have all edges neatly rounded with proper tools and be bounded on all sides by troweled border about one (1) inch in width.
- H. After completion of floating and troweling, eliminate any tool marks on concrete surface and broom finish by drawing fine-hair broom across surface perpendicular to line of traffic. Repeat as necessary to obtain a fine line texture.
- I. Do not remove forms for 24 hours after concrete has been placed. After form removal, clean ends of joints and point up any minor honeycombed areas. As directed, remove and replace sections with major defects at no cost to the City of New York.
- J. Backfilling must follow the removal of forms as soon as practicable and, unless otherwise permitted, must be of clean earth, satisfactorily compacted.
- K. Protection
1. Concrete sidewalk must be carefully protected against injury from rain, frost, the drying effects of the sun and wind, traffic or other causes, by means of suitable guards and covering. Any damaged/vandalized concrete must be replaced by the contractor at no cost to the City of New York.
 2. Concrete must be covered with a curing and anti-spalling material such as Durok Shield as manufactured by Durok Building Materials, Inc., Hastings-on-Hudson, N.Y. 10706; Duraltone as manufactured by Dural International, Inc., Deer Park, N.Y. 11729; Hydrozo Concrete Cure and Hydrozo Clear as manufactured by Hydrozo Coatings Co., Lincoln, Nebraska 68051; or an approved equal; and must be applied in accordance with instructions of the manufacturer.
- L. Where directed by Commissioner, asphaltic concrete mixture must be placed adjacent to newly constructed sidewalk as required to meet site grades.
- M. Concrete must be mixed by an approved NYCDOT method indicated below:
1. Method A – Central Plant Mix: Concrete produced at an approved plant, ready for use prior to discharge into a transporting vehicle.
 2. Method B – Truck Mix: Concrete whose constituent materials are proportioned at a central plant and mixed with water in a transporting vehicle.
- N. The compressive strength, average of not less than three cylinders or cores, at 28 days must be 3,200 psi tested in accordance with ASTM C39. Mold and store test cylinders meeting the requirements of ASTM C31.

- O. Slump must be a minimum of 1.5” and a maximum of 4”. The slump requirement must apply at the point of discharge. The Contractor must supply at each point of concrete delivery a slump cone and rod conforming to the requirements of ASTM C143 for use by Commissioner.

3.5 FIELD QUALITY CONTROL

- A. Cement must be dry, free from lumps and have a temperature less than 170°F.
- B. For concrete exposed to view, the Contractor must not use more than one (1) brand, unless otherwise permitted.
- C. Product Measurements
 - 1. Cement must be measured by weight, or in full bags of 94 pounds each. When cement is measured by weight, it must be weighed on a scale separate from those used for the other materials. After weighing, the entire contents of the hopper must be completely discharged. When the cement is measured in bags, no fractions of bags must be used unless weighed. Bags of cement must be taken from the place of storage and placed adjacent to the mixer, in separate piles containing the exact number of bags for each mixer charge. Each pile must be emptied into the mixer for each charge.
 - 2. Aggregates must be measured by weight. Batch weights must be based on saturated surface-dry materials and must be corrected to take into account the weight of surface moisture contained in the aggregate.
 - 3. Water must be measured by volume or by weight. The device for the measurement of the water must be readily adjustable and, under all operating conditions, must be accurate within 1.0 percent of its maximum capacity.
- D. The concrete batching plant requirements, the handling, measuring, and batching of the concrete materials, and the mixing, transporting, and discharging of the concrete, must be equal to the requirement specified therefore in Subsection 501-3.02, 502-3.03, and 501-3.04 of the current Standard Specifications, Construction and Materials, of the New York State Department of Transportation, Office of Engineering.
- E. The concrete at the time of pouring must be maintained at a temperature of not less than 50°F nor more than 90°F. When the air temperature exceeds 85°F., the concrete subsequent to initial set must be protected for three (3) days after pouring so as to prevent it from going above 90°F. When the air temperature is less than 38°F in the shade, concrete must be poured only with the approval of the Commissioner and must be adequately protected. If the air temperature falls below 50°F., an accelerator may be used. If the air temperature exceeds 85°F., a retarder may be used. Accelerators and retarders must be approved by the Commissioner before use.
- F. Perform slump tests on the first 3 trucks/batches at the beginning of the concrete placement operation to determine if material control has been established. Continue testing consecutive batches until the consistency meets the requirements of this section, and test thereafter at a rate of one test per 50 cubic yards.
- G. From the same samples taken for slump tests as specified herein, mold a sufficient number of concrete test cylinders to meet the requirements of this section.

END OF SECTION 321623

SECTION 321723 - PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Painted markings applied to asphalt paving.
 - 2. Painted markings applied to concrete surfaces.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: Include technical data and tested physical and performance properties.
 - 1. Pavement Marking Materials

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 FIELD CONDITIONS

- A. Environmental Limitations: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 55 deg F, and not exceeding 95 deg F.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Product: Subject to compliance with requirements, provide one of the following:
 - 1. Ennis-Flint; PreMark

2. Swarco Industries Inc.; Swarcotherm
3. Crown Technology LLC; Intersection Grade Thermoplastic
4. Or approved equal.

B. Source Limitations: Obtain pavement-marking paints from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1.

2.3 PAVEMENT-MARKING PAINT

- A. Pavement-Marking Paint, Alkyd: Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, Type S; colors complying with FS TT-P-1952F.

1. Color: As indicated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Verify that pavement-marking substrate is dry and in suitable condition to begin pavement marking in accordance with manufacturer's written instructions.
- B. Proceed with pavement marking only after unsatisfactory conditions have been corrected.

3.3 PAVEMENT MARKING

- A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Commissioner.
- B. Allow asphalt paving or concrete surfaces to age for a minimum of 90 days before starting pavement marking.
- C. Sweep and clean surface to eliminate loose material and dust.
- D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to asphalt paving or concrete surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
2. Broadcast glass beads uniformly into wet markings at a rate of 6 lb/gal..

3.4 PROTECTING AND CLEANING

- A. Protect pavement markings from damage and wear during remainder of construction period.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 321723

SECTION 322002 - PAVEMENT RESTORATION WITHIN THE RIGHT-OF-WAY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Provide for all items of Work outside the street line that are under the jurisdiction of the New York City Department of Transportation (NYCDOT).
- B. Construct all concrete sidewalks, pavements, pedestrian ramps, steel faced concrete curbs, drop curbs, tree pits, asphaltic concrete pavement, and items shown on Drawings, specified herein, and as required by site conditions and NYCDOT.
- C. Pay for tests required by NYCDOT to ensure compliance with NYCDOT Specifications.

1.3 REFERENCES

- A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards must be deemed mandatory and applicable to the Work.
 - 1. "Standard Specifications - New York City Department of Transportation, Bureau of Highway Operations" dated November, 2010 with latest amendments. (NYCDOT Standard Specifications)
 - 2. "Standard Details of Construction" of the New York City Department of Transportation, Bureau of Traffic Operations - Street Design, dated July, 2010 with latest amendments. (NYCDOT Standard Details)

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."
- B. Product Data
 - 1. Provide manufactures' information for the welded steel wire fabric.
- C. Shop Drawings
 - 1. Steel curb facing

D. Certificates and Mixes

1. Provide certificates or certifications for the following items:
 - a. Concrete design mix
 - b. Asphaltic concrete job mix formulas for each course.
 - c. Gradation analysis for aggregate base course and subbase course.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."

B. Qualifications

1. Concrete Installer: Company specializing in performing the Work of this Section must have three years minimum experience on successful projects of similar size.
2. Concrete Producer: Company specializing in the production of concrete must have a minimum of three years experience.

C. Regulatory Requirements

1. Materials and methods of construction must conform to:
 - a. "NYCDOT Standard Specifications": Section numbers referred to in Parts 2 and 3 of this Specification Section, such as "Section 4.13.3(b)" or "Section 2.23", etc. refer to the sections given in the NYCDOT Standard Specification which govern this work outside the street line.
 - b. "NYCDOT Standard Details": Drawing numbers referred to in Parts 2 and 3 of this Specification Section, such as "Drawing H-1044" or "Drawing H 1010", etc., refer to the Drawings in the NYCDOT Standard Details which govern this work outside the street line. Where more stringent requirements are given in this Specification Section, the requirements of this Specification Section must govern.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Sidewalk and Driveway Foundation Material

1. Material for sidewalk and driveway foundation course must conform to the requirements of "Section 2.02 consisting of Size No. 3 broken stone and conform to NYCDOT Type 1, Grade B: Broken Stone, Moderately Resistant to Abrasion; or other approved granular material containing not more than five (5) percent material passing a No. 200 mesh sieve and not more than (5) percent retained on a 2" square sieve.
2. Aggregate must be broken, clean, hard, unweathered stone of uniform quality. It must consist of fragments roughly cubicle or pyramidal in shape.

Size No. (ASTM)	Nominal Size	3.5"	3"	2.5"	2"	1.5"	1"	3/4"	1/2"	3/8"	#4
--------------------	-----------------	------	----	------	----	------	----	------	------	------	----

(C 33)	(inches)										
3	2 to1	-	-	100	90-100	35-70	0-15	-	0-5	-	-

B. Concrete for Sidewalks

1. Concrete must comply with the requirements of “Section 4.13.3(b)”, Class B-32 Type IA.
2. Portland Cement
 - a. Portland cement must conform to NYCDOT Type 1: Normal. Cement must be uniform in color. The brand must have an established reputation of uniformity of character and have been successfully used for at least two (2) years. Cement must be stored in such a manner as to permit easy inspection and to protect the cement from dampness and minimize warehouse set. Portland cement must comply with the requirements of ASTM C 150.

3. Fine Aggregate

- a. Sand must consist of clean, hard, durable, angular, rough-surfaced mineral particles and conform to NYCDOT Type 1A and comply with the following requirements:

Sieve Number	Total Passing - Percent By Weight
3/8”	100
No. 4	95-100
No. 8	--
No. 16	45-85
No. 50	10-30
No. 100	0-6

- b. Fineness Modulus of all sands must not vary more than plus or minus 0.20 from the first approved test sample.
- c. Sand must not contain any deleterious substances in excess of that shown in Table 1 of ASTM Designation C 33. The calculated quantity of sodium chloride must not exceed three-tenths (0.3) of one percent, by weight.

4. Coarse Aggregate

- a. Course Aggregate must be broken, clean, hard, unweathered stone of uniform quality and conform to NYCDOT Type 1, Grade B: Moderately Resistant to Abrasion, Size No. 57, ASTM Designation C-33, and comply with the following requirements:

Size No. (AST M) (C 33)	Nominal Size (inches) (except as noted)	2”	1.5”	1”	3/4”	1/2”	3/8”	#4	#8	#16
57	1 to #4	-	100	95-100	-	25-60	-	0-10	0-5	-

- b. Based on dry-rodded volumetric measurement of ingredient materials, concrete must conform to the following properties, approximately equal to a “1:2:3¼” mix:

Class Of Concrete	Nominal Size Of Coarse Aggregate Used - Inches	Bags of Cement Per Cubic Yard Of Freshly Mixed Concrete – Minimum	Fine Aggregate Percentage By Weight of Total Aggregate

Class B-32	1.5	6.0	29 to 37
------------	-----	-----	----------

- c. The volume of freshly mixed concrete must be assumed to be the absolute volume of the cement, plus the volume of the unabsorbed water, plus the absolute volume of the aggregates in a saturated surface-dry condition, plus entrained air.
 - d. Quantity of fine aggregate may be varied within the limits indicated according to the type of coarse aggregate used, in order to obtain a smooth, dense, homogeneous and plastic mixture. Air-entrained concrete must have an air content of 5.5% with a tolerance of 1.5
- C. Preformed Expansion Joint Filler
 - 1. Material must conform to the requirements of “Section 2.15”, 1/4"thick, Type IV.
 - D. Asphaltic Blown Joint Filler
 - 1. Material must conform to the requirements of “Section 2.16”.
 - E. Welded Steel Wire Fabric
 - 1. Material must conform to the requirements of “Section 2.25”. Fabric must be 6x6 W2.9xW2.9 wherever fabric is indicated.
 - F. Steel Bars for Concrete Reinforcement
 - 1. Material must conform to the requirements of “Section 2.23”, Type I, Grade 60.
 - G. Concrete for Steel-faced Curb and Facing
 - 1. Concrete and steel facing must comply with the requirements of “Section 4.09.3”.
 - H. Asphaltic Concrete Base Course
 - 1. Material must conform to the requirements of “Section 3.01” for binder mixture.
 - I. Concrete Base for Pavement
 - 1. Material must comply with the requirements of “Section 4.04.3”.
 - J. Asphaltic Concrete Surface Course
 - 1. Material must conform to the requirements of “Section 3.01” for fine asphaltic concrete mixture.
 - K. Concrete Pavements
 - 1. Concrete materials must comply with the requirements for “Section 4.05.3”.
 - L. Dense Graded Stone Base Course
 - 1. Material must comply with requirements of “Section 6.46.3”.
 - M. Granite Block Tree Pit

1. Granite block and sand for sand cushion and joint filler for use in tree pits must comply with the requirements of “Section 6.06.3”.

2.2 SOURCE QUALITY CONTROL

A. Testing

1. Concrete testing must comply with the requirements for “Section 5.03”.

B. Inspection

1. All inspection work must comply with the requirements for “Section 5.02”

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Do not start excavation around city monuments and bench marks until said monuments or bench marks have been referenced and reset or otherwise disposed of by the New York City Department of Transportation. Furnish labor and materials required to remove, care for, and reset all such monuments and bench marks.
- B. Carefully remove all existing traffic signs at locations where new sidewalks are to be installed and store on the premises in a safe place, protected from the weather. Ten days prior to their removal, notify in writing the New York City Department of Transportation when signs will be ready for pick-up by the Department of Transportation. Forward copy of the letter to the Department of Transportation to the Commissioner.

3.3 CONSTRUCTION

A. Concrete Sidewalk

1. Construct concrete sidewalk in accordance with the requirements of “Section 4.13.4” and “Drawing H-1045”, Type I. Score pattern must be 5'-0" x 5'-0" or as shown on Drawings in accordance with D.I.S.M.A.

B. Concrete Driveway Pavement

1. Construct 7" concrete driveway pavement in accordance with the requirements of “Section 4.13.4” and “Drawing H-1045”, Type III. The concrete must be placed in one course to the full depth indicated.

C. Steel-faced Concrete Curb

1. Steel-faced concrete curb must be constructed in accordance with “Section 4.09.4” and “Drawing H-1010”.

D. Pedestrian Ramps

1. Construct pedestrian ramps where shown on the Drawings and in accordance with the requirements of “Sections 4.13” and “4.09” and “Drawings H 1011”, ”Drawing H-1010” and “Drawing H-1045”, Type III.

E. Sidewalk Tree Pits

1. Construction of sidewalk tree pits must be in accordance with “Section 4.16” and “Drawing H 1046” or as shown on Drawings.
2. Granite block in tree pits must be constructed in accordance with “Section 6.06.4”.

F. Asphaltic Concrete Pavement

1. Prepare earth subgrade in accordance with “Section 4.04.4A”.
2. Construct subbase course to the compacted depth indicated on the Drawings and in accordance with “Section 4.01.4J”.
3. Construct asphaltic concrete base course to the compacted depth indicated on the Drawings and in accordance with “Section 4.01.4E-I”.
4. Construct asphaltic concrete surface course to the compacted depth indicated on the Drawings and in accordance with “Section 4.01.5B-D”.

G. Asphaltic Concrete Pavement with Concrete Base

1. Prepare earth subgrade in accordance with “Section 4.04.4”.
2. Construct concrete base to the levels indicated on the Drawings and in accordance with “Section 4.04.4”.
3. Construct asphaltic concrete wearing course to the compacted depth indicated on the Drawings in accordance with “Section 4.02”, using the material of 4.02.2(c); 3" course of binder mixture and surface mixture

H. Restoration of Existing Pavement

1. Existing roadway pavement damaged due to trenching or sewer installation operation must be restored as shown on “Drawing H-1042A”.

3.4 FIELD QUALITY CONTROL

A. Testing

1. Concrete testing must comply with the requirements for “Section 5.03”.
2. Pay for tests required by NYCDOT to ensure compliance with NYCDOT Specifications.

B. Inspection

1. Concrete testing must comply with the requirements for 5.02.

END OF SECTION 3220002

SECTION 323116 - WELDED WIRE FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Welded wire grid panel fences.
 - 2. Welded wire grid panel swing gates.
 - 3. Panel posts.
 - 4. Required clips, straps and spacers.
 - 5. Powdercoated finish.
 - 6. Latches and locking mechanisms.
 - 7. Hinges.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For fencing and gates.
 - 1. Include plans, elevations, sections, gate locations, post spacing, mounting and attachment details, and grounding details, hinges and latches.
- C. Samples: For each fence material and for each color specified.
 - 1. Provide Samples 12 inches in length for linear materials.
 - 2. Provide Samples 12 inches square for wire mesh.

1.6 INFORMATIONAL SUBMITTALS

- A. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For gate operators to include in maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Installer Qualifications: Fabricator of products.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
1. Include 10-foot length of fence complying with requirements.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Wind Loading:
1. Fence Height: As indicated on the Drawings.
 2. Wind Exposure Category: As indicated on the Drawings.
 3. Design Wind Speed: As indicated on the Drawings.
 4. Design Wind Pressure: As indicated on the Drawings.
- B. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

2.2 METALLIC-COATED-STEEL, WELDED-WIRE FENCES

- A. Metallic-Coated-Steel, Welded-Wire Fences:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Omega10 and Omega Architectural as manufactured by Omega Fence Systems, or comparable product by one of the following:
 - a. Ametco Manufacturing Corporation.
 - b. Metalco Fence & Railing Systems; Atlantis Products, Inc.

- c. Or approved equal.
- B. Fence Fabric: Metallic-coated-steel wire mesh.
- C. Posts:
 - 1. Line Posts: Square tubes 3 by 3 inches formed from minimum 0.064-inch nominal-thickness, metallic-coated steel sheet or formed from minimum 0.060-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 - 2. End and Corner Posts: Square tubes 3 by 3 inches formed from minimum 0.108-inch nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 - 3. Posts at Swing Gate Openings: Square tubes 3 by 3 inches formed from 0.108-inch nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- D. Fasteners: Manufacturer's standard tamperproof, corrosion-resistant, color-coated fasteners matching fence components with resilient polymer washers or clips.
- E. Finish: Powder coating.

2.3 SWING GATES

- A. Gate Configuration: As indicated.
- B. Gate Frame Height: As indicated.
- C. Gate Opening Width: As indicated.
- D. Galvanized-Steel Frames and Bracing: Fabricate members from rectangular tubes 1 inch in width and formed from 0.108-inch nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- E. Frame Corner Construction: Welded.
- F. Infill: Welded-wire fence fabric matching adjacent fence.
- G. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than 5 feet wide. Provide center gate stops and cane bolts for pairs of gates. Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.
- H. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
 - 1. Function: 39 - Full surface, triple weight, antifriction bearing.
 - 2. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.
- I. Rim Locks: BHMA A156.5, Grade 1, suitable for exterior use.
 - 1. Material: Cast, forged, or extruded brass or bronze.

2. Mounting Plate: Configuration necessary for mounting locks. Fabricate from 1/8-inch- thick, steel plate; hot-dip galvanize after fabrication.

J. Finish exposed welds to comply with NOMMA Guideline 1, Finish #4 - good-quality, uniform undressed weld with minimal splatter.

K. Metallic-Coated-Steel Finish: Galvanized finish.

2.4 FENCE AND GATE MATERIALS

A. Metallic-Coated-Steel Wire: Welded-wire fence fabric, hot-dip galvanized after fabrication. Weight of zinc coating shall be not less than 0.5 oz./sq. ft.

B. Plates, Shapes, and Bars: ASTM A 36/A 36M.

C. Tubing: ASTM A 500/A 500M, cold-formed steel tubing.

D. Uncoated Steel Sheet: Hot-rolled steel sheet, ASTM A 1011/A 1011M, Structural Steel, Grade 45 or cold-rolled steel sheet, ASTM A 1008/A 1008M, Structural Steel, Grade 50.

1. Interior surface of tubes formed from uncoated steel sheet shall be hot-dip zinc coated same as exterior or coated with zinc-rich thermosetting coating to comply with ASTM F 2408.

E. Metallic-Coated Steel Sheet: Galvanized-steel sheet or aluminum-zinc, alloy-coated steel sheet.

F. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 50, with G90 coating.

G. Aluminum-Zinc, Alloy-Coated Steel Sheet: ASTM A 792/A 792M, structural quality, Grade 50, with AZ60 coating.

H. Iron Castings: Either gray or malleable iron unless otherwise indicated.

1. Gray Iron: ASTM A 48/A 48M, Class 30.

2. Malleable Iron: ASTM A 47/A 47M.

I. Aluminum Castings: ASTM B 26/B 26M, Alloy A356.0-T6.

J. Galvanizing: For components indicated to be galvanized and for which galvanized coating is unspecified, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.

2.5 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for strength and compatibility in fabricated items.

- B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 033000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of 3000 psi, 3-inch slump, and 1-inch maximum aggregate size or dry, packaged, normal-weight concrete mix complying with ASTM C 387/C 387M mixed with potable water according to manufacturer's written instructions.
- C. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M and specifically recommended by manufacturer for exterior applications.

2.6 GROUNDING MATERIALS

- A. Comply with requirements of Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Grounding Conductors: Size as indicated on Drawings. Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
 - 1. Material above Finished Grade: Copper.
 - 2. Material on or below Finished Grade: Copper.
 - 3. Bonding Jumpers: Braided copper tape, 1-5/8 inch wide and 1/16 inch thick, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
- C. Grounding Connectors and Grounding Rods: Comply with UL 467.
 - 1. Connectors for Below-Grade Use: Exothermic-welded type.
 - 2. Grounding Rods: Copper-clad steel.
 - a. Size: 5/8 by 96 inches.

2.7 METALLIC-COATED-STEEL FINISHES

- A. Galvanized Finish: Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.
- B. Surface Preparation: Clean surfaces of oil and other contaminants. Use cleaning methods that do not leave residue. After cleaning, apply a zinc-phosphate conversion coating compatible with the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and apply galvanizing repair paint, complying with SSPC-Paint 20, to comply with ASTM A 780/A 780M.
- C. Powder Coating: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat finish consisting of zinc-rich epoxy prime coat and TGIC polyester topcoat to a minimum dry film thickness of 2 mils. Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of 4 mils.
 - 1. Color and Gloss: As selected by Commissioner from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.
- B. Do not begin installation before final grading is completed unless otherwise permitted by Commissioner.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.
 - 1. Construction layout and field engineering are specified in the DDC General Conditions.

3.4 FENCE INSTALLATION

- A. Install fences according to manufacturer's written instructions.
- B. Install fences by setting posts as indicated and fastening rails and infill panels to posts. Peen threads of bolts after assembly to prevent removal.
- C. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than 24 inches plus 3 inches for each foot or fraction of a foot that fence height exceeds 4 feet.
- D. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.
 - 1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
 - 2. Concrete Fill: Place concrete around posts and sleeves and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
 - a. Exposed Concrete: Extend 2 inches above grade. Finish and slope top surface to drain water away from post.

3. Posts Set into Concrete in Sleeves: Use galvanized-steel pipe sleeves with inside diameter at least 3/4 inch larger than outside diagonal dimension of post, preset and anchored into concrete for installing posts.
 - a. Extend posts at least 5 inches into sleeve.
 - b. After posts have been inserted in sleeves, fill annular space between post and sleeve with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions; shape and smooth to shed water. Finish and slope top surface of grout to drain water away from post.

3.5 GATE INSTALLATION

- A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.6 GROUNDING AND BONDING

- A. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fence Grounding: Install at maximum intervals of 1500 feet except as follows:
 1. Fences within 100 Feet of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet..
 - a. Gates and Other Fence Openings: Ground fence on each side of opening.
 - 1) Bond metal gates to gate posts.
 - 2) Bond across openings, with and without gates, except at openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches below finished grade.
- C. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet on each side of crossing.
- D. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.
- E. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
- F. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
 2. Make connections with clean, bare metal at points of contact.

3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

3.7 ADJUSTING

- A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
- B. Lubricate hardware and other moving parts.

END OF SECTION 323116

SECTION 323119 - DECORATIVE METAL FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Powder coated decorative steel fences and gates.
 - 2. Powder coated aluminum privacy fence and gate with steel posts.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For fencing and gates.
 - 1. Include plans, elevations, sections, gate locations, post spacing, and mounting, attachment details, and grounding details.

1.5 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Installer Qualifications: Fabricator of products.
- C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
1. Include 10-foot length of fence complying with requirements.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Wind Loading:
1. Fence Height: As indicated on the Drawings.
 2. Wind Exposure Category: As indicated on the Drawings.
 3. Design Wind Speed: As indicated on the Drawings.
 4. Design Wind Pressure: As indicated on the Drawings.
- B. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

2.2 DECORATIVE STEEL FENCES

- A. Decorative Steel Fences: Fences made from steel tubing bars and shapes, powder coated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ameristar Fence Products; an ASSA ABLOY company.
 - b. Ametco Manufacturing Corporation.
 - c. Builders Fence Company, Inc.
 - d. Or approved equal.
- B. Posts: Square steel tubing.
1. Line Posts: Minimum 2 by 2 inches with 3/16-inch wall thickness.
 2. End and Corner Posts: 3 by 3 inches with 3/16-inch wall thickness.
 3. Swing Gate Posts: Minimum 3 by 3 inches with 3/16-inch- wall thickness.
- C. Post Caps: Formed from steel sheet and hot-dip galvanized after forming and powder coated.
- D. Rails:
1. Steel Channel Rails: Steel channels Minimum 2 by 1 inch.

- E. Pickets: 3/4-inch- square steel bars, unless otherwise indicated.
 - 1. Terminate tops of pickets at top rail for flush top appearance.
 - 2. Picket Spacing: As indicated on the Drawings.
- F. Fasteners: Stainless-steel carriage bolts and tamperproof nuts.
- G. Fabrication: Assemble fences into sections by welding pickets to rails.
 - 1. Fabricate sections with clips welded to rails for field fastening to posts.
 - 2. Drill posts and clips for fasteners before finishing to maximum extent possible.
- H. Finish exposed welds to comply with NOMMA Guideline 1, Finish #4 - good-quality, uniform undressed weld with minimal splatter.
- I. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
 - 1. Hot-dip galvanize rail and picket assemblies after fabrication.
- J. Finish for Steel Items: Powder coated.

2.3 DECORATIVE ALUMINUM FENCES

- A. Decorative Aluminum Fences: Fences made from aluminum extrusions.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Alumi-Guard, Inc.
 - b. East & West Alum Craft Ltd.
 - c. Tek-Rail.
 - d. Or approved equal.
- B. Posts: Square extruded tubes.
 - 1. Line Posts: 4 inches by 4 inches with Minimum 0.062-inch wall thickness.
 - 2. End and Corner Posts: 4 inches by 4 inches with minimum 0.062-inch wall thickness.
 - 3. Swing Gate Posts: 4 by 4 inches with minimum 0.125-inch wall thickness.
- C. Post Caps: Aluminum castings that cover entire top of posts.
- D. Rails: Extruded-aluminum channels, Minimum 1-1/2 by 1-1/2 inches, with 0.100-inch- thick sidewalls and 0.070-inch- thick top.
- E. Panels: Extruded aluminum panels in dimensions indicated on the Drawings.

- F. Fasteners: Manufacturer's standard tamperproof, corrosion-resistant, color-coated fasteners matching fence components with resilient polymer washers.
- G. Fabrication: Assemble fences into sections by welding pickets to rails.
 - 1. Fabricate sections with clips welded to rails for field fastening to posts.
 - 2. Drill clips for fasteners before finishing.
- H. Finish exposed welds to comply with NOMMA Guideline 1, Finish #1 - No evidence of a welded joint.
- I. Finish: Powder coating.

2.4 SWING GATES

- A. Gate Configuration: As indicated.
- B. Gate Frame Height: As indicated.
- C. Gate Opening Width: As indicated.
- D. Galvanized-Steel Frames and Bracing: Fabricate members from square tubes Minimum 2-1/2 by 2-1/2 inches formed from 0.108-inch nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch nominal-thickness steel sheet and hot-dip galvanized after fabrication.
- E. Frame Corner Construction: Welded and 5/16-inch- diameter, adjustable truss rods for panels 5 feet wide or wider.
- F. Additional Rails: Provide as indicated, complying with requirements for fence rails.
- G. Infill: Comply with requirements for adjacent fence.
- H. Picket Size, Configuration, and Spacing: Comply with requirements for adjacent fence.
- I. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than 5 feet wide. Provide center gate stops and cane bolts for pairs of gates. Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate.
- J. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
 - 1. Function: 39 - Full surface, triple weight, antifriction bearing.
 - 2. Material: Wrought steel, forged steel, cast steel, or malleable iron; galvanized.
- K. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from Minimum 1/2-inch- diameter, round steel bars, hot-dip galvanized after fabrication. Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in both open and closed positions.
- L. Finish exposed welds to comply with NOMMA Guideline 1, Finish #4 - good-quality, uniform undressed weld with minimal splatter.

- M. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
- N. Steel Finish: Powder coated.

2.5 ALUMINUM

- A. Aluminum, General: Provide alloys and tempers with not less than the strength and durability properties of alloy and temper designated in paragraphs below for each aluminum form required.
- B. Extrusions: ASTM B 221, Alloy 6063-T5.
- C. Tubing: ASTM B 429/B 429M, Alloy 6063-T6.
- D. Plate and Sheet: ASTM B 209, Alloy 6061-T6.
- E. Die and Hand Forgings: ASTM B 247, Alloy 6061-T6.
- F. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.

2.6 STEEL AND IRON

- A. Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Bars (Pickets): Hot-rolled, carbon steel complying with ASTM A 29/A 29M, Grade 1010.
- C. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 50, with G90 coating.
- D. Castings: Either gray or malleable iron unless otherwise indicated.
 - 1. Gray Iron: ASTM A 48/A 48M, Class 30.
 - 2. Malleable Iron: ASTM A 47/A 47M.

2.7 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 033000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of 3000 psi, 3-inch slump, and 1-inch maximum aggregate size or dry, packaged, normal-weight concrete mix complying with ASTM C 387/C 387M mixed with potable water according to manufacturer's written instructions.
- C. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M and specifically recommended by manufacturer for exterior applications.

2.8 GROUNDING MATERIALS

- A. Comply with requirements of Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Grounding Conductors: Size as indicated on Drawings. Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
 - 1. Material above Finished Grade: Copper.
 - 2. Material on or below Finished Grade: Copper.
 - 3. Bonding Jumpers: Braided copper tape, 1-5/8 inch wide and 1/16 inch thick, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
- C. Grounding Connectors and Grounding Rods: Comply with UL 467.
 - 1. Connectors for Below-Grade Use: Exothermic-welded type.
 - 2. Grounding Rods: Copper-clad steel.
 - a. Size: 5/8 by 96 inches.

2.9 ALUMINUM FINISHES

- A. Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 2 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - 1. Color and Gloss: As selected by Commissioner from manufacturer's full range.

2.10 STEEL FINISHES

- A. Surface Preparation: Clean surfaces according to SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning." After cleaning, apply a conversion coating compatible with the organic coating to be applied over it.
- B. Powder Coating: Immediately after cleaning, apply manufacturer's standard two-coat finish consisting of epoxy primer and TGIC polyester topcoat to a minimum total dry film thickness of not less than 8 mils. Comply with coating manufacturer's written instructions.
 - 1. Color and Gloss: Match Commissioner's sample..

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.
- B. Do not begin installation before final grading is completed unless otherwise permitted by Commissioner.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.
 - 1. Construction layout and field engineering are specified in the DDC General Conditions.

3.4 DECORATIVE FENCE INSTALLATION

- A. Install fences by setting posts as indicated and fastening rails to posts. Peen threads of bolts after assembly to prevent removal.
- B. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than 24 inches plus 3 inches for each foot or fraction of a foot that fence height exceeds 4 feet.
- C. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.
 - 1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
 - 2. Concrete Fill: Place concrete around posts and sleeves and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
 - a. Concealed Concrete: Top 2 inches below grade to allow covering with surface material. Slope top surface of concrete to drain water away from post.
 - 3. Posts Set in Concrete: Extend post to within 6 inches of specified excavation depth, but not closer than 3 inches to bottom of concrete.

