1. For indoor applications, use mastics that have a VOC content of 40 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
1. Products: Subject to compliance with requirements, provide one of the following :
- a. Childers Products, Division of ITW; CP-35.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-90.
 - c. ITW TACC, Division of Illinois Tool Works; CB-50.
 - d. Marathon Industries, Inc.; 590.
 - e. Mon-Eco Industries, Inc.; 55-40.
 - f. Vimasco Corporation; 749.
2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below ambient services.
1. Products: Subject to compliance with requirements, provide one of the following:
- a. Childers Products, Division of ITW; CP-30.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-35.
 - c. ITW TACC, Division of Illinois Tool Works; CB-25.
 - d. Marathon Industries, Inc.; 501.
 - e. Mon-Eco Industries, Inc.; 55-10.
2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 35-mil dry film thickness.
3. Service Temperature Range: 0 to 180 deg F.
4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
5. Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
1. Products: Subject to compliance with requirements, provide one of the following :
- a. Childers Products, Division of ITW; Encacel.
 - b. Foster Products Corporation, H. B. Fuller Company; 60-95/60-96.

- c. Marathon Industries, Inc.; 570.
 - d. Mon-Eco Industries, Inc.; 55-70.
2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 30-mil dry film thickness.
 3. Service Temperature Range: Minus 50 to plus 220 deg F.
 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
 5. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; CP-10.
 - b. Foster Products Corporation, H. B. Fuller Company; 35-00.
 - c. ITW TACC, Division of Illinois Tool Works; CB-05/15.
 - d. Marathon Industries, Inc.; 550.
 - e. Mon-Eco Industries, Inc.; 55-50.
 - f. Vimasco Corporation; WC-1/WC-5.
 2. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 200 deg F.
 4. Solids Content: 63 percent by volume and 73 percent by weight.
 5. Color: White.

2.6 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of 40 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; CP-52.
 - b. Foster Products Corporation, H. B. Fuller Company; 81-42.
 - c. Marathon Industries, Inc.; 130.
 - d. Mon-Eco Industries, Inc.; 11-30.
 - e. Vimasco Corporation; 136.
 3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct, equipment, and pipe insulation.
 4. Service Temperature Range: Minus 50 to plus 180 deg F.
 5. Color: White.

2.7 SEALANTS

- A. Joint Sealants:
1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; CP-76.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45.

- c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - f. Vimasco Corporation; 750.
2. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, provide one of the following:
- a. Childers Products, Division of ITW; CP-70.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45/30-46.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
3. Materials shall be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: Minus 100 to plus 300 deg F.
6. Color: White or gray.
7. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following :
- a. Childers Products, Division of ITW; CP-76-8.
 - b. Foster Products Corporation, H. B. Fuller Company; 95-44.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following :
- a. Childers Products, Division of ITW; CP-76.
 - b. Vimasco Corp.
 - c. Mon-Eco Industries, Inc.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.8 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
5. PVDC Jacket for Indoor Applications: 4-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.

a. Products: Subject to compliance with requirements, provide one of the following:

- 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
- 2) Or Approved Equal

6. PVDC Jacket for Outdoor Applications: 6-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.

a. Products: Subject to compliance with requirements, provide one of the following:

- 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
- 2) Or Approved Equal

7. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.

a. Products: Subject to compliance with requirements, provide one of the following:

- 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
- 2) Or Approved Equal

8. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.9 FIELD-APPLIED FABRIC-REINFORCING MESH

A. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately 2 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch for covering pipe and pipe fittings.

1. Products: Subject to compliance with requirements, provide one of the following :
 - a. Vimasco Corporation; Elastafab 894.
 - B. Woven Glass-Fiber Fabric for Duct and Equipment Insulation: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. inch for covering equipment.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; Chil-Glas No. 5.
 - b. Foster Products Corporation, H. B. Fuller Company
 - c. Or approved equal
 - C. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch, in a Leno weave, for duct, equipment, and pipe.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Products Corporation, H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.
 - c. Or approved equal
- 2.10 FIELD-APPLIED JACKETS
- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
 - B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.
 - C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto PVC Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
 4. Factory-fabricated tank heads and tank side panels.
 - D. Metal Jacket:
 1. Products: Subject to compliance with requirements, provide one of the following :
 - a. Childers Products, Division of ITW; Metal Jacketing Systems.
 - b. PABCO Metals Corporation; Surefit.

- c. RPR Products, Inc.; Insul-Mate.
- 2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
 - a. Factory cut and rolled to size.
 - b. Finish and thickness are indicated in field-applied jacket schedules.
 - c. Moisture Barrier for Indoor Applications: 2.5-mil- thick Polysurlyn.
 - d. Moisture Barrier for Outdoor Applications: 2.5-mil- thick Polysurlyn.
 - e. Factory-Fabricated Fitting Covers:
 - 1) Same material, finish, and thickness as jacket.
 - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - 3) Tee covers.
 - 4) Flange and union covers.
 - 5) End caps.
 - 6) Beveled collars.
 - 7) Valve covers.
 - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.11 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
 - b. Compac Corp.; 104 and 105.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 - 2. Width: 3 inches.
 - 3. Thickness: 11.5 mils.
 - 4. Adhesion: 90 ounces force/inch in width.
 - 5. Elongation: 2 percent.
 - 6. Tensile Strength: 40 lbf/inch in width.
 - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - b. Compac Corp.; 110 and 111.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 491 AWF FSK.
 - d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
 - 2. Width: 3 inches.
 - 3. Thickness: 6.5 mils.

4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - b. Compac Corp.; 120.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
 - d. Venture Tape; 3520 CW.
2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

2.12 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, provide one of the following :
 - a. Childers Products; Bands.
 - b. PABCO Metals Corporation; Bands.
 - c. RPR Products, Inc.; Bands.
2. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 3/4 inch wide with wing or closed seal.
3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; CWP-1.
 - 2) GEMCO; CD.
 - 3) Midwest Fasteners, Inc.; CD.
 - 4) Nelson Stud Welding; TPA, TPC, and TPS.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; CWP-1.

- 2) GEMCO; Cupped Head Weld Pin.
 - 3) Midwest Fasteners, Inc.; Cupped Head.
 - 4) Nelson Stud Welding; CHP.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series T.
 - 2) GEMCO; Perforated Base.
 - 3) Midwest Fasteners, Inc.; Spindle.
 - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - c. Spindle: Aluminum, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) GEMCO; Nylon Hangers.
 - 2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
 - c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
- a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series TSA.
 - 2) GEMCO; Press and Peel.
 - 3) Midwest Fasteners, Inc.; Self Stick.
 - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - c. Spindle: Aluminum, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive-backed base with a peel-off protective cover.

6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, aluminum sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) AGM Industries, Inc.; RC-150.
 - 2) GEMCO; R-150.
 - 3) Midwest Fasteners, Inc.; WA-150.
 - 4) Nelson Stud Welding; Speed Clips.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) GEMCO.
 - 2) Midwest Fasteners, Inc.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.
- D. Wire: 0.062-inch soft-annealed, galvanized steel.
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Childers Products.
 - c. PABCO Metals Corporation.
 - d. RPR Products, Inc.

2.13 CORNER ANGLES

- A. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.
 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 2. Verify that surfaces to be insulated are clean and dry.
 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 - 2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.

2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
1. Comply with requirements in Division 07 Section "Penetration Firestopping" and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
 2. Pipe: Install insulation continuously through floor penetrations.
 3. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."
- ### 3.5 MINERAL-FIBER INSULATION INSTALLATION
- A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
 3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.

4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

E. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.
 - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

F. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.

- b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
- 5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
- 6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.6 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
 - 1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
 - 2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
 - 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
 - 1. Draw jacket material smooth and tight.
 - 2. Install lap or joint strips with same material as jacket.
 - 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 - 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
 - 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 - 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.
- E. Where PVDC jackets are indicated, install as follows:
 - 1. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
 - 2. Wrap factory-presizes jackets around individual pipe insulation sections with one end overlapping the previously installed sheet. Install presized jacket with an approximate overlap at butt joint of 2 inches over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.

3. Continuous jacket can be spiral wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
4. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches or less. The 33-1/2-inch- circumference limit allows for 2-inch- overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
5. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.7 FIRE-RATED INSULATION SYSTEM INSTALLATION

- A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- B. Insulate duct access panels and doors to achieve same fire rating as duct.
- C. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Division 07 Section "Penetration Firestopping."

3.8 FINISHES

- A. Duct, Equipment, and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.
 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.9 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 1. Inspect ductwork, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.

- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.10 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in nonconditioned space.
4. Indoor, exposed return located in nonconditioned space.
5. Indoor, concealed, Type I, commercial, kitchen hood exhaust.
6. Indoor, exposed, Type I, commercial, kitchen hood exhaust.
7. Indoor, concealed oven and warewash exhaust.
8. Indoor, exposed oven and warewash exhaust.
9. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
10. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
11. Outdoor, concealed supply and return.
12. Outdoor, exposed supply and return.

B. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Flexible connectors.
6. Vibration-control devices.
7. Factory-insulated access panels and doors.

3.11 INDOOR DUCT AND PLENUM INSULATION SCHEDULE (EXCEPT KITCHEN DUCTWORK)

A. Supply-and return air ducts and plenum insulation shall be one of the following:

1. Glass-Fiber Blanket: Minimum R-5
2. Glass-Fiber Board: Minimum R-5.
3. Flexible Elastomeric: Minimum R-5.

B. Outdoor-air ducts and plenum insulation shall be one of the following:

1. Glass-Fiber Blanket: : Minimum R-8
2. Glass-Fiber Board: Minimum R-8.
3. Flexible Elastomeric: Minimum R-8.

C. Exhaust-air duct insulation between isolation damper and penetration of building exterior shall be one of the following:

1. Glass-Fiber Blanket: Minimum R-5
2. Glass-Fiber Board: Minimum R-5.
3. Flexible Elastomeric: Minimum R-5.

3.12 KITCHEN DUCTWORK

- A. Kitchen exhaust ductwork shall be insulated with calcium silicate high temperature insulation with a maximum K factor of 0.42 at 200 degree F mean temperature.
- B. Insulation shall be securely wired in place with copper clad wire or galvanized steel bands (1/2" x 0.15) on 12" center.
- C. Over the insulation apply 1" galvanized wire netting secured to the bands or wires and pulled down tight. Apply 1/4" thick coat of insulating and finish cement trowelled to a smooth finish. This applies for both exposed and concealed ductwork.
- D. For kitchen exhaust ducts exposed in finished spaces cover the cement finish with glass cloth set in adhesive.

3.13 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. All outdoor duct and plenum shall be double wall construction as specified in Section 233113 "Metal Ducts".

3.14 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Ducts and Plenums, Concealed:
 - 1. None.
- D. Ducts and Plenums, Exposed:
 - 1. None.

3.15 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. Ducts and Plenums up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:
 - 1. Venture Clad Plus 1579CW 15.5 mils
 - 2. AlumaGuard
 - 3. PolyGuard
- C. Ducts and Plenums Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:
 - 1. Venture Clad Plus 1579CW 15.5 mils
 - 2. AlumaGuard
 - 3. PolyGuard
- D. Equipment, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:

1. Venture Clad Plus 1579CW 15.5 mils
 2. AlumaGuard
 3. PolyGuard
- E. Equipment, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:
1. Venture Clad Plus 1579CW 15.5 mils
 2. AlumaGuard
 3. PolyGuard
- F. Piping:
1. PVC: 40 mils thick.
 2. Venture Clad Plus 1579CW 15.5 mils
 3. AlumaGuard
 4. PolyGuard

END OF SECTION 230700

SECTION 230716**HVAC EQUIPMENT INSULATION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following HVAC equipment that is not factory insulated:
 - 1. Condenser water pumps.
 - 2. Heating, hot-water pumps.
 - 3. Chilled Water Pumps
 - 4. Expansion/compression tanks.
 - 5. Air separators.
- B. Related Sections:
 - 1. Division 23 Section "HVAC Insulation."
 - 2. Division 23 Section "HVAC Piping Insulation."

1.3 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
 - 3. Detail removable insulation at equipment connections.
 - 4. Detail application of field-applied jackets.
 - 5. Detail application at linkages of control devices.
 - 6. Detail field application for each equipment type.

- D. Qualification Data: For qualified Installer.
- E. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with equipment Installer for equipment insulation application.
- C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements "Equipment Insulation Schedule" for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Calcium Silicate:
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. Industrial Insulation Group (IIG); Thermo-12 Gold.
 - b. Fibrex Insulations Inc
 - c. Knauf Insulation
 - 2. Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.
- G. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. Provide insulation with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CertaPro Commercial Board.
 - b. Fibrex Insulations Inc.; FBX.
 - c. Johns Manville; 800 Series Spin-Glas.
 - d. Knauf Insulation; Insulation Board.
- H. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb/cu. ft. or more. Thermal conductivity (k-value) at 100 deg F is 0.29 Btu x in./h x sq. ft. x deg F or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; CrimpWrap.

- b. Johns Manville; MicroFlex.
- c. Knauf Insulation; Pipe and Tank Insulation.

2.2 INSULATING CEMENTS

- A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

- 1. Products: Subject to compliance with requirements, provide the following:

- a. Ramco Insulation, Inc.; Super-Stik.

2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

- 1. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- B. Calcium Silicate Adhesive: Fibrous, sodium-silicate-based adhesive with a service temperature range of 50 to 800 deg F.

- 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-97.
- b. Eagle Bridges - Marathon Industries; 290.
- c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 81-27.
- d. Mon-Eco Industries, Inc.; 22-30.
- e. Vimasco Corporation; 760.

- 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- 3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

- 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.

1. For indoor applications, use lagging adhesives that have a VOC content of 420g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 SEALANTS

A. Joint Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Permanently flexible, elastomeric sealant.
3. Service Temperature Range: Minus 100 to plus 300 deg F.
4. Color: White or gray.
5. For indoor applications, use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
 - d. Mon-Eco Industries, Inc.; 44-05.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications, use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications, use sealants that have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.7 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.8 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Glass-Fiber Fabric: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. in. for covering equipment.
 1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Chil-Glas No. 5.
- B. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. in., in a Leno weave, for equipment.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.

2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: White.
 4. Factory-fabricated tank heads and tank side panels.

2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 428 AWF ASJ.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
 - c. Compac Corporation; 104 and 105.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 2. Width: 3 inches.
 3. Thickness: 11.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 491 AWF FSK.
 - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - c. Compac Corporation; 110 and 111.
 - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
 2. Width: 3 inches.
 3. Thickness: 6.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 2. Width: 2 inches.
 3. Thickness: 6 mils.
 4. Adhesion: 64 ounces force/inch in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch in width.

2.11 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, provide one of the following:
 - a. ITW Insulation Systems; Gerrard Strapping and Seals.
 - b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316; 0.015 inch thick, 1/2 inch wide with wing seal or closed seal.
3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing seal or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place.
4. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

D. Wire: 0.062-inch soft-annealed, stainless steel.

2.12 CORNER ANGLES

- A. PVC Corner Angles: 30 mils thick, minimum 1 by 1 inch, PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- C. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 1. Verify that systems and equipment to be insulated have been tested and are free of defects.
 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
 - 1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
 - 2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- O. For above ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.4 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral-Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of tank and vessel surfaces.
 2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
 3. Protect exposed corners with secured corner angles.

4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
 - a. Do not weld anchor pins to ASME-labeled pressure vessels.
 - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
 - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
 - d. Do not overcompress insulation during installation.
 - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
 - f. Impale insulation over anchor pins and attach speed washers.
 - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
 6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
 7. Stagger joints between insulation layers at least 3 inches.
 8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
 9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
 10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
 2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
 2. Fabricate boxes from aluminum, at least 0.060 inch thick.
 3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.5 INSTALLATION OF CALCIUM SILICATE INSULATION

A. Insulation Installation on generator exhaust piping and muffler.:

1. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation material.
2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.
3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.
4. Jacket: Aluminum, Smooth: 0.032 inch thick.

3.6 FINISHES

A. Equipment Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 painting Sections.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections: Inspect field-insulated equipment, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to two location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.

D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.8 GENERATOR EXHAUST PIPING AND MUFFLER.

A. Shall be the following:

1. Calcium Silicate: 4 inches thick.

3.9 EQUIPMENT INSULATION SCHEDULE

- A. Insulation materials and thicknesses are identified below. If more than one material is listed for a type of equipment, selection from materials listed is Contractor's option.
- B. Insulate indoor and outdoor equipment that is not factory insulated.
- C. Condenser-water pump insulation shall be one of the following:
 1. Cellular Glass: 3 inches thick.
 2. Mineral-Fiber Board: 2 inches thick and 6-lb/cu. ft. nominal density.
- D. Heating-hot-water pump insulation shall be the following:
 1. Mineral-Fiber Board: 3 inches thick and 3-lb/cu. ft. nominal density.
- E. Chilled-water pump insulation shall be the following:
 1. Mineral-Fiber Board: 3 inches thick and 3-lb/cu. ft. nominal density.
- F. Condenser-water expansion/compression tank insulation shall be one of the following:
 1. Cellular Glass: 1-1/2 inches thick.
 2. Mineral-Fiber Board: 1 inch thick and 6-lb/cu. ft. nominal density.
- G. Condenser-water air-separator insulation shall be one of the following:
 1. Cellular Glass: 2 inches thick.
 2. Mineral-Fiber Board: 1 inch thick and 6-lb/cu. ft. nominal density.
- H. Heating-hot-water expansion/compression tank insulation shall be one of the following:
 1. Mineral-Fiber Board: 3 inches thick and 3-lb/cu. ft. nominal density.
 2. Mineral-Fiber Pipe and Tank: 3 inches thick.
- I. Heating-hot-water air-separator insulation shall be one of the following:
 1. Mineral-Fiber Board: 3 inches thick and 3-lb/cu. ft. nominal density.
 2. Mineral-Fiber Pipe and Tank: 3 inches thick.
- J. Chilled-water expansion/compression tank insulation shall be one of the following:
 1. Mineral-Fiber Board: 3 inches thick and 3-lb/cu. ft. nominal density.
 2. Mineral-Fiber Pipe and Tank: 3 inches thick.
- K. Chilled-water air-separator insulation shall be one of the following:
 1. Mineral-Fiber Board: 3 inches thick and 3-lb/cu. ft. nominal density.
 2. Mineral-Fiber Pipe and Tank: 3 inches thick.
- L. Emergency Generator Muffler: Same as generator exhaust piping.

3.10 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

- B. Emergency Generator Muffler and Piping: Aluminum, Smooth: 0.032 inch thick. See section 230719 for installation details.

END OF SECTION 230716

SECTION 230719**HVAC PIPING INSULATION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section includes insulating the following HVAC piping systems:
 - 1. Condensate drain piping, indoors.
 - 2. Condenser-water piping, indoors.
 - 3. Chilled-water piping, indoors.
 - 4. Heating hot-water piping, indoors
 - 5. Refrigerant suction and hot-gas piping, indoors and outdoors.
- B. Related Sections:
 - 1. Division 23 Section "HVAC Equipment Insulation."
 - 2. Division 23 Section "HVAC Insulation."
 - 3. Division 23 Section "Underground Hydronic Piping" for loose-fill pipe insulation in underground piping outside the building.

1.3 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory and field applied if any).
- B. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- C. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
 - 2. Detail attachment and covering of heat tracing inside insulation.
 - 3. Detail insulation application at pipe expansion joints for each type of insulation.

4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
 5. Detail removable insulation at piping specialties.
 6. Detail application of field-applied jackets.
 7. Detail application at linkages of control devices.
- D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use.
1. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
 2. Sheet Form Insulation Materials: 12 inches square.
 3. Jacket Materials for Pipe: 12 inches long by NPS 2.
 4. Sheet Jacket Materials: 12 inches square.
 5. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

1.4 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

- C. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

- D. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Commissioner. Use materials indicated for the completed Work.

1. Piping Mockups:
 - a. One 10-foot section of NPS 2 straight pipe.
 - b. One each of a 90-degree threaded, welded, and flanged elbow.
 - c. One each of a threaded, welded, and flanged tee fitting.
 - d. One NPS 2 or smaller valve, and one NPS 2-1/2 or larger valve.
 - e. Four support hangers including hanger shield and insert.
 - f. One threaded strainer and one flanged strainer with removable portion of insulation.
 - g. One threaded reducer and one welded reducer.
 - h. One pressure temperature tap.
 - i. One mechanical coupling.
2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
4. Obtain Commissioner's approval of mockups before starting insulation application.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

- B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials.

1. Products: Subject to compliance with requirements

- a. Aeroflex USA, Inc.; Aerocel.
- b. Armacell LLC; AP Armaflex.
- c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.
- d. K-Flex Clad

G. Mineral-Fiber, Preformed Pipe Insulation:

1. Products: Subject to compliance with requirements, provide one of the following:

- a. Fibrex Insulations Inc.; Coreplus 1200.
- b. Johns Manville; Micro-Lok.
- c. Knauf Insulation; 1000-Degree Pipe Insulation.
- d. Manson Insulation Inc.; Alley-K.

- e. Owens Corning; Fiberglas Pipe Insulation.

2.2 INSULATING CEMENTS

- A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

- 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Ramco Insulation, Inc.; Super-Stik.

2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

- B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.

- 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Aeroflex USA, Inc.; Aero seal.
 - b. Armacell LLC; Armaflex 520 Adhesive.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
 - d. K-Flex USA; R-373 Contact Adhesive.
- 2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

- 1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
 - b. Eagle Bridges - Marathon Industries; 225.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
 - d. Mon-Eco Industries, Inc.; 22-25.
- 2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- D. PVC Jacket Adhesive: Compatible with PVC jacket.

- 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Dow Corning Corporation; 739, Dow Silicone.
 - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.

- c. P.I.C. Plastics, Inc.; Welding Adhesive.
 - d. Speedline Corporation; Polyco VP Adhesive.
2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
1. Products: Subject to compliance with requirements available products that may be incorporated into the Work include, but are not limited to, the following:
- a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.
 - b. Vimasco Corporation; 749.
2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
5. Color: White.

2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
 - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
 - c. Vimasco Corporation; 713 and 714.
3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
4. Service Temperature Range: 0 to plus 180 deg F.
5. Color: White.

2.6 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-70.
 - b. Eagle Bridges - Marathon Industries; 405.
 - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
 - d. Mon-Eco Industries, Inc.; 44-05.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.7 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
5. PVDC Jacket for Indoor Applications: 4-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.02 perm when tested according to ASTM E 96/E 96M and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - 3) Eagle Bridges - Marathon Industries; 225.
6. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.
 - a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

- 1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
 - 2) Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
 - 3) Eagle Bridges - Marathon Industries; 225.
7. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96/E 96M, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.8 FIELD-APPLIED JACKETS

- A. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: Color-code jackets based on system. Color as selected by Commissioner.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

2.9 TAPES

- A. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. ABI, Ideal Tape Division; 370 White PVC tape.
 - b. Compac Corporation; 130.
 - c. Venture Tape; 1506 CW NS.
 2. Width: 2 inches.
 3. Thickness: 6 mils.
 4. Adhesion: 64 ounces force/inch in width.
 5. Elongation: 500 percent.
 6. Tensile Strength: 18 lbf/inch in width.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
 - 1. Verify that systems to be insulated have been tested and are free of defects.
 - 2. Verify that surfaces to be insulated are clean and dry.
 - 3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.

2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
1. Draw jacket tight and smooth.
 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
 - a. For below-ambient services, apply vapor-barrier mastic over staples.
 4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
 2. Testing agency labels and stamps.
 3. Nameplates and data plates.
 4. Manholes.
 5. Handholes.
 6. Cleanouts.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
1. Comply with requirements in Division 07 Section "Penetration Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
1. Pipe: Install insulation continuously through floor penetrations.
 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section "Penetration Firestopping."

3.5 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt

- each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Flanges:
 - 1. Install pipe insulation to outer diameter of pipe flange.
 - 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
 - 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
 - 4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
 - 1. Install mitered sections of pipe insulation.
 - 2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- D. Insulation Installation on Valves and Pipe Specialties:
 - 1. Install preformed valve covers manufactured of same material as pipe insulation when available.
 - 2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
 - 3. Install insulation to flanges as specified for flange insulation application.
 - 4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.7 INSTALLATION OF MINERAL-FIBER INSULATION

- A. Insulation Installation on Straight Pipes and Tubes:
 - 1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
 - 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
 - 3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
 - 4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Flanges:
 - 1. Install preformed pipe insulation to outer diameter of pipe flange.
 - 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.8 FIELD-APPLIED JACKET INSTALLATION

- A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive.
 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

3.9 FINISHES

- A. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- B. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.

3.10 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 1. Inspect pipe, fittings, strainers, and valves, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations

of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.11 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Drainage piping located in crawl spaces.
 - 2. Underground piping.
 - 3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.12 INDOOR PIPING INSULATION SCHEDULE

- A. Condensate and Equipment Drain Water below 60 Deg F:
 - 1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1 inch thick.
 - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
- B. Condenser-Water Supply and Return:
 - 1. 1.5 inch and Smaller: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1-1/2 inches thick.
 - b. Mineral-Fiber, Preformed Pipe, Type I: 1-1/2 inches thick.
 - 2. 2 inch and Larger: Insulation shall be one of the following:
 - a. Mineral-Fiber, Preformed Pipe, Type I: 2 inches thick.
- C. Chilled-Water Supply and Return, 200 Deg F and Below:
 - 1. 1.5 inch and Smaller: Insulation shall be one of the following:
 - a. Mineral-Fiber, Preformed Pipe, Type I: 1-1/2 inches thick.
 - 2. 2 inch and Larger: Insulation shall be one of the following:
 - a. Mineral-Fiber, Preformed Pipe, Type I: 2 inches thick.
- D. Heating-Hot-Water Supply and Return, 200 Deg F and Below:
 - 1. 1.5 inch and Smaller: Insulation shall be one of the following:
 - a. Mineral-Fiber, Preformed Pipe, Type I: 1-1/2 inches thick.
 - 2. 2 inch and Larger: Insulation shall be one of the following:
 - a. Mineral-Fiber, Preformed Pipe, Type I: 2 inches thick.
- E. Refrigerant Suction and Hot-Gas Piping:

1. 1.5 inch and Smaller: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1-1/2 inches thick.
 - b. Mineral-Fiber: 1-1/2 inches thick.
2. 2 inch and Larger: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches thick.
 - b. Mineral-Fiber: 1-1/2 inches thick.

F. Refrigerant Suction and Hot-Gas Flexible Tubing:

1. 1.5 inch and Smaller: Insulation shall be one of the following:
 - a. Flexible Elastomeric: 1-1/2 inches thick.
 - b. Mineral-Fiber: 1-1/2 inches thick.
2. 2 inch and Larger: Insulation shall be one of the following:
 - a. Cellular Glass: 1-1/2 inches thick.
 - b. Mineral-Fiber: 1-1/2 inches thick.

3.13 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Chilled Water and Brine:

1. All Pipe Sizes: Insulation shall be one of the following:
 - a. Cellular Glass: 3 inches thick.
 - b. Flexible Elastomeric: 3 inches thick.
 - c. Mineral-Fiber, Preformed Pipe Insulation, Type I: 3 inches thick.

3.14 OUTDOOR, UNDERGROUND PIPING INSULATION SCHEDULE

- A. Loose-fill insulation, for belowground piping, is specified in Section 232113.13 "Underground Hydronic Piping" and Section 336313 "Underground Steam and Condensate Distribution Piping."
- B. Chilled Water, All Sizes: Cellular glass, 2 inches thick.
- C. Condenser-Water Supply and Return, All Sizes: Cellular glass, 2 inches thick.
- D. Heating-Hot-Water Supply and Return, All Sizes.
 1. Calcium Silicate: 3 inches thick.
 2. Cellular Glass: 3 inches thick.

3.15 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Piping, Exposed: (Color by Commissioner)
 1. PVC: 30 mils thick.
- B. Piping Elbows, Exposed and concealed: (Color by Commissioner)
 1. PVC: 30 mils thick.

3.16 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 - 1. PVC: 30 mils thick.
 - 2. Aluminum, Smooth: 0.032 inch thick.
- D. Piping, Exposed:
 - 1. PVC: 30 mils thick.
 - 2. Aluminum, Smooth: 0.032 inch thick.

END OF SECTION 230719

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 230800
COMMISSIONING OF HVAC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, General Commissioning Requirement and other Division 01 Specification Sections, apply to this section.
- B. Division 01 section 'LEED Requirements' for additional LEED requirements.

1.2 SUMMARY

- A. This section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.
- B. Related Sections:
 - 1. Division 01 Section "General Commissioning Requirements" for general commissioning process requirements.
 - 2. Division 23 Heating Ventilation & Air Conditioning

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the Owner with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of each system designer to provide a complete design or installing subcontractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the Owner.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
 - 2. Verify and document proper performance of equipment and systems as per the written procedures.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to Owner.
 - 4. Verify that the City of New York's operating personnel are adequately trained.
 - 5. Verify a contract is in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.

- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.
- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Trade Contractors, subcontractors, manufacturers and equipment suppliers.
- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to Division 01 Section "General Commissioning Requirements" for definitions.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions.
- B. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, pre-start, and startup activities.
 - 3. O&M manuals
 - 4. Test reports
 - 5. 'As Built' Drawings
- C. Control Drawings Submittal
 - 1. The control drawings shall have a key to all abbreviations.
 - 2. The control drawings shall contain graphic schematic depictions of the systems and each component.
 - 3. The schematics will include the system and component layout of any equipment that the control system monitors, enables or controls, even if the equipment is primarily controlled by packaged or integral controls.
 - 4. Provide a full points list with at least the following included for each point:
 - a. Controlled system
 - b. Point abbreviation
 - c. Point description
 - d. Display unit
 - e. Control point or set point
 - f. Monitoring point
 - g. Intermediate point
 - h. Calculated point

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the mechanical contractor of Division 23 shall ultimately be responsible for all standard testing equipment for the HVAC&R system and controls system in Division 23, except for equipment specific to and used by TAB (Testing and Balancing) in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by each subcontractor.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the Owner and left on site.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon completion of the commissioning process.
- D. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
 - 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.

2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data:
1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 2. The CxA will review the O&M literature once for conformance to project requirements.
 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Training:
1. Contractor will provide demonstration and training as required by the specifications.
 2. A complete training plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any training.
 3. A training agenda for each training session must be submitted to the CxA one (1) week prior the training session.
 4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and Commissioner. A copy of the test record shall be provided to the CxA, Owner, and Commissioner.
 5. Engage a Factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.
 6. Train City of New York's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
 7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Mechanical, Controls and TAB Contractors. The commissioning responsibilities applicable to each of the mechanical, controls and TAB contractors of Division 23 are as follows (all references apply to commissioned equipment only):
- B. Perform commissioning tests at the direction of the CxA.
- C. Attend construction phase controls coordination meetings.
- D. Attend testing, adjusting, and balancing review and coordination meetings.
- E. Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- F. Provide information requested by the CxA for final commissioning documentation.
- G. Include requirements for submittal data, operation and maintenance data, and training in each purchase order or sub-contract written.
- H. Prepare preliminary schedule for Mechanical system orientations and inspections, operation and maintenance manual submissions, training sessions, pipe and duct system testing,

flushing and cleaning, equipment start-up, testing and balancing and task completion for owner. Distribute preliminary schedule to commissioning team members.

- I. Update schedule as required throughout the construction period.
- J. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- K. Assist the CxA in all verification and functional performance tests.
- L. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- M. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA (45) days after submittal acceptance.
- N. Coordinate with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- O. Notify the CxA a minimum of (2) weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
- P. Participate in, and schedule vendors and contractors to participate in the training sessions.
- Q. Provide written notification to the Commissioner/GC and CxA Authority that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. HVAC&R equipment including all fans, air handling units, piping, ductwork, dampers, terminals, and all other equipment furnished under this Division.
 - 2. Controls system used for equipment monitoring and manipulation
 - 3. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
 - 4. Fire detection and smoke detection devices furnished under other divisions of the specification.
- R. The equipment supplier shall document the performance of his equipment.
- S. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- T. Test, Adjust and Balance Contractor
 - 1. Attend initial commissioning coordination meeting scheduled by the Commissioning Authority.
 - 2. Submit the site specific testing and balancing plan to the CxA and AE for review and acceptance.
 - 3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
- 4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the HVAC&R contractor and the Commissioner/GC.
- 5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.

- U. Provide training of the City of New York's operating staff using expert qualified personnel, as specified.
- V. Equipment Suppliers
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner, to keep warranties in force.
 - 2. Assist in equipment testing per agreements with contractors.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- W. Refer to Division 01 Section "General Commissioning Requirements" for additional contractor responsibilities.

3.3 COMMISSIONER'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Commissioner's Responsibilities.

3.4 CxA RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's Responsibilities.

3.5 TESTING PREPARATION

- A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode.
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.6 TESTING, ADJUSTING AND BALANCING VERIFICATION

- A. Air and water testing, balancing and equipment performance verification shall be accomplished by an independent test and balance firm. The CxA shall spot check this work to verify accuracy of results
- B. Prior to performance of Testing, Adjusting and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- C. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.
- D. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.

1. The CxA will notify testing and balancing subcontractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
2. The testing and balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
3. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.7 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the HVAC&R contractor, testing and balancing Subcontractor, and HVAC&R Instrumentation and Control Subcontractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.8 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls." Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 23 piping Sections. HVAC&R Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating final reports to the CxA.

- D. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. Submit test reports to the CxA.
- E. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.
- F. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:
 - 1. Air Cooled Chillers
 - 2. Chilled Water Pumps
 - 3. Air Handlers
 - 4. Variable Air Volume Boxes
 - 5. Split System Air Conditioning Units
 - 6. Return Fans
 - 7. Toilet Exhaust Fans
 - 8. Exhaust Fans
 - 9. Atrium Exhaust System and dampers
 - 10. Boilers
 - 11. Hot Water Heating Pumps
 - 12. Electric Fin Tube and Unit Heaters
 - 13. Building Automation System
 - 14. Ductwork and accessories
 - 15. Testing, Adjusting and Balancing
 - 16. Building Automation System

3.9 APPROVAL

- A. Refer to other specification and "General Commissioning Requirements" for approval procedures.

3.10 DEFERRED TESTING

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deferred testing.

3.11 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to DDC General Conditions.
- B. Refer to DDC General Conditions" for the CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

- C. An updated as-built version of the control drawings and sequences of operation shall be included in the final controls O&M manual submittal.

3.12 TRAINING OF OWNER PERSONNEL

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to training.
- B. Mechanical Contractor. The mechanical contractor shall have the following training responsibilities:
 1. Provide the CxA with a training schedule, at least two weeks before the planned training.
 2. Provide designated City of New York's personnel with comprehensive orientation and training in the understanding of the systems and the operation and maintenance of each piece of HVAC equipment including, but not limited to, all HVAC equipment (ex. pumps, heat exchangers, chillers, heat rejection equipment, air conditioning units, air handling units, fans, terminal units, controls and water treatment systems, etc.)
 3. Training shall normally start with classroom sessions followed by hands-on training on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the training.
 6. The controls contractor shall attend sessions other than the controls training, as requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.
 7. The training sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
 8. Training shall include:
 - a. Use of the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Discussion of relevant health and safety issues and concerns.
 - c. Discussion of warranties and guarantees.
 - d. Common troubleshooting problems and solutions.
 - e. Explanatory information included in the O&M manuals and the location of all plans and manuals in the facility.
 - f. Discussion of any peculiarities of equipment installation or operation.
 - g. The format and training agenda in The HVAC Commissioning Process, ASHRAE Guideline 1-2007, is recommended.

9. Hands-on training shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
 10. The mechanical contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
 11. Training shall occur after functional testing is complete, unless approved otherwise by the Owner.
- C. Controls Contractor. The controls contractor shall have the following training responsibilities:
1. Provide the CxA and Commissioner with a training plan four weeks before the planned training.
 2. The controls contractor shall provide designated Owner personnel training on the control system in this facility. The intent is to clearly and completely instruct the Owner on all the capabilities of the control system.
 3. Training manuals. The standard operating manual for the system and any special training manuals will be provided for each trainee, with three extra copies left for the O&M manuals. In addition, copies of the system technical manual will be demonstrated during training and three copies submitted with the O&M manuals. Manuals shall include detailed description of the subject matter for each session. The manuals will cover all control sequences and have a definitions section that fully describes all relevant words used in the manuals and in all software displays. Manuals will be approved by the CxA and A/E. Copies of audiovisuals shall be delivered to the Owner.
 4. The trainings will be tailored to the needs and skill-level of the trainees.
 5. The trainers will be knowledgeable on the system and its use in buildings. For the on-site sessions, the most qualified trainer(s) will be used. The Owner shall approve the instructor prior to scheduling the training.
 6. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 7. The controls contractor shall attend sessions other than the controls training, as requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.
 8. Three (3) training sessions are suggested:
 - a. Training I. Control System. The first training shall consist of 8 hours of actual training. This training may be held on-site or in the supplier's facility. If held off-site, the training may occur prior to final completion of the system installation. Upon completion, each student, using appropriate documentation, should be able to perform elementary operations and describe general hardware architecture and functionality of the system.
 - b. Training II. Building Systems. The second session shall be held on-site for a period of 8 hours of actual hands-on training after the completion of system commissioning. The session shall include instruction on:
 - 1) Specific hardware configuration of installed systems in this building and specific instruction for operating the installed system, including HVAC

systems, lighting controls and any interface with security and communication systems.

- 2) Security levels, alarms, system start-up, shut-down, power outage and restart routines, changing set points and alarms and other typical changed parameters, overrides, freeze protection, manual operation of equipment, optional control strategies that can be considered, energy savings strategies and set points that if changed will adversely affect energy consumption, energy accounting, procedures for obtaining vendor assistance, etc.
 - 3) All trending and monitoring features (values, change of state, totalization, etc.), including setting up, executing, downloading, viewing both tabular and graphically and printing trends. Trainees will actually set-up trends in the presence of the trainer.
 - 4) Every screen shall be completely discussed, allowing time for questions.
 - 5) Use of keypad or plug-in laptop computer at the zone level.
 - 6) Use of remote access to the system via phone lines or networks.
 - 7) Setting up and changing an air terminal unit controller.
 - 8) Graphics generation
 - 9) Point database entry and modifications
 - 10) Understanding DDC (Direct Digital Controls) field panel operating programming (when applicable)
- c. Training III. The third training will be conducted on-site six months after occupancy and consist of 8 hours of training. The session will be structured to address specific topics that trainees need to discuss and to answer questions concerning operation of the system.

D. TAB. The TAB contractor shall have the following training responsibilities:

1. TAB shall meet with facility staff after completion of TAB and instruct them on the following:
 - a. Go over the final TAB report, explaining the layout and meanings of each data type.
 - b. Discuss any outstanding deficient items in control, ducting or design that may affect the proper delivery of air or water.
 - c. Identify and discuss any terminal units, duct runs, diffusers, coils, fans and pumps that are close to or are not meeting their design capacity.
 - d. Discuss any temporary settings and steps to finalize them for any areas that are not finished.
 - e. Other salient information that may be useful for facility operations, relative to TAB.

***** END OF SECTION 23 08 00 *****

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 230900**INSTRUMENTATION AND CONTROL FOR HVAC****PART 1 GENERAL****1.1 WORK INCLUDED**

- A. Furnish a native BACnet-based system, including a browser based operator interface that can be accessed using standard web browsers. The operator interface, all building controllers, application controllers, and all input/output devices shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135-2010, BACnet. All controllers, including unitary controllers, shall be native BACnet devices. No gateways shall be used for communication to controllers installed under this section. Gateways may be used for communication to systems installed under other sections.
- B. Provide all necessary BACnet-compliant hardware and software to meet the system's functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-based control software and every controller in system, including unitary controllers.
- C. Prepare individual hardware layouts, interconnection drawings, and software configuration from project design data.
- D. Implement the detailed design for all analog and binary objects, system databases, graphic displays, logs, and management reports based on control descriptions, logic drawings, configuration data, and bid documents.
- E. Provide, and install all equipment cabinets, panels, data communication network cables needed, and all associated hardware.
- F. Provide and install all interconnecting cables between supplied cabinets, application controllers, and input/output devices.
- G. Provide and install all interconnecting cables between all operator's terminals and peripheral devices (such as printers, etc.) supplied under this section.
- H. Provide power wiring for control system from designated power source. Coordinate with base building electrician.
- I. Provide complete manufacturer's specifications for all items that are supplied. Include vendor name of every item supplied.
- J. Provide supervisory specialists and technicians at the job site to assist in all phases of system installation, startup, and commissioning.
- K. Provide a comprehensive operator and technician training program as described herein.
- L. Provide as-built documentation, operator's terminal software, diagrams, and all other associated project operational documentation (such as technical manuals) on approved media, the sum total of which accurately represents the final system.
- M. Provide new sensors, dampers, valves, and install only new electronic actuators. No used components shall be used as any part or piece of installed system.

- N. All standard, devices and system set up shall conform to City of NY– Facility procedures and standards.

1.2 SYSTEM DESCRIPTION

- A. Distributed control systems complete with all software and hardware functions shall be provided and installed. System shall be completely based on ANSI/ASHRAE Standard 135-2010, BACnet. This system is to control all mechanical equipment, including all unitary equipment such as VAV boxes, AC units, etc. and all air handlers, exhaust fans, and any other listed equipment using native BACnet-compliant components. Non-BACnet-compliant or proprietary equipment or systems (including gateways) shall not be acceptable and are specifically prohibited.
- B. The Building Management System (BMS) application program shall be written to communicate specifically utilizing BACnet protocols. Software functions delivered on this project shall include password protection, scheduling (including optimum start), alarming, logging of historical data, full graphics including animation, after-hours billing program, demand limiting, full suite of field engineering tools including graphical programming and applications. Systems using operating systems other than that described above are strictly prohibited. All software required to program application specific controllers and all field level devices and controllers will be left with the owner. All software passwords required to program and make future changes to the system will also become the property of the owner. All software required to make any program changes anywhere in the system along with scheduling, and trending applications will be left with the owner. All software passwords required to program and make future changes to schedules, trends and related program changes will also become the property of the owner. All software required for all field engineering tools including graphical programming and applications will be left with the owner. All software passwords required to program and make future changes to field engineering tools including graphical programming and applications will be left with the owner.
- C. Building controllers shall include complete energy management software, including scheduling building control strategies with optimum start and logging routines. All energy management software and firmware shall be resident in field hardware and shall not be dependent on the operator's terminal. Operator's terminal software is to be used for access to field-based energy management functions only. Provide zone-by-zone direct digital logic control of space temperature, scheduling, runtime accumulation, equipment alarm reporting, and override timers for after-hours usage.
- D. All application controllers for every terminal unit (VAV, HP, UV, etc.) air handler, all central plant equipment, and any other piece of controlled equipment shall be fully programmable. Application controllers shall be mounted next to controlled equipment and communicate with building controller via BACnet LAN.
- E. Room sensors shall be provided with digital readout that allows the user to view room temperature, view outside air temperature, adjust the room set point within preset limits and set desired override time. User shall also be able to start and stop unit from the digital sensor. Include all necessary wiring and firmware such that room sensor includes field service mode. Field service mode shall allow technician to balance VAV zones and access any parameter in zone controller.
- F. All control equipment used to perform any or all of the specified smoke control sequences shall be UL-864 UUKL listed. This includes all field controllers and global control devices. Non UUKL rated equipment shall not be networked to any devices on the network performing smoke control sequences unless isolated by a UUKL rated device. See drawings for actual sequence of operations.

1.3 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. The Building Management System (BMS) shall be installed, commissioned and serviced by factory trained personnel. BMS contractor shall have an in-place support facility within 2 hours response time of the site with technical staff, spare parts inventory and necessary test and diagnostic equipment.
- C. The BMS contractor shall provide full time, on site, experienced project manager for this work, responsible for direct supervision of the design, installation, start up and commissioning of the BMS system.
- D. The Bidder shall be regularly engaged in the installation and maintenance of BMS systems and shall have demonstrated technical expertise and experience in the installation and maintenance of BMS systems similar in size and complexity to this project. Bidders shall provide a list of projects, similar in size and scope to this project completed within the past 3 years.
- E. Materials and equipment shall be the catalogued products of manufacturers regularly engaged in production and installation of automatic temperature control systems and shall be manufacturer's latest standard design that complies with the specification requirements.
- F. All BMS peer-to-peer network controllers, central system controllers and local user displays shall be UL Listed under Standard UL 916, category PAZX.
- G. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Governing Radio Frequency Electromagnetic Interference and be so labeled.

1.4 REFERENCE STANDARDS

- A. The latest edition of the following standards and codes in effect and amended as of supplier's proposal date, and any applicable subsections thereof, shall govern design and selection of equipment and material supplied:

1. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
2. ANSI/ASHRAE Standard 135-2010, BACnet.
3. Uniform Building Code (UBC), including local amendments.
4. UL 916 Underwriters Laboratories Standard for Energy Management Equipment. Canada and the US.
5. National Electrical Code (NEC).
6. FCC Part 15, Subpart J, Class A
7. EMC Directive 89/336/EEC (European CE Mark)
8. UL-864 UUKL listing for Smoke Controls for any equipment used in smoke control sequences
9. City, county, state, and federal regulations and codes in effect as of contract date.
10. Except as otherwise indicated the system supplier shall secure and pay for all permits, inspections, and certifications required for his work and arrange for necessary approvals by the governing authorities.

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Drawings

- C. The system supplier shall submit engineered drawings, control sequence, and bill of materials for approval.

- D. Drawings shall be submitted in the following standard sizes: 11" x 17" (ANSI B).

- E. Eight complete sets (copies) of submittal drawings shall be provided.

- F. Drawings shall be available on CD-ROM.

- G. System Documentation - Include the following in submittal package:

1. System configuration diagrams in simplified block format.
2. All input/output object listings and an alarm point summary listing.
3. Electrical drawings that show all system internal and external connection points, terminal block layouts, and terminal identification.
4. Complete bill of materials, valve schedule and damper schedule.

5. Manufacturer's instructions and drawings for installation, maintenance, and operation of all purchased items.
6. Overall system operation and maintenance instructions—including preventive maintenance and troubleshooting instructions.
7. For all system elements—building controller(s), application controllers, routers, and repeaters,—provide BACnet Protocol Implementation Conformance Statements (PICS) as per ANSI/ASHRAE Standard 135-2001.
8. Provide complete description and documentation of any proprietary (non-BACnet) services and/or objects used in the system.
9. A list of all functions available and a sample of function block programming that shall be part of delivered system.

H. Project Management

1. The vendor shall provide a detailed project design and installation schedule with time markings and details for hardware items and software development phases. Schedule shall show all the target dates for transmission of project information and documents and shall indicate timing and dates for system installation, debugging, and commissioning.

I. BACnet Device Object Naming Conventions

1. The BAS manufacturer's representative shall submit a BACnet Device Object Naming Convention Plan (DONCP) to the owner and consulting commissioner during the submittal process. The plan must be approved by the owner and consulting commissioner prior to implementation. It is the responsibility of the BAS contractor to coordinate the DONCP with the owner and consulting commissioner.
2. The DONCP shall be designed to eliminate any confusion between individual points in a facility/campus wide EMCS system. It will also be designed to allow for future expansion and consistency. Each device on a BACnet internetwork (including other manufacturer's devices) must have a unique device instance. This is a major consideration when adding to an existing system or interconnecting networks. Thorough and accessible site documentation is critical.
3. A consistent object (point) naming convention shall be used to facilitate familiarity and operational ease across an eventual large campus or inventory of facilities. The following section is designed as recommendations only. It is the responsibility of the BAS contractor to coordinate the DONCP with the owner and consulting commissioner.
4. BACnet requires that all devices have a Device object name that is unique throughout the entire internetwork. To comply with this requirement all BACnet devices should be configured with a Device Object Name that is based on the naming conventions described in this section. This includes all physical devices as well as any logical BACnet devices that are represented by gateways. The vendor shall coordinate with the City of New York's staff to ensure that the correct names are used. Device Object Name properties shall support strings of at least 50 characters in length.
5. Every system device has addresses by which any other BACnet device can identify it and route information to and from it. Although there are a number of addresses to consider, the scheme is fairly straightforward. It can become complicated, however, if addresses have not been documented adequately or there is no logical addressing.

scheme.

6. When you set up and plan a BACnet network or add to an existing network, considering and documenting your addressing scheme is of the utmost importance. Adopt a hierarchical and uniform addressing scheme for device instances to help you quickly identify the function and location of different devices when troubleshooting. Additionally, it's very important to document every element of your addressing scheme and update the site documentation with any changes.
7. This section first covers the important addressing issues with respect to BACnet LANs and it gives a practical application you can use to check your understanding.

J. BACnet Addressing

1. Three types of addresses are important in any BACnet system: network numbers, media access control (MAC) addresses, and device instances. Each BACnet device has these addresses associated with it. Though all three can be thought of as addresses, they are all very different both in how they function and how they are assigned.
 - a. Network numbers identify the network to which a BACnet device belongs. Every network on a BACnet LAN has a unique numerical identifier—a network number. This network number is used by BACnet devices only; it does not rely on nor does it affect any other network protocols. LANs connected by a router must have different network numbers. No interconnected BACnet networks can have the same network number. Network number range is 1–65,534, for a maximum of 65,534 interconnected BACnet networks. BACnet reserves network numbers 0 and 65,535 for special purposes. Don't use network 0 or 65,535.
 - b. MAC addresses Hardware-oriented. The MAC address uniquely identifies a device on its particular network. Each network type—Ethernet and MS/TP—has its own MAC addressing scheme. A device that exists on two or more networks will have a MAC address for each one. Devices can have the same MAC addresses as long as they are on networks with different network numbers.
 - c. Ethernet devices: For Ethernet LANs, the IEEE assigns a certain range of MAC addresses to manufacturers of Ethernet products. The manufacturer then assigns a unique MAC address to each of its Ethernet devices. MS/TP devices: For devices on an MS/TP LAN, you assign the MAC address for each controller. Devices on an MS/TP LAN are designated as either masters or slaves, which affects how they can be addressed. This is a requirement of the BACnet specification. BACnet reserves MS/TP MAC address 255 for special purposes. Don't use MS/TP MAC 255.
 - d. Device instances Software-oriented. The device instance identifies the device to the BACnet software and is the address most often encountered. The device instance is a shortcut to having to specify a MAC address and network number each time an operation is performed. Device instances range from 0–4194302. Note: BACnet reserves device instance 4194303 for special purposes. Don't use device instance 4194303.

1.6 WARRANTY

- A. Warranty shall cover all costs for parts, labor, and expenses for a period of one year from

completion of system acceptance.

- B. Hardware and software personnel supporting this warranty agreement shall provide on-site or off-site service in a timely manner after failure notification to the vendor. The maximum acceptable response time to provide this service at the site shall be 24 hours Monday through Friday, 48 hours on Saturday and Sunday.
- C. This warranty shall apply equally to both hardware and software.

1.7 RELATED WORK IN OTHER SECTIONS

- A. Refer to DDC General Conditions for related contractual requirements and general conditions.
- B. Refer to Division 22 for Plumbing
- C. Refer to Division 23 for Heating, Ventilating and Air Conditioning (HVAC)
- D. Refer to Division 26 for Electrical

PART 2 – PRODUCTS

2.1 APPROVED MANUFACTURERS

- A. Alerton BACtalk by ABM
- B. Andover by EMCC
- C. Automated Logic

2.2 NETWORK ARCHITECTURE

- A. Owner Intranet Network
 - 1. The BMS contractor shall be responsible for installation of primary and secondary LAN's required to support the complete BMS system. The Operator Interface Panel for the building shall be located as advised by the Commissioner.
- B. BACnet Primary LAN
 - 1. Primary LAN for the building automation system shall consist of a high speed network utilizing BACnet over Ethernet or BACnet/IP. The Primary LAN shall be used for communications between BACnet B-BC devices, B-AAC devices, and B-ASC devices.
- C. BACnet Secondary LAN
 - 1. A secondary LAN, separate from the Primary LAN shall be used for communications between B-ASC devices and the B-BC or B-AAC that provides BACnet router services for the device. The Secondary LAN shall utilize BACnet MS/TP for communications. The intent of the separate Primary LAN and Secondary LAN is to isolate traffic between B-BC's or B-AAC's and their associated B-ASC devices from the primary LAN.

2.3 OPERATOR INTERFACE

- A. Browser Based Operator Interface

1. The system shall be capable of supporting an unlimited number of clients using standard Web browser such as Internet Explorer, Firefox or Safari on Mac. Systems requiring additional software (to enable a standard Web browser) to be resident on the client machine, or manufacture-specific browsers shall not be acceptable.
2. The Web browser software shall run on any operating system and system configuration that is supported by the Web browser. Systems that require specific machine requirements in terms of processor speed, memory, etc., in order to allow the Web browser to function with the Building Automation System (BAS), shall not be acceptable.
3. The Web browser client shall support at a minimum, the following functions:
 - a. User log-on identification and password shall be required. If an unauthorized user attempts access, notice of access failure shall be displayed. Security using authentication and encryption techniques to prevent unauthorized access shall be implemented.
 - b. HTML programming shall not be required to display system graphics or data on a Web page. HTML editing of the Web page shall be allowed if the user desires a specific look or format.
 - c. Storage of the graphical screens shall be in the Network Area Controller (NAC), without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.
 - d. Real-time values displayed on a Web page shall update automatically without requiring a manual "refresh" of the Web page.
 - e. Users shall have administrator-defined access privileges. Depending on the access privileges assigned, the user shall be able to perform the following:
 1. Modify common application objects, such as schedules and setpoints in a graphical manner.
 2. Commands binary objects to start and stop.
 3. View logs and charts.
 4. View alarms.
 - f. Graphic screens on the Web Browser client shall support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.
4. Alarms
 - a. Alarm feature shall allow user configuration of criteria to create, route, and manage alarms and events. It shall be possible for specific alarms from specific points to be routed to specific alarm recipients. The alarm management portion of the user interface shall, at the minimum, provide the following functions:
 1. Allow configuration to generate alarms on any numeric, binary, or data point in the system.
 2. Generate alarm records that contain a minimum of a timestamp,

original state, acknowledged state, alarm class and priority.

3. Allow the establishment of alarm classes that provide the routing of alarms with similar characteristics to common recipients.
4. Allow a user, with the appropriate security level, to manage alarms - including sorting, acknowledging, and tagging alarms.

5. Reports and Summaries

- a. Reports and Summaries shall be generated and directed to the user interface displays, with subsequent assignment to printers, or disk. As a minimum, the system shall provide the following reports:
 1. All points in the BAS
 2. All points in each BAS application
 3. All points in a specific controller
 4. All points in a user-defined group of points
 5. All points currently in alarm
 6. All BAS schedules
 7. All user defined and adjustable variables, schedules, interlocks and the like.
- b. Reports shall be exportable to .pdf, .txt, or .csv formats.
- c. The system shall allow for the creation of custom reports and queries.

6. Schedules

- a. A graphical display for time-of-day scheduling and override scheduling of building operations shall be provided. At a minimum, the following functions shall be provided:
 1. Regular schedules
 2. Repeating schedules
 3. Exception Schedules
- b. Weekly schedules shall be provided for each group of equipment with a specific time use schedule.
- c. It shall be possible to define one or more exception schedules for each schedule including references to calendars
- d. Monthly calendars shall be provided that allow for simplified scheduling of holidays and special days. Holidays and special days shall be user-selected with the pointing device or keyboard.

7. Password

- a. Multiple-level password access protection shall be provided to allow the user/manager to user interface control, display, and database manipulation

capabilities deemed appropriate for each user, Based on an assigned password.

- b. Each user shall have the following: a user name, a password, and access levels.
- c. The system shall provide the capability to require a password of minimum length and require a combination of characters and numerical or special characters.
- d. When entering or editing passwords, the system shall not echo the actual characters for display on the monitor.
- e. The system shall provide unlimited flexibility with access rights. A minimum of four levels of access shall be provided along with the ability to customize the system to provide additional levels.
- f. A minimum of 100 unique passwords shall be supported.
- g. Operators shall be able to perform only those commands available for their respective passwords. Display of menu selections shall be limited to only those items defined for the access level of the password used to log-on.
- h. The system shall automatically generate a report of log-on/log-off and system activity for each user.
- i. All log data shall be available in .pdf, .txt, and .csv formats.

8. Dynamic Color Graphics

- a. The graphics application program shall be supplied as an integral part of the User Interface.
- b. The graphics applications shall include a create/edit function and a runtime function. The system architecture shall support an unlimited number of graphics documents (graphic definition files) to be generated and executed.
- c. The graphics shall be able to display real-time data that is acquired, derived, or entered.
- d. Graphics runtime functions –Each graphic application shall be capable of the following functions:
- e. All graphics shall be fully scalable
- f. The graphics shall support a maintained aspect ratio.
- g. Multiple fonts shall be supported.
- h. Unique background shall be assignable on a per graphic basis.
- i. Operation from graphics – It shall be possible to change values (set points) and states in systems controlled equipment within the Web browser interface.
- j. Graphic editing tool – A graphic editing tool shall be provided that allows for the creation and editing of graphic files. The graphic editor shall be

capable of performing/defining all runtime binding.

9. Historical Data Collection

- a. All numeric, binary or data points in the system database shall allow their values to be logged over time (trend log). Each historical record shall include the point's name, a time stamp including time zone, and the point's value.
- b. The configuration of the historical data collection shall allow for recording data based on change of value or on a user-defined time interval.
- c. The configuration of the historical data collection shall allow for the collection process to stop or rollover when capacity has been reached.
- d. A historical data viewing utility shall be provided with access to all history records. This utility shall allow historical data to be viewed in a table or chart format.
- e. The history data table view shall allow the user to hide/show columns and to filter data based on time and date. The history data table shall allow exporting to .txt, .csv, or .pdf file formats.
- f. The historical data chart view shall allow different point histories to be displayed simultaneously, and also provide panning and zooming capabilities.

10. Audit Log

- a. For each log entry, provide the following data;
- b. Time and date
- c. User ID
- d. Change or activity: i.e., Change set point, add or delete objects, commands, etc.

11. Database Backup and Storage

- a. The user shall have the ability to back up the System Controller databases.

2.4 BUILDING CONTROLLER

A. BACnet Devices

1. Network Area Controller (NAC)

- a. The NAC must provide the following hardware features as a minimum:
 1. Communications
 - a. One 10/100 Mb Ethernet Port – RJ-45 connection
 - b. One RS-232 port
 - c. One RS-485 port (up to 57,600 baud)

- d. Optional internal auto-dial/auto-answer 56K modem.
- e. All required protocol drivers are included.

2. Inputs/Outputs

- a. Four form C SPDT relay outputs rated for 24 VAC/DC @ 2Amps resistive each with individual LED indicators
- b. Six Universal Inputs for 10K NYC, 4-20 mA, 1-10 V, Dry contact

3. Battery Backup

- a. Battery backup provided for all on board functions including I/O
- b. Battery is monitored and trickle charged
- c. Battery maintains processor operation through power failures for a pre-determined interval, and then writes all data to flash memory, shuts the processor down, and maintains the clock for five years.

4. Environment

- a. Must be capable of operation over a temperature range of 0°C to 55°C.
- b. Must be capable of withstanding storage temperatures of between 0°C and 70°C.
- c. Must be capable of operation over a humidity range of 5% to 95% RH, non-condensing

5. Performance

- a. Supports up to 100 devices.
2. The Network Area Controller (NAC) shall be a fully user-programmable device capable of providing all of the capability described in Section 2.3 Part A.
 3. Automation network – The Network Area Controller (NAC) shall reside on the automation network. Each NAC shall support one or more sub-networks of controllers.
 4. User Interface – Each Network Area Controller (NAC) shall have the ability to deliver a web based user interface as previously described. All computers connected physically or virtually to the automation network shall have access to the web based UI.
 5. Power Failure – In the event of the loss of normal power, The Network Area Controller (NAC) shall continue to operate for a define period after which there shall be an orderly shutdown of all programs to prevent the loss of database or operating system software. Flash memory shall be incorporated for all critical controller configuration data.

- a. During a loss of normal power, the control sequences shall go to the normal system shutdown conditions.
- b. Upon restoration of normal power and after a minimum off-time delay, the controller shall automatically resume full operation without manual intervention through a normal soft-start sequence.
- c. Certification – All controllers shall be listed by Underwriters Laboratories (UL).

B. Advanced Application Controller

- 1. Control of AO's and BO's and monitoring of AI's and BI's are permitted on devices that conform to the requirements for the BACnet Advanced Application Controller (B-AAC) as identified in ASHRAE Standard 135. B-ASC's shall be provided with all supporting BACnet services as a local function. The device shall not depend upon any other devices for the functionality of schedule or alarm activities. Alternatively, the B-ASC's or B-BC's that the device is dependent upon shall utilize an Uninterruptible Power Supply (UPS). A single piece of equipment shall utilize a single controller. Control functions for a single piece of equipment may not be divided among controllers.

C. Application Specific Controllers

- 1. Control of AO's and BO's and monitoring of AI's and BI's are permitted on devices that conform to the requirements for the BACnet Application Specific Controller (B-ASC) as identified in ASHRAE Standard 135. Where B-ASC's are utilized, any supporting B-BC or B-ASC must be provided with an Uninterruptible Power Supply (UPS) to avoid any unintentional loss in the support of BACnet services due to a power outage for the B-BC while the B-ASC is functional.

D. Gateways

- 1. Gateways between BACnet and any other protocols shall not be allowed for this project.

E. Smart Sensor/Actuator

- 1. BACnet Smart sensors (B-SS) and actuators (B-SA) shall not be permitted for use on this project. All system I/O must be connected directly to a B-AAC or B-ASC device.

2.5 SENSORS AND MISCELLANEOUS DEVICES

A. General - field devices

- 1. The project that is the subject of this specification may not require all types of hardware listed in this section
- 2. Provide field devices for input and output of digital (binary), and analog, signals into BACnet devices. Provide signal conditioning and/or filtering for all field devices as recommended by field device manufacturers, and as required for proper operation of the system.
- 3. It the responsibility of the building automation contractor to provide equipment as identified in this specification section. This section may identify devices which are not required to be provided in the scope of this project (i.e. The ep transducer is included in this section, but may not be required on a project where all electric controls are

found).

4. It shall be this building automation contractor's responsibility to assure that all field devices are compatible with the controllers to be used on the project.
5. Transmitters specified herein are generally 4-20 ma "two-wired" type transmitters, with power for the device expected to be supplied from the transformer powering the controller.
6. For field devices specified hereinafter that require signal conditioners, signal boosters, signal repeaters, or other devices for proper interface to controllers, the building automation contractor shall furnish and install proper device. Such devices shall have accuracy equal to, or better than, the accuracy listed for respective field devices.
7. Accuracy, as stated in this section, shall include combined effects of non-linearity, non-repeatability and hysteresis.

B. Temperature Sensors

1. Sensor range: when matched with A/D converter of the controller, sensor range shall provide a resolution of no larger than .4°F (unless noted otherwise).
2. Room temperature sensor shall be an element contained within a ventilated cover, suitable for wall mounting. Sensors located in mechanical areas, plenums, garages, or designated institutional locations shall be a flat plate sensor with no possible adjustment. Security screws shall be used in institutional settings as deemed necessary by the design commissioner. The building automation contractor shall coordinate requirements with the design commissioner during the submittal process. Provide an insulated base when used on an outside wall, on an interior wall within 18 inches of an outside wall, or on a wall adjacent to an unconditioned space. The following sensing elements are acceptable:
 - A. Sensing element - platinum RTD, thermistor, or integrated circuit, +/- 0.8°F [0.45°C] accuracy at calibration point.
3. Intelligent room sensor with LCD readout
 - A. Sensor shall contain a backlit LCD digital display and user function keys along with temperature sensor. Controller shall function as room control unit, and shall allow occupant to raise and lower set point, and activate terminal unit for override use—all within limits as programmed by building operator. Sensor shall also allow service technician access to hidden functions as described in sequence of operation.
 - B. Intelligent room sensor shall simultaneously display room set point, room temperature, outside temperature, and fan status (if applicable) at each controller. This unit shall be programmable, allowing site developers the flexibility to configure the display to match their application. The site developer should be able to program the unit to display time-of-day, room humidity and outdoor humidity. Unit must have the capability to show temperatures in Fahrenheit or Centigrade.
 - C. Override time may be set and viewed in half-hour increments. Override time count down shall be automatic, but may be reset to zero by occupant from the sensor. Time remaining shall be displayed. Display shall show the word "off" in unoccupied mode unless a function button is pressed.

- D. See sequence of operation for specific operation of LCD displays and function keys in field service mode and in normal occupant mode. Provide intelligent room sensors as specified in point list.
 - E. Field service mode shall be customizable to fit different applications. If intelligent room sensor is connected to VAV controller, VAV box shall be balanced and all air flow parameters shall be viewed and set from the intelligent room sensor with no computer or other field service tool needed.
4. Single point duct temperature sensor shall consist of sensing element, junction box for wiring connections and gasket to prevent air leakage or vibration noise. Temperature range as required for resolution indicated in paragraph (a) below. Sensor probe shall be 300 or 400 series corrosion resistant steel.
 - A. Sensing element - platinum RTD, thermistor, or integrated circuit, $\pm 0.8^{\circ}\text{f}$ [0.45°c] accuracy at calibration point.
 5. Averaging duct temperature sensor shall consist of an averaging element, junction box for wiring connections and gasket to prevent air leakage. Provide enough sensors to give one lineal foot of sensing element for every three square feet of cooling coil face area. Temperature range as required for resolution indicated in paragraph (a) below.
 - A. Sensing element - platinum RTD, thermistor, or integrated circuit, $\pm 0.8^{\circ}\text{f}$ [0.45°c] accuracy at calibration point.
 6. Liquid immersion temperature sensor shall include stainless steel (or brass for copper piping) thermo well, sensor and connection head for wiring connections.
 - A. Sensing element for chilled water applications - platinum RTD, thermistor, or integrated circuit, $\pm 0.8^{\circ}\text{f}$ [0.45°c] accuracy at calibration point. Temperature range shall be as required for resolution indicated in paragraph a.
 - B. Sensing element for non-chilled water applications - platinum RTD, $\pm 0.2^{\circ}\text{f}$ [0.2°c] accuracy at calibration point. Temperature range shall be as required for resolution of no worse than 0.1°f [0.06°c].
 7. Outside air temperature and humidity station shall consist of a single device with a ventilated non-metallic sun shield, utility box for terminations, and water tight gasket to prevent water seepage. These devices shall be mounted at least 10 feet above ground level in a north-facing location that is not exposed to the draft from an exhaust fan, cooling tower exhaust, AHU relief air, flue vent from a gas combustion heater, or any source of conditioned air. In the event a suitable wall mounting location cannot be found, the devices may be mounted in an open location provided they are supplied with a housing intended for mounting in such a location. Temperature range shall be as required for resolution indicated in paragraphs (a) and (b) below.
 - A. Sensing element - platinum RTD, thermistor, or integrated circuit, $\pm 0.4^{\circ}\text{f}$ [0.2°c] temperature accuracy at calibration point.
 - B. Accuracy (% RH): $\pm 3\%$ 0-100% RH at 68°f [20°c], including hysteresis, linearity and repeatability.
 - C. Manufacturer:

1. Vaisala
2. Or Approved Equal

C. Humidity transmitters

1. Units shall be suitable for duct, wall (room) or outdoor mounting. Unit shall be two-wire transmitter utilizing bulk polymer resistance change or thin polymer film capacitance change humidity sensor. Unit shall produce linear continuous output of 4-20ma for percent relative humidity (% RH). Sensors shall have the following minimum performance and application criteria:

A. Input range: 0 to 100% RH

B. Accuracy (% RH): +/- 3% 0-100% RH at 68°F [20°C], including hysteresis, linearity and repeatability.

D. Voltage or current to pneumatic transducer

1. Voltage or current to pneumatic transducer: two valve, non-bleed type with piezoelectric silicon wafer output pressure sensor. 0-5v or 0-10v input, output to match spring range of controlled device. 25 to 150°F [0 to 65°C] temperature range; 40 psig [275 KPA] maximum supply pressure, 0-20 psig [0-138 KPA] branch output pressure range, plus or minus 1% FS accuracy; 16 gauge galvanized or enameled steel base; 1/4" O.D. Barbed brass pneumatic fitting. Poppet valves only shall be utilized. Needle valves shall not be acceptable. A dial-type gauge shall be provided and installed as a component of or separately from the EP transducer for indication of branch pressure.

E. Differential pressure sensor, air

1. The differential pressure sensor for air applications shall provide a current or voltage signal (4-20 mA, 0-10 VDC, or 0-5 VDC) with an accuracy of +/- 1% FS (including non-linearity, hysteresis, and non-repeatability). Accuracy for pressure sensors used in flow measurement applications shall be +/- 0.5%. Operating temperature range and compensated temperature range shall be as appropriate for the temperature extremes of the environment where it is used and the application it is intended for.

F. Differential pressure sensor, water

1. Sensor shall be two-wire 4-20 ma output Kele & associates model 160c with a 5-valve manifold (Kele bva-5) or a similar sensor and manifold from Veris industries.

G. Fluid flow meters

1. Differential pressure-sensing insertion style flow meters (air or water) or dual-turbine impeller style insertion flow meters shall be used to monitor flow. The insertion style liquid flow sensors shall be as manufactured by Rosemount (Annubar) or Onicon (f-1210 or f-1211).
2. As an alternative; provide non-intrusive flow measuring device similar to ultra-sonic Controlotron meters model 1010. Refer to manufacturer for recommendation installation, control and accessories.

H. Current switches

1. Current switch (input only) shall consist of 0 to 135 a continuous amperage rating, adjustable trip set-point to +/- 1% of range, .1a @ 110 VAC resistive rating. Direct

drive motors are permitted to utilize a current switch without an adjustable set point. Non direct-drive motors shall utilize a device with an adjustable set point as well as status and power led indication.

2. Current switch and load control relay (input/output device) shall consist of 0 to 135 a continuous amperage rating current switch, adjustable trip set-point to $\pm 1\%$ of range, .1a @ 110 VAC resistive rating. Load control relay shall be capable of 5a @ 240 VAC resistive. The device shall have adjustable trip set point as well as status, power, and relay command status led indication.
3. Current switches for VFD-controlled loads shall be specifically designed for this purpose. A Veris H-934 or approved equivalent device shall be used.

I. Damper end switch

1. Damper end switches shall be devices that directly detect the desired position of the damper blades. The switch shall not be a component of the actuator nor shall it be mounted on the damper shaft. The end switch shall be as manufactured by square d, Allen Bradley, cutler hammer, or approved equal.

J. Air Differential Pressure Switch

1. Air differential pressure switches shall be diaphragm type, die-cast aluminum housing, adjustable set point, with a SPDT switch. Rating shall be a minimum of 5 amps at 120 vac. Switch pressure range shall be suited for the application. Provide Dwyer or equal.

K. Low Temperature Detector (Freeze-Stat)

1. Low temperature detector (LTD) shall be automatic reset, DPDT type. LTD shall be installed in a serpentine fashion across the coil in the air stream in accordance with the manufacturer's recommendations. Element shall be arranged to lock out the associated fan should the temperature at any point along the sensing element fall below 35 °f for an adjustable time period.

L. Single Point Leak Detector

1. Provide Liebert It-410 or equal. The alarm module shall indicate that water has contacted the sensors by actuating two output relays. The relays shall remain activated until the module is reset.

M. Zone Leak Detector

1. Provide Liebert It-460 or equal. The alarm module shall indicate that water has contacted the sensors cable by actuating two output relays. The relays shall remain activated until the module is reset.

N. Carbon Dioxide Sensor

1. The carbon dioxide detectors shall be catalytic-bead type with a demonstrated resistance to silicones and reduced sulfur compounds. Detectors shall have a minimum life span of three years. The sensors shall have a dual housing with the sensor and transmitter in separate housings, with sensors located up to 50 feet from the transmitter. Housings shall be explosion proof for class 1, Group b, c and d, Division 1 areas. Input power shall be 250ma at 24vdc. Response time shall be less than 5 seconds to final reading, from a step change in gas concentration. Sensor/transmitter repeatability shall be $\pm 1\%$ full scale. Transmitter signal shall be 4-20 mA.

2. The detection system shall be MSA model 487817 or equal.
3. Provide a calibration kit (flow system type) including zero gas and test carbon dioxide gas. Turn over complete kit to owner at warranty start date.
4. Power 24vdc power supply as required from emergency source.

O. Outdoor Air Volume Measuring Station

1. Outdoor air volume measuring required to accomplish the specified control sequence shall be furnished and installed under this section. Conventional airflow measuring stations shall not be used for measuring outdoor air intake into an air handling unit.
2. Each outdoor air volume measuring station shall measure airflow by means of an airflow measuring probe specifically designed for the application, matched transducer and monitor. The monitor shall be located between the intake louvers and the outdoor air damper. The quantity of probes must be based on the size of the outdoor air intake opening and must conform to the manufacturer's recommendation.
3. The measured velocity pressure converted to airflow (CFM) shall have an accuracy of 5% of the full scale throughout the velocity range from 200 to 1,000 FPM when measured under ideal laboratory conditions. The location of stations shall meet manufacturer's guidelines.
4. The monitor shall include a built-in display that allows for local indication of all relevant data about the outdoor air. Data can be assessed and viewed by using the 80 character display and intuitive keypad sequences. The display also provides a means to trouble shoot the operation of the hardware. Diagnostic functions monitor the performance of the differential pressure transducer, auto-zero valve, temperature sensors, and transducer heater. Hardware malfunctions are pinpointed and displayed in the alarm list display.
5. Provide Tek-Air IAQ-Tek or approved equal.

P. Carbon Monoxide And Natural Gas Leak Detection

1. The gas leak detection system shall consist of a microprocessor based multi-channel gas controller with 3-digit led display with flashing over range and alphanumeric fault status indication and shall accept a minimum of ten (10) sensors.
2. Internal audible alarm and LED's shall annunciate alarm and fault conditions. The multi-channel gas detection system continuously detects, monitors, displays and transmits concentrations of toxic (carbon monoxide) and combustible (natural gas) gases.
3. The controller shall provide relay outputs for multiple alarm levels at pre-set limit and other functions as specified herein.
4. Each channel designed for use with the appropriate sensor shall be mounted in the controller. High, low and trouble LED's shall provide visual indication of alarm status, while an integral buzzer provides audible indication of alarms at the controller.
5. Natural gas alarm shall be set at 20% (low) and 50% (high) LEL within the 0 - 100% LEL measuring range.
6. Carbon monoxide shall be set at 25 ppm (low) and 75 ppm (high) within the 0 - 200 ppm measuring range.

7. Natural gas: sensors shall be continuous molecular diffusion type, low temperature catalytic bead hydrocarbon sensors. Temperature range shall be -6 f to + 120 f with a six (6) second response time when exposed to a 50% LEL of methane gas. Each unit shall be contained within a housing consistent with the area rating.
8. Calibration shall be conducted at least every one hundred eighty (180) days. Warranty shall be one year with a four-year typical life.
9. Carbon monoxide: sensors shall be designed to detect the presence of carbon monoxide' sensors shall be electrochemical cell maintenance free and stable with a 0 to 200 or 250 ppm range as a minimum. The gas transmitter shall exchange data without the need of monitor hardwiring with the controller over a wireless mesh network via a secured 128 bit encrypted communication protocol each unit shall be contained within a housing suitable for the area rating in which it is installed the electronics converts information from the sensor to an output signal that shall be sent directly to the controller. Provide sensor with visual alarm that indicates at a minimum power is on, sensor is operating properly and system is in calibration.
10. Calibration shall be conducted at least every one hundred eighty (180) days. Warranty shall be one year with a two-year typical battery life.
11. Equipment furnished shall be turned over to the building after training. Provide spare test gas in quantities sufficient to perform routine recalibration for two years. The gas detection controller shall be a Honeywell carbon monoxide sensor and explosive gas ch4 transmitter (natural gas) as manufactured by Honeywell or equal.

Q. Methane Monitoring System

1. The methane leak detectors shall be catalytic-bead type with a demonstrated resistance to silicones and reduced sulfur compounds. Detectors shall have a typical life span of three years. The sensors shall have a dual housing with the sensor and transmitter in separate housings, with sensors located up to 50 feet from the transmitter. Housings shall be explosion proof for class 1, group b, c and d, division 1 areas. Input power shall be 250ma at 24vdc. Response time shall be less than 5 seconds to final reading, from a step change in gas concentration. Sensor/transmitter repeatability shall be +/- 1% full scale. Transmitter signal shall be 4-20 ma.
2. The detection system shall be MSA model 487817 or equal.
3. Provide a calibration kit (flow system type) including zero gas and test gas. Turn over complete kit to owner at warranty start date.
4. Power 24vdc power supply as required from emergency source.
5. Provide leak detection for each gas riser shaft. Provide three sensors per riser or as per manufacturers recommendation, whichever is greater. Submit sensor and electronic transmitter locations for approval.

R. Electric Control Components

1. Limit switches (LS): limit switches shall be UL listed, with adjustable trim arm. Limit switches shall be as manufactured by Square "D", Allen Bradley or approved equal; SPDT or DPDT type.
2. Electric solenoid operated pneumatic valves (EP valve): EP valves shall be rated for 40 psig air pressure. EP valves shall be sized for a minimum pressure drop, and shall be UL and CSA listed. Furnish and install gauges on all inputs and outputs of

the EP serving loads.

- A. EP valves for high-volume applications where indicated in the project documents shall be as manufactured by ASCO, or approved equal.
 - B. EP valves for standard pneumatic application shall be as manufactured by Johnson (v11 series) or approved equal.
 - C. EP valves shall have appropriate voltage coil rated for the application (i.e., 24 vac, 120 VAC, 220 VAC, 24 VDC, etc.).
3. Control relays: all control relays shall be UL listed, with contacts rated for the application, and mounted in minimum NEMA 1 enclosure.
- A. Control relays for use on electrical systems of 120 volts or less shall have, as a minimum, the following:
 - 1. Poles – relays having a single pole or single-throw type shall not be used. Relays shall be double-throw type with a minimum of two poles.
 - 2. Relays shall incorporate an led that indicates when the relay coil is energized.
 - 3. Ac coil pull-in voltage range of +10%, -15% or nominal voltage.
 - 4. Coil – sealed, with required volt amperes (VA) not greater than four (4) VA.
 - 5. Silver cadmium form c (SPDT) contacts in a dust-proof enclosure, with 8 or 11 pin or spade type plug.
 - 6. Pilot light indication of power-to-coil shall be provided for relays installed remotely from the controlling device.
 - 7. Relays shall be Allen Bradley - model 700hk, Idec RH-series or approved equal.
 - B. Relays used for remote start/stop control of motors and shall have a current rating at least 1.5 times full load amps of the load it is controlling. In addition to the relays specified above, the functional devices ribu1c is also permitted for use here.
 - C. Relays used for stop/start control shall have low voltage coils (30 VAC or less), and shall be provided with transient and surge suppression devices at the controller interface.
4. Control transformers: furnish and install control transformers as required. Control transformers shall be machine tool type, and shall be us and CSA listed. Primary and secondary sides shall be fused in accordance with the NEC. Transformer shall be proper size for application, and mounted in minimum NEMA 1 enclosure. Each controller device requiring a low voltage power supply to operate shall be provided with a dedicated transformer.
- A. Westinghouse, Square "D", Jefferson or approved equal shall manufacture transformers.
5. Electric push button switch: switch shall be momentary contact, oil tight, push button,

with number of N.O. and/or N.C. contacts as required. Contacts shall be snap-action type, and rated for minimum 120 VAC operation. Switch shall be 800t type, as manufactured by Allen Bradley or approved equal.

6. Pilot light: panel-mounted pilot light shall be oil tight, transformer type, with screw terminals, led type, rated for 24 VAC or 120 VAC [220 VAC]. Unit shall be as manufactured by Allen Bradley or approved equal.

S. Network connection tool

1. Network connection tool shall allow technician to connect a laptop to any MS/TP network or at any MS/TP device and view and modify all information throughout the entire BACnet network. Laptop connection to tool shall be via Ethernet or PTP.
2. Provide quick connect to MS/TP LAN at each controller. Tool shall be able to adjust to all MS/TP baud rates specified in the BACnet standard.

2.6 ELECTRONIC ACTUATORS AND VALVES

A. Quality Assurance for Actuators and Valves

1. UL Listed Standard 873 and C.S.A. Class 4813 02 certified.
2. NEMA 2 rated enclosures for inside mounting, provide with weather shield for outside mounting.
3. Five-year manufacturer's warranty. Two-year unconditional and three-year product defect from date of installation.

B. Execution Details for Actuators and Valves

1. Furnish a Freeze-stat and install "Hard Wire" interlock to disconnect the mechanical spring return actuator power circuit for fail-safe operation. Use of the control signal to drive the actuators closed is not acceptable.
2. Each DDCS (Direct Digital Controllers) analog output point shall have an actuator feedback signal, independent of control signal, wired and terminated in the control panel for true position information and troubleshooting. Or the actuator feedback signal may be wired to the DDCS as an analog input for true actuator position status.
3. VAV box damper actuation shall be Floating type or Analog (2-10vdc, 4-20ma).
4. Booster-heat valve actuation shall be Floating type or Analog (2-10vdc, 4-20ma).
5. Primary valve control shall be Analog (2-10vdc, 4-20ma).

C. Actuators for Damper and Control Valves ½" to 6" shall be Electric unless otherwise specified, provide actuators as follows:

1. UL Listed Standard 873 and Canadian Standards association Class 481302 shall certify Actuators.
2. NEMA 2 rated actuator enclosures are. Use additional weather shield to protect actuator when mounted outside.
3. 5 year Manufacturer's Warranty. Two-year unconditional + Three year product defect from date of installation.

4. Mechanical spring shall be provided when specified. Capacitors or other non-mechanical forms of fail-safe are not acceptable.
5. Position indicator device shall be installed and made visible to the exposed side of the Actuator. For damper short shaft mounting, a separate indicator shall be provided to the exposed side of the Actuator.
6. Overload Protection: Actuators shall provide protection against actuator burnout by using an internal current limiting circuit or digital motor rotation sensing circuit. Circuit shall insure that actuators cannot burn out due to stalled damper or mechanical and electrical paralleling. End switches to deactivate the actuator at the end of rotation are acceptable only for Butterfly Valve actuators.
7. A push button gearbox release shall be provided for all non-spring actuators.
8. Modulating actuators shall be 24Vac and consume 10VA power or less.
9. Conduit connectors are required when specified and when code requires it.

D. Damper Actuators:

1. Outside Air and Exhaust Air Damper Actuators shall be Mechanical Spring Return. Capacitors or other non-mechanical forms of fail-safe are not acceptable. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the damper as required.
2. Economizer Actuators shall utilize Analog control 2-10 VDC, Floating control is not acceptable.
3. Electric damper actuators (including VAV box actuators) shall be direct shaft mounted and use a V-bolt and toothed V-clamp causing a cold weld effect for positive gripping. Single bolt or setscrew type fasteners are not acceptable.
4. One electronic actuator shall be direct shaft mounted per damper section. No connecting rods or jackshafts shall be needed. Small outside air and return air economizer dampers may be mechanically linked together if one actuator has sufficient torque to drive both and damper drive shafts are both horizontal installed.
5. Multi-section dampers with electric actuators shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per damper section. (See below execution section for more installation details.)

E. Valve Actuators ½" to 6"

1. Mechanical spring shall be provided on all actuators for pre-heat coil and actuators for AHU heating or cooling coil when units are mounted outside. See plans for fail save flow function: Normal Open or Normal Closed. Capacitors or other non-mechanical forms of fail-safe are not acceptable.
2. All zone service actuators shall be non-spring return unless otherwise specified.
3. The valve actuator shall be capable of providing the minimum torque required for proper valve close off for the required application.
4. All control valves actuators shall have an attached 3-foot cable for easy installation to a junction box.
5. Override handle and gearbox release shall be provided for all non-spring return valve

actuators.

F. Control Dampers.

1. All dampers used for modulating service shall be opposed blade type arrange for normally open or normally closed operation as required. The damper is to be sized so that when wide open the pressure drop is a sufficient amount of its close-off pressure drop for effective throttling.
2. All dampers used for two-position or open-close control shall be parallel blade type arranged for normally open or closed operation as required.
3. Damper linkage hardware shall be constructed of aluminum or corrosion resistant zinc & nickel-plated steel and furnished as follows:
4. Bearing support bracket and drive blade pin extension shall be provided for each damper section. Sheet metal contractor shall install bearing support bracket and drive blade pin extension. Sheet metal contractor shall provide permanent indication of blade position by scratching or marking the visible end of the drive blade pin extension.
5. Drive pin may be round only if V-bolt and toothed V-clamp is used to cause a cold weld effect for positive gripping. For Single bolt or set-screw type actuator fasteners, round damper pin shafts must be milled with at least one side flat to avoid slippage.
6. Damper manufacturer shall supply alignment plates for all multi-section dampers.

G. Control Valves ½" to 6": The BMS contractor shall furnish all specified motorized control valves and actuators. BMS contractor shall furnish all control wiring to actuators. The Plumbing contractor shall install all valves. Equal Percentage control characteristic shall be provided for all water coil control valves. Linear valve characteristic is acceptable for 3-way valves 2½ inches and above.

1. Characterized Control Valves shall be used for hydronic heating or cooling applications and small to medium AHU water coil applications to 100GPM. Actuators are non-spring return for terminal unit coil control unless otherwise noted. If the coil is exposed to the Outside Air stream then see plans for Spring Return requirement.
 - a. Leakage is Zero percent, Close-off is 200psi, and Maximum differential is 30psi. Rangeability is 500:1.
 - b. Valves 1/2 inch through 2 inches shall be nickel-plated forged brass body, NPT screw type connections.
 - c. Valves 1/2 inch through 1-1/4 inches shall be rated for ANSI Class 600 working pressure. Valves 1-1/2 inch and 2 inches shall be rated for ANSI Class 400 working pressure.
 - d. The operating temperature range shall be 0° to 250° F.
 - e. Stainless steel ball & stem shall be furnished on all modulating valves.
 - f. Seats shall be fiberglass reinforced Teflon or approved equal.
 - g. Two-way and three-way valves shall have an equal percentage control port. Full stem rotation is required for maximum flow to insure stable BTU control of the coil.
 - h. Three-way valve shall be applicable for both mixing and diverting.

- i. The characterizing disc is made of TEFZEL (or approved equal) and shall be keyed and held secure by a retaining ring.
 - j. The valves shall have a blowout proof stem design.
 - k. The stem packing shall consist of 2 lubricated O-rings designed for on-off or modulating service and require no maintenance.
 - l. The valves shall have an ISO type, 4-bolt flange, for mounting actuator in any orientation parallel or perpendicular to the pipe.
 - m. A non-metallic thermal isolation adapter shall separate valve flange from actuator.
 - n. One fastening screw shall secure the direct coupling of the thermal isolation adapter between the actuator and the valve. This will prevent all lateral or rotational forces from affecting the stem and its packing O-rings.
2. Globe valves ½" to 2" shall be used for steam control or water flow applications.
- a. Valves shall be bronze body, NPT screw type, and shall be rated for ANSI Class 250 working pressure.
 - b. Valves 1/2 inch (DN15) through 2 inches (DN50) with spring return actuators shall close off against 50 psi pressure differential with Class III leakage (.1%).
 - c. The operating temperature range shall be 20° to 280° F.
 - d. Spring loaded TFE packing shall protect against leakage at the stem.
 - e. Two-way valves shall have an equal percentage control port.
 - f. Three-way valves shall a linear control and bypass port.
 - g. Mixing and diverting valves must be installed specific to the valve design.
3. Globe Valve 2 ½ to 6"
- a. Valves 2-1/2 inch (DN65) through 6 inches (DN50) shall be iron body, 125 lb. flanged with Class III (.1%) close-off leakage at 50 psi differential.
 - b. Valves with spring return actuators shall close off against 50 psi pressure differential with Class III leakage (.1%).
 - c. Flow type for two-way valves shall be equal percentage. Flow type for three-way valves shall be linear.
 - d. Mixing and diverting valves must be installed specific to the valve design.

H. Butterfly valves

- 1. Butterfly Valves shall be sized for modulating service at 60-70 degree stem rotation. Isolation valves shall be line-size. Design velocity shall be less than 12 feet per second when used with standard EPDM seats.
 - a. Body is Cast Iron.
 - b. Disc is Aluminum Bronze standard.
 - c. Seat is EPDM Standard.

- d. Body Pressure is 200 psi, -30F to 275F.
- e. Flange is ANSI 125/250.
- f. Media Temperature Range is -22F to 240F.
- g. Maximum Differential Pressure is 200 psi for 2" to 6" size.

I. Butterfly Valve Industrial Actuators

1. Actuators shall be approved under a Nationally Recognized Testing Laboratory to UL standards. CSA Class 4813 02 or equal. Enclosure shall be NEMA 4 (weatherproof) enclosure and will have an industrial quality coating.
 - a. Actuator shall have a motor rated for continuous duty. The motor shall be fractional horsepower; permanent split capacitor type designed to operate on a 120 VAC, 1 ϕ , 60 Hz supply. Two adjustable cam actuated end travel limit switches shall be provided to control direction of travel. A self-resetting thermal switch shall be imbedded in the motor for overload protection.
 - b. Reduction gearing shall be designed to withstand the actual motor stall torque. Gears shall be hardened alloy steel, permanently lubricated. A self-locking gear assembly or a brake shall be supplied.
 - c. Actuator shall have a 6 ft. wiring harness provided for ease in field wiring (above 1500 in-lbs.). Two adjustable SPDT cam-actuated auxiliary switches, rated at 250 VAC shall be provided for indication of open and closed position. Actuator shall have heater and thermostat to minimize condensation within the actuator housing.
 - d. Actuator shall be equipped with a hand wheel for manual override to permit operation of the valve in the event of electrical power failure or system malfunction. Hand wheel must be permanently attached to the actuator and when in manual operation electrical power to the actuator will be permanently interrupted. The hand wheel will not rotate while the actuator is electrically driven.
 - e. The actuator shall be Analog, floating, or two position as called out in the control sequence of operation. All Analog valves shall be positive positioning, and respond to a 2-10 VDC, 4-20 mA, or adjustable signal as required. Analog actuators shall have a digital control card allowing any voltage input for control and any DC voltage feedback signal for position indication.
2. Performance Verification Test
 - a. Control loops shall cause productive actuation with each movement of the actuator and actuators shall modulate at a rate which is stable and responsive. Actuator movement shall not occur before the effects of previous movement have affected the sensor.
 - b. Actuator shall have capability of signaling a trouble alarm when the actuator Stop-Go Ratio exceeds 30%.
3. Actuator Mounting for Damper and Valve arrangements shall comply with the following:
 - a. Damper Actuators: Shall not be installed in the air stream
 - b. A weather shield shall be used if actuators are located outside. For Damper Actuators use clear plastic enclosure.

- c. Damper or valve actuator ambient temperature shall not exceed 122 degrees F through any combination of medium temperature or surrounding air. Appropriate air gaps, thermal isolation washers or spacers, standoff legs, or insulation shall be provided as necessary
 - d. Actuator cords or conduit shall incorporate a drip leg if condensation is possible. Water shall not be allowed to contact actuator or internal parts. Location of conduits in temperatures dropping below dew point shall be avoided to prevent water from condensing in conduit and running into actuator.
 - e. Damper mounting arrangements shall comply with the following:
 - 1. The ventilation subcontractor shall furnish and install damper channel supports and sheet metal collars.
 - 2. No jack shafting of damper sections shall be allowed.
 - 3. Multi-section dampers shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per section.
 - f. Size damper sections based on actuator manufacturers specific recommendations for face velocity, differential pressure and damper type. In general:
 - 1. Damper section shall not exceed 24 ft.-sq. with face velocity £ 1500 FPM.
 - 2. Damper section shall not exceed 18 ft.-sq. with face velocity £ 2500 FPM.
 - 3. Damper section shall not exceed 13 ft.-sq. with face velocity £ 3000 FPM.
 - g. Multiple section dampers of two or more shall be arranged to allow actuators to be direct shaft mounted on the outside of the duct.
 - h. Multiple section dampers of three or more sections wide shall be arranged with a 3-sided vertical channel (8" wide by 6" deep) within the duct or fan housing and between adjacent damper sections. Vertical channel shall be anchored at the top and bottom to the fan housing or building structure for support. The sides of each damper frame shall be connected to the channels. Holes in the channel shall allow damper drive blade shafts to pass through channel for direct shaft mounting of actuators. Open side of channel shall be faced down stream of the airflow, except for exhaust air dampers.
 - i. Multiple section dampers to be mounted flush within a wall or housing opening shall receive either vertical channel supports as described above or sheet metal standout collars. Sheet metal collars (12" minimum) shall bring each damper section out of the wall to allow direct shaft mounting of the actuator on the side of the collar.
4. Valve Sizing for Water Coil
- a. On/Off Control Valves shall be line size.
 - b. Modulating Control Valve Body Size may be reduced at most two pipe sizes from the line size or not less than ½ the pipe size. The BMS contractor shall size all water coil control valves for the application as follows:
 - i. Booster-heat valves shall be sized not to exceed 4-9psi differential pressure. Size valve for 50% Valve Authority. Valve design pressure drop is equal to the sum of coil drop plus the balance valve drop.

- ii. Primary valves shall be sized not to exceed 5-15psi differential pressure. Size valve for 50% Valve Authority. Valve design pressure drop is equal to the sum of coil drop plus the balance valve drop.
- iii. Butterfly valves shall be sized for modulating service at 60-70 degree rotation. Design velocity shall be 12 feet per second or less when used with standard EPDM seats.
- c. Valve Mounting arrangements shall comply with the following:
 - i. Unions shall be provided on all ports of two-way and three-way valves.
 - ii. Install three-way equal percentage Characterized Control valves in a mixing configuration with the "A" port piped to the coil.
 - iii. Install 2½ inch and above, Three-Way globe valves, as manufactured for mixing or diverting service to the coil.

2.7 ENCLOSURES

- A. All controllers, power supplies and relays shall be mounted in enclosures.
- B. Enclosures may be NEMA 1 when located in a clean, dry, indoor environment. Indoor enclosures shall be NEMA 12 when installed in other than a clean environment.
- C. Enclosures shall have hinged, locking doors.
- D. Provide laminated plastic nameplates for all enclosures in any mechanical room or electrical room. Include location and unit served on nameplate. Laminated plastic shall be 1/8" thick sized appropriately to make label easy to read.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Prior to starting work, carefully inspect installed work of other trades and verify that such work is complete to the point where work of this Section may properly commence.
- B. Notify the owners' representative in writing of conditions detrimental to the proper and timely completion of the work.
- C. Do not begin work until all unsatisfactory conditions are resolved.

3.2 INSTALLATION (GENERAL)

- A. Install in accordance with manufacturer's instructions.
- B. Provide all miscellaneous devices, hardware, software, interconnections installation and programming required to ensure a complete operating system in accordance with the sequences of operation and point schedules.

3.3 LOCATION AND INSTALLATION OF COMPONENTS

- A. Locate and install components for easy accessibility; in general, mount 48 inches above floor with minimum 3'-0" clear access space in front of units. Obtain approval on locations from commissioner prior to installation.
- B. All instruments, switches, transmitters, etc., shall be suitably wired and mounted to protect them from vibration, moisture and high or low temperatures.

- C. Identify all equipment and panels. Provide permanently mounted tags for all panels.
- D. Provide stainless steel or brass thermowells suitable for respective application and for installation under other sections—sized to suit pipe diameter without restricting flow.

3.4 INTERLOCKING AND CONTROL WIRING

- A. Provide all interlock and control wiring. All wiring shall be installed neatly and professionally, in accordance with Specification Division 26 and all national, state and local electrical codes.
- B. Provide wiring as required by functions as specified and as recommended by equipment manufacturers, to serve specified control functions. Provide shielded low capacitance wire for all communications trunks.
- C. Control wiring shall not be installed in power circuit raceways. Magnetic starters and disconnect switches shall not be used as junction boxes. Provide auxiliary junction boxes as required. Coordinate location and arrangement of all control equipment with the commissioner prior to rough-in.
- D. Provide auxiliary pilot duty relays on motor starters as required for control function.
- E. Provide power for all control components from nearest electrical control panel or as indicated on the electrical drawings—coordinate with electrical contractor.
- F. All control wiring in the mechanical, electrical, telephone and boiler rooms to be installed in raceways. All other wiring to be installed neatly and inconspicuously per local code requirements. If local code allows, control wiring above accessible ceiling spaces may be run with plenum rated cable (without conduit).

3.5 DDCS (DIRECT DIGITAL CONTROLLERS) OBJECT TYPE SUMMARY

- A. Provide all database generation.
- B. Displays
 - 1. System displays shall show all analog and binary object types within the system. They shall be logically laid out for easy use by the owner. Provide outside air temperature indication on all system displays associated with economizer cycles.
- C. Run Time Totalization
 - 1. At a minimum, run time totalization shall be incorporated for each monitored supply fan, return fan, exhaust fan, hot water and chilled water pumps. Warning limits for each point shall be entered for alarm and or maintenance purposes.
- D. Trend Log
 - 1. All binary and analog object types (including zones) shall have the capability to be automatically trended.
- E. Alarm
 - 1. All analog inputs (High/Low Limits) and selected binary input alarm points shall be prioritized and routed (locally or remotely) with alarm message per City of New York's requirements.
- F. Database Save
 - 1. Provide back-up database for all stand-alone application controllers on disk.

3.6 FIELD SERVICES

- A. Prepare and start logic control system under provisions of this section.
- B. Start-up and commission systems. Allow sufficient time for start-up and commissioning prior to placing control systems in permanent operation.
- C. Provide the capability for off-site monitoring at control contractor's local or main office. At a minimum, off-site facility shall be capable of system diagnostics and software download.
- D. Provide Commissioner with spare parts list. Identify equipment critical to maintaining the integrity of the operating system.

3.7 TRAINING

- A. Provide instruction to owner in operation of systems and equipment.
- B. Provide system operator's training to include (but not limited to) such items as the following: modification of data displays, alarm and status descriptors, requesting data, execution of commands and request of logs. Provide this training to a minimum of 3 persons.
- C. Provide on-site training above as required, up to 16 hours as part of this contract.

3.8 DEMONSTRATION

- A. Demonstrate complete operating system to commissioner.
- B. Provide certificate stating that control system has been tested and adjusted for proper operation.

END OF SECTION 230900

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 230990

SEQUENCE OF OPERATIONS FOR HVAC CONTROLS

PART 1 GENERAL

1.1 PERFORMANCE REQUIREMENTS

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

- a. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

- a. All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.
- B. Provide a complete and operational temperature control and building automation system based on the following points and sequence of operation. The system shall be complete as to sequences and standard control practices. The determined point list is the minimum amount of points that are to be provided. If additional points are required to meet the sequence of operation, they will be provided.
- C. Definition: DDCS (Direct Digital Control System)
- D. BACnet object list
1. The following points as defined for each piece of equipment are designated as follows:
 - A. Binary out (BO) - defined as any two-state output (start/stop) (enable/disable), etc.
 - B. Binary in (BI) - defined as any two-state input (alarm, status), etc.
 - C. Analog in (AI) - defined as any variable input (temperature) (position), etc.
 - D. Analog out (AO) - defined as any electrical variable output. 0–20ma, 4–20ma and 0–10vdc are the only acceptable analog outputs. The driver for analog outputs must come from both hardware and software resident in the controllers. Transducers will not be acceptable under any circumstance.

- E. All set points referenced in this section are subject to change and shall be adjustable from the BMS operator interface and from a portable operator terminal.
- F. The project that is the subject of this specification may not require all types of hardware listed in this section.

1.2 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. PROVIDE FOR ALL FIELD-APPLIED ADHESIVES, SEALANTS (USED AS FILLERS), AND PAINTS: MATERIAL SAFETY DATA SHEETS, FOR ALL APPLICABLE PRODUCTS. APPLICABLE PRODUCTS INCLUDE, BUT ARE NOT LIMITED TO ADHESIVES, SEALANTS, PAINTS AND COATINGS APPLIED ON THE INTERIOR OF THE BUILDING. MATERIAL SAFETY DATA SHEETS SHALL INDICATE THE VOLATILE ORGANIC COMPOUND (VOC) LIMITS OF PRODUCTS SUBMITTED (IF AN MSDS DOES NOT INCLUDE A PRODUCT'S VOC LIMITS, THEN PRODUCT DATA SHEETS, MANUFACTURER LITERATURE, OR A LETTER OF CERTIFICATION FROM THE MANUFACTURER CAN BE SUBMITTED IN ADDITION TO THE MSDS TO INDICATE THE VOC LIMITS).

1.3 WATER SYSTEMS

A. Hot Water System

1. The BMS contractor shall provide BACnet DDCS (Direct Digital Control System) controls for complete stand-alone operation of the hot water system. The BMS contractor shall connect the DDCS controller to the BMS network for point monitoring and control. The operator shall have the ability to select pump lead/lag and pump manual/auto operation from switches mounted on the face of the local control panel. Indicator lights on the face of the panel shall indicate pump running status for each pump. A local alarm with audible/visual indication and silence switch shall also be mounted on the face of the panel. Alarm annunciated shall be pump fail alarm.
2. Boilers shall be controlled by manufacturer supplied control panel that will stage boilers on and off and maintain proper loop temperature set point. The master boiler panel shall be furnished with a BACnet or Modbus interface for communication to the BMS. The BMS contractor shall provide an interface and all programming to monitor and control all points from the boilers to the BMS
3. The BMS contractor shall install all field devices and wiring required for proper boiler operation that cannot be factory installed.
4. All Fire/Smoke Dampers located in combustion air system shall be interlocked with boiler operation via BMS. Dampers shall remain open continuously and upon signal to close, the boiler will also shut down. Contractor to provide whisker switch and alarm to monitor airflow in combustion air system.
5. The hot water system shall be enabled or disabled based on outdoor air temperature. When the outdoor air temperature is below 58°F (adj.) the lead pump shall start and when the outdoor air temperature is above 60°F (adj.) enabled pump shall stop. When the hot water system is enabled the lead hot water pump shall start and slowly ramp up to speed control set point then the boiler shall be enabled to run.
6. The BMS shall reset the hot water system supply temperature set point based on outdoor air temperature as follows;

Outside Air Temperature	Set Point
55°F	130°F
30°F	155°F
0°F	180°F

7. Differential pressure sensor shall be located just prior to the last load on the circuit. The sensor shall be wired to the same controller that controls the pump VFD and pressure bypass valve. The pump VFD shall be controlled to maintain the condenser water system differential pressure set point. If the pump is operating at the minimum VFD speed and the differential pressure is above set point, the pressure bypass valve shall modulate open to maintain set point.
8. For each set of pumps one pump is primary and the other is stand-by. Provide staging control of the pumps so if the primary pump fails, lock it out and start the stand-by pump. An alarm shall be annunciated to the local panel and to the BMS. Rotate the primary and stand-by pumps on a regular schedule (adj.) to equalize runtime.
9. A pressure transmitter shall monitor the expansion tank pressure and annunciate a high or low alarm if the analog limits are exceeded.
10. A current sensor shall be used to prove pump status.
11. DDCS Points:
 - a. Boiler Serial interface Points
 - b. HW Pump Start/Stop
 - c. HW Pump Status
 - d. HW Pump VFD Speed Control
 - e. HW Pump VFD Malfunction
 - f. HW Pump Fail Alarm
 - g. HW Differential Pressure w/ High/Low Alarm
 - h. HW Supply and Return Temperature w/ High/Low Alarm
 - i. HW Differential Pressure Bypass Valve Control
 - j. Outdoor Air Temperature
 - k. Outdoor Air Humidity
 - l. Outdoor Air CO2
 - m. Expansion Tank High/Low Pressure Alarm

B. Chilled Water System

1. The Air Cooled Packaged Chillers shall be furnished with a complete controls package for full automatic control of the chilled water system. The chiller package includes all controls provided by the manufacturer that will operate the chillers and chilled water pumps to maintain the chilled water supply temperature set point. Automatic reset of the chilled water supply temperature based on either outdoor air temperature or chilled water return temperature shall be provided as part of the BMS. The operator, through the operator interface, shall have the ability to select either reset scheme or to set a fixed set point temperature. The user shall be able to

manually set the reset parameters for both reset schedules through the operator interface without the use of any special tools or programs.

2. The BMS contractor shall provide monitoring and control through the BMS via a two-wire network interface to the chiller manufacturer's microprocessor controller. The chiller manufacturer shall provide the chiller communication interface board for BACnet interface to the BMS. The BMS contractor shall provide connection to the interface and all programming to monitor and control all points from the chillers to the BMS.
3. The BMS contractor shall install, and wire all field control devices that cannot be factory installed and wired that are necessary for a complete operational chilled water system including but not limited to remote differential pressure transmitter, flow switches, etc. Coordinate requirements with the chiller manufacturer.
4. The chilled water system shall be enabled/disabled through the BMS based on a call for cooling from the equipment it is serving or through a manual command from the BMS.
5. DDC Points:

- a. Chiller BACnet Serial Interface Points

1.4 AIR SYSTEMS

A. General

1. Interlock all associated dampers to open/close with fan start/stop.
2. BMS shall monitor the fan status via a current switch and shall track run times when fan is in operation. If the fan fails to operate an alarm shall be annunciated at the BMS and dampers shall be indexed to their normal off positions.
3. For fans greater than 2,000 CFM, provide a high discharge static pressure switch if dampers are located upstream of the fan and/or a low static pressure switch if dampers are located downstream of the fan to prevent mechanical damage if a damper fails to open. The switch shall stop the fan when duct pressure exceeds design. The fan shall remain off until the pressure switch is reset.
4. Duct smoke detector shall stop the fan upon the presence of smoke through a signal from the fire alarm system. The Fire Alarm System shall signal the BMS when a fire alarm is present.
5. Fire/smoke dampers shall be wired back to associated fan so that the dampers open/close with fan start/stop. Where dampers are located just up or down stream from the fan, the damper shall open and prove open via a damper mounted end switch prior to starting the fan motor.
6. Atrium Smoke Purge – BMS contractor shall position fire/smoke dampers associated with the AHU's to the Smoke Purge positions when the Atrium Smoke Purge mode is initiated through the Fire Alarm System. Dampers shall be positioned to allow outdoor air to flow through the return air duct for make-up air to the Atrium. Refer to the fire/smoke damper schedule on the plans for proper damper positioning based on mode of operation.
7. BMS contractor shall provide optimized start/stop program for all air handling units to minimize equipment run time and improving energy efficiency.

B. Air Handling Unit (AHU-1)

1. The BMS contractor shall provide BACnet DDC controls for complete stand-alone operation of the Air Handling Unit (AHU). The BMS contractor shall connect the DDC controller to the BMS network for point monitoring and control.
2. BMS shall control heating coil freeze protection pump so that the pump is commanded on whenever the outdoor air temperature falls below 42°F (adj.). The pump shall run continuously until the outdoor air temperature rises 2°F above the set point at which the pump was commanded on.
3. Low temperature detectors (freeze stats), mounted upstream of the cooling coil, shall fully open the recirculation air damper, close the outdoor air and exhaust air dampers and annunciate an alarm to the BMS if the temperature falls below 38°F (adj.). The supply and return fans shall run continuously and the chilled water coil valve shall be controlled in sequence with the heating coil valve to maintain the supply air temperature set point. The unit shall operate this way until the low temperature detector is manually reset.
4. Unit supplied energy recovery wheel controls and variable speed controller shall control the speed of the energy recovery wheel. BMS DDC shall interface for enable/disable and status. The energy recovery wheel shall be used to pre-heat the outside air. Energy shall be transferred from the exhaust air to the outside air only in heating mode and when conditions are desirable.
5. Dead Band: zone thermostatic controls shall be capable of providing a temperature range or dead band of at least 5 °F within which the supply of heating and cooling energy to the zone is shut off or reduced to a minimum.
6. Set point Overlap Restriction: where heating and cooling to a zone are controlled by DDC software programming, means shall be provided to prevent the heating set point from exceeding the cooling set point minus any applicable proportional band.
7. Start-up: Upon a command to start the recirculation damper shall be full open while the outdoor air and exhaust air dampers remain closed and the energy recovery wheel is off. The AHU supply and exhaust fans shall start and slowly ramp up to speed control set point. The supply fan variable speed drive shall be controlled to maintain the supply static pressure set point, as sensed at a point 2/3 downstream of the supply fan. The exhaust fan variable speed drive shall be controlled to maintain a constant air volume differential, to maintain positive pressurization of the space.
8. Warm-up: The system shall be indexed to warm-up mode if the return air temperature is below (60°F adj.) during start-up. During morning warm-up; the EA damper and OA damper shall all be closed, the recirculation damper shall open 100% and the energy recovery wheel shall be off. The heating coil shall modulate to maintain discharge air set point (80°F adj.). The CAV/VAV boxes shall be indexed to the full open position when the associated AHU is in the warm-up mode. The system shall continue in warm-up mode until the return air temperature rises above (65°F adj.) then it shall be indexed to the occupied mode.
9. Cool-down: The system shall be indexed to cool-down mode if the return air temperature is above (80°F adj.) during start-up. The chilled water coil shall modulate in sequence with the airside economizer to maintain discharge air set point (50°F adj.). The system shall continue in cool-down mode until the space temperature falls below (76°F adj.) then it shall be indexed to the occupied mode. During morning cool-down; the EA damper and OA damper shall all be closed, the recirculation damper shall open to 100% and the energy recovery wheel is off.

10. Occupied Mode: The outdoor air and exhaust air dampers shall modulate open, while the recirculation air damper modulates closed and the energy recovery wheel shall be commanded on. The minimum outdoor air flow setting shall be controlled by modulating the outdoor air and recirculation air dampers. The supply and return fans shall run continuously. The chilled water coil valve shall be controlled in sequence with the airside economizer and heating coil valve to maintain the supply air temperature set point. The supply temperature set point shall be reset based on VAV box damper positions. All VAV box dampers associated with the AHU shall be polled every 15 minutes to determine position. If any damper is fully open, decrease the supply air temperature by .25°F. If no VAV damper is open greater than 75% open, increase the supply air temperature by .25°F.
11. Unoccupied Heating: During unoccupied periods if the space temperature falls below the unoccupied setback set point (58°F adj.) the AHU shall be indexed on. During unoccupied heating the EA damper and OA damper shall all be closed, the recirculation damper shall open 100% and the energy recovery wheel shall be off. The heating coil shall modulate to maintain discharge air set point (80°F adj.). The system shall continue to run until the space temperature rises 4°F above the unoccupied setback set point. The outdoor air damper shall remain closed during this mode of operation. The CAV/VAV boxes shall be indexed to the full open position when the associated AHU is in this mode.
12. Unoccupied Cooling: During unoccupied periods if the space temperature rises above the unoccupied setup set point (85°F adj.) the AHU shall cycle on and the chilled water coil shall be controlled to maintain discharge air set point (50°F adj.). The system shall continue to run until the space temperature falls 4°F below the unoccupied setup set point. During unoccupied cooling the EA damper and OA damper shall all be closed, the recirculation damper shall open to 100% and the energy recovery wheel shall be off.
13. Economizer Mode: Economizer dampers shall be enabled to provide free cooling whenever the outside air enthalpy is less than the air handling unit return air enthalpy. If economizer is available and there is a rise in temperature above the supply air temperature set point, the outside air bypass damper(s) and/or exhaust air bypass damper(s) shall be modulated open from minimum position to 100% open as necessary to maintain the temperature set point. The return air damper(s) shall modulate closed as the outside air and exhaust air damper(s) modulate open. If the outside air damper is 100% open and there is a further rise in the supply air temperature above set point, the outside air damper shall remain 100% open and the cooling coil valve shall modulate as necessary to maintain supply air temperature set point. Economizer dampers shall modulate in sequence with the cooling coil valve subject to a mixed air low limit of 50°F (adj.).
14. De-humidification: The return air humidity levels shall be maintained at a maximum of 60% RH (adj.). If the humidity level approaches the high limit set point, the chilled water coil valve shall open and the heating coil valve shall modulate to maintain the discharge air temperature set point. The dehumidification cycle shall continue until the return air humidity levels have dropped 5% RH (adj.) below the high limit set point.
15. High Occupancy Override: When the AHU is running and the return air CO2 level exceeds the preset high limit set point (800 ppm, adj.) the outdoor air minimum flow rate shall be reset to allow more outdoor air to enter the occupied space. The outdoor air damper and recirculation damper shall modulate to maintain the CO2 level below the preset high limit set point. The CO2 override function shall only be active when the CO2 levels are above 800 ppm. When CO2 levels drop, the MA dampers shall modulate to allow for more return air and less OA. The CO2 override function shall

not be enabled if the system is in economizer mode. If the return air CO2 level exceeds 1000 ppm an alarm shall be annunciated to the BMS. . This program shall work in sequence with the zone terminal units served to ensure adequate fresh air is supplied by the unit in order to maintain the space CO2 set point requirements.

16. System Off: When the system is indexed off the supply and exhaust fans shall stop, all associated discharge air, smoke and fire/smoke dampers shall close and the cooling coil valve shall close. The recirculation air damper shall be open, the outdoor air and exhaust air dampers shall be closed and the energy recovery wheel shall be off. The heating coil valve shall modulate to maintain a minimum heating coil discharge temperature of 45°F (adj.).
17. Monitor differential pressures across filters and annunciate alarm when differential pressure set point is exceeded.
18. If the supply or exhaust fans fail to operate an alarm shall be annunciated at the BMS.
19. The Fire Alarm System shall signal the BMS when a fire alarm is present. When the floor/area the fans serves is in alarm, the FAS shall shut down the fan and close all dampers.
20. DDCS Points:
 - a. Supply Fan Start/Stop
 - b. Supply Fan Status
 - c. Supply Fan VFD Speed Control
 - d. Supply Fan VFD Malfunction
 - e. Supply Fan Fail
 - f. Exhaust Fan Start/Stop
 - g. Exhaust Fan Status

 - gg. Freeze Protection Pump Status

C. Air Handling Unit (AHU-2 / RF-1)

1. The BMS contractor shall provide BACnet DDC controls for complete stand-alone operation of the Air Handling Unit (AHU). The BMS contractor shall connect the DDC controller to the BMS network for point monitoring and control.
2. Low temperature detectors (freeze stats), mounted upstream of the cooling coil, shall stop the fans and annunciate an alarm to the BMS if the temperature falls below 38°F (adj.). The heating coil valve shall modulate to maintain a minimum heating coil discharge temperature of 100°F (adj.).
3. The AHU shall be started by the BMS based upon a start time optimization program, time of day schedule, or manual command. Upon a command to start, all associated discharge air, smoke and fire/smoke dampers shall open.
4. Dead Band: zone thermostatic controls shall be capable of providing a temperature range or dead band of at least 5F within which the supply of heating and cooling energy to the zone is shut off or reduced to a minimum.
5. Set point Overlap Restriction: where heating and cooling to a zone are controlled by DDCS software programming, means shall be provided to prevent the heating set point from exceeding the cooling set point minus any applicable proportional band.
6. Start-up: Upon a command to start the return damper shall be full open while the outdoor air and exhaust air dampers remain closed. The AHU supply fan and associated return air fan shall start and slowly ramp up to speed control set point. The supply fan variable speed drive shall be controlled to maintain the supply fan speed as set with the Air Balancing Contractor. The return fan variable speed drive shall be controlled to maintain positive pressurization of the space as measured by the space static pressure sensor. The space static pressure sensor shall measure the space pressure as referenced to outdoor air. An outdoor air static pressure probe shall be used to eliminate wind effect. The system shall be indexed to one of the following modes:
 7. Warm-up: The system shall be indexed to warm-up mode if the return air temperature is below (60°F adj.) during start-up. The unit shall be indexed to the heating mode and the hot water heating coil shall be controlled to maintain discharge air set point (80°F adj.). The system shall continue in warm-up mode until the return air temperature rises above (65°F adj.) then it shall be indexed to the occupied mode.
 8. Cool-down: The system shall be indexed to cool-down mode if the return air temperature is above (80°F adj.) during start-up. The chilled water coil valve shall be controlled in sequence with the economizer dampers to maintain discharge air set point (50°F adj.). The outdoor air damper shall remain closed unless the economizer mode is enabled for free cooling. The system shall continue in cool-down mode until the space temperature falls below (76°F adj.) then it shall be indexed to the occupied mode.
 9. Occupied Mode: The outdoor air damper shall be opened to the minimum outdoor airflow at set point as measured by the outdoor airflow measuring station and the supply and return fans shall run continuously. The chilled water control valve and economizer dampers shall be controlled in sequence with the heating coil control valve to maintain the supply air temperature set point. The supply temperature set point shall be reset based on the average space temperature. Quantity and location of space temperature sensors as indicated on the plans.

10. Unoccupied Heating: During unoccupied periods if the space temperature falls below the unoccupied setback set point (58°F adj.) the AHU and associated return fan shall cycle on and the heating coil control valve shall modulate to maintain discharge air set point (80°F adj.). The system shall continue to run until the space temperature rises 4°F above the unoccupied setback set point. The outdoor air and exhaust air dampers shall remain closed during this mode of operation.
11. Unoccupied Cooling: During unoccupied periods if the space temperature rises above the unoccupied setup set point (85°F adj.) the AHU and associated return fan shall cycle on and the chilled water coil control valve shall be controlled in sequence with the economizer dampers to maintain discharge air set point (50°F adj.). The system shall continue to run until the space temperature falls 4°F below the unoccupied setup set point. The outdoor air and exhaust air dampers shall remain closed during this mode unless the economizer mode is enabled for free cooling.
12. Economizer Mode: Economizer dampers shall be enabled to provide free cooling whenever the outside air enthalpy is less than the return air enthalpy. If economizer is available and there is a rise in temperature above the supply air temperature set point, the outside air damper(s) and/or exhaust air damper(s) shall be modulated open from minimum position to 100% open as necessary to maintain the temperature set point. The return air damper(s) shall modulate closed as the outside air and exhaust air damper(s) modulate open. If the outside air damper is 100% open and there is a further rise in the supply air temperature above set point, the outside air damper shall remain 100% open and the cooling coil valve shall modulate as necessary to maintain supply air temperature set point. Economizer dampers shall modulate in sequence with the cooling coil valve subject to a mixed air low limit of 50°F (adj.).
13. De-humidification: The return air humidity levels shall be maintained at a maximum of 60% RH (adj.). If the humidity level approaches the high limit set point, the cooling coil control valve shall open and heating coil control valve shall modulate to maintain the discharge air temperature set point. The dehumidification cycle shall continue until the return air humidity levels have dropped 5% RH (adj.) below the high limit set point.
14. High Occupancy Override: When the AHU is running and the space or return air CO2 level exceeds the preset high limit set point (800 ppm, adj.) the outdoor air damper shall be reset to allow more outdoor air to enter the occupied space. The outdoor air damper shall modulate to maintain the CO2 level below the preset high limit set point. The CO2 override function shall only be active when the CO2 levels are above 800 ppm. If the return air CO2 level exceeds 1000 ppm an alarm shall be annunciated to the BMS. The CO2 override function shall not be enabled if the system is in economizer mode.
15. System Off: When the system is indexed off the supply and return fans shall stop, all associated discharge air, smoke and fire/smoke dampers shall close, the cooling coil control valve shall close and the heating coil valve shall modulate to maintain a minimum heating coil discharge temperature of 45°F (adj.). The outdoor and exhaust air dampers shall close and the return air damper shall open 100%.
16. Monitor differential pressures across filters and annunciate alarm when differential pressure set point is exceeded.
17. If the supply or return fans fail to operate an alarm shall be annunciated at the BMS and dampers shall be indexed to their normal off positions.
18. The Fire Alarm System shall signal the BMS when a fire alarm is present. When the

floor/area the fans serves is in alarm, the FAS shall shut down the fan and close all dampers.

19. DDCS Points:

- a. Supply Fan Start/Stop
- b. Supply Fan Status
- c. Supply Fan VFD Speed Control
- d. Supply Fan VFD Malfunction
- e. Supply Fan Fail
- f. Return Fan Start/Stop
- g. Return Fan Status
- h. Return Fan VFD Speed Control

- o. Mixed Air Temperature
- p. Hot Water Coil Discharge Temperature
- q. Supply Air Temperature w/ High/Low Alarm
- r. Supply Air Humidity w/ High/Low Alarm
- s. Return Air Temperature w/ High/Low Alarm
- t. Return Air Humidity w/ High/Low Alarm
- u. Space Temperature w/ High/Low Alarm – Multiple – See Plans
- v. Space Pressure
- w. Return Air CO2 w/ High Alarm
- x. Chilled Water Coil Valve Control
- y. Hot Water Coil Valve Control
- z. Outdoor Air Damper Control
- aa. Exhaust Air Damper Control
- bb. Return Air Damper Control

D. Air Handling Unit (AHU-3, 4)

1. The BMS contractor shall provide BACnet DDC controls for complete stand-alone operation of the Air Handling Unit (AHU). The BMS contractor shall connect the DDC controller to the BMS network for point monitoring and control.
2. Low temperature detectors (freeze stats), mounted upstream of the cooling coil, shall fully open the recirculation air damper, close the outdoor air and exhaust air dampers and annunciate an alarm to the BMS if the temperature falls below 38°F (adj.). The supply and return fans shall run continuously and the chilled water coil valve shall be controlled in sequence with the heating coil valve to maintain the supply air temperature set point. The unit shall operate this way until the low temperature detector is manually reset.
3. Unit supplied energy recovery wheel controls and variable speed controller shall control the speed of the energy recovery wheel. BMS DDC shall interface for enable/disable and status. The energy recovery wheel shall be used to pre-heat the outside air. Energy shall be transferred from the exhaust air to the outside air only in heating mode and when conditions are desirable.
4. Dead Band: zone thermostatic controls shall be capable of providing a temperature range or dead band of at least 5 °F within which the supply of heating and cooling energy to the zone is shut off or reduced to a minimum.

5. Set point Overlap Restriction: where heating and cooling to a zone are controlled by DDC software programming, means shall be provided to prevent the heating set point from exceeding the cooling set point minus any applicable proportional band.
6. Start-up: Upon a command to start the recirculation damper shall be full open while the outdoor air and exhaust air dampers remain closed and the energy recovery wheel is off. The AHU supply and exhaust fans shall start and slowly ramp up to speed control set point. The supply fan variable speed drive shall be controlled to maintain the supply static pressure set point, as sensed at a point 2/3 downstream of the supply fan. The exhaust fan variable speed drive shall be controlled to maintain a constant air volume differential, to maintain positive pressurization of the space.
7. Warm-up: The system shall be indexed to warm-up mode if the return air temperature is below (60°F adj.) during start-up. During morning warm-up; the EA damper and OA damper shall all be closed, the recirculation damper shall open 100% and the energy recovery wheel shall be off. The heating coil shall modulate to maintain discharge air set point (80°F adj.). The CAV/VAV boxes shall be indexed to the full open position when the associated AHU is in the warm-up mode. The system shall continue in warm-up mode until the return air temperature rises above (65°F adj.) then it shall be indexed to the occupied mode.
8. Cool-down: The system shall be indexed to cool-down mode if the return air temperature is above (80°F adj.) during start-up. The chilled water coil shall modulate in sequence with the airside economizer to maintain discharge air set point (50°F adj.). The system shall continue in cool-down mode until the space temperature falls below (76°F adj.) then it shall be indexed to the occupied mode. During morning cool-down; the EA damper and OA damper shall all be closed, the recirculation damper shall open to 100% and the energy recovery wheel is off.
9. Occupied Mode: The outdoor air and exhaust air dampers shall modulate open, while the recirculation air damper modulates closed and the energy recovery wheel shall be commanded on. The minimum outdoor air flow setting shall be controlled by modulating the outdoor air and recirculation air dampers. The supply and return fans shall run continuously. The chilled water coil valve shall be controlled in sequence with the airside economizer and heating coil valve to maintain the supply air temperature set point. The supply temperature set point shall be reset based on VAV box damper positions. All VAV box dampers associated with the AHU shall be polled every 15 minutes to determine position. If any damper is fully open, decrease the supply air temperature by .25°F. If no VAV damper is open greater than 75% open, increase the supply air temperature by .25°F.
10. Unoccupied Heating: During unoccupied periods if the space temperature falls below the unoccupied setback set point (58°F adj.) the AHU shall be indexed on. During unoccupied heating the EA damper and OA damper shall all be closed, the recirculation damper shall open 100% and the energy recovery wheel shall be off. The heating coil shall modulate to maintain discharge air set point (80°F adj.). The system shall continue to run until the space temperature rises 4°F above the unoccupied setback set point. The outdoor air damper shall remain closed during this mode of operation. The CAV/VAV boxes shall be indexed to the full open position when the associated AHU is in this mode.
11. Unoccupied Cooling: During unoccupied periods if the space temperature rises above the unoccupied setup set point (85°F adj.) the AHU shall cycle on and the chilled water coil shall be controlled to maintain discharge air set point (50°F adj.). The system shall continue to run until the space temperature falls 4°F below the unoccupied setup set point. During unoccupied cooling the EA damper and OA damper shall all be closed, the recirculation damper shall open to 100% and the

energy recovery wheel shall be off.

12. Economizer Mode: Economizer dampers shall be enabled to provide free cooling whenever the outside air enthalpy is less than the air handling unit return air enthalpy. If economizer is available and there is a rise in temperature above the supply air temperature set point, the outside air bypass damper(s) and/or exhaust air bypass damper(s) shall be modulated open from minimum position to 100% open as necessary to maintain the temperature set point. The return air damper(s) shall modulate closed as the outside air and exhaust air damper(s) modulate open. If the outside air damper is 100% open and there is a further rise in the supply air temperature above set point, the outside air damper shall remain 100% open and the cooling coil valve shall modulate as necessary to maintain supply air temperature set point. Economizer dampers shall modulate in sequence with the cooling coil valve subject to a mixed air low limit of 50°F (adj.).
13. De-humidification: The return air humidity levels shall be maintained at a maximum of 60% RH (adj.). If the humidity level approaches the high limit set point, the chilled water coil valve shall open and the heating coil valve shall modulate to maintain the discharge air temperature set point. The dehumidification cycle shall continue until the return air humidity levels have dropped 5% RH (adj.) below the high limit set point.
14. High Occupancy Override: When the AHU is running and the return air CO2 level exceeds the preset high limit set point (800 ppm, adj.) the outdoor air minimum flow rate shall be reset to allow more outdoor air to enter the occupied space. The outdoor air damper and recirculation damper shall modulate to maintain the CO2 level below the preset high limit set point. The CO2 override function shall only be active when the CO2 levels are above 800 ppm. When CO2 levels drop, the MA dampers shall modulate to allow for more return air and less OA. The CO2 override function shall not be enabled if the system is in economizer mode. If the return air CO2 level exceeds 1000 ppm an alarm shall be annunciated to the BMS. . This program shall work in sequence with the zone terminal units served to ensure adequate fresh air is supplied by the unit in order to maintain the space CO2 set point requirements.
15. System Off: When the system is indexed off the supply and exhaust fans shall stop, all associated discharge air, smoke and fire/smoke dampers shall close and the cooling coil valve shall close. The recirculation air damper shall be open, the outdoor air and exhaust air dampers shall be closed and the energy recovery wheel shall be off. The heating coil valve shall modulate to maintain a minimum heating coil discharge temperature of 45°F (adj.).
16. Monitor differential pressures across filters and annunciate alarm when differential pressure set point is exceeded.
17. If the supply or exhaust fans fail to operate an alarm shall be annunciated at the BMS.
18. The Fire Alarm System shall signal the BMS when a fire alarm is present. When the floor/area the fans serves is in alarm, the FAS shall shut down the fan and close all dampers.
19. DDCS Points:
 - a. Supply Fan Start/Stop
 - b. Supply Fan Status
 - c. Supply Fan VFD Speed Control
 - d. Supply Fan VFD Malfunction

- e. Supply Fan Fail
- f. Exhaust Fan Start/Stop
- g. Exhaust Fan Status
- h. Exhaust Fan VFD Speed Control
- i. Exhaust Fan VFD Malfunction
- j. Exhaust Fan Fail
- k. Outdoor Airflow
- l. Low Temperature Alarm
- m. High/Low Static Pressure Alarm
- n. Dirty Filter Alarm
- o. Mixed Air Temperature
- p. Hot Water Coil Discharge Temperature
- q. Supply Air Temperature w/ High/Low Alarm
- r. Supply Air Humidity w/ High/Low Alarm
- s. Supply Air Pressure w/ High/Low Alarm
- t. Return Air Temperature w/ High/Low Alarm
- u. Return Air Humidity w/ High/Low Alarm
- v. Return Air CO2 w/ High Alarm
- w. Chilled Water Coil Valve Control
- x. Hot Water Coil Valve Control
- y. Outdoor Air Energy Recovery Wheel Face Damper Control
- z. Outdoor Air Energy Recovery Wheel Bypass Damper Control
- aa. Exhaust Air Energy Recovery Wheel Face Damper Control
- bb. Exhaust Air Energy Recovery Wheel Bypass Damper Control
- cc. Return Air Damper Control
- dd. Energy Recovery Wheel Enable/Disable
- ee. Energy Recovery Wheel Status

E. Toilet Exhaust and General Exhaust

1. Exhaust fan shall start/stop through the BMS based on occupancy schedule.
2. DDCS Points:
 - a. Exhaust Fan Start/Stop
 - b. Exhaust Fan Status
 - c. Exhaust Fan Fail Alarm

F. SMD Exhaust Fan

1. Exhaust fan shall be started locally and shall run continuously.
2. The BMS shall monitor the fan status via a current switch and shall annunciate an alarm to the BMS if the fan is off for any reason.
3. DDCS Points:
 - a. Exhaust Fan Status
 - b. Exhaust Fan Off Alarm

G. Smoke Exhaust Fans

1. Smoke Exhaust fans shall be started and stopped through a signal from the fire alarm system. Damper position for smoke exhaust shall be controlled through the BMS. The BMS contractor shall provide damper actuators for open/close control of the dampers associated with the smoke exhaust fan operation.
2. The BMS contractor shall monitor a signal from the fire alarm system and index the

dampers to the exhaust mode when indexed to do so.

3. Refer to the fire/smoke damper schedule on the plans for proper damper positioning based on mode of operation.
4. DDCS Points:
 - a. Automatic Louvered Damper Open/Close Control
 - b. Automatic Louvered Damper Open/Close Status

H. Boiler Room

1. BMS contractor shall provide carbon monoxide (CO) and natural gas (CH4) sensors.
2. CO - When the CO level exceeds the high alarm limit set point of 200 PPM (adj.) a local alarm shall annunciate the condition (audible and visual alarms) and an alarm shall be annunciated to the BMS.
3. CH4 - When CH4 level exceeds the high alarm limit set point of 50% LEL (adj.) a local alarm shall annunciate the condition (audible and visual alarms), a second alarm shall be annunciated to the BMS and a relay output of the condition and shall simultaneously initiate the following:
 - a. Shutdown all equipment including boilers and burners irrespective of mode of operation.
 - b. Close the gas safety shut off valve feeding the, boilers and domestic hot water heaters.
4. Break glass switches shall be wired such that all boilers shall be shut down when glass is broken. The BMS will monitor break glass switch position. If an emergency occurs, the boiler control panel will initiate a shutdown for the boiler plant: shutting down all pumps and closing all isolation valves. A critical alarm will be issued to the BMS.
5. Provide an alarm horn, strobe light and silence switch at each entrance to the boiler room, above the break glass switch. Alarm to activate when gas leak occurs. Horn shall be silenced from switch and strobe shall continue to operate until condition is cleared.
6. DDCS Points:
 - a. CO level w/ Low/High Alarm for each sensor
 - b. CH4 level w/ Low/High Alarm for each sensor
 - c. Break Glass Switch Status

1.5 MISCELLANEOUS

A. DX Split AC Units

1. BMS contractor shall install and wire factory furnished space thermostat.
2. Furnish and install a single point leak detector for units installed in ceilings. The leak detector shall shut down the AC unit and shall annunciate an alarm at the operator's interface.
3. Provide all control interlock wire required between the ACU and remote ACCU.

Coordinate with AC Unit manufacturer.

B. VAV Box with Reheat

1. Provide one DDCS controller and at least one temperature sensor for each VAV box. Coordinate factory mounting and wiring of controller, actuator, and transformer with the VAV box manufacturer. The BMS contractor shall be responsible for furnishing, installing, and wiring any controls not furnished, installed, or wired by others that are required for an operational system.
2. The VAV box shall be indexed on when the associated Air Handling Unit serving it starts. The VAV box damper shall modulate to maintain the space temperature. As the space temperature rises above the space temperature set point, the DDCS controller shall modulate the VAV box damper from the minimum to the maximum CFM setting as necessary to maintain the space temperature at set point. As the space temperature falls below the space temperature set point, the DDCS controller shall modulate the VAV box damper to the minimum CFM set point. Upon a further fall in space temperature, the hot water reheat coil valve shall modulate to maintain space temperature at set point.
3. High Occupancy Override: (Where indicated on drawings) When the area the VAV box is serving is in the occupied mode and the space CO2 level exceeds the preset high limit set point (800 ppm, adj.) the VAV box shall override the current air flow set point to allow more outdoor air to enter the occupied space. The VAV box damper shall modulate to maintain the CO2 level below the preset high limit set point. CO2 sensors shall be located where shown on the plans. The hot water reheat shall be controlled to maintain the space temperature at set point. The associated air handling unit serving this zone shall work in sequence with the terminal unit to ensure adequate fresh air is supplied by the unit in order to maintain the CO2 set point requirements.
4. The VAV box shall be programmed for occupied and unoccupied settings. The space temperature sensor shall have a push-button override to index the space to the occupied mode for a timed period.
5. DDCS Points:
 - a. Supply Damper Control
 - b. Supply Damper Position
 - c. Supply Airflow w/ High/Low Alarms
 - d. Hot Water Reheat Valve Control
 - e. Space Temperature w/ High/Low Alarms
 - f. Space Temperature Set Point
 - g. Space CO2 w/ High/Low Alarms (Where indicated on drawings)

C. CV Box with Reheat

1. Provide one DDCS controller and at least one temperature sensor for each CV box. Coordinate factory mounting and wiring of controller, actuator, and transformer with the box manufacturer. The BMS contractor shall be responsible for furnishing, installing, and wiring any controls not furnished, installed, or wired by others that are required for an operational system.
2. The CV box shall be indexed on when the associated Air Handling Unit serving it starts. The CV box damper shall modulate to maintain the constant flow set point. Modulate the electric reheat to maintain space temperature set point. As the space temperature falls below the space temperature set point, the hot water reheat valve

shall modulate on as necessary to maintain space temperature at set point.

3. High Occupancy Override: (Where indicated on drawings) When the area the CV box is serving is in the occupied mode and the space CO2 level exceeds the preset high limit set point (800 ppm, adj.) the CV box shall override the current air flow set point to allow more outdoor air to enter the occupied space. The VAV box damper shall modulate to maintain the CO2 level below the preset high limit set point. CO2 sensors shall be located where shown on the plans. The hot water reheat shall be controlled to maintain the space temperature at set point. The associated air handling unit serving this zone shall work in sequence with the terminal unit to ensure adequate fresh air is supplied by the unit in order to maintain the CO2 set point requirements.
4. The CV box shall be programmed for occupied and unoccupied settings. The space temperature sensor shall have a push-button override to index the space to the occupied mode for a timed period.
5. DDCS Points:
 - a. Supply Damper Control
 - b. Supply Damper Position
 - c. Supply Airflow w/ High/Low Alarms
 - d. Hot Water Reheat Valve Control
 - e. Space Temperature w/ High/Low Alarms
 - f. Space Temperature Set Point
 - a. Space CO2 w/ High/Low Alarms (Where indicated on drawings)

D. Hot Water Unit Heater/Cabinet Unit Heater

1. The BMS contractor shall furnish, install, and wire a thermostat and control valve to control the unit heater. On a fall in space temperature below set point, the thermostat shall open the valve and energize the unit fan. On a rise in space temperature, the fan shall be de-energized and the valve shall close.
2. An aqua-stat on the return line of each unit shall stop the fan when hot water is not available. The AC shall be furnished with local controls for stand-alone operation.

E. Electric Unit Heater

1. The BMS contractor shall furnish, install, and wire a thermostat to start and stop the unit heater. On a fall in space temperature below set point, the thermostat shall start the fan and turn on the heater. On a rise in space temperature, the fan and heater shall be de-energized.

F. Vestibule Heater

1. The BMS contractor shall furnish, install, and wire a thermostat to start and stop the vestibule heater. On a fall in space temperature below set point, the thermostat shall start the fan and turn on the heater. On a rise in space temperature, the fan and heater shall be de-energized.
2. One space thermostat shall control multiple vestibule heaters. Refer to plans for quantities and locations.

G. Electric Finned Tube Radiation

1. The BMS contractor shall connect the Finned Tube Radiation (FTR) to the VAV box controller for the associated zone for control. The FTR shall be controlled in

sequence with the VAV box so that the FTR is enabled as the first stage of heat.

2. DDCS Points:

- a. FTR Control

H. Space High Temperature (Elevator Machine Room, Electric Room, IT Room)

1. Furnish and install a space temperature sensor in each space for critical alarm monitoring. Alarm shall be annunciated to the BMS if the space temperature rises above 85° F (adj.).

2. DDCS points:

- a. Space Temperature w/ High Alarm

I. Leak Detection (Elevator Pit)

1. BMS contractor shall furnish and install a leak detector in the elevator pit. Upon detection of a high water condition an alarm shall be annunciated to the BMS.

2. DDCS points:

- a. Leak Alarm

J. Emergency Generator

1. BMS contractor shall wire all interlocks required for proper generator operation.
2. BMS shall monitor the common alarm from the generator control panel.
3. DDCS Points:

- a. Generator Common Alarm

K. Fire Pump

1. BMS shall monitor fire pump run and common alarm from the control panel.
2. DDCS Points:

- a. Fire Pump Run Status
- b. Fire Pump Common Alarm

L. Auxiliary Building Space Temperature and Leak Detection Monitoring (Mechanical Room, Electric Room, ATS Room, Fire Pump Room)

1. BMS contractor shall furnish and install a space temperature sensor in each space for critical alarm monitoring. An alarm shall be annunciated to the Library BMS if the space temperature rises above 85° F (adj.) or falls below 45° F (adj.).
2. BMS contractor shall furnish and install a leak detector on the floor for each space. Upon detection of a high water condition an alarm shall be annunciated to the Library BMS.

3. DDCS points:

- a. Space Temperature w/ High/Low Alarms
- b. Leak Alarm

M. OA Intake Plenum

1. BMS contractor shall provide carbon monoxide (CO) in OA intake connections for AHU-1 through AHU-4.
2. CO - When the CO level exceeds the high alarm limit set point of 200 PPM (adj.) a local alarm shall annunciate the condition (audible and visual alarms) and an alarm shall be annunciated to the BMS.

1.6 PARKS BUILDING

A. General:

1. Parks Building control points are intended to be stand-alone control and do not connect to the Library Building Management System.

B. Parks Building Split AC Unit

1. The AC shall be furnished with local controls for stand-alone operation.
2. The BMS contractor shall provide installation of factory furnished controls that can't be factory installed including space thermostat, remote condensing unit interlock wiring, etc.

C. Parks Building Hot Water Cabinet Unit Heater

1. The BMS contractor shall furnish, install, and wire a thermostat and control valve to control the unit heater. On a fall in space temperature below set point, the thermostat shall open the valve and energize the unit fan. On a rise in space temperature, the fan shall be de-energized and the valve shall close.
2. An aqua-stat on the return line of each unit shall stop the fan when hot water is not available. The AC shall be furnished with local controls for stand-alone operation.

D. Parks Building Exhaust Fan

1. The BMS contractor shall furnish and install a 7 day programmable time clock for occupied/unoccupied start/stop of the exhaust fan.

E. Electric Finned Tube Radiation

1. The BMS contractor shall furnish, install, and wire a thermostat for stand-alone control of the Finned Tube Radiation (FTR).

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION 230990

SECTION 231113
FACILITY FUEL-OIL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
- B. All work shall be in accordance with New York State codes and regulations.

1.2 SUMMARY

- A. This Section includes diesel-fuel-oil distribution systems and the following:
 - 1. Pipes, tubes, and fittings.
 - 2. Piping specialties.
 - 3. Piping and tubing joining materials.
 - 4. Valves.
 - 5. Specialty Valves
 - 6. Wall Station, Gravity Fill Applications
 - 7. Mechanical sleeve seals.
 - 8. Grout.
 - 9. Concrete bases.

1.3 DEFINITIONS

- A. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- B. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- C. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- D. FPM: Vinylidene fluoride-hexafluoropropylene copolymer rubber.
- E. FRP: Glass-fiber-reinforced plastic.
- F. UST: Underground storage tank.

1.4 PERFORMANCE REQUIREMENTS

- A. Maximum Operating-Pressure Ratings: 3-psig fuel-oil supply pressure at oil-fired appliances.

- B. Provide restraint and anchors for fuel-oil piping, and equipment, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Seismic Performance: Factory-installed support attachments for work shall withstand the effects of earthquake motions determined according to IBC, and The New York State Building Code.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For each type of product indicated. Include construction details, material descriptions, and dimensions of individual components and profiles. Also include, where applicable, rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
 - 1. Piping specialties.
 - 2. Valves: Include pressure rating, capacity, settings, and electrical connection data of selected models.
 - 3. Each type and size of fuel-oil storage tank. Indicate dimensions, weights, loads, components, and location and size of each field connection.
 - 4. Fuel-oil storage tank accessories.
 - 5. Fuel-oil storage tank piping specialties.
 - 6. Fuel-oil storage tank pumps.
 - 7. Fuel-oil transfer pumps.
 - 8. Fuel maintenance system.
 - 9. Liquid-level gage system.
 - 10. Leak-detection and monitoring system.
- C. Shop Drawings: For facility fuel-oil piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
 - 1. Shop Drawing Scale: 1/4 inch per foot (1:50).
 - 2. For fuel-oil storage tanks and pumps, include details of supports and anchors.
- D. Equipment-Design Submittal: For fuel-oil piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of anchors and seismic restraints.
 2. Design Calculations: Calculate requirements for selecting seismic restraints.
 3. Detail fabrication and assembly of pipe anchors, hangers, supports for multiple pipes, and attachments of the same to building structure.
- E. Coordination Drawings: Plans and details, drawn to scale, on which fuel-oil piping is shown and coordinated with other installations, using input from installers of the items involved.
- F. Site Survey: Plans, drawn to scale, on which fuel-oil piping and tanks are shown and coordinated with other services and utilities.
- G. Qualification Data: For qualified professional engineer.
- H. Seismic Qualification Certificates:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- I. Brazing certificates.
- J. Welding certificates.
- K. Electr-O-Fuze welding certificates.
- L. Field quality-control reports.
- M. Operation and Maintenance Data: For fuel-oil equipment and accessories to include in emergency, operation, and maintenance manuals.
- N. Warranty: Sample of special warranty.

1.6 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
- C. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Comply with ASME B31.9, "Building Services Piping," for fuel-oil piping materials, installation, testing, and inspecting.
- G. Comply with requirements of the EPA and of state and local authorities having jurisdiction. Include recording of fuel-oil storage tanks and monitoring of tanks and piping.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support fuel-oil storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store pipes and tubes with protective PE coating to avoid damaging the coating and to protect from direct sunlight.
- D. Store PE pipes and valves protected from direct sunlight.

1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-oil storage tanks and flexible, double-containment piping and related equipment that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 1 year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. See Part 3 piping schedule articles for where pipes, tubes, fittings, and joining materials are applied in various services.
- B. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M, for butt and socket welding.
 - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 - 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: Asbestos free, ASME B16.20 metallic, or ASME B16.21 nonmetallic, gaskets compatible with fuel oil.
 - e. Bolts and Nuts: ASME B18.2.1, cadmium-plated steel.
 - 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
 - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

2.2 PIPING SPECIALTIES

- A. Flexible Connectors: Comply with UL 567.
 - 1. Metallic Connectors:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) FLEX-ING, Inc.
 - 2) Hose Master, Inc.
 - 3) Metraflex Company (The).
 - b. Listed and labeled for aboveground and underground applications by an NRTL acceptable to authorities having jurisdiction.
 - c. Stainless-steel bellows with woven, flexible, bronze or stainless-steel, wire-reinforcing protective jacket.
 - d. Minimum Operating Pressure: 150 psig
 - e. End Connections: Socket, flanged, or threaded end to match connected piping.
 - f. Maximum Length: 30 inches.
 - g. Swivel end, 50-psig maximum operating pressure.
 - h. Factory-furnished anode.
 - 2. Nonmetallic Connectors:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) FLEX-ING, Inc.
 - 2) Hose Master, Inc.
 - 3) Metraflex Company (The).
- b. Listed and labeled for underground applications by an NRTL acceptable to authorities having jurisdiction.
- c. PFTE bellows with woven, flexible, bronze or stainless-steel, wire-reinforcing protective jacket.
- d. Minimum Operating Pressure: 150 psig.
- e. End Connections: Socket, flanged, or threaded end to match connected piping.
- f. Maximum Length: 30 inches.
- g. Swivel end, 50-psig maximum operating pressure.
- h. Factory-furnished anode.

B. Y-Pattern Strainers:

- 1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
- 2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
- 3. Strainer Screen: 80-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
- 4. CWP Rating: 125 psig.

C. Basket Strainers:

- 1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
- 2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
- 3. Strainer Screen: 80-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
- 4. CWP Rating: 125 psig.

D. T-Pattern Strainers:

- 1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
- 2. End Connections: Grooved ends.
- 3. Strainer Screen: 80-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
- 4. CWP Rating: 750 psig.

E. Manual Air Vents:

- 1. Body: Bronze.
- 2. Internal Parts: Nonferrous.
- 3. Operator: Screwdriver or thumbscrew.
- 4. Inlet Connection: NPS 1/2.
- 5. Discharge Connection: NPS 1/8.
- 6. CWP Rating: 150 psig.
- 7. Maximum Operating Temperature: 225 deg F.

2.3 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for fuel oil.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.
- D. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.

2.4 MANUAL FUEL-OIL SHUTOFF VALVES

- A. See valve schedule in Part 3 for where each valve type is applied in various services.
- B. General Requirements for Metallic Valves, NPS 2 and Smaller for Liquid Service: Comply with UL 842.
 - 1. CWP Rating: 125 psig.
 - 2. Threaded Ends: Comply with ASME B1.20.1.
 - 3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
 - 4. Tamperproof Feature: Locking feature for valves indicated in the valve schedule.
 - 5. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- C. General Requirements for Metallic Valves, NPS 2-1/2 and Larger: Comply with UL 842.
 - 1. CWP Rating: 125 psig.
 - 2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
 - 3. Tamperproof Feature: Locking feature for valves indicated in the valve schedule.
 - 4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- D. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; A Subsidiary of American Meter Company.
 - 2. Body: Bronze, complying with ASTM B 584.
 - 3. Ball: Chrome-plated brass.
 - 4. Stem: Bronze; blowout proof.
 - 5. Seats: Reinforced TFE; blowout proof.
 - 6. Packing: Separate packnut with adjustable-stem packing threaded ends.
 - 7. Ends: Threaded, flared, or socket as indicated in the valve schedule.
 - 8. CWP Rating: 600 psig.
 - 9. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- E. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; A Subsidiary of American Meter Company.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE; blowout proof.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in the valve schedule.
 8. CWP Rating: 600 psig.
 9. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- F. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; A Subsidiary of American Meter Company.
 2. Body: Bronze, complying with ASTM B 584.
 3. Ball: Chrome-plated bronze.
 4. Stem: Bronze; blowout proof.
 5. Seats: Reinforced TFE.
 6. Packing: Threaded-body packnut design with adjustable-stem packing.
 7. Ends: Threaded, flared, or socket as indicated in the valve schedule.
 8. CWP Rating: 600 psig.
 9. Service Mark: Initials "WOG" shall be permanently marked on valve body.

2.5 SPECIALTY VALVES

A. Pressure Relief Valves: Comply with UL 842.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anderson Greenwood; Division of Tyco Flow Control.
 - b. Fulflo Specialties, Inc.
 - c. Webster Fuel Pumps & Valves; a division of Capital City Tool, Inc.
2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
3. Body: Brass, bronze, or cast steel.
4. Springs: Stainless steel, interchangeable.
5. Seat and Seal: Nitrile rubber.

6. Orifice: Stainless steel, interchangeable.
7. Factory-Applied Finish: Baked enamel.
8. Maximum Inlet Pressure: 150 psig.
9. Relief Pressure Setting: 60 psig.

B. Oil Safety Valves: Comply with UL 842.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anderson Greenwood; Division of Tyco Flow Control.
 - b. Suntec Industries Incorporated.
 - c. Webster Fuel Pumps & Valves; a division of Capital City Tool, Inc.
2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
3. Body: Brass, bronze, or cast steel.
4. Springs: Stainless steel.
5. Seat and Diaphragm: Nitrile rubber.
6. Orifice: Stainless steel, interchangeable.
7. Factory-Applied Finish: Baked enamel.
8. Manual override port.
9. Maximum Inlet Pressure: 60 psig.
10. Maximum Outlet Pressure: 3 psig.

C. Emergency Shutoff Valves: Comply with UL 842.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Ameron International; Fiberglass Pipe Group.
 - b. Conley Corporation.
 - c. EMCO Wheaton; a Gardner Denver Company.
 - d. Environ Products, Inc.
 - e. OPW.
2. Listed and labeled for fuel-oil service by an NRTL acceptable to authorities having jurisdiction.
3. Double poppet valve.
4. Body: ASTM A 126, cast iron.
5. Disk: FPM.
6. Poppet Spring: Stainless steel.
7. Stem: Plated brass.
8. O-Ring: FPM.
9. Packing Nut: PTFE-coated brass.
10. Fusible link to close valve at 165 deg F.
11. Thermal relief to vent line pressure buildup due to fire.
12. Air test port.
13. Maximum Operating Pressure: 0.5 psig.

D. Wall Station, Gravity Fill Applications:

1. Wall Fill Station:

- a. Storage tank fill lines shall terminate at the building wall in a Type 2 In-Wall Fill Station. The Fill Station shall have a minimum of a 5 U.S. Gal. holding capacity and include: an internal overfill alarm system with gallons display, a door-seal, locking handle, NEMA 4 rated construction and oil connection fill adapter for gravity fill.
- b. The Fill Station shall be equipped with a "stitch" weld 2" X 2" X 1/4" angle steel flanges. Flange shall be mounted to assure that cabinet body is flush with mounting surface. Fill Station shall be 12 gauge construction, and be equipped with 1/2" NPT drain connection. The door shall match the Fill Station construction and will include a neoprene gasket around all of the door. The door shall mount to the Fill Station with a full length steel piano hinge on the swing side and a three point latch with locking handle on the access side, three point locking mechanism shall latch at *center/top and bottom* of access way.
The entire interior shall be prime coated and painted with white enamel.
- c. Provide an Overfill Alarm Station integral to the Model 2 Horizontal Spill Container to be activated by a Preferred Utilities Tank Gauge logic. The station shall consist of an explosion proof "Overfill Alarm" light, alarm horn and "Alarm Silence" pushbutton.
- d. Explosion proof components are required to prevent the ignition of the fuel oil vapors generated from the sun heating the spill container. The light and bell shall be automatically silenced in 90 seconds or instantly silenced when the operator selects the "Alarm Silence" button.
- e. The Fill Station shall come with an oil fill connection rated for diesel oil/ #2 oil fill applications. This system and components are to be as designed and as supplied by Analytical and Combustion Systems 860- 210- 7932.
 - 1) Fill Station shall be Preferred Utilities Type 2- CS3-2- Z1121.
 - 2) Pryco
 - 3) Hurtado

2. Fill Cap:

- a. Provide for the fill box, a model W Fill Adapter for gravity fill applications. Include a wrench for the fill adapter. Field piping to include a close nipple and 45 degree elbow for final termination.

3. Alarm Logic Panel:

- a. Provide and install where shown on the drawings an Overfill Alarm Logic Panel for 1 tank to be activated by the High Level Switch. Panel to provide all interface logic for the factory installed Overfill Alarm System in the Fill Station and the solenoid valve. The system shall consist of a Preferred logic chassis and components to interface the high level sensor, bell, horn and timer. Panel to be NEMA rated. Logic Panel shall be a Preferred Utilities Mfg. Corp., Danbury, CT, Model #190126-Z1121. Or approved equal (Pryco or Hurtado).

4. Fill Line Solenoid Valve:

- a. Valve to be standard port NPT fittings, Brass body, PTFE seat, PA disc holder, 305 Stainless steel core tube, stainless steel wetted parts, copper coil, watertight

enclosure and be UL Listed. Minimum operating pressure to be 0, maximum operating pressure to be 8.6 Bar.

- b. Valve to be AC powered, with a Cv of 13. Provide valve with full size orifice. Field install a 3- valve manual bypass for each valves isolation.
- c. The valves shall be ASCO, Magnatrol, or Burkert brand and selected and designed by Analytical & Combustion Systems to work in the system.

5. Overfill Prevention:

- a. High Level Switch shall be arranged to sound an alarm, provide an electrical interlock and activate the overfill alarm via the Fuel Oil logic panel when the liquid level reaches 90 percent of tank capacity. Unit shall be float operated, suitable for #2 oil at 150 psi, have brass and Buna N wetted parts, and be mounted in a 1 1/4" tapping in the tank top. Switch shall be hermetically sealed and fully isolated from tank contents and external atmosphere. Electrical connections shall be made externally to the tank in an explosion-proof head assembly approved by UL for Class 1, Group D applications. Switch shall be as manufactured by Preferred Utilities Mfg. Corp. Model: PLS- 1- Z1121. Pryco or Hurtado are acceptable alternatives.

6. Vent Protector:

- a. Furnish and install for the fuel oil tank a weatherproof cast aluminum vent protector (vertical vent pipe). Vent protector shall prohibit water infiltration in to the vent line, *including wind driven rain* and shall be the full size of the vent pipe, and shall be in accordance with NFPA-30 2-4.5.2. and NFPA 31 and shall have NPT threaded connections, slip on connections are not acceptable. Vent protector shall be as manufactured by Preferred Utilities Mfg. Corp. Pryco or Hurtado are acceptable alternatives.

7. Lever Gate Valve

- a. Provide and install, where shown in the fuel oil supply line, a quick closing, spring loaded, Lever Gate Valve held open by a wire with fusible link arranged so that the valve will automatically close if the link melts. The valve shall be a Preferred Utilities Mfg. Corp., Danbury, CT, Model 110 Oil Lever Gate Valve with an Automatic Fuel Shut-off Limit Switch Assembly. Pryco or Hurtado are acceptable alternatives.

2.6 FUEL OIL

- A. Fuel Oil: ASTM D 396, Grade No. 2.
- B. Diesel Fuel Oil: ASTM D 975, Grade No. 2-D, general-purpose, high volatility.

2.7 SLEEVES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

2.8 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico Inc.
 - c. Metraflex Company (The).
 - d. Pipeline Seal and Insulator, Inc.
 - 2. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe and sleeve.
 - 3. Pressure Plates: Carbon steel or Stainless steel.
 - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or Stainless steel of length required to secure pressure plates to sealing elements. Include one nut and bolt for each sealing element.

2.9 ESCUTCHEONS

- A. General Requirements for Escutcheons: Manufactured wall and ceiling escutcheons and floor plates, with ID to fit around pipe or tube and with OD that completely covers opening.
- B. One-Piece, Deep-Pattern Escutcheons: Deep-drawn brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Escutcheons: With set screw.
 - 1. Finish: Polished chrome-plated or rough brass.
- D. Split-Casting, Cast-Brass Escutcheons: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated or rough brass.
- E. One-Piece, Stamped-Steel Escutcheons: With set screw or spring clips and chrome-plated finish.
- F. Split-Plate, Stamped-Steel Escutcheons: With exposed-rivet hinge, set screw or spring clips, and chrome-plated finish.
- G. One-Piece, Floor-Plate Escutcheons: Cast-iron floor plate.
- H. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

2.10 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Posthardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

2.11 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for fuel-oil piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

- A. Comply with requirements in Division 31 Section "Earthwork" for excavating, trenching, and backfilling.

3.3 PREPARATION

- A. Close equipment shutoff valves before turning off fuel oil to premises or piping section.
- B. Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.

3.4 OUTDOOR PIPING INSTALLATION

- A. Install underground fuel-oil piping buried at least 18 inches below finished grade. Comply with requirements in Division 31 Section "Earthwork" for excavating, trenching, and backfilling.
 - 1. If fuel-oil piping is installed with less than 12 inches of cover to finished grade, install in containment piping.
- B. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining, to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer. Review protective coating damage with Commissioner prior to repair.
 - 3. Replace pipe having damaged PE coating with new pipe.
- C. Install double-containment, fuel-oil pipe at a minimum slope of 1 percent downward toward fuel-oil storage tank sump.
- D. Install vent pipe at a minimum slope of 2 percent downward toward fuel-oil storage tank sump.
- E. Assemble and install entry boots for pipe penetrations through sump sidewalls for liquid-tight joints.

- F. Install metal pipes and tubes, fittings, valves, and flexible connectors at piping connections to UST.
- G. Install fittings for changes in direction in rigid pipe.
- H. Install system components with pressure rating equal to or greater than system operating pressure.
- I. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Install sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- J. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- K. Mechanical Sleeve Seal Installation: Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- L. Install pressure gage on suction and discharge from each pump. Pressure gages are specified in Division 23 Section "Meters and Gages."

3.5 INDOOR PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Install escutcheons for penetrations of walls, ceilings, and floors.
 - 1. New Piping:
 - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
 - b. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.

- c. Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge and set screw.
 - d. Piping in Unfinished Service Spaces: One-piece, stamped-steel type with set screw or spring clips.
 - e. Piping in Equipment Rooms: One-piece, stamped-steel type with set screw or spring clips.
 - f. Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.
- I. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 7 Section "Through-Penetration Firestop Systems."
 - J. Verify final equipment locations for roughing-in.
 - K. Comply with requirements for equipment specifications in Division 23 Sections for roughing-in requirements.
 - L. Conceal pipe installations in walls, pipe spaces, or utility spaces; above ceilings; below grade or floors; and in floor channels unless indicated to be exposed to view.
 - M. Prohibited Locations:
 - 1. Do not install fuel-oil piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - 2. Do not install fuel-oil piping in solid walls or partitions.
 - N. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
 - O. Connect branch piping from top or side of horizontal piping.
 - P. Install unions in pipes NPS 2 and smaller at final connection to each piece of equipment and elsewhere as indicated. Unions are not required on flanged devices.
 - Q. Do not use fuel-oil piping as grounding electrode.
 - R. Install Y-pattern strainer on inlet side of fuel-oil pump.

3.6 VALVE INSTALLATION

- A. Install manual fuel-oil shutoff valves on branch connections to fuel-oil appliance.
- B. Install valves in accessible locations.
- C. Protect valves from physical damage.
- D. Install metal tag attached with metal chain indicating fuel-oil piping systems.
- E. Identify valves as specified in Division 23 Section "Mechanical Identification."
- F. Install oil safety valves at inlet of each oil-fired appliance.
- G. Install pressure relief valves in distribution piping between the supply and return lines.

- H. Install one-piece, bronze ball valve with hose end connection at low points in fuel-oil piping.
- I. Install manual air vents at high points in fuel-oil piping.
- J. Install emergency shutoff valves at dispensers.

3.7 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to "Quality Assurance" Article.
 - 1. Bevel plain ends of steel pipe.
 - 2. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness for service application. Install gasket concentrically positioned.
- G. Flared Joints: Comply with SAE J513. Tighten finger tight, then use wrench according to fitting manufacturer's written recommendations. Do not overtighten.
- H. Fiberglass-Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.8 HANGER AND SUPPORT INSTALLATION

- A. Pipe hanger and support and equipment support materials and installation requirements are specified in Division 23 Section "Hangers and Supports."
- B. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1-1/4 and Smaller: Maximum span, 84 inches ; minimum rod size, 3/8 inch.
 - 2. NPS 1-1/2 : Maximum span, 108 inches ; minimum rod size, 3/8 inch .
 - 3. NPS 2: Maximum span, 10 feet ; minimum rod size, 3/8 inch.
 - 4. NPS 2-1/2: Maximum span, 11 feet; minimum rod size, 1/2 inch.

5. NPS 3 maximum span, 12 feet; minimum rod size, 1/2 in.
 6. NPS 4: Maximum span, 13 feet; minimum rod size, 5/8 inch.
- C. Support vertical steel pipe at each floor and at spacing not greater than 15 feet.
- D. Install hangers for horizontal, drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:
1. NPS 3/4 and Smaller: Maximum span, 60 inches; minimum rod size, 3/8 inch
 2. NPS 1: Maximum span, 72 inches; minimum rod size, 3/8 inch..
 3. NPS 1-1/4: Maximum span, 84 inches; minimum rod size, 3/8 inch.
 4. NPS 1-1/2 and NPS 2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
 5. NPS 2-1/2: Maximum span, 108 inches; minimum rod size, 1/2 inch.
 6. NPS 3: Maximum span, 10 feet; minimum rod size, 1/2 inch.
 7. NPS 4: Maximum span, 11 feet; minimum rod size, 5/8 inch.
- E. Support vertical copper tube at each floor and at spacing not greater than 10 feet.

3.9 FUEL MAINTENANCE SYSTEM INSTALLATION

- A. Install suction line, with foot valve, at one end of storage tank, 1 inch from the bottom of tank.
- B. Install return line at the opposite end of storage tank from suction line.

3.10 LIQUID-LEVEL GAGE SYSTEM INSTALLATION

- A. Install liquid-level gage system. Locate panel inside building where indicated.

3.11 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION

- A. Install leak-detection and monitoring system. Install alarm panel inside building where indicated.
 1. Double-Wall, Fuel-Oil Storage Tanks: Install probes or use factory-installed integral probes in interstitial space.
 2. Single-Wall, Fuel-Oil Storage Tanks: Install probes as indicated.
 3. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor cable probes in interstitial space of double-containment piping.
 4. Install liquid-level gage.

3.12 CONNECTIONS

- A. Install piping adjacent to equipment to allow service and maintenance.
- B. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment having threaded pipe connection.
- C. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

- D. Connect piping to equipment with ball valve and union. Install union between valve and equipment.
- E. Install flexible piping connectors at final connection to burners or oil-fired appliances that must be moved for maintenance access.

3.13 LABELING AND IDENTIFYING

- A. Nameplates, pipe identification, and signs are specified in Division 23 Section "Mechanical Identification."
- B. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplates and signs on or near each service regulator, service meter, and earthquake valve.
 - 1. Text: In addition to identifying unit, distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
- C. Install detectable warning tape directly above fuel-oil piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs. Terminate tracer wire in an accessible area, and identify as "tracer wire" for future use with plastic-laminate sign.
 - 1. Piping: Over underground fuel-oil distribution piping.
 - 2. Fuel-Oil Storage Tanks: Over edges of each UST.

3.14 FIELD PAINTING OF ABOVEGROUND PIPING

- A. Comply with requirements in Division 9 painting Sections for painting interior and exterior fuel-oil piping.
- B. Paint exposed, exterior metal piping, valves, and piping specialties, except components with factory-applied paint or protective coating.
 - 1. Alkyd System: MPI EXT 5.1D.
 - a. Prime Coat: Alkyd anticorrosive metal primer.
 - b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
 - c. Topcoat: Exterior alkyd enamel (semigloss).
 - d. Color: Gray.
- C. Paint exposed, interior metal piping, valves, and piping specialties, except components with factory-applied paint or protective coating.
 - 1. Latex Over Alkyd Primer System: MPI INT 5.1Q.
 - a. Prime Coat: Alkyd anticorrosive metal primer.
 - b. Intermediate Coat: Interior latex matching topcoat.
 - c. Topcoat: Interior latex (satin).
 - d. Color: Gray.
 - 2. Alkyd System: MPI INT 5.1E.
 - a. Prime Coat: Alkyd anticorrosive metal primer.

- b. Intermediate Coat: Interior alkyd matching topcoat.
- c. Topcoat: Interior alkyd (semigloss).
- d. Color: Gray.

- D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.15 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Use 3000-psi, 28-day, compressive-strength concrete and reinforcement as specified in Division 3 Section "Cast-in-Place Concrete."

3.16 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Provide a minimum of two (2) days of factory service for the startup and adjustment of the fuel oil handling system. Provide for one (1) training session in the proper operation and maintenance of the equipment. Training sessions shall cover the operation, troubleshooting and maintenance of the fuel handling equipment. A letter from the fuel oil handling system manufacturer shall be provided to the commissioner and owner stating that the system received its factory start up and that all components are in working order.
- B. Tests and Inspections:
 1. Tanks: Minimum hydrostatic or compressed-air test pressures for fuel-oil storage tanks that have not been factory tested and do not bear the ASME code stamp or a listing mark acceptable to authorities having jurisdiction:
 - a. Single-Wall Tanks: Minimum 3 psig and maximum 5 psig .
 - b. Double-Wall Tanks:
 - 1) Inner Tanks: Minimum 3 psig and maximum 5 psig.
 - 2) Interstitial Space: Minimum 3 psig and maximum 5 psig, or 5.3-in. Hg vacuum.
 - c. Where vertical height of fill and vent pipes is such that the static head imposed on the bottom of the tank is greater than 10 psig, hydrostatically test the tank and fill and vent pipes to a pressure equal to the static head thus imposed.
 - d. Maintain the test pressure for one hour.

2. Piping: Minimum hydrostatic or pneumatic test-pressures measured at highest point in system:
 - a. Fuel-Oil Distribution Piping: Minimum 5 psig for minimum 30 minutes.
 - b. Fuel-Oil, Double-Containment Piping:
 - 1) Carrier Pipe: Minimum 5 psig for minimum 30 minutes.
 - 2) Containment Conduit: Minimum 5 psig for minimum 60 minutes.
 - c. Suction Piping: Minimum 20-in. Hg for minimum 30 minutes.
 - d. Isolate storage tanks if test pressure in piping will cause pressure in storage tanks to exceed 10 psig.
 3. Inspect and test fuel-oil piping according to NFPA 31, "Tests of Piping" Paragraph; and according to requirements of authorities having jurisdiction.
 4. Test liquid-level gage for accuracy by manually measuring fuel-oil levels at not less than three different depths while filling tank and checking against gage indication.
 5. Test leak-detection and monitoring system for accuracy by manually operating sensors and checking against alarm panel indication.
 6. Start fuel-oil transfer pumps to verify for proper operation of pump and check for leaks.
 7. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 8. Bleed air from fuel-oil piping using manual air vents.
 - C. Fuel-oil piping and equipment will be considered defective if it does not pass tests and inspections.
 - D. Prepare test and inspection reports.
- 3.17 OUTDOOR PIPING SCHEDULE
- A. Underground fuel-oil piping shall be one of the following. Size indicated is carrier-pipe size.
 1. Flexible, double-containment piping.
 2. Rigid, double-containment piping.
 - B. Underground Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
 - C. Aboveground fuel-oil piping shall be one of the following:
 1. NPS 2 and Smaller: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints.
 2. NPS 2-1/2 and Larger: Steel pipe, steel welding fittings, and welded joints.
- 3.18 INDOOR PIPING SCHEDULE
- A. Aboveground fuel-oil piping shall be one of the following:
 1. NPS 1/2 and Smaller: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints.
 2. NPS 5/8 to NPS 2: Steel pipe, steel or malleable-iron threaded fittings, and threaded joints.

3. NPS 2-1/2 and Larger: Steel pipe, steel fittings, and welded or flanged joints.
4. Steel pipe with malleable-iron fittings and threaded joints.
5. Steel pipe with wrought-steel fittings and welded joints.
6. Annealed-temper copper tube, brass fittings, and flared joints.
7. Drawn-temper copper tubing, copper fittings, and brazed joints.

3.19 ABOVEGROUND MANUAL FUEL-OIL SHUTOFF VALVE SCHEDULE

- A. Distribution piping valves for pipe NPS 2 and smaller shall be one of the following:
 1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, full-port, bronze ball valves with bronze trim.
- B. Distribution piping valves for pipe NPS 2-1/2 and larger shall be one of the following:
 1. Two-piece, full-port, bronze ball valves with bronze trim.
 2. Bronze, nonlubricated plug valve.
- C. Valves in branch piping for single appliance shall be one of the following:
 1. One-piece, bronze ball valve with bronze trim.
 2. Two-piece, full-port, bronze ball valves with bronze trim.

END OF SECTION 231113

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 231123
NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Pipes, tubes, and fittings.
2. Piping specialties.
3. Piping and tubing joining materials.
4. Valves.
5. Pressure regulators.
6. Service meters.
7. Concrete bases.

1.3 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspace, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

1.4 PERFORMANCE REQUIREMENTS

- A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed

by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

B. Minimum Operating-Pressure Ratings:

1. Piping and Valves: 100 psig minimum unless otherwise indicated.

C. Natural-Gas System Pressure within Buildings: 0.5 psig or less.

1.5 ACTION SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For each type of the following:

1. Piping specialties.
2. Corrugated, stainless-steel tubing with associated components.
3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
4. Pressure regulators. Indicate pressure ratings and capacities.
5. Service meters. Indicate pressure ratings and capacities. Include bypass fittings and meter bars.
6. Dielectric fittings.

C. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1. Shop Drawing Scale: 1/4 inch per foot.
2. Detail mounting, supports, and valve arrangements for service meter assembly and pressure regulator assembly.

D. Equipment-Design Submittal: For natural-gas piping and equipment indicated to comply with performance requirements and design criteria if required evaluation shall be provided by Engineer.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.
- B. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
- C. Qualification Data: For qualified professional Commissioner.
- D. Welding certificates.
- E. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For motorized gas valves, pressure regulators and service meters to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of authorities having jurisdiction.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
- D. Protect stored PE pipes and valves from direct sunlight.

1.10 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:
 - 1. Notify Commissioner no fewer than 2 days in advance of proposed interruption of natural-gas service.
 - 2. Do not proceed with interruption of natural-gas service without Commissioner's written permission.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
 - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
 - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
 - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
 - 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
 - a. Material Group: 1.1.
 - b. End Connections: Threaded or butt welding to match pipe.
 - c. Lapped Face: Not permitted underground.
 - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
 - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
 - 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
 - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
 - 6. Mechanical Couplings:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) Dresser Piping Specialties; Division of Dresser, Inc.
- 2) Smith-Blair, Inc.

- b. Steel flanges and tube with epoxy finish.
- c. Buna-nitrile seals.
- d. Steel bolts, washers, and nuts.
- e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
- f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.

B. Corrugated, Stainless-Steel Tubing: Comply with ANSI/IAS LC 1.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. OmegaFlex, Inc.
- b. Parker Hannifin Corporation; Parflex Division.
- c. Titeflex.
- d. Tru-Flex Metal Hose Corp.

- 2. Tubing: ASTM A 240/A 240M, corrugated, Series 300 stainless steel.
- 3. Coating: PE with flame retardant.

- a. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

- 1) Flame-Spread Index: 25 or less.
- 2) Smoke-Developed Index: 50 or less.

- 4. Fittings: Copper-alloy mechanical fittings with ends made to fit and listed for use with corrugated stainless-steel tubing and capable of metal-to-metal seal without gaskets. Include brazing socket or threaded ends complying with ASME B1.20.1.
- 5. Striker Plates: Steel, designed to protect tubing from penetrations.
- 6. Manifolds: Malleable iron or steel with factory-applied protective coating. Threaded connections shall comply with ASME B1.20.1 for pipe inlet and corrugated tubing outlets.
- 7. Operating-Pressure Rating: 5 psig.

2.2 PIPING SPECIALTIES

A. Appliance Flexible Connectors:

- 1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
- 2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
- 3. Outdoor, Appliance Flexible Connectors: Comply with ANSI Z21.75.
- 4. Corrugated stainless-steel tubing with polymer coating.
- 5. Operating-Pressure Rating: 0.5 psig.
- 6. End Fittings: Zinc-coated steel.
- 7. Threaded Ends: Comply with ASME B1.20.1.
- 8. Maximum Length: 72 inches.

B. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

C. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

D. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

E. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig.

F. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for natural gas.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.4 MANUAL GAS SHUTOFF VALVES

- A. General Requirements for Metallic Valves, NPS 2 and Smaller: Comply with ASME B16.33.

1. CWP Rating: 125 psig.
2. Threaded Ends: Comply with ASME B1.20.1.
3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
4. Tamperproof Feature: Locking feature for valves indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.

B. General Requirements for Metallic Valves, NPS 2-1/2 and Larger: Comply with ASME B16.38.

1. CWP Rating: 125 psig.
2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
3. Tamperproof Feature: Locking feature for valves indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
4. Service Mark: Initials "WOG" shall be permanently marked on valve body.

C. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; a subsidiary of American Meter Company.
2. Body: Bronze, complying with ASTM B 584.
3. Ball: Chrome-plated brass.
4. Stem: Bronze; blowout proof.
5. Seats: Reinforced TFE; blowout proof.
6. Packing: Separate packnut with adjustable-stem packing threaded ends.
7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
8. CWP Rating: 600 psig.
9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. BrassCraft Manufacturing Company; a Masco company.
 - b. Conbraco Industries, Inc.; Apollo Div.
 - c. Lyall, R. W. & Company, Inc.
 - d. McDonald, A. Y. Mfg. Co.
 - e. Perfection Corporation; a subsidiary of American Meter Company.
2. Body: Bronze, complying with ASTM B 584.
3. Ball: Chrome-plated bronze.
4. Stem: Bronze; blowout proof.

5. Seats: Reinforced TFE; blowout proof.
6. Packing: Threaded-body packnut design with adjustable-stem packing.
7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
8. CWP Rating: 600 psig.
9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

E. Bronze Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Lee Brass Company.
 - b. McDonald, A. Y. Mfg. Co.
2. Body: Bronze, complying with ASTM B 584.
3. Plug: Bronze.
4. Ends: Threaded, socket, or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Operator: Square head or lug type with tamperproof feature where indicated.
6. Pressure Class: 125 psig.
7. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

F. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. McDonald, A. Y. Mfg. Co.
 - b. Mueller Co.; Gas Products Div.
 - c. Xomox Corporation; a Crane company.
2. Body: Cast iron, complying with ASTM A 126, Class B.
3. Plug: Bronze or nickel-plated cast iron.
4. Seat: Coated with thermoplastic.
5. Stem Seal: Compatible with natural gas.
6. Ends: Threaded or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
7. Operator: Square head or lug type with tamperproof feature where indicated.
8. Pressure Class: 125 psig.
9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

G. Cast-Iron, Lubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flowserve.
 - b. Homestead Valve; a division of Olson Technologies, Inc.

- c. McDonald, A. Y. Mfg. Co.
 - d. Milliken Valve Company.
 - e. Mueller Co.; Gas Products Div.
 - f. R&M Energy Systems, A Unit of Robbins & Myers, Inc.
2. Body: Cast iron, complying with ASTM A 126, Class B.
 3. Plug: Bronze or nickel-plated cast iron.
 4. Seat: Coated with thermoplastic.
 5. Stem Seal: Compatible with natural gas.
 6. Ends: Threaded or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
 7. Operator: Square head or lug type with tamperproof feature where indicated.
 8. Pressure Class: 125 psig.
 9. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

2.5 PRESSURE REGULATORS

A. General Requirements:

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 and smaller; flanged for regulators NPS 2-1/2 and larger.

B. Service Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Actaris.
 - b. American Meter Company.
 - c. Fisher Control Valves and Regulators; Division of Emerson Process Management.
 - d. Invensys.
 - e. Richards Industries; Jordan Valve Div.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 100 psig.

C. Line Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Actaris.
 - b. American Meter Company.
 - c. Eclipse Combustion, Inc.
 - d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
 - e. Invensys.
 - f. Maxitrol Company.
 - g. Richards Industries; Jordan Valve Div.
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 10 psig.

D. Appliance Pressure Regulators: Comply with ANSI Z21.18.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Corporation; Controls Div.
 - b. Harper Wyman Co.
 - c. Maxitrol Company.
 - d. SCP, Inc.
2. Body and Diaphragm Case: Die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber.
6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.
8. Regulator may include vent limiting device, instead of vent connection, if approved by authorities having jurisdiction.
9. Maximum Inlet Pressure: 1 psig.

2.6 SERVICE METERS

- A. Incoming Gas service meter shall be specify by Utility Company and installed in accordance with Utility Company requirements

2.7 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Hart Industries International, Inc.
 - d. Jomar International Ltd.
 - e. Matco-Norca, Inc.
 - f. McDonald, A. Y. Mfg. Co.
 - g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - h. Wilkins; a Zurn company.
 2. Description:
 - a. Standard: ASSE 1079.
 - b. Pressure Rating: 125 psig minimum at 180 deg F.
 - c. End Connections: Solder-joint copper alloy and threaded ferrous.
- C. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Matco-Norca, Inc.
 - d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - e. Wilkins; a Zurn company.
 2. Description:
 - a. Standard: ASSE 1079.
 - b. Factory-fabricated; bolted, companion-flange assembly.
 - c. Pressure Rating: 125 psig minimum at 180 deg F.
 - d. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
- D. Dielectric-Flange Insulating Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 2. Description:

- a. Nonconducting materials for field assembly of companion flanges.
- b. Pressure Rating: 150 psig.
- c. Gasket: Neoprene or phenolic.
- d. Bolt Sleeves: Phenolic or polyethylene.
- e. Washers: Phenolic with steel backing washers.

2.8 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored yellow, as per local authority requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping according to NFPA 54 and the International Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with NFPA 54 and the International Fuel Gas Code requirements for prevention of accidental ignition.

3.3 OUTDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 and the International Fuel Gas Code for installation and purging of natural-gas piping.
- B. Install underground, natural-gas piping buried at least as per local authority requirements below finished grade.
- C. Steel Piping with Protective Coating:
 - 1. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.
 - 2. Repair damage to PE coating on pipe as recommended in writing by protective coating manufacturer.
 - 3. Replace pipe having damaged PE coating with new pipe.
- D. Install fittings for changes in direction and branch connections.

- E. Install pressure gage upstream and downstream from each service regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."

3.4 INDOOR PIPING INSTALLATION

- A. Comply with NFPA 54 and the International Fuel Gas Code and local authority for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Verify final equipment locations for roughing-in.
- L. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- M. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
 - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- N. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- O. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.

- P. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
 2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
 3. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
 4. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
 - a. Exception: Tubing passing through partitions or walls does not require striker barriers.
 5. Prohibited Locations:
 - a. Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
 - b. Do not install natural-gas piping in solid walls or partitions.
- Q. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- R. Connect branch piping from top or side of horizontal piping.
- S. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- T. Do not use natural-gas piping as grounding electrode.
- U. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- V. Install pressure gage upstream and downstream from each line regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."
- W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."
- X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."
- Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 Section "Escutcheons for HVAC Piping."

3.5 SERVICE-METER ASSEMBLY INSTALLATION

- A. Install service-meter assemblies aboveground as per local utility requirements.
- B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
- C. Install strainer on inlet of service-pressure regulator and meter set.
- D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
- E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.
- F. Install service meters downstream from pressure regulators.
- G. Install metal bollards to protect meter assemblies. Comply with requirements in Division 05 Section "Metal Fabrications" for pipe bollards.

3.6 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
- B. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

3.7 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
 - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
 - 2. Cut threads full and clean using sharp dies.
 - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
 - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
 - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints:
 - 1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
 - 2. Bevel plain ends of steel pipe.
 - 3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.
- G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.
- H. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - 1. Plain-End Pipe and Fittings: Use butt fusion.
 - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.8 HANGER AND SUPPORT INSTALLATION

- A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- B. Comply with requirements for pipe hangers and supports specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1 and Smaller: Maximum span, 96 inches; minimum rod size, 3/8 inch.
 - 2. NPS 1-1/4: Maximum span, 108 inches; minimum rod size, 3/8 inch.
 - 3. NPS 1-1/2 and NPS 2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
 - 4. NPS 2-1/2 to NPS 3-1/2: Maximum span, 10 feet; minimum rod size, 1/2 inch.
 - 5. NPS 4 and Larger: Maximum span, 10 feet; minimum rod size, 5/8 inch.
- D. Install hangers for horizontal drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/8: Maximum span, 48 inches; minimum rod size, 3/8 inch.
 - 2. NPS 1/2 and NPS 5/8: Maximum span, 72 inches; minimum rod size, 3/8 inch.
 - 3. NPS 3/4 and NPS 7/8: Maximum span, 84 inches; minimum rod size, 3/8 inch.
 - 4. NPS 1: Maximum span, 96 inches; minimum rod size, 3/8 inch.
- E. Install hangers for horizontal, corrugated stainless-steel tubing with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/8: Maximum span, 48 inches; minimum rod size, 3/8 inch.
 - 2. NPS 1/2: Maximum span, 72 inches; minimum rod size, 3/8 inch.
 - 3. NPS 3/4 and Larger: Maximum span, 96 inches; minimum rod size, 3/8 inch.

3.9 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.

- B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.10 LABELING AND IDENTIFYING

- A. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.11 PAINTING

- A. Comply with requirements in Division 09 painting Sections for painting interior and exterior natural-gas piping.
- B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Alkyd System: MPI EXT 5.1D.

- a. Prime Coat: Alkyd anticorrosive metal primer.
- b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
- c. Topcoat: Exterior alkyd enamel (semigloss).
- d. Color: As per local utility or local authority.

- C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Latex Over Alkyd Primer System: MPI INT 5.1Q.

- a. Prime Coat: Alkyd anticorrosive metal primer.
- b. Intermediate Coat: Interior latex matching topcoat.
- c. Topcoat: Interior latex (semigloss).
- d. Color: As per local utility or local authority.

2. Alkyd System: MPI INT 5.1E.

- a. Prime Coat: Alkyd anticorrosive metal primer.
- b. Intermediate Coat: Interior alkyd matching topcoat.
- c. Topcoat: Interior alkyd (semigloss).
- d. Color: As per local utility or local authority.

- D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.12 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to seismic codes at Project.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Use 3000-psig, 28-day, compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."

3.13 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 1. Test, inspect, and purge natural gas according to NFPA 54 and the International Fuel Gas Code and authorities having jurisdiction.
- C. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

3.14 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG

- A. Aboveground, distribution piping shall be one of the following:
 1. NPS 3 and smaller: Steel pipe with malleable-iron fittings and threaded joints.
 2. NPS 4 and larger: Steel pipe with wrought-steel fittings and welded joints.
- B. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- C. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.15 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG AND LESS THAN 5 PSIG

- A. Aboveground, distribution piping shall be one of the following:

1. NPS 3 and smaller: Steel pipe with malleable-iron fittings and threaded joints.
2. NPS 4 and larger: Steel pipe with wrought-steel fittings and welded joints.

- B. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- C. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.16 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

- A. Valves for pipe sizes NPS 2 and smaller at service meter shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Bronze plug valve.
- B. Valves for pipe sizes NPS 2-1/2 and larger at service meter shall be one of the following:
1. Two-piece, full -port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, nonlubricated plug valve.
- C. Distribution piping valves for pipe sizes NPS 2 and smaller shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 and larger shall be one of the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
 2. Bronze plug valve.
 3. Cast-iron, lubricated plug valve.
- E. Valves in branch piping for single appliance shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
 2. Bronze plug valve.

END OF SECTION 231123

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 232113**HYDRONIC PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:
 - 1. Hot-water heating piping.
 - 2. Chilled-water piping.
 - 3. Condenser-water piping.
 - 4. Condensate-drain piping.
- B. Related Sections include the following:
 - 1. Division 23 Section "Hydronic Pumps" for pumps, motors, and accessories for hydronic piping.

1.3 DEFINITIONS

- A. PTFE: Polytetrafluoroethylene.
- B. RTRF: Reinforced thermosetting resin (fiberglass) fittings.
- C. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

1.4 PERFORMANCE REQUIREMENTS

- A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature:
 - 1. Hot-Water Heating Piping: at 200 deg F.
 - 2. Condenser-Water Piping: at 150 deg F.

1.5 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but

are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For each type of the following:

1. Plastic pipe and fittings with solvent cement.
2. RTRP and RTRF with adhesive.
3. Pressure-seal fittings.
4. Valves. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
5. Air control devices.
6. Chemical treatment.
7. Hydronic specialties.

C. Shop Drawings: Detail, at 1/4 scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

D. Welding certificates.

E. Qualification Data: For Installer.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For air control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

H. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.

1.6 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 -

Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

3. Installers of Pressure-Sealed Joints: Installers shall be certified by the pressure-seal joint manufacturer as having been trained and qualified to join piping with pressure-seal pipe couplings and fittings.
 4. Fiberglass Pipe and Fitting Installers: Installers of RTRF and RTRP shall be certified by the manufacturer of pipes and fittings as having been trained and qualified to join fiberglass piping with manufacturer-recommended adhesive.
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- D. ASME Compliance: Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 01.

1.7 EXTRA MATERIALS

- A. Water-Treatment Chemicals: Furnish enough chemicals for initial system startup and for preventive maintenance for one year from date of Substantial Completion.
- B. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Drawn-Temper Copper Tubing: ASTM B 88, Type L.
- B. Annealed-Temper Copper Tubing: ASTM B 88, Type K.
- C. DWV Copper Tubing: ASTM B 306, Type DWV.
- D. Wrought-Copper Fittings: ASME B16.22.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Anvil International, Inc.
 - b. S. P. Fittings; a division of Star Pipe Products.
- E. Wrought-Copper Unions: ASME B16.22.

2.2 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness as indicated in Part 3 "Piping Applications" Article.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125 and 250 as indicated in Part 3 "Piping Applications" Article.
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 as indicated in Part 3 "Piping Applications" Article.
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300 as indicated in Part 3 "Piping Applications" Article.
- E. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 25, 125, and 250; raised ground face, and bolt holes spot faced as indicated in Part 3 "Piping Applications" Article.
- F. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.

2.3 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
- D. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- E. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

2.4 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper-alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.

- b. Central Plastics Company.
 - c. Hart Industries International, Inc.
 - d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - e. Zurn Plumbing Products Group; AquaSpec Commercial Products Division.
- 2. Factory-fabricated union assembly, for 250-psig minimum working pressure at 180 deg F.
- D. Dielectric Flanges:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - 2. Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.
- E. Dielectric-Flange Kits:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 - 2. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
 - 3. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.
- F. Dielectric Couplings:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Calpico, Inc.
 - b. Lochinvar Corporation.
 - 2. Galvanized-steel coupling with inert and noncorrosive thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.
- G. Dielectric Nipples:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Perfection Corporation; a subsidiary of American Meter Company.
 - b. Precision Plumbing Products, Inc.
 - c. Sioux Chief Manufacturing Company, Inc.
 - d. Victaulic Company of America.
 - 2. Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.5 VALVES

- A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section "General-Duty Valves for HVAC Piping."
- B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 23 Section "Instrumentation and Control for HVAC."
- C. Bronze, Calibrated-Orifice, Balancing Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Armstrong Pumps, Inc.
 - b. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - c. Flow Design Inc.
 - d. Gerand Engineering Co.
 - e. Griswold Controls.
 - f. Taco.
 - 2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
 - 3. Ball: Brass or stainless steel.
 - 4. Plug: Resin.
 - 5. Seat: PTFE.
 - 6. End Connections: Threaded or socket.
 - 7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
 - 8. Handle Style: Lever, with memory stop to retain set position.
 - 9. CWP Rating: Minimum 125 psig.
 - 10. Maximum Operating Temperature: 250 deg F.
- D. Diaphragm-Operated, Pressure-Reducing Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - d. Conbraco Industries, Inc.
 - e. Spence Engineering Company, Inc.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - 2. Body: Bronze or brass.
 - 3. Disc: Glass and carbon-filled PTFE.
 - 4. Seat: Brass.
 - 5. Stem Seals: EPDM O-rings.
 - 6. Diaphragm: EPT.
 - 7. Low inlet-pressure check valve.
 - 8. Inlet Strainer: removable without system shutdown.
 - 9. Valve Seat and Stem: Noncorrosive.
 - 10. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.
- E. Diaphragm-Operated Safety Valves:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Amtrol, Inc.
 - b. Armstrong Pumps, Inc.
 - c. Bell & Gossett Domestic Pump; a division of ITT Industries.
 - d. Conbraco Industries, Inc.
 - e. Spence Engineering Company, Inc.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- 2. Body: Bronze or brass.
 - 3. Disc: Glass and carbon-filled PTFE.
 - 4. Seat: Brass.
 - 5. Stem Seals: EPDM O-rings.
 - 6. Diaphragm: EPT.
 - 7. Wetted, Internal Work Parts: Brass and rubber.
 - 8. Inlet Strainer: removable without system shutdown.
 - 9. Valve Seat and Stem: Noncorrosive.
 - 10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

F. Automatic Flow-Control Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Flow Design Inc.
 - b. Griswold Controls.
- 2. Body: Brass or ferrous metal.
- 3. Piston and Spring Assembly: Stainless steel Corrosion resistant, tamper proof, self cleaning, and removable.
- 4. Combination Assemblies: Include bronze or brass-alloy ball valve.
- 5. Identification Tag: Marked with zone identification, valve number, and flow rate.
- 6. Size: Same as pipe in which installed.
- 7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
- 8. Minimum CWP Rating: 300 psig.
- 9. Maximum Operating Temperature: 250 deg F.

2.6 AIR CONTROL DEVICES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- 1. Amtrol, Inc.
- 2. Armstrong Pumps, Inc.
- 3. Bell & Gossett Domestic Pump; a division of ITT Industries.
- 4. Taco.

B. Manual Air Vents:

- 1. Body: Bronze.
- 2. Internal Parts: Nonferrous.
- 3. Operator: Screwdriver or thumbscrew.
- 4. Inlet Connection: NPS 1/2.
- 5. Discharge Connection: NPS 1/8.

6. CWP Rating: 150 psig.
7. Maximum Operating Temperature: 225 deg F.

C. Expansion Tanks:

1. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature, with taps in bottom of tank for tank fitting and taps in end of tank for gage glass. Tanks shall be factory tested with taps fabricated and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Air-Control Tank Fitting: Cast-iron body, copper-plated tube, brass vent tube plug, and stainless-steel ball check, 100-gal. unit only; sized for compression-tank diameter. Provide tank fittings for 125-psig working pressure and 250 deg F maximum operating temperature.
3. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig working pressure and 240 deg F maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.
4. Gage Glass: Full height with dual manual shutoff valves, 3/4-inch- diameter gage glass, and slotted-metal glass guard.

D. Diaphragm-Type Expansion Tanks:

1. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
3. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

E. Tangential-Type Air Separators:

1. Tank: Welded steel; ASME constructed and labeled for 125-psig minimum working pressure and 375 deg F maximum operating temperature.
2. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
3. Tangential Inlet and Outlet Connections: Threaded for NPS 2 and smaller; flanged connections for NPS 2-1/2 and larger.
4. Blowdown Connection: Threaded.
5. Size: Match system flow capacity.

F. In-Line Air Separators:

1. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
2. Maximum Working Pressure: Up to 175 psig.
3. Maximum Operating Temperature: Up to 300 deg F.

G. Air Purgers:

1. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
2. Maximum Working Pressure: 150 psig.
3. Maximum Operating Temperature: 250 deg F.

2.7 HYDRONIC PIPING SPECIALTIES

A. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

B. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

C. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig.

D. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.
3. Performance: Capable of 3/4-inch misalignment.
4. CWP Rating: 150 psig.
5. Maximum Operating Temperature: 250 deg F.

E. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.
2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
3. Performance: Capable of misalignment.
4. CWP Rating: 150 psig.
5. Maximum Operating Temperature: 250 deg F.

F. Expansion fittings are specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Chilled-water piping, aboveground, NPS 2 and smaller, shall be any of the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
- B. Chilled-water piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
 - 2. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- C. Hot-water heating piping, aboveground, NPS 2 and smaller, shall be any of the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
- D. Hot-water heating piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
 - 2. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- E. Condenser-water piping, aboveground, NPS 2 and smaller, shall be any of the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
- F. Condenser-water piping, aboveground, NPS 2-1/2 and larger, shall be any of the following:
 - 1. Type L, drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
 - 2. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
- G. Condensate-Drain Piping: Type DWV, drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

3.2 VALVE APPLICATIONS

- A. Install shutoff-duty valves at each branch connection to supply and return mains, and at supply and return connection to each piece of equipment.
- B. Install calibrated-orifice, balancing valves at each branch connection to return main.
- C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
- D. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; and pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

- F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.3 PIPING INSTALLATIONS

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system operating pressure.
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
- L. Install drains, consisting of a tee fitting, NPS 3/4 ball valve, and short NPS 3/4 threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- N. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- O. Install branch connections to mains using mechanically formed tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- P. Install valves according to Division 23 Section "General-Duty Valves for HVAC Piping."
- Q. Install unions in piping, NPS 2 and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- R. Install flanges in piping, NPS 2-1/2 and larger, at final connections of equipment and elsewhere as indicated.

- S. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install NPS 3/4 nipple and ball valve in blowdown connection of strainers NPS 2 and larger. Match size of strainer blowoff connection for strainers smaller than NPS 2.
- T. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."
- U. Identify piping as specified in Division 23 Section "Identification for HVAC Piping and Equipment."
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 23 Section "Sleeves and Sleeve Seals for HVAC Piping."
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 Section "Escutcheons for HVAC Piping."

3.4 HANGERS AND SUPPORTS

- A. Hanger, support, and anchor devices are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment." Comply with the following requirements for maximum spacing of supports.
- B. Seismic restraints are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- C. Install the following pipe attachments:
 - 1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
 - 2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
 - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
 - 4. Spring hangers to support vertical runs.
 - 5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- D. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 3/4: Maximum span, 7 feet; minimum rod size, 1/4 inch.
 - 2. NPS 1: Maximum span, 7 feet; minimum rod size, 1/4 inch.
 - 3. NPS 1-1/2: Maximum span, 9 feet; minimum rod size, 3/8 inch.
 - 4. NPS 2: Maximum span, 10 feet; minimum rod size, 3/8 inch.
 - 5. NPS 2-1/2: Maximum span, 11 feet; minimum rod size, 3/8 inch.
 - 6. NPS 3: Maximum span, 12 feet; minimum rod size, 3/8 inch.
 - 7. NPS 4: Maximum span, 14 feet; minimum rod size, 1/2 inch.
 - 8. NPS 6: Maximum span, 17 feet; minimum rod size, 1/2 inch.
 - 9. NPS 8: Maximum span, 19 feet; minimum rod size, 5/8 inch.
 - 10. NPS 10: Maximum span, 20 feet; minimum rod size, 3/4 inch.
 - 11. NPS 12: Maximum span, 23 feet; minimum rod size, 7/8 inch.

12. NPS 14: Maximum span, 25 feet; minimum rod size, 1 inch.
13. NPS 16: Maximum span, 27 feet; minimum rod size, 1 inch.
14. NPS 18: Maximum span, 28 feet; minimum rod size, 1-1/4 inches.
15. NPS 20: Maximum span, 30 feet; minimum rod size, 1-1/4 inches.

E. Install hangers for drawn-temper copper piping with the following maximum spacing and minimum rod sizes:

1. NPS 3/4: Maximum span, 5 feet; minimum rod size, 1/4 inch.
2. NPS 1: Maximum span, 6 feet; minimum rod size, 1/4 inch.
3. NPS 1-1/2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
4. NPS 2: Maximum span, 8 feet; minimum rod size, 3/8 inch.
5. NPS 2-1/2: Maximum span, 9 feet; minimum rod size, 3/8 inch.
6. NPS 3: Maximum span, 10 feet; minimum rod size, 3/8 inch.

F. Support vertical runs at roof, at each floor, and at 10-foot intervals between floors.

3.5 PIPE JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Brazed Joints: Construct joints according to AWS's "Braze Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- E. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- F. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.6 HYDRONIC SPECIALTIES INSTALLATION

- A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Manual vents at heat-transfer coils and elsewhere as required for air venting.
- C. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.
- D. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 and larger.
- E. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.

- F. Install bypass chemical feeders in each hydronic system where indicated, in upright position with top of funnel not more than 48 inches above the floor. Install feeder in minimum NPS 3/4 bypass line, from main with full-size, full-port, ball valve in the main between bypass connections. Install NPS 3/4 pipe from chemical feeder drain, to nearest equipment drain and include a full-size, full-port, ball valve.
- G. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
 - 1. Install tank fittings that are shipped loose.
 - 2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.
- H. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system Project requirements.

3.7 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- D. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 23 Section "Meters and Gages for HVAC Piping."

3.8 FIELD QUALITY CONTROL

- A. Prepare hydronic piping according to ASME B31.9 and as follows:
 - 1. Leave joints, including welds, uninsulated and exposed for examination during test.
 - 2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
 - 3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
 - 4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
 - 5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- B. Perform the following tests on hydronic piping:
 - 1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
 - 2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
 - 3. Isolate expansion tanks and determine that hydronic system is full of water.

4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
5. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

C. Perform the following before operating the system:

1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Set makeup pressure-reducing valves for required system pressure.
4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
5. Set temperature controls so all coils are calling for full flow.
6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
7. Verify lubrication of motors and bearings.

END OF SECTION 232113

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 232123**HYDRONIC PUMPS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Separately coupled, horizontal, in-line centrifugal pumps.
 - 2. Separately coupled, vertical, in-line centrifugal pumps.
 - 3. Separately coupled, base-mounted, end-suction centrifugal pumps.
 - 4. Separately coupled, base-mounted, double-suction centrifugal pumps.
 - 5. Separately coupled, vertical-mounted, double-suction centrifugal pumps.

1.3 DEFINITIONS

- A. Buna-N: Nitrile rubber.
- B. EPT: Ethylene propylene terpolymer.

1.4 SUBMITTALS**A. LEED BUILDING SUBMITTAL REQUIREMENTS:**

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump's operating point on curves.
- C. Shop Drawings: Show pump layout and connections. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- D. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Source Limitations: Obtain hydronic pumps through one source from a single manufacturer.
- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of hydronic pumps and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- E. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- B. Store pumps in dry location.
- C. Retain protective covers for flanges and protective coatings during storage.
- D. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
- E. Comply with pump manufacturer's written rigging instructions.

1.7 WARRANTY:

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Mechanical Seals: One mechanical seal(s) for each pump.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

2.2 SEPARATELY COUPLED, HORIZONTAL, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers:
 - 1. Armstrong Pumps Inc.
 - 2. Aurora Pump; Division of Pentair Pump Group.
 - 3. Bell & Gossett; Div. of ITT Industries.
 - 4. Grundfos Pumps Corporation.
 - 5. PACO Pumps.
 - 6. Taco, Inc.
- B. Description: (See schedule on M-502)

2.3 SEPARATELY COUPLED, VERTICAL, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers:
 - 1. Armstrong Pumps Inc.
 - 2. Aurora Pump; Division of Pentair Pump Group.
 - 3. Bell & Gossett; Div. of ITT Industries.
 - 4. PACO Pumps.
 - 5. Patterson Pump Co.; a Subsidiary of The Gorman-Rupp Co.
- B. Description: Description: (See schedule on M-502)

2.4 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

A. Manufacturers:

1. Armstrong Pumps Inc.
2. Aurora Pump; Division of Pentair Pump Group.
3. Bell & Gossett; Div. of ITT Industries.
4. PACO Pumps.
5. Taco, Inc.

B. Description: Description: (See schedule on M-502)

2.5 SEPARATELY COUPLED, BASE-MOUNTED, DOUBLE-SUCTION CENTRIFUGAL PUMPS

A. Available Manufacturers:

1. Armstrong Pumps Inc.
2. Aurora Pump; Division of Pentair Pump Group.
3. Bell & Gossett; Div. of ITT Industries.
4. PACO Pumps.
5. Taco, Inc.

B. Description: Description: (See schedule on M-502)

2.6 SEPARATELY COUPLED, VERTICAL-MOUNTED, DOUBLE-SUCTION CENTRIFUGAL PUMPS

A. Available Manufacturers:

1. Armstrong Pumps Inc.
2. Aurora Pump; Division of Pentair Pump Group.
3. Bell & Gossett; Div. of ITT Industries.
4. PACO Pumps.
5. Taco, Inc.

B. Description: (See schedule on M-502)

2.7 PUMP SPECIALTY FITTINGS

A. Suction Diffuser: Angle pattern, 300-psig pressure rating, pump-inlet fitting; with bronze startup and bronze or stainless-steel permanent strainers; bronze or stainless-steel straightening vanes; drain plug; and factory-fabricated support.

B. Triple-Duty Valve: Angle or straight pattern, 300-psig pressure rating, pump-discharge fitting; with drain plug and bronze-fitted shutoff, balancing, and check valve features. Brass gage ports with integral check valve, and orifice for flow measurement.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for pumps and controllers. Refer to Division 23 Section "Common Work Results for HVAC."
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.3 PUMP INSTALLATION

- A. Install pumps with access for periodic maintenance including removal of motors, impellers, couplings, and accessories.
- B. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- C. Install continuous-thread hanger rods and spring hangers with vertical-limit stop of sufficient size to support pump weight. Vibration isolation devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment." Fabricate brackets or supports as required. Hanger and support materials are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- D. Suspend vertically mounted, in-line centrifugal pumps independent of piping. Install pumps with motor and pump shafts vertical. Use continuous-thread hanger rods and spring hangers with vertical-limit stop of sufficient size to support pump weight. Vibration isolation devices are specified in Division 21 Section "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment." Hanger and support materials are specified in Division 23 Section "Hangers and Supports for Plumbing Piping and Equipment/Hangers and Supports for HVAC Piping and Equipment."

- E. Set base-mounted pumps on concrete foundation. Disconnect coupling before setting. Do not reconnect couplings until alignment procedure is complete.
 - 1. Support pump baseplate on rectangular metal blocks and shims, or on metal wedges with small taper, at points near foundation bolts to provide a gap of 3/4 to 1-1/2 inches between pump base and foundation for grouting.
 - 2. Adjust metal supports or wedges until pump and driver shafts are level. Check coupling faces and suction and discharge flanges of pump to verify that they are level and plumb.
- F. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.

3.4 ALIGNMENT

- A. Align pump and motor shafts and piping connections after setting on foundation, grout has been set and foundation bolts have been tightened, and piping connections have been made.
- B. Comply with pump and coupling manufacturers' written instructions.
- C. Adjust pump and motor shafts for angular and offset alignment by methods specified in HI 1.1-1.5, "Centrifugal Pumps for Nomenclature, Definitions, Application and Operation and HI 2.1-2.5, " Vertical Pumps for Nomenclature, Definitions, Application and Operation."
- D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill baseplate with nonshrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

3.5 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Install triple-duty valve on discharge side of pumps.
- F. Install suction diffuser and shutoff valve on suction side of pumps.
- G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.
- H. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.
- I. Install check valve and gate or ball valve on each condensate pump unit discharge.
- J. Install electrical connections for power, controls, and devices.

- K. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- L. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.6 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check piping connections for tightness.
 - 3. Clean strainers on suction piping.
 - 4. Perform the following startup checks for each pump before starting:
 - a. Verify bearing lubrication.
 - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
 - c. Verify that pump is rotating in the correct direction.
 - 5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
 - 6. Start motor.
 - 7. Open discharge valve slowly.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain hydronic pumps.

END OF SECTION 232123

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 232300
REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes refrigerant piping used for air-conditioning applications.

1.3 PERFORMANCE REQUIREMENTS

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

B. Line Test Pressure for Refrigerant R-134a:

1. Suction Lines for Air-Conditioning Applications: 115 psig.
2. Suction Lines for Heat-Pump Applications: 225 psig.
3. Hot-Gas and Liquid Lines: 225 psig.

C. Line Test Pressure for Refrigerant R-407C:

1. Suction Lines for Air-Conditioning Applications: 230 psig.
2. Suction Lines for Heat-Pump Applications: 380 psig.
3. Hot-Gas and Liquid Lines: 380 psig.

D. Line Test Pressure for Refrigerant R-410A:

1. Suction Lines for Air-Conditioning Applications: 300 psig.
2. Suction Lines for Heat-Pump Applications: 535 psig.
3. Hot-Gas and Liquid Lines: 535 psig.

1.4 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer's test data, for the following:

1. Thermostatic expansion valves.
2. Solenoid valves.
3. Hot-gas bypass valves.
4. Filter dryers.
5. Strainers.
6. Pressure-regulating valves.

C. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.

1. Shop Drawing Scale: 1/4 inch equals 1 foot.
2. Refrigerant piping indicated on Drawings is schematic only. Size piping and design actual piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.

D. Welding certificates.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

B. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."

- C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.6 PRODUCT STORAGE AND HANDLING

- A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

1.7 COORDINATION

- A. Coordinate size and location of roof curbs, equipment supports, and roof penetrations.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Copper Tube: ASTM B 88, Type K or L.
- B. Wrought-Copper Fittings: ASME B16.22.
- C. Wrought-Copper Unions: ASME B16.22.
- D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- E. Brazing Filler Metals: AWS A5.8.
- F. Flexible Connectors:
 1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
 2. End Connections: Socket ends.
 3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch- long assembly.
 4. Pressure Rating: Factory test at minimum 500 psig.
 5. Maximum Operating Temperature: 250 deg F.

2.2 VALVES AND SPECIALTIES

- A. Diaphragm Packless Valves:
 1. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
 2. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
 3. Operator: Rising stem and hand wheel.
 4. Seat: Nylon.
 5. End Connections: Socket, union, or flanged.
 6. Working Pressure Rating: 500 psig.
 7. Maximum Operating Temperature: 275 deg F.
- B. Packed-Angle Valves:

1. Body and Bonnet: Forged brass or cast bronze.
2. Packing: Molded stem, back seating, and replaceable under pressure.
3. Operator: Rising stem.
4. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
5. Seal Cap: Forged-brass or valox hex cap.
6. End Connections: Socket, union, threaded, or flanged.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 275 deg F.

C. Check Valves:

1. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
2. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
3. Piston: Removable polytetrafluoroethylene seat.
4. Closing Spring: Stainless steel.
5. Manual Opening Stem: Seal cap, plated-steel stem, and graphite seal.
6. End Connections: Socket, union, threaded, or flanged.
7. Maximum Opening Pressure: 0.50 psig.
8. Working Pressure Rating: 500 psig.
9. Maximum Operating Temperature: 275 deg F.

D. Service Valves:

1. Body: Forged brass with brass cap including key end to remove core.
2. Core: Removable ball-type check valve with stainless-steel spring.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Copper spring.
5. Working Pressure Rating: 500 psig.

E. Solenoid Valves: Comply with ARI 760 and UL 429; listed and labeled by an NRTL.

1. Body and Bonnet: Plated steel.
2. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Threaded.
5. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter.
6. Working Pressure Rating: 400 psig.
7. Maximum Operating Temperature: 240 deg F.
8. Manual operator.

F. Safety Relief Valves: Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.

1. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
2. Piston, Closing Spring, and Seat Insert: Stainless steel.
3. Seat Disc: Polytetrafluoroethylene.
4. End Connections: Threaded.
5. Working Pressure Rating: 400 psig.
6. Maximum Operating Temperature: 240 deg F.

G. Thermostatic Expansion Valves: Comply with ARI 750.

1. Body, Bonnet, and Seal Cap: Forged brass or steel.
2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.

3. Packing and Gaskets: Non-asbestos.
4. Capillary and Bulb: Copper tubing filled with refrigerant charge.
5. Suction Temperature: 40 deg F.
6. Superheat: Adjustable.
7. Reverse-flow option (for heat-pump applications).
8. End Connections: Socket, flare, or threaded union.
9. Working Pressure Rating: 700 psig.

H. Straight-Type Strainers:

1. Body: Welded steel with corrosion-resistant coating.
2. Screen: 100-mesh stainless steel.
3. End Connections: Socket or flare.
4. Working Pressure Rating: 500 psig.
5. Maximum Operating Temperature: 275 deg F.

I. Angle-Type Strainers:

1. Body: Forged brass or cast bronze.
2. Drain Plug: Brass hex plug.
3. Screen: 100-mesh monel.
4. End Connections: Socket or flare.
5. Working Pressure Rating: 500 psig.
6. Maximum Operating Temperature: 275 deg F.

J. Moisture/Liquid Indicators:

1. Body: Forged brass.
2. Window: Replaceable, clear, fused glass window with indicating element protected by filter screen.
3. Indicator: Color coded to show moisture content in ppm.
4. Minimum Moisture Indicator Sensitivity: Indicate moisture above 60 ppm.
5. End Connections: Socket or flare.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 240 deg F.

K. Replaceable-Core Filter Dryers: Comply with ARI 730.

1. Body and Cover: Painted-steel shell with ductile-iron cover, stainless-steel screws, and neoprene gaskets.
2. Filter Media: 10 micron, pleated with integral end rings; stainless-steel support.
3. Desiccant Media: Activated alumina.
4. Designed for reverse flow (for heat-pump applications).
5. End Connections: Socket.
6. Access Ports: NPS 1/4 connections at entering and leaving sides for pressure differential measurement.
7. Maximum Pressure Loss: 2 psig.
8. Working Pressure Rating: 500 psig.
9. Maximum Operating Temperature: 240 deg F.

L. Mufflers:

1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or flare.
3. Working Pressure Rating: 500 psig.

4. Maximum Operating Temperature: 275 deg F.

M. Receivers: Comply with ARI 495.

1. Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.
2. Comply with UL 207; listed and labeled by an NRTL.
3. Body: Welded steel with corrosion-resistant coating.
4. Tappings: Inlet, outlet, liquid level indicator, and safety relief valve.
5. End Connections: Socket or threaded.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 275 deg F.

N. Liquid Accumulators: Comply with ARI 495.

1. Body: Welded steel with corrosion-resistant coating.
2. End Connections: Socket or threaded.
3. Working Pressure Rating: 500 psig.
4. Maximum Operating Temperature: 275 deg F.

2.3 REFRIGERANTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Atofina Chemicals, Inc.
2. DuPont Company; Fluorochemicals Div.
3. Honeywell, Inc.; Genetron Refrigerants.
4. INEOS Fluor Americas LLC.

B. ASHRAE 34, R-134a: Tetrafluoroethane.

C. ASHRAE 34, R-407C: Difluoromethane/Pentafluoroethane/1,1,1,2-Tetrafluoroethane.

D. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

- A. Suction Lines NPS 1-1/2 and Smaller for Conventional Air-Conditioning Applications: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed joints.
- B. Suction Lines NPS 2 to NPS 4 for Conventional Air-Conditioning Applications: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed joints.
- C. Hot-Gas and Liquid Lines: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed joints.
- D. Safety-Relief-Valve Discharge Piping: Copper, Type L, drawn-temper tubing and wrought-copper fittings with brazed joints.

3.2 VALVE AND SPECIALTY APPLICATIONS

- A. Install packed-angle valves in suction and discharge lines of compressor.
- B. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.
- C. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.
- D. Except as otherwise indicated, install packed-angle valves on inlet and outlet side of filter dryers.
- E. Install a full-sized, three-valve bypass around filter dryers.
- F. Install solenoid valves upstream from each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at top.
- G. Install thermostatic expansion valves as close as possible to distributors on evaporators.
 - 1. Install valve so diaphragm case is warmer than bulb.
 - 2. Secure bulb to clean, straight, horizontal section of suction line using two bulb straps. Do not mount bulb in a trap or at bottom of the line.
 - 3. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.
- H. Install safety relief valves where required by ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.
- I. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.
- J. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for device being protected:
 - 1. Solenoid valves.
 - 2. Thermostatic expansion valves.
 - 3. Hot-gas bypass valves.
 - 4. Compressor.
- K. Install filter dryers in liquid line between compressor and thermostatic expansion valve, and in the suction line at the compressor.
- L. Install receivers sized to accommodate pump-down charge.
- M. Install flexible connectors at compressors.

3.3 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

- B. Install refrigerant piping according to ASHRAE 15.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping adjacent to machines to allow service and maintenance.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Refer to Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operation" for solenoid valve controllers, control wiring, and sequence of operation.
- K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- L. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Division 08 Section "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.
- M. Install refrigerant piping in protective conduit where installed belowground.
- N. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- O. Slope refrigerant piping as follows:
 - 1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
 - 2. Install horizontal suction lines with a uniform slope downward to compressor.
 - 3. Install traps and double risers to entrain oil in vertical runs.
 - 4. Liquid lines may be installed level.
- P. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.
- Q. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:
 - 1. Shot blast the interior of piping.
 - 2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.

3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
 4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
 5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
 6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.
- R. Install pipe sleeves at penetrations in exterior walls and floor assemblies.
- S. Seal penetrations through fire and smoke barriers according to Division 07 Section "Penetration Firestopping."
- T. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- U. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.
- V. Seal pipe penetrations through exterior walls according to Division 07 Section "Joint Sealants" for materials and methods.
- W. Identify refrigerant piping and valves according to Division 23 Section "Identification for HVAC Piping and Equipment."

3.4 PIPE JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.
- D. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.
 2. Use Type BAg, cadmium-free silver alloy for joining copper with bronze or steel.
- F. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

- G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.
- H. Welded Joints: Construct joints according to AWS D10.12/D10.12M.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.5 HANGERS AND SUPPORTS

- A. Hanger, support, and anchor products are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Install the following pipe attachments:
 - 1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
 - 2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
 - 3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
 - 4. Spring hangers to support vertical runs.
 - 5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:
 - 1. NPS 1/2: Maximum span, 60 inches; minimum rod size, 1/4 inch.
 - 2. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch.
 - 3. NPS 1: Maximum span, 72 inches; minimum rod size, 1/4 inch.
 - 4. NPS 1-1/4: Maximum span, 96 inches; minimum rod size, 3/8 inch.
 - 5. NPS 1-1/2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
 - 6. NPS 2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
 - 7. NPS 2-1/2: Maximum span, 108 inches; minimum rod size, 3/8 inch.
 - 8. NPS 3: Maximum span, 10 feet; minimum rod size, 3/8 inch.
 - 9. NPS 4: Maximum span, 12 feet; minimum rod size, 1/2 inch.
- D. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
 - 1. NPS 2: Maximum span, 10 feet; minimum rod size, 3/8 inch.
 - 2. NPS 2-1/2: Maximum span, 11 feet; minimum rod size, 3/8 inch.
 - 3. NPS 3: Maximum span, 12 feet; minimum rod size, 3/8 inch.
 - 4. NPS 4: Maximum span, 14 feet; minimum rod size, 1/2 inch.
- E. Support multifloor vertical runs at least at each floor.

3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
 - 1. Comply with ASME B31.5, Chapter VI.
 - 2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.

3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
 - a. Fill system with nitrogen to the required test pressure.
 - b. System shall maintain test pressure at the manifold gage throughout duration of test.
 - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - d. Remake leaking joints using new materials, and retest until satisfactory results are achieved.

3.7 SYSTEM CHARGING

- A. Charge system using the following procedures:
 1. Install core in filter dryers after leak test but before evacuation.
 2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
 4. Charge system with a new filter-dryer core in charging line.

3.8 ADJUSTING

- A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.
- B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.
- C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.
- D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
 1. Open shutoff valves in condenser water circuit.
 2. Verify that compressor oil level is correct.
 3. Open compressor suction and discharge valves.
 4. Open refrigerant valves except bypass valves that are used for other purposes.
 5. Check open compressor-motor alignment and verify lubrication for motors and bearings.
- E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

THIS PAGE INTENTIONALLY LEFT BLANK.

**SECTION 232500
HVAC WATER TREATMENT**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes water-treatment systems for the following systems:
1. Re-Circulating Water Systems (Closed system)

1.3 CHEMICAL FEED SYSTEM DESCRIPTION

- A. Utilize Pot feeders to administer treatment to closed systems.

1.4 PERFORMANCE REQUIREMENTS

- A. LEED BUILDING REQUIREMENTS
- B. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.
- C. All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.
- D. Maintain water quality of treated systems to control corrosion, scale and micro-biological growth and fouling to ensure maximum efficiency of installed equipment without posing a hazard to operating personnel or the environment.
- E. Base chemical treatment performance requirements on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of authorities having jurisdiction.
1. Maintain system essentially free of scale, corrosion, fouling and microbiological control for the Condenser Water and Closed Systems

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Include rated capacities; water-pressure drops; shipping, installed, and operating weights; and furnished products listed below:
 1. Test equipment.
 2. Chemicals.
 3. Filters.
 4. Chemical feed automation for Condenser Water System and Pot feeders for closed systems.
- C. Shop Drawings: Detail equipment assemblies indicating dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
- D. Water Analysis: Submit a copy of the water analysis to illustrate water quality available at Project site.
- E. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.
- F. Maintenance Data: For pumps, agitators, filters, system controls, and accessories to include in maintenance manuals specified in Division 1.

1.6 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.7 MAINTENANCE

- A. Scope of Service: Provide chemicals and service program for maintaining optimum conditions in the circulating water for inhibiting corrosion, scale, and organic growths in the Condenser water, Secondary condenser water and hot-water system piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion, including the following:
 1. Initial water analysis and recommendations.
 2. Startup assistance.
 3. Periodic field service and consultation.
 4. Customer report charts and log sheets.
 5. Laboratory technical assistance.
 6. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Chemicals: Furnish quantity equal to 100% percent of amount initially installed.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fuel-oil storage tanks and flexible, double-containment piping and related equipment that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 1 year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. The Contractor will furnish and install all equipment, chemicals and service necessary to provide a complete Water Treatment Program. A single water treatment company shall provide all products and services for undivided responsibility throughout the warranty period. The water treatment company shall be from manufacturer listed below:

- 1. Water-Treatment Program and Products:
 - a. Nalco Company
 - b. Wesco
 - c. Chemworks

2.2 CHEMICAL PROGRAM EQUIPMENT

- A. Closed Re-circulating Water Systems: One (1) -Advantage Corrosion coupon rack, minimum of 2 sampling ports, with 0- 10 gpm flow indicator (no drole valves) and an isolation valve on both ends of the rack. Provide rack's For Primary Systems Only.
- B.
 - 1. Condenser Water Systems- constructed of Schedule 80 PVC
 - 2. Chilled/Hot Water Systems- constructed of Stainless Steel
 - a. Equipment Specification - Spec 459 Corrosion Coup Rack
 - 3.
 - Nalco part # 001-H10506.88
 - 4. Approved Equal (Emerson Swan or Softek)
 - a. Roto-Meter for rack flow
 - 5.
 - Part # 731-P02666.88

2.3 WATER TREATMENT CHEMICALS

- A. Furnish a one-year's supply of a liquid closed loop inhibitor for control of scale and corrosion in a closed recirculating system. A closed loop is a recirculating system that has less than 10% makeup when

compared to its system volume. *This one-year supply shall be a one-time treatment of corrosion inhibitor provided at start up.*

- B. Closed Systems: Formulations shall not contain any ingredients that may be harmful to system materials of construction. The corrosion inhibitor shall contain a multi-functional blend of nitrite, tolytriazole, anionic polymer and buffering agent such as Nalco TRAC 102. Provide MSDS sheets on all chemical products. No system shall be operated without the benefit of chemical protection. Once the recommended chemical residual is achieved, any additional chemicals required to re-treat the system due to water loss or to accomplish other work shall be provided by the Contractor.

2.4 OPERATION AND MAINTENANCE DATA

- A. Submit operation and maintenance data in a binder.

2.5 TEST EQUIPMENT

- A. Furnish basic water test equipment, including carrying case and spare reagents for maintaining control of the program standards in the Closed Loop System. Test kit will include reagents and apparatus for the determination of corrosion inhibitor level, pH and conductivity in the closed loop system, inhibitor, total and calcium hardness, TT, BZT, alkalinity conductivity and microbiological levels (10^4 CFU maximum).

2.6 WATER TREATMENT SERVICE PROGRAM

- A. Provide startup service and regular service visits to include the following:
 1. Installation and system start-up procedure recommendations.
 2. The initial treatment dosages.
 3. The training of operating personnel on proper feed and control techniques.
 4. Service visits and consultation meetings (as needed).
 5. Any necessary log sheets and record forms (available upon request).
 6. Any required laboratory and technical assistance (as needed).
 7. Annual corrosion coupon study (60 – 90 day trial), one sample for mild steel and one sample for copper

2.7 Cleaning & Passivation—Closed System (Off-Line without Heat)

- A. The contractor shall provide chemicals and labor for the pre-operational cleaning of all condenser, chilled, glycol or hot water and related equipment piping systems. This cleaning method is not intended for potable water systems.

2.8 PREPARATION FOR CLEAN-OUT

- A. All systems must be prepared prior to the introduction of the chemical cleaner.
- B. The Contractor shall flush all systems, including mud from drop legs. Remove, clean and replace all strainers. All systems shall contain the highest quality of water available.
- C. Complete circulation must be achieved during the cleaning procedure. A minimum flow rate of 3 ft/sec. needs to be maintained to insure that the cleaning chemicals will work properly. All manual, electrical,

air and thermostatic operated valves must be open. All dead end runs must be looped together with piping not less than 1/3 the size of the run. This piping is to remain in place until cleaning is complete.

- D. A minimum of 1-1/2" ball or gate valve is to be permanently installed in the low point of each system for the purpose of draining each system.
- E. The cleaner shall not require external heat to ensure its effectiveness.

2.9 CHEMICALS

- A. The cleaning solution shall be formulated to remove light grease, cutting oils, loose mill scale, organics and extraneous construction debris. The cleaner shall contain corrosion inhibitor, a dispersant and an oil emulsifier. The recommended cleaner shall be Nalco 2578, or approved equal with a procedure dosage of 2.7 gallons of chemical per 1000 gallons of water. Enough cleaner should be used to treat all of the piping to remove oil and grease to permit a uniform passivating film to form. This aids in the prevention of flash corrosion when the system is most vulnerable to corrosive attack. The contractor will provide the water treatment vendor with an estimate of system volume for proper dosage of cleaner.

2.10 PRE-OPERATIONAL CLEANING

- A. Closed System -- maintain lowest water level possible in cooling tower sump or basin.
- B. Add recommended quantity of passivation chemical directly into the tower sump or closed loop system before the recirculating pumps to ensure rapid mixing and distribution throughout the system. For towers that are constructed of galvanized steel with no protective coating, adjust the pH of the recirculating water to 6.5 to 7.5 prior to the addition of the passivation chemical. A small amount of antifoam (Nalco 7468 Plus or approved equal) may be added to prevent excessive foaming. Refer to MSDS sheets for safety information. Add biocide Nalco 7339 at a dosage of 0.5 per 1000 gallons of water. Refer to Section 2.1-A for approved equals.
- C. For ideal metal passivation, maintain the pH from 6.5 to 7.5 with a small amount of sulfuric acid during the entire cleaning process
- D. Recirculate the system for 48 - 72 hours.
- E. Open and drain mud legs and low points periodically during the cleaning process.
- F. Drain system completely paying particular attention to mud from drop legs and all low points.
- G. Refill the system with clean, potable water, check all strainers, Recirculate and drain completely.
- H. Refill the system again. The length of time between the completion of the cleaning procedure and addition of the corrosion inhibitor shall not exceed twenty-four (24) hours.
- I. Add the recommended level of closed loop or tower inhibitor. The system is now ready for operation. For towers that will not be immediately operational, the tower must have a chemical level consisting of at least 200 PPM molybdate and 10 PPM tolytriazole, using Nalco CW-4751 or molybdate-free Nalco PSO inhibitor TRAC 107. Refer to Section 2.1-A for approved equals.
- J. The manufacturer's representative certifying that the system has been cleaned in accordance with the above procedures will generate a service report on-site. A copy shall be sent to the contractor and the commissioner (as requested). Chemical test parameters shall include onsite testing of pH, conductivity,

phosphate, total iron, ferrous iron, and copper after the preclean is completed to verify all cleaner is removed and iron and copper levels are low. Total iron must be < 5 ppm, Ferrous Iron < 2 ppm, and Copper < 0.5 ppm.

1. Product Dosage Chart

System volume	2578 Product Dosage	7339 Product Dosage
1000	2.7	0.5
2000	5.4	1.0
3000	8.1	1.5
4000	10.8	2.0
5000	13.5	2.5
6000	16.2	3.0
7000	18.9	3.5
8000	21.6	4.0
9000	24.3	4.5
10,000	27	5.0
15,000	40.5	7.5
20,000	54	10

PART 3 - EXECUTION

3.1 WATER ANALYSIS

- A. Perform an analysis of supply water to determine the type and quantities of chemical treatment needed to maintain the water quality as specified in "Performance Requirements" Article.

3.2 INSTALLATION

- A. Install treatment equipment level and plumb.
- B. Add cleaning chemicals as recommended by manufacturer.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Confirm applicable electrical requirements in Division 26 Sections for connecting electrical equipment.
- D. Ground equipment.
 1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

- A. Engage a factory-authorized service representative to perform startup service.
 - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.
 - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
 - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
- B. Test chemical feed piping as follows:
 - 1. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
 - 2. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 - 3. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
 - 4. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
 - 5. Repair leaks and defects with new materials and retest piping until satisfactory results are obtained.
 - 6. Prepare test reports, including required corrective action.

3.5 ADJUSTING

- A. Sample closed water systems at two-week intervals after start-up and prepare certified test report for each required water performance characteristic.
 - 1. Nitrite: 500- 750ppm.
 - 2. pH: 8.8 – 9.5
 - 3. Conductivity: 1000 – 3300 michromos
- B. Occupancy Adjustments: Within 12 months of Substantial Completion, perform two separate water analyses to prove that automatic chemical feed systems are maintaining water quality within performance requirements specified in this Section. Perform analyses at least 60 days apart. Submit written reports of water analysis.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.
 - 1. Train City of New York's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.
- B. Review manufacturer's safety data sheets for handling of chemicals.
- C. Review data in maintenance manuals, especially data on recommended parts inventory and supply sources and on availability of parts and service. Refer to DDC General Conditions "Contract Closeout."

- D. Review data in maintenance manuals, especially data on recommended parts inventory and supply sources and on availability of parts and service. Refer to DDC General Conditions "Operation and Maintenance Data."
- E. Schedule at least four hours of training with Owner, through Commissioner, with at least seven days' advance notice.

END OF SECTION 232500

SECTION 233113**METAL DUCTS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Single-wall round and flat-oval ducts and fittings.
3. Sheet metal materials.
4. Duct liner.
5. Sealants and gaskets.
6. Hangers and supports.
7. Seismic-restraint devices.

1.3 PERFORMANCE REQUIREMENTS

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct

Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.

- C. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

1.4 SUBMITTALS

- A. Product Data: For each type of the following products:

1. Liners and adhesives.
2. Sealants and gaskets.
3. Seismic-restraint devices.

- B. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- C. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment and vibration isolation.

- D. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.
6. Items penetrating finished ceiling including the following:

- a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.
- E. Welding certificates.
- F. Field quality-control reports.
- G. Mock-Ups: Provide full scale mock-up of the theater supply ductwork. Mock-up should include a partial section of the main duct branch and one full drop including flexible connection, diffuser, support anchors, etc.

1.5 QUALITY ASSURANCE

- A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
 - 3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004, Section 6.4.4 - "HVAC System Construction and Insulation."

PART 2 - PRODUCTS

2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-4, "Transverse (Girth) Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-5, "Longitudinal Seams - Rectangular Ducts," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 2, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 SINGLE-WALL ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Lindab Inc.
 - b. McGill AirFlow LLC.
 - c. SEMCO Incorporated.
 - d. Sheet Metal Connectors, Inc.
 - e. Spiral Manufacturing Co., Inc.
- B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- C. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Transverse Joints - Round Duct," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
- D. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Seams - Round Duct and Fittings," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
 - 2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
- E. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "90 Degree Tees and Laterals," and Figure 3-5, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.3 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 - 1. Galvanized Coating Designation: G90.
 - 2. Finishes for Surfaces Exposed to View (for paintable surfaces only): Mill phosphatized.
 - 3. Finishes for Surfaces Exposed to View (unpainted): Commissioner to provide finish. Contractor to provide samples for review.
- C. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.
- D. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.
- E. Aluminum Sheets: Comply with ASTM B 209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
- F. Factory- or Shop-Applied Antimicrobial Coating:
 - 1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating shall be applied to the exterior surface.
 - 2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
 - 3. Coating containing the antimicrobial compound shall have a hardness of 2H, minimum, when tested according to ASTM D 3363.
 - 4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
 - 5. Shop-Applied Coating Color: Black.
 - 6. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.
- G. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
 - 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- H. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.4 DUCT LINER

- A. Duct lining shall be roll form, 1" or 2" as called out in the drawings or specifications. It shall be installed on all interior surfaces of sheet metal ductwork where shown on the drawings or specifications.

- B. Duct lining shall be adhered by 100% covering of a fire retardant adhesive. The black acrylic face shall face the air stream. When width of duct exceeds 12" and also on sides when height exceeds 24", use non-ferrous mechanical fasteners in addition to 100% adhesive coverage. All transverse and longitudinal abutting edges of duct lining shall be sealed and lapped 3" with a heavy coat of adhesive, in accordance with the manufacturer's recommendations.
- C. Duct lining shall be fiberglass insulation with a surface acrylic EPA registered anti-microbial coating that will not support biological growth, and meets ASTM G21 and G22 specifications. This coating shall also guard against incursion of dust and dirt into the insulation. This coating shall be damage resistant which does not tear or abrade easily. Duct lining shall be capable of being cleaned per NAIMA Duct Cleaning Standards. Duct lining shall be black, 1.5 lb/ ft³ density meeting the requirements of NFPA 90A and 90B, FHC 25/50, and limited combustibility. Duct lining shall be suitable up to 5000 fpm. Duct lining and adhesives shall comply with ASTM E-84 and shall have a maximum flame spread rating of 25 and smoke rating of 50. Duct lining adhesive shall conform to ASTM C916 "Specifications for Adhesives for Duct Thermal Insulation". Fasteners shall comply with SMACNA HVAC Duct Construction Standards Article S2.11.
- D. Metal Nosings shall be securely installed over transversely-oriented liner edges facing the air stream at forward discharge and at any point where lined duct is preceded by unlined duct. When velocities exceed 4000 FPM, use metal nosings on every leading edge. Nosing may be formed on duct or be channel or zee attached by screws, rivets or welds.
- E. Duct lining shall conform to ASTM C1071 standard "Thermal and Acoustical Insulation" and have the following minimum sound absorption coefficients when tested in accordance with ASTM C423 and E795 procedures mounting type "A":

	Octave Band Center Frequency, Hz.						
	125	250	500	1000	2000	4000	NRC
1" thick	0.04	0.19	0.35	0.55	0.69	0.72	0.45
2" thick	0.12	0.42	0.76	0.85	0.85	0.83	0.72

F. Approved Duct Lining:

1. Permacote Linacoustic from Johns-Manville Corporation, Manville Mechanical Insulations Division, Denver, CO 800-334-2399 (NE, Midwest) 800-368-4431 (West, SE). or approved equal.

G. Mechanical Fasteners:

1. Comply with SMACNA HVAC Duct Construction Standards, Article S2.11.

H. Adhesives:

1. 15-141 from King Co., St. Louis, MO 314-772-9953
2. Tuffbond from Goodloe E. Moore, Inc., Danville, IL 800-331-1164
3. INC C-700 from Industrial Noise Control Inc., Addison, IL 312-620-1998

2.5 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
 2. Tape Width: 4 inches.
 3. Sealant: Modified styrene acrylic.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
 7. Service: Indoor and outdoor.
 8. Service Temperature: Minus 40 to plus 200 deg F.
 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
 10. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.
 2. Solids Content: Minimum 65 percent.
 3. Shore A Hardness: Minimum 20.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. VOC: Maximum 75 g/L (less water).
 7. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
 8. Service: Indoor or outdoor.
 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- D. Solvent-Based Joint and Seam Sealant:
1. Application Method: Brush on.
 2. Base: Synthetic rubber resin.
 3. Solvent: Toluene and heptane.
 4. Solids Content: Minimum 60 percent.
 5. Shore A Hardness: Minimum 60.
 6. Water resistant.
 7. Mold and mildew resistant.
 8. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 9. VOC: Maximum 395 g/L.
 10. Maximum Static-Pressure Class: 10-inch wg, positive or negative.
 11. Service: Indoor or outdoor.
 12. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- E. Flanged Joint Sealant: Comply with ASTM C 920.
1. General: Single-component, acid-curing, silicone, elastomeric.

2. Type: S.
 3. Grade: NS.
 4. Class: 25.
 5. Use: O.
 6. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- G. Round Duct Joint O-Ring Seals:
1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg and shall be rated for 10-inch wg static-pressure class, positive or negative.
 2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
 3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.6 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1, "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
- E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
- F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
 2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
 3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

2.7 SEISMIC-RESTRAINT DEVICES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Cooper B-Line, Inc.; a division of Cooper Industries.
 2. Ductmate Industries, Inc.
 3. Hilti Corp.
 4. Kinetics Noise Control.

5. Loos & Co.; Cableware Division.
 6. Mason Industries.
 7. TOLCO; a brand of NIBCO INC.
 8. Unistrut Corporation; Tyco International, Ltd.
- B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an evaluation service member of the ICC Evaluation Service.
1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.
- C. Channel Support System: Shop- or field-fabricated support assembly made of slotted steel channels rated in tension, compression, and torsion forces and with accessories for attachment to braced component at one end and to building structure at the other end. Include matching components and corrosion-resistant coating.
- D. Restraint Cables: ASTM A 492, stainless-steel cables with end connections made of cadmium-plated steel assemblies with brackets, swivel, and bolts designed for restraining cable service; and with an automatic-locking and clamping device or double-cable clips.
- E. Hanger Rod Stiffener: Reinforcing steel angle clamped to hanger rod.
- F. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install round and flat-oval ducts in maximum practical lengths.
- D. Install ducts with fewest possible joints.
- E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

- H. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
- I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.
- K. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "Duct Cleanliness for New Construction Guidelines."

3.2 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.3 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":

3.4 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.

2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1, "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.5 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes. Comply with SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems."
1. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
 2. Brace a change of direction longer than 12 feet.
- B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.
- C. Install cables so they do not bend across edges of adjacent equipment or building structure.
- D. Install cable restraints on ducts that are suspended with vibration isolators.
- E. Install seismic-restraint devices using methods approved by an agency acceptable to authorities having jurisdiction.
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.
- G. Drilling for and Setting Anchors:
1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Commissioner if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.

3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Set anchors to manufacturer's recommended torque, using a torque wrench.
5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

3.6 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.7 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 09 painting Sections.

3.8 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Leakage Tests:
 1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test. Provide a duct leakage test for all supply, return, and exhaust ductwork with a static-pressure class of 2-inches and higher.
 2. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
 3. Test for leaks before applying external insulation.
 4. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
 5. Give seven days' advance notice for testing.
 6. Static-Pressure Classes:
 - a. Supply Ducts without Terminal Units: 2-inch wg.
 - b. Supply Ducts (Upstream from Air Terminal Units): 3-inch wg.
 - c. Supply Ducts (Downstream from Air Terminal Units): 2-inch wg.
 - d. Return Duct sub-mains and branches (Negative Pressure): 2-inch wg.
 - e. Return Duct mains (Negative Pressure): 3-inch wg.
 - f. General and Toilet Exhaust Ducts (Negative Pressure): 2-inch wg.
 - g. Kitchen, Isolation and Fume Hood Exhaust Ducts (Negative Pressure): 5 inch wg
 - h. Other Exhaust Ducts (Negative Pressure): 3-inch wg.
 7. Leakage Class:

- a. Round Supply-Air Duct: 3 cfm/100 sq. ft. at 1-inch wg.
- b. Rectangular Supply-Air Duct: 6 cfm/100 sq. ft. at 1-inch wg.
- c. Flexible Supply-Air Duct: 6 cfm/100 sq. ft. at 1-inch wg.
- d. General and Toilet Exhaust Air Duct: 6 cfm/100 sq.ft. at 1 inch wg
- e. Other Exhaust Air Ducts: 3 cfm/100 sq.ft. at 1 inch wg.

8. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":

- a. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- b. Outdoor, Supply-Air Ducts: Seal Class A.
- c. Outdoor, Exhaust Ducts: Seal Class C.
- d. Outdoor, Return-Air Ducts: Seal Class C.
- e. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class B.
- f. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg : Seal Class A.
- g. Unconditioned Space, Exhaust Ducts: Seal Class C.
- h. Unconditioned Space, Return-Air Ducts: Seal Class B.
- i. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class C.
- j. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg : Seal Class B.
- k. Conditioned Space, Exhaust Ducts: Seal Class B.
- l. Conditioned Space, Return-Air Ducts: Seal Class C.

C. Duct System Cleanliness Tests:

- 1. Visually inspect duct system to ensure that no visible contaminants are present.
- 2. Test sections of metal duct system, chosen randomly by Owner, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
 - a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.

D. Duct system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.9 START UP

- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.10 DUCT SCHEDULE

- A. Fabricate ducts with galvanized sheet steel except as otherwise indicated:
- B. Supply Ducts:
 - 1. Ducts Connected to Reheat Coils :

- a. Pressure Class: Positive 3-inch wg.
- 2. Ducts Connected Air-Handling Units (AHU):
 - a. Pressure Class: Positive 4-inch wg.
- 3. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Positive 3-inch wg.
- C. Return Ducts:
 - 1. Ducts Connected to Air-Handling Units (AHU):
 - a. Pressure Class: Negative 4-inch wg.
 - 2. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Negative 3-inch wg.
- D. Exhaust Ducts:
 - 1. Ducts Connected to Fans Exhausting (ASHRAE 62.1, Class 1 and 2) Air:
 - a. Pressure Class: Negative 3-inch wg.
 - 2. Ducts Connected to Commercial Kitchen Hoods: Comply with NFPA 96.
 - a. Exposed to View: Type 304, stainless-steel sheet, No. 4 finish.
 - b. Concealed: Black iron: 16 US gage for areas up to 155 sq. in.; 14 US gage up to 200 sq. in.; 12 US gage up to 255 sq. in.; 10 US gage for greater areas.
 - c. Exterior: Type 304, stainless-steel sheet, No. 4 finish.
 - d. Welded seams and joints.
 - e. Pressure Class: Negative 5-inch wg.
 - 3. Ducts Connected to Dishwasher Hoods:
 - a. Type 304, stainless-steel sheet.
 - b. Exposed to View: No. 4 finish.
 - c. Concealed: No. 2D finish.
 - d. Welded seams and flanged joints with watertight EPDM gaskets.
 - e. Pressure Class: Positive or negative 3-inch wg.
 - 4. Vent (exhaust) ducts from gas-fired dryers: Double wall construction, UL listed, Schebler, Model PA or approved equal.
 - 5. Ducts Connected to Equipment Not Listed Above:
 - a. Pressure Class: Positive or negative 2-inch wg.
- E. Outdoor-Air (Not Filtered, Heated, or Cooled) Ducts:
 - a. Pressure Class: Positive or negative 3-inch wg.

F. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel.
2. Stainless-Steel Ducts:
 - a. Exposed to Airstream: Match duct material.
 - b. Not Exposed to Airstream: Match duct material.

G. Elbow Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Elbows."
 - a. Velocity 1000 fpm or Lower:
 - 1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
 - 2) Mitered Type RE 4 without vanes.
 - b. Velocity 1000 to 1500 fpm:
 - 1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
 - c. Velocity 1500 fpm or Higher:
 - 1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - 2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - 3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
 - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
3. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-3, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
 - 1) Velocity 1000 fpm or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.

- 2) Velocity 1000 to 1500 fpm: 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
- 3) Velocity 1500 fpm or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
- 4) Radius-to Diameter Ratio: 1.5.

- b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
- c. Round Elbows, 14 Inches and Larger in Diameter: Standing seam.

H. Branch Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-6, "Branch Connections."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Spin in.
2. Round and Flat Oval: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "90 Degree Tees and Laterals," and Figure 3-5, "Conical Tees." Saddle taps are permitted in existing duct.
 - a. Velocity 1000 fpm or Lower: 90-degree tap.
 - b. Velocity 1000 to 1500 fpm: Conical tap.
 - c. Velocity 1500 fpm or Higher: 45-degree lateral.

I. Liner:

1. All Supply, Return, and Exhaust Air Ducts a minimum distance of 25' downstream or upstream, respectively, of fan housing and on all outdoor mounted ducts.
2. Indoor, exposed supply and outdoor air.
3. All Supply and Return Air Ducts crossing occupied spaces to be lined in the entire area of occupied space.
4. First 15' downstream of indoor supply fans.
5. First 10' downstream of Powered VAV, VAV or CV boxes, or Pressure Independent Modules. Integral sound traps are an acceptable alternative.
6. Outside Air and Exhaust Plenums.
7. Transfer Ducts.
8. Lining should be two-inches (2") thick in duct located in mechanical equipment areas, four-inches (4") thick in fan casings and plenums and a minimum of one-inch (1") thick for all supply, return, and exhaust ducts.

END OF SECTION 233113

SECTION 233300
AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Backdraft and pressure relief dampers.
2. Barometric relief dampers.
3. Manual volume dampers.
4. Control dampers.
5. Fire dampers.
6. Smoke dampers.
7. Combination fire and smoke dampers.
8. Flange connectors.
9. Duct silencers.
10. Turning vanes.
11. Remote damper operators.
12. Duct-mounted access doors.
13. Flexible connectors.
14. Duct security bars.
15. Constant Air Regulator
16. Duct accessory hardware.

B. Related Sections:

1. Division 28 Section "Fire Detection and Alarm" for duct-mounted fire and smoke detectors.

1.3 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For each type of product indicated.

1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.
- C. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
 1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
 - a. Special fittings.
 - b. Manual volume damper installations.
 - c. Control damper installations.
 - d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
 - e. Duct security bars.
 - f. Wiring Diagrams: For power, signal, and control wiring.
- D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.
- E. Source quality-control reports.
- F. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

- C. Comply with AMCA 500-D testing for damper rating.
- D. Stair and elevator shaft vents and all outside air intakes and exhaust openings shall be equipped with motorized dampers not less than Class I motorized, leakage rated damper with a maximum leakage rate of 4 cfm/sf at 1.0 in water gauge when tested in accordance with AMCA 500D that will automatically close when the systems or spaces served are not in use.

1.5 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 - 1. Galvanized Coating Designation: G90.
 - 2. Exposed-Surface Finish (for paintable surfaces): Mill phosphatized.
- C. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2 finish for concealed ducts.
- D. Aluminum Sheets: Comply with ASTM B 209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- E. Extruded Aluminum: Comply with ASTM B 221, Alloy 6063, Temper T6.
- F. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- G. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Air Balance Inc.; a division of Mestek, Inc.
 - 2. Greenheck Fan Corporation.
 - 3. Pottorff; a division of PCI Industries, Inc.
 - 4. Ruskin Company.

- B. Description: Gravity balanced.
- C. Maximum Air Velocity: 2000 fpm.
- D. Maximum System Pressure: 1-inch wg.
- E. Frame: 0.052-inch- thick, galvanized sheet steel, with welded corners and mounting flange.
- F. Blades: Multiple single-piece blades, center-pivoted, maximum 6-inch width with sealed edges.
- G. Blade Action: Parallel.
- H. Blade Seals: Extruded vinyl, mechanically locked.
- I. Blade Axles:
 - 1. Material: Stainless steel.
 - 2. Diameter: 0.20 inch.
- J. Tie Bars and Brackets: Galvanized steel.
- K. Return Spring: Adjustable tension.
- L. Bearings: Steel ball or synthetic pivot bushings.
- M. Accessories:
 - 1. Adjustment device to permit setting for varying differential static pressure.
 - 2. Counterweights and spring-assist kits for vertical airflow installations.
 - 3. Electric actuators.
 - 4. Chain pulls.
 - 5. Screen Mounting: Front mounted in sleeve.
 - a. Sleeve Thickness: 20-gage minimum.
 - b. Sleeve Length: 6 inches minimum.
 - 6. Screen Mounting: Rear mounted.
 - 7. Screen Material: Galvanized steel.
 - 8. Screen Type: Insect.
 - 9. 90-degree stops.

2.3 BAROMETRIC RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Air Balance Inc.; a division of Mestek, Inc.
 - 2. Greenheck Fan Corporation.
 - 3. Pottorff, a division of PCI Industries, Inc.
 - 4. Ruskin Company.
- B. Suitable for horizontal or vertical mounting.

- C. Maximum Air Velocity: 2000 fpm.
- D. Maximum System Pressure: 2-inch wg .
- E. Frame: 0.064-inch- thick, galvanized sheet steel, with welded corners and mounting flange.
- F. Blades:
 - 1. Multiple, 0.025-inch- thick, roll-formed aluminum.
 - 2. Maximum Width: 6 inches.
 - 3. Action: Parallel.
 - 4. Balance: Gravity.
 - 5. Eccentrically pivoted.
- G. Blade Seals: Vinyl.
- H. Blade Axles: Galvanized steel.
- I. Tie Bars and Brackets:
 - 1. Material: Galvanized steel.
 - 2. Rattle free with 90-degree stop.
- J. Return Spring: Adjustable tension.
- K. Bearings: Stainless steel.
- L. Accessories:
 - 1. Flange on intake.
 - 2. Adjustment device to permit setting for varying differential static pressures.

2.4 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a division of Mestek, Inc.
 - b. McGill AirFlow LLC.
 - c. METALAIRE, Inc.
 - d. Pottorff; a division of PCI Industries, Inc.
 - e. Ruskin Company.
- 2. Standard leakage rating, with linkage outside airstream.
- 3. Suitable for horizontal or vertical applications.
- 4. Frames:
 - a. Hat-shaped, stainless-steel channels, 0.064-inch minimum thickness.
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:

- a. Multiple or single blade.
- b. Parallel- or opposed-blade design.
- c. Stiffen damper blades for stability.
- d. Stainless-steel, 0.064 inch thick.

6. Blade Axles: Stainless steel.

7. Bearings:

- a. Stainless-steel sleeve.
- b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

8. Tie Bars and Brackets: Galvanized steel.

B. Standard, Aluminum, Manual Volume Dampers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Air Balance Inc.; a division of Mestek, Inc.
- b. McGill AirFlow LLC.
- c. METALAIR, Inc.
- d. Pottorff; a division of PCI Industries, Inc.
- e. Ruskin Company.

2. Standard leakage rating, with linkage outside airstream.

3. Suitable for horizontal or vertical applications.

4. Frames: Hat-shaped, 0.10-inch- thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:

- a. Multiple or single blade.
- b. Parallel- or opposed-blade design.
- c. Stiffen damper blades for stability.
- d. Roll-Formed Aluminum Blades: 0.10-inch- thick aluminum sheet.
- e. Extruded-Aluminum Blades: 0.050-inch- thick extruded aluminum.

6. Blade Axles: Stainless steel.

7. Bearings:

- a. Stainless-steel sleeve.
- b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

8. Tie Bars and Brackets: Aluminum.

C. Low-Leakage, Steel, Manual Volume Dampers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Air Balance Inc.; a division of Mestek, Inc.

- b. McGill AirFlow LLC.
 - c. METALAIRE, Inc.
 - d. Pottorff; a division of PCI Industries, Inc.
 - e. Ruskin Company.
 - 2. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
 - 3. Suitable for horizontal or vertical applications.
 - 4. Frames:
 - a. Angle shaped.
 - b. Stainless-steel channels, 0.064 inch thick.
 - c. Mitered and welded corners.
 - d. Flanges for attaching to walls and flangeless frames for installing in ducts.
 - 5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Stainless, roll-formed steel, 0.064 inch thick.
 - 6. Blade Axles: Stainless steel.
 - 7. Bearings:
 - a. Stainless-steel sleeve.
 - b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
 - 8. Blade Seals: Neoprene.
 - 9. Jamb Seals: Cambered stainless steel.
 - 10. Tie Bars and Brackets: Galvanized steel.
 - 11. Accessories:
 - a. Include locking device to hold single-blade dampers in a fixed position without vibration.
- D. Low-Leakage, Aluminum, Manual Volume Dampers:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a division of Mestek, Inc.
 - b. McGill AirFlow LLC.
 - c. METALAIRE, Inc.
 - d. Pottorff; a division of PCI Industries, Inc.
 - e. Ruskin Company.
 - 2. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
 - 3. Suitable for horizontal or vertical applications.
 - 4. Frames: Angle-shaped, 0.10-inch- thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
 - 5. Blades:

- a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Roll-Formed Aluminum Blades: 0.10-inch- thick aluminum sheet.
 - d. Extruded-Aluminum Blades: 0.050-inch- thick extruded aluminum.
- 6. Blade Axles: Stainless steel.
- 7. Bearings:
 - a. Stainless-steel sleeve.
 - b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
- 8. Blade Seals: Neoprene.
- 9. Jamb Seals: Cambered stainless steel.
- 10. Tie Bars and Brackets: Galvanized steel.
- 11. Accessories:
 - a. Include locking device to hold single-blade dampers in a fixed position without vibration.
- E. Jackshaft:
 - 1. Size: 1-inch diameter.
 - 2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
 - 3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.
- F. Damper Hardware:
 - 1. Zinc-plated, die-cast core with dial and handle made of 3/32-inch- thick zinc-plated steel, and a 3/4-inch hexagon locking nut.
 - 2. Include center hole to suit damper operating-rod size.
 - 3. Include elevated platform for insulated duct mounting.

2.5 CONTROL DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Warming and Ventilating; a division of Mestek, Inc.
 - 2. Arrow United Industries; a division of Mestek, Inc.
 - 3. Greenheck Fan Corporation.
 - 4. McGill AirFlow LLC.
 - 5. METALAIR, Inc.
 - 6. Ruskin Company.
 - 7. Young Regulator Company.
- B. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
- C. Frames:

1. Angle shaped.
2. Stainless-steel channels, 0.064 inch thick.
3. Mitered and welded corners.

D. Blades:

1. Multiple blade with maximum blade width of 8 inches.
2. Opposed-blade design.
3. Stainless steel.
4. 0.064 inch thick.
5. Blade Edging: Closed-cell neoprene edging.
6. Blade Edging: Inflatable seal blade edging, or replaceable rubber seals.

E. Blade Axles: 1/2-inch- diameter; stainless steel; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings.

1. Operating Temperature Range: From minus 40 to plus 200 deg F.

F. Bearings:

1. Stainless-steel sleeve.
2. Dampers in ducts with pressure classes of 3-inch wg or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
3. Thrust bearings at each end of every blade.

2.6 FIRE DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

1. Air Balance Inc.; a division of Mestek, Inc.
2. Arrow United Industries; a division of Mestek, Inc.
3. Greenheck Fan Corporation.
4. Pottorff; a division of PCI Industries, Inc.
5. Prefco; Perfect Air Control, Inc.
6. Ruskin Company.

B. Type: Static and dynamic; rated and labeled according to UL 555 by an NRTL.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 4000-fpm velocity.

D. Fire Rating: 1-1/2 and 3 hours.

E. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.

F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.

1. Minimum Thickness: 0.052 or 0.138 inch thick, as indicated, and of length to suit application.
2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

- G. Mounting Orientation: Vertical or horizontal as indicated.
- H. Blades: Roll-formed, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.
- I. Horizontal Dampers: Include blade lock and stainless-steel closure spring.
- J. Heat-Responsive Device: Electric resettable link and switch package, factory installed, 212 deg F rated.

2.7 SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Air Balance Inc.; a division of Mestek, Inc.
 - 2. Greenheck Fan Corporation.
 - 3. Ruskin Company.
- B. General Requirements: Label according to UL 555S by an NRTL.
- C. Smoke Detector: Integral, factory wired for single-point connection.
- D. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.
- E. Blades: Roll-formed, horizontal, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.
- F. Leakage: Class I .
- G. Rated pressure and velocity to exceed design airflow conditions.
- H. Mounting Sleeve: Factory-installed, 0.052-inch- thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone caulking.
- I. Master control panel for use in dynamic smoke-management systems.
- J. Electric actuators: rated for application duty and UL rated high temperature actuators for smoke control systems, factory installed by damper manufacturer, tested and classified together under UL 555S at 250F temperature.
- K. Damper Motors: Two-position action.
- L. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 23 Section "Instrumentation and Control for HVAC."

3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. x lbf and breakaway torque rating of 300 in. x lbf.
7. Electrical Connection: 115 V, single phase, 60 Hz.

M. Provide Line Voltage Power for all Smoke Dampers.

2.8 COMBINATION FIRE AND SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Air Balance Inc.; a division of Mestek, Inc.
 2. Greenheck Fan Corporation.
 3. Ruskin Company.
- B. Type: Static and dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.
- C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 4000-fpm velocity.
- D. Fire Rating: As required.
- E. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.
- F. Heat-Responsive Device (Non-Smoke Purge Applications): Reusable Resettable Link and open-close indicator
- G. Heat-Responsive Device (Smoke Purge Applications): Reusable Resettable Link and open-close indicator, Electric temperature override control, and switch package, factory installed, with (2) relays.
- H. Smoke Detector: Integral, factory wired for single-point connection.
- I. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.
- J. Blades: Roll-formed, horizontal, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.
- K. Leakage: Class I.
- L. Rated pressure and velocity to exceed design airflow conditions.
- M. Mounting Sleeve: Factory-installed, 0.052-inch- thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone calking.

- N. Master control panel for use in dynamic smoke-management systems.
- O. Electric actuators: rated for application duty and UL rated high temperature actuators for smoke control systems, factory installed by damper manufacturer, tested and classified together under UL 555S at 250F temperature.
- P. Damper Motors: Two-position action.
- Q. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 23 Section "Instrumentation and Control for HVAC."
 - 3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
 - 4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf and breakaway torque rating of 150 in. x lbf.
 - 5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
 - 6. Nonspring-Return Motors: For dampers larger than 25 sq. ft., size motor for running torque rating of 150 in. x lbf and breakaway torque rating of 300 in. x lbf.
 - 7. Electrical Connection: 115 V, single phase, 60 Hz.
- R. Provide Line Voltage Power for all Fire and Smoke Dampers.

2.9 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following :
 - 1. Ductmate Industries, Inc.
 - 2. Nexus PDQ; Division of Shilco Holdings Inc.
 - 3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
- B. Description: Add-on, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.
- C. Material: Galvanized steel.
- D. Gage and Shape: Match connecting ductwork.

2.10 DUCT SILENCERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Industrial Noise Control, Inc.
2. McGill AirFlow LLC.
3. Vibro-Acoustics.

B. General Requirements:

1. Factory fabricated.
2. Fire-Performance Characteristics: Adhesives, sealants, packing materials, and accessory materials shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84.
3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

C. Shape:

1. Rectangular straight with splitters or baffles.
2. Round straight with center bodies or pods.
3. Rectangular elbow with splitters or baffles.
4. Round elbow with center bodies or pods.
5. Rectangular transitional with splitters or baffles.

D. Rectangular Silencer Outer Casing: ASTM A 653/A 653M, G90, galvanized sheet steel, 0.040 inch thick.

E. Round Silencer Outer Casing: ASTM A 653/A 653M, G90, galvanized sheet steel.

1. Sheet Metal Thickness for Units up to 24 Inches in Diameter: 0.034 inch thick.
2. Sheet Metal Thickness for Units 26 through 40 Inches in Diameter: 0.040 inch thick.
3. Sheet Metal Thickness for Units 42 through 52 Inches in Diameter: 0.052 inch thick.
4. Sheet Metal Thickness for Units 54 through 60 Inches in Diameter: 0.064 inch thick.

F. Inner Casing and Baffles: ASTM A 653/A 653M, G90 galvanized sheet metal, 0.034 inch thick, and with 1/8-inch- diameter perforations.

G. Special Construction:

1. Suitable for outdoor use.
2. High transmission loss.

H. Connection Sizes: Match connecting ductwork unless otherwise indicated.

I. Principal Sound-Absorbing Mechanism:

1. Controlled impedance membranes and broadly tuned resonators without absorptive media.
2. Film-lined type with fill material.
 - a. Fill Material: Moisture-proof nonfibrous material.
 - b. Erosion Barrier: Polymer bag enclosing fill, and heat sealed before assembly.
3. Lining: Fiberglass cloth.

J. Fabricate silencers to form rigid units that will not pulsate, vibrate, rattle, or otherwise react to system pressure variations. Do not use mechanical fasteners for unit assemblies.

1. Flange connections.
2. Suspended Units: Factory-installed suspension hooks or lugs attached to frame in quantities and spaced to prevent deflection or distortion.
3. Reinforcement: Cross or trapeze angles for rigid suspension.

K. Accessories:

1. Integral 3-hour fire damper with access door. Access door to be high transmission loss to match silencer.
2. Factory-installed end caps to prevent contamination during shipping.
3. Removable splitters.
4. Airflow measuring devices.

L. Source Quality Control: Test according to ASTM E 477.

1. Record acoustic ratings, including dynamic insertion loss and generated-noise power levels with an airflow of at least 2000-fpm face velocity.
2. Leak Test: Test units for airtightness at 200 percent of associated fan static pressure or 6-inch wg static pressure, whichever is greater.

2.11 TURNING VANES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Duro Dyne Inc.
3. METALAIR, Inc.
4. SEMCO Incorporated.

B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.

C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-3, "Vanes and Vane Runners," and 2-4, "Vane Support in Elbows."

E. Vane Construction: Double wall.

F. Vane Construction: Single wall for ducts up to 48 inches wide and double wall for larger dimensions.

2.12 REMOTE DAMPER OPERATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following :
 - 1. Pottorff; a division of PCI Industries, Inc.
 - 2. Ventfabrics, Inc.
 - 3. Young Regulator Company.
- B. Description: Cable system designed for remote manual damper adjustment.
- C. Tubing: Brass.
- D. Cable: Stainless steel.
- E. Wall-Box Mounting: Recessed, 2 inches deep.
- F. Wall-Box Cover-Plate Material: Stainless steel.

2.13 DUCT-MOUNTED ACCESS DOORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Warming and Ventilating; a division of Mestek, Inc.
 - 2. Ductmate Industries, Inc.
 - 3. Pottorff; a division of PCI Industries, Inc.
- B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-10, "Duct Access Doors and Panels," and 2-11, "Access Panels - Round Duct."
 - 1. Door:
 - a. Double wall, rectangular.
 - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
 - c. Vision panel.
 - d. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
 - e. Fabricate doors airtight and suitable for duct pressure class.
 - 2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
 - 3. Number of Hinges and Locks:
 - a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
 - b. Access Doors up to 18 Inches Square: Two hinges and two sash locks.
 - c. Access Doors up to 24 by 48 Inches: Three hinges and two compression latches.
 - d. Access Doors Larger Than 24 by 48 Inches: Four hinges and two compression latches with outside and inside handles.
- C. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.
2. Door: Double wall with insulation fill with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
4. Factory set at 10-inch wg.
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.
9. Insulation Fill: 1-inch- thick, fibrous-glass or polystyrene-foam board.

2.14 DUCT ACCESS PANEL ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following :
 1. Ductmate Industries, Inc.
 2. Flame Gard, Inc.
 3. 3M.
- B. Labeled according to UL 1978 by an NRTL.
- C. Panel and Frame: Minimum thickness 0.0428-inch stainless steel.
- D. Fasteners: Stainless steel. Panel fasteners shall not penetrate duct wall.
- E. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F.
- F. Minimum Pressure Rating: 10-inch wg, positive or negative.

2.15 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ductmate Industries, Inc.
 2. Duro Dyne Inc.
 3. Ventfabrics, Inc.
 4. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
- B. Materials: Flame-retardant or noncombustible fabrics.
- C. Coatings and Adhesives: Comply with UL 181, Class 1.
- D. Metal-Edged Connectors: Factory fabricated with a fabric strips 5-3/4 inches wide attached to 2 strips of 2-3/4-inch- wide, 0.028-inch- thick, galvanized sheet steel or 0.032-inch- thick aluminum sheets. Provide metal compatible with connected ducts.
- E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.

1. Minimum Weight: 26 oz./sq. yd..
2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
3. Service Temperature: Minus 40 to plus 200 deg F.

F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.

1. Minimum Weight: 24 oz./sq. yd..
2. Minimum Tensile Strength: 500 lbf/inch in the warp and 440 lbf/inch in the filling.
3. Service Temperature: Minus 50 to plus 250 deg F.

G. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.

1. Minimum Weight: 16 oz./sq. yd..
2. Tensile Strength: 285 lbf/inch in the warp and 185 lbf/inch in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F.

H. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.

1. Minimum Weight: 14 oz./sq. yd..
2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F.

I. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.

1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch movement at start and stop.

2.16 DUCT ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- C. Install backdraft dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- E. Set dampers to fully open position before testing, adjusting, and balancing.
- F. Install test holes at fan inlets and outlets and elsewhere as indicated.
- G. Install fire and smoke dampers according to UL listing.
- H. Install duct security bars. Construct duct security bars from 0.164-inch steel sleeve, continuously welded at all joints and 1/2-inch- diameter steel bars, 6 inches o.c. in each direction in center of sleeve. Weld each bar to steel sleeve and each crossing bar. Weld 2-1/2-by-2-1/2-by-1/4-inch steel angle to 4 sides and both ends of sleeve. Connect duct security bars to ducts with flexible connections. Provide 12-by-12-inch hinged access panel with cam lock in duct in each side of sleeve.
- I. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
 - 1. On both sides of duct coils.
 - 2. Upstream and downstream from duct filters.
 - 3. At outdoor-air intakes and mixed-air plenums.
 - 4. At drain pans and seals.
 - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 - 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 - 7. At each change in direction and at maximum 50-foot spacing.
 - 8. Upstream and downstream from turning vanes.
 - 9. Upstream or downstream from duct silencers.
 - 10. Control devices requiring inspection.

11. Elsewhere as indicated.

J. Install access doors with swing against duct static pressure.

K. Access Door Sizes:

1. One-Hand or Inspection Access: 8 by 5 inches.
2. Two-Hand Access: 12 by 6 inches.
3. Head and Hand Access: 18 by 10 inches.
4. Head and Shoulders Access: 21 by 14 inches.
5. Body Access: 25 by 14 inches.
6. Body plus Ladder Access: 25 by 17 inches.

L. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

M. Install flexible connectors to connect ducts to equipment.

N. For fans developing static pressures of 5-inch wg and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.

O. Install duct test holes where required for testing and balancing purposes.

P. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 233300

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 233416
CENTRIFUGAL HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
1. Airfoil centrifugal fans.
 2. Backward-inclined centrifugal fans.

1.3 PERFORMANCE REQUIREMENTS

- A. Operating Limits: Classify according to AMCA 99.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:
1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:
1. Certified fan performance curves with system operating conditions indicated.
 2. Certified fan sound-power ratings.
 3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 4. Material thickness and finishes, including color charts.
 5. Dampers, including housings, linkages, and operators.
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Wiring Diagrams: Power, signal, and control wiring.

2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
- D. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For centrifugal fans to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. AMCA Compliance: Products shall comply with performance requirements and shall be licensed to use the AMCA-Certified Ratings Seal.
- D. NEMA Compliance: Motors and electrical accessories shall comply with NEMA 1.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.

- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.7 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

1.8 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Belts: One set(s) for each belt-driven unit.

PART 2 - PRODUCTS

2.1 BACKWARD-INCLINED CENTRIFUGAL FANS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aerovent; a Twin City Fan Company.
 - 2. Greenheck
 - 3. Chicago Blower Corporation.
 - 4. Loren Cook Company.
- B. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure.
- C. Housings: Formed panels to make curved-scroll housings with shaped cutoff; with doors or panels to allow access to internal parts and components.
 - 1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
 - 2. Horizontally split, bolted-flange housing.
 - 3. Spun inlet cone with flange.
 - 4. Outlet flange.
- D. Backward-Inclined Wheels: Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange, backplate, backward-inclined blades welded or riveted to flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.

- E. Shafts: Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
 - 1. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil.
 - 2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
- F. Prelubricated and Sealed Shaft Bearings: Self-aligning, pillow-block-type ball bearings.
 - 1. Ball-Bearing Rating Life: ABMA 9, L10 at 120,000 hours.
 - 2. Roller-Bearing Rating Life: ABMA 11, L10 at 120,000 hours.
- G. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
 - 1. Service Factor Based on Fan Motor Size: 1.5.
 - 2. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
 - 3. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
 - 4. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
 - 5. Belt Guards: Fabricate to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame or equivalent, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
 - 6. Motor Mount: Adjustable for belt tensioning.
- H. Accessories:
 - 1. Scroll Access Doors: Shaped to conform to scroll, with quick-opening latches and gaskets.
 - 2. Cleanout Door: Bolted gasketed door allowing access to fan scroll, of same material as housing.
 - 3. Scroll Drain Connection: NPS 1 (DN 25) steel pipe coupling welded to low point of fan scroll.
 - 4. Companion Flanges: Rolled flanges for duct connections of same material as housing.
 - 5. Variable Inlet Vanes: With blades supported at both ends with two permanently lubricated bearings of same material as housing. Variable mechanism terminating in single control lever with control shaft for double-width fans.
 - 6. Discharge Dampers: Assembly with opposed blades constructed of two plates formed around and to shaft, channel frame, and sealed ball bearings; with blades linked outside of airstream to single control lever of same material as housing.
 - 7. Inlet Screens: Grid screen of same material as housing.
 - 8. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.
 - 9. Spark-Resistant Construction: AMCA 99.
 - 10. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
 - 11. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.
- I. Motors: Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 - 1. Enclosure Type: Totally enclosed, fan cooled.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install centrifugal fans level and plumb.
- B. Vibration- and seismic-control devices are specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
 - 1. Secure vibration and seismic controls to concrete bases using anchor bolts cast in concrete base.
- C. Install floor-mounting units on concrete bases designed to withstand, without damage to equipment, the seismic force required by authorities having jurisdiction. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- D. Install units with clearances for service and maintenance.
- E. Label fans according to requirements specified in Division 23 Section "Identification for HVAC Piping and Equipment."

3.2 CONNECTIONS

- A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Division 23 Section "Air Duct Accessories."
- B. Install ducts adjacent to fans to allow service and maintenance.
- C. Install line-sized piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain.
- D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.

4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 5. Adjust belt tension.
 6. Adjust damper linkages for proper damper operation.
 7. Verify lubrication for bearings and other moving parts.
 8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 9. Refer to Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
 10. Remove and replace malfunctioning units and retest as specified above.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain centrifugal fans. Refer to DDC General Conditions Section "Demonstration and Training."

END OF SECTION 23 34 16

SECTION 233600
AIR TERMINAL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Single-duct air terminal units.

1.3 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Hangers and supports and seismic restraints shall withstand the effects of gravity and seismic loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and ASCE/SEI 7.

1.4 SUBMITTALS

- A. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.

1. Air terminal units.
2. Liners and adhesives.
3. Sealants and gaskets.
4. Seismic-restraint devices.

- B. LEED Submittal:

1. Product Data for Prerequisite EQ 1: Documentation indicating that units comply with ASHRAE 62.1-2004, Section 5 - "Systems and Equipment."

- C. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.

- D. Equipment-Design Submittal:

1. Materials, fabrication, assembly, and spacing of hangers and supports.
- E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
 1. Ceiling suspension assembly members.
 2. Size and location of initial access modules for acoustic tile.
 3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
- F. Field quality-control reports.
- G. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01 Section "Operation and Maintenance Data," include the following:
 1. Instructions for resetting minimum and maximum air volumes.
 2. Instructions for adjusting software set points.

1.5 QUALITY ASSURANCE

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

PART 2 - PRODUCTS

2.1 SINGLE-DUCT AIR TERMINAL UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Titus.
 2. Anemostat
 3. Krueger
- B. Configuration: Diverting-damper assembly inside unit casing with control components inside a protective metal shroud.
- C. Casing: 0.034-inch steel, double wall.
 1. Casing Lining: Adhesive attached, 1-inch- thick, coated, fibrous-glass duct liner complying with ASTM C 1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E 84.
 - a. Cover liner with nonporous foil and perforated metal.
 2. Air Inlet: Round stub connection for duct attachment.
 3. Air Outlet: S-slip and drive connections.

4. Access: Removable panels for access to diverting damper and other parts requiring service, adjustment, or maintenance; with airtight gasket.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

- D. Diverter Assembly: Galvanized-steel gate, with polyethylene linear bearings.
- E. Integral sound attenuator: Provide terminal mounted sound attenuator as scheduled on the drawings.
- F. Electric Connection: Air terminal units will be provided for 120/1/60 power connection. Provide step down transformer 24 V for control circuit.
- G. Hydronic Coils: Copper tube, with mechanically bonded aluminum fins spaced no closer than 0.1 inch , and rated for a minimum working pressure of 200 psig and a maximum entering-water temperature of 220 deg F . Include control valve, manual air vent and drain valve.
- H. Electronic Controls: Microprocessor based controller will be provided by control contractor. Controller will be shipped to the air terminal factory and shall be mounted at the factory. Refer to Division 23 Section "Instrumentation and Control for HVAC" for additional information.

2.2 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Steel Cables: Galvanized steel complying with ASTM A 603.
- D. Air Terminal Unit Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

2.3 SOURCE QUALITY CONTROL

- A. Factory Tests: Test assembled air terminal units according to ARI 880.
 1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."
- B. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.
- C. Install wall-mounted thermostats.

3.2 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.
 - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes and for slabs more than 4 inches thick.
 - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.
 - 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hangers Exposed to View: Threaded rod and angle or channel supports.
- D. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.3 CONNECTIONS

- A. Connect ducts to air terminal units according to Division 23 Section "Metal Ducts."
- B. Make connections to air terminal units with flexible connectors complying with requirements in Division 23 Section "Air Duct Accessories."

3.4 IDENTIFICATION

- A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for equipment labels and warning signs and labels.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Tests and Inspections:
 - 1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
 - 2. Leak Test: After installation, fill water coils and test for leaks. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- D. Air terminal unit will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

- A. Perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
 - 3. Verify that controls and control enclosure are accessible.
 - 4. Verify that control connections are complete.
 - 5. Verify that nameplate and identification tag are visible.
 - 6. Verify that controls respond to inputs as specified.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain air terminal units.

END OF SECTION 233600

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 233713**DIFFUSERS, REGISTERS, AND GRILLES****PART 1 - GENERAL****1.1 PERFORMANCE REQUIREMENTS****A. LEED BUILDING REQUIREMENTS**

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

B. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY**A. Section Includes:**

1. Round ceiling diffusers.
2. Rectangular and square ceiling diffusers.
3. Perforated diffusers.
4. Louver face diffusers.
5. Linear bar diffusers.
6. Linear slot diffusers.
7. Ceiling-integral continuous diffusers.
8. Light troffer diffusers.
9. Modular core supply grilles.
10. Continuous tubular diffusers.
11. Adjustable bar registers and grilles.
12. Security registers and grilles.
13. Fixed face registers and grilles.
14. Linear bar grilles.

B. Related Sections:

1. Division 08 Section "Louvers and Vents" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.
2. Division 23 Section "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.4 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For each type of product indicated, include the following:

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

C. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.

D. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Revise subparagraphs below to suit Project.
2. Ceiling suspension assembly members.
3. Method of attaching hangers to building structure.
4. Size and location of initial access modules for acoustical tile.
5. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
6. Duct access panels.

F. Source quality-control reports.

PART 2 - PRODUCTS

2.1 CEILING DIFFUSERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Anemostat Products; a Mestek company.
2. Nailor Industries Inc.
3. Price Industries.
4. Titus.

B. Devices shall be specifically designed for variable-air-volume flows.

- C. Material: Steel.
- D. Finish: Baked enamel, color selected by Commissioner.
- E. Mounting: Duct connection.
- F. Dampers: Radial opposed blade.
- G. Accessories:
 - 1. Equalizing grid.
 - 2. Plaster ring.
 - 3. Safety chain.
 - 4. Wire guard.
 - 5. Sectorizing baffles.
 - 6. Operating rod extension.

2.2 CEILING LINEAR SLOT OUTLETS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Krueger.
 - 3. Nailor Industries Inc.
 - 4. Price Industries.
 - 5. Titus.
- B. Devices shall be specifically designed for variable-air-volume flows.
- C. Material: Steel.
- D. Finish: Baked enamel, color selected by Commissioner.
- E. Mounting: Concealed bracket.
- F. Damper Type: Adjustable opposed-blade assembly.

2.3 REGISTERS AND GRILLES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Anemostat Products; a Mestek company.
 - 2. Krueger.
 - 3. Nailor Industries Inc.
 - 4. Price Industries.
 - 5. Titus.
- B. Material: Steel.
- C. Finish: Baked enamel, color selected by Commissioner.
- D. Mounting: Concealed.
- E. Damper Type: Adjustable opposed blade.

2.4 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Commissioner for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 233713

SECTION 235100**BREECHINGS, CHIMNEYS, AND STACKS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
1. Listed double-wall vents and chimneys.

1.3 ACTION SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For the following:
1. Special gas vents.
 2. Guy wires and connectors.

- C. Shop Drawings: For vents, breechings, chimneys, and stacks. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, methods of field assembly, components, hangers and seismic restraints, and location and size of each field connection.
2. For installed products indicated to comply with design loads, include calculations required for selecting seismic restraints and structural analysis data signed and sealed by the qualified professional commissioner responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Manufacturer Seismic Qualification Certification: Submit certification that factory-fabricated breeching, chimneys, and stacks; accessories; and components will withstand seismic forces

defined in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
2. Dimensioned Outline Drawings of Breeching, Chimneys, and Stacks: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of anchorage devices on which the certification is based and their installation requirements.

C. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Source Limitations: Obtain listed system components through one source from a single manufacturer.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code—Steel," for hangers and supports and AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents, breechings, and stacks.
- D. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.

1.6 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.7 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, structural failures caused by expansion and contraction.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 LISTED SPECIAL GAS VENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Heat-Fab, Inc.
 2. Metal-Fab, Inc.
 3. Selkirk Inc.; Selkirk Metalbestos and Air Mate.
- B. Description: Double-wall metal vents tested according to UL 1738 and rated for 480 deg F continuously, with positive or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a 1-inch airspace.
- D. Inner Shell: ASTM A 959, Type 29-4C stainless steel OR as rated per boiler manufacture.
- E. Outer Jacket: Stainless steel.
- F. Accessories: Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as vent-pipe straight sections; all listed for same assembly.
1. Termination: Exit cone with drain section incorporated into riser.

2.2 GUYING AND BRACING MATERIALS

- A. Cable: Four galvanized, stranded wires of the following thickness:
1. Minimum Size: 1/4 inch in diameter.
 2. For ID Sizes 4 to 15 Inches: 5/16 inch.
 3. For ID Sizes 18 to 24 Inches: 3/8 inch.
 4. For ID Sizes 27 to 30 Inches: 7/16 inch.
 5. For ID Sizes 33 to 36 Inches: 1/2 inch.
 6. For ID Sizes 39 to 48 Inches: 9/16 inch.
 7. For ID Sizes 51 to 60 Inches: 5/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATION

- A. Listed Special Gas Vent: Condensing gas appliances.

3.3 INSTALLATION OF LISTED VENTS AND CHIMNEYS

- A. Locate to comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.
- B. Seal between sections of positive-pressure vents and grease exhaust ducts according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- C. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.
- D. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.
- E. Lap joints in direction of flow.
- F. Connect base section to foundation using anchor lugs of size and number recommended by manufacturer.
- G. Join sections with acid-resistant joint cement to provide continuous joint and smooth interior finish.
- H. Erect stacks plumb to finished tolerance of no more than 1 inch out of plumb from top to bottom.

3.4 INSTALLATION OF UNLISTED, FIELD-FABRICATED BREECHINGS AND CHIMNEYS

- A. Suspend breechings and chimneys independent of their appliance connections.
- B. Install, support, and restrain according to seismic requirements.
- C. Align breechings at connections, with smooth internal surface and a maximum 1/8-inch misalignment tolerance.
- D. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.
- E. Lap joints in direction of flow.

- F. Support breechings and chimneys from building structure with bolts, concrete inserts, steel expansion anchors, welded studs, C-clamps, or beam clamps according to manufacturer's written instructions.

3.5 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.
- B. Clean breechings internally, during and after installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth and apply touchup finish to match factory or shop finish.
- C. Provide temporary closures at ends of breechings, chimneys, and stacks that are not completed or connected to equipment.

END OF SECTION 235100

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 235216
CONDENSING BOILERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes packaged, factory-fabricated and -assembled, gas-fired, condensing boilers, trim, and accessories for generating hot water.

1.3 ACTION SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Calculations and vibration isolation base details, signed and sealed by a qualified professional engineer.
 - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 - b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.
 - 2. Wiring Diagrams: Power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

- A. **Manufacturer Seismic Qualification Certification:** Submit certification that boiler, accessories, and components will withstand seismic forces defined in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment." Include the following:
 - 1. **Basis for Certification:** Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 - 2. **Dimensioned Outline Drawings of Equipment Unit:** Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. **Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.**
- B. **Source quality-control test reports.**
- C. **Field quality-control test reports.**
- D. **Warranty:** Special warranty specified in this Section.
- E. **Other Informational Submittals:**
 - 1. **ASME Stamp Certification and Report:** Submit "A," "S," or "PP" stamp certificate of authorization, as required by authorities having jurisdiction, and document hydrostatic testing of piping external to boiler.

1.5 CLOSEOUT SUBMITTALS

- A. **Operation and Maintenance Data:** For boilers to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- D. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- E. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, "Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers."
- F. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to authorities having jurisdiction.

1.7 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Pulse-Combustion Boilers:

- a. Heat Exchanger Damaged by Thermal Shock: 10 years from date of Substantial Completion.
- b. Heat-Exchanger Corrosion: 7 years from date of Substantial Completion.
- c. Leakage and Materials: 7 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Lochinvar Corporation
 2. Patterson Kelley
 3. AERCO International.

2.2 MANUFACTURED UNITS

- A. Description: Factory fabricated and assembled.

1. The Condensing boiler shall be provided with a fully modulating burner. The 316L stainless steel combustion chamber shall be designed to drain condensate to the bottom of the heat exchanger assembly. A built in trap shall allow condensate to drain from the heat exchanger assembly.

- B. Heat Exchanger Section Design:

1. Configuration: Water tube design; 316L stainless steel water-tube heat exchanger
2. Number of Passes: Multiple pass; condensate shall drain to the bottom of the vessel.
3. Fully welded tube/header assembly. There shall be no banding material, bolts, gaskets or "O" rings in the header construction.
4. Tubes shall be precision welded to the headers. Tube sheet weld area shall not have overlapping tube weld deposits to help prevent cracking and breaking of welds.
5. ASME "H" stamp for 160-psi working pressure

- C. Combustion Chamber:

1. Equipped with insulation and flame observation port
2. Sealed and completely enclosed, independent of the outer jacket assembly, so that integrity of the outer jacket does not affect a proper seal.
3. Fuel supply: Natural gas or Liquid Propane where noted on the schedule.

- D. Casing:

1. Jacket: Heavy gauge primed and pre-painted sheet metal, with snap-in or interlocking closures and baked-enamel protective finish.
2. Insulation: Minimum 2-inch- (50-mm-) thick, mineral-fiber insulation surrounding the heat exchanger.
3. Combustion Chamber Access: Back, removable panel access
4. Sealed combustion for direct venting of the combustion and flue vent. Stainless Steel, category VI vent.
5. Boiler based designed to permit boiler to be installed on combustible floor.
6. Mounting Frame: Steel rails to mount assembled boiler package on concrete base.
 - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces. Seismic restraints by others.

7. Control Cabinet: Sheet metal casing shall cover all controls, gas train, and burner.

2.3 BURNER

- A. Burner: Shall be a premix design and constructed of high temperature stainless steel with a woven metal fiber outer covering to provide modulating firing rates. Boiler shall operate in a safe condition with gas supply pressures as low as 4 inches of water column. Manufacturers unable to provide stable operation at 4 inches water column shall provide a gas booster at the cost of the contractor or manufacture.
- B. Blower: Forward-curved centrifugal fan integral, directly driven by motor; fully modulating
 - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Gas Train: Control devices and modulating control sequence shall comply with requirements in IRI and UL. The gas valve shall be designed with negative pressure regulation and be equipped with a variable speed blower system to precisely control the fuel/air mixture to provide modulating boiler firing from 100% to 5.5% of full load capacity.
- D. Pilot: Intermittent-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.

2.4 TRIM

- A. Include devices sized to comply with ANSI B31.9, "Building Services Piping."
- B. Boiler shall be equipped with: a temperature/pressure gauge, high limit temperature control certified to UL353, ASME certified pressure relief valve, outlet water temperature sensor, return water temperature sensor, a UL353 certified flue temperature sensor, outdoor air sensor, low water flow protection, and built-in adjustable freeze protection.
- C. Safety Relief Valve: ASME rated set for 50-psi as standard with an optional range up to 160-psi; see drawings for safety relief valve rating.

2.5 CONTROLS

- A. Refer to Section "HVAC Instrumentation and Controls."
- B. Boiler operating controls shall include the following devices and features:
 - 1. The Boiler shall utilize a 24 VAC control circuit and components. The control system shall have an liquid crystal display for boiler set-up, status, and diagnostics. All components shall be easily accessed and serviceable from the front of the boiler jacket.
 - 2. The boiler shall feature the "Smart System" control with password security, outdoor air reset, pump delay with freeze protection, pump exercise, domestic hot water prioritization, night set-back, service reminder, time clock, data logging of run hours and space heating. A USB PC port connection provided standard for direct PC connection

3. The Boiler shall have the capability to accept a 0-10 VDC input connection from a BMS control of modulation or set-point, enable/disable of the boiler.
 4. The boiler shall have a built-in Cascade with sequencing options for "efficiency optimized" modulation logic; capable of rotation while maintaining modulation of up to eight boilers without utilization of an external controller. Supply voltage shall be 120volt/60hz/1-ph.
 5. Built-in controls for each boiler shall incorporate Open Protocol Modbus Communications. BACnet and LONworks communications shall be achieved by means of a job specific, boiler manufactures supplied and pre-programmed gateway device, if noted on the drawings.
- C. Interface to Boiler Control Panel: BMS can hardware to boiler control panel to monitor, control, and display boiler status and alarms. Microprocessor interface noted in item B.5 above.
1. Hardwired Points:
 - a. Monitoring: On/off status, common trouble alarm
 - b. Control: On/off operation, hot water supply temperature set-point adjustment.

2.6 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.
- B. The BOILER shall be equipped with two terminal strips for electrical connection.
1. The low votage connection board provided with 30 data points for safety and operating controls including: Alarm contacts, runtime contacts, louver proving switch, 2 flow switches, DHW tank thermostat, remote enable/disable (wall thermostat/zone control), system supply sensor, outdoor sensor, tank sensor, Modbus BMS signal and cascade control circuit.
 2. The high voltage terminal strip shall be provided for supply voltage. Supply voltage shall be 120v/1ph/60hz.
 3. The high voltage terminal strip plus integral relays are provided for independent pump control of up to (3) pumps: 1) System pump, 2) Boiler pump, 3) Domestic Hot Water pump.
 4. The System pump and Boiler pump dry contacts shall be sized for up to 1.5-hp @ 120/1/60 or 3-hp @ 240/1/50, or 30 amps.

2.7 CAPACITIES AND CHARACTERISTICS:

- A. Refer to plan schedules for additional information.
1. Heating Medium: Hot water.
 2. Design Water Pressure Rating: 160 psi
 3. Safety Relief Valve Setting: 50 psig standard. Optional range up to 160 psig
 4. Design Pressure Drop: 5 psig
 5. Minimum Efficiency: 94.6% AFUE
 6. Number of Passes: Multiple
 7. Blower: Variable Speed
 8. Electrical Characteristics: refer to plan schedules.

2.8 VENTING

- A. The exhaust vent must be UL Listed for use with Category III and IV appliances and compatible with operating temperatures up to 480°F, positive pressure, condensing flue gas service. UL-listed vents of Al 29-4C stainless steel must be used with boilers.
- B. The minimum exhaust vent duct size for each boiler is eight-inch diameter.
- C. Combustion-Air Intake: Boilers shall be capable of drawing combustion air from the outdoors via a metal or PVC duct connected between the boiler and the outdoors.
- D. The minimum sealed combustion air duct size for each boiler is eight-inch diameter.
- E. Common vent and common combustion air must be an available option for boiler installation. Consult manufacturer for common vent and combustion air sizing.
- F. Follow guidelines specified in manufacturer's venting guide.

2.9 SOURCE QUALITY CONTROL

- A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions and carbon monoxide in flue gas, and to achieve combustion efficiency. Perform hydrostatic testing.
- B. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.
 - 1. If boilers are not factory assembled and fire-tested, the local vendor is responsible for all field assembly and testing.
- C. Allow Owner access to source quality-control testing of boilers. Notify Commissioner fourteen days in advance of testing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
 - 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BOILER INSTALLATION

- A. Equipment Mounting: Install boilers on cast-in-place concrete equipment base(s) using elastomeric mounts. Comply with requirements for equipment bases specified in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
 - 1. Minimum Deflection: 1/4 inch.
 - 2. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
 - 3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 - 4. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
 - 5. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 6. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 7. Install on 4-inch- high concrete base designed to withstand, without damage to equipment, seismic force required by code.
- B. Install gas-fired boilers according to NFPA 54.
- C. Assemble and install boiler trim.
- D. Install electrical devices furnished with boiler but not specified to be factory mounted.
- E. Install control wiring to field-mounted electrical devices.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Division 23 Section "Hydronic Piping."
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.
- F. Connect hot-water piping to supply- and return-boiler tapings with shutoff valve and union or flange at each connection.

- G. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tapings with shutoff valve and union or flange at each connection.
- H. Install piping from safety relief valves to nearest floor drain.
- I. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- J. Boiler Venting:
 - 1. Install flue venting kit and combustion-air intake.
 - 2. Connect full size to boiler connections. Comply with requirements in Division 23 Section "Breechings, Chimneys, and Stacks."
- K. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- L. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Tests and Inspections:
 - 1. Perform installation and startup checks according to manufacturer's written instructions.
 - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
 - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature.
 - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other than normal occupancy hours for this purpose.
- E. Performance Tests:
 - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.

2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
3. Perform field performance tests to determine capacity and efficiency of boilers.
 - a. Test for full capacity.
 - b. Test for boiler efficiency at low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20 percent of full capacity. Determine efficiency at each test point.
4. Repeat tests until results comply with requirements indicated.
5. Provide analysis equipment required to determine performance.
6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are not adequate.
7. Notify Commissioner in advance of test dates.
8. Document test results in a report and submit to Commissioner.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain boilers. Refer to DDC General Conditions "Demonstration and Training."

END OF SECTION 235216

SECTION 236423
SCROLL WATER CHILLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:
 - 1. Packaged, air-cooled, electric-motor-driven, scroll water chillers.
- B. Related Sections:
 - 1. Division 28 Section "Refrigerant Detection and Alarm" for refrigerant monitors, alarms, supplemental breathing apparatus, and ventilation equipment interlocks.

1.3 DEFINITIONS

- A. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- B. DDC: Direct Digital Control
- C. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- D. IPLV: Integrated part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and referenced to ARI standard rating conditions.
- E. kW/Ton: The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons at any given set of rating conditions.
- F. NPLV: Nonstandard part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and intended for operating conditions other than the ARI standard rating conditions.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Scroll water chillers shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
 - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.5 ACTION SUBMITTALS

- A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
1. Performance at ARI standard conditions and at conditions indicated.
 2. Performance at ARI standard unloading conditions.
 3. Minimum evaporator flow rate.
 4. Refrigerant capacity of water chiller.
 5. Oil capacity of water chiller.
 6. Fluid capacity of evaporator.
 7. Fluid capacity of condenser.
 8. Characteristics of safety relief valves.
 9. Minimum entering condenser-water temperature.
 10. Minimum entering condenser-air temperature
 11. Performance at varying capacity with constant design entering condenser-air temperature. Repeat performance at varying capacity for different entering condenser-air temperatures from design to minimum in 5 deg F increments.
- B. LEED Submittals:
1. Product Data for Credit EA 4: Documentation indicating that equipment and refrigerants comply.
- C. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
1. Assembled unit dimensions.
 2. Weight and load distribution.
 3. Required clearances for maintenance and operation.
 4. Size and location of piping and wiring connections.
 5. Wiring Diagrams: For power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
1. Structural supports.
 2. Piping roughing-in requirements.
 3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
 4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Seismic Qualification Certificates: For water chillers, accessories, and components from manufacturers.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- D. Source quality-control test reports.
- E. Startup service reports.
- F. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.