3.5 GATE INSTALLATION

- A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.6 GROUNDING AND BONDING

- A. Comply with Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fence Grounding: Install at maximum intervals of 1500 feet except as follows:
 - 1. Fences within 100 Feet of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet
 - a. Gates and Other Fence Openings: Ground fence on each side of opening.
 - 1) Bond metal gates to gate posts.
- C. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet on each side of crossing.
- D. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.
- E. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.
- F. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
- G. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.
 - 1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
 - 2. Make connections with clean, bare metal at points of contact.
 - 3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
 - 4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
 - 5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
- H. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

3.7 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Commissioner promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
3. Report: Prepare test reports of grounding resistance at each test location certified by a testing agency. Include observations of weather and other phenomena that may affect test results.

3.8 ADJUSTING

- A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.
- B. Lubricate hardware and other moving parts.

END OF SECTION 323119

SECTION 323133 - BRICK FENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:

1. Site erected masonry fencing as indicated on Drawings.

- B. Related Sections:

1. Section 042000 "Unit Masonry" for reinforcement, ties, grout, and other requirements.
2. Section 323116 "Welded Wire Fence and Gates" for welded wire gates, frames, hardware and other requirements.

1.3 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 :Submittal Procedures."

1.5 ACTION SUBMITTALS

- A. Product Data: Provide For each type of brick, mortar and grout required for Project application.

- B. Shop Drawings: Show installation details. Include plans, elevations, sections, details, and attachments to other Work.

- C. Samples for Verification.

1. Hollow brick, in the form of straps of five or more bricks.
2. Colored-aggregate mortar and grout. Make Samples using same sand, mortar and grout ingredients to be used on Project.

- D. Engineering Services Submittals: For masonry anchors and ties, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

E. Sustainable Design Submittals:

1. Environmental Product Declaration (EPD): For each product.
2. Type III Environmental Product Declaration (EPD): For each product.

1.6 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Engineer and Installer.
- B. Product Certificates: For each type of brick and mortar and grout.
- C. Field quality-control reports.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
 1. Include 10 foot length of fence complying with requirements.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

- A. Obtain exposed masonry units and mortar aggregate from single source.

2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design brick fence assembly including reinforcement and ties.
- B. Wind Loads: Comply with Structural Drawings.
- C. Seismic Performance: Masonry to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7
- D. Provide unit masonry that develops indicated net-area compressive strengths at 28 days.
 1. Determine net-area compressive strength of masonry by testing masonry prisms in accordance with ASTM C1314.

2.3 BRICK

- A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
 - 1. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
- B. Clay Face Brick: Hollow brick complying with ASTM C652, Class H40V (void areas between 25 and 40 percent of gross cross-sectional area), Type HBX, Type HBS, or Type HBA.
 - 1. Efflorescence: Provide brick that has been tested in accordance with ASTM C67/C67M and is rated "not effloresced."
 - 2. Surface Coating: Brick with colors or textures produced by application of coatings shall withstand 50 cycles of freezing and thawing in accordance with ASTM C67/C67M with no observable difference in the applied finish when viewed from 10 ft. (3 m) or shall have a history of successful use in Project's area.
- C. Size (Actual Dimensions): As indicated on the Drawings.

2.4 GATES

- A. Comply with Section 323116 "Decorative Metal Fences and Gates."

2.5 MORTAR AND GROUT MATERIALS

- A. Comply with Section 042000 "Unit Masonry."

2.6 REINFORCEMENT

- A. Comply with Section 042000 "Unit Masonry."

2.7 TIES AND ANCHORS

- A. Comply with Section 042000 "Unit Masonry."

2.8 EMBEDDED FLASHING

- A. Comply with Section 042000 "Unit Masonry."

2.9 MORTAR AND GROUT MIXES

- A. Comply with Section 042000 "Unit Masonry."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Thickness: Build masonry fence construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
- B. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- C. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
- D. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested in accordance with ASTM C67/C67M. Allow units to absorb water so they are damp but not wet at time of laying.

3.4 TOLERANCES

- A. Dimensions and Locations of Elements:
 - 1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch (13 mm) or minus 1/4 inch (6.4 mm).
 - 2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch (13 mm).
 - 3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch (6.4 mm) in a story height or 1/2 inch (13 mm) total.

3.5 REPAIRING, POINTING, AND CLEANING

- A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
- B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.
- C. In-Progress and Final Cleaning: Comply with Section 042000 "Unit Masonry."

3.6 MASONRY WASTE DISPOSAL

- A. Comply with Section 042000 "Unit Masonry."

END OF SECTION 323133

SECTION 323300 - SITE FURNISHINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
 - 1. Precast concrete seating and bases.
 - 2. Precast concrete bollards.
 - 3. Pet waste stations.
 - 4. Bicycle racks.
 - 5. Planters.
 - 6. Pet play furnishings.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples for Verification: For each type of exposed finish, not less than 6-inch- long linear components and 4-inch- square sheet components.
 - 1. Include full-size Samples of bench, bicycle rack, pet washing station, and each type of pet play furniture. Approved samples may be incorporated into the Work.

1.5 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For site furnishings..

1.6 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For site furnishings to include in maintenance manuals.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PLANTERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide fiberglass planters as manufactured by Oldtown Fiberglass, or comparable product by one of the following:
1. Fiberglass Engineering Company.
 2. Fibrex Group Inc. (The).
 3. Or approved equal.
- B. Fiberglass Facing Surrounds: Molded fiberglass shape.
- C. Planter Shape and Form: As indicated.
- D. Style: As indicated by manufacturer's designation.
- E. Overall Height: As indicated.
- F. Overall Width: As indicated,.
- G. Overall Depth: As indicated.
- H. Inner Container: Fiberglass with drain holes.
- I. Installation Method:Freestanding with weighted base.
- J. Fiberglass Color: As selected by Commissioner from manufacturer's full range.
1. Finish: Smooth.

2.2 PRECAST CONCRETE BENCHES, SEATING AND BOLLARDS

- A. Mold Materials:
1. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete countertop surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.
- B. Reinforcing Materials:
1. Stainless Steel Pencil Rod Reinforcing Bars: ASTM A 666, Type 304, unless otherwise indicated.

2. Stainless Steel Wire Mesh: Type 304 4 inches by 4 inches by 6 inches.
3. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

C. Concrete Materials:

1. Portland Cement: ASTM C 150, Type I or Type III, gray for unexposed surfaces and white for exposed surfaces, unless otherwise indicated.
 - a. Mix gray with white cement, of same type, brand, and mill source.
2. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
 - a. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
 - b. Gradation: Gap graded to match design reference sample.
 - c. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate, unless otherwise approved by Commissioner.
3. Coloring Admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
4. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
5. Integral Colors: As selected by the Commissioner from manufacturer's full line.

D. Basis-of-Design Product: Subject to compliance with requirements, provide "Beachstone" precast concrete benches, seating and bollards as manufactured by ED's Concrete Products, or comparable product by one of the following:

1. Columbia Cascade Company.
2. Urban Accessories, Inc.
3. Or approved equal.

2.3 PET WASTE STATIONS

A. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123. For hardware items, hot-dip galvanize to comply with ASTM A153.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Superior Pet Waste Elimination Station as manufactured or distributed by Pet Waste Eliminator Commercial Pet Waste Disposal System, one of the following:
 - a. Commercial Dog Waste Station; Bow Wow Waste.
 - b. Dog Waste Station; Dog Waste Depot.
 - c. Or approved equal.

2.4 BICYCLE RACKS

- A. Bicycle Rack Construction: Cast aluminum.
 - 1. Style: As indicated.
 - 2. Installation Method: As indicated.
 - 3. Finish: Powdercoated.
 - 4. Color: As selected by the Commissioner.
- B. Basis of Design Product: Subject to compliance with requirements, provide Loop Bike Rack as manufactured by Landscapeforms, or one of the following:
 - 1. Round Rack; Dero, A Playcore Company.
 - 2. Oahu No Scratch Bike Rack; Sportworks.
 - 3. Or approved equal.

2.5 PET PLAY FURNISHINGS

- A. Fiberglass: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.
- B. Plastic: Color impregnated, color and UV-light stabilized, and mold resistant.
- C. Polyethylene: Fabricated from virgin plastic HDPE resin.
- D. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A123. For hardware items, hot-dip galvanize to comply with ASTM A153.
 - 1. Color: As selected by the Commissioner.
- E. Portland Cement: ASTM C 150/C 150M; Type I, II, or III.
 - 1. For surfaces exposed to view in finished structure, use gray or white of same type, brand, and source throughout GFRC production.
- F. Metakaolin: ASTM C 618, Class N.
- G. Glass Fibers: Alkali resistant, with a minimum zirconia content of 16 percent, 1 to 2 inches long, specifically produced for use in GFRC, and complying with ASTM C 1666/C 1666M.
- H. Sand: Washed and dried silica, complying with composition requirements in ASTM C 144; passing a No. 20 sieve with a maximum of 2 percent passing a No. 100 sieve.
- I. Coloring Admixture: ASTM C 979/C 979M, synthetic mineral-oxide pigments or colored water-reducing admixtures, temperature stable, nonfading, and alkali resistant.
- J. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of GFRC and complying with chemical limits in PCI MNL 130.

- K. Polymer-Curing Admixture: Acrylic thermoplastic copolymer dispersion complying with PCI MNL 130.
- L. Air-Entraining Admixture: ASTM C 260/C 260M, containing not more than 0.1 percent chloride ions.
- M. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that provides continuous GFRC surfaces within tolerances; nonreactive with GFRC and capable of producing required finish surfaces.
- N. Mold-Release Agent: Commercially produced liquid-release agent that does not bond with, stain, or adversely affect GFRC surfaces and does not impare subsequent surface or joint treatment or GFRC.
 - 1. Basis-of-Design Product (Dog Climb): Subject to compliance with requirements, provide Superior Pet Waste Elimination Station as manufactured or distributed by Pet Waste Eliminator Commercial Pet Waste Disposal System, or one of the following:
 - a. Corgi Climb; Dog On It Parks.
 - b. King of the Hill; The Park and Facilities Catalog.
 - c. Metalco Fence & Railing Systems; Atlantis Products, Inc.
 - d. Or approved equal.
 - 2. Basis-of-Design Product (Fire Hydrant): Subject to compliance with requirements, provide Red Surface Mount-Thermoplastic Coated Steel Fire Hydrant as manufactured or distributed by Gyms for Dogs Natural Dog Park Products, or one of the following:
 - a. Fire Hydrant; Dog On It Parks.
 - b. Fire Hydrant; The Park and Facilities Catalog.
 - c. Metalco Fence & Railing Systems; Atlantis Products, Inc.
 - d. Or approved equal.

2.6 MATERIALS

- A. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated; free of surface blemishes and complying with the following:
 - 1. Rolled or Cold-Finished Bars, Rods, and Wire: ASTM B 211.
 - 2. Extruded Bars, Rods, Wire, Profiles, and Tubes: ASTM B 221.
 - 3. Structural Pipe and Tube: ASTM B 429/B 429M.
 - 4. Sheet and Plate: ASTM B 209.
 - 5. Castings: ASTM B 26/B 26M.
- B. Steel and Iron: Free of surface blemishes and complying with the following:
 - 1. Plates, Shapes, and Bars: ASTM A 36/A 36M.
 - 2. Steel Pipe: Standard-weight steel pipe complying with ASTM A 53/A 53M, or electric-resistance-welded pipe complying with ASTM A 135/A 135M.
 - 3. Tubing: Cold-formed steel tubing complying with ASTM A 500/A 500M.

4. Mechanical Tubing: Cold-rolled, electric-resistance-welded carbon or alloy steel tubing complying with ASTM A 513/A 513M, or steel tubing fabricated from steel complying with ASTM A 1011/A 1011M and complying with dimensional tolerances in ASTM A 500/A 500M; zinc coated internally and externally.
5. Sheet: Commercial steel sheet complying with ASTM A 1011/A 1011M.
6. Malleable-Iron Castings: ASTM A 47/A 47M, grade as recommended by fabricator for type of use intended.
7. Gray-Iron Castings: ASTM A 48/A 48M, Class 200.

C. Stainless Steel: Free of surface blemishes and complying with the following:

1. Sheet, Strip, Plate, and Flat Bars: ASTM A240/A240M or ASTM A666.
2. Pipe: Schedule 40 steel pipe complying with ASTM A 312/A 312M.
3. Tubing: ASTM A 554.

D. Fiberglass: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.

E. Plastic: Color impregnated, color and UV-light stabilized, and mold resistant.

1. Polyethylene: Fabricated from virgin plastic HDPE resin.

F. Anchors, Fasteners, Fittings, and Hardware: Stainless steel ; commercial quality, tamperproof, vandal and theft resistant, concealed, recessed, and capped or plugged.

G. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M; recommended in writing by manufacturer, for exterior applications.

H. Erosion-Resistant Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound; resistant to erosion from water exposure without needing protection by a sealer or waterproof coating; recommended in writing by manufacturer, for exterior applications.

2.7 FABRICATION

- A. Metal Components: Form to required shapes and sizes with true, consistent curves, lines, and angles. Separate metals from dissimilar materials to prevent electrolytic action.
- B. Welded Connections: Weld connections continuously. Weld solid members with full-length, full-penetration welds and hollow members with full-circumference welds. At exposed connections, finish surfaces smooth and blended, so no roughness or unevenness shows after finishing and welded surface matches contours of adjoining surfaces.
- C. Pipes and Tubes: Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.

- D. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.
- E. Factory Assembly: Factory assemble components to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

2.8 GENERAL FINISH REQUIREMENTS

- A. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.9 STEEL AND GALVANIZED-STEEL FINISHES

- A. Powder-Coat Finish: Manufacturer's standard polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.10 IRON FINISHES

- A. Powder-Coat Finish: Manufacturer's standard polyester powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.11 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 1. Run directional finishes with long dimension of each piece.
 2. Directional Satin Finish: ASTM A480/A480M, No 4.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.
- B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.
- C. Install site furnishings level, plumb, true, and securely anchored and positioned at locations indicated on Drawings.
- D. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.
- E. Posts Set into Voids in Concrete: Form or core-drill holes for installing posts in concrete to depth recommended in writing by manufacturer of site furnishings and 3/4 inch larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

END OF SECTION 323300

SECTION 328400 - IRRIGATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract “City of New York Standard Construction Contract.”

1.2 SUMMARY

- A. This section Includes:

1. Automatic irrigation system with electric control including piping, fittings, and accessories.
2. Drip irrigation.
3. Precipitation sensor with related wiring.
4. Flow sensor and master valve with related wiring.
5. Moisture sensors with related wiring.
6. Controller with related wiring and conduit, electrical wiring.
7. Grounding of irrigation system.
8. Testing and instruction.
9. Excavating and backfilling irrigation system work.
10. Maintenance and Guarantee.

- B. Related Requirements:

1. Division 26 Electrical
2. Division 22 Plumbing
3. Section 329300 Planting

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTAL

- A. Product Data: Manufacturer or supplier’s descriptive literature including installation instructions, for each specified product.
- B. Submit all product warranties to Commissioner.
- C. Certifications: Written certification from each product manufacturer or supplier stating that their product conforms to the specified requirements and that all products do not contain hazardous materials.

D. Shop Drawings:

1. Shop drawings showing all piping, conduit, and irrigation equipment for point of connection.
2. Show layouts of system(s) relate to and adjusted together with layouts of on-site design conditions and plantings.

E. Samples: When requested by the City of New York submit each irrigation system component and other item(s) related to the work to confirm product characteristics.

1.5 INFORMATION SUBMITTAL

A. Controller Drawings:

1. Controller drawings will be a reproduction of the construction record drawing reduced and printed on eight and one half inches (8½") x eleven inches (11") twenty four pound (24lb) white paper. Drawings will be legible. If necessary, use multiple sheets of paper and place drawings back-to-back.
2. Drawings will show all irrigation zones highlighted in a different color solid hatch pattern with the designated valve schedule.
3. Seal controller drawings in ten (10) mil plastic laminate. When multiple drawings are required punch a hole in the upper left had corner of the laminate and connect with a key chain loop.
4. Submit two (2) sets of drawings for each controller.

B. Irrigation Schedule:

1. Create a typewritten schedule on eight and one half inches (8½") x eleven inches (11") twenty four pound (24lb) white paper listing each valve number, type of sprinkler (rotor, spray, drip), description of that zone, days to water and daily runtimes for each irrigation month. Irrigation run times based on historical evapotranspiration and rainfall data.

2. Example:

Zone	Type	Days	Description	April	May	June	Jul	Aug	Sept	Oct
1	Drip	MWF	Front Bed	15:00	17:00	25:00	25:00	30:00	18:00	8:00
2	Spray	MWF	Rear Lawn	5:00	6:00	8:00	12:00	13:00	9:00	6:00

3. Schedule will include the following note: Irrigation runtimes are based on Historical data and should be used only as a guide. All irrigation runtimes should be adjusted accordingly based on actual climatic conditions.
4. Seal irrigation schedule in ten (10) mil plastic laminate.
5. Submit two (2) irrigation schedules for each controller.

1.6 CLOSEOUT SUBMITTAL

A. Operation & Maintenance Manual: The Contractor will furnish four (4) copies of the O & M Manual (Operation & Maintenance Manual) for the irrigation system and the associated mechanical system. The manual will include a checklist for trouble shooting and corrective measures in addition to operation and maintenance instructions.

- B. Guarantee: provide one year installer’s guarantee.
- C. Construction Record Drawing:
 - 1. As-Built Drawings to consist of the following: Controllers, Sprinklers, Spray heads, Quick coupling valves, Isolation valves, Automatic valve assemblies, mainline pipe routing, lateral pipe routing, splice boxes and control wire routing. All pipe and wire to have size indicated.
 - 2. Prepare "Construction Record Drawings" for irrigation system using a computer process based upon AutoCAD, latest release software and drawn at a scale of 1"=20'-0" or as otherwise noted. Legibly mark drawings to record actual construction locations. Indicate horizontal and vertical locations, referenced to permanent surface improvements; Identify field changes of dimension, detail and changes made by Change Order or Field Directives. These "Construction Record Drawings" will be created from work progress sheets.
 - 3. Submit a CD-ROM disk with digital AutoCAD drawing file(s), one (1) set of PDF files suitable for reproduction of the "Construction Record Drawings" showing actual construction.
 - 4. Submit “Construction Record Drawings” prior to final review and acceptance.
- D. Refer to and comply with additional Record Document requirements in the DDC General Conditions.

1.7 DEFINITIONS

- A. The following are industry abbreviations for irrigation materials.
 - 1. Excessive Compaction: Planting area soil or soil mix compaction greater than 75 percent of maximum dry density as determined by ASTM D 1557.
 - 2. PVC: Polyvinyl Chloride.
 - 3. SDR: Standard Dimensional Ratio.
 - 4. AWG: American Wire Gauge.
 - 5. Lateral Piping: Downstream from control valves to sprinklers, specialties, and drain valves. Piping is under pressure during flow.
 - 6. Main Piping: Downstream from point of connection to water distribution piping to, and including, control valves. Piping is under water-distribution-system pressure.
 - 7. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.8 REFERENCES

- A. Standards and Codes that apply to the Work of this Section:
 - 1. RE NEC — National Electric Code, current edition.
 - 2. UPC — Uniform Plumbing Code, current edition.
 - 3. ASTM — ASTM International:
 - a. B 3 — Specification for Soft or Annealed Copper Wire.
 - b. D 698 — Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort.
 - c. D 1557 — Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.

- d. D 1784 — Specification for Rigid PVC Compounds and CPVC Compounds.
 - e. D 1785 — Specification for PVC Plastic Pipe, Schedule 40.
 - f. D 2287 — Specification for Nonrigid Vinyl Chloride Polymer and Copolymer Molding and Extrusion Compounds.
 - g. Compounds.
 - h. D 2241 — Specification for PVC Pressure-Rated Pipe (SDR Series).
 - i. D 2464 — Specification for Threaded PVC Plastic Pipe Fittings, Schedule 80.
 - j. D 2466 — Specification for PVC Plastic Pipe Fittings, Schedule 40.
 - k. D 2564 — Specification for Solvent Cements for PVC Plastic Piping Systems.
 - l. D 2672 —F 690 — Practice for Underground Installation of Thermoplastic Pressure Piping Irrigation Systems.
4. ANSI — American National Standards Institute: NSF 14— Plastics Piping Components and Related Materials.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements"
- B. Obtain and pay for all required inspections, permits, and fees.
- C. Qualifications:
 - 1. Contractors are required who are experienced and properly trained in the skills required to install irrigation systems. Contractors to have a minimum of three (3) years' experience in the installation of site irrigation and be regularly engaged in and which maintains a regular work force in the installation of site irrigation.
 - 2. A qualified superintendent will be present during the installation.
- D. Licenses:
 - 1. A licensed Plumber will make all plumbing connections. A licensed Electrician will perform connections to 120 VAC power supplies.

1.10 COORDINATION

- A. Thoroughly coordinate and schedule the work of this Section with all trades involved to prevent interferences, and in order to allow adequate time at the proper stage of construction to properly perform all work of this Section.
- B. Before any work is started, a site conference will be held between the Contractor, the Irrigation Sub/Contractor and Commissioner concerning the work to be performed under this Section. The Landscape Plans will be reviewed at this conference and siting, layout, hand and/or pneumatic excavation will be discussed. Contractor will schedule conference at the convenience of the City of New York.
- C. Subcontractor to coordinate location of all piping and sleeves to be installed under walkways and driveway pavements with the Contractor.

1.11 GUARANTEE

- A. Guarantee the entire irrigation system and all related equipment and accessories for a period of one (1) year from the date of substantial completion.
- B. The guarantee period will commence upon substantial completion for a complete system and/or any portion thereof has been put into operation and acceptable to the City of New York.

1.12 GUARANTEE SERVICE

- A. Irrigation system will be guaranteed for a period of 12 months after the date of Substantial Completion. During the 12 month guarantee period, the Contractor will maintain the irrigation system
- B. During the guaranty period, maintain the irrigation system to ensure complete operation of the entire system. Repair and restore all settled piping, trenches, and sprinkler heads. Correct all defective or damaged work as soon as possible.
- C. Return to the site during the subsequent fall season(s) (before October 30th) and winterize the entire system. Drain all water from the system via compressed air and demonstrate to the City of New York the proper procedures for the system winterization.
- D. Return to the site during the subsequent spring season(s) (before April 15th) and start-up the system. Demonstrate to the City of New York the proper procedures for the system start-up, operation, and maintenance.
- E. System maintenance to begin immediately upon substantial completion. Provide continuing maintenance of the irrigation system, as necessary, throughout the installation of the irrigation system.

1.13 DELIVERY, STORAGE, AND HANDLING

- A. Deliver the irrigation system components in the manufacturer's original undamaged and unopened containers with labels intact and legible.
- B. Deliver plastic piping in bundles, packaged to provide adequate protection of pipe ends, both threaded and plain.
- C. Handle materials to prevent damage.
- D. Store materials to protect from sunlight, temperature variation and weather.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Ashcroft Gauges, Stratford, Connecticut
2. Baseline, Boise, Idaho
3. Dura Plastic Products; Beaumont, California
4. Elchen Industries, Inc. (Turf-Tite), Dallas, Texas
5. Goodall Rubber Company, Trenton, New Jersey
6. Hunter Industries, San Marcos, California
7. IPEX Inc Beverly, Massachusetts
8. IPS Corporation, Compton, California
9. JM Eagle, Livingston, New Jersey
10. Lasco Industries, Anaheim, California
11. Maclean Highline Access Boxes, Fort Mill, South Carolina
12. Netafim Irrigation Fresno, California
13. Nibco Inc; Elkhart, Indiana
14. Oldcastle Enclosure Solutions. Auburn, Washington
15. Paige Electric Corp., Union, New Jersey
16. Rainbird, Glendora, California
17. Storm Manufacturing Group, Torrance, California
18. 3M Corporation, Electrical Products Division, St. Paul, Minnesota
19. or approved equal.

2.2 MATERIALS

A. All materials and equipment will be new of the kind and type specified, of good quality, and will delivered to the site in good condition. All materials will be protected until incorporated in the work and finally accepted by the City of New York.

B. Controller:

1. The Controller will support:
 - a. Up to 200 zones along a two-wire path and/or a conventional wire path
 - a. Up to 25 moisture sensors
 - b. Up to 8 temperature sensors, which monitor, and control program operation based on temperature thresholds
 - c. Up to 8 devices with contacts that alternate between open and closed
 - d. Up to 8 water sources
 - e. Up to 8 independent mainlines for control and management of separate water delivery systems
 - f. Up to 8 hydraulic components known as “control points.” The control points will accept input from:
 - 1) Up to 8 normally open or normally closed master valves
 - 2) Up to 8 pump starts
 - 3) Up to 8 flow sensors or meters, including indoor flow sensors and hydrometers
 - 4) Up to 8 pressure decoders, which will be used to accept 4-20 mA inputs from pressure transducer devices

- g. Up to 110 device loads on the two-wire path
 - 1) 1, 2, and 4 station decoders = ½ load
 - 2) 12 to 24 station Powered decoders = 2 loads
 - 3) Soil moisture sensor = 1 load
 - 4) Flow decoder = 3 loads
 - 5) Event device = 1 load
 - 6) Pressure decoder = 3 loads
 - h. Up to 99 completely independent programs
 - i. Up to 8 available addresses for TCP/IP-based connections.
 - 1) These addresses will be used to connect the following performance components:
 - 2) Shared flow controller
 - 3) TCP/IP-based irrigation system extender
 - 4) Compatible pump station
 2. The controller will support concurrent zone operation.
 - a. In stand-alone operation, the controller's transformer will support a maximum of 15 concurrent zones.
 - b. When operated in conjunction with a TCP/IP-based irrigation system extender, the number of concurrent zones will increase by 15 zones with each additional TCP/IP-based irrigation system extender.
 - 1) With 8 TCP/IP-based irrigation system extenders, the controller will support a maximum of 99 concurrent zones.
 - c. Over conventional wire, the controller will operate up to 2 typical solenoids per 12-station powered decoder or up to 4 typical solenoids per 24-station powered decoder plus 2 additional solenoids using the VE00001 and VE00002 ports.
 3. The controller will display on-screen help. The on-screen help will be available in both English and Spanish. The help text language will be user-configurable.
 4. The operator will be able to establish 3 levels of security for operators of the controller: Operator, Programmer, and Administrator.
 5. Device Assignments
 - a. The controller will search for and identify all devices connected to the two-wire and list them according to device type and serial number.
 - b. The controller will be capable of addressing or re-addressing any two-wire decoder from the controller by re-assigning the device's serial number to a new zone address.
 - c. The controller will assign any station or terminal number on a multi-station decoder from the controller to any zone address in any order, in any program.
 - d. The controller will allow any device to be removed, replaced, or reordered.
 - e. The controller will support full two-way communication with all devices and monitor two-wire voltage and communication integrity, solenoid voltages, current, and status (reported as open/short/OK).
 6. Programming
 - a. The controller will be capable of managing 99 programs, including up to 8 start times per program with overlapping run times.
 - b. The controller will automatically stack overlapping programs. The system can run any number of programs concurrently if permitted by the concurrent zone settings.

- c. The controller will support program prioritization and progression to allow control of which landscape areas get watered first, and/or to prioritize water rations during restricted water allocations.
 - d. Program priorities will be set from 1 – 99.
 - e. Each program will allow from 1 – 15 concurrent zones.
 - f. The operator will be able to configure a program to ignore concurrent zone settings, which enables the program to run even when the maximum number of concurrent zones are running as long as the system does not exceed electrical and hydraulic limits.
 - g. The operator will be able to configure a program to ignore global controller settings such as a rain delay, which enables the program to run even when even when the controller is in rain delay mode.
 - h. The controller will be able to adjust seasonal water budget from 25% to 200% by program.
 - i. The controller will allow an operator to set a “water window” by program on a per hour basis for each day of the week, which suspends watering beyond a set time and resumes watering when another window opens.
 - j. The controller will allow a program to be started by the following conditions:
 - k. Start time
 - l. Moisture percent
 - m. Temperature value
 - n. Event switch contacts open/closed
 - o. Pressure sensor readings
 - p. The program will be capable of using the following schedules:
 - q. Day intervals in even days
 - r. Odd days
 - s. Odd days excluding the 31st
 - t. User defined interval
 - u. Custom 7-day calendar
 - v. Historical day interval calendar with customizable half-months-
 - w. The controller will be able to irrigate in the following modes:
 - x. Timed (standard time-based watering)
 - y. Soil moisture-based
 - z. Weather-based
 - 1) For weather-based watering to be enabled, the controller will have an active central control subscription at the appropriate level.
7. Zone Settings
- a. The controller will allow run times for zones from 1 minute to 23 hours 59 minutes.
 - b. The controller will allow an operator to enable or disable each zone.
 - c. The controller will be able to group zones into scheduling groups as follows:
 - d. Primary – Primary zones can be time based or soil moisture based.
 - e. Linked – The settings for a linked zone match the settings of the assigned primary zone.
 - f. A zone will be assigned to both a program and a mainline, or just to a program.
8. Specialized Soak Cycles
- a. The controller will have the ability to perform specialized soak cycles to prioritize cycles for zones that have already started to water over zones that have not started.
 - b. The controller will have the ability to program cycle times and soak times between 0 minutes and 23 hours 59 minutes.
9. Messages and Alerts

- a. The controller will display all pause and stop conditions in message screens that are accessible from the main screen. The system displays one message for each condition, and the operator can clear each message.
 - b. The controller will display high flow alerts, low flow alerts, pause messages and conditions, and rain delays, wire faults, as well as other operating conditions.
 - c. The controller will display messages generated from diagnostic tests initiated by the controller and by the operator.
10. Reports and Graphs
- a. The controller's main screen will be able to display water usage, soil moisture graphs, design flow or actual flow, two-wire current, program reports, pause reports, and zone status by program (shown as a color representing watering, soaking, waiting, paused, disabled, and error) without affecting any active programs.
 - b. The controller will display an on-screen, historical-run-time chart that includes the time watered for last 6 days by program.
 - c. The controller will display an on-screen historical water used chart that includes the actual water used for the last 6 days by the flow meter.
 - d. The controller will display a 6-day scalable soil moisture history graph with integrated run-time bar chart.
 - e. The controller will be able to log data collected from each flow meter, moisture sensor, temperature sensor, pressure sensor, and zone run time.
 - f. The controller will have the ability to report:
 - g. The last date a program ran
 - h. The next run date of a program
 - i. Water consumption used by program per run estimation
 - j. 14 days of moisture readings displayed graphically
 - k. Water flow estimation in gallons per minute (gpm)
 - l. Total daily, current month, and previous month's water consumption estimation in gallons
 - m. Actual water used and flow rate for each flow meter
 - n. A report for every pause condition event
 - o. Monthly water budget
11. Flow Monitoring and Management
- a. The controller will support the following flow monitoring and management devices:
 - b. Up to 8 flow sensors or meters
 - 1) Flow meters will be assigned to control points.
 - 2) Flow meters will take flow rate readings twice per minute.
 - 3) Flow meters will take water used readings one per minute.
 - c. Up to 8 master valves
 - 1) Each master valve will be assignable to any control point.
 - 2) The controller will be able to operate normally open and normally closed master valves.
 - d. Up to 8 pumps
 - 1) The controller will have the ability to manage a pump or other loads switched with a relay on a per program basis.
 - e. Up to 8 pressure sensors
 - 1) The controller will have the ability to react to high- and low-pressure settings on the mainline with a pressure sensor.
 - 2) The controller will have the ability to ramp up or down the delay between zones starting and stopping with a pressure sensor.

- f. The controller will support the following flow management components.
 - g. Up to 8 control points, to which any of the following devices can be assigned:
 - 1) Flow meter
 - 2) Master valve
 - 3) Pump
 - 4) Pressure sensor
 - h. Up to 8 mainlines
 - 1) The controller will allow a zone to be assigned to any one mainline.
 - i. The irrigation controller will support a connection to the shared flow controller.
 - j. The shared flow controller and up to 20 irrigation controllers will become a shared flow group where water is shared and managed among all controllers.
 - k. The irrigation controller will support the following flow monitoring and management functionality:
 - l. The irrigation controller will display real-time flow updated every 15 seconds when watering.
 - m. The irrigation controller will be able to learn flow for programs and sets of zones.
 - 1) The operator will be able to perform the learn flow operation while normal irrigation continues.
 - 2) The operator will be able to schedule learn flow cycles for individual zones or for programs during a time when the system is not irrigating.
 - n. The controller will intelligently schedule watering based on available flow or design flow to maximize concurrent valve operation and minimize total water time by mainline.
 - o. The controller will be able to limit the number of concurrent zones using the design flow.
 - p. The controller will detect flow variance at the control point level and/or the mainline level.
 - 1) In an “overflow event,” the controller will halt all irrigation on the faulty control point or on the mainline.
 - q. The controller will be able to dynamically allocate flow by turning on only those control points needed to supply water to a mainline with running zones.
 - r. When a pressure sensor is associated with a control point, the controller will be able to respond to high/low limits.
 - s. The operator will be able to set a separate variance percentage in 4 GPM ranges.
 - 1) The system will not act until the flow variance reaches the specified limit.
 - t. The operator will be able to set delays based on time or pressure before and after running zones on a mainline.
12. Water Management
- a. The controller will support 8 water sources.
 - b. A water source will be assigned to a control point.
 - c. The controller will support water source prioritization and intelligent secondary water source management to control which water sources are used first.
 - d. The controller will support empty and full indicators from moisture sensors, switches, and pressure sensors to optimize management of cisterns, ponds, rainwater catchment, and other water storage systems.
 - e. The controller will support a settable wait time after an empty condition is met.
 - f. The controller will support a monthly water budget per water source.
 - g. The controller will be able to shut down the water source when the budget has been exceeded.
 - h. The controller will support daily water rationing across multiple water sources.
13. Hydraulic Layout
- a. The operator will be able to model their actual hydraulic system on the controller.

- b. The operator will be able to connect a water source to a control point.
 - c. The operator will be able to connect a control point to a mainline.
 - d. The operator will be able to assign zones to their mainlines.
14. Soil Moisture Sensor
- a. The controller will support up to 25 individual soil moisture sensors.
 - b. The controller will have the ability to automatically adjust run times and/or day intervals based on soil moisture readings.
 - c. The controller will override a programmed run time or day interval when it detects a soil moisture reading that exceeds the assigned shut-off value.
 - d. Using a moisture sensor, the controller will be able to determine the water capacity of the soil and establish a lower limit threshold for the sensor.
 - e. The controller will be able to respond to a moisture limit that is accurate within $\pm 3\%$ when measured with a soil moisture sensor.
15. System Backups
- a. The controller will be able to export all data to a USB flash drive including:
 - b. All events
 - c. All programming
 - d. Run times (including manual run times)
 - e. Water used
 - f. Moisture logs
 - g. Temperature logs
 - h. Alarm logs
 - i. Program summary report
 - j. Test all results
 - k. The controller will have the ability to load all programming information directly from a USB flash drive.
 - l. All programming will be saved in non-volatile memory.
 - m. The controller will save running events and logs every 10 minutes to non-volatile memory.
16. Diagnostics
- a. The controller will have the ability to reprogram the solenoid drive current of the decoder from the controller without uninstalling or removing the decoder from the field.
 - b. The controller will be able to detect and report a “two-wire over current.”
 - c. The controller will be able to read and report the current of the two-wire during normal running conditions.
 - d. The controller will be able to test each individual zone and display:
 - e. Two-wire voltage drop
 - f. Valve voltage
 - g. Current
 - h. Decoder serial number
 - i. The controller will run a weekly diagnostic test on normally open master valves to help prevent a normally open master valve from “sticking” open.
17. Manual Operation
- a. The operator will be able to manually run one zone or all zones of a program with programmable concurrent zones and run times.
 - b. The operator will be able to manually start or stop a program.

- c. When running a manual zone, the controller will allow the operator to advance watering to the next zone or return to a previous zone while not affecting the programming of the controller.
 - d. The operator will be able to manually operate one or more zones at a time when other program operation is happening, or another operator is manually operating other zones.
 - e. The operator will be able to run master valves and pumps for individual times.
 - f. This operation will pause watering on the entire controller.
18. Start, Stop, Pause
- a. When a moisture sensor, event switch, or temperature sensor, or pressure sensor is connected, the controller will be able to:
 - b. Start a program
 - c. Stop a program or the entire controller
 - d. Pause any program or the entire controller
 - 1) The operator will be able to configure the pause in 1 minute increments from 0-24 hours. Watering will resume when the pause condition is removed, and the allotted time has passed.
19. Event Scheduling
- a. The controller will be able to schedule 8 controller-wide event dates plus 8 event dates per program during which watering is disabled.
20. Smart Watering Modes
- a. In addition to time-based watering, the irrigation controller will also be operated in the following smart watering modes:
 - b. With an installed and configured soil moisture sensor, the irrigation controller will be able to start/stop irrigation cycles based soil moisture readings.
 - c. When operated in a weather-based mode with an active central control subscription at the appropriate level, the irrigation controller will be able to start/stop irrigation cycles based on weather data calculations.
 - 1) When operated based on weather data, the irrigation controller will have the EPA WaterSense label.
21. Central Control and Remote Control Functionality
- a. The controller will be able to connect to irrigation central control software and virtual irrigation controller access when configured with an approved communication module.
 - b. The controller will support the following communication options: built-in Ethernet, Wi-Fi, cellular modem, Ethernet radio, and long haul Ethernet.
 - c. The operator will be able to configure, program, and operate all zones from the irrigation central control software.
 - d. The operator will be able to receive email and text message alerts when connected to the irrigation central control software.
 - e. The operator will be able to perform manual operations remotely with the irrigation central control software.
 - f. For more information, please refer to the Central Control specification.
22. Information Security Controls
- a. The controller will include information security controls that enable secure networking with other compatible products.
 - b. To learn more about the controller's security controls, refer to the Security Controls Technical Specification available on the manufacturer's website.

23. Display
 - a. The controller display will have a high-contrast 3.5-inch screen with a resolution of 320x240 at 65,536 colors. The LCD brightness will be a minimum of 200 lumens.
24. Ethernet Jack
 - a. The controller will have a 100 Base-TX Ethernet jack.
 - 1) The jack will accept RJ45 connectors.
 - 2) The jack will be compliant with CAT5, CAT5e, and CAT6 Ethernet cable.
 - 3) The jack will be RoHS compliant.
 - 4) The jack will meet or exceed IEEE 802.3 standards.
 - 5) The jack will have indicator LEDs.
25. Power Specifications
 - a. The controller will come standard with a 120 VAC transformer, which has apparent power of 40 VA.
 - b. The controller will not exceed 30 VAC RMS output on the two-wire.
 - c. The controller will be able to support up to a 1.45 amp output current.
26. Surge Protection
 - a. The controller will have 3 levels of surge protection built into the controller including a replaceable and fusible surge protection PC board.
 - b. The controller will have a minimum of a 1 picosecond surge response time.
27. Environmental Specifications
 - a. The controller will be able to operate in environments ranging from 32°F to 140°F (0°C to 60°C) ambient temperatures.
 - a. Large Capacity Stainless Steel Wall Mount Enclosure
 - b. The pre-assembled vandal resistant enclosure will be 15.50" W x12.38" H x 6.40" D and will come complete with lightning and surge protection and all terminals will be factory labeled.
 - c. The wall mount enclosure will be manufactured entirely of 16-gauge 304-grade stainless steel.
 - d. A nickel-plated cam style lock will be mounted in the door for security.
28. Include two instructional meetings with the City of New York's designated personnel and the representative of the controller manufacturer. These meetings are to occur upon completion of the irrigation system installation.

C. Two-Wire Path:

1. The two-wire will have the following operating voltage: 600 V RMS max
2. The two-wire will have the following temperature rating: 140°F (60°C)
3. The two-wire will meet one criterion within each of the following categories:
 - a. Outer Jacket
 - 1) High density polyethylene (HDPE) between 0.035" and 0.048" thick, conforming to ICEA S-61-402 and NEMA WC5
 - b. Conductors - two of the same gauge, conforming to ASTM B-33, B-3, or B-8
 - 1) Bare copper
 - c. Conductor Arrangement
 - 1) Conductors that are twisted
 - 2) Conductors that are laid in parallel
 - d. Conductor Insulation

- 1) Low density, high molecular weight polyethylene (PE) with a thickness of 0.045”
 - 2) PVC conforming to UL-493 or UL-719 for thermoplastic-insulated style UF (Underground Feeder)
 - e. Conductor Color Coding
 - 1) Black & red
2. Each two-wire path will have an outer jacket of a different color.

D. Valve Decoders:

1. The valve decoders will be fully sealed, submersion proof, and direct bury to effectively seal moisture from the electronics and will be installed as specified herein.
 - a. A specific decoder will be used with DC latching solenoids.
 - b. A specific decoder will be used as a master valve decoder.
2. The valve decoder will have true two-way communication.
3. The valve decoder will be capable of self-identifying to the two-wire controller and will report preconfigured unique serial numbers and zone addresses.
4. The valve decoder will have from one to four preconfigured serial numbers with the first address listed on the side of the decoder.
5. Each valve decoder will come with 23 inches of 16-gauge PVC jacketed solid core wire to connect to the two-wire.
6. Each valve decoder will come with 23 inches of 18-gauge PVC jacketed stranded core wire to connect to the valve wire.
7. The valve decoder will have communication collision detection on the two-wire and will resend any message experiencing an error.
8. The valve decoder will be able to search for a solenoid and report whether a solenoid is present.
9. The valve decoder will have a built-in amperage meter to accurately measure and diagnose valve solenoid electrical problems such as “no current,” “station short,” “over current,” etc.

E. Electrical Components:

1. Direct Bury Splice Kits
 - a. The connectors will electrically connect two or more pre-stripped copper wires and moisture seal the connection.
 - b. The connectors will be UL listed.
 - c. The connectors will be installed per manufacturer’s specifications, and as specified herein.
 - d. All twist connectors will have a steel spring and a flame-retardant insulator.
 - e. The outer tube will be made of UV-resistant polypropylene.
 - f. The tube will be filled with moisture-resistant grease.
 - g. The voltage rating will be a minimum of 600 volts.
 - h. The operating temperature will be -40°F to 221°F (-40°C to 105°C).

2. Conduit for Low Voltage Wiring:

- a. Conduit for 2-wire path (low voltage wiring) will be rigid Schedule 40 non-metallic conduit and fittings conforming to NEMA TC-2, Federal specification WC1094A and UL 651 specifications. Fittings are manufactured to NEMA TC-3, Federal specification WC1094A and UL514B. Conduit will be rated for use for underground, encased or exposed applications in accordance with the National Electrical Code (Article 347). Conduit will be model Plus 40 as manufactured by Carlon, Cantex Inc., Allied Tube and Conduit or approved equal.
- b. Conduit sealant will be a two-part “blown” urethane foam with 98% closed cell content. The foam duct sealant will have a compressive strength of 300 pounds (ASTM D1691) and will have a tensile strength of 250 pounds (ASTM D1623). Foam duct sealant will have a flexural strength of 450 pounds (ASTM D790), and will withstand temperatures from -20° F to 200° F. The foam duct sealant will be chemically resistant to gasoline, oils, dilute acids and bases. The foam duct sealant will be available as a kit suitable for sealing various sized ducts. The product will foam and react in five to ten minutes at 70° When installed, the sealant will be capable of holding 7.25 psi air pressure continuously (equivalent of 16.4 feet water-head pressure).

F. Grounding/Surge Protection:

1. Grounding rods will be bare copper 5/8 inch diameter or greater and a minimum of 8 feet long or longer.
2. Earth grounding wire running from the grounding device to the surge arrestor will be a minimum of a 6-gauge diameter, bare copper wire.
3. All connections to grounding rods will consist of an exothermic weld type of connection that is suitable for direct burial. Screw clamp type is not acceptable.
4. Surge arrestors will be fully sealed, submersion proof made for direct bury, and will effectively seal moisture from electronics. The surge arrestors will be installed as specified herein.
 - a. The surge arrestor will come with 2 levels of surge protection that will clamp at 60 volts in less than 1 microsecond.
 - b. The surge arrestor will clamp closed to dissipate all surges to earth ground and protect other devices on the two-wire.
 - c. Each surge arrestor will come with 23 inches of 16-gauge PVC jacketed solid core wire to connect to the two-wire.

G. Sleeves:

1. Sleeves will be Schedule 40 PVC pipe w/solvent weld coupling as manufactured by Cresline Plastic Pipe, CertainTeed, JM Eagle or approved equal.
2. Furnish and install separate sleeve for piping and wire.
3. Furnish and install PVC sleeves two times (2x) the diameter of the pipe or conduit.

H. Pipes and Tubes:

1. All pipe will be continuously and permanently marked with manufacturer's name or trademark, materials size and schedule or type of pipe, working pressure at 73 degrees F. and National Sanitation Foundation (NSF) approval.
2. The pipe will contain no recycled compounds except that generated in the manufacturer's own plant from resin of the same specification from the same raw materials.

3. Pipe homogenous throughout and free from visible cracks, holes, foreign materials, blisters, wrinkles, and dents.
4. Main line pipe will be PVC (polyvinyl chloride) Schedule 40 solvent weld piping. Pipe will be manufactured from virgin rigid PVC vinyl compounds with a Cell Class of 12454 as identified in ASTM D-1784. PVC Schedule 40 pipe will be Iron Pipe Size (IPS) conforming to ASTM D-1785. Pipe will be manufactured with solvent weld bell end joints. Pipe will be as manufactured by Cresline Plastic Pipe, CertainTeed, JM Eagle or approved equal.
5. Lateral piping will be POLY (polyethylene) PE 3408/3608 SIDR-15 - 100 psi non-NSF pipe conforming to ASTM-2239. Pipe will be as manufactured by Oil Creek Plastics, Inc., Centennial Plastics or Charter Plastics or approved equal.

I. Pipe Fittings:

1. Fittings used with PVC (polyvinyl chloride) mainline will be Schedule 40 PVC (polyvinyl chloride) will conform to ASTM D 2466. Fittings will be as manufactured by Charlotte Pipe, Spears Manufacturing, Lasco Fittings Inc. or approved equal.
2. Fittings used with polyethylene lateral pipe in the landscape areas will be PVC insert fittings as manufactured by Charlotte Pipe, Spears Manufacturing, Lasco Fittings Inc. or approved equal. Clamps will be stainless steel, worm gear hose clamps with stainless steel screws or stainless steel “ear” type clamps.
3. Schedule 80 PVC (polyvinyl chloride) fittings will conform to ASTM D 2467. PVC (polyvinyl chloride) Schedule 80 threaded fittings will conform to ASTM D 2464. All PVC (Polyvinyl Chloride) nipples will be Schedule 80 with molded threads. Close nipples to not be allowed. Fittings and nipples will be as manufactured by Charlotte Pipe, Spears Manufacturing, Lasco Fittings Inc. or approved equal.
4. Dielectric Fittings: ASTM F 441/F 441M, Schedule 80, PVC threaded pipe nipples, 4-inch length.

J. Swing Joints:

1. One inch (1”) swing joint used for quick coupling valves will have a 1” MIPT inlet with 1” snap Lok type outlet and be rated at 315 psi maximum working pressure @ 73° F when tested in accordance with ASTM D3139, including internal hydrostatic pressure @ 787 psi. for 60 minutes and short-term pressure of 1008 psi. without leakage or failure. Swing joints will be molded of rigid polyvinyl chloride (PVC). Type 1, Cell classification 12454-B per ASTM specification D 1784, with NPT threads and pipe sockets per ASTM D 2464 and D2466, respectively. Each rotating joint will be sealed with a 0-ring, installed pre-compressed in a sealing groove free of parting lines to prevent leakage. Modified stub ACME threads will have special engineered (S.E.) diameters and clearances to allow full circle (360°) movement and to reduce stress concentrations and joint fracture at thread roots. Swing joints will be manufactured by LASCO, Spears, Rainbird or approved equal.

K. Drip Irrigation Equipment:

1. Dripper Tubing: Drip tubing will be 17mm tubing with pressure compensating emitters and check valves. Drip tubing will be as follows:
 - a. Drip tree rings .9 gph x 12” emitter spacing
 - b. Planting beds .6 gph x 12” emitter spacing
2. Drip Tubing Staple: Drip tubing staple will be nine gauge galvanized steel 6” in length. Drip tubing staple will provide long-lasting and corrosion resistant holding strength for drip tubing.
3. Drip Irrigation Control Zone Kits: Drip irrigation control zone kits will include on/off control, 140 mesh filtration and 40 psi pressure regulation. Drip irrigation (Over 5.0 gpm - high flow) control zone

- kits will be model XCZ-100-PRB-LC as manufactured by Rainbird, model ICZ-101 as manufactured by Hunter Industries and model LVCZNVSF10075-HFHP as manufactured by Netafim Industries or approved equal. Drip irrigation (Under 5.0 gpm - low flow) control zone kits will be model XCZLF-100-PRF as manufactured by Rainbird, model ACZ-101 as manufactured by Hunter Industries and model LVCZNVSF10075-LF as manufactured by Netafim Industries or approved equal.
4. Drip flushing valve: to consist of three quarter inches (3/4") MPT x 3/4" MGHT, 3/4" FGHT x 3/4" MGHT PVC ball valve and 3/4" FGHT threaded cap.
 5. Fittings for use with drip tubing will be 17mm insert fittings as manufactured by Netafim Irrigation, Rainbird, Hunter or approved equal.
 6. Pop-up operation/pressure indicator provide a visual assurance that the drip irrigation system is operational. When the drip system reaches 20 PSI the pop-up indicator will rise 6" to provide a clear visual indication that the irrigation zone is on. When the system is off, the pop-up indicator retracts to become hidden by lowering safely and securely back into the operational indicator body. Pop-up operation/pressure indicator will include:
 - a. A yellow cap indicates that the water source in the drip irrigation zone is potable.
 - b. Constructed with UV resistant, high impact plastic.
 - c. Includes 16" of durable 1/4" distribution tubing.
 - d. Self-piercing connection fitting pre-installed.
 - e. Operating range: 20 to 50 PSI

L. Valves:

1. Plastic Ball Valves: PVC (polyvinyl chloride) plastic, with 150 psig minimum pressure rating, ends compatible to piping where valve is to be installed, and tee handle.
2. Bronze Non Rising Stem Gate Valves, 2 Inches and Smaller: MSS SP-80, Type 1, solid wedge; nonrising, copper-silicon-alloy Stem; Class 125, body and screw bonnet of ASTM B 62 cast bronze, with threaded or solder-joint ends. Include polytetrafluoroethylene (PTFE)-impregnated packing, brass packing gland, and malleable-iron handwheel.
3. Quick-coupling valves will be one-piece bronze bodies, double slot, 1" IPS with locking rubber top. Quick coupler assembly will include valve, valve key, 1' coupler and 1" x 3/4:" hose swivel
4. Automatic valves will be plastic globe type, normally closed, electric solenoid-actuated and diaphragm-operated with flow stem. Solenoid will be epoxy impregnated 24 VAC-60 Hz (18 to 30 VAC), 5.8 VA and will be suitable for direct burial. Valves will be capable of manual operation by means of an internal bleed. Sizes will be as noted on the drawings. Valves will be ICV series as manufactured by Hunter Industries. PEB series as manufactured by Rainbird, or P-220 series as manufactured by The Toro Company or approved equal.
5. 1 1/2" master valve will be brass globe type, normally open, electric solenoid-actuated and diaphragm- operated with flow stem. Solenoid will be epoxy impregnated 24 VAC-60Hz (18 to 30 VAC), 5.8 VA and will be suitable for direct burial. Valves will be capable of manual operation by means of an internal bleed. Master valve will be series 3100 as manufactured by Storm Manufacturing Group, series 2160 as manufactured by Griswold, series IR-200 as manufactured by Bermad Inc. or approved equal.
6. Identification tags will be manufactured from polyurethane Behr Desopan, incorporating an integral attachment neck and reinforced attachment hole and will be capable of withstanding 180LBS. pull out resistance. The identification tag will be 2.25" X 2.75" in size. All lettering will be hot stamped in black and capable of withstanding outdoor usage. The standard alpha-numeric designations will incorporate alpha-numeric lettering 1-1/8" in height. The tag color will be YELLOW. The marking

tag will be single sided stamped with the following identification sequence A1, A2, A3 etc. to match the controller number.

M. Valve Boxes:

1. Valve boxes to be high density polyethylene (HDPE) for light duty greenbelt applications. All box covers to have standard markings identifying it as an irrigation box. All covers to have “irrigation” or “irrigation control valve” stamped on the cover.
2. Valve boxes for drip irrigation flush valves will be 6" round x 10" deep valve boxes. Valve boxes will have snap down black cover as manufactured by Oldcastle Enclosure Solutions, Maclean Highline Products, Dura or approved equal.
3. Valve boxes for quick coupling valves will be 10" round x 12" deep valve boxes. Valve boxes will have bolt down option black T-cover as manufactured by Oldcastle Enclosure Solutions, Maclean Highline Products, Dura or approved equal.
4. Standard valve boxes will be 12" x 17" x 12" deep valve boxes: black in color. Valve boxes will include black T-cover and L-Bolt down option as manufactured by Oldcastle Enclosure Solutions, Maclean Highline Products, Dura or approved equal.
5. Jumbo valve boxes will be 15" x 21" x 12" deep valve boxes: Black in color. Valve boxes will include black T-cover and L-Bolt down option as manufactured by Oldcastle Enclosure Solutions, Maclean Highline Products, Dura or approved equal.
6. Valve box extensions, as required, will be of the same size, color, and manufacturer as the box on which it is used.

N. Precipitation Sensor and Precip biCoder:

1. The precipitation sensor funnels precipitation into a bucket mechanism that tips when filled to its calibrated level. A magnet attached to the tipping mechanism actuates a switch as the bucket tips sending data via a biCoder interface to the irrigation controller. Precipitation Sensor will include:
 - a. Accuracy: 0-1 in. (25mm) per hour; +/-2%
 - b. Collector diameter: 3.90" (100mm) with knife-edge
 - c. Funnel Depth: 3" (76 mm)
 - d. Splash out protection: >1.5" (38mm)
 - e. Operating Temp: 32 to 125°F (0 to 50°C)
 - f. Storage Temp: -40 to 160°F (-40 to 70°C)
 - g. Humidity Limits: 0-100%
 - h. Height: 6" (152mm)
 - i. Cable: 10', 22 gauge 2 conductor
 - j. Switch: Momentary potted reed switch
 - k. Switch rating: 30VDC @ 2A, 115 VAC @ 1A
 - l. Switch Closure Time: 135 ms
2. The precip biCoder
 - a. biCoders are fully sealed, submersion proof, and approved for direct bury.
 - b. Shock resistant
 - c. Freeze/head resistant -4°F to 140°F (-20°C to 60°C)
 - d. Manufactured with 24 inches of 16-gauge PVC jacketed solid core wire to connect to the two-wire
 - e. biCoders have built-in LEDs that blink during communications.
 - f. The precipitation sensor biCoder has an additional LED that blinks when it's raining
 - g. Built-in surge protection
 - h. Decoder hardware type = 5.32

- i. Default “R-value” is 100 (100 pulses per inch).
- O. 1” Flow Sensor and Flow Decoder:
- 1. Flow Sensors will be brass with a flow range of .8 – 50 gpm.
 - a. Brass bodied sensor with female NPT connections
 - b. Threaded Retaining Nut – easier to service in valve box, more moisture resistant than competitive sensors
 - c. Lightweight Impeller – improved low flow performance, detects and measures flows as low as 0.50 ft/sec
 - d. Built-in two-wire decoder
 - e. Pre-configured K and offset values
 - f. Diagnostic LEDs – visual indication of flow, improved troubleshooting
 - g. Highly accurate over a large range of flows.
 - 2. Flow Decoder.
 - a. The flow decoder will be fully sealed, submersion proof, and direct bury that will effectively seal moisture from the electronics and will be installed as specified herein.
 - b. One flow decoder type will supply up to 17mA of current to the blue wire. The voltage on the blue wire is approximately 14.5v.
 - c. The flow decoder will have true two-way communication.
 - d. The flow decoder will be capable of self-identifying to the two-wire controller and will report preconfigured unique serial numbers and zone addresses.
 - e. The flow decoder will have one preconfigured serial number on the side of the decoder.
 - f. Each flow decoder will come with 23 inches of 16-gauge PVC jacketed solid core wire to connect to the two-wire.
 - g. Each flow decoder will come with 23 inches of 18-gauge PVC jacketed stranded core wire to connect to a pulse output flow meter.
 - h. The flow decoder will have collision detection on the two-wire and be able to resend messages if a collision is detected.
 - i. The flow decoder will read a minimum of a 4-millisecond low pulse at 100 hertz and a maximum of 100 pulses per second.
 - j. The flow decoder will be able to search for a flow meter.
 - k. The flow decoder will have a built-in amperage meter to accurately measure and diagnose flow meter electrical problems such as “no current,” “station short,” “over current,” etc.
- P. Moisture Sensors/Controls:
- 1. The soil moisture sensor will be fully sealed, submersion proof, direct bury that will effectively seal moisture from electronics and will be installed as specified herein.
 - 2. The soil moisture sensor will provide automatic and user-requested measurements of soil moisture.
 - a. The soil moisture sensor will be capable of measuring volumetric soil moisture changes of less than 0.1 percent.
 - b. The soil moisture sensor will be capable of measuring volumetric soil moisture within ± 3 percent of the actual volumetric soil moisture content.
 - 3. The soil moisture sensor will have a built-in temperature sensor (thermistor) that provides automatic and user-requested measurements of temperature.
 - a. The thermistor in the original soil moisture sensor will be capable of reading temperatures between 33°F and 120°F.

- b. The thermistor in the original soil moisture sensor will be capable of measuring temperature within $\pm 1.12^{\circ}\text{F}$ of the actual temperature.
4. The soil moisture sensor will have true two-way communication.
5. The soil moisture sensor decoder will be capable of self-identifying to the two-wire controller and will report its preconfigured unique serial number.
6. Each soil moisture sensor decoder will come with 50 feet of 16-gauge PVC jacketed solid core wire to connect to the two-wire.
7. The soil moisture sensor decoder will have standard error collision detections and will resend messages on the two-wire.
8. The soil moisture sensor will be a TDT (time domain transmissibility) technology sensor that accurately measures soil moisture.
9. Salinity and/or other minerals in the soil will not affect the soil moisture sensor readings.
10. The soil moisture sensor will be constructed of a multi-layer fiberglass stick.
11. The soil moisture sensor blade will be 14.95" x 2" x .075".
12. The original soil moisture sensor logic module will be 2" x 3" x 1".

2.3 ACCESSORY MATERIALS

A. Pressure Gauges:

1. Pressure gauges will be ASME B40.1 stainless steel (0-100 PSI) 2 "diameter dial x 1/4" NPT with bottom outlet.

B. Drainage Stone for Valve Boxes:

1. One-half inch ($\frac{1}{2}$ ") to three-quarter ($\frac{3}{4}$ ") size, washed, graded crushed stone.

C. Landscape Fabric:

1. Landscape Fabric will be a one hundred percent (100%) continuous monofilament polypropylene spun geotextile fabric with UV inhibitors. The landscape fabric will prevent soil from entering the irrigation valve box. The fabric will demonstrate the following minimum characteristics:
 - a. Area Weight (ASTM 5261): 4.0 oz/yard
 - b. Tensile Strength (ASTM D 4595): 48.57 lbs./ inch
 - c. Strength @ 5% Elongation: 22.86 lbs./ inch
 - d. Energy Absorption: 22 lbs./ inch
 - e. Grab Strength (ASTM D 4632): 167.42 psi
 - f. Burst Strength (ASTM D 3786) 166.79 psi
 - g. Tear Strength (ASTM D 4533): 83.15 lbs.
 - h. Puncture (ASTM D 4833): 56.18 lbs.
 - i. Hydraulic Properties: opening size (ASTM D 4751) 210 microns, US Sieve 70

D. Brick:

1. Common, grade SW, per ASTM C42.

E. Reinforcing Rods:

1. Steel, galvanized. #4 x 30"

- F. Bedding for Piping Material:
 - 1. Coarse, mason sand conforming to ASTM C-33.
- G. Trench Backfill in Planting Areas:
 - 1. Conform to requirements of sub grade materials as specified in Section 310000, Earthwork.
- H. Suitable excavated materials removed to accommodate the irrigation system work will be used as fill materials provided it conforms to the requirements of fill as noted above.
 - 1. Soils on site are to consist of sub grade materials and planting soil mix. Materials placed at various levels and thicknesses depending upon planting types and locations. Separation of materials will be maintained.
- I. Pipe Joining Materials:
 - 1. Solvent Cements for Joining PVC Piping: ASTM D 2564. Include primer according to ASTM F 656. Primer to be purple in color.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine the areas and conditions where Site Irrigation is to be installed. Notify the Commissioner, in writing, of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to the City of New York.

3.3 PREPARATION AND LAYOUT

- A. The location of sprinkler heads, valves, and piping, noted on the drawings, are diagrammatic to the extent that swing joints, off sets and all pipe fittings are not shown; exact locations of piping, sprinkler heads, valves, and other components are to be approved by the Commissioner in the field prior to the time of installation.
- B. Pipe routing is to be in accordance with the drawings, however, the Commissioner will have the right to change the route and/or depth of the pipe from that shown in cases where rock or other obstacles may interfere with the intended path or depth of the piping.
- C. Stake all proposed pipe and wire routes, sprinkler, valve, and controller locations in accordance with the locations noted on the drawings; provide staking prior to the commencement of work in any area of installation; furnish all supplies, equipment, and personnel necessary for the staking of the work.
- D. Notify the Commissioner a minimum of five (5) days prior to the scheduled staking.

- E. Coordinate the irrigation work with planting work as to have irrigation available at time of the turf and plant material establishment.
- F. Coordinate irrigation work with plumbing, electrical and sleeve work.
- G. Final system layout to be acceptable to the Commissioner.

3.4 CUTTING AND PATCHING

- A. Methods and materials used for cutting and patching to be acceptable to the Commissioner.
- B. Materials and finishes for all patching to match existing cut surface materials and finish.
- C. Cut through concrete and masonry with core drills. Jack hammers not permitted.
- D. Seal all openings in exterior walls watertight with link seals.

3.5 CONDUIT:

- A. Install all electrical conduits for irrigation control wiring.
- B. Backfill and thoroughly compact around all conduits.
- C. All conduits to have a minimum cover of eighteen inches (18").

3.6 SLEEVES:

- A. Install ends of sleeves six to twelve-inches (6"-12") beyond the edge of all pavement and curbs.
- B. Backfill and thoroughly compact around all sleeves.
- C. Coordinate the installation of sleeves for pipe and control wiring.
- D. All sleeve locations will be staked or permanently marked.

3.7 INSTALLATION

- A. Point of Connection, Backflow Preventer, Piping and Fittings:
 - 1. Refer to plumbing drawings for location of water supply and backflow preventer.
- B. Winterization Assembly:
 - 1. Install winterization assemblies as detailed on the Contract Drawings.
- C. Main Line Isolation Valve(s):
 - 1. Install main line Isolation valves as detailed on the Contract Drawings.
- D. Master Valve:

1. Install master valve on mainline and connect to the master valve terminal of the irrigation controller. See detail drawings.

E. Excavating and Backfilling:

1. Provide all excavation, backfilling and compaction required for the proper installation of all piping.
2. All piping will be trenched by hand or machine. Pipe pulling method is not will be used.
3. Minimum trench width will be three inches (3") on each side of the main line pipe and one and one-half inches (1½") on each side of lateral pipe to allow for proper compaction of backfill material.
4. Excavate to the depths required to allow a four-inch (4") depth of sand bedding material for piping when unsuitable bearing materials are encountered.
5. Minimum depth of cover:
 - a. Main line piping: - eighteen inches (18") of cover.
 - b. Lateral piping: - twelve inches (12") of cover.
 - c. Control wire: - twelve inches (12") of cover.
 - d. Control wire and pipe under pavement: - twenty-four inches (24") of cover.
6. The trench bottom should be smooth and free of rocks greater than one and one-half inches (1 1/2") diameter, large dirt clods or any frozen material. Excavation at bells (bell holes) should be provided to allow pipe will be fully supported along its length.
7. Bed pipe to provide uniform longitudinal support under the pipe to prevent low spots.
8. Backfill material will be free from rock, large stones, or other unsuitable substances to prevent damage to pipe during backfilling operations. Refer to section 310000 "Earthwork".
9. Install a four-inch (4") depth of sand bedding material where pipe settles on rock, shale or where the pipe cannot be fully supported along its entire length.
10. Initial four inches (4") of backfill will be properly compacted continuously above the bedding and around the pipe as well as between the pipe and undisturbed trench walls. Initial backfill will be done by hand.
11. Backfill trenches to match adjacent grade elevations with approved trench backfill material. Place and compact fill in layers not greater than six-inch (6") depth to ninety-five percent (95%) maximum dry density at optimum moisture content under all paving areas and eighty five percent (85%) maximum under planting areas.
12. Throughout the duration of the Contract refill any trenches that may have settled.
13. Excavate trenches; install piping and backfill during the same working day. Do not leave open trenches or partially filled trenches overnight.