1.8 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. ARI Certification: Certify chiller according to ARI 590 certification program.
- C. ARI Rating: Rate water chiller performance according to requirements in ARI 550/590, "Water Chilling Packages Using the Vapor Compression Cycle."
- D. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
- E. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- G. Comply with NFPA 70.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.
- B. Package water chiller for export shipping.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.11 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of water chillers that fail in materials or workmanship within specified period.
 - 1. Compressor Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PACKAGED AIR-COOLED WATER CHILLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Tandem
 - 2. Airstack
 - 3. ArctiChill
- B. The unit shall be a complete outdoor modular packaged water chilling plant equal to Tandem Chillers, Inc., designed for parallel evaporator flow, complete with scroll compressors, evaporators, air-cooled condensers, starters, weather tight control cabinets, duty/standby dual in-line pumps, glycol feeder and expansion tank all mounted on a heavy gauge steel base. The unit shall be provided with single-point power connections as indicated. Air-cooled chiller modules must be AHRI Performance Certified using scroll compressors to AHRI Standard 550/590 and be listed in the AHRI directory at ahridirectory.org. Rated performance at AHRI conditions must meet or exceed ASHRAE 90.1.
- C. The (3)-air cooled chiller modules and (1)-pump package module shall ship fully assembled from the factory. The assembly shall be pre-wired to the single point power panel and all piping shall be connected leaving a single water inlet and single water outlet connection. The entire assembly shall be mounted at the factory to a 6" base frame. The entire assembly with 6" base frame shall be rigged as a single piece to the roof. The base frame shall be suitable for mounting on contractor provided external spring vibration isolators.

- D. Compressors shall be direct drive, hermetic scroll type using HFC-410A as the refrigerant. Motor shall be induction type, hermetically sealed and suction gas cooled. Each compressor shall have crank case heaters installed.
- E. Condenser shall be air-cooled vertical discharge type, and shall be constructed of all-aluminum micro-channel coils. Coils shall be tested and made tight at a pressure 50% greater than maximum operating pressure, dehydrated and sealed at the factory. Fan section shall have weatherproof electric motor located inside of coil casing, protected from weather and direct connected to propeller type fan with rust-resistant coated blades and shaft. Motors shall have permanently lubricated ball bearings and built-in thermal overload protection. Provide guard over fan blades and guard over coil surface to protect coil from external damage. Fan speed control shall be provided to automatically balance condenser and compressor capacity and ensure proper condensing pressure without adjustment when unit is operating at a minimum capacity and to allow operation to low ambient outdoor temperature of 0°F.
- F. Evaporator shall be direct expansion type, brazed plate design. Evaporator shall be stamped in accordance with ASME Boiler and Pressure Vessel Code and fitted with sight glass and relief valve in accordance with ASHRAE Standard 15. Evaporator shall be provided with automatic refrigerant control, automatic oil return and solenoid valve for each circuit. Evaporator shall be provided with heat tape and thermostat and shall be thermally insulated to prevent sweating when operating at ambient air dew point up to 70°F. Evaporator capacity shall be based on 0.0001 fouling factor.
- G. Each module shall be comprised of dual independent refrigeration circuits, with dual condenser fans, compressor service valves on suction and discharge, liquid line shut-off valve, removable core filter dryer, liquid line sight glass with moisture indicator, refrigerant charging port and thermostatic expansion valve.
- H. Chiller base and frame shall be formed from powder-coated 12 gauge satin-coat steel with bolted assembly. Panels shall be factory-installed on chillers with main headers to simplify installation and reduce installation time.
- I. Provide a heavy gauge, coated wire mesh or screen around the equipment base below the condenser coils to protect the evaporator, compressors, valves and gauges.
- J. Chiller module assembly shall be completely piped at the factory. Refrigerant suction line shall be insulated with not less than one inch thick closed cell insulation, vapor sealed. The chilled water mains of each individual module shall be provided with a built in strainer with blow-down valve.
- K. Pump package module shall be supplied with duplex 7.5 HP pumps with expansion tank and glycol feeder. Pump manufacturer shall be Peerless Pump (or approved equal – Armstrong/Taco). One pump shall be operating and one pump shall be redundant. Pumps changeover shall be automatic and shall occur on pump failure. One pump can be serviced while the other is operating. Additional accessories; two suction side strainers, expansion tank, air purger (separator), single point power distribution panel.
- L. The unit shall be provided with factory piped and wired, enclosed, weather-proof control cabinet with high and low pressure cut-out, low water temperature cut-out, on-off switch, automatic pump-down controls, and solid state motor protection system. Unit protective functions include loss of chilled water flow, evaporator freezing, low refrigerant pressure, reverse rotation, compressor starting and running over current, phase loss, phase imbalance, and phase reversal. Unit shall be suitable for single point three-phase electrical connection, separate circuit to provide power to controls, with transformer. Unit shall have provisions for automatic restart after electric service interruption.

- M. Chiller module control panel shall be complete with door-mounted non-fused disconnect switch, chiller on-off switch, power on light, compressor fuses, compressor contactors, four-line liquid crystal display, 24VAC control transformer with primary and secondary fuses and chiller DDC controller module. Panel shall come pre-wired to compressors, safety controls, and sensors.
- N. Chiller module controller shall monitor all operating and fault conditions and display them in English.

- 1. IN A STAND-ALONE MODE - Chiller must be able to automatically operate in a stand-alone mode if the Remote Master fails or the communications cable is cut and automatically report back to the System Remote Master when the system communication is restored.

- a. Shall set compressor minimum run time, minimum off time, stage up and stage down time when operating in a stand-a-lone mode. Shall stage compressors on entering water temperature. Shall lead - lag compressors on a first in - first out basis and on compressor run time. Shall log compressor run hours and number of compressor starts.

- b. When an out-of-tolerance condition exists or a sensor fails the chiller shall stop the appropriate compressor and display the alarm fault condition on its display. (Note: If an optional network communication card is installed, the controller shall also signal the building BMS or DDC that an alarm condition exists.)

- i. Points that are sensed, displayed and used for alarm conditions - entering and leaving chilled water temperature, freeze temperature, suction and discharge refrigerant pressure each circuit, suction temperature each circuit (discharge temperature on heat reclaim and heat pump chillers), faults displayed and used for alarm conditions - chilled water flow switch and compressor internal protectors

- 2. IN A BANK MODE - Chiller shall receive commands from the System Remote Master to start and stop the chiller module compressors and shall communicate its operating and fault conditions back to the Remote Master.

- a. Remote Master shall control minimum run time, minimum off time, stage up and stage down-time.
- b. Remote Master shall lead - lag compressors based on the System first in - first out basis and on the System compressor run times to equalize the compressors across the Bank.
- c. When an out-of-tolerance condition exists the chiller shall stop the appropriate compressor and display the alarm fault condition, it shall communicate this alarm condition to the Remote Master and 1) Remote Master shall take this compressor out of its rotation. 2) It shall signal the building BMS or DDC that an alarm condition exists

A two-wire shielded twisted pair shall be field supplied to create a daisy-chain from the System Remote Master to all the chiller module control panels in the Bank.

- O. System Remote Master shall be provided to control the individual modules and circuits as one larger chiller, and:

1. Shall be enclosed in a NEMA 12 control panel complete with door mounted on-off switch, power on light, eight (8) line liquid crystal display, 24VAC control transformer with primary and secondary fuses.
2. Shall be provided a separate 120 volt power supply so that it is not electrically powered from any of the chillers.
3. Must be mounted indoors.
4. Must be able to communicate to the BMS or DDC in BACnet MS/TP.
5. Shall sense entering and leaving chilled water temperature and condenser entering and leaving water temperature. Options for chilled or condenser flow switches or flow sensors that shall display main header GPM on display.
6. Shall sense leaving chilled water temperature and through a "dead band program" stage on the number of compressors required to maintain the leaving water temperature. The dead band temperature width and stage up and down times shall be field adjustable to suit each chilling system.
7. Shall lead - lag the compressors in the Bank on a first in - first out basis in conjunction with run time. If a compressor is 24 hours ahead of the others it is held off to allow the balance of the compressors to catch up.
8. The Default Screen shall indicate entering and leaving chilled water temperature with an icon of a compressor for every compressor in the Bank. Each chiller shall be represented by two (2) icons, one above the other. Depending on the number of chillers in the Bank, a matching the number of double icons shall appear across the display. When the compressor is off the icon shall be an outline of a compressor and when the icon goes dark the compressor is operating.
9. If an "exclamation mark" is displayed inside of a compressor icon it indicates that the compressor has been taken out of service due to an alarm condition. By pressing the alarm key the type of failure shall be displayed. If an "X" is displayed inside a compressor icon the compressor is counting down to start.
10. Shall also control the Pump Module as part of the complete system.
11. Shall interface via BACnet MS/TP to provide the following points to the Building Automation System:
 - a. Remote Start/Stop
 - b. Chiller Run Status
 - c. Chiller Alarm
 - d. Chilled Water Supply Temperature Set Point/Reset
 - e. Leaving Chilled Water Temperature
 - f. Entering Chilled Water Temperature

g. Number of Stages On

- P. Low Sound Provisions: Each mechanical cooling module shall have oversized condenser coils and VFD controlled condenser fan motors that modulate to maintain head pressure for precise fan speed control. Fans shall have acoustically optimized fan blades utilizing a composite material. Compressors shall be wrapped with high-temperature acoustic covers consisting of a dense-design fabric exterior with quilted acoustical fiberglass interior and open edges sealed with silicone coated fabric with hook and loop closures.
- Q. Variable Flow Pumping: Pumps shall include variable frequency drives which are used to maintain system pressure.
- R. Motorized Isolation Valves: Motorized isolation valves shall be factory installed at each chiller module and shall close when the respective chiller is off.
- S. Pressure Differential Bypass: Pressure differential bypass shall be factory installed between the pump inlet and pump outlet. The pressure differential shall be controlled by the unit's controller.
- T. Factory Startup: The unit manufacturer shall provide a factory-trained representative to supervise refrigerant charging, controls setup, machine startup, and testing under actual load conditions. The representative shall also instruct operating personnel as to the proper care and operation of the chiller(s).
- U. Warranty: Chiller shall be provided with standard two (2) year parts-only warranty by the manufacturer. Parts-only warranty shall be extended to a total of five (5) years for compressors.
- V. Charging: The unit shall be cleaned, purged and charged completely with refrigerant and refrigerant oil, tested and made tight.
- W. Testing: The unit shall be tested as a whole for safe, controlled operation by the manufacturer's representative. A letter, on manufacturer's letterhead, attesting to the successful test shall be submitted to the Engineer before requesting final acceptance of the unit.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
 - 1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 WATER CHILLER INSTALLATION

- A. Install water chillers on support structure indicated. See Specification Section 230548 for information on required vibration isolation and noise control.

- B. Equipment Mounting: Install water chiller on concrete bases using restrained spring isolators. Comply with requirements in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
 - 1. Minimum Deflection: 1 inch.
 - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 - 3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Equipment Mounting: Install water chiller using restrained spring isolators. Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
 - 1. Minimum Deflection: 1 inch.
- D. Maintain manufacturer's recommended clearances for service and maintenance.
- E. Charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
- F. Install separate devices furnished by manufacturer and not factory installed.

3.3 CONNECTIONS

- A. Comply with requirements in Division 23 Section "Hydronic Piping" Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Comply with requirements in Division 23 Section "Refrigerant Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to chiller to allow service and maintenance.
- D. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve. Make connections to water chiller with a flange.
- E. Refrigerant Pressure Relief Valve Connections: For water chillers installed indoors, extend vent piping to the outside without valves or restrictions. Comply with ASHRAE 15.
- F. Connect each drain connection with a union and drain pipe and extend pipe, full size of connection, to floor drain. Provide a shutoff valve at each connection if required.
- G. PIPING CONNECTIONS:
 - 1. Use flexible connectors at chilled water connections.
 - 2. Verify chilled water IN and OUT, before piping.

3. Install thermometer wells, flow switches, pressure gauges, etc. as directed by manufacturer.
4. Install all necessary air vents, drains, controls, and auxiliary piping or accessories.

H. ELECTRICAL WIRING

1. Electrical Contractor shall provide all power wiring to chiller.
2. Electrical Contractor shall mount the chiller System Remote Master indoors and supply 120 volt power, and supply and install twisted shielded pair of control wires between the System Remote Master, pump package and all chillers in the bank.
3. HVAC Contractor shall provide all control wiring at chiller.

I. ACCESSORIES

1. Install accessories which are not factory mounted according to manufacturer's recommendations.

3.4 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
 2. Verify that pumps are installed and functional.
 3. Verify that thermometers and gages are installed.
 4. Operate water chiller for run-in period.
 5. Check bearing lubrication and oil levels.
 6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
 7. Verify proper motor rotation.
 8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
 9. Verify and record performance of chilled-water flow and low-temperature interlocks.
 10. Verify and record performance of water chiller protection devices.
 11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- D. Prepare a written startup report that records results of tests and inspections.

3.5 PIPING SYSTEM FLUSHING PROCEDURE

- A. Prior to connecting the chiller to the building chilled water loop, the piping shall be flushed with a detergent and hot water (110-130° F) mixture to remove previously accumulated dirt and other organic residue. In old piping systems with heavy encrustation of

inorganic materials consult a water treatment specialist for proper passivation and/or removal of these contaminants.

B. During the flushing a 30 mesh (max.) Y-strainers (or acceptable equivalent) shall be in place in the system piping and examined periodically as necessary to remove collected residue. The flushing process shall take no less than 6 hours or until the strainers, when examined after each flushing, are clean. Old systems with heavy encrustation shall be flushed for a minimum of 24 hours and may take as long as 48 hours before the filters run clean. Detergent and acid concentrations shall be used in strict accordance with the respective chemical manufacturers instructions. After flushing with the detergent and/or dilute acid concentrations the system loop shall be purged with clean water for at least one hour to ensure that all residual cleaning chemicals have been flushed out.

C. Prior to supplying water to the chiller the Water Treatment, specification shall be consulted for requirements regarding the water quality during chiller operation. The appropriate chiller manufacturer's service literature shall be available to the operator and/or service contractor and consulted for guidelines concerning preventative maintenance and off-season shutdown procedures.

3.6 Water Treatment Requirements

A. Supply water for the chilled water circuit shall be analyzed and treated by a professional water treatment specialist who is familiar with the operating conditions and materials of construction specified for the chiller's heat exchangers, headers and associated piping. Cycles of concentration shall be controlled such that recirculated water quality for modular chillers using 316 stainless steel brazed plate heat exchangers and carbon steel headers is maintained within the following parameters:

- | | |
|-------------------------------------|--------------------------------|
| 1. pH | Greater than 7 and less than 9 |
| 2. Total Dissolved Solids (TDS) | Less than 1000 ppm |
| 3. Hardness as CaCO ₃ | 30 to 500 ppm |
| 4. Alkalinity as Ca CO ₃ | 30 to 500 ppm |
| 5. Chlorides | Less than 200 ppm |
| 6. Sulfates | Less than 200 ppm |

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water chillers.

END OF SECTION 236423

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 237313**MODULAR INDOOR CENTRAL-STATION AIR-HANDLING UNITS****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. Section Includes:

1. Constant-air-volume, air-handling units.
2. Variable-air-volume, air-handling units.

1.03 DEFINITIONS

- A. DDCS – Direct Digital Control System

1.04 PERFORMANCE REQUIREMENTS

- A. Design vibration isolation and seismic-restraint details, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- B. Seismic Performance: Air-handling units shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.05 ACTION SUBMITTALS

- A. Product Data: For each air-handling unit indicated.

1. Unit dimensions and weight.
2. Cabinet material, metal thickness, finishes, insulation, and accessories.
3. Fans:
 - a. Certified fan-performance curves with system operating conditions indicated.
 - b. Certified fan-sound power ratings.
 - c. Fan construction and accessories.
 - d. Motor ratings, electrical characteristics, and motor accessories.

4. Certified coil-performance ratings with system operating conditions indicated.
5. Dampers, including housings, linkages, and operators.
6. Filters with performance characteristics.

B. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
2. Product Data for Prerequisite IEQ 1: Documentation indicating that units comply with ASHRAE 62.1, Section 5 - "Systems and Equipment."

C. Equipment-Design Submittal: For vibration isolation and seismic restraints indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.

1.06 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Mechanical-room layout and relationships between components and adjacent structural and mechanical elements.
2. Support location, type, and weight.
3. Field measurements.

B. Seismic Qualification Certificates: For air-handling units, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Source quality-control reports.

D. Field quality-control reports.

1.07 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For air-handling units to include in emergency, operation, and maintenance manuals.

1.08 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Filters: One set(s) for each air-handling unit.
 - 2. Gaskets: One set(s) for each access door.
 - 3. Fan Belts: One set(s) for each air-handling unit fan.

1.09 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. NFPA Compliance: Comply with NFPA 90A for design, fabrication, and installation of air-handling units and components.
- D. ARI Certification: Air-handling units and their components shall be factory tested according to ARI 430, "Central-Station Air-Handling Units," and shall be listed and labeled by ARI.
- E. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- F. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

- G. Comply with NFPA 70.

1.10 General Air Handling Units Testing and Standards

- A. Unit shall have the approval of one of the following agencies: Underwriters' Laboratories (UL), Electrical Testing Laboratories (ETL) or Canadian Standards Association (CSA). The air handler shall bear an appropriate label certifying that the unit has been designed and manufactured in strict accordance with the UL1995 Standard for air handling equipment. If the manufacturer cannot provide an ETL/UL sticker on the air handler, it will be the sole responsibility of the contractor to arrange for local ETL or UL approval and labeling.
- B. The Unit Electrical Panel(s) shall be built in strict accordance to NEC Standards and shall bear an appropriate label certifying compliance with UL Standard 508A.
- C. The air handling equipment manufacturer shall provide single source responsibility for all components for the unit whether specifically manufactured by the unit manufacturer or obtained outside and installed in the equipment with the exception of consumable items such as filters, fan belts, etc., or as specifically warranted by the product manufacturer such as motors, VFD's, etc.
- D. The attached schedules, tables and specifications are to be used as the selection criteria for the air handling equipment to include Air Flow Rates, External Static Pressures and Water Flow Rates. The following are to be equaled or bettered: Coil Face velocities and Filter Face Velocities. The following are to be met within 5% of specified values: internal air pressure drops, water pressure drops.
- E. Additional Testing and Quality Assurance as explained in individual component / item sections in the following paragraphs of this specification.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate sizes and locations of structural-steel support members, if any, with actual equipment provided.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Task

- 2. Energy Labs
- 3. Ventrol
- 4. Hunt Air

2.02 GENERAL

- A. Unit layout and configuration shall be as defined in project plans and schedule.
- B. Provide an integral base frame to support all sections of unit and raise unit for proper trapping. Contractor will be responsible for providing a housekeeping pad when unit base frame is not of sufficient height to properly trap unit. Unit base frames not constructed of galvanized steel shall be chemically cleaned and coated with both a rust-inhibiting primer and finished coat of rust-inhibiting enamel.
- C. Entire unit shall have a full perimeter base rail for structural rigidity and condensate trapping.
- D. Housing: Manufacturer's standard construction, gasketed and calked weathertight, double wall hinged access doors with neoprene gaskets and latching handles for inspection and access to internal parts, minimum 1-inch- (25-mm-) thick thermal insulation, knockouts for electrical and piping connections, exterior drain connection, and lifting lugs.
 - 1. Exterior: 18 gauge galvanized steel cabinet.
 - 2. Interior: 22 gauge inner perforated liner.
- E. Enthalpy Wheel (AHU-1,3,4 only):
 - 1. The airflow through the wheel will be in a counter flow direction. The wheel is ARI certified and is constructed of an aluminum substrate with a desiccant coating. The cassette will have no maintenance bearings, field adjustable purge sector, bulb type non-contact seals and panelized construction. The wheel will be removable from the unit for maintenance through a screw on access panel. Wheel motor shall be equipped with a variable speed drive.
- F. Supply and Exhaust Fans: Plenum type **spring isolators** and flexible duct connections.
 - 1. Motor and Drive: Direct drive Inverter Duty Motor.
 - 2. VFDs shall be provided for the supply and exhaust fans.
- G. Filters: MERV 13 for outside air filtration. MERV 8 for supply and return air filtration.
- H. Coils: Aluminum fins, copper tubes with stainless steel drain pan. Cooling coils shall be selected for use with 40% propylene. Hot water reheat coils shall be selected for use with water.
- I. Airside Economizer: AHU-1,3,4 shall be provided with wheel bypass dampers for air side economizer.
- J. Dampers: Shall be tested in accordance with AMCA standard 500. Leakage rates shall not exceed 10 cfm/sq ft at 4 inch w.g. level. AHU-1 shall be provided with supply air, exhaust air, wheel bypass dampers and re-circ damper. AHU-3,4 shall be provided with outside air, exhaust air dampers and mixed air dampers.

- K. Wiring: Fabricate units with space within housing for electrical conduits. Wire motors and controls so only external connections are required during installation. Single point power connection for entire unit.
- L. Unit Controls: Unit manufacturer shall install DDCS contractor provided controls and sensors. Any sensors that the unit manufacturer is unable to mount and wire shall be installed in the field by the ATC Contractor.
- M. Warranty Period: 1 year for all parts (excluding belts and filters). Warranties are to begin 6-months from shipping or at start-up (whichever occurs first). Labor for the replacement parts during this time period is to be provided by the installing mechanical contractor. All freight costs for replacement parts are to be provided by the installing contractor.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine casing insulation materials and filter media before air-handling unit installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.
- C. Examine roughing-in for steam, hydronic, and condensate drainage piping systems and electrical services to verify actual locations of connections before installation.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Retain one of first two paragraphs below for floor-mounted units. Refer to Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for other types and applications of vibration-control devices.
- B. Equipment Mounting: Install air-handling units on concrete bases using restrained spring isolators. Secure units to anchor bolts installed in concrete bases. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete." Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- C. Equipment Mounting: Install air-handling unit using restrained spring isolators. Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."
- D. Suspended Units: Suspend and brace units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

- E. Arrange installation of units to provide access space around air-handling units for service and maintenance.
- F. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing, with new, clean filters.
- G. Install filter-gage, static-pressure taps upstream and downstream of filters. Mount filter gages on outside of filter housing or filter plenum in accessible position. Provide filter gages on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

3.03 CONNECTIONS

- A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.
- B. Comply with requirements for piping specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- C. Install piping adjacent to air-handling unit to allow service and maintenance.
- D. Connect piping to air-handling units mounted on vibration isolators with flexible connectors.
- E. Connect condensate drain pans using NPS 1-1/4, ASTM B 88, Type M copper tubing. Extend to nearest equipment or floor drain. Construct deep trap at connection to drain pan and install cleanouts at changes in direction.
- F. Hot- and Chilled-Water Piping: Comply with applicable requirements in Division 23 Section "Hydronic Piping." Install shutoff valve and union or flange at each coil supply connection. Install balancing valve and union or flange at each coil return connection.
- G. Connect duct to air-handling units with flexible connections. Comply with requirements in Division 23 Section "Air Duct Accessories."

3.04 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Leak Test: After installation, fill water and steam coils with water, and test coils and connections for leaks.
 - 2. Charge refrigerant coils with refrigerant and test for leaks.

3. Fan Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 4. Automatic-Roll-Filter Operational Test: Operate filters to demonstrate compliance with requirements. Test for leakage of unfiltered air while system is operating.
 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Air-handling unit or components will be considered defective if unit or components do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.05 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
1. Complete installation and startup checks according to manufacturer's written instructions.
 2. Verify that shipping, blocking, and bracing are removed.
 3. Verify that unit is secure on mountings and supporting devices and that connections to piping, ducts, and electrical systems are complete. Verify that proper thermal-overload protection is installed in motors, controllers, and switches.
 4. Verify proper motor rotation direction, free fan wheel rotation, and smooth bearing operations. Reconnect fan drive system, align belts, and install belt guards.
 5. Verify that bearings, pulleys, belts, and other moving parts are lubricated with factory-recommended lubricants.
 6. Verify that zone dampers fully open and close for each zone.
 7. Verify that face-and-bypass dampers provide full face flow.
 8. Verify that outdoor- and return-air mixing dampers open and close, and maintain minimum outdoor-air setting.
 9. Comb coil fins for parallel orientation.
 10. Verify that proper thermal-overload protection is installed for electric coils.
 11. Install new, clean filters.
 12. Verify that manual and automatic volume control and fire and smoke dampers in connected duct systems are in fully open position.
- B. Starting procedures for air-handling units include the following:
1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated rpm. Replace fan and motor pulleys as required to achieve design conditions.
 2. Measure and record motor electrical values for voltage and amperage.
 3. Manually operate dampers from fully closed to fully open position and record fan performance.
 4. Do not operate units for any purpose, temporary or permanent, until ductwork is clean, filters in place, bearings lubricated (if applicable), condensate properly trapped, piping connections verified and leak-tested, belts aligned and tensioned, all shipping braces removed, bearing set screws torqued, and fan has been test run under observation.

3.06 ADJUSTING

- A. Adjust damper linkages for proper damper operation.

- B. Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for air-handling system testing, adjusting, and balancing.

3.07 CLEANING

- A. After completing system installation and testing, adjusting, and balancing air-handling unit and air-distribution systems and after completing startup service, clean air-handling units internally to remove foreign material and construction dirt and dust. Clean fan wheels, cabinets, dampers, coils, and filter housings, and install new, clean filters.
- B. Unit shall be swept & vacuumed cleaned and then shrink-wrapped prior to shipment.

3.08 Delivery, Storage & Handling:

- A. Comply with manufacturer's installation instructions for rigging, unloading, and transporting units.
- B. Units shall ship fully assembled up to practical shipping and rigging limitations. Units not shipped fully assembled shall have tags and airflow arrows on each section to indicate location and orientation in direction of airflow. Shipping splits shall be clearly defined on submittal drawings. Cost associated with non-conformance to shop drawings shall be the responsibility of the manufacturer. Each section shall have lifting lugs and shipping skid for lifting and forklift transport to allow for field rigging and final placement of section.
- C. Deliver units to jobsite with fan motor(s), sheave(s), and belt(s) completely assembled and mounted in units.
- D. Unit shall be shipped in a clear shrink-wrap or stretch-wrap to protect unit from in-transit rain and debris per ASHRAE 62.1 recommendations.
- E. Installing contractor shall be responsible for storing AHU in a clean, dry place and protect from weather and construction traffic. Handle carefully to avoid damage to components, enclosures, and finish.

3.09 DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air-handling units.

END OF SECTION 237313

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 238126**SPLIT-SYSTEM AIR-CONDITIONERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes split-system air-conditioning and heat pump units consisting of separate evaporator-fan and compressor-condenser components. Units are designed for exposed or concealed mounting, and may be connected to ducts.

1.3 SUBMITTALS

- A. **LEED BUILDING SUBMITTAL REQUIREMENTS:**
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. **Product Data:** Include rated capacities, furnished specialties, and accessories for each type of product indicated. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.
- C. **Shop Drawings:** Diagram power, signal, and control wiring.
- D. **Samples for Initial Selection:** For units with factory-applied color finishes.
- E. **Field quality-control test reports.**
- F. **Operation and Maintenance Data:** For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.
- G. **Warranty:** Special warranty specified in this Section.

1.4 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

B. GENERAL REQUIREMENTS:

1. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

C. PERFORMANCE CRITERIA

1. All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.
2. Product Options: Drawings indicate size, profiles, and dimensional requirements of split-system units and are based on the specific system indicated. Refer to Division 01 Section "Product Requirements."
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
4. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
5. ASHRAE/IESNA 90.1-2004 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004, Section 6 - "Heating, Ventilating, and Air-Conditioning."

D. COORDINATION

1. Coordinate size and location of concrete bases for units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Filters: One set of filters for each unit.
 2. Fan Belts: One set of belts for each unit.

PART 2 - PRODUCTS

2.1 System Description:

- A. Variable Refrigerant Flow System: The heat pump air conditioning system shall be based on Mitsubishi Electric MXZ-B variable capacity multi-zone series. The system shall consist of two (2) or three (3) slim silhouette, compact, wall and/or floor mounted indoor fan coil sections with digital wireless remote controller, and/or ceiling suspended, ceiling recessed and/or low to mid profile ducted indoor units with a wired, wall mounted remote controller connected to a compact horizontal discharge outdoor unit which shall be of an inverter driven heat pump design.
- B. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Mitsubishi Electric
 - 2. Sanyo Fisher (U.S.A.) Corp..
 - 3. LG
- C. Refer to plans for exact Indoor unit model numbers. Models below are based on Mitsubishi as basis of design. Provide similar capacity and type for alternate approved manufacturer.
 - 1. Ceiling Recessed; SLZ-KA09NA, SLZ-KA12NA
- D. Outdoor unit model numbers are based on MXZ-3B30NA-1 (3:1) multi-zone systems. Provide similar capacity and type for alternate approved manufacturer.

2.2 Quality Assurance:

- A. The system components shall be tested by a Nationally Recognized Testing Laboratory (NRTL) and shall bear the ETL label.
- B. All wiring shall be in accordance with the National Electrical Code (N.E.C.).
- C. The units shall be rated in accordance with Air-conditioning Refrigeration Institute's (ARI) Standard 240 and bear the ARI Certification label.
- D. The units shall be manufactured in a facility registered to ISO 9001 and ISO 14001, which is a set of standards applying to product and manufacturing quality and environmental management and protection set by the International Standard Organization (ISO).
- E. A dry air holding charge shall be provided in the indoor section.
- F. System efficiency shall meet or exceed 14.5 SEER when part of a multi system (2:1 / 3:1).

2.3 Delivery, Storage and Handling

- A. Unit shall be stored and carefully handled according to the manufacturer's recommendations.

- B. The wireless controller shall be shipped separately.

2.4 Warranty

- A. The units shall have a manufacturer's parts and defects warranty for a period five (5) years from date of installation. The compressor shall have an extended warranty of seven (7) years from date of installation. If, during this period, any part should fail to function properly due to defects in workmanship or material, it shall be replaced or repaired at the discretion of the manufacturer. This warranty will not include labor.

2.5 Outdoor Units (Mitsubishi Basis of Design):

A. General:

The MXZ-B outdoor units shall be specifically designed to work with the MSZ-GE, MSZ-FE, MFZ-KD, SEZ-KD and SLZ-KA family of indoor units, as well as with the PLA-A18BA-4, PLA-A24BA-4, PCA-A24KA-4 and PEAD-A24AA-4 indoor models. The outdoor unit shall be completely factory assembled, piped and wired. Each unit shall be run tested at the factory prior to shipment. The table below shows the available outdoor and indoor combinations:

MXZ-3A30NA
9+9+12

B. Unit Cabinet:

1. The casing shall be fabricated of galvanized steel, Bonderized, finished with an electrostatically applied, thermally fused acrylic or polyester powder coating for corrosion protection. Assembly hardware shall be cadmium plated for weather resistance.
2. Cabinet color shall be Munsell 3Y 7.8/1.1.
3. Two (2) mild steel mounting feet, traverse mounted across the cabinet base pan, welded mount, providing four (4) slotted mounting holes shall be furnished. Assembly shall withstand lateral wind gust up to 155 MPH to meet applicable weather codes.

C. Fan:

1. The unit shall be furnished with a direct drive, high performance propeller type fan.
2. The condenser fan motor shall be a variable speed, direct current (DC) motor and shall have permanently lubricated bearings.
3. Fan speed shall be switch automatically according to the number of operating indoor units and the compressor operating frequency.
4. The fan motor shall be mounted with vibration isolation for quiet operation.
5. The fan shall be provided with a raised guard to prevent contact with moving parts.
6. The outdoor unit shall have horizontal discharge airflow.
7. Outdoor unit sound level shall not exceed:

Model	Cooling	Heating
MXZ-3B30NA-	49 dB(A)	49 dB(A)

D. Coil:

1. The outdoor unit coil shall be of nonferrous construction with lanced or corrugated plate fins on copper tubing.
2. The coil shall be protected with an integral guard.
3. Refrigerant flow from the outdoor unit to the indoor units shall be independently controlled by means of individual electronic linear expansion valves for each indoor unit.
4. Outdoor unit shall be pre-charged with sufficient R-410a refrigerant for up to one hundred and thirty-one (131) feet of refrigerant piping.
5. All refrigerant lines between outdoor and indoor units shall be of annealed, refrigeration grade copper tubing, ARC Type, meeting ASTM B280 requirements, individually insulated in twin-tube, flexible, closed-cell, CFC-free (ozone depletion potential of zero), elastomeric material for the insulation of refrigerant pipes and tubes with thermal conductivity equal to or better than 0.27 BTU-inch/hour per Sq Ft / °F, a water vapor transmission equal to or better than 0.08 Perm-inch and superior fire ratings such that insulation will not contribute significantly to fire and up to 1" thick insulation shall have a Flame-Spread Index of less than 25 and a Smoke-development Index of less than 50 as tested by ASTM E 84 and CAN / ULC S-102.
6. All refrigerant connections between outdoor and indoor units shall be flare type.

E. Compressor:

1. The compressor shall be a high performance, hermetic, inverter driven, variable speed, dual rotary type manufactured by Mitsubishi Electric Corporation.
2. The compressor motor shall be direct current (DC) type equipped with a factory supplied and installed inverter drive package.
3. The outdoor unit shall be equipped with a suction side refrigerant accumulator.
4. The compressor will be equipped with an internal thermal overload.
5. The compressor shall be mounted to avoid the transmission of vibration.

F. Manifold:

- 1.
2. The outdoor unit shall have manifold connections providing a separate set of flared fittings for each indoor unit per the table below:

Port Connections	A	B	C	D
MXZ-3B30NA-1	¼" Liquid ; 1/2" Gas	¼" Liquid 3/8" Gas	¼" Liquid 3/8" Gas	

[Some indoor unit combinations may require port adapters for proper connection]

G. Piping Requirements:

The outdoor unit must have the ability to operate within the following refrigerant piping and height limitations without the need for line size changes, traps or additional oil.

1. Piping Lengths:

Refrigerant Piping Data	Length to each indoor unit	Total piping length
MXZ-3B30NA-1	82 feet (Max)	230 feet (Max)

2. Height Differential:

Model	Indoor unit above outdoor unit	Indoor unit below outdoor unit
MXZ-3B30NA-1	49 feet (Max)	33 feet (Max)

H. Electrical:

1. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.
2. The unit shall be capable of satisfactory operation within voltage limits of 198 volts to 253 volts.
3. The outdoor unit shall be controlled by the microprocessors located in the indoor unit and in the outdoor unit communicating system status, operation, and instructions digitally over A-Control – a system directing that the indoor unit be powered directly from the outdoor unit using a 3-wire, 14 ga. AWG connection plus ground.
4. The outdoor unit shall be equipped with Pulse Amplitude Modulation (PAM) compressor inverter drive control for maximum efficiency with minimum power consumption.

2.6 Ceiling Recessed SLZ-KA**NA Indoor Units (Mitsubishi Basis of Design):

A. General:

The SLZ shall be a four-way cassette style indoor unit that recesses into the ceiling with a ceiling grille. The indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, an emergency operation function and a test run switch. Indoor unit and refrigerant pipes shall be charged with dehydrated air before shipment from the factory.

B. Unit Cabinet:

1. The cabinet shall be a compact 22-7/16" wide x 22-7/16" deep so it will fit within a standard 24" square suspended ceiling grid.
2. The cabinet panel shall have provisions for a field installed filtered outside air intake.
3. Four-way grille shall be fixed to bottom of cabinet allowing two, three or four-way blow.

C. Fan:

1. The indoor fan shall be an assembly with a turbo fan direct driven by a single motor.
2. The indoor fan shall be statically and dynamically balanced to run on a motor with permanently lubricated bearings.
3. The indoor fan shall consist of three (3) speeds, Low, Mid, and High.
4. The indoor unit shall have an adjustable air outlet system offering 4-way airflow, 3-way airflow, or 2-way airflow.
5. The auto air swing vanes shall be capable of automatically swinging up and down for uniform air distribution.

D. Filter:

1. Return air shall be filtered by means of a long-life washable filter.

E. Coil:

1. The indoor coil shall be of nonferrous construction with smooth plate fins on copper tubing.
2. The tubing shall have inner grooves for high efficiency heat exchange.
3. All tube joints shall be brazed with phos-copper or silver alloy.

4. The coils shall be pressure tested at the factory.
5. A condensate pan and drain shall be provided under the coil.
6. The unit shall include a condensate lift mechanism that will be able to raise drain water 19-3/4" inches above the condensate pan.
7. An optional drain pan level switch (DPLS1), designed to connect to the control board, shall be provided if required, and installed on the condensate pan to prevent condensate from overflowing.
8. Both refrigerant lines to the SLZ indoor units shall be insulated.

F. Electrical:

1. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.
2. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz).

G. Controls:

1. The control system shall consist of a minimum of one microprocessor on each indoor unit and one on the outdoor unit, interconnected by single non-polar two-wire cables. The microprocessor located in the indoor unit shall have the capability of monitoring return air temperature and indoor coil temperature, receiving and processing commands from a wireless or wired controller, providing emergency operation and controlling the outdoor unit. The control signal between the indoor and outdoor unit shall be pulse signal 24 volts DC. Indoor units shall have the ability to control supplemental heat via connector CN24 and a 12 VDC output.
2. For A-Control, a three (3) conductor 14 gauge AWG wire with ground shall provide power feed and bi-directional control transmission between the outdoor and indoor units. . If code requires a disconnect mounted near the indoor unit, a TAZ-MS303 3-Pole Disconnect shall be used – all three conductors must be interrupted.
3. The system shall be capable of automatic restart when power is restored after power interruption. The system shall have self-diagnostics ability, including total hours of compressor run time. Diagnostics codes for indoor and outdoor units shall be displayed on the wired controller panel.
4. Remote Controller
All remote controller needs to be ordered separately from the unit. Wireless, wall mounted remote controller kit (MHK1) The Wireless, wall mounted remote controller kit (MHK1) shall consist of a wireless, wall mounted controller (MRCH1), a wireless receiver (MIFH1) and a cable (MRC1) to connect the receiver to the indoor unit. The controller shall be white in color with a light-green LCD display and a backlight feature. The MRCH1 shall consist of four Function buttons below the display, and Increase/Decrease Set Temperature buttons and a Hold button to the right of the display. The controller shall have a built-in temperature sensor and a battery holder, using two AA alkaline batteries. Temperature shall be displayed in either Fahrenheit (°F) or Celsius (°C), and temperature changes shall be by increments of 1°F (0.5°C).
 - a. Linking to the wireless network shall be done from the receiver and from the remote controller. Communication shall be automatically restored after power resumes and after batteries are replaced.
 - b. The basic functions are:

Wireless, Wall Mounted Remote Controller Kit (MHK1)	
Item	Description
Number of Units Controllable	1 unit

Wireless, Wall Mounted Remote Controller Kit (MHK1)	
Item	Description
ON/OFF	Run and stop operation
Operation Mode	Switches between Cool/Drying/Auto/Fan/Heat.
Temperature Setting (Range and modes depend on connected unit model)	Controller general setpoint temperature range: Cool/Dry: 50°F-99°F Heat: 40°F-90°F Auto: 50°F-90°F Controller temperature range when connected to the SLZ/SUZ system: Cool/Dry: 67°F-87°F Heat: 63°F-83°F Auto: 67°F-83°F
Fan Speed Setting (Range and modes depend on connected unit model)	Hi/Mid-2/Mid-1/Low/Auto
Air Flow Direction Setting (Air flow direction settings depend on the unit model)	Air flow direction angles 100%-80%-60%-40%, Swing.
Dual Setpoint Control	Separate heating and cooling setpoints. Adjustable deadband from 2°F to 8°F. Automatically adjusts setpoints to ensure deadband. System changeover with dual setpoints.
Scheduling	5-2 and 5-1-1 schedules Separate Heat/Cool schedules Allows operation in AUTO with Scheduling setbacks and dual setpoint Simple temperature setting can be done up to 4 times one day in the week. The time can be set by the 15-minute interval. Remote controller shall be programmable as either a residential controller, which will offer residential scheduling options only; or as a commercial controller, which will offer commercial scheduling options only.
Optimal Start	Set occupied time and desired set temperature Remote controller learns when to start warm up or cool down so that space is at set temperature at start of occupied time
Operating Conditions Display	Setpoint and room temperature. Default sensing is at the remote controller. Installer setting to select at return air sensor. Automatically switches to return air sensor if communication to remote controller is lost Outdoor temperature and humidity (Requires optional air sensor MOS1)
Additional Functions	Hold Function Temporary Schedule Override Reset to factory default
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed

Wireless, Wall Mounted Remote Controller Kit (MHK1)	
Item	Description
Auto Lock Out Function	<p>Setting/releasing of simplified locking for remote control settings can be performed.</p> <ul style="list-style-type: none"> • Locking of all settings • Locking of ON/OFF setting • Locking of system setting (Heat, Cool, Off, Auto, etc.) • Locking of fan setting • Locking of temperature setting • Locking of Clock/Day/Schedule

- c. Two optional devices can be used with the MHK1 controller kit. These are, an outdoor air sensor (MOS1), which allows the display of the outdoor temperature and humidity, and a portable central controller (MCCH1), which can control up to 16 zones with On/Off, set temperature, heat/cool mode selection and auto-off timer.

2.7 System Descriptions: Mini-Split Systems

- A. The Air Conditioner system shall be a Mitsubishi Electric split system with Variable Speed Inverter Compressor technology. The system shall consist of a horizontal discharge, single phase outdoor unit, a matched capacity indoor section that shall be equipped with a wired wall mounted, wireless wall mounted and/or wireless hand held remote controller.
- B. Acceptable Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Mitsubishi Electric
 2. Sanyo Fisher (U.S.A.) Corp..
 3. LG

2.8 Outdoor Unit Capacity

- A. See table:

Model Numbers	Cooling BTU/h
PUY-A18NHA4	18,000
PUY-A24NHA4	24,000

2.9 Quality Assurance

- A. The units shall be tested by a Nationally Recognized Testing Laboratory (NRTL) and shall bear the ETL label.
- B. All wiring shall be in accordance with the National Electrical Code (N.E.C.) and local codes as required.

- C. The units shall be rated in accordance with Air-conditioning, Heating, and Refrigeration Institute's (AHRI) Standard 210 and bear the ARI Certification label.
- D. The units shall be manufactured in a facility registered to ISO 9001 and ISO 14001, which is a set of standards applying to environmental protection set by the International Standard Organization (ISO).
- E. A dry air holding charge shall be provided in the indoor section.
- F. The outdoor unit shall be pre-charged with R-410a refrigerant for 70 feet (20 meters) of refrigerant tubing.- PUY-42NHA4 for 100 feet (30 meters) of refrigerant tubing
- G. System efficiency shall meet or exceed SEER values below:

When used with Indoor Unit	Minimum SEER
PKA Wall Mounted Type	14.0

2.10 Delivery, Storage and Handling

- A. Unit shall be stored and handled according to the manufacturer's recommendations.
- B. The controller shall be shipped separately and shall be able to withstand 105°F storage temperatures and 95% relative humidity without adverse effect.

2.11 Outdoor Unit Design:

- A. The outdoor unit shall be compatible with the four different types of indoor units (PCA - ceiling suspending, PEA / PEAD – ducted, PKA - wall mounted and PLA - four way recessed ceiling cassette). The connected indoor unit shall be of the same capacity as the outdoor unit. Indoor unit Twinning is allowed as described in 3.02 below.
- B. Models PUY-A24NHA4 shall have the option to connect to two, one-half capacity, indoor units (PKA, PEA and/or PLA type), within the same confined space, to improve air distribution (total combined indoor unit capacity shall be equal to that of the outdoor unit).
- C. The outdoor unit shall be equipped with an electronic control board that interfaces with the indoor unit to perform all necessary operation functions.
- D. The outdoor unit shall be capable of cooling operation down to 0°F (-18°C) ambient temperature without additional low ambient controls (optional wind baffle shall be required).
- E. The outdoor unit shall be able to operate with a maximum height difference of 100 feet (30 meters) between indoor and outdoor units.

- F. System shall operate at up to a maximum refrigerant tubing length of 100 feet (30 meters) for the 12,000 and 18,000 and 165 feet (50 meters) for the 24,000, 30,000, 36,000, and 42,000 BTU/h units between indoor and outdoor units without the need for line size changes, traps or additional oil. Models PUY-A12/18/24/30/36NHA4 shall be pre-charged for a maximum of 70 feet (20 meters) of refrigerant tubing – PUY-A42NHA4 for 100 feet (30 meters).
- G. The outdoor unit shall be completely factory assembled, piped, and wired. Each unit must be test run at the factory.
- H. Outdoor unit sound level shall not exceed:

Model Numbers	Cooling
PUY-A18NHA4	48 dB(A)
PUY-A24NHA4	48 dB(A)

I. Cabinet

1. The casing shall be constructed from galvanized steel plate, finished with an electrostatically applied, thermally fused acrylic or polyester powder coating for corrosion protection and have a Munsell 3Y 7.8/1.1 finish.
2. Mounting feet shall be provided and shall be welded to the base of the cabinet and be of sufficient size to afford reliable equipment mount and stability.
3. Easy access shall be afforded to all serviceable parts by means of removable panel sections.
4. The fan grill shall be of ABS plastic.
5. Cabinet mounting and construction shall be sufficient to withstand 155 MPH wind speed conditions for use in Hurricane condition areas. Mounting, base support, and other installation to meet Hurricane Code Conditions shall be by others.

J. Fan

1. Models PUY-A18/24NHA4 shall be furnished with a single DC fan motor. Model PUY-A42NHA4 shall have two (2) DC fan motors.
2. The fan blade(s) shall be of aerodynamic design for quiet operation, and the fan motor bearings shall be permanently lubricated.
3. The outdoor unit shall have horizontal discharge airflow. The fan shall be mounted in front of the coil, pulling air across it from the rear and dispelling it through the front. The fan shall be provided with a raised guard to prevent external contact with moving parts

K. Coil

1. The L shaped condenser coil shall be of copper tubing with flat aluminum fins to reduce debris build up and allow maximum airflow. The coil shall be protected with an integral metal guard.
2. Refrigerant flow from the condenser shall be controlled by means of an electronic linear expansion valve (LEV) metering device. The LEV shall be controlled by a microprocessor controlled step motor.
3. All refrigerant lines between outdoor and indoor units shall be of annealed, refrigeration grade copper tubing, ARC Type, meeting ASTM B280 requirements, individually insulated in twin-tube, flexible, closed-cell, CFC-free (ozone depletion potential of zero),

elastomeric material for the insulation of refrigerant pipes and tubes with thermal conductivity equal to or better than 0.27 BTU-inch/hour per Sq Ft / °F, a water vapor transmission equal to or better than 0.08 Perm-inch and superior fire ratings such that insulation will not contribute significantly to fire and up to 1" thick insulation shall have a - Flame-Spread Index of less than 25 and a Smoke-development Index of less than 50 as tested by ASTM E 84 and CAN / ULC S-102.

4. Compressor

- a. The compressor for models PUY-A12/18/24/30/36NHA4 shall be a DC twin-rotor rotary compressor with Variable Speed Inverter Drive Technology. The compressor for model PUY-A42NHA4 shall be a Frame Compliant Scroll compressor with Variable Speed Inverter Drive Technology.
- b. The compressor shall be driven by inverter circuit to control compressor speed. The compressor speed shall dynamically vary to match the room load for significantly increasing the efficiency of the system which shall result in significant energy savings
- c. To prevent liquid from accumulating in the compressor during the off cycle, a minimal amount of current shall be automatically, intermittently applied to the compressor motor windings to maintain sufficient heat to vaporize any refrigerant. No crankcase heater is to be used.
- d. The outdoor unit shall have an accumulator and high pressure safety switch. The compressor shall be mounted to avoid the transmission of vibration.

5. Electrical

- a. The electrical power of the unit shall be 208volts or 230 volts, single phase, 60 hertz. The unit shall be capable of satisfactory operation within voltage limits of 187 volts to 253 volts.
- b. Power for the indoor unit shall be supplied from the outdoor unit via Mitsubishi Electric A-Control using three (3) fourteen (14) gauge AWG conductors plus ground wire connecting the units.
- c. The outdoor unit shall be controlled by the microprocessor located in the indoor unit. The control signal between the indoor unit and the outdoor unit shall be pulse signal 24 volts DC. The unit shall have Pulse Amplitude Modulation circuit to utilize 98% of input power supply.
- d. Operating Range:

Operating Range		Indoor Air Intake Temperature	Outdoor Air Intake Temperature
Cooling	Maximum	D.B. 95°F (35°C) W.B. 71°F (21.7°C)	D.B. 115°F (46°C)
	Minimum	D.B. 67°F (19.4°C) W.B. 57°F (13.9°C)	D.B. 0°F (-18°C)*

* Requires wind baffle – without wind baffle: D.B. 23°F (-5°C)

Unit shall be able to provide 100% capacity when operating at 0°F outdoor air temperature and a wind baffle is used.

2.12 PKA Wall Mounted Type

- A. The indoor unit shall be factory assembled, wired and tested. Contained within the unit shall be all factory wiring and internal piping, control circuit board and fan motor. The unit, in conjunction with the wired wall-mounted controller, wireless wall-mounted controller or wireless handheld controller, shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart

function, and a test run switch. Indoor unit and refrigerant pipes shall be purged with dry nitrogen before shipment from the factory.

Wall Mounted Type Indoor Units	
Model Number	Cooling Capacity
PKA-A18HA4	18,000
PKA-A24KA4	24,000

- B. Unit Cabinet: The cabinet shall be formed from high strength molded plastic with smooth finish, flat front panel design with access for filter. Cabinet color shall be white – Munsell 1.0Y 9.2/0.2. The unit shall be wall mounted by means of a factory supplied, pre-drilled, mounting plate.
- C. Fan: The indoor unit fan shall be high performance, double inlet, forward curve, direct drive sirocco fan with a single motor. The fans shall be statically and dynamically balanced and run on a motor with permanently lubricated bearings. The indoor fan shall consist of three (3) speeds: Low, Mid, and Hi and Auto. The fan shall have a selectable Auto fan setting that will adjust the fan speed based on the difference between controller set-point and space temperature.

1. Indoor unit sound level shall not exceed the levels below:

Model Number	Low Speed	Mid Speed	High Speed
PKA-A18HA4	36 dB(A)	40 dB(A)	43 dB(A)
PKA-A24KA4	39 dB(A)	42 dB(A)	45 dB(A)

- D. Vane: There shall be a motorized horizontal vane to automatically direct air flow in a horizontal and downward direction for uniform air distribution. The horizontal vane shall significantly decrease downward air resistance for lower sound levels, and shall close the outlet port when operation is stopped. There shall also be a set of vertical vanes to provide horizontal swing airflow movement.
- E. Filter: Return air shall be filtered by means of an easily removable washable filter.
- F. Coil: The evaporator coil shall be of nonferrous construction with pre-coated aluminum strake fins on copper tubing. The multi-angled heat exchanger shall have a modified fin shape that reduces air resistance for a smoother, quieter airflow. All tube joints shall be brazed with PhosCopper or silver alloy. The coils shall be pressure tested at the factory. A condensate pan and drain shall be provided under the coil. An optional drain pan level switch (DPLS1), designed to connect to the control board, shall be provided if required, and installed on the condensate pan to prevent condensate from overflowing. A condensate mini-pump shall be provided to provide a means of condensate disposal when a gravity drain is not available.
- G. Electrical: The electrical power of the unit shall be 208 volts or 230 volts, 1 phase, 60 hertz. The system shall be capable of satisfactory operation within voltage limits of 187 volts to 253 volts. The power to the indoor unit shall be supplied from the outdoor unit, using the Mitsubishi Electric A-Control system. For A-Control, a three (3) conductor AWG-14 wire with ground shall provide power feed and bi-directional control transmission between the outdoor and indoor units.

- H. Performance: Each system shall perform in accordance to the ratings shown in the table below. Cooling performance shall be based on 80°F DB, 67°F WB (26.7°C DB, 19.4°C WB) for the indoor unit and 95°F DB, 75°F WB (35°C DB, 29.3°C WB) for the outdoor unit.

System Model Number	Cooling Capacity Btu/h	TPW	SEER	CFM (Hi/Dry)
PKA-A18HA4	8,000 – 18,000	2,240	15.3	425
PKA-A24KA4	12,000 – 24,000	2,270	17.0	775

TPW = Total Power Watts

- I. System Control: The control system shall consist of a minimum of two (2) microprocessors, one on each indoor and outdoor unit, interconnected by a single non-polar two-wire cable. The microprocessor located in the indoor unit shall have the capability of monitoring return air temperature and indoor coil temperature, receiving and processing commands from a wireless or wired controller, providing emergency operation and controlling the outdoor unit. The control signal between the indoor and outdoor unit shall be pulse signal 24 volts DC. Indoor units shall have the ability to control supplemental heat via connector CN152 and a 12 VDC output.
- J. The indoor unit control board shall have auxiliary control contact connectors to provide:

Function / Model	PCA	PEA / PEAD	PKA	PLA
CN-2L – Lossnay Control	X	X	X	X
CN-24(152) Back-up Heat	X	X	X	X
CN-32 – Remote Switch	X	X	X	X
CN-51 – Central Control	X	X	X	X
CN-105 – IT Terminal	X	X	X	X

X = Included

K. Remote Controllers

1. All remote controllers need to be ordered separately from the unit.

L. Wireless, wall mounted remote controller kit (MHK1)

1. The Wireless, wall mounted remote controller kit (MHK1) shall consist of a wireless, wall mounted controller (MRCH1), a wireless receiver (MIFH1) and a cable (MRC1) to connect the receiver to the indoor unit. The controller shall be white in color with a light-green LCD display and a backlight feature. The MRCH1 shall consist of four Function buttons below the display, and Increase/Decrease Set Temperature buttons and a Hold button to the right of the display. The controller shall have a built-in temperature sensor and a battery holder, using two AA alkaline batteries. Temperature shall be displayed in either Fahrenheit (°F) or Celsius (°C), and temperature changes shall be by increments of 1°F (0.5°C).
2. Linking to the wireless network shall be done from the receiver and from the remote controller. Communication shall be automatically restored after power resumes and after batteries are replaced.

M. Wired Remote Controller (PAR-21MAA)

1. The Wired Remote Controller (PAR-21MAA) shall be approximately 5" x 5" in size and white in color with a light-green LCD display. The PAR-21MAA shall support a selection from multiple languages (Spanish, German, Japanese, Chinese, English, Russian, Italian, or French) for display information. There shall be a built-in weekly timer with up to 8 pattern settings per day. The controller shall consist of an On/Off button, Increase/Decrease Set Temperature buttons, a Cool/Auto/Fan/Dry mode selector, a Timer Menu button, a Timer On/Off button, Set Time buttons, a Fan Speed selector, a Ventilation button, a Test Run button, and a Check Mode button. The controller shall have a built-in temperature sensor. Temperature shall be displayed in either Fahrenheit (°F) or Celsius (°C), and Temperature changes shall be by increments of 1°F (0.5°C). The PAR-21MAA shall have the capability of controlling up to a maximum of 16 systems, as a group with the same mode and set-point for all, at a maximum developed control cable distance of 1,500 feet (500 meters).
2. The control voltage from the wired controller to the indoor unit shall be 12/24 volts, DC. Field wiring shall run directly from the indoor unit to the wall mounted controller with no splices. Up to two wired controllers shall be able to be used to control one unit.
3. The basic functions are:

Wired Remote Controller (PAR-21MAA)	
Item	Description
Number of Units Controllable	16 units as 1 group
ON/OFF	Run and stop operation
Operation Mode	Switches between Cool/Dry/Auto/Fan/Heat.
Temperature Setting (Range and modes depend on connected unit model)	Sets the setpoint temperature in the following range Cool/Dry: 67°F-87°F Heat: 63°F-83°F Auto: 67°F-83°F
Fan Speed Setting (Range and modes depend on connected unit model)	Hi/Mid-2/Mid-1/Low/Auto
Air Flow Direction Setting (Air flow direction settings depend on the unit model)	Air flow direction angles 100%-80%-60%-40%, Swing.
Weekly Scheduler	ON/OFF/Temperature setting can be done up to 8 times one day in the week. The time can be set by the 1-minute interval.
Operating Conditions Display	Setpoint and room temperature. Sensing can be done at the remote controller or the indoor unit depending on the indoor unit dipswitch setting Liquid, discharge, indoor and outdoor pipe temperatures LEV opening pulses, sub cooling and discharge super heat Compressor Operating Conditions: Running current, frequency, input voltage, On/Off status and operating time
Error	When an error is currently occurring on an air conditioner unit, the afflicted unit and the error code are displayed

Wired Remote Controller (PAR-21MAA)	
Item	Description
Auto Lock Out Function	Setting/releasing of simplified locking for remote control buttons can be performed. <ul style="list-style-type: none"> • Locking of all buttons • Locking of all buttons except ON/OFF button

- N. Wireless, hand held remote controller (PAR-FL32MA)
1. The wireless hand held remote controller (PAR-FL32MA) shall perform input functions necessary to operate the system. There shall be a wireless receiver built in the indoor unit.
 2. The controller shall have a Power On/Off switch, Mode Selector – Cool, Dry, Heat, Auto, and Powerful Modes - Temperature Setting, Timer Control, Fan Speed Select and Horizontal and Vertical Vane control selector. There shall be an sensor area Selector control. The indoor unit shall perform Self-diagnostic Function and Check Mode switching. Temperature changes shall be in 1°F (0.5°C) increments with a setting range of 61 to 88°F (16 to 31°C).

PART 3 - EXECUTION

3.1 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to unit to allow service and maintenance.
- C. Duct Connections: Duct installation requirements are specified in Division 23 Section "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Division 23 Section "Air Duct Accessories."
- D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- E. Electrical Connections: Comply with requirements in Division 26 Sections for power wiring, switches, and motor controls.

3.2 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain units. Refer to Division 01 Section "Demonstration and Training."

END OF SECTION 238126

SECTION 238233**CONVECTORS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
1. Hydronic baseboard radiators.
 2. Hydronic finned-tube radiators.
 3. Hydronic convectors.

1.3 ACTION SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.

- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Plans, elevations, sections, and details.
2. Details of custom-fabricated enclosures indicating dimensions.
3. Location and size of each field connection.
4. Location and arrangement of piping valves and specialties.
5. Location and arrangement of integral controls.
6. Enclosure joints, corner pieces, access doors, and other accessories.
7. Wiring Diagrams: Power, signal, and control wiring.

- D. Color Samples for Initial Selection: For units with factory-applied color finishes.

- E. Color Samples for Verification: For each type of exposed finish required.

1.4 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 - 1. Structural members, including wall construction, to which convection units will be attached.
 - 2. Method of attaching convection units to building structure.
 - 3. Penetrations of fire-rated wall and floor assemblies.
- B. Field quality-control test reports.

1.5 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For convection heating units to include in emergency, operation, and maintenance manuals.

1.6 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial.

1.7 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

PART 2 - PRODUCTS

2.1 HOT-WATER BASEBOARD RADIATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Modine
 - 2. Rittling, a div. of Hydro-Air Components.
 - 3. Sterling
 - 4. Slant/Fin.
- B. Performance Ratings: Rate baseboard radiators according to Hydronics Institute's "I=B=R Testing and Rating Standard for Baseboard Radiation."
- C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on polypropylene element glides. One end of tube shall be belled.
- D. Enclosures: Minimum 0.0428-inch- thick steel, removable front cover.
- E. Rust-Resistant Enclosures: Minimum 0.052-inch- thick ASTM A 653/A 653M, G60 galvanized-steel, removable front cover.
 - 1. Full-height back.
 - 2. Full-length damper.
 - 3. End panel.
 - 4. End caps.
 - 5. Inside and outside corners.
 - 6. Valve access door.
 - 7. Joiner pieces to snap together.
 - 8. Finish: Baked-enamel finish in manufacturer's custom color as selected by Commissioner.
 - 9. Element Brackets: Primed and painted steel to support front panel and element.

2.2 HOT-WATER FINNED-TUBE RADIATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Modine
 - 2. Rittling, a div. of Hydro-Air Components.
 - 3. Sterling
 - 4. Slant/Fin.
- B. Performance Ratings: Rate finned-tube radiators according to Hydronics Institute's "I=B=R Testing and Rating Standard for Finned-Tube (Commercial) Radiation."
- C. Heating Elements: Copper tubing mechanically expanded into flanged collars of evenly spaced aluminum fins resting on element supports. One tube end shall be belled.
- D. Element Supports: Ball-bearing cradle type to permit longitudinal movement on enclosure brackets.
- E. Front Panel: Minimum 0.0528-inch- thick steel.

- F. Rust-Resistant Front Panel: Minimum 0.064-inch- thick, ASTM A 653/A 653M, G60 galvanized steel.
- G. Wall-Mounting Back Panel: Minimum 0.0329-inch- thick steel, full height, with full-length channel support for front panel without exposed fasteners.
- H. Floor-Mounting Pedestals: Conceal insulated piping at maximum 36-inch spacing. Pedestal-mounting back panel shall be solid panel matching front panel. Provide stainless-steel escutcheon for floor openings at pedestals.
- I. Support Brackets: Locate at maximum 36-inch spacing to support front panel and element.
- J. Finish: Baked-enamel finish in manufacturer's custom color as selected by Commissioner.
- K. Damper: Knob-operated internal damper at enclosure outlet.
- L. Access Doors: Factory made, permanently hinged with tamper-resistant fastener, minimum size 6 by 7 inches, integral with enclosure.
- M. Enclosure Style:
 - 1. Front Inlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by Commissioner from manufacturer's custom colors.
 - c. Painted to match enclosure.
 - 2. Outlet Grille: Extruded-aluminum linear bar grille; pencil-proof bar spacing.
 - a. Mill-finish aluminum.
 - b. Anodized finish, color as selected by Commissioner from manufacturer's custom colors.
 - c. Painted to match enclosure.
- N. Accessories: Filler sections, corners, relay sections, and splice plates all matching the enclosure and grille finishes.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas to receive convection heating units for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for hydronic-piping connections to verify actual locations before convection heating unit installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 BASEBOARD RADIATOR INSTALLATION

- A. Install units level and plumb.

- B. Install baseboard radiators according to Guide 2000 - Residential Hydronic Heating.
- C. Install enclosure continuously around corners, using outside and inside corner fittings.
- D. Join sections with splice plates and filler pieces to provide continuous enclosure.
- E. Install access doors for access to valves.
- F. Install enclosure continuously from wall to wall.
- G. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.
- H. Install valves within reach of access door provided in enclosure.
- I. Install air-seal gasket between wall and recessing flanges or front cover of fully recessed unit.
- J. Install piping within pedestals for freestanding units.

3.3 FINNED-TUBE RADIATOR INSTALLATION

- A. Install units level and plumb.
- B. Install finned-tube radiators according to Guide 2000 - Residential Hydronic Heating.
- C. Install enclosure continuously around corners, using outside and inside corner fittings.
- D. Join sections with splice plates and filler pieces to provide continuous enclosure.
- E. Install access doors for access to valves.
- F. Install enclosure continuously from wall to wall.
- G. Terminate enclosures with manufacturer's end caps, except where enclosures are indicated to extend to adjoining walls.
- H. Install valves within reach of access door provided in enclosure.
- I. Install air-seal gasket between wall and recessing flanges or front cover of fully recessed unit.
- J. Install piping within pedestals for freestanding units.

3.4 CONVECTOR INSTALLATION

- A. Install units level and plumb.
- B. Install valves within reach of access door provided in enclosure.
- C. Install air-seal gasketing between wall and recessing flanges or front cover of fully recessed unit.
- D. Install piping within pedestals for freestanding units.

3.5 FLAT-PIPE STEEL RADIATOR INSTALLATION

- A. Install units level and plumb.
- B. Install expansion compensation hoses.
- C. Install piping covers.

3.6 CONNECTIONS

- A. Piping installation requirements are specified in Section 232113 "Hydronic Piping" Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect hot-water units and components to piping according to Section 232113 "Hydronic Piping."
 - 1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.
- C. Connect steam units and components to piping according to Section 232213 "Steam and Condensate Heating Piping."
 - 1. Install shutoff valve on inlet; install strainer, steam trap, and shutoff valve on outlet.
- D. Install control valves as required by Section 230900 "Instrumentation and Control for HVAC."
- E. Install piping adjacent to convection heating units to allow service and maintenance.
- F. Ground electric convection heating units according to Section 260526 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.7 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, start units to confirm proper convection heating unit operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Remove and replace convection heating units that do not pass tests and inspections and retest as specified above.

END OF SECTION 238233

SECTION 238239

UNIT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. Section Includes:

1. Cabinet unit heaters with centrifugal fans and electric-resistance heating coils.

1.3 DEFINITIONS

- A. BAS: Building automation system.
- B. CWP: Cold working pressure.
- C. PTFE: Polytetrafluoroethylene plastic.
- D. TFE: Tetrafluoroethylene plastic.

1.4 SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.

- B. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Plans, elevations, sections, and details.
2. Location and size of each field connection.
3. Details of anchorages and attachments to structure and to supported equipment.

4. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
 5. Location and arrangement of piping valves and specialties.
 6. Location and arrangement of integral controls.
 7. Wiring Diagrams: Power, signal, and control wiring.
- D. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
1. Suspended ceiling components.
 2. Structural members to which unit heaters will be attached.
 3. Method of attaching hangers to building structure.
 4. Size and location of initial access modules for acoustical tile.
 5. Items penetrating finished ceiling, including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 6. Perimeter moldings for exposed or partially exposed cabinets.
- E. Samples for Initial Selection: Finish colors for units with factory-applied color finishes.
- F. Samples for Verification: Finish colors for each type of cabinet unit heater and wall and ceiling heaters indicated with factory-applied color finishes.
- G. Manufacturer Seismic Qualification Certification: Submit certification that cabinet unit heaters, accessories, and components will withstand seismic forces defined in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- H. Field quality-control test reports.
- I. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.
- 1.5 QUALITY ASSURANCE
- A. LEED BUILDING REQUIREMENTS
1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
- D. ASHRAE/IESNA 90.1-2004 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.6 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Cabinet Unit Heater Filters: Furnish one spare filter(s) for each filter installed.

1.7 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

PART 2 - PRODUCTS

2.1 CABINET UNIT HEATERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Berko Electric Heating; a division of Marley Engineered Products.
 - 2. Carrier Corporation.
 - 3. Indeeco.
 - 4. International Environmental Corporation.
 - 5. Markel Products; a division of TPI Corporation.
 - 6. Marley Electric Heating; a division of Marley Engineered Products.

7. McQuay International.
 8. QMark Electric Heating; a division of Marley Engineered Products.
 9. Trane.
- B. Description: A factory-assembled and -tested unit complying with ARI 440.
1. Comply with UL 2021.
- C. Coil Section Insulation: ASTM C 1071; surfaces exposed to airstream shall be erosion-resistant coating to prevent erosion of glass fibers.
1. Thickness: 1-1/2 inches.
 2. Thermal Conductivity (k-Value): 0.26 Btu x in./h x sq. ft. at 75 deg F mean temperature.
 3. Fire-Hazard Classification: Maximum flame-spread index of 25 and smoke-developed index of 50 when tested according to ASTM E 84.
 4. Adhesive: Comply with ASTM C 916 and with NFPA 90A or NFPA 90B.
 5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.
- D. Cabinet: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Commissioner.
1. Vertical Unit, Exposed Front Panels: Minimum 0.0528-inch- thick, galvanized, sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
 2. Horizontal Unit, Exposed Bottom Panels: Minimum 0.0528-inch- thick, galvanized, sheet steel, removable panels secured with tamperproof cam fasteners and safety chain.
 3. Recessing Flanges: Steel, finished to match cabinet.
 4. Control Access Door: Key operated.
- E. Filters: Minimum arrestance according to ASHRAE 52.1 and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
- F. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, mounted in ceramic inserts in a galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
- G. Fan and Motor Board: Removable.
1. Fan: Forward curved, double width, centrifugal; directly connected to motor. Thermoplastic or painted-steel wheels, and aluminum, painted-steel, or galvanized-steel fan scrolls.
 2. Motor: Permanently lubricated, multispeed; resiliently mounted on motor board. Comply with requirements in Division 23 Section "Common Motor Requirements for HVAC Equipment."
 3. Wiring Terminations: Connect motor to chassis wiring with plug connection.
- H. Control devices and operational sequences are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls."

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Division 07 Section "Joint Sealants."
- B. Install cabinet unit heaters to comply with NFPA 90A.
- C. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.3 CONNECTIONS

- A. Connect supply and return ducts to cabinet unit heaters with flexible duct connectors specified in Division 23 Section "Air Duct Accessories."
- B. Comply with safety requirements in UL 1995.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain cabinet unit heaters. Refer to DDC General Conditions "Demonstration and Training."

END OF SECTION 238239

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260500**COMMON WORK RESULTS FOR ELECTRICAL****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.
 - 1. Section 018114, VOC Limits for Adhesives, Sealants, Paints and Coatings
 - 2. Section 017419, Construction Waste Management
 - 3. Section 018113, LEED Requirements Summary
 - 4. Section 018119, Construction Indoor Air Quality

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Electrical equipment coordination and installation.
 - 2. Sleeves for raceways and cables.
 - 3. Sleeve seals.
 - 4. Common electrical installation requirements.

1.3 DEFINITIONS

- A. ATS: Acceptance Testing Specifications.
- B. EPDM: Ethylene-propylene-diene terpolymer rubber.
- C. NBR: Acrylonitrile-butadiene rubber.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For each type of product indicated.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

B. Test Equipment Suitability and Calibration: Comply with NETA ATS, "Suitability of Test Equipment" and "Test Instrument Calibration."

C. Sustainable Design Standards and Requirements:

1. Adhesive and Sealant VOC Limits: SCAQMD Rule 1168 and GS 36
2. Paint Coating VOC Limits: As tested to EPA Method 24; and per SCAQMD Rules 1113 and 1168; BAAQMD Regulation 8, Rule 51; CARB; GS 11 and GC 03.

1.6 COORDINATION

A. Coordinate arrangement, mounting, and support of electrical equipment:

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping and conduit installed at required slope.
4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 8 Section "Access Doors and Frames."

D. Coordinate electrical testing of electrical, mechanical, and architectural items, so equipment and systems that are functionally interdependent are tested to demonstrate successful interoperability.

1.7 WORK INCLUDED

A. Related Work and Requirements

1. Requirements of Construction Waste Management, Section 017419.

- a. The Commissioner has established that as many of the surplus and waste material as economically feasible shall be reused, salvaged, or recycled. To that end, the Contractor for Electrical Work shall participate in the development of the Waste Management Plan, and collect, sort and deposit in designated containers, their waste, non-returned surplus materials and rubbish in accordance with the approved Plan.

- B. Project Diversion Goals are stated in Section 017419 – Construction Waste Management. The Contractor for Electrical Work shall meet or exceed the minimum percentage of waste stated there for diversion from landfill, unless the Contractor for General Construction Work designates a different amount. Specific items/categories shall be in accordance with the Documents and as established in the Plan.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.
- D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 7 Section "Through-Penetration Firestop Systems."

2.3 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers:

- a. Advance Products & Systems, Inc.
- b. Calpico, Inc.
- c. Metraflex Co.
- d. Pipeline Seal and Insulator, Inc.

- 2. Sealing Elements: EPDM/NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.

3. Pressure Plates: Stainless steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.4 MOUNTING HEIGHTS:

- A. Heights of all wall mounted outlets and equipment shall be in accordance with the following list. (Dimensions are above finished floor unless otherwise noted).

1. Receptacle or telephone/data outlet in field constructed wall, partition or column unless otherwise specified below – 18" to centerline.
2. Receptacles or telephone/data outlet at workstations – 42" A.F.F to centerline.
3. Receptacles or telephone/data outlet for TV. Monitors in classrooms – 1'-4" below finished ceiling.
4. Receptacle or telephone outlet in mechanical spaces electric switchboard rooms electric closets—5'0" to centerline.
5. Toggle switch outlet in field constructed wall partition or column – 3'-10" to centerline.
6. Individually motor starter – 5'-0" to centerline.
7. Individual distribution system switching device (with or without overcurrent protection) – 5'-0". To centerline
8. Group mounted motor starters – 6'-6" maximum to centerline of highest pushbutton or switching device handle requiring manual operation, 1'-0" minimum to bottom of lowest enclosure.
9. Group mounted distribution system switching devices – 6'6"maximum to centerline of highest switching device handle, 1'-0" minimum to bottom of lowest enclosure.
10. Panelboard – 6'6" maximum to centerline of highest switching device handle.
11. Strip cabinet or other cabinet containing no switching devices – 1'-0" minimum to bottom
12. Bracket lighting outlets, except for "over door"- 7'-6" to centerline.
13. Bracket lighting outlet over door – as required to center outlet between top surface of door lintel and underside of ceiling.
14. Wall exit sign except for over door – 7'-6" to centerline.
15. Exit sign over door – As required to center sign between top surface of door lintel and underside of ceiling.
16. Outlet for any signal system device other than fire alarm station requiring manual operation – 3'-10" to centerline.
17. Manual fire alarm station – 3'-10" to centerline.
18. Outlet for any signal system visual device or sounding device other than fire alarm visual device or visual/sounding device – As required for device to clear underside of ceiling by 1".
19. Outlet for fire alarm visual device – Bottom of visual device 80" AFF, except as otherwise noted.
20. Clock outlet – As required for clock to clear underside of ceiling by 1".

- B. Architectural drawings and field instructions issued by the Commissioner take precedence over the above list and shall be adhered to.

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

- A. Comply with NECA 1.
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- E. Right of Way: Give to raceways and piping systems installed at a required slope.

3.2 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 7 Section "Through-Penetration Firestop Systems."
- C. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- D. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- E. Rectangular Sleeve Minimum Metal Thickness:
 - 1. For sleeve cross-section rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 0.052 inch.
 - 2. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 0.138 inch.
- F. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- G. Cut sleeves to length for mounting flush with both surfaces of walls.
- H. Extend sleeves installed in floors 2 inches above finished floor level.
- I. Size pipe sleeves to provide ¼-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require a different clearance.
- J. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.

- K. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Refer to Division 7 Section "Joint Sealants" for materials and installation.
- L. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with Division 7 Section "Through-Penetration Firestop Systems."
- M. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- N. Aboveground, Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- O. Underground, Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.3 SLEEVE-SEAL INSTALLATION

- A. Install to seal underground, exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.4 FIRESTOPPING

- A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 7 Section "Through-Penetration Firestop Systems."

3.5 FIELD QUALITY CONTROL

- A. Inspect installed sleeve and sleeve-seal installations and associated firestopping for damage and faulty work.

3.6 WASTE MANAGEMENT

- A. Comply with the requirements established by the Contractor for General Construction Work to separate and recycle, salvage or reuse cast-offs, surplus and waste material in accordance with the Waste Management Plan.
- B. Arrange for suppliers to take back shipping and packing materials for reuse or recycling to the maximum extent economically feasible, or include them in the Waste Management Plan.

END OF SECTION 260500

SECTION 260519**LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes building wires and cables and associated connectors, splices, and terminations for wiring systems rated 600 V and less.

1.3 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For each type of product indicated.

- C. Qualification Data: For testing agency.

- D. Field Quality-Control Test Reports: From a qualified testing and inspecting agency engaged by the Contractor or authorized and qualified manufacturer's representative.

1.4 QUALITY ASSURANCE

- A. LEED BUILDING REQUIREMENTS

- 1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed

by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Testing Agency Qualifications: Testing agency as defined by OSHA in 29 CFR 1910.7 or a member company of the InterNational Electrical Testing Association and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Commissioning Technologies to supervise on-site testing specified in Part 3.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.

2.2 CONDUCTORS AND CABLES

- A. Manufacturers:
 - 1. American Insulated Wire Corp.; a Leviton Company.
 - 2. General Cable Corporation.
 - 3. Senator Wire & Cable Company.
 - 4. Southwire Company.
 - 5. Approved equal.
- B. Refer to Part 3 "Conductor and Insulation Applications" Article for insulation type, cable construction, and ratings.
- C. Conductor Material: Copper complying with NEMA 1; solid conductor for No. 10 AWG and smaller, stranded for No. 8 AWG and larger. All wiring shall be copper.
- D. Conductor Insulation Types: Type THHN-THWN XHHW complying with NEMA 1.

- E. Multiconductor Cable: Armored cable, Type AC Metal-clad cable with ground wire.
- F. Plenum-rated cables shall be used in all spaces which by definition established in applicable codes qualify as such.

2.3 CONNECTORS AND SPLICES

- A. Manufacturers:
 - 1. AFC Cable Systems, Inc.
 - 2. AMP Incorporated/Tyco International.
 - 3. Hubbell/Anderson.
 - 4. O-Z/Gedney; EGS Electrical Group LLC.
 - 5. 3M Company; Electrical Products Division.
 - 6. Approved equal.
- B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1 CONDUCTOR AND INSULATION APPLICATIONS

- A. Service Entrance: Type THHN-THWN, single conductors in raceway.
- B. Exposed Feeders: Type THHN-THWN, single conductors in raceway.
- C. Feeders Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway.
- D. Feeders Concealed in Concrete, below Slabs-on-Grade, and in Crawlspace: Type THHN-THWN, single conductors in raceway.
- E. Exposed Branch Circuits, including in Crawlspace: Type THHN-THWN, single conductors in raceway.
- F. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway, Armored cable, Type AC Metal-clad cable.
- G. Branch Circuits Concealed in Concrete and below Slabs-on-Grade: Type THHN-THWN, single conductors in raceway.
- H. Underground Feeders and Branch Circuits: Type UF multiconductor cable.
- I. Cord Drops and Portable Appliance Connections: Type SO, hard service cord.
- J. Fire Alarm Circuits: Type THHN-THWN, in rigid conduit raceway and approved fire alarm cable. Cables must be run in ceiling and wall voids only and shall be installed as per code.
- K. Class 1 Control Circuits: Type THHN-THWN, in raceway.
- L. Class 2 Control Circuits: Type THHN-THWN, in raceway.

3.2 INSTALLATION

- A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated. There shall be no exposed armored cables.
- B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.
- E. Support cables according to Division 26 Section "Common Work Results for Electrical."
- F. Seal around cables penetrating fire-rated elements utilizing UL Approved materials in accordance with the manufacturers directions. Select materials so as to maintain equivalent fire rating of penetrated element.
- G. Identify and color-code conductors and cables according to Division 26 Section "Common work results for Electrical."
- H. Contractor shall note "Places of Assembly" and utilize code required wiring methods for those areas. Verify all "Places of Assembly" with Commissioner prior to installing work.

3.3 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
 - 1. Use oxide inhibitor in each splice and tap conductor for aluminum conductors.
- C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inches of slack.

3.4 FIELD QUALITY CONTROL

- A. Testing: Perform the following field quality-control testing:
 - 1. After installing conductors and cables and before electrical circuitry has been energized, test for compliance with requirements.
 - 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.3.1. Certify compliance with test parameters.
- B. Test Reports: Prepare a written report to record the following:
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.

3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

END OF SECTION 260519

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260526**GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes methods and materials for grounding systems and equipment.

1.3 SUBMITTALS**A. LEED BUILDING SUBMITTAL REQUIREMENTS:**

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For each type of product indicated.**C. Other Informational Submittals:** Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:

- 1. Ground rods.
- 2. Ground rings.
- 3. Grounding arrangements and connections for separately derived systems.
- 4. Grounding for sensitive electronic equipment.

D. Qualification Data: For testing agency and testing agency's field supervisor.**E. Field quality-control test reports.****F. Operation and Maintenance Data:** For grounding to include the following in emergency, operation, and maintenance manuals:

- 1. Instructions for periodic testing and inspection of grounding features at test wells based on NFPA 70B.
 - a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.
 - b. Include recommended testing intervals.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association to supervise on-site testing specified in Part 3.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

- D. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.1 CONDUCTORS

- A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or authorities having jurisdiction.

- B. Bare Copper Conductors:

1. Solid Conductors: ASTM B 3.
2. Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.
4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick. Minimum # 4 copper.
8. No. 4 AWG minimum, soft-drawn copper.
- C. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 2 inches in cross section, unless otherwise indicated; with insulators.

2.2 CONNECTORS

- A. Listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.
- B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.
 1. Pipe Connectors: Clamp type, sized for pipe.
- C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.3 GROUNDING ELECTRODES

- A. Ground Rods: Copper-clad steel; 3/4 inch by 10 feet in diameter.
- B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with nonhazardous electrolytic chemical salts.
 1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches long.
 2. Backfill Material: Electrode manufacturer's recommended material.

PART 3 - EXECUTION

3.1 APPLICATIONS

- A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.
- B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.
 1. Bury at least 24 inches below grade.
 2. Duct-Bank Grounding Conductor: Bury 12 inches above duct bank when indicated as part of duct-bank installation.
- C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

- D. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.
 - 1. Install bus on insulated spacers 1 inch, minimum, from wall 6 inches above finished floor, unless otherwise indicated.
 - 2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, down to specified height above floor, and connect to horizontal bus.
- E. Conductor Terminations and Connections:
 - 1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
 - 2. Underground Connections: Welded connectors, except at test wells and as otherwise indicated.
 - 3. Connections to Ground Rods at Test Wells: Bolted connectors.
 - 4. Connections to Structural Steel: Welded connectors.
- F. Comply with IEEE C2 grounding requirements.
- G. Install 2 parallel ground rods if resistance to ground by a single, ground-rod electrode exceeds 25 ohms.
- H. Drive ground rods until tops are 12 inches below finished grade in undisturbed earth.
- I. Ground-Rod Connections: Install bolted connectors for underground connections and connections to rods.
- J. Lightning Arrester Grounding Conductors: Separate from other grounding conductors.
- K. Secondary Neutral and Transformer Enclosure: Interconnect and connect to grounding conductor.
- L. Comply with IEEE C2 grounding requirements.

3.2 EQUIPMENT GROUNDING

- A. Install insulated equipment grounding conductors with all feeders and branch circuits.
- B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:
 - 1. Feeders and branch circuits.
 - 2. Lighting circuits.
 - 3. Receptacle circuits.
 - 4. Single-phase motor and appliance branch circuits.
 - 5. Three-phase motor and appliance branch circuits.
 - 6. Flexible raceway runs.
 - 7. Armored and metal-clad cable runs.
 - 8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
 - 9. Computer and Rack-Mounted Electronic Equipment Circuits: Install insulated equipment grounding conductor in branch-circuit runs from equipment-area power panels and power-distribution units.

10. X-Ray Equipment Circuits: Install insulated equipment grounding conductor in circuits supplying x-ray equipment.
- C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
- D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
- E. Isolated Grounding Receptacle Circuits: Install an insulated equipment grounding conductor connected to the receptacle grounding terminal. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service, unless otherwise indicated.
- F. Isolated Equipment Enclosure Circuits: For designated equipment supplied by a branch circuit or feeder, isolate equipment enclosure from supply circuit raceway with a nonmetallic raceway fitting listed for the purpose. Install fitting where raceway enters enclosure, and install a separate insulated equipment grounding conductor. Isolate conductor from raceway and from panelboard grounding terminals. Terminate at equipment grounding conductor terminal of the applicable derived system or service, unless otherwise indicated.
- G. Signal and Communication Equipment: For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
 1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-2-by-12-inch grounding bus.
 2. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.
- H. Metal Poles Supporting Outdoor Lighting Fixtures: Install grounding electrode and a separate insulated equipment grounding conductor in addition to grounding conductor installed with branch-circuit conductors.

3.3 INSTALLATION

- A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- B. Common Ground Bonding with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.
- C. Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade, unless otherwise indicated.

1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating, if any.
 2. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.
- D. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.
1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
 2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
 3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.
- E. Grounding and Bonding for Piping:
1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
 2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
 3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.
- F. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.
- G. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.
- H. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of building.
1. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.
 2. Bury ground ring not less than 24 inches from building foundation.
- I. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70, using a minimum of 20 feet of bare copper conductor not smaller than No. 4 AWG.
1. If concrete foundation is less than 20 feet long, coil excess conductor within base of foundation.
 2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building grounding grid or to grounding electrode external to concrete.

3.4 FIELD QUALITY CONTROL

A. Perform the following tests and inspections and prepare test reports:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells. Make tests at ground rods before any conductors are connected.
 - a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
 - b. Perform tests by fall-of-potential method according to IEEE 81.
3. Prepare dimensioned drawings locating each test well, ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

B. Report measured ground resistances that exceed the following values:

1. Power and Lighting Equipment or System with Capacity 500 kVA and Less: 10 ohms.
2. Power and Lighting Equipment or System with Capacity 500 to 1000 kVA: 5 ohms.
3. Power and Lighting Equipment or System with Capacity More Than 1000 kVA: 3 ohms.
4. Power Distribution Units or Panelboards Serving Electronic Equipment: 1 ohm(s).
5. Substations and Pad-Mounted Equipment: 5 ohms.

C. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Commissioner promptly and include recommendations to reduce ground resistance.

END OF SECTION 260526

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260529**HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Hangers and supports for electrical equipment and systems.
 - 2. Construction requirements for concrete bases.

1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. IMC: Intermediate metal conduit.
- C. RMC: Rigid metal conduit.

1.4 PERFORMANCE REQUIREMENTS

- A. LEED BUILDING REQUIREMENTS
 - 1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

- 2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Provide supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
- C. Provide supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
- D. Provide equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- E. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For the following:

- 1. Steel slotted support systems.
- 2. Nonmetallic slotted support systems.

C. Shop Drawings: Show fabrication and installation details and include calculations for the following:

- 1. Trapeze hangers. Include Product Data for components.
- 2. Steel slotted channel systems. Include Product Data for components.
- 3. Nonmetallic slotted channel systems. Include Product Data for components.
- 4. Equipment supports.

D. Welding certificates.

1.6 QUALITY ASSURANCE

- A. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Comply with NFPA 70.

1.7 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.; a division of Cooper Industries.
 - c. ERICO International Corporation.
 - d. GS Metals Corp.
 - e. Thomas & Betts Corporation.
 - f. Unistrut; Tyco International, Ltd.
 - g. Wesanco, Inc.
 - 2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
 - 3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
 - 4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
 - 5. Channel Dimensions: Selected for applicable load criteria.
- B. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with 9/16-inch- diameter holes at a maximum of 8 inches o.c., in at least 1 surface.
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.; a division of Cooper Industries.
 - c. Fabco Plastics Wholesale Limited.
 - d. Seasafe, Inc.
 - 2. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.
 - 3. Fitting and Accessory Materials: Same as channels and angles.
 - 4. Rated Strength: Selected to suit applicable load criteria.
- C. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- D. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.
- F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Hilti Inc.
 - 2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
 - 3) MKT Fastening, LLC.
 - 4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Cooper B-Line, Inc.; a division of Cooper Industries.
 - 2) Empire Tool and Manufacturing Co., Inc.
 - 3) Hilti Inc.
 - 4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
 - 5) MKT Fastening, LLC.
3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
6. Toggle Bolts: All-steel springhead type.
7. Hanger Rods: Threaded steel.

2.2 FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

- A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.
- B. Materials: Comply with requirements in Division 05 Section "Metal Fabrications" for steel shapes and plates.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.
- C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted or other support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.
 - 1. Secure raceways and cables to these supports with two-bolt conduit clamps.
- D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.2 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.
- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT RMC may be supported by openings through structure members, as permitted in NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
 - 1. To Wood: Fasten with lag screws or through bolts.
 - 2. To New Concrete: Bolt to concrete inserts.
 - 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 - 4. To Existing Concrete: Expansion anchor fasteners.
 - 5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
 - 6. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
 - 7. To Light Steel: Sheet metal screws.
 - 8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that meet seismic-restraint strength and anchorage requirements.
- E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.3 INSTALLATION OF FABRICATED METAL SUPPORTS

- A. Comply with installation requirements in Division 05 Section "Metal Fabrications" for site-fabricated metal supports.

- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
- C. Field Welding: Comply with AWS D1.1/D1.1M.

3.4 CONCRETE BASES

- A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
- B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Anchor equipment to concrete base.
 - 1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 2. Install anchor bolts to elevations required for proper attachment to supported equipment.
 - 3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touchup: Comply with requirements in Division 09 painting Sections for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION 260529

SECTION 260533**RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.
- B. Related Sections include the following:
 - 1. Division 26 Section "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.

1.3 DEFINITIONS

- A. EMT: Electrical metallic tubing.
- B. ENT: Electrical nonmetallic tubing.
- C. FMC: Flexible metal conduit.
- D. IMC: Intermediate metal conduit.
- E. LFMC: Liquidtight flexible metal conduit.
- F. LFNC: Liquidtight flexible nonmetallic conduit.
- G. RNC: Rigid nonmetallic conduit.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.
- C. Shop Drawings: Show fabrication and installation details of components for raceways, fittings, boxes, enclosures, and cabinets.
- D. Shop Drawings: Signed and sealed by a qualified professional engineer.
 - 1. Design Calculations: Calculate requirements for selecting seismic restraints.
 - 2. Detail assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
- E. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:
 - 1. Ceiling suspension assembly members.
 - 2. Method of attaching hangers to building structure.
 - 3. Size and location of initial access modules for acoustical tile.
 - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.

1.6 COORDINATION

- A. Coordinate layout and installation of raceways, boxes, enclosures, cabinets, and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 METAL CONDUIT AND TUBING

- A. Manufacturers:
 - 1. AFC Cable Systems, Inc.
 - 2. Alflec Inc.
 - 3. Anamet Electrical, Inc.; Anaconda Metal Hose.
 - 4. Electri-Flex Co.
 - 5. Grinnell Co./Tyco International; Allied Tube and Conduit Div.
 - 6. LTV Steel Tubular Products Company.
 - 7. Manhattan/CDT/Cole-Flex.
 - 8. O-Z Gedney; Unit of General Signal.
 - 9. Wheatland Tube Co.
- B. Rigid Steel Conduit: ANSI C80.1.
- C. IMC: ANSI C80.6.
- D. Plastic-Coated Steel Conduit and Fittings: NEMA RN 1.
- E. Plastic-Coated IMC and Fittings: NEMA RN 1.
- F. EMT and Fittings: ANSI C80.3.
 - 1. Fittings: Compression type.
- G. FMC: Zinc-coated steel.
- H. LFMC: Flexible steel conduit with PVC jacket.
- I. Fittings: NEMA FB 1; compatible with conduit and tubing materials.
- J. Manufacturers:
 - 1. American International.
 - 2. Anamet Electrical, Inc.; Anaconda Metal Hose.
 - 3. Arnco Corp.

4. Cantex Inc.
5. Certaineed Corp.; Pipe & Plastics Group.
6. Condux International.
7. ElecSYS, Inc.
8. Electri-Flex Co.
9. Lamson & Sessions; Carlon Electrical Products.
10. Manhattan/CDT/Cole-Flex.
11. RACO; Division of Hubbell, Inc.
12. Spiralduct, Inc./AFC Cable Systems, Inc.
13. Thomas & Betts Corporation.

K. LFNC: UL 1660.

2.3 METAL WIREWAYS

A. Manufacturers:

1. Hoffman.
2. Square D.

B. Material and Construction: Sheet metal sized and shaped as indicated, NEMA 1.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70.

E. Wireway Covers: Flanged-and-gasketed type.

F. Finish: Manufacturer's standard enamel finish.

2.4 NONMETALLIC WIREWAYS (use only where indicated on the drawings or otherwise approved prior to installing any work)

A. Manufacturers:

1. Hoffman.
2. Lamson & Sessions; Carlon Electrical Products.

B. Description: Fiberglass polyester, extruded and fabricated to size and shape indicated, with no holes or knockouts. Cover is gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections are flanged, with stainless-steel screws and oil-resistant gaskets.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70.

2.5 SURFACE RACEWAYS

- A. Surface Metal Raceways: Galvanized steel with snap-on covers. Finish with manufacturer's standard prime coating.
 - 1. Manufacturers:
 - a. Airey-Thompson Sentinel Lighting; Wiremold Company (The).
 - b. Thomas & Betts Corporation.
 - c. Walker Systems, Inc.; Wiremold Company (The).
 - d. Wiremold Company (The); Electrical Sales Division.
- B. Types, sizes, and channels as indicated and required for each application, with fittings that match and mate with raceways.

2.6 BOXES, ENCLOSURES, AND CABINETS

- A. Manufacturers:
 - 1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
 - 2. Emerson/General Signal; Appleton Electric Company.
 - 3. Erickson Electrical Equipment Co.
 - 4. Hoffman.
 - 5. Hubbell, Inc.; Killark Electric Manufacturing Co.
 - 6. O-Z/Gedney; Unit of General Signal.
 - 7. RACO; Division of Hubbell, Inc.
 - 8. Robroy Industries, Inc.; Enclosure Division.
 - 9. Scott Fetzer Co.; Adalet-PLM Division.
 - 10. Spring City Electrical Manufacturing Co.
 - 11. Thomas & Betts Corporation.
 - 12. Walker Systems, Inc.; Wiremold Company (The).
 - 13. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary.
- B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.
- C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, Type FD, with gasketed cover.
- D. Nonmetallic Outlet and Device Boxes: NEMA OS 2.
- E. Floor Boxes: Cast metal, fully adjustable, rectangular.
- F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.
- G. Cast-Metal Pull and Junction Boxes: NEMA FB 1, cast aluminum with gasketed cover.
- H. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous hinge cover and flush latch.
 - 1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
 - 2. Nonmetallic Enclosures: Plastic, finished inside with radio-frequency-resistant paint.
- I. Cabinets: NEMA 250, Type 1, galvanized steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel. Hinged door in front cover with flush latch and concealed hinge. Key latch to match panelboards. Include

metal barriers to separate wiring of different systems and voltage and include accessory feet where required for freestanding equipment.

2.7 FACTORY FINISHES

- A. Finish: For raceway, enclosure, or cabinet components, provide manufacturer's standard paint applied to factory-assembled surface raceways, enclosures, and cabinets before shipping.

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Outdoors:

1. Exposed: Rigid steel or IMC.
2. Concealed: Rigid steel or IMC.
3. Underground, Single Run: RNC.
4. Underground, Grouped: RNC.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
6. Boxes and Enclosures: NEMA 250, Type 3R.

B. Indoors:

1. Exposed: EMT or Rigid galvanized steel where subject to physical damage or where required by code.
2. Concealed: EMT or Rigid galvanized steel where required by code.
3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC; except use LFMC in damp or wet locations.
4. Damp or Wet Locations: Rigid galvanized steel conduit.
5. Boxes and Enclosures: NEMA 250, Type 1, except as follows:
 - a. Damp or Wet Locations: NEMA 250, Type 4 metallic.

C. Minimum Raceway Size: 3/4-inch trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings approved for use with that material. Patch all nicks and scrapes in PVC coating after installing conduits.

3.2 INSTALLATION

- A. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.
- B. Complete raceway installation before starting conductor installation.

- C. Install temporary closures to prevent foreign matter from entering raceways.
- D. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portions of bends are not visible above the finished slab.
- E. Make bends and offsets so ID is not reduced. Keep legs of bends in the same plane and keep straight legs of offsets parallel, unless otherwise indicated.
- F. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.
 - 1. Install concealed raceways with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.
- G. Raceways Embedded in Slabs: Install in middle 1/3 of slab thickness where practical and leave at least 2 inches of concrete cover.
 - 1. Secure raceways to reinforcing rods to prevent sagging or shifting during concrete placement.
 - 2. Space raceways laterally to prevent voids in concrete.
 - 3. Run conduit larger than 1-inch trade size parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.
 - 4. Change from nonmetallic tubing to Schedule 80 nonmetallic conduit, rigid steel conduit, or IMC before rising above the floor.
- H. Install exposed raceways parallel or at right angles to nearby surfaces or structural members and follow surface contours as much as possible.
 - 1. Run parallel or banked raceways together on common supports.
 - 2. Make parallel bends in parallel or banked runs. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.
- I. Join raceways with fittings designed and approved for that purpose and make joints tight.
 - 1. Use insulating bushings to protect conductors.
- J. Tighten set screws of threadless fittings with suitable tools.
- K. Terminations:
 - 1. Where raceways are terminated with locknuts and bushings, align raceways to enter squarely and install locknuts with dished part against box. Use two locknuts, one inside and one outside box.
 - 2. Where raceways are terminated with threaded hubs, screw raceways or fittings tightly into hub so end bears against wire protection shoulder. Where chase nipples are used, align raceways so coupling is square to box; tighten chase nipple so no threads are exposed.
- L. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire.
- M. Telephone and Signal System Raceways, 2-Inch Trade Size and Smaller: In addition to above requirements, install raceways in maximum lengths of 150 feet and with a maximum of two 90-degree bends or equivalent. Separate lengths with pull or junction boxes where necessary to comply with these requirements.

- N. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:
 - 1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
 - 2. Where otherwise required by NFPA 70.
- O. Stub-up Connections: Extend conduits through concrete floor for connection to freestanding equipment. Install with an adjustable top or coupling threaded inside for plugs set flush with finished floor. Extend conductors to equipment with rigid steel conduit; FMC may be used 6 inches above the floor. Install screwdriver-operated, threaded plugs flush with floor for future equipment connections.
- P. Flexible Connections: Use maximum of 72 inches of flexible conduit for recessed and semirecessed lighting fixtures; for equipment subject to vibration, noise transmission, or movement; and for all motors. Use LFMC in damp or wet locations. Install separate ground conductor across flexible connections.
- Q. Surface Raceways: Install a separate, green, ground conductor in raceways from junction box supplying raceways to receptacle or fixture ground terminals.
- R. Set floor boxes level and flush with finished floor surface.
- S. Set floor boxes level. Trim after installation to fit flush with finished floor surface.
- T. Install hinged-cover enclosures and cabinets plumb. Support at each corner.

3.3 PROTECTION

- A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.
 - 1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 - 2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

3.4 CLEANING

- A. After completing installation of exposed, factory-finished raceways and boxes, inspect exposed finishes and repair damaged finishes.

END OF SECTION 260533

SECTION 260543

UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Conduit, ducts, and duct accessories for direct-buried and concrete-encased duct banks, and in single duct runs.
 - 2. Handholes and boxes.
 - 3. Manholes.

1.3 DEFINITION

- A. RNC: Rigid nonmetallic conduit.

1.4 ACTION SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For the following:
 - 1. Duct-bank materials, including separators and miscellaneous components.
 - 2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
 - 3. Accessories for manholes, handholes, boxes, and other utility structures.
 - 4. Warning tape.
 - 5. Warning planks.
- C. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:

1. Duct entry provisions, including locations and duct sizes.
 2. Reinforcement details.
 3. Frame and cover design and manhole frame support rings.
 4. Grounding details.
 5. Dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
 6. Joint details.
- D. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:
1. Duct entry provisions, including locations and duct sizes.
 2. Cover design.
 3. Grounding details.
 4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

1.5 INFORMATIONAL SUBMITTALS

- A. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.
1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
 2. Drawings shall be signed and sealed by a qualified professional engineer.
- B. Product Certificates: For concrete and steel used in precast concrete handholes, as required by ASTM C 858.
- C. Qualification Data: For professional engineer and testing agency.
- D. Source quality-control test reports.
- E. Field quality-control test reports.

1.6 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- C. Comply with ANSI C2.
- D. Comply with NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.
- B. Store precast concrete and other factory-fabricated underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.
- C. Lift and support precast concrete units only at designated lifting or supporting points.

1.8 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 1. Notify Commissioner no fewer than two days in advance of proposed interruption of electrical service.
 2. Do not proceed with interruption of electrical service without Commissioner's written permission.

1.9 COORDINATION

- A. Coordinate layout and installation of ducts, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.
- B. Coordinate elevations of ducts and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Commissioner.

PART 2 - PRODUCTS

2.1 CONDUIT

- A. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.

- B. RNC: NEMA TC 2, Type EPC-80-PVC, UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.2 NONMETALLIC DUCTS AND DUCT ACCESSORIES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

1. ARNCO Corp.
2. Beck Manufacturing.
3. Cantex, Inc.
4. CertainTeed Corp.; Pipe & Plastics Group.
5. Condux International, Inc.
6. ElecSys, Inc.
7. Electri-Flex Company.
8. IPEX Inc.
9. Lamson & Sessions; Carlon Electrical Products.
10. Manhattan/CDT; a division of Cable Design Technologies.
11. Spiraduct/AFC Cable Systems, Inc.

- B. Underground Plastic Utilities Duct: NEMA TC 6 & 8, Type DB-120-PVC, ASTM F 512, with matching fittings by the same manufacturer as the duct, complying with NEMA TC 9.

- C. Duct Accessories:

1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacings indicated while supporting ducts during concreting or backfilling.
2. Warning Tape: Underground-line warning tape specified in Section 260553 "Identification for Electrical Systems."
3. Concrete Warning Planks: Nominal 12 by 24 by 3 inches in size, manufactured from 6000-psi concrete.
 - a. Color: Red dye added to concrete during batching.
 - b. Mark each plank with "ELECTRIC" in 2-inch- high, 3/8-inch- deep letters.

2.3 PRECAST CONCRETE HANDHOLES AND BOXES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Carder Concrete Products.
2. Christy Concrete Products.
3. Elmhurst-Chicago Stone Co.
4. Oldcastle Precast Group.
5. Riverton Concrete Products; a division of Cretex Companies, Inc.
6. Utility Concrete Products, LLC.
7. Utility Vault Co.
8. Wausau Tile, Inc.

- B. Comply with ASTM C 858 for design and manufacturing processes.

- C. Description: Factory-fabricated, reinforced-concrete, monolithically poured walls and bottom unless open-bottom enclosures are indicated. Frame and cover shall form top of enclosure and shall have load rating consistent with that of handhole or box.
1. Frame and Cover: Weatherproof cast-iron frame, with cast-iron cover with recessed cover hook eyes and tamper-resistant, captive, cover-securing bolts.
 2. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 3. Cover Legend: Molded lettering, As indicated for each service
 4. Configuration: Units shall be designed for flush burial and have integral closed bottom, unless otherwise indicated.
 5. Extensions and Slabs: Designed to mate with bottom of enclosure. Same material as enclosure.
 - a. Extension shall provide increased depth of **12 inches**.
 - b. Slab: Same dimensions as bottom of enclosure, and arranged to provide closure.
 6. Windows: Precast openings in walls, arranged to match dimensions and elevations of approaching ducts and duct banks plus an additional 12 inches vertically and horizontally to accommodate alignment variations.
 - a. Windows shall be located no less than 6 inches from interior surfaces of walls, floors, or frames and covers of handholes, but close enough to corners to facilitate racking of cables on walls.
 - b. Window opening shall have cast-in-place, welded wire fabric reinforcement for field cutting and bending to tie in to concrete envelopes of duct banks.
 - c. Window openings shall be framed with at least two additional No. 4 steel reinforcing bars in concrete around each opening.
 7. Duct Entrances in Handhole Walls: Cast end-bell or duct-terminating fitting in wall for each entering duct.
 - a. Type and size shall match fittings to duct or conduit to be terminated.
 - b. Fittings shall align with elevations of approaching ducts and be located near interior corners of handholes to facilitate racking of cable.
 8. Handholes 12 inches wide by 24 inches long and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

2.4 HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

- A. Description: Comply with SCTE 77.
1. Color: Green.
 2. Configuration: Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.
 3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
 4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
 5. Cover Legend: Molded lettering, As indicated for each service
 6. Direct-Buried Wiring Entrance Provisions: Knockouts equipped with insulated bushings or end-bell fittings, selected to suit box material, sized for wiring indicated, and arranged for secure, fixed installation in enclosure wall.

7. Duct Entrance Provisions: Duct-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
 8. Handholes 12 inches wide by 24 inches long and larger shall have factory-installed inserts for cable racks and pulling-in irons.
- B. Polymer Concrete Handholes and Boxes with Polymer Concrete Cover: Molded of sand and aggregate, bound together with a polymer resin, and reinforced with steel or fiberglass or a combination of the two.
1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
 - a. Armorcast Products Company.
 - b. Carson Industries LLC.
 - c. CDR Systems Corporation.
 - d. NewBasis.

2.5 UTILITY STRUCTURE ACCESSORIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bilco Company (The).
 2. Campbell Foundry Company.
 3. Carder Concrete Products.
 4. Christy Concrete Products.
 5. East Jordan Iron Works, Inc.
 6. Elmhurst-Chicago Stone Co.
 7. McKinley Iron Works, Inc.
 8. Neenah Foundry Company.
 9. NewBasis.
 10. Oldcastle Precast Group.
 11. Osburn Associates, Inc.
 12. Pennsylvania Insert Corporation.
 13. Riverton Concrete Products; a division of Cretex Companies, Inc..
 14. Strongwell Corporation; Lenoir City Division.
 15. Underground Devices, Inc.
 16. Utility Concrete Products, LLC.
 17. Utility Vault Co.
 18. Wausau Tile, Inc.
- B. Expansion Anchors for Installation after Concrete Is Cast: Zinc-plated, carbon-steel-wedge type with stainless-steel expander clip with 1/2-inch bolt, 5300-lbf rated pullout strength, and minimum 6800-lbf rated shear strength.
- C. Cable Rack Assembly: Steel, galvanized, except insulators.
1. Stanchions: T-section or channel; 2-1/4-inch nominal size; punched with 14 holes on 1-1/2-inch centers for cable-arm attachment.
 2. Arms: 1-1/2 inches wide, lengths ranging from 3 inches with 450-lb minimum capacity to 18 inches with 250-lb minimum capacity. Arms shall have slots along full length for cable ties and be arranged for secure mounting in horizontal position at any vertical location on stanchions.
 3. Insulators: High-glaze, wet-process porcelain arranged for mounting on cable arms.

- D. Cable Rack Assembly: Nonmetallic. Components fabricated from nonconductive, fiberglass-reinforced polymer.
 - 1. Stanchions: Nominal 36 inches high by 4 inches wide, with minimum of 9 holes for arm attachment.
 - 2. Arms: Arranged for secure, drop-in attachment in horizontal position at any location on cable stanchions, and capable of being locked in position. Arms shall be available in lengths ranging from 3 inches with 450-lb minimum capacity to 20 inches with 250-lb minimum capacity. Top of arm shall be nominally 4 inches wide, and arm shall have slots along full length for cable ties.
- E. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduits, conduit coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals.

2.6 SOURCE QUALITY CONTROL

- A. Test and inspect precast concrete utility structures according to ASTM C 1037.
- B. Nonconcrete Handhole and Pull-Box Prototype Test: Test prototypes of manholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.
 - 1. Tests of materials shall be performed by a independent testing agency.
 - 2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer shall certify tests by manufacturer.
 - 3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 UNDERGROUND DUCT APPLICATION

- A. Ducts for Electrical Cables Over 600 V: RNC, NEMA Type EPC-80-PVC, in concrete-encased duct bank, unless otherwise indicated.
- B. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-80-PVC, in direct-buried duct bank, unless otherwise indicated.
- C. Ducts for Electrical Branch Circuits: RNC, NEMA Type EPC-80-PVC, in direct-buried duct bank, unless otherwise indicated.
- D. Underground Ducts for Telephone, Communications, or Data Utility Service Cables: RNC, NEMA Type EPC-40-PVC, in concrete-encased duct bank, unless otherwise indicated.

3.2 UNDERGROUND ENCLOSURE APPLICATION

- A. Handholes and Boxes for 600 V and Less, Including Telephone, Communications, and Data Wiring:
 - 1. Units Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf vertical loading.

3.3 EARTHWORK

- A. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.
- B. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching.

3.4 DUCT INSTALLATION

- A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.
- B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of **48 inches**, both horizontally and vertically, at other locations, unless otherwise indicated.
- C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.
- D. Duct Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inches o.c. for 5-inch ducts, and vary proportionately for other duct sizes.
 - 1. Begin change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line.
 - 2. Direct-Buried Duct Banks: Install an expansion and deflection fitting in each conduit in the area of disturbed earth adjacent to manhole or handhole.
 - 3. Grout end bells into structure walls from both sides to provide watertight entrances.
- E. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 feet outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
- F. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig hydrostatic pressure.
- G. Pulling Cord: Install 100-lbf- test nylon cord in ducts, including spares.
- H. Concrete-Encased Ducts: Support ducts on duct separators.

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
2. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
 - a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
 - b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch reinforcing rod dowels extending 18 inches into concrete on both sides of joint near corners of envelope.
3. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
4. Minimum Space between Ducts: 3 inches between ducts and exterior envelope wall, 2 inches between ducts for like services, and 4 inches between power and signal ducts.
5. Depth: Install top of duct bank at least 24 inches below finished grade in areas not subject to deliberate traffic, and at least 30 inches below finished grade in deliberate traffic paths for vehicles, unless otherwise indicated.
6. Stub-Ups: Use manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.
 - a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
 - b. Stub-Ups to Equipment: For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of base. Install insulated grounding bushings on terminations at equipment.
7. Warning Tape: Bury warning tape approximately 12 inches above all concrete-encased ducts and duct banks. Align tape parallel to and within 3 inches of the centerline of duct bank. Provide an additional warning tape for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional tapes 12 inches apart, horizontally.

I. Direct-Buried Duct Banks:

1. Support ducts on duct separators coordinated with duct size, duct spacing, and outdoor temperature.
2. Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet of duct. Secure separators to earth and to ducts to prevent displacement during backfill and yet permit linear duct movement due to expansion and contraction as temperature changes. Stagger spacers approximately 6 inches between tiers.
3. Install ducts with a minimum of 3 inches between ducts for like services and 6 inches between power and signal ducts.
4. Depth: Install top of duct bank at least 36 inches below finished grade, unless otherwise indicated.
5. Set elevation of bottom of duct bank below the frost line.
6. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.
7. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

- a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches of concrete.
 - b. For equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.
- 8. Warning Planks: Bury warning planks approximately 12 inches above direct-buried ducts and duct banks, placing them 24 inches o.c. Align planks along the width and along the centerline of duct bank. Provide an additional plank for each 12-inch increment of duct-bank width over a nominal 18 inches. Space additional planks 12 inches apart, horizontally.
- J. Precast Concrete Handhole and Manhole Installation:
 - 1. Comply with ASTM C 891, unless otherwise indicated.
 - 2. Install units level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances.
 - 3. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
- K. Elevations:
 - 1. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.
 - 2. Where indicated, cast handhole cover frame integrally with handhole structure.
- L. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
- M. Waterproofing: Apply waterproofing to exterior surfaces of handholes after concrete has cured at least three days. After ducts have been connected and grouted, and before backfilling, waterproof joints and connections and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
- N. Hardware: Install removable hardware, including pulling eyes, cable stanchions, cable arms, as required for installation and support of cables and conductors and as indicated.
- O. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inches for manholes and 2 inches for handholes, for anchor bolts installed in the field. Use a minimum of two anchors for each cable stanchion.
- P. Warning Sign: Install "Confined Space Hazard" warning sign on the inside surface of each manhole cover.
- 3.5 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE
 - A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.
 - B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

- C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch above finished grade.
- D. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.
- E. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
- F. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.
 - 1. Concrete: 3000 psi, 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with a troweled finish.
 - 2. Dimensions: **10 inches wide by 12 inches deep.**

3.6 GROUNDING

- A. Ground underground ducts and utility structures according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.7 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections and prepare test reports:
 - 1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
 - 2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
 - 3. Test handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.8 CLEANING

- A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.
- B. Clean internal surfaces of manholes, including sump. Remove foreign material.

END OF SECTION 260543

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260544

SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 PERFORMANCE REQUIREMENTS

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY

A. Section Includes:

1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
2. Sleeve-seal systems.
3. Sleeve-seal fittings.
4. Grout.
5. Silicone sealants.

B. Related Requirements:

1. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.4 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Wall Sleeves:
 - 1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.
 - 2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.
- C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.
- D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.
- E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.
- F. Sleeves for Rectangular Openings:
 - 1. Material: Galvanized sheet steel.
 - 2. Minimum Metal Thickness:
 - a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and with no side larger than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
 - b. For sleeve cross-section rectangle perimeter 50 inches (1270 mm) or more and one or more sides larger than 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2 SLEEVE-SEAL SYSTEMS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. CALPICO, Inc.
 - c. Metraflex Company (The).
 - d. Pipeline Seal and Insulator, Inc.
 - e. Proco Products, Inc.
2. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Carbon steel
4. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

- A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.
 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
 - a. Presealed Systems.

2.4 GROUT

- A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.
- B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

2.5 SILICONE SEALANTS

- A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.
 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.
 2. Sealant shall have VOC content of 400g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 3. Sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

- B. **Silicone Foams:** Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 - EXECUTION

3.1 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

- A. Comply with NECA 1.
- B. Comply with NEMA VE 2 for cable tray and cable penetrations.
- C. **Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:**
 - 1. **Interior Penetrations of Non-Fire-Rated Walls and Floors:**
 - a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."
 - b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.
 - 2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
 - 3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
 - 4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
 - 5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level. Install sleeves during erection of floors.
- D. **Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:**
 - 1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
 - 2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.
- E. **Roof-Penetration Sleeves:** Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- F. **Aboveground, Exterior-Wall Penetrations:** Seal penetrations – using cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- G. **Underground, Exterior-Wall and Floor Penetrations:** Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.2 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.
- B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.3 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION 260544

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260548**VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Isolation pads.
2. Spring isolators.
3. Restrained spring isolators.
4. Channel support systems.
5. Restraint cables.
6. Hanger rod stiffeners.
7. Anchorage bushings and washers.

- B. Related Sections include the following:

1. Division 26 Section "Hangers and Supports for Electrical Systems" for commonly used electrical supports and installation requirements.

1.3 DEFINITIONS

- A. The IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.

1.4 PERFORMANCE REQUIREMENTS

- A. Seismic-Restraint Loading:

1. Site Class as Defined in the NYC Building Code: C.
2. Assigned Seismic Use Group or Building Category as Defined in the NYC Building Code: III.
 - a. Component Importance Factor: 1.5.
 - b. Component Response Modification Factor: 4.
3. Design Spectral Response Acceleration at Short Periods (0.2 Second): 0.365
4. Design Spectral Response Acceleration at 1.0-Second Period: .071

1.5 SUBMITTALS

A. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
 - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by OSHPD or an agency acceptable to authorities having jurisdiction.
 - b. Annotate to indicate application of each product submitted and compliance with requirements.
3. Restrained-Isolation Devices: Include ratings for horizontal, vertical, and combined loads.

B. Engineering Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators and seismic restraints.
 - a. Coordinate design calculations with wind-load calculations required for equipment mounted outdoors. Comply with requirements in other Division 26 Sections for equipment mounted outdoors.
2. Indicate materials and dimensions and identify hardware, including attachment and anchorage devices.
3. Field-fabricated supports.
4. Seismic-Restraint Details:
 - a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
 - b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events.
 - c. and Evaluation Documentation: By OSHPD or an agency acceptable to authorities having jurisdiction, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

C. Coordination Drawings: Show coordination of seismic bracing for electrical components with other systems and equipment in the vicinity, including other supports and seismic restraints.

D. Welding certificates.

E. Qualification Data: For professional engineer and testing agency.

F. Field quality-control test reports.

1.6 QUALITY ASSURANCE

- A. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
- B. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.
- C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- D. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage pre-approval OPA number from OSHPD, pre-approval by ICC-ES, or pre-approval by another agency acceptable to authorities having jurisdiction, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If pre-approved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer.
- E. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

- A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- C. Basis-of-Design Product: Subject to compliance with requirements, provide product by one of the following:
 - 1. Ace Mountings Co. Inc.
 - 2. Vibration Mountings & Controls, Inc.
 - 3. Mason Industries.
 - 4. Amber/Booth Company, Inc.
 - 5. Kinetics Noise Control.
 - 6. Vibration Eliminator Co., Inc.
 - 7. Vibration Isolators.
- D. Pads: Arrange in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
 - 1. Resilient Material: Oil- and water-resistant neoprene.
- E. Spring Isolators: Freestanding, laterally stable, open-spring isolators.
 - 1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 2. Minimum Additional Travel: 50 percent of the required deflection at rated load.

3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 5. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch- thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig.
 6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.
- F. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 2. Restraint: Seismic or limit-stop as required for equipment and authorities having jurisdiction.
 3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.2 SEISMIC-RESTRAINT DEVICES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide a product by one of the following:
1. Amber/Booth Company, Inc.
 2. California Dynamics Corporation.
 3. Cooper B-Line, Inc.; a division of Cooper Industries.
 4. Hilti Inc.
 5. Loos & Co.; Seismic Earthquake Division.
 6. Mason Industries.
 7. TOLCO Incorporated; a brand of NIBCO INC.
 8. Unistrut; Tyco International, Ltd.
- B. General Requirements for Restraint Components: Rated strengths, features, and application requirements shall be as defined in reports by OSHPD or an agency acceptable to authorities having jurisdiction.
1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.
- C. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

- D. Restraint Cables: ASTM A 603 galvanized-steel cables with end connections made of steel assemblies with thimbles, brackets, swivels, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.
- E. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections to hanger rod. Do not weld stiffeners to rods.
- F. Bushings for Floor-Mounted Equipment Anchor: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchors and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- I. Mechanical Anchor: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchors with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.
- J. Adhesive Anchor: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.3 FACTORY FINISHES

- A. Finish: Manufacturer's standard prime-coat finish ready for field painting.
- B. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
 - 1. Powder coating on springs and housings.
 - 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
 - 3. Baked enamel or powder coat for metal components on isolators for interior use.
 - 4. Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Multiple Raceways or Cables: Secure raceways and cables to trapeze member with clamps approved for application by OSHPD or an agency acceptable to authorities having jurisdiction.
- B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.3 SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Equipment and Hanger Restraints:

1. Install restrained isolators on electrical equipment.
2. Install resilient, bolt-isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch.
3. Install seismic-restraint devices using methods approved by OSHPD or an agency acceptable to authorities having jurisdiction providing required submittals for component.

- B. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

- C. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

D. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.4 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in runs of raceways, cables, wireways, cable trays, and busways where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where they terminate with connection to equipment that is anchored to a different structural element from the one supporting them as they approach equipment.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Perform tests and inspections.
- C. Tests and Inspections:
 - 1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
 - 2. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
 - 3. Obtain Architect's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 - 4. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
 - 5. Test to 90 percent of rated proof load of device.
 - 6. Measure isolator restraint clearance.
 - 7. Measure isolator deflection.
 - 8. Verify snubber minimum clearances.
 - 9. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Adjust isolators after isolated equipment is at operating weight.
- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust active height of spring isolators.
- D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.7 ELECTRICAL VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

- A. Supported or Suspended Equipment:

1. Equipment Location:
2. Pads:
 - a. Material: Neoprene.
 - b. Thickness: as required.
 - c. Durometer: as required.
 - d. Number of Pads: as required.
3. Isolator Type: To be determined by Seismic consultant.
4. Component Importance Factor: 1.5.
5. Component Response Modification Factor: 4.

END OF SECTION 260548

SECTION 260550
ELECTRICAL NOISE CONTROL

PART 1 - GENERAL

1.1 SCOPE

- A. All penetrations of sound-rated walls, floors and ceilings in Sound-Critical Spaces shall be specially sealed in accordance with the requirements as outlined below. Refer to Noise Control Section of Division 230550, paragraph 1.1.C for listing of Sound Critical Spaces and their acoustical performance requirements.
- B. Refer to the Vibration Isolation Schedule, Section 260548, for vibration isolation requirements of electrical items.

1.2 RELATED WORK

- A. General conditions of the Contract and Division 1.
- B. Vibration Isolation Schedule, Section 260548

1.3 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

- 2. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.
- B. All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.
- C. Manufacturer to:
 - 1. Determine vibration isolation sizes and locations.
 - 2. Guarantee specified isolation system deflection.
 - 3. Provide installation instructions and drawings.
 - 4. Substitution of "Internally Isolated" mechanical equipment in lieu of the specified isolation of this section must be approved for individual equipment units by the commissioner. This type of substitution will only be considered with a letter of

guarantee from the equipment manufacturer that states that the "Internal Isolated" mechanical equipment is equivalent to the specified isolation outlined in this section.

1.4 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

PART 2 – Product

2.1 Fluorescent Light Fixture

A. Fluorescent and Metal Halide light fixtures for sound-critical spaces including, but not limited to: Auditorium, Control Rooms, Breakout Rooms, Insert Studio, shall incorporate electronic ballasts as described below or have remotely located ballasts. The fixture should not incorporate thin, lightweight aluminum baffle fins, which tend to vibrate sympathetically with certain musical pitches. Fixture should be submitted to Commissioner for review.

2.2 Electronic Ballasts

A. The electronic ballast shall be approved and listed by Underwriters Laboratories, Inc. Ballasts shall comply with all applicable state and federal efficiency standards. Ballasts shall comply with FCC and NEMA limits governing electromagnetic and radio-frequency interference and shall not interfere with operation of other normal electrical equipment.

B. Ballasts shall not produce any audible noise, be Class "A" rated for sound and have a total harmonic distortion of 10 percent or less. Ballasts shall be rapid start.

C. Ballasts shall carry a minimum three-year warranty, including labor allowance.

D. Manufacturer shall provide certified test data for sound pressure level (dBA) of the submitted ballast. In addition, contractor shall deliver to the Commissioner a sample for acoustical testing and approval. This sample shall consist of a 2' x 4' luminaire with 10% THD rapid start electronic ballast, cord and plug for 120Volt operation. Contractor shall resubmit additional samples until approval is received from the Commissioner.

E. The following manufacturers are acceptable:

1. Universal Lighting Technologies, Nashville, TN, 615.316.5100 www.unvlt.com
2. Mark V series from Advance Transformer, Rosemont, IL 847-390-5000
www.advancetransformer.com

3. High Performance Electronic Ballast from Motorola Lighting Inc. Buffalo Grove, IL 708-215-6300, www.motorola.com

4. or approved equivalent.

2.3 OUTLET PADS

A. Outlet box pad is to be a polybutene-butyl material with a self-adhesive backing.

B. The following manufacturers are acceptable:

1. Lowry's Outlet Box Pads, by Lowry's Inc., Inc. Arleta, CA 800-225-8231.
www.halowry.com
2. Legrand Wiremold
3. Or approved equal

2.4 GENERATOR

A. Generator shall be as specified elsewhere. Sound power data shall be submitted as described in Section "1.4" of this Specification.

B. Provide units with the following maximum sound power levels in dB, re 10^{-12} W: (R=Radiated)

Tag #	D//R	Octave Band Center Frequency, Hz.							
		63	125	250	500	1000	2000	4000	8000
Gen-1	R	98.5	94.5	94.1	92.3	90.6	88.9	84.4	83.3

Submittal may be rejected if sound power level data for inlet or discharge is more than 5 dB higher in the 63 Hz octave band or 3 dB higher in any other octave band when compared against the specified unit.

C. In the event that the specified sound levels are not achieved by the tested unit(s), it is the manufacturer's responsibility to do whatever is necessary to achieve the specified sound levels at no additional cost to the owner.

2.5 NEOPRENE MOUNTS

A. Neoprene mounts for vibration isolation of electrical transformers shall be double deflection types, minimum 2" thick, with a minimum rated deflection of .35". All metal surfaces shall be neoprene covered and have friction pads both top and bottom so they need not be bolted to the floor.

B. Subject to compliance with requirements specified herein, provide vibration isolation materials, bases and systems by one of the following or approved equal:

1. Type RBA Mason Industries, Incorporated

350 Rabro Drive
Hauppauge, New York 11788
631-348-0282
www.mason-ind.com

2. Type RDCM
Vibration Mountings & Controls, Inc.
113 Main Street
Bloomington, NJ 07403
973-838-1780
www.aeroflex.com

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine all work prepared by others to receive work of this Section and report problems or defects affecting installation to the General Contractor/Commissioner for correction.
- D. Inspect all components of the Work to insure no damage has occurred during shipment or storage.
- E. Accompany General Contractor/Commissioner on a joint inspection, ideally within 2 weeks of the point in time when equipment systems are certified operable and adjusted.

3.2 INSTALLATION

- A. Install vibration isolation devices and systems in accordance with the manufacturer's instructions and certified submittal data.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping or duct resulting in stresses or misalignment.
- C. No rigid connections between equipment and the building structure shall be made that degrades the performance of the vibration isolation systems herein specified.
- D. The contractor shall not install any equipment, piping, duct or conduit which makes rigid connections with the building unless isolation is not specified. "Building" includes, but is not limited to, slabs, beams, columns, studs and walls.
- E. Coordinate work with other trades to avoid rigid contact with the building.
- F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the Commissioner's attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.
- G. Correct, at no additional cost, all installations which are deemed defective in workmanship and materials at the contractor's expense.
- H. Floor Mounted Equipment:
 - 1. 4-inch thick concrete housekeeping pads:
 - a. Over entire floor area of supported equipment.

- b. Supporting all vibration isolation devices and bases.
- c. Keyed with hairpins as required to be integral with the structural slab.
- d. Incorporating approved seismic restraint anchor plates flush with the top of the housekeeping pad.

2. Concrete per specification describing requirements.

I. General Equipment Isolation:

- 1. Isolation mounting deflection (minimum) as specified or scheduled on manufacturer's certified drawings.
- 2. Electrical conduit connections to isolated equipment shall be looped or installed with flexible conduit to allow free motion of isolated equipment.
- 3. Install equipment directly on isolation system. Support rails between the equipment and isolators should not be used.
- 4. Verify all installed isolators and mounting systems permit equipment motion in all directions.
- 5. Prior to startup, clean out all foreign matter between bases and equipment. Verify that there are no isolation short circuits in the base or isolators.
- 6. No rigid connections between rotating or vibrating equipment and building structure shall be made that degrades the vibration isolation system herein specified.
- 7. Coordinate work with other trades to avoid rigid contact with the "building". Inform other trades following, such as plastering, drywall, electrical or sheet metal, to avoid any contact which would reduce the vibration isolation.
- 8. Bring to the Commissioner's attention immediately, prior to installation, any conflicts with other trades which will result in unavoidable rigid contact with equipment or piping as described herein, due to inadequate space or other unforeseen conditions. Corrective work necessitated by conflicts after installation shall be at the contractor's expense.
- 9. Correct, at no additional cost, all installations which are deemed defective in workmanship or material as a result of project completion inspection or subsequent inspections due to City of New York complaints within a period of one year following acceptance.

3.3 ELECTRICAL OUTLET/RECEPTACLE

- A. There shall be a separation of 24" between centerlines of outlet boxes or receptacles set into opposite sides of the wall. Conduit connecting such boxes shall be flexible and shall provide 6" slack per 24" of run.
- B. In a double wall, boxes in opposite sides of the wall shall be located 24" on center, minimum. Effectively, this means that boxes on the same side of the wall will be 48" apart if there is a box between them on the other side of the wall.
- C. The boxes shall be treated to reduce sound transmission. All unused knock-out holes shall be plugged with knock-out caps or spot welded closed. The openings or cutouts in the walls to receive the boxes/receptacles shall be made no more than 1/4" oversize to allow a 1/8" gap all around. The flanges shall be perimeter sealed with acoustical caulking, prior to the boxes/receptacles being inserted.
- D. Conduit in double walls of Sound Critical Spaces shall home run to a point outside of the partition before connecting to cable and conduit connecting boxes on the other side. Conduit may thread through the studs on its own side but shall under no circumstances interface with the stud on the other side of the wall.
- E. Outlets installed in gypsum board only partitions (no CMU in construction) in noise critical spaces as defined in the Noise Control specification, will require that the outlet be wrapped on five sides with an acoustical pad. The pad is a polybutene-butyl material with a self-adhesive backing. This material will help reduce sound transmission through walls. Acceptable manufacturer is Lowry's Outlet Box Pads, by Harry A. Lowry & Associates, Inc. Sun Valley, CA 818-768-4661. Legrand Wiremold

3.4 SOUNDPROOFING OF CONSTRUCTION

- A. Required for penetrations through walls, floors and ceilings of ductwork pipes and conduits in Sound-Critical Spaces.
- B. The Contractor shall ensure that the sound control performance of structures be maintained in accordance with the drawings and specifications. All penetrations shall be installed in a manner that results in complete air tightness through structure. If a condition occurs where penetration of the structure by a pipe, conduit, etc., is not shown clearly on the drawings (or described in the specifications), the Contractor shall ask immediately for clarification of the method necessary to install the particular item.
- C. Penetrations of Single-Wythe Masonry and Concrete Constructions
 - 1. Pipe/Conduit diameter = 1" or larger:
 - a. Install a metal sleeve at the penetration. Size the sleeve to allow for 1" flexible foam tubular insulation material and normal pipe clearances. Line the sleeve with 1" thick CFC free elastomeric nitrile flexible foam tubular insulation (or equal).
 - b. Install pipe/conduit through lined sleeve and seal airtight with acoustical sealant or fire barrier acoustical sealant if partition is fire-rated.

- c. Do not rigidly secure pipe/conduit to wall with angles.
- 2. Pipe/Conduit diameter < 1":
 - a. Wrap pipe/conduit with 1/2" thick Armstrong Self-Seal flexible foam tubular insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Grout tightly to flexible foam tubular insulation cover on the pipe/conduit.
 - c. Trim flexible foam tubular insulation material to the width of the partition, and seal airtight with acoustical sealant or fire barrier acoustical sealant if partition is fire-rated.
- D. Penetrations of Single Stud Drywall Constructions
 - 1. Pipe/Conduit diameter = 1" or larger:
 - a. Wrap with 1/2" thick Armstrong Self-Seal flexible foam pipe Insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Install a metal pipe sleeve around the flexible foam tubular insulation wrap.
 - c. Install the drywall around the sleeve and spackle tightly to full thickness of partition.
 - d. Trim Armaflex and sleeve to the width of the partition, and seal airtight with 3M Corporation CP 25 Caulk (or equal).
 - 2. Pipe/Conduit diameter < 1":
 - a. Wrap with 1/2" thick Armstrong Self-Seal flexible foam pipe insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Install the drywall tight to the flexible foam tubular insulation wrap.
 - c. Trim flexible foam tubular insulation to the width of the partition, and seal airtight with 3M Corporation CP 25 Caulk (or equal).
- E. Multiple Pipe/Conduit Penetrations
 - 1. Where a series of conduits or pipes are penetrating the wall/floor/ceiling, each duct/conduit/pipe shall be separated by minimum 4" in all directions.
 - 2. Multiple pipe/conduit penetrations at one location (ie-one large opening for a series of runs) is not recommended.
- F. Penetrations of Double-Wythe Masonry/Concrete and/or Double Stud Drywall and/or Combination Constructions
 - 1. Use same techniques described above EXCEPT do not bridge the two studs or wythes with solid members such as sleeves or stud frames. Each sleeve or frame must be for each individual wythe or stud

3.5 CONDUIT ISOLATION

- A. All electrical conduit connections to vibration isolated equipment shall be looped or installed with flexible conduit to allow free motion of isolated equipment.
- B. All conduit shall be resiliently mounted, either floor supported or ceiling hung, such that conduit will be isolated from the building structure (ie - no direct metal to metal contact of the conduit with the building structure) in the following locations:
 - 1) First three (3) supports on both sides of any Acoustical Isolation Joint (AIJ)

3.6 PERFORMANCE VERIFICATION

- A. Subsequent to equipment installation, the installation will be surveyed visually for conformance to specified installation, materials and workmanship by the Commissioner and Mechanical Commissioner. All parts of the installation will be reviewed for conformance to this specification including vibration isolation devices and sealing of all partition penetrations.
- B. If the results of the visual survey indicate non-conformance with the specifications or if the results of any acoustical measurements indicate non-conformance with the specified NC levels, as described in Section 1.01.C of the Mechanical Noise Control specification section, due to improper installation, poor workmanship or unapproved substitutions or shop drawings, it shall be the responsibility of the contractor to correct, at his own expense, such deficiencies by methods that shall be approved by the Electrical Commissioner prior to incorporation.
- C. After corrections have been made, further acoustical tests shall be performed at contractor's expense for verification of conformance to specified NC levels.

END OF SECTION 260550

SECTION 260553**IDENTIFICATION FOR ELECTRICAL SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Identification for raceway and metal-clad cable.
2. Identification for conductors and communication and control cable.
3. Underground-line warning tape.
4. Warning labels and signs.
5. Instruction signs.
6. Equipment identification labels.
7. Miscellaneous identification products.

1.3 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For each electrical identification product indicated.
- C. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.
- D. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions, and graphic features of identification products.

1.4 QUALITY ASSURANCE

- A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Comply with ANSI A13.1 and ANSI C2.
- C. Comply with NFPA 70.
- D. Comply with 29 CFR 1910.145.

1.5 COORDINATION

- A. Coordinate identification names, abbreviations, colors, and other features with requirements in the Contract Documents, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual, and with those required by codes, standards, and 29 CFR 1910.145. Use consistent designations throughout Project.
- B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- C. Coordinate installation of identifying devices with location of access panels and doors.
- D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 RACEWAY AND METAL-CLAD CABLE IDENTIFICATION MATERIALS

- A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.
- B. Color for Printed Legend:
 - 1. Power Circuits: Black letters on an orange field.
 - 2. Legend: Indicate system or service and voltage, if applicable.
- C. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

- D. Snap-Around Labels: Slit, pre-tensioned, flexible, preprinted, color-coded acrylic sleeves, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- E. Snap-Around, Color-Coding Bands: Slit, pre-tensioned, flexible, solid-colored acrylic sleeves, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.
- F. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches wide; compounded for outdoor use.

2.2 CONDUCTOR AND COMMUNICATION- AND CONTROL-CABLE IDENTIFICATION MATERIALS

- A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.
- B. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.
- C. Aluminum Wraparound Marker Labels: Cut from 0.014-inch- thick aluminum sheet, with stamped, embossed, or scribed legend, and fitted with tabs and matching slots for permanently securing around wire or cable jacket or around groups of conductors.
- D. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking nylon tie fastener.
- E. Write-On Tags: Polyester tag, 0.015 inch thick, with corrosion-resistant grommet and polyester or nylon tie for attachment to conductor or cable.
 - 1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2.3 WARNING LABELS AND SIGNS

- A. Comply with NFPA 70 and 29 CFR 1910.145.
- B. Baked-Enamel Warning Signs: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application. 1/4-inch grommets in corners for mounting. Nominal size, 7 by 10 inches.
- C. Warning label and sign shall include, but are not limited to, the following legends:
 - 1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
 - 2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES." (208 volts) 42 INCHES for 277/480 volts.

2.4 INSTRUCTION SIGNS

- A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch thick for signs up to 20 sq. in. and 1/8 inch thick for larger sizes.
 - 1. Engraved legend with black letters on white face.
 - 2. Punched or drilled for mechanical fasteners.
 - 3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.5 EQUIPMENT IDENTIFICATION LABELS

- A. Self-Adhesive, Engraved, Laminated Acrylic or Melamine Label: Adhesive backed, with white letters on a dark-gray or black background. Minimum letter height shall be 3/8 inch.

2.6 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.
 - 1. Minimum Width: 3/16 inch.
 - 2. Tensile Strength: 50 lb, minimum.
 - 3. Temperature Range: Minus 40 to plus 185 deg F.
 - 4. Color: Black, except where used for color-coding.

PART 3 - EXECUTION

3.1 APPLICATION

- A. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 100A: Identify with orange self-adhesive vinyl label or self-adhesive vinyl tape applied in bands.
- B. Accessible Raceways and Cables of Auxiliary Systems: Identify the following systems with color-coded, self-adhesive vinyl tape applied in bands:
 - 1. Fire Alarm System: Red.
 - 2. Fire-Suppression Supervisory and Control System: Red and yellow.
 - 3. Combined Fire Alarm and Security System: Red and blue.
 - 4. Security System: Blue and yellow.
 - 5. Mechanical and Electrical Supervisory System: Green and blue.
 - 6. Telecommunication System: Green and yellow.
 - 7. Control Wiring: Green and red.
- C. Power-Circuit Conductor Identification: For secondary conductors No. 12 AWG and larger in vaults, pull and junction boxes, manholes, and handholes use color-coding conductor tape. Identify source and circuit number of each set of conductors. For single conductor cables, identify phase in addition to the above.
- D. Branch-Circuit Conductor Identification: Where there are conductors for more than three branch circuits in same junction or pull box, use color-coding conductor tape. Identify each ungrounded conductor according to source and circuit number.

- E. Conductors to Be Extended in the Future: Attach marker tape to conductors and list source and circuit number.
- F. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.
 - 1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
 - 2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
 - 3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.
- G. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145 and apply self-adhesive warning labels. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.
 - 1. Equipment with Multiple Power or Control Sources: Apply to door or cover of equipment including, but not limited to, the following:
 - a. Power transfer switches.
 - b. Controls with external control power connections.
 - 2. Equipment Requiring Workspace Clearance According to NFPA 70: Unless otherwise indicated, apply to door or cover of equipment but not on flush panelboards and similar equipment in finished spaces.
- H. Instruction Signs:
 - 1. Operating Instructions: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.
 - 2. Emergency Operating Instructions: Install instruction signs with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for 'EM' circuit breakers in panels.
- I. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.
 - 1. Labeling Instructions:
 - a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch- high label; where 2 lines of text are required, use labels 2 inches high.
 - b. Outdoor Equipment: Engraved, laminated acrylic or melamine label.
 - c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.
 - 2. Equipment to Be Labeled:

- a. Panelboards, electrical cabinets, dimmer panels and enclosures.
- b. Access doors and panels for concealed electrical items.
- c. Electrical switchgear and switchboards.
- d. Transformers.
- e. Electrical substations.
- f. Emergency system boxes and enclosures.
- g. Motor-control centers.
- h. Disconnect switches.
- i. Enclosed circuit breakers.
- j. Motor starters.
- k. Push-button stations.
- l. Power transfer equipment.
- m. Contactors.
- n. Remote-controlled switches, dimmer modules, and control devices.
- o. Battery inverter units.
- p. Battery racks.
- q. Power-generating units.
- r. Voice and data cable terminal equipment.
- s. Master clock and program equipment.
- t. Intercommunication and call system master and staff stations.
- u. Television/audio components, racks, and controls.
- v. Fire-alarm control panel and annunciators.
- w. Security and intrusion-detection control stations, control panels, terminal cabinets, and racks.
- x. Monitoring and control equipment.
- y. Uninterruptible power supply equipment.
- z. Terminals, racks, and patch panels for voice and data communication and for signal and control functions.

3.2 INSTALLATION

- A. Verify identity of each item before installing identification products.
- B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.
- C. Apply identification devices to surfaces that require finish after completing finish work.
- D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.
- E. Attach non-adhesive signs and plastic labels with screws and auxiliary hardware appropriate to the location and substrate.
- F. System Identification Color Banding for Raceways and Cables: Each color band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.
- G. Color-Coding for Phase Identification, 600 V and Less: Use the colors listed below for ungrounded feeder/branch-circuit conductors.
 - 1. Color shall be factory applied or, for sizes larger than No. 10 AWG if authorities having jurisdiction permit, field applied.

2. Colors for 208/120-V Circuits:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 3. Colors for 480/277-V Circuits:
 - a. Phase A: Brown.
 - b. Phase B: Orange.
 - c. Phase C: Yellow.
 4. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.
- H. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.
- I. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.
- J. Painted Identification: Prepare surface and apply paint according to Division 9 painting Sections.

END OF SECTION 260553

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260573**OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes computer-based, fault-current and overcurrent protective device coordination studies. Protective devices shall be set based on results of the protective device coordination study.
 - 1. Provide fully rated system. Series-rated devices are not permitted.
- B. The contractor shall furnish an Arc Flash Hazard Analysis Study per the requirements set forth in NFPA 70E -Standard for Electrical Safety in the Workplace. The arc flash hazard analysis shall be performed according to the IEEE 1584 equations that are presented in NFPA70E-2004, Annex D. Provide and install Arc-Flash labels on all equipment.

1.3 SUBMITTALS**A. LEED BUILDING SUBMITTAL REQUIREMENTS:**

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For computer software program to be used for studies.
- C. Product Certificates: For coordination-study and fault-current-study computer software programs, certifying compliance with IEEE 399.
- D. Qualification Data: For coordination-study specialist.
- E. Other Action Submittals: The following submittals shall be made after the approval process for system protective devices has been completed. Submittals may be in digital form.
 - 1. Coordination-study input data, including completed computer program input data sheets.
 - 2. Study and Equipment Evaluation Reports.
 - 3. Coordination-Study Report.
 - 4. Arc flash hazard analysis.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are not acceptable.
- C. Coordination-Study Specialist Qualifications: An entity experienced in the application of computer software used for studies, having performed successful studies of similar magnitude on electrical distribution systems using similar devices.
 - 1. Professional Engineer, licensed in the state where Project is located, shall be responsible for the study. All elements of the study shall be performed under the direct supervision and control of engineer.
 - 2. The equipment manufacturer or approved engineering firm shall demonstrate experience with Arc Flash Hazard Analysis by submitting names of actual arc flash hazard analysis it has performed in the past year.
- D. Comply with IEEE 242 for short-circuit currents and coordination time intervals.
- E. Comply with IEEE 399 for general study procedures.
- F. IEEE 1584 -Guide for Performing Arc-Flash Hazard Calculations.
- G. NFPA 70E – Standard for Electrical Safety in the Workplace.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE DEVELOPERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide a comparable product by one of the following:

1. CGI CYME.
2. EDSA Micro Corporation.
3. ESA Inc.
4. Operation Technology, Inc.
5. SKM Systems Analysis, Inc.

2.2 COMPUTER SOFTWARE PROGRAM REQUIREMENTS

- A. Comply with IEEE 399.
- B. Analytical features of fault-current-study computer software program shall include "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.
- C. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.
 1. Optional Features:
 - a. Arcing faults.
 - b. Simultaneous faults.
 - c. Explicit negative sequence.
 - d. Mutual coupling in zero sequence.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.
 1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.2 POWER SYSTEM DATA

- A. Gather and tabulate the following input data to support coordination study:
 1. Product Data for overcurrent protective devices specified in other Division 26 Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
 2. Impedance of utility service entrance.
 3. Electrical Distribution System Diagram: In hard-copy and electronic-copy formats, showing the following:
 - a. Circuit-breaker and fuse-current ratings and types.

- b. Relays and associated power and current transformer ratings and ratios.
 - c. Transformer kilovolt amperes, primary and secondary voltages, connection type, impedance, and X/R ratios.
 - d. Generator kilovolt amperes, size, voltage, and source impedance.
 - e. Cables: Indicate conduit material, sizes of conductors, conductor material, insulation, and length.
 - f. Busway ampacity and impedance.
 - g. Motor horsepower and code letter designation according to NEMA MG 1.
4. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:
- a. Special load considerations, including starting inrush currents and frequent starting and stopping.
 - b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
 - c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
 - d. Generator thermal-damage curve.
 - e. Ratings, types, and settings of utility company's overcurrent protective devices.
 - f. Special overcurrent protective device settings or types stipulated by utility company.
 - g. Time-current-characteristic curves of devices indicated to be coordinated.
 - h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
 - i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
 - j. Panelboards, switchboards, motor-control center ampacity, and interrupting rating in amperes rms symmetrical.

3.3 FAULT-CURRENT STUDY

- A. Calculate the maximum available short-circuit current in amperes rms symmetrical at circuit-breaker positions of the electrical power distribution system. The calculation shall be for a current immediately after initiation and for a three-phase bolted short circuit at each of the following:
 - 1. Switchgear and switchboard bus.
 - 2. Distribution panelboard.
 - 3. Branch circuit panelboard.
- B. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Include studies of system-switching configurations and alternate operations that could result in maximum fault conditions.
- C. Calculate momentary and interrupting duties on the basis of maximum available fault current.
- D. Calculations to verify interrupting ratings of overcurrent protective devices shall comply with IEEE 241 and IEEE 242.
 - 1. Transformers:

- a. ANSI C57.12.10.
 - b. ANSI C57.12.22.
 - c. ANSI C57.12.40.
 - d. IEEE C57.12.00.
 - e. IEEE C57.96.
 - 2. Medium-Voltage Circuit Breakers: IEEE C37.010.
 - 3. Low-Voltage Circuit Breakers: IEEE 1015 and IEEE C37.20.1.
 - 4. Low-Voltage Fuses: IEEE C37.46.
- E. Study Report:
- 1. Show calculated X/R ratios and equipment interrupting rating (1/2-cycle) fault currents on electrical distribution system diagram.
- F. Equipment Evaluation Report:
- 1. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
 - 2. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
 - 3. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

3.4 COORDINATION STUDY

- A. Perform coordination study using approved computer software program. Prepare a written report using results of fault-current study. Comply with IEEE 399.
 - 1. Calculate the maximum and minimum 1/2-cycle short-circuit currents.
 - 2. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
 - 3. Calculate the maximum and minimum ground-fault currents.
- B. Comply with IEEE 241 recommendations for fault currents and time intervals.
- C. Transformer Primary Overcurrent Protective Devices:
 - 1. Device shall not operate in response to the following:
 - a. Inrush current when first energized.
 - b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
 - c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.
 - 2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.
- D. Motors served by voltages more than 600 V shall be protected according to IEEE 620.
- E. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that

equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

F. Coordination-Study Report: Prepare a written report indicating the following results of coordination study:

1. Tabular Format of Settings Selected for Overcurrent Protective Devices:

- a. Device tag.
- b. Relay-current transformer ratios; and tap, time-dial, and instantaneous-pickup values.
- c. Circuit-breaker sensor rating; and long-time, short-time, and instantaneous settings.
- d. Fuse-current rating and type.
- e. Ground-fault relay-pickup and time-delay settings.

2. Coordination Curves: Prepared to determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:

- a. Device tag.
- b. Voltage and current ratio for curves.
- c. Three-phase and single-phase damage points for each transformer.
- d. No damage, melting, and clearing curves for fuses.
- e. Cable damage curves.
- f. Transformer inrush points.
- g. Maximum fault-current cutoff point.

G. Completed data sheets for setting of overcurrent protective devices.

3.5 FIELD ADJUSTMENT

A. POWER COMPANY APPROVAL

- 1. Copies of the final report shall be submitted to the power company for their review and approval. Approved copies of the report shall be submitted to the Electrical Design Engineer.

B. FIELD SETTINGS

- 1. The Contractor shall perform field adjustments of the protective devices as required to place the equipment in final operating condition. The settings shall be in accordance with the approved short circuit study, protective device evaluation study, and protective device coordination study.

3.6 ARC FLASH WARNING LABELS

- A. The contractor of the Arc Flash Hazard Analysis shall provide a 3.5 in. x 5 in. thermal transfer

type label of high adhesion polyester for each work location analyzed.

- B. All labels will be based on recommended overcurrent device settings and will be provided after the results of the analysis have been presented to the City of New York and after any system changes, upgrades or modifications have been incorporated in the system.
- C. The label shall include the following information, at a minimum:
 - 1. Location designation
 - 2. Nominal voltage
 - 3. Flash protection boundary
 - 4. Hazard risk category
 - 5. Incident energy
 - 6. Working distance
 - 7. Engineering report number, revision number and issue date.
- D. Labels shall be machine printed, with no field markings.
- E. Arc flash labels shall be provided in the following manner and all labels shall be based on recommended overcurrent device settings.
 - 1. For each panelboard, one arc flash label shall be provided.
 - 2. For each low voltage switchboard, one arc flash label shall be provided.
 - 3. For each switchgear, one flash label shall be provided.
 - 4. For medium voltage switches one arc flash label shall be provided.

END OF SECTION 26 05 73

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260800**COMMISSIONING OF ELECTRICAL****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this section.
- B. Division 01 section 'LEED Requirements' for additional LEED requirements.

1.2 SUMMARY

- A. This section includes commissioning process requirements for Electrical systems, assemblies, and equipment.
- B. Related Sections:
 - 1. Division 01 Section "General Commissioning Requirements" for general commissioning process requirements.

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of each system designer to provide a complete design or installing subcontractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
 - 2. Verify and document proper performance of equipment and systems.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to City of New York.
 - 4. Verify that the City of New York's operating personnel are adequately trained.
 - 5. Verify a contract is in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment

startup, control system calibration, testing, balancing and verification and performance checkouts.

- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Trade Contractors, subcontractors, manufacturers and equipment suppliers.
- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to Division 01 Section and "General Commissioning Requirements" for definitions.

1.5 SUBMITTALS

- A. Refer to Division 01 Section and "General Commissioning Requirements" for CxA's role.
- B. Refer to 'DDC General conditions' for specific requirements. In addition, provide the following:
- C. In addition, provide the following:
 1. Certificates of readiness
 2. Certificates of completion of installation, prestart, and startup activities.
 3. O&M manuals
 4. Test reports
 5. 'As Built' drawings

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test equipment manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the electrical contractor of Division 26 shall ultimately be responsible for all standard testing equipment for the electrical systems and controls systems in Division 26. A sufficient quantity of two-way radios shall be provided by each contractor.

- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of the City of New York.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
 - 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data:
 - 1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 - 2. The CxA will review the O&M literature once for conformance to project requirements.
 - 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Training:
 - 1. Contractor will provide demonstration and training as required by the specifications.
 - 2. A complete training plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any training.

3. A training agenda for each training session must be submitted to the CxA one (1) week prior the training session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and Commissioner. A copy of the test record shall be provided to the CxA, City of New York, and Commissioner.
5. Engage a Factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.
6. Train City of New York's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests as per the written procedure and at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Participate in Electrical systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Include requirements for submittal data, operation and maintenance data, and training in each purchase order or sub-contract written.
- F. Prepare preliminary schedule for Electrical system orientations and inspections, operation and maintenance manual submissions, training sessions, equipment start-up and task completion for City of New York. Distribute preliminary schedule to commissioning team members.
- G. Update schedule as required throughout the construction period.
- H. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- I. Perform all verification and functional performance tests in the presence of the CxA as required.
- J. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- L. Coordinate with the CxA to provide 72-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- M. Notify the CxA a minimum of two weeks in advance of the time for start of the testing work.
- N. Participate in, and schedule vendors and contractors to participate in the training sessions.

- O. Provide written notification to the Commissioner/GC and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. Electrical equipment including switchgear, panel boards, motor control centers, lighting, receptacles, and all other equipment furnished under this Division.
 - 2. Lighting System
 - 3. Emergency Power System
- P. The equipment supplier shall document the performance of his equipment.
- Q. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- R. Provide training of the City of New York's operating staff using expert qualified personnel, as specified.
- S. Equipment Suppliers
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.
 - 2. Assist in equipment testing per agreements with contractors.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- T. Refer to Division 01 Section "General Commissioning Requirements" for additional Contractor responsibilities.

3.3 CITY OF NEW YORK'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for City of New York's Responsibilities.

3.4 COMMISSIONER'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Commissioner's Responsibilities.

3.5 CxA'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's Responsibilities.

3.6 TESTING PREPARATION

- A. Certify in writing to the CxA that Electrical systems, subsystems, and equipment have been installed, megerred, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.7 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Electrical testing shall include the entire Electrical installation, from the incoming power equipment throughout the distribution system. Testing shall include measuring, but not limited to resistance, voltage, and amperage of system(s) and devices.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The Electrical contractor and other contracted subcontractors, including the fire alarm Subcontractor shall prepare detailed testing plans, procedures, and checklists for Electrical systems, subsystems, and equipment with guidance from CxA.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. If tests cannot be completed because of a deficiency outside the scope of the Electrical system, document the deficiency and report it to the City of New York. After deficiencies are resolved, reschedule tests.
- H. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.8 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 26 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CA.

- B. Electrical Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 26. Assist the CxA with preparation of testing plans.
- C. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- D. Electrical Distribution System Testing: Provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested
- E. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The scope of commissioning work shall include but not limited to the following equipment and systems :
 - 1. Emergency Generator
 - 2. Automatic Transfer Switches
 - 3. Electrical Panels
 - 4. Lighting Controls

3.9 DEFICIENCIES/NON-CONFORMANCE, COST OF RETESTING, FAILURE DUE TO MANUFACTURER DEFECT

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deficiencies/non-conformance, cost of retesting, or failure due to manufacturer defect.

3.10 APPROVAL

- A. Refer to Division 01 Section "General Commissioning Requirements" for approval procedures.

3.11 DEFERRED TESTING

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deferred testing.

3.12 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in Division 01.
- B. Refer to Division 01 Section "General Commissioning Requirements" for the AE and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.13 TRAINING OF CITY OF NEW YORK PERSONNEL

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to training.

B. Electrical Contractor. The electrical contractor shall have the following training responsibilities:

1. Provide the CxA with a training plan two weeks before the planned training.
2. Provide designated City of New York's personnel with comprehensive training in the understanding of the systems and the operation and maintenance of each major piece of commissioned electrical equipment or system.
3. Training shall be recorded by the CxA and start with classroom sessions, if necessary, followed by hands on training on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the training.
6. The training sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
7. Training shall include:
 - a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The training shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
 - c. Discuss relevant health and safety issues and concerns.
 - d. Discuss warranties and guarantees.
 - e. Cover common troubleshooting problems and solutions.
 - f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
 - g. Discuss any peculiarities of equipment installation or operation.
8. Hands-on training shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.
9. The electrical contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
10. Training shall occur after functional testing is complete, unless approved otherwise by the City of New York's.

*****END OF SECTION 26 08 00*****

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 260923
LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following lighting control devices:

1. Time switches.
2. Indoor photoelectric switches.
3. Indoor occupancy sensors.
4. Outdoor motion sensors.
5. Lighting contactors.
6. Emergency shunt relays.

- B. Related Sections include the following:

1. Division 26 Section "Wiring Devices" for wall-box dimmers, wall-switch occupancy sensors, and manual light switches.

1.3 DEFINITIONS

- A. LED: Light-emitting diode.
- B. PIR: Passive infrared.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For each type of product indicated.

- C. Shop Drawings: Show installation details for occupancy and light-level sensors.

1. Interconnection diagrams showing field-installed wiring.

- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 COORDINATION

- A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

1.7 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

PART 2 - PRODUCTS

2.1 TIME SWITCHES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

1. Area Lighting Research, Inc.; Tyco Electronics.
2. Grasslin Controls Corporation; a GE Industrial Systems Company.
3. Intermatic, Inc.
4. Leviton Mfg. Company Inc.
5. Lightolier Controls; a Genlyte Company.
6. Lithonia Lighting; Acuity Lighting Group, Inc.
7. Paragon Electric Co.; Invensys Climate Controls.
8. Square D; Schneider Electric.
9. TORK.
10. Touch-Plate, Inc.
11. Watt Stopper (The).

B. Electronic Time Switches: Electronic, solid-state programmable units with alphanumeric display; complying with UL 917.

1. Contact Configuration: SPST.
2. Contact Rating: 30-A inductive or resistive, 240-V ac.
3. Program: 8 on-off set points on a 24-hour schedule and an annual holiday schedule that overrides the weekly operation on holidays.
4. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program on selected channels.
5. Astronomic Time: All channels.
6. Battery Backup: For schedules and time clock.

C. Electromechanical-Dial Time Switches: Type complying with UL 917.

1. Contact Configuration: DPST.
2. Contact Rating: 30-A inductive or resistive, 240-V ac.
3. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program.
4. Astronomic time dial.
5. Eight-Day Program: Uniquely programmable for each weekday and holidays.
6. Skip-a-day mode.
7. Wound-spring reserve carryover mechanism to keep time during power failures, minimum of 16 hours.

2.2 OUTDOOR PHOTOELECTRIC SWITCHES

A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

1. Area Lighting Research, Inc.; Tyco Electronics.
2. Grasslin Controls Corporation; a GE Industrial Systems Company.
3. Intermatic, Inc.
4. Lithonia Lighting; Acuity Lighting Group, Inc.
5. Novitas, Inc.
6. Paragon Electric Co.; Invensys Climate Controls.
7. Square D; Schneider Electric.
8. TORK.
9. Touch-Plate, Inc.
10. Watt Stopper (The).

B. Description: Solid state, with SPST dry contacts rated for, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A.

1. Light-Level Monitoring Range: 1.5 to 10 fc, with an adjustment for turn-on and turn-off levels within that range, and a directional lens in front of photocell to prevent fixed light sources from causing turn-off.
 2. Time Delay: 15-second minimum, to prevent false operation.
 3. Surge Protection: Metal-oxide varistor, complying with IEEE C62.41.1, IEEE C62.41.2, and IEEE 62.45 for Category A1 locations.
 4. Mounting: Twist lock complying with IEEE C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure.
- C. Description: Solid state, with SPST dry contacts rated for 1800 VA to operate connected load, relay, or contactor coils; complying with UL 773.
1. Light-Level Monitoring Range: 1.5 to 10 fc, with an adjustment for turn-on and turn-off levels within that range.
 2. Time Delay: 30-second minimum, to prevent false operation.
 3. Lightning Arrester: Air-gap type.
 4. Mounting: Twist lock complying with IEEE C136.10, with base.

2.3 INDOOR PHOTOELECTRIC SWITCHES

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Lutron.
 2. Watt Stopper (The).
 3. Hubbell
 4. Allen-Bradley/Rockwell Automation.
 5. Area Lighting Research, Inc.; Tyco Electronics.
 6. Eaton Electrical Inc; Cutler-Hammer Products.
 7. Grasslin Controls Corporation; a GE Industrial Systems Company.
 8. Intermatic, Inc.
 9. Lithonia Lighting; Acuity Lighting Group, Inc.
 10. MicroLite Lighting Control Systems.
 11. Novitas, Inc.
 12. Paragon Electric Co.; Invensys Climate Controls.
 13. Square D; Schneider Electric.
 14. TORK.
 15. Touch-Plate, Inc.
- B. Ceiling-Mounted Photoelectric Switch: Solid-state, light-level sensor unit, with separate relay unit, to detect changes in lighting levels that are perceived by the eye. Cadmium sulfide photoresistors are not acceptable.
1. Sensor Output: Contacts rated to operate the associated relay, complying with UL 773A. Sensor shall be powered from the relay unit.
 2. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
 3. Light-Level Monitoring Range: 10 to 200 fc, with an adjustment for turn-on and turn-off levels within that range.
 4. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling, with deadband adjustment.
 5. Indicator: Two LEDs to indicate the beginning of on-off cycles.

- C. Skylight Photoelectric Sensors: Solid-state, light-level sensor; housed in a threaded, plastic fitting for mounting under skylight, facing up at skylight; with separate relay unit, to detect changes in lighting levels that are perceived by the eye. Cadmium sulfide photoresistors are not acceptable.

1. Sensor Output: Contacts rated to operate the associated relay, complying with UL 773A. Sensor shall be powered from the relay unit.
2. Relay Unit: Dry contacts rated for 20 -A ballast load at 120- and 277-V ac, for-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
3. Light-Level Monitoring Range: 1000 to 10,000 fc, with an adjustment for turn-on and turn-off levels within that range.
4. Time Delay: Adjustable from 5 to 300 seconds to prevent cycling, with deadband adjustment.
5. Indicator: Two LEDs to indicate the beginning of on-off cycles.

2.4 INDOOR OCCUPANCY SENSORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

1. Watt Stopper (The).
2. Lutron.
3. Hubbell Lighting.
4. Leviton Mfg. Company Inc.
5. Lithonia Lighting; Acuity Lighting Group, Inc.
6. Novitas, Inc.
7. RAB Lighting, Inc.
8. Sensor Switch, Inc.
9. TORK.

- B. General Description: Wall- or ceiling-mounting, solid-state units with a separate relay unit.

1. Operation: Unless otherwise indicated, turn lights on when covered area is occupied and off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
3. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
4. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outlet box.
 - b. Relay: Externally mounted through a 1/2-inch knockout in a standard electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
5. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.
6. Bypass Switch: Override the on function in case of sensor failure.
7. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc; keep lighting off when selected lighting level is present.

- C. PIR Type: Ceiling mounting; detect occupancy by sensing a combination of heat and movement in area of coverage.
 - 1. Detector Sensitivity: Detect occurrences of 6-inch- minimum movement of any portion of a human body that presents a target of not less than 36 sq. in..
 - 2. Detection Coverage (Room): Detect occupancy anywhere in a circular area of 1000 sq. ft. when mounted on a 96-inch- high ceiling.
 - 3. Detection Coverage (Corridor): Detect occupancy within 90 feet when mounted on a 10-foot- high ceiling.
- D. Ultrasonic Type: Ceiling mounting; detect occupancy by sensing a change in pattern of reflected ultrasonic energy in area of coverage.
 - 1. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
 - 2. Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft. when mounted on a 96-inch- high ceiling.
 - 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. when mounted on a 96-inch- high ceiling.
 - 4. Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft. when mounted on a 96-inch- high ceiling.
 - 5. Detection Coverage (Corridor): Detect occupancy anywhere within 90 feet when mounted on a 10-foot- high ceiling in a corridor not wider than 14 feet.
- E. Dual-Technology Type: Ceiling mounting; detect occupancy by using a combination of PIR and ultrasonic detection methods in area of coverage. Particular technology or combination of technologies that controls on-off functions shall be selectable in the field by operating controls on unit.
 - 1. Sensitivity Adjustment: Separate for each sensing technology.
 - 2. Detector Sensitivity: Detect occurrences of 6-inch- minimum movement of any portion of a human body that presents a target of not less than 36 sq. in., and detect a person of average size and weight moving not less than 12 inches in either a horizontal or a vertical manner at an approximate speed of 12 inches/s.
 - 3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. when mounted on a 96-inch- high ceiling.

2.5 OUTDOOR MOTION SENSORS (PIR)

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
 - 1. Bryant Electric; a Hubbell Company.
 - 2. Hubbell Lighting.
 - 3. Lithonia Lighting; Acuity Lighting Group, Inc.
 - 4. Paragon Electric Co.; Invensys Climate Controls.
 - 5. RAB Lighting, Inc.
 - 6. TORK.
 - 7. Watt Stopper (The).
- B. Performance Requirements: Suitable for operation in ambient temperatures ranging from minus 40 to plus 130 deg F, rated as raintight according to UL 773A.

1. Operation: Turn lights on when sensing infrared energy changes between background and moving body in area of coverage; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
 2. Mounting:
 - a. Sensor: Suitable for mounting in any position on a standard outdoor junction box.
 - b. Relay: Internally mounted in a standard weatherproof electrical enclosure.
 - c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.
 3. Bypass Switch: Override the on function in case of sensor failure.
 4. Automatic Light-Level Sensor: Adjustable from 1 to 20 fc; keep lighting off during daylight hours.
- C. Detector Sensitivity: Detect occurrences of 6-inch- minimum movement of any portion of a human body that presents a target of not less than 36 sq. in..
- D. Detection Coverage: Up to 35 feet, with a field of view of 90 degrees.
- E. Lighting Fixture Mounted Sensor: Suitable for switching 300 W of tungsten load at 120- or 277- V ac.
- F. Individually Mounted Sensor: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
1. Relay Unit: Dry contacts rated for 20-A ballast load at 120- and 277-V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
 2. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.

2.6 LIGHTING CONTACTORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
1. Allen-Bradley/Rockwell Automation.
 2. ASCO Power Technologies, LP; a division of Emerson Electric Co.
 3. Eaton Electrical Inc.; Cutler-Hammer Products.
 4. GE Industrial Systems; Total Lighting Control.
 5. Grasslin Controls Corporation; a GE Industrial Systems Company.
 6. Hubbell Lighting.
 7. Lithonia Lighting; Acuity Lighting Group, Inc.
 8. MicroLite Lighting Control Systems.
 9. Square D; Schneider Electric.
 10. TORK.
 11. Touch-Plate, Inc.
 12. Watt Stopper (The).
- B. Description: Electrically operated and electrically held, combination type with fusible switch, complying with NEMA ICS 2 and UL 508.

1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).
2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
3. Enclosure: Comply with NEMA 250.
4. Provide with control and pilot devices as scheduled, matching the NEMA type specified for the enclosure.

2.7 EMERGENCY SHUNT RELAY

- A. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
 1. Lighting Control and Design, Inc.
- B. Description: Normally closed, electrically held relay, arranged for wiring in parallel with manual or automatic switching contacts; complying with UL 924.
 1. Coil Rating: 277 V.

2.8 CONDUCTORS AND CABLES

- A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 18 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 14 AWG. Comply with requirements in Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 SENSOR INSTALLATION

- A. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.2 CONTACTOR INSTALLATION

- A. Mount electrically held lighting contactors with elastomeric isolator pads, to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.3 WIRING INSTALLATION

- A. Wiring Method: Comply with Division 26 Section "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be 1/2 inch.
- B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.
- C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.
- D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.4 IDENTIFICATION

- A. Identify components and power and control wiring according to Division 26 Section "Identification for Electrical Systems."
 - 1. Identify controlled circuits in lighting contactors.
 - 2. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
- B. Label time switches and contactors with a unique designation.

3.5 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.
 - 2. Operational Test: Verify operation of each lighting control device, and adjust time delays.
- B. Lighting control devices that fail tests and inspections are defective work.

3.6 ADJUSTING

- A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 260923

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 262413**SWITCHBOARDS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Service and distribution switchboards rated 600 V and less.
2. Transient voltage suppression devices.
3. Disconnecting and overcurrent protective devices.
4. Instrumentation.
5. Control power.
6. Accessory components and features.
7. Identification.
8. Mimic bus.

1.3 PERFORMANCE REQUIREMENTS

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.4 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For each type of switchboard, overcurrent protective device, transient voltage suppression device, ground-fault protector, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

- C. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.
7. Include evidence of NRTL listing for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device.
10. Include diagram and details of proposed mimic bus.
11. Include schematic and wiring diagrams for power, signal, and control wiring.

- D. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

- E. Qualification Data: For qualified Installer.

- F. Seismic Qualification Certificates: Submit certification that switchboards, overcurrent protective devices, accessories, and components will withstand seismic forces. Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

G. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

H. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals.

1. Routine maintenance requirements for switchboards and all installed components.
2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
3. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graph paper; include selectable ranges for each type of overcurrent protective device.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and trained in electrical safety as required by NFPA 70E.
- B. Testing Agency Qualifications: Member company of NETA or an NRTL.
 1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- C. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.
- D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Comply with NEMA PB 2.
- G. Comply with NFPA 70.
- H. Comply with UL 891.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.
- B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) to prevent condensation.

- C. Handle and prepare switchboards for installation according to NEMA PB 2.1.

1.7 PROJECT CONDITIONS

- A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.
- B. Environmental Limitations:
 - 1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
 - 2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 - a. Ambient Temperature: Not exceeding 104 deg F.
 - b. Altitude: Not exceeding 6600 feet.
- C. Service Conditions: NEMA PB 2, usual service conditions, as follows:
 - 1. Ambient temperatures within limits specified.
 - 2. Altitude not exceeding 6600 feet.
- D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:
 - 1. Notify City of New York no fewer than seven days in advance of proposed interruption of electric service.
 - 2. Indicate method of providing temporary electric service.
 - 3. Do not proceed with interruption of electric service without City of New York's written permission.
 - 4. Comply with NFPA 70E.

1.8 COORDINATION

- A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

1.10 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
 2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
 3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
 6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type, but no fewer than one of each size and type.
 7. Auxiliary boxes, crown boxes, wireways, meter pans, totalizing equipment, end-boxes etc as required to install the equipment and electrical service.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 1. Atlas Switch Inc. NY with GE
 2. Cutler Hammer
 3. Siemens
- B. Front-Connected, Front-Accessible Switchboards:
 1. Main Devices: Panel mounted.
 2. Branch Devices: Panel mounted.
 3. Sections front and rear aligned.
- C. Front- and Side-Accessible Switchboards:
 1. Main Devices: Fixed, individually mounted.
 2. Branch Devices: Panel mounted.
 3. Sections front and rear aligned.
- D. Front- and Rear-Accessible Switchboards:
 1. Main Devices: Fixed, individually mounted.
 2. Branch Devices: Fixed, individually mounted.
 3. Sections front and rear aligned.

- E. Nominal System Voltage: As indicated.
- F. Main-Bus Continuous: As indicated.
- G. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces
- H. Switchboards rely on natural convection for dissipating heat; therefore, NEMA 250, Type 12 enclosures are not usually available.
- I. Indoor Enclosures: Steel, NEMA 250, Type 1.
- J. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.
- K. Outdoor Enclosures: Type 3R.
 - 1. Finish: Factory-applied finish in manufacturer's standard color; undersurfaces treated with corrosion-resistant undercoating.
- L. Barriers: Between adjacent switchboard sections.
- M. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.
- N. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.
- O. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.
- P. Removable, Hinged Rear Doors and Compartment Covers: Secured by captive thumb screws, for access to rear interior of switchboard.
- Q. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.
- R. Pull Box on Top of Switchboard:
 - 1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
 - 2. Set back from front to clear circuit-breaker removal mechanism.
 - 3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
 - 4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
 - 5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.
- S. Buses and Connections: Three phase, four wire unless otherwise indicated.

1. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity, with tinned copper feeder circuit-breaker line connections.
 2. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with compression connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
 3. Ground Bus: Minimum-size required by UL 891, hard-drawn copper of 98 percent conductivity, equipped with compression connectors for feeder and branch-circuit ground conductors. For busway feeders, extend insulated equipment grounding cable to busway ground connection and support cable at intervals in vertical run.
 4. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
 5. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with compression connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
 6. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.
- T. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.
- U. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.
- V. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.2 SURGE PROTECTION DEVICES (TRANSIENT VOLTAGE SUPPRESSION DEVICES)

- A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Siemens Energy & Automation, Inc.
 4. Square D; a brand of Schneider Electric.
- B. Surge Protection Device Description: IEEE C62.41-compliant, integrally mounted, wired-in, solid-state, parallel-connected, modular (with field-replaceable modules) type, with sine-wave tracking suppression and filtering modules, UL 1449, second edition, short-circuit current rating matching or exceeding the switchboard short-circuit rating, and with the following features and accessories:
1. Fuses, rated at 200-kA interrupting capacity.
 2. Fabrication using bolted compression lugs for internal wiring.
 3. Integral disconnect switch.
 4. Redundant suppression circuits.
 5. Redundant replaceable modules.
 6. Arrangement with wire connections to phase buses, neutral bus, and ground bus.
 7. LED indicator lights for power and protection status.
 8. Audible alarm, with silencing switch, to indicate when protection has failed.
 9. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of system operation. Contacts shall reverse position on failure of

any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

10. Four-digit, transient-event counter set to totalize transient surges.
- C. Peak Single-Impulse Surge Current Rating: 160 kA per mode/320 kA per phase.
- D. Withstand Capabilities: 12,000 IEEE C62.41, Category C3 (10 kA), 8-by-20-mic.sec. surges with less than 5 percent change in clamping voltage.
- E. Protection modes and UL 1449 SVR for grounded wye circuits with 480Y/277 208Y/120-V, three-phase, four-wire circuits shall be as follows:
 1. Line to Neutral: 800 V for 480Y/277, 400 V for 208Y/120.
 2. Line to Ground: 800 V for 480Y/277, 400 V for 208Y/120.
 3. Neutral to Ground: 800 V for 480Y/277, 400 V for 208Y/120.
- F. Protection modes and UL 1449 SVR for 240/120-V, three-phase, four-wire circuits with high leg shall be as follows:
 1. Line to Neutral: 400 V, 800 V from high leg.
 2. Line to Ground: 400 V.
 3. Neutral to Ground: 400 V.
- G. Protection modes and UL 1449 SVR for 240-, 480-, or 600-V, three-phase, three-wire, delta circuits shall be as follows:
 1. Line to Line: 2000 V for 480 V.
 2. Line to Ground: 1500 V for 480 V.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

- A. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.
 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replaceable electronic trip; and the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
 4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
 6. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
 8. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:
 - a. Standard frame sizes, trip ratings, and number of poles.
 - b. Lugs: Compression style, suitable for number, size, trip ratings, and conductor material.
 - c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
 - d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator. Provide ground fault protection as indicated and as required by code.
 - e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 - f. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
 - g. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
 - h. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 - i. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
- B. Insulated-Case Circuit Breaker (ICCB): 100 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.
1. Fixed circuit-breaker mounting.
 2. Two-step, stored-energy closing.
 3. Standard-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time time adjustments.
 - c. Ground-fault pickup level, time delay, and I^2t response.
 4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 5. Remote trip indication and control.
 6. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
 7. Control Voltage: 120-V ac.
- C. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Boltswitch, Inc.
 - b. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - c. Pringle Electrical Manufacturing Company, Inc.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.

2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
 3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
 - a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
 - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
 4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
 5. Service-Rated Switches: Labeled for use as service equipment.
 6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.
 - a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
 - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
 7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.
- D. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and a spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
 3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.
 - a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
 - b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.
 4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
 5. Service-Rated Switches: Labeled for use as service equipment.
 6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

- a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 - b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
 - c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
 - d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).
7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.
- E. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
- F. Fuses are specified in Division 26 Section "Fuses."

2.4 INSTRUMENTATION

- A. Instrument Transformers: IEEE C57.13, NEMA EI 21.1, and the following:
- 1. Potential Transformers: IEEE C57.13; 120 V, 60 Hz, single secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
 - 2. Current Transformers: IEEE C57.13; 5 A, 60 Hz, secondary; wound type; double secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
 - 3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
 - 4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.
- B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:
- 1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:
 - a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Megawatts: Plus or minus 2 percent.
 - e. Megavars: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Accumulated Energy, Megawatt Hours: Plus or minus 2 percent; accumulated values unaffected by power outages up to 72 hours.
 - i. Megawatt Demand: Plus or minus 2 percent; demand interval programmable from five to 60 minutes.
 - j. Contact devices to operate remote impulse-totalizing demand meter.
 - 2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.
- C. Ammeters, Voltmeters, and Power-Factor Meters: ANSI C39.1.

1. Meters: 4-inch diameter or 6 inches square, flush or semiflush, with antiparallax 250-degree scales and external zero adjustment.
 2. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.
- D. Instrument Switches: Rotary type with off position.
1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and, where a neutral is indicated, phase-to-neutral voltages.
 2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.
- E. Feeder Ammeters: 2-1/2-inch minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for indicated feeder circuits only.
- F. Watt-Hour Meters and Wattmeters:
1. Comply with ANSI C12.1.
 2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
 3. Suitable for connection to three- and four-wire circuits.
 4. Potential indicating lamps.
 5. Adjustments for light and full load, phase balance, and power factor.
 6. Four-dial clock register.
 7. Integral demand indicator.
 8. Contact devices to operate remote impulse-totalizing demand meter.
 9. Ratchets to prevent reverse rotation.
 10. Removable meter with drawout test plug.
 11. Semiflush mounted case with matching cover.
 12. Appropriate multiplier tag.
- G. Impulse-Totalizing Demand Meter:
1. Comply with ANSI C12.1.
 2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.
 3. Cyclometer.
 4. Four-dial, totalizing kilowatt-hour register.
 5. Positive chart drive mechanism.
 6. Capillary pen holding a minimum of one month's ink supply.
 7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
 8. Capable of indicating and recording five-minute integrated demand of totalized system.
- 2.5 CONTROL POWER
- A. Control Circuits: As required.
- B. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to the primary side of each control-power transformer at the line side of the associated main circuit breaker. 120-V secondaries connected through automatic transfer relays to ensure a fail-safe automatic transfer scheme.
- C. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

- D. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.6 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.
- C. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers.
- D. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker.
- E. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

2.7 IDENTIFICATION

- A. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce a concise visual presentation of principal switchboard components and connections.
- B. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.
- C. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Receive, inspect, handle, and store switchboards according to NEMA PB 2.1.
- B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.
- C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install switchboards and accessories according to NEMA PB 2.1.
- B. Equipment Mounting: Install switchboards on concrete base, 6-inch nominal thickness. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete."
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to switchboards.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.
- D. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.
- E. Install filler plates in unused spaces of panel-mounted sections.
- F. Install overcurrent protective devices, transient voltage suppression devices, and instrumentation.
 - 1. Set field-adjustable switches and circuit-breaker trip ranges.
- G. Install spare-fuse cabinet.
- H. Comply with NECA 1.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
- B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
- C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."

3.4 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- D. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Perform the following infrared scan tests and inspections and prepare reports:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front and rear panels so joints and connections are accessible to portable scanner.
 - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
 - c. Instruments and Equipment:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Switchboard will be considered defective if it does not pass tests and inspections.
- F. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.
- B. Set field-adjustable circuit-breaker trip ranges as indicated.

3.6 PROTECTION

- A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories.

END OF SECTION 262413

SECTION 262416**PANELBOARDS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Distribution panelboards.
 - 2. Lighting and appliance branch-circuit panelboards.
 - 3. Load centers.
 - 4. Transient voltage suppression panelboards.

1.3 DEFINITIONS

- A. EMI: Electromagnetic interference.
- B. GFCI: Ground-fault circuit interrupter.
- C. AFCI: Arc Fault Circuit interrupter.
- D. RFI: Radio-frequency interference.
- E. RMS: Root mean square.
- F. SPDT: Single pole, double throw.
- G. SPD: Surge Protective Device.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. **Product Data:** For each type of panelboard, overcurrent protective device, transient voltage suppression device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- C. **Shop Drawings:** For each panelboard and related equipment.
 - 1. **Dimensioned plans, elevations, sections, and details.** Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Enclosure types and details for types other than NEMA 250, Type 1.
 - b. Bus configuration, current, and voltage ratings.
 - c. Short-circuit current rating of panelboards and overcurrent protective devices.
 - d. UL listing for series rating of installed devices.
 - e. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
 - 2. **Wiring Diagrams:** Power, signal, and control wiring.
- D. **Manufacturer Seismic Qualification Certification:** Submit certification that panelboards, overcurrent protective devices, accessories, and components will withstand seismic forces:
 - 1. **Basis of Certification:** Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. **Dimensioned Outline Drawings of Equipment Unit:** Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. **Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.**
- E. **Qualification Data:** For testing agency.
- F. **Field quality-control test reports including the following:**
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- G. **Panelboard Schedules:** For installation in panelboards. Submit final versions after load balancing.
- H. **Operation and Maintenance Data:** For panelboards and components to include in emergency, operation, and maintenance manuals include the following:
 - 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
 - 2. Time-current curves, including selectable ranges for each type of overcurrent protective device.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

- C. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories through one source from a single manufacturer.
- D. Product Options: Drawings indicate size, profiles, and dimensional requirements of panelboards and are based on the specific system indicated. Refer to 'DDC General Conditions'.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with NEMA PB 1.
- G. Comply with NFPA 70.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:

1. Ambient Temperature: Not exceeding 104 deg F.
2. Altitude: Not exceeding 6600 feet.

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet.

C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Do not proceed with interruption of electrical service without Commissioner's and or City of New York's written permission.

1.7 COORDINATION

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, and encumbrances to workspace clearance requirements.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.8 WARRANTY

- A. The manufacturer shall warranty the system for 5 years from date of substantial completion.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Keys: 3 spares for each type of panelboard cabinet lock.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Panelboards, Overcurrent Protective Devices, Controllers, Contactors, and Accessories:
 - a. Eaton Corporation; Cutler-Hammer Products.
 - b. General Electric Co.; Electrical Distribution & Protection Div.
 - c. Siemens Energy & Automation, Inc.
 - d. Square D.
 - e. Approved equal
 2. Surge Protection Device (Transient Voltage Suppression) Panelboards:
 - a. Current Technology.

- b. Liebert Corporation.
- c. Siemens
- d. Cutler Hammer

2.2 MANUFACTURED UNITS

- A. Enclosures: Flush or Surface-mounted cabinets indicated on plans. NEMA PB 1, Type 1.
 - 1. Rated for environmental conditions at installed location.
 - a. Outdoor Locations: NEMA 250, Type 3R or Type 4X as indicated on plans.
 - b. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 - c. Other Wet or Damp Indoor Locations: NEMA 250, Type 3R.
 - d. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.
 - 2. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.
 - 3. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
 - 4. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
 - 5. Column-Type Panelboards: Narrow gutter extension, with cover, to overhead junction box equipped with ground and neutral terminal buses.
 - 6. Finish: Manufacturer's standard enamel finish over corrosion-resistant treatment or primer coat.
 - 7. Directory Card: With transparent protective cover, mounted in metal frame, inside panelboard door.
- B. Phase and Ground Buses:
 - 1. Material: Hard-drawn copper, 98 percent conductivity.
 - 2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment ground conductors; bonded to box.
 - 3. Isolated Equipment Ground Bus: Adequate for branch-circuit equipment ground conductors; insulated from box. Provide where indicated on plans.
 - 4. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads. Provide where indicated on plans.
 - 5. Split Bus: Vertical buses divided into individual vertical sections.
- C. Conductor Connectors: Suitable for use with conductor material.
 - 1. Main and Neutral Lugs: Compression type.
 - 2. Ground Lugs and Bus Configured Terminators: Compression type.
 - 3. Feed-Through Lugs: Compression type suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
 - 4. Extra-Capacity Neutral Lugs: Rated 200 percent of phase lugs mounted on extra-capacity neutral bus.
- D. Service Equipment Label: UL labeled for use as service equipment for panelboards with main service disconnect switches.
- E. Future Devices: Mounting brackets, bus connections, and necessary appurtenances required for future installation of devices.

2.3 PANELBOARD SHORT-CIRCUIT RATING

- A. Fully rated to interrupt symmetrical short-circuit current available at terminals.

2.4 DISTRIBUTION PANELBOARDS

- A. Doors: Secured with vault-type latch with tumbler lock; keyed alike. Omit for fused-switch panelboards.
- B. Main Overcurrent Protective Devices: Circuit breaker.
- C. Branch Overcurrent Protective Devices:
 - 1. For Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.
 - 2. For Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers; plug-in circuit breakers where individual positive-locking device requires mechanical release for removal.
 - 3. Fused switches.

2.5 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

- A. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
- B. Doors: Door-in- door covers; secured with flush latch with tumbler lock; keyed alike.

2.6 LOAD CENTERS

- A. Overcurrent Protective Devices: Plug-in, full-module circuit breaker.
- B. Conductor Connectors: Mechanical type for main, neutral, and ground lugs and buses.

2.7 SURGE PROTECTION DEVICE (TRANSIENT VOLTAGE SUPPRESSION) PANELBOARDS

- A. Doors: Secured with vault-type latch with tumbler lock; keyed alike.
- B. Main Overcurrent Devices: Thermal-magnetic circuit breaker.
- C. Branch Overcurrent Protective Devices: Bolt-on circuit breakers.
- D. Bus: Copper phase and neutral buses; 200 percent capacity neutral bus and lugs.
- E. Surge Protection Device (Transient Voltage Suppression Device): IEEE C62.41, UL 1449 latest edition compliant, integrally mounted, plug-in-style, solid-state, parallel-connected, sine-wave tracking suppression and filtering modules.
 - 1. Minimum Single-Impulse Current Ratings:
 - a. Line to Neutral: 100,000 A.
 - b. Line to Ground: 100,000 A.
 - c. Neutral to Ground: 50,000 A.

2. Protection modes shall be as follows:

- a. Line to neutral.
 - b. Line to ground.
 - c. Neutral to ground.
- 3. EMI/RFI Noise Attenuation Using 50-ohm Insertion Loss Test: 55 dB at 100 kHz.
 - 4. Maximum Category C Combination Wave Clamping Voltage: 600 V, line to neutral and line to ground on 120/208 V systems and 1000 V, line to neutral and line to ground on 277/480 V systems.
 - 5. Maximum UL 1449 Clamping Levels: 400 V, line to neutral and line to ground on 120/208 V systems and 800 V, line to neutral and line to ground on 277/480 V systems.
 - 6. Withstand Capabilities: 3000 Category C surges with less than 5 percent change in clamping voltage.
 - 7. Accessories:
 - a. Form-C contacts, one normally open and one normally closed, for remote monitoring of system operation. Contacts to reverse position on failure of any surge diversion module.
 - b. Audible alarm activated on failure of any surge diversion module.
 - c. Six-digit transient-counter set to total transient surges that deviate from the sine-wave envelope by more than 125 V.

2.8 OVERCURRENT PROTECTIVE DEVICES

A. Molded-Case Circuit Breaker: UL 489, with full rating to meet available fault currents.

- 1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
- 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
- 3. Electronic trip-unit circuit breakers shall have RMS sensing; field-replaceable rating plug; and with the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
- 4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
- 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
- 6. GFCI Circuit Breakers: Single- and two-pole configurations with 5-mA trip sensitivity.

B. Molded-Case Circuit-Breaker Features and Accessories: Standard frame sizes, trip ratings, and number of poles.

- 1. Lugs: Compression style, suitable for number, size, trip ratings, and conductor materials.
- 2. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.

3. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 4. Arc-Fault Circuit Interrupter: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 5. Communication Capability: Circuit-breaker-mounted or Din-rail-mounted communication module with functions and features compatible with power monitoring and control system specified in Division 26 Section 260913 "Electrical Power Monitoring and Control."
 6. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
 7. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay.
 8. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 9. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
 10. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
 11. Multipole units enclosed in a single housing or factory-assembled to operate as a single unit.
- C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.
- D. Fuses are specified in Division 26 Section "Fuses."

2.9 CONTROLLERS

- A. Motor Controllers: NEMA ICS 2, Class A, combination controller equipped for panelboard mounting and including the following accessories:
1. Individual control-power transformers.
 2. Fuses for control-power transformers.
 3. Melting-alloy overload relay.
 4. Indicating lights.
 5. Seal-in contact.
 6. 2 convertible auxiliary contacts.
 7. Push buttons.
 8. Selector switches.
- B. Contactors: NEMA ICS 2, Class A, combination controller equipped for panelboard mounting and including the following accessories:
1. Individual control-power transformers.
 2. Fuses for control-power transformers.
 3. Indicating lights.
 4. Seal-in contact.
 5. 2 convertible auxiliary contacts.
 6. Push buttons.
 7. Selector switches.
- C. Controller Disconnect Switches: Fused switch or Adjustable instantaneous-trip circuit breaker and interlocked with controller.
1. Auxiliary Contacts: Integral with disconnect switches to de-energize external control-power source.

- D. Contactors in Main Bus: NEMA ICS 2, Class A, mechanically held general-purpose controller.
 - 1. Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
 - 2. Control-Power Source: 120-V branch circuit.

2.10 ACCESSORY COMPONENTS AND FEATURES

- A. Furnish accessory set including tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Furnish portable test set to test functions of solid-state trip devices without removal from panelboard.
- C. Fungus Proofing: Permanent fungicidal treatment for panelboard interior, including overcurrent protective devices and other components.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install panelboards and accessories according to NEMA PB 1.1.
- B. Comply with mounting and anchoring requirements specified in Division 26 Section 260548 "Vibration and Seismic Controls for Electrical Systems."
- C. Mount top of trim 74 inches above finished floor, unless otherwise indicated.
- D. Mount plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish. Install surface wall mounted panel boards on unistruts.
- E. Install overcurrent protective devices and controllers.
 - 1. Set field-adjustable switches and circuit-breaker trip ranges.
- F. Install filler plates in unused spaces.
- G. Stub four 1-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch empty conduits into raised floor space or below slab not on grade.
- H. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

3.2 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."

- B. Create a directory to indicate installed circuit loads after balancing panelboard loads. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- C. Panelboard Nameplates: Label each panelboard with engraved metal or laminated-plastic nameplate mounted with corrosion-resistant screws.

3.3 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- B. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
- C. Perform the following field tests and inspections and prepare test reports:
 - 1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- D. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.
 - 1. Measure as directed during period of normal system loading.
 - 2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
 - 3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
 - 4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.
- E. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scanning of each panelboard. Remove panel fronts so joints and connections are accessible to portable scanner.
 - 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.

2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies panelboards checked and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 CLEANING

- A. On completion of installation, inspect interior and exterior of panelboards. Remove paint splatters and other spots. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Repair exposed surfaces to match original finish.

SECTION 262713
ELECTRICITY METERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes equipment for owners electricity metering.

1.3 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes. Describe electrical characteristics, features, and operating sequences, both automatic and manual. Include the following:
 1. Electricity-metering equipment.
- C. Shop Drawings for Electricity-Metering Equipment:
 1. Dimensioned plans and sections or elevation layouts.
 2. Wiring Diagrams: Power, signal, and control wiring specific to this Project. Identify terminals and wiring designations and color codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features.
- D. Manufacturer Seismic Qualification Certification for Electricity-Metering Equipment: Submit certification that equipment components and their mounting and anchorage provisions have been designed to remain in place without separation of any parts or loosening of factory-made connections when subjected to the seismic forces:
 1. Basis for Certification: Indicate whether certification is based on actual test of assembled components or on calculations.

2. Detailed description of equipment mounting and anchorage devices on which the certification is based and their installation requirements.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For electricity-metering equipment to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Receive, store, and handle modular meter center as specified in NECA 400.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 1. Notify Commissioner and or City of New York no fewer than two days in advance of proposed interruption of electrical service.
 2. Do not proceed with interruption of electrical service without Commissioner's and or City of New York's written permission.

1.7 COORDINATION

- A. Electrical Service Connections: Coordinate with utility companies and components they furnish as follows:
 - 1. Comply with requirements of utilities providing electrical power and communication services.
 - 2. Coordinate installation and connection of utilities and services, including provision for electricity-metering components.

1.8 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers specified.

2.2 EXISTING UTILITY METERING:

- A. All work shall be coordinated with utility company.

2.3 EQUIPMENT FOR ELECTRICITY METERING BY CITY OF NEW YORK

- A. Available Manufacturers:
 - 1. E-MON L.P.
 - 2. National Meter Industries, Inc.
 - 3. Osaki Meter Sales, Inc.
 - 4. Power Measurement.
 - 5. Square D; Schneider Electric.
- B. Kilowatt-Hour Meter: Electronic three-phase meters, measuring electricity used.
 - 1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.
 - 2. Display: Digital liquid crystal, indicating accumulative kilowatt hours and current kilowatt load.
- C. Kilowatt-Hour/Demand Meter: Electronic three-phase meters, measuring electricity use and demand.

1. Voltage and Phase Configuration: Meter shall be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display: Digital liquid crystal, indicating accumulative kilowatt hours, current time and date, current demand, historic peak demand, and time and date of historic peak demand.
3. Programmable Contact Module: Unit shall have push-button switches and a display for setting the demand level at which an integral set of Form C contacts shall be operated to initiate indicated action.
4. Enclosure: NEMA 250, Type 1 minimum, with hasp for padlocking or sealing.
5. Identification: Comply with Division 26 Section "Identification for Electrical Systems."
6. Memory Backup: Self-contained to maintain memory throughout power outages of 72 hours, minimum.
7. Sensors: Current-sensing type, with current or voltage output, selected for optimum range and accuracy for ratings of circuits indicated for this application.
8. Current-Transformer Cabinet: Listed or recommended by metering equipment manufacturer for use with sensors indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Comply with equipment installation requirements in NECA 1.
- B. Install equipment for owners metering. Install raceways and equipment according to owners written requirements. Provide all conduit and wiring for metering leads and extend grounding connections as required by City of New York.

3.2 FIELD QUALITY CONTROL

- A. Test electricity-metering installation for proper operation, accuracy, and usability of output data.
 1. Connect a load of known kilowatt rating, 1.5 kW minimum, to a circuit supplied by metered feeder.
 2. Turn off circuits supplied by metered feeder and secure them in off condition.
 3. Run test load continuously for eight hours, minimum, or longer to obtain a measurable meter indication. Use test load placement and setting that ensures continuous, safe operation.
 4. Check and record meter reading at end of test period and compare with actual electricity used based on test load rating, duration of test, and sample measurements of supply voltage at test load connection. Record test results.
 5. Repair or replace deficient or malfunctioning metering equipment, or correct test setup; then retest. Repeat for each meter in installation until proper operation of entire system is verified.

END OF SECTION 262713

SECTION 262726

WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Single and duplex receptacles, ground-fault circuit interrupters, integral surge suppression units, and isolated-ground receptacles.
2. Single- and double-pole snap switches and dimmer switches.
3. Device wall plates.
4. Pin and sleeve connectors and receptacles.
5. Floor service outlets, poke-through assemblies, service poles, and multi-outlet assemblies.

1.3 DEFINITIONS

- A. EMI: Electromagnetic interference.
- B. GFCI: Ground-fault circuit interrupter.
- C. PVC: Polyvinyl chloride.
- D. RFI: Radio-frequency interference.
- E. TVSS: Transient voltage surge suppressor.
- F. UTP: Unshielded twisted pair.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.
- C. Samples: One for each type of device and wall plate specified, in each color specified.
- D. Field quality-control test reports.
- E. LEED BUILDING SUBMITTAL REQUIREMENTS:

Hunterspoint Community Library

WIRING DEVICES
262726-1

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

1.5 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type of wiring device through one source from a single manufacturer.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NFPA 70.
- D. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

1.6 COORDINATION

- A. Receptacles for City of New York-Furnished Equipment: Match plug configurations.
 1. Cord and Plug Sets: Match equipment requirements

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Wiring Devices:
 - a. Bryant Electric, Inc./Hubbell Subsidiary.
 - b. Eagle Electric Manufacturing Co., Inc.
 - c. Hubbell Incorporated; Wiring Device-Kellems.
 - d. Leviton Mfg. Company Inc.
 - e. Pass & Seymour/Legrand; Wiring Devices Div.
 2. Wiring Devices for Hazardous (Classified) Locations:
 - a. Crouse-Hinds/Cooper Industries, Inc.; Arrow Hart Wiring Devices.
 - b. EGS/Appleton Electric Company.
 - c. Killark Electric Manufacturing Co./Hubbell Incorporated.
 3. Multioutlet Assemblies:
 - a. Hubbell Incorporated; Wiring Device-Kellems.
 - b. Wiremold Company (The).
 4. Poke-Through, Floor Service Outlets and Telephone/Power Poles:
 - a. Hubbell Incorporated; Wiring Device-Kellems.
 - b. Pass & Seymour/Legrand; Wiring Devices Div.
 - c. Square D/Groupe Schneider NA.
 - d. Thomas & Betts Corporation.
 - e. Wiremold Company (The).

2.2 RECEPTACLES

- A. Straight-Blade-Type Receptacles: Comply with NEMA WD 1, NEMA WD 6, DSCC W-C-596G, and UL 498.
- B. Locking Receptacles: Heavy duty.
- C. Straight-Blade Receptacles: Commercial grade, Leviton 'Decora' type. Lutron or Legrand are acceptable alternatives.
- D. GFCI Receptacles: Straight blade, feed-through type, Commercial grade, Leviton 'Decora' type with integral NEMA WD 6, Configuration 5-20R duplex receptacle; complying with UL 498 and UL 943. Design units for installation in a 2-3/4-inch- deep outlet box without an adapter. Lutron or Legrand are acceptable alternatives.
- E. Isolated-Ground Receptacles: Straight blade, Commercial grade, 'Decora' type duplex receptacle, with equipment grounding contacts connected only to the green grounding screw terminal of the device and with inherent electrical isolation from mounting strap. Lutron or Legrand are acceptable alternatives.

1. Devices: Listed and labeled as isolated-ground receptacles.
 2. Isolation Method: Integral to receptacle construction and not dependent on removable parts.
- F. TVSS Receptacles: Straight blade, NEMA WD 6, Configuration 5-20R, with integral TVSS in line to ground, line to neutral, and neutral to ground.
1. TVSS Components: Multiple metal-oxide varistors; with a nominal clamp level rating of 500 volts and minimum single transient pulse energy dissipation of 140 J line to neutral, and 70 J line to ground and neutral to ground.
 2. Active TVSS Indication: Visual only with light visible in face of device to indicate device is "active" or "no longer in service."
 3. Receptacle Type: Heavy-Duty grade, with isolated-ground terminal.
 4. Identification: Distinctive marking on face of device to denote TVSS-type unit.
- G. Industrial Heavy-Duty Pin and Sleeve Devices: Comply with IEC 309-1.
- H. Hazardous (Classified) Location Receptacles: Comply with NEMA FB 11.

2.3 PENDANT CORD/CONNECTOR DEVICES

- A. Description: Matching, locking-type plug and receptacle body connector, NEMA WD 6, Configurations L5-20P and L5-20R, Heavy-Duty grade.
1. Body: Nylon with screw-open cable-gripping jaws and provision for attaching external cable grip.
 2. External Cable Grip: Woven wire-mesh type made of high-strength galvanized-steel wire strand, matched to cable diameter, and with attachment provision designed for corresponding connector.

2.4 CORD AND PLUG SETS

- A. Description: Match voltage and current ratings and number of conductors to requirements of equipment being connected.
1. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and equipment-rating ampacity plus a minimum of 30 percent.
 2. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.5 SWITCHES

- A. Single- and Double-Pole Switches: Comply with DSCC W-C-896F and UL 20.
- B. Switches: Commercial grade, 'Decora' type.
- C. Combination Switch and Receptacle: Both devices in a single gang unit with plaster ears and removable tab connector that permit separate or common feed connection.
1. Switch: 20 A, 120/277-V ac.
 2. Receptacle: NEMA WD 6, Configuration 5-15R.

- D. Dimmer Switches: Modular, full-wave, solid-state units with integral, quiet on/off switches and audible frequency and EMI/RFI filters.

1. Control: Continuously adjustable toggle switch; with single-pole or three-way switching to suit connections.
2. Incandescent Lamp Dimmers: Modular, 120 V, 60 Hz with continuously adjustable rotary knob, toggle switch, or slider; single pole with soft tap or other quiet switch; EMI/RFI filter to eliminate interference; and 5-inch wire connecting leads.
3. Fluorescent Lamp Dimmer Switches: Modular; compatible with dimmer ballasts; trim potentiometer to adjust low-end dimming; dimmer-ballast combination capable of consistent dimming with low end not greater than 20 percent of full brightness.

2.6 WALL PLATES

- A. Single and combination Leviton 'Decora' types to match corresponding wiring devices. Lutron or Legrand are acceptable alternatives.

1. Plate-Securing Screws: Metal with head color to match plate finish.
2. Material for Finished Spaces: Steel with white baked enamel, suitable for field painting.
3. Material for Unfinished Spaces: Smooth, high-impact thermoplastic.
4. Material for Wet Locations: Thermoplastic with spring-loaded lift cover, and listed and labeled for use in "wet locations."

2.7 FLOOR SERVICE FITTINGS

- A. Type: Cast iron, fully adjustable, flush-type, modular units suitable for wiring method used. As manufactured by Wiremold 880 series or equal. Wiring method shall include conduit embedded in slab. Coordinate installation with Commissioner. Unless indicated otherwise, all floor mounted devices shall be flush mounted. Provide all required accessories for complete installation.
- B. Compartments: Barrier separates power from voice and data communication cabling.
- C. Service Plate: Rectangular, solid brass with satin finish.
- D. Power Receptacle: NEMA WD 6, Configuration 5-20R, gray finish, unless otherwise indicated.
- E. Voice and Data Communication Outlet: Blank cover with bushed cable opening.

2.8 POKE-THROUGH ASSEMBLIES

- A. Description: Factory-fabricated and -wired assembly of below-floor junction box with multichanneled, through-floor raceway/firestop unit and detachable matching floor service outlet assembly.

1. Service Outlet Assembly: Flush type with four simplex receptacles and space for four RJ-45 jacks.
2. Size: Selected to fit nominal 3-inch cored holes in floor and matched to floor thickness.
3. Fire Rating: Unit is listed and labeled for fire rating of floor-ceiling assembly.
4. Closure Plug: Arranged to close unused 3-inch cored openings and reestablish fire rating of floor.
5. Wiring Raceways and Compartments: For a minimum of four No. 12 AWG conductors; and a minimum of four, 4-pair, Category 5 voice and data communication cables.

2.9 MULTIOUTLET ASSEMBLIES

- A. Components of Assemblies: Products from a single manufacturer designed for use as a complete, matching assembly of raceways and receptacles.
- B. Raceway Material: Metal, with manufacturer's standard finish.
- C. Wire: No. 12 AWG.

2.10 FINISHES

- A. Color:
 - 1. Wiring Devices Connected to Normal Power System: White, unless otherwise indicated or required by NFPA 70.
 - 2. Isolated-Ground Receptacles: Orange.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install devices and assemblies level, plumb, and square with building lines.
- B. Install wall dimmers to achieve indicated rating after derating for ganging according to manufacturer's written instructions.
- C. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' written instructions.
- D. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical, and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.
- E. Remove wall plates and protect devices and assemblies during painting.
- F. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

3.2 IDENTIFICATION

- A. Comply with Division 26 Section "Identification for Electrical Systems."
 - 1. Receptacles: Identify panelboard and circuit number from which served. Use hot, stamped or engraved machine printing with black-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

3.3 CONNECTIONS

- A. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low Voltage Electrical Power Conductors and Cables."
- C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. After installing wiring devices and after electrical circuitry has been energized, test for proper polarity, ground continuity, and compliance with requirements.
 - 2. Test GFCI operation with both local and remote fault simulations according to manufacturer's written instructions.
- B. Remove malfunctioning units, replace with new units, and retest as specified above.

END OF SECTION 26 27 26

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 262813**FUSES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:

1. Cartridge fuses rated 600 V and less for use in switches, panelboards, switchboards controllers and motor-control centers.
2. Spare-fuse cabinets.

1.3 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: Include the following for each fuse type indicated:

1. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
2. Let-through current curves for fuses with current-limiting characteristics.
3. Time-current curves, coordination charts and tables, and related data.
4. Fuse size for elevator feeders and elevator disconnect switches.

- C. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.

1. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
2. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.

- D. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals.

1. Include the following:
 - a. Time-current curves, coordination charts and tables, and related data.
 - b. Ambient temperature adjustment information.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Source Limitations: Obtain fuses from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with NEMA FU 1.
- E. Comply with NFPA 70.

1.5 PROJECT CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.6 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

1.7 COORDINATION

- A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Fuses: Quantity equal to 15 percent of each fuse type and size, but no fewer than 6 of each type and size.

PART 2 - PRODUCTS

2.1 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, nonrenewable cartridge fuse; class and current rating indicated; voltage rating consistent with circuit voltage.

2.2 SPARE-FUSE CABINET AND FUSES

- A. Cabinet: Wall-mounted, 0.05-inch- thick steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
 - 1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
 - 2. Finish: Gray, baked enamel.
 - 3. Identification: "SPARE FUSES" in 1-1/2-inch- high letters on exterior of door.
 - 4. Fuse Pullers: For each size of fuse.
- B. Provide a minimum 10% spare for each type of fuse utilized on the project or at minimum 3 of each type whichever is greater.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- B. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare-fuse cabinet(s).

3.3 IDENTIFICATION

- A. Install labels indicating fuse replacement information on inside door of each fused switch.

END OF SECTION 262813

SECTION 262816**ENCLOSED SWITCHES AND CIRCUIT BREAKERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following individually mounted, enclosed switches and circuit breakers:
 - 1. Fusible switches.
 - 2. Nonfusible switches.
 - 3. Bolted-pressure contact switches.
 - 4. High-pressure, butt-type contact switches.
 - 5. Molded-case circuit breakers.
 - 6. Molded-case switches.
 - 7. Enclosures.

1.3 DEFINITIONS

- A. GD: General duty.
- B. GFCI: Ground-fault circuit interrupter.
- C. HD: Heavy duty.
- D. RMS: Root mean square.
- E. SPDT: Single pole, double throw.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:
 - 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. **Product Data:** For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
 - 1. Enclosure types and details for types other than NEMA 250, Type 1.
 - 2. Current and voltage ratings.
 - 3. Short-circuit current rating.
 - 4. UL listing for series rating of installed devices.
 - 5. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
- C. **Shop Drawings:** Diagram power, signal, and control wiring.
- D. **Manufacturer Seismic Qualification Certification:** Submit certification that enclosed switches and circuit breakers, accessories, and components will withstand seismic forces Include the following:
 - 1. **Basis of Certification:** Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. **Dimensioned Outline Drawings of Equipment Unit:** Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. **Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.**
- E. **Qualification Data:** For testing agency.
- F. **Field quality-control test reports including the following:**
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- G. **Manufacturer's field service report.**
- H. **Operation and Maintenance Data:** For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals.
 - 1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
 - 2. Time-current curves, including selectable ranges for each type of circuit breaker.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green

Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with NFPA 70.
- E. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:
 - 1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
 - 2. Altitude: Not exceeding 6600 feet.

1.7 COORDINATION

- A. Coordinate layout and installation of switches, circuit breakers, and components with other construction, including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

1.8 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Spares: For the following:
 - a. Potential Transformer Fuses: 3
 - b. Control-Power Fuses: 4
 - c. Fuses and Fusible Devices for Fused Circuit Breakers: 15%
 - d. Fuses for Fusible Switches: 15%
 - e. Fuses for Fused Power Circuit Devices: 15%
 - 2. Spare Indicating Lights: Six of each type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 FUSIBLE AND NONFUSIBLE SWITCHES

- A. Manufacturers:
 - 1. Eaton Corporation; Cutler-Hammer Products.
 - 2. General Electric Co.; Electrical Distribution & Control Division.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D/Group Schneider.
- B. Fusible Switch: NEMA KS 1, Type HD, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- C. Nonfusible Switch: NEMA KS 1, Type HD, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.
- D. Accessories:
 - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
 - 2. Neutral Kit: Internally mounted; insulated, capable of being grounded, and bonded; and labeled for copper and aluminum neutral conductors.
 - 3. Auxiliary Contact Kit: Auxiliary set of contacts arranged to open before switch blades open.

2.3 FUSED POWER CIRCUIT DEVICES

- A. Bolted-Pressure Contact Switch: UL 977; operating mechanism shall use a rotary-mechanical-bolting action to produce and maintain high-clamping pressure on the switch blade after it engages the stationary contacts.

1. Manufacturers:

- a. Boltswitch, Inc.
- b. Eaton Corporation; Cutler-Hammer Products.
- c. Pringle Electrical Mfg. Co.
- d. Siemens Energy & Automation, Inc.
- e. Square D/Group Schneider.

- B. High-Pressure, Butt-Type Contact Switch: UL 977; operating mechanism shall use butt-type contacts and a spring-charged mechanism to produce and maintain high-contact pressure when switch is closed.

1. Manufacturers:

- a. General Electric Co.; Electrical Distribution & Control Division.

2. Main Contact Interrupting Capability: Twelve times the switch current rating, minimum.

3. Operating Mechanism: Manual handle operation to close switch stores energy in mechanism for closing and opening.

- a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
- b. Mechanical Trip: Operation of mechanical lever or push button or another device causes switch to open.

4. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.

5. Service-Rated Switches: Labeled for use as service equipment.

6. Ground-Fault Relay: Comply with UL 1053. Self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

- a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground fault indicator.
- b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
- c. No-Trip Relay Test: Operation of "no-trip" test control permits ground-fault simulation test without tripping switch.
- d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).

7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

2.4 MOLDED-CASE CIRCUIT BREAKERS AND SWITCHES

A. Manufacturers:

1. Eaton Corporation; Cutler-Hammer Products.

2. General Electric Co.; Electrical Distribution & Control Division.
 3. Moeller Electric Corporation.
 4. Siemens Energy & Automation, Inc.
 5. Square D/Group Schneider.
- B. Molded-Case Circuit Breaker: NEMA AB 1, with interrupting capacity to meet available fault currents.
1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
 3. Electronic Trip-Unit Circuit Breakers: RMS sensing; field-replaceable rating plug; with the following field-adjustable settings:
 - a. Instantaneous trip.
 - b. Long- and short-time pickup levels.
 - c. Long- and short-time time adjustments.
 - d. Ground-fault pickup level, time delay, and I^2t response.
 4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller and let-through ratings less than NEMA FU 1, RK-5.
 5. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.
 6. GFCI Circuit Breakers: Single- and two-pole configurations with 5-mA trip sensitivity.
- C. Molded-Case Circuit-Breaker Features and Accessories:
1. Standard frame sizes, trip ratings, and number of poles.
 2. Lugs: Mechanical style with compression lug kits suitable for number, size, trip ratings, and conductor material.
 3. Application Listing: Type SWD for switching fluorescent lighting loads; Type HACR for heating, air-conditioning, and refrigerating equipment.
 4. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
 5. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
 6. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay.
 7. Auxiliary Switch: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
 8. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
 9. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
- D. Molded-Case Switches: Molded-case circuit breaker with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.
- E. Molded-Case Switch Accessories:
1. Lugs: Mechanical style with compression lug kits suitable for number, size, trip ratings, and material of conductors.

2. Application Listing: Type HACR for heating, air-conditioning, and refrigerating equipment.
3. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage. Provide "dummy" trip unit where required for proper operation.
4. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay. Provide "dummy" trip unit where required for proper operation.
5. Auxiliary Switch: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
6. Key Interlock Kit: Externally mounted to prohibit operation; key shall be removable only when switch is in off position.

2.5 ENCLOSURES

- A. NEMA AB 1 and NEMA KS 1 to meet environmental conditions of installed location.

1. Outdoor Locations: NEMA 250, Type 3R.
2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
4. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 CONCRETE BASES

- A. Coordinate size and location of concrete bases. Verify structural requirements with structural Commissioner.
- B. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.

3.3 INSTALLATION

- A. Comply with applicable portions of NECA 1, NEMA PB 1.1, and NEMA PB 2.1 for installation of enclosed switches and circuit breakers.
- B. Mount individual wall-mounting switches and circuit breakers with tops at uniform height, unless otherwise indicated. Anchor floor-mounting switches to concrete base.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

3.4 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Division 26 Section "Identification for Electrical Systems."
- B. Enclosure Nameplates: Label each enclosure with engraved metal or laminated-plastic nameplate as specified in Division 26 Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Prepare for acceptance testing as follows:
 - 1. Inspect mechanical and electrical connections.
 - 2. Verify switch and relay type and labeling verification.
 - 3. Verify rating of installed fuses.
 - 4. Inspect proper installation of type, size, quantity, and arrangement of mounting or anchorage devices complying with manufacturer's certification.
- C. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
- D. Perform the following field tests and inspections and prepare test reports:
 - 1. Test mounting and anchorage devices according to requirements in Division 26 Section 260548 "Vibration and Seismic Controls for Electrical Systems."
 - 2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.5 for switches and Section 7.6 for molded-case circuit breakers. Certify compliance with test parameters.
 - 3. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 4. Infrared Scanning:
 - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Open or remove doors or panels so connections are accessible to portable scanner.
 - b. Follow-Up Infrared Scanning: Perform an additional follow-up infrared scan of each unit 11 months after date of Substantial Completion.
 - c. Instruments, Equipment and Reports:
 - 1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 2) Prepare a certified report that identifies enclosed switches and circuit breakers included and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

- A. Set field-adjustable switches and circuit-breaker trip ranges.

3.7 CLEANING

- A. On completion of installation, vacuum dirt and debris from interiors; do not use compressed air to assist in cleaning.
- B. Inspect exposed surfaces and repair damaged finishes.

END OF SECTION 262816

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 262913
ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes ac, enclosed controllers rated 600 V and less, of the following types:
1. Across-the-line, manual and magnetic controllers.
 2. Reduced-voltage controllers.
 3. Multispeed controllers.
 4. Variable frequency controllers for small motor applications.
- B. Related Sections include the following:
1. Division 26 Section "Variable-Frequency Motor Controllers" for general-purpose, ac, adjustable-frequency, pulse-width-modulated controllers for use on constant torque loads in ranges up to 200 hp.

1.3 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For each type of enclosed controller. Include dimensions and manufacturer's technical data on features, performance, electrical characteristics, ratings, and finishes.

- C. Shop Drawings: For each enclosed controller.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Each installed unit's type and details.
 - b. Nameplate legends.
 - c. Short-circuit current rating of integrated unit.

- d. Listed and labeled for series rating of overcurrent protective devices in combination controllers by an NRTL acceptable to authorities having jurisdiction.
- e. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices in combination controllers.

2. Wiring Diagrams: Power, signal, and control wiring.

D. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around enclosed controllers where pipe and ducts are prohibited. Show enclosed controller layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

E. Manufacturer Seismic Qualification Certification: Submit certification that enclosed controllers, accessories, and components will withstand seismic forces

- 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
- 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Qualification Data: For manufacturer.

G. Field quality-control test reports.

H. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals

- 1. Routine maintenance requirements for enclosed controllers and all installed components.
- 2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

I. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

J. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that dip switch settings for motor running overload protection suit actual motor to be protected.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the

applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Manufacturer Qualifications: A qualified manufacturer. Maintain, a service center capable of providing training, parts, and emergency maintenance and repairs.
- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- D. Source Limitations: Obtain enclosed controllers of a single type through one source from a single manufacturer.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with NFPA 70.
- G. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed controllers, minimum clearances between enclosed controllers, and for adjacent surfaces and other items. Comply with indicated maximum dimensions and clearances.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install electric heating of sufficient wattage to prevent condensation.

1.6 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
 1. Notify Commissioner and or City of New York no fewer than two days in advance of proposed interruption of electrical service.
 2. Indicate method of providing temporary utilities.
 3. Do not proceed with interruption of electrical service without Commissioner's and or City of New York's written permission.

1.7 COORDINATION

- A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Coordinate features of enclosed controllers and accessory devices with pilot devices and control circuits to which they connect.
- D. Coordinate features, accessories, and functions of each enclosed controller with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Spare Fuses: Furnish one spare for every five installed, but no fewer than one set of three of each type and rating.
 2. Indicating Lights: Two of each type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. ABB Power Distribution, Inc.; ABB Control, Inc. Subsidiary.
 2. Danfoss Inc.; Danfoss Electronic Drives Div.
 3. Eaton Corporation; Cutler-Hammer Products.
 4. General Electrical Company; GE Industrial Systems.
 5. Rockwell Automation; Allen-Bradley Co.; Industrial Control Group.

- 6. Siemens/Furnas Controls.
- 7. Square D.

2.2 ACROSS-THE-LINE ENCLOSED CONTROLLERS

- A. Manual Controller: NEMA ICS 2, general purpose, Class A, with "quick-make, quick-break" toggle or pushbutton action, and marked to show whether unit is "OFF," "ON," or "TRIPPED."
 - 1. Overload Relay: Ambient-compensated type with inverse-time-current characteristics and NEMA ICS 2, Class 10 tripping characteristics. Relays shall have heaters and sensors in each phase, matched to nameplate, full-load current of specific motor to which they connect and shall have appropriate adjustment for duty cycle.
- B. Magnetic Controller: NEMA ICS 2, Class A, full voltage, nonreversing, across the line, unless otherwise indicated.
 - 1. Control Circuit: 120 V; obtained from integral control power transformer with a control power of sufficient capacity to operate connected pilot, indicating and control devices, plus 100 percent spare capacity.
 - 2. Overload Relay: Ambient-compensated type with inverse-time-current characteristic and NEMA ICS 2, Class 10 or 20 tripping characteristic. Provide with heaters or sensors in each phase matched to nameplate full-load current of specific motor to which they connect and with appropriate adjustment for duty cycle.
 - 3. Adjustable Overload Relay: Dip switch selectable for motor running overload protection with NEMA ICS 2, Class 10 or 20 tripping characteristic, and selected to protect motor against voltage and current unbalance and single phasing. Provide relay with Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
- C. Combination Magnetic Controller: Factory-assembled combination controller and disconnect switch.
 - 1. Fusible Disconnecting Means: NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 947-4-1, as certified by an NRTL.
 - 2. Nonfusible Disconnecting Means: NEMA KS 1, heavy-duty, nonfusible switch.
 - 3. Circuit-Breaker Disconnecting Means: NEMA AB 1, motor-circuit protector with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.

2.3 REDUCED-VOLTAGE ENCLOSED CONTROLLERS

- A. Star-Delta Controller: NEMA ICS 2, closed transition with adjustable time delay.
- B. Part-Winding Controller: NEMA ICS 2, closed transition with separate overload relays for starting and running sequences.
- C. Autotransformer Reduced-Voltage Controller: NEMA ICS 2, closed transition.
- D. Solid-State, Reduced-Voltage Controller: NEMA ICS 2, suitable for use with NEMA MG 1, Design B, polyphase, medium induction motors.
 - 1. Adjustable acceleration rate control utilizing voltage or current ramp, and adjustable starting torque control with up to 500 percent current limitation for 20 seconds.

2. Surge suppressor in solid-state power circuits providing 3-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
3. LED indicators showing motor and control status, including the following conditions:
 - a. Control power available.
 - b. Controller on.
 - c. Overload trip.
 - d. Loss of phase.
 - e. Shorted silicon-controlled rectifier.
4. Automatic voltage-reduction controls to reduce voltage when motor is running at light load.
5. Motor running contactor operating automatically when full voltage is applied to motor.

2.4 MULTISPEED ENCLOSED CONTROLLERS

- A. Multispeed Enclosed Controller: Match controller to motor type, application, and number of speeds; include the following accessories:
 1. Compelling relay to ensure that motor will start only at low speed.
 2. Accelerating relay to ensure properly timed acceleration through speeds lower than that selected.
 3. Decelerating relay to ensure automatically timed deceleration through each speed.

2.5 VARIABLE FREQUENCY CONTROLLERS

- A. Description: NEMA ICS 2, pulse-width-modulated, variable frequency controller; listed and labeled as a complete unit and arranged to provide variable speed of an NEMA MG 1, Design B, 3-phase, induction motor by adjusting output voltage and frequency.
- B. Design and Rating: Match load type such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.
- C. Isolation Transformer: Match transformer voltage ratings and capacity to system and motor voltages; and controller, motor, and load characteristics.
- D. Output Rating: Match load rating.
- E. Unit Operating Requirements:
 1. Input ac voltage tolerance of 200 V, plus or minus 5 percent or 460V, plus or minus 10 percent.
 2. Input frequency tolerance of 60 Hz, plus or minus 6 percent.
 3. Minimum Efficiency: 96 percent at 60 Hz, full load.
 4. Minimum Displacement Primary-Side Power Factor: 96 percent.
 5. Overload Capability: 1.1 times the base load current for 60 seconds; 2.0 times the base load current for 3 seconds.
 6. Starting Torque: 100 percent of rated torque or as indicated.
 7. Speed Regulation: Plus or minus 1 percent.
 8. Ambient Temperature: 0 to 40 deg C.
- F. Isolated control interface allows controller to follow control signal over an 11:1 speed range.

1. Electrical Signal: 4 to 20 mA at 24 V.
 2. Pneumatic Signal: 3 to 15 psig.
- G. Internal Adjustability Capabilities:
1. Minimum Speed: 5 to 25 percent of maximum rpm.
 2. Maximum Speed: 80 to 100 percent of maximum rpm.
 3. Acceleration: 2 to a minimum of 22 seconds.
 4. Deceleration: 2 to minimum of 22 seconds.
 5. Current Limit: 50 to a minimum of 110 percent of maximum rating.
- H. Self-Protection and Reliability Features:
1. Input transient protection by means of surge suppressors.
 2. Under- and overvoltage trips; inverter overtemperature, overload, and overcurrent trips.
 3. Motor Overload Relay: Adjustable and capable of NEMA 250, Class 10 or 20 performance.
 4. Notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
 5. Instantaneous line-to-line and line-to-ground overcurrent trips.
 6. Loss-of-phase protection.
 7. Reverse-phase protection.
 8. Short-circuit protection.
 9. Motor overtemperature fault.
- I. Multiple-Motor Capability: Controller suitable for service to multiple motors and having a separate overload relay and protection for each controlled motor. Overload relay shall shut off controller and motors served by it when overload relay is tripped.
- J. Automatic Reset/Restart: Controller shall be equipped with Automatic Reset feature, which attempts three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Restarting during deceleration shall not damage controller, motor, or load. Default setting shall be Manual.
- K. Power-Interruption Protection: Prevents motor from re-energizing after a power interruption until motor has stopped.
- L. Status Lights: Door-mounted LED indicators shall indicate the following conditions:
1. Power on.
 2. Run.
 3. Overvoltage.
 4. Line fault.
 5. Overcurrent.
 6. External fault.
- M. Panel-Mounted Operator Station: Start-stop and auto-manual selector switches with manual speed control potentiometer and elapsed time meter.
- N. Indicating Devices: Meters or digital readout devices and selector switch, mounted flush in controller door and connected to indicate controller output current, voltage, and frequency.
- O. Manual Bypass: Magnetic contactor arranged to safely transfer motor between controller output and bypass controller circuit when motor is at zero speed. Controller-off-bypass selector switch sets mode, and indicator lights give indication of mode selected.

- P. Bypass Controller: NEMA ICS 2, full-voltage, nonreversing enclosed controller with across-the-line starting capability in manual-bypass mode. Provide motor overload protection under both modes of operation with control logic that allows common start-stop capability in either mode.
- Q. Integral Disconnecting Means: NEMA AB 1, instantaneous-trip circuit breaker or NEMA KS 1, fusible switch with lockable handle.
- R. Isolating Switch: Non-load-break switch arranged to isolate variable frequency controller and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode.
- S. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.

2.6 ENCLOSURES

- A. Description: Flush- or surface-mounting cabinets as indicated. NEMA 250, Type 1, unless otherwise indicated to comply with environmental conditions at installed location.
 - 1. Outdoor Locations: NEMA 250, Type 3R.
 - 2. Kitchen Areas: NEMA 250, Type 4X, stainless steel.
 - 3. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
 - 4. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7C.

2.7 ACCESSORIES

- A. Devices shall be factory installed in controller enclosure, unless otherwise indicated.
- B. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
- C. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
- D. Control Relays: Auxiliary and adjustable time-delay relays.
- E. Elapsed Time Meters: Heavy duty with digital readout in hours.
- F. Meters: Panel type, 2-1/2-inch minimum size with 90- or 120-degree scale and plus or minus 2 percent accuracy. Where indicated, provide transfer device with an off position. Meters shall indicate the following:
 - 1. Ammeter: Output current, with current sensors rated to suit application.
 - 2. Voltmeter: Output voltage.
 - 3. Frequency Meter: Output frequency.
- G. Multifunction Digital-Metering Monitor: Listed and labeled by an NRTL acceptable to authorities having jurisdiction, microprocessor-based unit suitable for three- or four-wire systems and with the following features:
 - 1. Inputs from sensors or 5-A current-transformer secondaries, and potential terminals rated to 600 V.
 - 2. Switch-selectable digital display of the following:

- a. Phase Currents, Each Phase: Plus or minus 1 percent.
 - b. Phase-to-Phase Voltages, Three Phase: Plus or minus 1 percent.
 - c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 1 percent.
 - d. Three-Phase Real Power: Plus or minus 2 percent.
 - e. Three-Phase Reactive Power: Plus or minus 2 percent.
 - f. Power Factor: Plus or minus 2 percent.
 - g. Frequency: Plus or minus 0.5 percent.
 - h. Integrated Demand with Demand Interval Selectable from 5 to 60 Minutes: Plus or minus 2 percent.
 - i. Accumulated energy, in megawatt hours (joules), plus or minus 2 percent; stored values unaffected by power outages for up to 72 hours.
3. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.
- H. Phase-Failure and Undervoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connection. Provide adjustable undervoltage setting.
- I. Current-Sensing, Phase-Failure Relays for Bypass Controllers: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage; with adjustable response delay.
- 2.8 FACTORY FINISHES
- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested enclosed controllers before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas and surfaces to receive enclosed controllers for compliance with requirements, installation tolerances, and other conditions affecting performance.
1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Select features of each enclosed controller to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; duty cycle of motor, controller, and load; and configuration of pilot device and control circuit affecting controller functions.
- B. Select horsepower rating of controllers to suit motor controlled.

3.3 INSTALLATION

- A. For control equipment at walls, bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

- B. Install freestanding equipment on concrete bases.
- C. Enclosed Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Division 26 Section "Fuses."

3.4 CONCRETE BASES

- A. Coordinate size and location of concrete bases. Verify structural requirements with structural Engineer.
- B. Concrete base is specified in Division 26 Section "Hangers and Supports for Electrical Systems," and concrete materials and installation requirements are specified in Division 03.

3.5 IDENTIFICATION

- A. Identify enclosed controller, components, and control wiring according to Division 26 Section "Identification for Electrical Systems."

3.6 CONTROL WIRING INSTALLATION

- A. Install wiring between enclosed controllers according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect hand-off-automatic switch and other automatic-control devices where applicable.
 - 1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
 - 2. Connect selector switches with enclosed controller circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.7 CONNECTIONS

- A. Conduit installation requirements are specified in other Division 26 Sections. Drawings indicate general arrangement of conduit, fittings, and specialties.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each enclosed controller element, bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following:

1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
2. Assist in field testing of equipment including pretesting and adjusting of solid-state controllers.
3. Report results in writing.

C. Perform the following field tests and inspections and prepare test reports:

1. Perform each electrical test and visual and mechanical inspection, except optional tests, stated in NETA ATS, "Motor Control - Motor Starters." Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.9 ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges.

END OF SECTION 262913

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 262923**VARIABLE-FREQUENCY MOTOR CONTROLLERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes solid-state, PWM, VFCs for speed control of three-phase, squirrel-cage induction motors.

1.3 DEFINITIONS

- A. BMS: Building management system.
- B. IGBT: Integrated gate bipolar transistor.
- C. LAN: Local area network.
- D. PID: Control action, proportional plus integral plus derivative.
- E. PWM: Pulse-width modulated.
- F. VFC: Variable frequency controller.

1.4 SUBMITTALS**A. LEED BUILDING SUBMITTAL REQUIREMENTS:**

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:
Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For each type of VFC. Include dimensions, mounting arrangements, location for conduit entries, shipping and operating weights, and manufacturer's technical data on features, performance, electrical ratings, characteristics, and finishes.
- C. Shop Drawings: For each VFC.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Each installed unit's type and details.
 - b. Nameplate legends.
 - c. Short-circuit current rating of integrated unit.
 - d. Listed and labeled for series rating of overcurrent protective devices in combination controllers by an NRTL acceptable to authorities having jurisdiction.
 - e. Features, characteristics, ratings, and factory settings of each motor-control center unit.
2. Wiring Diagrams: Power, signal, and control wiring for VFCs. Provide schematic wiring diagram for each type of VFC.
- D. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFCs where pipe and ducts are prohibited. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.
- E. Qualification Data: For manufacturer.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For VFCs, all installed devices, and components to include in emergency, operation, and maintenance manuals. In addition to items specified in 'DDC General conditions' include the following:
 1. Routine maintenance requirements for VFCs and all installed components.
 2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
- H. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- I. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that dip switch settings for motor running overload protection suit actual motor to be protected.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed

by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. **Manufacturer Qualifications:** A qualified manufacturer. Maintain a service center capable of providing training, parts, and emergency maintenance and repairs.
- C. **Testing Agency Qualifications:** An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.
 - 1. **Testing Agency's Field Supervisor:** Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- D. **Source Limitations:** Obtain VFCs of a single type through one source from a single manufacturer.
- E. **Electrical Components, Devices, and Accessories:** Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. **Comply with NFPA 70.**
- G. **Product Selection for Restricted Space:** Drawings indicate maximum dimensions for VFCs, minimum clearances between VFCs, and adjacent surfaces and other items. Comply with indicated maximum dimensions and clearances.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. **Deliver VFCs in shipping splits of lengths that can be moved past obstructions in delivery path as indicated.**
- B. **Store VFCs indoors in clean, dry space with uniform temperature to prevent condensation. Protect VFCs from exposure to dirt, fumes, water, corrosive substances, and physical damage.**
- C. **If stored in areas subject to weather, cover VFCs to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install electric heating of sufficient wattage to prevent condensation.**

1.7 PROJECT CONDITIONS

- A. **Environmental Limitations:** Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions, unless otherwise indicated:
 - 1. **Ambient Temperature:** 0 to 40 deg C.

2. Humidity: Less than 90 percent (noncondensing).
 3. Altitude: Not exceeding 3300 feet.
- B. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:
1. Notify Commissioner and or City of New York no fewer than two days in advance of proposed interruption of electrical service.
 2. Indicate method of providing temporary electrical service.
 3. Do not proceed with interruption of electrical service without Commissioner's and or City of New York's written permission.
- C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.8 COORDINATION

- A. Coordinate layout and installation of VFCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.
- D. Coordinate features of VFCs, installed units, and accessory devices with pilot devices and control circuits to which they connect.
- E. Coordinate features, accessories, and functions of each VFC and each installed unit with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load.

1.9 WARRANTY

- A. The manufacturer shall warranty the system for 24 months from date of substantial completion.

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 1. Spare Fuses: Furnish one spare for every five installed, but no fewer than one set of three of each type and rating.
 2. Indicating Lights: Two of each type installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB Power Distribution, Inc.; ABB Control, Inc. Subsidiary.
 2. Yaskawa
 3. Baldor Electric Company (Graham).
 4. Danfoss Inc.; Danfoss Electronic Drives Div.
 5. Eaton Corporation; Cutler-Hammer Products.
 6. General Electric Company; GE Industrial Systems.
 7. Rockwell Automation; Allen-Bradley Co.; Industrial Control Group.
 8. Siemens Energy and Automation; Industrial Products Division.
 9. Square D.
 10. Toshiba International Corporation.

2.2 VARIABLE FREQUENCY CONTROLLERS

- A. Description: NEMA ICS 2, IGBT, PWM, VFC; listed and labeled as a complete unit and arranged to provide variable speed of an NEMA MG 1, Design B, 3-phase induction motor by adjusting output voltage and frequency.
1. Provide unit suitable for operation of premium-efficiency motor as defined by NEMA MG 1.
- B. Design and Rating: Match load type such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.
- C. Output Rating: Match load rating.
- D. Unit Operating Requirements:
1. Input ac voltage tolerance of 208 V, plus or minus 5 percent or 460V plus or minus 10 percent.
 2. Input frequency tolerance of 60 Hz, plus or minus 6 percent.
 3. Minimum Efficiency: 96 percent at 60 Hz, full load.
 4. Minimum Displacement Primary-Side Power Factor: 96 percent.
 5. Overload Capability: 1.1 times the base load current for 60 seconds; 2.0 times the base load current for 3 seconds.
 6. Starting Torque: 100 percent of rated torque or as indicated.
 7. Speed Regulation: Plus or minus 1 percent.
- E. Isolated control interface to allow controller to follow control signal over an 11:1 speed range.
1. Electrical Signal: 4 to 20 mA at 24 V.
 2. Pneumatic Signal: 3 to 15 psig (20 to 104 kPa).
- F. Internal Adjustability Capabilities:
1. Minimum Speed: 5 to 25 percent of maximum rpm.
 2. Maximum Speed: 80 to 100 percent of maximum rpm.

3. Acceleration: 2 to a minimum of 22 seconds.
4. Deceleration: 2 to a minimum of 22 seconds.
5. Current Limit: 50 to a minimum of 110 percent of maximum rating.

G. Self-Protection and Reliability Features:

1. Input transient protection by means of surge suppressors.
2. Under- and overvoltage trips; inverter overtemperature, overload, and overcurrent trips.
3. Motor Overload Relay: Adjustable and capable of NEMA ICS 2, Class 10 or 20 performance.
4. Notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
5. Instantaneous line-to-line and line-to-ground overcurrent trips.
6. Loss-of-phase protection.
7. Reverse-phase protection.
8. Short-circuit protection.
9. Motor overtemperature fault.

H. Multiple-Motor Capability: Controller suitable for service to multiple motors and having a separate overload relay and protection for each controlled motor. Overload relay shall shut off controller and motors served by it when overload relay is tripped.

I. Automatic Reset/Restart: Attempts three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Bidirectional autospeed search shall be capable of starting into rotating loads spinning in either direction and returning motor to set speed in proper direction, without damage to controller, motor, or load.

J. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped.

K. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

L. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

M. Status Lights: Door-mounted LED indicators shall indicate the following conditions:

1. Power on.
2. Run.
3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.

N. Panel-Mounted Operator Station: Start-stop and auto-manual selector switches with manual speed control potentiometer and elapsed time meter.

O. Indicating Devices: Meters or digital readout devices and selector switch, mounted flush in controller door and connected to indicate the following controller parameters:

1. Output frequency (Hz).
2. Motor speed (rpm).
3. Motor status (running, stop, fault).

4. Motor current (amperes).
5. Motor torque (percent).
6. Fault or alarming status (code).
7. PID feedback signal (percent).
8. DC-link voltage (VDC).
9. Set-point frequency (Hz).
10. Motor output voltage (V).

P. Control Signal Interface:

1. Electric Input Signal Interface: A minimum of 2 analog inputs (0 to 10 V or 0/4-20 mA) and 6 programmable digital inputs.
2. Pneumatic Input Signal Interface: 3 to 15 psig.
3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BMS or other control systems:

- a. 0 to 10-V dc.
- b. 0-20 or 4-20 mA.
- c. Potentiometer using up/down digital inputs.
- d. Fixed frequencies using digital inputs.
- e. RS485.
- f. Keypad display for local hand operation.

4. Output Signal Interface:

- a. A minimum of 1 analog output signal (0/4-20 mA), which can be programmed to any of the following:

- 1) Output frequency (Hz).
- 2) Output current (load).
- 3) DC-link voltage (VDC).
- 4) Motor torque (percent).
- 5) Motor speed (rpm).
- 6) Set-point frequency (Hz).

5. Remote Indication Interface: A minimum of 2 dry circuit relay outputs (120-V ac, 1 A) for remote indication of the following:

- a. Motor running.
- b. Set-point speed reached.
- c. Fault and warning indication (overtemperature or overcurrent).
- d. PID high- or low-speed limits reached.

- Q. Communications: Provide an RS485 interface allowing VFC to be used with an external system within a multidrop LAN configuration. Interface shall allow all parameter settings of VFC to be programmed via BMS control. Provide capability for VFC to retain these settings within the nonvolatile memory.

- R. Manual Bypass: Magnetic contactor arranged to safely transfer motor between controller output and bypass controller circuit when motor is at zero speed. Controller-off-bypass selector switch sets mode, and indicator lights give indication of mode selected. Unit shall be capable of stable operation (starting, stopping, and running), with motor completely disconnected from controller (no load).

- S. Bypass Controller: NEMA ICS 2, full-voltage, nonreversing enclosed controller with across-the-line starting capability in manual-bypass mode. Provide motor overload protection under both modes of operation with control logic that allows common start-stop capability in either mode.
- T. Integral Disconnecting Means: NEMA AB 1, instantaneous-trip circuit breaker NEMA KS 1, fusible switch with lockable handle.
- U. Isolating Switch: Non-load-break switch arranged to isolate VFC and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode.
- V. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.

2.3 ENCLOSURES

- A. NEMA-1 for interior use and NEMA-3R or NEMA-4X as indicated for exterior use.

2.4 ACCESSORIES

- A. Devices shall be factory installed in controller enclosure, unless otherwise indicated.
- B. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.
- C. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.
- D. Control Relays: Auxiliary and adjustable time-delay relays.
- E. Standard Displays:
 - 1. Output frequency (Hz).
 - 2. Set-point frequency (Hz).
 - 3. Motor current (amperes).
 - 4. DC-link voltage (VDC).
 - 5. Motor torque (percent).
 - 6. Motor speed (rpm).
 - 7. Motor output voltage (V).
- F. Historical Logging Information and Displays:
 - 1. Real-time clock with current time and date.
 - 2. Running log of total power versus time.
 - 3. Total run time.
 - 4. Fault log, maintaining last four faults with time and date stamp for each.
- G. Current-Sensing, Phase-Failure Relays for Bypass Controller: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage; with adjustable response delay.

2.5 FACTORY FINISHES

- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested VFCs before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, surfaces, and substrates to receive VFCs for compliance with requirements, installation tolerances, and other conditions affecting performance.
- B. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

- A. Select features of each VFC to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; and duty cycle of motor, controller, and load.
- B. Select horsepower rating of controllers to suit motor controlled.

3.3 INSTALLATION

- A. Anchor each VFC assembly to steel-channel sills arranged and sized according to manufacturer's written instructions. Attach by bolting. Level and grout sills flush with mounting surface.
- B. Install VFCs on concrete bases.
- C. Comply with mounting and anchoring requirements specified in Division 26 Section "Hangers and Supports for Electrical Systems."
- D. Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Division 26 Section "Fuses."

3.4 CONCRETE BASES

- A. Coordinate size and location of concrete bases. Verify structural requirements with structural engineer.
- B. Concrete base is specified in Division 26 Section "Common Work Results for Electrical," and concrete materials and installation requirements are specified in Division 03.

3.5 IDENTIFICATION

- A. Identify VFCs, components, and control wiring according to Division 26 Section "Identification for Electrical Systems."
- B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.6 CONTROL WIRING INSTALLATION

- A. Install wiring between VFCs and remote devices according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect hand-off-automatic switch and other automatic-control devices where applicable.
 - 1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
 - 2. Connect selector switches with control circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.7 CONNECTIONS

- A. Conduit installation requirements are specified in other Division 26 Sections. Drawings indicate general arrangement of conduit, fittings, and specialties.
- B. Ground equipment according to Division 26 "Grounding and Bonding for Electrical Systems."

3.8 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each enclosed controller element, bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following:
 - 1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
 - 2. Assist in field testing of equipment including pretesting and adjusting of solid-state controllers.
 - 3. Report results in writing.
- C. Perform the following field tests and inspections and prepare test reports:
 - 1. Perform each electrical test and visual and mechanical inspection, except optional tests, stated in NETA ATS. Certify compliance with test parameters.

2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.9 ADJUSTING

- A. Set field-adjustable switches and circuit-breaker trip ranges.

END OF SECTION 262923

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 263213
ENGINE GENERATOR

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes engine-generator sets for emergency power supply with the following features:
1. Diesel engine.
 2. Unit-mounted cooling system.
 3. Unit-mounted control and monitoring.
 4. Performance requirements for sensitive loads.
 5. Outdoor weatherproof sound attenuated enclosure.
- B. Related Sections include the following:
1. Division 26 Section "Transfer Switches" for transfer switches including sensors and relays to initiate automatic-starting and -stopping signals for engine-generator sets.

1.3 DEFINITIONS

- A. Operational Bandwidth: The total variation from the lowest to highest value of a parameter over the range of conditions indicated, expressed as a percentage of the nominal value of the parameter.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

Provide for all field-applied adhesives, sealants (used as fillers), and paints:

Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Manufacturer Seismic Qualification Certification: Submit certification that complete engine-generator set, batteries, battery racks, accessories, and components will withstand seismic

forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of the assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Product Data: For type of packaged engine generator indicated. Include rated capacity, operating characteristics, and furnished specialties and accessories. In addition, include the following:
1. Thermal damage curve for generator.
 2. Time-current characteristic curves for generator protective device.
- D. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
1. Dimensioned outline plan and elevation drawings of engine-generator set and other components specified.
 2. Calculations: Signed and sealed by a qualified professional engineer. Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
 3. Vibration Isolation Base Details: Signed and sealed by a qualified professional engineer. Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include base weights.
 4. Wiring Diagrams: Power, signal, and control wiring.
 5. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 6. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. Qualification Data: For installer.
- F. Source quality-control test reports.
1. Certified summary of prototype-unit test report.
 2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
 3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
 4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
 5. Report of sound generation.

- 6. Report of exhaust emissions showing compliance with applicable regulations.
- 7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

G. Field quality-control test reports.

H. Operation and Maintenance Data: For packaged engine generators to include in emergency, operation, and maintenance manuals. In addition to items specified in 'DDC General conditions' include the following:

- 1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current unit prices, and source of supply.

I. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

B. Installer Qualifications: Trained by manufacturer for installation of units required for this Project.

- 1. Engineering Responsibility: Preparation of data for vibration isolators and seismic restraints of engine skid mounts, including Shop Drawings, based on testing and Engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

C. Manufacturer Qualifications: A qualified manufacturer. Maintain, a service center capable of providing training, parts, and emergency maintenance repairs.

D. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL), and that is acceptable to authorities having jurisdiction.

- 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

E. Source Limitations: Obtain packaged generator sets and auxiliary components through one source from a single manufacturer.

- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- G. Comply with ASME B15.1.
- H. Comply with NFPA 37.
- I. Comply with NFPA 70.
- J. Comply with NFPA 110 requirements.
- K. Comply with UL 2200.
- L. Engine Exhaust Emissions: Comply with applicable state and local government requirements.
- M. Noise Emission: Comply with applicable state and local government requirements for maximum noise level at adjacent property boundaries due to sound emitted by generator set including engine, engine exhaust, engine cooling-air intake and discharge, and other components of installation.

1.6 PROJECT CONDITIONS

- A. Environmental Conditions: Engine-generator system shall withstand the following environmental conditions without mechanical or electrical damage or degradation of performance capability:
 - 1. Ambient Temperature: Minus 15 to plus 40 deg C.
 - 2. Altitude: Sea level to 1000 feet (300 m).

1.7 COORDINATION

- A. Coordinate size and location of concrete bases for package engine generators. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged engine generators and associated auxiliary components that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: five years from date of Substantial Completion.

1.9 MAINTENANCE SERVICE

- A. Initial Maintenance Service: Beginning at Substantial Completion, provide 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include quarterly exercising to check for proper starting, load transfer, and running under load. Include routine preventive maintenance as recommended by manufacturer and adjusting as required for

proper operation. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

1.10 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: One for every 10 of each type and rating, but no fewer than one of each.
2. Indicator Lamps: Two for every six of each type used, but no fewer than two of each.
3. Filters: One set each of lubricating oil, fuel, and combustion-air filters.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Onan/Cummins Power Generation; Industrial Business Group or a comparable product by one of the following:

1. Caterpillar; Engine Div.
2. Generac Power Systems, Inc.
3. Kohler Co.; Generator Division.
4. Magnetek, Inc.
5. Spectrum Detroit Diesel.

2.2 ENGINE-GENERATOR SET

- A. Factory-assembled and -tested, engine-generator set.

- B. Mounting Frame: Maintain alignment of mounted components without depending on concrete foundation; and have lifting attachments.

1. Rigging Diagram: Inscribed on metal plate permanently attached to mounting frame to indicate location and lifting capacity of each lifting attachment and generator-set center of gravity.

- C. Capacities and Characteristics:

1. Power Output Ratings: Nominal ratings as indicated, with capacity as required to operate as a unit as evidenced by records of prototype testing.
2. Output Connections: Three-phase, four wire.
3. Nameplates: For each major system component to identify manufacturer's name and address, and model and serial number of component.

- D. Generator-Set Performance for Sensitive Loads:

1. Oversizing generator compared with the rated power output of the engine is permissible to meet specified performance.

- a. Nameplate Data for Oversized Generator: Show ratings required by the Contract Documents rather than ratings that would normally be applied to generator size installed.
2. Steady-State Voltage Operational Bandwidth: 1 percent of rated output voltage from no load to full load.
3. Some manufacturers may be required to provide an oversized engine-generator set in order to meet parameters in first subparagraph below. This could impact space, noise, ventilation, cooling, and other parameters. Verify performance of products if specific manufacturers are listed at the beginning of Part 2. Edit requirements below to suit actual Project load characteristics.
4. Transient Voltage Performance: Not more than 10 percent variation for 50 percent step-load increase or decrease. Voltage shall recover and remain within the steady-state operating band within 0.5 second.
5. Steady-State Frequency Operational Bandwidth: Plus or minus 0.25 percent of rated frequency from no load to full load.
6. Steady-State Frequency Stability: When system is operating at any constant load within the rated load, there shall be no random speed variations outside the steady-state operational band and no hunting or surging of speed.
7. Transient Frequency Performance: Less than 2-Hz variation for 50 percent step-load increase or decrease. Frequency shall recover and remain within the steady-state operating band within three seconds.
8. Output Waveform: At no load, harmonic content measured line to neutral shall not exceed 2 percent total with no slot ripple. Telephone influence factor, determined according to NEMA MG 1, shall not exceed 50 percent.
9. Sustained Short-Circuit Current: For a 3-phase, bolted short circuit at system output terminals, system shall supply a minimum of 300 percent of rated full-load current for not less than 10 seconds and then clear the fault automatically, without damage to winding insulation or other generator system components.
10. Excitation System: Performance shall be unaffected by voltage distortion caused by nonlinear load.
- b. Provide permanent magnet excitation for power source to voltage regulator.
11. Start Time: Comply with NFPA 110, Type 10, system requirements.

2.3 ENGINE

- A. Fuel: Fuel oil, Grade DF-2.
- B. Rated Engine Speed: 1800 rpm.
- C. Maximum Piston Speed for Four-Cycle Engines: 2250 fpm (11.4 m/s).
- D. Lubrication System: The following items are mounted on engine or skid:

1. Filter and Strainer: Rated to remove 90 percent of particles 5 micrometers and smaller while passing full flow.
2. Thermostatic Control Valve: Control flow in system to maintain optimum oil temperature. Unit shall be capable of full flow and is designed to be fail-safe.
3. Crankcase Drain: Arranged for complete gravity drainage to an easily removable container with no disassembly and without use of pumps, siphons, special tools, or appliances.

E. Engine Fuel System:

1. Main Fuel Pump: Mounted on engine. Pump ensures adequate primary fuel flow under starting and load conditions.
2. Relief-Bypass Valve: Automatically regulates pressure in fuel line and returns excess fuel to source.

F. Coolant Jacket Heater: Electric-immersion type, factory installed in coolant jacket system. Comply with NFPA 110 requirements for Level 1 equipment for heater capacity.

G. Governor: Adjustable isochronous, with speed sensing.

H. Cooling System: Closed loop, liquid cooled, with radiator factory mounted on engine-generator-set mounting frame and integral engine-driven coolant pump.

1. Coolant: Solution of 50 percent ethylene-glycol-based antifreeze and 50 percent water, with anticorrosion additives as recommended by engine manufacturer.
2. Size of Radiator: Adequate to contain expansion of total system coolant from cold start to 110 percent load condition.
3. Expansion Tank: Constructed of welded steel plate and rated to withstand maximum closed-loop coolant system pressure for engine used. Equip with gage glass and petcock.
4. Temperature Control: Self-contained, thermostatic-control valve modulates coolant flow automatically to maintain optimum constant coolant temperature as recommended by engine manufacturer.
5. Coolant Hose: Flexible assembly with inside surface of nonporous rubber and outer covering of aging-, ultraviolet-, and abrasion-resistant fabric.
 - a. Rating: 50-psig maximum working pressure with coolant at 180 deg F and noncollapsible under vacuum.
 - b. End Fittings: Flanges or steel pipe nipples with clamps to suit piping and equipment connections.

I. Muffler/Silencer: Critical type, sized as recommended by engine manufacturer and selected with exhaust piping system to not exceed engine manufacturer's engine backpressure requirements.

1. Minimum sound attenuation of 25 dB at 500 Hz.
2. Sound level measured at a distance of 3.3 feet from exhaust discharge after installation is complete shall be 85 dBA or less.

J. Air-Intake Filter: Heavy-duty, engine-mounted air cleaner with replaceable dry-filter element and "blocked filter" indicator.

K. Starting System: 24-V electric, with negative ground.

1. Components: Sized so they will not be damaged during a full engine-cranking cycle with ambient temperature at maximum specified in Part 1 "Project Conditions" Article.
2. Cranking Motor: Heavy-duty unit that automatically engages and releases from engine flywheel without binding.
3. Cranking Cycle: As required by NFPA 110 for system level specified.
4. Battery: Adequate capacity within ambient temperature range specified in Part 1 "Project Conditions" Article to provide specified cranking cycle at least three times without recharging.
5. Battery Cable: Size as recommended by engine manufacturer for cable length indicated. Include required interconnecting conductors and connection accessories.
6. Battery Compartment: Factory fabricated of metal with acid-resistant finish and thermal insulation. Thermostatically controlled heater shall be arranged to maintain battery above 10 deg C regardless of external ambient temperature within range specified in Part 1 "Project Conditions" Article. Include accessories required to support and fasten batteries in place.
7. Battery-Charging Alternator: Factory mounted on engine with solid-state voltage regulation and 35-A minimum continuous rating.
8. Battery Charger: Current-limiting, automatic-equalizing and float-charging type. Unit shall comply with UL 1236 and include the following features:
 - a. Operation: Equalizing-charging rate of 10 A shall be initiated automatically after battery has lost charge until an adjustable equalizing voltage is achieved at battery terminals. Unit shall then be automatically switched to a lower float-charging mode and shall continue to operate in that mode until battery is discharged again.
 - b. Automatic Temperature Compensation: Adjust float and equalize voltages for variations in ambient temperature from minus 40 deg C to plus 60 deg C to prevent overcharging at high temperatures and undercharging at low temperatures.
 - c. Automatic Voltage Regulation: Maintain constant output voltage regardless of input voltage variations up to plus or minus 10 percent.
 - d. Ammeter and Voltmeter: Flush mounted in door. Meters shall indicate charging rates.
 - e. Safety Functions: Sense abnormally low battery voltage and close contacts providing low battery voltage indication on control and monitoring panel. Sense high battery voltage and loss of ac input or dc output of battery charger. Either condition shall close contacts that provide a battery-charger malfunction indication at system control and monitoring panel.
 - f. Enclosure and Mounting: NEMA 250, Type 1, wall-mounted cabinet.

2.4 FUEL OIL STORAGE

- A. Base-Mounted Fuel Oil Tank: Factory installed and piped, complying with UL 142 fuel oil tank. Features include the following:
 1. Tank level indicator.
 2. Capacity: Fuel for 6 HRS.
 3. Vandal-resistant fill cap.
 4. Containment Provisions: Comply with requirements of authorities having jurisdiction.

2.5 CONTROL AND MONITORING

- A. Automatic Starting System Sequence of Operation: When mode-selector switch on the control and monitoring panel is in the automatic position, remote-control contacts in one or more

separate automatic transfer switches initiate starting and stopping of generator set. When mode-selector switch is switched to the on position, generator set starts. The off position of same switch initiates generator-set shutdown. When generator set is running, specified system or equipment failures or derangements automatically shut down generator set and initiate alarms. Operation of a remote emergency-stop switch also shuts down generator set.

- B. Configuration: Operating and safety indications, protective devices, basic system controls, engine gages, instrument transformers, generator disconnect switch or circuit breaker, and other indicated components shall be grouped in a combination control and power panel. Control and monitoring section of panel shall be isolated from power sections by steel barriers. Panel features shall include the following:

1. Wall-Mounting Cabinet Construction: Rigid, self-supporting steel unit complying with NEMA ICS 6. Power bus shall be copper. Bus, bus supports, control wiring, and temperature rise shall comply with UL 891.
2. Switchboard Construction: Freestanding unit complying with Division 26 Section "Switchboards."
3. Switchgear Construction: Freestanding unit complying with Division 26 Section "Low-Voltage Switchgear."
4. Current and Potential Transformers: Instrument accuracy class.

- C. Indicating and Protective Devices and Controls: As required by NFPA 110 for Level 1 system, and the following:

1. AC voltmeter.
2. AC ammeter.
3. AC frequency meter.
4. DC voltmeter (alternator battery charging).
5. Engine-coolant temperature gage.
6. Engine lubricating-oil pressure gage.
7. Running-time meter.
8. Ammeter-voltmeter, phase-selector switch(es).
9. Generator-voltage adjusting rheostat.
10. Fuel tank derangement alarm.
11. Fuel tank high-level shutdown of fuel supply alarm.
12. Generator overload.

- D. Indicating and Protective Devices and Controls:

1. AC voltmeter.
2. AC ammeter.
3. AC frequency meter.
4. DC voltmeter (alternator battery charging).
5. Engine-coolant temperature gage.
6. Engine lubricating-oil pressure gage.
7. Running-time meter.
8. Ammeter-voltmeter, phase-selector switch(es).
9. Generator-voltage adjusting rheostat.
10. Start-stop switch.
11. Overspeed shutdown device.
12. Coolant high-temperature shutdown device.
13. Coolant low-level shutdown device.
14. Oil low-pressure shutdown device.
15. Fuel tank derangement alarm.
16. Fuel tank high-level shutdown of fuel supply alarm.
17. Generator overload.

- E. Supporting Items: Include sensors, transducers, terminals, relays, and other devices and include wiring required to support specified items. Locate sensors and other supporting items on engine or generator, unless otherwise indicated.
- F. Connection to Data Link: A separate terminal block, factory wired to Form C dry contacts, for each alarm and status indication is reserved for connections for data-link transmission of indications to remote data terminals.
- G. Common Remote Audible Alarm: Signal the occurrence of any events listed below without differentiating between event types. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset.
 - 1. Engine high-temperature shutdown.
 - 2. Lube-oil, low-pressure shutdown.
 - 3. Overspeed shutdown.
 - 4. Remote emergency-stop shutdown.
 - 5. Engine high-temperature prealarm.
 - 6. Lube-oil, low-pressure prealarm.
 - 7. Fuel tank, low-fuel level.
 - 8. Low coolant level.
- H. Remote Alarm Annunciator: Comply with NFPA 99. An LED labeled with proper alarm conditions shall identify each alarm event and a common audible signal shall sound for each alarm condition. Silencing switch in face of panel shall silence signal without altering visual indication. Connect so that after an alarm is silenced, clearing of initiating condition will reactivate alarm until silencing switch is reset. Cabinet and faceplate are surface- or flush-mounting type to suit mounting conditions indicated.
- I. Remote Emergency-Stop Switch: Flush; wall mounted, unless otherwise indicated; and labeled. Push button shall be protected from accidental operation.

2.6 GENERATOR OVERCURRENT AND FAULT PROTECTION

- A. Generator Circuit Breaker: Insulated-case, electronic-trip type; 100 percent rated; complying with UL 489.
 - 1. Tripping Characteristics: Adjustable long-time and short-time delay and instantaneous.
 - 2. Trip Settings: Selected to coordinate with generator thermal damage curve.
 - 3. Shunt Trip: Connected to trip breaker when generator set is shut down by other protective devices.
 - 4. Mounting: Adjacent to or integrated with control and monitoring panel.
- B. Generator Disconnect Switch: Molded-case type, 100 percent rated.
 - 1. Rating: Matched to generator output rating.
 - 2. Shunt Trip: Connected to trip switch when signaled by generator protector or by other protective devices.
- C. Generator Protector: Microprocessor-based unit shall continuously monitor current level in each phase of generator output, integrate generator heating effect over time, and predict when thermal damage of alternator will occur. When signaled by generator protector or other generator-set protective devices, a shunt-trip device in the generator disconnect switch shall open the switch to disconnect the generator from load circuits. Protector shall perform the following functions:

1. Initiates a generator overload alarm when generator has operated at an overload equivalent to 110 percent of full-rated load for 60 seconds. Indication for this alarm is integrated with other generator-set malfunction alarms.
 2. Under single or three-phase fault conditions, regulates generator to 300 percent of rated full-load current for up to 10 seconds.
 3. As overcurrent heating effect on the generator approaches the thermal damage point of the unit, protector switches the excitation system off, opens the generator disconnect device, and shuts down the generator set.
 4. Senses clearing of a fault by other overcurrent devices and controls recovery of rated voltage to avoid overshoot.
- D. Ground-Fault Indication: Comply with NFPA 70, "Emergency System" signals for ground-fault. Integrate ground-fault alarm indication with other generator-set alarm indications.

2.7 OUTDOOR GENERATOR-SET ENCLOSURE

- A. Description: Vandal-resistant, weatherproof steel housing, wind resistant up to 100 mph (160 km/h). Multiple panels shall be lockable and provide adequate access to components requiring maintenance. Panels shall be removable by one person without tools. Instruments and control shall be mounted within enclosure.
- B. Coordinate first paragraph and subparagraphs below with Drawings showing features, construction details, and equipment arrangement.

Description: Prefabricated with the following features:

1. Fully guarded cooling fan and battery charging alternator.
 2. Emergency stop push button mounted on exterior enclosure wall.
 3. Roof outlet exhaust with rain cap.
 4. Totally enclosed exhaust silencing system.
- C. Engine Cooling Airflow through Enclosure: Maintain temperature rise of system components within required limits when unit operates at 110 percent of rated load for 2 hours with ambient temperature at top of range specified in system service conditions.
1. Louvers: Fixed-engine, cooling-air inlet and discharge. Storm-proof and drainable louvers prevent entry of rain and snow.

2.8 MOTORS

- A. General requirements for motors are specified in Division 23 Section "Common Motor Requirements for HVAC Equipment."
1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 2. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.

2.9 VIBRATION ISOLATION DEVICES

- A. Elastomeric Isolator Pads: Oil- and water-resistant elastomer or natural rubber, arranged in single or multiple layers, molded with a nonslip pattern and galvanized-steel baseplates of sufficient stiffness for uniform loading over pad area, and factory cut to sizes that match requirements of supported equipment.

1. Material: Bridge-bearing neoprene, complying with AASHTO M 251.
2. Durometer Rating: 60.
3. Number of Layers: Four.

B. Restrained Minimum static deflection: 1 inch.

1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to wind loads or if weight is removed; factory-drilled baseplate bonded to 1/4-inch- (6-mm-) thick, elastomeric isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
2. Outside Spring Diameter: Not less than 80 percent of compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of required deflection at rated load.
4. Ratio of horizontal stiffness to vertical stiffness not less than 1 and not greater than 2.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

2.10 FINISHES

- A. Outdoor Enclosures and Components: Manufacturer's standard finish over corrosion-resistant pretreatment and compatible primer.

2.11 SOURCE QUALITY CONTROL

- A. Prototype Testing: Factory test engine-generator set using same engine model, constructed of identical or equivalent components and equipped with identical or equivalent accessories.

1. Tests: Comply with NFPA 110, Level 1 Energy Converters and with IEEE 115.

- B. Project-Specific Equipment Tests: Before shipment, factory test engine-generator set and other system components and accessories manufactured specifically for this Project. Perform tests at rated load and power factor. Include the following tests:

1. Test components and accessories furnished with installed unit that are not identical to those on tested prototype to demonstrate compatibility and reliability.
2. Full load run.
3. Maximum power.
4. Voltage regulation.
5. Transient and steady-state governing.
6. Single-step load pickup.
7. Safety shutdown.
8. Provide 14 days' advance notice of tests and opportunity for observation of tests by Commissioner.
9. Report factory test results within 10 days of completion of test.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.
- B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.
- B. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.
- C. Install packaged engine generator with restrained spring isolators having a minimum deflection of 1 inch on 4-inch- high concrete base. Secure sets to anchor bolts installed in concrete bases on roof equipment supports on roof.
 - 1. Install condensate drain piping to muffler drain outlet full size of drain connection with a shutoff valve, stainless-steel flexible connector, and Schedule 40, black steel pipe with welded joints.
- D. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.3 CONNECTIONS

- A. Connect fuel, and exhaust-system piping adjacent to packaged engine generator to allow service and maintenance.
- B. Connect cooling-system water piping to engine-generator set with flexible connectors.
- C. Connect engine exhaust pipe to engine with flexible connector.
- D. Connect fuel piping to engines with a valve and union and flexible connector.
- E. Connect wiring according to Division 26 Section "Conductors and Cables."

3.4 IDENTIFICATION

- A. Identify system components according to Division 23 Section "Identification for HVAC Piping and Equipment" and Division 26 Section "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
 - 1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test.
 - 3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
 - a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
 - b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
 - c. Verify acceptance of charge for each element of the battery after discharge.
 - d. Verify that measurements are within manufacturer's specifications.
 - 4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
 - 5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
 - 6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg (120 kPa). Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
 - 7. Exhaust Emissions Test: Comply with applicable government test criteria.
 - 8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases, and verify that performance is as specified.
 - 9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
 - 10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at ten locations, and compare measured levels with required values.
- D. Coordinate tests with tests for transfer switches and run them concurrently.

- E. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.
- F. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
- G. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
- H. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- I. Remove and replace malfunctioning units and reinspect as specified above.
- J. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.
- K. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- L. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each power wiring termination and each bus connection. Remove all access panels so terminations and connections are accessible to portable scanner.
 - 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.
 - 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 3. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

END OF SECTION 263213

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 263600
TRANSFER SWITCHES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes transfer switches rated 600 V and less, including the following:
1. Automatic transfer switches.
 2. Remote annunciation systems.
 3. Remote annunciation and control systems.
- B. Related Sections include the following:
1. Division 21 Section "Electric-Drive, Centrifugal Fire Pumps" for automatic transfer switches for fire pumps.

1.3 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.
1. Single-Line Diagram: Show connections between transfer switch, bypass/isolation switch, power sources, and load; and show interlocking provisions for each combined transfer switch and bypass/isolation switch.

- D. Manufacturer Seismic Qualification Certification: Submit certification that transfer switches accessories, and components will withstand seismic forces
 - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
 - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. Qualification Data: For testing agency.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.
 - 1. Features and operating sequences, both automatic and manual.
 - 2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.4 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Manufacturer Qualifications: Maintain a service center capable of providing training, parts, and emergency maintenance repairs within a response period of less than eight hours from time of notification.
- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing

Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to authorities having jurisdiction.

1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- D. Source Limitations: Obtain automatic transfer switches and remote annunciator and control panels through one source from a single manufacturer.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- F. Comply with NEMA ICS 1.
- G. Comply with NFPA 70.
- H. Comply with NFPA 99.
- I. Comply with NFPA 110.
- J. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.5 PROJECT CONDITIONS

- A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electrical service:
 1. Notify Commissioner and City of New York no fewer than two days in advance of proposed interruption of electrical service.
 2. Do not proceed with interruption of electrical service without Commissioner's written permission.

1.6 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.7 WARRANTY

- A. The manufacturer shall warranty the system for 12 months from date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Contactor Transfer Switches:

- a. Caterpillar; Engine Div.
- b. Emerson; ASCO Power Technologies, LP.
- c. GE Zenith Controls.
- d. Kohler Power Systems; Generator Division.
- e. Onan/Cummins Power Generation; Industrial Business Group.
- f. Spectrum Detroit Diesel.

2. Transfer Switches Using Molded-Case Switches or Circuit Breakers:

- a. AC Data Systems, Inc.
- b. Eaton Electrical Inc.; Cutler-Hammer.
- c. GE Zenith Controls.
- d. Hubbell Industrial Controls, Inc.

2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

- A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
 - 1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.
- C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.
- F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
 - 1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
 - 2. Switch Action: Double throw; mechanically held in both directions.
 - 3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.
- G. Neutral Switching. Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.
- H. Neutral Terminal: Solid and fully rated, unless otherwise indicated.

- I. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.
- J. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater.
- K. Battery Charger: For generator starting batteries.
 - 1. Float type rated 10 A.
 - 2. Ammeter to display charging current.
 - 3. Fused ac inputs and dc outputs.
- L. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.
- M. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Division 26 Section "Identification for Electrical Systems."
 - 1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
 - 2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
 - 3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.
- N. Enclosures: General-purpose NEMA 250, Type 1 complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.3 AUTOMATIC TRANSFER SWITCHES

- A. Comply with Level 1 equipment according to NFPA 110.
- B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.
- C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.
- D. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.
- E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.
- F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.
- G. Transfer Switches Based on Molded-Case-Switch Components: Comply with NEMA AB 1, UL 489, and UL 869A.

- H. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.
- I. Motor Disconnect and Timing Relay: Controls designate starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.
- J. Programmed Neutral Switch Position: Switch operator has a programmed neutral position arranged to provide a midpoint between the two working switch positions, with an intentional, time-controlled pause at midpoint during transfer. Pause is adjustable from 0.5 to 30 seconds minimum and factory set for 0.5 second, unless otherwise indicated. Time delay occurs for both transfer directions. Pause is disabled unless both sources are live.
- K. Automatic Transfer-Switch Features:
 - 1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
 - 2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.
 - 3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
 - 4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
 - 5. Test Switch: Simulate normal-source failure.
 - 6. Switch-Position Pilot Lights: Indicate source to which load is connected.
 - 7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.
 - a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
 - b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."
 - 8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
 - 9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
 - 10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.

11. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
12. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:
 - a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
 - b. Push-button programming control with digital display of settings.
 - c. Integral battery operation of time switch when normal control power is not available.

2.4 REMOTE ANNUNCIATOR SYSTEM

- A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:
 1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
 2. Switch position.
 3. Switch in test mode.
 4. Failure of communication link.
- B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.
 1. Indicating Lights: Grouped for each transfer switch monitored.
 2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.
 3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.
 4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.5 REMOTE ANNUNCIATOR AND CONTROL SYSTEM

- A. Functional Description: Include the following functions for indicated transfer switches:
 1. Indication of sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
 2. Indication of switch position.
 3. Indication of switch in test mode.
 4. Indication of failure of digital communication link.
 5. Key-switch or user-code access to control functions of panel.
 6. Control of switch-test initiation.
 7. Control of switch operation in either direction.
 8. Control of time-delay bypass for transfer to normal source.
- B. Malfunction of annunciator, annunciation and control panel, or communication link shall not affect functions of automatic transfer switch. In the event of failure of communication link, automatic transfer switch automatically reverts to stand-alone, self-contained operation.

Automatic transfer-switch sensing, controlling, or operating function shall not depend on remote panel for proper operation.

- C. Remote Annunciation and Control Panel: Solid-state components. Include the following features:
 - 1. Controls and indicating lights grouped together for each transfer switch.
 - 2. Label each indicating light control group. Indicate transfer switch it controls, location of switch, and load it serves.
 - 3. Digital Communication Capability: Matched to that of transfer switches supervised.
 - 4. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.

2.6 SOURCE QUALITY CONTROL

- A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Floor-Mounting Switch: Anchor to floor by bolting.
 - 1. Concrete Bases: 12 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 4 inches (100 mm) in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Division 26 Section "Hangers and Supports for Electrical Systems."
- B. Annunciator and Control Panel Mounting: Flush in wall, unless otherwise indicated.
- C. Identify components according to Division 26 Section "Identification for Electrical Systems."
- D. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.2 CONNECTIONS

- A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to City of New York if necessary to accommodate required wiring.
- B. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- C. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified independent testing and inspecting agency to perform tests and inspections and prepare test reports.
- B. Perform tests and inspections and prepare test reports.
 - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing.
 - 2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.
 - 5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
 - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
 - c. Verify time-delay settings.
 - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
 - e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
 - f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
 - g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.
 - 6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
 - a. Verify grounding connections and locations and ratings of sensors.
- C. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- D. Remove and replace malfunctioning units and retest as specified above.

- E. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
 - 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
 - 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 - 3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's maintenance personnel to adjust, operate, and maintain transfer switches and related equipment
- B. Coordinate this training with that for generator equipment.

END OF SECTION 263600

SECTION 265100
INTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
1. Interior lighting fixtures with lamps and ballasts.
 2. Lighting fixtures mounted on exterior building surfaces.
 3. Emergency lighting units.
 4. Exit signs.
 5. Edit options in subparagraph below to suit Project. Coordinate with "Related Sections" Paragraph and subparagraphs.
 6. Accessories, including fluorescent fixture dimmers and occupancy sensors.
 7. This section applies only to lighting fixtures, emergency lighting units and exit signs specified on Electrical Drawings and accessories, including fluorescent fixture dimmers, occupancy sensors specified in related sections.
- B. Related Sections include the following:
1. Division 26 Section "Wiring Devices" for manual wall-box dimmers for incandescent lamps.

1.3 DEFINITIONS

- A. BF: Ballast factor. Ratio of light output of a given lamp(s) operated by the subject ballast to the light output of the same lamp(s) when operated on an ANSI reference circuit.
- B. CRI: Color rendering index.
- C. CU: Coefficient of utilization.
- D. LER: Luminaire efficiency rating, which is calculated according to NEMA LE 5. This value can be estimated from photometric data using the following formula:
1. LER is equal to the product of total rated lamp lumens times BF times luminaire efficiency, divided by input watts.
- E. RCR: Room cavity ratio.

1.4 SUBMITTALS

- A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: For each type of lighting fixture scheduled, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:
 1. Physical description of fixture, including dimensions and verification of indicated parameters.
 2. Emergency lighting unit battery and charger.
 3. Fluorescent and high-intensity-discharge ballasts.
 4. Retain first two subparagraphs below for projects with air-handling fixtures.
 5. Air and Thermal Performance Data: For air-handling fixtures. Furnish data required in "Submittals" Article in Division 23 Section "Diffusers, Registers, and Grilles."
 6. Sound Performance Data: For air-handling fixtures. Indicate sound power level and sound transmission class in test reports certified according to standards specified in Division 23 Section "Diffusers, Registers and Grilles."
 7. Lamps.
- C. Shop Drawings: Show details of nonstandard or custom fixtures. Indicate dimensions, weights, methods of field assembly, components, features, and accessories.
- D. Wiring Diagrams: Power, signal, and control wiring.
- E. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
 1. Suspended ceiling components.
 2. Structural members to which lighting-fixture suspension systems will be attached.
 3. Other items in finished ceiling, including the following:
 - a. Air outlets and inlets.
 - b. Speakers.
 - c. Sprinklers.
 - d. Access panels.
 4. Perimeter moldings.
- F. Samples for Verification: For interior lighting fixtures designated for sample submission in the Interior Lighting Fixture Schedule.
 1. Lamps: Specified units installed.
 2. Ballast: 120-V models of specified ballast types.
 3. Accessories: Cords and plugs.
- G. Product Certificates: For each type of ballast for dimmer-controlled fixtures, signed by product manufacturer.
- H. Source quality-control test reports.
- I. Field quality-control test reports.

- J. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals
 - 1. Catalog data for each fixture. Include the diffuser, ballast, and lamps installed in that fixture.
- K. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with NFPA 70.
- E. FMG Compliance: Fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.
- F. NFPA 101 Compliance: Comply with visibility and luminance requirements for exit signs.
- G. Mockups: Provide lighting fixtures for room or module mockups. Install fixtures for mockups with power and control connections.
 - 1. Obtain Commissioner's approval of fixtures for mockups before starting installations.
 - 2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work. Retain below if mockups are erected as part of building rather than separately and the intention is to make an exception to the default

requirement in Division 1 Section "Quality Requirements" for demolishing and removing mockups when directed, unless otherwise indicated.

3. Approved fixtures in mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 COORDINATION

- A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.7 WARRANTY

- A. Special Warranty for Emergency Lighting Unit Batteries: Manufacturer's standard form in which manufacturer of battery-powered emergency lighting unit agrees to repair or replace components of rechargeable batteries that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion. Full warranty shall apply for first year, and prorated warranty for the remaining nine years.

- B. Special Warranty for Fluorescent Ballasts: Manufacturer's standard form in which ballast manufacturer agrees to repair or replace ballasts that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Electronic Ballasts: Five years from date of Substantial Completion.
2. Warranty Period for Electromagnetic Ballasts: Three years from date of Substantial Completion.

- C. Manufacturer's Special Warranty for T8 Fluorescent Lamps: Manufacturer's standard form, made out to City of New York and signed by lamp manufacturer agreeing to replace lamps that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

2. Warranty Period: Two years from date of Substantial Completion.

1.8 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
2. Plastic Diffusers and Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
3. Battery and Charger Data: One for each emergency lighting unit.
4. Ballasts: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
5. Globes and Guards: 1 for every 20 of each type and rating installed. Furnish at least one of each type.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

1. Lightolier
2. Edison Price
3. Columbia Lighting
4. Cooper Lighting

2.2 FIXTURES AND COMPONENTS, GENERAL

- A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.
- B. Fluorescent Fixtures: Comply with UL 1570. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.
- C. HID Fixtures: Comply with UL 1572. Where LER is specified, test according to NEMA LE 5B.
- D. Metal Parts: Free of burrs and sharp corners and edges.
- E. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.
- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.
- G. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 1. White Surfaces: 85 percent.
 2. Specular Surfaces: 83 percent.
 3. Diffusing Specular Surfaces: 75 percent.
 4. Laminated Silver Metallized Film: 90 percent.
- H. Plastic Diffusers, Covers, and Globes:
 - A. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 1. Lens Thickness: At least 0.125 inch minimum unless different thickness is scheduled.
 2. UV stabilized.
 - B. Glass: Annealed crystal glass, unless otherwise indicated.
- I. Electromagnetic-Interference Filters: A component of fixture assembly. Suppress conducted electromagnetic-interference as required by MIL-STD-461D. Fabricate lighting fixtures with one filter on each ballast indicated to require a filter.
- J. Air-Handling Fluorescent Fixtures: For use with plenum ceiling for air return and heat extraction and for attaching an air-diffuser-boot assembly specified in Division 23 Section "Diffusers, Registers, and Grilles."

3. Air Supply Units: Slots in one or both side trims join with air-diffuser-boot assemblies.
4. Heat Removal Units: Air path leads through lamp cavity.
5. Combination Heat Removal and Air Supply Unit: Heat is removed through lamp cavity at both ends of the fixture door with air supply same as for air supply units.
6. Dampers: Operable from outside fixture for control of return-air volume.
7. Static Fixtures: Air supply slots are blanked off, and fixture appearance matches active units.

2.3 LIGHTING FIXTURES

- A. Refer to electrical drawings for Light fixture schedule with manufacturers list and type.

2.4 FLUORESCENT LAMP BALLASTS

- A. Description: Include the following features, unless otherwise indicated:
 1. Designed for type and quantity of lamps indicated at full light output except for emergency lamps powered by in-fixture battery-packs.
 2. Externally fused with slow-blow type rated between 2.65 and 3.0 times the line current.
- B. Electronic ballasts for linear lamps shall include the following features, unless otherwise indicated:
 1. Comply with NEMA C82.11.
 2. Ballast Type: Rapid start, unless otherwise indicated.
 3. Programmed Start: Ballasts with two-step lamp starting to extend life of frequently started lamps.
 4. Sound Rating: A.
 5. Total harmonic distortion rating of less than 10 percent according to NEMA C82.11.
 6. Transient Voltage Protection: IEEE C62.41, Category A.
 7. Operating Frequency: 20 kHz or higher.
 8. Lamp Current Crest Factor: Less than 1.7.
 9. Parallel Lamp Circuits: Multiple lamp ballasts connected to maintain full light output on surviving lamps if one or more lamps fail.
- C. Electronic Programmed-Start Ballasts for T5 and T5HO Lamps: Comply with ANSI C82.11 and the following:
 1. Lamp end-of-life detection and shutdown circuit for T5 diameter lamps.
 2. Automatic lamp starting after lamp replacement.

3. Sound Rating: A.
4. Total Harmonic Distortion Rating: Less than 20 percent.
5. Transient Voltage Protection: IEEE C62.41, Category A or better.
6. Operating Frequency: 20 kHz or higher.
7. Lamp Current Crest Factor: 1.7 or less.
8. BF: 0.95 or higher, unless otherwise indicated.
9. Power Factor: 0.98 or higher.

D. Ballasts for compact lamps in recessed fixtures shall have the following features, unless otherwise indicated:

1. Type: Electronic.
2. Power Factor: 90 percent, minimum.
3. Flicker: Less than 5 percent.
4. Lamp Current Crest Factor: Less than 1.7.
5. Electronic Ballast Operating Frequency: 20 kHz or higher.
6. Lamp end-of-life detection and shutdown circuit.
7. Transient Protection: Comply with IEEE C62.41 for Category A1 locations.
8. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.

E. Ballasts for compact lamps in nonrecessed fixtures shall include the following features, unless otherwise indicated:

1. Type: Electronic.
2. Power Factor: 90 percent, minimum.
3. Ballast Coil Temperature: 65 deg C, maximum.
4. Transient Protection: Comply with IEEE C62.41 for Category A1 locations.
5. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.

F. Ballasts for dimmer-controlled fixtures shall comply with general and fixture-related requirements above for electronic ballasts and the following features:

1. Dimming Range: 100 to 5 percent of rated lamp lumens.
2. Ballast Input Watts: Can be reduced to 20 percent of normal.
3. Compatibility: Certified by manufacturer for use with specific dimming system indicated.

G. Ballasts for Low-Temperature Environments:

1. Temperatures 0 deg F and Higher: Electronic or electromagnetic type rated for 0 deg F (minus 17 deg C) starting temperature.
2. Temperatures minus 20 deg F (Minus 29 deg C) and Higher: Electromagnetic type designed for use with high-output lamps.

H. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.

2.5 HIGH-INTENSITY-DISCHARGE LAMP BALLASTS

A. General: Comply with NEMA C82.4 and UL 1029. Shall include the following features, unless otherwise indicated.

1. Type: Constant-wattage autotransformer or regulating high-power-factor type.

2. Minimum Starting Temperature: Minus 22 deg F (Minus 30 deg C) for single-lamp ballasts.
 3. Normal Ambient Operating Temperature: 104 deg F (40 deg C).
 4. Open-circuit operation that will not reduce average life.
- B. Auxiliary, Instant-On, Quartz System: Automatically switches quartz lamp on when fixture is initially energized and when momentary power outages occur. Automatically turns quartz lamp off when high-intensity-discharge lamp reaches approximately 60 percent light output.
- C. Low-Noise Ballasts: Manufacturers' standard epoxy-encapsulated models designed to minimize audible fixture noise.
- D. High-Pressure-Sodium Ballasts: Solid-state igniter/starter with an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.
1. Instant Restrike Device: Solid-state potted module, mounted inside high-pressure-sodium fixture and compatible with high-pressure-sodium lamps, ballasts, and sockets up to 150 W.
 - a. Restrike Range: 105- to 130-V ac.
 - b. Maximum Voltage: 250-V peak or 150-V ac RMS.

2.6 EXIT SIGNS

- A. General: Comply with UL 924; for sign colors and lettering size, comply with authorities having jurisdiction.
- B. Internally Lighted Signs:
1. Retain one of three subparagraphs below. See Evaluations for energy considerations. Lamps for AC Operation: Light-emitting diodes, 70,000 hours minimum of rated lamp life.
- C. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.
1. Battery: Sealed, maintenance-free, nickel-cadmium type with special warranty.
 2. Charger: Fully automatic, solid-state type with sealed transfer relay.
 3. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.

2.7 EMERGENCY LIGHTING UNITS

- A. General: Self-contained units complying with UL 924.
1. Battery: Sealed, maintenance-free, lead-acid type with minimum 10-year nominal life and special warranty.
 2. Charger: Fully automatic, solid-state type with sealed transfer relay.
 3. Operation: Relay automatically turns lamp on when power supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
 4. Wire Guard: Where indicated, heavy-chrome-plated wire guard protects lamp heads or fixtures.

5. Integral Time-Delay Relay: Holds unit on for fixed interval when power is restored after an outage; time delay permits high-intensity-discharge lamps to restrike and develop adequate output.

2.8 EMERGENCY FLUORESCENT POWER UNIT

- A. Internal Type: Self-contained, modular, battery-inverter unit, factory mounted within lighting fixture body and compatible with ballast. Comply with UL 924.
 1. Emergency Connection: Operate 1 fluorescent lamp(s) continuously at an output of 1250 lumens each. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
 2. Retain first subparagraph below if night-light connections are used. If used, differentiate two connection modes on Drawings or in Interior Lighting Fixture Schedule on Drawings.
 3. Night-Light Connection: Operate one fluorescent lamp continuously.
 4. Test Push Button and Indicator Light: Visible and accessible without opening fixture or entering ceiling space.
 - a. Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 - b. Indicator Light: LED indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 5. Battery: Sealed, maintenance-free, nickel-cadmium type.
 6. Charger: Fully automatic, solid-state, constant-current type with sealed power transfer relay.
 7. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 8. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.
- B. External Type: Self-contained, modular, battery-inverter unit, suitable for powering one or more fluorescent lamps, remote mounted from lighting fixture. Comply with UL 924.
 1. Emergency Connection: Operate one fluorescent lamp continuously. Connect unswitched circuit to battery-inverter unit and switched circuit to fixture ballast.
 2. Night-Light Connection: Operate one fluorescent lamp in a remote fixture continuously.
 3. Battery: Sealed, maintenance-free, nickel-cadmium type.
 4. Charger: Fully automatic, solid-state, constant-current type.
 5. Housing: NEMA 250, Type 1 enclosure.
 6. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
 7. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
 8. Remote Test: Switch in hand-held remote device aimed in direction of tested unit initiates coded infrared signal. Signal reception by factory-installed infrared receiver in tested unit triggers simulation of loss of its normal power supply, providing visual confirmation of either proper or failed emergency response.
 9. Integral Self-Test: Factory-installed electronic device automatically initiates code-required test of unit emergency operation at required intervals. Test failure is annunciated by an integral audible alarm and flashing red LED.
- C. Central Type: Factory installed, full light output, fluorescent emergency ballast to operate lamps indicated from a remote emergency power source.

1. Battery: Sealed, maintenance-free, nickel-cadmium type with minimum seven-year nominal life.
2. Charger: Fully automatic, solid-state, constant-current type.
3. Housing: NEMA 250, Class 1 enclosure.

2.9 FLUORESCENT LAMPS

- A. Low-Mercury Lamps: Comply with Federal toxic characteristic leaching procedure test, and yield less than 0.2 mg of mercury per liter, when tested according to NEMA LL 1.
- B. T8 rapid-start low-mercury lamps, rated 32 W maximum, 2800 initial lumens (minimum), CRI of 75 (minimum), color temperature of 3500 K, and average rated life of 20,000 hours, unless otherwise indicated.
- C. T8 rapid-start low-mercury lamps, rated 17 W maximum, nominal length of 24 inches 610 mm, 1300 initial lumens (minimum), CRI of 75 (minimum), color temperature of 3500 K, and average rated life of 20,000 hours, unless otherwise indicated.
- D. T5 program-start low-mercury lamps, rated 28 W maximum, nominal length of 45.2 inches (1150 mm), 2900 initial lumens (minimum), CRI 85 (minimum), color temperature 3500 K, and average rated life of 20,000 hours, unless otherwise indicated.
- E. T5HO program-start, high-output low-mercury lamps, rated 54 W maximum, nominal length of 45.2 inches (1150 mm), 5000 initial lumens (minimum), CRI 85 (minimum), color temperature 4100 K, and average rated life of 20,000 hours, unless otherwise indicated.
- F. Compact Fluorescent Lamps: CRI 80 (minimum), color temperature 3500, average rated life of 10,000 hours at 3 hours operation per start, unless otherwise indicated.
 1. T4, Twin Tube: Rated 5 W, 250 initial lumens (minimum).
 2. T4, Twin Tube: Rated 7 W, 400 initial lumens (minimum).
 3. T4, Twin Tube: Rated 9 W, 600 initial lumens (minimum).
 4. T4, Twin Tube: Rated 13 W, 825 initial lumens (minimum).
 5. T4, Double-Twin Tube: Rated 13 W, 900 initial lumens (minimum).
 6. T4, Double-Twin Tube: Rated 18 W, 1200 initial lumens (minimum).
 7. T4, Double-Twin Tube: Rated 26 W, 1800 initial lumens (minimum).

2.10 HIGH-INTENSITY-DISCHARGE LAMPS

- A. High-Pressure-Sodium Lamps: NEMA C78.42, wattage and burning position as scheduled, CRI 21 (minimum), color temperature 1900, and average rated life of 24,000 hours.
- B. Low-Pressure-Sodium Lamps: NEMA C78.41.
- C. Metal-Halide Lamps: ANSI C78.1372, wattage and burning position as scheduled, CRI 65 (minimum), and color temperature 4000.

2.11 FIXTURE SUPPORT COMPONENTS

- A. Comply with Division 26 Section 260529 "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.

- B. Single-Stem Hangers: 1/2-inch steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.
- C. Twin-Stem Hangers: Two, 1/2-inch steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.
- D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated, 12 gage.
- E. Wires For Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage.
- F. Rod Hangers: 3/16-inch- minimum diameter, cadmium-plated, threaded steel rod.
- G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.
- H. Aircraft Cable Support: Use cable, anchorages, and intermediate supports recommended by fixture manufacturer.

2.12 FINISHES

- A. Fixtures: Manufacturers' standard, unless otherwise indicated.
 - 1. Paint Finish: Applied over corrosion-resistant treatment or primer, free of defects.
 - 2. Metallic Finish: Corrosion resistant.

2.13 LIGHTING CONTROL DEVICES

- A. Dimming Ballast Controls: Sliding-handle type with on/off control; compatible with ballast and having light output and energy input over the full dimming range.
- B. Light Level Sensor: Detect changes in ambient lighting level and provide dimming range of 20 to 100 percent in response to change.
 - 1. Sensor Capacity: At least 40 electronic dimming ballasts.
 - 2. Adjustable Ambient Detection Range: 10 to 100 fc minimum.
- C. Occupancy Sensors: Adjustable sensitivity and off delay time range of 5 to 15 minutes.
 - 1. Device Color:
 - a. Wall Mounted: Ivory.
 - b. Ceiling Mounted: White.
 - 2. Occupancy detection indicator.
 - 3. Delete nonapplicable subparagraphs below.
 - 4. Ultrasonic Sensors: Crystal controlled with circuitry that causes no detection interference between adjacent sensors.
 - 5. Infrared Sensors: With daylight filter and lens to afford coverage applicable to space to be controlled.
 - 6. Combination Sensors: Ultrasonic and infrared sensors combined.

2.14 FLUORESCENT FIXTURE RETROFIT MATERIALS

- A. Comply with UL 1570 listing requirements.

1. Reflector Kit: UL 1570, Type I. Suitable for two- to four-lamp, surface-mounted or recessed lighting fixtures by improving reflectivity of fixture surfaces. No electrical parts are to be changed.
2. Ballast and Lamp Change Kit: UL 1570, Type II. Suitable for changing existing ballast, lamps, and sockets as scheduled.

2.15 SOURCE QUALITY CONTROL

- A. Provide services of a qualified, independent testing and inspecting agency to factory test fixtures with ballasts and lamps; certify results for electrical ratings and photometric data.
- B. Factory test fixtures with ballasts and lamps; certify results for electrical ratings and photometric data.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.
- B. Support for Fixtures in or on Grid-Type Suspended Ceilings: Use grid for support.
 1. Install a minimum of four ceiling support system rods or wires for each fixture. Locate not more than 6 inches from fixture corners.
 2. Support Clips: Fasten to fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
 3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch metal channels spanning and secured to ceiling tees.
 4. Install at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.
- C. Suspended Fixture Support: As follows:
 1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
 2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
 3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.
- D. Air-Handling Fixtures: Install with dampers closed and ready for adjustment.
- E. Adjust aimable fixtures to provide required light intensities.

3.2 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Verify normal operation of each fixture after installation.
- C. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify normal transfer to battery power source and retransfer to normal.
- D. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.
- E. Corroded Fixtures: During warranty period, replace fixtures that show any signs of corrosion.

END OF SECTION 265100

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 265600
EXTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Exterior luminaires with lamps and ballasts.
 - 2. Luminaire-mounted photoelectric relays.
 - 3. Poles and accessories.
 - 4. Luminaire lowering devices.
- B. Related Sections include the following:
 - 1. Division 26 Section "Interior Lighting" for exterior luminaires normally mounted on exterior surfaces of buildings.

1.3 DEFINITIONS

- A. CRI: Color-rendering index.
- B. HID: High-intensity discharge.
- C. Luminaire: Complete lighting fixture, including ballast housing if provided.
- D. Pole: Luminaire support structure, including tower used for large area illumination.
- E. Standard: Same definition as "Pole" above.

1.4 STRUCTURAL ANALYSIS CRITERIA FOR POLE SELECTION

- A. Dead Load: Weight of luminaire and its horizontal and vertical supports, lowering devices, and supporting structure, applied as stated in AASHTO LTS-4.
- B. Live Load: Single load of 500 lbf (2224 N), distributed as stated in AASHTO LTS-4.
- C. Ice Load: Load of 3 lbf/sq. ft. (143.6 Pa), applied as stated in AASHTO LTS-4.

- D. Wind Load: Pressure of wind on pole and luminaire, calculated and applied as stated in AASHTO LTS-4.

1. Wind speed for calculating wind load for poles exceeding 50 feet (15 m) in height is 110 mph (177 km/h).
2. Wind speed for calculating wind load for poles 50 feet (15 m) or less in height is 110 mph (177 km/h).

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. Product Data: For each luminaire, pole, and support component, arranged in order of lighting unit designation. Include data on features, accessories, finishes, and the following:

1. Physical description of luminaire, including materials, dimensions, effective projected area, and verification of indicated parameters.
2. Details of attaching luminaires and accessories.
3. Details of installation and construction.
4. Luminaire materials.
5. Photometric data based on laboratory tests of each luminaire type, complete with indicated lamps, ballasts, and accessories.
 - a. For indicated luminaires, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining luminaires shall be certified by manufacturer.
 - b. Photometric data shall be certified by manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program for Energy Efficient Lighting Products.
6. Photoelectric relays.
7. Ballasts, including energy-efficiency data.
8. Lamps, including life, output, and energy-efficiency data.
9. Materials, dimensions, and finishes of poles.
10. Means of attaching luminaires to supports, and indication that attachment is suitable for components involved.
11. Anchor bolts for poles.
12. Manufactured pole foundations.