F. Pipe Laying:

1. Inspect the pipe for defects before installation and fusion. Defective, damaged, or unsound pipe will be rejected.
2. Install PVC piping in dry weather when temperature is above 40 degrees Fahrenheit. Allow joints to cure at least twenty-four (24) hours at temperatures above 40 dig F before testing.
3. Make solvent weld joints in strict accordance with ASTM D2855 and the manufacturers printed instructions. Color primer will be used.
4. Allow joints to set at least twenty-four (24) hours before pressure is applied to the system.
5. Maintain pipe interiors free of dirt and debris. Close open ends of pipe by acceptable methods when pipe installation is not in progress.
6. Insert type fittings on laterals will be double clamped.

G. Clearances:

1. Minimum horizontal clearances between pipes: four-inches (4") for two-inch (2") pipe and less; twelve-inches (12") for two-inch (2") pipe and more.
2. Minimum vertical clearances between pipes: Two-inches (2").

H. Dielectric Fittings:

1. Install dielectric nipple for dissimilar-metal pipe connections.

I. Quick Coupling Valves, Fittings, and Accessories:

1. Quick coupling valves will be connected to the piping system by installing factory assembled PVC swing joints. Swing joint size will be the same size as that of the IPS inlet of the sprinkler, or as otherwise shown. The long nipple of the swing joint will be set between 20 and 60 degrees from the horizontal. Install quick coupling valve in six-inch (6") valve box and set within one inch (1") of the bottom of the box cover. See detail drawings.
2. All quick-coupling valves will be set flush to grade.
3. Install fittings, valves, sprinkler heads, risers, and accessories in accordance with manufacturer's printed instructions, except as otherwise indicted or as detailed on the Contract Drawings.

J. Valve Boxes and Valve Assemblies:

1. All valve box locations will be staked prior to installation and approved by the Commissioner prior to starting construction.
2. Valve boxes will be installed as shown in the Contract Drawings with adequate space for operation, service, and removal of the equipment in the box.
3. A minimum of six inches (6") of one half-inch (1/2") gravel will be placed under, in and around each valve box for both drainage and leveling the box. Gravel installed inside valve box is not acceptable.
4. Where necessary to properly fit the pipe, boxes will be neatly cut to provide a firm fit to the pipe. Do not allow soil or gravel to enter the box through these cut-outs.
5. Install filter fabric under gravel and around valve box as detailed on the Contract Drawings. Duct tape fabric to valve box.
6. Do not install more than two (2) valve assemblies per valve access box.
7. Do not group more than two (2) irrigation valve boxes together in one location. When grouping two valve boxes together allow twelve-inches (12") of space between boxes.
8. All boxes will be mounted plumb and flush to grade - extensions will be used as required for proper installation and setting. Surrounding grade will be established with the use of a leveling board not less than four feet (4') in length. Box will be set to the underside of this board.
9. Install all valve boxes in planters in a location approved by the Commissioner.
10. Seal threaded connections on pressure side of control valves with Teflon tape.
11. Automatic valve assemblies will be as per Contract Drawings using standard brass nipples, Heavy Duty brass fittings and PVC Schedule 80 nipples.
12. Ball valves will be installed in the "closed" position and to not be opened until the main line piping system has been pressurized and flushing has been completed through the blow-out valve assemblies.
13. Assemble brass to brass threaded fitting connections with non-hardening thread sealant.
14. Assemble threaded PVC to PVC, or brass to PVC, with the use of two (2) wraps of Teflon tape.
15. Assemble threaded connections so that thread sealant or Teflon tape does not enter the pipe or fitting.

16. Automatic valve manual bleeds to not be used for continual operation. For extended use without 24VAC, the manual bleed will be left in the open position and the flow to the zone controlled (on-off) by the manual ball valve.
17. Install valve identification tag on each valve assembly as shown on the drawings.

K. Valve Decoder Wiring and Installation

1. The valve decoder will be 1" x 4" x 2" with 2 mounting tabs for attaching the decoder to the side of a valve box.
2. The valve decoder will be connected to the two-wire path and will be mounted to the side of the valve box with the serial number face up.
3. The valve decoders will be attached to the valve wire using the connector specification in this document. All valve common wires will be attached to white common wire of the valve decoder using waterproof connector specified in this document.
4. The valve decoders will not share valve wires or common wires between valve decoders.
5. The maximum distance between the controller and the decoder is 5000 feet.
6. The maximum wire run between the valve decoder and the solenoid will be 150 feet using standard 14-gauge irrigation wire.
7. Each decoder will be polarized.
8. The decoder will be connected to the two-wire using the connector specification.
9. Each valve wire will be color coded relative to the serial numbers on the decoder.
10. The valve decoder will have built-in LEDs on the two-wire side that blink during communications.
11. The valve decoder will have a built-in LED on the valve side that is on when power is supplied to the valve.
12. The valve decoder will be installed in accordance with the manufacturer's published instructions.

L. Drip Irrigation:

1. Install drip irrigation as detailed on the Contract Drawings. Do not install dripper line in a serpentine fashion.
2. Install dripper line two-inches (2") below finish grade (not below mulch) in shrub beds.
3. Connect dripper line to header and exhaust manifold as detailed.
4. Install flush valve on exhaust manifold as detailed.
5. Staples will be spaced a maximum of three feet (3') and at every fitting to hold the dripper line in place.
6. Install indicator stake at all drip irrigation zones in a location approved by the Commissioner.
7. All drip irrigation zones will be tested, in the presence of the Commissioner, for proper coverage prior to installing mulch. Provide three (3) days' notice prior to testing.

M. Controller:

1. Controller will be wall mounted in the mechanical room in a location approved by the Commissioner. Install the controller in accordance with manufacturer's printed instructions and connected to form an operational system. Diagrammatic location shown on the drawings.

N. Controller Power Supply:

1. Power to the controller will be supplied from a dedicated circuit and brought to the controller location (Installed as part of work of other section(s) and contract).

2. Controller to have one circuit with full time 120 VAC GFCI outlet and 120 VAC to the controller with on/off switch.
3. Install lightning surge arrestor with mounting bracket on the 120 VAC power supply to the controller.
4. All wiring will be done by a licensed professional.
5. The controller will be grounded to the building ground by connecting the ground lug of the controller directly to the building ground using a bare #6 AWG wire.
6. Refer to and comply with electrical work requirements specified in Division 26.

O. Two-Wire Path:

1. Install electric control wires in conduit and locate in pipe trenches. Place conduit in trench adjacent to pipe. Install wire with slack to allow for thermal expansion and contraction.
2. Seal all wire conduits with duct sealant.
3. Install a thirty-six (36") wire loop at remote control valves in control boxes to allow raising the valve bonnet to the surface without disconnecting the wires when repair is required.
4. Install an expansion curl at all wire connections of all valves and splices. Expansion curls will be formed by wrapping the 24V control wire six (6) turns of wire around a one inch (1") diameter pipe, then withdrawing pipe.
5. Connect each remote-control valve to one station of a controller.
6. Connect remote control valves to common ground wire system.
7. Make all wire splices by baring a three-quarter inch (3/4") of copper conductor, twisting the leads together. Wire nuts will be used over the connection. Make wire splice completely waterproof using approved connector kits in strict accordance with the manufacturer's printed instructions.

P. Valve Decoders:

1. The valve decoder will be connected to each automatic valve and two-wire path in accordance with manufacturer's printed instructions.
2. The valve decoders will be attached to the valve wire and 2-wire path using waterproof connector.
3. The valve decoders will not share valve wires or common wires between valve decoders.
4. The maximum wire run between the valve decoder and the solenoid will be 150 feet (150').
5. The contractor will be responsible for accurately recording on the as-built drawings, as each decoder is being installed, the address number of the decoder at that location. It is also necessary that it be indicated which remote controls valves controlled by each specified decoder.

Q. Sleeves

1. Sleeves to extend one (1) foot beyond pavement, road or culvert and will be plugged with duct seal.

R. Waterproof Connectors:

1. All connectors will be installed per manufacturer's written specifications.
2. Verify that no loose, unshielded wiring will touch the ground, water, or other copper conductor causing a leakage of current to the ground or a short circuit across wires.
3. Score the outer jacket of the wire twelve inches (12") from each end without scoring conductor insulation.
4. The installer will strip one inch (1") of insulation from conductor without scoring the conductor.
5. Install an expansion curl on each wire conductor at all wire connections of all valves and splices.
6. Expansion curls will be formed by wrapping each wire conductor six (6) turns of wire around a one inch (1") diameter pipe, then withdrawing pipe.
7. Installer will bundle like conductors, twist them together, and trim off ½ inch of conductors.

8. Installer will twist a wire connector in a clockwise direction, and then place a moisture-proof tube over the top making sure connector is fully seated at the top of the tube. Snap the cover completely closed.
9. Installer will ensure that all connections are mounted in a vertical orientation to eliminate standing water inside the connector.
10. All splices will be made inside a valve box.

S. Grounding/Surge Protection:

1. The surge arrestor will be installed in an appropriate irrigation box and will be connected to the two-wire in accordance with the manufacturer's two-wire connector specifications.
2. The surge arrestor ground wire will be connected to a bare copper solid core ground wire using a screw clamp or split bolt type connector (no wire nuts of any kind are supported for grounding wires). The connector will be installed and insulated according to the manufacturer's specifications.
3. The bare copper wire will be connected to the grounding device using the grounding device specifications.
4. The first surge arrestor on the two-wire path will be within 25' of the controller.
5. This grounding point will be separate from the irrigation controller's enclosure grounding point.
6. A surge arrestor will be placed every 600' on the two-wire path.
7. A surge arrestor will be placed at the end of the two-wire that is the maximum distance from the controller.
8. Any branch of the two-wire that exceeds 50' will have a surge arrestor at the end.
9. On an uninterrupted wire run of more than 600', a surge arrestor will be placed at each end.
10. Install grounding rod as detailed and at a minimum distance of eight feet (8') at a right angle from the two-wire path.
11. Drive the ground rod vertically to its entire length.
12. Connect 6/1 AWG earth grounding, green insulated, solid bare copper wire to the ground rod with Cadweld connector. Screw type clamps are not acceptable.
13. The earth-to-ground resistance will be measured at the time of installation using a "Megger", or other similar instrument, and the reading will be no more than 10 Ohms. If the resistance is more than 10 ohms, additional ground plates and "Earth Contact Material" will be installed. It is required that the soil surrounding copper electrodes, within the Sphere of Influence, be kept at a minimum moisture level of 15% (by weight) always as dry soil does not conduct electricity.

T. Precipitation Sensor:

1. Install precipitation sensor in a location approved by the Commissioner. The precipitation sensor will be connected to the precip biCoder, two-wire path and controller in accordance with the manufacturers written instructions

U. Flow Sensor:

1. Install the flow sensor with a length of straight pipe before and after the flow sensor.
2. Upstream: The minimum length of straight pipe will be equal to 10 times the diameter of the upstream pipe (ex. 10 inches for 1-inch pipe).
3. Downstream: The minimum length of straight pipe will be equal to 5 times the diameter of the downstream pipe (ex. 5 inches for 1-inch pipe).
4. The flow sensor will be connected to the flow biCoder, two-wire path and controller in accordance with the manufacturer's written instructions.

V. Moisture Sensors:

1. Install moisture sensors in a location approved by the Commissioner.
2. The maximum wire run between soil moisture sensor and the controller will be the same as stated in the two-wire specifications.
3. The soil moisture sensor will be connected to the two-wire path.
4. The soil moisture sensor will be buried in an area of average water distribution between two sprinkler heads and placed off the centerline that the sprinklers create.
5. The soil moisture sensor will be installed in a location representative of the zones that the sensor is controlling.
6. The soil moisture sensor will be installed two – three inches (2”-3”) below the plant or in the top one third (1/3) of the root zone.
7. The soil moisture sensor will be buried with no air pockets around the sensor.
8. The soil moisture sensor will be marked to avoid damage during aeration.
9. All splices will be made inside the valve box with a direct burial waterproof connection.

3.8 PRESSURE TESTING

- A. Use Hydrostatic pressure test only. Pressure test using air or compressed gas is not acceptable.
- B. Testing should be performed at the lowest elevation along the pipe being evaluated.
- C. Solvent weld piping - Cap all risers, bleed air from pipes and perform pressure test upon completion of the main line pipe installation.
- D. Pressure will be applied by means of a pump connected to the pipe. All main line piping will be tested at 1.5 X the system operating pressure for three (3) hours. During this time, a visual inspection will be made by the Commissioner for leaks.
- E. A pressure reading will be taken after three (3) hours with an allowable pressure drop of 5 psi.
- F. All leaks will be repaired by removing the section of pipe at the joint and installing a new section using coupling, mechanical joint or union. After repair, the piping will be retested until approved by the Commissioner.
- G. All lateral piping will be tested under working conditions and visual inspection made for leaks.
- H. Notify the Commissioner seventy-two (72) hours prior to testing.

3.9 FLUSHING AND ADJUSTMENT

- A. After piping is installed and before sprinklers and spray heads are installed, open control valves and flush out the system with full head of water until pipe is free of all foreign materials.
- B. Adjustment of the sprinkler equipment will be done upon completion of the installation, to provide optimum performance and to assure that all sprinklers are properly set to grade.

- C. Adjust all automatic valves by means of the flow control stem and verify sprinkler discharge pressure on each lateral zone, with a pitot tube and gauge, to obtain optimum sprinkler performance in accordance with manufacturer's printed instructions.
- D. After the irrigation system, has been installed, test the entire system, and demonstrate that the entire system meets coverage requirements and automatic controls function properly.

3.10 FINAL REVIEW AND ACCEPTANCE

- A. When all irrigation work is completed and the "Construction Record Drawing" has been submitted a final review of the irrigation system will be made by the Commissioner, upon written notice requesting such a review. Submit the written notice at least ten (10) days prior to the anticipated review.
- B. Any irrigation equipment item required under this Contract that is malfunctioning or in need of repair will be removed and replaced. All replacements will be of equipment and/or material originally specified.
- C. Upon acceptance of the entire irrigation system, instruct the City of New York's designated personnel in the complete operation of the entire irrigation system.

3.11 CLEAN UP AND PROTECTION

- A. Upon completion of all work of this Section, remove and legally dispose of all excess materials resulting from the work operations of this Section.
- B. Accumulation of materials for disposal is not permitted. Disposal will be made as fast as materials accumulate.
- C. Adequately protect all paving, surfacing, and plant material and restore to original condition all damages resulting from work operations of this Section.

3.12 MAINTENANCE & OPERATIONS STAFF INSTRUCTION AND DEMONSTRATION

- A. After testing is completed and approved by the Commissioner, an instruction and demonstration session will be held for the M&O staff. The installed irrigation system will be demonstrated for one day (maximum 6 hours) for the district M & O Staff. The demonstrations will include manual and automatic operation including pumping. The demonstration will also include identification and operation of each component, trouble shooting for each component, winterizing the system, removal and replacement of defective components, general and specific requirements for the system maintenance, and a check list for frequent attention of components. Highlights of the demonstration, including identification of components will be videotaped for future M&O instruction.

3.13 OPERATIONS AND MAINTENANCE MANUAL

- A. The Contractor will furnish four (4) copies of the O & M Manual (Operation & Maintenance Manual) for the irrigation system and the associated mechanical system. The manual will include a checklist for trouble shooting and corrective measures in addition to operation and maintenance instructions.

END OF SECTION 328400

SECTION 329113 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section includes planting soils and layered soil assemblies specified by composition of the mixes.
- B. Related Requirements:
 - 1. Section 329300 "Plants" for placing planting soil for plantings.

1.3 DEFINITIONS

- A. AAPFCO: Association of American Plant Food Control Officials.
- B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.
- C. CEC: Cation exchange capacity.
- D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.
- E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.
- F. Imported Soil: Soil that is transported to Project site for use.
- G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.
- H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.
- I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.

- J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."
- K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified as specified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.
- L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.
- M. SSSA: Soil Science Society of America.
- N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.
- O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.
- P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.
- Q. USCC: U.S. Composting Council.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Include recommendations for application and use.
 - 2. Include test data substantiating that products comply with requirements.
 - 3. Include sieve analyses for aggregate materials.
 - 4. Material Certificates: For each type of imported soil and soil amendment and fertilizer before delivery to the site, according to the following:
 - a. Manufacturer's qualified testing agency's certified analysis of standard products.
 - b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.
 - c. Analysis of nonstandard materials, by a qualified testing agency, made according to SSSA methods, where applicable.

B. Sustainable Design Submittals:

1. Environmental Product Declaration (EPD): For each product.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For each testing agency.

B. Preconstruction Test Reports: For preconstruction soil analyses specified in "Preconstruction Testing" Article.

C. Field quality-control reports.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing, and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.

1.9 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction soil analyses on existing, on-site soil..

1. Notify Commissioner seven days in advance of the dates and times when laboratory samples will be taken.

B. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.

1. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements.

1.10 SOIL-SAMPLING REQUIREMENTS

A. General: Extract soil samples according to requirements in this article.

B. Sample Collection and Labeling: Have samples taken and labeled by soil scientist (RPSS) registered by the National Society of Consulting Soil Scientists or New York state-certified, -licensed, or -registered soil scientist under the direction of the testing agency.

1. Number and Location of Samples: Minimum of three representative soil samples from varied locations for each soil to be used or amended for landscaping purposes.

2. Procedures and Depth of Samples: According to USDA-NRCS's "Field Book for Describing and Sampling Soils."
3. Division of Samples: Split each sample into two, equal parts. Send half to the testing agency and half to Commissioner for records.
4. Labeling: Label each sample with the date, location keyed to a site plan or other location system, visible soil condition, and sampling depth.

1.11 TESTING REQUIREMENTS

A. General: Perform tests on soil samples according to requirements in this article.

B. Physical Testing:

1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":
 - a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
 - b. Hydrometer Method: Report percentages of sand, silt, and clay.
2. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
3. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
4. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85% compaction according to ASTM D 698 (Standard Proctor).

C. Chemical Testing:

1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3-Chemical Methods."
2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1- Physical and Mineralogical Methods."
3. Metals Hazardous to Human Health: Test for presence and quantities of RCRA metals including aluminum, arsenic, barium, copper, cadmium, chromium, cobalt, lead, lithium, and vanadium. If RCRA metals are present, include recommendations for corrective action.
4. Phytotoxicity: Test for plant-available concentrations of phytotoxic minerals including aluminum, arsenic, barium, cadmium, chlorides, chromium, cobalt, copper, lead, lithium, mercury, nickel, selenium, silver, sodium, strontium, tin, titanium, vanadium, and zinc.

D. Fertility Testing: Soil-fertility analysis according to standard laboratory protocol of SSSA NAFT NEC-67, including the following:

1. Percentage of organic matter.
2. CEC, calcium percent of CEC, and magnesium percent of CEC.
3. Soil reaction (acidity/alkalinity pH value).
4. Buffered acidity or alkalinity.

5. Nitrogen ppm.
6. Phosphorous ppm.
7. Potassium ppm.
8. Manganese ppm.
9. Manganese-availability ppm.
10. Zinc ppm.
11. Zinc availability ppm.
12. Copper ppm.
13. Sodium ppm and sodium absorption ratio.
14. Soluble-salts ppm.
15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
16. Other deleterious materials, including their characteristics and content of each.

E. Organic-Matter Content: Analysis using loss-by-ignition method according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."

F. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.

1. Fertilizers and Soil Amendment Rates: State recommendations in weight per 1000 sq. ft. for 6-inch depth of soil.
2. Soil Reaction: State the recommended liming rates for raising pH or sulfur for lowering pH according to the buffered acidity or buffered alkalinity in weight per 1000 sq. ft. for 6-inch depth of soil.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Do not move or handle materials when they are wet or frozen.
4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Regional Materials: Imported soil, manufactured planting soil, and soil amendments and fertilizers shall be manufactured within 500 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site. If materials are transported by rail or water, the distance transported by rail or water shall be multiplied by 0.25 to determine the distance to Project site.

2.2 PLANTING SOILS SPECIFIED BY COMPOSITION

- A. General: Soil amendments, fertilizers, and rates of application specified in this article are guidelines that may need revision based on testing laboratory's recommendations after preconstruction soil analyses are performed.

- B. Planting-Soil Type : Existing, on-site surface soil, with the duff layer, if any, retained; and stockpiled on-site; modified to produce viable planting soil. Blend existing, on-site surface soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:

1. Ratio of Loose Compost to Soil: Minimum 1:4 by volume.

- C. Planting-Soil Type : Imported, naturally formed soil from off-site sources and consisting of sandy loam according to USDA textures; and modified to produce viable planting soil.

1. Sources: Take imported, unamended soil from sources that are naturally well-drained sites where topsoil occurs at least 4 inches deep, not from agricultural land, bogs, or marshes; and that do not contain undesirable organisms; disease-causing plant pathogens; or obnoxious weeds and invasive plants including, but not limited to, quackgrass, Johnsongrass, poison ivy, nutsedge, nimblewill, Canada thistle, bindweed, bentgrass, wild garlic, ground ivy, perennial sorrel, and brome grass.
2. Additional Properties of Imported Soil before Amending: Soil reaction of pH 6 to 7 and minimum of 2 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
3. Unacceptable Properties: Clean soil of the following:

- a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
- b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 8 percent by dry weight of the imported soil.
- c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 2 inches in any dimension.

4. Amended Soil Composition: Blend imported, unamended soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:

- a. Ratio of Loose Compost to Soil: Minimum 1:4 by volume.

- D. Planting-Soil Type: Manufactured soil consisting of manufacturer's basic topsoil, sandy loam according to USDA textures, blended in a manufacturing facility with sand, stabilized organic soil amendments, and other materials to produce viable planting soil.
1. Additional Properties of Manufacturer's Basic Soil before Amending: Soil reaction of pH 6 to 7 and minimum of 2 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
 2. Unacceptable Properties: Manufactured soil shall not contain the following:
 - a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
 - b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 5 percent by dry weight of the manufactured soil.
 - c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 1-1/2 inches in any dimension.

2.3 INORGANIC SOIL AMENDMENTS

- A. Lime: ASTM C 602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
1. Class: T, with a minimum of 99 percent passing through a No. 8 sieve and a minimum of 75 percent passing through a No. 60 sieve.
- B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 sieve and a maximum of 10 percent passing through a No. 40 sieve.
- C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.
- D. Perlite: Horticultural perlite, soil amendment grade.
- E. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 sieve.
- F. Sand: Clean, washed, natural or manufactured, free of toxic materials, and according to ASTM C 33.

2.4 ORGANIC SOIL AMENDMENTS

- A. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance," and as follows:
1. Feedstock: Limited to leaves.
 2. Reaction: pH of 5.0 to 8.5.
 3. Soluble-Salt Concentration: Less than 10 dS/m.
 4. Moisture Content: 30 to 60 percent by weight.
 5. Organic-Matter Content: 30 to 65 percent of dry weight.
 6. Particle Size: Minimum of 98 percent passing through a 3/4 inch sieve.

- B. Wood Derivatives: Shredded and composted, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.
 - 1. Partially Decomposed Wood Derivatives: In lieu of shredded and composted wood derivatives, mix shredded and partially decomposed wood derivatives with ammonium nitrate at a minimum rate of 0.15 lb/cu. ft. of loose sawdust or ground bark, or with ammonium sulfate at a minimum rate of 0.25 lb/cu. ft. of loose sawdust or ground bark.

2.5 FERTILIZERS

- A. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.
- B. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
 - 1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.
- C. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:
 - 1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.
- D. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Place planting soil and fertilizers according to requirements in other Specification Sections.
- B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.
- C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.3 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

- A. Excavation: Excavate soil from designated area(s) to a depth of 6 inches and stockpile until amended.
- B. Unacceptable Materials: Clean soil of concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
- C. Unsuitable Materials: Clean soil to contain a maximum of 8 percent by dry weight of stones, roots, plants, sod, clay lumps, and pockets of coarse sand.
- D. Screening: Pass unamended soil through a 2-inch sieve to remove large materials.

3.4 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

- A. General: Apply and mix unamended soil with amendments on-site to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.
- B. Subgrade Preparation: Till subgrade to a minimum depth of 12 inches. Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off City of New York's property.
 - 1. Apply, add soil amendments, and mix approximately half the thickness of unamended soil over prepared, loosened subgrade according to "Mixing" Paragraph below. Mix thoroughly into top 4 inches of subgrade. Spread remainder of planting soil.
- C. Mixing: Spread unamended soil to total depth indicated on Drawings but not less than required to meet finish grades after mixing with amendments and natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.
 - 1. Amendments: Apply soil amendments, except compost, and fertilizer, if required, evenly on surface, and thoroughly blend them with unamended soil to produce planting soil.
 - a. Mix lime and sulfur with dry soil before mixing fertilizer.
 - b. Mix fertilizer with planting soil no more than seven days before planting.
 - 2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8 inches in loose depth for material compacted by compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
- D. Compaction: Compact each blended lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698 and tested in-place except where a different compaction value is indicated on Drawings.
- E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.5 PLACING MANUFACTURED PLANTING SOIL OVER EXPOSED SUBGRADE

- A. General: Apply manufactured soil on-site in its final, blended condition. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.
 - B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches. Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off City of New York's property.
 - 1. Apply approximately half the thickness of planting soil over prepared, loosened subgrade. Mix thoroughly into top 2 inches of subgrade. Spread remainder of planting soil.
 - C. Application: Spread planting soil to total depth indicated on Drawings, but not less than required to meet finish grades after natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.
 - 1. Lifts: Apply planting soil in lifts not exceeding 8 inches in loose depth for material compacted by compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
 - D. Compaction: Compact each lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698 except where a different compaction value is indicated on Drawings.
 - E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.
- ### LENDING PLANTING SOIL IN PLACE
- F. General: Mix amendments with in-place, unamended soil to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.
 - G. Preparation: Till unamended, existing soil in planting areas to depth indicated on Drawings. Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off City of New York's property.
 - H. Mixing: Apply soil amendments, except compost, and fertilizer, if required, evenly on surface, and thoroughly blend them into full depth of unamended, in-place soil to produce planting soil.
 - 1. Mix lime and sulfur with dry soil before mixing fertilizer.
 - 2. Mix fertilizer with planting soil no more than seven days before planting.
 - I. Compaction: Compact blended planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698 except where a different compaction value is indicated on Drawings.
 - J. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.6 APPLYING COMPOST TO SURFACE OF PLANTING SOIL

- A. Finish Grading: Grade surface to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.7 LAYERED SOIL ASSEMBLIES

- A. Layered Soil Assembly:
 - 1. Top Layer: Planting soil type as indicated on the Drawings.
 - 2. Subsequent Layers: Planting-soil type as indicated on the Drawings.

3.8 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform the following tests and inspections:
 - 1. Compaction: Test planting-soil compaction after placing each lift and at completion using a densitometer or soil-compaction meter calibrated to a reference test value based on laboratory testing according to ASTM D 698. Space tests at no less than one for each 1000 sq. ft. of in-place soil or part thereof.
- C. Soil will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.
- E. Label each sample and test report with the date, location keyed to a site plan or other location system, visible conditions when and where sample was taken, and sampling depth.

3.9 PROTECTION

- A. Protect areas of in-place soil from additional compaction, disturbance, and contamination. Prohibit the following practices within these areas except as required to perform planting operations:
 - 1. Storage of construction materials, debris, or excavated material.
 - 2. Parking vehicles or equipment.
 - 3. Vehicle traffic.
 - 4. Foot traffic.
 - 5. Erection of sheds or structures.
 - 6. Impoundment of water.
 - 7. Excavation or other digging unless otherwise indicated.
- B. If planting soil or subgrade is overcompacted, disturbed, or contaminated by foreign or deleterious materials or liquids, remove the planting soil and contamination; restore the subgrade as directed by Commissioner and replace contaminated planting soil with new planting soil.

3.10 CLEANING

- A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off City of New York's property unless otherwise indicated.
 - 1. Dispose of excess subsoil and unsuitable materials on-site where directed by the Commissioner.

END OF SECTION 329113

SECTION 329300 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

- A. Section Includes:
1. Plants.
 2. Tree stabilization.
 3. Tree-watering devices.

1.3 DEFINITIONS

- A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.
- C. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required.
- D. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than the minimum root spread according to ANSI Z60.1 for type and size of plant required.
- E. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.
- F. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.
- G. Finish Grade: Elevation of finished surface of planting soil.

- H. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
- I. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
- J. Planting Area: Areas to be planted.
- K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See Section 329113 "Soil Preparation" for drawing designations for planting soils.
- L. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.
- M. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.
- N. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.
- O. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 COORDINATION

- A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.
 - 1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.5 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
 - 1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.

2. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than 20 plants are required, include a minimum of three photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

B. Samples for Verification: For each of the following:

1. Trees and Shrubs: Three Samples of each variety and size delivered to site for review. Maintain approved Samples on-site as a standard for comparison.
2. Organic and Compost Mulch: 1-quart volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
3. Mineral Mulch: 2 lb of each mineral mulch required, in sealed plastic bags labeled with source of mulch. Sample shall be typical of the lot of material to be delivered and installed on-site; provide an accurate indication of color, texture, and makeup of the material.
4. Weed Control Barrier: 12 by 12 inches.
5. Root-Ball-Stabilization Device: One unit.
6. Slow-Release, Tree-Watering Device: One unit of each size required.
7. Root Barrier: Width of panel by 12 inches.

1.8 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer.

B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:

1. Manufacturer's certified analysis of standard products.
2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

1.9 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures for maintenance of plants during a calendar year.

1.10 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

- C. Pesticide Applicator: New York State licensed, commercial.
- D. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.
 - 1. Selection of plants purchased under allowances is made by Commissioner, who tags plants at their place of growth before they are prepared for transplanting.
- E. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.
 - 1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches above the root flare for trees up to 4-inch caliper size, and 12 inches above the root flare for larger sizes.
 - 2. Other Plants: Measure with stems, petioles, and foliage in their normal position.
- F. Plant Material Observation: Commissioner may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Commissioner may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.
 - 1. Notify Commissioner of sources of planting materials seven days in advance of delivery to site.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
- B. Bulk Materials:
 - 1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 - 2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 - 3. Accompany each delivery of bulk materials with appropriate certificates.
- C. Deliver bare-root stock plants within 36 hours of digging. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting. Transport in covered, temperature-controlled vehicles, and keep plants cool and protected from sun and wind at all times.

- D. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.
- E. Handle planting stock by root ball.
- F. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.
- G. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.
 - 1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.
- H. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.
- I. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
 - 1. Heel-in bare-root stock. Soak roots that are in less than moist condition in water for two hours. Reject plants with dry roots.
 - 2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
 - 3. Do not remove container-grown stock from containers before time of planting.
 - 4. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.12 FIELD CONDITIONS

- A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.
- B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.
 - 1. Spring Planting: May 10 - June 10.
 - 2. Fall Planting: September 10 to October 10.
 - 3. Deciduous trees and shrubs March 1 to May 1 and September 1 to December 1.
 - a. Trees known as fall transplant hazard shall not be moved in the Fall period.
- C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions.