C. Shop Drawings:

1. Anchor-bolt templates keyed to specific poles and certified by manufacturer.
2. Calculations, certified by a qualified professional Commissioner, indicating strength of screw foundations and soil conditions on which they are based.
3. Wiring Diagrams: Power and control wiring.

- D. Samples for Verification: For products designated for sample submission in Exterior Lighting Device Schedule. Each sample shall include lamps and ballasts.
- E. Pole and Support Component Certificates: Signed by manufacturers of poles, certifying that products are designed for indicated load requirements in AASHTO LTS-4 and that load imposed by luminaire has been included in design.
- F. Qualification Data: For agencies providing photometric data for lighting fixtures.
- G. Field quality-control test reports.
- H. Operation and Maintenance Data: For luminaires and poles to include in emergency, operation, and maintenance manuals.
- I. Warranty: Special warranty specified in this Section.

1.6 QUALITY ASSURANCE

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

- B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by an independent agency, with the experience and capability to conduct the testing indicated, that is an NRTL as defined by OSHA in 29 CFR 1910.7.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- D. Comply with IEEE C2, "National Electrical Safety Code."
- E. Comply with NFPA 70.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Package aluminum poles for shipping according to ASTM B 660.
- B. Store poles on decay-resistant-treated skids at least 12 inches (300 mm) above grade and vegetation. Support poles to prevent distortion and arrange to provide free air circulation.
- C. Handle wood poles so they will not be damaged. Do not use pointed tools that can indent pole surface more than 1/4 inch (6 mm) deep. Do not apply tools to section of pole to be installed below ground line.
- D. Retain factory-applied pole wrappings on fiberglass and laminated wood poles until right before pole installation. Handle poles with web fabric straps.
- E. Retain factory-applied pole wrappings on metal poles until right before pole installation. For poles with nonmetallic finishes, handle with web fabric straps.

1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace products that fail in materials or workmanship; that corrode; or that fade, stain, perforate, erode, or chalk due to effects of weather or solar radiation within specified warranty period. Manufacturer may exclude lightning damage, hail damage, vandalism, abuse, or unauthorized repairs or alterations from special warranty coverage.
 - 1. Warranty Period for Luminaires: Five years from date of Substantial Completion.
 - 2. Warranty Period for Metal Corrosion: Five years from date of Substantial Completion.
 - 3. Warranty Period for Color Retention: Five years from date of Substantial Completion.
 - 4. Warranty Period for Lamps: Replace lamps and fuses that fail within 12 months from date of Substantial Completion; furnish replacement lamps and fuses that fail within the second 12 months from date of Substantial Completion.
 - 5. Warranty Period for Poles: Repair or replace lighting poles and standards that fail in finish, materials, and workmanship within manufacturer's standard warranty period, but not less than three years from date of Substantial Completion.

1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Lamps: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 2. Glass and Plastic Lenses, Covers, and Other Optical Parts: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 3. Ballasts: 10 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 4. Globes and Guards: 10 for every 20 of each type and rating installed. Furnish at least one of each type.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. Lightolier
- B. Edison Price
- C. Columbia Lighting
- D. Cooper Lighting

2.2 LUMINAIRES, GENERAL REQUIREMENTS

- A. Luminaires shall comply with UL 1598 and be listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.
- B. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.
- C. Metal Parts: Free of burrs and sharp corners and edges.
- D. Sheet Metal Components: Corrosion-resistant aluminum, unless otherwise indicated. Form and support to prevent warping and sagging.
- E. Housings: Rigidly formed, weather- and light-tight enclosures that will not warp, sag, or deform in use. Provide filter/breather for enclosed luminaires.
- F. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position. Doors shall be removable for cleaning or replacing lenses. Designed to disconnect ballast when door opens.
- G. Exposed Hardware Material: Stainless steel.
- H. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
- I. Light Shields: Metal baffles, factory installed and field adjustable, arranged to block light distribution to indicated portion of normally illuminated area or field.
- J. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:
 - 1. White Surfaces: 85 percent.
 - 2. Specular Surfaces: 83 percent.
 - 3. Diffusing Specular Surfaces: 75 percent.
- K. Lenses and Refractors Gaskets: Use heat- and aging-resistant resilient gaskets to seal and cushion lenses and refractors in luminaire doors.
- L. Luminaire Finish: Manufacturer's standard paint applied to factory-assembled and -tested luminaire before shipping. Where indicated, match finish process and color of pole or support materials.

- M. Factory-Applied Finish for Steel Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 - 2. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: As selected by Commissioner from manufacturer's full range.
- N. Factory-Applied Finish for Aluminum Luminaires: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 - 2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
 - 3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
 - 4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: As specified by the Commissioner..

2.3 LUMINAIRE-MOUNTED PHOTOELECTRIC RELAYS

- A. Comply with UL 773 or UL 773A.
- B. Contact Relays: Factory mounted, single throw, designed to fail in the on position, and factory set to turn light unit on at 1.5 to 3 fc (16 to 32 lx) and off at 4.5 to 10 fc (48 to 108 lx) with 15-second minimum time delay. Relay shall have directional lens in front of photocell to prevent artificial light sources from causing false turnoff.
 - 1. Relay with locking-type receptacle shall comply with NEMA C136.10.
 - 2. Adjustable window slide for adjusting on-off set points.

2.4 FLUORESCENT BALLASTS AND LAMPS

- A. Low-Temperature Ballast Capability: Rated by its manufacturer for reliable starting and operation of indicated lamp(s) at temperatures minus 20 deg F (minus 29 deg C) and higher.
- B. Ballast Characteristics:
 - 1. Power Factor: 90 percent, minimum.
 - 2. Sound Rating: A, except B for T12/HO ballasts.
 - 3. Total Harmonic Distortion Rating: Less than 10 percent.

4. Electromagnetic Ballasts: Comply with ANSI C82.1, energy-saving, high power factor, Class P, automatic-reset thermal protection.
 5. Case Temperature for Compact Lamp Ballasts: 65 deg C, maximum.
 6. Transient-Voltage Protection: Comply with IEEE C62.41 Category A or better.
- C. Low-Temperature Lamp Capability: Rated for reliable starting and operation with ballast provided at temperatures minus 20 deg F (minus 29 deg C) and higher.
- D. Fluorescent Lamps: Low-mercury type. Comply with the EPA's toxicity characteristic leaching procedure test; shall yield less than 0.2 mg of mercury per liter when tested according to NEMA LL 1.

2.5 BALLASTS FOR HID LAMPS

- A. Comply with ANSI C82.4 and UL 1029 and capable of open-circuit operation without reduction of average lamp life. Include the following features, unless otherwise indicated:
1. Ballast Circuit: Constant-wattage autotransformer or regulating high-power-factor type.
 2. Minimum Starting Temperature: Minus 22 deg F (Minus 30 deg C).
 3. Normal Ambient Operating Temperature: 104 deg F (40 deg C).
 4. Ballast Fuses: One in each ungrounded power supply conductor. Voltage and current ratings as recommended by ballast manufacturer.
- B. Auxiliary, Instant-On, Quartz System: Factory-installed feature automatically switches quartz lamp on when fixture is initially energized and when momentary power outages occur. System automatically turns quartz lamp off when HID lamp reaches approximately 60 percent of light output.
- C. High-Pressure Sodium Ballasts: Electromagnetic type with solid-state igniter/starter and capable of open-circuit operation without reduction of average lamp life. Igniter/starter shall have an average life in pulsing mode of 10,000 hours at an igniter/starter-case temperature of 90 deg C.
1. Instant-Restrike Device: Integral with ballast, or solid-state potted module, factory installed within fixture and compatible with lamps, ballasts, and mogul sockets up to 150 W.
 - a. Restrike Range: 105- to 130-V ac.
 - b. Maximum Voltage: 250-V peak or 150-V ac RMS.
 2. Minimum Starting Temperature: Minus 40 deg F (Minus 40 deg C).

2.6 HID LAMPS

- A. High-Pressure Sodium Lamps: ANSI C78.42, CRI 21 (minimum), color temperature 1900 K, and average rated life of 24,000 hours, minimum.
1. Dual-Arc Tube Lamp: Arranged so only one of two arc tubes is lighted at one time and, when power is restored after an outage, the cooler arc tube, with lower internal pressure, lights instantly, providing an immediate 8 to 15 percent of normal light output.
- B. Metal-Halide Lamps: ANSI C78.1372, with a minimum CRI 65, and color temperature 4000 K.

- C. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and color temperature 4000 K.
- D. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI 80, and color temperature 4000 K.

2.7 POLES AND SUPPORT COMPONENTS, GENERAL REQUIREMENTS

- A. Structural Characteristics: Comply with AASHTO LTS-4.
 - 1. Wind-Load Strength of Poles: Adequate at indicated heights above grade without failure, permanent deflection, or whipping in steady winds of speed indicated in Part 1 "Structural Analysis Criteria for Pole Selection" Article, with a gust factor of 1.3.
 - 2. Strength Analysis: For each pole, multiply the actual equivalent projected area of luminaires and brackets by a factor of 1.1 to obtain the equivalent projected area to be used in pole selection strength analysis.
- B. Luminaire Attachment Provisions: Comply with luminaire manufacturers' mounting requirements. Use stainless-steel fasteners and mounting bolts, unless otherwise indicated.
- C. Mountings, Fasteners, and Appurtenances: Corrosion-resistant items compatible with support components.
 - 1. Materials: Shall not cause galvanic action at contact points.
 - 2. Anchor Bolts, Leveling Nuts, Bolt Caps, and Washers: Hot-dip galvanized after fabrication, unless stainless-steel items are indicated.
 - 3. Anchor-Bolt Template: Plywood or steel.
- D. Concrete Pole Foundations: Cast in place, with anchor bolts to match pole-base flange. Concrete, reinforcement, and formwork are specified in Division 03 Section "Cast-in-Place Concrete."
- E. Power-Installed Screw Foundations: Factory fabricated by pole manufacturer, with structural steel complying with ASTM A 36/A 36M and hot-dip galvanized according to ASTM A 123/A 123M; and with top-plate and mounting bolts to match pole base flange and strength required to support pole, luminaire, and accessories.
- F. Breakaway Supports: Frangible breakaway supports, tested by an independent testing agency acceptable to authorities having jurisdiction, according to AASHTO LTS-4.

2.8 STEEL POLES

- A. Poles: Comply with ASTM A 500, Grade B, carbon steel with a minimum yield of 46,000 psig (317 MPa); 1-piece construction up to 40 feet (12 m) in height with access handhole in pole wall.
 - 1. Shape: Round, tapered.
 - 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Steel Mast Arms: Single-arm type, continuously welded to pole attachment plate. Material and finish same as pole.
- C. Brackets for Luminaires: Detachable, cantilever, without underbrace.

1. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
 2. Cross Section: Tapered oval, with straight tubular end section to accommodate luminaire.
 3. Match pole material and finish.
- D. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- E. Steps: Fixed steel, with nonslip treads, positioned for 15-inch (381-mm) vertical spacing, alternating on opposite sides of pole; first step at elevation 10 feet (3 m) above finished grade.
- F. Intermediate Handhole and Cable Support: Weathertight, 3-by-5-inch (76-by-127-mm) handhole located at midpoint of pole with cover for access to internal welded attachment lug for electric cable support grip.
- G. Grounding and Bonding Lugs: Welded 1/2-inch (13-mm) threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- H. Cable Support Grip: Wire-mesh type with rotating attachment eye, sized for diameter of cable and rated for a minimum load equal to weight of supported cable times a 5.0 safety factor.
- I. Platform for Lamp and Ballast Servicing: Factory fabricated of steel with finish matching that of pole.
- J. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- K. Galvanized Finish: After fabrication, hot-dip galvanize complying with ASTM A 123/A 123M.
- L. Factory-Painted Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, and other contaminants that could impair paint bond. Grind welds and polish surfaces to a smooth, even finish. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."
 2. Interior Surfaces of Pole: One coat of bituminous paint, or otherwise treat for equal corrosion protection.
 3. Exterior Surfaces: Manufacturer's standard finish consisting of one or more coats of primer and two finish coats of high-gloss, high-build polyurethane enamel.
 - a. Color: As selected by Commissioner from manufacturer's full range.

2.9 ALUMINUM POLES

- A. Poles: Seamless, extruded structural tube complying with ASTM B 429, Alloy 6063-T6 with access handhole in pole wall.
- B. Poles: ASTM B 209 (ASTM B 209M), 5052-H34 marine sheet alloy with access handhole in pole wall.
1. Shape: Round, tapered.

2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- C. Pole-Top Tenons: Fabricated to support luminaire or luminaires and brackets indicated, and securely fastened to pole top.
- D. Grounding and Bonding Lugs: Welded 1/2-inch (13-mm) threaded lug, complying with requirements in Division 26 Section "Grounding and Bonding for Electrical Systems," listed for attaching grounding and bonding conductors of type and size listed in that Section, and accessible through handhole.
- E. Brackets for Luminaires: Detachable, with pole and adapter fittings of cast aluminum. Adapter fitting welded to pole and bracket, then bolted together with stainless-steel bolts.
 1. Tapered oval cross section, with straight tubular end section to accommodate luminaire.
 2. Finish: Same as pole.
- F. Prime-Coat Finish: Manufacturer's standard prime-coat finish ready for field painting.
- G. Aluminum Finish: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 2. Natural Satin Finish: Provide fine, directional, medium satin polish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.
 3. Class I, Clear Anodic Finish: AA-M32C22A41 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
 4. Class I, Color Anodic Finish: AA-M32C22A42/A44 (Mechanical Finish: medium satin; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.
 - a. Color: As selected by Commissioner from manufacturer's full range.

2.10 FIBERGLASS POLES

- A. Poles: Comply with ANSI C136.20, with access handhole in pole wall.
 1. Mounting: Embedded.
 2. Mounting Provisions: Butt flange for bolted mounting on foundation or breakaway support.
- B. Resin Color: Dark bronze; provide uniform coloration throughout entire wall thickness.
- C. Surface Finish: Pigmented polyurethane, with a minimum dry film thickness of 1.5 mils (0.04 mm).

2.11 DECORATIVE POLES

- A. Pole Material:

1. Cast ductile iron.
2. Cast gray iron, according to ASTM A 48/A 48M, Class 30.
3. Cast aluminum.
4. Cast concrete.
5. Spun concrete.
6. Steel tube, covered with closed-cell polyurethane foam, with a polyethylene exterior.

B. Mounting Provisions:

1. Bolted to concrete foundation.
2. Embedded.

C. Fixture Brackets:

1. Cast ductile iron.
2. Cast gray iron.
3. Cast aluminum.

D. Pole Finish: As specified by the Commissioner.

2.12 POLE ACCESSORIES

A. Duplex Receptacle: 120 V, 20 A in a weatherproof assembly complying with Division 26 Section "Wiring Devices" for ground-fault circuit-interrupter type.

1. Recessed, 12 inches (300 mm) above finished grade.
2. Nonmetallic polycarbonate plastic or reinforced fiberglass cover, Insert color to match pole, that when mounted results in NEMA 250, Type 4X enclosure.
3. With cord opening.
4. With lockable hasp and latch that complies with OSHA lockout and tag-out requirements.

B. Minimum 1800-W transformer, protected by replaceable fuses, mounted behind access cover.

C. Base Covers: Manufacturers' standard metal units, arranged to cover pole's mounting bolts and nuts. Finish same as pole.

D. Transformer Type Base: Same material and color as pole. Coordinate dimensions to suit pole's base flange and accept ballast(s) and indicated accessories.

E. Decorative accessories, supplied by decorative pole manufacturer, include the following:

1. Banner Arms: As specified by the Commissioner.
2. Flag Holders: As specified by the Commissioner.
3. Ladder Rests: As specified by the Commissioner.

2.13 LOWERING SYSTEM FOR LUMINAIRES

A. Arrange system to lower luminaire assembly to a servicing position within 36 inches (900 mm) of finished grade in winds up to 30 mph (49 km/h) and to provide for manual plug connection to electrical power in the lowered position for testing.

- B. Coordinate with luminaire and pole manufacturers for assembly details, wind-load and vibration analysis, and compatibility of materials for electrolysis-free attachment and connection for luminaire mounting assembly, lowering device, lowering cable, and portable winch.
- C. Structural and Mechanical Design: Use a minimum safety factor of 5.0 for static and dynamic loads of load-bearing components, including cable.
- D. Luminaire Mounting and Disconnect Arrangement: Multiple ring-mounted luminaires, arranged for lowering and raising as a group.
 - 1. Electrical cable for normal operating power to luminaires manually disconnects inside pole base, using weatherproof multipin connector, and shall be arranged to move within the pole during lowering and raising of luminaire assembly.
- E. Lowering Device: Weatherproof, cast-aluminum housing and multiple mechanical latches. Moving parts of latching assembly shall be located in the portion of the unit that is lowered to the servicing position. Positive latching in the operating position shall be indicated to the operator at the base of the pole by a clear visual signal, or by other means acceptable to City of New York or authorities having jurisdiction.
- F. Lowering Cable: Zinc-electroplated- or stainless-steel aircraft cable.
- G. Portable Winch: Manual type. One required.

PART 3 - EXECUTION

3.1 LUMINAIRE INSTALLATION

- A. Install lamps in each luminaire.
- B. Fasten luminaire to indicated structural supports.
 - 1. Use fastening methods and materials selected to resist seismic forces defined for the application and approved by manufacturer.
- C. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources.

3.2 POLE INSTALLATION

- A. Align pole foundations and poles for optimum directional alignment of luminaires and their mounting provisions on the pole.
- B. Clearances: Maintain the following minimum horizontal distances of poles from surface and underground features, unless otherwise indicated on Drawings:
 - 1. Fire Hydrants and Storm Drainage Piping: 60 inches (1520 mm).
 - 2. Water, Gas, Electric, Communication, and Sewer Lines: 10 feet (3 m).
 - 3. Trees: 15 feet (5 m).

- C. **Concrete Pole Foundations:** Set anchor bolts according to anchor-bolt templates furnished by pole manufacturer. Concrete materials, installation, and finishing requirements are specified in Division 03 Section "Cast-in-Place Concrete."
- D. **Foundation-Mounted Poles:** Mount pole with leveling nuts, and tighten top nuts to torque level recommended by pole manufacturer.
 - 1. Use anchor bolts and nuts selected to resist seismic forces defined for the application and approved by manufacturer.
 - 2. Grout void between pole base and foundation. Use nonshrink or expanding concrete grout firmly packed to fill space.
 - 3. Install base covers, unless otherwise indicated.
 - 4. Use a short piece of 1/2-inch- (13-mm-) diameter pipe to make a drain hole through grout. Arrange to drain condensation from interior of pole.
- E. **Embedded Poles with Tamped Earth Backfill:** Set poles to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Dig holes large enough to permit use of tampers in the full depth of hole.
 - 2. Backfill in 6-inch (150-mm) layers and thoroughly tamp each layer so compaction of backfill is equal to or greater than that of undisturbed earth.
- F. **Embedded Poles with Concrete Backfill:** Set poles in augered holes to depth below finished grade indicated on Drawings, but not less than one-sixth of pole height.
 - 1. Make holes 6 inches (150 mm) in diameter larger than pole diameter.
 - 2. Fill augered hole around pole with air-entrained concrete having a minimum compressive strength of 3000 psi (20 MPa) at 28 days, and finish in a dome above finished grade.
 - 3. Use a short piece of 1/2-inch- (13-mm-) diameter pipe to make a drain hole through concrete dome. Arrange to drain condensation from interior of pole.
 - 4. Cure concrete a minimum of 72 hours before performing work on pole.
- G. **Poles and Pole Foundations Set in Concrete Paved Areas:** Install poles with minimum of 6-inch- (150-mm-) wide, unpaved gap between the pole or pole foundation and the edge of adjacent concrete slab. Fill unpaved ring with pea gravel to a level 1 inch (25 mm) below top of concrete slab.
- H. **Raise and set poles using web fabric slings (not chain or cable).**

3.3 BOLLARD LUMINAIRE INSTALLATION

- A. Align units for optimum directional alignment of light distribution.
- B. Install on concrete base with top 4 inches (100 mm) above finished grade or surface at bollard location. Cast conduit into base, and shape base to match shape of bollard base. Finish by troweling and rubbing smooth. Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.4 INSTALLATION OF INDIVIDUAL GROUND-MOUNTING LUMINAIRES

- A. Install on concrete base with top 4 inches (100 mm) above finished grade or surface at luminaire location. Cast conduit into base, and finish by troweling and rubbing smooth.

Concrete materials, installation, and finishing are specified in Division 03 Section "Cast-in-Place Concrete."

3.5 CORROSION PREVENTION

- A. Aluminum: Do not use in contact with earth or concrete. When in direct contact with a dissimilar metal, protect aluminum by insulating fittings or treatment.
- B. Steel Conduits: Comply with Division 26 Section "Raceway and Boxes for Electrical Systems." In concrete foundations, wrap conduit with 0.010-inch- (0.254-mm-) thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

3.6 GROUNDING

- A. Ground metal poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole, unless otherwise indicated.
 - 2. Install grounding conductor pigtail in the base for connecting luminaire to grounding system.
- B. Ground nonmetallic poles and support structures according to Division 26 Section "Grounding and Bonding for Electrical Systems."
 - 1. Install grounding electrode for each pole.
 - 2. Install grounding conductor and conductor protector.
 - 3. Ground metallic components of pole accessories and foundations.

3.7 FIELD QUALITY CONTROL

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Illumination Observations: Verify normal operation of lighting units after installing luminaires and energizing circuits with normal power source.
 - 1. Verify operation of photoelectric controls.
- C. Illumination Tests:
 - 1. Measure light intensities at night. Use photometers with calibration referenced to NIST standards. Comply with the following IESNA testing guide(s):
 - a. IESNA LM-5, "Photometric Measurements of Area and Sports Lighting."
 - b. IESNA LM-50, "Photometric Measurements of Roadway Lighting Installations."
 - c. IESNA LM-52, "Photometric Measurements of Roadway Sign Installations."
 - d. IESNA LM-64, "Photometric Measurements of Parking Areas."
 - e. IESNA LM-72, "Directional Positioning of Photometric Data."
- D. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 280500**COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY****PART 1 - GENERAL****1.1 PERFORMANCE REQUIREMENTS****A. LEED BUILDING REQUIREMENTS****1. GENERAL REQUIREMENTS:**

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

1.2 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY**A. Section Includes:**

1. Electronic safety and security equipment coordination and installation.
2. Sleeves for raceways and cables.
3. Sleeve seals.
4. Grout.
5. Common electronic safety and security installation requirements.

1.4 DEFINITIONS

- A. EPDM: Ethylene-propylene-diene terpolymer rubber.
- B. NBR: Acrylonitrile-butadiene rubber.

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

1. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

B. Product Data: For sleeve seals.

1.6 COORDINATION

A. Coordinate arrangement, mounting, and support of electronic safety and security equipment:

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping and conduit installed at required slope.
4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for electronic safety and security items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Division 08 Section "Access Doors and Frames."

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Division 07 Section "Penetration Firestopping.".

PART 2 - PRODUCTS

2.1 SLEEVES FOR RACEWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel.

1. Minimum Metal Thickness:

- a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.

- b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Metraflex Co.
 - d. Pipeline Seal and Insulator, Inc.
 - 2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
 - 3. Pressure Plates: Stainless steel. Include two for each sealing element.
 - 4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1 COMMON REQUIREMENTS FOR ELECTRONIC SAFETY AND SECURITY INSTALLATION

- A. Comply with NECA 1.
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electronic safety and security equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.
- E. Right of Way: Give to piping systems installed at a required slope.

3.2 SLEEVE INSTALLATION FOR ELECTRONIC SAFETY AND SECURITY PENETRATIONS

- A. Electronic safety and security penetrations occur when raceways, pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.
- F. Extend sleeves installed in floors 2 inches above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
 - 1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants."
- J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
- K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.
- L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
- M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.3 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.
- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve

seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.4 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electronic safety and security installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

END OF SECTION 280500

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 283111

FIRE ALARM

PART 1 -GENERAL

1.1 DESCRIPTION

- A. The requirements of the Contract Documents, including the General and Supplementary General Condition and Division 1 -General Requirements shall apply to the work of this section.
- B. The entire system shall be installed with aesthetics in mind. All control panels and remote annunciators installed in public spaces shall be semi-flush mounted with no exposed conduit or cable trays.

1.2 WORK INCLUDED

- A. The work covered by this Section of the Specification shall include all labor, equipment, materials and services to furnish and install a complete fire alarm system of the addressable, non-coded type. It shall be complete with all necessary hardware, software and memory specifically tailored for this installation. It shall be possible to permanently modify the software on site by using a plug-in programmer. The system shall consist of, but not be limited to, the following:
 - 1. Fire Alarm Control Panel and related remote data gathering panels.
 - 2. Remote Annunciators with semi flush backbox.
 - 3. Addressable manual fire alarm stations.
 - 4. Addressable analog area smoke detectors.
 - 5. Addressable analog duct smoke detectors.
 - 6. Addressable analog heat detectors.
 - 7. Magnetic door/card access release override control.
 - 8. Audible notification appliances -horns.
 - 9. Visual notification appliances -strobes.
 - 10. Central station alarm connection control.
 - 11. Air handling systems shutdown control.
 - 12. Magnetic door holder release.
 - 13. Sprinkler supervisory switches and tamper switch supervision.
 - 14. Battery standby.
 - 15. ALL NYC Fire Alarm peripherals, such as code cards, placards, riser diagram, necessary switches, LED's, clock, fire sign, manual central office trip, Fuse Cutout, FDNY approved locks, with enclosed purfdny key switch and Atrium exhaust components shall be included in the system price. Data gathering panels shall be connected to a power riser with a fuse cutout connection or Fused Disconnect. A common ground shall be included in the power riser.

1.3 APPLICABLE CODES AND STANDARDS

- A. All equipment shall be UL listed for its intended use and conform to the latest UL Standards.
- B. Underwriters Laboratories Inc.: The system and all components shall be listed by Underwriters Laboratories Inc. for use in fire protective signaling system under the following standards as applicable:

1. UL 864/UOJZ, APOU Control Units for Fire Protective Signaling Systems.
2. UL 268 Smoke Detectors for Fire Protective Signaling Systems.
3. UL 268A Smoke Detectors for Duct Applications.
4. UL 217 Smoke Detectors Single Station.
5. UL 521 Heat Detectors for Fire Protective Signaling Systems.
6. UL 228 Door Holders for Fire Protective Signaling Systems.
7. UL 464 Audible Signaling Appliances.
8. UL 1638 Visual Signaling Appliances.
9. UL 38 Manually Activated Signaling Boxes.
10. UL 346 Waterflow Indicators for Fire Protective Signaling Systems.
11. UL 1971 Standard for Signaling Devices for the Hearing Impaired
12. UL 1481 Power Supplies for Fire Protective Signaling Systems.
13. UL 1711 Amplifiers for Fire Protective Signaling Systems.
14. UUKL The Fire Alarm system shall be UUKL for Smoke Control.

C. This installation shall comply with:

1. Americans with Disabilities Act (ADA)
2. National Electric Code, Article 760 with NYC Amendments.
3. National Fire Protection Association Standards: NFPA72
4. Local and State Building Codes and the Local Authorities Having Jurisdiction.
5. International Standards Organization (ISO): ISO-9001
6. The latest provisions of and amendments to Local Law No. 5, Local Law No. 16 and Local Law No.58 of the City of New York.
7. Utilize MEA / BSA Approved Fire Alarm Equipment
8. The requirements of the City of New York Building Department and the City of New York Fire Department.

1.4 RELATED DOCUMENTS

- A. Prior to commencement and after completion of work notify Authorities Having Jurisdiction.
- B. Submit letter of approval for installation before requesting acceptance of system.

1.5 RELATED WORK

- A. The Contractor shall coordinate work in this Section with all related trades. Work and/or equipment provided in other Sections and related to the fire alarm system shall include, but not be limited to:
 1. Sprinkler waterflow and supervisory switches shall be furnished and installed by the fire protection contractor, but wired and connected by the electrical contractor.
 2. Duct smoke detectors shall be furnished, wired and connected by the electrical contractor. The HVAC contractor shall furnish necessary duct opening to install the duct smoke detectors.
 3. Air handling and Atrium smoke exhaust system fan control circuits and status contacts to be furnished by the HVAC control equipment.

4. Elevator recall control circuits to be provided by the elevator control equipment. The operation of the elevators shall be in accordance with RS 18-1.
5. Fire pumps (manual, automatic and special service) status monitoring.
 - a. Pump failure (fail to start) indication
 - b. Pump running indication
 - c. Phase reversal indication
6. Emergency generator status monitoring
 - a. Running indication
 - b. Fail to start indication
7. Conduit: Section 260533.
8. Wire and Cables: Section 260519.

1.6 SUBMITTALS

- A. Provide list of all types of equipment and components provided. This shall be incorporated as part of a Table of Contents, which will also indicate the manufacturer's part number, the description of the part, and the part number of the manufacturer's product datasheet on which the information can be found.
- B. Provide description of operation of the system (Sequence of Operation), similar to that provided in Part 2 of this Section of the Specifications, to include any and all exceptions, variances or substitutions listed. Any such exceptions, variances or substitutions that were not listed and are identified in the submittal, shall be grounds for immediate disapproval without comment. The sequence of operation shall be project specific, and shall provide individual sequences for every type of alarm, supervisory, or trouble condition that may occur as part of normal or off-normal system use.
- C. Provide manufacturer's printed product data, catalog cuts and description of any special installation procedures. Poorly photocopied and/or illegible product data sheets shall not be acceptable and shall be rejected. All product datasheets shall be highlighted or stamped with arrows to indicate the specific components being submitted for approval.
- D. Provide manufacturer's installation instruction manual for specified system.
- E. Provide samples of various items when requested.
- F. Provide copy of NYS License to perform such work.
- G. Provide copies of NICET Level II Fire Alarm certifications for the two (2) technicians assigned to this project.
- H. Provide shop drawings as follows:
 1. Coversheet with project name, address and drawing index.
 2. General notes drawing with peripheral device backbox size information, part numbers, device mounting height information, and the names, addresses, point of contact, and telephone numbers of all contract project team members.

3. Device riser diagram that individually depicts all control panels, annunciators, addressable devices, and notification appliances. Shall include a specific, proposed point descriptor above each addressable device. Shall include a specific, discrete point address that shall correspond to addresses depicted on the device layout floor plans. Drawing shall provide wire specifications, and wire tags shown on all conductors depicted on the riser diagram.
4. All circuits shall have designations that shall those require on the control panel and floor plan drawings. End-of-line resistors (and values) shall be depicted.
5. Control panel termination drawing(s). Shall depict internal component placement and all internal and field termination points. Drawing shall provide a detail indicating where conduit penetrations shall be made, so as to avoid conflicts with internally mounted batteries. For each additional data gathering panel, a separate control panel drawing shall be provided, which clearly indicated the designation, service and location of the control enclosure. End-of-line resistors (and values) shall be depicted.
6. See section 3.4 DOCUMENTATION AND TRAINING for other documents relating to this section.
7. Device typical wiring diagram drawing(s) shall be provided which depict all system components, and their respective field wiring termination points. Wire type, gauge, and jacket shall also be indicated. When an addressable module is used in multiple configurations for monitoring or controlling various types of equipment, different device typical diagrams shall be provided. End-of-line resistors (and values) shall be depicted.
8. Device layout floor plans shall be created for every area served by the fire alarm system. CAD Files (AutoCAD – latest edition) shall be provided for the fire alarm system equipment vendor in the preparation of the floor plans. Floor plans shall indicate accurate locations for all control and peripheral devices. Drawings shall be NO LESS THAN 1/8 INCH SCALE. All addressable devices shall be depicted with a discrete address that corresponds with that indicated on the Riser Diagram. All notification appliances shall also be provided with a circuit address that corresponds to that depicted on the Riser Diagram. If individual floors need to be segmented to accommodate the 1/8" scale requirements, KEY PLANS and BREAK-LINES shall be provided on the plans in an orderly and professional manner. End-of-line resistors (and values) shall be depicted.
9. Contained in the title block of each drawing shall be symbol legends with device counts, wire tag legends, circuit schedules for all addressable and notification appliance circuits, the project name/address, and a drawing description which corresponds to that indicated in the drawing index on the coversheet drawing. A section of each drawing title block shall be reserved for revision numbers and notes. The initial submission shall be Revision 0, with Revision A, B, or C as project modifications require.
 - I. Battery calculations shall be provided on a per power supply/charger basis. These calculations shall clearly indicate the quantity of devices, the device part numbers, the supervisory current draw, the alarm current draw, totals for all categories, and the calculated battery requirements. Battery calculations shall also reflect all control panel component, remote annunciator, and auxiliary relay current draws. Failure to provide these calculations shall be grounds for the complete rejection of the submittal package.
 - J. Table of contents, product data sheets, sequences of operation, battery calculations, installation instructions, licenses, NICET certifications and B-Size (blackline) reduced shop drawings shall be provided by the fire alarm vendor as part of a single, spiral bound submittal book. The submittal book shall have laminated covers indicating the project address, SED number, system type, and contractor. The book shall consist of labeled dividers, and

shall not exceed 9 ½" in width, and 11 ½" in height. No less than three (3) sets of submittal booklets shall be provided for review and comment. Additional copies may be required at no additional cost to the project.

- K. Scale drawing sets shall be submitted along with the submittal booklets. These drawings may be either D-Size or E-Size Blue-line drawings and of a sufficient resolution to be completely read. Sets shall be bound and folded so as to not take up more than 100 square inches of space. No less than three (3) sets of scale drawing sets shall be provided for review and comment. Additional copies may be required at no additional cost to the project.

1.7 CONTRACTOR'S GUARANTEE.

- A. All work performed and all material and equipment furnished under this contract shall be free from defects and shall remain so for a period of at least one (1) year from the date of acceptance or approval by the Commissioner. The full cost of maintenance, labor and materials required to correct any defect during this one year period shall be included in the submittal.

1.8 PERFORMANCE REQUIREMENTS

A. LEED BUILDING REQUIREMENTS

1. GENERAL REQUIREMENTS:

The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related Product Data: For each type of product indicated sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

2. PERFORMANCE CRITERIA

All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018114 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Coatings, and Section 09900 - Interior Paint.

1.9 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS:

- 1. Provide for all field-applied adhesives, sealants (used as fillers), and paints:

Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

PART II --PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

- A. The catalog numbers used are those of Edwards Systems Technology (EST) by GE Security and constitute the type and quality of equipment to be furnished.
- B. All products used shall be of Edwards Systems Technology. Submission of notification appliances, auxiliary relays, or documentation from other than a single manufacturer shall not be acceptable and will be grounds for immediate disapproval without comment.
- C. The Fire Alarm / Life Safety System supplied under this specification shall be a microprocessor-based. All Control Panel Assemblies and connected Field Appliances shall be both designed and manufactured Edwards Systems Technology, and shall be tested and cross-listed as compatible to ensure that a fully functioning Life Safety System is designed and installed. All amplifiers used in the DGP will be required to have built in standby tone generators in case the primary means of digital voice evacuation is impaired. Each Notification Appliance Circuits (Horn and Strobe) shall be split (A/B) per 2003 RS17-3A. Each DGP shall be designed with the highest level of survivability in mind, including an amplifier for each horn circuit (one for A and one for B) and one backup amplifier for each DGP.
- D. SimplexGrinnell and Siemens Fire Alarm Systems are acceptable alternatives.

2.2 CIRCUITING GUIDELINES

- A. Each Signaling Line Circuit (SLC) shall be circuited so device loading is not to exceed 80% of loop capacity in order to leave for space for future devices. The loop shall have Class B operation. Each DGP shall include an SLC loop on a per floor basis. T-Tapping a selected loop to cover an alternate floor shall not be accepted.
- B. Where it is necessary to interface conventional initiating devices provide intelligent input modules to supervise Class B zone wiring.
- C. Each of the following types of devices or equipment shall be provided with supervised circuits as shown on the drawings but shall be typically as follows:
 - 1 Sprinkler Valve Supervisory Switches: Provide one (1) supervisory module circuit for each sprinkler valve supervisory switch.
 - 2 When waterflow and tamper switches exist at the same location, provide one (1) dual input addressable module. When odd numbers of devices exist at a single location, provide additional single input addressable modules.
- D. Each of the following types of alarm notification appliances shall be circuited as shown on the drawings but shall be typically as follows:
 - 1 Audible Signals: Provide sufficient spare capacity to assure that the addition of five (5) audible devices can be supported without the need for addition control components (power supplies, signal circuit modules, amplifiers, batteries, etc.)
 - 2 Visual Signals Provide sufficient spare capacity to assure that the addition of three (3) audible devices can be supported without the need for addition control components (power supplies, signal circuit modules, batteries, etc.)

- E. Each of the following types of remote equipment associated with the fire alarm system shall be provided with a form 'C' control relay contact as shown on the drawings, but shall be typi cally as follows:
1. HVAC Fan Systems: Provide one (1) shutdown control relay contact for each HVAC fan system.
 2. HVAC Supply Fans: Provide one (1) shutdown control relay contact for each HVAC supply fan.
 3. HVAC Return Fans: Provide one (1) shutdown control relay contact for each HVAC return fan.
 4. Provide a dedicated 24VDC circuit to feed all auxiliary relays required for inductive loads. Circuits shall be supervised via an end-of-line relay and addressable input module. Auxiliary relays shall not derive their power from the starter or load being controlled.
- F. An appropriate fuse cut out shall be included, wired as indicated in the Building Code for the City of NY.

2.3 FIRE ALARM SYSTEM SEQUENCE OF OPERATION

- A. The system shall identify any off normal condition and log each condition into the system database as an event.
1. The system shall automatically display on the control panel Liquid Crystal Display the first event of the highest priority by type. The priorities and types shall be alarm, supervisory, trouble, and monitor.
 2. The system shall have a Queue operation, and shall not require event acknowledgment by the system operator. The system shall have a labeled color coded indicator for each type of event; alarm -red, supervisory -yellow, trouble -yellow, monitor -yellow. When an unseen event exists for a given type, the indicator shall be lit.
 3. For each event, the display shall include the current time, the total number of events, the type of event, the time the event occurred and up to a 42 character custom user description.
 4. The user shall be able to review each event by simply selecting scrolling keys (up-down) for each event type.
 5. New alarm, supervisory, or trouble events shall sound a silencing audible signal at the control panel.
- B. Operation of any alarm initiating device shall automatically:
1. Update the control/display as described above (A.1.)
 2. Sound all audible devices on the fire floor and floor above. Audible devices shall have the ability to be silenced per NYC code.
 3. Activate all strobe appliances on the fire floor and floor above. ALL STROBE APPLIANCES SHALL BE SYNCHRONIZED WHERE ANY TWO STROBES ARE IN COMMON FIELD OF VIEW. Visual devices shall be non-silenced unless the system is successfully reset.
 4. Operate control relay contacts to shutdown all HVAC units serving the floor of alarm initiation.

5. Operate control relay contacts to return all elevators that serve the floor of alarm initiation to the ground floor. If the alarm originates from the ground floor, operate control circuits contacts to return elevator to a level as directed by the NYC fire department.
 6. Operate control relay contacts to release all magnetically held smoke doors throughout the building.
 7. Visually annunciate the individual point of alarm on all remote annunciator panels. The visual indication shall remain on until the alarm condition is reset to normal. An annunciator panels shall be located in the main FACP and as indicated on the drawings. Transmit an alarm condition to central station/NYC Fire Department (as required by the Commissioner).
 8. Transmit a supervisory condition to central station/Local Fire Department (as required by the Commissioner).
- C. Elevator detecting sequences shall comply with the RS 18-1 requirements for main lobby floor recall.
- D. Activation of a sprinkler supervisory initiating device shall:
1. Update the control/display as described above (A.1.)
 2. Transmit a supervisory condition to central station/Local Fire Department (as required by the Commissioner).
 3. Visually annunciate the individual point of alarm on all remote annunciator panels. The visual indication shall remain on until the alarm condition is reset to normal.
- E. The entire fire alarm system wiring shall be electrically supervised to automatically detect and report trouble conditions to the fire alarm control panel. Any opens, grounds or disarrangement of system wiring and shorts across alarm signaling wiring shall automatically:
1. Update the control/display as described above (A.1.)
 2. Transmit a trouble condition to central station/Local Fire Department (as required by the Commissioner).
 3. Visually and audibly annunciate a general trouble condition, on the remote annunciator panels. The visual indication shall remain on until the trouble condition is repaired.
- F. Coordinate schedule of operation of atrium smoke control with hvac drawings.

2.4 SUPPORT FOR INSTALLER AND CITY OF NEW YORK MAINTENANCE

- A. Provide a coded one-man walk test feature. Allow audible or silent testing. Signal alarms and troubles during test. Allow receipt of alarms and programmed operations for alarms from areas not under test.
- B. Provide internal system diagnostics and maintenance user interface controls to display/report the power, communication, and general status of specific panel components, detectors, and modules.
- C. Provide loop controller diagnostics to identify common alarm, trouble, ground fault, Class A fault, and map faults. Map faults include wire changes, device type changes by location, de-

vice additions/deletions and conventional open, short, and ground conditions. Ground faults on the circuit wiring of remote module shall be identified by device address.

- D. Allow the user to display/report the condition of addressable analog detectors. Include device address, device type, percent obscuration, and maintenance indicator. The maintenance indicator shall provide the user with a measure of contamination of a device upon which cleaning decisions can confidently be made.
- E. Allow the user to report history for alarm, supervisory, monitor, trouble, smoke verification, watchdog, and restore activity. Include Facility Name, Licensee, Project Program Compilation date, Compiler Version, Project Revision Number, and the time and date of the History Report.
- F. Allow the user to disable/enable devices, zones, actions, timers and sequences. Protect the disable function with a password.
- G. Allow the user to activate/restore outputs, actions, sequences, and simulate detector smoke levels.
- H. Allow the service user to enter time and date, reconfigure an external port for download programming, initiate auto programming and change passwords. Protect these functions with a password.
- I. THE END-USER SHALL RETAIN COMPLETE RIGHTS AND OWNERSHIP TO ALL SOFTWARE RUNNING IN THE SYSTEM. The fire alarm equipment vendor shall provide useable hard and soft copies of the software database to the End-User at the end of the warranty period. The database provided shall be useable by any authorized and certified distributor of the product line, and shall include all applicable passwords necessary for total and unrestricted use and modification of the database.

2.5 UL LISTED AND APPROVED EQUIPMENT

A. Fire Alarm Control Panel Requirements:

- 1. The fire alarm control panel or panels and all system devices (horns-strobes, strobes, pull stations, smoke and heat detectors, etc. shall be Edwards Systems Technology (EST) by GE Security type EST3 series. All under one label "UL listed and approved" for the use of fire alarm systems in this area of the United States of America. The operating controls shall be located behind locked door with viewing window. All control modules shall be labeled, and all zone locations shall be identified.

B. System Controllers

- 1. The main controller 3-CPU shall be supervised, site programmable, and of modular design supporting up to 125 detectors and 125 remote modules per addressable Signaling line Circuit (SLC). The CPU shall support up to 10 SLC's per panel for a total system capacity of 2500 Intelligent Addressable points. The system shall be designed with peer-to-peer networking capability for enhanced survivability, with support for up to 64 modes, each with up to 2500 points and an overall capacity of 160,000 points. The cabinets shall be steel.
- C. The system shall store all basic system functionality and job specific data in non-volatile memory. All site specific and operating data shall survive a complete power failure intact. Passwords shall protect any changes to system operations.

- D. The Main Controller Module shall control and monitor all local or remote peripherals. It shall support a large 960 character LCD, power supply, remote LCD and zone display annunciators, printers, and support communication interface standard protocol (CSI) devices such as color computer annunciators and color graphic displays. Remote LCD annunciators shall also display each and every point in the system and be sized with the same number of characters as in the main FACP display.
- E. The panel shall have an interface module for remote site monitoring. The module shall have a dialer (alarm communicator transmitter (DACT)) module to transmit alarm, supervisory and trouble signals to a Central Monitoring Station (CMS). The DACT shall support dual telephone lines, Contact I.D. communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC power failure reports, auto test call, and be site programmable. The dialer shall be capable of transmitting every individual alarm condition to the central station.
- F. The system shall have built-in automatic system programming to automatically address and map all system devices attached to the main controller. A minimum default single stage alarm system operation shall be supported with alarm silence, event silence, drill, lamp test, and reset common controls.
- G. Advanced Windows-based System Definition Utility with Program Version Reporting to document any and all changes made during system start-up or system commissioning shall be used to maintain site specific programming. Time and Date Stamps of all modifications made to the program must be included to allow full retention of all previous program version data. It shall support programming of any input point to any output point. The system shall support the use of Bar Code readers to assist custom programming functions. It shall allow authorized customization of fundamental system operations using initiating events to start actions, timers, sequences and logical algorithms. The system program shall meet the requirements of this project, current codes and standards, and satisfy the local City of New York.
- H. The system shall support distributed processor intelligent detectors with the following operational attributes; integral multiple differential sensors, automatic device mapping, electronic addressing, environmental compensation, pre-alarm, dirty detector identification, automatic day/night sensitivity adjustment, normal/alarm LEDs, relay bases, sounder bases and isolator bases.
- I. The system shall use full digital communications to supervise all addressable loop devices for placement, correct location, and operation. It shall allow swapping of "same type" devices without the need of addressing and impose the "location" parameters on replacement device. It shall initiate and maintain a trouble if a device is added to a loop and clear the trouble when the new device is mapped and defined into the system.
- J. Each controller shall contain a RS232 printer/programming port for programming locally via an IBM PC. When operational, each controller shall support a printer through the RS232 port and be capable of message routing.
- K. System circuits shall be configured as follows: Addressable analog SLC loops Class B (Style 4); Initiating Device Circuits Class B; Notification Appliance Circuits Class B; Network Communications Class B; Annunciator Communications Class B.
- L. Single stage operation shall be provided.
- M. The system shall have a UL Listed Detector Sensitivity test feature, which will be a function of the smoke detectors and performed automatically every 4 hours.

- N. The system shall support 100% of all remote devices in alarm and provide support for a 100% compliment of detector isolator bases.
- O. All panel modules shall be supervised for placement and return trouble if damaged or removed.
- P. The system shall have a CPU watchdog circuit to initiate trouble should the CPU fail.
- Q. The Fire Alarm / Life Safety System shall incorporate a true digital integrated audio system into the network, multiplexing 8 independent audio channels over a single pair of wires. The system shall include distributed audio amplifiers, one for each audible circuit, and split A/B horns circuits for the ultimate in system survivability. The system shall provide a local temporal back up tone at each amplifier to allow evacuation signals to be broadcast in the protected premises in the event of a loss of data communication from the multiplexed audio riser.
- R. Audible notification appliances shall be affected by signal silence features. Visual signal appliance shall not be affected by signal silence features.
- S. User Interface
 - 1. The 3-LCDXL Display Module shall be of membrane style construction with a 24 line by 40character (960 total characters) Liquid Crystal Display (LCD). The LCD shall use super-twist technology and backlighting for high contrast visual clarity and a colored gray/black and white display. In the normal mode the LCD shall display the time, a customer facility name, and the number of history events. In the alarm mode the LCD display the total number of events and the type of event on display.
 - 2. The LCD shall reserve 42 characters of display space for each user custom message by addressable device. The module shall have visual indicators for the following common control functions; Power, Alarm, Supervisory, Monitor, Trouble, Disable, Ground Fault, CPU fail, and Test. There shall be common control keys and visual indicators for reset, alarm silence, panel silence, and drill.
 - 3. Provide four pairs of display control keys for selection of event display by type (alarm, supervisory, monitor and trouble) and forward / backward scrolling through event listings. The operation of these keys shall be integrated with the related common control indicators to flash the indicators when undisplayed events are available for display and turn on steady when all events have been displayed.
 - 4. The LCD shall display the first event of the highest priority as well as the previous seven (7) alarm events "hands free" in chronological order so that the arriving firefighter may track the fires progression. Provide system function keys; status, reports, enable, disable, activate, restore, program, and test. The module shall have a numeric keypad, zero through nine with delete and enter keys.
 - 5. As an alternate if the above cannot be provided, provide UL-Listed 864 PC graphics display.
- T. Power Supplies
 - 1. The power supply shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 Vdc at 7.0A continuous for notification appliance circuits. The

power supply shall be capable of providing 7A to output circuits for a maximum period of 100 ms. All outputs shall be power limited. The battery shall be sized to support the system for 24 hours of supervisory and trouble signal current plus general alarm for 45 minutes.

- U. Auxiliary power supplies shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 Vdc at 7.0A continuous for notification appliance circuits. The power supply shall be capable of providing 7A to output circuits for a maximum period of 100 ms. All outputs shall be power limited. The battery shall be sized to support the system for 24 hours of supervisory and trouble signal current plus general alarm for 45 minutes.
- V. Network alphanumeric annunciators shall be located as indicated on the plans and in the fire safety director's office or constantly attended location. Each annunciator shall contain a supervised, back lit, liquid crystal with a minimum of 8 line with 21 characters per line. Where required, the annunciator shall include additional zonal annunciation and manual control without additional enclosures. The annunciator shall support full ability to serve as the operating interface to the system and shall include the following features.
- W. Each annunciator must be capable of supporting custom messages as well as system event annunciation. It must be possible to filter unwanted annunciation of trouble, alarm or supervisory functions on a by point or by geographic area. The annunciators shall be mounted in stand-alone enclosures or integrated into the network panels as indicated on the plans.

2.6 COMPONENTS

A. Intelligent Devices—General

1. Each remote device shall have a microprocessor with non-volatile memory to support its functionality and serviceability. Each device shall store as required for its functionality the following data: device serial number, device address, device type, personality code, date of manufacture, hours in use, time and date of last alarm, amount of environmental compensation left/used, last maintenance date, job/project number, current detector sensitivity values, diagnostic information (trouble codes) and algorithms required to process sensor data and perform communications with the loop controller.
2. Each device shall be capable of electronic addressing, either automatically or application programmed assigned, to support physical/electrical mapping and supervision by location. Setting a device's address by physical means shall not be necessary.

B. Intelligent Detectors—General

1. The System Intelligent Detectors shall be capable of full digital communications using both broadcast and polling protocol. Each detector shall be capable of performing independent fire detection algorithms. The fire detection algorithm shall measure sensor signal dimensions, time patterns and combine different fire parameters to increase reliability and distinguish real fire conditions from unwanted deceptive nuisance alarms. Signal patterns that are not typical of fires shall be eliminated by digital filters. Devices not capable of combining different fire parameters or employing digital filters shall not be acceptable.
2. Each detector shall have an integral microprocessor capable of making alarm decisions based on fire parameter information stored in the detector head. Distributed intelligence shall improve response time by decreasing the data flow between detector and analog loop controller. Detectors not capable of making independent alarm decisions shall not be acceptable. Maximum total analog loop response time for detectors changing state shall be 0.5 seconds.

3. Each detector shall have a separate means of displaying communication and alarm status. A green LED shall flash to confirm communication with the analog loop controller. A red LED shall flash to display alarm status.
4. The detector shall be capable of identifying up to 32 diagnostic codes. This information shall be available for system maintenance. The diagnostic code shall be stored at the detector.
5. Each smoke detector shall be capable of transmitting pre-alarm and alarm signals in addition to the normal, trouble and need cleaning information. It shall be possible to program control panel activity to each level. Each smoke detector may be individually programmed to operate at any one of five (5) sensitivity settings.
6. Each detector microprocessor shall contain an environmental compensation algorithm which identifies and sets ambient "Environmental Thresholds" approximately six times an hour. The microprocessor shall continually monitor the environmental impact of temperature, humidity, other contaminants as well as detector aging. The process shall employ digital compensation to adapt the detector to both 24 hour long term and 4 hour short term environmental changes.
7. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches 80% and 100% of the allowable environmental compensation value. Differential sensing algorithms shall maintain a constant differential between selected detector sensitivity and the "learned" base line sensitivity. The base line sensitivity information shall be updated and permanently stored at the detector approximately once every hour.
8. The intelligent analog detectors shall be suitable for mounting on any detector mounting base.
9. The Fire alarm system shall have the ability to set elevator lobby Ionization or Multi Sensing smoke detectors for alarm verification. Detector in the alarm verification mode shall indicate, by point in a text format at the main control and at the remote LCD annunciators.

C. Fixed Temperature/Rate of Rise Heat Detector, SIGA-HRS

1. Provide intelligent combination fixed temperature/rate-of-rise heat detectors SIGA-HRS. The heat detector shall have a low mass thermistor heat sensor and operate at a fixed temperature and at a temperature rate-of-rise. It shall continually monitor the temperature of the air in its surroundings to minimize thermal lag to the time required to process an alarm. The integral microprocessor shall determine if an alarm condition exists and initiate an alarm based on the analysis of the data. Systems using central intelligence for alarm decisions shall not be acceptable. The intelligent heat detector shall have a nominal fixed temperature alarm point rating of 135°F (57°C) and a rate-of-rise alarm point of 15°F (9°C) per minute. The heat detector shall be rated for ceiling installation at a minimum of 70 ft (21.3m) centers and be suitable for wall mount applications.

D. Ionization Smoke Detector, SIGA-IS

1. Provide intelligent ionization smoke detectors SIGA-IS. The analog ionization detector shall utilize a unipolar ionization smoke sensor to sense changes in air samples from its surroundings. The integral microprocessor shall dynamically examine values from the sensor and initiate an alarm based on the analysis of data. Systems using central intelligence for alarm decisions shall not be acceptable. The detector shall continually monitor any changes in sensitivity due to the environmental affects of dirt, smoke, temperature, aging and humidity. The information shall be stored in the integral processor and transferred to the analog loop controller for retrieval using a laptop PC or the SIGA-PRO Program/Service Tool. The ion detector shall be rated for ceiling installation at a minimum of 30 ft (9.1m) centers and be suitable

for wall mount applications. The ion smoke detector shall be rated for operation in constant air velocities from 0 to 75 ft/min. (0-0.38 m/sec) and with intermittent air gusts up to 300 ft/min. (1.52m/sec) for up to 1 hour.

2. The percent smoke obscuration per foot alarm set point shall be field selectable to any of five sensitivity settings ranging from 0.7% to 1.6%. The ion detector shall be suitable for operation in the following environment:
 - a. Temperature: 32°F to 120°F (0°C to 49°C)
 - b. Humidity: 0-93% RH, non-condensing
 - c. Elevation: Up to 6,000 ft. (1828 m)

E. Photoelectric Smoke Detector, SIGA-PS

1. Provide intelligent photoelectric smoke detectors SIGA-PS. The analog photoelectric detector shall utilize a light scattering type photoelectric smoke sensor to sense changes in air samples from its surroundings. The integral microprocessor shall dynamically examine values from the sensor and initiate an alarm based on the analysis of data. Systems using central intelligence for alarm decisions shall not be acceptable. The detector shall continually monitor any changes in sensitivity due to the environmental affects of dirt, smoke, temperature, aging and humidity. The information shall be stored in the integral processor and transferred to the analog loop controller for retrieval using a laptop PC or the SIGA-PRO Program/Service Tool. The photo detector shall be rated for ceiling installation at a minimum of 30 ft (9.1m) centers and be suitable for wall mount applications. The photoelectric smoke detector shall be suitable for direct insertion into air ducts up to 3 ft (0.91m) high and 3 ft (0.91m) wide with air velocities up to 5,000 ft/min. (0-25.39 m/sec) without requiring specific duct detector housings or supply tubes.
2. The percent smoke obscuration per foot alarm set point shall be field selectable to any of five sensitivity settings ranging from 1.0% to 3.5%. The photo detector shall be suitable for operation in the following environment:
 - a. Temperature: 32°F to 120°F (0°C to 49°C)
 - b. Humidity: 0-93% RH, non-condensing
 - c. Elevation: no limit

F. Standard Detector Mounting Bases, SIGA-SB / SIGA-SB4

1. Provide standard detector mounting bases SIGA-SB suitable for mounting on North American 1gang, 3½" or 4" octagon box and 4" square box. The base shall, contain no electronics, support all detector types and have the following minimum requirements:
 - a. Removal of the respective detector shall not affect communications with other detectors.
 - b. Terminal connections shall be made on the room side of the base. Bases which must be removed to gain access to the terminals shall not be acceptable.
 - c. The base shall be capable of supporting one (1) SIGA-LED Remote Alarm LED Indicator.
2. Provide remote LED alarm indicators where shown on the plans.

G. Duct Detector, Model SIGA-SD

1. Provide model SIGA-SD Low profile intelligent addressable DUCT smoke detector as indicated on the project plans. Provide for variations in duct air velocity between 100 and 4,000 feet per minute and include a wide sensitivity range of .79 to 2.46%/ft. Obscuration. Include one Form-C shut down relay rated 2.0 amps @ 30 Vdc and also include slave high contact relays if required. Provide an air exhaust tube and an air sampling inlet tube that extends into the duct air stream up to ten feet. The addressable DUCT housing shall be suitable for extreme environments, including a temperature range of -20 to 158 degrees F (-29 to 70 degrees Celsius) and offer a harsh envi-

ronment gasket option. Provide Remote Alarm LED Indicators SIGA-LED and/or remote test station model SD-TRK as indicated on the project plans.

H. Intelligent Modules—General

1. It shall be possible to address each Intelligent module without the use of DIP or rotary switches. Devices using DIP switches for addressing shall not be acceptable. The personality of multifunction modules shall be programmable at site to suit conditions and may be changed at any time using a personality code downloaded from the Analog Loop Controller. Modules requiring EPROM, PROM, ROM changes or DIP switch and/or jumper changes shall not be acceptable. The modules shall have a minimum of 2 diagnostic LEDs mounted behind a finished cover plate. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The module shall be capable of storing up to 24 diagnostic codes which can be retrieved for troubleshooting assistance. Input and output circuit wiring shall be supervised for open and ground faults. The module shall be suitable for operation in the following environment:
 - a. Temperature: 32°F to 120°F (0°C to 49°C)
 - b. Humidity: 0-93% RH, non-condensing

I. Single Input Module, SIGA-CT1

1. Provide intelligent single input modules SIGA-CT1. The Single Input Module shall provide one (1) supervised Class B input circuit capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on North American 2 ½" (64mm) deep 1-gang boxes and 1 ½" (38mm) deep 4" square boxes with 1-gang covers. The single input module shall support the following circuit types:
 - a. Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.)
 - b. Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - c. Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - d. Normally-Open Active Latching (Supervisory, Tamper Switches)

J. Dual Input Module, SIGA-CT2

1. Provide intelligent dual input modules SIGA-CT2. The Dual Input Module shall provide two (2) supervised Class B input circuits each capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on North American 2 ½" (64mm) deep 1-gang boxes and 1 ½" (38mm) deep 4" square boxes with 1-gang covers. The dual input module shall support the following circuit types:
 - a. Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.)
 - b. Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - c. Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - d. Normally-Open Active Latching (Supervisory, Tamper Switches)

K. Waterflow/Tamper Module, SIGA-WTM

1. Provide intelligent waterflow/tamper modules SIGA-WTM. The Waterflow/Tamper Module shall be factory set to support two (2) supervised Class B input circuits. Channel A shall support a Normally-Open Alarm Delayed Latching Waterflow Switch circuit. Channel B shall support a Normally-Open Active Latching Tamper Switch. The waterflow/tamper module shall be suitable for mounting on North American 2 ½" (64mm) deep 1-gang boxes and 1 ½" (38mm) deep 4" square boxes with 1-gang covers.

L. Single Input Signal Module, SIGA-CC1

1. Provide intelligent single input signal modules SIGA-CC1. The Single Input (Single Riser Select) Signal Module shall provide one (1) supervised Class B output circuit capable of a minimum of 2 personalities, each with a distinct operation. When selected as a telephone power selector, the module shall be capable of generating its own "ring tone". The module shall be suitable for mounting on North American 2 1/2" (64mm) deep 2-gang boxes and 1 1/2" (38mm) deep 4" square boxes with 2-gang covers, or European 100mm square boxes. The single input signal module shall support the following operations:
 - a. Audible/Visible Signal Power Selector (Polarized 24 Vdc @ 2A, 25Vrms @50w or 70 Vrms @ 35 Watts of Audio)
 - b. Telephone Power Selector with Ring Tone (Fire Fighter's Telephone)

M. Control Relay Module, SIGA-CR

1. Provide intelligent control relay modules SIGA-CR. The Control Relay Module shall provide one form "R" dry relay contact rated at 2 amps @ 24 Vdc to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware. The control relay module shall be suitable for mounting on North American 2 1/2" (64mm) deep 1-gang boxes and 1 1/2" (38mm) deep 4" square boxes with 1-gang covers.

N. Intelligent Manual Pull Stations—General

1. It shall be possible to address each fire alarm pull station without the use of DIP or rotary switches. Devices using DIP switches for addressing shall not be acceptable. The manual stations shall have a minimum of 2 diagnostic LEDs mounted on their integral, factory assembled single or two stage input module. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The station shall be capable of storing up to 24 diagnostic codes which can be retrieved for troubleshooting assistance. Input circuit wiring shall be supervised for open and ground faults. The fire alarm pull station shall be suitable for operation in the following environment:
 - a. Temperature: 32°F to 120°F (0°C to 49°C)
 - b. Humidity: 0-93% RH, non-condensing

Manual Pull Station, SIGA-270

2. Provide intelligent single action, single stage fire alarm stations SIGA-270. The fire alarm station shall be of metal construction with an internal toggle switch. Provide a locked test feature. Finish the station in red with silver "PULL IN CASE OF FIRE" English lettering. The manual station shall be suitable for mounting on North American 2 1/2" (64mm) deep 1-gang boxes and 1 1/2" (38mm) deep 4" square boxes with 1-gang covers. All manual stations which, when activated dial the central station, shall be mechanically identified with a white stripe per NYC code.

O. Notification Appliances – General

1. All appliances shall be UL Listed for Fire Protective Service.
 All strobe appliances or combination appliances with strobes shall be capable of providing the "Equivalent Facilitation" which is allowed under the Americans with Disabilities Act accessibility guidelines (ADA(AG)), and shall be UL 1971, arranged per NYC Building Code.
 All appliances shall be of the same manufacturer as the Fire Alarm Control Panel (NO EXCEPTIONS) specified to insure absolute compatibility between the appliances and the control panels, and to insure that the application of the appliances are done in accordance with the single manufacturers' instructions.
 Any appliances that do not meet the above requirements, and are submitted for use must show written proof of their compatibility for the purpose intended. Such proof shall be in the form of

documentation from THE CONTROL PANEL MANUFACTURER clearly stating that the control equipment (as submitted) is 100% compatible with the submitted Notification Appliances.

P. Strobes, Genesis Series

1. Provide EST Series G1RF-VM series low profile wall mounted strobes at the locations shown on the drawings. Strobes shall provide synchronized flash outputs. Strobe output shall be field selectable as indicated on the drawings in one of the following intensity levels; 15/75, 15cd, 30cd, 75cd or 110cd*. Low profile strobes shall mount in a North American 1-gang box or surface mounted on a matching back box provided by the manufacturer, as directed in the field.

* The fire alarm vendor may select below 75 candela where allowed by the appropriate release of ADA. 15/75 strobes may be used in corridors and in locations where 15 candela is required per NFPA wall and ceiling tables (see NFPA 72).

Q. Remote Relays

1. Multi-Voltage Control Relays, MR-100 Series Provide remote control relays connected to supervised ancillary circuits for control of fans, dampers, door releases, etc. Relay contact ratings shall be SPDT and rated for 10 amperes at 115 Vac. A single relay may be energized from a voltage source of 24 Vdc, 24 Vac, 115 Vac, or 230 Vac. A red LED shall indicate the relay is energized. A metal enclosure shall be provided.

S. Multi-Voltage Control Relays, MR-200 Series

Provide remote control relays connected to supervised ancillary circuits for control of fans, dampers, door releases, etc. Relay contact ratings shall be DPDT and rated for 10 amperes at 115 Vac. A single relay may be energized from a voltage source of 24 Vdc, 24 Vac, 115 Vac, or 230 Vac. A red LED shall indicate the relay is energized. A metal enclosure shall be provided.

R. Electromagnetic Doorholders – General

1. Electromagnetic doorholders submitted for use must have written proof of their compatibility for the purposes intended. Such proof shall be in the form of documentation from all manufacturers that clearly states that their equipment (as submitted) is 100% compatible with each other for the purposes intended.

S. Wall Mounted, 1504/1505/1508/1509 Series

1. Provide flush, semi-flush or surface wall mounted electromagnetic doorholder/releases rated at 24 Vac/dc. Finish shall be brushed zinc.

T. Fused Cut-Out

1. The Contractor shall provide an individual cartridge fused cut-out panel with three (3) poles and a removable, solid copper, neutral bar in fuse gap for the FCS and remote Data Gathering Panels (DGPs).
2. Fused cut-outs shall be provided with silver sand fuses, current limiting type with an interrupting capacity rating of 200,000 amps (r.m.s. symmetrical). The size of the fuses shall be thirty (30) amperes.
3. The fused cut-out panel shall bear an engraved white-core phenolic or bakelite identification nameplate stating in minimum one-quarter inch (1/4") high white letters on a red background "FIRE ALARM FUSED CUT-OUT".

4. A four (4) wire feeder shall bring three phase 120/208 volt service to the fused cut-out. The feeder shall be tapped off the main building service ahead of the main service switch but after the Current Transformers (Metering Transformers).

PART3 -EXECUTION

3.1 INSTALLATION

- A. The entire system shall be installed in a workmanlike manner, in accordance with approved manufacturer's wiring diagram. The contractor shall furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation. All wiring shall be of the type recommended by the manufacturer, approved by the local Fire Department and specified with in.
- B. All penetration of floor slabs and firewalls shall be sleeved (1" conduit minimum) fire stopped in accordance with all local fire codes.
- C. End of Line Resistors shall be furnished as required for mounting as directed by the manufacturer. Devices containing end-of-line resistors shall be appropriately labeled. Devices should be labeled so removal of the device is not required to identify the EOL device.
- D. All manual pull stations shall be mounted 48 inches above the finished floor, as measured to the handle. All manual pull stations that provide central station connection shall include a white strip per NYC code requirements.
- E. All audio/visual devices shall be mounted 80 inches above the finished floor, as measured on center. Devices shall be mounted no less than 6 inches from the ceiling. Audio-visual devices shall be mounted per RS17-5.
- F. No area smoke detectors shall be mounted within 36 inches of any HVAC supply, return air register or lighting fixture.
- G. No area smoke or heat detector shall be mounted within 12 inches of any wall. All detectors shall be installed in strict accordance with NFPA 72 as amended in RS17-5 guidelines for such devices.
- H. All mechanical rooms or areas with no hung ceilings shall be piped with 3/4" conduit. All device plenum rated wiring shall be mechanically protected with conduit.
- I. All areas in public view shall be in metal conduit. All boxes must be painted red.
- J. All addressable modules shall be mounted within 36 inches of the monitored or controlled point of termination. This shall include, but is not necessarily limited to, fan shutdown, elevator recall, shunt trip, sprinkler status points, or door release. Label all addressable modules as to their function.
- K. All low voltage wiring terminated to the fire alarm system shall be PLENUM RATED with no exceptions and no less than No. 12 AWG in size for NAC circuits and 16 AWG for Initiating Circuits, and solid copper.
- L. All line voltage (120VAC) wiring shall be no less than No. 12 AWG in size, and solid copper. This shall include all system grounding. FACP must have a DEDICATED fuse cut out arranged per NYC code.
- M. All wiring shall be color-coded throughout, to National Electrical Code standards

- N. Power-limited/Non-power-limited NEC wiring standards SHALL BE OBSERVED.
- O. All junction box covers shall be painted red.
- P. Fire alarm system wiring shall not co-mingle with any other system wiring in the facility. Conduits shall not be shared under any circumstance. Only when fire alarm wiring enters the enclosure of a monitored or controlled system will co-habitation be permitted (i.e. at fan starters or elevator controllers).
- Q. Auxiliary relays shall be appropriately labeled to indicate "FIRE ALARM SYSTEM" and their specific function (i.e. FAN S-1 SHUTDOWN).
- R. All fire alarm wiring shall be continuous and unspliced. Terminations shall only occur at fire alarm devices or control panel enclosures under terminal screws. All other splicing methods are specifically disallowed (i.e. plastic wirenuts).
- S. All fire alarm wiring shall be installed using a dedicated system of supports (i.e. bridle rings). Fire alarm wiring shall not be bundled or strapped to existing conduit, pipe or wire in the facility.
- T. All fire alarm wiring shall be sleeved when passing through any wall, using conduit sleeves (1" min.) with bushings, and fire stopped in accordance with Code.

3.2 FIELD QUALITY CONTROL

- A. The system shall be installed and fully tested under the supervision of a trained manufacturer's representative. The system shall be demonstrated to perform all of the function as specified.
- B. The installing contractor or fire alarm equipment vendor shall have no less than two (2) NICET Level II fire alarm technicians dedicated to this project.
- C. The Installing Contractor and the Fire Alarm System Vendor shall, upon request, attend any and all project meetings for the purpose of accurately determining progress.
- D. It shall be the responsibility of the installing contractor to assure that construction debris does not adversely affect any sensing devices installed as part of this project. Should it be deemed necessary, the installing contractor shall be responsible for the cleaning of all smoke detectors prior to final acceptance.

3.3 TESTS

- A. The fire alarm system vendor shall test the system in accordance with the manufacturer's requirements and NFPA 72 as amended by the NYC Building Code. The vendor shall provide completed reports for review and approval prior to final acceptance.
- B. Each individual system operation on a circuit by circuit basis shall be tested for its complete operation. The procedure for testing the entire fire alarm system shall be set forth with the consent of the code enforcement official and the manufacturer.

3.4 DOCUMENTATION AND TRAINING

- A. The contractor shall compile and provide to the owners three (3) complete manuals on the completed system to include SITE SPECIFIC operating and maintenance instruction, catalog cuts of all equipment and components, as-built wiring diagrams and a manufacturer's suggested spare parts list.
- B. In addition to the above manuals, the Electrical Contractor shall provide the services of the manufacturer's trained representative for two (2) separate calendar days for a period of four (4) hours per day to instruct the owners' designated personnel on the operation and maintenance of the entire system.
- C. As-built drawings shall consist of the following:
 - 1 Complete revision of all previously submitted drawings
 - 2 Point-to-point depiction of all device wiring on the device layout floor plans.
 - 3 One (1) set of B-size, laminated as-built drawings.
 - 4 Two (2) sets of 30"x42"inch 1\16"=1' scale drawings showing all points of fire alarm. One set shall be submitted with the close-out documents. Second set shall be mounted in frame with a lexan cover. These drawing must be submitted for approval.
- D. Turnover of all software database hard/soft copies shall be required. This shall include all possible programming software logs, diskettes or CDs containing exported project files, hard copies of all device maps, the revision number of the version of programming utility used, and all required passwords. The turnover of all database information shall occur prior to the end of the One (1) year warranty period (or period as amended earlier in this specification).

END OF SECTION 283111

SECTION 31 00 00
EARTHWORK

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work governed by this section, as shown or specified shall be in accordance with the requirements of the Contract Documents and the New York City Building Code (latest edition).
- B. Work of this Section, as shown or specified, shall be in accordance with the Sediment and Erosion Control Plan.
- C. Work of this Section, as shown or specified, shall be in accordance with the Construction Waste Management Plan.
- D. The Construction Manager will arrange and host a pre-construction meeting with the City of New York, and Commissioner, and any Sub-Contractor's involved with dewatering, excavation, waterproofing, and other foundation-related construction work at least three weeks before mobilizing for construction.
- E. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan. Contractor be familiar with the SMP and comply with such at all times.
 - 1. For all excavation onsite, the contractor must follow requirements set forth in the Excavation Work Plan, Appendix 'A' of SMP.

1.2 WORK INCLUDED

Provide all labor, materials, equipment and services and perform all operations required of this Section, included but not limited to the following:

- A. Removal of existing pavements, curbs, tanks, abandoned pipes, utilities, former foundation structures, and other structures encountered which require removal for successful completion of the Work.
- B. General excavation to levels established within the Contract Drawings and as described herein.
- C. Demolition and excavation for the pile caps, slabs, walls, and other foundation elements indicated on the Contract Drawings and as directed by the Commissioner.
- D. Excavation, fill placement, grading and compaction to required elevations for appurtenances and general site work as shown on the Contract Drawings.
- E. Excavation and trenching for temporary works as shown or as required; backfilling same with approved fill; compaction, and rough grading.
- F. Removal of unsuitable subgrade soils, replacement with approved fills, and compaction as dictated by site conditions or as directed by the Commissioner.
- G. Improvement of subgrade conditions via compaction, installation of geotextiles, or placement of approved fill as directed by the Commissioner.

- H. Providing additional approved suitable material for filling and rough grading.
- I. Legal off-site disposal of surplus excavated materials, unsuitable for use as fill or backfill in accordance with soil management plan.
- J. Subgrade preparation for all pile caps and floor slabs.
- K. Protection of adjacent structures, utilities and pavements.
- L. Temporary groundwater control as required for execution of the Work of this Section and for all other related foundation Work.
- M. All other labor, equipment, and materials as may be reasonably inferred to be required to make the work under this Section complete.

1.3 RELATED SECTIONS (FOR COORD.)

- A. Protection of Existing Utilities – Section 02 20 50
- B. Asphalt Paving – Section 32 12 16
- C. Cast-in-Place Concrete – Section 03 30 00
- D. Dewatering and Contaminated Groundwater Management – Section 31 23 19
- E. Sheet piling, Bracing, and Underpinning – Section 31 40 00
- F. Driven Piles – Section 31 62 00
- G. Sanitary Sewage Utilities – Section 33 00 00
- H. Other Utilities – Section 33 90 00

1.4 STANDARDS AND REFERENCES

- A. American Society for Testing and Materials (ASTM) standards, latest edition.
 - 1. ASTM C 33 Standard Specifications for Concrete Aggregates.
 - 2. ASTM D 422 Standard Test Method for Particle Size Analysis of Soils (sieve only).
 - 3. ASTM D 1557 Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.
 - 4. ASTM D 2216 Test Method for Laboratory Determination of Water (Moisture) Content of Rock and Soil.
 - 5. ASTM D 2487 Test Method for Classification of Soils for Engineering Purposes.
 - 6. ASTM D 2922 Standard Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
 - 7. ASTM D 4318 Test Method for Liquid Limit, Plastic Limit, and Plasticity Index.
- B. ACI-318 latest edition – Building Code Requirements for Structural Concrete, latest edition.
- C. ACI-299R – Controlled Low Strength Materials, latest edition.

D. Geotechnical Information for Reference:

1. Geotechnical Interpretive Report prepared by Langan Engineering and Environmental Services, P.C. dated 12 July 2012.

E. Regulatory Requirements and Reference Standards (FOR COORD.)

1. The Contractor shall comply with all the laws, ordinances, codes, rules and regulations of the Federal, State and Local authorities having jurisdiction over any of the work specified herein. The Contractor shall meet NYCDEP Limitations for Effluent, NYSDEC and EPA limitations for discharge into any surface water bodies, federal EPA and State Department of Transportation regulations for shipping of regulated substances to off-site disposal facilities, and meet all regulatory requirements imposed by the Treatment, Storage and Disposal Facility. Regulations pertaining to the transport and disposal of regulated substances/materials include, but are not limited to the following:
 - a. Department of Transportation 49 CFR 172 through 179
 - b. Department of Transportation 49 CFR 387 (46 FR 30974)
 - c. Department of Transportation DOT-E 8876
 - d. Environmental Protection Agency 40 CFR 136 (41 FR 52779)
 - e. Environmental Protection Agency 40 CFR 262 and 761
 - f. Resource Conservation and Recovery Act (RCRA)
 - g. NYCDEC, Rules of the City of New York (RCNY), Title 15, Chapter 19, Use of the Public Sewers.
 - h. NYCDEP, Limitations for Effluent to Sanitary or Combined Sewers.
 - i) NYCDEP, Dewatering Sampling and Testing Requirements.
2. Any transporter of contaminated/hazardous materials shall be licensed in the state in which handling and transportation shall take place in accordance with all applicable regulations.
3. Comply with OSHA (Occupational Safety and Health Administration) Standards and Regulations contained in Title 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response."
4. Where reference is made to one of the above standards the revision in effect at the time of the bid opening shall apply.

- F. All work shall comply with requirements of (all latest editions) the Building Code of the City of New York, requirements of the New York State Department of Labor, requirements of Occupational Safety and Health Administration (OSHA), requirements of New York State Department of Health (NYSDOH), requirements of the New York State Department of Environmental Conservation (NYSDEC), requirements of the New York City Department of Environmental Protection (NYCDEP), requirements of the New York State Department of Transportation (NYSDOT), requirements of New York City Department of Transportation (NYCDOT), and with applicable requirements of all other authorities having jurisdiction.

- G. It is the Contractor's responsibility to perform all work in accordance with these

Specifications and all applicable Federal, State, and City codes and standards. The Commissioner will not be responsible for giving notice of deviations from specifications whenever such deviations occur. The Contractor shall cooperate with the Commissioner in performing all the work.

- H. In case of conflict between regulations and specifications, the Contractor shall comply with the most stringent applicable codes, regulations or specifications.

1.5 SUBMITTALS

- A. Test Reports: Submit the following information for each source of each material submitted for review and approval of the Commissioner:
 - 1. Test reports for all proposed fill materials (either from borrow sources or on-site) as follows:
 - a. Particle size analysis in accordance with ASTM D 422 (sieve only).
 - b. Soil classification in accordance with ASTM D 2487
 - c. Moisture content in accordance with ASTM D 2216
 - d. Modified Compaction Curve in accordance with ASTM D 1557.
 - 2. Include data for all samples indicating the exact location and methods of transportation and placement of all materials.
- B. Samples:
 - 1. Submit a 50-lb (minimum) sample of each material proposed for use as general fill, drainage fill, structural fill, pavement subbase course, etc.
- C. Shop Drawings: Submit detailed shop drawings and calculations to be reviewed by the Commissioner. The drawings and calculations shall be prepared by a Professional Engineer registered in the State of New York. The submittals shall include but not limited to the following:
 - 1. Earth excavation procedures.
 - 2. Backfilling and compacting material, equipment and procedures.
- D. Catalog Cuts: Submit catalog cuts and manufacturer's literature for compaction equipment, vapor barrier, waterproofing membrane, drainage panel/protection board, and drainage materials, and relevant accessories etc. as required by the Contract Documents.
- E. Samples: Submit a 12 inch by 12 inch sample of each geotextile filter fabric, geogrid, and drainage panel proposed for use.
- F. Certification for Examination of Site and Records: Before proceeding with the Work, submit certification in an acceptable form, signed by the Contractor, stating that careful examination has been made of the site, existing structures, existing adjacent structures, records of utility lines, test boring records, soil samples, subsurface exploration reports, the Contract Drawings, and all other Contract Documents.
- G. Certification of attendance at pre-construction meeting hosted by Construction Manager as defined in Section 1.1.D. Submit requests for information for any items requiring clarification or resolution before constructing the work associated with said items

requiring additional information.

1.6 DEFINITIONS

- A. Wherever the word "excavating", "excavate", "excavation", "carried down", "remove", etc., are used, they shall be taken to include the removal of all existing work, including rubble, former foundation remnants, rubbish, earth, as well as rock, boulders, concrete and all other materials and obstructions encountered; they shall also be taken to include all temporary excavation support, bracing, groundwater control, and all other operations and items needed for the proper execution of the Work. Excavation is considered unclassified.
- B. Where the words "finished grades", "finished grade lines", or "future finished grades", appear in these specifications, they shall be taken to mean the finished elevations as indicated on the Contract Drawings.
- C. Rough grading consists of cutting or filling to the elevation herein established with a permissible tolerance of plus or minus 1 inch. This tolerance shall be so used within any area of 100 ft that it will not be necessary to remove excess or bring in additional fill to meet the required elevations.

1.7 PROTECTION

- A. The work shall be executed so that no damage or injury will occur to the existing public and adjoining or adjacent structures, streets, paving, sewers, gas, water, electric or any other pipes. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor shall repair such damage and shall assume all responsibility for such injury.
- B. The above shall also include the protection of all existing utilities (including sewers, water lines, electrical lines and telecommunication lines) to remain in use within and adjacent to the area affected by the work of this project.
- C. Monuments, bench marks and other reference features shall be protected. Should these be disturbed in any manner, the Contractor shall have them replaced at his expense.
- D. Provide barricades, warning lights, and barriers, to prevent accidents, to avoid all necessary hazards and protect the public, the work and property at all times, including Saturdays, Sundays and Holidays.
- E. The Contractor shall maintain the cleanliness of paved streets immediately adjacent to the site through regular sweeping and moistening as required to remove any excess mud, dirt, or rocks tracked from the site. Dump trucks hauling material from the site will be covered with a tarpaulin.

1.8 ERRORS IN DEPTH

- A. In the event that any part of the excavation be carried, through error, beyond the depth and the dimensions indicated on the drawings, called for in the specifications, or directed by the Commissioner, then the Contractor, at own expense, shall furnish and install approved backfill materials with which to fill to the required level without additional cost to the City of New York.

1.9 QUALITY ASSURANCE

- A. Contractor Qualifications: The Contractor performing the work of this Section shall be a qualified excavation contractor with at least 3 years of relevant field experience on projects of similar size, scope, and complexity and shall have completed at least five

jobs of similar size, scope, and complexity.

- B. All work shall comply with the City of New York's Construction Waste Management Plan.
- C. All work shall comply with the requirements of the project's Sediment and Erosion Control Plan.
- D. Codes and Permits:
 - 1. Comply with New York City Building Code, and any other Federal, State, or local codes having jurisdiction.
 - 2. All labor, materials, equipment, and services necessary to make the work comply with such requirements shall be provided without additional cost to the City of New York.
- E. Quality Control Tests and Special Inspection:
 - 1. Before commencing work of this section, meet with representatives of the Commissioner. Review the earthwork procedures and responsibilities including testing and inspection procedures and requirements. Notify participants at least 3 working days prior to convening conference.
 - 2. The City of New York shall engage, under the requirements of Section 1704.1 of the Building Code, one or more Special Inspection Agencies to observe and provide all necessary material testing related to the work of this Section. All inspections and all materials testing shall be performed by Special Inspectors meeting the minimum qualifications outlined in RCNY 101-06.
 - 3. Special Inspections related to earthwork may include but not be limited to the following:
 - a. Proof-rolling of subgrades
 - b. Inspect foundation subgrades.
 - c. Inspect the in-place backfill for compaction. In-place density tests shall be performed in accordance with ASTM D2922, or as approved by the Commissioner for specific fill materials.
- F. The Commissioner will review the Contractor's submittals related to temporary and permanent support of excavations, excavation procedures, dewatering, and materials.
- G. It is the Contractor's responsibility to perform all work in accordance with these Specifications and all applicable Federal, State, and City codes and standards. The Commissioner will not be responsible for giving notice of deviations from specifications whenever such deviations occur. The Contractor shall cooperate with the Commissioner in performing all the work.

1.10 PROJECT CONDITIONS

- A. Refer to the Geotechnical Interpretive Report prepared and associated boring and test data for information pertaining to the general subsurface conditions within the project site.
- B. Boring and other in situ test logs are made available to the Contractor for information only. Conditions are not intended as representations or warranties of accuracy or

continuity between borings. The City of New York will not be responsible for interpretation or conclusions drawn from this data by the Contractor.

1. The Contractor, by careful examination, shall inform himself as to the nature and location of the work, the nature of the subsurface conditions, the locations of the groundwater table, the character, quality and quantity of the materials to be encountered, the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can in any way effect the work.
2. The Contractor shall be held to have visited the site and to have familiarized himself with the existing conditions of adjoining properties, utilities and buildings.
3. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor shall conform to all New York City and State, and Federal regulations in regard to the transportation of materials to and from and at the job site and shall secure in advance such permits as may be required.

PART 2 PRODUCTS

2.1 SOIL MATERIALS:

- A. Structural Fill: Well graded granular soil containing not more than 10% by weight of materials finer than No. 200 mesh sieve and not more than 20% retained on a 3/4" sieve with a maximum particle size of 2-inches.
- B. Drainage Fill: Clean 3/4-inch gravel meeting the requirements of NYSDOT Item No. 605.0901, Underdrain Filter, Type I. Recycled concrete aggregate will not be accepted for use as drainage material.
- C. General Fill: Shall have no more than 20% by weight of stones or masonry debris, containing no stones or other materials greater than 4 inches in any dimension and contain less than 20% by weight materials finer than No. 200 mesh sieve.
- D. Pavement Subbase Fill: Subbase materials below asphalt and concrete pavements shall consist of clean granular soils, crushed stone, or recycled concrete aggregate conforming to the requirements of NYSDOT Item No. 304.14, Subbase Course, Type 4.
- E. Fill for utility trenches shall meet the criteria given for structural fill and shall not contain sharp, angular pieces and pieces larger than 2 inches in any dimension.
- F. Before bringing any fill to the site, the Contractor shall submit the source for approval by the Commissioner.
- G. All fill materials shall be free from wood, debris, combustible materials, organic matter or any material subject to decay or disintegration.
- H. The use of recycled concrete aggregate as structural or general fill shall be permitted provided it meets the gradation requirements above, and is suitable for the application intended. Recycled concrete aggregate will not be accepted for use as drainage material.

2.2 CONCRETE MATERIALS:

- A. Lean Concrete shall conform to ACI 301 and as specified in Section 03 30 00.
- B. Controlled low strength material (CLSM) shall conform to ACI 299R.

PART 3 EXECUTION

3.1 GENERAL SITE PREPARATION

- A. The Contractor shall furnish all labor, equipment and materials required to prepare the site and to excavate all materials of whatever type encountered to the lines and grades shown on the Contract Drawings and as specified.
- B. The Contractor shall give 48 hours advance notice to the Commissioner of the impending completion of excavations so as to allow the Commissioner to inspect the condition of the exposed surface for footings, pile caps, slabs and pads and review the ground water conditions in accordance with the NYC Building Code requirements for Special Inspection.
- C. Install all necessary protection equipment, structures such as fences, signs, scaffolding, etc. prior to start of work.
- D. Remove all existing structures, utilities, and pavement in accordance with the Contract Documents.
- E. Protect all utility lines which are not to be abandoned. The Contractor shall be responsible for any damage to utilities resulting from the Contractor's actions.
- F. Stockpile on-site materials anticipated for re-use. Care shall be taken to avoid blending with the deleterious materials. Stockpiling and re-use of soil shall comply with the requirements of Site Management Plan in Appendix A of specification.

3.2 GROUNDWATER AND SURFACE WATER CONTROL

- A. Groundwater control shall be in accordance with:
 - 1. Local, State and Federal standards and guidelines.
 - 2. Dewatering and Contaminated Groundwater Management Specification 31 23 19.
- B. The Contractor shall be responsible for maintaining groundwater levels at least 2 ft below the levels of any excavation.
- C. All pumping and dewatering shall be performed in such a manner as to avoid the movement of fines or loss of ground from below the bearing level and shall not influence the stability of surrounding areas.
- D. The Contractor shall be responsible for controlling surface water on-site. Excavations shall be protected from deleterious effects of surface water accumulation. The Contractor shall grade accordingly to minimize run-off from entering and accumulating in excavations.

3.3 EXCAVATION

- A. General
 - 1. The excavation shall be unclassified and shall comprise and include the

satisfactory removal and legal disposal of all materials encountered regardless of the nature of the materials and shall be understood to include boulders, earth, hardpan, miscellaneous fill, foundations, structures, slabs, walls, utilities, pavements, curbs, piping and debris.

2. All excavation shall extend to the depths of the form and size required for the installation of the work as indicated on the Contract Drawings. When excavations for foundations have reached the required depths, the Commissioner shall make an inspection of the conditions.
3. Excavation shall be made to a depth that will allow installation of full depth of concrete slabs, sub-base/mudmat, waterproofing, as shown on drawings. Excavation lines shall provide sufficient clearance for the proper execution of all concrete work including allowances for form work, shoring and inspection.
4. Materials that, in the opinion of the Commissioner, are not suitable for reuse as fill, any surplus earth and all rock shall be removed from the site and legally disposed of.
5. The bottom of excavations shall be leveled off, free of standing water and loose materials and graded to receive foundations, slabs, pits, pile caps, trenches, grade beams, etc.
6. Where required, waterproofing shall be installed in accordance with the Contract Drawings and Specifications.
7. Subgrades of pile caps, slabs, and other foundation elements shall be level and free of loose soil, standing water and frost prior to acceptance for placing concrete.
8. Approved subgrades for pile caps, slabs, footings shall be sealed with a 3-inch-cover of lean concrete to provide stabilization of the subgrade and provide a suitable substrate for installation of waterproofing membranes.

3.4 SUBGRADE PREPARATION

- A. Proofrolling shall be performed for all subgrade outside the limits of the proposed building including all adjacent site work and pavements.
- B. Proofrolling of subgrades shall conform to the following requirements:
 1. All subgrades shall be proofrolled in the presence of the Special Inspector.
 2. Proofrolling shall be accomplished with a minimum of six overlapping cross-rolled coverages of a smooth drum roller having a static weight of at least 10-tons. A vibratory trench roller having a static weight of at least 1.5 tons shall be in confined areas as approved by the Commissioner or Special Inspector. Areas inaccessible to the heavy equipment shall be compacted using a vibratory plate or jumping jack compactor as directed by the Commissioner. The maximum travel speed of rollers should not exceed 1.5 mph.
 3. Vibratory or impact compaction shall not be performed on soils which are not within 2 percent of the optimum moisture content as determined by ASTM D1557. Disking, harrowing, or other methods of drying the soils should be performed as necessary to facilitate drying and subsequent proofrolling.
 4. Fill shall not be placed until the subgrade is approved by the Special Inspector.

5. Soft Areas during Compaction: Areas deemed unsatisfactory due to "pumping, rutting, or heaving" shall be undercut within the limits and extent ordered by the Special Inspector or Commissioner. These areas shall be replaced with an approved fill, and compacted to the requirements of this Section or as directed by the Special Inspector or Commissioner.

3.5 FILL PLACEMENT, GRADING, AND COMPACTION

- A. Filling and backfilling shall not be performed until related work has been inspected by the Special Inspector.
- B. All subgrades shall be free of wood, organics, or other deleterious materials prior to placement of any fill.
- C. Fill shall be placed such that there are no void spaces below floors, bottoms of pits, trenches, pipe haunches, pavements, etc.
- D. Fill shall not be placed against concrete elements until the concrete has obtained its specified compressive strength, unless otherwise directed by the Commissioner. Where fill is required on both sides of a wall, said fill shall be brought up simultaneously and evenly on both sides.
- E. Fill voids caused by the removal of boulders, and/or below grade improvements, with lean concrete, CLSM, or structural fill.
- F. The Contractor to supply and install all fill materials necessary to bring the ground surfaces to the required levels as shown on the Contract Drawings and as necessary to make the work complete.
- G. All surplus materials shall be removed from site and legally disposed of. Should additional material be required for the placing of backfill, other than material obtained from the site, the Contractor shall obtain, deliver, and place accepted backfill material as required.
- H. Fill Placement:
 1. Begin placement of fill and backfill at the lowest section of the area. Spread material evenly by mechanical equipment or by manual means above the approved compacted subgrade in lifts not exceeding 10-inches for material compacted by heavy machinery and 4-inches for material compacted by hand tamping.
 2. Build layers as horizontally as practical to prevent thickness of lift from exceeding that specified but provide with sufficient longitudinal and transverse slope to provide for runoff of surface water from every point.
- I. Moisture Control: The moisture-density curve for the fill used shall be supplied by the Contractor as a guide in controlling moisture to achieve the required degree of compaction. If, in the opinion of the Special Inspector, fill material becomes too wet for the required compaction, the fill shall be dried by a method approved by the Commissioner prior to commencing or continuing compaction operations. Likewise, if, in the opinion of the Special Inspector, the fill material becomes too dry for the required compaction, the fill shall be moistened by a method approved by the Commissioner prior to commencing or continuing compaction operations.
- J. Compaction:
 1. Pile and Caisson Supported Structures:

- a. Compact each lift to at least 92 percent of the soil's maximum dry laboratory density as determined by ASTM D1557.
- 2. Footings, slabs-on-grade, pavement, and utilities:
 - a. Compact each lift to at least 95 percent of the soil's maximum dry laboratory density as determined by ASTM D1557.
- 3. The degree of compaction shall be checked by the Special Inspector and each successive lift shall not be placed or compacted until the previous lift is inspected and approved by the Special Inspector. Compact all fill to elevations and limits shown on Contract Drawings.

- K. Frost: Do not place fill materials when either the fill materials or the previous lift (or subgrade) on which it is placed is frozen. In the event that any fill which has already been placed on the surface shall become frozen, it shall be scarified and recompacted, or removed, to the approval of the Special Inspector before the next lift is placed. Remove or recompact any soft spots resulting from frost to the satisfaction of the Commissioner before new fill is placed.

3.6 FIELD QUALITY CONTROL

- A. The City of New York will employ, at his own expense, a Special Inspector to review all laboratory test results and submitted reports specified in this Section.
- B. The Commissioner will interpret the tests, state in each report whether or not the test specimens and results comply with all requirements of the Contract Documents and note any deviations.
- C. The Commissioner will identify when and where samples are to be obtained. Contractor shall collect samples and forward them to the City of New York's Testing Laboratory for testing. The City of New York's Testing Laboratory shall submit the following laboratory test reports to the Commissioner for review:
 - 1. Gradation Analysis - ASTM D 422.
 - 2. Atterberg limits - ASTM D 4318.
 - 3. Modified Moisture-density curve determination - ASTM D1557.
- D. The Commissioner will determine the conformance of materials to be used for fills.
- E. Special Inspection: All special inspections shall comply with the requirements of the New York City Building Code.
- F. Proofrolling: Proofrolling shall be inspected by the Commissioner.
- G. Backfilling and Compaction: Backfilling and compaction below foundations, building slabs, behind foundation walls, and any other backfilling and compaction work shall be inspected by the Commissioner. No fill shall be placed unless the previous lift is approved by the Commissioner. Commissioner will take field density tests of the subgrade for every 2000 sq-ft, but not less than 3 tests in each compacted fill layer. Field density tests shall be performed in accordance with ASTM D2922.
- H. The Contractor shall cooperate with the Commissioner in the performance of the required tests and inspections.

3.7 MAINTENANCE

- A. Protect newly graded areas and membrane waterproofing from erosion and traffic. Keep free of trash and debris.
- B. Repair and re-establish grades in settled, eroded, and rutted areas to specified tolerances.
- C. Where completed or compacted areas are disturbed by subsequent construction operations or adverse weather, scarify surface, reshape, and compact to required density prior to any further construction.
- D. Where settling is measurable or observable at excavated areas during general project warrantee period, remove surface (pavement, or other finish), add backfill material, compact, and replace surface treatment. Restore appearance, quality, and condition of surface or finish to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.8 CLEAN-UP

- A. All excess material including earth, rock and fill shall be removed from site and legally disposed of.
- B. All lumber, forms and metal work shall be removed immediately after completion of local areas. The Contractor shall be responsible for removal of all debris produced by work to this section from the site.
- C. Sidewalk and streets adjoining the property shall be broom cleaned and free of debris, rubbish, trash and obstructions of any kind caused by the work of this Section.

END OF SECTION

SECTION 31 10 00

SITE PREPARATION AND CLEARING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions and DDC General Conditions, apply to the work of this Section and are hereby made a part of this section.
- B. Examine all Drawings and other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

- A. The work of this Section includes, but is not limited to, the following:
 - 1. Temporary Construction Fence and Gates.
 - 2. Semi-Permanent Construction Fence and Gates.
 - 3. Protection of existing improvements to remain.
 - 4. Cutting of existing grade to establish construction grade.
 - 5. General demolition and removal.
 - 6. Coordination of disconnection and capping of utilities as needed.
 - 7. Complete controlled, selective demolition and removal from the site of all existing construction, materials, and systems as needed to properly complete the work of the Contract Documents.
 - 8. Post construction cleanup.
- B. All work shall also include the protection from injury or defacement of objects designated to remain, as shown on the Drawings or as directed by the Landscape Architect or Commissioner.

1.3 RELATED SECTIONS

- A. The following items of related work are specified and included in other Sections of the Specifications:
 - 1. Section 31 25 00 – Erosion and Sediment Control

1.4 DEFINITIONS

- A. The following related items are included herein and shall mean:
 - 1. ASTM: American Society of Testing Materials.

2. Standard Specifications: NY State Department of Transportation, Specification Book for Highway Construction, Latest Edition, and addenda.

1.5 SUBMITTALS

- A. Shop Drawings: Shop drawings shall show all details including sizes, materials, quantities and manner of assembling the various members, properly coordinated with the related work. Shop Drawings shall show true profiles, methods of anchoring hardware, if any, and all other necessary information. Work includes but is not limited to:
 1. Semi-Permanent Construction Fence and gates, including attachments and fencing details.
- B. Mockup: Provide a mockup sufficient to demonstrate appearance and function of completed semi permanent fence. Mockup may become part of the final work if acceptable to the Landscape Architect and City of New York..
 1. Semi-Permanent Construction Fence and Gate: 1 Section

1.6 PROJECT CONDITIONS AND EXAMINATION OF CONDITIONS

- A. General: The Contractor shall visit and accept the site as he finds it, and shall inform himself of the character and the type of site items to be removed. The City of New York assumes no responsibility for the actual condition or structural adequacy of any existing construction to be demolished.
 1. Damage or loss to site improvements shall be at the risk of the Contractor from and after the date of Contract execution, and no such damage or loss shall relieve the Contractor from any obligation under the Contract.
 2. The Contractor shall walk the site with the Landscape Architect and/or Commissioner prior to commencing work to determine the full scope of demolition and items to remain.
- B. The Contractor shall fully inform himself of existing conditions of the site before submitting his bid, and shall be fully responsible for carrying out all site work required to fully and properly execute the work of the Contract, regardless of the conditions encountered in the actual work. No claim for extra compensation or extension of time will be allowed on account of actual conditions inconsistent with those assumed.
- C. Plans, surveys, measurements and dimensions under which the work is to be performed are believed to be correct to the best of the Landscape Architect's and City of New York's knowledge, but the Contractor shall have examined them for himself during the bidding period, as no allowance will be made for any errors or inaccuracies that may be found therein.
- D. Disposal: Dispose of cleared and removed material off the site. Burning of materials on the job site will not be permitted. Stockpile salvaged material in a secured location, designated by the Landscape Architect or Commissioner.

- E. Traffic: Adjacent areas and streets will continue to be used throughout the construction process. Conduct operations and removal of debris to ensure minimum interference with the normal use of corridors, public ways and other adjacent facilities. Do not close or obstruct traffic ways, corridors, streets, walks or other used facilities without the written permission of the City of New York and authorities having jurisdiction.
- F. Related Construction Contracts: The contractor is required to provide complete cooperation and coordination for construction of the park in tandem with associated construction projects that will be occurring on adjacent building sites and roads. Coordination shall be planned so that there is no delay to the construction contract.
- G. Protection: The buildings and the adjacent parking areas and streets will be occupied and operational during construction. The Contractor shall provide access for pedestrians and service vehicles as per Division 1. The Contractor shall take all necessary precautions, including but not limited to, traffic control and construction of temporary ramps, access routes or enclosures, to ensure the safe passage of pedestrians and the normal functioning of the buildings, site areas, and service areas. Ensure the safe passage of persons in and around the work areas during and after demolition. Prevent injury to persons and damage to property. Immediately repair damaged property to its condition before being damaged.
- H. Dust and Noise Control: Take effective measures to prevent windblown dust and to control noise to avoid creating a nuisance. Obtain approval of means, methods and techniques used to control dust and noise from Landscape Architect or Commissioner. Chemicals deleterious to plant growth may not be used on subgrades of areas that will be seeded or planted. Avoid creating ice hazards in freezing weather.

1.7 EXISTING UTILITIES

- A. The Contractor must verify the location of all utilities in the limit of work before starting work, including but not limited to gas, electric, telephone, storm drainage, sanitary drainage, fiber optic, telecommunication, cable, and water services.
 - 1. The Contractor shall locate and mark underground utilities to remain in service before beginning work. Markings shall remain throughout the length of the project.
- B. Maintain all utilities except those requiring removal or relocation. Keep utilities in service and protect from damage. Do not interrupt utilities serving used areas without first obtaining permission from the utility company, and the Commissioner. Provide temporary services as required and review interim utility service plan with the Commissioner prior to interruption of service.
- C. Active utilities and drains shall be adequately protected from damage and removed or relocated only as indicated on Drawings or as directed by the Commissioner. Where active utilities are encountered but not shown on the Drawings, the Contractor shall notify the Commissioner immediately in writing.

The Contractor shall protect and maintain these utilities until written instructions are received from the Commissioner or Landscape Architect.

- D. Inactive and abandoned utilities and drains encountered in excavating and site preparation operations shall be reported to the Commissioner immediately. They shall be removed, plugged or capped as directed by the Commissioner. Utilities that were not identified by the survey and the Contractor's examination of City of New York's and utility company records, but which are discovered through excavation will be considered extra work, to be approved by the Commissioner.
- E. The Contractor shall provide strawbales on all sides of existing drain inlets and maintain these measures throughout construction, or until instructed by the Commissioner or the Landscape Architect

1.8 PROTECTIONS

- A. The Contractor in executing all work under this section shall observe all local rules and regulations governing the works.
- B. All work shall be executed in a manner to prevent any damage to existing buildings, streets, paving, service utility lines, structures, existing improvements, adjoining property and existing improvements on adjoining property.
- C. Items to remain and existing improvements that are damaged shall be restored to their original condition that is acceptable to the Landscape Architect, Commissioner, and parties having jurisdiction. Restoration work shall be at no cost to the City of New York and parties having jurisdiction.
- D. Approval for performing removal and alteration work on property adjoining the City of New York's property shall be obtained by the Contractor prior to beginning work.
- E. All work shall be executed in a manner that takes every and all precautions to assure safe work operations.
- F. All protective fencing shall be in place prior to start of work.

1.9 SOIL EROSION AND SEDIMENT CONTROL

- A. Erosion control measures shall be, at a minimum, in conformance with State of New York Department of Transportation Specification Book for Highway Construction, and the New York Department of Environmental Conservation.
- B. Conform to the requirements of Section 31 25 00 Erosion and Sediment Control. In the event of a discrepancy, the stricter standard shall apply.
- C. The contractor shall furnish a schedule of anticipated starting and completion dates for each sequence of land disturbing activity.
- D. Prior to any other construction, a stabilized construction entrance shall be constructed at the point of entry/exit to and from the site.

- E. The construction exit shall be maintained in a condition that will prevent tracking or flow of mud onto public right of way. This may require periodic top dressing with stone, as conditions demand, and repair and/or clean out of any structures used to trap sediment. All materials spilled, dropped, washed, or tracked from vehicle or site onto public right of way or into storm drain must be removed immediately.
- F. Immediately after the establishment of construction entrances/exits and prior to any other construction, all work limit fencing and stormwater management devices must be installed.
- G. The phasing and sequencing of major grading activities shall conform to plans and specifications.
- H. The construction of the site will initiate with the installation of measures sufficient to control sediment deposits and erosion. All sediment control measures will be maintained until all upstream ground within the construction area has been completely stabilized with permanent vegetation and all roads/driveways and walks have been paved.
- I. The contractor is responsible for controlling erosion in all drainage patterns created during construction. Any difficulty in controlling erosion during any phase of the construction shall be reported immediately to the Commissioner by the contractor.
- J. The contractor shall remove accumulated sediments when they reach half the capacity of the erosion control devices. Sediment/erosion control devices must be checked after each storm event.
- K. Failure to install, operate, or maintain all erosion control measures will result in the cessation of all construction until such measures are corrected to the local jurisdiction or city standards.
- L. Any additional construction other than shown in the Drawings will require separate and additional erosion and sediment control measures and approval.
- M. The contractor is responsible for cleaning any and all sediment leaving the site. The contractor shall be responsible for repairing all damages caused by the accumulation of sediment.

1.10 ENVIRONMENTAL PERFORMANCE REQUIREMENTS

- A. Subsoil shall be provided by the Contractor from on-site material that has been stockpiled from site excavation for re-use. Off-site borrow should only be used when on-site sources are exhausted.
- B. Provide on-site locations for as much excavated rock and soil as possible.
- C. Separate organic and inorganic material from site clearing.

- D. All pesticides (e.g. herbicides, insecticides, etc.) must be EPA approved and applied per manufacturer's instructions. All pesticide use must be approved by Commissioner. Pesticide use must follow local, state, and federal regulations.
- E. Avoid the use of pesticides that are assigned Hazard Category I by the EPA; such products bear the signal word "DANGER" on their labeling. See www.epa.gov/oppfead1/labeling/lrm/chap-08.htm for additional information.
- F. Collect and transport all salvageable and recyclable scrap material in accordance with requirements of DDC General Conditions.

PART 2 PRODUCTS

2.1 GENERAL

- A. Provide all materials, equipment and supplies as required to completely perform the demolition work specified herein and as shown on the Drawings.

2.2 LAYOUT EQUIPMENT

- A. Stakes and batter-boards shall be of size and quality necessary to execute work. The Contractor shall use wire, non-stretching cord, or laser equipment to establish reference lines.

2.3 PROTECTION OF DRAINAGE / SEDIMENTATION CONTROL

- A. Conform to the requirements of Section 31 25 00 Erosion and Sediment Control.

2.4 TEMPORARY FENCE AND GATES

- A. Protective fences and gates shall be chain link fence components including posts, rails, fabric, and miscellaneous accessories. Limits shall be as shown on the Drawings or as determined by the Landscape Architect or Commissioner. All fence components shall be galvanized. Fence and gate components may be used (second hand) if in good shape.
 1. Contractor shall obtain Commissioners approval of all fence components before obtaining fence system.
 2. Protective fences shall include the Construction Perimeter Fence (temporary).
 3. Protective fence and gate components shall include 2.5"Ø posts, 1.5"Ø top and bottom rails, and 9 gage 2" x 2" chain link fence fabric. Posts shall be set at a depth necessary to provide a secure and stable fence system. Posts shall be located at a maximum distance of 10'-0" on center. Minimum height of complete assembly shall be 8.0 feet. Contractor shall examine the site preparation plan to determine extent of posts required to accommodate the fence layout. Gates shall be lockable and shall be located as shown on the drawings.

4. All fences and gates shall have green windscreen fabric securely tied to the interior surface of the chain link fabric. Netting shall extend entire height of the fence fabric. Periodically inspect and maintain fabric.
 - (a) Netting shall be 100% polypropylene fabric, 28 x 14 Lathe-Leno weave. Color shall be black. Netting shall extend the full height of the chain link. Acceptable manufacturer: Mytarp.com, Marietta, Georgia, Tel: 404.551.4347, Web: www.MyTarp.com, or approved equivalent.
5. The layout of the protective fence shall be considered schematic. The contractor shall be responsible for providing sufficient fences and gates to secure the site throughout the construction process.
 - (a) Review and obtain approval for the fence layout with the Landscape Architect and Commissioner. Do not erect the fence until approval has been obtained.

2.5 SEMI PERMANENT FENCE AND GATES

- A. Standard NYS DOT Temporary Concrete Barrier with Chain Link Pedestrian Fencing, with the following modifications:
 1. All components shall be new – recycled components shall not be acceptable.
 2. Fencing shall be core drilled into top surface of concrete barrier, not fastened to side of barrier.
 3. Fencing shall be provided with green windscreen fabric of the type described in this Section.

PART 3 EXECUTION

3.1 PREPARATION

- A. Call Dig Safely New York at 1-800-962-7962 not less than two working days before performing Work.
 1. Request underground utilities to be located and marked within and surrounding construction areas.

3.2 PROTECTION

- A. The Contractor shall provide protections necessary to prevent damage to existing improvements indicated to remain in place and newly constructed improvements on City of New York property.
- B. The Contractor shall protect existing improvements on adjoining properties from any damage.
- C. The Contractor shall notify the City of New York of any utility marked that is not shown on the project drawings immediately and prior to construction.

- D. The Contractor shall restore damaged improvements to their original condition, as acceptable to the Landscape Architect, City of New York and parties having jurisdiction.

3.3 ESTABLISHMENT OF CONSTRUCTION GRADE

- A. Establish construction grade by cutting to the grades indicated on the Drawings.
- B. Completely dispose of cut soils off site before beginning construction.

3.4 GENERAL DEMOLITION AND REMOVALS

- A. General conditions of demolition and removal:
 - 1. Demolish and remove existing improvements and obstructions above-grade and below-grade to permit construction and other work as indicated on the Drawings and specified herein.
 - 2. Review extent of demolition and removal with the City of New York and the Landscape Architect before beginning work. Do not proceed in uncertainty.
- B. Garbage, debris, and other refuse in areas of earthwork and new construction and, in other areas as directed by the City of New York, shall be completely removed prior to beginning the construction and legally disposed off site. Remove organic or recyclable materials in accordance with Division 1 and this Section.
- C. Permit the City of New York, Commissioner and Landscape Architect to view stockpiled items at any time during construction.
- D. Temporary Finished Grade: Remove soil and borrow used for temporary finished grade adjacent existing pavements and other improvements, as indicated on the Drawings. Remove to a flush condition with surrounding existing grade.

3.5 UTILITY DEMOLITION AND REMOVAL

- A. Utilities shall be disconnected as required for construction of the site improvements, as approved by the Commissioner and in accordance with Utility Companies. Where disconnection will interrupt the utility services to an area not included in the contract, arrangements for such interruption shall be made with utility company and users 14 working days in advance of the interruption.
- B. Remove abandoned utilities. Indicate removal termination point for underground utilities on Record Documents.
- C. Backfill areas disturbed by utility removal in accordance with requirements for new improvements and in accordance with utility company requirements.
- D. Extent of utility removal is shown on the Drawings.

3.6 DISPOSAL OF WASTE MATERIAL

- A. See DDC Standard General Conditions

3.7 POST CONSTRUCTION CLEANUP

- A. The Contractor shall completely remove all signs of temporary construction facilities such as haul roads, work areas, structures, foundations of temporary structures, stockpiles of excess or waste materials, fencing, or any other vestiges of construction. Disturbed areas shall be graded and filled with approved subsoil to the depths indicated on the Drawings.
- B. Refer to Division 1 for site restoration, cleanup, and closeout requirements.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 312319

FOUNDATION DRAINAGE SYSTEM

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.
- B. LEED BUILDING - GENERAL REQUIREMENTS: The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the foundation and underslab drainage system as shown on the drawings and/or specified herein including, but not limited to, the following:
 - 1. Perimeter foundation drainage system terminating and connecting into storm drainage system.
 - 2. Drainage fill.
 - 3. Penetrations through concrete walls.
 - 4. Filter cloth and filter drainage mat.

1.3 RELATED SECTIONS

- A. Construction waste requirements – Section 017419.
- B. Sustainable design requirements (LEED Building) – Section 018113.
- C. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018114.
- D. Construction IAQ requirements – Section 018119.
- E. Earthwork - Section 312000.
- F. Cast in place concrete - Section 033000.
- G. Foundation waterproofing - Section 071326.

1.4 REFERENCES

- A. Only the latest editions of the following standards shall form part of the Specification to the extent indicated by the reference thereto:
1. ASTM A74 – Standard Specification for Cast Iron Soil Pipe and Fittings.
 2. ASTM D2729 – Standard Specification for PolyVinyl Chloride (PVC) Sewer Pipe and Fittings.
 3. ASTM D4491 – Standard Test Methods for Water Permeability of Geotextiles by Permittivity.
 4. ASTM D4751 – Test Method for Determining Apparent Opening Size of a Geotextile.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, per Section 018113 - 1.5.C (Sustainable Design Requirements) of these specifications.
 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
 5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.
- B. Certification: Submit certification signed by Contractor and foundation drainage system installer that installed materials conform to specified requirements and system was successfully checked and tested by the Contractor prior to covering with drainage fill.
- C. Shop Drawings: Submit complete layout of piping system for approval showing all elevations.
- D. Catalog Cuts: Submit catalog cuts and manufacturer's literature for piping material, geotextile fabric and drainage panels.

1.6 QUALITY ASSURANCE AND TESTING

- A. Codes and Standards: Perform foundation drainage work in compliance with applicable requirements of governing authorities having jurisdiction.
- B. All fill materials and placing shall be subject to quality control tests and testing, which will be performed by Commisisoner. Copies of results and laboratory recommendations shall be submitted to the Contractor.
- C. The Contractor shall provide, to the Commissioner, samples of each fill and backfill material from the proposed source of supply. Allow sufficient time (minimum two weeks) for testing and evaluation results before material is needed. Submit samples from alternate source, if required.
- D. The commissioner shall be sole and final judge of suitability of all fill and backfill material.
- E. Tests of fill material, as delivered, may be made from time to time. Materials in question may not be used, pending test results. Remove rejected materials and replace with new, whether in stockpiles or in place, at no additional cost to the City of New York.
- F. The Contractor must cooperate with the Commissioner and give 72 hours. written notice prior to any fill placement and inspection.

PART 2 PRODUCTS

2.1 DRAINAGE PIPE

- A. Drainage pipe shall be perforated polyvinyl chloride pipe, 6" dia., conforming to ASTM D2729, bell and spigot ends, for loose joints.
 - 1. Minimum wall thickness of pipe shall be 0.100".
 - 2. Pipe shall have 3/8" dia. perforations.
- B. Provide elbows, connections, fittings, etc. for piping as required furnished by pipe manufacturer for type of pipe used.

2.2 POROUS PIPE FILTER

- A. Well-graded crushed stone or gravel, free of organic materials, with no less than 85% passing the 3/8" sieve and 100% retained on the No 30 sieve (all sieves U.S. standard), commercially known as 3/8" crushed stone.

2.3 GEOTEXTILE FILTER FABRICS

- A. Woven or non-woven geotextile filter fabric of PP or polyester fibers, or combination of both. Flow rates range from 110 to 330 gpm per sq. ft. when tested according to ASTM D4491. Available styles are flat and sock.

2.4 MOLDED SHEET DRAINAGE PANELS

- A. Prefabricated composite panels manufactured with geotextile facing laminated to molded plastic drainage core equal to "Miradrain 6000XL" made by T.C. Mirafi or equal made by W.R. Grace or American Wick Drain Corp.

2.5 CAST IRON PIPE AND PIPE SLEEVES

- A. Provide cast iron pipe conforming to ASTM A74, "Service" grade.
- B. Provide cast iron pipe with all special shapes as required, including special connections wherever cast iron intersects with concrete pipe.
- C. Cast iron pipe shall be used where drainage pipe penetrates foundation wall or other concrete walls, and for connection to sump pits.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where drainage system is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Foundation Drainage

- 1. For foundation walls install drainage panels adjacent to waterproof membrane and protection board. Use adhesive for holding panels in place; follow recommendations of panel manufacturer.
- 2. Drainage panels shall extend from 12" below grade level to bottom of foundation wall unless shown otherwise on drawings.
- 3. Set drainage pipe with perforations up adjacent to footings surrounded by 6" of porous pipe filter. Wrap entire porous pipe filter with drainage panel fabric peeled from drainage panel or use other methods as recommended by drainage panel manufacturer to allow water to pass freely into drainage pipe and to prevent soil particles from entering and clogging system.
- 4. Set pipe to a minimum slope of 0.5 percent.

3.3 CLEANING

- A. Clear interior of installed piping and structures of dirt and other superfluous material as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed. Place plugs in ends of uncompleted pipe at end of each day or when work stops.

END OF SECTION

SECTION 31 25 00 - EROSION AND SEDIMENTATION CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. The provisions of the New York State Department of Environmental Conservation (NYSDEC) New York State Standards and Specifications for Erosion and Sediment Control shall govern the work of this section.
- B. Provide all labor, materials, equipment and services to implement all erosion and sediment control practices and procedures as indicated in The Contract Documents.
- C. Section Includes:
 - 1. Furnish and install erosion and sediment controls for each work area prior to commencement of work within that area. Controls include but are not limited to: silt fence, straw bale dikes, stabilized construction entrances, inlet filter fabric protection, temporary earth dikes, erosion control blankets, temporary sediment traps, and temporary storm piping and structures for the traps as indicated in the Contract Documents.
 - 2. Initiate temporary and permanent stabilization measures as indicated in the Contract Documents.
 - 3. Inspect and maintain all erosion and sediment control practices weekly, prior to anticipated rainfall events, and after rainfall events. Needed repairs shall be made immediately.
- D. Related Sections:
 - 1. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements, and other related Division 01 Sections regarding specific requirements for LEED certification
 - 2. Section 01 74 19 - Construction Waste Management and Disposal
 - 3. Section 31 23 19 - Dewatering

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Protect adjacent properties and water resources from erosion and sediment damage throughout construction in accordance with the NYSDEC.
- B. Do not direct discharge from dewatering operations to public sewers without prior approval from New York City Department of Environmental Protection (NYCDEP).

- C. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan.

1.4 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:
 1. NYSDEC New York State Standards and Specifications for Erosion and Sediment Control, August 2005.
 2. United States Department of Environmental Protection Agency (EPA) Document No. EPA 832/R-92-005, "Storm Water Management for Construction Activities", Chapter 3.
 3. New York City Building Code.

1.5 SUBMITTALS

- A. Submittals shall include, but are not limited to the following for all erosion control products and seed mixes: shop drawings, cut sheets, installation instructions and manufacturer's specifications.
- B. All calculations and shop drawings shall be signed and sealed by a Professional Engineer registered in the State of New York.
- C. LEED Submittals: Submit the following information for all materials in this section.
 1. Recycled Content: Submit certification/letter from material supplier(s) highlighting percentage of recycled content, both post consumer and pre consumer.
 2. Submit photographs documenting that the control measures outlined and required in this Section have been installed, implemented and maintained on the site for the duration of the project. Take photographs at regular intervals during construction.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Store materials in designated areas and as recommended by the manufacturer to protect against the elements, direct exposures, and damage.
- B. Furnish erosion control blankets, jute mesh and geotextile fabric in rolls with suitable wrapping to protect against moisture and extended ultraviolet exposure prior to placement.

1.7 WARRANTY

- A. Erosion control material shall have a warranty for use and durable condition for project specific installations.
- B. Temporary erosion control materials shall carry a minimum eighteen (18) month warranty.

- C. Permanent erosion control materials shall carry a minimum three (3) year warranty.

PART 2 - PRODUCTS

2.1 SILT FENCE

- A. Silt fence posts: wood, steel, or an approved synthetic material, with a minimum length of three (3) feet. Hardwood posts shall have a minimum cross sectional area of three square inches. Steel posts shall be standard T and U sections weighing not less than 1.00 pounds per linear foot.
- B. Silt fence fabric: Fabric shall meet or exceed the following specifications:

PROPERTY	UNIT	TEST METHOD	MIN. ACCEPTABLE VALUES
Grab Tensile Strength	lbs.	ASTM D1682	90
Elongation at Failure	%	ASTM D1682	50
Puncture Strength	lbs.	ASTM D751	40
Mullen Burst Strength	PSI	ASTM D 3786	190
Slurry flow rate	(gal./min.sf)		0.3
Equivalent Opening Size		US Std. Sieve CW-02215	40-80
Ultraviolet Radiation Stability	%	ASTM G-26	90

- C. Wire Fence: Minimum 14 gage with a maximum six inch mesh opening.
- D. Prefabricated silt fence units: Mutual MISF 1776 or approved equal.

2.2 STRAW BALE DIKE

- A. Hay or straw bales: New straw that shall be either wire bound or nylon string tied.
- B. Bale stakes: Rebar, steel pickets, or 2-inch x 2-inch hardwood stakes.

2.3 STABILIZED CONSTRUCTION ENTRANCE

- A. Stone aggregate: 1-inch to 4-inch clean stone or reclaimed or recycled concrete
- B. Geotextile: woven or non-woven fabric consisting only of continuous chain polymeric filaments or yarns of polyester. The fabric shall be inert to commonly encountered chemicals, hydro-carbons, mildew, rot resistant, and conform to the fabric properties shown:

PROPERTY	UNIT	TEST METHOD	Light duty* Roads Grade Subgrade	Heavy duty** Haul Roads Rough Graded
Grab Tensile Strength	lbs.	ASTM D1682	200	220
Elongation at Failure	%	ASTM D1682	50	60
Puncture Strength	lbs.	ASTM D751	40	125
Mullen Burst Strength	PSI	ASTM D3786	190	430
Equivalent Opening Size		US Std. Sieve CW-02215	40-80	40-80
Aggregate Depth	(inches)	-	6	10

*light duty roads: Area sites that have been graded to subgrade and where most travel would be single axle vehicles and an occasional multi-axle truck. Acceptable materials are Trivera Spunbound 1115, Mirafi 100X, Typer 3401, or equivalent.

**heavy duty roads: Area sites with only rough grading, and where most travel would be multi-axle vehicles. Acceptable materials are Trevira Spunbound 1135, Mirafi 600X or equivalent.

2.4 FILTER FABRIC DROP INLET PROTECTION

- A. Filter Fabric: Fabric shall have an equivalent opening size (EOS) of 40-85. Burlap may be used for short term applications.
- B. Stakes: Standard 2-inch x 4-inch wood or equivalent metal with a minimum length of three (3) feet.
- C. Wooden Frame: 2-inch x 4-inch construction grade lumber.

2.5 CURB DROP INLET PROTECTION

- A. Filter Fabric: Fabric shall have an equivalent opening size (EOS) of 40-85.
- B. Wooden Frame: 2-inch x 4-inch construction grade lumber.
- C. Wire Mesh: Continuous piece with 30-inch minimum width and length equal to four (4) feet longer than the throat per detail.
- D. Stone: Stone shall be 2-inches in size and clean.
- E. Weir: 2-inch x 4-inch construction grade lumber.
- F. Spacers: 2-inch x 4-inch construction grade lumber with length of nine (9) inches.
- G. Anchors: 2-inch x 4-inch construction grade lumber with length of two (2) feet.

2.6 EROSION CONTROL BLANKET

- A. Erosion Control Blanket: Blankets shall be a machine-produced 100% biodegradable blanket composed of 70% agricultural straw and 30% coconut fiber blend matrix. The blanket shall be designed for 1H:1V and 2H:1V slopes, with a functional longevity of up to eighteen (18) months. The blanket shall be of consistent thickness with the straw and coconut fiber evenly distributed over the entire area of the blanket and shall be covered on the top and bottom sides with 100% biodegradable woven natural organic fiber netting. The top netting shall consist of machine directional strands formed from two intertwined yarns with cross directional strands interwoven through the twisted machine strands to form an approximate 0.5-inch x 1.0-inch mesh.
- B. Blankets shall be SC150BN manufactured by North American Green; Landlok ENCS2 manufactured by SI Geosolutions; Type EC/SC2 manufactured by Pinelands Nursery, Columbus, NJ or approved equal.
- C. Staples: Steel staples as supplied by the Erosion Control Blanket Manufacturer. Six (6) inch length, 11 gage "U" wire staples or eight (8) inch length for loose soil.

2.7 JUTE MESH

- A. Jute Mesh: Mesh shall be of a uniform open plain weave of undyed and unbleached single jute yard averaging 190 pounds per spindle or 14,400 yards. This yarn shall be of a loosely twisted construction having an average twist of not less than 1.6 turns per inch and shall not vary in thickness by more than one-half its normal diameter. The width of the jute mesh shall be approximately forty five inches (45") or as specified or approved.
- B. Jute mesh shall be woven as follows:
 - 1. Approximately 60 warp ends per yard of width
 - 2. Approximately 40 weft ends per lineal yard
 - 3. Weight of Jute Mesh shall average 1.44 pounds per square yard ($\pm 5\%$)
- C. Wire Staples: Staples shall consist of 12-inch lengths of No. 11 gauge wire bent to form a "U", or other wire staples as approved.
- D. Wood Pegs: Shall be wedge shaped, approximately one inch by two inches by six inches (1"x2"x6").
- E. Smolder Resistance: The jute mesh shall be treated so as to be smolder resistant, meeting the following conditions:
 - 1. The cloth shall be made resistant to smoldering and/or after-glow by treatment with non-leaching and non-toxic chemicals. The chemicals used for this purpose must resist leaching based on the equivalent of two inches of rain. The cloth itself shall bear some identification mark to differentiate it from untreated jute cloth.
 - 2. "Test Method" – when a lighted cigarette is placed on the upper or treated surface of the cloth, neither flame nor after-glow will proceed in any direction more than twelve (12) inches from the original position of the cigarette after it has burned out completely.

2.8 TEMPORARY STOCKPILE

- A. Sheeting: PVC sheeting shall be a minimum of 10 mils thick.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Review site conditions and Contract Drawings prior to the commencement of demolition, earth moving activities or excavation.
- B. Notify the Commissioner prior to the commencement of work. Submit any proposed deviation from the Contract Drawings to the Commissioner in writing 72 hours prior to commencing work.
- C. Install erosion and sediment controls for each work area prior to commencement of work within that work area. Comply with all applicable NYSDEC standards and specifications.
- D. Perform all erosion and sediment controls in accordance with the Contract Drawings.

3.2 SILT FENCE

- A. Use silt fence subject to the following conditions:

Slope Steepness	Maximum Length (ft.)
2H:1V	25
3H:1V	50
4H:1V	75
5H:1V or flatter	100

- B. Do not exceed $\frac{1}{4}$ acre drainage area for overland flow per 100-feet of the silt fence, with maximum ponding depth of 1.5 feet behind the fence. Given that erosion would occur in the form of sheet erosion and there is no concentration of water flowing to the barrier.
- C. Locate silt fence at the toe of slopes and at ground level throughout its length. Drive posts securely at least 16-inches into the ground on the down slope side of the trench. Set post spacing a maximum of ten (10) feet apart. Adjust spacing to place posts at low points along fence line.
- D. Fasten support wire fence to upslope side of posts, extending six inches below grade. Attach continuous length of fabric to upslope side of fence posts. Avoid joints, particularly at low points in the fence line. Fasten fabric securely to support posts where joints are necessary and overlap to the next post. Place the fabric in the trench so the bottom folds across the bottom of the trench.
- E. Inspect silt fences weekly and after each rainfall event. Remove any sediment deposits found promptly to provide adequate storage volume for the next rain and reduce pressure on the fence. Do not undermine the silt fence during clean out. Replace fabric that is torn, decomposed, or in anyway becomes ineffective, immediately without additional cost to the Commissioner.
- F. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.3 STRAW BALE DIKE

- A. Use straw bale dikes subject to the following conditions:

Slope Steepness	Maximum Length (ft.)
2H:1V	25
3H:1V	50
4H:1V	75
5H:1V or flatter	100

- B. Do not exceed $\frac{1}{4}$ acre drainage area for overland flow per 100-feet of straw bale dike with silt fence, with maximum ponding depth of 1.5 feet behind the fence. Given that erosion would occur in the form of sheet erosion and there is no concentration of water flowing to the barrier.
- C. Excavate the area to accommodate placement of straw bales which are to be embedded in the soil a minimum of four inches, and placed so the string or wire is horizontal. Place bales in a row with ends tightly abutting the adjacent bale. Anchor the bales securely by driving two stakes or rebar through each bale to a minimum depth of 1.5 to 2 feet into the ground. Drive the first stake in each bale toward the previously laid bale to force the bales together. Drive stakes flush with the top of the bale.

- D. Inspect straw bales weekly and after each rainfall event, repair or replace promptly as needed. Remove accumulations of sediment trapped by straw bale filters regularly. Remove temporary straw bales from the site at the conclusion of construction. Restore the areas where the straw bales were installed to match the surrounding area. Restoration may include, but is not limited to, seeding and establishing the lawn area.
- E. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.4 STABILIZED CONSTRUCTION ENTRANCE

- A. Install stabilized construction entrances at any point where traffic will be entering or leaving a construction site to or from a public-right-of-way, street, alley, sidewalk, or parking area.
- B. Install and maintain a minimum stone thickness of 6-inches.
- C. The stabilized construction entrance shall be twelve feet minimum but not less than the full width of points of where ingress or egress occurs. The stabilized construction entrance shall be a minimum of 24-feet if there is only one entrance to the site.
- D. The length of the stabilized construction entrance shall be 50-feet minimum.
- E. Place geotextile over the entire area to be covered with aggregate.
- F. Provide piping of surface water under entrance as required. If piping is impossible, a mountable berm with 5:1 slopes will be permitted.
- G. Maintain the entrance in a condition which will prevent tracking of sediment onto public-right-of-way or streets. This may require periodic top dressing with additional aggregate. Remove all sediment spilled, dropped, or washed onto public right-of-way immediately.
- H. Clean wheels, when required, to remove sediment prior to entrance onto public right-of-way. Perform washing, when required, on an area stabilized with aggregate, which drains into an approved sediment trapping device. Prevent all sediment from entering storm drains, ditches and watercourses.
- I. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.5 FILTER FABRIC DROP INLET PROTECTION

- A. Install inlet protection at all existing, temporary, and new catch basins located within the disturbed work area.
- B. Space support stakes evenly around the inlet a maximum of three (3) feet apart. Drive support stakes a minimum of 18-inches below grade. Bridge spans greater than three (3) feet with the use of wire mesh behind the filter fabric for support.
- C. Drive support stakes close to the inlet so any overflow drops into the inlet and not on the unprotected soil.
- D. Cut filter fabric from a continuous roll to eliminate joints. Overlap joints, if needed, to the next stake. Extend filter fabric a minimum of one (1) foot below grade and backfill. Securely fasten fabric to the support stakes and frame.

- E. Do not extend filter fabric more than 1.5 feet above the inlet crest unless reinforced.
- F. Install wooden frame completely around the crest of the fabric for overflow stability.
- G. Inspect the fabric barrier after each rain event and repair as needed. Remove sediment from the pool area as necessary with care not to undercut or damage the filter fabric.
- H. Upon stabilization of the drainage area, remove all materials and unstable sediment and dispose of in accordance with the NYCDEC-approved SMP. Bring the adjacent area of the drop inlet to grade, smooth and compact and stabilize in the appropriate manner to the site.
- I. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.6 CURB DROP INLET PROTECTION

- A. Install inlet protection at all existing, temporary, and new curb catch basins located within the disturbed work area.
- B. Construct wooden frame as per the detail. Set spacers a maximum of six (6) feet apart. Securely nail the weir to the spacers.
- C. Shape and securely nail wire mesh to the weir. Wire mesh shall be a continuous piece with length of four (4) feet longer than the throat.
- D. Place the assembly against the inlet and secure with two (2) foot long anchors extending across the top of the inlet and held in place by sandbags or alternate weights. Install stone as per the detail.
- E. Construct the protective structure to extend two (2) feet beyond the inlet in both directions.
- F. Inspect the structure after every storm event. Remove any sediment and dispose of sediment on the site per the NYCDEC-approved SMP. Replace any missing stone. Check all materials for proper anchorage and secure as necessary.
- G. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.7 EROSION CONTROL BLANKET

- A. Place erosion control blankets on any disturbed slopes with grades from 1H:1V to 3H:1V.
- B. Excavate and grade the areas to receive the erosion control blanket. Install seed per the manufacturer's recommendation.
- C. Roll blankets down or horizontally across the slope. Unroll blanket with the appropriate side against the soil surface.
- D. Secure all blankets to the soil surface by placing staples in appropriate locations as shown in the staple pattern guide provided by the manufacturer.
- E. Staple the edge of parallel blankets with a four (4) inch overlap.
- F. Splice consecutive blankets, if necessary, across the slope and place over end (shingle style) with a three (3) inch overlap.

G. Anchor the blankets as follows:

1. Anchor the blanket at the top of the slope in a 6-inch deep x 6-inch wide trench with approximately twelve (12) inches of blanket extended beyond the upslope portion of the trench.
2. Backfill and compact the trench after stapling.
3. Apply seed to compacted soil and fold the remaining twelve (12) inch portion of the blanket back over seeded and compacted soil.

H. Maintain and inspect the erosion control blankets per the manufacturer's recommendations.

I. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.8 JUTE MESH

- A. Place jute mesh on any disturbed slopes with grades from 3H:1V to 5H:1V.
- B. Excavate and grade the areas to receive the jute mesh. Install seed and topsoil per the manufacturer's recommendation.
- C. Install jute mesh without stretching so that it lies loosely on the soil and in contact with the soil at all points. Press firmly into the soil surface by rolling and tamping.
- D. Turn and bury the upper end of each roll of jute mesh to a depth of six (6) inches, with the soil tamped firmly against it.
- E. Construct check slots at intervals of fifty-feet, unless otherwise approved, by placing a fold of jute six (6) inches vertically into the ground with replaced soil tamped firmly against it.
- F. Fasten jute mesh tightly to the soil by staples or wood pegs driven firmly into the ground. Do not space staples or wood pegs more than three (3) feet apart along the sides of the jute mesh and not more than one (1) foot apart at roll ends and check slots.
- G. Maintain and inspect the jute mesh per the manufacturer's recommendations.
- H. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.9 TEMPORARY STOCKPILE

- A. Situate soil stockpiles in a dry area on top of a layer of PVC sheeting (minimum 10 mils thick) per the NYCDEC-approved SMP. Overlap all joints in the underlying PVC sheeting with a minimum of three (3) feet at the ends.
- B. Secure PVC sheeting in place with tie downs and/or weights such as sand bags at the end of each workday and during adverse weather conditions.
- C. Construct stockpiles so that the height does not exceed fifteen (15) feet. Side slopes shall not be steeper than 2H:1V.
- D. Contain all stockpiles with hay bales and silt fence placed continuously around the perimeter.

- E. Apply temporary seeding to all stockpiles which will be inactive for twenty (20) days or longer.
- F. Maintain stockpiles in accordance with the NYCDEC-approved SMP.
- G. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.10 CATCH BASIN SEDIMENT TRAP

- A. Install temporary storm piping and structures for each trap as indicated in the Contract Drawings.
- B. Excavate to the dimensions and depth shown in the Contract Drawings. All cut slopes shall be 1H:1V or flatter.
- C. Provide 3600 cubic feet of sediment storage volume per acre of contributory drainage. Measure the volume of the trap at the elevation of the crest of the outlet (grate of the catch basin).
- D. Inspect the trap after every storm event and repair as needed.
- E. Remove sediment and restore the trap to its original dimensions when the sediment has accumulated to one-half (1/2) the design depth of the trap. Deposit sediment in a suitable area and stabilize in accordance with the NYCDEC-approved SMP.
- F. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the Contract Drawings.

3.11 EROSION CONTROL IMPLEMENTATION

- A. Place erosion control systems in accordance with the staging and features outlined in the Contract Drawings.
- B. Follow construction phasing in the sediment control plans to limit the surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and embankment operations.
- C. Incorporate all permanent erosion control features into the project at the earliest practical time to minimize the need for temporary controls.
- D. Properly construct, stabilize, and maintain all temporary and permanent erosion and sedimentation control measures and related items. Check all controls daily and after storm events to ensure they are in proper working order.
- E. Replace at own expense any control measure that is not functioning properly as directed by Construction Manager or authorized regulatory personnel.
- F. Install inlet protection on all new catch basins immediately upon construction of catch basins.
- G. Implement dust control measures during construction. Minimize dust clouds by watering down construction area or other approved methods as required.
- H. Secure a tarp over materials in all construction vehicles hauling materials either into or out of the construction area to prevent sediment pollution of public roadways.
- I. Design erosion and sediment controls specific to the site in accordance with the NYSDEC Standards, which are more stringent than the EPA Standards.

3.12 NON-STORMWATER DISCHARGE CONTROLS

- A. Groundwater encountered within excavations and cleaning water for construction vehicles and equipment shall be diverted to the temporary and approved erosion and sediment control measures. Chemicals and detergents shall not be used.
- B. Coordinate with the Commissioner to identify areas on-site for construction vehicle transit (i.e. – haul roads, contractor trailers and parking areas, etc.) or equipment staging which shall be monitored and where runoff can be controlled.
- C. Water used for dust control measures shall be applied using appropriate quantities and equipment. No chemical additives shall be used.
- D. Water main flushings, hydrostatic test water, fire test water, and chlorination test water shall be directed to the control measures on the site. Turbid water is to be detained to allow sufficient sedimentation time (minimum of 24 hours). Chlorinated water is to be detained until the water is de-chlorinated (minimum of 24 hours).
- E. Concrete trucks shall be washed out in an area approved of by the Commissioner. Designate wash-out areas with proper signage. Locate a concrete wash-out box near the concrete trucks to prevent concrete residue from being washed off-site. Wash-out containers can be pre-fabricated or constructed on-site out of plywood and plastic sheeting. All runoff from wash-out activities shall be directed to the on-site control measures. Discarded cementitious materials shall be removed and disposed off-site.
- F. Building washing or parking lot cleaning water (where no spills or leaks of toxic or hazardous materials have occurred) that may enter the storm drainage system shall not contain chemicals or detergents.

3.13 REMOVALS

- A. Maintain erosion and sediment control devices within each work area until final stabilization of that work area.
- B. "Final stabilization" shall mean that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.
- C. Remove erosion and sediment control devices in accordance with the Division One Section – Construction Waste Management & Disposal.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK.

SECTION 316200
STEEL PILES

PART 1 GENERAL

1.1 SUMMARY

- A. Work of this Section, as shown or specified shall be in accordance with the requirements of the Contract Documents.
- B. The provisions of the latest edition of the New York City Building Code (NYCBC) relating to pile foundations shall govern the work of this section.
- C. The Contractor will arrange and host a pre-construction meeting with the Owner, Commissioner, and any Sub-Contractor's involved with dewatering, excavation, waterproofing, and other foundation-related construction work at least three weeks before mobilizing for construction.
- D. Install driven steel H-piles to achieve the required design capacities at the locations shown on the Contract Drawings and as directed.
- E. Provide all labor, materials, equipment and services to install ten (10) driven index piles with a Pile Driving Analyzer (PDA).
- F. Provide all labor, materials, equipment and services required for performance of two (2) successful axial compression load tests that meet or exceed NYCBC requirements for pile load test and demonstrating required axial pile capacity.
- G. Provide all labor, materials, equipment and services required for the performance of two (2) successful lateral load tests that meet or exceed NYCBC requirements for pile load test and demonstrating required lateral pile capacity.
- H. Axial tension load tests are not required.

1.2 WORK INCLUDED

Provide all labor, materials, equipment and services and perform all operations required of this Section, included but not limited to the following:

- A. Furnish and drive all steel H-piles and cut piles to the required levels on the Contract Drawings.
- B. Furnish and install 10 index piles as required.
- C. Perform at least two (2) successful axial compression load tests on selected piles.
- D. Perform at least two (2) successful lateral load tests on selected pile.
- E. Provide as-built pile location survey and identification plan.
- F. Establish reference points on the adjacent buildings and monitor them regularly during pile installation in accordance with the monitoring plan established by the Commissioner.

1.3 RELATED SECTIONS

- A. Protection of Existing Utilities – Section 02 20 50
- B. Earthwork – Section 31 00 00

- C. Asphalt Paving – Section 32 12 16
- D. Dewatering and Contaminated Groundwater Management – Section 31 23 19
- E. Sanitary Sewage Utilities – Section 33 00 00
- F. Cast-in-Place Concrete – Section 03 30 00
- G. Other Utilities – Section 33 90 00

1.4 REFERENCES

A. Site Information:

1. Geotechnical Interpretive Report prepared by Langan Engineering and Environmental Services, P.C. dated 12 July 2012.

B. All work and materials under this section shall conform to the latest revision of the following standard specifications, where not otherwise required by the Contract Documents:

1. ASTM A6 Control Requirements for Rolled Steel Plates, Shapes Sheet Piling and Bars for Structural Use.
2. ASTM A36 Specifications for Structural Steel.
3. American Welding Society AWS D1.1-86 Structural Welding Code-Steel.
4. ASTM D1143 Standard Test Methods for Deep Foundations Under Static Axial Compression Load.
5. ASTM D3689 Standard Test Methods for Deep Foundations Under Static Axial Tensile Load.
6. ASTM D3966 Standard Test Methods for Deep Foundations Under Lateral Load.
7. ACI-318 latest edition - Building Code Requirements for Structural Concrete.

C. 2008 New York City Building Code

1.5 SUBMITTALS

The Contractor shall prepare and submit the following items to the Owner for review and approval by the Commissioner at least 15 days before the start of said work. All calculations and shop drawings shall be signed and sealed by a Professional Engineer registered in the State of New York.

A. Driven Piles

1. Pile manufacturers and or suppliers certificate certifying pile materials conform to the requirements specified herein. Include, mill certificates covering physical and chemical tests, and ladle analyses of each melt.
2. Driving Equipment: Submit for approval, the type, size and configuration of the driving hammer, helmet, and cushion to be used. Acceptance of the pile hammer and driving equipment will not relieve the contractor's responsibility for properly driving piles, in satisfactory condition, to the driving criteria indicated.
3. Provide installation procedures for the driven piles, including pile installation program giving the amount and character of equipment to be used in the work, including methods

for dealing with obstructions, schedule for performing the work and method and sequence of pile driving.

4. Submit proposed final driving criteria to achieve the specified design load.
5. Specifications and procedures on the proposed pile splice, if necessary, including welders qualifications.
6. Submit manufacturer's data for all pile installation and support equipment.
7. Submit equipment data sheets and procedures for driving the piles with a PDA, and estimating the static pile load capacity using the Case Method and the CAPWAP Method.
8. Submit identification numbers and calibration curve for the hydraulic jacks and pressure gauges.
9. If the contractor plans to re-tap the index or production piles to achieve the required capacity, then the contractor must submit equipment data sheets and procedures for re-tapping piles.
10. Submit within 1 day of index pile driving the results of the PDA/Case Method Analyses for each of the index piles.
11. Submit within 3 days of index pile driving the results of the CAPWAP analyses for each of the index piles.

B. Pile Identification Plan:

1. Submit plan clearly showing the designation and location of all piles by an identifying system, including the cut-off elevations for all piles. The plan shall include the location of the centerline of each pile group by a coordinate system from an approved reference working point. All detailed records for individual piles shall bear identification corresponding to that shown on this plan. A copy of this plan shall also be available at the site for inspection at all times.

C. Pile Load Tests

1. Submit load test procedures and setup including shop drawings showing the layout of load frame and reference frame for the compression and lateral load tests.
2. Submit identification numbers and calibration curve for the hydraulic jacks and pressure gauges. The last calibration must be performed within three months of the proposed load test date. All calibration data must be submitted signed and sealed by a Professional Engineer licensed in the State of New York.
3. At the completion of all load tests, submit a record report signed and sealed by a Professional Engineer licensed in the state of New York, summarizing the load-deflection response for each pile in conformance with the NYCBC allowable settlement. Include proposed final driving criteria for production driven piles and drilled piles.
4. NYCBC requires two axial compression load tests and two lateral load tests to be performed for the proposed building footprint.

D. Pile Survey

1. The Contractor shall provide the Commissioner with a survey prepared by a Professional Surveyor, licensed in the State of New York showing the completed locations of the piles at cut-off elevation with respect to the proposed locations. The survey shall include

elevations of the tops and batters of the piles. Piles that exceed location tolerances shall be highlighted and offset dimensions provided. Any abandoned piles shall be included in the survey.

2. After the one-quarter, one-half, three-quarters, and completion of the pile driving, pile drilling and concrete filling work, the Contractor shall submit a survey plan showing all numbered pile locations, including locations of all abandoned piles and their replacements, if any. The Contractor shall provide additional surveys of a pile or pile groups, at no extra cost to the Owner, if required by the Commissioner.

1.6 QUALITY ASSURANCE

A. Qualifications

1. The pile installer shall specialize in performing the work of this Section and shall have a minimum of 3 years experience and projects of similar scope.

B. Regulatory Requirements

1. Work of this Section shall conform to all requirements of the latest edition of the New York City Building Code and all applicable regulations and governing authorities having jurisdiction, including safety, health, noise, and anti-pollution regulations. Where more severe requirements than those contained in the Building Code are given in this Section, the requirements of this Section shall govern.
2. The Contractor shall pay for all expenses that may be incurred where the Building Code states that the work shall be done "at the expense of the owner" or a similar phrase.

C. Certification

1. Structural steel shall conform to the material acceptance, certification, and inspection required on the latest edition of the 2008 New York City Building Code.
2. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure".

D. Contractor's Responsibilities:

1. The Contractor performing the work specified herein shall have at least 3 years experience in installing steel piles and performing the required dynamic and static load testing. The Contractor's Professional Engineer and Professional Land Surveyor shall be licensed in good standing in the State of New York.
2. The Contractor shall accurately mark 1 ft intervals on each pile and shall number these marks at 5 ft intervals starting from the pile tip. The upper portion of the pile or a sufficient portion of the leads shall be marked at 1-inch intervals as necessary to determine the final driving resistance.
3. The contractor shall engage the services of a New York State licensed Professional Engineer to monitor the actual pile hammer energy and estimate the ultimate pile load using a PDA and the Case Method for the installation of each index pile.
4. The Contractor shall cooperate with the Owner's Engineer to facilitate the progress of the work.

E. Special Inspections:

1. The Owner shall engage, under the requirements of Section 1704.1 of the Building Code,

one or more Special Inspection Agencies to observe and provide all necessary material testing related to the work of this Section. Driven pile installation shall be observed by a Licensed Professional Engineer, and all materials testing shall be performed by Special Inspectors meeting the minimum qualifications outlined in RCNY 101-06.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to the project site in such quantities and at such times to assure the continuity of pile driving/drilling operations, and to maintain the project schedule. Carefully handle piles by means of rope slings or other means so as not to damage piles; do not use peavies, cant hooks or other sharp tools.
- B. Piles shall be stored in orderly groups above ground sufficiently blocked to minimize bending stresses. Piles exhibiting variations beyond specified limits will be considered distorted and shall not be used in the work.
- C. Concentrated loads, which occur during stacking or lifting, shall be kept below the level that would produce permanent deformation or overstress of the material. Damaged piles will be rejected from use in the performance of the work and shall be removed from the site.

1.8 PROJECT CONDITIONS

- A. Refer to the Geotechnical Interpretive Report prepared and associated boring and test data for information pertaining to the general subsurface conditions within the project site. Boring and other in situ test logs are made available to the Contractor for information only. Conditions are not intended as representations or warranties of accuracy or continuity between borings. The Owner will not be responsible for interpretation or conclusions drawn from this data by the Contractor.
- B. The Contractor, by careful examination, shall inform himself as to the nature and location of the work; the nature of the subsurface conditions; the locations of the groundwater table; the character, quality and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can in any way effect the work.
- C. The Contractor shall be held to have visited the site and to have familiarized himself with the existing conditions of adjoining properties, utilities and buildings.
- D. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor shall conform to all New York City and State, and Federal regulations in regard to the transportation of materials to and from and at the job site and shall secure in advance such permits as may be required.

PART 2 PRODUCTS

2.1 MATERIALS FOR DRIVEN PILES

- A. The steel shall conform to ASTM A572 Grade 50 (minimum f_y – 50 ksi).
- B. The pile section sizes and required capacity are specified on the structural foundation plans.
- C. No more than one field-welded splice (including factory splices) shall be permitted per pile. Length of pile to be spliced shall be secured in proper alignment prior to welding and in such a manner that no eccentricity between the axis of the two lengths to be spliced, or angle between them, results. Sections of pile shall be spliced to develop full strength of section. Splices shall

not be permitted in the upper 10 ft of the pile below the proposed pile cut-off elevation.

- D. The piles shall be fitted with cutting shoe such as Hardbite by American Pile Equipment.

2.2 EQUIPMENT FOR DRIVEN PILES

A. General

1. Furnish pile driving equipment of a type generally used in standard pile driving practice, operated at the manufacturer's specified rate, to develop the required rated energy per blow.
2. In driving all piles in the work, including index piles, the same make and model of pile hammer shall be used throughout; the operation of hammers with regard to speed, height of fall or stroke, pressure and all other variable factors must be the same; and the methods used in driving piles shall be substantially the same.

B. Hammer

1. Furnish pile driving hammers of a size and type able to deliver consistently effective dynamic energy, suitable to the piles to be driven and to the subsurface materials into which they are to be driven.
2. The pile driving hammer shall have a minimum rated energy based on the results of the PDA tests.
3. The hammer shall be in first-class operating condition having a minimum energy of at least 40,000 ft-lbs. The valve mechanism shall be serviced and kept in first-class condition so that the length of stroke will be accurately maintained at all times during driving. The capblock material shall have uniform elastic properties during driving, providing superior energy transmission, and shall be replaced if crushed, burned or damaged. Any hammer not operating in accordance with the manufacturer's specifications shall be deemed unsatisfactory by the Commissioner and shall be replaced immediately by the Contractor.
4. The pile cushion shall be 9-inch-thick aluminum and micarta, or approved substitute cushion. Scrap lumber shall not be used as cushion material.

C. Leads

1. All piles shall be driven using fixed leads constructed in such a manner as to afford freedom of movement to the hammer, and capable of holding the pile firmly in correct position and alignment as well as in axial alignment with the hammer.
2. Use fixed rigid type pile driver leads that will hold the pile firmly in position and in axial alignment with the hammer to ensure support of the pile during driving. Free-swinging leads will not be permitted. Extend leads to within 2 ft of the elevation at which the pile enters the ground.
3. Leads shall be of sufficient length so that the use of a follower will not be necessary. Suitable anvils or cushions shall be used to prevent undue damage of the pile butts. Pile driving shall be continuous for each pile.

D. Pre-Drilling Equipment

1. Pre-drilling equipment and/or spudding shall be adequate to pass the specified pile through all obstructions encountered. The Contractor should anticipate obstructions from foundation elements of former structures at the site.

2. Driven piles shall not be installed within 25 feet of adjacent buildings supported on shallow foundations.

2.3 PILE LOAD TESTS

A. Hydraulic Jack(s) and Pressure Gauges:

1. Hydraulic jack(s) shall be equipped with the necessary gauges and piping which shall transmit constant load to the pile.
2. Hydraulic jack(s) shall be rated for a load capacity of at least 1.5 times the total test load.
3. Hydraulic jack(s) shall have sufficient ram so that the full test load can be applied at no more than 80 % of its extension.
4. Pressure gauge(s) shall be able to read pressures accurately to the nearest 50 psi and shall have a range equivalent to at least twice the pressure required to maintain the full test load.
5. Hydraulic jack(s) and pressure gauge(s) shall be calibrated as a unit by a certified testing laboratory not more than one month prior to their use at the site. A calibration report indicating jack and pressure gauge identification numbers and a calibration curve shall be submitted to the Commissioner at least one week prior to beginning any load tests.

B. Load Cell:

1. The load cell shall have a capacity of at least 1.5 times the maximum test load.
2. The load cell shall be calibrated by a certified testing laboratory not more than one month prior to its use at the site. A calibration report indicating load cell and read out box serial numbers shall be submitted to the Commissioner at least one week prior to beginning any load tests.

C. Dial Indicators:

1. Dial gauges shall be capable of reading to the nearest 0.001 inch, and shall have a travel of at least 3 inches.

D. Telltales

1. Outer pipe shall be a standard steel pipe with a minimum outside diameter of 1 inch, with a flat bottom steel cap.
2. The inner pipe shall be a standard 3/8 inch pipe.
3. Horizontal reference plate shall be a minimum 2 inch by 2 inch, 1/4 inch thick steel plate.
4. Telltales shall be properly welded to the index pile.
5. Telltales shall extend for the full length of the pile.

PART 3 EXECUTION

3.1 PRE-CONSTRUCTION MEETING

- A. A pre-construction meeting shall be held coordinated and documented by the Contractor and attended by the Owner, Pile Contractor, and the Commissioner. The Pile Contractor's proposed and submitted pile installation and load testing means and methods shall be presented and discussed at this meeting. The Contractor will document the meeting and any modifications to

the submitted procedures agreed upon.

3.2 SITE PREPARATION

- A. The Contractor shall perform his work so as not to cause harmful effects to any adjacent structures and utilities. Should damage to adjacent structures and utilities occur, all costs in connection with the repair of such damage and the restoration of damaged construction to its original condition shall be borne by the Contractor.
- B. The Contractor shall lay out the pile locations referencing the pre-approved plan.
- C. Pile Length Markings: Mark each pile's length by painting a horizontal line at 1'-0" intervals. Mark the number of feet from the pile point in 5'-0" intervals. Mark piles at every inch for the last 5 feet of driving.
- D. The Contractor shall be prepared to spud and/or pre-drill through the obstructions to facilitate subsequent pile installation.

3.3 INDEX PILES

- A. Prior to the start of production pile installation, install at least ten (10) driven index piles that are the same in every way as the production piles. Driven index piles specified herein shall be installed to final resistance with a PDA. Hammer energy being transferred to the top of the pile shall be continuously recorded during the driving of the pile.
- B. The location of the index piles shall be selected by the Contractor and submitted to the Commissioner for review.
- C. Index piles shall be installed to the final driving resistance needed to achieve an ultimate pile capacity predicted by the PDA of at least 160 tons (320 kips).
- D. The Commissioner shall select two (2) index piles for compression load testing, two (2) index piles for lateral load testing, based on the results of the index pile installation.

3.4 DRIVEN PILES

- A. General
 - 1. No piles shall be driven in the absence of the Commissioner responsible for Special Inspection of pile installation.
 - 2. No piles other than the index piles shall be driven until the successful pile load tests have been completed.
 - 3. A surveyor shall maintain accurate layouts and levels for all work. Up-to-date reproducible records showing as-built pile locations, tip elevation, cut-off elevation and plumb shall be maintained.
 - 4. All piles shall be driven by such methods and equipment as not to impair their strength and as to ensure pile shafts retain the initial driving resistance and lateral support of the soil.
 - 5. Continuously drive each pile at the locations indicated, to the underlying Building Code Class 1a, Class 1b and Class 1c material and to the required driving criteria established by the driving of index piles and load test program.
 - 6. The Contractor shall demonstrate that the hammer energy is being transferred to the top of the pile. The capblock and cushion assembly shall be the same as was used for the index pile driving.

7. The Contractor shall coordinate the work such that pile driving shall be continuous once the pile reaches the bearing stratum; necessary lengths of pile and splicing shall be considered and coordinated so that this requirement is satisfied. Pile splices in the upper 10 ft shall not be permitted. Contractor shall establish qualification of welders in accordance with the AWS code and the codes and laws.
8. Carefully maintain the center of gravity for each group or cluster of piles to conform to the locations shown on the drawings. Where piles are driven out of location, the Commissioner may require that an additional pile or piles be driven at a location and in a manner that he may specify. The unacceptable pile may be left in place or may be pulled, as the Commissioner directs, without additional payment to the Contractor for driving or pulling.
9. Carefully plumb the leads and the pile before driving. Take care during driving to prevent and to correct any tendency of piles to twist or rotate.
10. If, during the driving of any piles, any of the piles previously driven show signs of heaving or lifting, the Contractor shall re-drive such piles to the required load-bearing capacity without additional cost to the Owner.
11. When handling and driving long piles, take special precautions to ensure against overstress or leading away from a true position when driving. Spud piles may be used to minimize hard driving of long piles through obstructions lying near the surface.
12. Cut-off: After each pile has been driven and accepted, cut it off at the required top elevation. Make cut perpendicular to axis of pile. The cut-off ends become the property of the Contractor, who is responsible for their removal and disposal.

B. Final Driving Criteria:

1. Continuously drive each pile at the locations indicated to final bearing on Building Code Class 1a, Class 1b and Class 1c material.
2. Final driving resistance shall be as demonstrated by the successful pile load tests, the PDA results and as approved by the Commissioner.
3. The above penetration resistances in the bearing stratum shall be adjusted by the Commissioner to account for any penetration resistance measured in the overlying strata.

C. Driving Tolerances: Drive piles within the following maximum tolerances:

1. Location: Within 3" from the location indicated for the center of gravity of each single pile or pile group.
2. Plumbness: Within 5 inches in 10 ft (4%) from vertical following driving, and a maximum of 1 inch in 10 ft, measured when the pile is being driven and is in the leads above ground.

D. Heaved Piles: Compile recorded instrument observations made during pile driving to determine whether a driven pile has lifted from its original seat during the driving of adjacent piles. If uplift occurs, re-drive the affected piles to a point elevation at least as deep as the original point elevation with a driving resistance at least as great as the original driving resistance.

E. Special Inspection of Driven Piles:

1. Installation of the index and production pile and the load tests shall be subject to New York City Building Code Special Inspection by the Special Inspector, on behalf of the Owner.
2. No pile shall be installed without the presence of the Special Inspector.

F. Damaged or Mis-Driven Piles:

1. In the event any pile be damaged during installation and not satisfactorily repaired, or be driven out of design position sufficiently to result in a loading in excess of that allowed by paragraphs in 1808.2.21.2 of the 2008 New York City Building Code, or be rejected for any reason, remove or abandon it. Drive additional pile or piles before concrete has been poured in the adjacent piles and make such changes in pile caps or other construction necessary to provide for proper load distribution.
2. Damaged piles, and piles driven outside the required driving tolerances, will not be accepted. The location of any additional or replacement piles or redesign shall be subject to the approval of the Commissioner.
3. Solidly fill spaces that are left by withdrawn piles that will not be filled by new piles, using cohesionless soil material such as gravel, broken stone, and gravel-sand mixtures. Place and compact throughout the length of the space.
4. If during the driving of any piles any of the piles previously driven heave or lift, redrive such heaved or lifted piles to the required load bearing capacity and without additional cost to the Owner.
5. Provide and pay for work of whatever nature (including cost of redesign) required on account of rejected, damaged, or displaced piles.
6. Drive additional pile or piles where the centerline deviation exceeds 3 inches and an analytical determination indicates the load on any pile exceeds 110% of the design load.

G. Cutting-Off:

1. Cutoff the tops of the driven piles, square with pile axis and at the elevations indicated. Dispose of excess material off site.

3.5 OBSTRUCTIONS

- A. No extra payment will be made to the Contractor for overcoming of obstructions under any condition whatsoever.
- B. If a production pile encounters an obstruction which will damage the pile tip or cause the pile to drift off location, the pile shall be pulled and the obstruction removed by spudding, augering, drilling or other approved methods, and the pile be re-driven.
- C. Replacement of piles damaged by obstructions shall be the responsibility of the contractor.

3.6 LOAD TESTS – GENERAL

- A. The pile installation procedures, driving sequence, and final driving criteria shall be confirmed by pile load tests in accordance with the requirements of the Building Code.
 1. Two (2) successful axial compression load tests in accordance with the New York City Building Code and ASTM D1143.
 2. Two (2) successful lateral load test in accordance with the New York City Building Code and ASTM D3966.
- B. Tested piles may be incorporated into the foundation system provided they conform to the specification requirements, and with the approval of the Commissioner.
- C. Load test piles shall be instrumented with Tell-tales so that movements of the pile tip may be

independently determined, in accordance with the New York City Building Code.

- D. The hydraulic jack shall be equipped with the necessary gauges and piping which shall transmit constant load to the pile. Piles shall have been in place a minimum of 3 days before loading.
- E. Pile head movement shall be measured using dial gauge extensometers capable of measuring to 0.001 in. Loading, testing, and recording of data shall be under the direct inspection of the Contractor's Professional Engineer.
- F. If index piles are driven prior to site excavation to design sub-grade elevation, an isolation casing (minimum 24-in O.D.) shall be installed around the top of the pile down to design pile cut-off elevation. The casing shall be installed first and cleaned out to the pile cut-off elevation, prior to driving the index pile. Any production pile driven above design sub-grade shall also have isolation casing installed to design cutoff elevations.
- G. The Contractor will provide experienced and competent personnel to operate the jacks and load test assembly for the entire duration of the axial and lateral load tests.

3.7 AXIAL COMPRESSION LOAD TEST

- A. Perform two (2) successful compression load tests demonstrating an ultimate capacity of at least two times the required design load.
- B. Load test procedures shall conform to the requirements of New York City Building Code 1808.2.8.3.1.3 and ASTM D1143.
- C. Load tests shall be administered and supervised by the Special Inspector.
 - 1. Load Schedule – The test load shall be twice the design load. The load shall be applied in increments equal to 25% of the design load. Intermediate load increments shall be held at for a minimum of 1 hour, but up to 2 hours, per the requirements of ASTM D1143 and Section 1808.2.8.3.1.3. The total test load shall be sustained for at least 24 hours and until the rate of pile head movement is less than 0.001 ft (0.012 in) as measured over 12 hours.
- D. Settlement Measurements
 - 1. Measure pile settlements within at least three (3) dial gauges capable of reading to the nearest 0.001 inch. Dial gauges shall have a travel of at least 2 inches. Dial gauges shall be mounted on an independent steel test frame to prevent relative movement during the load test.
 - 2. Establish a separate mirror, wire, scale set-up, with scale capable of measuring to the nearest 0.02 inch.
 - 3. Provide independent survey level measurements of the pile using optical level survey equipment capable of reading to the nearest 0.005 ft.
- E. Removal of Loads
 - 1. Removal of load shall be in decrements not exceeding 25% of the total test load.
 - 2. Allow intervals of not less than one hour under each decreasing load.
 - 3. Rebound shall be recorded after each decrement is removed.
- F. Allowable Design Capacity
 - 1. Allowable design capacity shall be the lesser of:

- a. Fifty percent of the applied load causing a net settlement of the pile not more than one-hundredth of an inch per ton of applied load. Net settlement shall be defined as the gross settlement due to the total test load minus the rebound after removing one hundred percent of the test load; or
 - b. Fifty percent of the applied load causing a net settlement of the pile of $\frac{3}{4}$ inch. Net settlement shall be defined as the gross settlement due to the total load test minus the amount of elastic shortening in the pile due to total load test.
- G. The Special Inspector shall prepare and submit a load test report to the Commissioner for approval. The Commissioner will file the load test report and obtain Building Department approvals.

3.8 LATERAL LOAD TEST

- A. Perform two (2) successful lateral load test demonstrating an ultimate capacity of at least two times the required design load.
- B. Load test procedures shall conform to the requirements of ASTM D3966.
- C. Load tests shall be administered and supervised by the Special Inspector.
- D. Load Schedule – The load schedule shall be as follows:

Load (tons)	Hold Period
25% Design Load (DL)	10 min
50% DL	10 min
75% DL	15 min
100% DL	20 min
125% DL	20 min
150% DL	20 min
170% DL	20 min
180% DL	20 min
190 % DL	20 min
200% DL (Test Load)	60 min
150% DL	10 min
100% DL	10 min
50% DL	10 min
0	10 min

E. Pile Head Movements

- 1. Measure pile settlements within at least two (2) dial gauges capable of reading to the nearest 0.001 inch. Dial gauges shall have a travel of at least 2 inches. Dial gauges shall be mounted on an independent steel test frame to prevent relative movement during the load test.
- 2. Establish a separate mirror, wire, scale set-up, with scale capable of measuring to the nearest 0.02 inch.

3. Provide independent survey level measurements of the pile using optical level survey equipment capable of reading to the nearest 0.005 ft.

F. Allowable Design Capacity

1. Lateral Capacity

- a. Fifty (50) percent of the applied lateral load causing a gross lateral movement of not more than 1.0 inch measured movement at the ground surface.

- G. The Special Inspector shall prepare and submit a load test report to the Commissioner for approval. The Commissioner will file the load test report and obtain Building Department approvals.

3.9 FIELD QUALITY CONTROL

A. Special Inspection

1. The Special Inspector shall be on-site full-time during pile installation and load testing.

B. Contractor's Responsibility

1. The Contractor shall notify the Owner at least 72 hours prior to each day of pile driving to allow for the appropriate personnel to be on the site.
2. The Contractor shall prepare and periodically submit to the Commissioner for review partial area surveys to permit pile cap work to proceed and to facilitate the design of corrective measures.
3. Upon completion and approval of all pile driving, the Contractor shall deliver to the Commissioner the original tracings (equal in size to that of the Drawings) and the requisite copies for review and filing in the Building Department.

- C. Licensed Surveyor: Engage the services of a Licensed Land Surveyor registered in the State of New York and approved by the Owner for the performance of the survey work called for herein, as per 2008 New York City Building Code. The installed location of each pile shall be established by survey and shown on drawings, in accordance with the provisions of the Building Code.

D. Pile Review and Corrective Measures

1. Review: The Commissioner, upon receiving the as-driven pile survey, will perform a complete pile review to determine the true loading on the piles due to pile group eccentricities, including a review of the pile cap design. The pile review will determine if pile corrective measures are required.
2. Design of Corrective Measure: The Commissioner will perform all necessary design and filing to obtain Building Department Approval of all necessary corrective measures required due to pile driving operations as required by 2008 New York City Building Code.

3.10 CLEAN-UP

- A. All debris resulting from excavation of objectionable material, removal of obstructions, cut-off butts, and any material not to remain as part of the construction is to be removed and disposed of off-site by the Contractor in a legal manner at no additional cost to the Owner.
- B. The site shall be cleaned at frequent intervals and no material shall be stored on the site in a manner, which would obstruct the easy access of equipment and personnel.

END OF SECTION

SECTION 32 12 16

ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to install on-site asphalt pavement as indicated on the Contract Documents. This section is applicable for areas within the property limits. Does not apply to areas within Right-of-Way.
- B. Section Includes:
 - 1. Furnish and install asphaltic concrete paving: surface course, tack coat, base course and subbase as per the Contract Documents.
- C. Related Sections:
 - 1. Section 02 20 50 – Protection of Existing Utilities
 - 2. Section 31 00 00 – Earthwork

1.3 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:
 - 1. New York City Building Code.
 - 2. New York City Department of Transportation (NYCDOT) Bureau of Highway Operations Standard Specifications, latest edition.
 - 3. ASTM D946 - Penetration - Graded Asphalt Cement for use in Pavement Construction
 - 4. ANSI/ASTM D1557 – Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures using 10 lb (4.54 Kg) Hammer and 18 inch (457 mm) Drop.
 - 5. ASTM D2922 – Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth), Method B (Direct Transmission).
 - 6. ASTM D424 – Standard Method of Test for Plastic Limit

7. ASTM C33 – Standard Specification for Concrete Aggregates
8. ASTM D1559 – Test Method for Resistance of Plastic Flow of Bituminous Mixtures Using Marshall Apparatus
9. ASTM D2028 – Standard Specification for Cutback Asphalt (Rapid-Curing Type)

1.4 SUBMITTALS

- A. Design Mix: Before any asphaltic concrete paving is constructed, submit actual design mix to the City of New York for review and/or approval. Design mix submittal shall include the type/name of the mix, gradation analysis, grade of asphalt cement used, sources of all ingredient materials, percentages by weight and the number of pounds of each of the materials and direct references to the Standard Specifications sections for each material. Mix designs over three (3) years old will not be accepted by the City of New York.
- B. Shop Drawings: Indicate extents of asphaltic concrete paving to be installed, to be approved by Commissioner prior to placement.
- C. Material Certificates: Submit signed materials certificate to the City of New York which is cosigned by the material producer, certifying that materials comply with, or exceed, the requirements herein.

1.5 JOB CONDITIONS

- A. Weather Limitations:
 1. Apply tack coat when ambient temperature is above 40°F, and when temperature has been above 35°F for 12 hours immediately prior to application. Do not apply when base is wet, contains excess moisture, or during rain.
 2. Construct asphaltic concrete paving when atmospheric temperature is above 40°F.

B. QUALITY ASSURANCE

1. Manufacturer Qualifications: manufacturer must be approved by NYSDOT and NYCDOT.
2. Installer: installer shall specialize in performing the work of this Section and shall have a minimum of 3 years experience and projects of similar scope.
3. Testing Agency Qualifications: Qualified according to ASTM D 3666 for testing indicated.
4. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of NYSDOT and NYCDOT for asphalt paving work.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Pavement Design: Provide pavement design section as shown on drawings. Use locally available materials and gradations, which meet the NYSDOT and NYCDOT Standard

Specifications and exhibit satisfactory records of previous installations.

1. Bituminous Stabilized Base Course shall conform to NYSDOT Type 1 (Item No. 403.11) in accordance with NYSDOT Specifications Section 401.
2. Bituminous Stabilized Top Course shall conform to NYSDOT Type 6 (Item No. 403.16) in accordance with NYSDOT Specifications Section 401.

B. Asphalt Cement:

1. Comply with AASHTO M-226/ASTM D 3381
2. Table 2 AC-10, AC-20, or AC-30, viscosity grade, depending on local mean annual air temperature. (See chart below):

<u>Temperature Condition</u>	<u>Asphalt Grades</u>
Cold, mean annual air temperature at 7 degrees C (45 degrees F) or lower	AC-10 85/100 pen.
Warm, mean annual air temperature between 7 degrees C (45 degrees F) and 24 degrees C (75 degrees F)	AC-20 60/70 pen.
Hot, mean annual air temperature at 24 degrees C (75 degrees F) or higher	AC-30

3. Reclaimed Asphalt Pavement (RAP)
 - a. Each mix shall include 5 percent RAP for top and 15 percent for base course.
 - b. Where reclaimed asphalt pavement is being used the Contractor shall take a sample of freshly mixed recycled asphalt concrete in accordance with ASTM D 979 and determine the moisture content at least twice daily. Moisture determinations shall be based on the weight loss by heating an approximately 4 pound sample of the freshly mixed materials for one hour in an oven at 280 plus or minus 5 degrees Fahrenheit. The moisture content of the freshly mixed bituminous concrete shall not exceed 0.8 percent.
 - c. The Contractor shall take a sample of reclaimed asphalt pavement from the approved stockpile at least once daily and test in accordance with ASTM D 2172 to determine asphalt content and gradation in accordance with ASTM C 136. The resulting asphalt content and aggregate gradation shall be similar to the average test results of the reclaimed asphalt pavement submitted with Design Job Mix Formula. If there is a variation of plus or minus 1.0 percent in the asphalt content or, plus or minus 10 percent in aggregate gradation on any sieve, a second sample shall be taken and tested in the same manner as the first sample, appropriate measures shall be taken to adjust the mixture to compensate for the variation in the reclaimed asphalt pavement.
 - d. Batch Plants shall have an appropriately located metering device for adding the reclaimed asphalt pavement to the heated new aggregate and shall provide an accurate method for proportioning the reclaimed asphalt pavement into the mixture.
 - e. The batch plant's dryer may have to be operated at temperatures higher than with all new materials. Modifications to the dryer and the dust collection system may be necessary to prevent damage.
 - f. Drum-mix plants shall have an appropriately located metering device for adding the reclaimed asphalt concrete to the dryer-mixer in a manner that does not damage the

asphalt in the reclaimed material. An accurate method for proportioning the reclaimed asphalt pavement into the mixture shall be provided. The Contractor shall make provisions for compensating for the moisture in the reclaimed asphalt concrete.

- g. The mixing time for a drum-mix plant shall be such as to achieve an intimate blending of the new and reclaimed materials and a complete coating of all aggregate particles.
- h. The batch or drum-mix plant may be equipped with a surge-storage bin at the mixture discharge point
- C. Tack Coat: Emulsified asphalt conforming to NYSDOT Specifications Section 700. The asphalt emulsion tack coat shall meet the requirements in NYSDOT Specifications Table 702-90.
- D. Mineral Filler: Rock or slag dust, hydraulic cement, or other inert material complying with AASHTO M-17/ASTM D 242, if recommended by applicable state highway standards.
- E. Course Aggregate Base Course: Stone subbase shall conform to NYSDOT Type 1 (Item No. 304.02) in accordance with the requirements of NYSDOT Section 304. Reclaimed or recycled concrete aggregate meeting the requirements of the NYSDOT and NYCDOT Standard Specifications shall be used as subbase material subject to approval by the Commissioner.

2.2 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition and correct breakdowns in a manner that will not delay or be detrimental to progress of paving operations.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Verify that substrate has been inspected and that substrate is hard, uniform, stable, true to gradients and elevations, and dry prior to any subbase course construction.
- B. Proof roll prepared base material surface to check for areas requiring additional compaction and areas requiring removal and recompaction.
- C. Do not begin paving work until deficient base material areas have been corrected and are ready to receive paving.

3.2 TRANSPORTATION

- A. Asphalt mixtures shall be transported to work site in tight vehicles having clean and smooth heated metal beds and protected from weather.
- B. The inside surface of transportation vehicles shall be lightly coated, just before the vehicles are loaded, with either a whitewash of lime and water, soap solutions, or detergents, as approved by the City of New York. After application, the truck bodies shall be raised for a sufficient time to allow the excess fluid to drain.

3.3 APPLICATIONS

A. Course Aggregate Base Course:

1. Perform subbase course construction in a manner that will drain surface properly at all times, and at the same time prevent runoff from adjacent areas from draining onto subbase course construction.
2. Compact granular subbase material in 8-inch maximum loose lifts with a minimum of 6 passes of a 10 ton compactor, to not less than 95% of the optimum density as determined by ASTM D1557.

B. Tack Coat:

1. Apply to contact surfaces of previously constructed asphaltic concrete base courses or Portland cement concrete and surfaces abutting or projecting into asphaltic concrete or into asphaltic concrete pavement.
2. Apply tack coat to asphaltic concrete base course. Apply emulsified asphalt tack coat between each lift or layer of full depth asphaltic concrete and on surface of all such bases where asphaltic concrete paving will be constructed.
3. Apply at minimum rate of 0.05 gallon per square yard of surface.

3.4 ASPHALTIC CONCRETE PLACEMENT

A. Place asphaltic concrete mixture on compacted subbase surface, spread, and strike off. Spread mixture at following minimum temperatures:

1. When ambient temperature is between 40°F and 50°F, mixture temp. = 285°F
2. When ambient temperature is between 50°F and 60°F, mixture temp. = 280°F
3. When ambient temperature is higher than 60°F, mixture temp. = 275°F

B. Whenever possible, all pavement shall be spread by a finishing machine; however, inaccessible or irregular areas may be placed by hand methods. The hot mixture shall be spread uniformly to the required depth with hot shovels and rakes. After spreading, the hot mixture shall be carefully smoothed to remove all segregated course aggregate and rake marks. Rakes and lutes used for hand spreading shall be of the type designed for use on asphalt mixtures. Loads shall not be dumped faster than can be properly spread. Workers shall not stand on the loose mixture while spreading.

C. Paving Machine Placement: Apply successive lifts of asphaltic concrete with the surface course placed in the direction of surface-water flow. Place in typical strips not less than 10'-0" wide.

D. Joints: Make joints between old and new pavements, or between successive days and work in a manner that will provide a continuous bond between adjoining work. Construction joints shall have same texture, density, and smoothness as other sections of asphaltic concrete course. Clean contact surfaces of all joints and apply tack coat.

3.5 ROLLING AND COMPACTION

- A. **Compaction:** The mixture, after being spread, shall be thoroughly compacted by rolling as soon as it will bear the weight of the rollers without undue displacement. The number, weight, and types of rollers and sequences of rolling operations shall be such that the required density and surface are consistently attained while the mixture is in a workable condition. The bituminous concrete pavement shall have a minimum thickness as specified on the contract drawings and should be compacted to a minimum of 96% of the maximum unit weight as determined by the Marshall Mix Design Procedures in accordance with ASTM D-1559. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.
- B. **Breakdown Rolling:** Accomplish breakdown or initial rolling immediately following rolling of joints and outside edge. Check surface after breakdown rolling, and repair displaced areas by loosening and filling with hot material.
- C. **Second Rolling:** Follow breakdown rolling as soon as possible, while mixture is hot. Continue secondrolling until mixture has been thoroughly compacted.
- D. **Finish Rolling:** Perform finish rolling while mixture is still warm enough for removal of roller marks. Continue rolling until roller marks are eliminated and course has attained maximum density.
- E. **Patching:** Remove and replace paving areas mixed with foreign materials and defective areas. Cut out such areas and fill with fresh, hot asphaltic concrete. Compact by rolling to maximum surface density and smoothness.
- F. **Protection:** After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.6 FIELD QUALITY CONTROL

- A. **Grade Control:** Establish and maintain required lines and elevations.
- B. **Temperature:** The Construction Manager shall monitor the asphaltic concrete mixture on the paver immediately prior to spreading asphalt mixture to certify that the minimum temperature requirements of this section are met. Temperature measurement shall be taken on the average of one test per 20 tons of material.
- C. **Thickness:** In-place compacted thickness shall not be less than thickness specified on the drawings. Areas of deficient paving thickness shall receive a tack coat and a minimum 1.5" overlay; or shall be removed and replaced to the proper thickness, at the discretion of the Construction Manager; until specified thickness of the course is met or exceeded at no additional expense to the City of New York.
- D. **Surface Smoothness:** Testing shall be performed on the finished surface of each asphalt concrete course for smoothness, using 10'-0" straightedge applied parallel with, and at right angles to centerline of paved area. These tests shall be performed under the observation of the Construction Manager. Surfaces will not be acceptable if the following 10' straightedge tolerances for smoothness are exceeded.

Base Course Surface: 1/4 inch
Wearing Course Surface: 3/16 inch

- E. **Ponding:** Check surface areas at intervals necessary to eliminate ponding areas. Remove and replace unacceptable paving as directed by the Construction Manager.

- F. Compaction: The Construction Manager shall perform in place density tests as part of the construction testing requirements using the Nuclear Method in accordance with ASTM D-2922 Method B direct transmission. Field density tests shall be performed at the rate of one test per 20,000 square feet of pavement.
- G. Surface Color and Texture: Sufficiently clean work areas and paving equipment shall be maintained to prohibit discoloration or introduction of soil or other materials into the finished pavement surface.

3.7 INSTALLATION TOLERANCES

- A. Pavement Thickness: Compact each course to produce the thickness indicated within the following tolerances:
 - 1. Base Course: Plus or minus 1/2 inch
 - 2. Surface Course: Plus 1/4 inch, no minus.
- B. Pavement Surface Smoothness: Compact each course to produce a surface smoothness within the following tolerances as determined by using a 10-foot straightedge applied transversely or longitudinally to paved areas:
 - 1. Base Course: 1/4 inch
 - 2. Surface Course: 1/8 inch
 - 3. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowable variance from template is 1/4 inch.
- C. Traffic-Calming Devices: Compact and form asphalt to produce the contour indicated and within a tolerance of plus or minus 1/8 inch of height indicated above pavement surface.

3.8 JOINTS

- A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.
 - 1. Clean contact surfaces and apply tack coat to joints.
 - 2. Offset longitudinal joints, in successive courses, a minimum of 6 inches.
 - 3. Offset transverse joints, in successive courses, a minimum of 24 inches.
 - 4. Construct transverse joints at each point where paver ends a day's work and resumes work at a subsequent time.
 - 5. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.
 - 6. Compact asphalt at joints to a density within 2 percent of specified course density.

3.9 WASTE DISPOSAL

- A. All removals and disposal of waste related to work of this Section shall be performed in accordance with these specifications.

END OF SECTION

SECTION 32 13 13
CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to install outside concrete structural and topping slabs, and onsite concrete sidewalk as indicated on the Contract Documents. This section is applicable for areas within the property limits. Does not apply to areas within Right-of-Way.
- B. Section Includes:
 - 1. Furnish and install on-site concrete pavement, sidewalks, ramps and stone base as per the Contract Documents.
- C. Related Sections:
 - 1. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements, and other related Division 01 Sections regarding specific requirements for LEED certification
 - 2. Section 02 20 50 – Protection of Existing Utilities
 - 3. Section 31 00 00 – Earthwork
 - 4. Section 32 16 13 – Concrete Curbs
 - 5. Section 03 30 00 – Cast in Place Concrete

1.3 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:
 - 1. New York City Building Code.
 - 2. New York City Department of Transportation (NYCDOT) Bureau of Highway Operations Standard Specifications, latest edition.
 - 3. ASTM C33 – Standard Specification for Concrete Aggregates

4. ASTM C143 – Standard Test Method For Slump of Hydraulic Cement Concrete
5. ASTM C150 – Standard Specification for Portland Cement
6. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types)
7. ASTM A185 -- Welded Steel Wire Fabric for Concrete Reinforcement.
8. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field
9. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens

1.4 SUBMITTALS

- A. Design Mix: Before concrete is manufactured, the design mix must be approved by the Commissioner. A statement, in writing, of the sources of all ingredient materials, the type and brand of the cement and the number of pounds of each of the materials in a saturated surface-dry condition making up one cubic yard of concrete shall be submitted. The range of water-cement ratios within which the concrete will be manufactured and the method of mixing to be employed shall also be stated. The approved formula shall not be changed without the Commissioner's written permission.
- B. Welded Wire Fabric: Shop drawings of reinforcing steel showing the location and type of supports and tie wires shall be submitted to the Commissioner for approval before any work covered by these drawings is undertaken.
- C. Material Certificates: Submit a signed materials certificate to the Construction Manager which is cosigned by the material producer, certifying that the following materials comply with, or exceed, the requirements herein:
 1. Steel reinforcement and reinforcement accessories
 2. Fiber Reinforcement
 3. Admixtures
 4. Curing compounds
 5. Applied finish materials
 6. Bonding Agent or epoxy adhesive
 7. Joint Fillers

1.5 QUALITY ASSURANCE

- A. Independent Testing Agency: Retain an independent testing agency to perform the required tests. Any necessary assistance to the testing agency shall be provided. The testing agency shall be provided the construction schedule at least one week prior to the start of construction, and Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

- B. Random Pavement Cores: The Construction Manager shall randomly core the pavement at a minimum rate of one core per 20,000 square feet of pavement, with a minimum of 3 cores from heavy-duty areas and 3 cores from standard duty areas. Core shall be tested for thickness and quality of aggregate distribution. Core holes shall be patched immediately with portland cement concrete conforming to section 2.1 and shall be finished to provide a level surface conforming to section 3.3.
- C. Concrete Cleaning: Sweep concrete pavement and wash free of stains, discolorations, dirt, and other foreign material just prior to final inspection.
- D. Mockups to demonstrate surface finish, texture and color: Provide one mockup to demonstrate surface finish, texture, and color to be approved by Commissioner.

1.6 JOB CONDITIONS

- A. Work Notifications: A construction schedule shall be submitted to the Construction Manager one week prior to the start of construction for approval.
- B. Weather Limitations: The weather conditions specified in specification section 03 30 00 – Cast in Place Concrete shall be followed.

PART 2 - PRODUCTS

2.1 FORM MATERIALS – Refer to specification 03 30 00 – Cast in Place Concrete

2.2 REINFORCING MATERIALS – Refer to specification 03 30 00 – Cast in Place Concrete

2.3 CONCRETE MATERIALS

- A. Refer to of specification 03 30 00 – Cast in Place Concrete with the exception of 2.3(D)
 - 1. Pozzolans and slags: These must be completely accounted for in the design mix. Replace Portland cement by weight with a minimum of 20% and a maximum of 25% Fly Ash. Mix design must meet minimum design requirements set in the contract documents, additional admixtures may be required to meet early strength requirements and alternative cementitious material goals. Note: If a "blended cement" is used which already contains a certain percentage of Pozzolans or Slags this content may offset or entirely satisfy the minimum percentage required.

2.4 RELATED MATERIALS – Refer to specification 03 30 00 – Cast in Place Concrete in addition to:

- A. Stone Base:
 - 1. AASHTO No. 57 processed sand and gravel free from debris, clay lumps, organic, or other deleterious material, and complying with the following gradation requirements:

<u>U.S. Sieve Size</u>	<u>% Passing by Wt</u>
1 ½ inch	100
1 inch	90 to 100

1/2 inch	20 to 60
No. 4	0 to 10
No. 8	0 to 5

2. Stone Base shall be reclaimed or recycled concrete aggregate.
- B. Joint Fillers: Resilient premolded bituminous impregnated fiberboard units complying with ASTM D 1751 FS HH-F-341, Type II, Class A; or AASHTO M 153, Type I.
- C. Joint Sealants: Non-priming, pourable, self-leveling polyurethane. Acceptable sealants are Sonneborn "Sonolastic Paving Joint Sealant" Sonneborn "Sonomeric CT 1 Sealant", Sonneborn "Sonomeric CT 2 Sealant", Mameco "Vulken 45", or Woodmont Products "Chem-Caulk". PROPORTIONING AND DESIGN OF MIXES – Refer to of specification 03 30 00 – Cast in Place Concrete

2.5 CONCRETE MIXING – Refer to specification 03 30 00 – Cast in Place Concrete

2.6 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition and correct breakdowns in a manner that will not delay or be detrimental to progress of paving operations.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Prior to the construction of concrete pavement, the subgrade must be approved by the Commissioner. Pavement constructed without subgrade approval shall be removed and reconstructed after the subgrade is approved at no additional cost to the City of New York.
- B. Proof-roll prepared base material surface to check for unstable areas. The paving work shall begin after the unsuitable areas have been corrected and are ready to receive paving. Compaction testing for the base material shall be completed prior to the placement of the paving.
- C. Surface Preparation: Remove loose material from compacted base material surface to produce a firm, smooth surface immediately before placing concrete.

3.2 INSTALLATION

- A. Form Construction - Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete
- B. Reinforcement: Locate, place and support reinforcement per Construction Drawings and applicable Section 03 30 00 Cast in Place Concrete. Reinforcement must be inspected and approved by the Commissioner prior to concrete pour.
- C. Concrete Placement - Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete

D. Joint Construction:

1. Joint Construction: Construct expansion and contraction joints, and construction joints straight with face perpendicular to concrete surface. Construct transverse joints perpendicular to centerline, unless otherwise detailed.
2. Provide Expansion and Contraction joints as indicated on Contact Drawings. Provide joint filler for the entire depth of the slab section and not less than 1" below finished surface so as to allow for joint sealer.
3. Construction Joints: Place construction joints at end of placements and at locations where placement operations are stopped for period of more than ½ hour, except where such placements terminate at expansion joints.

E. Joint Fillers: Extend joint fillers full-width and depth of joint, and not less than ½" or more than 1" below finished surface where joint sealer is indicated. Furnish joint fillers in one-piece lengths for full width being placed, wherever possible. Where more than one length is required, lace or clip joint filler sections together.

F. Joint Sealants: All joints shall be sealed with approved exterior pavement joint sealants and shall be installed per manufacturer's recommendations.

3.3 CONCRETE FINISHING - Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete

3.4 PROTECTION - Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete

3.5 FIELD QUALITY CONTROL - Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete

3.6 WASTE DISPOSAL

- A. All removals and disposal of waste related to work of this Section shall be performed in accordance with these specifications.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 14 40

UNIT PAVER PAVEMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions and DDC General Conditions, apply to the work of this Section and are hereby made a part of this Section.
- B. Examine all drawings and other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

- A. The work of this section includes, but is not limited to:
 - 1. Concrete Plank Pavement (Unit Paver)
 - 2. Concrete Hex Block Pavement (Unit Paver)
 - 3. Granite Cobbles (Unit Paver)
 - 4. Gantry State Park Granite Paver (Unit Paver)
 - 5. Setting Beds
 - 6. Joint Fillers
 - 7. Expansion Joint
 - 8. Non-woven Geotextile Fabric
 - 9. Coordination
 - 10. Clean-up
- B. Related Requirements: The following items of related work are specified and included in other Sections of the Specifications:
 - 1. Section 03 30 00 – Cast In Place Concrete.
 - 2. Section 31 00 00 - Earthwork.
 - 3. Section 32 15 40 – Decomposed Granite Pavement

1.3 EXAMINATION OF CONDITIONS

- A. The Contractor shall fully inform himself of existing conditions of the site before submitting his bid, and shall be fully responsible for carrying out all site work required to fully and properly execute the work of the Contract, regardless of the conditions encountered in the actual work. No claim for extra compensation or extension of time will be allowed on account of actual conditions inconsistent with those assumed.

- B. Plans, surveys, measurements and dimensions under which the work is to be performed are believed to be correct to the best of the City of New York's knowledge, but the Contractor shall have examined them for himself during the bidding period, as no allowance will be made for any errors or inaccuracies that may be found therein.

1.4 SUBMITTALS

- A. Submittals shall conform to DDC General Conditions.
- B. Statements of Qualifications: Submit to identify and exhibit qualifications as specified in this Section.
- C. Product Data: For each component, each type and condition to include proposed sources of supply and material technical data, including the following:
1. For Stone Materials Furnished (Granite Cobble):
 - (a) Submit complete data on quarry facilities for each stone type and on fabrication facilities for stonework. Include information of location, production capabilities, and the nature and character of each stone selected.
 - (b) Material properties data for each stone type shall be submitted by the stone suppliers and certified as representative of the properties of stone material to be supplied for the Project. Include references to appropriate ASTM tests as conducted by a certified testing laboratory.
 2. For manufactured paver (Concrete Hex Block, Concrete Plank) furnished:
 - (a) Submit complete data on manufacturer facilities for each type and on fabrication facilities. Include information of location, production capabilities and the nature and character of each pavement selected.
 - (b) Material properties data for each pavement type shall be submitted by the suppliers and certified as representative of the properties of the material to be supplied for the Project. Include references to appropriate ASTM tests as conducted by a certified testing laboratory.
 3. For Base Course and Setting Bed Materials:
 - (a) Submit material certification and analysis report for aggregates and sand. Refer to and comply with requirements specified in 310000 Earthwork as approved applicable.
 4. Submit for each material item of this section including fitting hardware, fastening devices, accessories, mortars, grouts, sealants, fillers, expansion joint material, etc.
 5. For Asphalt setting bed materials:
 - (a) Test reports and data: Submit for the following materials to confirm material composition and compliance with products data and specifications criteria:
 - i) Bituminous setting bed materials
- D. Shop Drawings:
1. For stone materials and unit pavers furnished: Submit for each material type furnished and each related application condition of the project work. Include necessary coordination and preparation of composite drawing information

together with other trades and contractors of adjacent components and conditions.

- (a) Cutting and Setting Drawings: Submit complete cutting and setting drawings showing shop sizes, shapes, thicknesses, jointing, anchoring, connection with other work, typical and special anchoring details, supports, dimensions and setting numbers for each piece.
- (b) Setting Drawings: Setting drawings shall show the relationship to adjoining construction and, after fabrication and final selection, shall indicate the location of each unit with a number designation corresponding to number marked on each unit.
 - i) Show location layouts and patterns coordinated with design drawings and related to survey control points and dimensions. Establish and verify dimensions with concrete work of on-site walls and buildings, layouts and patterns of other work, and other like conditions.
 - ii) Show location, type, and extent of anticipated field cutting.
 - iii) Do not fabricate any stone or pavers (except for samples) until shop drawings have been approved for fabrication by the Commissioner.
- (c) Shop Drawing for Unit Pavers Mockup
 - i) Similar to setting drawings, but specific to the required mockups.

E. Samples for Verification for Concrete Plank, Concrete Hex Block, Granite Cobble, Flush Granite Curb, Gantry State Park Granite Paver:

- 1. Materials: Full Size units of each type of unit paver or material indicated in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics.
 - (a) Granite Cobble and Granite Curb: Provide samples with joints grouted and cured, showing the full range of colors to be expected in the completed work
 - (b) Include samples of exposed edge restraints (section 321540).

F. Qualification Data: For Firms specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include list of completed projects with project names and addresses, names and addresses of Landscape Architects and Owners, and other information specified.

G. Field Samples/Mock-ups for Unit Pavers: Before installing unit pavers, build mockups for each form and patterns of unit pavers required to verify selections made under sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Each mock-up shall be large enough to display typical characteristics of each item and type of work. If the original mock-up is not approved, the Contractor shall provide additional samples, as required, at no cost to the City of New York until an approved sample is obtained. The approved sample shall become the standard for the entire job. Sample panel shall not be constructed on a location becoming part of the final work and shall remain undisturbed until all work is completed. Build mockups to comply with the following requirements, using materials indicated for the completed Work, including same base construction, special features for expansion joints, edge restraints, transitions to adjacent materials and contiguous work as indicated.

1. Build mockups in the location as directed by Commissioner. Install paving surface samples complete with jointing materials and setting bed indicated over concrete base slab as specified in this section.
2. Each Unit Paver shall be constructed at 10'x10' minimum. Transitions shall be shown by constructing mockups adjacent to one another as they would be in the actual Work. See section 321540 for Decomposed Granite mockup and incorporate to show designed transitions.
3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. Obtain Commissioners approval of mockups before starting stone or paver installation.
6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed.

1.5 QUALITY ASSURANCE

- A. Materials and methods of construction shall comply with the following standards:
 1. ACI: American Concrete Institute
 2. ANSI: American National Standards Institute
 3. ASTM: American Society for Testing and Materials
 4. BSI: Building Stone Institute
 5. FS: Federal Specifications
 6. PCA: Portland Cement Association
- B. Installer Qualifications: Installations of paving system shall be by firm that can exhibit proof within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work. The project names and references for each project shall be submitted for review.
- C. Source Limitations for Unit Paver: Obtain each type of unit paver, joint material, and setting material from one source with resources to provide materials and products of consistent quality in appearance and physical properties.
- D. Layout and Grading: After staking out the work, and before beginning final construction, obtain the Commissioners written approval for layout and grades (horizontal and vertical alignment).
 1. The Contractor shall locate all pavement edges (horizontal and vertical) by means of survey using the layout data provided in the Drawings. Edges shall be staked or painted.
 2. Layout of horizontal and vertical alignments shall be coincident so that the Commissioner may review both simultaneously.

3. At least 72 hours before commencing work, the Contractor shall have substantial portions of the pavement laid out for the Commissioners review. The Contractor shall not proceed with work until the Commissioner accepts the horizontal and vertical layout.
4. Transitions between all vertical curves on all walks shall be smooth and consistent. Sharp breaks shall not be accepted by the Commissioner.
5. The Commissioner shall be permitted to make reasonable adjustments to layout and grading without further compensation to the Contractor.

1.6 PROJECT CONDITIONS

A. Environmental Requirements:

1. Prevent wind or rain disturbance of setting materials, protect from sheet flow from adjacent areas, and generally maintain optimum installation conditions.
2. Do not install paving in conditions of standing water. Surface and sub-drainage must be assured at all times.

B. Cold Weather Protection:

1. Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen sub-grade or setting beds. Remove and replace unit paver work damaged by frost or freezing.
2. Temperature: Do not place paving systems when the ambient temperature is below 40°F, or when there is frost in the base course, or any other time when weather conditions are unsuitable for the type of material being placed. Place cobble unit pavers only when the ambient temperature is 40°F and rising but well below maximum temperatures recommended for all the materials.
3. Provide the following protection for completed portions of work for 24 hours after installation when the mean dialing air temperature ins as indicated: below 25 deg F, cover with insulating blankets; below 20 deg F, provide enclosure and temporary heat to maintain temperature above 32 deg F.

C. Weather Limitations for Bituminous Setting Bed: Comply with the following requirements:

1. Apply asphalt adhesive when ambient temperature is above 50 deg F (10 deg C) and when temperature has not been below 35 deg F (2 deg C) for 12 hours immediately before application. Do not apply when base is wet or contains excess moisture.
2. Install bituminous setting bed only when atmospheric temperature is above 40 deg F (4 deg C) and when base is dry.

D. Weather Limitations for Mortar and Grout: Comply with the following requirements:

1. Cold-Weather Requirements: Protect unit paver work against freezing when atmospheric temperature is 40 deg F and falling. Heat materials to provide mortar and grout temperatures between 40 and 120 deg F. Provide the following protection for completed portions of work for 24 hours after installation when the mean daily air temperature is as indicated: below 40 deg F, cover with weather-resistant membrane; below 25 deg F, cover with insulating blankets; below 20 deg F, provide enclosure and temporary heat to maintain temperature above 32 deg F.

2. Hot-Weather Requirements: Protect unit paver work when temperature and humidity conditions produce excessive evaporation of setting beds and grout. Provide artificial shade and windbreaks and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg F and higher.
 - (a) When ambient temperature exceeds 100 or 90 deg F with a wind velocity greater than 8 mph, set pavers within 1 minute of spreading setting-bed mortar.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Protect unit pavers and aggregate during storage and construction against soiling or contamination from earth and other materials.
 1. Cover pavers with plastic or use other packaging materials that will prevent rust marks from steel strapping.
 2. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
 3. Store liquids in tightly closed containers protected from freezing.
 4. Store asphalt cement and other bituminous materials in tightly closed containers.

1.8 SEQUENCING / SCHEDULING

- A. Coordinate delivery and installation of items so as not to damage installed unit pavers.
- B. Furnish cast-in and built-in items and setting instructions when required by affected trades.

1.9 EXTRA STOCK

- A. Furnish additional Paver Units of each type and color used in the project in a quantity of 1% used on the Project Work. Deliver to the City of New York at completion of work, strapped on pallets, correctly identified, and to a location designated by the City of New York and the Commissioner.

1.10 WARRANTY

- A. Provide Manufacturer's Warranty for minimum 1 year from date of Final Acceptance of installation, to repair or replace units that become defective during warranty period excluding parts subject to accident, abuse, misuse or neglect.

PART 2 PRODUCTS

2.1 SUBBASE PREPARATION AND BASE MATERIALS

- A. Compacted subgrade shall conform to Section 31 00 00 – Earthwork.
- B. Compacted aggregate shall be used as a base course material under all other bases in accordance with Section 31 00 00 – Earthwork.
- C. Concrete slab for construction of Concrete Plank Pavement shall conform to Section 03 30 00 Precast Concrete.

2.2 PRECAST CONCRETE PLANK PAVEMENT

A. Product:

1. Custom Plank Paver (2-3/4" Thick): Pressed Concrete
 - (a) 6"x18"
 - (b) 18"x18"
 - (c) 42"x18"
 - (d) 60"x18"
2. Strength: Rated for vehicular traffic
 - (a) Cement: ASTM C150 Portland Cement Type III, Aggregates: ASTM C33 (washed, graded sand and natural aggregates)
 - (b) Compressive Strength: >8,500 psi Average, ASTM C140
 - (c) Flexural Strength: >800 psi Average, ASTM C293
 - (d) Water Absorption: <5%, ASTM C140
 - (e) Freeze/Thaw: <1% Loss of dry weight (50 Cycles), ASTM C67
 - (f) Center Load: 1,800 lbs., WTCL 99
3. Finish and Color: As approved by the Commissioner.
4. Manufacturer: Wausau Tile, Michael Conboy, New York Representative, phone: (631) 645-4331, Email: michael.fmconboy@gmail.com; or Approved Equal

2.3 CONCRETE HEX BLOCK PAVEMENT

- A. Product: Concrete Hex Block Pavers are custom colors used in Gantry State Park Phase 2. Pavers of this Work shall match the Pavers of previous work as described below and in the drawings. Shall be fabricated for Vehicular Loading.
1. FDX 10DP Hex Block
 - (a) Charcoal color with reflective aggregate (Not Recycled Glass)
 2. GB QW Type 2 Hex Block
 - (a) Medium Grey with Clear Glass aggregate
 3. GB QW Type 4 Hex Block
 - (a) Medium Grey with Charcoal glass aggregates

B. Quantity:

1. FDX 10DP: 85% of the total quantity required
2. GB QW Type 2: 5% of the total quantity required
3. GB QW Type 4: 10% of the total quantity required

C. Manufacturer:

1. Wausau Tile, Michael Conboy, New York Representative, phone: (631) 645-4331, Email: michael.fmconboy@gmail.com; or Approved Equal

2.4 GRANITE COBBLES

A. General:

1. Granite Cobbles shall be sound stock, and free from defects impairing strength, durability of appearance, such as cracks, seams, starts, holes, flaws or imperfections which have been patched or filled. No patching or hiding of defects will be permitted.
2. Granite Cobbles shall be uniformly consistent in value, graining texture, and other features to extent inherent in each stone type. Color shall be the full color range.
3. Exposed surfaces and edges of stone units shall be free from cracks, broken comers, chipped edges, scratches, or defects affecting appearances.
4. Shop Cutting, Drilling and Fitting: Include all cutting, drilling, and fitting of stone required to accommodate the work of other trades and to fit conditions on-site. In cutting and fitting, carefully cut and grind edges to a neat, tight fit. Cutting shall be in such a manner so as not to impair strength or appearance.

B. Granite Cobbles to be provided by single source to be approved by the Commissioner.

1. Finish: Match existing Queens West Standard
2. Size: 4"x6"x12"

2.5 GANTRY STATE PARK GRANITE PAVER

A. Existing Pavers shall be salvaged for reuse to complete this Work. Should additional pavers be required to complete the job, the Contractor shall match all properties of the existing paver.

B. Submit data as required by this specification for approval by the Commissioner.

2.6 STEEL EDGE RESTRIANT

A. See Section 32 15 40 – Decomposed Granite Pavement

2.7 SETTING BEDS AND JOINTS

A. Precast Plank Paver over Concrete Slab

1. Concrete Slab at depth specified in the drawings.
2. 2" Min. Depth Sand Cement (5:1 Ratio)
 - (a) Sand for setting bed: Sound, Sharp, washed, natural sand complying with gradation requirements in ASTM C33 for fine Aggregates.
 - (b) Cement for setting bed: Portland cement.
3. Joints: Stone Dust and Decomposed Granite (Section 32 15 40)
 - (a) Joint spacing varies –
 - i) ¼" at Face of adjacent features (utilities/buildings/walls/conc. sidewalk)
 - ii) Butt tight as shown on the drawings
 - iii) Larger joints as shown on the drawings – VIF with Commissioner.

B. Precast Plank Paver over compacted aggregate

1. Compacted Aggregate to depth shown on the plan.
2. Non-woven geotextile fabric. See Section 329100 Planting Soil System
3. Welded wire mesh, 4" openings.
4. 6" Depth Sand Cement (5:1 Ratio)
 - (a) Sand for setting bed: Sound, Sharp, washed, natural sand complying with gradation requirements in ASTM C33 for fine Aggregates.
 - (b) Cement for setting bed: Portland cement.
5. Joints: Stone Dust and Decomposed Granite (Section 32 15 40)

C. Concrete Hex Block Paver Over Concrete Slab

1. Concrete Slab at depth specified in the drawings.
2. 2" Bituminous Concrete. See 2.8-E for Bituminous Setting Bed Materials and Mix.
3. Modified Neoprene Adhesive.
4. Joints: See 2.8.E.1(e)

D. Cobble Paver

1. Place non-woven geotextile fabric above structural soil layer per Section 329100 Planting Soil System.
2. Compacted aggregate base to the depth shown on the drawings.
3. 2" Stone dust/Cement setting bed (5:1 ratio)
 - (a) Stone Dust: See Decomposed Granite (Section 32 15 40)
4. Joints: Latex-Modified Portland Cement Grout

- (a) Add latex additive to dry grout mix in proportions and concentration recommended by latex-additive manufacturer. Proportion cement and aggregate to comply with directions of latex-additive manufacturer.
- (b) Color: Shall match cobble pavement. To be approved by Commissioner.

E. Requirements for Bituminous Setting Bed

- 1. Materials:
 - (a) Primer for Base: ASTM D 2028, cutback asphalt, grade as recommended by unit paver manufacturer.
 - (b) Fine aggregate for setting bed: ASTM C 1073, No. 2 or No. 3
 - (c) Asphalt Cement: ASTM D 3381, Viscosity Grade AC-10 or AC-20
 - (d) Neoprene-Modified Asphalt Adhesive: Paving manufacturers standard adhesive consisting of oxidized asphalt combined with 2 percent neoprene and 10 percent long-fibered mineral fibers containing not asbestos.
 - (e) Joint filler shall be sand cement mixture consistency of colored Portland cement to match color of Pavers and conforming to ASTM C 150.
- 2. Mix:
 - (a) Mix bituminous setting bed materials at an asphalt plant in approximate proportion, by weight, of 7 percent asphalt cement to 93 percent fine aggregate, unless otherwise indicated by the paver manufacturer. Heat mixture to 300 deg F (149 deg C).

PART 3 EXECUTION

3.1 EXAMINATIONS

- A. The installing contractor shall arrange a pre installation meeting with the Commissioner and shall examine previous work, related work, and conditions under which this work is to be performed and notify the Commissioner in writing of all deficiencies and conditions detrimental to the proper completion of this work. Beginning work means installer accepts substrates, subgrades, previous work, and conditions.
 - 1. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Review the layout and pattern of drainage structures and utility covers with the Commissioner. Adjust patterns adjacent to structures and covers as indicated by the Commissioner.

3.2 PREPARATION

- A. Aggregate bases shall be provided in accordance with Section 31 00 00 Earthwork.
- B. Concrete base slab shall be provided in accordance with Section 03 30 00 Cast in Place Concrete. Slab shall have a rough broom finish and shall be acceptable to paving system installer. Coordinate with work of concrete placement and make corrections as necessary.
- C. Vacuum clean concrete slabs to remove dirt, dust debris and loose particles.

- D. Remove substances, from concrete slab, that could impair bond.
- E. Clean unit paver surfaces that have become dirty or stained by removing soil, stains and foreign materials before setting. Clean stone thoroughly scrubbing with fiber brushed and then drenching with clean water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

3.3 INSTALLATION, GENERAL

- A. Layout of Work: Accurately layout paving work to patterns and conditions as indicated, encountered on site, and specified for installation. Comply with set out control points as indicated and coordinate with other work of the Project. Provide additional control points and stakeouts as required to effect correct alignments and grade elevations. Advise Commissioner of any discrepancies or on-site conditions detrimental to critical layouts and obtain approved correction.
- B. Prior to prime application and setting bed placements, verify slab placement to correct line and grade and with correct finish and thoroughly clean base surface to be covered with paving system of all dust, debris and contaminants.
- C. Do not use paving materials with chips, cracks, voids, discolorations, and other defects that might be visible or cause staining in finished work.
- D. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
 - 1. VIF all cuts with Commissioner prior to final placement of cut paver.
- E. Joint Pattern: Set unit pavers to comply with Contract Documents and approved Shop Drawings. Match for color and pattern by using units numbered in sequence as indicated on approved shop drawings.
- F. Tolerances: Do not exceed 1/16-inch unit to unit offset from flush (lippage) nor 1/8-inch in 24 inches and 1/4-inch in 10 feet from level, or indicated slope, for finished surface of paving.
- G. Expansion and Control Joints: Provide for sealant filled joints at locations and widths indicated. Install joint filler before setting pavers. See 33 30 00-Cast in Place Concrete for joint sealants.
- H. Provide edge restraint as indicated. Install edge restraint before placing unit pavers. Install per manufacturers instructions. Obtain Commissioners approval before continuing work.
- I. The Commissioner shall determine when the joints are fully filled.

3.4 AGGREGATE SETTING BED PAVER APPLICATIONS

- A. Compact soil subgrade uniformly to at least 95 percent of ASTM D 1557 laboratory density.

- B. Place aggregate sub base (and conc. base as required) in thickness indicated on the Contract Drawings. Compact by tamping with a plate vibrator and screed to depth required to allow setting of pavers.
- C. Place leveling course and screed to a thickness as indicated on the contract drawings, taking care that moisture content remains constant and density is loose and constant until pavers are set and compacted.
- D. Treat leveling base with soil sterilizer to inhibit growth of grass and weeds.
- E. Set pavers with joints as shown on the Contract Drawings and as indicated in the approved Shop Drawings.
- F. Vibrate Pavers into leveling course with a low-amplitude plate vibrator capable of a 3,500 – 5,000 lbf compaction force at 80-90 Hz. Perform at least three passes across paving with vibrator. Vibrate under the following conditions:
 - 1. After edge pavers are installed and there is a completed surface or before surface is exposed to rain.
 - 2. Before ending each day's work, fully compact installed concrete pavers to within 36-inches of the laying face. Cover open layers with non-staining plastic sheets overlapped 48-inches on each side of the laying face to protect it from rain.
 - 3. Joints:
 - (a) Spread dry joint fill (see above) and fill joints immediately after vibrating pavers into leveling course. Vibrate pavers and add joint fill material until joints are completely filled, then remove excess. Leave slight surplus on the surface for refilling.
 - (b) For cobble joint placement: Grout joints as soon as possible after initial placement of cobble. Force grout into joints, taking care not to smear grout on adjoining pavers and other surfaces. After initial set of grout, finish joints by tooling to produce a slight concave joint, free from dry cracks. Lightly brush joint with a soft bristle brush. Cure grout by maintaining is a damp condition for seven days, unless otherwise recommended by the latex-additive manufacturer.
- G. Do not allow traffic on installed pavers until joints have been filled and vibrated into place.
- H. Repeat joint filling process 30 days later.

3.5 BITUMINOUS SETTING-BED APPLICATIONS

- A. Apply primer to concrete slab or binder course immediately before placing setting bed.
- B. Prepare for setting bed placement by locating control bars approximately 10 feet apart and parallel to one another, to serve as guides for striking board. Adjust bars to subgrades required for accurate setting of paving units to finish grades indicated
- C. Place bituminous setting bed where indicated, in panels, by spreading bituminous material between control bars. Strike setting bed smooth, firm, even, and not less than depth specified on the contract drawings. Add fresh bituminous material to low, porous spots after each pass of striking board. After each panel is completed, advance the first

control bar to the next position in readiness for striking the adjacent panel. Carefully fill depressions that remain after removing depth-control bars.

1. Roll setting bed with power roller to a nominal depth indicated on the contract drawings while still hot. Adjust thickness as necessary to allow for accurate setting of unit pavers to finish grades indicated.
 2. Apply neoprene-modified asphalt adhesive to cold setting bed by squeegeeing or troweling. If troweled on, use trowel with serrations not exceeding 1/16-inch. Proceed with setting of units only after adhesive is dry to the touch.
- D. Place pavers carefully by hand in courses indicated on the contract drawings, maintaining accurate alignment and uniform top surface. Protect newly laid pavers with plywood panels on which workers may stand. Advance protective panels as work progresses, but maintain protection in areas subject to continued movement of materials and equipment to avoid creating depressions or disturbing alignment of pavers. If additional leveling of paving is required, and before treating joints, roll paving with power roller after sufficient heat has build up in the surface from several days of hot weather.
- E. Joint treatment: Place unit pavers with hand tight joints. Fill joints with dry mixture of one part colored Portland cement to match color of the pavers and three parts sand by sweeping over paved surface until joints are filled. Vibrate with a plate type compactor.
1. Repeat operation until joints are completely full and flush. Remove excess sand mixture from surfaces. Fog lightly with water. Cement stains that remain should be cleaned with a 10% solution of muriatic acid or mortar cleaner, or swept with moist sand.

3.6 ACCEPTANCE

- A. Final acceptance shall be based on quality of craftsmanship, adherence to patterns, and surface elevations. Poor craftsmanship, pattern deviations, and uneven surface elevations shall not be accepted. Unacceptable work shall be re-done at no cost to the City of New York. The Commissioner shall be the sole judges of whether the work is acceptable.

3.7 REPAIR, CLEANING, AND PROTECTION

- A. All rules and regulations governing respective utilities shall be observed in executing all work under this Section. All work shall be executed in such a manner as to prevent any damage to existing trees, curbs, pavement, walls, rails, utility lines, structures, and adjoining property. Contractor shall promptly repair any damages so that the repairs meet or exceed the existing condition. Before starting repairs, the Contractor shall review the extent and method of repair with the Commissioner, utility owner, or adjacent property owner. The repairs shall be made to the satisfaction of the affected party.
- B. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units as intended. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.
- C. After the work is installed, it shall be the responsibility of the Contractor to see that the pavement is properly and adequately protected from damage. Suitable protection shall be required wherever necessary, but no lumber that may stain or deface the pavement shall be used. All fastenings and nails used in conjunction with protecting devices shall

be non-staining. All pavement work in progress shall be protected at all times during construction by use of a suitable strong, impervious film or fabric securely held in place.

3.8 FINAL CORRECTIONS

- A. The Commissioner reserves the right to inspect the work to determine if adjustments are necessary in grade, alignment or layout. The Contractor shall make such adjustments without further compensation.

END OF SECTION

SECTION 32 15 40

DECOMPOSED GRANITE PAVEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The General Documents, and applicable parts of DDC General Conditions, shall be included in and made a part of this Section.
- B. Examine all Drawings and all other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

- A. The work of this Section consist of all improvements and related items as indicated on the Drawings and/or as specified herein and includes, but is not limited to, the following:
 - 1. Preparation of Compacted Gravel Base Course and Subbase.
 - 2. Decomposed Granite Pavement.
 - 3. Steel Edge Restraint
 - 4. Infill at Precast Concrete Plank Pavement
 - 5. Coordination with other subcontractors.
 - 6. Clean-up.

1.3 RELATED WORK UNDER OTHER SECTIONS

- A. The following items of related work are specified and included in other Sections of the Specifications:
 - 1. Section 321440 – Unit Paver Pavement
 - 2. Section 329100 – Planting Soil System.
 - 3. Section 329200 – Lawns
 - 4. Section 329300 – Planting and Fine Grading.

1.4 EXAMINATION OF CONDITIONS

- A. The Contractor shall fully inform him/herself of existing conditions of the site.
- B. Plans, surveys, measurements and dimensions under which the work is to be performed are believed to be correct to the best of Surveyors knowledge.
- C. The Contractor shall coordinate with other trades to insure subsurface drainage, water supply, planting soils and planting is coordinated with the installation of the decomposed granite pavement.
- D. Do not install decomposed granite during rainy conditions or below 40 degrees Fahrenheit and falling.

1.5 QUALITY ASSURANCE

- A. Materials and methods of construction shall comply with the following standards, latest editions and addenda:
 - 1. ASTM: American Society for Testing and Materials.
 - 2. AAMA: American Architectural Manufacturer's Association for aluminum finishes.
 - 2. ANSI: American National Standards Institute.

3. PCA: Portland Cement Association.
 4. ACI: American Concrete Institute.
- B. Qualifications of Workers: Use adequate numbers of skilled workers who are trained in the necessary crafts and who are completely familiar with the specified requirements and methods needed for the proper performance of the work of this Section.
 - C. Layout and Grading: After staking out the work, and before beginning final construction, obtain the Commissioners approval for layout and grades.
 1. Establish layout and grades before beginning work to ensure that components properly fit.
 2. Also refer to Section 017123 – Field Engineering.
 - D. Testing: Perform gradation of decomposed granite in accordance with ASTM C 136 – Method for Sieve Analysis for Fine and Course particles.
 - E. Do not install or work with material during inclement conditions or if material is wet or frozen.

1.6 SUBMITTALS AND SAMPLE PANELS

- A. See DDC General Conditions.
- B. Product Information: Provide manufacturer's data showing installation and limitations in use. Supply Certificates of Compliance for all materials required for fabrication and installation, certifying that each material item complies with, or exceeds, specific requirements.
 1. Decomposed Granite, including sieve analysis.
 2. Stabilizer.
 3. Edge Restraint
- C. Material Samples: Once product information has been approved and prior to ordering the below listed materials, submit representative samples to Commissioner for selection and approval as follows. Do not order materials until Commissioners approval has been obtained. If initial material samples are not approved, resubmit materials as necessary to obtain Commissioners approval. Delivered materials shall closely match the approved samples. Submit duplicate samples of each type listed below showing full range of color variation, finish and texture that can be expected in the permanent work. Submit duplicate samples, each of the size or quantity indicated below: provide one sample to the Commissioner and retain one sample at the project site.
 1. Decomposed Granite, one 5-lb bag.
 2. Stabilizer, one 1-pint bag.
 3. After the Commissioner has approved the decomposed granite sample, submit a 5 lb. decomposed granite sample and sieve analysis to stabilizer manufacturer prior to any construction for determination of the mix ratio of crushed limestone to stabilizer. Allow a minimum of 1 month turn-around time for this process.
 4. Edge Restraint, 12" section
- D. Sample Panels/Mockups: Upon approval of all materials, the Contractor shall construct sample panels on site in the minimum size indicated below and shall be constructed in coordination with the Unit Paver Pavement mock-ups. Each sample panel shall be large enough to display typical characteristics of each item and type of work. All sample panels shall be constructed at the same time so that the entire palette of materials can be

viewed simultaneously. The Commissioner shall approve the visual characteristics, quality of workmanship, and installation methods before final work is started. If the original sample is not approved, the Contractor shall provide additional samples, as required, at no cost to the City of New York until an approved sample is obtained. The approved sample shall become the standard for the entire job. Sample panel shall not be constructed on a location becoming part of the final work, and shall remain undisturbed until all work is completed. Contractor shall completely remove all sample panels from the site upon final acceptance of work.

1. Decomposed Granite Pavement, separate sample, 4' wide x 10' long, using the selected sample materials. Before mixing sample panel, confirm with stabilizer supplier that mix ratio specified is suitable for obtaining a stable well-drained surface. Check stability of sample panel at one and two week intervals to determine if mix is hardening properly. Re-roll sample as necessary. If mix is not properly hardening, consult with stabilizer supplier and adjust mix. Provide sample panels until stabilized mix is achieved and approved by the Commissioner.
2. Upon approval of the separate sample, construct Decomposed Granite Pavement mockups in conjunction with other Unit Paver Mockups, using the procedure as approved and modified for the separate panel. See Section 32 14 40 – Unit Paver Pavement. The number of mockups required will be determined by the number of material transitions and the contractors layout of the sample panels.
3. Edge Restraint, 16' long section along one edge. Install as per manufacturer installation instructions.

1.7 WARRANTY

- A. Submit a written warranty executed by the installer agreeing to repair or replace components of stabilized surfacing that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:
 1. Premature wear and tear, provided the material is maintained in accordance with manufacturer's written maintenance instructions.
 2. Failure of system to meet performance requirements.
- B. Warranty Period: Contractor shall provide warranty for the performance of the product. The Contractor shall warranty the installation of product for the time of one (1) year from the date of final acceptance.
- C. Contractor shall provide, for a period of sixty days after final acceptance, unconditional maintenance and repairs of the stabilized surfacing as required.
- D. Submit Manufacturer's warranty for the warranty period. Warranty shall be 2 years minimum.

PART 2 - PRODUCTS

2.1 COMPACTED SUBGRADE AND GRAVEL BASE COURSE

- A. Compacted subgrade and gravel base course shall conform to Division 31.

2.2 Decomposed Granite Pavement

- A. Aggregate stone for paving shall conform to the following:
 1. Clean, hard, durable particles or fragments of 1/4" minus select crushed stone. Fines shall be evenly mixed throughout the aggregate. When produced from gravel, 50

percent, by weight, of the material retained on a No.4 sieve shall have one fractured face.

2. The portion retained on the No.4 sieve shall have a maximum percentage of wear of 50 at 500 revolutions as determined by AASHTO T96-77.
3. The portion passing a No.40 sieve shall have a maximum liquid limit of 25 and a maximum plasticity index of 7, as determined by AASHTO T89-81 and AASHTO T90-81, respectively.
4. Size shall be 3/8" to No.200 crushed granite screenings conforming to the following crushed stone sieve analysis for percentage of weight passing a square mesh sieve, ASTM C 136 – Method for Sieve Analysis for Fine and Course:

<i>Sieve Designation</i>	<i>Range of % Passing</i>
No. 3/8"	100%
No. 4	95 – 100%
No. 8	75 – 80%
No. 16	55 – 65 %
No. 30	40 – 50%
No. 50	25 – 35%
No. 100	15 – 20%
No. 200	10 – 15%

5. The crushed aggregate screenings shall be free from clay lumps, vegetative matter and deleterious material.
6. Granite color shall be gray as selected from the material sample submittals. Provide five granite types as material samples for selection of the final decomposed granite. Granite sample colors shall range from light tan to light grays.
7. Acceptable Aggregate Supplier
 - a. Schofield Stone, 831 E Main Street, Bridgewater, NJ 08807, Tel. 1-800-827-6257, www.schofieldstone.com
 - b. Kafka Granite LLC., 550 East Hwy 153, Mosinee, WI 54455, Tel: 800-852-7415
 - c. Read Custom, Greg Fredrick, Tel: 888-475-5526
 - d. Or approved equal subject to approval by the Commissioner.

B. Stabilizer binder for paving shall conform to the following:

1. Binder shall be a natural, non-toxic, non-staining, environmentally safe, organic binder that is a colorless, odorless concentrated powder specifically manufactured to bind crushed granite or crushed aggregate, consisting of 95% Psyllium with a 70% mucilliod content. The powder shall be of a size that not more than 10% is retained on a U.S. Standard #40 mesh sieve.
2. Acceptable Stabilizer Manufacturer:
 - a. Stabilizer Solutions, Inc., 33 South 28th Street, Phoenix, Arizona 85034 USA, Telephone: 602.225.5900 International, 800.336.2468 USA, FAX: 602.225.5902 USA, www.stabilizersolutions.com, email: info@stabilizersolutions
 - b. Or approved equal subject to the approval of the Commissioner.

C. Mix Ratio: The estimated ratio for decomposed granite pavement shall be a minimum of 14.5 lbs of stabilizer per ton of granite screenings.

1. Mix ratio is approximate. The final mix ratio shall be established as part of the material sample process listed in this Section.

2.3 EDGE RESTRAINT

- A. Compacted subgrade and gravel base course shall conform to Division 31.
- B. Product:
 1. Sure Loc Steel Edging – Black Size: ¼" x 5" x 16', Sure-loc Edging, 494 E. 64th Street, Holland, MI 49423, 1 (800) 787-3562
 2. Boarder King Steel Edge – Black Size: ¼" x 5" x 16', Boarder Concepts, Inc., 1338 Hundred Oaks Drive, Suite G, Charlotte, NC, 28217, Phone: 704.541.5509
 3. Commercial Grade Steel Landscape Edging – Black, Size: ¼" x 5" x 10', Col-Met, 3333 Miller Park South, Garland, TX 75042, Tel.: (972)494-3900
 4. Or Approved Equal subject to approval by the Commissioner.

2.4 ANCHORS

- A. Spikes: 3/8" x 18" steel spike to be provided by the manufacturer.
- B. Install minimum of 5 spikes per 16' section of edging. Additional spikes shall be located as directed by the Commissioner.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. The installer shall examine previous work, related work, and conditions under which this work is to be performed and notify the Contractor in writing of all deficiencies and conditions detrimental to the proper completion of this work. Beginning work means installer accepts substrates, subgrades, previous work, and conditions.

3.2 PACKING, LOADING AND STORAGE

- A. Packaged materials shall be carefully packed and loaded for shipment using all reasonable and customary precautions against damage in transit.
- B. Loose materials shall be carefully loaded for shipment using all precautionary methods to avoid the intermingling of loose materials with foreign material. Material that is intermixed with other materials will be rejected.
- C. Storage: Upon receipt of material, promptly store packaged and loose materials in a secure, dry location. For loose material, cover stockpiles to avoid wind blowing and to protect material from being contaminated by foreign material.

3.3 COMPACTED SUBGRADE AND GRAVEL BASE COURSE

- A. For Garden pavements, install compacted subgrade and gravel base course in conformance with Division 31. When subbase is completed apply the compacted base course using a roller-type vibratory compactor of at least one ton capacity making at least 3 to 4 passes over the base with the vibratory unit operating.
- B. Install Steel Edging prior to placement of decomposed granite pavement.

- C. Follow Steel Edging Manufacturers installation instructions and obtain layout and grade approval from the Commissioner prior to placement of finish grade in plant beds or on paths.

3.4 Decomposed Granite Pavement

- A. Thoroughly pre-mix stabilizer with crushed aggregate at the rate specified. A 9 cubic foot concrete drum mixer may be used or a clean concrete transit mix truck equipped with the proper internal mixing blades to discharge the material or a mobile mixer with a modified metering unit for stabilizer may be used for larger installations. The aggregate must be damp before mixing but not wet. In the 9 cy. ft. mixer begin to shovel the aggregate into the mixer as it is turning and gradually keep adding stabilizer. The adding of the aggregate and the stabilizer should end almost simultaneously when the capacity of the mixer is reached. In the transit mixer, preload the drum; then as the drum is rotating add the stabilizer slowly and uniformly to the discharge opening. Mix for a minimum of 15 minutes prior to placing. The mobile mixer has an internal mixing device which will discharge the material properly mixed.
- B. Drop-spreading of stabilizer over preplaced stone screening and mixing by rototilling is not acceptable.
- C. Stabilizer shall not be applied during, prior to, or immediately following rainfall or when the temperature is 40 degrees Fahrenheit and falling. Inclement weather and cold to freezing temperatures will cause an unsatisfactory installation.
- D. Install stabilized decomposed granite paving in two lifts.
- E. After pre-blending, place the stabilized crushed aggregate screenings on prepared subgrade and rake smooth using a steel tine rake to desired grade and cross section. Place to avoid segregation, in one layer. Do not apply deeper than 3 inches in one lift. Ex. For a 4 inch thickness, apply in two 2-inch lifts (allowing each layer after compaction to dry out.) Compact the material with a one-ton minimum compactor as specified above making 3 to 4 passes (do NOT use vibratory unit). Hand tamp edges around benches, signposts, planted areas, pavers, etc.
- F. Water lightly but thoroughly to achieve full depth moisture penetration of the mix. Watering is best accomplished using a garden hose with spray nozzle set to a light spray; pressure should not disturb leveled surface. Water activates stabilizer, consequently, it is essential that the full depth of stabilized paving material is saturated. When the water sheen has disappeared and the surface looks damp roll it again. If by chance the surface lifts (too wet) re-rake the area to a depth of 1 to 2 inches, level with the back of the rake and reroll. Plan your operation so that you will always be working out of the installed Stabilized surface course and not over it. After completion do not allow any traffic of any kind on the finished surface course until it is completely dried through, about 2 to 3 days. This is dependent upon weather. The stabilized crushed stone paving must completely dry out one time before it can be put into service.
- G. Finished surface of pathway shall be smooth, uniform and solid. There shall be no evidence of chipping or cracking. Dried, cured, compacted pathway shall be firm throughout profile with no spongy areas. Loose material shall not be present on the surface initially. Any significant irregularities in path surface shall be repaired to the uniformity of entire installation.
- H. Loose gravel on the surface, or unconsolidated crushed aggregate screenings below the surface, is evidence of improper bonding due to poor mixing or insufficient watering. Test the loose material for adequate stabilizer by wetting, then tamping, and allowing it to dry. If the material is still unconsolidated, stabilizer did not get mixed adequately throughout the crushed aggregate screenings. If the material is now solid, initial watering was insufficient.

- I. Repairs: Unconsolidated areas shall be dug out, and be replaced with new crushed aggregate screenings meeting the grading requirements of Article 2.2, mixed with stabilizer per the procedures listed above. Patched areas then shall be wetted thoroughly and rolled smooth. Patching shall be completed prior to any paving smoothing required.
 - 1. Any significant irregularities shall be smoothed out prior to final acceptance of work. Smoothing shall be accomplished by rewetting/saturating rough areas thoroughly, and then rolling the paving again with a heavy roller (2000 lbs powered walk-behind or small rider. Wackers are not recommended.)
- J. Maintenance: Remove debris, such as paper, grass clippings, leaves or other organic material by mechanically blowing or hand raking the surface as needed. Any plowing program required during winter months shall involve the use of a rubber baffle on the plow blade or wheels on the plow that lifts the blade 1/4" off the paving surface. During the first year, a minor amount of loose aggregate will appear on the paving surface. If this material exceeds a 1/4" depth, redistribute the material over the entire surface. Water thoroughly to the depth of 1". Compact with power roller of no less than 1000 lbs. This process should be repeated as needed.
 - 1. If cracking occurs, sweep fines into the cracks, water thoroughly and hand tamp with an 8" - 10" hand tamp plate.

3.5 LAYOUT, GRADES AND ELEVATIONS

- A. The Drawings indicate, in general, the alignment and finish grade elevations. The Commissioner, may request such adjustments in grades and alignments as are found necessary to properly complete the work. The contractor shall not receive further compensation for adjustments.

3.6 PROTECTION

- A. All rules and regulations governing respective utilities shall be observed in executing all work under this Section. All work shall be executed in such a manner as to prevent any damage to existing trees, curbs, pavement, walls, utility lines, structures, and adjoining property.

3.7 FINAL CORRECTIONS

- A. The Commissioner reserves the right to inspect the work to determine if adjustments are necessary in grade, alignment, layout or surface condition. The Contractor shall make such adjusts without further compensation.

3.8 CLEAN -UP

- A. The Contractor shall remove all debris, construction equipment and scrap material from all areas within the limit of work prior to the final inspection and acceptance.

SECTION 32 16 13

CONCRETE CURBS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to furnish and install on-site steel-faced concrete curbs as indicated on the Contract Documents.
- B. Section Includes:
 - 1. Furnish and install on-site steel-faced concrete curbs and stone base as per the Contract Documents.
- C. Related Sections:
 - 1. Section 02 20 50 – Protection of Existing Utilities
 - 2. Section 31 00 00 – Earthwork
 - 3. Section 32 13 13 – Concrete Paving
 - 4. Section 03 30 00 – Cast in Place Concrete

1.3 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:
 - 1. New York City Building Code.
 - 2. New York City Department of Transportation (NYCDOT) Bureau of Highway Operations Standard Specifications, latest edition.
 - 3. ASTM C33 – Standard Specification for Concrete Aggregates
 - 4. ASTM C143 – Standard Test Method For Slump of Hydraulic Cement Concrete
 - 5. ASTM C150 – Standard Specification for Portland Cement

6. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types)
7. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field
8. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens

1.4 SUBMITTALS

- A. Product Data: Submit data for all materials and items, including reinforcement and forming accessories, admixtures, patching compounds, waterstops, joint systems, curing compounds, and others as requested by Commissioner.
- B. Shop Drawings: The shop drawings shall be prepared only by competent detailers, checked by the contractor prior to submission. The shop drawings shall show all bends and joint locations.
- C. Samples: Submit samples of materials as requested by Commissioner, including names, sources and descriptions.
- D. Laboratory Test Reports: Submit laboratory test reports for concrete materials, mix design test.
- E. Material Certificates: Provide materials certificates in lieu of materials laboratory test reports when permitted by Commissioner. Manufacturer and Contractor, certifying that each material item complies with, or exceeds, specified requirements should sign material certificates. Provide certification from admixture manufacturers that chloride content complies with specification requirements.

1.5 QUALITY ASSURANCE

- A. Independent Testing Agency: Provide testing and inspection by an independent testing laboratory during concrete operations.
- B. Materials and methods of construction will comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete
- C. Field Constructed Sample Sections:
 1. Construct field samples of curb work at locations selected by Commissioner.
 2. Produce additional samples, if required obtain Commissioner's approval prior to beginning actual installation. Demonstrate finish, expansion joints, control joints and tooling for samples as follows:
 - a. 10' long straight section.
 - b. 10' long corner section.
 - c. 10' long radius section.
 3. Retain approved samples during construction as standards for workmanship and appearance of installation.

4. Approved sample sections in undamaged, undisturbed condition at time of substantial completion may become part of completed work.

1.6 JOB CONDITIONS

- A. Work Notifications: A construction schedule shall be submitted to the Construction Manager one week prior to the start of construction for approval.
- B. Weather Limitations: The weather conditions specified in specification section 03 30 00 – Cast in Place Concrete shall be followed.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Forms: Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete
- B. Refer to of specification 03 30 00 – Cast in Place Concrete with the exception of 2.3(D)
 1. Pozzolans and slags: These must be completely accounted for in the design mix. Replace Portland cement by weight with a minimum of 20% and a maximum of 25% Fly Ash. Mix design must meet minimum design requirements set in the contract documents, additional admixtures may be required to meet early strength requirements and alternative cementitious material goals. Note: If a "blended cement" is used which already contains a certain percentage of Pozzolans or Slags this content may offset or entirely satisfy the minimum percentage required.
- C. Joint Fillers: Resilient premolded bituminous impregnated fiberboard units complying with ASTM D 1751 FS HH-F-341, Type II, Class A; or AASHTO M 153, Type I.
- D. Joint Sealants: Non-priming, pourable, self-leveling polyurethane. Acceptable sealants are Sonneborn "Sonolastic Paving Joint Sealant" Sonneborn "Sonomeric CT 1 Sealant", Sonneborn "Sonomeric CT 2 Sealant", Mameco "Vulken 45", or Woodmont Products "Chem-Caulk".
- E. Steel facing shall conform to Section 2.13 "Curb – Steel Facing" of New York City Department of Transportation Standards, latest edition. Steel facing shall be Type D-bent plate.

2.2 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition and correct breakdowns in a manner that will not delay or be detrimental to progress of paving operations.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Sub Base: Provided under Section 31 00 00 - Earthwork

3.2 INSTALLATION

- A. Form Construction: Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete
- B. Concrete Placement: Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete. Refer to this section for finish requirements.
- C. Joint Construction:
 - 1. Install control, expansion, and construction joints properly aligned and perpendicular with faces and surfaces.
 - 2. Tool joints to depth of 3/8".
 - 3. Provide 1/4" wide expansion joints using premolded joint filler as follows:
 - a. Locate expansion joints at 10' on center as indicated on Drawings, and between curb work and adjoining walls, structures, walks, and other fixed objects. Align expansion joints of abutting curbs and walks where possible.
 - b. Install 1/4" wide joint fillers full-width and depth of curb. Recess edge adjacent to finished surface 1/2" or as otherwise indicated on Drawings. For forming, attach approved cap strip to finish edges of fillers to keep opening clear. Protect finish edge of joint fillers during concrete placement.
 - c. At joints between curb sections install 2 dowels, as indicated on Drawings. Sleeve one end of each dowel for free movement.
 - d. After concrete has cured, remove finish edge cap strip leaving recess clear. Joint Fillers: Extend joint fillers full-width and depth of joint, and not less than 1/2" or more than 1" below finished surface where joint sealer is indicated. Furnish joint fillers in one-piece lengths for full width being placed, wherever possible. Where more than one length is required, lace or clip joint filler sections together.
- D. Concrete Finishing
 - 1. Perform concrete finishing using mechanical or hand methods as required.
 - 2. On completion of floating, and after bleed water has disappeared and concrete has firmed, cut concrete away from forms. Work edges with an edging tool. Round back edges to 1/4" radius and shape bull-nose edge to radius indicated on Drawings.
 - 3. Install control joints at indicated locations during edging operations.
 - 4. Provide smooth float finish to tops of curbs. Remove forms only after concrete has set up sufficiently to support its own weight without slumping. Immediately upon removal of forms, rub finish faces to smooth, uniform, even surface with soft rubbing brick or carborundum stone, using Portland cement and clean water as lubricant. Plastering with mortar to build up or to finish shall not be permitted. Finish visible surfaces and edges so that they are uniform in color and appearance, free of blemishes, form and tool marks.
- E. Joint Sealants: All joints shall be sealed with approved exterior pavement joint sealants and shall be installed per manufacturer's recommendations.

3.3 PROTECTION

- A. Protect concrete work from damage due to construction and vehicular traffic until final acceptance. Exclude construction and vehicular traffic from curb areas for at least 14 days.

3.4 FIELD QUALITY CONTROL

- A. Provide field quality control testing and inspection during concrete operations.
- B. Provide adequate notice, cooperate with, provide access to the work, obtain samples, and assist test agency and their representatives in execution of their function.
- C. Testing: Comply with applicable requirements of specification 03 30 00 – Cast in Place Concrete

3.5 WASTE DISPOSAL

- A. All removals and disposal of waste related to work of this Section shall be performed in accordance with these specifications.

END OF SECTION

SECTION 32 20 00

PAVEMENT RESTORATION WITHIN THE CITY RIGHT-OF-WAY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to restore pavement with the city right-of-way in accordance with New York City Department of Transportation (NYCDOT) standards and as indicated on the Contract Documents.
- B. Section Includes:
 - 1. Concrete sidewalk consisting of single course concrete laid on a stone base.
 - 2. Asphaltic concrete wearing course and stone aggregate base for use in utility trench patching and curb installation.
 - 3. Steel faced concrete curbing and Granite stone curb.
- C. Related Sections:
 - 1. Section 01 74 19 - Construction Waste Management & Disposal
 - 2. Section 02 20 50 - Protection of Existing Utilities
 - 3. Section 03 30 00 - Cast in Place Concrete

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Protect adjacent properties and water resources from erosion and sediment damage throughout construction in accordance with the NYSDEC.
- B. Do not direct discharge from dewatering operations to public sewers without prior approval from New York City Department of Environmental Protection (NYCDEP).
- C. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan.

1.4 REFERENCES

A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:

1. New York City Building Code.
2. New York City Department of Transportation (NYCDOT) Bureau of Highway Operations Standard Specifications latest edition.
3. New York State Department of Transportation (NYSDOT) Office of Engineering Standard Specifications latest edition.
4. ASTM C33 – Standard Specification for Concrete Aggregates.
5. ASTM C143 – Standard Test Method For Slump of Hydraulic Cement Concrete.
6. ASTM C150 – Standard Specification for Portland Cement.
7. ASTM D1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).
8. ASTM A185 -- Welded Steel Wire Fabric for Concrete Reinforcement.
9. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field.
10. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
11. ASTM C 618, Standard Specification for Fly Ash and Raw or Calcined Natural Pozzolan for Uses as a Mineral Admixture in Portland Cement Concrete.
12. ASTM C 311, Standard Methods of Sampling and Testing Fly Ash and Natural.
13. ASTM D946 - Penetration - Graded Asphalt Cement for use in Pavement Construction.
14. ANSI/ASTM D1557 – Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures using 10 lb (4.54 Kg) Hammer and 18 inch (457 mm) Drop.
15. ASTM D2922 – Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth), Method B (Direct Transmission).
16. ASTM D424 – Standard Method of Test for Plastic Limit
17. ASTM C33 – Standard Specification for Concrete Aggregates
18. ASTM D1559 – Test Method for Resistance of Plastic Flow of Bituminous Mixtures Using Marshall Apparatus
19. ASTM D2028 – Standard Specification for Cutback Asphalt (Rapid-Curing Type)

1.5 SUBMITTALS

- A. Concrete Formula: Comply with applicable requirements of specification 03 30 00 – Cast in Place

Concrete

- B. **Welded Wire Fabric:** Shop drawings of reinforcing steel showing the location and type of supports and tie wires shall be submitted to the Commissioner for his approval before any work covered by these drawings is undertaken.
- C. **Asphalt Design Mix:** Before any asphaltic concrete paving is constructed, submit actual design mix to the Construction Manager for review and/or approval. Design mix submittal shall include the type/name of the mix, gradation analysis, grade of asphalt cement used, sources of all ingredient materials, percentages by weight and the number of pounds of each of the materials and direct references to the Standard Specifications sections for each material. Mix designs over three (3) years old will not be accepted by the Commissioner.
- D. **Material Certificates:** Submit signed materials certificate to the Construction Manager which is cosigned by the material producer, certifying that materials comply with, or exceed, the requirements herein.
- E. **Laboratory Test Reports:** Submit laboratory test reports for concrete materials, mix design test.

PART 2 - PRODUCTS**2.1 CONCRETE SIDEWALK – STONE BASE**

- A. Base material shall consist of Size No. 3 broken stone and conform to NYCDOT Type 1, Grade B: Broken Stone, Moderately Resistant to Abrasion; or other approved granular material containing not more than five (5) percent material passing a No. 200 mesh sieve and not more than (5) percent retained on a 2" square sieve.
- B. Stone Base shall be reclaimed or recycled concrete aggregate.
- C. Aggregate shall be broken, clean, hard, unweathered stone of uniform quality. It shall consist of fragments roughly cubicle or pyramidal in shape.
- D. Aggregate shall comply with the following sieve analysis (percent by weight passing square sieve openings):

Size No. (ASTM) (C 33)	Nominal Size (inches)	3.5"	3"	2.5"	2"	1.5"	1"	3/4"	1/2"	3/8"	#4
3	2 to 1	-	-	100	90- 100	35- 70	0- 15	-	0-5	-	-

2.2 CONCRETE SIDEWALK

- A. Concrete shall conform to NYCDOT Class B-32 Type IA: Normal Air-entrained concrete; a homogeneous mixture of the following:

1. Portland Cement

- a. Portland cement shall conform to NYCDOT Type 1: Normal. Cement shall be uniform in color. The brand shall have an established reputation of uniformity of character and have been successfully used in the United States for at least two (2) years. Cement shall be stored in such a manner as to permit easy inspection and to protect the cement from dampness and minimize warehouse set. Portland cement shall comply with the requirements of ASTM C 150.

2. Fine Aggregate

- a. Sand shall consist of clean, hard, durable, angular, rough-surfaced mineral particles and conform to NYCDOT Type 1A and comply with the following requirements:

Sieve Number	Total Passing - Percent By Weight
3/8"	100
No. 4	95-100
No. 8	--
No. 16	45-85
No. 50	10-30
No. 100	0-6

- b. Fineness Modulus of all sands shall not vary more than plus or minus 0.20 from the first approved test sample.
- c. Sand shall not contain any deleterious substances in excess of that shown in Table 1 of ASTM Designation C 33. The calculated quantity of sodium chloride shall not exceed three-tenths (0.3) of one percent, by weight.

3. Coarse Aggregate

- a. Coarse Aggregate shall be broken, clean, hard, unweathered stone of uniform quality and conform to NYCDOT Type 1, Grade B: Moderately Resistant to Abrasion, Size No. 57, ASTM Designation C-33, and comply with the following requirements:

Size No. (ASTM) (C 33)	Nominal Size (inches) (except as noted)	2"	1.5"	1"	3/4"	1/2"	3/8"	#4	#8	#16
57	1 to #4	-	100	95-100	-	25-60	-	0-10	0-5	-

- B. Based on dry-rodded volumetric measurement of ingredient materials, concrete shall conform to the following properties, approximately equal to a "1:2:3 1/4" mix:

Class Of Concrete	Nominal Size Of Coarse Aggregate Used - Inches	Bags of Cement Per Cubic Yard Of Freshly Mixed Concrete - Minimum	Fine Aggregate Percentage By Weight of Total Aggregate
Class B-32	1.5	6.0	29 to 37

- C. The volume of freshly mixed concrete shall be assumed to be the absolute volume of the cement, plus the volume of the unabsorbed water, plus the absolute volume of the aggregates in a saturated surface-dry condition, plus entrained air.

- D. Quantity of fine aggregate may be varied within the limits indicated according to the type of coarse aggregate used, in order to obtain a smooth, dense, homogeneous and plastic mixture.
- E. Air-entrained concrete shall have an air content of 5.5% with a tolerance of 1.5%.

2.3 CONCRETE SIDEWALK – FILLER, EXPANSION JOINT, PREFORMED

- A. Preformed Expansion Joint Filler shall be nonextruding and one-quarter (1/4) inch thick. The filler shall conform to either NYCDOT Type IV: Bituminous Fiber, conforming to ASTM Designation D 1751; closed cell neoprene, or approved equal.
- B. Welded wire fabric shall be 6x6 W29xW29 or approved equal and comply with the requirements of ASTM A185.

2.4 ASPHALTIC CONCRETE – COARSE AGGREGATE BASE COURSE

- A. Base course shall conform to NYCDOT Type 1, Grade B: Broken Stone, Moderately Resistant to Abrasion.
- B. Aggregate shall be broken, clean, hard, unweathered stone of uniform quality. It shall consist of fragments roughly cubical or pyramidal in shape.
- C. Aggregate shall comply with the following sieve analysis (percent by weight passing square sieve openings):

Type of Mix	Nominal Size	2"	1"	1/2"	3/8"	#4	#8	#100	#200
Dense Graded Stone Base	1" to #200	100	80-100	-	-	25-60	-	-	0-10

- D. The plasticity index of the material passing the #200 sieve shall not exceed 5.0 as determined in accordance with ASTM D424.

2.5 ASPHALTIC CONCRETE WEARING COURSE

- A. Asphaltic concrete wearing course shall consist of a binder mixture and a fine-mix asphaltic concrete surface course mixture in layer thicknesses indicated on Drawing.
- B. Asphaltic cement shall comply with the requirements of ASTM D946, except that the ductility test shall be run at 60 degrees Fahrenheit and that the petroleum derivative in the Spot Test with standard naphtha solvent in 24 hours shall be negative. Asphaltic cement shall be NYCDOT viscosity grade AC-20 meeting the requirements listed below and shall be either fluxed natural asphalt or residual asphalt derived from the distillation of asphaltic petroleum.

NYCDOT Grade	AC-10		AC-20	
Requirements	Min.	Max.	Min.	Max.
Viscosity@ 140F(60C), poises	800	1200	1600	2400
Viscosity@ 275F(135C), Cs.	250 *	-	300 *	-
Penetration, 77F(25C) 100g, 5 sec.	70 *	-	60 *	-
Flash Point, COC, F	425	-	450	-
Solubility in trichloroethylene, %	99	-	99	-
Test on residue from thin-film oven test (TFOT):				
Loss on heating, %	-	0.50	-	0.50
Ductility, 60F(15.5C), 5 cm/min., cm.#40	40 *	-	30 *	-
Viscosity Ratio@ 140F(60C), poises after:before TFOT	-	4 *	-	4 *

- C. The above requirements denoted with an asterisk (*) may deviate for asphalt cements refined from Domestic Mid-continent, Canadian, or Boscan crudes with prior approval of the Construction Manager.
- D. Sand shall be of NYCDOT Type 2A or 2B and shall consist of clean, hard, durable, rough-surfaced mineral particles. Sand shall not contain any deleterious substances in excess of that shown in Table 1 of ASTM C33.
- E. Coarse aggregate for binder mix shall be a NYCDOT Type 1, Grade B, AASHTO size #57 stone. Coarse aggregate for fine-mix surface course shall be a NYCDOT Type 1, Grade A, AASHTO size #8 stone.
- F. Mineral dust shall be limestone or other approved dust, be thoroughly dry when delivered, be of one grade, and contain not more than 50% free silicon dioxide. Dust shall have a record of satisfactory performance in pavements for not less than three (3) years. Mineral dust shall not be permitted in Binder Mixture.
- G. Aggregate within asphaltic concrete mixes shall comply with the following sieve analyses:

Sieve Size	Binder Course		Fine-Mix Surface Course	
	% Passing	Tol.(%)	% Passing	Tol.(%)
1 1/2"	100	-		
1"	95-100	-	100	-
1/2"	70-90	± 6	90-100	-
1/4"	48-74	± 7	65-85	± 7
1/8"	32-62	± 7	36-65	± 7
#20	15-39	± 7	15-39	± 7
#40	8-27	± 7	8-27	± 7
#80	4-16	± 4	4-16	± 4
#200	2-8	± 2	2-6	± 2
Bitumen percent by weight soluble in chloroform	4.5-6.5	± 0.4	5.8-7.0	± 0.4

- H. Tack
Coat shall be rapid curing liquid asphalt conforming to ASTM D2028 Grade RC-70, and shall be a product of fluxing an asphaltic residuum with a distillate. Liquid asphalt shall be homogeneous and free from water.

2.6 STEEL FACING

- A. Steel facing material shall contain minimum 25% total recycled content, calculated by adding the post-consumer recycled content plus one-half of the pre-consumer recycled content.
- B. Steel facing shall conform to Section 2.13 "Curb – Steel Facing" of New York City Department of Transportation Standards, latest edition.
- C. Steel facing shall be Type D-bent plate.

2.7 WELDED WIRE FABRIC

- A. Steel reinforcing shall contain minimum 25% total recycled content, calculated by adding the post-consumer recycled content plus one-half of the pre-consumer recycled content.

2.8 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition.

2.9 DETECTABLE WARNING

- A. Detectable warnings shall consist of a surface of truncated domes aligned in a square or radial grid pattern and shall comply with ADA requirements.
- B. Refer to contract drawings for detectable warning size and spacing.
- C. Detectable warning surfaces shall contrast visually with the sidewalk

PART 3 - EXECUTION

3.1 CONCRETE SIDEWALK

A. Excavation and Subgrade:

- 1. Excavation shall be made to dimensions sufficient to permit the setting of forms. The earth subgrade, immediately before foundation material is placed on it, shall be compacted, smooth, parallel to and at the required depth below the finished sidewalk surfaced and be dampened with water sufficient only to be absorbed by the subgrade. The Subgrade shall not be in a muddy or frozen condition and unsuitable material shall be removed and replaced with acceptable material thoroughly compacted.

B. Stone Base:

- 1. Base material shall be placed on the prepared subgrade and thoroughly compacted into lifts equal to the smaller of 6-inches in the full section thickness. Unsatisfactory subgrade material shall be removed and replaced with acceptable material and shall be thoroughly compacted to the satisfaction of the Commissioner. The excavated material shall be removed from the site to the Commissioner's satisfaction. The top surface shall be parallel to the finished grade and at a distance below the grade equal to the specified thickness of concrete. Additional depth of base material for special conditions shall be placed as required by the Commissioner.

C. Concrete Sidewalk Installation:

- 1. Forms shall be made of substantial material with suitable metal dividing plates and of sufficient strength to satisfactorily resist distortion when fastened together and secured in place. Forms and dividing plates shall be of a depth not less than that of the concrete sidewalk, be properly located with tops set to the designated sidewalk surface and be left in place until the concrete has hardened.
- 2. Concrete sidewalk shall be built in approximately twenty foot slabs between expansion joints. Expansion joints in sidewalk shall coincide with expansion joints in curb. Tooled dummy joints not less than one-half inch in depth shall be provided five feet on center.
- 3. Sidewalk scoring shall be per NYCDOT requirements unless otherwise noted on drawings.
- 4. Expansion joints shall be one-quarter ¼- inch in width and shall be filled with preformed joint filler within 1- inch of the sidewalk surface. The top 1- inch shall be sealed with poured joint filler.

5. Base material shall be wetted immediately before concrete is placed. The concrete shall be placed within the forms and thoroughly tamped until the surface is at the finished grade.

D. Welded Wire Fabric:

1. Steel wire fabric shall be made up in sections of the length and width required. They shall be fastened together in an approved manner at each intersection.
2. Steel wire fabric shall be protected from moisture, and, when placed in the work, shall be free from grease, injurious rust, dirt or other foreign substances.
3. Steel wire fabric shall have transverse or longitudinal end members overlapping each other by not less than a full mesh length or width respectively. Overlapping sheets shall be securely and properly fastened.
4. Steel reinforcement shall be supported at the specified depth in such a manner that no displacement will occur during concreting operations. It shall be supported either on approved devices or upon a layer of concrete which has been evenly struck off. The method of supporting the steel at the proper elevation shall be approved by the Commissioner.
5. Steel wire fabric shall be laid in sheets which shall be straight and true to form and shall be securely held in position by approved methods so that they will be in their prescribed position after the concrete has been thoroughly compacted.

- E. Concrete sidewalk top surfaces shall be finished to true smooth planes by screening, and finally by wooden floats. Each rectangular slab shall have all edges neatly rounded with proper tools and be bounded on all sides by trowelled border about one inch in width.

- F. After completion of floating and troweling, eliminate any tool marks on concrete surface and broom finish by drawing fine-hair broom across surface perpendicular to line of traffic. Repeat as necessary to obtain a fine line texture.

- G. Do not remove forms for twenty four hours after concrete has been placed. After form removal, clean ends of joints and point up any minor honeycombed areas. As directed, remove and replace sections with major defects at no cost to the Commissioner.

- H. Backfilling shall follow the removal of forms as soon as practicable and, unless otherwise permitted, shall be of clean earth, satisfactorily compacted.

I. Protection:

1. Concrete sidewalk shall be carefully protected against injury from rain, frost, the drying effects of the sun and wind, traffic or other causes, by means of suitable guards and covering. Any damaged/vandalized concrete shall be replaced at no cost to the Commissioner.
2. Concrete shall be covered with a curing and anti-spalling material such as Durok Shield as manufactured by Durok Building Materials, Inc., Hastings-on-Hudson, N.Y. 10706; Duraltone as manufactured by Dural International, Inc., Deer Park, N.Y. 11729; Hydrozo Concrete Cure and Hydrozo Clear as manufactured by Hydrozo Coatings Co., Lincoln, Nebraska 68051; or an approved equal; and shall be applied in accordance with instructions of the manufacturer.

- J. Where directed by Construction Manager, asphaltic concrete mixture shall be placed adjacent to

newly constructed sidewalk as required to meet site grades.

K. Concrete shall be mixed by an approved NYCDOT method indicated below:

1. Method A – Central Plant Mix: Concrete produced at an approved plant, ready for use prior to discharge into a transporting vehicle.
2. Method B – Truck Mix: Concrete whose constituent materials are proportioned at a central plant and mixed with water in a transporting vehicle.
3. Method C – Job Mix: Concrete whose constituent materials are proportioned at a central plant and mixed at the job, or concrete whose constituent materials are proportioned and mixed at a job plant.

L. The compressive strength, average of not less than three cylinders or cores, at 28 days shall be 3,200 psi tested in accordance with ASTM C39. Mold and store test cylinders meeting the requirements of ASTM C31.

M. Slump shall be a minimum of 1.5" and a maximum of 4". The slump requirement shall apply at the point of discharge. Supply at each point of concrete delivery a slump cone and rod conforming to the requirements of ASTM C143 for use by Construction Manager.

3.2 ASPHALTIC CONCRETE

A. Ingredients:

1. The asphaltic cement shall be heated in approved receptacles to a temperature between 275 and 325 degrees F. It shall be kept uniform in composition and consistency by thorough mixing and agitation. Approved methods of agitation that will not injure the cement shall be used.
2. The materials comprising the charge for each batch shall be proportioned accurately by weight or by volume. The proportioning apparatus shall be of approved NYCDOT design, kept in good working order and accurate to 0.5 percent. Fluid materials may be measured by approved fluidometers.
3. When mixed in a batch mixer prior to the addition of the asphaltic cement, the aggregate shall be deposited in the mixer and thoroughly mixed for a period of not less than ten seconds for binder mixture and fifteen seconds for surface mixtures.
4. Mixing shall be continued until a homogeneous mixture is produced in which all particles of the mineral aggregate are completely coated with asphaltic cement.

B. Preparations:

1. Saw cut existing pavement to produce a clean, straight edge for new work to meet.
2. Verify that substrate has been inspected and that substrate is hard, uniform, stable, true to gradients and elevations, and dry prior to any subbase course construction.
3. Proof roll base material surface to check for areas requiring additional compaction and areas requiring removal and re-compaction.

4. Do not begin paving work until deficient base material areas have been corrected and are ready to receive paving.
5. Weather limitations:
 - a. Apply tack coat when ambient temperature is above 40°F, and when temperature has been above 35°F for 12 hours immediately prior to application. Do not apply when base is wet, contains excess moisture, or during rain.
 - b. Construct asphaltic concrete paving when atmospheric temperature is above 40°F.

C. Transportation:

1. Asphalt mixtures shall be transported to work site in tight vehicles having clean and smooth heated metal beds and protected from weather.
2. The inside surface of transportation vehicles shall be lightly coated, just before the vehicles are loaded, with either a whitewash of lime and water, soap solutions, or detergents, as approved by the Construction Manager. After application, the truck bodies shall be raised for a sufficient time to allow the excess fluid to drain.

D. Application:

1. Coarse Aggregate Base Course:
 - a. Perform construction in a manner that will drain surface properly at all times, and at the same time prevent runoff from adjacent areas from draining onto base course construction.
 - b. Compact granular base material in 4-inch lifts with a minimum of 6 passes of a 10 ton vibratory compactor, to not less than 95% of the optimum density as determined by ASTM D1557.
2. Tack Coat:
 - a. Apply to contact surfaces of previously constructed asphaltic concrete base courses or Portland cement concrete and surfaces abutting or projecting into asphaltic concrete or into asphaltic concrete pavement.
 - b. Surface must be thoroughly swept and cleaned, as often as required, to remove all dirt, loose and foreign matter, and be free of standing water. No tack coat shall be applied unless the surface on which it is to be applied is in a condition acceptable to the Commissioner.
 - c. Apply tack coat between each lift or layer of full depth asphaltic concrete and on surface of all such bases where asphaltic concrete paving will be constructed.
 - d. Apply at minimum rate of 0.10 gallon per square yard of surface.
 - e. Allow to dry until at proper condition to receive paving.
3. Asphaltic Concrete Placement:

- a. Place asphaltic concrete mixture on completed compacted sub-grade surface, spread, and strike off. Spread mixture at following minimum temperatures:
 - i. When ambient temperature is between 40°F and 50°F, mixture temp. = 285°F
 - ii. When ambient temperature is between 50°F and 60°F, mixture temp. = 280°F
 - iii. When ambient temperature is higher than 60°F, mixture temp. = 275°F
 - b. Whenever possible, all pavements shall be spread by a finishing machine; however, inaccessible or irregular areas may be placed by hand methods. The hot mixture shall be spread uniformly to the required depth with hot shovels and rakes. After spreading, the hot mixture shall be carefully smoothed to remove all segregated course aggregate and rake marks. Rakes and lutes used for hand spreading shall be of the type designed for use on asphalt mixtures. Loads shall not be dumped faster than can be properly spread. Workers shall not stand on the loose mixture while spreading.
 - c. Place in typical strips not less than 10'-0" wide or the full path width, whichever is smaller.
 - d. Joints: Make joints between old and new pavements, or between successive days work in a manner that will provide a continuous bond between adjoining work. Construction joints shall have same texture, density, and smoothness as other sections of asphaltic concrete course. Clean contact surfaces of all joints and apply tack coat.
- E. Rolling and Compaction:
- 1. The mixture, after being spread, shall be thoroughly compacted by rolling as soon as it will bear the weight of the rollers without undue displacement. The number, weight, and types of rollers and sequences of rolling operations shall be such that the required density and surface are consistently attained while the mixture is in a workable condition.
 - 2. The bituminous concrete pavement shall have a minimum thickness as specified on the contract drawings and should be compacted to a minimum of 96% of the maximum unit weight as determined by the Marshall Mix Design Procedures in accordance with ASTM D-1559.
 - 3. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.
- F. Breakdown Rolling: Accomplish breakdown or initial rolling immediately following rolling of joints and outside edge. Check surface after breakdown rolling, and repair displaced areas by loosening and filling with hot material.
- 1. Second Rolling: Follow breakdown rolling as soon as possible, while mixture is hot. Continue second rolling until mixture has been thoroughly compacted.
 - 2. Finish Rolling: Perform finish rolling while mixture is still warm enough for removal of roller marks. Continue rolling until roller marks are eliminated and course has attained maximum density.
 - 3. Patching: Remove and replace paving areas mixed with foreign materials and defective areas. Cut out such areas and fill with fresh, hot asphaltic concrete. Compact by rolling to maximum surface density and smoothness.

4. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.3 GRANITE STONE CURB

- A. Concrete curb installation shall conform to Section 4.08 "Curb, Concrete" of the New York City Department of Transportation Standard Specification, latest Edition.

3.4 STEEL FACED CONCRETE CURB

- A. Steel faced concrete curb construction within the public right-of-way shall conform to Section 4.09 "Curb, Concrete, Steel Faced" of the New York City Department of Transportation Standard Specifications.

3.5 FIELD QUALITY CONTROL – CONCRETE

- A. Comply with requirements of specification 03 30 00 – Cast in Place Concrete

3.6 FIELD QUALITY CONTROL – ASPHALTIC CONCRETE

- A. Grade Control: Establish and maintain required lines and elevations.
- B. Temperature: Monitor the asphaltic concrete mixture on the paver immediately prior to spreading asphalt mixture to certify that the minimum temperature requirements of this section are met. Temperature measurement shall be taken on the average of one test per 20 tons of material.
- C. Thickness: In-place compacted thickness shall not be less than thickness specified on the drawings. Areas of deficient paving thickness shall receive a tack coat and a minimum 1" overlay; or shall be removed and replaced to the proper thickness, at the discretion of the Construction Manager; until specified thickness of the course is met or exceeded at no additional expense to the Commissioner.
- D. Surface Smoothness: Perform testing on the finished surface of each asphalt concrete course for smoothness, using 10'-0" straightedge applied parallel with, and at right angles to centerline of paved area. These tests shall be performed under the observation of the Construction Manager. Surfaces will not be acceptable if the following 10' straightedge tolerances for smoothness are exceeded.
 1. Base Course Surface: 1/4"
 2. Wearing Course Surface: 3/16"
- E. Check surface areas at intervals necessary to eliminate ponding areas. Remove and replace unacceptable paving as directed by Construction Manager.
- F. Compaction: The Construction Manager shall perform in place density tests as part of the construction testing requirements using the Nuclear Method in accordance with ASTM D-2922 Method B direct transmission. Field density tests shall be performed at the rate of one test per 20,000 square feet of pavement.

3.7 WASTE DISPOSAL

- A. All removals and disposal of waste related to work of this Section shall be performed in accordance with Division 01 - Construction Waste Management.

END OF SECTION

SECTION 32 91 00
PLANTING SOIL SYSTEM

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions and DDC General Conditions.
1. General Requirements apply to the work of this Section and are hereby made a part of this Section.

1.2 SUMMARY

- A. Scope of Work: The work of this Section consists of all site preparation work and related items as indicated on the Drawings and/or as specified herein and includes, but are not limited to the following:
1. Evaluation of rough subgrade water infiltration.
 2. Planting soil material acquisition.
 3. Testing and analysis for specification conformance.
 4. Inspection and testing of subgrade for preparation of subgrade.
 5. Preparation of soil mixes and testing for conformance.
 6. Installation and placement of landscape underdrainage piping
 7. Installation and placement of soils.
 8. Soil biological amendments
 9. Decompaction of soils.
 10. Mock-up of planting soil profiles.
 11. Final in-place testing of soils.
 12. Coordination with other trades.
 13. Clean-up.
- B. Related Sections: Carefully examine all of the Contract Documents for the requirements that affect the work of this Section. Other specification Sections that directly relate to the work of this Section include, but are not limited to, the following:
1. DDC General Conditions
 2. Section 310000 – Earthwork
 3. Section 311000 – Site Preparation and Clearing
 4. Section 312500 – Erosion and Sedimentation Control
 5. Section 329200 – Lawns - Sod
 6. Section 329310 – Liquid Biological Amendment (LBA)
 7. Section 334000 – Storm Drainage Utilities
 8. Section 334600 – Underdrainage

1.3 DEFINITIONS:

- A. *Compaction*: Compaction of the soil fabric is any force applied to the soil that reduces porosity and where 90 percent of all compaction can be accomplished with only three applications of force under optimum soil moisture conditions.
- B. *Dry Soil*: The condition of the soil at or below the wilting point of plant available water in which the soil is powdery and subject to blowing.
- C. *Frozen Soil*: The point at which the soil water has frozen and the soil has become very hard and cloddy. Ice crystals can be seen in the pore spaces of the soil.
- D. *Field Capacity*: The percentage of water remaining in a soil two or three days after having been saturated and after free gravimetric drainage has ceased.
- E. *Moist Soil*: The condition of the soil in where it can be formed into a ball and maintain its shape. Deformation of the soil is difficult with hand pressure. Free water is not visible and is usually considered the point between the wilting point and field capacity of the soil.
- F. *Saturated*: All the pore space within a soil is filled with water and the remaining water is under gravitational forces to drain through the profile.
- G. *Scarification*: The loosening of the surface of a soil lift by mechanical or manual means to alleviate compaction of the soil surface. Depth of scarification is dependent on material and extent of compaction. Depths are noted within the specifications.
- H. *Subgrade*: The in-situ soil material that the planting soil will be installed upon.
- I. *Subsoil*: The soil horizon directly below topsoil that provides water holding and structural support to plants. Source of the majority of micro-nutrients.
- J. *Topsoil*: The mineral surface layer of soil that exhibit obliteration of all or much of the original rock structure and must show the following: (1) an accumulation of humified organic matter closely mixed with the mineral fraction and not dominated by properties characteristic of subsurface horizons; (2) has reasonable tilth (biological, chemical and physical properties) to support plant growth; and have two or more of the following:
 - 1. A bulk density of less than 1.5g/cc installed
 - 2. Less than 15 percent by weight coarse fragments greater than 2mm
 - 3. Identifiable structure between clods called peds, no massive structure
 - 4. No contamination (i.e. Toxic weeds, chemicals, heavy metals, construction debris) that inhibit desired plant growth or human activity.
 - 5. Planting Area: A plant bed defined on all edges by hardscape.
 - 6. *Wet Soils*: Soil that is considered wet will easily be deformed by hand pressure, maintain their shape, and free water will be visible within the pore spaces. The water content at this soil condition is considered at field capacity or wetter.

1.4 QUALIFICATIONS:

- A. **Analysis and Testing of Materials Qualifications:** For each type of packaged material required for the work of this Section, provide manufacturer's certified analysis. For all other materials, provide complete analysis by a recognized laboratory made in strict compliance with the standards and procedures of the following:

American Society of Testing Materials (ASTM)
 American Society of Agronomy
 Soil Science Society of America
 Association of Official Agricultural Chemists.
 U.S Composting Council

- B. **Quality Assurance Qualifications:** Work and materials shall meet the standards of the following references:

International Society of Arboriculture (ISA)
 American Society for Testing Materials (ASTM)
 Environmental Protection Agency (EPA)
 Philadelphia Water Department (PWD)

- C. **Installer Qualifications:** A qualified landscape installer whose work has resulting in successful establishment of exterior plants.

1. *Installer's Field Supervision:* Require Installer to maintain an experienced full-time supervisor on Project site who has experience with projects of similar scale and complexity.
2. The Landscape Contractor shall have experience in the proper and safe transportation and installation of soil material.
3. The Landscape Contractor shall have adequate supervision, staff, equipment and experience needed to complete a project of this magnitude.
4. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

- D. **Soil Mixing Contractor Qualifications:**

1. Shall be able to provide soil mixes that meet the specifications within tolerances assigned.
2. Shall be able to produce enough consistently uniform soil material for the project to meet the scheduled demands.

- E. **Testing Laboratory Qualifications:** An independent laboratory, recognized by the State Department of Agriculture, with experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

1. Employ a qualified independent testing and inspection laboratory acceptable to the Commissioner to perform tests and certifications indicated.
2. It is the responsibility of Landscape Contractor in conjunction with the Soil Supplier to submit material for the soil and compost tests.
3. Tests shall be made in strict compliance with the standards of the Association of Official Analytical Chemists and follow standards from ASTM, EPA, and/or Methods of Soil Analysis, Soil Science Society of America.
4. Other equivalent testing laboratories can be substituted, but require pre-approval by the Commissioner:

1.5 CRITICAL PATH PROCESSING

- A. The Landscape Contractor shall prepare and present to the Commissioner required soil submittals, and their associated specified test results prior to the scheduled soil and plant installation.
- B. The soil mixing contractor shall be engaged eight (8) months prior to scheduled soil installation to allow for sufficient time for material searches and initial planting mix approval.
- C. The soil mixing contractor shall allow access to the soil supply by the Commissioner upon request.

1.6 SUBMITTALS

- A. *Certificates:* Provide certificates required by authorities having jurisdiction, for any composted materials and sources. Approval as EPA Type 1 "exceptional quality" is required as well standards for application of composted organic material by state or local regulations.
1. Compost Test 3A from Penn State's Agricultural Analytical Services Laboratory fulfills this requirement and meets strict US Compost Council standards.
- B. *Testing Intervals for Organic Amendments, Planting Soil Mixes:* Testing is required at the following intervals:
1. Testing of the organic compost material: Test certificates required for producers of municipal yard waste composts are described within this Section 329100 Part 1 and shall follow criteria listed within Part 2 of this section.
 2. Submit complete test results and samples of the S3, S2, and organic soil amendment (compost) materials for approval as described within Part 1 following criteria of Part 2 of this section.
 3. After test results for the composted organic material have been accepted the Contractor shall create sample soil mixes for the S1 and soil layer for the planting soil. Mix and perform the complete tests described in Section 329100, Part 1.
 4. In-place planting soil testing shall follow methods specified in Part 1 of this section for the layers and intervals noted following the specific ranges and limits noted within Part 2 of this section. Incomplete test results shall not be reviewed. Resubmission of incomplete submittals shall not be considered as an acceptable reason for delays to the project schedule..
- C. *Test Procedures and Reporting:* Submit certified report for each test required. Each test report shall have its associated soil layer clearly marked along with the name of the soil supplier and soil material product name or designation. Only complete submittals with all corresponding test results and samples as list within Part 1 will be reviewed. Submit test results for compost, S3, and S2 first, then after approval, mix and submit the S1 surface layer.
1. *Compost:* Analyses of composted organic materials are required prior to initial soil mix acceptance. Analyses shall include all tests specified below and meet the criteria listed in Part 2 of this section. Incomplete test results shall not be reviewed. Resubmission of incomplete submittals shall not be considered as an acceptable reason for delays to the project schedule.
 - (a.) Maturity index either by Solvita, Dewar Self Heating or CO2 evolution sometimes called respirometry.
 - (b.) Reaction in 1:1 water
 - (c.) Carbon/Nitrogen ratio
 - (d.) Foreign Material on a dry weight basis
 - (e.) Organic Mater percent on a dry weight basis
 - (f.) Ammonium-N using an extract method
 - (g.) Salinity using a 1:1 water paste method
 - (h.) Basic Nutrient content of macro nutrients (P, K, Ca, Mg)
 - (i.) Soil Biology Assay testing
 - (j.) The compost material must be tested to meet EPA Chapter 503 and/or New York Department of Environmental Conservation levels for human use.

2. *Soil Mixes and Topsoil:* Testing shall be performed and reported for particle size requiring percent of gravel (>2.0 mm), very coarse sand (2.0 – 1.0 mm), coarse sand (1.0 – 0.5 mm), medium sand (0.5 – 0.25 mm), fine sand (0.25 – 0.10 mm), very fine sand (0.10 – 0.05 mm), silt (0.05 – 0.002 mm) and clay (< 0.002 mm). Saturated conductivity, bulk density, pH, total porosity, salt content, Ammonium content and organic matter percentage on a dry weight basis shall also be tested as specifically noted below.
 - (a.) Particle size distribution by ASTM F1632-03 for all soil layers and topsoil. Fines passing the #270 sieve are to be measured using the hydrometer method as outlined in ASTM F1632. If any alternate method is used such as ASTM D422, the results still must be reported at the specified particle size breaks listed below or by plotting as a particle size distribution curve on a five cycle semi-log graph. AASHTO or Unified particle size breaks are unacceptable.
 - i.) Dry sieving and fines passing a #200 mesh sieve is NOT ACCEPTABLE and the results will be rejected outright.
 - (b.) Organic matter content by ASTM F 1647-02a, commonly known as loss on ignition.
 - (c.) Salts and Ammonium test using Woods End Research Laboratory # 104 Soluble Ion Test or 1:2 soil/water extract test as specified in *Methods of Soil Analysis, Part 3* and must be tested and made available to the Commissioner within two weeks of planned soil installation.
 - (d.) Plant available Phosphorous, Potassium, Magnesium, Calcium and Cation Exchange Capacity tested for the S1 Planting Soil Mix ONLY. There are no specified levels for Magnesium and Calcium and are only used as reference to supplement pH and exchangeable cations. Quality Assurance samples shall also complete these tests.
 - (e.) Soil Biology population testing shall be completed for the S1 layer ONLY. Initial approval submittals are required to be tested. Follow-up soil biology testing may be needed if initial submittals are deficient.
3. *Biological Tests* for organisms in compost and S1 planting soil mix:
 - (a.) Contact the testing laboratory to review testing and sampling requirements before sending samples.
 - (b.) Testing laboratories include, but are not limited to: Soil FoodWeb Inc. 1645 Washington Ave Bohemia NY (tel: 631.750.1553) or approved equivalent.
 - (c.) Sampling requirements: At middle height of windrow or soil stockpile, remove sample two feet into the pile. Place sample in clean container. Repeat gathering methods for five to ten times at equidistant spacing on both sides of the compost or soil mix pile. Mix gathered samples with clean utensils. Remove approximately 500g of composite sample and submit final sample by overnight courier to the testing laboratory with completed testing laboratory submission form. If overnight delivery is not available or if being shipped over a weekend, the samples must be stored and/or shipped in coolers maintaining approximately 45° F.
 - (d.) Maintain clear and concise records for testing and sampling procedures.
 - (e.) Compost and S1 soil mix samples shall be tested for the following and shall meet the levels/requirements specified in Part 2 of this

Specification:

- ii.) Active bacterial biomass.
- iii.) Total bacterial biomass.
- iv.) Active fungal biomass.
- v.) Total fungal biomass.
- vi.) Protozoa, to include flagellates, amoebae, and ciliates.
- vii.) Total nematode numbers.
- viii.) Hyphal diameter.
- ix.) Total available N from biological cycling

D. *Sources for Soil Components and Planting Soil Mixes:* Submit information identifying sources for all soil components and the contractor responsible for mixing of planting soil mixes.

1. Commissioner shall have the right to reject any soil supplier.
2. Soil mix supplier shall have a minimum of three (3) years experience at supplying custom planting soil mixes.
3. Submit supplier name, address, telephone and fax numbers and contact name.
4. Submit certification that accepted supplier is able to provide sufficient quantities of materials and mixes for the entire project. Indicate quantity and type of material from each supplier.
5. Soil supplier information shall be provided as requested.
6. The following soil suppliers are possible sources of soil components. In providing such suppliers, the Commissioner makes no claims that the specified materials are available. The Contractor shall be advised that suppliers may not have all soil components; multiple suppliers may be needed. The contractor shall use the listed supplier(s) or an approved equivalent.

1.7 QUALITY ASSURANCE

- A. *Planting Soil QA:* During the placement of planting soils, sample every defined planting area of each layer of the planting soil mix delivered to the job site. Keep these samples on site for review by the Commissioner during the construction process. Label each sample with the Soil Supplier, planting soil layer, date of delivery, general location of where it was placed, and any other notations that would be relevant such as if it was raining that day or

the planting soil was too wet or dry. If there are questions or concerns with a certain mix, the Commissioner will require the QA sample to be tested.

- B. *Samples:* Acquisition and acceptance of planting soils requires a long lead time. Prior to ordering the listed materials, submit representative samples of the same organic batches and soil mixes that will be used to the Commissioner for selection and approval. Do not order materials until the Commissioner approval has been obtained. Schedule at least 4 months for soil ingredient search and initial submittal approval. Delivered materials shall closely match the approved samples.
1. *Organic amendment:* duplicate samples of 1 quart.
 2. *Soil Mix:* duplicate samples of 1 quart for each soil layer after mixing organic material and soil. The Soil Mix shall match the material being placed as closely as possible.
 3. A duplicate 1 quart sample of the soil mix and compost shall be sent to the soil consultant for review.
- C. *In-place Designed Soil Testing:*
1. General planting soil installation for planting beds and lawns shall be tested using a cone penetrometer with a $\frac{3}{4}$ " cone or equivalent for approximately one point every 100 ft² at an interval after S2 layer installation and again after complete soil profile installation. The planting soil penetration resistance shall be uniformly increasing in density with depth, not exceeding 250 lbs/in² to a depth of 30 inches. There shall not be any compacted dense layers within the soil profile. Specific penetration resistance rates are given in Part 2 of this section for each soil layer.
 2. In-place Density Tests for soils prescribed under sidewalks and pervious paving surfaces shall be conducted for at least three tests of surface soil density per segment as noted on the drawings. The surface that is to support pavement construction is to be tested. Density testing shall conform to ASTM standards using either ASTM D1556-07 or ASTM D6938-10 and shall be at 95% of Standard Proctor measured at below optimum moisture content (Do not compact planting soils at moisture contents above the "Optimum" line)
 3. Soil moisture testing can be completed using the hand pat method in which a handful of soil is rolled into a ball about the size of a golf ball and then bounced in the hand for three to four times. If a sheen of water appears on the surface of the ball of soil, it is too wet to work. The designed soil should remain in a ball without disintegrating when patted and should only deform with slight to moderate finger pressure. If the soil cannot be formed into a ball, then it is too dry.
- D. *Planting Soil and Compost Submittal Review and Acceptance:* Submittals for planting soil approval shall include complete test results as specified for each soil, results shall be clearly marked for their corresponding soil layer, clearly labeled with the soil supplier's name, and receipt of soil samples by the Commissioner before review of the submittal can take place. Incomplete test results shall not be reviewed. Resubmission of incomplete submittals shall not be considered as an acceptable reason for delays to the project schedule..
- E. *Soil Installation Review:* For every planting area, notify the Commissioner at least 10 days in advance of date of soil placement. Inspection of the soil installation shall take place during placement of the S3 layer while some of the subgrade is visible and another inspection during the placement of the S2 layer before placement of the S1 layer. Final inspection shall take place during S1 installation.
- F. *Partial Acceptance:* Acceptance of partial areas or portions of the total work may be

granted at the option of the Commissioner only if the area to be inspected for acceptance is large, well defined and easily described. The Commissioner is not obligated to provide partial acceptance of the work.

- G. *Final Acceptance*: Final acceptance shall be defined as the date after which the Commissioner determine that all work, including Punch List items, has been satisfactorily completed.

1.8 HANDLING AND STORAGE

- A. The planting soil shall be mixed in a ball mill or tub mill fitted with proper screening and paddles. Windrowing the materials is not acceptable, as it does not produce uniform mixing of the components.
- B. Store and handle packaged materials in strict compliance with manufacturer's instructions and recommendations. Protect all materials from weather, damage, injury and theft.
- C. Prohibit vehicular and pedestrian traffic on or around stockpiled planting soil.
- D. Install planting soil layers directly before planting is to commence. Do not install plantings soils so that they over-winter without vegetation. Failure to vegetate the planting soil or allowing partial planting soil installation allows for extensive erosion, compaction, and overall degradation of the planting soil system requiring extensive refurbishment before spring planting. The Contractor shall be responsible for all repairs and replacements for soil until the project reaches final acceptance.
- E. Soil (Planting Soil or Mix Components) that is to be stockpiled longer than two weeks, whether on or off site, shall not be placed in mounds greater than six feet high. If soil stockpiles greater than six feet high are to be stored for more than two weeks, the contractor shall break down and disperse soil so that mounds do not exceed the six-foot height restriction or thoroughly mix the stockpile once a month.
- F. Soil materials shall be covered at least two weeks prior to installation to prevent excess moisture from saturating the soil stockpile. If in doubt of planting soil moisture use the gravimetric oven dry method as described in Soil Science Society of America, *Methods of Soil Analysis*, Part 1, 1986 at least two days prior to soil installation and maintain records of testing.
- G. Soil materials shall not be mixed, handled or hauled, placed or compacted when it is wet, as after precipitation, nor when frozen. Soil shall be handled only when the moisture content is less than 8 percent by volume.

1.9 PROJECT CONDITIONS

- A. Sequence deliveries to avoid delay. On-site storage space is permissible only with written notice from Commissioner. Deliver soil materials only after preparations for placement of planting soil have been completed.
- B. Vehicular access to the site may be restricted. Prior to construction the Contractor shall submit for approval a plan showing proposed routing for deliveries and site access which shall include, but not limited to equipment movements and staging locations.

PART 2 – PRODUCTS

2.1 SOIL LAYERS (HORIZONS):

A. General

1. All plant mix material shall fulfill the requirements as specified and be tested to confirm the specified characteristics.
2. Samples of individual components of plant mixes in addition to blended plant mixes including compost materials shall be submitted by the Contractor for testing and analysis to the approved testing laboratory. Include verification testing of on-site sub soils. Comply with specific materials requirements specified.
 - (a.) No base component material or soil components for plant soil mixes shall be used until certified test reports by an approved agricultural chemist have been received and approved by the Commissioner.
 - (b.) If necessary, additional testing of the soil material components may be requested by the Commissioner to facilitate approval of the plant soil mix.
 - (c.) As necessary, make any and all plant soil mix amendments and resubmit test reports indicating amendments until approved.
3. The Commissioner may request additional testing by the Contractor for confirmation of mix quality and/or plant soil mix amendments at any time until completion if quality control samples deviate from the specifications and initially approved submittals.

B. *Planting Soil Supply:*

1. In the event that any of the soil materials are not available from the supplier or are not in compliance with specifications herein, the Contractor shall obtain material from other equivalent and pre-approved suppliers and conduct tests specified herein to provide materials in compliance with these specifications.
2. The Commissioner shall be notified of all soil mix substitutions or problems with the planting soil supply in order to assist with timely delivery and installation.

C. *Planting Soils:*

1. *Soil layer (S3):* Planting Soil Drainage Layer consisting of a 6 inch layer of material with a USDA Texture of coarse sand.
 - (a.) Soil reaction with a pH between 4.5 – 7.0.
 - (b.) An estimated permeability of 10 - 25 cm/hour.
 - (c.) The S3 layer after installation shall have a, uniformly increasing with depth, penetration resistance of < 250 lbs/in² after installation. No dense layers (+ 50 lbs/in² from background rate) are allowed.
 - (d.) There shall be no visible organic material present in this layer.
 - (e.) Material can be a natural sand or finely ground recycled glass meeting the following particle size distribution

S3 Soil Layer Particle Size Distribution

Particle Size Class	Passing Sieve No	Range in Percent Passing ASTM F 1632-03
fine gravel	10	95 – 100
very coarse sand	18	80 – 95
coarse sand	35	60 – 80
medium sand	60	10 – 40
fine sand	140	8 – 15
very fine sand	270	1 – 10
silt* (<0.05mm)		1 – 6%
clay* (<0.002mm)		0 – 4%
Organic Matter %	ASTM F 1647-02a	<0.25
pH	1:1 Water	4.5 – 7.0

*determined by hydrometer method in ASTM F1632-03 as percent of total soil.

2. *Soil layer (S2):* A variable thickness layer of material with a USDA Texture of coarse sand to loamy sand that has a maximum thickness of 24 inches. The thickness of the S2 is dependent on the soil profiles for individual planting areas, underground obstructions and transition areas.
 - (a.) The minimum infiltration rate for soils shall be above 5 cm/hour (2 in/hr) after installation.
 - (b.) There should be no coarse fragments over 2.5 cm (1 in.) in size. The soil shall have soil moisture content less than 8% by weight for installation.
 - (c.) The S2 layer after installation shall have a, uniformly increasing with depth, penetration resistance of < 250 lbs/in² after installation. No dense layers (+ 50 lbs/in² from background rate) shall be allowed.
 - (d.) The particle size distribution shall be:

S2 Soil Layer Particle Size Distribution

Particle Size Class	Passing Sieve No	Range in Percent Passing ASTM F 1632-03
fine gravel	10	95 – 100
very coarse sand	18	90 – 100
coarse sand	35	65 – 85
medium sand	60	30 – 40
fine sand	140	15 – 25
very fine sand	270	9 – 18
silt* (<0.05mm)		6 – 12%
clay* (<0.002mm)		3 – 6%
Organic Matter %	ASTM F 1647-02a	<1
pH	1:1 Water	5.8 – 6.5
EC	1:1 paste	1.5 dS/m

*determined by hydrometer method in ASTM F1632-03 as a percent of total soil.

3. *Soil layer (S1):* Planting Soil Surface layer. A layer consisting of an 8 inch layer of

material with a USDA Texture of sand to loamy sand (S2) amended with organic matter. Testing for compliance shall be performed after compost is approved and added.

- (a.) The minimum infiltration rate for planting soil areas shall be above 5 cm/hour (2 in/hr) after installation.
- (b.) The soil shall have soil moisture content less than 8% by weight for installation.
- (c.) The S1 layer shall have a uniformly increasing with depth, penetration resistance of < 120 lbs/in² after installation. No dense layers (+ 25 lbs/in² from background rate) shall be allowed.
- (d.) The particle size distribution shall be:

S1 Soil Layer Particle Size Distribution

Particle Size Class	Passing Sieve No	Range in Percent Passing ASTM F 1632-03
fine gravel	10	95 – 100
very coarse sand	18	90 – 100
coarse sand	35	65 – 85
medium sand	60	30 – 40
fine sand	140	15 – 25
very fine sand	270	9 – 18
silt* (<0.05mm)		6 – 12%
clay* (<0.002mm)		5 – 9%
Chemical		
Organic Matter %	ASTM F 1647-02a	4 – 6% (weight)
pH	1:1 water	5.8 – 6.5
EC	1:1 paste	1.5 dS/m
Phosphorous (P)	extract	20 – 100 ppm
Potassium (K)	extract	200 – 600 ppm
Cation Exchange (CEC)	Extract	>10 Meq/100g
Biological		
Available Total N Cycling	Assay	100 – 150 lbs./ ac
Active Bacteria	Assay	15-25 or more µg/g ¹
Total Bacteria	Assay	100-3000 or more µg/g ¹
Active Fungi	Assay	25-50 or more µg/g ¹
Total Fungi	Assay	500-3000 or more µg/g ¹
Protozoa	Assay	10,000 – 50,000 flagellates
Protozoa	Assay	10,000 – 50,000 Amoebae
Protozoa	Assay	25-50 ciliates
Nematodes	Assay	2-10 beneficial nematodes

*determined by hydrometer method in ASTM F1632-03 as a percent of total soil.

¹Soil Biology is in µg/g of dry weight of soil

D. *Organic Amendment:*

1. Composted municipal yard waste shall provide the heavy metal certificate of the material delivered as per EPA and NYDEC standards. Composted organic matter shall have the following criteria:

Criteria	Test Method	Acceptable Range
Type		brewer's waste, or leaf mulches are also acceptable. Composted municipal waste (chipped, shredded and screened wood, leaves, bark, etc.) alone is not acceptable unless it meets all of the criteria noted
Carbon/Nitrogen Ratio		11:1 – 22:1
Degree of Maturity	Dewer Self Heating or	VI – V
	Solvita Maturity Index or	6 – 8
	CO ₂ Evolution	1.2 % C/day
Foreign Material	Dry wt.	< 1" dia. And < 2% (of total)
Organic Matter %	Dry wt.	25 – 75%
Reaction	1:1 water	5.5 – 8.0
EC	1:1 water	< 3 dS/m
Ammonium	extract	< 200 ppm
Biology	assay	>200 lbs/ac Available Total N from Biology
		15-25 or more µg active bacteria/g ¹
		100-3000 or more µg total bacteria/g ¹
		25-50 or more µg of active fungi/g ¹
		500-3000 or more µg of total fungi/g ¹
		10,000 -50,000 flagellates (Protozoa)
		10,000 - 50,000 Amoebae (Protozoa)
		25-50 ciliates (Protozoa)
Nutrient Content	extract	2-10 beneficial nematodes (no root feeders)
		Contains some nitrogen, phosphorus, potassium, calcium, magnesium, sodium and micronutrients including iron, copper, boron, and manganese. Nutrients shall be present in appropriate agricultural and horticultural proportions to prevent ion antagonism.
Heavy Metals	extract	Concentrations of zinc, mercury, cadmium, lead, nickel, chromium, and copper shall be below EPA and the NYDEC standards for compost applications to soils with human activity.

¹ Soil Biology is in µg/g of dry weight of Compost

- E. *Landscape Underdrainage Pipe Filtration Gravel:* Only for areas where designed planting soils will be placed over a compacted subgrade soil; otherwise, follow the drainage mat specifications for on structure.

1. The perforated underdrainage pipes shall require a minimum 4 inch gravel filtration encasement to protect the pipe from siltation from the overlying soil material.

2. In order to best match the sand particle size and allow for laminar inflow of water, an AASHTO gravel size of #7 or #78 is required.
3. Underdrain gravel shall conform to the following specifications:

SIEVE OPENING	0.25 in.	to 0.5 in.	Pea gravel shall be clean double-washed crushed aggregate, free of rock dust, fines or soil particles and foreign material.
SIZE SPECIFICATION	AASHTO M-43		

4. No filter fabric is to be used separating the gravel layer from the overlying sand layer. Standard filter fabric shall be used to line the drainage trench and used to temporarily cover the crushed stone to prevent siltation from other construction until the planting soil is in place.

F. Landscape Drainage and Structural Soil Filter Fabric:

1. A drainage-type non-woven geotextile fabric shall be used as a separation layer between subgrade soils or larger ($>3/4"$) aggregate and the planting soil from migrating into the underdrainage system. The geotextile is to be used to line the entire trench excavation in areas with dense subgrade soils prior to placement of any crushed stone and underdrainage piping. The permeability of the drainage fabric shall be a minimum of 110 gal/min/sq.ft.
2. Drainage filter fabric shall meet the following Minimum Average Roll Value (MARV) specifications across the weave:

PROPERTY	TEST METHOD	REQUIREMENT	PROPERTY	TEST METHOD	REQUIREMENT
Grab Tensile Strength	ASTM D-4632	90 lb. min.	Puncture Strength	ASTM D-4833	60 lb. min.
Grab Tensile Elongation	ASTM D-4632	50% min.	UV Resistance	ASTM D-4335	70% at 500 hrs min.
Trapezoidal Tear Strength	ASTM D-4533	40 lb. min.	Apparent opening	ASTM-D-4751	40-80 US Sieve
Mullen Burst Strength	ASTM D-3786	130 psi. min.	Permeability	ASTM D-4491	120 gal/min/ft.2 min.

- G. Planting Soil Mix Equivalency Table: The mix ratios are rough estimates based on usual components found in the area and their physical properties. Adjustments to the mix shall be needed to achieve the required planting soil properties and the Contractor shall make the required adjustments at no additional cost to the project.