1.13 GUARANTY SERVICE

- A. Provide all required planting maintenance, repairs or replacements for a period of two years from Date of Substantial Completion as put forth in Schedule B of the Addendum to the General Conditions.
1. Trees and Shrubs: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than two years.
 2. Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than two years.
 3. Repair or replace plantings and accessories that fail in materials, workmanship, or growth.
 4. Include the following remedial actions as a minimum:
 - a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
 - b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of guarantee period.
 - c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

- A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots are unacceptable.
 2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.
- B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Commissioner, with a proportionate increase in size of roots or balls.
- C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

- D. Labeling: Label at least one plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.
- E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

2.2 FERTILIZERS

- A. Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.
 - 1. Size: 5-gram tablets.
 - 2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 MULCHES

- A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:
 - 1. Type: Shredded hardwood.
 - 2. Size Range: 3 inches maximum, 1/2 inch minimum.
 - 3. Color: Natural.

2.4 WEED-CONTROL BARRIERS

- A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.
- B. Composite Fabric: Woven, needle-punched polypropylene substrate bonded to a nonwoven polypropylene fabric, 4.8 oz./sq. yd..

2.5 PESTICIDES

- A. General: Pesticide registered and approved by the EPA, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides.
- B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
- C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

1. Upright and Guy Stakes: Rough-sawn, sound, new hardwood or softwood with specified wood pressure-preservative treatment, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by length indicated, pointed at one end.
2. Flexible Ties: Wide rubber or elastic bands or straps of length required to reach stakes or turnbuckles.
3. Guys and Tie Wires: ASTM A 641/A 641M, Class 1, galvanized-steel wire, two-strand, twisted, 0.106 inch in diameter.
4. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
5. Guy Cables: Five-strand, 3/16-inch- diameter, galvanized-steel cable, with zinc-coated turnbuckles, a minimum of 3 inches long, with two 3/8-inch galvanized eyebolts.
6. Flags: Standard surveyor's plastic flagging tape, white, 6 inches long.
7. Staking-and-Guying Devices: Stake or anchor and adjustable tie systems to secure each new planting by plant stem; sized as indicated and according to manufacturer's written recommendations.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Arborbrace.
 - 2) Foresight Products, LLC.
 - 3) Villa Root Barrier.
 - 4) Or approved equal.

B. Root-Ball Stabilization Materials:

1. Upright Stakes and Horizontal Hold-Down: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by length indicated; stakes pointed at one end.
2. Wood Screws: ASME B18.6.1.
3. Root-Ball Stabilization Devices: At- or below-grade stabilization systems to secure each new planting by root ball and that do not encircle the trunk; sized according to manufacturer's written recommendations unless otherwise indicated.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Border Concepts, Inc.
 - 2) Foresight Products, LLC.
 - 3) Tree Staple, Inc.

2.7 TREE-WATERING DEVICES

- ### A. Slow-Release Watering Device: Standard product manufactured for drip irrigation of plants and emptying its water contents over two to three weeks; manufactured from UV-light-stabilized nylon-reinforced polyethylene sheet, PVC, or HDPE plastic.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BIO-PLEX.
 - b. Engineered Watering Solutions; PQ Partners, LLC.
 - c. Spectrum Products, Inc..
 - d. Or approved equal.
2. Color: As selected by Commissioner from manufacturer's full range.

2.8 MISCELLANEOUS PRODUCTS

- A. Root Barrier: Black, molded, modular panels minimum 18 inches high (deep), 85 mils thick, and with vertical root deflecting ribs protruding 3/4 inch out from panel surface; manufactured with minimum 50 percent recycled polyethylene plastic with UV inhibitors.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. DeepRoot Green Infrastructure, LLC.
 - b. NDS Inc.
 - c. Villa Root Barrier.
 - d. Or approved equal.
- B. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.
- C. Burlap: Non-synthetic, biodegradable.
- D. Gravel: Washed, sound rounded riverbed gravel or smooth-faced stone, in size range of a minimum 1/2 inch to 1 inch maximum, in readily available natural blue-gray gravel color range.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.
 1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.

2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
 3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
 4. Uniformly moisten excessively dry soil that is not workable or which is dusty.
- B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Commissioner and replace with new planting soil.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.
- B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
- C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Commissioner's acceptance of layout before excavating or planting. Make minor adjustments as required.
- D. Lay out plants at locations directed by Commissioner. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.4 PLANTING AREA ESTABLISHMENT

- A. General: Prepare planting area for soil placement and mix planting soil according to Section 329113 "Soil Preparation."
- B. Placing Planting Soil: Place manufactured planting soil over exposed subgrade.
- C. Before planting, obtain Commissioner's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.
- D. Application of Mycorrhizal Fungi: At time directed by Commissioner, broadcast dry product uniformly over prepared soil at application rate according to manufacturer's written recommendations.

3.5 EXCAVATION FOR TREES AND SHRUBS

- A. Planting Pits and Trenches: Excavate circular planting pits.
 1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.

2. Excavate approximately three times as wide as ball diameter for all stock.
3. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
4. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
5. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
6. Maintain supervision of excavations during working hours.
7. Keep excavations covered or otherwise protected after working hours and when unattended by Installer's personnel.

B. Backfill Soil: Subsoil and topsoil removed from excavations may be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Commissioner if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill 6-inch- diameter holes, 24 inches apart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.

D. Drainage: Notify Commissioner if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.6 TREE, SHRUB, AND VINE PLANTING

A. Inspection: At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare 2 inches above adjacent finish grades as required for each type of species.

1. Backfill: Planting soil . For trees, use excavated soil for backfill.
2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.

- a. Quantity: Three for each caliper inch of plant.
5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- D. Balled and Potted and Container-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch or 2 inches adjacent finish grades.
 1. Backfill: Planting soil . For trees, use excavated soil for backfill.
 2. Carefully remove root ball from container without damaging root ball or plant.
 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
 - a. Quantity: Three for each caliper inch of plant unless otherwise indicated..
 5. Continue backfilling process. Water again after placing and tamping final layer of soil.
- E. Fabric Bag-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch or 2 inches adjacent finish grades.
 1. Backfill: Planting soil. For trees, use excavated soil for backfill.
 2. Carefully remove root ball from fabric bag without damaging root ball or plant. Do not use planting stock if root ball is cracked or broken before or during planting operation.
 3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
 4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
 - a. Quantity: Three for each caliper inch of plant, unless otherwise indicated..
 5. Continue backfilling process. Water again after placing and tamping final layer of soil.

3.7 MECHANIZED TREE-SPADE PLANTING

- A. Trees may be planted with an approved mechanized tree spade at the designated locations. Do not use tree spade to move trees larger than the maximum size allowed for a similar field-grown, balled-and-burlapped root-ball diameter according to ANSI Z60.1, or larger than manufacturer's maximum size recommendation for the tree spade being used, whichever is smaller.
- B. Use the same tree spade to excavate the planting hole as will be used to extract and transport the tree.
- C. When extracting the tree, center the trunk within the tree spade and move tree with a solid ball of earth.

- D. Cut exposed roots cleanly during transplanting operations.
- E. Plant trees following procedures in "Tree, Shrub, and Vine Planting" Article.
- F. Where possible, orient the tree in the same direction as in its original location.

3.8 TREE, SHRUB, AND VINE PRUNING

- A. Remove only dead, dying, or broken branches. Do not prune for shape.
- B. Prune, thin, and shape trees, shrubs, and vines as directed by Commissioner.
- C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Commissioner, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.
- D. Do not apply pruning paint to wounds unless required by plant species for wound protection.

3.9 TREE STABILIZATION

- A. Trunk Stabilization by Staking and Guying: Install trunk stabilization as follows unless otherwise indicated on Drawings. Stake and guy trees more than 8 feet in height and more than 2 inches in caliper unless otherwise indicated.
 - 1. Site-Fabricated, Staking-and-Guying Method: Install no fewer than three guys spaced equally around tree.
 - a. Securely attach guys to stakes 30 inches long, driven to grade. Adjust spacing to avoid penetrating root balls or root masses. Provide turnbuckle for each guy wire and tighten securely.
 - b. For trees more than 6 inches in caliper, anchor guys to wood deadmen buried at least 36 inches below grade. Provide turnbuckle for each guy wire and tighten securely.
 - c. Support trees with bands of flexible ties at contact points with tree trunk and reaching to turnbuckle. Allow enough slack to avoid rigid restraint of tree.
 - d. Paint turnbuckles with luminescent white paint.
 - 2. Staking and Guying Device: Install staking and guying system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.
- B. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by the root ball unless otherwise indicated.
 - 1. Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

3.10 ROOT-BARRIER INSTALLATION

- A. Install root barrier where trees are planted within 48 inches of paving or other hardscape elements, such as walls, curbs, and walkways, unless otherwise indicated on Drawings.
- B. Align root barrier vertically and with bottom edge angled at 20 degrees away from the paving or other hardscape element, and run it linearly along and adjacent to the paving or other hardscape elements to be protected from invasive roots.
- C. Install root barrier continuously for a distance of 60 inches in each direction from the tree trunk, for a total distance of 10 feet per tree. If trees are spaced closer, use a single continuous piece of root barrier.
 - 1. Position top of root barrier according to manufacturer's written recommendations.
 - 2. Overlap root barrier a minimum of 12 inches at joints.
 - 3. Do not distort or bend root barrier during construction activities.
 - 4. Do not install root barrier surrounding the root ball of tree.

3.11 GROUND COVER AND PLANT PLANTING

- A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawings in even rows with triangular spacing.
- B. Use planting soil for backfill.
- C. Dig holes large enough to allow spreading of roots.
- D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system but to a depth not less than two nodes.
- E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.
- F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
- G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.12 PLANTING AREA MULCHING

- A. Mulch backfilled surfaces of planting areas and other areas indicated.
 - 1. Organic Mulch: Place organic mulch in areas and depths indicated, and in compliance with approved Shop Drawings.
 - 2. Gravel: Place gravel in areas and depths indicated, and in compliance with approved Shop Drawings.

3.13 INSTALLING SLOW-RELEASE WATERING DEVICE

- A. Provide one device for each tree.
- B. Place device on top of the mulch at base of tree stem and fill with water according to manufacturer's written instructions.

3.14 PLANT MAINTENANCE

- A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.
- B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.
- C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.15 PESTICIDE APPLICATION

- A. Apply pesticides and other chemical products and biological control agents according to the New York City Department of Environmental Protection and manufacturer's written recommendations. Coordinate applications with City of New York's operations and others in proximity to the Work. Notify the Commissioner before each application is performed.
- B. Pre-Emergent Herbicides (Selective and Nonselective): Apply to tree, shrub, and ground-cover areas according to manufacturer's written recommendations. Do not apply to seeded areas.
- C. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and according to manufacturer's written recommendations.

3.16 CORRECTIVE WORK AND REPLACEMENT

- A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Commissioner.
 - 1. Submit details of proposed pruning and repairs.
 - 2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
 - 3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Commissioner.

- B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Commissioner determines are incapable of restoring to normal growth pattern.
 - 1. Provide new trees of same size as those being replaced for each tree of 6 inches or smaller in caliper size.
 - 2. Provide one6-inch caliper size for each tree being replaced that measures more than 6 inches in caliper size.
 - 3. Species of Replacement Trees: Same species being replaced unless otherwise selected by the Commissioner.

3.17 CLEANING AND PROTECTION

- A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.
- B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off City of New York's property.
- C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.
- D. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.
- E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

END OF SECTION 329300

SECTION 333100 - SANITARY SEWERAGE PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 RELATED SECTIONS

- A. Trenching.....Section 312316.13
B. Earthwork.....Section 310000

1.3 SUMMARY

- A. Section Includes:
1. Sanitary sewer pipe and fittings.
 2. Underground pipe markers.
 3. Wye branches and tees.
 4. Sanitary Laterals.

1.4 REFERENCES

- A. ASTM International:
1. ASTM A746 - Standard Specification for Ductile Iron Gravity Sewer Pipe.
 2. ASTM D1784 - Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds.
 3. ASTM D3034 - Standard Specification for Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
 4. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
 5. ASTM D3212 - Standard Specification for Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
 6. ASTM D2729 - Standard Specification for Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
 7. ASTM D2855 - Standard Practice for Making Solvent-Cemented Joints with Poly (Vinyl Chloride) (PVC) Pipe and Fittings.
 8. ASTM D2564 - Standard Specification for Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Piping Systems.
- B. (Vinyl Chloride) (PVC) Pipe and Fittings.

1. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

C. American Water Works Association:

1. AWWA C110 - American National Standard for Ductile-Iron and Grey-Iron Fittings, 3 in. Through 48 in. (75 mm through 1200 mm), for Water and Other Liquids.
2. AWWA C111 - American National Standard for Rubber-Gasket Joints for Ductile Iron Pressure Pipe and Fittings.
3. AWWA C153 - American National Standard for Ductile-Iron Compact Fittings for Water Service.

D. Construction Documents and Specifications:

1. New York State Department of Transportation Standard Specifications (USC), the latest edition.
2. New York City Department of Buildings, Plumbing Code

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."
- B. Permits: Submit copies of construction permits obtained for this Work.
- C. Product Data: Submit catalog cuts and other pertinent data indicating proposed materials, accessories, details, and construction information for Commissioner approval.
- D. Submit reports indicating field tests made and results obtained to Commissioner.
- E. Manufacturer's Installation Instructions:
 1. Indicate special procedures required to install Products specified.
 2. Submit detailed description of procedures for connecting new sewer to existing sewer line and directional drilling, or pipe jacking installation for Commissioner approval.
- F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.6 CLOSEOUT SUBMITTALS

- A. Project Record Documents: Record location of pipe runs, connections, manholes, cleanouts, and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions, Section 014000 "Quality Requirements."
- B. Maintain one copy of signed and sealed documents on site.

1.8 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years documented experience.
- B. Installer: Company specializing in performing Work of this section with minimum 3 years documented experience.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store valves in shipping containers with labeling in place.
- B. Block individual and stockpiled pipe lengths to prevent moving.
- C. Do not place pipe or pipe materials on private property or in areas obstructing pedestrian or vehicle traffic.
- D. Do not place pipe flat on ground. Cradle to prevent point stress.
- E. Store UV sensitive materials out of direct sunlight.

1.10 FIELD MEASUREMENTS

- A. Verify field measurements and elevations are as indicated.

1.11 COORDINATION

- A. Coordinate Work with NYC DEP. Convene pre-installation meeting minimum of one week prior to starting Work of this Section.
- B. Notify affected utility companies minimum of 72 hours prior to construction.

PART 2 - PRODUCTS

2.1 MATERIAL

- A. Ductile Iron Gravity Sewer Pipe: ANSI/AWWA C150, bell and spigot ends. Conforming to ASTM A-377.
 - 1. Pipe Class: 8” through 12” pressure class 350 psi., 14” and larger pressure class 250 psi.
 - 2. Fittings: Ductile iron, AWWA C110. Compact fittings, AWWA C153.
 - 3. Joints: Rubber gaskets per AWWA C111.
- B. Underground Pipe Markers: Per details shown on plans.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 QUALITY CONTROL

- A. Verify existing sanitary sewer utility main size, location, and inverts are as indicated on Drawings.
- B. Final Inspection: Compliance with approved shop drawings. Commissioner to verify installation.

3.3 INSTALLATION

- A. Install in accordance with manufactures instructions and as indicated on Drawings.
- B. Install plastic pipe, fittings, and accessories in accordance with ASTM D2321.
- C. Install DIP, fittings, and accessories in accordance with applicable portions of AWWA C600.
- D. Seal joints watertight.
- E. Lay pipe to slope gradients indicated on Drawings with maximum variation from indicated slope of 1/8 inch in 10 feet. Begin at downstream end and progress upstream.
- F. Ensure entire pipe is supported by bedding.
- G. Assemble and handle pipe in accordance with manufacturer's instructions except as modified on the Drawings or by Commissioner.
- H. Keep pipe and fittings clean until work is completed and accepted by EOR. Cap open ends during periods of work stoppage.
- I. Lay bell and spigot pipe with bells upstream.

3.4 INSTALLATION - WYE BRANCHES AND TEES

- A. Install wye branches or pipe tees at locations indicated on Drawings concurrent with pipe laying operations.
- B. Use saddle wye or tee with stainless steel clamps for taps into existing piping. Mount saddles with solvent cement or gasket and secure with metal bands. Layout holes with template and cut holes with mechanical cutter.

3.5 INSTALLATION - SANITARY LATERALS

- A. Construct laterals from wye branch to terminal point at right-of-way or as indicated on Drawings.
- B. Where depth of main pipeline warrants, construct riser type laterals from wye branch.

3.6 BACKFILLING

- A. Backfill around sides and to top of pipe in accordance with Section 310000 "Earthwork."

3.7 FIELD QUALITY CONTROL

- A. Request inspection prior to and immediately after placing bedding.
- B. Perform test on sanitary sewage system in accordance with New York City Department of Environmental Protection. Perform the following tests:
 - 1. Gravity Sewer Testing:
 - a. Low pressure air test.
 - b. Infiltration test.
 - 2. Deflection Testing of Plastic Piping.
 - 3. Notify Commissioner 72 hours in advance of test and have witness test.
- C. When tests indicate Work does not meet specified requirements, remove work, replace, and retest.
- D. Final Inspection: Compliance with approved shop drawings. Coordinate with the Commissioner to verify installation.

3.8 PROTECTION OF FINISHED WORK

- A. Protect pipe and aggregate cover from damage or displacement until backfilling operation is in progress.

END OF SECTION 333100

SECTION 334000 - STORMWATER UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 RELATED SECTIONS

- A. Trenching.....Section 312316.13
- B. Earthwork.....Section 310000

1.3 SUMMARY

- A. Provide storm sewer system in accordance with the requirements of the Contract Documents. Work includes:
 - 1. Storm sewerage drainage piping, fittings and accessories, and bedding.
 - 2. Catch basins.

1.4 REFERENCES

- A. AASHTO M294 and M252 – Corrugated Polyethylene Pipe Smooth Interior.
- B. ASTM A48 – Gray Iron Casting.
- C. ASTM C923 – Resilient Connectors Between Reinforced Concrete Manhole Structures and Pipes.
- D. ASTM D1248 – Polyethylene Plastics Molding and Extrusion Materials.
- E. ASTM D3350 – Polyethylene Plastics Pipe and Fittings Materials.
- F. AWWA C115

1.5 SUBMITTALS

- A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."
- B. Shop Drawings: Indicate locations, elevations, invert elevations, piping, sizes and elevation penetrations of storm system piping and all appurtenant structures.

- C. Product Data: Provide component construction, features, configurations and dimensions.

1.6 PROJECT RECORD DOCUMENTS

- A. Accurately record actual locations of pipe runs, connections, catch basins, detention tank, and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.7 PERMITS AND APPROVALS

- A. Stormwater sewer system must be per NYC DEP-approved Site Connection Proposal application.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions, Section 01400 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SEWER PIPE MATERIALS AND ACCESSORIES

- A. High-Density Polyethylene Pipe: Comply with requirements of ASTM D1248, Type III, Category 4, grade P33, Class C or ASTM D3350 Cell Classification 324420C. All High Density Polyethylene (HDPE) pipe shall have NYCDOB MEA Approval.
- B. Ductile Iron: Comply with the requirements of AWWA C115-Flanged Ductile Iron Pipe with threaded flange.
- C. Trenching: Section 312316.13.
- D. Combined sewer pipe and appurtenances must conform to section 333100 Sanitary Sewerage Piping.
- E. Lid and Frame

2.2 DETENTION FACILITIES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide ADS StormTech Chamber System MC3500, or comparable product by one of the following:
 - 1. Contech Engineered Solutions.
 - 2. NDS.
 - 3. Cultech.
 - 4. Or approved equal.

2.3 PRETREATMENT STRUCTURE

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Hydro International 6-ft-dia "First Defense Unit", or comparable product by one of the following:
 - 1. Contech Engineered Solutions.
 - 2. Oldcastle Precast.
 - 3. ADS Pipe.
 - 4. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Verify the trench cut and excavation base to be hard, smooth, and dry.
- B. Verify excavation location, dimensions and elevation with contract drawings.

3.3 PREPARATION

- A. Hand trim excavations to required elevations and thoroughly compact as per Section 310000 "Earthwork".
- B. Remove large stones or other hard matter which may damage piping or impede consistent backfilling or compaction.
- C. Set all lines, elevations, and grades for utility and drainage system work and maintain for the duration of work. Provide careful maintenance of benchmarks, property corners, monuments, or other reference points.
- D. Protect and maintain in operating condition, existing utilities encountered during utility installation. Restore any damage to surface or subsurface improvements shown on the Drawings.
- E. Verify location, size, elevation, and other pertinent data required to make connections between existing utilities and drainage systems, and proposed construction indicated on Drawings.
- F. Coordinate structural placement with inlet and outlet pipe or duct sleeve locations and inverts required by other sections.
- G. Coordinate all building utility connection locations and elevations with architectural plans. Contractor must comply with The New York Administrative Code and the Rules of the City of New York.

- H. Install dewatering systems that will be required to construct the proposed utilities to the design elevations and using the methods described herein. Water pumped out of excavations must be disposed of on-site, and will not be discharged directly to the municipality's storm drainage system without prior approval of NYC DEP and NYS DEC.
- I. Subgrade areas identified by the Commissioner as not being capable of supporting the proposed structure must be excavated to suitable material or a maximum of two additional feet, backfill with bedding material and compact as specified in Section 310000 "Earthwork."

3.4 BEDDING

- A. Excavate pipe trench in accordance with Section 312316.13 "Trenching" for work of this section.
- B. Place and compact bedding material at trench bottom. Hand trim bedding for accurate placement of pipe to elevations indicated.
- C. Maintain moisture content of bedding material between 1% below and 3% above the optimum.

3.5 INSTALLATION PIPE

- A. Place pipe on minimum 6-inch deep bed of compacted bedding aggregate.
- B. Install pipe, fittings, and accessories in accordance with ASTM C12, ASTM D2321, manufacturer's instructions and/or The New York Administrative Code and the Rules of the City of New York. Seal joints to be watertight.
- C. Lay pipe to slope gradients noted on Contract Drawings; with maximum variation from true slope of 1/8 inch in 20 feet.
- D. Place and compact bedding aggregate at sides and to the springline of the pipe as per Section 310000 "Earthwork."
- E. Refer to Section 312316.13 "Trenching" for trenching and backfill requirements. Do not displace or damage pipe when compacting.

3.6 INSTALLATION – CATCH BASINS

- A. Form bottom of excavation clean and smooth and to correct elevation. Place minimum of 6" compacted bedding aggregate.
- B. Form and place cast in place concrete base pad, with provision for storm sewer pipe end sections, or place precast reinforced concrete pad at the location and elevation specified on the plans.
- C. Level top surface of base pad to receive concrete shaft sections, sleeved to receive storm sewer pipe sections.
- D. Establish elevations and pipe inverts for inlets and outlets as indicated.

- E. Mount lid and frame level in grout, secured to top cone section to elevation indicated.
- F. Outlet structures must be constructed in accordance with the section and elevations shown on the Contract Drawings.

3.7 INTERFACE WITH EXISTING FACILITIES

- A. Compliance With City of New York Requirements: Connections made into existing drainage facilities must be performed in accordance with the requirements of the NYC DEP. The Contractor will be required to comply with all such requirements, including securing of all required permits, and paying the costs thereof.

3.8 CONSTRUCTION WITHIN THE PUBLIC R.O.W.

- A. Construction within the public right-of-way must conform to all requirements of NYC DEP.

3.9 CLEANING AND RESTORATION

- A. The Contractor must clean the entire drainage system of all debris and obstructions. This must include, but not be limited to, removal of all formwork from structures, concrete and mortar droppings, construction debris and dirt. The system must be thoroughly flushed clean and the Contractor must furnish all necessary hose, pumps, pipe and other equipment that may be required for this purpose. No debris may be flushed into existing storm drains or streams; all debris must be removed from the system as well as any temporary or permanent detention ponds.
- B. After the system has been cleaned, the Contractor must thoroughly inspect the system and all restoration shown to be necessary must be promptly made by the Contractor.
- C. All Work of cleaning and restoration as specified herein must be performed at the Contractor's expense and to the complete satisfaction of the Commissioner.

3.10 FINAL INSPECTION

- A. Upon completion of the Work and before final acceptance by the City of New York, the entire drainage system must be subject to a final inspection in the presence of the Commissioner or NYC DEP representative. The Work may not be considered as complete until all requirements for line, grade, cleanliness, and workmanship have been completed to the satisfaction of the Commissioner and/or the Commissioner.

END OF SECTION 334000

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

May 16, 2022

ADDENDUM No. # 1

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

850022B0074 – HL82BRONX

Bronx Animal Care Center and Veterinary Clinic

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for May 27, 2022, at 2:30 pm is rescheduled to June 14, 2022 at 2:30 pm.**
Contract #1 – General Construction Work
2. **Bidders Questions and Responses to Questions:**
See Attachment A.
3. **Revisions to PASSPort forms:**
See Attachment B.
4. **Revisions to Documents:**
See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFX tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

Richard Jones, PE CWI
Executive Director, Specifications

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Center & Veterinary Clinic

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	The following Drawings are missing from the Drawing Index and Set: P-334, P-400, FP-334, TA-002, TA-600, TN-802. Please provide.	All drawings noted in this list are not part of the set. References to them have been removed from the documents.
2	Provide missing drawing S-701 from bid set.	Drawing is not part of the set. All references have been removed from the document.
3	Provide project start date.	Contract start date will occur after required procurement activities are completed and contract is registered.
4	L-701 Detail 08 - provide an indication as to where this detail occurs	L-701/08 Gravel Scupper occurs at curb cuts by the planter islands in parking area.
5	L-750 Detail 01 and 02 Brick Fence elevation these details refer to the Structural Drawings, we do not see these details indicated on the Structural Drawings. Please provide.	See 09/FO-302.00 for brick fence foundation detail.
6	C-130 / L-750 note on Drawing C-130 refers us to L-750, Drawing L-750 reflects the brick fence detail. Please provide correct detail.	Refer to L-742 Animal Enclosure Fence.
7	C-130 / L-740 note refers us to Sheet L-740 for privacy fence. Sheet L-740 indicates "Omega 10" fence system. Please clarify.	Refer to L-741 Aluminum Privacy Fence, as well as specification section 323116 Welded Wire Fences and Gates for additional information and manufacturers.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Center & Veterinary Clinic

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to Volume 2:

- Updated Prevailing Wage Schedule (dated 01/31/2022)

Revisions to Volume 3:

- Updated Addendum to the General Conditions, Schedule C, List of Drawings

Updated DDC PASSPort Bid Information

Updated COVID-19 Notice to Bidders

Revisions to the Bid Drawings:

Architectural Scope:

- **G-030.00**-Survey document updated
- **Z-001.00**-Zoning numbers have been updated, building height, total zoning deductions, sally port diagram added.
- **Z-040.00**-Zoning heights numbers have been updated for clarity.
- **Z-050.00**-Zoning deduction numbers have been refined and coordinated
- **Z-041.00, A-000.00** - Site plan updates related to new electrical transformer work within project limits, Refer to Landscape series & Electrical for complete scope. Zoning compliance notations have been added.
- **A-020.00, A-055.00, A-111.00, A-113.00, A-114.00** - Xray Rooms shielding requirements are now included.
- **A-117.00, A-654.00** - Updated layout and millwork drawings for west lobby nook on FL 02
- **A-204.00** - Updated lighting layout for Rms 1W03, 1W08, 1W14
- **A-205.00** - Updated lighting layout for Rms 1L07, 1L08
- **A-209.00** - Updated lighting layout for Rms 2B02, 2B28, 2B29
- **A-210.00** - Updated lighting layout for Rms 2B27, 2B28, 2B29
- **A-900.00 & A-901.00** - Updated plan location drawings to receive (3) artwork pieces (paintings), updated detail for installation

Civil

- **C-110.00:**
 - Inlet protection has been revised for the shift of BH-1 structure.
 - Inlet protection has been added to the plans for BH-5.
 - Inlet protection has been added to the plans for BH-6.
 - Inlet protection has been added to the plans for BH-7.
- **C-130.00:**

- Gravel scuppers has been added to the plans in the locations where there are curb openings adjacent to landscape islands.
- Transformer concrete pad has been added to the plans.
- PME concrete pad has been added to the plans.
- Protective bollards for PME structure have been added to the plans.
- **C-140.00 Grading Plan**
 - 15-foot contour revised on the plans to accommodate transformer at the northeast area of the project site.
 - 15-foot contour and adjacent 16-foot contours revised on the plans to accommodate the shift of the BH-1 structure.
 - Transformer concrete pad elevation added to the plans.
 - PME concrete pad elevation added to the plans.
 - MH-1 rim spot elevation added to the plans.
 - MH-2 rim spot elevation added to the plans.
 - MH-2A rim spot elevation added to the plans.
 - MH-3 rim spot elevation added to the plans.
 - MH-4 rim spot elevation added to the plans.
 - PTS-1 rim spot elevation added to the plans.
 - OCS-1 rim spot elevations added to the plans.
 - MH-5 rim spot elevation added to the plans.
 - BH-5 spot elevation added to the plans.
 - BH-6 spot elevation added to the plans.
 - BH-7 spot elevation added to the plans.
 - MH-6 rim spot elevation added to the plans.
 - PTS-2 rim spot elevation added to the plans.
 - 16-foot contour added to the plans adjacent to the BH-5 structure.
 - Curb opening top and bottom of curb elevations added to the plans along the parking island curb.
 - Top of curb and bottom of curb elevations have been revised on the plans for the parking island on the west side of the projects site.
 - 16-foot contour adjacent to BH-3 revised on the plans.
 - 16-foot contour added to the plans adjacent to the BH-6 structure.
 - Top and bottom of curb elevations added to the plans adjacent to the BH-6 structure for both curb openings along the parking island curb.
 - 16-foot contour added to the plans adjacent to the BH-7 structure.
 - Top and bottom of curb elevations added to the plans adjacent to the BH-7 structure for both curb openings along the parking island curb.
 - Top and bottom of curb elevations revised on the plans for the parking island adjacent to the Sally Port.
- **C-150.00 Drainage Plan:**
 - Pipe crossing callout at northwest corner of propped building removed.
 - Pipe slope for pipe within right-of-way revised from 1.80% slope to 1.00% slope.
 - Pipe segment between BH-1 to BH-5 added to plans.
 - Beehive drain structure BH-5 added to plans & drainage table.
 - Pipe segment between MH-4 to BH-1 has been revised from 11 LF to 18 LF.
 - Pipe segment between BH-4 to BH-6 added to plans.
 - Beehive drain structure BH-6 added to plans & drainage table.
 - Pipe segment between BH-6 to BH-7 added to plans.
 - Beehive drain structure BH-7 added to plans & drainage table.
 - Stormwater and Sanitary Calculations have been revised per updates from Site Connection Application.
 - Drainage table items:

- BH-1 invert in added.
- BH-1 invert revised to 11.43.
- BH-4 invert in (SE) added.
- BH-5 added to table.
- BH-6 added to table.
- BH-7 added to table.
- **C-160.00** Utility Plan
 - Previous electrical connection at the northeast corner of the site has been removed.
 - Transformer structure location added to the plans.
 - Proposed PME structure location added to the plans.
 - Electrical line has been added to the plans from the transformer to the PME structure.
- **C-500.00** Civil Details
 - Detail 19: concrete-filled steel bollard has been added to the sheet.
- **C-501.00** Civil Details
 - Detail 7 has been revised to show rectangular weir, inflow pipes, and proper layout of manhole lids.
- **C-502.00** Civil Details
 - Detail 5 has been revised to include the SC-740 Structure and associated elevations.
- **C-503.00** Civil Details
 - Addition of new sheet #14 in site plan package set.
- **BPP-002.00** Builders Pavement Plan Site Plan & Profile Bartow Avenue
 - Callout added to plans for location of proposed 4kV connection to the project site.
 - Callout for electrical connection t the northeast section of the site removed from plans.

Landscape Scope:

- **L-100, L-110, L-120, L-130**, Landscape Layout plans
 - Pad mounted transformer has been located at the north-east corner of the site in front of the building with clearance required by Con Ed.
 - Pad mounted Con Ed switch has been located at the north-west corner of site with clearance required.
 - Planter at the north-east corner of site changed in size to accommodate pad mounted transformer.
 - Beehive drains have been added per Civil's addendum set per zoning code in planters adjacent to parking areas.
- **L-200, L-210, L-220, L-230** Landscape Materials & Furnishing plans
 - Planting material has changed to concrete material at pad mounted transformer area.
 - Planting material has been removed at pad mounted Con Ed switch area.
 - Flush curbs have been added to provide positive drainage into planters adjacent to parking.
 - Gravel scuppers have been added next to flush curb to provide positive drainage into planters adjacent to parking.

- **L-300, L-310, L-320, L-330, L-340**, Landscape Planting plans and schedule
 - Planting has been updated per layout changes in the pad mounted transformer area, pad mounted Con Ed switch area and planter with newly added beehive drains.
 - Planting quantity has been changed per layout changes in the above areas.
- **L-701** Landscape edging detail
 - Gravel scuppers have been added between planting areas and flush concrete curbs.

Mechanical

- **M-001.00**- Indicated drawings issued under Addendum #1
- **M-311.00**- Added flexible ductwork connections and corresponding new work note.
- **M-321.00**- Added flexible ductwork connections and corresponding new work note.
- **M351.00**- Added flexible piping joints and corresponding new work note.
- **M-361.00**- Added flexible piping joints and corresponding new work note.
- **M-602.00**- Added flexible joint details for ductwork and piping to be used at locations along the seismic joint in the building.

Electrical

- **E-001**- Indicated drawings issued under this Addendum. Updated lighting notes.
- **E-002**- Updated Scope for Normal electrical service per Con Ed, Updated outstanding items
- **E-200**- Updated the routing of underground duct bank, Revised electrical service location and added pad mounted transformer.
- **E-201**- Added note #3 for conduit passing through joint expansion requirement.
- **E-202** - Added note #3 for conduit passing through joint expansion requirement.
- **E-310** - Added receptacle for plugin undercabinet lighting fixtures.
- **E-311**- Added receptacle for plugin undercabinet lighting fixtures.
- **E-312**- Added receptacle for plugin undercabinet lighting fixtures.
- **E-330**- Indicated the secondary power source switch inside the emergency generator enclosure
- **E-332**- Added power to motorized valves
- **E-500**-Updated electrical Service - Revised secondary power source to FA to fusible switch.
- **E-600**- Updated note of the Con ed utility line underground duct conduits and cross section.
- **E-601**- Added Pad mounted transformer grounding details.
- **E-700**- Updated Lighting Fixture schedule
- **E-703**- Updated panel ELP-EQ-2S schedule
- **E-709**- Updated Lighting Control Zoning schedule
- **EL-310**- Updated Lighting fixtures in Room 1W03, 1L07 and 1L08
- **EL-311**-Updated Lighting fixtures in Room 1D07, 1W08 and Corridor 1W14
- **EL-313**-Adjust switch locations in multiple rooms to avoid being at glass/window.
- **EL-314**- Deleted lighting control zone designation in area, animal housing to have local controls. (Non-hatched areas)
- **EL-320**- Deleted one (1) type TDA fixture in corridor 2B02, Updated Lighting fixtures in Room 2B28, and 2B29
- **EL-321**- Deleted two (2) type TA-5 fixture in room 2B27
- **EL-322**- Deleted lighting control zone designation in area, animal housing to have local controls. (Non-hatched areas), Adjust switch locations in multiple rooms to avoid being at glass/window.
- **EL-323** - Deleted lighting control zone designation in area, animal housing to have local controls. (Non-hatched areas)

Fire Protection

- **FP-001.00**- Indicated drawings issued under Addendum #1
- **FP-311.00**- Added note to call out for installation of 6 elbow swing expansion loop to be installed on the

domestic water and clinic water piping. Added note for BAA flex-tend fittings to be installed on sanitary, storm and vent piping.

- **FP-321.00-** Added note to call out for installation of 6 elbow swing expansion loop to be installed on the domestic water and clinic water piping. Added note for BAA flex-tend fittings to be installed on sanitary, storm and vent piping.
- **FP-610.00-** Add detail for 6 elbow swing expansion loop.

Fire Alarm

- **FA-001.00-** Indicated drawings issued under this Addendum, Updated Legend for FACP (from FCC)
- **FA-310.00-** Deleted one speaker/strobe device within staircase A.
- **FA-311.00-** Indicated FA-ATS in emergency electrical room and added total of four (4) fire alarm speaker/strobe devices in MEP rooms.
- **FA-313.00-** Deleted one speaker/strobe device within staircase A.
- **FA-320.00-** Indicated FA-ATS in emergency electrical room and added total of four (4) fire alarm speaker/strobe devices in MEP rooms.
- **FA-323.00-** Deleted one speaker/strobe device within staircase B.
- **FA-330.00-** Indicated the secondary power source switch inside the emergency generator enclosure
- **FA-331.00-** Deleted the secondary power source switch outside the standby generator enclosure
- **FA-500.00-** Coordinated fire alarm device quantity with floor layout

1. WHERE DO VENDORS FIND THE ADVERTISEMENT DOCUMENTS?

For non-PQL projects:

- Go here: https://passport.cityofnewyork.us/page.aspx/en/rfp/request_browse_public
 - Filter Industry: "Construction"
 - Filter RFX status: "Released", "Planned", and/or "Responses Received".
 - If necessary, filter Agency: "Department of Design and Construction"
- Click on the link for the Procurement Name you are interested in.

For PQL projects: Documents will not be posted on the public portal, but will be available to the PQL once logged in to PASSPort.

In all cases, the documents will no longer be on the DDC Bid Documents Online website.

2. WHAT IS AN RFX?

"Request for Anything". Basically a procurement or solicitation.

3. WHAT HAPPENED TO THE BID BOOKLET?

The Volume 1 bid booklet previously consisted of two types of materials:

1. Information for the bidder
2. Forms for use during the bid.

The material has been restructured as follows:

- Volume 1 Bid Booklet: All information for the bidder. This is not project specific.
- PASSPort Questionnaire: Forms for use during the bid.
- PASSPort Item Grids: Where bid prices are entered.
- PASSPort Subcontractor and Joint Venture: where subcontractors are entered. The subcontractor information is used to determine compliance with the M/WBE goals.

4. HOW DO VENDORS GET HELP WITH PASSPORT?

- Manuals: <https://www1.nyc.gov/site/mocs/systems/passport-user-materials.page>
 - Highlight: [Finding and Responding to RFX for Vendors](#) PDF
- Helpdesk: <https://mocsupport.atlassian.net/servicedesk/customer/portal/8>
- MOCS Website: <https://www1.nyc.gov/site/mocs/systems/contact-passport.page>

5. HOW DO VENDORS SUBMIT PRE BID QUESTIONS?

All PBQ's must be sent to CSB_ProjectInquiries@ddc.nyc.gov per current procedure.

The PASSPort Discussion feature is not being used.

6. BUT THE MOCS HELPDESK TOLD ME TO SEND A MESSAGE IN THE PASSPORT DISCUSSION, WHAT DO WE DO?

Don't use the PASSPort Discussion feature, email CSB_ProjectInquiries@ddc.nyc.gov.

7. WHAT HAPPENED TO M/WBE SCHEDULE B?

M/WBE participation is entered using the Subcontractor and Joint Venture tab in PASSPort. Please refer to the file "Schedule B – WMBE Utilization + Waiver Instructions" in the RFX Documents.

8. HOW DO VENDORS SUBMIT A M/WBE WAIVER REQUEST?

Vendors must follow the instructions in the Volume 1 Bid Booklet, section M/WBE Notice to Prospective Contractors and the Schedule B – MWBE Utilization + Waiver Instructions.

9. WHAT DO VENDORS ACTUALLY SUBMIT TO DDC ON THE BID DAY?

- You must submit by hand to DDC before the bid due date:
 - The Bid Submission form, found in the PASSPort Questionnaire
 - If applicable, the certified check for bid security.

No other paper submissions will be accepted.
- The paper bid submission must be delivered in person. No mail, FedEx, UPS, or courier deliveries will be accepted.

The price on the Bid Submission form must be the total bid price – including all allowances and item grids.

**PAPER ONLY BID SUBMISSIONS WILL BE DEEMED NON-RESPONSIVE.
YOU MUST SUBMIT YOUR BID ELECTRONICALLY IN PASSPORT AND HAND DELIVER
TO DDC THE SIGNED BID SUBMISSION FORM (AND CERTIFIED CHECK, IF APPLICABLE)
FOR THE BID TO BE CONSIDERED RESPONSIVE.**

10. WHAT CHANGED IN THE ADDENDUM FORMAT?

We have updated the addendum format to standardize between Public Buildings and Infrastructure, and to better accentuate where the changes are. The addendum will have up to three Attachments:

- A. Bidder Questions and Responses to Questions
- B. Revisions to PASSPort Forms. This includes:
 - a. Date changes
 - b. M/WBE goal changes
 - c. Questionnaire changes (includes Infrastructure Bid Schedule changes)
 - d. Item grid changes
- C. Revisions to Documents.

NOT ALL ADDENDUMS INCLUDE ALL THREE ATTACHMENTS.

11. WHAT IS AN ADDENDUM ROUND?

- Addendum rounds are separate from addendums.
- Addendum rounds allow for changing:
 - Questionnaire (including Infrastructure Bid Schedule)
 - Item Grids
 - Removing or revising documents
 - Changing or adding pre-bid conferences
- The following can be changed via addendum without an addendum round:
 - Change bid due date and bid opening date
 - Change M/WBE goals
 - Add documents

12. THE DATES IN PASSPORT DON'T MATCH DATES FROM SOME OTHER SOURCE. WHAT DO WE DO?

The dates in PASSPort are what govern and should be used. If you suspect an error or believe there is insufficient time to prepare your bid, please submit a pre-bid question to CSB_ProjectInquiries@ddc.nyc.gov.

13. HOW DO WE GET A PLANHOLDER LIST?

Planholder lists are no longer automatically generated with PASSPort. If you would like a planholder list, please submit a Pre-Bid Question to CSB_ProjectInquiries@ddc.nyc.gov and one will be provided via addendum.

14. HOW DO VENDORS GET NOTIFIED OF PROJECTS BEING ADVERTISED?

- Set your PASSPort profile to sign up for the [right commodity codes](#), and [enroll to those codes](#).
- Currently DDC is using the following commodity codes:
 - Public Buildings:
 - 110 GC
 - 105 Electrical
 - 111 HVAC
 - 116 Plumbing
 - 117 Roofing
 - Infrastructure:
 - 131 Bridge
 - 135 Parks
 - 137 Roadwork
 - 141 Utilities
- Projects will use only one code, but may have work in multiple codes. Examples:
 - An Infrastructure project where the bulk of the work is sewer reconstruction but still has road construction and paving will be entered as code 141.
 - A Public Buildings project being bid as a GC contract but contains electrical and roofing work will be entered as code 110.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT C – REVISIONS TO PASSPORT FORMS

This Addendum initiates Round 2 of the procurement.

Please note that numbering of addenda is independent of rounds.

Bid Opening Date Changes:

The Bid Opening scheduled for May 27, 2022 at 2:30pm is rescheduled for June 14, 2022 at 2:30pm.

Questionnaire Changes:

None

Item Grid Changes:

None

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

June 1, 2022

ADDENDUM No. # 2

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

850022B0074 – HL82BRONX

Bronx Animal Care Center and Veterinary Clinic

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for June 14, 2022, at 2:30 pm is rescheduled to June 29, 2022 at 2:30 pm.**
Contract #1 – General Construction Work
2. **Bidders Questions and Responses to Questions:**
See Attachment A.
3. **Revisions to PASSPort forms:**
See Attachment B.
4. **Revisions to Documents:**
See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFX tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

Richard Jones, PE CWI
Executive Director, Specifications

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Center & Veterinary Clinic

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Materials legend A-071 calls for ACT 1 and 2 to be "ULTIMA Lay In and Tegular". Both tiles are available in lay-in or tegular. Please provide an Armstrong tile # for ACT1 and ACT2?	The Basis of Design model numbers are as follows: ACT1 - Armstrong Ultima Lay-In #1910 ACT2 – Mix of Armstrong Ultima Lay-In #1990, #1991 Refer to RCP for ACT layout patterns, and specification section 095113 for additional manufacturers or approved equal.
2	Materials legend A-071 calls for ACT 2 to be 2X4, on A-209; for example, Rooms 2B33, 2B34, 2B02, etc., call for ACT 2, but clearly shows a 2X6 tile. 2B32 is showing a mix of 2X4 and 2X6. Please Clarify.	The referenced rooms use a mix of 2X4 and 2X6 to align with the lighting design. Refer to RCP for ACT layout patterns.
3	Materials legend A-071 calls for ACT 3 to be "Healthzone Ultima 2X2." This tile is available in lay-in or tegular. Please provide an Armstrong tile # for ACT3.	The Basis of Design model number for ACT3 is Armstrong Healthzone Ultima Lay-In #1445. as basis of design. Refer to specification section 095113 for additional manufacturers or approved equal.
4	ACT 1, 2, and 3 all are compatible with many different types of grids. The specifications only mention "9/16 wide." Many different types of grid are available 9/16" wide. Please provide a grid type for ACT1, 2, and 3.	Grid types are as per design basis for lay in tile only. The base grid type is applicable to all lay-in tile, including ACT 1,2 and 3.
5	Please indicate the limits of the Construction Fence. Also please indicate if it's a chain-link fence or painted 2x4 with plywood.	For Construction Fence requirements, refer to "Division 01 – DDC Standard General Conditions Single Contract Projects; Section 01 50 00 'Temporary Facilities, Services And Controls;' Article 3.13 'Work Fence Enclosure.'
6	Please confirm the size of the AST: Specification 231323, 2.1B notes– 400 gallons. M-106.00, 23,A, b – 3,000 gallons M-404.00 – 300-500 gallons M-530.00 – 300 gallons M-600, detail 7 – 500 gallons M-701.00 – 300 gallons	The tank is 300 gallons. Drawings M-106 and M-600 and Specification section 231323 have been updated for Addendum #2.

7	What's the burn rate of the generator? Bulk tank is to be sized for run time of 24 hours.	The burning rate of the diesel generator is 10.9 gal/hr at full load of 150KW. For 24 Hours, it will require 252 Gallons. Normally, the load will be less than the full generator capacity and the actual consumption during 24 hour period will be less than 252 Gal.
8	Are we to follow PSI tank rating per NYS or NYC?	The fuel oil tank is to be designed to follow NYC requirements for pressure rating.
9	The specifications mention that artwork has been integrated the into Bid Documents, including engineering and detailing of all resources necessary to support the artwork. The only direction, though, is on page A-900. A small amount of information is available for the lobby ceiling artwork, but there is no information on other integrated art and there is no schedule. Please advise.	Art scope for hung paintings has been refined in Addendum #1 (Refer to Addendum 1, Attachment B, A-900.) Art Sculpture support from lobby ceiling has been included in structural drawing set. In addition, Refer to A-900 for further clarification of qty of art pieces to be installed. Also see sheet S-109.00.
10	"There are conflicting requirements in Specification section 260519, Article 3.4 and 260533, Article 3.1C5. Please confirm AC and MC type cables are acceptable for concealed branch wiring.	Please follow both specifications. For branch circuit below slab or in concrete, use ENT. For branch circuits above ceiling and in interior wall, use EMT. Contractor shall not use expose AC/MC cable in MEP room with open ceiling; otherwise, it is acceptable for use.
11	Re: Drawing BPP-0002, please clarify the notes referencing "under separate application". Is this work part of the this contract?	Scope of work referred to on BPP-002 is part of the scope under this contract. Note indicated in comment is for purposes of DOB approvals referring that BPP is under separate application from Main Building Application.
12	Re: Misc Details FO.301.00, please provide the thickness of the under slab insulation.	2" under all housing portions of the project, 1" everywhere else. Refer to updated slab edge drawing A-131.
13	Re: Drawing S-514, "Typical raised slab detail:" Where does this detail apply?	The raised slabs/pads are called out on plan, sheets S-108 & S-109. The only locations where these are specified is under the generators (two units, so two pads) and under the chiller banks (four sets of units, so four pads there). The details accommodate various pad heights.
14	Re: Drawings A-111 A-113, who is responsible to provide Xray Equipment in room 1S24 and 1G03?	X-Ray equipment will be procured and installed by a separate contract by DOHMH.

15	Re: Drawings A-111 A-113, who is responsible for the installation of the x-ray equipment in rooms 1W24 and IG03	Items pertaining to the construction of the room inclusive of lead shielding will be furnished by GC. Refer to scope of work detailed on Addendum #1, sheets: A-020.00, A-055.00, A-111.00, A-113.00, A-114.00.
16	Re: Plumbing Drawing P-200 Underground Plumbing Plan, please provide a trench and backfill detail for the underground plumbing shown on P-200.	This detail has been provided in the Civil drawing set for reference. (# 20 Sheet C-500.)
17	Schedule A of the Addendum to the General Conditions states that the maximum amount of subcontracted work cannot exceed 60%. Can this requirement be waived to increase competition?	No, this requirement will not be waived. However, the maximum amount of subcontracted work has been updated to 75%. See updated Addendum to General Conditions, included with this Addendum.
18	On the Entech Engineering Figure 2 – located in Appendix, the contamination map identifies approximate areas where contaminated soil is expected to be encountered, in varying depths. At the time of bid, it is impossible to determine the quantity of contaminated soil based on this information. For the purposes of bid, please advise of a quantity of removal to include or an allowance to allow for fair competition between bidders.	For bidding purposes, assume that approximately one (1) foot of excavation will be required throughout the 28,748 square foot building footprint for the installation of the building slab/foundation. As such, approximately 28,748 cubic feet or approximately 1,065 cubic yards of soil material should be assumed for disposal at a minimum. Refer to the Remedial Action Work Plan included in the Appendix for more information.
19	Re: Detail 4 Drawing A030.00, will Saw Cuts be required for C01 Polished Concrete?	No, saw cutting is not required on polished concrete C01.
20	Re: Detail 7 Drawing A030.00, Mortar Bond Coat is not a procedure for LVT Luxury Vinyl tile. Please clarify.	Detail on A-030.00 has been updated to remove the note. Self-leveling topping is only required at LVT locations.
21	Re: Detail 2 Drawing A030.00: which rooms have radiant tubing? Please advise.	Radiant tubing is not required for the project. Detail in sheet A-030.00 has been updated.
22	Re: Detail 8 Drawing A-760.00, will tile cove trim need to be installed after the polished concrete procedure is complete? Please confirm.	This is a means and methods issue, determined by the Contractor.
23	Re: Detail 8 Drawing A-760.00 will wall tile be installed after the polished concrete procedure is complete? Please confirm.	This is a means and methods issue, determined by the Contractor.
24	Re: Drawings A-102.00 and A-116.00 - Dashed Arrows on Floor: at Doors STA-2 and Doors 2B32-1, what do the arrows within dotted lines represent?	Dashed arrows and lines are just for reference and represent the direction of approach and pull/push clearance as per ADA.

25	Re: Office 2B-37 on Drawing A-072.00: please point us to this room on Drawing A-102.00.	Room does not exist. A-072 Schedule has been updated in this Addendum.
26	Re: Drawing A-131.00 Cols A-C and 1-7. Should FD Floor Drains will be installed after C01 polished concrete procedure is complete? Please advise.	This is a means and methods issue, determined by the Contractor.
27	Re: Drawing A-132.00 Slab Edge Plan Note: #2 refers to Drawing G-010.00, might that be Drawing G-015.00?	Note#2 needs to refer to G-015.00. Sheet A-131, A-132 and A-133 have been updated in this Addendum.
28	Specification 084113, section 1.6-A calls for a project specific testing program with laboratory testing and mock-ups, however the mockups are called to remain in place in section 1.9-A. Please confirm that manufacturer standard test reports are acceptable in lieu of project specific testing, and that mockups will remain in place for final construction and field testing.	Manufacturer standard test reports are acceptable in lieu of project-specific testing for unmodified (off-the-shelf) systems. If the contractor opts to construct mockups in situ, these mockups may remain in place for final construction and field testing. Contractor to secure Commissioner approval of these 'first installation' mockups prior to commencing with remainder of install.
29	Please confirm the minimum size allowed as acceptable for the glass mock-up listed in specification 018316, section – 1.8-B.	Punch windows: require 3 samples be typical size (E01, E04, E27) Storefront: 2 samples be typical storefront size. 5'- 6" by 11'-8"
30	With regards to the "Solid Light Tight Enclosure" that is to be built for viewing the (5) full size glass mock up lites described in section 018316 – 1.8-B: are all (5) lites to be viewed at the same time? How many people will need to fit inside? We need to know what size to build this plywood shanty.	Yes, all 5 glazing samples are visible at the same time. Viewing box is to be 4' to 6' deep to allow a few observers to be inside at once. Interior of enclosure is to be painted to match the color of typical interior finishes to allow observation of glass in conditions most similar to final install.
31	Specification 084113 – section 2.3-A lists products that utilize SSG mullions, however the details shown on the drawings all show fully captured systems. Please advise if the details on the drawings are to be followed or if they will be revised to include SSG mullions.	All glazing is to be fully captured systems. Specification 084113 has been updated in this Addendum.
32	Door type "E1" is shown on Drawing A-050 as being aluminum, whereas all "E1" type doors on the door schedule shown on A-055 are listed as hollow metal. Please confirm material.	E1 is aluminum – A-055 door schedule has been updated in this Addendum.
33	Door type "H1" is shown on the door schedule (A-055) as being a hollow metal door in aluminum framing, please confirm whether both the door & frame are to be hollow metal or both aluminum as you cannot have one of each.	H1 to have metal door and frame - A-055 door schedule has been updated in this Addendum.

34	There is a door located between rooms #2L14 & #2B01 labeled as "DH28", and also shown on Drawing A-431 within frame A73. However, this door is not found on the door schedule. Please advise.	Door was incorrectly labelled and is now AB02-01. See updated sheet A-117.00, included with this Addendum.
35	The floor plan shown on Drawing A-116 seems to be missing a door & frame between column lines 2 & 2.5. Please update drawing information.	A-116 has been updated to show the missing door.
36	Please confirm that the frame shown as "E16" in elevation view on A-432 is supposed to read "E53" as listed in the window schedule on the same page.	Confirmed. A-432 has been corrected to show E53 in elevation view as per schedule.
37	Please confirm that the doors & frames shown on A-433 are to be window wall / terrace door combinations, as per specification 085113, since no detail markers are indicated.	Confirmed. Doors and frames shown on A-433 are combination or window wall/terrace doors as per specifications.
38	Dr #1 A01-2 and corresponding frames are not shown on either of the storefront elevation pages that contain doors (A-431 or A-433). Please provide frame information similar to the other frames throughout the project.	Refer to updated Drawing A-433, included with this Addendum.
39	Plumbing Drawings indicate installing "Trap Seal" guard similar to JRSmith#2692. Plumbing specifications 221319 & 221119 indicate Trap Primer devices & Floor Drain Trap Primer. Trap Seal maybe Plastic Seal, hard piped pressure drop or electronic Trap Primer. Please Clarify.	Specification Section 221319 has been updated to include trap seals, along with recommended manufacturers.
40	Re: Drawings L-110 through L-130: please provide design for the impervious concrete tan and yellow.	Design for the impervious concrete, tan and yellow, are shown in L-200, L-210, L-220, L-230 in Materials and Furnishing Plans. L-110 through to L-130 are layout plans therefore do not differentiate materials in detail.
41	Re: Drawing C150: please provide detail where 12" HDPE pipe transitions to DIP.	Drawing C-150 has been revised to indicate DIP from street connection to the upstream on-site structure. No in-line transition required.
42	Who is responsible for the purchase of the furniture? Who is responsible for the placement of the furniture?	Furniture will be purchased and installed under a separate contract by DOHMH.
43	Drawing A118 includes a note regarding cat housing/small animal modular unit (see A652/MW8). Detail on A652, however, reflects the public clinic reception desk. Please provide proper detail.	Scope no longer applies to project. Reference to this detail has been removed. Refer to updated Drawing A-118, included with this Addendum

44	Tile and grid for the ACT is general and vague on the finish schedule A-071. The spec section for the material does not clear it up at all. Please advise what Ceiling tiles specifically we should carry for ACT-1, ACT-2 & ACT-3?	Refer to responses to questions 1-4 of this Addendum.
45	Room 1W33 on RCP A-204 has a soffit enclosure pointed out above the ceiling. Is there a detail showing what is required here?	There is an GWB enclosure above ACT to preserve fire rating for Mech ducts crossing from floor above. Assume detail #7 / sheet A-035 as basis of design.
46	This RFI is to bring attention to NSEW direction tags that the design team may want to amend in construction documents. Elevations on A-301 of the exterior of the building tag the South Façade as North, the North façade as South, The East façade as East and the West facade as West.	On Drawing A-301, detail 4 refers to the north elevation in relation to the entry plaza, Detail 3 refer to the South elevation in relation to the entry plaza. Details 1,2,5 and 6 are correct.
47	General plan notes advise that all animal housing units are part of the FF&E scope. Please confirm this includes all types on schedule A-075.	Confirmed. All types on schedule A-075 to be part of the FF&E scope.
48	Please confirm all tags marked AW represent the Ki Wall system. Please confirm all AW tagged systems are FF&E. There is no detail for AW/ Ki Wall system on A-75, please provide.	All AW tagged systems are FF&E, which will be procured under by a separate contract under DOHMH.
49	Please confirm door & frames tagged #1W24-1 & 1G03-1 need to be lead lined for x-ray rooms.	Doors to x-ray rooms do not need to be lead lined.
50	Doors 1G01-1,1G01-2,1G03-1, & 1G03 Schedule indicates Jamb & Head Details 8&9/A056 (Masonry M.O.); however, in the plans, these doors are set in a D1 Drywall Partition. Please confirm that the plans take precedent.	Confirmed, the plans take precedent. Refer to updated Drawing A-055, included with this Addendum.

51	Model numbers are missing for under valve model/faucets f3,f3a,f4b,f5,f5d. The plumbing schedule says to refer to the architectural schedule, but the information is missing on the architectural schedule.	Refer to updated Drawing P-700, included with this Addendum. Those fixtures have no number on that column of the schedule on architecture or plumbing set as they are sinks.
52	Drawing E-500 calls for 2-600amp ATS (2-EQ-1 & 2-N-1), 1-1200amp ATS 2 EQ 2. However, Drawing E-710 calls for 400amp ATS 2 N-1, 1200amp ATS 2 EQ-1 and 1600amp ATS 2 EQ-2. Please advise which is correct and size feeders for each.	Follow Drawings E-500 and E-502 for ATS sizes and feeder schedule. Refer to updated Drawing E710, included with this Addendum.
53	We request that the 60-page Bid Breakdown required to be submitted with the bid be removed and that it be required only of the successful low bidder. Instead, totals be provided with the bid only for each specification division. This identical request was granted at time of bid for the 116th Precinct, DDC Project # PO002-116.	The detailed bid breakdown will be required prior to the contract being awarded to the lowest qualified responsive and responsible bidder. It has been provided with the solicitation to help any potential bidder prepare their bid and prepare for the pre-award phase when it would be required from the lowest qualified, responsive, and responsible bidder.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Center & Veterinary Clinic

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to the Drawings:

Architectural Scope:

- **G-000.00** Updated sheet index
- **G-001.00** Updated consultants sheet index
- **A-030.00** Updated details to remove radiant tubing references & updated LVT detailing
- **A-055.00** Updated panel materials
- **A-071.00** Acoustical ceiling notes updated
- **A-072.00** Floor 2 interior finish schedule updated
- **A-116.00** Missing door added
- **A-117.00** Door tag updated
- **A-118.00** Cat housing note eliminated
- **A-131.00** General note #2 updated. Under slab insulation legend added.
- **A-132.00** General note #2 updated.
- **A-133.00** General note #2 updated.
- **A-432.00** Window mark corrected E53
- **A-433.00** DR #1A01-2 and corresponding frame information added
- **A-900.00** Added notes on artwork scope

Electrical Scope

- **E-001-** Indicated drawings issued under this Addendum. Updated lighting notes.
- **E-710-** Updated ATS Schedule as per E-500. Follow the feeder schedule E-502.
- **E-201-** Addendum #1 revision shown
- **E-202-** Addendum #1 revision shown
- **EL-320-** Addendum #1 revision shown

Mechanical

- **M-001.00** - Indicated drawings issued under Addendum #2
- **M-100.00** - Revised title to match updated sequence of operations for Lobby Hot Water Finned Tube system.
- **M-106.00** - Updated typo
- **M-404.00** - Updated typo
- **M-511.00** - Updated hot water riser to match updated Lobby Hot Water Finned Tube system.
- **M-600.00** - Updated typo

Plumbing

- **P-001.00** - Indicated drawings issued under Addendum #2
- **P-700.00** - Revised plumbing fixture schedule to exclude valve model/ fixture column

Civil Scope

- **C-150.00** - Plans revised to indicate DIP from street connection to the upstream on-site structure. No in-line transition required.
- **C-500-00** - Trenching detail #20 added for trenching in soil

Revisions to Volume 3:

- **Addendum to the General Conditions, p.9:** updated Article 17 to 75%
- **084113 Aluminum-Framed Entrances And Storefronts:** Updated spec to reflect fully captured mullions
- **221319 Sanitary Waste Piping Specialties:** Updated spec to include trap seals along with recommended manufacturers.
- **231323 Facility Aboveground Fuel-Oil Storage Tanks:** Updated spec for correct fuel tank size.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Center & Veterinary Clinic

ATTACHMENT C – REVISIONS TO PASSPORT FORMS

This Addendum initiates Round 3 of the procurement.

Please note that numbering of addenda is independent of rounds.

Bid Opening Date Changes:

The Bid Opening scheduled for June 14, 2022 at 2:30pm is rescheduled for June 29, 2022 at 2:30pm.

Questionnaire Changes:

None

Item Grid Changes:

None

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

June 27, 2022

ADDENDUM No. # 3

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

850022B0074 – HL82BRONX

Bronx Animal Care Center and Veterinary Clinic

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for June 29, 2022, at 2:30 pm is rescheduled to July 13, 2022 at 2:30 pm.**
Contract #1 – General Construction Work
2. **Bidders Questions and Responses to Questions:**
See Attachment A.
3. **Revisions to PASSPort forms:**
See Attachment B.
4. **Revisions to Documents:**
See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFX tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

Richard Jones, PE CWI
Executive Director, Specifications

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
#1	The specs call for 2 different types of piles. The plans only show one type of pile. Are the W piles eliminated? If not, how are we to differentiate the 2 different piles on the plans?	Only one type of pile is required. This type of pile is specified on the FO-501 typical pile cap detail. The geotechnical engineer provided two pile options based on the exploration of the subsurface conditions.
#2	When is the expected pile driving start date?	Pile driving start is expected in Q1 2023.
#3	Reference Drawing A-900. Please confirm the artwork will be provided by the City for contractor installation.	Correct. Also see Response for RFI #9 on Addendum #2 for reference.
#4	Please confirm the City will provide the custom ceiling hung light fixture for contractor installation.	Confirmed. Contractor to assist artist in installation of the piece.
#5	Reference Drawing A-901. Please provide further detail for the ceiling mounted light fixture i.e. Mounting, Weight, etc.	"Ceiling mounted fixture" is an art piece provided by the City and coordinated with the Contractor. Structural support is included in drawing set. Assumed weight of the piece is 5 psf averaged over ~350 square feet. The total load assumed is about 1,700 lb. As there will be discrete anchor point, assume for bidding purposes within the 5 psf average weight, any individual point load could be up to 600 lbs. Also, see response for RFI #9 on Addendum #2 for reference.
#6	Please provide further detail for the animal enclosures. <ul style="list-style-type: none"> • How are they shipped? • Are they assembled? • Is on-site assembly required? • What are they weights of these units? • Please confirm if they are City furnished? 	Animal Enclosures are part of FF&E scope. They will be provided and furnished under a separate contract. Contractor to coordinate installation only.