Layer Designation	Base Material or Equivalent	Second Soil Mix Component	Third Soil Mix Component	Est. Mix Ratio (Volume)
S3 Layer	USGA straight sand, non-calcareous Masonry Sand, or fine ground recycled glass	None	None	None
S2 Layer	Approved S3 material	sandy loam [‡]	None	3:1
		sandy clay loam [‡]	None	5:1
		loam [‡]	None	4:1
S1 Layer	S2 planting soil mix	Approved Compost	None	4:1

[‡]USDA Soil Textures

2.2 SOIL PROFILES

- A. Soil profiles are shown on the Drawings. The S1 layer (*planting bed soil*) shall be 6 to 8 inches deep to allow enough material for final grading/settlement, and the S3 layer (*drainage layer*) is always 6 inches thick. The S2 layer (*horticultural subsoil*) is a variable thickness so that it is the layer that is thickened or thinned to make the final grade.

PART 3 – EXECUTION

3.1 COORDINATION

- A. **Pre-Installation Examination Required:** The Contractor shall examine previous work, related work, and conditions under which this work is to be performed and shall notify the Commissioner in writing of all deficiencies and conditions detrimental to the proper completion of this work. Beginning work means the Contractor accepts substrates, previous work, and conditions. The Contractor shall not place any planting soil until all work in adjacent areas is complete and approved by the Commissioner.
- B. **Planting Soil Preparation:** Examine soil and remove foreign materials, stones over 1", and organic debris over 2" in length. Mix-in amendments as required by tests and as approved by the Commissioner. All preparation and mixing shall be accomplished when the soil moisture content is less than 8 percent by volume.
- C. Coordinate planting soil placement with the Soil Biologist for proper applications of soil biology amendments.
- D. Coordinate activities with other project contractors so that there is no soil disturbance from traffic or other construction activities subsequent to placement.
- E. Coordinate installation of irrigation system prior to placement of the S1 layer so as not to damage the final grade and planting soil.
- F. Stormwater system tests shall be conducted prior to S1 layer placement so as not to damage

the final soil layer. Any erosion or gully damage to the planting soils during these tests shall be corrected prior to S1 layer placement and final grading.

3.2 EXCAVATION AND SCARIFICATION

- A. Excavation of the soils shall be accomplished to a depths noted for each soil profile area. All construction debris shall be removed from the planting areas prior to placement of the soil layers. Care shall be taken to avoid working the soil when it has 8 percent moisture content or above.
 - 1. *Excavation Depths:* (of the subgrade below final grade where applicable)
 - (a.) All areas shall be excavated to 36 inches below final grade unless noted on the Drawings.
 - 2. *Subgrade pitch:* The subgrade shall be pitched toward the underdrainage with a gradient of 1 percent (1.25 inches fall per 10 feet).
- B. Scarification of the Subgrade: After the specified engineering compaction for the subgrade is accomplished, scarification must loosen the compacted surface of the subgrade following final rough grade to a depth of 4 to 6 inches prior to the designed soil placement.

3.3 MIXING OF TOPSOIL

- A. The planting soil shall be mixed in a ball mill or tub mill fitted with proper screening and paddles. Windrowing the materials is not acceptable, as it does not produce uniform mixing of the components.
- B. Mixing of the compost for the S1 layer (topsoil) shall be accomplished in the same manner as the other mixing procedures. The compost shall be moist, but not overly wet. Compost shall not be so wet as to have water squeezed out by hand or so dry as to be easily blown by wind.

3.4 PLACEMENT OF SOIL LAYERS (HORIZONS)

- A. *Examination of Subgrade:* The subgrade shall be examined by the Contractor prior to the start of soil placement and planting. Any deficiencies shall be noted and related to the Commissioner in writing prior to acceptance of the subgrade by the Landscape Contractor.
- B. Coordinate with Section 33 46 00 Underdrainage System. Remove filter fabric from surface of pipe filtration aggregate prior to placing S3 layer.
- C. Planting Soil Placement:
 - 1. *General Soil Placement Procedures:*
 - (a.) Installation of planting soils shall be accomplished with small tracked equipment of less than 8 lbs/in² ground pressure. Back-blading is strictly forbidden as it will overly compact the planting soil. If planting soil has been kept dry and the subgrade is not saturated, installation of the designed planting soil can continue the day after a rain event, unless the subgrade is considerably saturated or has standing water.

- (b.) All soil profiles will have a 6 inch S3 Layer – *Drainage Layer*, and a 6 to 8 inch S1 Layer – *Planting Bed Soil* with the S2 Layer used as the variable to meet the overall depths required by the soil profiles. Thickness of the S2 Layer will range from 0 to 24+ inches or as need to meet final grade.
- (c.) Within tree soil profiles (Profile A) the S2 is 24" thick and within the shrub soil profile (Profile B) it is 12" thick under normal conditions.
- (d.) Care shall be taken to maintain the separation between the designed soil layers. Do not mix the S1, S2 or S3 with adjacent layers.
- (e.) The surface of each lift shall be scarified prior to placement of the next lift or layer.
- (f.) Only light tamping with foot traffic during installation is allowed on the designed soil.
- (g.) To protect the planting soil if heavy rainfall is predicted, cover the surface of exposed planting soils on all slopes greater than 4:1 with 1" of approved mulch. In areas where there may be concentrated flow from runoff, place 9" mulch socks across the affected area.

2. *Tree Soil Profiles:* Specific installation instructions for areas designated PROFILE A (See Drawings)

- (a.) Where applicable, place the S3 drainage layer a 6 inch lift over the underdrain system. Compaction of this lift shall consist of light tamping by the installers foot traffic. No mechanical compaction shall be allowed except where otherwise noted.
- (b.) Large tree (rootballs around 36 inches tall that would sit on about 4 inches of compacted S3) (for smaller trees see 'c' below) planting shall follow these procedures for handling the planting soils in and around the rootballs.
 - i.) Adjust the subgrade overall depth to allow 4 inches of S3 material and so that the root flair of the tree will be 1 to 2 inches above final grade
 - ii.) There shall be a pedestal of compacted subgrade or S3 under each of the tree planting areas. Compact this area to 90 percent of standard Proctor at below optimum moisture content then lightly scarify the pedestal surface. The tree pedestal shall be slightly higher in elevation than the surrounding subgrade to allow drainage away from beneath the rootball.
 - iii.) Place at least 4 inches of S3 material on the pedestal area to allow support for the rootball and assist with tree leveling.
 - iv.) Install the 8 inches of the S1 layer after all plantings have been completed and fine grade.
- (c.) Trees with rootballs less than 36 inches tall shall follow these procedures for soil installation and planting. These trees and large shrubs shall be planted after the S2 layer is installed, but prior to the S1 layer installation.
 - i.) Compact a pedestal of S2 material to 90 percent of Standard Proctor at below optimum moisture then lightly scarify the pedestal surface.
 - ii.) The soil depth shall be so that the root flair of the tree will be 1 to 2 inches above final grade.
 - iii.) Install the 6 to 8 inches of the S1 layer after all plantings have been completed.

- (d.) Where applicable, place 24 inches of the S2 layer in 6 inches lifts. The thickness of the S2 layer shall be thickened or thinned to maintain final grade. Light foot traffic and tracked light equipment is allowable for placing the next lift and is needed to seat the soil layers within the profile thus reducing overall subsidence. A light scarification of the surface of each lift with hand tools is required to break up any compacted surface and eliminate any compaction interface. Higher traffic areas will require greater amounts of scarification. Additional compaction is prohibited except where noted.
 - (e.) Reducing the amount of compaction to the soils shall be accomplished by beginning the work in corners, against walls, or at the center of isolated beds, and progressing outwards. This limits the amount of traffic needed for installation on the placed soil.
 - (f.) Planting soils shall never be moved or worked when wet or frozen.
 - (g.) Penetration resistance shall not exceed 200 lbs/ft² within the S2 and the resistance for the S1 layer shall be less than 120 lbs/ft² except where otherwise noted (under pavement plantings). The planting soil shall be uniformly increasing in density with depth. There shall not be any compacted layers within the soil profile.
 - (h.) The Contractor shall place barricades as required to prevent any unnecessary compaction of S2 layer from vehicles, equipment, or pedestrian traffic during construction and vegetation establishment. Any additional compaction of the planting soils must be loosened satisfactorily to meet penetration resistance specifications.
3. *Structural Soil under Pavement or Stone Dust:* Specific installation procedure for areas designated Profiles C and D (See Drawings)
- (a.) Place the S3 drainage layer in 6 inch lifts over a properly scarified and pitched subgrade. Compaction of this lift shall consist of light tamping by the installers foot traffic. No mechanical compaction shall be allowed except where otherwise noted.
 - (b.) Place 24 inches of S2 material in 6 inch lifts. Compact each lift to 90 percent of Standard Proctor below optimum moisture. DO NOT compact soils above optimum moisture content.
 - (c.) Scarify each lift surface before applying additional lifts to a depth of 1-2 inches. The final lift below the pavement shall be compacted to 95% and shall not be scarified.
 - (d.) Place approved Geotextile on the S2 surface in the areas noted on the drawings before placing the gravel base layer for concrete or permeable pavement sidewalks. Ensure that the Geotextile is folded back onto the gravel base and away from the planting areas and tree openings.
 - (e.) Place S1 material in the tree opening within the sidewalk.
4. Complete all hardscape construction after installation of the S2 layer and/or clean scarified subsoil has occurred. Only place S1 material when hardscape construction is complete.
- (a.) Limit all traffic during construction to areas designated for hardscape placement.
 - (b.) After hardscape construction is complete, remove any debris from the S2 layer and supplement the S2 soil with approved soil mixes. Clean subsoil and scarify to loosen compacted areas adjacent to where construction occurred. Penetration resistance shall not exceed 200 lbs/ft² except where noted. Resistance shall be uniformly increasing with depth.

- (c.) The scarification shall be such that care is taken not to damage the hardscape.
- (d.) The depth of the scarification shall be 2 to 3 inches. Deeper loosening may be required if compaction is extensive. Test with cone penetrometer. If compaction exceeds specified rated, decompact areas as required and in consultation with the Commissioner.
- (e.) Scarify any other areas that have been compacted prior to S1 layer or Topsoil placement.
- (f.) **CONSTRUCTION NOTE:** For all utility boxes and structures that will be placed completely within the designed soil shall require compacted pedestals at 90% of Standard Proctor to support the structures.

3.5 PROTECTION AND REPAIRS

A. General:

1. Protect newly graded areas from traffic, freezing and erosion. Keep free of trash, debris or construction materials. Landscape contractor shall be the only personnel allowed on areas where planting soil has been installed.
2. When providing water to plants within designed sand based planting soils, provide adequate water directly to the rootballs of all plants using watering gators or drip irrigation directly on the rootballs. Monitor the rootballs and not the surrounding soils for moisture until plant establishment.
3. Within the installation warranty period repair and re-establish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or compacted due to subsequent construction operations or weather conditions.
4. Scarify or remove and replace material to a depth as directed by the Commissioner; reshape and re-compact by only hand tamping at the prescribed moisture content.
5. Where settling occurs, before sidewalk construction and final soil installation acceptance, backfill with additional approved soil material, compact to specified rates, and restore any disturbed areas to a condition acceptable to the Commissioner.

3.6 POST INSTALLATION WARRANTY

- A. Where settling occurs, backfill with additional approved material, compact to specified rates, and restore any disturbed areas to a condition acceptable to the Commissioner.
- B. Organic fertilization of planting areas shall be handled after establishment after soil tests have been taken to determine the optimum fertilizer rates.
- C. Warranty shall be two (2) years from date of final acceptance. Also, See Warranty as described in section 32 93 10 – Liquid Biological Amendment.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 92 00

LAWNS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The General Documents, as listed in the Table of Contents, and applicable parts of DDC General Conditions, shall be included and made a part of this Section.
- B. Examine all Drawings and all other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

- A. The work of this Section consists of all site preparation work and related items as indicated on the Drawings and/or as specified herein and includes, but is not limited to, the following:
 - 1. Providing and installing sodded lawns.
 - 2. Coordination with soils placement.
 - 3. Maintenance.
 - 4. Warranty.
 - 5. Coordination with other trades.
 - 6. Testing.
 - 7. Clean-up.
 - 8. Restoring all lawn areas within the limit of work that are disturbed by the work of the Contract.

1.3 RELATED WORK UNDER OTHER SECTIONS

- A. Carefully examine all of the Contract Documents for requirements that affect the work of this section. Other specification sections which directly relate to the work of this section include, but are not limited to, the following:
 - 1. Section 32 91 00 – Planting Soil System.
 - 2. Section 32 93 00 – Planting and Fine Grading.
 - 3. Section 32 93 10 – Liquid Biological Amendment
 - 4. Section 33 46 00 – Underdrainage

1.4 LIMITS OF WORK

- A. The limits of work for lawns are shown on the Drawings. All disturbed areas beyond the limits of work shall be restored to the satisfaction of the Commissioner.

1.5 LINES AND GRADES

- A. The Contractor shall verify that the subgrade and finish grade lines and grade are consistent with the Drawings and acceptable to the Commissioner. The Contractor shall make adjustments as necessary to establish finish grades.
- B. Grades: If present, protect and maintain grade stakes and location stakes until removal is acceptable to Commissioner and all parties involved in this project. If grade stakes are not present, establish grade stakes to ensure that grades shown on the Drawings are being met.

1.6 QUALITY ASSURANCE/ DEFINITIONS

- A. Analysis of Materials: For each type of packaged material required for the work of this Section, provide manufacturer's certified analysis. For all other materials, provide complete analysis by a recognized laboratory made in strict compliance with the standards of the Association of Official Agricultural Chemists.
- B. Inspection: Permit the Commissioner to inspect sod at the place of growth. The Commissioner reserves the right to re-inspect sod at any time and to reject unsatisfactory materials at any time during the progress of the work even if previously inspected and approved. The Contractor shall replace rejected materials at no change in Contract Amount.
 - 1. At the Commissioner's option and/ or request, the Contractor shall supply the Commissioner with photographs of sod for the project. The photographs shall be taken at the sod farm. Photographs shall include images showing the full range of sod characteristics including detailed photographs of the sod and blades. Images shall include a measuring device to indicate true size.
 - 2. The Commissioner shall have the right to reject any sod source if he/ she determines, before, during or after inspecting or receipt of sod, any of the following:
 - (a) The sod does not meet quality standards set forth herein.
 - (b) The sod does not meet the intended visual characteristics of the lawn as determined by the Commissioner.
 - (c) The sod farm cannot supply the specified sod or an acceptable substitute species.
 - (d) The sod farm's cultural practices or maintenance procedures do not meet specified standards.
 - (e) The soil medium used for growing sod does not meet the specifications.
 - 3. The Commissioner has endeavored to locate sources for the sod indicated. However, the Commissioner makes no claim that the materials will be available at the sources researched. The Contractor shall submit to the Commissioner any questions regarding the source of sod.

1.7 STANDARDS AND SPECIFICATIONS

- A. Materials and methods of construction shall comply with the following standards:
 - 1. ASTM: American Society for Testing and Materials.
 - 2. AOAH: Association of Official Agricultural Chemists.

3. International Society of Arboriculture.

B. Also refer to Section 32 93 00 Planting and Fine Grading.

1.8 TESTS

A. Testing Agency: Employ an independent testing agency acceptable to the Commissioner to perform tests and certifications indicated. Tests shall be made in strict compliance with the standards of the Association of Official Agricultural Chemists.

1.9 SUBMITTALS

A. Submittals shall conform to DDC General Conditions.

B. The soil shall meet the specifications noted in this Section and in Section 32 91 00 Planting Soils System. Soil for the sod shall be the S1 layer.

C. Sod Certification: Provide certification showing sod mix species and source. Certification shall clearly indicate deviations from the specified sod mix and any proposed substitutions.

D. Certificates: Submit inspection certificates required by authorities having jurisdiction. Provide certifications stating that materials comply with requirements. Provide certified analysis of soil amendments and fertilizers.

E. Test Reports: Submit certified reports for tests required or performed.

1. Provide soil tests for soil medium that the sod was grown on. Submit sieve analysis, pH, organic content and chemical properties, all in compliance with testing requirements listed in Section 32 91 00 Planting soil System.

F. Product Information: Provide manufacturer's data showing installation and limitations in use. Supply Certificates of Compliance for all materials required for fabrication and installation, certifying that each material item complies with, or exceeds, specific requirements. Work includes but is not limited to:

1. Sod Mix.

2. Miscellaneous materials.

G. Material Samples: Before ordering the below listed materials, submit representative samples to Commissioner for selection and approval as follows. Do not order materials until Commissioner approval has been obtained. Delivered materials shall closely match the approved samples. Submit duplicate samples of each type listed below showing full range of color variation, finish and texture that can be expected in the permanent work:

1. Sod: Two (2) 12 x 12" pieces.

H. Maintenance Instructions: Provide clear, concise typewritten maintenance instructions and recommendations for year round care of all work provided under this Section. Maintenance Instructions must be provided to the Commissioner for review prior to start of sod placement.

1. Maintenance Instructions shall include the following information plus any special instructions deemed necessary by the Commissioner:

- (a) Title and location of project; date of project; name, address, and telephone/ fax number of Landscape Contractor, Commissioner.
- (b) Lawn Sod Mix and source.
- (c) Identify by calendar month the maintenance requirements for Liquid Biological Amendments, irrigation, pest/ disease control, mowing, and general maintenance. Indicate type and quantity of which pests/ diseases can be anticipated for sod, and quantity of water needed.
- (d) Identify the planting soil mixes used with sod, including a diagram and soil mix constituents.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Store and handle all sod and materials in strict compliance with supplier's / manufacturer's instructions and recommendations. Protect all materials from damage, injury and theft. Sod shall be closely monitored for sufficient root moisture and shall be protected from sun and wind. Stored sod shall be watered and misted several times a day if necessary to maintain proper root moisture and to reduce transpiration in sunny or windy locations. Sod shall not be stored more than twenty-four hours without written acceptance by the Commissioner.
 - 1. Sod stored longer than 24 hours shall be rejected and promptly removed from the site.
- B. Sequence deliveries to avoid delay. On-site storage space is extremely limited and is restricted to a 24-hour period for sod and materials. On site storage is permissible only with written notice from the Commissioner. Deliver materials and sod only after preparations for sodding have been completed and accepted, including but not limited to: subdrainage system, rough grading, utilities, decompaction or remediation of soils. The Commissioner shall determine if the site is acceptable for sodding.
- C. Prohibit vehicular and pedestrian traffic on or around areas sodded or to be sodded.
- D. Prior to construction, the Contractor shall submit for approval a plan showing proposed routing for deliveries and access to the site.

1.11 PROJECT CONDITIONS AND COORDINATION

- A. Utilities: Determine and mark the location of below grade utilities before project staking. The Contractor shall field locate all utilities before starting work. Hand excavate as necessary to avoid damage. Repair all damage and restore items to their original condition as approved by the Commissioner and authorities having jurisdiction at no change in Contract Amount.
- B. Concealed Conditions: Notify Commissioner before planting when below grade conditions detrimental to proper plant growth are encountered. Do not proceed with planting without specific written instructions from the Commissioner.
- C. Sequence of Planting: Sequence installation so that trees and shrubs are installed before lawns, unless otherwise approved by the Commissioner. Restore damaged lawns and groundcover beds if tree and shrub planting is delayed. Complete planting work as quickly as possible on portions of the site as they become available for planting.
 - 1. Coordinate installation of sod with installation of planting soils.

- D. Verify that water is available for watering at time of lawn installation. Do not proceed with lawn work until irrigation is available. If water service is discontinued, for any reason, before final acceptance, provide water as needed to maintain lawn in a healthy condition. Provide all accessories required for watering. Watering and equipment shall be included in the cost.
- E. Painting: Do not paint vegetation or lawns for any reason.

1.12 PLANTING SEASONS

- A. Planting Seasons: Work only within seasonal limitations for proper planting as follows:
 - 1. Lawn Sod
 - (a) Planting Season: 15 April to 15 June and 15 Sept to 30 Oct

1.13 ACCEPTANCE

- A. Acceptance Criteria: Create an acceptable lawn which is defined to mean a uniform, smooth lawn with well established, close stands of grass, with no bare or dead spots over 3" in maximum dimension, with not more than one bare spot for each square yard of lawn area, and with an average of at least 6 thriving grass plants per square inch. To be acceptable, the lawn shall be free from weeds, disease, and detrimental insect infestation. Roots should extend two inches into new root zone.
- B. Lawn Replacement: Replace defective lawn with new lawn of same species, character, and quality of originally accepted work. If a replacement is unacceptable during its two year warranty, the Contractor shall provide another replacement.
 - 1. Replacement Planting Seasons: Planting for replacement and warranty work for lawns shall comply with the Planting Seasons specified herein.

1.14 WARRANTY

- A. Provide written warranty agreeing to remove and replace work that exhibits defects in materials or workmanship for the specified periods. "Defects" is defined to include, but is not limited to, death, unsatisfactory growth, failure to adequately root into soil, disease, abnormal foliage density, abnormal size, abnormal color, failure to thrive, and other unsatisfactory characteristics.
 - 1. Lawn Replacement: Replace defective lawn with new lawn of same species, character, and quality of originally accepted work. If a replacement is unacceptable during its two year warranty, the Contractor shall provide another replacement.
 - 2. Warranty Period for Lawns: Two years from date of Final Acceptance.

PART 2 PRODUCTS

2.1 PLANTING SOIL

- A. Refer to Section 32 91 00 - Planting Soil Systems.

2.2 SOD ROOT ZONE GROWTH MEDIUM

- A. Provide sod with a root zone growth medium that is compatible with Tree Soil Profile. Refer to Section 32 91 00 Planting Soil System.
1. Submit soil tests and samples in strict accordance with Section 32 91 00 Planting Soil System.
 2. Commissioner and Soil Scientist shall have the right to reject any sod determined to be incompatible with the Tree Soil Profile.

2.3 LAWN SOD

- A. Grass Sod: Provide strongly rooted, mature vigorous, healthy, commercially grown sod free of weeds other grasses, (including annual bluegrass, *Poa annua*), insects, diseases, gravel (greater than 1/8"), and other deleterious matter.
1. Provide sod that contains disease resistant strains of Bluegrass (65%) and Creeping Red Fescue (35%).
- B. Sources for Sod: Only sod growers with experience producing sod of the type required for this project shall be considered. Below is a list of sod growers, however the contractor is not limited to these sod farms, nor does their listing here assume approval. Submit soil and sod samples to the Commissioner per Article 1.9, herein.

(631) 368-8022
(631) 368-8032 (fax)
(800) 244-7637 (toll-free)

- C. Stripping: Provide sod cut to 1/2" to 3/4", thickness, excluding top growth and thatch. Provide only non-dormant, viable sod in uniform sized pads. Sod must be capable of supporting its own weight when held vertically within the top 10%. Roll or fold sod prior to lifting and handle in a manner to prevent tearing, breaking, drying, or any other damage. Deliver sod to site and begin installation within 24 hours after stripping.

2.4 MISCELLANEOUS MATERIALS

- A. Fertilizer: Fertilizer recommendation will be made by the soil scientist and Commissioner after soil testing. Fertilizer additions and may include liquid biological amendment, lime, gypsum, sulfur, nitrogen, phosphorus, and potassium. Commercial fertilizer shall be an organic product complying with the State and Federal fertilizer laws. Deliver to the site in the original unopened containers that shall bear the manufacturer's certificate of compliance covering analysis, which shall be furnished to the Commissioner. At least 33% of the nitrogen content by weight shall be cold water insoluble nitrogen.
- B. Plywood: Provide 3/4" Grade C or better plywood for use as planking when moving equipment over soil areas to be planted. The driving of vehicles over planted areas is expressly prohibited.

PART 3 EXECUTION

3.1 LAWN SOD

- A. Sodding: Obtain Commissioner's approval of fine grading prior to placing sod. Cut, deliver and install sod within a 24-hour period. Do not harvest or transport sod when moisture content may adversely affect sod survival. Protect sod from sun, wind, and dehydration prior to installation. Do not lay dormant sod or install sod on saturated or frozen soil. Do not tear, stretch, or drop sod during handling and installation. Loosen topsoil of loam to be sodded and place sod immediately. Sod to be placed only by experienced workers under supervision of a qualified foreman.
 1. Sod Placement: Dampen dry soil prior to placing sod. Install initial row of sod in a straight line, beginning at bottom of slopes, and lay sod perpendicular to slope direction. Place subsequent rows parallel to and lightly against the previously installed row. Lay sod to form a solid mass with close joints. No space between joints should be greater than 1/2". Fill any space between joints to level with root zone soil. Butt ends and sides of sod strips; do not overlay edges. Stagger strips to offset joints in adjacent courses. Provide sod pad top flush with adjacent curbs, sidewalks, drains, and seeded areas.
 2. Rolling: Press sod firmly into contact with the sod bed by tamping or rolling to eliminate air pockets, provide true and even surfaces, ensure knitting and protect all exposed sod edges, but without displacement of the sod or deformation of the sod surface. Sod surface shall be smooth and free of depressions or lumps, and without gaps, seams and bare patches.
 3. Watering: Water sod thoroughly at the rate of 5 gallons per square yard with a fine spray immediately after laying. Roll with light lawn roller to ensure contact with sub-grade.
 4. Mowing: The first mowing of sodded areas shall not be done until the sod is firmly rooted, as determined by the Commissioner, and securely in place. Not more than 40% of the grass leaf shall be removed by the initial or subsequent

mowing. Grass height shall be maintained between 2-1/2 and 3 inches, unless otherwise specified or approved by Commissioner until final acceptance.

5. Aeration: After sod has rooted sufficiently, as determined by the Commissioner, aerate the sod with a hollow tine aerator using 3/4 inch tines on 2-inch spacing. The aerator should be a piston type aerator. A disk or rolling aerator is not acceptable. Harvest and discard aeration cores using sweepers or other approved devices. Topdress using sufficient original root zone soil mix to fill aeration holes and provide an additional 1/4" of root zone soil over entire area. Broom topdressing to smooth surface.
- B. Limit of sodding shall be as shown on the Drawings. All areas on the plan are to be loamed and sodded only after written approval of the finished grading or as directed by the Commissioner. All disturbed areas outside the limit of sodding shall be seeded as approved by Commissioner.
- C. Planting season for sod shall be as specified. The actual planting of sod shall be done, however, only during periods within this season that are normal for such work as determined by weather conditions and by accepted practice in this locality. At his option and on his responsibility the Contractor may plant sod under unseasonable conditions without compensation but subject to Commissioner's approval as to time and methods.
- D. Sodding of lawns shall be done only by experienced workers under the supervision of a qualified foreman. Sodding shall consist of soil preparation, sodding, rolling, pegging, weeding, fertilizing, watering and otherwise providing all labor and materials necessary to secure the establishment of acceptable turf.

3.2 CLEANING, PROTECTION AND EXCESS MATERIALS

- A. Clean pavements and keep work areas clean and neat during landscape work. Remove all debris from site.
- B. Provide temporary protection, as specified and as needed to protect drainage system, restrict traffic, to permit growth to develop, to protect completed work, and to ensure work is without damage or deterioration at time of final acceptance. Remove and replace damaged landscape work prior to acceptance.
 1. Protection of Drainage System: If present, protect existing drainage protection system at all drain inlets to prevent silt, materials or debris caused by planting operations from entering the drainage system. If drainage protection system is not present, establish strawbales, siltation fencing or other devices as required by Section 31 25 00- Erosion and Sedimentation Control to prevent siltation of the drainage system.
 2. Excess Materials: Remove the excess materials from the site at no additional cost to the Owner.

END OF SECTION

SECTION 32 93 00
PLANTING AND FINE GRADING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions and DDC General Conditions, apply to the work of this Section and are hereby made a part of this Section.
- B. Examine all Drawings and other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

- A. The work of this Section includes, but is not limited to, the following:
 - 1. Trees and shrubs.
 - 2. Groundcover, Perennial and Herbaceous plants.
 - 3. Mulch, fertilizer and other soil amendment applications to suit plant type during and after planting.
 - 4. Plant anchoring system.
 - 5. Temporary erosion control.
 - 6. Protecting the completed work.
 - 7. Post-installation maintenance.
 - 8. Warranty.
 - 9. Coordination with other trades.
 - 10. Clean up.
- B. Extent of Landscaping Work: In addition to the work indicated, Landscape work includes restoring all areas within and outside the limit of work disturbed by work of the Contract and coordination of work with other subcontractors.

1.3 RELATED SECTIONS

- A. The following items of related work are specified and included in other Sections of the Specifications:
 - 1. Section 31 00 00 – Earthwork.
 - 2. Section 31 25 00 – Erosion and Sediment Control.
 - 3. Section 32 91 00 – Planting Soil System.
 - 4. Section 32 93 10 – Liquid Biological Amendment.

5. Section 33 46 00 – Underdrainage System.

1.4 REFERENCES

- A. ANLA: American Nursery & Landscape Association (Formerly: AAN – American Association of Nurserymen)
- B. ANSI: American National Standards Institute.
- C. AOAC: Association of Official Agricultural Chemists.
- D. ASTM: American Society for Testing Materials.

1.5 APPLICABLE STANDARDS

- A. The references listed herein shall be the standards used for performance of the Work: All standards shall include the latest additions and amendments as of the date of advertisement for bids.
 - 1. American National Standards for Tree Care Operations, ANSI A300. American National Standards Institute, 11 West 42nd Street, New York, N.Y. 10036.
 - 2. American Standard for Nursery Stock, ANSI Z60.1. American Nursery and Landscape Association, 1250 Eye Street. NW, Suite 500, Washington, D.C. 20005.
 - 3. Horticultural Standards, American Nursery & Landscape Association.
 - 4. Hortus Third, The Staff of the L.H. Bailey Hortorium. 1976. MacMillan Publishing Co., New York.
 - 5. Standardized Plant Names, American Joint Committee on Horticultural Nomenclature, 1942 edition.
 - 6. American Society for Testing Material (ASTM).
 - 7. International Society of Arboriculture.

1.6 DEFINITIONS

- A. Balled and Burlapped Stock: Exterior plants dug with firm, natural balls of earth in which they are grown; wrapped, tied, rigidly supported, and drum-laced as recommended by ANSI Z60.1.
- B. Container-Grown Stock: Healthy, vigorous, well-rooted exterior plants grown in a container with well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold rootball shape and protect root mass during shipping and shall be sized according to ANSI Z60.1 for kind, type, and size of exterior plant required.
- C. Finish Grade: Elevation of finished fine graded surface of planting soil.
- D. Planting Soil for Soil Profiles: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil. See Section 32 91 00– Planting Soil System.

- E. Subgrade: Surface or elevation of subsoil remaining after completing excavation, or top surface of a fill or backfill, before placing planting soil. See Section 31 00 00 – Earthwork.
- F. Final Acceptance: Date at which all Work, including work identified in the "Punch List", is completed and accepted by the Commissioner. Warranty and maintenance periods do not begin until final acceptance.

1.7 SUBMITTALS

- A. Submittals shall conform to DDC General Conditions – Submittal Procedures.
- B. Product Data: Provide manufacturer's data for each type of product indicated showing installation and limitations in use.
 - 1. Plant Anchoring System.
 - 2. Silt Fence.
 - 3. Water Bags
- C. Product Certificates: For each type of manufactured product, signed by product manufacturer, and complying with the following. Submit inspection certificates required by authorities having jurisdiction. Supply Certificates of Compliance for all materials required for fabrication and installation, certifying that each material item complies with, or exceeds, specific requirements.
 - 1. Manufacturer's/Supplier's certified analysis for standard products including, but not limited to:
 - (a) Soil amendments.
 - (b) Mulch, maturity certification.
 - 2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.
- D. Material Test Reports: Submit certified reports for tests required, including:
 - 1. Miscellaneous tests listed herein.
- E. Samples and Submittals for Verification: Prior to ordering the below listed materials, submit representative samples and submittals to the Commissioner's for selection and approval as follows. Do not order materials until Commissioner's approval has been obtained. Delivered materials shall closely match the approved samples. Submit duplicate samples of each type listed below showing full range of color variation, finish and texture that can be expected in the permanent work:
 - 1. Mulch: At least three pint-bags of aged milled leaf mulch of the type to be used on this project.
 - 2. Plant anchoring system.
 - 3. Photographs of Plants taken at the Nursery Source as indicated within this Section.
 - 4. Photographs of the progress of the work for each work activity.

- F. Mock-ups: Construct an in-situ mockup of a planted slope typical for this Project that may become part of the final work at a location specified by the Commissioner. The Commissioner shall accept the visual characteristics, grades, layout, quality of workmanship, and installation methods before work is continued. If the in-situ mockup is not approved, the Contractor shall remove the mockup as required at no cost to the City of New York and construct it again until an approved mock-up is obtained.
1. Location: Work with the Commissioner to select the location and extent of the planted slope mockup.
 2. The mockup shall demonstrate all materials and methods used to build the planted slope including:
 - (a) Soil Profiles, including geofibers
 - (b) Trees and Shrubs
 - (c) Other plant material if directed by the Commissioner
 3. Duration: The mockup shall be reviewed at each stage of construction as specified by the Commissioner including, but not limited to:
 - (a) Placement of Soil
 - (b) Placement of Trees and Shrubs
- G. Delivery and Storage: Prior to construction the Contractor shall submit for the Commissioner's review and approval a plan showing proposed routing for deliveries and access to the site.
- H. Plant Source: The Contractor shall submit for the Commissioner's review and approval a list indicating the plant botanical and common name, size, quantity, form, rootball, limb height (if applicable) and nursery source, including contact information, for the plants. Plant list shall clearly indicate deviations from the specified plant list and any proposed substitutions. Contractor shall confirm nursery source prior to scheduling tagging trip.
1. As the project progresses and plants are located, revise and re-submit the plant source submittal.
- I. Planting Schedule: Indicating anticipated planting dates for performing all Work within this Section and all associated Work in other Sections of the Project Manual.

1.8 QUALITY ASSURANCE

- A. Installer Qualifications: Installing contractor or subcontractor performing the work of this section (including the installation of manufactured planting soils as specified in Section 32 91 00 – Planting Soil System) must, within the last three (3) consecutive years prior to the bid opening, have successfully completed in a timely fashion projects similar in scope and type to the required work. The project names and references for each project shall be provided for review.
1. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when exterior planting is in progress.
- B. Testing Laboratory Qualifications: An independent laboratory with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.

1. Employ a qualified independent testing and inspection laboratory acceptable to the Commissioner to perform tests and certifications indicated. Tests shall be made in strict compliance with the standards of the Association of Official Analytical Chemists.
 2. Direct Microscopy Testing: Samples shall be sent for review. See Section 32 93 10 – Liquid Biological Amendment for testing facilities.
- C. Plant Materials: Provide quality, size, genus, species, and variety of exterior plants indicated. Provide only healthy, vigorous stock, grown in a recognized nursery acceptable to the Commissioner and free from disease, insects, eggs, larvae, and other defects. Provide plants in strict compliance with the recommendations of the following:
1. ANSI Z60.1, American Standard for Nursery Stock, latest edition.
 2. American Association of Nurserymen, Horticultural Standards.
 3. American Joint Committee on Horticultural Nomenclature, Standardized Plant Names, 1942 edition.
 4. International Society of Arboriculture.
- D. Labeling: Label at least one specimen of each variety and size with a securely attached, waterproof tag bearing legible designation of botanical and common name in compliance with the recommendations of the American Nursery & Landscape Association.
- E. Tree and Shrub Measurements: Measure according to ANSI Z60.1 with branches and trunks or canes in their normal position. Do not prune to obtain required sizes. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip-to-tip.
- F. Pruning: Unless otherwise noted, pruning of plants before, during or after installation shall be prohibited except to remove dead or broken branches and limbs. Confer with the Commissioner before any pruning. Plants pruned without permission from the Commissioner are subject to rejection and replacement.
- G. Inspection: The Commissioner will inspect plant materials at place of growth before planting for compliance with requirements for genus, species, variety, size, and quality. Commissioner retains right to inspect plant materials further for size and condition of balls and root systems, insects, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work even if previously inspected and approved. Remove and replace rejected plants immediately from Project site at no charge to the City of New York.
1. Selection: All plants shall be tagged in the nursery by the Commissioner prior to digging of plants. The Commissioner shall place seals on selected plants at the nursery. Seals shall remain on plants until the acceptance of the work. At least three weeks prior to expected planting date, request, in writing, the Commissioner's inspection of plant material at the nursery. The Commissioner shall make their own travel arrangements.
 - (a) All trees shall be tagged by the Commissioner at least one year prior to digging to allow for applications of Liquid Biological Amendment at the nursery. See Section 32 93 10.
 2. Photographs: At the Commissioner option and/ or request, the Contractor shall supply the Commissioner with photographs of plants for the project.

- (a) The photographs shall be taken at the nursery source. Photographs shall include images showing the full range of characteristics of each plant including detailed photographs of the bark, the base of the tree (rootball crown), leaves, branching structure, form, and habit. Images shall include a scale figure or measuring device to indicate true size.
 - (b) Contractor shall label each photograph with the plant species botanical name, nursery name, and date of photograph.
 - (c) Photographs may be transmitted electronically but the title of electronic files must bear the plant name, nursery and date.
- 3. Nursery Source: The Commissioner shall have the right to reject any nursery source and associated plants if he/ she determines, before, during or after inspecting or receipt of plants, any of the following:
 - (a) The nursery stock does not meet quality standards set forth herein.
 - (b) The nursery stock does not meet the intended visual characteristics of the plants as determined by the Commissioner).
 - (c) The nursery cannot supply the specified plant(s) or an acceptable substitute cultivar or species.
 - (d) The nursery's cultural practices or maintenance procedures do not meet specified standards.
 - (e) The nursery or plants are infested with pests or diseases.
- H. Plant Sources: The Contractor shall submit to the Commissioner any questions regarding the source of any plant. The Commissioner has endeavored to locate plants at the nursery sources indicated below. Alternate sources may be used for all plants provided the Commissioner has approved the source.
 - 1. Trees have been located at the following sources. The Commissioner makes no claim that trees will be available at the sources listed below at the time required for this Project:
 - (a) Halka Nurseries, 240 Sweetmans Lane, Millstone Township, NJ, Ph: 732-462-8450, F: 732-409-2705
 - (b) Rivendell Nursery, LLC, 320 Stathem's Neck Road, Greenwich, New Jersey, Tel (856) 453-0708, www.rivendellnursery.com
 - 2. Other Shrubs, Perennials and Groundcover: Other sources for plants include, but are not limited to, those listed below. If necessary, for all other plants the Contractor shall make arrangements to contract-grow plants in sufficient quantities and in advance to permit planting within the specified planting season.
 - (a) Summerhill Nursery, 888 Summer Hill Road, Madison, CT, Ph: 203-421-3055
 - (b) Angelica Nursery, 11129 Locust Grove Road, Kennedyville, Maryland, 21645, Ph: 410-928-3111, F: 410-928-3044
 - (c) Pleasant Run Nursery, 93 Ellisdale Road, Allentown, NJ, 08501, Ph: 609.259.8585
 - (d) Environmental Nursery, 22275 Main Road, Cutchogue, New York, Ph: 631-734-6439, F: 631-734-6452
 - (e) Carlson's Gardens, P.O. Box 305, South Salem, NY, Ph: 914-763-5958

- I. Pre-installation Conference: Conduct conference at Project site with Contractor, Commissioner at least 1 month prior to the start of planting.

1.9 DELIVERY, STORAGE AND HANDLING

- A. Store and handle packaged materials in strict compliance with manufacturer's instructions and recommendations. Plants shall be closely monitored for sufficient root moisture. Protect all materials from damage, injury and theft.
- B. Sequence deliveries to avoid delays, but minimize on-site storage.
 1. On-site storage space is extremely limited and is restricted to a 24-hour period for any one material, plant or group of plants. On site storage is permissible only with written notice from the Commissioner.
 2. Deliver materials and plants only after preparations for planting have been completed and accepted, including but not limited to: planting soil system, water piping for hose bibs, rough grading, utilities, decompaction or remediation of soils. The Commissioner shall determine if the site is acceptable for planting.
- C. Protect bark, branches, and root systems from sun scald, drying, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of exterior plants during delivery. Do not drop plants during delivery.
- D. Handle planting stock by supporting the rootball or container.
- E. Deliver plants after preparations for planting have been completed and install immediately. If planting is delayed more than six hours after delivery or if plants are to be stored off-site, the contractor shall adhere to the following practices:
 1. Set plants in shade, protect from weather and mechanical damage, and keep roots moist.
 2. All plants shall be stored at location mutually agreed upon by the Contractor, Commissioner. Store all plant materials in a secure and clean location, free from conditions that would be harmful and/or deleterious to the immediate or long-term health of the trees. If plants are to be stored over three weeks, space plants properly apart to prevent damage or death to branches and leaves. In the event of a schedule delay, adjust all plants to be properly spaced apart during storage.
 3. During all seasons, set balled stock upright and plumb on firm ground and cover the ball with fully aged and decomposed wood mulch, soil, peat moss, sawdust, wood chips, straw mulch or other material acceptable to the Commissioner.
 4. Do not loosen drum-lacing nor remove container-grown stock from containers before time of planting.
 5. During the growing season, stored plant material shall be watered and the rootballs kept moist with an automatic drip irrigation system to prevent drying out. Do not move trees if rootballs are saturated. Mist plants several times a day as necessary to reduce transpiration in sunny or windy locations.
 6. During the dormant season, rootballs shall be insulated against freezing and cold weather damage. Plants shall be protected from wind and ice damage.

7. During the storage period, inspect all plants for pests and diseases and have them evaluated by an arborist certified in the state where the project is located.
 - (a) Before proceeding, report issues and recommended treatment to the Commissioner for review and approval.
 - (b) Whenever possible, select and use organic treatments.
 - (c) Isolate trees with diseases or pests and remove and replace if the Commissioner determines that the plants are unusable.
8. For plants stored on-site more than 12 hours, or off-site for more than 24 hours, the Contractor shall keep a maintenance log. The log shall include information on the watering, misting, and protection of plants. The weather, date, time, type of maintenance and name of maintenance personnel shall be included in the log.
9. The contractor shall fully inspect and maintain plants for the entire duration of the storage period.
10. All stored plants shall remain the property of the Contractor and shall be replaced in kind to meet the standards defined herein for healthy plants and the character and habit defined by the Commissioner. The Commissioner shall be the sole evaluator of whether replacement plants match the originally stored plants.
11. No plant shall be stored more than four weeks without written acceptance by the Commissioner.

1.10 PROJECT CONDITIONS AND COORDINATION

- A. Utilities: Determine and mark the location of underground utilities before planting soils and plants are placed. Do not damage utilities.
- B. Underdrainage: Underdrainage shall be in place when planting activities begin. The contractor shall coordinate with the work of those Sections, and shall take all precautions to prevent damage to the underdrainage. If damage occurs, the Contractor shall stop work and immediately report the damages to the Commissioner. Work shall not resume until all work is repaired, inspected and accepted by the Commissioner and Commissioner.
 1. The Contractor shall pay for all remediation to damages.
- C. Concealed Conditions: Notify Commissioner before planting when below grade or on-structure conditions detrimental to proper plant growth are encountered. Do not proceed with planting without specific written instructions from the Commissioner.
- D. Sequence of Planting: Plant trees and shrubs after S3 Soil Layer is established and either concurrently with or preceding the installation of the S2 Soil Layer and before planting groundcovers and perennials, unless otherwise approved by the Commissioner. Complete landscaping work as quickly as possible on portions of the site as they become available for landscaping.
- E. Digging Season: Plants shall be delivered freshly dug. Plants dug the previous season shall not be accepted. When it is anticipated that planting will occur outside of the digging seasons, storage shall conform to the requirements of this Specification.
 1. Spring Dig: Plants shall be dug as early as determined by the nursery owner and no later than bud break.

2. Fall Dig: Plants shall be dug following leaf senescence.

- (a) Fall Dig Hazard: Many species of trees or shrubs are considered "Fall Transplanting Hazards" by the nursery trade. Fall Transplanting Hazards are to be transplanted only during the spring digging season. The Contractor shall identify Fall Transplanting Hazards from the plant schedule, and factor the proper handling of these trees into the overall sequencing of construction. The Contractor shall notify the Commissioner of any conflicts arising from this analysis of the plant list. Fall Dig Hazard species include, but are not limited to:

- i) Quercus Phellos.

F. Planting Seasons: Work only within seasonal limitations for proper planting as follows:

Item	Spring Season	Fall Season
Deciduous (container)	Mar. 1 to June 15	Sept. 1 to Nov 30
Deciduous (B&B)	Mar. 1 to June 15	Sept. 1 to Nov 30
Groundcover	April 1 to June 15	Sept. 1 to Oct. 30
Perennials	May 15 to June 30	Sept. 1 to Oct. 30

G. Water: See DDC General Conditions – General Requirements for temporary water use.

1. The Contractor shall immediately notify the Commissioner in writing if water is insufficient for work and maintenance operations.
2. Provide as needed water from sources free from impurities injurious to vegetation.
3. Provide all hoses and equipment as needed to distribute water to area of landscape work and areas needing watering. Provide water tank trucks as needed if water service is interrupted. Prior to providing water tank trucks, submit to Commissioner for review and approval by the Commissioner.

H. Painting: Do not paint vegetation for any reason.

1.11 LINES AND GRADES

- A. The Contractor shall provide his own lines and grades for the work required. Refer to Section 01 71 23 Field Engineering.
- B. Grades: If present, protect and maintain grade stakes and location stakes until removal is acceptable to Commissioner and all parties involved in this project. If grade stakes are not present, establish grade stakes to ensure that grades shown on the Drawings are being met.

1.12 ACCEPTANCE AND MAINTENANCE

- A. Request for Acceptance: In writing, request Commissioner's inspection for acceptance at least 10 days in advance of preferred inspection date. Do not request inspection for acceptance until work is 100% complete (not including maintenance) and in compliance with the Contract requirements.

1. Partial Acceptance: Acceptance of partial areas or portions of the total work may be granted, at the Commissioner's option, if the area to be inspected for acceptance is large, well defined, and easily described. The Commissioners are not obligated to provide partial acceptance of the work.
2. Maintenance Period: Completely maintain plants and trees for two years after final acceptance.
 - (a) Provide complete maintenance and service as required to promote and maintain healthy growth including, without limitation, watering, and per the Commissioner's specifications, weeding, fallen leaf removal, treatment for insects and disease, resetting plants to proper grade and upright position, and other operations and maintenance work. Throughout the maintenance period, restore planting saucers and mulch, and keep mulch beds weed free. Tighten and adjust rootball fixing system to keep trees in vertical position.

1.13 WARRANTY

- A. Warranty: Provide written warranty agreeing to remove and replace work that exhibits defects in materials or workmanship for the specified periods. "Defects" is defined to include, but is not limited to, death, unsatisfactory growth, disease, insect infestation, abnormal foliage density, abnormal size, abnormal color, failure to thrive, and other unsatisfactory characteristics.
 1. Warranty Period for Plants: Two years from date of Final Acceptance.
 2. Replacement: Replace defective work with new material of same species, size, character, and quality of originally accepted work. With each replacement material, provide a new two year warranty for the replacement work. If a replacement is unacceptable during its two year warranty, the Contractor shall provide another replacement.
 3. Replacement Planting Seasons: Replacement for plant warranty work shall comply with the Planting Seasons specified herein. Electing to plant outside of the specified Planting Seasons shall not absolve the Contractor from providing the warranty.
 4. Repair of Adjacent Work: Contractor shall return all adjacent elements and systems modified during removal and replacement of plants to the condition in which they were found, including shrub and perennial planting, planting soils, and drainage.

PART 2 PRODUCTS

2.1 PLANTING SOIL MIXTURE AND AMENDMENTS

- A. See Section 32 91 00 - Planting Soil System for planting soil mixture requirements. The Contractor shall strictly adhere to soil specification composition for each section of the Work.
- B. Coordinate installation of soil mixes and plants to meet requirements of this Section and Section 32 91 00 - Planting Soil System.
- C. See Section 32 93 10 for Liquid Biological Amendment requirements.

1. Contractor shall make arrangements with the nursery for applications of biological amendment starting at least 1 year min. prior to digging.

2.2 PLANT MATERIALS - GENERAL

- A. General: Furnish specimen nursery-grown plants of genus, species, and cultivar specified complying with ANSI Z60.1, with healthy root systems well provided with fibrous roots developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock free of disease, insects, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement. All parts of the plant shall be moist and show active green cambium when cut. Plants will be densely foliated when in leaf.
- B. Grade: Provide plants of specified height, caliper, sizes and grades complying with ANSI Z60.1 for type of plants required.
 1. Larger Stock: Plants larger than required may be used if approved by the Commissioner if rootball is proportionately larger, and if there is no change in Contract Price.
 2. Undersize Stock: Not more than 10% of plants smaller than required may be used if approved by Commissioner, if equal number of oversize plants are provided to make average size equal or greater than size required, and if undersize plants are larger than the average size of the next lowest size grade.
- C. Hardiness: Provide plant stock certified to have been grown within hardiness Zones 2 through 6 as established by the Arnold Arboretum, Jamaica Plain, Massachusetts. Plants without this certification will be rejected.
- D. Plant Character: All plants shall be typical of their species or variety and shall have a normal habit of growth and be legibly tagged with the proper name. Form and size shall comply with ANSI Z60.1.
 1. Multistem Trees: Branched or pruned naturally according to species and type, with relationship of caliper, height, and branching according to ANSI Z60.1
 2. Shrubs: Multi-stemmed plants complying with ANSI Z60.1 for the species indicated.
 3. Groundcover: Provide groundcover of species indicated, established and well rooted in pots or similar containers, and complying with ANSI Z60.1.
 4. Perennials and Herbaceous Plants: Provide healthy, field-grown plants from a commercial nursery, of species and variety shown or listed.
- E. Trunk: The height of the trees (measured from the crown of the roots to the tip of the top branch) shall be not less than the minimum size designated. No part of the trunk shall be conspicuously crooked as compared with normal trees of the same variety. The trunk shall be free from sunscald, frost cracks, or wounds resulting from abrasions, fire or other causes. No pruning wounds shall be present having a diameter exceeding one inch and such wounds must show vigorous bark on all edges. Plants shall not be pruned prior to delivery. Contractor shall reject such plants at time of delivery by the nursery/supplier unless such plants were selected by the Commissioner as indicated by tags and seals.
- F. Rootballs: All plants to be moved balled and burlapped shall be moved with the root systems as solid units with balls of earth firmly wrapped with untreated biodegradable

eight ounce burlap, firmly held in place by a stout cord and drum lacing. The diameter and depth of the rootballs of earth must be sufficient to encompass the fibrous and root feeding system necessary for the healthy development of the plant. No plant shall be accepted when the ball of earth surrounding its roots has been badly cracked or broken preparatory to or during the process of planting or after the burlap, staves, ropes or platform required in connection with its transplanting have been removed. The plants and balls shall remain intact during all operations. Burlap for containing rootballs shall be untreated, made from biodegradable natural fibers. Inspect root crown for girdling roots. Plants with girdling roots will be rejected. Remove all wire baskets.

1. Root flare of all plants shall be clearly visible prior to planting. Carefully avoid damage to trunk or roots while removing soil overburden from the rootball. Adventitious roots shall be removed with sharp pruners.
 - (a) Root flares more than 2" below grade at the source shall be cause for rejection. The Commissioner may request a larger diameter rootball to compensate for a buried root flare, as the soil overburden shall be removed prior to planting which effectively reduces the size of the rootball.

G. Container Stock: Container stock shall have a full container of well developed root system. Plants loose in the container are not acceptable. The surface of the root zone shall be free of circling or kinked roots. Staked plants must be self supporting when unfastened from the stake. When removed from the container, the rootball shall be free from numerous circling roots. Large matted roots at the sides or bottom of the container will not be accepted. Container grown plants may be accepted for balled and burlapped material if approved by Commissioner.

H. Handling of Plants: Plants delivered by truck and plants requiring overnight storage on site shall be properly wrapped and covered to prevent wind-drying and desiccation of branches, leaves and buds; plant balls should be firmly bound, unbroken, reasonably moist to indicate watering prior to delivery and during storage, and tree trunks shall be free from fresh scars and damage in handling.

1. For plants stored longer than overnight at the site shall conform to 1.9, E. in this Section.

2.3 MULCH

- A. Milled Leaf Mulch: Provide partially decomposed, minimum six-month-aged, finely shredded leaf mulch that is free of weeds, excessive fine particles and stringy material. Provide leaf mulch approved by Commissioner.

2.4 PLANT ANCHORING SYSTEM:

- A. Stakes: Provide 2" diameter un-peeled cedar staked for all balled and burlapped trees, 3 per tree. Tie shall be "ArborTie."
1. Manufacturers
 - (a) DeepRoot Green Infrastructure, 5030 Washington Street, San Fransisco, CA, Tel: 800.458.7668, www.deeproot.com
 - (b) Forestry Suppliers Inc., www.forestry-suppliers.com
 - (c) Gempler's, www.gemplers.com
 - (d) OR APPROVED EQUAL

2.5 TEMPORARY EROSION CONTROL MATERIALS

- A. Straw Bales: Refer to Section 31 25 00 Erosion and Sediment Control
- B. Temporary Cover: Use one of the following:
 - 1. Organic Mulches: Use Mulch, as described in this Section.
 - 2. Synthetic Covers: Erosion control blankets and mats designed and manufactured specifically for soil retention, as approved by Commissioner.
- C. Silt Fences: Refer to Section 31 25 00 Erosion and Sediment Control

2.6 ANTI-DESSICCANT:

- A. Provide emulsion type, film forming agent designed to permit vapor transmission but retard excessive moisture loss. Provide "Vapor Guard Anti-Transpirant" or Commissioner's approved equivalent.
 - 1. Use anti-desiccant only with the approval of the Commissioner.

2.7 TREE WATER BAGS:

- A. In addition to regular watering as defined within this section, the contractor shall use water bags for slow drip temporary irrigation at the base of the all trees on site and existing trees within tree protection areas.
 - 1. Submit product data for review by the Commissioner.

PART 3 EXECUTION

3.1 PREPARATION

- A. Pre-Installation Examination Required: The Contractor shall examine previous work, related work, and conditions under which this work is to be performed and notify Commissioner in writing of all deficiencies and conditions detrimental to the proper completion of this work. Beginning work means Contractor accepts substrates, previous work, and conditions. The Contractor shall not place any plants or planting soil mixtures until all work in adjacent areas is complete and accepted by the Commissioner.
- B. Layout and Approval: Layout and stake individual trees and obtain Commissioner's approval before starting installation. After staking is accepted, set plants in place for final review and acceptance by the Commissioner. Contractor shall not stake plant locations for Commissioner's approval until proper subgrade, drainage, and subsoil layers are installed. Make revisions and adjustments as directed by Commissioner.
- C. Planting Soil Mixture Preparation: Refer to Section 32 91 00 Planting Soil System for planting soil mixtures.

3.2 PLACEMENT OF PLANTING SOIL MIXTURE

- A. Placement of Planting Soil Mixture; Refer to Sections 32 91 00 Planting Soil System.

3.3 PLANTING TREES AND PLANTS

A. Planting Preparation:

1. Maintain at all times during the planting operations at least one stockpile of each type of plant soil mixture, as specified in Section 32 91 00 and as approved by the Commissioner.
2. Protect new and existing site improvements from damage due to planting operations. Repair all damage and restore items to their original condition as approved by Commissioner at no change in Contract Amount.

B. Planting Bed Preparation for Trees: Create continuous plant bed, do not place plants in pits. Plant soil mixture will be used to backfill the planting pits.

1. Plant Installation: S3 soil layer shall be in place. S2 soil layer shall be in place or placed simultaneously with plant installation.
2. Staking and Layout: Stake trees and obtain Commissioner's acceptance of location and finish grade elevation before planting.
3. Ball Pedestals: Provide a rootball pedestal immediately beneath the ball or root mass so that tree or plant will not settle and will have the relationship to finish grade described below. Refer to Section 32 91 00 for compaction rates of planting pedestals.
4. Watering and Drainage: Test the drainage of planting areas by filling with water and allowing water to percolate twice in succession. If planting areas do not percolate or drain properly after the second filling notify Commissioner and request additional instructions prior to planting. Do not plant into poorly draining planting areas; poorly draining planting areas may hold water and drown plants. Correct poorly draining area per the direction of the Commissioner prior to proceeding with work.
5. Obstructions: If obstructions or other conditions detrimental to healthy plant growth are encountered, notify Commissioner immediately and request additional instructions. At the Commissioner's direction and at no additional cost to the City of New York, plants shall be relocated to avoid the obstruction.

C. Planting balled and burlapped stock: Inspect all plants and determine if flare of trunk is improperly buried. Expose flare of trunk by removing excess fill on top of rootball. Set balled and burlapped stock plumb with crown of properly exposed rootball 2"-3" higher than specified finished grade. Remove burlap and twine from trunk to prevent girdling. Completely remove wire baskets. Fold down burlap 1/3' from top. Biodegradable drum lacing burlap can be left in place. Before planting, confer with Commissioner if non-biodegradable materials are used on the rootballs. Keep rootballs intact; plants with broken or damaged rootballs shall be rejected and immediately removed from the site. Keep rootballs damp and protected from damage due to sun and wind. If plants are installed in planting pits, scarify sides of pits before placing trees.

1. Backfilling: After trees have been placed in staked locations, and as directed by Commissioner, backfill excavations with soil mix layers to levels shown on Drawings and described in Sections 32 91 00. Backfill in 6" layers and gently tamp each layer to eliminate voids and air pockets before placing subsequent

layers. Continue until backfill has reached specified finished grade shown on the Drawings.

2. Watering: Flood all plants with water twice within the first 24 hours after planting. Take care to avoid saturating adjacent soils where planting operations are ongoing.
 3. Watering Dish and Mulch: Dish top of S1 soil layer around each tree as shown in the Drawings to allow water to collect and seep into the root zone. Cover topsoil dish with mulch as shown in the Drawings.
 4. Anti-Desiccant: Spray anti-desiccant to provide adequate film over trunks, branches, stems and foliage. If trees are moved in full leaf, spray with anti-desiccant at nursery before moving and again two weeks after planting. Use anti-desiccant only if approved by Commissioner.
 5. Plant Anchoring System: Install anchoring system to trees immediately after planting to maintain trunk plumb.
- D. Planting Container Stock: Plant container grown stock the same as specified for balled and burlapped stock, but remove containers completely with a cutter acceptable to Commissioner.
1. Root Pruning: After removing plant from the container, the Contractor shall inspect the rootball for kinked, matted or circling roots. If these conditions are present, the Contractor shall prune to remove cleanly any kinked, matted or circling roots with sharp clean hand pruners. The Contractor shall also scarify the sides of the rootball to prevent a rootbound condition.

3.4 APPLICATION OF LIQUID BIOLOGICAL AMENDMENT

- A. Refer to Section 32 93 10 Liquid Biological Amendment.

3.5 PLACEMENT OF MISCELLANEOUS MATERIALS

- A. Fertilizer: Apply organic fertilizer as required by soil analysis and approved by Commissioner.

3.6 FINE GRADING

- A. Prior to fine grading, Contractor shall verify that the rough grading, under drainage system, planting soil mixes and irrigation system have been accepted.
- B. Fine Grading: Set sufficient grade stakes for checking the finished grades. Stakes must be set at the bottom and top of slopes and the centers of plant beds. Grades shall be established which are accurate to 1 inch either way. Connect contours and spot elevations with an even slope.
1. After planting soil mix has been spread, it shall be carefully prepared by scarifying and hand raking. All large stiff clods, lumps, brush, roots, stumps, litter and other foreign matter, and stones over one inch in diameter shall be removed from the topsoil. Planting soil shall also be free of smaller stones in excessive quantities as determined by the Commissioner.

2. Fine grade planted areas to smooth, free draining, even surfaces with fine texture. Roll, rake and drag areas to flatten ridges and fill depressions, except as select areas shown on Drawings. Control moisture content to maintain optimum conditions, but do not create a muddy condition.
3. Maintenance and Restoration: Restore prepared areas to specified condition if eroded, settled, or otherwise disturbed after fine grading and prior to lawn planting.

3.7 TRAFFIC ACCESS

- A. The Contractor is strictly prohibited from tracking or driving over newly planted areas.
- B. Restore area disturbed by planting to achieve full healthy growth as approved by the Commissioner.

3.8 CLEANING, PROTECTION AND EXCESS MATERIALS

- A. Clean pavements and keep work areas clean and neat during landscape work. Remove all debris from site.
- B. Provide temporary protection, as specified and as needed to protect drainage system and roof assemblies, restrict traffic, to permit growth to develop, to protect completed work, and to ensure work is without damage or deterioration at time of final acceptance. Remove and replace damaged landscape work prior to acceptance.
 1. Protection of Drainage System: Protect existing drainage protection system at all drain inlets to prevent silt, materials or debris caused by planting operations from entering the drainage system. If drainage protection system is not present, establish straw bales, silt fencing or other devices as required to prevent siltation of the drainage system.
 2. Protection of Underdrainage System: Refer to Part 1.
- C. Excess Planting Soil Mixture and Materials: Remove the excess planting soil mixture and materials from the site at no additional cost to the City of New York. Coordinate with work in Section 32 91 00.
- D. Tags: Remove all identification labels, seals and tags at final acceptance of the project.

END OF SECTION

SECTION 32 93 10

LIQUID BIOLOGICAL AMENDMENT (LBA)

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. All of the Contract Documents, including General and Supplementary Conditions and DDC General Conditions, apply to the work of this Section and are hereby made a part of this Section.
- B. Examine all Drawings and other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

- A. The work of this Section includes, but is not limited to, the following:
 - 1. Procurement of compost and other LBA components.
 - 2. Preparation (brewing) of LBA, including customization to the needs of this Project
 - 3. Application of LBA at Nursery.
 - 4. Application of LBA on Project Site
 - 5. Soil sampling for analysis and conformance.
 - 6. Coordination with the Nursery and other trades.
 - 7. Clean up.

1.3 RELATED SECTIONS

- A. The following items of related work are specified and included in other Sections of the Specifications:
 - 1. Section 32 91 00 – Planting Soil System.
 - 2. Section 32 93 00 – Planting and Fine Grading.

1.4 REFERENCES

- A. Ingham, Dr. Elaine. The Compost Tea Brewing Manual. Latest Edition, Soil Food Web: Corvallis, Oregon, 2005.
- B. Ingham, Dr. Elaine. The Soil Biology Primer, Soil and Water Conservation Society, in cooperation with the USDA Natural Resources Conservation Service (2000)
- C. Soil Biology and Land Management.
<http://soils.usda.gov/sqi/publications/files/soilbiolandmgt.pdf>
- D. ANLA: American Nursery & Landscape Association (Formerly: AAN – American Association of Nurserymen)

- E. ANSI: American National Standards Institute.
- F. AOAC: Association of Official Agricultural Chemists.
- G. ASTM: American Society for Testing Materials.

1.5 APPLICABLE STANDARDS

- A. The references listed herein shall be the standards used for performance of the Work: All standards shall include the latest additions and amendments as of the date of advertisement for bids.
 - 1. Horticultural Standards, American Nursery & Landscape Association.
 - 2. American Society for Testing Material (ASTM).
 - 3. International Society of Arboriculture (ISA).
 - 4. Environmental Protection Agency (EPA)

1.6 DEFINITIONS

- A. Liquid Biological Amendment (LBA): Also known as Aerated Compost Tea, made by coaxing the beneficial organisms from compost and establishing them in an aerated water solution with various food sources.
- B. Active Bacteria: The biomass of bacteria performing measurable aerobic metabolism.
- C. Total Bacteria: All of the bacterial biomass present, including the sleeping, dormant, inactive and not-very-active portions of the community. Gives a relative idea of whether adequate bacterial diversity is present.
- D. Active Fungi: The biomass of fungi performing their functions right now.
- E. Total Fungi: All of the fungal biomass present, including active, inactive and dormant. Gives an idea of the diversity. Must be adequate in order to be able to prevent diseases under all conditions.
- F. Protozoa: All three groups cycle nutrients from bacteria into plant available forms. Flagellates and amoebae are strict aerobes. Ciliates prefer to feed on anaerobic bacteria and thus indicate that the conditions are conducive to anaerobic bacteria growing. Higher than the desired range of ciliate numbers indicates lack of oxygen somewhere in the material. If flagellates and amoebae numbers are above the desired range, then even greater than minimal nutrient cycling will occur.
- G. Beneficial Nematodes: These are bacterial-feeding, fungal-feeding and predatory nematodes. They consume their prey group, and release nutrients from the prey group into plant available forms. The greater the diversity of these groups, the more likely nutrient cycling will occur in all conditions.

1.7 CRITICAL PATH PROCESSING

- A. The Contractor shall start the LBA inoculation process at the nursery, just after the Commissioner tags the project specific trees. This is a minimum of 1 year prior to digging the tree. See Section 32 93 00 Planting and Fine Grading.

- B. The contractor shall arrange a pre inoculation meeting at the nursery with the Commissioner prior to sampling nursery soil.
- C. Contractor shall coordinate with the nursery for access to trees tagged by the Commissioner.
- D. Contractor shall coordinate with the nursery for reduction or elimination of inorganic fertilizer applications to the Project specific trees and root zones.

1.8 SUBMITTALS

- A. Submittals shall conform to DDC General Requirements and as described below.
- B. Product Certificates: For each type of manufactured product, signed by product manufacturer, and complying with the following. Submit inspection certificates required by authorities having jurisdiction. Supply Certificates of Compliance for all materials required for fabrication and installation, certifying that each material item complies with, or exceeds, specific requirements.
 - 1. Manufacturer's/Supplier's certified analysis for standard products including, but not limited to:
 - (a) LBA Additives
 - (b) LBA Brewing Machine
 - i) Indicating that adequate biomass of all groups of necessary aerobic organisms were present in test batches of LBA. Testing conditions shall include:
 - a) Either the food resources sold by the brewing machine manufacturer, or a standard set of foods.
 - b) Compost with documented initial biology
 - c) Aerated conditions, such that oxygen remains in the aerobic ranges during the tea brew.
 - 2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.
- C. Material Test Reports: Submit certified reports for tests required, including:
 - 1. Compost. Approval as EPA Type 1 "Exceptional Quality" is required as well as standards for application of composted organic material by state or local regulations. Coordinate as required with Section 32 91 00 Planting Soil System. Analyses shall include:
 - (a) Maturity index either by Solvita, Dewar Self Heating or CO2 evolution sometimes called respirometry.
 - (b) Reaction in 1:1 water
 - (c) Carbon/Nitrogen ratio
 - (d) Foreign Material on a dry weight basis
 - (e) Organic Mater percent on a dry weight basis
 - (f) Ammonium-N using an extract method
 - (g) Salinity using a 1:1 water paste method
 - (h) Basic Nutrient content of macro nutrients (P, K, Ca, Mg)

- (i) The compost material must be tested to meet EPA Chapter 503 and/or New York Department of Environmental Conservation levels for human use.
- (j) Soil Biology Assay testing (Direct Microscopy)
 - i) Active bacterial biomass.
 - ii) Total bacterial biomass.
 - iii) Active fungal biomass.
 - iv) Total fungal biomass.
 - v) Protozoa, to include flagellates, amoebae, and ciliates.
 - vi) Total nematode numbers.
 - vii) Hyphal diameter.
 - viii) Total available N from biological cycling
- 2. Liquid LBA: Provide Soil Biology Assay testing (Direct Microscopy) of each batch of brewed LBA that is delivered to the nursery and to the Project Site and as requested by the Commissioner.
- D. Application Schedule:
 - 1. Provide a detailed schedule indicating when applications will occur at the Nurseries and when applications will occur on the Project site.
- E. Nursery Test Results (soil sampling)
 - 1. Testing locations shall be at the root ball of every 3rd tree tagged for trees of the same species.
 - 2. Identify the tag number of the tree to identify the testing location.
 - 3. Test the same root ball at the frequency indicated in this specification.

1.9 DELIVERY AND STORAGE:

- A. LBA brewing shall take no longer than 24 hours.
- B. LBA shall be applied within 4 hours of brewing.
- C. Packaged materials shall be stored in their original, unopened containers.

1.10 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified LBA Brewer / Applicator whose past work is of a similar type, size, scale and complexity. Submit resumes showing years of experience, certifications and licenses, education, projects worked on of a similar size, scale and complexity. For each project list client, type of project, cost of project, duration of project and role of personnel.
 - 1. LBA Brewer / Applicator The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
 - 2. Lead personal shall have ISA Certified Arborist license.

3. Installers include, but are not limited to:
 - (a) Ecological Landscape Management, 10 Inwood Court, Melville, NY 11747, Tel. 631-484-1979, james@elmscapes.com
 - (b) D'Amato Landscaping Inc., PO Box 601, Northport, NY 11768, Tel. 631-754-39-27, damatolandscaping@verizon.net
 - (c) Compostwerks LLC, 487 East Main Street, Suite 160, MT. Kisco, NY, 10549, Tel. 844-266-9375, info@compostwerks.com
 - (d) Or Approved Equivalent
- B. Testing Laboratory Qualifications: An independent laboratory with the experience and capability to conduct the testing indicated and that specializes in types of tests to be performed.
 1. Employ at the Contractor's expense a qualified independent testing and inspection laboratory acceptable to the Commissioner to perform tests and certifications indicated.
 2. It is the responsibility of the Contractor to submit material for the tests.
 3. Direct Microscopy Testing: Samples shall be sent to:
 - (a) Earthfort, 635 SW Western Blvd., Corvallis, OR, 97333, info@earthfort.com
 - (b) Rodale Institute of Research, 611 Siegfriedale Road, Kutztown, PA, 19530, Tel. 610-683-6009
 4. Mycorrhiza Colonization Testing:
 - (a) MycoRoots, 1970 NW Lance Way, Corvallis, OR, 97330, Tel. 541-752-0339, www.mycoroots.com
 - (b) or approved equal.
 5. Contact the testing laboratory's to review testing and sampling requirements before sending samples.
 6. Sampling requirements for compost: At middle height of compost stockpile, remove sample two feet into the pile. Place sample in clean container. Repeat gathering methods for five to ten times at equidistant spacing on both sides of the compost pile. Mix gathered samples with clean utensils. Remove approximately 500g of composite sample and submit final sample by overnight courier to the testing laboratory with completed testing laboratory submission form. If overnight delivery is not available or if being shipped over a weekend, the samples must be stored and/or shipped in coolers maintaining approximately 45° F.
 7. Sampling requirements Soil Biology in installed soils: Refer to testing laboratories instructions.
 8. Maintain clear and concise records for testing and sampling procedures.
- C. Source Limitation: LBA brewing and application shall be provided by a single source.
- D. Application Schedule: Indicating anticipated dates for performing all Work within this Section coordinated with related Work of other Sections of the Project Manual.
- E. Management of Human Pathogens: The Contractor shall take all precautions necessary to eliminate the risk of human pathogens forming in the LBA. The Contractor shall bear

the responsibility of familiarizing himself with these precautions. Precautions include, but are not limited to:

1. Maintaining aerobic conditions.
2. Maintaining a very high diversity of aerobic bacteria and fungi
3. Ensuring equipment is clean and no aerobic bio-film residues are present in the LBA Brewer.

1.11 PROJECT CONDITIONS AND COORDINATION

- A. Sequence of Application (At Nursery): Application of LBA shall promptly follow the tagging of the trees at the Nursery.
 1. For Trees only (1 year prior to digging):
 - (a) At nursery take composite root sample and send to MycoRoots for colonization testing.
 - (b) At nursery take composite soil sample and send to Earthfort for Direct Microscopy Testing.
 - (c) Create a living active carbon, tree species specific, inoculum out of compost, indigenous rooting and soil mass along with planting of species for correct sets of mycorrhiza spores.
 - (d) Build nutrient cycling creating home for colonization at nursery.
 - (e) Repeat colonization testing every 5 months until proper colonization is achieved.
- B. Sequence of Application (On Site): Application of LBA shall promptly follow the completion of planting activities. Coordinate with the requirements of Section 32 93 00 Planting and Fine Grading.
- C. Weather Restrictions: LBA shall not be applied during rain events. Applying during light rains is acceptable.
- D. Application Seasons: LBA shall be applied during seasons in which plants are active. LBA may be applied from early spring (two weeks prior to bud break) and through to late fall (up to senescence of leaves).
- E. Water: See Division 1 – General Requirements for temporary water use.
 1. Provide as needed water from sources free from impurities injurious to the LBA brewing process. Water shall be degassed (non-chlorinated.)
 2. Provide all hoses and equipment as needed to distribute water to area of LBA brewing. Provide water tank trucks as needed if water service is interrupted. Prior to providing water tank trucks, submit to Commissioner for review and approval.
 3. The Contractor shall immediately notify the Commissioner in writing if water is insufficient for work.

1.12 ACCEPTANCE

- A. Final Acceptance shall be granted when a healthy Soil Food Web has been achieved throughout the site, as determined by Direct Microscopy testing of the Soil Biology to values defined in Part 2 of this Specification.

1. Testing shall be at a rate of one composite test per plant bed. Each composite test shall include soil sampled from several areas within the plant bed.

1.13 WARRANTY

- A. Warranty: Provide written warranty agreeing to reapply LBA if the minimum biological values no longer meet the acceptance criteria within the warranty period.

1. Warranty Period: Two (2) years from date of Final Acceptance.
2. Testing Interval within warranty period: Approximately six months after final acceptance, in coordination with acceptance testing season, sample the soils as defined in the acceptance criteria.

PART 2 PRODUCTS

2.1 SOIL FOOD WEB

- A. Acceptance for this specification is defined by the following minimum values for organisms to be present in planting soil:

1. Nutrient cycling of between 100 and 150 pounds of Nitrogen per acre
2. 15-25 ug active bacteria / gram of soil
3. 1000-5000 ug total bacteria / gram of soil
4. 25-75 ug active fungi / gram of soil
5. 800-3500 ug total fungi / gram of soil
6. protozoa
 - (a) 10,000 – 50,000 flagellates
 - (b) 10,000 – 50,000 amoebae
 - (c) 50-150 ciliates
7. 4 -15 beneficial nematodes

- B. Acceptance for this specification is defined by the following minimum values for organisms to be present in the root ball of Endo-mycorrhiza plants (turf, herbaceous meadows, understory trees):

- (a) Nutrient cycling of between 100 and 150 pounds of Nitrogen per acre
- (b) 15-25 ug active bacteria / gram of soil
- (c) 1500-3000 ug total bacteria / gram of soil
- (d) 25-75 ug active fungi / gram of soil
- (e) 800-3500 ug total fungi / gram of soil
- (f) protozoa
 - i) 10,000 – 50,000 flagellates
 - ii) 10,000 – 50,000 amoebae

- iii) 50-150 ciliates
- (g) 4 -15 beneficial nematodes
- (h) Mycorrhiza: 30% by colonization

C. Acceptance for this specification is defined by the following minimum values for organisms to be present in the root ball of Ecto-mycorrhiza trees (Oak, Beech, Conifers, Ginkgo):

- (a) Nutrient cycling of between 100 and 150 pounds of Nitrogen per acre
- (b) 15-25 ug active bacteria / gram of soil
- (c) 750-2000 ug total bacteria / gram of soil
- (d) 25-75 ug active fungi / gram of soil
- (e) 1000-3500 ug total fungi / gram of soil
- (f) protozoa
 - i) 10,000 plus flagellates
 - ii) 10,000 plus amoebae
 - iii) 50-150 ciliates
- (g) 4 -15 beneficial nematodes
- (h) Micorrhiza: 25% by colonization

2.2 PERFORMANCE CRITERIA FOR LBA BREWER

A. The brewer shall remain the property of the Supplier upon completion of the Work and may be re-use from Supplier's previous projects provided that the brewer meets or exceeds the following requirements:

1. Achieves a finished brew in 24 hours.
2. Maintains aerobic conditions above 6 mg oxygen per liter.
3. Extracts all types of organisms from the compost.
4. Extracts soluble nutrients from the compost.
5. Permits water to actively move through the compost.
6. Consists primarily of plastic components. Metal containers shall be avoided.
7. Is clean. Brewers with biofilm buildup shall be unacceptable.
8. Tea brewing by other means such as the Bucket Method, Bucket-Bubbler Method or Trough Method shall not be allowed.

B. Manufacturers of Brewers may include, but are not limited to:

1. Sustainable Agricultural Technologies, Inc. Cottage Grove, Oregon, Tel: 541.767.2747, www.composttea.com.
2. Keep It Simple, Inc., Redmond, Washington, Tel: 425.558.0990, www.simplicitea.com.
3. Growing Solutions Inc., Eugene, Oregon, Tel: 541.343.8727, www.growingsolutions.com.

2.3 LBA COMPONENTS: COMPOST

- A. Composted municipal yard waste shall provide the heavy metal certificate of the material delivered as per EPA and NYDEC standards. Composted organic matter shall have the following criteria:

Criteria	Test Method	Acceptable Range
Type		brewer's waste, or leaf mulches are also acceptable. Composted municipal waste (chipped, shredded and screened wood, leaves, bark, etc.) alone is not acceptable unless it meets all of the criteria noted
Carbon/Nitrogen Ratio		11:1 – 22:1
Degree of Maturity	Dewer Self Heating or	VI – V
	Solvita Maturity Index or	6 – 8
	CO ₂ Evolution	1.2 % C/day
Foreign Material	Dry wt.	< 1" dia. And < 2% (of total)
Organic Matter %	Dry wt.	25 – 75%
Reaction	1:1 water	5.5 – 8.0
EC	1:1 water	< 3 dS/m
Ammonium	extract	< 200 ppm
Biology	assay	>200 lbs/ac Available Total N from Biology
		15-25 or more µg active bacteria/g ¹
		100-3000 or more µg total bacteria/g ¹
		25-50 or more µg of active fungi/g ¹
		500-3000 or more µg of total fungi/g ¹
		10,000 -50,000 flagellates (Protozoa)
		10,000 - 50,000 Amoebae (Protozoa)
		25-50 ciliates (Protozoa)
Nutrient Content	extract	2-10 beneficial nematodes (no root feeders)
		Contains some nitrogen, phosphorus, potassium, calcium, magnesium, sodium and micronutrients including iron, copper, boron, and manganese. Nutrients shall be present in appropriate agricultural and horticultural proportions to prevent ion antagonism.
Heavy Metals	extract	Concentrations of zinc, mercury, cadmium, lead, nickel, chromium, and copper must be below EPA and the NYDEC standards for compost applications to soils with human activity.

¹ Soil Biology is in µg/g of dry weight of Compost

2.4 LBA COMPONENTS: ADDITIVES

- A. It is anticipated that additional products shall be added to the LBA to promote the activity of the beneficial organisms. It is the responsibility of the Contractor to design an LBA

recipe that achieves the acceptance criteria of this Specification for each soil condition. Additives may include:

1. Soluble kelp, humic acid and molasses or fish hydrolysate at a rate of ½ gallon per 100 gallons of concentrated solution.
2. 2-10 ug active bacteria / ml of solution
3. 150-3000 ug total bacteria / ml of solution
4. 2-10 ug of active fungi / ml of solution
5. 10-50 of total fungi / ml of solution
6. 2,000 or more protozoa including 1,000 flagellates, 1,000 Amoebae and 5-10 ciliates
7. 2-10 beneficial nematodes (no root feeders)
8. 10% active bacteria and fungi
9. Inoculation of plant specific active carbon, mycorrhiza spores and mycorrhizal helping bacteria

PART 3 EXECUTION

3.1 PREPARATION

- A. Pre-Installation Examination Required: The Contractor shall examine previous work, related work, and conditions under which this work is to be performed and shall notify Commissioner in writing of all deficiencies and conditions detrimental to the proper completion of this work. Beginning work means Contractor accepts substrates, previous work, and conditions. The Contractor shall not apply any LBA until all work in adjacent areas is complete and accepted by the Commissioner.
- B. Refer to Section 32 93 00 Planting and Fine Grading for mulching and planting.

3.2 EXECUTION – GENERAL

- A. Within three days of the completion of planting activities, submit soil samples for testing at the rate of one sample per plant bed. Each sample shall be a composite of soil gathered several areas within a plant bed.
- B. Review test results with Commissioner. Prepare a recipe for a fungal-dominated LBA that fills the specific Soil Food Web requirements of the Project soils.
- C. Within 10 days of planting trees, shrubs and Lawns in a defined area, apply Liquid Biological Amendment.

3.3 PREPARATION OF LBA

- A. LBA Brewer shall be clean. Biofilm on the components shall not be acceptable. Manage the brew so that biofilm does not accumulate during the brewing process.
- B. Water:
 - 1. Water for use in brewing shall be degassed (de-chlorinated.)
 - 2. Temperature of the water at the beginning of the brewing cycling shall be similar within 7 degrees F to the soil temperature.
 - 3. Temperature of the brew shall not exceed 110 degrees F at any time during the brewing cycle.
- C. Add LBA Additives at the beginning of the brew cycle.
- D. The following values for gases in the LBA shall be maintained throughout the brew cycle:
 - 1. Total Atmospheric Gases: 20-21% Oxygen, 1-6% Carbon Dioxide.
 - 2. Percent Dissolved Gases: 95-98% Oxygen, 1-5% Carbon Dioxide.
 - 3. Dissolved Gases: Greater than 6 mg/L Oxygen.
- E. Add Mycorizae at the completion of the brewing cycle.

3.4 APPLICATION OF LIQUID BIOLOGICAL AMENDMENT

- A. Apply LBA within 2-4 hours of preparation.
- B. For Trees not in Plant Beds:
 - 1. Inject LBA in a grid pattern throughout the rootball. Grid is to be 12 inch on center and to a depth of 4-6 inches.
 - 2. Inject solution using a commercial spray tank and pump with no more than 175 PSI pressure at point of application.
- C. For Plant Beds and Lawns:
 - 1. Drench the soil with LBA at the rate of 3 gallons solution per 1,000 sf. Contractor may opt to dilute the LBA 1:1 with water and apply at a rate of 6 gallons per 1,000 sf.
 - 2. Foliar applications shall not be acceptable.
- D. Four weeks after application of Liquid Biological Amendment in a defined area, send soil samples for Direct Microscopy (Soil Biology) testing. Follow testing agencies procedures for collecting and shipping soil samples.
 - 1. If soil biology does not meet the Acceptance criteria defined in Part 2 of this Specification, re-apply Liquid Biological Amendment.
 - (a) Customize LBA to fulfill the specific needs of the Soil Food Web for this Project.

3.5 CLEANING, PROTECTION AND EXCESS MATERIALS

- A. Clean pavements and keep work areas clean and neat during landscape work. Remove all debris from site.
- B. Provide temporary protection to protect plants from foot traffic and hoses.
- C. Extra care shall be taken to avoid damage to Irrigation System when LBA is applied by Injection.

END OF SECTION

SECTION 33 10 00 – WATER UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to install all water utilities as indicated on the Contract Documents.
- B. Section Includes:
 - 1. Furnish and install pipe and fittings for site water line including domestic water line and fire water line, fire hydrant water line, valves, flexible connections, fire hydrants and hydrant fenders as per the Contract Documents.
 - 2. Set lines, elevations, and grades for water distribution system work for duration of work including careful maintenance of benchmarks, property corners, monuments, or other reference points.
- C. RELATED SECTIONS
 - 1. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements, and other related Division 01 Sections regarding specific requirements for LEED certification
 - 2. Section 02 20 50 – Protection of Existing Utilities
 - 3. Section 31 00 00 – Earthwork

1.3 ENVIRONMENTAL REQUIREMENTS

- A. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan. Contractor be familiar with the SMP and comply with such at all times.
 - 1. For all excavation onsite, the contractor must follow requirements set forth in the Excavation Work Plan, Appendix 'A' of SMP.

1.4 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:

1. New York City Building Code.
2. NYCDEP Bureau of Water Supply Standards and Specifications.
3. ANSI/ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
4. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
5. ASTM B88 - Seamless Copper Water Tube.
6. ANSI/AWS A5.8 - Brazing Filler Metal.
7. ANSI/AWWA C104 - Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
8. ANSI/AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other Liquids.
9. ANSI/AWWA C111- Rubber-Gasket Joints for Ductile Iron and Grey-Iron Pressure Pipe and Fittings.
10. ANSI/AWWA C151 - Ductile-Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids.
11. ANSI/AWWA C500 - Gate Valves, 3 through 48 inches NPS, for Water and Sewage Systems.
12. ANSI/AWWA C502 - Dry Barrel Fire Hydrants.
13. ANSI/AWWA C504 - Rubber Seated Butterfly Valves.
14. ANSI/AWWA C508 - Swing-Check Valves for Waterworks Service, 2 inches through 24 inches NPS.
15. ANSI/AWWA C509 Resilient Seated Gate Valves 3 inches through 12 inches NPS, for Water and Sewage Systems.
16. ANSI/AWWA C600 Installation of Ductile Iron Water Mains and Appurtenances.
17. ANSI/AWWA C606 Grooved and Shouldered Type Joints.
18. UL 246 Hydrants for Fire Protection Service

1.5 SUBMITTALS

- A. Product Data: Provide data on pipe materials, pipe fittings, hydrants, valves and accessories.
- B. Manufacturer's Certificate: Certify that products meet or exceed state and local requirements.
- C. LEED Submittals: Submit the following information for all materials in this section.
 1. Recycled Content: Submit certification/letter from material supplier(s) highlighting percentage of recycled content, both post consumer and pre consumer.

1.6 PROJECT RECORD DOCUMENTS

- A. Accurately record actual locations of piping mains, valves, connections, and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.7 QUALITY ASSURANCE

- A. Perform work in accordance with NYCDEP and NYCDOB requirements.
- B. Valves: Mark Manufacturer's name and pressure rating on valve body.

PART 2 - PRODUCTS**2.1 WATER PIPE**

- A. Ductile Iron Pipe: Cement-Lined, ANSI A21.10 (AWWA C-151) Class 56 for pipe 6 inch diameter and larger; Class 52 for smaller than 6 inch diameter:
 - 1. Fittings: Ductile Iron, standard thickness.
 - 2. Joints: AWWA C151, mechanical joints.
 - 3. Cement mortar lining: AWWA C-104..
- B. Bedding: Refer to Section 31 00 00 – Earthwork

2.2 GATE VALVES – 3 INCHES AND OVER

- A. Manually operated, inside non-rising stem, ductile iron body/bonnet/seal plate, non-packing, bronze seated, double disc, seating wedge mechanism gate valve; model and manufacturer as approved by the NYCDEP Bureau of Water and Sewer.

2.3 METER

- A. As specified in plumbing drawings and specifications. If omitted use meter approved by NYC DEP Bureau of Water.

2.4 DOUBLE DETECTOR CHECK VALVE ASSEMBLY

- A. 8-inch Double Detector Check Valve Assembly as approved by the NYC DEP Bureau of Cross Connection Control.

2.5 FIRE HYDRANT

- A. Hydrant: As approved by NYCDEP Bureau of Water.

- B. Hydrant Extensions: Fabricate in multiples of 6 inches with rod and coupling to increase barrel length.
- C. Hose and Streamer Connection: Match sizes with NYC Fire Department, two hose nozzles, and one pumper nozzle.
- D. Finish: Primer and two coats of enamel or special coating in color permitted by NYCDEP and NYC Fire Department.
- E. Hydrant Drain and Fenders: As shown on construction drawings in accordance with requirements of NYCDEP.

2.6 JOINT RESTRAINT

- A. Concrete for Thrust Blocks: Place thrust blocks consisting of 3,000 psi concrete to provide sufficient bearing area to transmit unbalanced thrust from bends, tees, caps, restrained mechanical joints, or plugs to undisturbed soil.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions.
- B. Verify building service connection points with architectural and plumbing plans.
- C. Verify that existing water main size, location, and invert are as indicated on the drawings.

3.2 PREPARATION

- A. Cut pipe ends square, ream pipe and tube ends to full pipe diameter, remove burrs.
- B. Remove scale and dirt on inside and outside before assembly.
- C. Prepare pipe connections to equipment with flanges or unions.
- D. Hydrants removed from site shall remain property of the NYCDEP, with relocation or disposal at NYCDEP's discretion.

3.3 BEDDING

- A. Excavate pipe trench in accordance with Section 31 00 00 – Earthwork.
- B. Form and place concrete for pipe thrust restraints at any change of pipe direction.
- C. Place bedding material at trench bottom.
- D. Backfill around sides and to top of pipe with cover fill, tamp in place and compact in accordance with Section 31 00 00 – Earthwork.

3.4 INSTALLATION – PIPE

- A. Maintain separation of water main from sanitary and storm sewer piping in accordance with NYCDOB code. Unless otherwise approved, water mains shall be separated from sanitary sewer pipes a minimum distance of 10 feet horizontal and 18 inches vertical.
- B. Install ductile iron piping and fittings to ANSI/AWWA C600.
- C. Route pipe in straight line.
- D. Install pipe to allow for expansion and contraction without stressing pipe or joints.
- E. Install access fittings to permit disinfection of water system performed under this section.
- F. Form and place concrete for thrust restraints in accordance with the Contract Drawings at each elbow or change of direction of pipe main.
- G. Establish elevations of buried piping to ensure not less than four (4) feet of cover over the top of pipe under proposed grading.
- H. Backfill trench in accordance with Section 31 00 00 – Earthwork.
- I. Connections with Existing Pipelines: Where connections are made between new work and existing piping, make connection using suitable fittings for conditions encountered. Make each on-site wet tap connection under conditions which least interfere with operation of existing pipeline. NYCDEP will install wet tap to their main in public roadways.

3.5 INSTALLATION – VALVES AND HYDRANTS

- A. Install gate valves as indicated on Construction Drawings, and in accordance with NYCDEP standards and specifications. Valves shall be supported on concrete pads with the valve stem vertical. Install valve boxes in a manner that will not transmit loads, stress, or shock to valve body. Center valve box over operating nut of valve vertical and plumb. Securely fit valve box together leaving cover flush with finished grade.
- B. Install fire hydrant assemblies as indicated on Construction Drawings, and in accordance with NYCDEP standards and specifications. Install fire hydrants in a plumb vertical position with the pumper nozzle perpendicular to roadway, unless otherwise directed by local authorities. Support hydrant assembly on a concrete pad, firmly braced against compacted soil and concrete blocking on the side opposite the inlet pipe. After thrust blocking has cured at least 24 hours, place a minimum of 6 cu. ft. of crushed stone or gravel around the hydrant base and barrel. Exercise care when backfilling and compacting so that proper vertical position is maintained.

3.6 SERVICE CONNECTIONS

- A. Construct water service lines to within 5 feet of the building entry point.

3.7 DISINFECTION OF WATER PIPING SYSTEM

- A. Disinfect line in accordance with NYC Building Code Rules and Regulations.

- B. After sterilization, test water for bacterium in accordance with AWWA and NYC Building Code regulations. Do not place distribution system in service until approval is obtained from NYC Department of Buildings.

3.8 FIELD QUALITY CONTROL

- A. Water line installation and testing shall be certified to the NYC Building Code by a licensed plumber. Cooperate with the Construction Manager as required to facilitate testing and inspection of the work.
- B. Test water distribution system installed below grade and outside the building in accordance with NYC Building Code and the following procedures:
 - 1. Test all pipework at a hydrostatic pressure equal to 150 psi. The pipe work shall maintain said pressure for not less than two hours.
 - 2. Furnish, install, and operate the necessary connections, pumps, meters, and gauges. Leakage shall not exceed that permitted by AWWA Specifications C600-64 for mechanical joint and push-on joint pipe. Prior to running any field test, a meter shall be tested, sealed, and approved by applicable governing authority at own expense.
 - 3. Locate and repair any leaks. Repeat testing until process results are satisfactory and in compliance with this section.
 - 4. Furnish a copy of the results of the meter test and the hydrostatic pressure test to the Commissioner upon completion of water distribution system backfilling operations.

END OF SECTION

SECTION 33 30 00

SANITARY SEWERAGE UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to install all sanitary sewerage utilities as indicated on the Contract Documents.
- B. Section Includes:
 - 1. Furnish and install sanitary sewerage piping, fittings and accessories, and bedding as per the Contract Documents.
 - 2. Furnish and install sanitary sewer connections to New York City Sewers in accordance with New York City Department of Environmental Protection (NYCDEP) Site Connection Certification.
- C. Related Sections:
 - 1. Section 01 74 19 - Construction Waste Management & Disposal
 - 2. Section 02 20 50 - Protection of Existing Utilities
 - 3. Section 31 00 00 - Earthwork

1.3 ENVIRONMENTAL REQUIREMENTS

- A. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan. Contractor be familiar with the SMP and comply with such at all times.
 - 1. For all excavation onsite, the contractor must follow requirements set forth in the Excavation Work Plan, Appendix 'A' of SMP.

1.4 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the

Contract Documents:

1. New York City Building Code.
2. NYCDEP Bureau of Water and Sewer rules and specifications.
3. NYCDEP Site Connection Proposal Certification.
4. ANSI C150/AWWA A21.50 - Ductile Iron Pipe (DIP) Class 56, Cement-Lined Tyton Joints.
5. ANSI C151/AWWA A21.51 - Ductile Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids.
6. ANSI C111/ANSI A21.11 - Rubber Gasket Joint Seals.
7. ASTM A48 - Gray Iron Castings.

1.5 SUBMITTALS

- A. Shop Drawings: Indicate locations, elevations, invert elevations, piping, sizes and elevation penetrations of sanitary system piping and all appurtenant structures.
- B. Product Data
 1. Pipe: Provide catalog materials indicating pipe, pipe accessories, and fittings.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install products specified.
- D. Manufacturer's Certificate: Certify that products meet or exceed ANSI/ASTM or AWWA designations.

1.6 COORDINATION

- A. Coordinate building sanitary sewer connection points with the location shown on the plumbing plans and connections to NYC Sewers.

1.7 PROJECT RECORD DOCUMENTS

- A. Accurately record actual locations of pipe runs, connections, manholes, cleanouts, and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.8 PERMITS AND APPROVALS

- A. The Commissioner shall obtain the NYCDEP Site Connection Proposal Certifications for the sanitary sewer connections to NYCDEP sewers. Note that this certification is not a permit for construction. The Contractor shall be responsible for obtaining street opening permit and all permits and inspections for the sanitary sewer system construction as required by the NYCDEP, NYC

Department of Buildings, and NYCDOT.

PART 2 - PRODUCTS

2.1 SEWER PIPE MATERIALS AND ACCESSORIES

- A. Ductile Iron Pipe:
 - 1. ANSI C150/AWWA A21.50 - Ductile Iron Pipe (DIP) Class 56, Cement-Lined, Joints.
 - 2. ANSI C111/ANSI A21.11 - Rubber Gasket Joint Seals.
 - 3. All pipe shall be in accordance with NYC Building Code, latest revision.
- B. Fittings: Same material as pipe molded or formed to suit pipe size and end design, in required tee, bends, elbows, cleanouts, reducers, traps and other configurations required.
- C. Bedding: Refer to Section 31 00 00 - Earthwork

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify the trench cut and excavation base to be hard, smooth, and dry.
- B. Verify excavation location, dimensions and elevation with Contract Drawings.

3.2 PREPARATION

- A. Set all lines, elevations, and grades for utility work and maintain for the duration of work. Provide careful maintenance of bench marks, property corners, monuments, or other reference points.
- B. Protect and maintain in operating condition, existing utilities encountered during utility installation. Repair any damage to surface or subsurface improvements shown on the drawings.
- C. Verify location, size, elevation, and other pertinent data required to make connections with existing sewer systems indicated on the Drawings.
- D. Coordinate structure placement with inlet and outlet pipe or duct sleeve locations and inverts required by other sections.
- E. Coordinate all building sewer connection locations and elevations with architectural and plumbing plans. Contractor shall comply with all local codes and regulations.
- F. Hand trim excavations to required elevations.
- G. Install dewatering systems that will be required to construct the proposed utilities to the design elevations and using the methods described herein. Water pumped out of excavations shall be disposed of on-site for sedimentation removal, and will not be discharged directly to the City's sewer system without prior approval of NYCDEP.

- H. Remove large stones or other hard matter, which could damage pipe or impede consistent backfilling or compaction.
- I. Subgrade areas identified by the Construction Manager as not being capable of supporting the proposed structure shall be excavated to suitable material or a maximum of two additional feet, backfill with bedding material and compact as specified in Section 31 00 00 – Earthwork.

3.3 BEDDING

- A. Excavate pipe trench in accordance with Section 31 00 00 – Earthwork.
- B. Place and compact bedding material at trench bottom. Hand trim bedding for accurate placement of pipe to elevations indicated.
- C. Maintain moisture content of bedding material between 1% below and 3% above optimum during compaction.

3.4 INSTALLATION – PIPE

- A. Install pipe, fittings, and accessories in accordance with ANSI/ASTM or AWWA requirements and/or manufacturer's instructions. Seal joints watertight.
- B. Lay pipe to slope gradients noted on Construction Drawings; with maximum variation from true slope of 1/8 inch in 20 feet.
- C. Lay pipe beginning at low point of system, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream.
- D. Refer to Section 31 00 00 – Earthwork for trenching requirements. Do not displace or damage pipe when compacting.
- E. Connect to building sanitary sewer outlet and New York City sewer systems.

3.5 INTERFACE WITH EXISTING FACILITIES

- A. Requirements: The Contractor shall make all required connections of the proposed sewage facilities into existing facilities, where and as shown on the Construction Drawings in accordance with the NYCDEP-certified Site Connection Proposal.
- B. Compliance with Facility Owner Requirements: Connections made into existing facilities shall be performed in accordance with the requirements of the NYCDEP. The Contractor will be required to comply with all such requirements, including securing of all required permits, and paying the costs thereof. The cost of making the connections in accordance with the requirements of the Owner of the existing facility shall be included in the Contract Sum.

3.6 CONSTRUCTION WITHIN THE CITY R.O.W.

- A. Construction within the public right-of-way shall conform to all requirements of the City of New York, NYCDOT, and any other agency having jurisdiction.

3.7 FIELD QUALITY CONTROL

- A. Backfill placement and quantity control will be performed in accordance with Section 31 00 00 – Earthwork.
- B. If tests indicate work does not meet specified requirements, remove work, replace and retest at no cost to the Commissioner.
- C. Inspection and Testing: As per NYC Building Code, sewer installation and testing shall be certified to the NYCBC by a licensed plumber. Cooperate with the Construction Manager as required to facilitate testing and inspection of the work. Test the complete sanitary sewer system, including mains, lateral sewers and manholes for both infiltration and exfiltration. Provide all materials equipment and services as necessary to perform the tests.
- D. Connections of pipe to manholes shall be water tight.
- E. Any defective work not meeting contract requirements shall be replaced by Contractor at own expense.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 40 00 – STORM DRAINAGE UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide all labor, materials, equipment and services to install all storm drainage utilities as indicated on the Contract Documents.
- B. Section Includes:
 - 1. Furnish and install storm sewerage drainage piping, fittings and accessories, and bedding as per the Contract Documents.
 - 2. Furnish and install storm manholes, catch basins, area drains, headwalls, and treatment devices as per the Contract Documents.
- C. Related Sections:
 - 1. Division 01 Section "Sustainable Design Requirements" for additional LEED requirements, and other related Division 01 Sections regarding specific requirements for LEED certification
 - 2. Section 01 74 19 - Construction Waste Management & Disposal
 - 3. Section 02 20 50 – Protection of Existing Utilities
 - 4. Section 31 00 00 – Earthwork

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Protect adjacent properties and water resources from erosion and sediment damage throughout construction in accordance with the NYSDEC.
- B. Do not direct discharge from dewatering operations to public sewers without prior approval from New York City Department of Environmental Protection (NYCDEP).
- C. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan. Contractor be familiar with the SMP and comply with such at all times.
 - 1. For all excavation onsite, the contractor must follow requirements set forth in the Excavation Work Plan, Appendix 'A' of SMP.

1.4 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:
1. New York City Building Code.
 2. NYSDEC New York State Standards and Specifications for Erosion and Sediment Control, August 2005.
 3. NYCDEP Bureau of Water and Sewer rules and specifications.
 4. NYCDEP Site Connection Proposal Certification
 5. AASHTO M294 and M252 – Corrugated Polyethylene Pipe Smooth Interior.
 6. ASTM A48 – Gray Iron Castings.
 7. ASTM C55 – Concrete Building Block.
 8. ANSI C115/AWWA A21.15 – Flanged Ductile Iron Pipe with Ductile-Iron or Gray-Iron Threaded Flanges
 9. ASTM C478 – Precast Reinforced Concrete Manhole Sections.
 10. ASTM C618 - Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.
 11. ASTM C923 – Resilient Connectors between Reinforced Concrete Manhole Structures and Pipes.
 12. ASTM D1248 – Polyethylene Plastics Molding and Extrusion Materials.
 13. ASTM D3350 – Polyethylene Plastics Pipe and Fittings Materials.
 14. International Masonry Industry All-Weather Council (IMIAC): Recommended Practices and Guide Specification for Cold Weather Masonry Construction.

1.5 SUBMITTALS

- A. Shop Drawings: Indicate locations, elevations, invert elevations, piping, sizes and elevation penetrations of storm system piping and all appurtenant structures. Include signed and sealed engineering calculations for loading design of all structures.
- B. Product Data:
1. Pipe: Provide catalog materials indicating pipe, pipe accessories, and fittings.
 2. Structures: Provide covers, component construction, features, configuration, and dimensions.
 3. Stone: Submit the following:
 - a. Name and address of stone supplier.
 - b. Type of stone.
 - c. Gradation of stone.

4. Mulch: Submit the following:
 - a. Name and address of mulch supplier.
 - b. Type of mulch.
 - c. Sample: 5 lb bag.
5. Filter Fabric: Submit manufacturer's full product data for filter fabric.
- C. Manufacturer's Installation Instructions: Indicate special procedures required to install products specified.
- D. Manufacturer's Certificate: Certify that products meet or exceed ANSI/ASTM or AWWA designations.
- E. LEED Submittals: Submit the following information for all materials in this section.
 1. Recycled Content: Submit certification/letter from material supplier(s) highlighting percentage of recycled content, both post consumer and pre consumer.
 2. Provide concrete mix designs including breakdown of all mix components by weight.

1.6 PROJECT RECORD DOCUMENTS

- A. Accurately record actual locations of pipe runs, connections, catch basins, manholes, cleanouts, treatment devices, and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.7 PERMITS AND APPROVALS

- A. The Project Engineer shall obtain the NYCDEP Site Connection Proposal Certifications (SD1 & 2), NYSDEC and ACOE approvals for the site storm connections to the Detention Basin. Note that these approvals are not a permit for construction. The Contractor shall be responsible for obtaining all permits and inspections for the storm system construction as required by the NYCDEP, NYSDEC, ACOE and NYC Department of Buildings.

PART 2 - PRODUCTS

2.1 SEWER PIPE MATERIALS AND ACCESSORIES

- A. High-Density Polyethylene (HDPE) Pipe Solid and Perforated: Comply with requirements of AASHTO M252 Type S and AASHTO M294, Type S for 12-inch through 60-inch diameter. Fittings shall conform to AASHTO M294, AASHTO M252, and ASTM D3350 Cell Classification 335420C. Joints shall be bell and spigot with an o-ring gasket meeting ASTM F477.
- B. Ductile Iron Pipe: Comply with the requirements of ANSI C115/AWWA A21.15 – Flanged Ductile Iron Pipe with threaded flange.
- C. Area Drains: Per details shown on the Contract Drawings or approved equal.
- D. Bedding: Refer to Section 31 00 00 – Earthwork

2.2 PRECAST CONCRETE CATCH BASINS

- A. Precast Catch Basins: 4,000 psi concrete reinforced for H20 loading in accordance with ASTM C478 of size, shape and depth as indicated on the Contract Drawings. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.
- B. Lid and Frame: Cast Iron frame and grate to be ADA compliant with H-20 design loading and bicycle safe grate pattern.
- C. Hood: Standard cast iron hood and hook.
- D. Steps: Cast Iron steps required for catch basin depth of 4-ft or greater. Steps shall be 10-inches wide with 5-inch tread per ASTM-48 Class 40 Standards.
- E. Base Pad: Precast reinforced concrete or Cast-in-place concrete leveled top surface. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.

2.3 CLEAN OUTS

- A. Lid and Frame: Heavy duty cast iron construction with H20 design loading and closed locking lid design.
- B. Shaft Construction: Cast iron shaft of internal diameter as specified on plans with 4,000 psi concrete collar for cleanouts located in paved areas.
- C. Base Pad: Cast in place concrete, 4,000 psi leveled top surface to receive cast iron shaft sections, sleeved to receive sewer pipe sections. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.

2.4 CONCRETE MANHOLES

- A. Manhole Sections: Reinforced precast concrete
 - 1. 4,000 psi concrete reinforced for H20 loading or greater in accordance with ASTM C478, with self-sealing butyl gaskets in accordance with ASTM C923. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.
 - 2. Construct manholes of precast concrete sections as required by the Contract Drawings to size, shape, and depth indicated.
- B. Alternate Manhole Sections: Reinforced cast-in-place concrete.
 - 1. Construct cast-in-place manholes of 4,000 psi concrete reinforced for H20 loading or greater. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.
 - 2. Accurately make forms of steel sheets and shapes of sufficient strength to form dense watertight walls to true dimensions.
 - 3. Deposit concrete in evenly distributed layers of about 18 inches, with each layer vibrated to bond it to the preceding layer.

C. Mortar and Grout:

1. Conform to the requirements of ASTM C91 for masonry cement used for laying up dimension masonry.
2. Grouting material for use in grouting anchor bolts, franges, dowels and other miscellaneous items in concrete shall be a non-metallic, non-shrink grout which when mixed with water, will harden rapidly to produce a permanent anchoring bond. It shall be free of any corrosion promoting agents.

D. Reinforcement: Grade 60 deformed steel rebars with galvanized finish. Reinforcing shall conform to the latest revised edition of the AISC code. Steel reinforcing shall contain minimum 25% total recycled content, calculated by adding the post-consumer recycled content plus one-half of the pre-consumer recycled content.

E. Lid and Frame: Per details shown on the Contract Drawings or approved equal.

F. Steps: Cast Iron steps required for manhole depth of 4-ft or greater. Steps shall be 10-inches wide with 5-inch tread per ASTM-48 Class 40 Standards.

G. Base Pad: Precast reinforced concrete or Cast-in-place concrete leveled top surface. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.

2.5 CONCRETE MANHOLE CONFIGURATION

- A. Shaft Construction: Concentric with eccentric cone top section; lipped male/female dry joints; sleeve to receive pipe sections.
- B. Shape: Cylindrical.
- C. Clear Inside Dimensions: 48 inch diameter unless noted otherwise on Contract Drawings.
- D. Design Depth: As indicated on Contract Drawings.
- E. Clear Lid Opening: 24 inches diameter minimum.
- F. Pipe Entry: Provide openings as indicated.
- G. Main and Lateral Pipes: Neatly cut off main and lateral pipes flush with inside of manhole or inlet where they enter structure walls, and point up irregularities and rough edges with nonshrink grout.
- H. Inverts: Shape inverts for smooth flow across structure floor as shown on Drawings. Use concrete and mortar to obtain proper grade and contour and finish surface with fine textured wood float.

2.6 PRECAST STORMWATER TREATMENT DEVICES

- A. Precast Treatment Device: Devices shall be as shown on the Contract Drawings. Manufacturer and model type shall be NYCDEP-approved. Installation per manufacturer's specifications.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify the trench cut and excavation base to be hard, smooth, and dry.
- B. Verify excavation location, dimensions and elevation with Contract Drawings.

3.2 PREPARATION

- A. Set all lines, elevations, and grades for utility work and maintain for the duration of work. Provide careful maintenance of bench marks, property corners, monuments, or other reference points.
- B. Protect and maintain in operating condition, existing utilities encountered during utility installation. Repair any damage to surface or subsurface improvements shown on the drawings.
- C. Coordinate structure placement with inlet and outlet pipe or duct sleeve locations and inverts required by other sections.
- D. Coordinate all building sewer connection locations and elevations with architectural and plumbing plans. Contractor shall comply with all local codes and regulations.
- E. Hand trim excavations to required elevations.
- F. Install dewatering systems that will be required to construct the proposed utilities to the design elevations and using the methods described herein. Water pumped out of excavations shall be disposed of on-site for sedimentation removal, and will not be discharged directly to the City's storm drainage system without prior approval of NYCDEP.
- G. Remove large stones or other hard matter, which could damage pipe or impede consistent backfilling or compaction.
- H. Subgrade areas identified by the Construction Manager as not being capable of supporting the proposed structure shall be excavated to suitable material or a maximum of two additional feet, backfill with bedding material and compact as specified in Section 31 00 00 – Earthwork.

3.3 BEDDING

- A. Excavate pipe trench in accordance with Section 31 00 00 – Earthwork.
- B. Place and compact bedding material at trench bottom. Hand trim bedding for accurate placement of pipe to elevations indicated.
- C. Maintain moisture content of bedding material between 1% below and 3% above the optimum during compaction.

3.4 INSTALLATION – PIPE

- A. Install pipe, fittings, and accessories in accordance with ASTM D2321, manufacturer's instructions and/or state or local requirements. Seal joints to be watertight.

- B. Lay pipe to slope gradients noted on the Construction Drawings; with maximum variation from true slope of 1/8 inch in 20 feet.
- C. Refer to Section 31 00 00 – Earthwork for trenching and backfill requirements. Do not displace or damage pipe when compacting.

3.5 INSTALLATION – CATCH BASINS

- A. Form bottom of excavation clean and smooth and to correct elevation. Place minimum of 6-inch compacted bedding aggregate.
- B. Form and place cast-in-place concrete base pad, with provision for storm sewer pipe end sections, or place precast reinforced concrete pad at the location and elevation specified on the plans.
- C. Level top surface of base pad to receive concrete shaft sections, sleeve to receive storm sewer pipe sections.
- D. Establish elevations and pipe inverts for inlets and outlets as indicated.
- E. Mount lid and frame level in grout, secured to top cone section to elevation indicated.
- F. Grates to be placed with the long direction of the slot perpendicular to the flow of pedestrian traffic when placed in walkways.

3.6 INSTALLATION – CLEAN OUTS

- A. Form bottom of excavation clean and smooth to correct elevation.
- B. Form and place cast-in-place concrete base pad, with provision for storm pipe end sections.
- C. Mount lid and frame level in grout to finished grade elevation indicated on plan.

3.7 INSTALLATION – MANHOLES

- A. Placing Manhole Sections:
 - 1. Place granular base pad, trowel top surface level for cast-in-place bases.
 - 2. Place manhole sections plumb and level, trim to correct elevations, anchor to base pad.
 - 3. After completion of excavation, setting of reinforcing steel and placing inlet and outlet pipes, but prior to placing concrete for invert slab, set precast concrete blocks on slab foundation to support first manhole barrel which shall be lowered into excavation, grooved end first, and set on concrete blocks. Align and adjust to proper grade prior to placing invert slab, which shall be poured immediately after setting of first section of manhole barrel.
 - 4. Prior to setting subsequent manhole barrel sections, apply primer to tongue and groove ends and allow to set in accordance with manufacturer recommendations. Place gasket on tongue end. Lower next section into position, and remove excess material from interior of structure. Add additional primer on exterior of joint, if necessary, for completely watertight joint.
 - 5. Salvage and reuse castings belonging to reset/converted structures, if possible.

6. Set cover frames and covers securely to correct line and grade elevations.
7. Grout base of shaft sections to achieve slope to exit piping. Trowel smooth. Contour as required.
8. Coordinate with other sections of work to provide correct size, shape, and location.
9. Construct manhole safety steps as indicated on the Contract Drawings, and in all cases where depths exceed four (4) feet.

B. Masonry Construction:

1. Maintain masonry courses to a uniform dimension. Form vertical and horizontal joints of uniform thickness.
2. Lay masonry units in running bond.
3. Form flush mortar joints.
4. Lay masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.
5. Install joint reinforcement 16 inches on center.
6. Place joint reinforcement in first and second horizontal joints above base pad and below lid frame opening.
7. Set cover frames and covers securely to correct line and grade elevations.
8. Grout base of shaft sections to achieve slope to exit piping. Trowel smooth. Contour as required.
9. Coordinate with other sections of work to provide correct size, shape, and location.

3.8 ROOF DRAINS AND LEADERS

- A. General: Make all required connections of the building leader drains into the on-site drainage system as shown on the Contract Drawings and/or approved by the Construction Manager. Work shall include making the leader drain connections into the on-site drainage system, furnishing and installing all leader drain pipe from the on-site drainage system to points located five (5) feet outside of the proposed building lines and properly sealing the ends with watertight plugs. Leader drain extensions from these points into the building will be performed by others.
- B. Coordination with Building Contractor: Coordinate work with the work of the Building Contractor to determine the exact location and elevation of the point of entry into the building. If the Building Contractor has installed his portion of the leader drain, work under this Contract shall also include final connections of the leader drain five (5) feet outside the building line to the building leader drains at no additional cost to the Commissioner.
- C. For leaders not immediately connected to Building System, stake and mark end of leaders.

3.9 CLEANING AND REPAIR

- A. Clean the entire drainage system of all debris and obstructions. This shall include, but not be limited to, removal of all formwork from structures, concrete and mortar droppings, construction debris and

dirt. Thoroughly flush the system clean and furnish all necessary hose, pumps, pipe and other equipment that may be required for this purpose. Do not flush debris into existing storm drains or streams; remove all debris from the system. Perform all removals and disposal in accordance with Division One – Construction Waste Management & Disposal.

- B. After the system has been cleaned, thoroughly inspect the system. Promptly make repairs as necessary.
- C. Perform all work of cleaning and repair as specified herein at own expense and to the complete satisfaction of the Construction Manager.

3.10 FINAL INSPECTION

- A. Upon completion of the Work and before backfill is placed and final acceptance by the Commissioner, the drainage system shall be subject to a final inspection in the presence of the Engineer and/or Construction Manager. The Work shall not be considered as complete until all requirements for line, grade, cleanliness, and workmanship have been completed to the satisfaction of the Construction Manager and/or the Engineer.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 46 00

UNDERDRAINAGE SYSTEM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. All of the Contract Documents, including General and Supplementary Conditions and DDC General Conditions, apply to the work of this Section and are hereby made a part of this Section.

B. Examine all Drawings and other Sections of the Specifications for requirements therein affecting the work of this trade.

1.2 SCOPE OF WORK

A. The work of this section includes, but is not limited to, the following:

1. Providing and installing underdrainage system.
2. Protecting and maintaining the drainage system and completed work.
3. Warranty and Maintenance.
4. Coordination with other Trades.
5. Clean up.

1.3 RELATED WORK UNDER OTHER SECTIONS

A. Carefully examine all of the Contract Documents for requirements that affect the work of this section. Other specifications sections which directly relate to the work of this section include, but are not limited to, the following:

1. Section 03 30 00 – Cast in Place Concrete
2. Section 31 10 00 – Site Preparation and Clearing
3. Section 31 00 00 – Earthwork
4. Section 32 91 00 – Planting Soil System
5. Section 33 40 00 – Storm Drainage Utilities
6. Section 33 90 00 – Other Utilities

1.4 REFERENCES

A. General: Refer to DDC General Conditions.

B. Definitions

1. Pipe Filtration Aggregate: Referred to as Underdrainage Gravel in Drawings.

C. AASHTO: American Association of State Highway and Transportation Officials.

1. AASHTO M 252 Corrugated Polyethylene Drainage Tubing
 2. AASHTO M 288 Standard Specification for Geotextiles
- D. ASTM: American Society of Testing Materials.
1. ASTM C 33 Concrete Aggregates
 2. ASTM C 117 Test Method for Material Finer than 0.075mm (No. 200) Sieve in Mineral Aggregates by Washing
 3. ASTM C 136 Method for Sieve Analysis of Fine and Coarse Aggregates
 4. ASTM C 150 Portland Cement
 5. ASTM C 822 Terminology Relating to Concrete Pipe and Related Products
 6. ASTM D 2321 Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity Flow Applications
 7. ASTM F 412 Definition of Terms Relating to Plastic Piping Systems
 8. ASTM D 3212 Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals
 9. ASTM F 477 Elastomeric Seals (Gaskets) for Joining Plastic Pipe

1.5 SUBMITTALS

- A. Product Data: Provide manufacturer's data showing installation and limitations in use.
1. Perforated High Density Polyethylene Pipe (HDPE).
 - (a) Perforated.
 - (b) Non-Perforated.
 2. Geotextile Filter Fabric.
- B. Certifications of Compliance: Submit certificates of compliance from manufacturers of the following items certifying that the following materials comply with the requirements specified in this Section:
1. Perforated High Density Polyethylene Pipe (HDPE).
 - (a) Perforated.
 - (b) Non-Perforated.
 2. Geotextile Filter Fabric.
- C. Testing Procedures and Reporting for Pipe Filtration Aggregate: Submit certified report indicating that the material complies with the Specification.
1. Testing shall be performed and reported based on ASTM D422 specifications.
 2. Submit the sample in a clean, sturdy sealed container or bag that shall not permit loss or contamination of any kind of the material.
 3. Clearly label the container or bag of the sample with: Contract location, title and number; the name of the material supplied; and location of the source.

D. Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including accessories for drainage piping and all drainage connections to composites.

E. Submit for Commissioner's approval methods for prevention of accumulation of groundwater and alternate methods of line and grade control where applicable.

F. Submit "As-built" drawings.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Installer Qualifications: Installer experienced to perform work of this type, who has specialized in the installation of work similar to that required for this project who can comply with manufacturer's warranty requirements.
2. Manufacturer Qualifications: Manufacturer with a minimum of three (3) years experience in underdrainage systems, capable of providing technical support in the application of the drainage system.

B. Pre-Installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, manufacturer's installation instructions and manufacturer's warranty requirements.

C. The Commissioner will visually inspect pipe when delivered to the construction site. Damaged material or material not meeting the requirements of this Section shall be removed from the construction site and replaced at no cost to the Owner.

D. The Commissioner may inspect pipe at the place of manufacture.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling and Unloading: Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact. Schedule deliveries to avoid construction delays but minimize jobsite storage.

B. Comply with the manufacturer's instructions for unloading, storing and moving all materials.

C. Care shall be taken when storing pipe and appurtenances so as not to damage any public or private property. Any property so damaged shall be repaired at the Contractor's expense and at the approval of the Commissioner.

1.8 PROJECT CONDITIONS/ SITE CONDITIONS

A. When the pipe is bedded in a drainage layer the pipe shall be installed at the same time as the drainage layer.

1.9 WARRANTY

A. Manufacturer's Warranty: Submit manufacturer's standard warranty document executed by authorized company official.

1. Manufacturer's Warranty:

(a) Extended 15 year Drainage Warranty.

B. Standard Contractor's Guaranty: Submit one-year warranty for all materials, products and workmanship.

PART 2 PRODUCTS

2.1 HIGH DENSITY POLYETHYLENE PIPE (HDPE)

A. Pipe: Corrugated double wall heavy duty polyethylene (HDPE) (40% post-consumer recycled) resins pipe, conforming to ASTM F405 and F667. Provide perforated pipe under planted areas and non-perforated pipe under pavements and at connections into drainage structures.

1. Size: 4 inch diameter
2. Perforation (where applicable): ¼" inflow holes at 6" on center, located at the 4 and 8 o'clock position on the installed pipe.

B. Pipe Accessories: Couplings, end caps, tees, wyes, end plugs shall be heavy duty polyethylene resins, conforming to ASTM F405 and F667.

C. Manufacturers, or approved equivalent:

- (a) Hancor, www.hancor.com, Tel: 1-888-367-7473
- (b) ADS, www.ads-pipe.com, Tel: 1-800-821-6710

2.2 GEOTEXTILE FILTER FABRIC

A. A drainage-type non-woven geotextile filter fabric meeting the physical requirements of Class "2" for Drainage applications of AASHTO M 288.

B. The permeability of the drainage fabric shall be a minimum of 110 gal/min/sq.ft.

C. Drainage filter fabric shall meet the following Minimum Average Roll Value (MARV) specifications across the weave:

PROPERTY	TEST METHOD	REQUIREMENT	PROPERTY	TEST METHOD	REQUIREMENT
Grab Tensile Strength	ASTM D-4632	80 lb. min.	Puncture Strength	ASTM D-4833	45 lb. min.
Grab Tensile Elongation	ASTM D-4632	50% max.	UV Resistance	ASTM D-4335	70% at 500 hrs min.
Trapezoidal Tear Strength	ASTM D-4533	35 lb. min.	Apparent opening	ASTM-D-4751	40-80 US Sieve
Mullen Burst Strength	ASTM D-3786	160 psi. min.	Permeability	ASTM D-4491	110 gal/min/ft.2 min.

D. Manufacturers, or approved equivalent:

1. US Fabrics, www.usfabricsinc.com, Tel:800-518-2290
2. GSE, www.gseworld.com, Tel:800-435-2008
3. Geotextile Systems, www.geotextile.com, Tel: 804-892-0468

4. Contech Construction Products, www.contech-cpi.com, Tel: 800.338.1122

2.3 PIPE FILTRATION AGGREGATE

- A. An AASHTO gravel size of #7 or #78 conforming to the following specifications:

SIEVE OPENING	0.25 in.	to 0.5 in.	Pea gravel shall be clean double-washed crushed aggregate, free of rock dust, fines or soil particles and foreign material.
SIZE SPECIFICATION	AASHTO M-43		

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Site Verification of Conditions: Verify that the substrate conditions are acceptable for product installation in accordance with manufacturer's instructions and in compliance with the Drawings. Do not proceed with drainage installation until substrate conditions are acceptable for compliance with manufacturer's warranty requirements.

3.2 PREPARATION

- A. Adjacent Surfaces Protection: Protect adjacent work areas and finish surfaces from damage during installation operations.
- B. Substrate Cleaning: Clean substrate that is to receive drainage. Remove loose debris and other harmful contaminants that will affect performance of drainage composite.

3.3 UNDERDRAINAGE SYSTEM INSTALLATION

- A. Coordination:
1. Coordinate Installation of solid pipe under pavements that may need to be in place before the planting soils and under drainage system are installed.
- B. Excavation:
1. Coordinate construction of under drainage system with installation of Planting Soil Profile Layer S-3. See Section 32 91 00 Planting Soil System. When the pipe is installed in a plant bed, the pipe shall be installed at the same time as the S-3 drainage layer or installed and protected by covering installation with filter fabric to prevent sedimentation contamination of the gravel and piping. Otherwise, excavate pipe trench in accordance with Section 31 00 00 Earthwork in the location and to the depth shown on the Contract Drawings.
 2. Remove all rocks or other hard objects larger than 1 1/2 inches in size from the area within 12 inches of the pipe.
 3. If ground water is encountered, prevent accumulation of water in trench by methods approved by the Commissioner.
- C. Lines and Grades:

1. Prior to the start of construction, the method for control of alignment and grade shall be submitted for approval. The method shall be a laser system or grade board setup, to establish a reference grade and alignment control directly above or within the pipe. Use of other equipment may be substituted if in the opinion of the Resident Engineer, the alternate system produces equivalent accuracy. Pipe invert elevations shall be checked at intervals no greater than 25 feet and shall be constructed to the lines and grades as shown on the Drawings.
2. All lines shall be positively pitched at a minimum of 0.5% towards the outlet. Take extreme care to eliminate sags or drops in pipeline that would obstruct or slow down the flow of water.
3. Conform to Section 01 71 23 Field Engineering.

D. Filter Fabric Installation

1. Prior to the placement of the pipe filtration aggregate, the entire trench shall be lined with filter fabric.
2. Provide sufficient additional material to overlay the completed trench. The overlay provides temporary cover for the pipe filtration aggregate to prevent siltation from other construction until the S-3 Planting soil is in place.

E. Pipe and Fittings:

1. Connect under drainage system to storm drainage structures. Pipe connection shall be fully embedded into the drainage structure and shall be sealed with a non-shrink grout. Coordinate connections with Section 33 40 00 Storm Drainage Utilities to not delay work. Coordinate connection of discharge with the site utility contractor.
2. Use fittings for branch connections and bends. Use proper size increasers, reducers, and couplings where different sizes or materials of pipes and fittings are connected. Reducing size of piping in direction of flow is prohibited.
3. Make up the pipe joints in accordance with the manufacturer's instructions.
4. Provide proper facilities for lowering sections of pipe into trenches.
5. Do not use blocking or mounding to bring the pipe to grade. Conform to the applicable requirements of ASTM D 2321.
6. Pipe beds in bedding material shall be rounded to accommodate the bottom quadrant of the pipe and to provide full support and uniform bearing for the entire length of the pipe barrel.

F. Precautions

1. Take precautions to ensure that the interior of the pipeline remains clean during pipe jointing.
2. Close all opening in the pipeline temporarily with watertight wood blocks or bulkheads when pipe laying is stopped at the conclusion of the work period or interrupted for any reason.
3. Inspect each pipe and fitting before and after installation; remove those found defective from site and replace with new.

4. Care shall be taken not to damage or displace installed pipes during construction. Where pipe is damaged or displaced, take remedial measures as directed by the Resident Engineer, at no additional cost to the City of New York.
5. Do not cover pipe until the Commissioner has approved the installation.

3.4 DEMONSTRATION AND COMMISSIONING

- A. Prior to installation of finish Work, demonstrate that the underdrainage systems are fully functional. Provide adjustments as required and confer with Commissioner on remediation measures.

3.5 CLEANING AND PROTECTION

- A. Cleaning: Remove temporary coverings and protection of adjacent work areas. Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions before Commissioners acceptance. Remove construction debris from project site and legally dispose of debris.

1. Take extreme care to protect planting soils installed by others.

- B. Protection: Protect installed products finished surfaces from damage during construction.

SECTION 33 90 00

OTHER UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Contract Drawings, Conditions of the Contract (Including General Conditions, Addendum to the General Conditions, Special Conditions, Division 01 Specification Sections and all other Contract Documents) apply to the work of this Section.
- B. Site Management Plan for Queens West (Hunter's Point) Parcel 8, Queens, New York prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc., dated December 2011.

1.2 SUMMARY

- A. Provide labor, materials, services, equipment, and other necessary items required to excavate, install and backfill the piping, conduit, duct banks and manhole/pull box structures related to the on-site primary and secondary electrical service, site lighting, telephone/data and natural gas services in accordance with the Contract Documents.

B. RELATED SECTIONS

- 1. Section 02 20 50 – Protection of Existing Utilities
- 2. Section 31 00 00 – Earthwork
- 3. Division 26 – Electrical

1.3 ENVIRONMENTAL REQUIREMENTS

- A. The project site is subject to the provisions of the NYCDEC-approved Site Management Plan (SMP) prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc. Excavation, handling of soils, access, and erosion & sedimentation control must be performed in compliance with Site Management Plan. Contractor be familiar with the SMP and comply with such at all times.

- 1. For all excavation onsite, the contractor must follow requirements set forth in the Excavation Work Plan, Appendix 'A' of SMP.

1.4 REFERENCES

- A. All work and materials under this section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:
 - 1. New York City Building Code.
 - 2. Consolidated Edison Company of New York, Inc. Construction Standards, latest revision.
 - 3. The National Electric Code, latest edition.

1.5 COORDINATION

- A. Coordinate work in this Section with the electric and telephone/data utility companies, and shall comply with all requirements, details, regulations, etc. of said companies. Coordinate with each utility to define where limits of work exist prior to submitting a bid price.

1.6 SUBMITTALS

- A. Any work shall be coordinated with, reviewed, and approved by local utility company having jurisdiction.

1.7 PROJECT RECORD DOCUMENTS

- A. Accurately record actual locations of conduits, piping, valves, manholes, pull boxes, and invert elevations.
- B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

PART 2 - PRODUCTS

2.1 CONDUIT, FITTINGS AND CABLE

- A. Natural Gas: Coordinate all piping, valves and appurtenances with Consolidated Edison Company of New York, Inc.

2.2 STRUCTURES

- A. Manholes, pull boxes and junction boxes shall comply with all requirements, specifications, details, and recommendations of the governing utility company or authority and as indicated on the Contract Drawings.

2.3 CONCRETE ENCASEMENT

- A. Concrete for encasement of duct banks shall be 4,000 psi concrete. Class C Fly Ash, in accordance with ASTM C618, shall constitute 40% by mass of total cementitious material used in the concrete mix.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions.
- B. Verify building service connection points with mechanical, electrical and telecommunications plans.

3.2 PREPARATION

- A. Remove scale and dirt, on inside and outside of conduit, prior to assembly.
- B. Prepare conduit in accordance with manufacturer's recommendations.

3.3 INSTALLATION

A. Conduit

1. Maintain minimum conduit separation in accordance with NYC Building Code.
2. Place forms for concrete encased duct banks. Install conduit to conserve space and to allow for expansion and contraction without stressing conduit or joints. Pour concrete and vibrate to ensure there are no voids.
3. Install conduit in the line and grade indicated on the Construction Drawings. Reference the Electrical, Mechanical, Telecom, and Site Utility Drawings to ensure sufficient conduit capacity to pull the necessary electric and telecommunication wires.

B. Structures

1. Install manholes, handholes, junction boxes and/or pullboxes in accordance with all requirements, specifications, and recommendations of the governing utility company or authority, and as indicated on Construction Drawings.

C. Service Connections

1. Coordinate with Building Contractor: Coordinate work with the work of the other Contractors to determine the exact location and elevation of the point of entry into the building. If the other Contractor has installed his portion of the conduit, work under this Contract shall also include final connection five (5) feet outside the building line. If the other Contractor has not installed his portion of conduit, cap and stake ends of conduits with 2" x 4" piece of wood extending from utility invert to 4 ft above final grade. Paint end or otherwise mark stake to adequately identify type of utility marked.
2. Perform connections with existing facilities in accordance with the requirements of the owner of the facility. Comply with all such requirements, and payment of all fees related to this section.

- D. Repair, realign or replace any product, which is damaged or disturbed through any cause prior to acceptance of the Work as directed by the Construction Manager, at no expense to the Commissioner.

SITE MANAGEMENT PLAN

1.0 INTRODUCTION AND DESCRIPTION OF REMEDIAL PROGRAM

1.1 INTRODUCTION

This document is required as an element of the remedial program at the Queens West (Hunter's Point) Parcel 8 (hereinafter referred to as the Site) under the New York State (NYS) Brownfield Cleanup Program (BCP) administered by New York State Department of Environmental Conservation (NYSDEC). The site was remediated in accordance with Brownfield Cleanup Agreement (BCA) Index # W2-1059-05-03, Site # C241087, which was executed on March 30, 2005 and last amended on March 10, 2010.

1.1.1 General

Avalon Riverview II LLC and Avalon Riverview North¹ LLC and Queens West Development Corp., or QWDC (collectively, the Volunteer) entered into a BCA with the NYSDEC to remediate a 0.73-acre property located in Long Island City, Queens County, New York. This BCA required the Volunteer to investigate and remediate contaminated media at the site. A figure showing the site location and boundaries of this 0.73-acre site is provided in Figure 1. The boundaries of the site are more fully described in the metes and bounds site description (Appendix B) that is part of the Environmental Easement.

After completion of the remedial work described in the Remedial Action Work Plan (RAWP), some contamination was left in the subsurface at this site, which is hereafter referred to as "remaining contamination." This Site Management Plan (SMP) was prepared to manage remaining contamination at the site until the Environmental

¹ Avalon Riverview North, LLC was previously known and listed on the March 30, 2005 BCA as Avalon Riverview III, LLC. The name change was reflected in the Amended BCA dated 3/10/2010.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Easement is extinguished in accordance with ECL Article 71, Title 36. All reports associated with the site can be viewed by contacting the NYSDEC or its successor agency managing environmental issues in New York State.

This SMP was prepared by Arnold Fleming, P.E. and Fleming-Lee Shue, Inc. (FLS), on behalf of the Volunteer in accordance with the requirements in NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010, and the guidelines provided by NYSDEC. This SMP addresses the means for implementing the Institutional Controls (ICs) and Engineering Controls (ECs) that are required by the Environmental Easement for the site.

1.1.2 Purpose

The site contains contamination left after completion of the remedial action. Engineering Controls have been incorporated into the site remedy to control exposure to remaining contamination during the use of the site to ensure protection of public health and the environment. An Environmental Easement (Appendix B) granted to the NYSDEC, and recorded with the Office of the City Register, will require compliance with this SMP and all ECs and ICs placed on the site. The ICs place restrictions on site use, and mandate operation, maintenance, monitoring and reporting measures for all ECs and ICs. This SMP specifies the methods necessary ensure compliance with all ECs and ICs required by the Environmental Easement for contamination that remains at the site. This plan has been approved by the NYSDEC, and compliance with this plan is required by the grantor of the Environmental Easement and the grantor's successors and assigns. This SMP may only be revised with the approval of the NYSDEC.

This SMP provides a detailed description of all procedures required to manage remaining contamination at the site after completion of the Remedial Action, including: (1) implementation and management of all Engineering and Institutional Controls; (2) media monitoring; (3) operation and maintenance of all treatment, collection, containment, or recovery systems; (4) performance of periodic inspections, certification of results, and submittal of Periodic Review Reports; and (5) defining criteria for termination of treatment system operations.

To address these needs, this SMP includes three plans: (1) an Engineering and Institutional Control Plan for implementation and management of EC/ICs; (2) a Monitoring Plan for implementation of Site Monitoring; (3) an Operation and

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Maintenance Plan for implementation of remedial collection, containment, treatment, and recovery systems (including, where appropriate, preparation of an Operation and Maintenance Manual for complex systems).

This plan also includes a description of Periodic Review Reports for the periodic submittal of data, information, recommendations, and certifications to NYSDEC.

It is important to note that:

- This SMP details the site-specific implementation procedures that are required by the Environmental Easement. Failure to properly implement the SMP is a violation of the environmental easement, which is grounds for revocation of the Certificate of Completion (COC);
- Failure to comply with this SMP is also a violation of Environmental Conservation Law, 6NYCRR Part 375 and the BCA Index # W2-1059-05-03; Site #C210487 for the site, and thereby subject to applicable penalties.

1.1.3 Revisions

Revisions to this plan will be proposed in writing to the NYSDEC's project manager. In accordance with the Environmental Easement for the site, the NYSDEC will provide a notice of any approved changes to the SMP, and append these notices to the SMP that is retained in its files.

1.2 SITE BACKGROUND

1.2.1 Site Location and Description

The site is located at 4-56 47th Road, Long Island City, County of Queens, New York and is identified as Block 19 and Lot 19 on the Queens Tax Map. The site is an approximately 0.73-acre area bounded by 47th Road to the north, 48th Avenue to the south, Center Boulevard to the east, and Peninsula Park to the west (see Figure 1). The boundaries of the site are more fully described in Appendix B – Metes and Bounds.

The site is to be developed with a library and park ranger station. Parcel 8 is part of a larger multi-acre shoreline tract of land known as the Queens West Development (QWD) that extends along the East River from Anable Basin to the north to 50th Avenue to the south. A portion of the QWD, south of 50th Avenue, was sold to the City of New York for an affordable housing project known as the Hunters Point South Development.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Surrounding parcels include Parcel 9 of the QWD to the east (Site #C241049), which received a Certificate of Completion (COC) for Restricted Residential Use in December 2006; Stage II of the QWD to the north (Sites V00505A and B), which completed remediation and received Voluntary Cleanup Agreement (VCA) releases in 2008 and 2006, respectively; Peninsula Park and the East River to the west; and mixed uses to the south, including residential, commercial, a day care center, a public school and Gantry Plaza State Park.

1.2.2 Site History

The Site history was developed from several sources including Sanborn maps, historical photographs, previous AKRF and TRC Engineers, Inc. reports, and a detailed history of Long Island City (Seyfried 1984).

The Site was originally part of the East River and was man-made by extensive filling, which raised the surface elevation and expanded the shoreline into the river. The Site historically housed industrial operations and was occupied by the Warren Chemical Co. (Warren) from circa 1855 until 1915. Warren produced roofing materials, tar paper and asphalt. Pumps, tanks, condensers, dryers, steam stills, and stacked drums associated with the production of these products are known to have been used on Site. Following Warren, the Site was used by the Liquid Carbonic Company, which produced liquefied carbon dioxide for soda fountains, from the 1930s until the 1950s. In 1970 the Site was occupied by a metal storage warehouse. Hallen Contractors occupied the Site from the 1970s until 1999. The Site was vacated in 2001. Parcel 9, adjacent to the east of the Site, was occupied by a portion of the Warren Chemical Company facilities. Varnish and paint manufacturers occupied the eastern portion of Parcel 9 and a variety of manufacturing uses were on the western portion, including the Blau Gas Company, an asphalt company, the Harlem Chemical Co., a plumbing supply manufacturer, a refrigeration equipment manufacturer, a barrel manufacturer, and an auto repair shop.

Parcel 8, along with Parcels 9 and 11, and the Center Boulevard VCP Site No. V00194A were the subject of a single Voluntary Cleanup Agreement (VCA), dated August 17, 1999 (Index No. D2-0003-98-10). In July 2000, that VCA was amended to remove Parcels 8, 9 and 11, and separate VCAs were executed for each parcel by the

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

designated developer for the parcel. Parcels 8 and 9 were subsequently transitioned into the Brownfield Cleanup Program (BCP), as BCP Site Nos. C241087 and C241049, respectively. Parcel 9 has since been remediated under a BCA (Site No. C241049) and received its Certificate of Completion for Restricted Residential use (Track 4) on December 29, 2006. On April 6, 2010, an Agreement Amendment was signed for Parcel 8, which added QWDC as a Volunteer.

A Phase I report was not prepared separately for Parcel 8. Prior investigations were conducted in 1985, 1989, 1998, and 2000. Sampling was performed in 2006 as part of an off-Site investigation for Parcel 9. Elevated levels of coal tar compounds were detected in groundwater, and in soils exceeding Unrestricted Use Soil Cleanup Objectives. Abandonment-in-place of a 1,000-gallon underground storage tank was completed under a FDNY citation in 2007. An Interim Remedial Measure (IRM) for removal of a large soil and construction and demolition debris pile was completed in June 2008. A Supplemental Remedial Investigation Work Plan (SRIWP) was approved by NYSDEC in July 2008. Off-Site investigations to the south and west of the Site were conducted during the summer of 2009 and a pilot study tested a new remedial technology in February-March 2010. The remedial action work plan (RAWP) was submitted in April 2010 and remediation began in October 2010.

1.2.3 Geologic Conditions

LITHOLOGY

The top four to five feet of soil was removed across the entire Site as part of the remediation. Soil was excavated to seven feet in Grid Cell 7 to address a hot spot. Soil boring data collected by AKRF and FLS during the remedial investigations showed that the Site contained historic urban fill, consisting of brown medium to coarse sands intermixed with concrete, brick and ash, from ground surface to predominantly 7 to 13 ft-bg, although it reached to 19 to 25 ft-bg in a few places. Underlying the fill are brown medium to coarse sands, silts and clays, to approximately 29 to 35 ft ft-bg, where a heavily consolidated grey silt/till begins. The till lies beneath most of Parcel 8 and

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

typically begins at 28 to 31 ft-bg. The top of bedrock is anticipated to begin at 30 to 35 ft-bg.

A lens of silt and silty clay was found over approximately 85 percent of Parcel 8. The silty layer begins at 15 to 18 feet below grade and ends at 18 to 25 feet below grade, although the bottom depth of the unit varies. A geologic cross section is shown in Figure 2.

Of particular importance to non-aqueous phase liquid (NAPL) behavior, discussed further in Section 1.3, is the silty clay layer and the increasing bulk density with depth. Bulk density increases from 1.18 g/ml near the water table to 1.57 g/ml near the till layer, an increase of nearly 25 percent.

HYDROGEOLOGY

Groundwater occurs in two zones: a shallow zone, extending from the water table at approximately 8 to 10 ft-bg to approximately 17 to 24 ft-bg and a deeper zone, from approximately 24 to 36 ft-bg. Net groundwater flow in the shallow zone is towards the west. Groundwater appears to mound slightly near the center of Parcel 8 and diverges in its westerly flow, with a portion flowing towards the inlets that surround Peninsula Park on the north and south. One component flows northwest toward the Northern Embayment at the end of 47th Road and the other flows southwest towards the Southern Embayment. Groundwater gradients also trend toward the sewer bordering the northern side of Parcel 8 that leads to the 47th Road Outfall. Groundwater in the deeper zone follows the same pattern as the shallow groundwater flow, although there is a greater component of flow towards northwest and there are local deflections in other directions, but the net deep groundwater flow is to the surface water bodies.

The average horizontal hydraulic gradient (based on three rounds of measurements) in the shallow zone is 0.0032 and 0.0035 in the deep zone. While these average gradients are about the same, the gradient measurements were more variable in the deeper zone.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

The net vertical hydraulic gradient is downward, from the shallow to the deeper groundwater zone and a downward hydraulic gradient, measured during both low and high tide measurements, was evident in all eight well pairs. The average vertical gradient measured 0.06. The ratio of horizontal to vertical gradient is slightly less than 20 horizontal to 1 vertical.

Hydraulic conductivity, based on slug tests, in the shallow groundwater zone ranged from 3.0×10^{-4} cm/sec to 1.7×10^{-2} cm/sec and averaged 5.1×10^{-3} cm/sec. In the deep groundwater zone this parameter ranged from 2×10^{-4} cm/sec to 2.1×10^{-3} cm/sec and averaged 8.8×10^{-4} cm/sec. On average, hydraulic conductivity in the shallow groundwater zone was approximately 6 times greater than in the deeper zone.

Seepage velocity, using effective porosities for medium and coarse sands of 0.25 to 0.35 ranged from 2.7×10^{-6} cm/sec to 2.2×10^{-4} cm/sec and averaged 3.4×10^{-5} cm/sec in the shallow groundwater zone. In the deeper groundwater zone, seepage velocity ranged from 2.8×10^{-6} cm/sec to 2.9×10^{-5} cm/sec and averaged 1.1×10^{-5} cm/sec.

A geologic section is shown in Figure 2.

A groundwater flow figure is shown in Figure 3.

1.3 SUMMARY OF REMEDIAL INVESTIGATION FINDINGS

Remedial Investigations (RIs) were performed to characterize the nature and extent of contamination at the site and adjacent areas. The results of the RIs are described in detail in the following reports:

- TRC Engineers, December 2004. Supplemental Investigation Report No. 11. Queens West Development – Stage 2, 46-00 5th Street, Long Island City, New York. TRC Project Number 35204-2010-00000.
- AKRF, April 2005. Supplemental Remedial Investigation Report, Queens West Parcel 9.
- AKRF, June 2005. Supplemental Remedial Investigation Work Plan Parcel 8 and Offsite. Project Number 10516.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- AKRF, June 2005. Additional Delineation Testing Report, Queens West Development-Parcel 9, Queens, New York, Project Number 10516.
- TRC Engineers, June 2005. Operable Units One & Two Remedial Investigation Report. Queens West Development – Stage 2, 46-00 5th Street, Long Island City, New York. TRC Project Number 35204-2200-00000.
- AKRF, July 2006. Off-Site Investigation Report, Queens West Development-Parcel 9, Queens, New York, Project Number 10516.
- FLS, 2008, Parcel 8 Supplemental Remedial Investigation Work Plan, July 2008. Project No. 10011-007-1.
- FLS, 2009. Parcel 8 Remedial Investigation Report, April 2009. FLS Project No. 10011-007-1.

Generally, the RIs determined that the majority of on-Site contamination existed beneath the former main operational footprint of Warren Chemical between the capillary fringe (approximately 10 ft-bg) and approximately 22 ft-bg. Some dense non-aqueous phase liquid (DNAPL) existed near the till layer at approximately 30 ft-bg, albeit at a much smaller amount than in the overlying strata. There are several instances where DNAPL is present atop medium to coarse sands, unable to penetrate because of the capillary resistance. NAPL and staining were also observed atop the silty clay lens.

All of the DNAPL was residual. Numerous attempts to gauge DNAPL accumulation in wells failed to identify measurable NAPL. Visible NAPL occurred in soil borings throughout Parcel 8, mainly in sandy lenses, but the bulk of the contaminant mass is near the contaminant source, the former operational foot print on the southwest and west central part of Parcel 8. This area also corresponds to areas where NAPL thickness is greatest. The DNAPL seems to have remained in the area of the original release, and has not migrated in any horizontal direction in any significant quantity.