#7	The flow diagram on M-510 shows 3 expansion tanks, glycol tanks and glycol makeup pump pairs. All are labeled/tagged identically, and two sets are shown as tied into the HW system. Please clarify the equipment tags and confirm the indicated tie-in points.	Tags for the expansion tanks have been corrected on M-510 to correspond with the schedule sheet M-701. Tie-in points are correct as shown on M-510, each tank is dedicated for a loop.
#8	M-331 and M-333 show louvered penthouses LPH-R-1 & LPH-R-2 however there is no equipment schedule for these items. M-601 has a detail for "Penthouse Elevator Vents" and there is no application. Are the vents in the detail intended to be for the louvered penthouses shown on the roof plans? Please provide a full schedule for the louvered penthouses and indicate an application for the penthouse elevator vent detail.	Detail #4 on M-601 is intended to be used for LPH-R-1 and LPH-R-2. M-520 has been updated to tag both elevator hoistway vents.
#9	Partition type G5 is detailed on A-20 as well as A-21. The details do not match. Which one is correct?	G5 Detail on A-021.00 is correct. Conflicting detail has been removed from A-020.00.
#10	There are many discrepancies on the Finish Schedule; please advise on the correct floor finishes.	See revised Finish Schedule, included with this Addendum.
#11	Will the utility companies be trenching and excavating for the gas and electrical duct banks? Will they pour the concrete for the duct banks? If not, is there a detail outlining excavation and concrete work for the services?	The trench for the electrical service from street up to the property line equipment PME-5 will be done by Con Ed (including excavation and backfill). After that, everything to be under this Contractor.
#12	Should we figure electrical and gas service installation will be by the utility company?	Both electrical and gas service installation are in the scope of work. ConEd will bring the main/first line of gas & electric services to the building property, at no cost to the Contractor. All electrical conduits from the property line to the new transformer location, as well as its placement beyond the property line is the Contractor's responsibility. The City will reimburse Contractor for the surcharge fee by ConEd, while Contractor is responsible for the miscellaneous application costs.
#13	A millwork subcontractor has declined due to the lack of millwork identifying tags in the enlarged floorplans. Can casework be tagged on the enlarged floorplans to coordinate with the schedule and details?	Millwork schedule is on A-650. Also see below for updated tags: MW2 – Tags added to A-118. See also A-650. MW3 – Tag added to A-117 and A-112. See also A-650. MW4 – Tagged on A-112. See also A-651. MW5 – Tag added to A-113. See also A-652. MW6 – Tag added to A-117. See also A-653.

#14	Detail 2 on Sheet A-030 refers to a “radiant tubing assembly encased in a 3” concrete topping;” however, this is the only place on the drawings the radiant assembly is referred. What areas are expected to have the radiant tubing assembly? How will this affect specification Section 035300 Concrete Topping?	No radiant tubing in scope. Also see response for RFI #21 on addendum #2 for reference.
#15	After reviewing drawing changes in Addendum #1, we noticed that the Electrical, EL and FA drawings do not show any changes mentioned on the Addendum. There are no revision clouds and no indication of revisions have been shown on any of the drawings listed. Please clarify.	Reference Addendum #2 Vol. 2 drawings containing Addendum #1 revisions.
#16	Mark E54 windows - per page A-430.00: Please confirm if the lower opening will have both an exterior window and a dog door or the dog door only.	<p>The opening will have two enclosures. The interior one is the vertical sliding “guillotine” style door on the inside of the exterior window/door assembly. Basis of design for this door is “Mason Kenl-Dor” Refer to specification section 083113 for additional manufacturers.</p> <p>The second door is a saloon-style dog door that the dog can push through to go from inside to outside the building. It closes shut on a hinge so that the building does not stay open to the elements. Basis of design is “BiteGuard Kennelplex.” Refer to specification section 083113 for additional manufacturers.</p>
#17	Mark E54 windows - per page A-430.00: If the lower window needs both the dog door and an exterior window; The exterior window is drawn as a double casement. This is too narrow to build as a double casement. Please advise if window casement is acceptable.	No, Casement is not acceptable. The lower exterior door is a saloon style door. Also see response to RFI #16 above for reference.
#18	Sheet A-074 has a table detailing laboratory and operating equipment. Is the contractor responsible for the items? If so, please provide specification for these items.	Contractor not responsible for Equipment. It is part of FF&E scope to be furnished by City under a separate contract.
#19	Addendum 1 MEP documents do not show updated dates or changes referenced in the addenda control sheet. They are dated 1/26/2022. Please send updated documents asap.	Reference Addendum #2 Vol. 2 drawings containing Addendum #1 revisions.

#20	Re: Materials and Furnishing Enlargement Plan Smooth: Is the end user concerned with the possibility of slip and fall?	Refer to Specification section 033543, which calls for a level 2 polish (low sheen). Polished concrete, despite its smooth appearance, has a relatively high slip-resistance when wet.
#21	Reference Enlarged Construction Plans General Note 6: For Xray rooms, provide shelving as required by approved physicist recommendations. Please provide physicist recommendations.	Note refers to shielding, not shelving. Further clarification has been provided in Addendum #1.
#22	Reference Drawing S-521 Please provide rebar spacing for the stairwell walls.	The reinforcing of the stairwell walls is governed by the typical detail on S-521. They are interior walls with 8" block.
#23	Is grout required only in cells containing rebar or are all cells to be grouted?	Refer to drawing, grout only required as specified. No grout required in this area.
#24	Reference Specification Section 026200 - Excavation and Disposal of Potentially Contaminated Soils. Please provide a quantity to be included in the bid. May we suggest an allowance be developed, similar to other projects for this work.	Allowance will not be provided. See response for RFI #18 from Addendum #2 for clarification.
#25	Roller Shades RS-1 is not shown clearly as per the Reflected Ceiling Plans. Please clarify what fabric is needed for the shade?	RS-1 fabric to be EcoVeil Sheer 6854 as Basis of Design. Refer to specification section 122413 for additional manufacturers. Color to be finalized during submittal process.
#26	Regarding Roller Shade RS-2, I have not been able to locate it on the drawings. If RS-2 is needed, please clarify the location of the shade and what fabric is needed as well.	Sheet A-205.00 has been updated. Tag now refers to south lobby motorized shade as RS-2. Fabric to be EcoVeil Sheer 6854 as basis of design. Refer to specification section 122413 for additional manufacturers. Color to be finalized during submittal process.
#27	Please advise which specification section for scope of work for C110.0 Erosion and Sediment Control.	Erosion & Sediment control is reflected on sheet C-110.00.
#28	Please advise spec section for scope of work for C120.0 Site demolition.	Refer to specification sections 022050 'Protection of Existing Utilities' and 310000 'Earthwork.'
#29	Please advise which specification section for scope of work for Wheel Stop.	Wheel Stop can be found on Detail 6 Sheet C-500.
#30	Reference typical CMU bond beam lintel as show on drawing S-521 versus structural steel note #10 on drawing S-001. Which one governs loose (galvanized or exterior wall) steel lintels or bond beam lintels?	Loose lintels per S-001 are for brick only, and CMU bond beams are for CMU.

#31	<p>Reference to "Typical Beam Web Penetrations" as show on drawing S-514:</p> <p>a. Beam web penetration schedule notes that reinforcing is not required at PO-1 thru PO-5 marks. However beam web penetration details P-A, -B and P-C show reinforcing. Please clarify.</p> <p>b. If reinforcing is required, which "PO" schedule marks will require details P-A and P-B?</p>	<p>Reinforcing is not required at any of the beam web penetrations shown on the plans. Per the Beam Web Penetration Schedule, details P-A, P-B, and P-C are not currently used and are now removed from sheet S-514.00.</p>
#32	<p>Specification section 098129-2 references Pyrok Acoustement 40 as the basis of design and BASWA as a comparable product. These products are very different and have large cost differences between them. Please confirm the Pyrok Acoustement 40 is needed.</p>	<p>BASWA has been removed as it is not a comparable product. Acoustement 40 is a cement based, spray-applied acoustical material that can withstand repeated wetting and even direct hose spray. Gypsum-based plaster acoustical materials are not comparable. Refer to updated specification section 098129, included with this Addendum.</p>
#33	<p>The specification lists a .50 NRC (1/2" thick) and .60 NRC (1" thick). The installation and substrate are dependent on the weight of the plaster (Lath) and a stronger ceiling substrate might be needed depending on the thickness of plaster. Which sound absorption option is needed?</p>	<p>The 1/2" thick is the required thickness. Texture is semi-smooth, troweled. Refer to updated specification section 098129, included with this Addendum.</p>
#34	<p>Rooms 2C25 and 2C38 call our for a sink PF-25 which isn't listed on drawing A-073. Please provide make and model number.</p>	<p>A-073 schedule specifies PF-25 which is a kitchen sink with divider by Elkay (ELUHAQD32179 - Double Bowl Undermount Sink with Aqua Divide).Refer to specification section 224216.16 for additional manufacturers.</p>
#35	<p>Room 2C23 on drawing P-322 shows a fixture F-4A but A-118 doesn't. Please advise.</p>	<p>Room 2C23 does not require any plumbing fixtures. Refer to updated sheet P-322, included with this Addendum.</p>
#36	<p>Room 1W25 on drawing P-310 shows a fixture F-9 but A-111 doesn't. Please advise.</p>	<p>F-9 fixture is to provide plumbing connection to a wet exam table which will be under FF&E scope.</p>
#37	<p>Please label the different types of floor drains on the plumbing plans. In addition, FD-C has a 1" tapping for a water connection. Will a water connection be required on these drains because none are shown with water? Please advise.</p>	<p>Refer to Plumbing Drawings for updated floor drains. FD-C will not require a water connection. The intent is to manually wash down the drains on occasion with a hose. The pipe connection will be capped of in the field.</p>
#38	<p>Details 2&9/A-400 show roof type 2 (IRMA with waterproofing on a sloped topped slab). Detail 8 shows 2 ply SBS roofing on a tapered insulation system, there is not any spec for a 2 ply SBS system. Are all roof terraces with pavers R2 applied on a sloped topping slab?</p>	<p>All details show tapered insulation to allow for slope of waterproofing. There is no sloped topped slab used in the project. Detail 8/A400 has been updated to reflect typical detail. The two roof types are cold-fluid applied roofing and TPO at bulkhead conditions.</p>
#39	<p>Specification section 075423 TPO roofing calls for xps insulation. However, isocyanate is typically used in this assembly. Please confirm we are to install xps.</p>	<p>Polyiso insulation should be used. Specification 075423 has been updated.</p>

#40	Please provide layout for walkways.	Pathways are shown on overall plans A-103.00.
#41	Flood testing of roofs is not recommended by the NRCA. Please confirm flood testing is required and that water will be supplied by others, and the structure can support the weight.	Flood testing recommended only in an area directly around the drains. This would be about 2" of water around the drain area, not the whole roof. Electronic Leak Detection testing is not possible directly adjacent to the drains due to electric bridging between the drain and deck. 2" of water around drain area is an acceptable load.
#42	What is the required overhead clearance for the adjacent property overhead protection?	Refer to NYC Construction Codes, Chapter 33 – Safeguards During Construction or Demolition.
#43	Can you please revise the Signage Schedule on Sheets A806-A807? The Schedule is blurry and barely readable.	Refer to revised sheets A-806/A-807 for higher resolution schedules, included with this Addendum.
#44	The location of Type B.5 Distraction Markers is to be identified with blue lines on the floor plans. The aforementioned blue lines are absent in Sheet A800. Do you have a scaled Floor Plan that can show the supposed location of the Distraction Markers?	Refer to revised sheet A-800 for updated signage location plans indicating locations for Type B.5 distraction markers, included with this Addendum.
#45	The G5 partition on A-021, with resilient clips, is shown incorrectly. This partition would require a layer of 7/8" cross furring to attach the clips to the furring, then the drywall to the furring. You cannot attach drywall directly to the resilient clips. Correctly built, the wall thickness will be 8 1/4". This will affect every door frame and vision panel within this partition.	Resilient clips shown in detail are installed directly to the flange of the vertical stud. Please note that this is a design basis and a similar performing clip system is acceptable. Wall to remain as 7 5/8" in thickness.
#46	<p>With regards to the tiles, please advise on the following:</p> <ul style="list-style-type: none"> a) Could you please clarify the TB-3/Cove base & TL-15 wall tile size? The finish schedule has been specified both as 12"x12", however, this size is not available at manufacturer's website. Available sizes are 1x1, 2x2, 2x4, 2x8, 4x4, 8x8. b) Could you please clarify the TL-13 material size? Although finish schedule has been specified the sizes as 12"x24", only available size at manufacturer's website is 3"x12". c) Could you please clarify the TL-10 material color? Although Finish Schedule has been specified this material color as "VISERE", this color is not available at manufacturer's website. 	A-072 tile selection is a basis of design. Refer to specification 093013 for additional manufacturers. All products will be reviewed during the submittal process.

#47	Could you please clarify the TZ-1 material color? Although Finish Schedule has been specified this material color as "AUTUMN, WHITE MATRIX", both white and autumn colors are available at manufacturer's website but separately. Also, could you please clarify the finish type of this material?	Material color is Autumn in honed finish – A-072. Finish legend has been revised to reflect this change. Note this is a basis of design selection. Refer to specification section 123661.16 for additional manufacturers.
#48	Please advise if the equipment listed on the special equipment schedule on A-074 will be owner provided or included in the GC's bid. If by GC, please provide a complete spec for items missing information.	This will be separately provided and procured.
#49	Is there an FF&E matrix that can be provided?	Equipment to be procured & installed under a separate contract. Refer to A-074 & A-075 for responsibility matrix.
#50	Please provide a specification or direction on the fabric for shades RS-1 and RS-2. Please advise if RS-2 locations are identified on the architectural documents.	Refer to RFI #30 response above.
#51	Confirm that the 'Custom Fowl Tub' and 'Wildlife Rehab Reception Desk' indicated on Drawing A-111 for Lobby/Waiting Area 1W01 are both FF&E, City provided, Contractor installed.	Confirmed.
#52	In addition to Animal Housing Units, listed on Drawing A-075, is any other equipment or furnishings FF&E, City provided, Contractor Installed?	Animal housing units to be procured and installed under a separate contract by DOHMH. Refer to updated A-075 for revised list, included with this Addendum.
#53	Is the Specialty Equipment, listed on Drawing A-074 part of FF&E, City provided, Contractor installed, in full or in part? The information on the schedule is incomplete and no specification sections are provided for the bulk of this equipment.	Equipment to be procured & installed under a separate contract. Refer to updated A-074 & A-075 for responsibility matrix, included with this Addendum.
#54	Drawing A-026 Shows typical details on Fireproofing. However, if you look at the code requirements for the general notes, it states that the building is Type IIB and has no rating on the chart. Type IIB has no rating, correct?	IIB requires no rating for the elements listed as per table 602 shown on G-001; however, there is use separation that uses rating, as shown on drawing G-060. Drawing A-026 has been updated per this Addendum.
#55	Reference E-002. Security audio/visual, and telecom: Please confirm bidders are only doing conduit and power and not providing any wiring, devices or equipment for those systems.	Confirmed. Refer to TN-000.00, TY-000.00, TA-000.00 for details.
#56	Do we need to include insurance?	Refer to Schedule A in the Addendum to General Conditions (Volume 3) and Contract Article 22 (Volume 2) for insurance requirements.
#57	Seeing as this is a DDC job, is there a bid quantity sheet? I did not see a "Vol 1 Info for bidders" in the folder, where it might have been.	Refer to "Bid Breakdown" form included in the PASSPort Questionnaire.

#58	<p>Refer to Vol 2 of 3, Information for Bidders, page 7 “Form of Bonds: Security provided in the form of bonds must be prepared on the form of bonds authorized by the City of New York. Forms for bid, performance, and payment bonds are included in the Invitation for Bids Documents.” The Documents include the payment & performance bond forms, but do not include the bid bond form. Please provide.</p>	<p>The Bid Bond form is included in the PASSPort Questionnaire “Paper Bid Submissions – To Be Submitted to Agency.”</p>
#59	<p>What is the intent for the “hydrant relocation?” New hydrant (usually, 6” or 8” ?) and fenders? Cap old line? Where at main or property line? New tap at main? Wet tap?</p>	<p>Hydrant relocation is needed to shift the existing hydrant out of the limits of proposed Animal Lane. As this relocation is less than 18-ft, it is submitted to NYCDEP and does not require FDNY review. Final determination of all relocation elements pending approval by NYCDEP. Contractor to provide new NYCDEP-compliant hydrant, due to condition of existing hydrant. Relocations of less than 18-ft are typically performed off the existing tap, with an elbow installed at location of existing hydrant and new pipe extended beneath the sidewalk. NYC DEP to provide final determination prior to installation. However, if a new connection is required, it will be a wet tap.</p>
#60	<p>Reference to Addendum # 2 RFI response # 30. The planned enclosure will need to be substantial in order to house (5) lites of glass with (2) of them being 11’-8” tall. Would it be possible to have carpenters build this enclosure in a chosen location, which we would then install these (5) glass lites into for observation by the Commissioner? I don’t think it would be cost effective to have metal/glassworkers create something of this size.</p>	<p>The construction of the mock-up is a means and methods item. Commissioner will review and approve approach during the submittal process.</p>
#61	<p>Refer to Note 11 on drawing BPP-001. For bidding purposes, please confirm the limits of roadway resurfacing on Bartow Avenue are denoted by dashed lines on drawing BPP-002 and entire street width (120’ wide) resurfacing is not to be included in the bid.</p>	<p>Correct, dashed lines correspond to extents of road replacement as per New York City Department of Buildings. The minimum width of the improvement shall be one-half of the mapped street width plus five feet.</p>
#62	<p>Refer to contract drawing C-110.00. In the southwest corner of the site there is a 100-ft x 50-ft area with “ST-1” designation. What is this area and what is the “ST-1” designation?</p>	<p>“ST-1” is a label on the Soil Erosion and Sediment Control Plan to indicate that this area shall be used as a Pipe Outlet Sediment Trap as per New York State Standards and Specifications for Erosion and Sediment Control. There are three (3) types of Sediment Traps, the “1” indicator in “ST-1” is used to denote one of three types of Sediment Traps. Detail has been added to the Civil Details Sheet C-503.00.</p>

#63	Refer to contract drawing C-110.00. In the southwest corner of the site there is a 100-ft x 50-ft area with "ST-1" designation. What is the temporary 18" PVC (Inv. 9.38) for?	The temporary 18-in PVC (INV. 9.38) is an outlet pipe for the Pipe Outlet Sediment Trap (ST-1), as per New York State Standards and Specifications for Erosion and Sediment Control. Detail has been added to the Civil Details Sheet C-503.00.
#64	Refer to contract drawing C-110.00. Notes and callouts on the drawing refer to "Phase 2". Where are other phases shown in the bid documents? How many phases are there?	Phases here are representations of site conditions during standard Contractor Means and Methods, and not intended to indicate series of partial work. Phase 2 refers to the construction phase of the project when the substantial completion of at-grade site features (i.e., building foundation, stormwater structures) have been completed - limiting the available site area for large Soil Erosion and Sediment Control features such as soil stockpile areas & staging equipment areas. Due to generally large footprint of the proposed building, not all Soil Erosion and Sediment Control features are able to maintain their locations for the entire duration of construction. Therefore, certain soil erosion and sediment control features must be separated into phases to allow the continuation of construction and continued implementation of Soil Erosion & Sediment Control features, as required by the New York City Department of Environmental Protection. There should be only two phases for implementation of the Soil Erosion & Sediment Control features on site – refer to the Stormwater Pollution prevention Plan for further information regarding phases.
#65	Refer to Addendum 02 – Attachment B – Revisions to the Documents. Civil contract drawing C-150.00 is stated as being revised, but there are no changes noted on the drawing included in the revised drawing set. Please provide the revised drawing.	Refer to updated C-150, included with this Addendum.
#66	Refer to contract drawing C-001.00 Asphalt Pavement Note 5 provides description of asphalt pavement section required, but it does not match Detail 5 provided on C-500.00. Please clarify which detail to use.	Use detail #5 on Civil Details sheet C-500.00 for asphalt pavement to be used on site. Note #5 on Civil Notes sheet C-001.00 shall be revised.
#67	Please confirm equipment items EQ-1 to EQ-43 in the specialty equipment schedule on contract drawing A-074.00 are to be provided and installed by others. If these items are to be provided and/or installed by contractor, please provide specifications.	Equipment in this chart are to be furnished and installed by the City. Refer to A-074.00 for responsibility matrix.
#68	On Drawing L-230, on the south end of the building, there is a symbol [CB] for a bench. This bench is not shown, like they are on L-210. Can you confirm if this is a bench that is to be provided?	There is no bench on the south end of the building. Drawing L-230 has been updated in this Addendum.

#69	Please provide information/drawing on Norlake item EQ12? Unimac-AP12-AP14. Please clarify if this will require a certain control?	Refer to sheet A-074.00 for more information on each equipment listed here. No additional controls beyond what equipment comes with.
#70	For the stack Unit Pump or Gravity Drain for the washer? Dryers: are they to be gas or electric?	Refer to equipment model numbers for requirements on drains. Dryers to be electric.
#71	Contract drawing A-124 notes "Refer to landscape drawings for roof garden scope" for sector 5 roof plan. However, there are no landscaping drawings that show a green roof at this area. Please clarify.	Note removed from A-124. No landscape scope in this area.
#72	Partition type EX4 is shown for walls on column lines 10 and A.7 on contract drawing A-115, but there is no detail shown on the partition type drawing A-021. Please provide detail for partition type EX4.	This is an exterior wall. Exterior walls are detailed on sheet series A-370s. For this specific wall, refer to drawing 1 on sheet A-374 and related details.
#73	Refer to appliance schedule on contract drawing A-074, items AP-12, AP-13, and AP-14 for Unimac washers, dryers, and washer/dryer combo stacks. These appliances are not listed in the appliance specification section 113013 and are also not shown on the bid breakdown. Please confirm these equipment items are required to be furnished and installed in this contract.	All appliances are part of bid scope. They have been added to specification 113000 for clarity and on the Bid Breakdown.
#74	We could not find appendix items C Construction health and safety plan (CHASP), D LEED-NC-v4 appraisal, or E LEED V4 Materials Reporting Form. Please provide.	This information is included in the PASSPort RFx (HL82BRONX-APPENDIX_Part 3').

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to the Drawings:

Architectural Scope:

- **G-000.00/G-001.00** Updated sheet index
- **A-020.00** G5 Partition Detail removed
- **A-026.00** Fireproofing removed from details
- **A-035.00** Detail 12 acoustical plaster removed
- **A-050.00** Added S1 door type
- **A-055.00** Saloon Type dog door note added to sheet for clarity
- **A-071.00** Revised TZ-1 finish.
- **A-072.00** Coordinated schedule to match floor finish plans
- **A-074.00/A-075.00** Revised FFE responsibility matrix, removed G1/H1 product type
- **A-112.00** MW-3 Millwork tag added
- **A-113.00** MW-5 Millwork tag added
- **A-114.00/A-115** S1 door tag added
- **A-117.00** MW-6 and MW-3 Millwork tags added
- **A-118.00** MW-2 Millwork tags added, AW partition tags added Revised plan lineweights to show AW as part of this contract scope.
- **A-124.00** landscape note removed
- **A-142.00/A-143.00/A-144.00/A-147** Added missing floor material tags
- **A-205.00** Tag updated for RS-2
- **A-400.00** Detail 8/A-400 updated
- **A-430.00** E54 clarification as it is a hybrid, saloon type dog door is capture as window but is really a door.
- **A-440.00** Added elevations for cat partitions
- **A-654.00** Revised dimensions for Percent for Art scope
- **A-800.00** Added Signage Type B.5. and Percent for Art signage locations in the location plans
- **A-805.00** Added new signage type for Percent for Art scope
- **A-806.00/A-807** Higher-resolution schedule for legibility, updated locations for Signage Type B.5 and Percent for Art scope
- **A-901.00** Revised details for mounting artwork

Landscape

- **L-200, L-210, L-220, L-230** Fixed bench tag, we no longer have bench on the south side of the building. Fixed two fence tags, now showing the correct fence type

Structural

- **FO-001** Added general notes to address DOB comments about drainage and rodent proofing.
- **FO-002** Added general notes to address DOB comments about elevation datum, deep foundations, and SOE exceptions.
- **FO-102:** Added plan note to address DOB comments about SOE exceptions.

- **FO-103** Added plan note to address DOB comments about SOE exceptions.
- **FO-106** Updated grade beam and pile cap geometry for MEP/Civil piping coordination.
- **FO-501** Added comments to slab on grade detail to address DOB comments about drainage.
- **FO-601** Updated grade beam and pile cap geometry for MEP/Civil piping coordination.
- **S-514** Removed reinforcement from typical beam web penetration detail.
- **S-601** Included slab and wall schedules from FO-601.

Mechanical

- **M-001.00** Indicated drawings issued under Addendum #3
- **M-510.00** Revised tagging for expansion tanks to match schedules.
- **M-520.00** Indicated tag for LPH-R-1.
- **M-601.00** Corrected detail #4 for extra copy and LPH dimensions.

Plumbing

- **P-001.00** - Indicated drawings issued under Addendum #3
- **P-004.00** - Updated gas piping to city main to be 2 connections in lieu of 1 connection
- **P-005.00** - Removed gid ruling.
- **P-200.00** - Updated sewage ejector pit depth and sanitary invert to pit
- **P-201.00** - Updated sewage ejector pit depth
- **P-300.00** - Updated floor drain tags to match schedule
- **P-301.00** - Updated floor drain tags to match schedule
- **P-302.00** - Updated route for 10" storm piping in coordination with civil site drainage piping, updated floor drain tags to match schedule
- **P-303.00** - Updated route for 10" storm piping and 6" sanitary piping in coordination with civil site drainage piping, updated pit depth and sanitary invert to pit, updated floor drain tags to match schedule
- **P-304.00** - Updated route for 10" storm piping and 6" sanitary piping in coordination with civil site drainage piping, updated floor drain tags to match schedule
- **P-310.00** - Updated floor drain tags to match schedule
- **P-311.00** - Updated floor drain tags to match schedule
- **P-312.00** - Updated floor drain tags to match schedule
- **P-313.00** - Updated sewage ejector pit depth, updated floor drain tags to match schedule
- **P-314.00** - Updated floor drain tags to match schedule
- **P-320.00** - Updated floor drain tags to match schedule
- **P-321.00** - Updated floor drain tags to match schedule
- **P-322.00** - Updated floor drain tags to match schedule
- **P-323.00** - Updated floor drain tags to match schedule
- **P-402.00** - Updated floor drain tags to match schedule
- **P-403.00** - Updated floor drain tags to match schedule
- **P-501.00**- Updated riser diagram to match floor plans
- **P-513.00**- Updated sanitary riser diagram to match floor plans
- **P-511.00** - Updated sewage ejector pit depth
- **P-530.00** - Updated gas piping to city main to be 2 connections in lieu of 1 connection
- **P-700.00** - Updated sewage ejector pit depth

Civil

- **C-001.00** - Indicated drawings issued under Addendum #2
Note #5 in Asphalt Pavement Notes section has been revised
- **C-130.00** - Two (2) proposed area drains along the eastern fence line have been rearranged.
One (1) proposed solid lid area drain has been added along the western building face
- **C-140.00** - Top and bottom of curb elevations have been revised along the eastern fence line for three (3) locations.
Rim elevation has been added to the proposed solid lid area drain along the western building face.
- **C150.00** - DR-15 structure added to plans and drainage table.
DR-8 structure has been shifted.
DR-9 structure has been shifted.
Pipe segment between DR-7 and DR-8 have been revised.
Pipe segment between DR-8 and DR-9 have been revised.
Pipe segment between DR-9 and DR-10 have been revised.
Pipe segment between DR-5 and DR-13 has been removed from the plans.
Pipe segment between DR-5 and DR-15 has been added to the plans.
Pipe segment between DR-15 and DR-13 has been added to the plans.
Pipe segment between DR-11 and DR-9 has been revised.
Inverts for building penetrations have been revised.
- **C-501.00** - Detail #4 has been revised to a square frame, solid lid and Type E Grate for drain structures.
Detail #5 has been revised to a beehive frame compatible with the square frame provided in detail #4
- **C-503.00** - Detail #1 has been revised to indicate a 100-inch length for the transformer pad, dimensions for opening per MEP comments, and notes per MEP comments.
Detail #3: Pipe Outlet Sediment Trap – 1 Standard Detail has been added

Telecommunications

- **TN-000.00** - Indicated drawings issued under Addendum #3
Matrix of responsibility Chart added

Security

- **TY-000.00** - Indicated drawings issued under Addendum #3
Matrix of responsibility Chart added

Audiovisual

- **TA-000.00** - Indicated drawings issued under Addendum #3
Matrix of responsibility Chart added

Revisions to Volume 3:

Addendum to General Conditions: Schedule B to include warranty requirements for 102219, 113000; BIM requirements revised

Table of Contents: remove section 113013, include new sections: **102219, 113000, 271100, 274116**

Removed Specifications:

- **SECTION 113013**- RESIDENTIAL APPLIANCES- replaced with section 113000- Appliances

Revised Specifications:

- **SECTION 098129** - SPRAYED ACOUSTIC INSULATION- clarification on acceptable manufacturers
- **SECTION 083113** - ACCESS DOORS AND FRAMES – addition of manufacturers for dog saloon doors.
- **SECTION 075423** - THERMOPLASTIC-POLYOLEFIN (TPO) ROOFING clarification on roofing insulation.
- **SECTION 221119** - DOMESTIC WATER PIPING SPECIALTIES additional manufacturers added.

New Specifications:

- **SECTION 102219** - DEMOUNTABLE PARTITIONS-inclusion of cat partitions in GC scope.
- **SECTION 113000**- APPLIANCES replaces residential appliances specs. added washers and dryers
- **SECTION 271100** - COMMUNICATIONS EQUIPMENT ROOM FITTINGS clarifying scope responsibilities.
- **SECTION 271600** - COMMUNICATIONS CONNECTING CORDS, DEVICES, & AND ADAPTERS clarifying scope responsibilities.
- **SECTION 274116** - INTEGRATED AUDIO-VIDEO SYSTEMS AND EQUIPMENT clarifying scope responsibilities.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT C – REVISIONS TO PASSPORT FORMS

This Addendum initiates Round 4 of the procurement.

Please note that numbering of addenda is independent of rounds.

Bid Opening Changes:

- The Bid Opening scheduled for June 29, 2022 at 2:30pm is rescheduled for July 13, 2022 at 2:30pm.
- The link to the Bid Opening has been revised to the following:
https://www.youtube.com/playlist?list=PLKYRN_jd7vvhJ3NGqCkKJ2n32mGvlcpVR

Questionnaire Changes:

- Bid Breakdown has been updated to remove section 113013, and include Sections 102219, 113000, 271100, 271600, 274116

Item Grid Changes:

None

THE CITY OF NEW YORK

DIVISION OF PUBLIC BUILDINGS

July 8, 2022

ADDENDUM No. # 4

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

850022B0074 – HL82BRONX

Bronx Animal Care Center and Veterinary Clinic

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

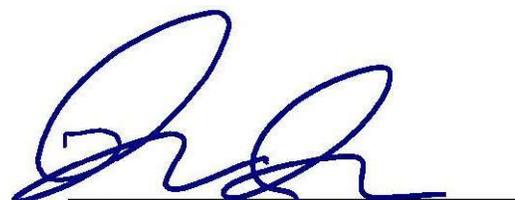

The bidder is advised that the items listed below apply to the project:

- 1. The Bid Opening for the contract described below scheduled for July 13, 2022, at 2:30 pm is rescheduled to July 28, 2022 at 2:30 pm.**
Contract #1 – General Construction Work
- 2. Bidders Questions and Responses to Questions:**
See Attachment A.
- 3. Revisions to PASSPort forms:**
See Attachment B.
- 4. Revisions to Documents:**
See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFX tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	The HVAC Pipe Specs mention that press fitting up to 4" can be used on copper however, there is no spec for 5", 6" 8" pipe. Can this be a black grooved pipe? What type of pipe is ERW 1 Seamless?	No press fitting should be used on the project. ERW or seamless pipe is acceptable.
2	What is the expected driving elevation and cut-off elevation? Current grade is +16', and the cut-off elevation is stated as -4' 11", although it does not say if that is the elevation or if that is from top of slab. Please advise.	<p>This is a means and methods issue. Refer to Geotechnical report. Driving elevation is to be determined based on achieving the required capacity and according to the pile dynamic driving program included in the geotechnical design documents. The approximate average length of the piles is noted on FO-001 in Foundation note 1. Variables affecting the length of the piles required during construction include grade elevation at time of driving and actual rock elevation.</p> <p>The pile cut-off elevations are noted relative to the project datum, as stated in plan note 1 on FO-102 and FO-103. The project datum is defined as 0'-0" = NAVD88 16.33'.</p>
3	Per RFIs above, will this work be paid for by the City directly? Should these costs be excluded from our bid?	Refer to Drawing P-004.00. A secondary gas line has been added as per Con Ed request. The secondary line of service for the gas generator will have an upfront charge by ConEd, which Contractor should include in its bid price.
4	AV vendors advise that they require an AV equipment list to provide a proposal. Is there a BOM that can be shared? Also, there is currently no AV specification. Please advise if one will be issued.	AV equipment is not part of this contract. It will be procured by DOHMH under a separate FF&E contract. The scope of work included in this project are conduits & Infrastructure for AV equipment. Contractor to coordinate with the DOHMH FF&E vendor during construction. AV equipment list will be made available during construction phase. Refer to TA-000 for trade separation chart.
5	The material legend A-071 lists ACP01 as the only plaster material on the legend. It is consistent with the specification as it lists Acoustical Cementitious plaster by Pyrok (Acoustement 40) for ACP-01. Detail 12 on A-035 indicates an acoustical plaster panel directly adhered to s GWB suspended ceiling with caulk-based construction adhesive. This detail is more consistent with a star silent / BASWA product. Details 2,3 and 4 on A-760 reference a cement backing board with acoustical cement plaster directly applied over it, which is more consistent with	Acoustical plaster details on A-760 take precedent over A-035.00. Detail 12 has been removed from A-035.00 in Addendum #3 Drawings.

	Acoustement 40. Can you please confirm the details on A-760 take precedent over A-071?	
6	Please provide the make and model number of the mixing valve and expansion tank for the domestic water heaters.	Refer to Detail 7 of Drawing P-611.00. Tank is listed as a 6 gallon Amtrol expansion tank. The thermostatic mixing valve for the domestic heaters shall be 3" Holby mixing valve, while for the clinic water heaters, the mixing valve shall be a 2" Holby mixing valve. Refer to specification section 221119 for additional manufacturers.
7	Is DDC procuring licensing agreements from the adjacent properties such as Red Lobster and others to allow for overhead protection to be installed where required?	No. the Contractor is responsible for site safety and meeting DOB codes/criteria for protecting neighboring properties during construction.
8	<p>Reference Specification 01 10 00 1.4 SCOPE AND INTENT Paragraphs F, G, and H require bidders to assume costs for work that may not be contained in the specifications or shown on the contract drawings. Given that this value will be impossible to calculate or predict, please advise whether an allowance will be established for consistency among bidders. Paragraphs F, G, and H are listed below for your convenience.</p> <p>F. OMMISION OF DETAILS: All work called for in the Specifications applicable to the Contract but not show on the Contract Drawings in their present form, or vice versa, is required, and must be performed by the Contractor as though it were originally delineated or described. The cost of such work will be3 deemed included in the total Contract Price.</p> <p>G. WORK NOT IN SPECIFIATIONS OR CONTRACT DRAWINGS: Work not particularly specified in the Specifications nor detailed on the contract Drawings but involved in carrying out their intent or in the complete and proper execution of the Work, is required and must be performed by the Contractor. The cost of such work will be deemed included in the total Contract Price.</p> <p>H. SILENCE OF THE SPECIFICATIONS: The apparent silence of the Specifications as to any detail, or the apparent omission from them of a detailed description concerning any work to be done and materials to be furnished, will be regarded as meaning that only the best practice is to prevail and that only the best material and workmanship is to be used and interpretation of the Specifications will be made upon that basis.</p>	No allowance is required and will not be provided.
9	Please confirm the requirements for in-person hand delivery of the Bid as well as Passport submission.	Electronic submission in PASSPort and hand delivery of the Bid Submission Form are both required. See PASSPort Questionnaire, 'Paper Bid Submissions – to be Submitted to Agency.' Also see PASSPort RfX 'DDC PASSPort Bid Information Addendum1' for detailed instructions.
10	Please provide the bid submission time of the in-person bid delivery. We have seen 3 different times published 1:00pm 2:00pm and 2:30pm	The electronic submission in PASSPort may happen at any time, and early submissions are encouraged. Hand delivery of the Bid Submission Form must be between 11:30 and 2:00, as noted on the Addenda Control Sheet. The virtual bid opening is at 2:30. See PASSPort

		Questionnaire, 'Paper Bid Submissions – to be Submitted to Agency.' Also see PASSPort RFx 'DDC PASSPort Bid Information_Addendum1' for detailed instructions.
11	In reviewing Passport, we do not see a place to acknowledge any addenda, please advise.	Correct, it is not required to individually acknowledge addendums in PASSPort.
12	Page 3 of the Information for Bidders states that "The receipt of any amendment to the Contract Documents shall be acknowledged by the bidder in its bid submission". We don't see a spot for this on any of the bid documents or in Passport. Where do we acknowledge the amendments?	By submitting the bid electronically in PASSPort, the Bidder is acknowledging all of the documents listed in the current round of the PASSPort RFx, fulfilling this requirement.
13	In Specification Section 280500 Page 2 section 1.4 Paragraph B, it is stated "Provide a complete fully operational turnkey security system as specified within these documents.". There is however, no section with a performance specification for either Access Control, Intrusion detection Intercom or CCTV. Can these Specification sections be released?	Scope referred to here is not part of this bidding scope. They will be separately procured by DOHMH.
14	The outdoor Pole Mounted Security Cameras. Are they being mounted to Site Lighting Poles?	Security cameras are not part of the scope of work of this procurement. They will be separately procured by DOHMH.
15	Drawing E-500 shows 30amp switch for AHU R1,2,3,4. Drawings E-330 shows AHU R1 60amp DS & R2-100amp DS. Drawing E-331 shows AHU R3 & 4 60amp DS. Please advise which is correct.	Each of unit has multiple motors AHU-R-1 has total of 6- 7.5 HP AHU-R-3 has total of 6- 7.5 HP AHU-R-4 has total of 6- 7.5 HP Each requires 60A fusible switch. Sheet E-500 has been updated to reflect this information.
16	Please advise if the 30-600 MCM service feeders need fusible lugs.	Assume that no fusible lugs are required. However, contractor shall review Con Ed standard upon installation to confirm.
17	Please confirm Con Edison is furnishing and installing all 5kv cable with terminations in transformer and HV disconnect switch.	Con Ed will install the HV cable up to the PEM-5 switch and also install the PEM-5 switch. Secondary HV cables and raceway from PME-5 to the transformer to be provided by the contractor. Transformer to be furnished by Con Ed and installed by the contractor.
18	Drawing E-500 calls for a 400amp 3ph 480v disconnect switch fused at 300amp. Drawing E-320 shows a 800amp 3 ph 480v disconnect switch fused at 600amp for the Fire Pump. Which is correct?	400A/300AF is the correct size for the 60HP fire pump (rated at 460V). Correction has been to sheet E-320.
19	Confirm Con Edison is bringing to jobsite transformer and HV DS.	Yes, Con Ed will bring the transformer to the property line and contractor to move to the final position on pad- the HV DS will be completely by Con Ed.
20	Please give detail of pad for the HV DS.	It will be constructed by Con Ed. No detail will be provided.

21	Please clarify Addendum # 2 item 10, which asks for EMT in ceilings and then says both are acceptable AC/MC cable.	EMT will be required in all exposed area, including ceilings like MEP room which is exposed. AC/MC is acceptable only in concealed ceilings or above hung ceilings.
22	Please confirm that Hospital Grade receptacles only go in surgery rooms on first floor.	Confirmed.
23	Drawing E500 calls for 2-600amp ATS (2-EQ-1 & 2-N-1), 1-1200amp ATS 2 EQ 2. Drawing 710 calls for 400amp ATS 2 N-1, 1200amp ATS 2 EQ-1 and 1600amp ATS 2 EQ-2. Please advise which is correct and size feeders for each.	Refer to E-710 updated in Addendum #2, which matches the riser diagram.
24	Re: Item EQ-41 Spray Master – This is a Central System which consists of a pump with remote stations located throughout the facility. Please provide detailed specs showing number and layout of these stations to provide pricing.	This is not part of the Contractor's scope. This will be procured and installed separately.
25	Re: Specification section 230713 Duct Insulation – Article 3.13 only includes concealed supply/return/outdoor-air/exhaust duct and plenum insulation. What insulation type/thickness/density should be figured for exposed supply/return/outdoor-air/exhaust duct?	Exposed Supply = 6 PCF and 2" thick rigid board Exposed Return = 3 PCF and 1" thick rigid board Exposed Outdoor Air = 6 PCF and 2" thick rigid board Exposed Exhaust Air = 3 PCF and 1" thick rigid board. Refer to updated Section 230713 included with this Addendum.
26	Re: Specification section 230713 Duct Insulation – Article 3.13 B 1 & 2 state that all concealed and exposed exhaust duct require insulation. Article 3.13 B 5 & 6 state that concealed and exhaust duct only between isolation damper and penetration of building exterior require insulation. These two specification items contradict. How should exhaust duct be insulated on this project?	Exhaust ducts should only be insulated between the isolation damper and the building penetration. Refer to updated Section 230713 included with this Addendum.
27	Re: Specification section 230713 Duct Insulation – Article 3.14 C & D require that all duct and plenum (concealed and exposed) will receive "Painted Aluminum and Smooth" jacket. This install is not typical and unnecessary as concealed ductwork does not require protection being that it is concealed from view and traffic. Can you confirm that all concealed and exposed duct insulation is to require additional "Painted Aluminum and Smooth" jacket on this project?	"Painted Aluminum and Smooth" Jacketing is not required on any ducting. The insulation finish should be the vapor barrier finish that is on the rigid board insulation. Refer to updated Section 230713 included with this Addendum.
28	Re: Specification section 230713 Duct Insulation – Article 3.14 C & D require that all duct and plenum (concealed and exposed) will receive "Painted Aluminum and Smooth" jacket. Aluminum jacketing install on duct insulation is not feasible. Protective cladding products are specifically designed to be installed over duct insulation and resist moisture, air, and vapor intrusion. Can protective cladding (such as Alumaguard/ VentureClad) be installed in lieu of specified metal jacket?	"Painted Aluminum and Smooth" Jacketing is not required on any ducting. The only finish expected is standard vapor barrier that is installed over the rigid board insulation. Refer to updated Section 230713 included with this Addendum.

29	Re: Specification section 230719 HVAC Pipe Insulation – 3.21 – C & D require that all piping (concealed and exposed) to receive “Painted Aluminum, Smooth: 0.016 inch thick” jacket. This install is not typical and unnecessary as concealed pipe insulation does not require protection being that it is concealed from view and traffic. Can you confirm that all concealed and exposed pipe insulation is to require additional “Painted Aluminum, Smooth: 0.016 inch thick” jacket on this project?	All exposed – outdoor – piping will use Foam Glass insulation with a stainless steel jacket. All interior piping – exposed in a Mechanical Room up to a height of 8’-0” is to receive a protective aluminum or PVC jacket. For all other concealed piping in hung ceilings, the insulation finish will be the vapor barrier finish that is on the pipe insulation. Refer to updated Section 230719 included with this Addendum.
30	Re: Pre-Fabricated Fuel Oil Piping specifications – the drawings and specifications reference both FRP and Steel Jacketed systems. Please confirm which system will be used on the piping within the building and the piping on the roof. Please confirm the Fuel Carrier pipe specification (schedule 80 welded) and confirm the exterior jacketing material.	The fuel oil piping system (Pipe and Containment pipe if required) will be steel throughout (no FRP). Fuel Oil piping can be normal weight – Schedule 40.
31	Is any construction vibration, crack, optic monitoring required at 2050 Bartow avenue Bronx NY 10475 or T-Mobile/Red Lobster/ Panera Bread shopping center? If so, please provide plan and specifications.	Yes. Refer to DDC General Conditions & DOB requirements. Contractor is to conduct an existing survey of adjacent properties, any existing cracks or damage that may exist should be identified. Based on results of the survey, DDC will determine the extent of vibration/crack/optics monitoring that may be required, which cost will be reimbursed separately beyond the lump-sum bid.
32	Is an existing condition survey required at the same (above) addresses?	Yes
33	Room 1W14 shows no ceiling on RCP but calls for ACT3 on interior finish schedule. Please clarify.	Room 1W14 shows a GWB in drawing A-204, as per legend in Reflected Ceiling Plans. Schedule in A-072 has been updated to reflect this.
34	Plans call for partition type F4 (e.g. A-111) partition schedule A-020 and 021 do not show this type 4 partition. Please provide a detail for type 4 partition?	Partition now shown on sheet A-021.00
35	Coating is only shown in Specification section 316216 for H-piles - to be 25’ below cut/off elevation. No coating is shown or called out on the FO-drawings. Is there coating required on this job?	Yes, coating is required. Notes on FO-drawings have been updated.
36	Is there an material escalation clause in this contract.	No.
37	Second floor partial framing plan b on S-106 column line 7/d-e indicates detail 9/S-401. Detail 9/S-401 shows HSS tubes-see plan, but they are not indicated on the plan. Please clarify.	Section 9/S-401 shows the connection detail for the HSS10x8x1/2 FLAT to the W-beams at the east and west ends of the HSS span. The hanger stub tube down is identified in the section, and the spanning HSS is identified on plan.
38	Room 1H14 shows C03 on the finish plan, but is asking for RF5 on the finish schedule. Please advise.	Schedule in sheet A-072 has been updated to remove RF5 base.
39	Please provide specification for stair c precast treads.	Refer to updated Section 055110 Metal Stairs, included with this Addendum.

40	The only security related spec section in Volume 3 is Common Work Results 280500. No manufactures or parts are called out. Please advise who is the manufacturer.	Scope of work not part of this procurement. It will be procured separately by DOHMH.
41	Please provide steel reinforcing for brick shown on L-750.	Drawing on L-750 shows what is required.
42	Please provide locations of relieving angles for masonry, as none are shown.	The hung relieving angles are all shown on plans. They are called out with the symbol as indicated in the legend. Refer to sheet S-001 for lintel parameters for all masonry openings.
43	Drawing A-119 bike storage 2H28 indicates to "provide blocking to support wall mounted bike racks (FF&E)." Please clarify is the bike racks shown on Z-060 and section 129313 is part of this contract or furnished and installed by the owner.	Refer to sheet A-072. Bike racks are part of the scope of this procurement.
44	L-720 indicates railing post spacing 5'-0" oc, whereas detail 8/A-400 indicates 4'-0" oc. Please clarify which detail to follow.	The railing post spacing shall be 4'-0" oc, as indicated in detail 8/A-400. Railing detail in sheet L-720 has been updated.
45	Please indicate which asphalt detail we are supposed to use- detail 5/c-500 and detail 6/l-700.	Follow detail 5/C-500 for asphalt pavement applications. Detail 6/L-700 has been omitted.
46	Daydog 1G43 shows ACP on 1/A-207, but not on finish schedule A-072. Please advise.	Drawing 1/A-207 is correct. Schedule on A-072 has been corrected.
47	1W01 and 1W02 on A-204 show sheet rock hatch, whereas the finish schedule on A-072 shows ACP-1. Please clarify.	Drawing A-204 is correct. A-072 has been updated to reflect Paint finish.
48	As per note 9 on A-204 - detail 12/A-035 indicates GWB, whereas detail 3/A-760 indicates cement backer board. Please clarify.	Detail 12/A-035 has been removed from set on Addendum #3/ Detail 3/A-760 is correct.
49	Please confirm casework schedule A-600 through A-613 is part of our contract and not FF&E.	Confirmed.
50	Detail 4/A-403 indicates concrete curb, but CMU is shown. Please indicate if CMU or concrete curbs are required at bulkhead sills.	CMU curb to be installed as bulkhead sills as per detail. Note has been updated on 4/A-403.
51	Cat condo 2C12 indicates WP-3 on A-072. A-148 does not. Please clarify.	Drawing A-148 is correct. Schedule in A-072 has been updated.
52	Please indicate which rooms have the wall and protection and rail per detail 14/A-760. Please provide specification for wall protection rail.	Detail applies to all exam rooms on cat housing, floor 02 sector 3.
53	Please confirm note 10 on drawings A-131.00 through A-133.00 does not apply for this project. If the note does apply, please provide SOE drawings and specifications.	Project does not require SOE. Note 10 to be taken out from drawings A-131.00 through A-133.00.
54	Please provide dosage rate for hydrophilic crystalline admixture within "impervious CIP concrete" as shown on L-110.00.	Dosage rate shall follow product manufacturer's recommendations and instruction for the specified application. Impervious CIP concrete pavement in this project is for animal exercise and play areas that will be exposed to water, urine, and other liquids.

55	The light pole layout on drawing E-100.00 does not match the light pole layout on drawing C-130.00. Please update the incorrect drawing that reflects the intended design. In addition, please update the conduit routing for the light poles if necessary.	Drawing C-130.00 shows correct configuration. Drawing E-100.00 has been updated.
56	Detail 5/C-500 shows an asphalt binder base of 2.5", detail 6/I-700 shows an asphalt binder base with a thickness of 4". Please advise which detail is to be followed.	Please use Detail #6 provided on the Paving Details, Sheet L-600. Detail on C-500 has been removed.
57	The wall finish schedule on drawing A-072.00 calls to "see interior elevation" at the staff locker room. Please provide the elevations for the staff locker room.	Elevation not required. Note has been removed from A-072.
58	The available voltage options for the unit with the electric heated dryer are (d voltage) 200-208v/50-60hz/1ph (e voltage) 230-240v/50-60hz/1ph (f voltage) 200-208v/50-60hz/3ph (g voltage) 230-240v/50-60hz/3ph. Please advise.	Review provided electrical circuiting in Electrical Drawing set to determine appropriate equipment.
59	Detail 3/A-400 calls for the waterproofing to extend from the outside face of grade beam, underneath the perimeter grade beam and up the interior vertical face of beam. Please confirm the inside face is to receive sheet membrane waterproofing and not vapor barrier, and that the sheet membrane waterproofing is to extend below the grade beam.	The self-adhered sheet membrane waterproofing extends from outside face of grade beam, underneath the perimeter grade beam and up the interior vertical face of beam. The interior face of the grade beam should tie into the underslab vapor barrier.
60	Detail 1/FO-301 and typical elevator pit detail on FO-501 call for rigid insulation below the perimeter grade beam and elevator pit. Please confirm the grade beam and elevator pit are to be placed on top of the rigid insulation, as detail 3/A-400 and detail 9/A-550 do not show any insulation below.	Insulation not required below the grade beam. 1/FO-301 and FO-501 to be updated.
61	Can mockups stated in specifications section 018316 be performed in place?	Refer to 1.8A2 for guidance.
62	Detail 1/E-600.00 calls for the conduit duct bank below the slab on grade to be concrete encased. The conduits shown on drawing C-160.00 show the conduit duct bank, but the Drawing does not reference the conduit duct bank to be concrete encased. Please advise if the electrical service and 4" conduit duct bank are to be concrete encased.	Yes, the service needs to be encased in concrete up to the service SWBD on 2 nd floor.
63	Re: Dwg E-200 - Please advise who furnish and who install the Con Ed pad mounted switch, the MV cables, and the Con Ed pad mounted transformer. Detail says switch furnished and installed by Con Ed. Note #1 say furnished by Con Ed and installed by contractor.	Refer to E-500, which states that the HV switch and the associated pad to be fully installed by Con Ed. The pad mounted transformer to be furnished by Con Ed and installed by contractor. The pad will also be constructed by the contractor.
64	Dwg E-200/E-500 - Please advise if there is a specification for the MV cable.	The Con Ed cable from street is: 3-2/0 EPR-NL (5KV rated), the cable from the switch to the switch shall be the same type as indicated on E-500. There is no spec for the MV cable. Con Ed standards to be followed. Con Ed required cable is as indicated in drawings.

65	Please provide the areas in which the Traffic Coatings described in Specification Section 071800 are to be applied.	Refer to A-072 for this information.
66	Concrete toppings – Please provide the areas at the second floor where concrete topping is to be applied.	Refer to A-072 for this information.
67	Please confirm the structural angle in detail 7/A-435 is coordinated with details 1 and 2 on S-404. Please advise if the shelf angle detailed on 5/A-435 is coordinate with structural details. If not, please advise on the attachment of this brick angle.	The architectural detail 7/A-435 referenced is a typical detail and shows a loose lintel. Sections 1/ and 2/S-404 applies to 5/A-435 architectural detail and refer to hung lintels. Refer to Structural Steel note 10 on S001.00. Refer to S-105, S-106, S-108 and S-109 for locations of hung lintels.
68	Are site safety personnel a requirement for this project? If so, does a construction supervisor qualify as site safety personnel, or do the personnel need to be specifically licensed?	A licensed safety personnel is required, see Schedule A in the Addendum to the General Conditions. For site safety personnel requirements, the bidder shall refer to NYC Building Code, Chapter 33: Safeguards During Construction or Demolition.
69	L and IR scope was changed per the addendum 01, attachment B. However, these updated drawings were not included in the documents issued in addendum 01 or addendum 02. Please advise if updated documents will be issued.	Drawings were moved into Part 3 of the Drawing set.
70	Re: Specification Section 316216 Steel Piles Article 1.7 J 1-3 lists the Test piles required and quantities for each. Item 3 states, “For each type of pile, two piles for lateral load test. Production piles can be used upon approval of the Commissioner.” This is only stated for the lateral loads tests and not for Item 1 compressive load test or Item 2: uplift lad test. Please confirm all test piles/ types can be used as production piles upon approval of the Commissioner.	The production piles can only be used for lateral load tests. Additional sacrificial/destructive piles must be used for other tests.
71	Re: roof planters - Detail 4/L720 states for the material to be 1/8” thick powder coated steel planter box. Specification Section 323300 Site Furnishings states it should be Fiberglass. Please advise on what to price.	Fiberglass is the material. The roof planter detail 4/L-720 has been updated to reflect the same material specified in Specification 323300.
72	Please provide additional information on what type of gravel is to be used at the gravel areas per detail 8/L-700.	Gravel: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color: 1. Type: Rounded riverbed gravel or smooth-faced stone. 2. Size Range: 1 inch maximum, ½ inch minimum. 3. Color: Readily available natural blue-gray gravel color range. Specification 329300 has been updated to include this information.
73	Drawing E-200 shows Con Edison 5kv HV switch getting fed with 2-4” PVC Sch.40 conduit. Please advise who is furnishing the 5kv cable (if Con Edison with termination or electrical subcontractor). If electrical subcontractor, provide specs for the cable.	Cable from street to the switch will be by Con Ed as E-500 provided with demarcation detailed note. Only section of cable and conduit from the switch to the transformer to be by contractor- Cable type to be same in response #64.
74	Please advise if the 4000-amp service gets limiter lugs or manhole crabs (not shown).	Contractor shall refer to Con Ed standard EO-13827 which is listed in E-200 for complete detail and provide compression lugs. No limiter lugs

		required as the transformer provided with internal expulsion fuses.
75	Drawing EL-100 shows 4-Bollard lights in parking area. Please confirm.	There are 5 fixtures as per EL-100.
76	Per the specifications for Asphalt Paving (Section 321216) the specified Binder Course is designated as PG 70-22. In speaking with the local supplier they do not have and cannot make this mix. They do in fact have DDC approved mix designs however this specified mix is a specialty mix typical for highways. Please clarify if we can utilize a DDC approved mix that is not PG 70-22. Also please clarify if we should follow mixes listed in specifications or on Detail 5 on drawing C-500.	Approved DDC mixes are acceptable. Follow updated specification section 321216. Also see updated Drawing C-500.
77	Regarding the LL34 Compliance Tab, if we don't have a CFO, CEO or COO, we just exclude all three and submit?	The bidder must respond to all parts of the LL34 compliance tab. For determining who is the CEO, CFO, and COO, the following guidance is provided: <ul style="list-style-type: none"> • Chief Executive Officer (CEO) or equivalent officer – The highest ranking officer or manager, such as the President, Executive Director, Sole Proprietor or Chairperson of the Board. • Chief Financial Officer (CFO) or equivalent officer – The highest ranking financial officer, such as the Treasurer, Comptroller, Financial Director or VP for Finance. • Chief Operating Officer (COO) or equivalent officer – The highest ranking operational officer, such as the Chief Planning Officer, Director of Operations or VP for Operations.
78	Section 096519-4 Article 3.3C notes no Access panels to receive LVT in this bid scope. Please confirm.	There is no access flooring in this job. Specification 096519-4 has been updated to remove reference.
79	Please confirm that Concrete Topping Section 035300-3 Article 2.1 is only required where shown on Drawing FO-002.00 under LEGEND – GROUD FLOOR W/ TOPPING.	FO-002.00 is a structural loading diagram. Please refer to architectural floor finish plans and slab edge plans.
80	Sanitary Base, top edge will have a cap strip, per Section 096516-5 Article 3.4 J1. However, cap strip is not indicated in Detail 1 on Drawing A-025.00. Please clarify.	Design basis product does not require cap strip. Other manufacturers as referred to in specification might require cap strip as part of the system.
81	What is Floor and Base Finish of DOG HOUSING EXTERIOR on the 1 st Floor, Detail 1 on Drawing A-726.00?	Concrete finish. Walls are exterior so no base required.
82	Ground Floor on Drawing FO-002.00 is also the 1 st Floor as shown on Drawing A-101.00. Please confirm.	“Ground floor” on FO-002.00 refers to 1 st floor as shown on A-101.00. FO-002.00 naming has been updated.
83	As per page G-010, Table 601, Construction Classification IIB does not require fireproofing of structural members: This is not typical of a building of this	Confirmed.

	size in the Bronx. Can you please confirm there is no fireproofing required on this project?	
84	Please provide name of the manufacturer and model number for new vacuum tank for this project.	Refer to Schedule on sheet P-700.00 for Basis of design, as well as Specification 226219.
85	Addendum #3, Drawing A-075 indicates that the Guillotine Panel Systems (G1/S1), for the Medical area, is by the Contractor. In the Dog Room - DOHMH, the GI portion of this panel system is by DOHMH. Is this correct?	Yes, correct.
86	Section 035416-3 Article 2.3A calls for Sound Control Mat. Please confirm Sound Control requirements.	No sound control mat required. Specification 035416 has been updated.
87	There are multiple sloped topping slabs throughout the first and second floor of the project. The specification calls for some of these topping slabs to be performed using engineered, bagged, self-leveling products which will not allow for slopes to be created. In addition, it is more expensive in both materials and labor to place the slabs using a bag mix. Please confirm the intent for the topping slabs are to be bag mixed and not ready mixed concrete throughout the building. If it is to be ready mix, please provide design mix requirements.	Ready mix is the intended method for pitched slabs. Specification 035300 has been removed. Refer to updated Specification 033000 for ready mix specification, and updated Bid Breakdown included in the PASSPort Questionnaire.
88	Addendum 3 included a new specification Section, 102219 Demountable Partitions. Where can we find the schedule for the demountable partitions so we can quantify and provide their respective costs.?	No schedules for this scope. Partitions can be found in the drawings. Refer to sheet A-118.
89	Please confirm that RB-5 and RB-6 Nora Rubber Base is to be 4" height.	Confirmed.
90	Please confirm all plastic laminate casework construction is NAF MDF with recessed standards and plastic laminate interiors, and not NAUF particleboard with melamine interiors and shelf pins.	Correct, NAF MDF.
91	Please clarify at casework if drawer box material is plastic laminate MDF or particleboard with white melamine interior.	MDF plastic laminate.
92	The Civil Drawings show an 18" curb cut while the Landscape drawings show a 24" curb cut, please advise what drawing takes precedent.	Follow Civil Drawings. Drawings L-701 has been updated to match.
93	Drawing A-115 shows a canopy overhang in the dog housing exterior area. No further details or specifications are shown. Please advise.	Scope not by Contractor. Canopy will be furnished and installed by DOHMH.
94	Note #6 on drawing S-512.00 Slab on metal deck edge condition says "macrofibre dosage to be the equivalent of .4 sq. in. per foot of steel in each direction." Please advise what Macrofibre is in reference to.	The slab on metal deck is required to have macrofibres instead of welded wire reinforcement. This note specifies the dosage requirement of fibers in terms of equivalent area of steel.
95	RFI #48 on Addendum #2 advised that all Ki Wall systems tagged AW were FF&E, to be procured under a separate contract. Addendum 3 updated A-075 with a matrix stating that the Contractor is responsible for purchase and installation of AW systems. Please confirm Addendum 3 is correct.	Confirmed. Addendum #3 clarifies responsibility.

96	Drawing A-491 shows canopy drainage in two locations. The drawings advise that the building side drainage should be per the plumbing drawings. However, there is no direction shown on the plumbing drawings. Please advise.	Refer to P-300 & A-490 for quantities. Drawing A-491 show only details. Drawings are coordinated.
97	There are several missing rebar lengths on drawing FO-112.00. This information is necessary for an accurate quote; please provide this information.	Drawing FO-112.00 has been updated.
98	Addendum #4 states that the Bid Submission Form in Passport has been updated. The Bid Submission form that is currently in Passport references "85022B0104-CO283WT 100 Centre Street House Tank Replacement Rebid." Please provide an updated Bid Submission Form.	Bid Submission Form has been revised to correctly label this project; refer to PASSPort Questionnaire.

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to the Drawings:

Architectural Scope:

- **G-000.00/G-001.00** Updated sheet index
- **A-021.00** Added partition type
- **A-072.00** Updated finishes
- **A-131.00** Note 10 removed
- **A-132.00** Note 10 removed
- **A-133.00** Note 10 removed
- **A-403.00** Updated drawing 4. Note on curb updated to match detail

Landscape

- **L-200** Materials & Furnishing Plan
- **L-210** Materials & Furnishing Plan Enlargement
- **L-220** Materials & Furnishing Plan Enlargement
- **L-230** Materials & Furnishing Plan Enlargement
- **L-240** Roof Materials & Furnishing Plan Enlargement
- **L-700** Paving Details
- **L-701** Edging Details, curb cut
- **L-720** Furnishing Details

Structural

- **FO-001** Pile length language updated to match Geotech Engineer
- **FO-002** Ground floor designation updated to 1st floor
- **FO-112** Added rebar lengths
- **FO-301** Insulation under perimeter grade beam and pits removed
- **FO-302** Insulation under perimeter grade beam and pits removed
- **FO-501** Insulation from below elevator and GBs removed in typical details; refer to Geotech for pile coating

Electrical

- **E-001.00-** Indicated drawings issued under Addendum #5
- **E-100.00-** Updated light pole
- **E-320.00-** Coordinated fire pump disc switch size with the riser diagram
- **E-500.00-** Updated feeder size and local disc switch for AHU-R-1, AHU-R-3 & AHU-R-4
- **E-700.00-** Updated fixture description for Stairway light
- **E-701.00-** Updated panel Schedule for HDP-N-2N to coordinate with the riser
- **E-702.00-** Updated panel Schedule
- **E-706.00-** Updated panel Schedule

- **EL-100.00-** Coordinated pole lighting with civil drawing C-160

Plumbing

- **P-001-** Indicated drawings issued under Addendum #5
- **P-403-**Medical vacuum note updated
- **P-700-**Medical vacuum schedule updated

Civil

- **C-500** – Asphalt mix note removed, paving detail clarified.

Revisions to Volume 3:

Revised Addendum to the General Conditions: revised Mobilization Payment

Revised Sections:

- **SECTION 033000 – CAST IN PLACE CONCRETE**–updated topping mix
- **SECTION 035416 – HYDRAULIC CEMENT UNDERLAYMENT**–removed sound control mat reference
- **SECTION 033543 – POLISHED CONCRETE FINISHING-** removed reference to concrete topping
- **SECTION 055110 – METAL STAIRS** – spec section edited for precast treads
- **SECTION 096519 – RESILIENT TILE FLOORING** – reference to access flooring removed
- **SECTION 102600 – WALL AND DOOR PROTECTION** – added cat rail protection
- **SECTION 230713-DUCT INSULATION** – clarified wording on insulation part 2
- **SECTION 230719-HVAC PIPING INSULATION**– clarified wording on insulation part 2
- **SECTION 321216 – ASPHALT PAVING** – removed PG 70-22 reference from spec.
- **SECTION 329300 – PLANTS**-Gravel bed text added.

Removed Sections:

- **SECTION 035300 CONCRETE TOPPING**

DDC PROJECT #: HL82BRONX

PROJECT NAME: Bronx Animal Care Facility & Veterinary Clinic

ATTACHMENT C – REVISIONS TO PASSPORT FORMS

This Addendum initiates Round 6 of the procurement.

Please note that numbering of addenda is independent of rounds.

Bid Opening Changes:

None

Questionnaire Changes:

- Bid Submission Form has been updated.