Due to the limited size of the Site (0.73 acres) and the prevalence of soil and groundwater impacts across the Site, all of Parcel 8 is considered an Area of Concern (AOC). The RI did uncover a number of scattered soil "Hot Spot" areas. Hot Spots are

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

those soil locations where copper, barium, or arsenic, and PCBs exceeded the Commercial Use Soil Cleanup Objectives (SCOs) in soils below 4 ft-bg.

Below is a summary of site conditions when the RIs were performed between 1985 and 2010:

Soil

Soils on Parcel 8 were impacted by PAHs from the surface to depth. The shallow surface soils contained some debris and PAHs from a combination of the historic waste and the fill that was brought in to grade the land for development. The surface soil also contained a few scattered areas of metals and PCB contamination. Subsequent to Warren Chemical, historic Site operations resulted in scattered small-scale solvent spills that did not impact groundwater or result in elevated soil gas concentrations. A summary of soil boring sample results which exceeded the Part 375 Commercial use SCOs is shown on Figure 4. Soil analytical summary tables from the RIR are included in Appendix C.

Volatile Organic Compounds (VOCs)

Soil boring analytical results indicated a single location (SB-29 at 13-15 ft-bg) where the benzene concentration (115,000 ug/kg) exceeded the Commercial Use SCO of 44,000 ug/kg. None of the analytical results for ethylbenzene or toluene in soil exceeded their respective Commercial Use SCOs and only one total xylene result, [QW-SB-15B (16-18') Dup], at 520,000 ug/kg, exceeded the Commercial Use SCO of 500,000 ug/kg. Chlorinated compounds were predominantly non-detect (ND) and in the few instances where they were detected, concentrations were below their respective Commercial Use SCOs.

Semi-Volatile Organic Compounds (SVOCs)

SVOCs were reported at concentrations above the Commercial Use SCOs in several soil borings at varying depths. The SVOCs reported above the Commercial Use SCOs are the polycyclic aromatic hydrocarbons (PAHs), which are combustion products

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

and typical components of historic urban fill, but are also components of products such as fuel oils, and coal tars.

PAHs above the Commercial Use SCO were reported in all samples collected from the 2 to 4 ft-bg depth interval, which consists of historic urban fill.

In general, the highest elevated concentrations of PAHs were in soils exhibiting visual indications of NAPL contamination. Soil samples containing elevated concentrations of PAHs largely consisted of medium to coarse sands collected from the depth interval of approximately 12 to 31 ft-bg, within the saturated zone. In particular, soil samples SB-29 (13-15 ft), SB-29 (19-20 ft), SB-35 (18-20 ft), MW-22 (12-13 ft), MW-22 (17.5-18.5 ft), SB-26 (13-14.5 ft), and SB-26 (19-21 ft), which exhibited visual indications of coal tar, were reported as containing the highest concentrations of PAHs.

Metals

Below 2 ft-bg, arsenic exceeded the Commercial Use SCO of 16 mg/kg in four locations: SB-40 (2-4'), 17.5 mg/kg; SB-35 (2-4'), 17.8 mg/kg; MW-22 (12-13'), 24 mg/kg; and QW-SB-7 (7-9'), 19.5 mg/kg. Below 2 ft-bg, copper exceeded the Commercial Use SCO of 270 mg/kg in one location: SB36 (2-4'), at 325 mg/kg. Barium exceeded the Commercial Use SCO of 400 mg/kg below two ft-bg in two samples, SB32 (422 mg/kg) and SB36 (75 mg/kg). All other toxic metal results were below the Commercial Use SCOs.

PCBs

Total PCB concentrations at depths beneath 2 ft-bg, exceeded the Commercial Use SCO of 1,000 ug/kg at one location, SB-31 (2-4') at 55,100 ug/kg.

Pesticides

All pesticide results were below the Commercial Use SCOs.

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

Site-Related Groundwater

Groundwater analytical summary tables from the RIR are included in Appendix C. A summary of groundwater conditions are described in the following sections. Shallow and deep monitoring wells were installed during the remedial investigation with screens across the lower and upper water-bearing strata, respectively, to provide discreet groundwater analytical results.

VOCs

Benzene, toluene, ethylbenzene, and total xylenes (BTEX) exceeded the Class GA criteria in groundwater at all but two locations, at MW-10 on the northwest corner, and MW-20 in the northwest quadrant (Figure 5), where benzene was below detection levels. The highest benzene concentrations were detected in well cluster MW-16(S)/MW-9 where benzene was detected at 5,050 µg/L and 1,210 µg/L, respectively, and in well cluster MW-14(S)/MW-22(D), where benzene measured 3,720 µg/L and 1,020 µg/L. BTEX concentrations were highest between approximately 18 and 24 feet below grade. VOCs in groundwater above Technical Operational Guidance Series (TOGS) Class GA Ambient Water Quality standards (AWQS) were summarized in Matrix 1.

SVOCs

Acenaphthene concentrations ranged from 1 µg/L to 405 µg/L with a median concentration of 227 µg/L. Acenaphthene exceeded the TOGS Class GA criterion of 20 µg/L in all samples except in MW-10. Benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, and benzo(g,h,i)perylene exceeded their TOGS Class GA criterion of 0.002 µg/L in four wells (MW-14[S], MW-16[S], MW-20[S], and MW-23[S]). Chrysene and benzo(a) anthracene each exceeded their TOGS Class GA criterion of 0.002 µg/L in six and eight wells, respectively. Naphthalene concentrations ranged from ND to 17,300 µg/L in MW-11(D). SVOCs in groundwater above TOGS Class GA AWQS are summarized in Matrix 2.

Metals

Arsenic concentrations in on-Site wells were below the TOGS criterion of 25 µg/L. Lead exceeded the TOGS criterion of 25 µg/L in two samples: MW-20(S) and MW-14(S). Lead exceeded the TOGS criterion of 25 µg/L in two samples: MW-20(S), 27.9 µg/L and MW-14(S), 66 µg/L. Manganese exceeded 300 µg/L in several wells.

Site-Related Soil Vapor Intrusion

The results of the soil gas survey conducted as part of the RI indicated that the body of contaminant mass is located in the southwest corner, arcing from the southeast corner to southwest corner and along the western boundary of Parcel 8. The soil gas results are consistent with the results of the soil samples collected from borings.

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

Benzene concentrations ranged from ND (in two of the 11 samples) to 119.3 ug/m³. Toluene was detected in 10 of the 11 samples at concentrations ranging from ND to 79.9 ug/m³. Naphthalene was detected in 2 out of 11 samples, up to a concentration of 15.7 ug/m³.

Tetrachloroethylene (PCE) was detected in all samples at concentrations ranging from 7.5 ug/m³ to 216.3 ug/m³. It should be noted that PCE concentrations in groundwater at all monitoring well locations were below detection limits. Trichloroethene (TCE) was detected at two locations at concentrations ranging from ND to 29 ug/m³. Methylene chloride was detected in one sample at a concentration of 13.9 ug/m³.

Underground Storage Tanks

One former 1,000-gallon fuel oil tank, previously abandoned in place, was allowed to remain. The UST had previously been abandoned in place by filling with concrete. All piping had been previously removed as well. The UST was allowed to remain following a discussion between FLS and NYSDEC on 11/30/11, after several unsuccessful attempts to locate the tank. A second tank, an empty riveted, 550-gallon tank, was uncovered during excavation in the southwest quadrant of grid cell 2 and removed. Two additional USTs were uncovered in Grid Cell 7, one riveted, 550-gallon UST and one 1,000-gallon steel UST encased in a concrete vault. Two tanks, a 30-gallon steel UST and a 750-gallon UST were also uncovered in Grid Cell 6, removed and disposed as scrap metal.

1.4 SUMMARY OF REMEDIAL ACTIONS

The site was remediated in accordance with the NYSDEC-approved Remedial Action Work Plan dated October 10, 2010.

The following is a summary of the Remedial Actions performed at the Site:

1. Excavation of the top four to five feet of soil over the entire area of the Site. The shallow soil excavation was done in the open without an enclosure, and odor suppressant foam was on hand and utilized as needed.
2. Hot Spots of metals and PCBs in Grid Cell 7 identified during the RI were removed to a depth of 7 feet below grade, where endpoint samples met the

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

Commercial Use SCOs. Soil removal identified in remedial components 1 and 2 removed approximately 3 percent of the total organic contaminant mass from the Site. The remedial performance goals for shallow soil removal were the Part 375 Commercial use SCOs.

Soils which were not grossly contaminated below approximately 4-5 ft-bg, and below the Hot Spot excavation in Grid Cell 7 remained in place.

Excavation (components 1 and 2) was completed in lifts or strips so that the existing soil cover remained in place and minimized exposure of subsurface soils. Only a small portion was excavated at a time. The strips were approximately 10 to 20 feet wide with a length that accommodated "load and go" removal of soils into trucks. Alternatively, no more than a 60-foot by 60-foot excavation (3,600 ft²) was made in any one day so as to accommodate up to 30 truckloads per day. In this manner, only soil that could be removed without stockpiling was excavated. Post excavation samples were collected for expedited turn around and the results forwarded to the Department for review. If the results were acceptable, clean cover was placed over the excavation to grade and the next strip was begun. The process continued until excavation was complete. The clean cover is recycled concrete aggregate which had been stockpiled on Stage 3 approximately ¼ mile south of the Site.

3. Screening for indications of gross contamination (by visual means, odor, and monitoring with PID) of all excavated soil during any intrusive Site work.
4. Appropriate off-Site disposal of all material removed from the Site in accordance with all Federal, State and local rules and regulations for handling, transport, and disposal.

A total of 7,665.3 tons of soil were removed from the Site, including 7,340.8 tons of non-hazardous, petroleum-impacted soil/historic fill was removed and transported to Soil Safe, Inc. in Logan Township, NJ for disposal.

There was one PCB hot spot area within Grid Cell 7. Hazardous PCB-contaminated soil was excavated to a depth of five feet and a total of 18.4 tons removed and transported to CWM Waste Management, LLC in Model City, NY.

A total of 306.1 tons of non-hazardous PCB-contaminated soils from 5 to 7 ft-bg within Grid Cell 7 were transported to the Atlantic County Utility Authority (ACUA) landfill in Egg Harbor Township, New Jersey.

A total of approximately 85 yd³ of general trash including metal, tires, and general non-soil debris was unearthed and removed from the excavation. This was disposed as normal solid waste or recycled at Evergreen Recycling, TNT Scrap, D.F. Allen, and S&M Tire Recycling.

5. Collection and analysis of end-point samples subsequent to removal of shallow soil, Hot Spots and gross contamination. Endpoint samples were collected at 4 to 5 ft-bg, and along the Site sidewalls and analyzed for VOCs, SVOCs, metals, PCBs, and pesticides/herbicides. In the areas of Hot Spot and

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

gross contamination excavation, endpoint samples were collected at the bottom of the Hot Spot and/or gross contamination excavation and along the sidewalls of each excavation in accordance with the procedures in DER-10, and similarly analyzed.

6. Import of materials to be used for backfill and cover in compliance with: (1) Part 375-6.7(d) and, (2) all Federal, State and local rules and regulations for handling and transport of material;
7. Installation of a demarcation barrier between the residual soil and approved fill material. Hot Spot and gross contamination excavations were filled to 4 ft-bg with soils meeting Part 375-6.7(d) prior to installation of the demarcation barrier.
8. One former 1,000-gallon fuel oil tank, previously abandoned in place, was allowed to remain. The UST had previously been abandoned in place by filling with concrete. All piping had been previously removed as well. The UST was allowed to remain following a discussion between FLS and NYSDEC on 11/30/11, after several unsuccessful attempts to locate the tank. A second tank, an empty riveted, 550-gallon tank, was uncovered in the southwest quadrant of grid cell 2 and removed. Two additional USTs were uncovered in Grid Cell 7, one riveted, 550-gallon UST and one 1,000-gallon steel UST encased in a concrete vault. Two tanks, a 30-gallon steel UST and a 750-gallon UST were also uncovered in Grid Cell 6, removed and disposed as scrap metal. All USTs, except the one left in place, were excavated and disposed at TNT Scrap LLC, Maspeth, NY.
9. Installation of a composite cover system consisting of, at a minimum, 2 feet of clean soil and/or 6 inches of asphalt or concrete. The final composite cover system will include the library and park ranger station foundations, which will be slab-on-grade with a shallow pile-cap grade-beam system, not expected to extend beneath the demarcation layer. Additionally, there may be ancillary buildings of similar construction. Proposed stone walkways underlain by a gravel substrate, landscaped pervious areas, and a possible water element with an impervious concrete slab foundation are also part of the composite cover system.
10. S-ISCO™ addressed the bulk of the contaminant source mass. The greater part of the mass occurred from approximately 10 ft-bg to 22 ft-bg, (i.e., the treatment zone) and encompassed about 67 percent of the contaminant mass (53,600 pounds). Combined with the removal of the top four to five feet of soil and the Hot Spot and gross contamination removal, over 90 percent of the total contaminant mass was removed or destroyed in place. Additional S-ISCO™ treatment addressed deep contamination atop the till layer near the southwest corner of Parcel 8.
11. All activities associated with the remedial action, including permitting requirements, were conducted in accordance with the applicable Federal, State and local rules and regulations.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

12. Recording of an Environmental Easement requiring implementation of engineering and institutional controls described in a Department-approved Site Management Plan (SMP) to manage residual contamination.
13. Publication of this SMP for long term management of residual contamination, as required by the Environmental Easement, that: (i) requires installation of a sub-slab depressurization system and vapor barrier for any occupied buildings constructed on the Site, (ii) details procedures for future maintenance of engineering controls and management of any residual Site contamination and (iii) addresses procedures for future Oxygen Release Compound Advanced™ (ORCA) application, if necessary, including monitoring parameters to prevent migration of contaminated groundwater off Site.

Remedial activities were completed at the Site in December 2011.

1.4.1 Removal of Contaminated Materials from the Site

Based on the results of the Remedial Investigation, the following Remedial Action Objectives (RAOs) have been identified for this Site.

Groundwater

RAOs for Public Health Protection

- Prevent ingestion of groundwater containing contaminant levels exceeding drinking water standards.
- Prevent contact with, or inhalation of, volatiles emanating from contaminated groundwater.
- The cleanup objectives for groundwater are the TOGS Class GA AWQS and/or achievement of asymptotic levels for VOCs and naphthalene during the proposed eight quarters of post-remedial monitoring.

RAOs for Environmental Protection

- Restore groundwater aquifer, to the extent practicable, to pre-disposal/pre-release conditions and/or to a level commensurate with Site use.
- Prevent the discharge of contaminants to surface water.
- Prevent further off-Site migration of contaminated groundwater.
- Remove the source of groundwater contamination.

Soil

RAOs for Public Health Protection

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Prevent ingestion/direct contact with contaminated soil.
- Prevent inhalation of, or exposure to, contaminants volatilizing from contaminated soil.

RAOs for Environmental Protection

- Prevent migration of contaminants that would result in groundwater.

There is no surface water on Site, so the remedial action did not address this medium. There were no material adverse impacts to sediment stemming from Parcel 8, so the remedial action did not address this medium.

A list of the soil cleanup objectives (SCOs) for the primary contaminants of concern (COCs) and applicable land use for this site is provided in Table 1.

A figure showing areas where excavation was performed is shown in Figure 6.

1.4.2 Site-Related Treatment Systems

A sub-slab depressurization system (SSDS) and vapor barrier will be installed to mitigate soil vapors and prevent their entry into any future structures. It should be noted that these are a precaution only, as soil vapor sampling completed before remediation demonstrated that the contamination posed no source of adverse soil vapors.

The vapor barrier will be a heavy grade (20 mil minimum thickness), impervious plastic that surrounds the building basement floor and walls. The SSDS will lie beneath the library building footprint and park ranger station and consist of a series of perforated polyvinyl chloride (PVC) pipes connected to a manifold that connects to a PVC pipe that leads to the roof whereupon a fan will discharge soil vapors to the air. The SSDS will be an active system. Refer to Appendix K for SSDS details and the location of the SSDS (to be provided upon SSDS design).

1.4.3 Remaining Contamination

Table 2 and Figure 7 summarize the results of all soil samples remaining at the site after completion of Remedial Action that exceed the Track 1 (unrestricted) SCOs. Table 2 and Figure 8 summarize the results of all soil samples remaining after remediation above the Site-specific action levels.

2.0 ENGINEERING AND INSTITUTIONAL CONTROL PLAN

2.1 INTRODUCTION

2.1.1 General

Since remaining contaminated soil and groundwater exists beneath the site, Engineering Controls and Institutional Controls (EC/ICs) are required to protect human health and the environment. This Engineering and Institutional Control Plan describes the procedures for the implementation and management of all EC/ICs at the site. The EC/IC Plan is one component of the SMP and is subject to revision by NYSDEC.

2.1.2 Purpose

This plan provides:

- A description of all EC/ICs on the site;
- The basic implementation and intended role of each EC/IC;
- A description of the key components of the ICs set forth in the Environmental Easement;
- A description of the features to be evaluated during each required inspection and periodic review;
- A description of plans and procedures to be followed for implementation of EC/ICs, such as the implementation of the Excavation Work Plan for the proper handling of remaining contamination that may be disturbed during maintenance or redevelopment work on the site; and
- Any other provisions necessary to identify or establish methods for implementing the EC/ICs required by the site remedy, as determined by the NYSDEC.

2.2 ENGINEERING CONTROLS

2.2.1 Engineering Control Systems

2.2.1.1 Composite Cover System

Exposure to remaining contamination in soil/fill at the site is prevented by a composite cover system placed over the site. This cover system is comprised of a minimum of two feet of NYSDEC-approved fill and/or six inches of asphalt paving or concrete underlain by a demarcation layer to delineate the cover soil from the subsurface soil. The final composite cover system will include the library and park ranger station foundations, which will be slab-on-grade with a shallow pile-cap grade-beam system, not expected to extend beneath the demarcation layer. Additionally, there may be ancillary buildings of similar construction. Proposed stone walkways underlain by a gravel substrate, landscaped pervious areas, and a possible water element with an impervious concrete slab foundation are also part of the composite cover system. Once Site construction is complete, a figure showing the composite cover system will be appended to this SMP as Figure 12.

The Excavation Work Plan that appears in Appendix A outlines the procedures required to be implemented during construction activities or in the event the cover system is breached, penetrated or temporarily removed, and any underlying remaining contamination is disturbed. Procedures for the inspection and maintenance of this cover are provided in the Monitoring Plan included in Section 4 of this SMP.

2.2.1.2 Vapor Barrier

Vapor barriers will be installed beneath all occupied buildings to be constructed on the Site. The vapor barriers will be installed below the concrete floor slabs and have continuous water stops at the construction joints or utility openings. The vapor barriers will consist of either a minimum 20 mil PVC sheet sealed at all penetrations, spray on Liquid Boot, or equivalent means approvable by NYSDEC.

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

2.2.1.3 Sub-Slab Depressurization Systems

All occupied buildings to be constructed on the Site will have an active SSDS below the vapor barrier in order to further minimize potential vapor intrusion. The SSDS will include the following elements:

- Suction pits under floor slab
- Layer of gas permeable material beneath the concrete floor slab(s)
- Perforated horizontal pipe(s) running from each suction pit to a common header
- A vertical riser extending from the common header to a discharge point above the roof. This pipe will be at least six (6) inches in diameter
- A fan on the roof to provide negative pressure to the sub-slab area
- Monitoring points located throughout the building, which are installed at the lowest level floor slab
- Piping to connect the occupied buildings so as to have one SSDS system for the two separate buildings
- Control panel
- Alarms / remote telemetry system

The operation, maintenance and monitoring (OM&M) requirements for the SSDS consist of start-up testing, routine maintenance and monitoring, and non-routine maintenance as described in Section 4.

Operation of the active SSDS will not be discontinued without written approval by NYSDEC and NYSDOH. A proposal to discontinue the active SSDS and operate in passive mode may be submitted by the property owner based on confirmatory data that justify such a request. In this case, a proposed sampling plan will be presented to NYSDEC and NYSDOH for consideration; however the SSDS will remain in place and operational until permission to discontinue operating actively and operate in passive mode is granted by NYSDEC and NYSDOH.

Procedures for operating and maintaining the SSDS are documented in the Operation and Maintenance Plan (Section 4 of this SMP). Procedures for monitoring the system are included in the Monitoring Plan (Section 3 of this SMP). The Monitoring Plan also addresses severe condition inspections in the event that a severe condition, which may affect controls at the site, occurs.

2.2.2 Criteria for Completion of Remediation/Termination of Remedial Systems

Generally, remedial processes are considered completed when effectiveness monitoring indicates that the remedy has achieved the remedial action objectives identified by the decision document. The framework for determining when remedial processes are complete is provided in Section 6.6 of NYSDEC DER-10.

2.2.2.1 Composite Cover System

The composite cover system is a permanent control and the quality and integrity of this system will be inspected at defined, regular intervals in perpetuity.

2.2.2.2 Sub-Slab Depressurization System (SSDS)

The active SSDS will not be discontinued unless prior written approval is granted by the NYSDEC. In the event that monitoring data indicates that the active SSDS is no longer required, a proposal to switch to a passive SSDS will be submitted by the property owner to the NYSDEC and NYSDOH.

2.3 INSTITUTIONAL CONTROLS

A series of Institutional Controls is required by the RAWP to: (1) implement, maintain and monitor Engineering Control systems; (2) prevent future exposure to remaining contamination by controlling disturbances of the subsurface contamination; and, (3) limit the use and development of the site to commercial uses only. Adherence to these Institutional Controls on the site is required by the Environmental Easement and will be implemented under this Site Management Plan. These Institutional Controls that support Engineering Controls are:

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Compliance with the Environmental Easement and this SMP by the Grantor and the Grantor's successors and assigns;
- All Engineering Controls must be operated and maintained as specified in this SMP;
- All Engineering Controls on the Controlled Property (i.e., the site) must be inspected at a frequency and in a manner defined in this SMP.
- Groundwater, soil vapor and other environmental or public health monitoring must be performed as defined in this SMP;
- Data and information pertinent to Site Management of the Controlled Property must be reported at the frequency and in a manner defined in this SMP;
- A soil vapor mitigation system consisting of an SSDS under all occupied building structures must be inspected, certified, operated and maintained as required by the SMP;
- On-Site environmental monitoring devices, including but not limited to, groundwater monitoring wells, must be protected and replaced as necessary to ensure proper functioning in the manner specified in the SMP;
- Engineering Controls may not be discontinued without an amendment or extinguishment of the Environmental Easement.

The Site has a series of Institutional Controls in the form of site restrictions.

Adherence to these Institutional Controls is required by the Environmental Easement.

Site restrictions that apply to the Controlled Property are:

- The property may only be used for commercial use provided that the long-term Engineering and Institutional Controls included in this SMP are employed.
- The property may not be used for a higher level of use, such as unrestricted or restricted residential, use without additional remediation and amendment of the Environmental Easement, as approved by the NYSDEC;
- All future activities on the property that will disturb remaining contaminated material must be conducted in accordance with this SMP;
- The use of the groundwater underlying the property is prohibited without treatment rendering it safe for intended use;

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- The potential for vapor intrusion must be evaluated for any new buildings or extensions to the proposed library or park ranger station and any potential impacts that are identified must be monitored or mitigated;
- Vegetable gardens and farming on the property are prohibited;
- The site owner or remedial party will submit to NYSDEC a written statement that certifies, under penalty of perjury, that: (1) controls employed at the Controlled Property are unchanged from the previous certification or that any changes to the controls were approved by the NYSDEC; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. NYSDEC retains the right to access such Controlled Property at any time in order to evaluate the continued maintenance of any and all controls. This certification shall be submitted annually, or an alternate period of time that NYSDEC may allow and will be made by an expert that the NYSDEC finds acceptable.

Institutional Controls identified in the Environmental Easement may not be discontinued without an amendment to or extinguishment of the Environmental Easement.

2.3.1 Excavation Work Plan

The site has been remediated for commercial use. Any future intrusive work that will penetrate the soil cover or cap, or encounter or disturb the remaining contamination, including any modifications or repairs to the existing cover system will be performed in compliance with the Excavation Work Plan (EWP) that is attached as Appendix A to this SMP. Any work conducted pursuant to the EWP must also be conducted in accordance with the procedures defined in a Health and Safety Plan (HASP) and Community Air Monitoring Plan (CAMP) prepared for the site. A sample HASP is attached as Appendix D and a sample CAMP is attached as Appendix E to this SMP that is in current compliance with DER-10, and 29 CFR 1910, 29 CFR 1926, and all other applicable Federal, State and local regulations. Based on future changes to State and federal health and safety requirements, and specific methods employed by future contractors, the HASP and CAMP will be updated and re-submitted with the notification provided in Section A-

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

1 of the EWP. Any intrusive construction work will be performed in compliance with the EWP, HASP and CAMP, and will be included in the periodic inspection and certification reports submitted under the Site Management Reporting Plan (See Section 5).

The site owner and associated parties preparing the remedial documents submitted to the State, and parties performing this work, are completely responsible for the safe performance of all intrusive work, the structural integrity of excavations, proper disposal of excavation de-water, control of runoff from open excavations into remaining contamination, and for structures that may be affected by excavations (such as building foundations and bridge footings). The site owner will ensure that site development activities will not interfere with, or otherwise impair or compromise, the engineering controls described in this SMP.

2.3.2 Soil Vapor Intrusion Evaluation

Soil Vapor Intrusion (SVI) evaluation is not needed at the Site as a vapor barrier and an active SSDS will be installed as an element of the building foundation.

2.4 INSPECTIONS AND NOTIFICATIONS

2.4.1 Inspections

Inspections of all remedial components installed at the site will be conducted at the frequency specified in the SMP Monitoring Plan schedule. A comprehensive site-wide inspection will be conducted annually, regardless of the frequency of the Periodic Review Report. The inspections will determine and document the following:

- Whether Engineering Controls continue to perform as designed;
- If these controls continue to be protective of human health and the environment;
- Compliance with requirements of this SMP and the Environmental Easement;
- Achievement of remedial performance criteria;
- Sampling and analysis of appropriate media during monitoring events;
- If site records are complete and up to date; and
- Changes, or needed changes, to the remedial or monitoring system;

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Inspections will be conducted in accordance with the procedures set forth in the Monitoring Plan of this SMP (Section 3). The reporting requirements are outlined in the Periodic Review Reporting section of this plan (Section 5).

If an emergency, such as a natural disaster or an unforeseen failure of any of the ECs occurs, an inspection of the site will be conducted within 5 days of the event to verify the effectiveness of the EC/ICs implemented at the site by a qualified environmental professional as determined by NYSDEC.

2.4.2 Notifications

Notifications will be submitted by the property owner to the NYSDEC as needed for the following reasons:

- 60-day advance notice of any proposed changes in site use that are required under the terms of the Brownfield Cleanup Agreement (BCA), 6NYCRR Part 375, and/or Environmental Conservation Law.
- 7-day advance notice of any proposed ground-intrusive activities pursuant to the Excavation Work Plan.
- Notice within 48-hours of any damage or defect to the foundation structures that reduces or has the potential to reduce the effectiveness of other Engineering Controls and likewise any action to be taken to mitigate the damage or defect.
- Verbal notice by noon of the following day of any emergency, such as a fire, flood, or earthquake that reduces or has the potential to reduce the effectiveness of Engineering Controls in place at the site, with written confirmation within 7 days that includes a summary of actions taken, or to be taken, and the potential impact to the environment and the public.
- Follow-up status reports on actions taken to respond to any emergency event requiring ongoing responsive action shall be submitted to the NYSDEC within 45 days and shall describe and document actions taken to restore the effectiveness of the ECs.

Any change in the ownership of the site or the responsibility for implementing this SMP will include the following notifications:

- At least 60 days prior to the change, the NYSDEC will be notified in writing of the proposed change. This will include a certification that the prospective

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

purchaser has been provided with a copy of the BCA and all approved work plans and reports, including this SMP

- Within 15 days after the transfer of all or part of the site, the new owner's name, contact representative, and contact information will be confirmed in writing.

2.5 CONTINGENCY PLAN

Emergencies may include injury to personnel, fire or explosion, environmental release, or serious weather conditions.

2.5.1 Emergency Telephone Numbers

In the event of any environmentally related situation or unplanned occurrence requiring assistance the Owner or Owner's representative(s) should contact the appropriate party from the contact list below. For emergencies, appropriate emergency response personnel should be contacted. Prompt contact should also be made to Steven E. Panter, FLS. These emergency contact lists must be maintained in an easily accessible location at the site during and after completion of Site development construction.

Table 6: Emergency Contact Numbers

2.5.2 Map and Directions to Nearest Health Facility

Site Location: 4-56 47th Road, Long Island City, New York

Nearest Hospital Name: Mount Sinai of Queens

Hospital Location: 25-10 30th Avenue, Astoria, NY 11102

Hospital Telephone: (718) 932-1000

Directions to the Hospital:

1. Start on 5th Street and 47th Avenue 0.1 mile
2. Turn right onto 46th Road 0.4 mile
3. Turn left onto 21st Street 2.1 mile
4. Turn right onto 29th Avenue 0.2 mile
5. Turn right onto 25th Street/Crescent Street 0.1 mile
6. Arrive at 25-10 30th Avenue, Astoria

Total Distance: 2.9 miles

Total Estimated Time: 10 minutes

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Figure 9 - Map Showing Route from the Site to the Hospital

2.5.3 Response Procedures

As appropriate, the fire department and other emergency response group will be notified immediately by telephone of the emergency. The emergency telephone number list is found at the beginning of this Contingency Plan (Table 6). After construction of the library, the list will also be posted prominently at the site and made readily available to all personnel at all times.

If a spill occurs or is observed, the NYSDEC Spill Hotline should be contacted at (800) 457-7362. Evacuation plans will be developed by the building management and distributed to the building staff as appropriate. Any amendments to this contingency plan will be included in the Annual Report.

3.0 SITE MONITORING PLAN

3.1 INTRODUCTION

3.1.1 General

The Monitoring Plan describes the measures for evaluating the performance and effectiveness of the remedy to reduce or mitigate contamination at the site, the soil cover system, and all affected site media identified below. Monitoring of other Engineering Controls is described in Chapter 4, Operation, Monitoring and Maintenance Plan. This Monitoring Plan may only be revised with the approval of NYSDEC.

3.1.2 Purpose and Schedule

This Monitoring Plan describes the methods to be used for:

- Sampling and analysis of all appropriate media (e.g., groundwater, indoor air, soil vapor, soils);
- Assessing compliance with applicable NYSDEC standards, criteria and guidance, particularly ambient groundwater standards and Part 375 SCOs for soil;
- Assessing achievement of the remedial performance criteria.
- Evaluating site information periodically to confirm that the remedy continues to be effective in protecting public health and the environment; and
- Preparing the necessary reports for the various monitoring activities.

To adequately address these issues, this Monitoring Plan provides information on:

- Sampling locations, protocol, and frequency;
- Information on all designed monitoring systems (e.g., well logs);
- Analytical sampling program requirements;
- Reporting requirements;
- Quality Assurance/Quality Control (QA/QC) requirements;
- Inspection and maintenance requirements for monitoring wells;
- Monitoring well decommissioning procedures; and

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Annual inspection and periodic certification.

Quarterly monitoring of the performance of the remedy and overall reduction in contamination on-site will be conducted for the first two years. The frequency thereafter will be determined by NYSDEC. Trends in contaminant levels in air, soil, and/or groundwater in the affected areas, will be evaluated to determine if the remedy continues to be effective in achieving remedial goals. Monitoring programs are summarized in Table 4 and outlined in detail in Sections 3.2 and 3.3 below.

Table 4: Monitoring/Inspection Schedule

Monitoring Program	Frequency*	Matrix	Analysis
Groundwater	Quarterly for first two years, with frequency thereafter to be determined upon consultation and concurrence of NYSDEC	Groundwater	TCL VOCs, SVOCs & TPH (DRO & GRO), total iron, sulfide, sulfate & alkalinity
Soil Cover	Annually	Soil	Visual Inspection

* The frequency of events will be conducted as specified until otherwise approved by NYSDEC and NYSDOH

TCL – Target Compound List, USEPA SW-846 Methods: VOCs, 8260B; SVOCs, 8270C, TPH (DRO & GRO), 8015

3.2 COMPOSITE COVER SYSTEM MONITORING

At the completion of remedial activities, a soil cover consisting of a minimum of two feet of clean approved soil and/or RCA underlain by a demarcation layer will be placed across the Site. The final composite cover system will also include stone walkways underlain by a gravel substrate (minimum 2 feet thick), landscaped areas (minimum 2 feet thick), the concrete foundations of buildings and other structures (minimum 6 inches thick). The activities required to repair breaches in the composite cover are to be conducted in accordance with this SMP. The components of the composite cover are described in Section 2.2.1.1. Once construction is complete, a figure showing the cover system will be appended to this report as Figure 12. A qualified environmental professional will conduct a yearly inspection of the composite cover. This inspection will include, at a minimum, visual inspection of the cover to determine if it is

intact and free from damage, and the results will be reported in the Annual Report described in Section 5.1. Any damage to the covers will be repaired in kind.

3.3 MEDIA MONITORING PROGRAM

3.3.1 Groundwater Monitoring

Groundwater monitoring will be performed on a periodic basis to assess the performance of the remedy.

Groundwater flow direction is discussed in detail in Section 1.2.3.

Post-treatment groundwater sampling took place on Parcel 8, Peninsula State Park, and Gantry Plaza State Park between September 12, 2011, and September 16, 2011. Groundwater results exceeding the NYSDEC Class GA standards are shown on Figure 12. The results are summarized below.

VOCs

Benzene concentrations decreased and met the TOGS GA AWQS in three wells where pre-treatment concentrations were above the AWQS of 1 ug/L. Following treatment, benzene concentrations were below detection limits in MW17(S), MW20(S), and MW23(S). This represents one-third of the monitoring wells in the Parcel 8 treatment interval. Benzene decreased in all other wells in the treatment interval, except for MW10, but still remains above the AWQS for all of these wells.

Ethylbenzene met the TOGS AWQS in two wells where pre-treatment concentrations were above the guidance value of 5 ug/L. Following treatment, ethylbenzene concentrations were below 5 ug/L in MW17(S) and MW20(S), the same wells where benzene was below TOGS.

Toluene showed variable changes. Overall, six out of nine wells showed a decrease in toluene and median toluene concentration decreased by 49 percent compared to pre-treatment concentration. Toluene concentrations were below detection limits in two wells, MW17(S) and MW23(S), for the first time since sampling began and exhibited increases in MW9, MW10, and MW20(S). MW17(S) and MW23(S) were the only wells

Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087

with post-treatment concentrations below the TOGS toluene guidance value of 5 ug/L. In a third well, MW13(S), toluene dropped appreciably to 6.4 ug/L and came close to the TOGS guidance value.

Overall, seven out of nine wells showed a decrease in total xylenes and the median concentration of total xylenes decreased by 92 percent compared to pre-treatment concentrations. Only one well, MW17(S) reached the TOGS total xylene guidance value of 5 ug/L. Wells MW10 and MW9 showed no appreciable change or a modest increase over pre-treatment concentrations.

SVOCs

Among the SVOCs, naphthalene showed the largest reduction. The median post-treatment naphthalene concentration decreased by 80 percent compared to the pre-treatment concentration. Other SVOC compounds declined as well. Acenaphthene decreased by 46 percent, phenanthrene by 35 percent, and benzo(k)fluoranthene by 100 percent. The remaining PAHs did not show a decrease in median concentrations, and five PAHs exhibited modest increases in concentration. The slight increase is most likely an artifact of residual surfactant and its effect on soils.

The post-treatment median naphthalene concentration showed an overall 80 percent decline compared to the pre-treatment concentration and showed overall decreases in all nine wells. Naphthalene reductions compared to the median results from earlier sampling ranged from 10 percent to 96 percent. A third of the wells experienced naphthalene reductions of 88 percent and higher.

Naphthalene was below the TOGS GA AWQS Guidance value of 10 ug/L in MW17(S). In three previous pre-treatment groundwater sampling events, the naphthalene concentration in MW17(S) ranged from approximately 66 ug/L to 387 ug/L and had a median concentration of 128 ug/L. In the first post-treatment round of sampling, naphthalene measured 4.5 ug/L in this well.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Four sentinel well pairs, each consisting of a shallow and deep well, lie along the western-most part of Parcel 8 for the purpose of monitoring the remedy. The network of on-Site and off-Site wells has been designed to provide ample coverage of the deep and shallow groundwater zones. Monitoring well locations are shown on Figure 11, and hydrogeologic cross sections are shown on Figure 2. Monitoring well construction logs for the newly constructed sentinel wells are included in Appendix F.

The wells will be sampled once per quarter for eight consecutive quarters. Matrix 3 provides the monitoring well details. Monitoring will continue at quarterly intervals until the Volunteer requests a change in schedule. A change may be requested after eight quarters.

**Matrix 3
Monitoring Well Details**

Well	Screen Top, elev.	Screen Bottom, elev.
MW-1S	1.86	-8.14
MW-1D	-8.14	-18.14
MW-2S	2.53	-7.47
MW-2D	-7.47	-17.47
MW-3S	2.34	-7.66
MW-3D	-7.66	-17.66
MW-4S	2.17	-7.87
MW-4D	-7.83	-17.83

The sampling frequency may be modified with the approval NYSDEC. The SMP will be modified to reflect changes in sampling plans approved by NYSDEC.

Deliverables for the groundwater monitoring program are specified below.

3.3.1.1 Sampling Protocol

Sampling protocols are described in the project's Quality Assurance Project Plan (QAPP) presented in Appendix G. All monitoring well sampling activities will be recorded in a field book and a groundwater-sampling log presented in Appendix H. Other observations (e.g., well integrity, etc.) will be noted on the well sampling log. The well sampling log will serve as the inspection form for the groundwater monitoring well network.

3.3.1.2 Monitoring Well Repairs, Replacement And Decommissioning

If biofouling or silt accumulation occurs in the on-site and/or off-site monitoring wells, the wells will be physically agitated/surged and redeveloped. Additionally, monitoring wells will be properly decommissioned and replaced (as per the Monitoring Plan), if an event renders the wells unusable.

Repairs and/or replacement of wells in the monitoring well network will be performed based on assessments of structural integrity and overall performance.

The NYSDEC will be notified prior to any repair or decommissioning of monitoring wells for the purpose of replacement, and the repair or decommissioning and replacement process will be documented in the subsequent periodic report. Well decommissioning without replacement will be done only with the prior approval of NYSDEC. Well abandonment will be performed in accordance with NYSDEC's "Groundwater Monitoring Well Decommissioning Procedures." Monitoring wells that are decommissioned because they have been rendered unusable will be reinstalled in the nearest available location, unless otherwise approved by the NYSDEC.

3.3.2 Contingency Dissolved Groundwater Remediation

The performance of these remedial actions will be assessed by performing groundwater monitoring, as described above. As a contingency, injection/application of ORCA, or similar material, will be performed at the downgradient boundary of the Site if elevated VOCs in groundwater persist and the NYSDEC requires it. If required, the specific design of the contingency groundwater remediation system will be presented to the NYSDEC in a letter work plan for its review and approval prior to implementation.

3.4 SITE-WIDE INSPECTION

Site-wide inspections will be performed on a regular schedule at a minimum of once a year. Site-wide inspections will also be performed after all severe weather conditions that may affect Engineering Controls or monitoring devices. During these inspections, an inspection form will be completed (Appendix I). The form will compile sufficient information to assess the following:

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Compliance with all ICs, including site usage;
- An evaluation of the condition and continued effectiveness of ECs;
- General site conditions at the time of the inspection;
- The site management activities being conducted including, where appropriate, confirmation sampling and a health and safety inspection;
- Compliance with permits and schedules included in the Operation and Maintenance Plan; and
- Confirm that site records are up to date.

3.5 MONITORING QUALITY ASSURANCE/QUALITY CONTROL

All sampling and analyses will be performed in accordance with the requirements of the QAPP prepared for the site (Appendix G). Main Components of the QAPP include:

- Sampling Protocols
- QA/QC Objectives for Data Measurement;
- Sampling Program:
 - Sample containers will be properly washed, decontaminated, and appropriate preservative will be added (if applicable) prior to their use by the analytical laboratory. Containers with preservative will be tagged as such.
 - Sample holding times will be in accordance with the NYSDEC ASP requirements.
 - Field QC samples (e.g., trip blanks, coded field duplicates, and matrix spike/matrix spike duplicates) will be collected as necessary.
- Sample Tracking and Custody;
- Calibration Procedures:
 - All field analytical equipment will be calibrated immediately prior to each day's use. Calibration procedures will conform to manufacturer's standard instructions.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- The laboratory will follow all calibration procedures and schedules as specified in USEPA SW-846 and subsequent updates that apply to the instruments used for the analytical methods.
- Analytical Procedures;
- Preparation of a Data Usability Summary Report (DUSR), which will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and chain of custody procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method.
- Internal QC and Checks;
- QA Performance and System Audits;
- Preventative Maintenance Procedures and Schedules;
- Corrective Action Measures.

3.6 MONITORING REPORTING REQUIREMENTS

During and after construction of the library, forms and any other information generated during regular monitoring events and inspections will be kept on file on-site. All forms, and other relevant reporting formats used during the monitoring/inspection events, will be (1) subject to approval by NYSDEC and (2) submitted at the time of the Periodic Review Report, as specified in the Reporting Plan of this SMP.

All monitoring results will be reported to NYSDEC on a periodic basis in the Periodic Review Report. The report will include, at a minimum:

- Date of event;
- Personnel conducting sampling;
- Description of the activities performed;
- Type of samples collected (e.g., sub-slab vapor, indoor air, outdoor air, etc);
- Copies of all field forms completed (e.g., well sampling logs, chain-of-custody documentation, etc.);

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Sampling results in comparison to appropriate standards/criteria;
- A figure illustrating sample type and sampling locations;
- Copies of all laboratory data sheets and the required laboratory data deliverables required for all points sampled (to be submitted electronically in the NYSDEC-identified format);
- Any observations, conclusions, or recommendations; and
- A determination as to whether groundwater conditions have changed since the last reporting event.

Data will be reported in hard copy or digital format as determined by NYSDEC.

A summary of the monitoring program deliverables are summarized in Table 5 below.

Table 5: Schedule of Monitoring/Inspection Reports

Task	Reporting Frequency*
Groundwater Monitoring	Quarterly for first two years. Frequency thereafter to be determined upon consultation and concurrence of NYSDEC
Composite Cover System Inspections	Annually

* The frequency of events will be conducted as specified until otherwise approved by NYSDEC

4.0 OPERATION AND MAINTENANCE PLAN

4.1 INTRODUCTION

This Operation and Maintenance Plan describes the measures necessary to operate, monitor and maintain the mechanical components of the remedy selected for the site. This Operation and Maintenance Plan:

- Includes the steps necessary to allow individuals unfamiliar with the site to operate and maintain the SSDS;
- Includes an operation and maintenance contingency plan; and,
- Will be updated periodically to reflect changes in site conditions or the manner in which the SSDS is operated and maintained.

Information on non-mechanical Engineering Controls (i.e., composite cover system) is provided in Section 3 - Engineering and Institutional Control Plan. A copy of this Operation and Maintenance Plan, along with the complete SMP, will be kept at the site. This Operation and Maintenance Plan is not to be used as a stand-alone document, but as a component document of the SMP.

4.2 ENGINEERING CONTROL SYSTEM OPERATION AND MAINTENANCE

4.2.1 Sub-Slab Depressurization System

All future buildings constructed on the Site will have an active SSDS installed below the vapor barrier in order to mitigate possible soil vapor intrusion and eliminate an exposure pathway. The SSDS will have the following elements:

- Suction pits under floor slab
- Gas permeable aggregate layer beneath the concrete floor slab(s)
- Solid horizontal pipe(s) running from each suction pit to a common header
- A vertical riser extending from the common header to a discharge point above the roof. The exhaust will be located in accordance with NYSDOH Soil Vapor Guidance (October 2006). This pipe will be at least six (6) inches in diameter

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Monitoring points located throughout the buildings, which are installed at the lowest level floor slab. Collection of soil gas samples from the SSDS is not necessary, however, if needed in the future, soil gas samples can be collected through the monitoring points.
- Piping to connect the library and park ranger station so as to have one SSDS system for the two separate buildings
- Blower test on the stub from the basement and application of pressure and/or vacuum to demonstrate that a pressure field extension can be created. Also used as an aid to sizing the vacuum fan.
- Control Panel with warning alarms to indicate system malfunction/shut down.

Operation of the SSDS will continue unless authorized in writing by NYSDEC and NYSDOH. A proposal to discontinue the blower for the active SSDS, leaving a passive system, may be submitted by the property owner based on confirmatory data that justify such a request.

4.2.1.1 Scope

The requirements for the SSDS consist of baseline sampling, initial start-up testing, routine maintenance and monitoring, and non-routine maintenance. Each is described in the following subsections.

4.2.1.2 System Start-Up and Testing

This subsection presents procedures for proper installation and testing of the SSDS prior to use. Start-up testing will ensure that the SSDS is capable of operating effectively. The procedures comply with the post-mitigation/confirmation testing requirements in NYSDOH's *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006 and Appendix F within the NYSDOH document, entitled *Model Standards and Techniques for Control of Radon in New Residential Buildings* (EPA 402-R-94-009; March 1994), as well as *Radon Prevention in the Design and Construction of Schools and Other Large Buildings* (EPA/625/R-92/016; June 1994).

The objective of an SSDS is to rely on suction propagated by means of a vacuum fan that removes vapors before they reach the building interior. The operational goal is to achieve a minimum differential pressure of 0.01 inches of water column (w.c.) between the sub-slab air and the ambient indoor air (EPA/625/R-92/016; June 1994). The

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

following will be completed during SSDS start-up testing and/or activation to achieve this objective:

1. Measure the sub-slab pressure at each monitoring point shortly before and after SSDS start-up, using a hand-held Dwyer 475 MARK II-000 digital manometer, or equivalent. The valve box controlling the vacuum at each suction pit will be used to balance the sub-slab air pressure.
2. Smoke tests will be employed after achieving a vacuum of -0.01 inches of water to identify any leaks through the concrete floor (through cracks, floor joints, etc.). Leaks will be sealed until the smoke tests indicate that an effective seal(s) has been made throughout the entire floor slab.
3. Appliances relying on natural draft for exhaust of carbon monoxide and other combustion gasses will be tested for back draft caused by operation of the SSDS. Testing for back draft will entail use of a carbon monoxide meter to detect this compound near appliance exhaust apparatus. If necessary, any back draft attributable to the SSDS will be corrected by sealing any leaks in the floor slab as described in Item 2.
4. Operation of the warning device on the vacuum fan will be confirmed.

The system testing described above will be conducted if, in the course of the SSDS lifetime, significant changes are made to the system, and the system must be restarted.

4.2.1.3 System Operation: Routine Operation Procedures

Routine maintenance and inspection will be conducted to ensure that the SSDS is capable of proper operation.

Quarterly Inspection Procedures

Each quarter, qualified personnel will confirm that the vacuum fan and warning device are operational. Appendix K has a routine SSDS maintenance checklist. Appendix K will also contains an Operations, Maintenance, and Monitoring (OM&M) manual for SSDS vacuum fans and filters once design is complete. Refer to Section 4.3.1.1 Monitoring Schedule.

Annual Inspection Procedures

Qualified personnel will inspect and address the following on an annual basis:

- Visually inspect the entire SSDS system
- Inspect vacuum fan for bearing failures or other indications of wear and tear or abnormal operating, repair or replace, if required
- Inspect vent pipe discharge for obstructions or nearby air intakes, windows, etc.
- Through inquiries with building maintenance and management personnel, determine if any heating, ventilation, or air conditioning (HVAC) changes have occurred that might affect SSDS operation or effectiveness. Inquires should also be made about any other conditions that would warrant investigation of the SSDS.
- Inspect floor slab and foundation walls for evidence of cracks and/or holes and repair, if required
- Measure indoor air combustible gas levels at minimum of three locations per floor. Readings will be collected using a properly calibrated portable instrument. These measurements must be made during the heating season.

4.2.1.4 System Operation: Routine Equipment Maintenance

Follow the manufacturer's maintenance and inspection recommendation presented in the manual in Appendix K.

4.2.1.5 System Operation: Non-Routine Equipment Maintenance

Non-routine maintenance applies when the warning device indicates the SSDS is working improperly or the system becomes damaged, or some other condition arises indicating that inspection or maintenance is required. Non-routine maintenance will vary depending on the nature of the situation.

1. Begin with a discussion with building maintenance and management personnel to identify any potential sources of malfunction or unusual circumstances or events
2. Examine the building for structural, HVAC, or other changes that could affect the SSDS (e.g., new combustion appliances, new fixtures near the vent pipe on the roof, bird or insect nests near vent openings, excessive moisture, construction or other maintenance, abrupt temperature changes in equipment)
3. Examine and address the cause activating the warning device and the vacuum fan, if applicable, and measure the pressure at the monitoring points. (first check for

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

an electrical switch malfunction as this is often a common cause of improper warning device activation.)

4. Repair or adjust the SSDS as appropriate. If necessary, the SSDS should be restarted.

4.3 ENGINEERING CONTROL SYSTEM PERFORMANCE MONITORING

4.3.1 Sub-Slab Depressurization System

Sub-slab depressurization systems will be installed to mitigate possible soil vapor intrusion into occupied buildings. The SSDS will have the following elements:

- Suction pits under floor slab
- Gas permeable aggregate layer
- Solid horizontal pipe(s) running from each suction pit to a common header
- A vertical riser extending from the common header to a discharge point above the roof. This pipe will be at least six (6) inches in diameter
- Monitoring points located throughout the building, which are installed at the lowest level floor slab
- Piping to connect the library and park ranger station so as to have one SSDS system for the two separate buildings
- Control panel
- Alarms

The SSDS will begin operating following installation and granting of the certificate of occupancy.

4.3.1.1 Monitoring Schedule

Inspection frequency is subject to change with the approval of the NYSDEC. Unscheduled inspections and/or sampling may take place when a suspected failure of the SSDS has been reported or an emergency occurs that is deemed likely to affect the operation of the system. Monitoring deliverables for the SSDS are specified later in this Plan.

Baseline Sampling

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Sampling will consist of baseline measurements to gauge 1) sub-slab soil vapor pressures and 2) sub-slab soil vapor VOC concentrations. Baseline sub-slab soil vapor pressures will be collected after construction of the library, principally the concrete floor slab, monitoring points, and vent stack, and before system start-up. Sub-slab soil vapor pressure measurements will be collected from the monitoring points installed in the concrete floor slab. Sub-slab pressure measurements will be collected a minimum of three times before SSDS start-up.

Inspection Frequency

- Initial inspection frequency for first year/month

Inspections shall occur weekly for the first month following SSDS start-up and once every three months for the remaining first year.

- Long-term inspection frequency

Inspections will take place annually after the first year of SSDS operation, during the heating season. A log book will be maintained with monthly entries using the Monthly Sub-Slab Depressurization System Inspection form (Appendix K), documenting the proper functioning of the SSDS. Matrix 4 summarizes the inspection and monitoring frequency.

Matrix 4 – Monitoring Schedule	
Inspection/Monitoring Type	Frequency
Baseline Testing	Pre-SSDS start-up soil pressure testing
Start-up & Testing	Initial and weekly SSDS inspections for first month of operation
SSDS Inspection	Quarterly following start-up for the first year. Annually thereafter.
SSDS Warning Device	Monthly log book entry to document its proper function.

Inspection frequency is subject to change with the approval of the NYSDEC. Unscheduled inspections and/or sampling may take place when a suspected failure of the SSDS has been reported or an emergency occurs that is deemed likely to affect the

operation of the system. Monitoring deliverables for the SSDS are specified later in this Plan.

4.3.1.2 SSDS Monitoring and Inspection

A visual inspection of the complete system will be conducted during the monitoring event. SSDS components to be monitored include, but are not limited to, the following:

- Vacuum blower; and,
- General system piping.

A complete list of components to be checked is provided in the Inspection Checklist, presented in Appendix I. If any equipment readings are not within their typical range, any equipment is observed to be malfunctioning, or the system is not performing within specifications, maintenance and repair as per the Operation and Maintenance Plan are required immediately, and the SSDS system restarted.

4.3.1.3 System Monitoring Devices and Alarms

The SSDS has a warning device to indicate that the system is not operating properly. The warning device will alert the building superintendant and maintenance staff, who will be trained to trouble shoot the SSDS. A sample documentation log is attached as a form in Appendix K. If additional assistance is needed, the building superintendant will notify the remedial engineer. In the event that the warning device is activated, applicable maintenance and repairs will be conducted, as specified in the Operation and Maintenance Plan, and the SSDS system restarted. Operational problems will be noted in the subsequent Periodic Review Report.

4.4 MAINTENANCE AND PERFORMANCE MONITORING REPORTING REQUIREMENTS

During Site development and after completion of the Site buildings, maintenance reports and any other information generated during regular operations at the site will be kept on-file on-site. All reports, forms, and other relevant information generated will be

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

available upon request to the NYSDEC and submitted as part of the Periodic Review Report, as specified in the Section 5 of this SMP.

4.4.1 Routine Maintenance Reports

Checklists or forms (see Appendices I and K) will be completed during each routine maintenance event. Checklists/forms will include, but not be limited to the following information:

- Date;
- Name, company, and position of person(s) conducting maintenance activities;
- Maintenance activities conducted;
- Any modifications to the system;
- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents noted (included either on the checklist/form or on an attached sheet); and,
- Other documentation such as copies of invoices for maintenance work, receipts for replacement equipment, etc., (attached to the checklist/form).

4.4.2 Non-Routine Maintenance Reports

During each non-routine maintenance event, a form will be completed which will include, but not be limited to, the following information:

- Date;
- Name, company, and position of person(s) conducting non-routine maintenance/repair activities;
- Presence of leaks;
- Date of leak repair;
- Other repairs or adjustments made to the system;

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Where appropriate, color photographs or sketches showing the approximate location of any problems or incidents (included either on the form or on an attached sheet); and,
- Other documentation such as copies of invoices for repair work, receipts for replacement equipment, etc. (attached to the checklist/form).

5.0 INSPECTIONS, REPORTING AND CERTIFICATIONS

5.1 SITE INSPECTIONS

5.1.1 Inspection Frequency

All inspections will be conducted at the frequency specified in the schedules provided in Section 3 Monitoring Plan and Section 4 Operation and Maintenance Plan of this SMP. At a minimum, a site-wide inspection will be conducted annually. Inspections of remedial components will also be conducted when a breakdown of any treatment system component has occurred or whenever a severe condition has taken place, such as an erosion or flooding event that may affect the ECs.

5.1.2 Inspection Forms, Sampling Data, and Maintenance Reports

All SSDS inspections and monitoring events will be recorded on the appropriate forms which are contained in Appendices I and K. Additionally, a general site-wide inspection form will be completed during the site-wide inspection (see Appendix I). These forms are subject to NYSDEC revision.

All applicable inspection forms and other records, including all media sampling data and system maintenance reports, generated for the site during the reporting period will be provided in electronic format in the Periodic Review Report.

5.1.3 Evaluation of Records and Reporting

The results of the inspection and site monitoring data will be evaluated as part of the EC/IC certification to confirm that the:

- EC/ICs are in place, are performing properly, and remain effective;
- The Monitoring Plan is being implemented;
- Operation and maintenance activities are being conducted properly; and, based on the above items,

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- The site remedy continues to be protective of public health and the environment and is performing as designed in the RAWP and FER.

5.2 CERTIFICATION OF ENGINEERING AND INSTITUTIONAL CONTROLS

After the last inspection of the reporting period, a Professional Engineer licensed to practice in New York State will prepare the following certification:

For each institutional or engineering control identified for the site, I certify that all of the following statements are true:

- The inspection of the site to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under my direction;
- The institutional control and/or engineering control employed at this site is unchanged from the date the control was put in place, or last approved by the Department;
- Nothing has occurred that would impair the ability of the control to protect the public health and environment;
- Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control;
- Access to the site will continue to be provided to the Department to evaluate the remedy, including access to evaluate the continued maintenance of this control;
- Use of the site is compliant with the environmental easement;
- The engineering control systems are performing as designed and are effective;
- To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program and generally accepted engineering practices; and
- The information presented in this report is accurate and complete.
- I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, Arnold F. Fleming,

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

PE, of Fleming-Lee Shue, Inc., 158 West 29th Street, 9th Floor, New York, NY 10001, am certifying as Owner's Designated Site Representative for the site.

The signed certification will be included in the Periodic Review Report described below.

- No new information has come to my attention, including groundwater monitoring data from wells located at the site boundary, if any, to indicate that the assumptions made in the qualitative exposure assessment of off-site contamination are no longer valid; and

Every five years the following certification will be added:

- The assumptions made in the qualitative exposure assessment remain valid.

The signed certification will be included in the Periodic Review Report described below.

5.3 PERIODIC REVIEW REPORT

An annual Periodic Review Report will be submitted to the Department every year, beginning eighteen months after the Certificate of Completion is issued. In the event that the site is subdivided into separate parcels with different ownership, a single Periodic Review Report will be prepared that addresses the site described in Appendix B (Metes and Bounds). The report will be prepared in accordance with NYSDEC DER-10 and submitted within 45 days of the end of each certification period. Media sampling results will also be incorporated into the Periodic Review Report. The report will include:

- Identification, assessment and certification of all ECs/ICs required by the remedy for the site;
- Results of the required annual site inspections and severe condition inspections, if applicable;
- All applicable inspection forms and other records generated for the site during the reporting period in electronic format;
- A summary of any discharge monitoring data and/or information generated during the reporting period with comments and conclusions;

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

- Data summary tables and graphical representations of contaminants of concern by media (groundwater, soil vapor), which include a listing of all compounds analyzed, along with the applicable standards, with all exceedances highlighted. These will include a presentation of past data as part of an evaluation of contaminant concentration trends;
- Results of all analyses, copies of all laboratory data sheets, and the required laboratory data deliverables for all samples collected during the reporting period will be submitted electronically in a NYSDEC-approved format;
- A site evaluation, which includes the following:
 - The compliance of the remedy with the requirements of the site-specific RAWP;
 - The operation and the effectiveness of all treatment units, etc., including identification of any needed repairs or modifications;
 - Any new conclusions or observations regarding site contamination based on inspections or data generated by the Monitoring Plan for the media being monitored;
 - Recommendations regarding any necessary changes to the remedy and/or Monitoring Plan; and
 - The overall performance and effectiveness of the remedy.
- A performance summary for the SSDS during the calendar year, including information such as:
 - The number of days the system was run for the reporting period;
 - The average, high, and low flows per day;
 - The contaminant mass removed;
 - A description of breakdowns and/or repairs along with an explanation for any significant downtime;
 - A description of the resolution of performance problems;
 - A summary of the performance, effluent and/or effectiveness monitoring; and
 - Comments, conclusions, and recommendations based on data evaluation.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

The Periodic Review Report will be submitted, in hard-copy format, to the NYSDEC Central Office and Regional Office in which the site is located, and in electronic format to NYSDEC Central Office, Regional Office and the NYSDOH Bureau of Environmental Exposure Investigation.

5.4 CORRECTIVE MEASURES PLAN

If any component of the remedy is found to have failed, or if the periodic certification cannot be provided due to the failure of an institutional or engineering control, a corrective measures plan will be submitted to the NYSDEC for approval. This plan will explain the failure and provide the details and schedule for performing work necessary to correct the failure. Unless an emergency condition exists, no work will be performed pursuant to the corrective measures plan until it is approved by the NYSDEC.

APPENDIX A – EXCAVATION WORK PLAN

A-1 NOTIFICATION

At least 15 days prior to the start of any activity that is anticipated to encounter remaining contamination, the site owner or their representative will notify the Department. Currently, this notification will be made to:

Jane H. O'Connell
Regional Hazardous Waste Remediation Engineer
NYSDEC Region 2
47-40 21st Street,
Long Island City, NY 11101

This notification will include:

- A detailed description of the work to be performed, including the location and areal extent, plans for site re-grading, intrusive elements or utilities to be installed below the soil cover, estimated volumes of contaminated soil to be excavated and any work that may impact an engineering control,
- A summary of environmental conditions anticipated in the work areas, including the nature and concentration levels of contaminants of concern, potential presence of grossly contaminated media, and plans for any pre-construction sampling;
- A schedule for the work, detailing the start and completion of all intrusive work,
- A summary of the applicable components of this EWP,
- A statement that the work will be performed in compliance with this EWP and 29 CFR 1910.120,
- A copy of the contractor's health and safety plan, in electronic format, if it differs from the sample HASP provided in Appendix D of this document,
- Identification of disposal facilities for potential waste streams,
- Identification of sources of any anticipated backfill, along with all required chemical testing results.

A-2 SOIL SCREENING METHODS

Visual, olfactory and instrument-based soil screening will be performed by a qualified environmental professional during all remedial and development excavations into known or potentially contaminated material (remaining contamination). Soil screening will be performed regardless of when the invasive work is done and will include all excavation and invasive work performed during development, such as excavations for foundations and utility work, after issuance of the COC.

Soils will be segregated based on previous environmental data and screening results into material that requires off-site disposal, material that requires testing, material that can be returned to the subsurface, and material that can be used as cover soil.

A-3 STOCKPILE METHODS

Soil stockpiles will be continuously encircled with a berm and/or silt fence. Hay bales will be used as needed near catch basins, surface waters and other discharge points.

When not in use, stockpiles will be kept covered at all times with appropriately anchored tarps. Stockpiles will be routinely inspected and damaged tarp covers will be promptly replaced.

If needed, odor suppressant material will be applied to the stockpiled soil prior to covering. A nearby hydrant serves as a readily available source of water to control dust.

Stockpiles will be inspected at a minimum once each week and after every storm event. Results of inspections will be recorded in a logbook and maintained at the site and available for inspection by NYSDEC.

A-4 MATERIALS EXCAVATION AND LOAD OUT

A qualified environmental professional or person under their supervision will oversee all invasive work and the excavation and load-out of all excavated material.

The owner of the property and its contractors are solely responsible for safe execution of all invasive and other work performed under this Plan.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

The presence of utilities and easements on the site will be investigated by the qualified environmental professional. It will be determined whether a risk or impediment to the planned work under this SMP is posed by utilities or easements on the site.

Loaded vehicles leaving the site will be appropriately lined, tarped, securely covered, manifested, and placarded in accordance with appropriate Federal, State, local, and NYSDOT requirements (and all other applicable transportation requirements).

A truck wash will be operated on-site. The qualified environmental professional will be responsible for ensuring that all outbound trucks will be washed at the truck wash before leaving the site until the activities performed under this section are complete.

Locations where vehicles enter or exit the site shall be inspected daily for evidence of off-site soil tracking.

The qualified environmental professional will be responsible for ensuring that all egress points for truck and equipment transport from the site are clean of dirt and other materials derived from the site during intrusive excavation activities. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to site-derived materials.

A-5 MATERIALS TRANSPORT OFF-SITE

All transport of materials will be performed by licensed haulers in accordance with appropriate local, State, and Federal regulations, including 6 NYCRR Part 364. Haulers will be appropriately licensed and trucks properly placarded.

Material transported by trucks exiting the site will be secured with tight-fitting covers. Loose-fitting canvas-type truck covers will be prohibited. If loads contain wet material capable of producing free liquid, truck liners will be used.

All trucks will be washed prior to leaving the site. Truck wash waters will be collected and disposed of off-site in an appropriate manner.

Proposed in-bound and out-bound truck routes to the Site are shown in Figure 1 of Appendix J.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

All trucks loaded with site materials will exit the vicinity of the site using only these approved truck routes. This is the most appropriate route and takes into account: (a) limiting transport through residential areas and past sensitive sites; (b) use of city mapped truck routes; (c) prohibiting off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; (f) overall safety in transport; and (g) community input.

Trucks will be prohibited from stopping and idling in the neighborhood outside the project site.

Egress points for truck and equipment transport from the site will be kept clean of dirt and other materials during site remediation and development.

When possible, queuing of trucks will be performed on-site in order to minimize off-site disturbance. Off-site queuing will be prohibited.

A-6 MATERIALS DISPOSAL OFF-SITE

All soil/fill/solid waste excavated and removed from the site will be treated as contaminated and regulated material and will be transported and disposed in accordance with all local, State (including 6NYCRR Part 360) and Federal regulations. If disposal of soil/fill from this site is proposed for unregulated off-site disposal (i.e. clean soil removed for development purposes), a formal request with an associated plan will be made to the NYSDEC. Unregulated off-site management of materials from this site will not occur without formal NYSDEC approval.

Off-site disposal locations for excavated soils will be identified in the pre-excavation notification. This will include estimated quantities and a breakdown by class of disposal facility if appropriate, i.e. hazardous waste disposal facility, solid waste landfill, petroleum treatment facility, C/D recycling facility, etc. Actual disposal quantities and associated documentation will be reported to the NYSDEC in the Periodic Review Report. This documentation will include: waste profiles, test results, facility acceptance letters, manifests, bills of lading and facility receipts.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Non-hazardous historic fill and contaminated soils taken off-site will be handled, at minimum, as a Municipal Solid Waste per 6NYCRR Part 360-1.2. Material that does not meet Track 1 unrestricted SCOs is prohibited from being taken to a New York State recycling facility (6NYCRR Part 360-16 Registration Facility).

A-7 MATERIALS REUSE ON-SITE

Soil above the demarcation layer may be reused on-Site with no restrictions. All soils imported as part of remediation, other than approved RCA, have met the soil import requirements listed in A-10.

Soil below the demarcation layer may be reused below the demarcation layer only as long as it is free of odors or staining. Soil chemical sampling is not required.

The qualified environmental professional will ensure that procedures defined for materials reuse in this SMP are followed and that unacceptable material does not remain on-site. Contaminated on-site material, including historic fill and contaminated soil, that is acceptable for re-use on-site will be placed below the demarcation layer or impervious surface, and will not be reused within a cover soil layer, within landscaping berms, or as backfill for subsurface utility lines.

Any demolition material proposed for reuse on-site will be sampled for asbestos and the results will be reported to the NYSDEC for acceptance. Concrete crushing or processing on-site will not be performed without prior NYSDEC approval. Organic matter (wood, roots, stumps, etc.) or other solid waste derived from clearing and grubbing of the site will not be reused on-site.

A-8 FLUIDS MANAGEMENT

All liquids to be removed from the site, including excavation dewatering and groundwater monitoring well purge and development waters, will be handled, transported and disposed in accordance with applicable local, State, and Federal regulations. Dewatering, purge and development fluids will not be recharged back to the land surface or subsurface of the site, but will be managed off-site.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Discharge of water generated during large-scale construction activities to surface waters (i.e. a local pond, stream or river) will be performed under a SPDES permit.

A-9 COVER SYSTEM RESTORATION

After the completion of soil removal and any other invasive activities the cover system will be restored in a manner that complies with the RAWP. The demarcation layer, consisting of orange snow fencing material or equivalent material will be replaced to provide a visual reference to the top of the 'Remaining Contamination Zone', the zone that requires adherence to special conditions for disturbance of remaining contaminated soils defined in this Site Management Plan. If the type of cover system changes from that which exists prior to the excavation (i.e., a soil cover is replaced by asphalt), this will constitute a modification of the cover element of the remedy and the upper surface of the 'Remaining Contamination.' A figure showing the modified surface will be included in the subsequent Periodic Review Report and in any updates to the Site Management Plan.

A-10 BACKFILL FROM OFF-SITE SOURCES

This section presents the requirements for imported clean fill. All imported fill will meet the more stringent of the Protection of Groundwater or Protection of Public Health SCOs for Commercial Use as described in 6 NYCRR 375-6.7(d) and listed in Table 3 unless otherwise approved by NYSDEC.

A preliminary property review will be conducted to evaluate sources of potential fill to be used on-Site and will include documentation of each source's location and current and historical use(s). The following potential sources will be considered, subject to NYSDEC approval:

- Virgin sources (i.e., native soils and/or sediments from undeveloped properties),
- Construction projects at non-industrial properties,
- Roadway or other transportation-related projects,
- Other non-industrial sources, and
- Recycled concrete aggregate.

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Prior to accepting any fill material, except for previously-approved recycled concrete aggregate, the procedures described below will be followed to verify the acceptability of the source. History of fill material source properties will be determined using historical Sanborn Fire Insurance Maps, if available, and one or more of the following sources:

- For fill sources in New York City or other urban areas, historical maps (Sanborn Maps) will be reviewed, if available,
- Aerial photographs,
- Historical title information,
- Site reconnaissance,
- Regulatory agency(ies) database review (NYSDEC, EPA), and/or
- Interviews of knowledgeable persons.

Confirmatory samples will be collected at a frequency specified in NYSDEC DER-10 Table 5.4(e)10 (summarized below).

Number of Samples to be collected for Imported Material		
Sampling Parameter	TCL VOCs	Full TCLP parameters, TCL SVOCs, TCL PCBs, TCL herbicides, and TAL Metals
Soil Quantity (Cubic Yards)	Grab	Five-point Composite
0-50	1	1
50-100	2	1
100-200	3	1
200-300	4	1
300-400	4	2
400-500	5	2
500-800	6	2
800-1,000	7	2
> 1,000 cubic yards	Add two additional VOC grab samples and one five-point composite sample for each additional 1,000 cubic yards or propose a lesser frequency of testing for NYSDEC approval	

Materials from virgin sources will be tested initially, and will consist of collecting and analyzing a minimum of one sample from the initial 100 cubic yards for the

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

parameters listed above. Imported materials from non-virgin sources will be tested at a frequency and for the parameters listed in the above table.

All materials proposed for import onto the site will be approved by the qualified environmental professional and will be in compliance with provisions in this SMP prior to receipt at the site.

Material from industrial sites, spill sites, or other environmental remediation sites or potentially contaminated sites will not be imported to the site.

All imported soils will meet the backfill and cover soil quality standards established in 6NYCRR 375-6.7(d). Based on an evaluation of the land use, protection of groundwater and protection of ecological resources criteria, the resulting soil quality standards are listed in Table 3. Soils that meet 'exempt' fill requirements under 6 NYCRR Part 360, but do not meet backfill or cover soil objectives for this site, will not be imported onto the site without prior approval by NYSDEC. Solid waste will not be imported onto the site.

Trucks entering the site with imported soils will be securely covered with tight fitting covers. Imported soils will be stockpiled separately from excavated materials and covered to prevent dust releases.

A-11 STORMWATER POLLUTION PREVENTION

This Site is less than an acre in size; therefore a stormwater pollution prevention plan (SWPPP) is not required during construction. Stormwater from the Site buildings will be collected via roof drains, which will be directly connected to either the NYCDEP storm sewer located on 47th Road or the storm sewer located on Center Boulevard. Stormwater pollution prevention measures will comply with the August 2005 or most recent New York Standards and Specifications for Erosion and Sediment Control (<http://www.dec.ny.gov/chemical/29066.html>).

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Silt fencing or hay bales will be installed around the entire perimeter of the construction area only if warranted by site conditions and there is a reasonable chance that sediment transport or erosion could occur.

A-12 CONTINGENCY PLAN

If underground tanks or other previously unidentified contaminant sources are found during post-remedial subsurface excavations or development related construction, excavation activities will be suspended until sufficient equipment is mobilized to address the condition.

Sampling will be performed on product, sediment and surrounding soils, etc. as necessary to determine the nature of the material and proper disposal method. Chemical analysis will be performed for full a full list of analytes (TAL metals; TCL volatiles and semi-volatiles, TCL pesticides and PCBs), unless the site history and previous sampling results provide a sufficient justification to limit the list of analytes. In this case, a reduced list of analytes will be proposed to the NYSDEC for approval prior to sampling.

Identification of unknown or unexpected contaminated media identified by screening during invasive site work will be promptly communicated by phone to NYSDEC's Project Manager. Reportable quantities of petroleum product will also be reported to the NYSDEC spills hotline. These findings will be also included in the periodic reports prepared pursuant to Section 5 of the SMP.

A-13 COMMUNITY AIR MONITORING PLAN

A sample CAMP for the Site is given in Appendix E. Air sampling stations will be based on generally prevailing wind conditions. These locations will be adjusted on a daily or more frequent basis based on actual wind directions to provide an upwind and at least two downwind monitoring stations. In addition, a fixed monitoring station will be located at the Site perimeter on the corner of Center Boulevard and 47th Road, regardless of wind direction, to monitor conditions adjacent to the residential buildings located there.

Exceedances of action levels listed in the CAMP (Appendix E) will be reported to NYSDEC and NYSDOH Project Managers.

A-14 ODOR CONTROL PLAN

This odor control plan is capable of controlling emissions of nuisance odors off-site. Specific odor control methods to be used on a routine basis will include foam odor suppressants. If nuisance odors are identified at the site boundary, or if odor complaints are received, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. NYSDEC and NYSDOH will be notified of all odor events and of any other complaints about the project. Implementation of all odor controls, including the halt of work, is the responsibility of the property owner's Remediation Engineer, and any measures that are implemented will be discussed in the Periodic Review Report.

All necessary means will be employed to prevent on- and off-site nuisances. At a minimum, these measures will include: (a) limiting the area of open excavations and size of soil stockpiles; (b) shrouding open excavations with tarps and other covers; and (c) using foams to cover exposed odorous soils. If odors develop and cannot be otherwise controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-site disposal; (e) use of chemical odorants in spray or misting systems; and, (f) use of staff to monitor odors in surrounding neighborhoods.

If nuisance odors develop during intrusive work that cannot be corrected, or where the control of nuisance odors cannot otherwise be achieved due to on-site conditions or close proximity to sensitive receptors, odor control will be achieved by sheltering the excavation and handling areas in a temporary containment structure equipped with appropriate air venting/filtering systems.

A-15 DUST CONTROL PLAN

A dust suppression plan that addresses dust management during invasive on-site work will include, at a minimum, the items listed below:

**Site Management Plan
Queens West (Hunter's Point) Parcel 8
BCP # C241087**

Dust suppression will be achieved through the use of hoses attached to the nearby hydrants, as required.

A-16 OTHER NUISANCES

A plan for rodent control will be developed and utilized by the contractor prior to and during site clearing and site grubbing, and during all remedial work.

A plan will be developed and utilized by the contractor for all remedial work to ensure compliance with local noise control ordinances.

Figures

Tables

Table 1 – Parcel 8 Soil Cleanup Objectives
Queens West Parcel 8
47th Road, Long Island City, NY
BCP Site No. C241087

Remediation Unit/Item	Soil Cleanup Objective	Comment
Soils – 0 to 4 ft-bg	Part 375 Commercial Use SCO for metals and PCBs for the bottom and sidewall endpoint samples for documentation purposes only	Arsenic, lead, copper, mercury, barium, and PCBs exceed Commercial Use SCOs in some locations.
Hot Spot Areas: 4 to 5+ ft-bg	Part 375 Commercial Use SCO for metals responsible for Hot Spot and PCBs	
Grossly Contaminated Soils	Excavated to water table, 8 – 10 ft-bg	Gross contamination meets one or both of the following criteria: 1) free product observed, 2) dissolved concentrations in groundwater exceed TOGS standards.
Soils from 4 ft-bg to water table (8 - 10 ft-bg)	Leave in place – no action	No VOCs above Commercial Use SCOs in this interval. Isolated metals above SCOs. Almost exclusively SVOCs above SCOs.
Soils - water table to 22 ft-bg	Ninety percent (90%) reduction in organic contaminant mass	This interval contains approximately 67 percent of the total Site organic contamination.

- Appendix A "Results of Geotechnical Laboratory Testing and Rock Core Photograph Log" by Matrix Engineering Services, P.C., dated 30 April 201 and,
"Record of Borings" drawings B-101.0 and B-102.0, dated 21 May 2012 by
Matrix Engineering Services, P.C.

INTRODUCTION

This report presents our geotechnical engineering interpretive study for the proposed Hunters Point Community Library in in the Queens West section of Long Island City, New York. The purposes of this study were to evaluate the subsurface conditions at the site, and to develop recommendations for the geotechnical aspects of design and construction of the building. Our scope of services included reviewing the subsurface investigation including boreholes and laboratory testing (both performed by others), performing geotechnical engineering analyses and evaluations, and preparing this report. All work was performed in accordance with our proposal dated 13 March 2012 and authorized by Steven Holl Architects (SHA). A summary of our findings and recommendations are presented herein.

Our understanding of the proposed project is based on:

1. The project schematic design plans (including architectural and structural drawings) dated 8 March 2012, and last revised for schematic design addendum on 15 May 2012.
2. Discussions with Steven Holl Architects (project architect) and Robert Silman Associates (project structural engineer).
3. Report titled "Results of Geotechnical Laboratory Testing and Rock Core Photograph Log" by Matrix Engineering Services, P.C., dated 30 April 2012.
4. Matrix Engineering Services, P.C drawings B-101.0 and B-102.0 "Record of Borings", dated 21 May 2012.
5. Environmental engineering report titled "Site Management Plan – NYSDEC Site Number C241087", dated December 2011 and prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc.

The project datum is reported to be the Queens Highway Datum (QHD¹) and is used in this report unless otherwise noted.

SITE DESCRIPTION

The site is known as Parcel 8 within the 74 acre Queens West Development, located in Queens, New York. The site is west of Center Boulevard between 47th Road and 48th Avenue, and Peninsula Park/Gantry Plaza State Park and the East River are to the west. The Site is about 0.73 acres in size, and is designated by Block 19, Lot 19. The site is currently an empty lot. A site location map is presented in Figure 1.

¹ The Queens Highway Datum is 2.725 feet above the U.S. Coast and Geodetic Survey Vertical Datum (Mean Sea Level at Sandy Hook, New Jersey, 1929). [QHD = USGS-2.725].

Regional Geology

Long Island City is located in the western portion of Long Island, which is geologically a relatively large depressed segment of the Atlantic coastal plain. The soils in this area of Long Island were most significantly impacted by several glacial advances into the area during late Pleistocene glaciations (about 25,000 years before present.) During this period, large sheets of ice moved southward across the Bronx and into parts of Manhattan, Queens and Long Island, scraping soil off the bedrock surface. The soils at the site are part of the Lake Flushing Deposit, and consist of varved silt and clay. As discussed by Parsons (1976), the terminal moraine (a ridgelike "dam" of till at the farthest advance of the last glacier) formed a dam, blocking drainage of glacial melt water, and forming Lake Flushing over a major part of Manhattan and Queens. Alternating thin layers (varves) of sandy silt, silt and clay were deposited following seasonal variations of water flow in the lake. The layers of sandy silt and silt were generally deposited during warm months when meltwater had the highest flow through the lake, and the clay layers were generally deposited during cold months when flows decreased and the lake was calm. Parsons suggests the silty sand layer at the top of the formation was deposited following a breakthrough of the moraine allowing higher water flow to transport coarser material across the lake. Site specific soil conditions are discussed in detail later in this report.

The USGS "Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York" indicates the bedrock underlying the site is greater than 50 feet deep and consists of gray gneiss of the Heartland Formation. A portion of the engineering geology map showing the site location is presented in Figure 2.

Historical Land Use

The Site Management Plan reports the site is located on reclaimed land that was originally within the East River. The methods and materials used to fill the site are unknown. However, our experience with other projects located in areas of reclaimed land around New York City suggest that the fill is usually uncontrolled and may contain a wide variety of miscellaneous debris such as foundation elements of former buildings, timber, boulders, cobbles, trash etc. The presence of large obstructions has caused problems with construction of foundations, support of excavation systems, and installation of driven piles.

The Site Management Plan reports that the site was occupied by buildings that had a variety of uses including: the Warren Chemical Company from about 1855 to 1915, the Carbonic Company from about the 1930's to the 1950's, a metal storage warehouse in 1970, and Hallen Contractors from the 1970's until about 1999. The Site Management Plan reports that the site was vacated around 2001. Note, evaluation of the environmental conditions at the site is not part of our report.

Flood Plain

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) number 3604970202F, Panel 202 of 457 revised 5 September 2007, the site is located within Zone AE which is the "100-year flood zone" with a base flood elevation of el. 10 (NGVD, 1929), corresponding to el. 7.275 QHD. The 100-year flood is defined as the flood that has a 1% chance of being equaled or exceeded in any given year. An excerpt from the FEMA Flood Insurance Rate Map is presented in Figure 3.

PROPOSED CONSTRUCTION

The proposed development consists of a new four-story public library with a building footprint of about 5,000 sq ft on the western portion of the site. The proposed finished floor elevation of the first floor of the library building is +8.70 QHD. We understand that the proposed basement level for the building was eliminated during the schematic design addendum of 15 May 2012.

Additionally, a separate one-story New York State Parks Department office building with a footprint of about 1,600 sq ft is proposed on the northern portion of the site. The proposed finished floor elevation of the first floor of the parks department building is +9.15 QHD.

The site will also be developed to include significant landscaping including the construction of a new reading garden to the east side of the site, and a riparian garden swale at the west side of the site. Typical proposed site elevations for the reading garden range between about +8.50 QHD and 10.50 QHD. The proposed bottom of the riparian garden swale is about elevation +4.50 QHD and the water level within the swale is about +7.5 QHD.

Column configurations and structural design loads for both buildings are under development at the time of writing this report. However, RSA reports that vertical foundation loads are on the order of about 30 kips per linear foot of wall for the library building; lateral loads were not provided at the time of preparing this report.

SUBSURFACE INVESTIGATION

The subsurface investigation was performed by Matrix Engineering Services, P.C. (Matrix). The investigation consisted of drilling six test borings (B-1A through B-6) within the property limits in the vicinity of the proposed buildings. The lab results and record of borings by Matrix is presented in Appendix A and summarized below.

Borings

The boring logs do not indicate the date and duration of the investigation; however we understand the borings started around 23 March 2012 and were completed around

3 April 2012. The boring logs do not indicate the name of the drilling contractor or the type of equipment used to advance the borings; however, we understand the borings were advanced by Aquifer Drilling and Testing, Inc. (ADT) using a truck mounted drill rig and mud-rotary drilling techniques.

The approximate locations of the borings and the boring logs were provided by Matrix in drawings B-101.0 and B-102.0 "Record of Borings", dated 21 May 2012 (see Figure 4). We note the borings were not field-surveyed to provide top of boring elevation. Matrix reports the ground surface elevation for all borings to be an arbitrary datum of +0.0 and is not referenced to a survey datum. Therefore, for his report we have assumed the site is level use "depth below existing grade" in all discussions. The designers should carefully assess how actual site grades related to the discussions herein.

The logs indicate soil samples were recovered from about six-feet below the existing ground surface using a standard two-inch outside diameter split spoon sampler in conjunction with the Standard Penetration Test (SPT)², or by pushing thin-walled 'Shelby' tubes to obtain relatively undisturbed samples. The logs indicate an automatic hammer was used for SPT testing. All N-values reported in this report are assumed to be uncorrected field values as recorded by Matrix. Rock was cored in all borings using an NX sized double-tube core barrel with a diamond cutting bit. Rock type, percent core recoveries (REC)³, and Rock Quality Designation (RQD)⁴ values were determined based on the length and quality of the rock core retrieved from each core run. The borings were terminated between about 35 to 52-feet below existing grades.

Temporary Groundwater Observation Wells

Temporary groundwater observation wells were not installed in any of the completed geotechnical borings and groundwater levels were not recorded by Matrix. Groundwater levels are reported to be about 8-feet to 10-feet below grade in the "Site Management Plan".

Laboratory Testing

The laboratory test program was developed by Langan and Matrix sent the samples for analysis to TeraSense, LLC soil testing laboratory for analysis. The purpose of the geotechnical laboratory testing was to confirm visual classifications and to define the index (physical and mechanical) properties of the soil as well as strength and consolidation parameters for use in

² The Standard Penetration Test is a measure of the soil density and consistency. The SPT N-value is defined as the number of blows required to drive a 2-inch outer diameter split-barrel sampler 12-inches, after an initial penetration of 6-inches, using a 140-pound hammer free falling of a height of 30-inches.

³ The core recovery is the ratio of the length of rock recovered to the total core run length, expressed as a percent.

⁴ The RQD is defined as the ratio of the summation of each rock piece greater than 4-inches in length for NX cores to the total core run length, expressed as a percent.

the evaluation and design of the foundation system. The laboratory testing included moisture content measurements, Atterberg Limits, grain size analyses, consolidation test, and unconfined compression test. The results of the laboratory testing are presented in the Geotechnical Laboratory Testing and Rock Core Photograph Log by Matrix, dated 30 April 2012 and are included in Appendix A.

SUBSURFACE CONDITIONS

The soil profile generally consists of a surficial layer of uncontrolled fill underlain by a layer of dark gray sand, brown-gray fine to medium sand, and dark gray silty clay. Bedrock was encountered in all borings and included moderately to thoroughly weathered gneiss encountered in two borings, and slightly weathered to fresh gneiss encountered in all borings. Detailed description of each subsurface stratum is given below in order of increasing depth. A generalized subsurface profile is presented in Figure 5.

Uncontrolled Fill [Class 7]⁵

A layer of uncontrolled fill, generally consisting of loose gray-brown to black fine to coarse sand, with varying amounts of gravel, silt, and brick was encountered below the existing ground surface. The record of borings notes the presence of petroleum and coaltar in some samples. The general thickness of the fill ranged between about 8-feet thick and 21-feet thick, with the thicker fill being encountered in borings B-5 and B-6 to the north side of the site.

A timber pile was encountered in boring B-3. Remnant foundation elements of former structures that occupied the site may be present within the fill layer. A layer of black silt with trace organic material was only noted in boring B-2.

Uncorrected standard penetration test N-values in the fill varied from weight-of-hammer (WOH) to about 24 blows per foot (bpf), indicating the highly variable nature of the fill. The uncontrolled fill material was visually classified as SP, poorly graded sands in accordance with Unified Soils Classification System (USCS) and is designated as Building Code Class-7 material, "Controlled and Uncontrolled Fills".

Sand, Silty Clay, Clayey Silt [Class 4c and 6]

Underlying the fill layer is a layer of loose dark gray medium to fine sand with varying amounts of gravel and silt. Lenses of very soft dark gray clayey silt and silty clay with trace organic material were encountered within this layer. This layer was encountered in all borings except B-6, and B-3 where the timber pile was encountered and precluded soil sampling. The top of

⁵ Numbers in brackets indicate classification of soil and rock materials in accordance with the 2008 New York City Building Code (Building Code).

this stratum is encountered about 8-feet to 18-feet below grade and varies in thickness from about 4 feet to 12 feet, with the layer thinning towards the north.

Uncorrected standard penetration test N-values in the sand dominated layer varied from about 2-bpf to about 8-bpf. The sand dominated lenses are generally classified as SP or SM in accordance with USCS and are designated as Building Code Class 6, "Granular Soils".

The results of three Atterberg limit tests in the silty clay and clayey silt soils indicates typically high plasticity clay, with Liquid Limits from about 43 to 57 percent and Plasticity Index (PI) from about 23 to 31 percent.

The results of one laboratory consolidation testing (B-4, sample U-1 CH – gray, slightly organic CLAY, shell fragments and chemical odor present) indicate an overconsolidation ratio (OCR) of about 1. The OCR of about 1 indicates the layer is normally consolidated and will compress under any new loads. This sample was also subject to an unconsolidated-undrained compressive strength test and the unconfined compressive strength (q_u) was measured to be about 0.69 tsf, and the corresponding undrained shear (S_u) strength is about 0.345 tsf indicative of a very weak material.

Uncorrected standard penetration test N-values in the clay dominated layer varied from about weight-of-hammer to about 2-bpf. The silty clay and clayey silt dominated lenses are generally classified CL, ML, and CH in accordance with the USCS and is designated as Building Code Class 4c and 6 materials "Soft Clays, Silty Clays, Silts and Clayey Silts".

Sand [Class 3b]

Underlying the sand and silty clay layer is a layer of medium-dense to dense, brown-gray to dark brown, medium-fine sand with varying amounts of gravel and silt. The sand layer was encountered in all borings at about 18-feet to 24-feet below grade and varies in thickness from about 5-feet to 11-feet. Uncorrected standard penetration test N-values in the sand layer ranged from about 8-bpf to about 29-bpf, with an average of about 19-bpf.

The sand is classified as SM and SP in accordance with USCS and is designated as Building Code Class 3b material, "Granular Soils".

Silty Clay [Class 4b, 4c, 5a and 3b]

Underlying the sand layer is a layer of stiff gray silty clay with varying amounts of gravel, sand and silt. The grain size typically increased with depth and the bottom of the layer was dominated by sand sized particles. The silty clay layer was encountered in all borings, except borings B-1 and B-2 at the south of the site. The top of the silty clay layer was encountered at

about 28-feet below grade and the layer varies in thickness from about 9-feet to 14-feet. Uncorrected standard penetration test N-values in the silty layer ranged from about 8-bpf to about 62-bpf, with an average of about 25-bpf.

The silty clay is classified as CL, ML, SP, SM and SC in accordance with USCS and is designated as Building Code Class 4b and 4c material stiff-medium "Clay", Class 5a material medium "Silts and Clayey Silts", Class 3b material, "Granular Soils".

Soft Rock [Class 1d]

Soft rock (weathered rock) was encountered in borings B-3 and B-5. The material consisted of moderately to thoroughly weathered gneiss. Joints were described as dipping between about 10 degrees to 40 degrees, with one description of a joint at 90 degrees from horizontal in boring B-3. The top of the weathered rock was encountered at a depth of about 25-feet in boring B-3 and about 37-feet in boring B-5. The weathered rock is about 5-feet thick in both borings. Percentage recovery ranged from 15 percent to 100 percent and RQD values ranged from 12 percent to 39 percent.

The weathered rock is designated as Building Code Class 1d Material, "Soft Rock – Weathered Rock".

Bedrock [Classes 1a, 1b & 1c]

Intermediate to hard-sound gneiss bedrock was encountered in all borings at depths varying from about 30 feet to 42 feet below the existing grade across the site, with deeper bedrock being encountered towards the central and northern sections of the site. The material consisted of slightly weathered to fresh gneiss. Joints were described as dipping between about 10 degrees to 40 degrees, with one description of near vertical joints in boring B-3 at 90 degrees from horizontal. The top of the rock was encountered at a depth of about 25-feet in boring B-3 and about 37-feet in boring B-5. Percentage recovery ranged from 75 percent to 100 percent, with an average of 95 percent. RQD values ranged from 48 percent to 100 percent with an average of 84 percent. The rock quality generally improves with depth.

The bedrock is designated as Building Code Class 1a, 1b, and 1c material.

Groundwater

Groundwater observation wells were not installed in any of the completed geotechnical borings and groundwater levels were not recorded by Matrix. Groundwater levels are reported to be about 8-feet to 10-feet below grade (about elevation -0.80 to +0.60) in the "Site Management Plan" report.

GEOTECHNICAL EVALUATION AND RECOMMENDATIONS

The main geotechnical engineering concerns at the site include the presence of an undocumented and uncontrolled fill layer, and the presence of soft and loose silty clay and sand. In addition to the poor soil conditions at the site, construction of new foundations and site utilities may be hindered by the presence of remnant foundation elements (timber piles etc.) of former buildings that occupied the site. Our discussion of the geotechnical issues for the site is discussed herein.

Seismic Evaluation

This section presents seismic design recommendations for use with the 2008 New York City Building Code. The structure must be designed to resist the forces generated during earthquake shaking. Because of the relatively consistent soil conditions and relatively small building, we do not feel a site-specific seismic study is justified. If seismic loads are found to cause a cost premium to the project a site specific study could be considered to attempt to reduce the seismic loads.

Seismic Design Parameters

The following design parameters should be used to design the structure in accordance with the 2008 New York City Building Code:

Table 1 – Seismic Design Parameters for Deep Foundations

Description	Parameter	Recommended Value	Building Code Reference
Mapped Spectral Acceleration for short periods:	S_s	0.365 g	Section 1615.1
Mapped Spectral Acceleration for 1-sec period:	S_1	0.071 g	
Site Class	D	Stiff Soil Profile	Table 1615.1.1
Site Coefficient (short periods)	F_a	1.51	Table 1615.1.2
Site Coefficient (1-second period)	F_v	2.40	
5 percent damped design spectral response acceleration at short periods:	S_{DS}	0.367 g	Section 1615.1.3
5 percent damped design spectral response acceleration at 1-sec period:	S_{D1}	0.114 g	
Seismic Design Category	SDC	C*	Table 1616.3(1) & (2)

* Seismic design category to be confirmed by the structural engineer.

Seismic hazards such as slope instability, surface fault rupture and lateral spreading are considered unlikely at this site because of the low potential for liquefaction (discussed below), relatively flat site grades and distance to a known active fault.

Soil Liquefaction

The Building Code requires an evaluation of the liquefaction potential of noncohesive soils below the groundwater table and to a depth of 50 feet below the ground surface. The potential for soil liquefaction was evaluated using the procedure outlined by Youd et al. (2001). The Youd et al. evaluation is currently considered the state of practice procedure as recommended by FEMA 450-2. This evaluation develops an empirical relationship between the earthquake demand, represented by the Cyclic Stress Ratio (CSR), and the soil's resistance to dynamic loading, represented by Cyclic Resistance Ratio (CRR). The CSR is correlated to the Peak Ground Acceleration (PGA) of the design earthquake event and the in situ soil stresses. The CRR is correlated to standard penetration test N-values obtained from field tests at the site. The field N-values are converted to $N_{1,60,cs}$ by applying correction factors for soil overburden pressure, hammer energy efficiency, and percent fines.

Our analysis parameters included a magnitude 5.71 earthquake event (consistent with the USGS deaggregation results for the peak ground acceleration - PGA), a PGA of 0.146g (consistent with the NYCBC-recommended PGA equal to $S_{DS}/2.5$), and a magnitude scaling factor (MSF) of 2.23 (consistent with the Youd et al. (2001) recommendations). The MSF is an empirical correction of the earthquake demand applied for earthquake magnitudes different than 7.5. Figure 6 shows a plot of the factor of safety with depth using the results of the Standard Penetration Tests (SPT).

We analyzed a total of 44 SPT data points and 41 of the data points plot above Langan's minimum recommended factor of safety of 1.25. Three data points plot below the minimum recommended factor of safety, however we note the calculated factor of safety for these points is about 1.1. Based on these results, our judgment is that liquefaction need not be considered for design, and as such no revision to the site class is necessary.

Foundations

The uncontrolled fill and soft silty clay layers located directly below the proposed ground floor slab level are not suitable for support of the proposed building. A deep foundation is recommended to transfer the building loads to a satisfactory bearing material such as the weathered bedrock or competent bedrock.

Driven piles are the most commonly used types of deep foundation systems in the New York City area. Driven piles typically consist of timber, steel, concrete or composite members, range

from 8 to 18 inches in width or diameter, and are installed into the ground by repeated impacts with a high energy hammer. We feel H-piles or timber piles are efficient piles for this site and are discussed further below. The foundation contractor should submit the final selected pile type, size, cross section and reinforcement arrangement, and a wave equation analysis with pile driving criteria, for the proposed assembly of pile driving hammer prior to the start of excavation and foundation construction. We recommend that the contract documents be written as performance specifications and include provision for pre-drilling to clear obstructions that may impede the driving of the piles.

Driven Pile Options

H-Piles

A steel H-pile such as an HP-12 x 84 section or HP 14 x 73 section may be driven to bedrock of Class 1-d or better. The basic maximum allowable pile capacity is 80 tons for H-piles bearing on bedrock per the Building Code. The estimated average pile length below existing grade varies between about 35-feet to about 50-feet.

All H-piles should have a minimum yield strength of 50 ksi and be fitted with protective points, such as the Hard-Bite manufactured by Associated Pile Fitting Corp, or equivalent. H-piles can generally cut through the overburden and weathered rock easier than other pile types.

We recommend that driven piles be spaced a minimum of not less than 2 feet apart as required by the Building Code, to reduce the impact of group effects on axial capacity. All piles in a group or cluster of piles should be checked for heave using optical survey methods as driving in the group progresses. Following completion of pile driving operations in that group, piles that have heaved in excess of ¼ inch should be tapped to their required resistance.

Timber Piles

A timber pile of Douglas Fir with a minimum tip diameter of 9-inches may be driven to bedrock of Class 1-d or better. The basic maximum allowable pile capacity is 30 tons for timber piles bearing on bedrock per the Building Code. The estimated average pile length below existing grade varies between about 35-feet to about 50-feet.

Index Piles and Pile Load Tests for Driven Piles

We recommend installing index piles that are the same in every aspect to production piles at the start of the pile driving operations. The recommended number of index piles is about 5% to 10% of the total number of piles required. Index piles allow for estimating pile lengths, identifying unusual driving conditions, and the need for spudding and pre-drilling. The index

piles should be installed with a pile driving analyzer (PDA) attached to collect data on pile integrity, driving stresses and hammer energy. The index piles may be used as production piles if properly installed and accepted by the geotechnical engineer.

For driven piles of allowable capacity greater than 40-tons (section 1808.2.8.2), the final driving criteria and allowable axial load must be verified by load tests (load tests are not required for timber piles with an allowable capacity of 30 tons or less). Therefore load tests are required for the H-pile option. Section 1808.2.8.3.1.2 of the Building Code requires that load tests be performed in each area of substantially similar conditions. For a proposed building area of about 5,000 square-feet, we recommend a minimum of two load tests be performed to satisfy Building Code requirements.

The compression load tests should be performed in accordance with ASTM D1143 and Building Code specifications. The Building Code requires that the test load (twice the design load) be applied and held until the rate of settlement does not exceed 0.012 inches over a time period of 12 hours. If the load tests are used to substantiate higher allowable loads than those shown in the Building Code, the final load increment must remain in place for a total of not less than 24 hours. For loads above the Building Code maximum value, the test pile must also be suitably instrumented with telltales and strain gauges so that the movement of the pile tip and butt may be independently determined and load transfer to the soil evaluated. Production piles should be installed in the same manner as the successfully load-tested piles.

Lateral Loads

The Building Code allows a maximum basic lateral load of 1 ton per pile. Should lateral resistance in excess of 1 ton per pile be required, lateral load tests must be performed, along with analysis to demonstrate capacity and group effects. The lateral load test shall be performed in accordance with ASTM D3966 and the maximum allowable lateral load shall not be more than one-half the test load producing a gross lateral movement of 1 inch at the ground surface.

Frictional resistance along the base of pile caps and underside of floor slab should not be used for lateral resistance, as consolidation of the underlying soils may cause a gap to form beneath the pile cap. Passive pressure along the face of the pile cap may be used for lateral resistance; however consideration must be given to compatible deflection-resistance relationships to evaluate the contribution of lateral resistance provided by the piles and cap. Passive pressure on the cap can be evaluated further if higher lateral capacity must be resisted than can be provided by the pile design alone.

Foundation Settlement

The anticipated maximum total and differential settlement of the pile supported columns will depend on the type and length of the pile type selected but is expected to be less than 1-inch. Differential settlement should be less than ½ inch between adjacent columns.

Ground Floor Slab Support

Because of the potential consolidation (settlement) of the compressible organic clays, and uncontrolled fill, we recommend the ground floor slab be designed as a structural slab. The slab should span between the pile foundations/grade beams. Utilities constructed below ground level floor slabs may also be subjected to settlement. Therefore, we recommend utilities be constructed in chases cast into the structural slab. Hanging utilities from the slab is not recommended. Utilities entering the building, and utility structures, should be fitted with flexible connections.

Permanent Control of Groundwater

The groundwater level was measured at about elevation +0.0. For design purposes the recommended design groundwater level is elevation +7.275 QHD which is the 100-year flood elevation. The proposed floor slab elevation is +8.70 QHD and is above the flood elevation. However, control of water vapor is necessary to limit seepage and dampness through the first floor slab which will be in contact with the soil.

Given the sensitive nature of the use within the library we recommend a water proofing membrane such as Preprufe by Grace, or at least a heavy duty vapor retarder such as Florprufe by Grace is installed between the underside of the floor slab and a gravel sub-base. Please note that the project environmental engineer may have requirements for the vapor retarder and should be consulted prior to final selection.

During construction, all penetrations (e.g. pipes and conduits), overlap seams, and punctures should be completely sealed using a waterproof tape or mastic applied in accordance with the manufacturer's specifications. The barrier should extend to the edges of the floor slab/perimeter wall footings. The barrier should be placed directly under the slab foundation.

CONSTRUCTION RECOMMENDATIONS

Excavation

Excavation within the site will consist primarily of excavation of fill. Soil excavation can likely be performed using conventional earth moving equipment; however provision should be made to facilitate the excavation of former building foundation elements and large debris encountered within the fill, which may require large demolition equipment to remove.

Temporary Excavation Support

Temporary excavation support is not anticipated to be required and localized excavations for elevator and sup pits etc. can likely be accomplished by sloping the sides of the excavation.

If a temporary excavation support system is required then the system should be designed in accordance with OSHA and local requirements. The contractor's professional engineer is responsible for design and permitting of all temporary excavation support systems.

Fill Material, Placement, and Compaction Criteria

Controlled fill shall be well-graded sand and gravel having not more than 10 percent by dry weight passing the No. 200 sieve. The maximum particle size should be 4 inches. The fill should be free of organics, clay, and other deleterious or compressible materials. Controlled fill should be used below all site and building structures, and as backfill for below grade walls. General fill can be used for general earthwork grading in all open plaza and landscape areas. The use of recycled concrete aggregate (RCA) as backfill immediately behind foundations or retaining walls is not recommended.

Controlled fill material should be placed in uniform 12-inch-thick loose lifts and compacted to at least 95 percent of the soil's maximum dry unit weight as determined by the Modified Proctor Test, ASTM test designation D1557 (latest edition). In restricted areas where only hand-operated compactors can be used, the maximum lift thickness should be limited to 8 inches. The appropriate water content at the time of compaction should be plus or minus 2 percentage points of optimum as determined by the laboratory compaction tests of proposed fill material. No fill should be placed until all unsuitable material is removed and the exposed subgrade has been proof-rolled. No backfill material should be placed on areas where free water is standing or on frozen subsoil areas.

Soil Reuse

The on-site fill material and underlying sand materials may be reused as general or controlled fill on-site, provided the material meets the criteria for fill defined above and is approved by the

environmental engineer for reuse. Because of the uncontrolled placement of the existing fill, we anticipate that pockets of soil within the existing fill layer may be encountered with a high percentage of fine grained material (silt and clay) which are unsuitable for use as controlled fill. Additionally, old foundation elements or debris that are unsuitable for reuse may be encountered within the fill. The construction documents for the project should include a unit cost for off-site disposal of any materials that are deemed unsuitable for reuse as fill material. Prior to reuse as general or controlled fill, all particles larger than 6-inches across should be removed. When used within 2 feet of any structure, including footings, slabs, below-grade walls, utilities, manholes, catch basins, etc., all particles larger than 4-inches across should be removed prior to placement.

Temporary Groundwater Control

General site excavation and excavation for pile caps at the basement level are anticipated to be made above the groundwater level. However local deep excavations for elevator and sump pits may require excavation below the groundwater level. We anticipate that sump pumping from gravel filled trenches and local sump pits may be suitable to temporarily control groundwater if needed. Groundwater discharge should be performed in accordance with the requirements of the environmental engineer's recommendations and DEP requirements.

Pre-Construction Documentation and Monitoring During Construction

We recommend that preconstruction conditions documentation be performed for the adjacent buildings and park areas/promenades about one month prior to commencing excavation and pile driving activities. The purpose of these observations is to provide a photographic and video documentation representation of the general existing conditions and to identify obvious visual deficiencies. The preconstruction conditions documentation should also identify areas requiring specific monitoring during construction. Structural integrity of the structure is not commonly addressed in such documentation. This baseline information is often critical in the event of future damage claims resulting from construction activities.

We also recommend that a comprehensive monitoring program be developed to observe the response of the adjacent buildings during foundation construction activities (i.e. demolition, excavation, dewatering, pile driving, etc.) This program should monitor horizontal and vertical movements of adjacent structures by optical surveying and crack gages. The monitoring program for the adjacent buildings can be developed following the completion of design plans and the pre-construction conditions survey. Adjacent structures will be subject to vibrations induced by pile driving and other construction activities. Vibrations and their effects on adjacent structures should be also monitored. Seismographs should be installed inside the buildings adjacent to the site to measure vibration levels during pile driving operations.

Engineering Inspection During Construction

Design specifications and drawings should incorporate our recommendations to ensure that subsurface conditions and other geotechnical issues at the site are adequately addressed in construction documents. Langan should assist the design team in preparing specification sections related to geotechnical issues such as subgrade preparation and foundations. Langan should also review foundation design drawings and details, and all contractor submittals and construction procedures related to geotechnical work.

Geotechnical assessment and design is an ongoing process as additional information becomes available, including during construction. A geotechnical engineer familiar with the site subsurface conditions and design intent should perform the engineering inspection and testing of geotechnical related work during construction. Per the Building Code, construction of foundations (foundation subgrade preparation, shoring, underpinning, earthwork, pile driving, ground improvement, etc.) is subject to required Special Inspection by a Professional Engineer licensed in the State of New York. We recommend that Langan provide controlled Special Inspection to verify that the foundation design is implemented during construction and to provide timely responses to field questions/changes. We must inspect any underpinning or shoring designed by Langan.

CONSTRUCTION DOCUMENTS AND CONSTRUCTION QUALITY ASSURANCE

Technical specifications and design drawings should incorporate Langan's recommendations. When authorized, Langan will assist the design team in preparing specification sections related to geotechnical issues such as earthwork, pile foundations, backfill and excavation support. Langan should also, when authorized, review foundation drawings prepared by the Structural Engineer, as well as Contractor submittals relating to materials and construction procedures for geotechnical work.

Langan has investigated and interpreted the site subsurface conditions and developed the foundation design recommendations contained herein, and is therefore best suited to perform quality assurance observation and testing of geotechnical-related work during construction. This work requiring quality assurance confirmation includes, but is not limited to, earthwork, backfill, ground improvement, shallow and deep foundations, and excavation support. Recognizing that construction is essentially the completion of design, Langan's quality assurance observation and testing during construction is necessary to maintain our continuity of responsibility on this project.

OWNER AND CONTRACTOR OBLIGATIONS

The Contractor is responsible for construction quality control, which includes satisfactorily constructing the foundation system and any associated temporary works to achieve the design intent while not adversely impacting or causing loss of support to neighboring structures included but not limited to utilities and roadways. Construction activities that can alter the existing ground conditions such as excavation, fill placement, foundation construction, ground improvement, pile driving/drilling, dewatering, etc. can also potentially induce stresses, vibrations, and movements in nearby structures and utilities, and disturb occupants of nearby structures. Contractors working at the site must ensure that their activities will not adversely affect the performance of the structures and utilities, and will not disturb occupants of nearby structures. Contractors must also take all necessary measures to protect the existing structures during construction.

LIMITATIONS

The conclusions and recommendations provided in this report are based on subsurface conditions inferred from a limited number of borings and test pits, as well as architectural and structural information provided by:

1. The project schematic design plans (including architectural and structural drawings) dated 8 March 2012, and last revised for schematic design addendum on 15 May 2012.
2. Discussions with Steven Holl Architects (project architect) and Robert Silman Associates (project structural engineer).
3. Results of "Geotechnical Laboratory Testing and Rock Core Photograph Log" by Matrix Engineering Services, P.C., dated 30 April 2012.
4. Matrix Engineering Services, P.C drawings B-101.0 and B-102.0 "Record of Borings", dated 21 May 2012.
5. Site Management Plan – NYSDEC Site Number C241087, dated December 2011 and prepared by Arnold F. Fleming, P.E. & Fleming-Lee Shue, Inc.

Recommendations provided are dependent upon one another and no recommendation should be followed independent of the others.

Any proposed changes in structures or their locations should be brought to Langan's attention as soon as possible so that we can determine whether such changes affect our recommendations. Information on subsurface strata and groundwater levels shown on the logs

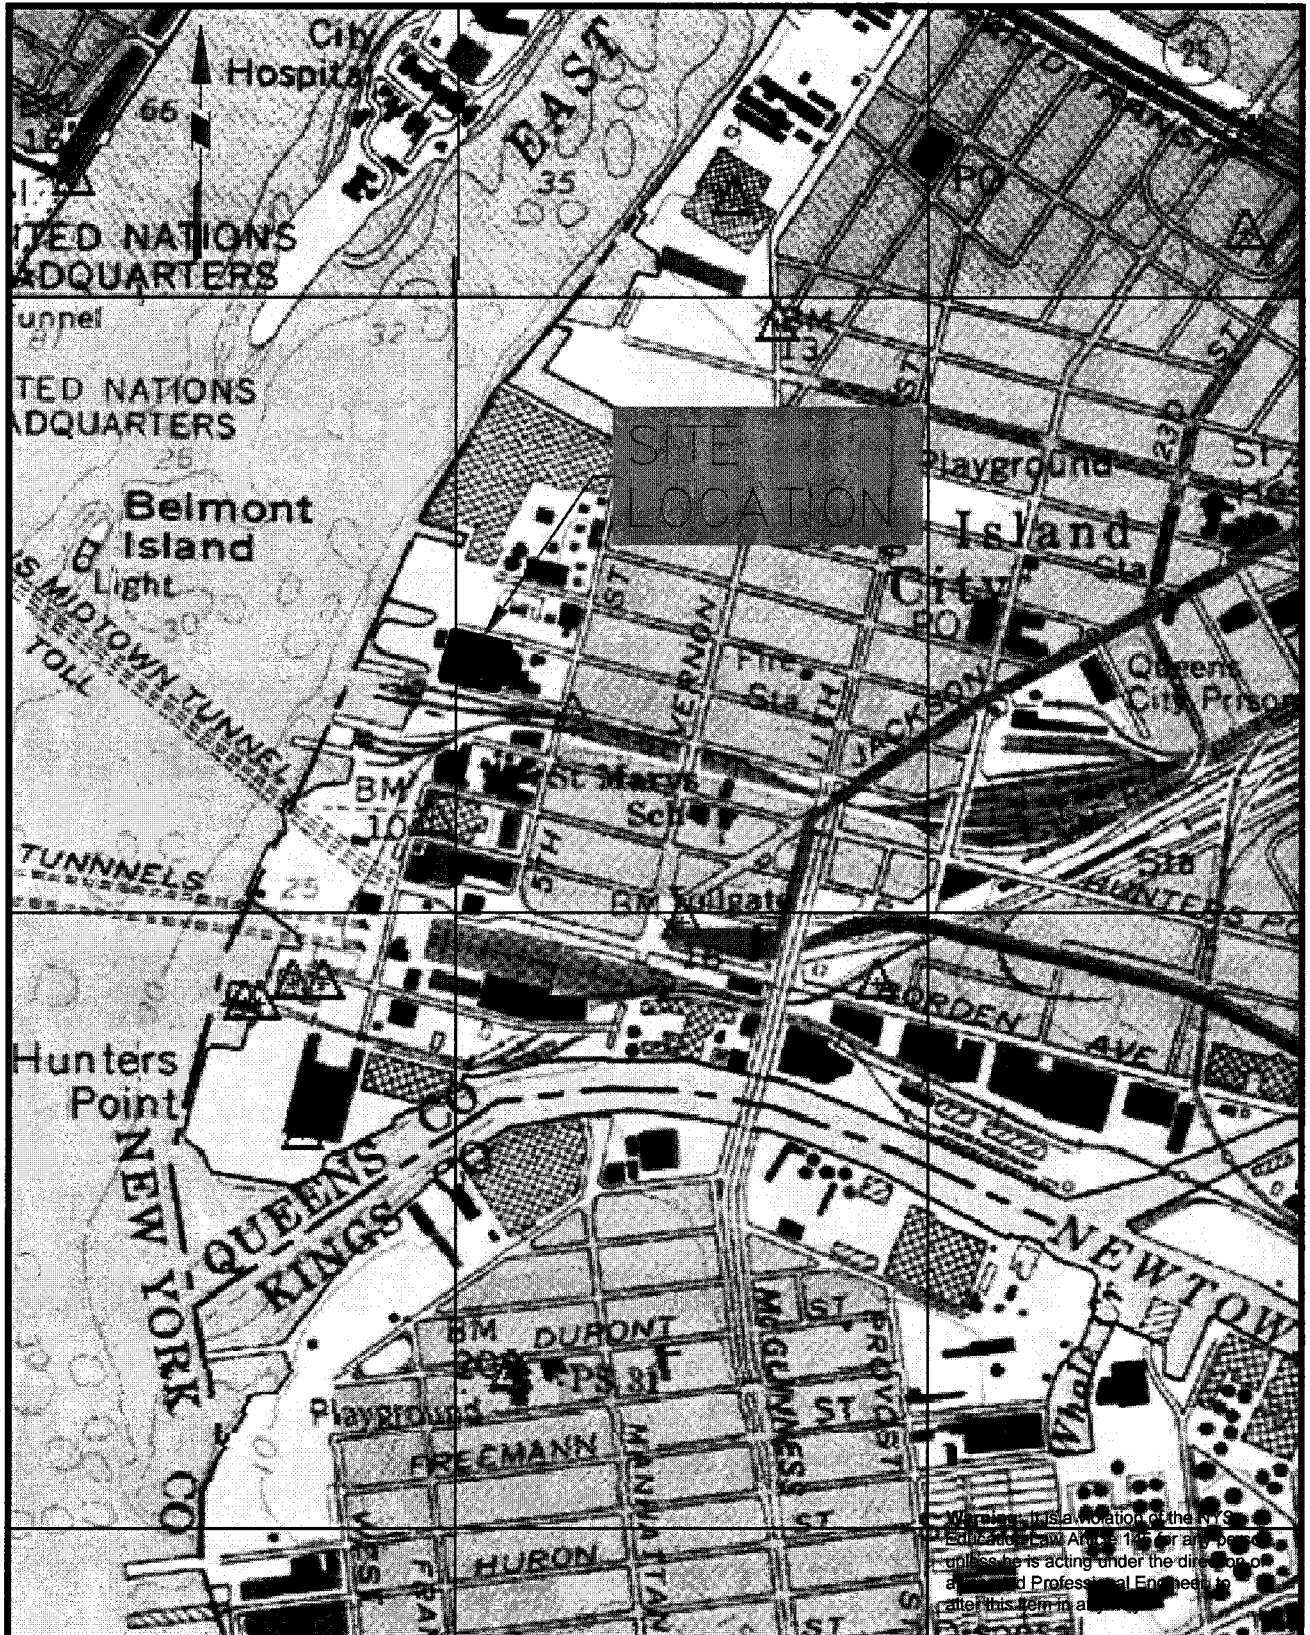

represent conditions encountered only at the locations indicated and at the time of investigation. If different conditions are encountered during construction, they should immediately be brought to Langan's attention for evaluation, as they may affect our recommendations.

This report has been prepared to assist the Owner, architect and structural engineer in the design process and is only applicable to the design of the specific project identified. The information in this report cannot be utilized or depended on by engineers or contractors who are involved in evaluations or designs of facilities (including underpinning, grouting, stabilization, etc.) on adjacent properties which are beyond the limits of that which is the specific subject of this report.

Environmental issues (such as potentially contaminated soil and groundwater) are outside the scope of this study. Refer to environmental consultants documentation for information pertaining to environmental conditions.

CORRELATION OF MAP UNITS

DESCRIPTION OF MAP UNITS
NEWARK BASIN ROCKS

Reverwood Granodiorite (Middle Ordovician to Middle Cambrian)—Medium- to dark-gray, sillimanite-garnet-plus microcline-plagioclase-biotite-muscovite-quartz and (or) biotite-hornblende-orthoclase layered gneiss. Layers rich in hornblende and biotite weather dark gray to black, whereas siliceous layers weather tan. A feature of this rock is an irregular rather than, conchoidal texture; weathered surfaces are pitted, with rims of hornblende surrounding pits as much as 0.8 ft. across, apparently due to the weathering of iron-rich minerals. This facies is black, tan, and locally rusty weathering.

The Reverwood, which crops out along the eastern side of the East River on Long Island (Queens and Kings Counties) and along the lower east side of Manhattan (New York County), was first mapped and described by Ziegler (1911). It consists of both granite and diorite, which range in texture from granitic to gneissic; the latter being minor. Ziegler considered this rock to be intrusive. Berkey and Rice (1921) believed that the Reverwood is Proterozoic in age; it is probably no older than early Paleozoic, based on its intrusive relation with the Hartland Formation to the east (illustrated by the change from gneiss to schist at the Reverwood-Hartland boundary as seen in City Water Tunnel No. 3) and on rubidium-strontium age dating (Baskerville and Moss, unpub. data). The Reverwood is in thrust contact with the Manhattan Schist to the west.

Warning: It is a violation of the NYS Education Law Article 145 for any person, unless he is acting under the direction of a licensed Professional Engineer, to alter this item in any way.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, AV, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A No Base Flood Elevations determined.

ZONE AE Base Flood Elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.

ZONE AO Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of atypical fan flooding, velocities also determined.

ZONE AR Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently destroyed. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.

ZONE AR9 Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.

ZONE V Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

TITLE: New Construction of the Hunters Point Community Library

APPROVED BY:

**ARCHITECTURE/
ENGINEERING**

**GENERAL
COUNSEL**

ADDENDA ISSUED

**NO. OF
DWG**

DATE _____

#1 Revised Bid Opening Date; Additional Pre-Bid Conference Date; Questions from Bidders and Responses to Questions

5/22/2014

LS
5/22/14

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

May 22, 2014

ADDENDUM No. # 1

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

LQD122-QW-1

New Construction of the Hunters Point Community Library

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. Revised Bid Opening Date:

The Bid Opening for the Contract described below scheduled for June 11th, 2014 at 2:00pm is rescheduled to June 18th, 2014 at 2:00pm.

Contract #1 – General Construction Work

2. Additional Pre-Bid Conference Date:

We will be holding an additional non-mandatory pre-bid conference. Details are as follows:

3:00 PM Wednesday, May 28, 2014
NYC Department of Design and Construction, 1st Floor Bid Room
30-30 Thomson Avenue
Long Island City, NY 11101

Contract 1 – General Construction Work

3. Questions from Bidders and Responses to Questions:

See Attachment A.

THIS ADDENDUM MUST BE SIGNED BY ALL BIDDERS AND ATTACHED TO THEIR BIDS.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-2200, (718) 391-1727, or by fax at (718) 391-2615.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Please advise where the Lighting Fixture Schedule is located. The Electrical Drawings reference that it is on Drawing Sheets E-504 and E-505; these Drawing Sheets only have the Lighting Control Schedule, however.	See reference to Lighting Fixture Schedule in Attachment C, Revisions to the Drawings.
2	Please refer to Drawing Sheets A-001, A-002, A-111, A-113, A-203, A-404, and A-707. Drawing Sheet A-001 references "3/4" "Perf. Bamboo Plywood" (on Wall Type 1W). Drawing Sheet A-002 references "PBP – Perforated Bamboo Panel." Drawing Sheets A-111 – A-113 reference "Perforated Bamboo Ceiling" and "Bamboo Access Panel." Drawing Sheet A-203/2 references "Bamboo Plywood." Drawing Sheet A-404/2 references "3/4 Perf. Bamboo Panels." Drawing Sheet A-707 references "Curved Bamboo." Are 3/4" Bamboo Plywood, Perforated Bamboo Panel, Perforated Bamboo Ceiling, Bamboo Access Panel, Bamboo Plywood, 3/4" Perforated Bamboo Panels, and Curved Bamboo all the same product? Also, please advise which Specification Section describes these items.	Yes, these are the same product. Please refer to Specification Section 064023, "Architectural Woodwork," for this information. The referenced supplier is Eastern Millwork, or approved equal.
3	The application of Intumescent Fireproofing is shown in sections of Hanger 1 and Hanger 6. Do Hangers 2-5 also receive intumescent fireproofing?	Yes, Hangers 2-5 are to receive intumescent paint. See Attachment C, Revisions to the drawings, Sheet A-404 for this information.
4	Aside from Hangers 1-6 and one (1) custom column (on Grid Line 7), is there any other steel that is to receive Intumescent Fireproofing? Please advise.	The custom column on grid G is also to receive intumescent paint. See Attachment C, Revisions to the drawings, Sheet A-404 for this information.
5	Schedule A included in the Addendum to the General Conditions specifies that no more than 60% of the project can be subcontracted. Please advise if the subcontracting limit requirement can be eliminated or revised.	See attachment D, Revisions to the Addendum to the General Conditions.
6	Since this is a rebid, please advise if supplemental bid paperwork is required to be submitted with the bid proposal again. This paperwork includes the Bid Breakdown Forms, the Safety Questionnaire, and the Vendex forms. In addition, in accordance with the Special Experience Requirements, please	The Bid Breakdown and Bid Forms must be resubmitted. Any items included as part of the RFQ for PQL (including Vendex and Special Experience for the Bidder) does not need to be included. Please note that if there are any changes since the last full questionnaire was

	confirm that the admission of Special Experience documents no longer need to be provided for the Bidder, and only for the contractors performing the specialized scopes of work.	completed, Bidders must submit a change questionnaire to MOCS. If not, bidders must submit a Certificate of No Change. Please refer to www.nyc.gov/vendex to see submitted questionnaires.
7	Please clarify the extent of work for Specification Section 018316, "Building Enclosure System."	Refer to Article 1.2, Section A2c within Specification Section 018316, for this information.
8	Project Specification 096813, "Carpet Tile" does not provide a tile type, color or pattern. The finish schedule does not provide this information either. Can you please provide this information?	Please see Attachment B, Revisions to the Specifications, for this information.
9	Please provide more information on the 5 1/2" NW Epicore deck system. What is the deck's depth? Please provide a section view of the deck system.	Please refer to the legend on Structural Drawings for the depth of Epicore, or approved equal: Drawing Sheets S-100, S-101, S-102, S-103, S-104, S-105 and S-106. For a section view of this type of construction, please refer to Attachment C, Revisions to the Drawings.
10	Regarding the exterior building concrete shear walls, please confirm that there is no requirement for admixtures in the exterior shear walls.	Please reference Specification Section 033000, "Cast in Place Concrete," Article 2.3 Sections E thru R for this information.
11	Regarding the exterior building concrete shear walls, please confirm that there is no requirement for epoxy coated rebar in the exterior shear walls.	Correct, no epoxy coated rebar is required.
12	Regarding the exterior building concrete shear walls, please confirm if it is acceptable to patch the holes from the form ties in the exterior shear walls.	Yes, this is acceptable.
13	Regarding the exterior building concrete shear walls, please advise what class finish is required for the exterior shear walls and exposed interior walls.	This finish will be Class B. Reference the concrete notes on the wall elevations, Drawing Sheets S-120, S-121, S-122, S-123, S-124, S-125 and S-126.
14	Please advise what designation MG denotes on Detail 8 of Drawing Sheet A-711.	See Attachment C, Revisions to the Drawings, for this information.
15	The specification asks for Boiler Insurance with a limit of \$200,000. Please advise us as to what this should include.	Please refer to Attachment D, revisions to the Addendum to General Conditions.
16	Please clarify the existing grade elevation of the project site. The supplemental drawings compared with the bid drawings provide some conflicting information.	Bid drawings are at future grade. Please refer to drawing sheet L-400. For current grade conditions, please refer to Attachment C, Revisions to the drawings, for this information.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT B – REVISIONS TO THE SPECIFICATIONS

Specification Section 0968130 “Carpet Tile”

Add the following text to Article 2.1:

A1. Tretford Tile “534” or approved equal.

Specification Section 101100 “Visual Display Surfaces”

Delete entire specification section.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT C – REVISIONS TO THE DRAWINGS

Drawing Sheet A-404 Partial Sections

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-711 Interior Elevations 7

Cross out "MG" and replace with "CG" on Detail 8.

Lighting Fixture Schedule

See new Drawing Sheet, included with this Addendum.

Sketch 1 – Typical Long Span Deck Profile

See new Drawing Sheet, included with this Addendum.

Topographical & Property Line Map

See new Drawing Sheet B, Included with this Addendum

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT D – REVISIONS TO THE ADDENDUM TO THE GENERAL CONDITIONS

Reference Schedule A, Art. 17, Sub-Contracts:

Sub-Contract *Not to exceed Percent of Contract Price* is revised to 75%.

Reference Schedule A, Art. 22.1.8, Boiler Insurance:

Boiler Insurance requirement is not applicable and is deleted.

ADDENDA CONTROL SHEET

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

June 17, 2014

ADDENDUM No. # 4

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

LQD122-QW-1

New Construction of the Hunters Point/ Queens West Library

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **Questions from Bidders and Responses to Questions:**
See Attachment A.
2. **Revisions to the Bid Booklet:**
See Attachment B.
3. **Revisions to the Addendum to the General Conditions:**
See Attachment C.
4. **Revisions to the Specifications:**
See Attachment D.
5. **Revisions to the Drawings:**
See Attachment E.

THIS ADDENDUM MUST BE SIGNED BY ALL BIDDERS AND ATTACHED TO THEIR BIDS.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-2200, (718) 391-1727, or by fax at (718) 391-2615.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Typical details on Drawing Sheet S-203 show that only the beams are to be sprayed with Intumescent Fireproofing. However, with 3' NW concrete over 2" metal decking, deck spray will be required in order to attain a 2 hour assembly rating (required for 1B Construction). Please confirm.	Confirmed, the deck underside to receive spray on for required rating. Please Refer to Attachment E, Revisions to the Drawings, for this information.
2	Drawing Sheet S-103 shows W10x22 beams with WTs between grids 3 & 4. What are the sizes of the tees?	Please refer to Attachment E, Revisions to the Drawings, S-103, for this information.
3	Drawing Sheet S-203 shows a typical beam-to-beam moment connection. If the moment connections need to be bolted, we need the kip loads provided. There are no moment connection details. Please advise.	Per Structural Steel Note #3 on S-200, connections are to be designed for 1.5 x reaction from the AISC uniform load table.
4	The First Floor Plan of the Parks Building in Detail 1 on Drawing Sheet A-901 denotes Wall Type E1, which has 3/4" Arriscraft (or equal) tile on metal stud and exterior sheathing for the North and South elevations of the Building. However, the elevations in Details 8 and 9 on Drawing A-901 denote an MB Wall, which is 4x4x24 CMSU by Arriscraft (or equal). Please advise which wall construction will be used.	Please refer to Attachment E, Revisions to the Drawings, A-901, for this information.
5	Arriscraft, one of the specified manufacturers of concrete blocks, has advised us that they do not provide a brick/block in the color specified on the Bid Documents. Please advise us of how to proceed.	The concrete blocks shall be painted with SW Bondplex, or equal. Refer to Specification Section 090000, "Painting and Finishing," for further information.
6	Please confirm that room 300 IT is also room 300 EL.	Confirmed.
7	Detail 14 on Drawing Sheet A-805 indicates the stage shall be built from studs and plywood. Drawing Sheet S-202, however, shows details of a raised slab and ramp as CIP Concrete with foam. Please clarify the structure for the stage in the Meeting Room #101.	Please refer to Attachment E, Revision to the Drawings, A-805, for this information. Platform and ramp construction are per Architectural Drawings.
8	Please provide a specification section for the Linoleum shown on the Finish Schedule.	Please refer to Attachment E, Revisions to the Drawings, for this information.
9	Regarding the below-slab waterproofing, is the waterproofing to be installed below the structural slab and the pile caps?	The waterproofing is to be installed below the slab.

10	Regarding the below-slab waterproofing, how does the waterproofing terminate at the perimeter of the slab?	The waterproofing terminates on the vertical face of the pile cap.
11	Can you confirm if the exterior walls are to level along the top of the pile caps, or to extend down at the pile cap location? Detail 2/S-300 indicates that the exterior wall is to bridge from pile cap to pile cap, with the ground floor slab extending under the exterior wall. Drawing Sheets S-120, S-121 and S-122 indicate the slab will stay on the interior of the walls.	The vertical wall can be installed on top of the slab throughout. Please refer to Appendix E, Revisions to the Drawings, for a revised Detail 1/S-300 showing the condition at the pile cap.
12	Partition Type 1C, as indicated on Drawing Sheet A-101 in Room 101M, does not exist on the wall partition drawings. Can you please provide the details for this wall type?	Please refer to Attachment E, Revisions to the Drawings, for this information.
13	What are the finishes for the Periodical Levels (i.e. floors and walls)?	Please refer to finishes in schedule for Room 200 on Drawing Sheet A-002.
14	Please provide the partition make-up of the short wall between the Periodical Levels.	Please refer to Attachment E, Revisions to the Drawings, A-805, for this information.
15	What are the finishes for the stairs and railings?	Please refer to Drawing Sheet A-600 for tread/riser finishes and guardrail/handrail finishes.
16	Please provide a missing partition type for interior face of exterior wall, all levels.	Please refer to Attachment E, Revisions to the Drawings, A-501, for this information.
17	How many fire extinguisher cabinets should we allow for?	For bidding purposes, allow 20 fire extinguisher cabinets. The Contractor will be required to supply a location plan during construction, to be reviewed and approved by Commissioner.
18	Please refer to Drawing Sheet E-001. There is a note on the Wiring Device Legend regarding telephone data outlets which reads, "Provide 1" empty conduit stubbed up in nearest accessible ceiling." Per the Finish Schedule, all ceilings are gypsum board. Will there be access doors at each location? Please advise.	Access doors may be required. The Contractor will need to lay out low voltage runs and determine based on the number of turns between the closet and the outlet location in the wall whether pullboxes are required. The Contractor will be required to supply a location plan during construction, to be reviewed and approved by Commissioner.
19	Please refer to Drawing Sheet L-310 and Specification Section 321440, "Unit Paver Pavement." Four (4) sizes of Custom Plank Pavers are specified: 6"x18", 18"x18", 42"x18", and 60"x18". Wausau Tile is specified as the manufacturer for these planks. Wausau Tile's Representative, Michael Conboy, explained that Wausau does not make the 60" planks. In addition, he will need a specific color to be able to price the planks. Please advise on how we should proceed.	The material cost for the Concrete Plank Pavers is provided for in the "Amount for Proprietary Items," on pages 2e and 13 of the Bid Booklet. Please refer to Attachment B, Revisions to the Bid Booklet, and Attachment E, Revisions to the Drawings, L-310, for further information.

20	Specification Section 064023, "Architectural Woodwork," indicates plastic laminate cabinets, countertops, vanities, etc. We cannot identify this scope of work on the Bid Drawings. Please provide the locations for this scope of work if it still pertains to the project.	These items have been removed from the scope. Please refer to Attachment B, Revisions to the Bid Booklet, for further information.
21	Please provide location and size of Walk off Mat(s).	Walk off Mats have been removed from the scope. Please refer to Attachment B, Revisions to the Bid Booklet, and Attachment D, Revisions to the Specifications, for further information.
22	Are Bamboo locations as shown on Details 14, 15, & 16 of Drawing Sheet A-805?	Yes. Details 14, 15 and 16 show Bamboo for the platform in meeting room 101 on Drawing Sheet A-805.
23	Is the limit of the Carpet Tile for Room 201 at intersection of Corridor 200CR?	Yes, the limit is the transition at the intersection with Corridor 200CR.
24	Please provide a Specification section for Rubber Flooring, as per Details 1 & 3 on Drawing Sheet A-404.00 Revision 1 (Children's Area).	Please refer Attachment E, Revisions to the Drawings, for this information.
25	What is the limit of the Rubber Flooring on the stepped seating to Carpet Tile in the Children Area, per Drawing Sheet A-720?	Refer to Attachment E, Revisions to the Drawings, A-102 Plans 2, for further information.
26	What is the limit of the Carpet Tile in Room 1-MEZ and at the intersection of Corridor 1-MEZ-CR?	The Carpet ends where ramp (1-MEZ-CR) begins.
27	What is the flooring shown on Drawing Sheet A-101 Area at Columns A-F, 6 to 7?	Please refer to Drawing Sheet A-002, Finish and Door Schedules, for this information. The area at Columns A-F, 6 to 7 matches rooms 102 and 100W.
28	Is the carpet in the Parks Building Rooms 101, 102 and 103, and as on the Finish Schedule on Drawing Sheet A-903, to be as selected in Addendum #3 Attachment B?	Correct.
29	Please provide a Specification section or selection for the Vinyl Base in Parks Building Rooms 101, 102 and 103.	Refer Attachment D, Revisions to the Drawings, A-903 for this information.
30	Will the bid date be extended?	No.
31	Regarding Drawing Sheets E-504 and E-505, only the Lighting Control schedule was provided. Please provide the Lighting Fixture schedule as well.	This was provided in Addendum #3, Issued on June 11, 2014.
32	Regarding the Addendum to the General Conditions, Section VIII "Special Experience Requirements:" please confirm this is not a requirement as all bidders have already gone through the prequalification process for this project.	Section VIII "Special Experience Requirements" refers to the qualifications for installers, not for the bidder.

33	Please provide a copy of the Site Management Plan, indicated on C-001 BCP #C241087.	The Site Management Plan is included within the Bid Package as an Appendix to the Specifications. Refer to Volume 3 for this information.
34	Regarding Drawing Sheets A-002 and A-903, and Specification Section 093000, Article 2.1A states "The commissioner reserves the right to pick tile from any price group." Please provide the tile type and color we are to include for bid purposes so that this work may be quantified.	For bidding purposes, please select from the highest price group. For color and type, please refer to Specification Section 093000, Article 2.2,
35	The sound rating for the engine generator may not be within compliance of NYC DOB Code 2008. The nearest adjacent property (window), across the street, is approximately 60 feet from the generator. A custom enclosure might be necessary to obtain the 45 dba at 60 feet, which is necessary to comply with the DOB code. Please advise.	Bidders are advised not to include custom enclosure in bid.
36	Drawing S-202 typical detail of steel beam foundation wall. WP1-WP5. These are not called out on plans. Please advise.	They are not called out on plan. The detail is to serve as an alternate to the beam bearing plate detail should the contractor find that approach to be more cost effective.

AMENDED SECTIONS/SUB-SECTIONS

The Contractor is advised that the amended Sub-Sections set forth below are included in the General Conditions and apply to the Project.

017300 EXECUTION:

Insert the following text into Article 3.3, "SURVEYS:"

J. Refer to Specification Section 017123 Field Engineering for further information.

ADDITIONAL SECTIONS/SUB-SECTIONS

The Contractor is advised that the additional Sub-Sections set forth below are included in the General Conditions and apply to the Project.

013100 PROJECT MANAGEMENT COORDINATION:

Include Article 1.10 "SITE MANAGEMENT PLAN" as follows:

This project requires the contractor to comply with all requirements detailed in the Parcel 8 Site Management Plan (SMP) for work that takes place below the demarcation barrier. This article does not replace the SMP, but serves as a guide of the key points of requirements. Allowances for the General Contractor are herein established for the work listed below, when so ordered and authorized by the Commissioner, through a written work Order Letter.

All requirements included are required to be followed by the contractor at all times during excavation and the contractors and subcontractors are responsible for safe execution of all invasive and other work.

SUMMARY OF KEY REQUIREMENTS

Part A: SMP Key Requirements Allocated Allowance

1. Qualified Environmental Professional (QEP) Supervision and Reporting Requirements

- A Qualified Environmental Professional (QEP), as defined by NYSDEC DER-10, or a person under their direct supervision, will oversee work below the demarcation barrier and soil management and load out. The QEP must prepare a brief daily report for NYSDEC. The report should provide particulate and VOC measurements, a brief description of site activities, any environmental or related issues and their resolution, description of any complaints, and a schedule update.
 - a. Allowance Amount: \$5,000

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT D – REVISIONS TO THE SPECIFICATIONS

Specification Section 085200, “Aluminum Windows”

Article 1.5 “Testing and Performance Requirements”

Include the following text:

- D. Window Unit Operator Performance Requirements
- 1. Provide mockup of aluminum window assembly in the largest unit size specified in combination with a minimum of two sill mounted electric operators to open automatically on a signal initiated by the Fire Alarm System. Provide additional operators as necessary to achieve required operation performance.
- 2. The operable window assembly shall be capable of opening against the combined opposed force from the operable unit weight, break force of window weather seal and pressure force from wind and negative pressure from Atrium Smoke Exhaust Fans.
- 3. Testing shall be conducted on performance mock-ups in accordance with the requirements of Part 1.6 of this Specification.
- 4. A field test shall be performed for all automatic operable windows in coordination with the Commissioning performance testing requirements of Section 230800 COMMISSIONING OF HVAC SYSTEMS and the Atrium Smoke Exhaust / Fire Modeling Analysis prepared for the Project.

Article 1.6 “Quality Assurance,” Section E2

Include the following text:

- h. Functional and Dynamic Testing of Window Operators:
 - i. Functional tests shall be performed resulting in successful operating of the window unit under the effects of operable unit weight and break force of window weather seal.
 - ii. Dynamic tests shall be performed for the successful operation of the window unit and operator concurrent with the operation of the Atrium Smoke Exhaust System under the effects of opposed pressure force from wind and negative pressure from Atrium Smoke Exhaust Fans.
 - iii. All tests performed shall demonstrate the successful opening of operable window assemblies in accordance with the time restraints specified for the Atrium Smoke Exhaust System operation.

Article 2.1 “Manufacturer,” Section B

Delete “Substitutions” and replace with “Approved Equal”

Article 2.2 “Materials,” Section B2b

Include the following text after “Minimum 2 per sill:”

“or additional as required to achieve the required operating performance.”

Specification Section 124814, “Floor Mats and Frames”

Delete specification in its entirety.

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT E – REVISIONS TO THE DRAWINGS

Drawing Sheet L-310 Concrete Plank Pavement Detail Plan

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-101 Plans 1

Add note: Partition Type 1C is the same as one side of Partition Type 1B, installed with cavity in front of concrete wall for plumbing, finish per schedule, wall elevation.

Drawing Sheet A-102 Plans 2

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-401 Enlarged Curtain Wall Elevations 2

Remove Linoleum finish where Linoleum was specified and replace with Epoxy.

Drawing Sheet A-404 Partial Wall Sections

Children's Area Rubber Flooring specified as Johnsonite rubber floor, solid color, weathered texture or equal.

Drawing Sheet A-410 Exterior Wall Sections

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-501, Typical Glazing Details 1

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-805 Interior Details

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-901 Parks Building

See revised Drawing Sheet, included with this Addendum.

Drawing Sheet A-903 Parks Building Interior Elevations

Add note: Selection of Vinyl Base in Parks Building Rooms 101, 102 and 103, is Johnsonite 2.5 inch traditional wall base, solid standard color, 1/8" thickness.

Drawing Sheet S-103 4th Floor and Mezz Framing Plan

The size of the tees is WT4x7.1 cut to fit to maintain top of slab.

Drawing Sheet S-300 Foundation Sections

See revised Detail 1, included with this Addendum.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Please advise where the Lighting Fixture Schedule is located. The Electrical Drawings reference that it is on Drawing Sheets E-504 and E-505; these Drawing Sheets only have the Lighting Control Schedule, however.	See reference to Lighting Fixture Schedule in Attachment C, Revisions to the Drawings.
2	Please refer to Drawing Sheets A-001, A-002, A-111, A-113, A-203, A-404, and A-707. Drawing Sheet A-001 references "3/4" "Perf. Bamboo Plywood" (on Wall Type 1W). Drawing Sheet A-002 references "PBP – Perforated Bamboo Panel." Drawing Sheets A-111 – A-113 reference "Perforated Bamboo Ceiling" and "Bamboo Access Panel." Drawing Sheet A-203/2 references "Bamboo Plywood." Drawing Sheet A-404/2 references "3/4 Perf. Bamboo Panels." Drawing Sheet A-707 references "Curved Bamboo." Are 3/4" Bamboo Plywood, Perforated Bamboo Panel, Perforated Bamboo Ceiling, Bamboo Access Panel, Bamboo Plywood, 3/4" Perforated Bamboo Panels, and Curved Bamboo all the same product? Also, please advise which Specification Section describes these items.	Yes, these are the same product. Please refer to Specification Section 064023, "Architectural Woodwork," for this information. The referenced supplier is Eastern Millwork, or approved equal.
3	The application of Intumescent Fireproofing is shown in sections of Hanger 1 and Hanger 6. Do Hangers 2-5 also receive intumescent fireproofing?	Yes, Hangers 2-5 are to receive intumescent paint. See Attachment C, Revisions to the drawings, Sheet A-404 for this information.
4	Aside from Hangers 1-6 and one (1) custom column (on Grid Line 7), is there any other steel that is to receive Intumescent Fireproofing? Please advise.	The custom column on grid G is also to receive intumescent paint. See Attachment C, Revisions to the drawings, Sheet A-404 for this information.
5	Schedule A included in the Addendum to the General Conditions specifies that no more than 60% of the project can be subcontracted. Please advise if the subcontracting limit requirement can be eliminated or revised.	See attachment D, Revisions to the Addendum to the General Conditions.
6	Since this is a rebid, please advise if supplemental bid paperwork is required to be submitted with the bid proposal again. This paperwork includes the Bid Breakdown Forms, the Safety Questionnaire, and the Vendex forms. In addition, in accordance with the Special Experience Requirements, please	The Bid Breakdown and Bid Forms must be resubmitted. Any items included as part of the RFQ for PQL (including Vendex and Special Experience for the Bidder) does not need to be included. Please note that if there are any changes since the last full questionnaire was

	confirm that the admission of Special Experience documents no longer need to be provided for the Bidder, and only for the contractors performing the specialized scopes of work.	completed, Bidders must submit a change questionnaire to MOCS. If not, bidders must submit a Certificate of No Change. Please refer to www.nyc.gov/vendex to see submitted questionnaires.
7	Please clarify the extent of work for Specification Section 018316, "Building Enclosure System."	Refer to Article 1.2, Section A2c within Specification Section 018316, for this information.
8	Project Specification 096813, "Carpet Tile" does not provide a tile type, color or pattern. The finish schedule does not provide this information either. Can you please provide this information?	Please see Attachment B, Revisions to the Specifications, for this information.
9	Please provide more information on the 5 1/2" NW Epicore deck system. What is the deck's depth? Please provide a section view of the deck system.	Please refer to the legend on Structural Drawings for the depth of Epicore, or approved equal: Drawing Sheets S-100, S-101, S-102, S-103, S-104, S-105 and S-106. For a section view of this type of construction, please refer to Attachment C, Revisions to the Drawings.
10	Regarding the exterior building concrete shear walls, please confirm that there is no requirement for admixtures in the exterior shear walls.	Please reference Specification Section 033000, "Cast in Place Concrete," Article 2.3 Sections E thru R for this information.
11	Regarding the exterior building concrete shear walls, please confirm that there is no requirement for epoxy coated rebar in the exterior shear walls.	Correct, no epoxy coated rebar is required.
12	Regarding the exterior building concrete shear walls, please confirm if it is acceptable to patch the holes from the form ties in the exterior shear walls.	Yes, this is acceptable.
13	Regarding the exterior building concrete shear walls, please advise what class finish is required for the exterior shear walls and exposed interior walls.	This finish will be Class B. Reference the concrete notes on the wall elevations, Drawing Sheets S-120, S-121, S-122, S-123, S-124, S-125 and S-126.
14	Please advise what designation MG denotes on Detail 8 of Drawing Sheet A-711.	See Attachment C, Revisions to the Drawings, for this information.
15	The specification asks for Boiler Insurance with a limit of \$200,000. Please advise us as to what this should include.	Please refer to Attachment D, revisions to the Addendum to General Conditions.
16	Please clarify the existing grade elevation of the project site. The supplemental drawings compared with the bid drawings provide some conflicting information.	Bid drawings are at future grade. Please refer to drawing sheet L-400. For current grade conditions, please refer to Attachment C, Revisions to the drawings, for this information.

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

June 5, 2014

ADDENDUM No. # 2

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

LQD122-QW-1

New Construction of the Hunters Point Community Library

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

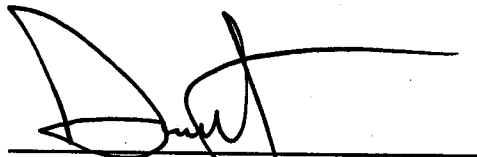

1. Revised Bid Opening Date:

The Bid Opening for the Contract described below scheduled for June 18th, 2014 at 2:00pm is rescheduled to June 25th, 2014 at 2:00pm.

Contract #1 – General Construction Work

THIS ADDENDUM MUST BE SIGNED BY ALL BIDDERS AND ATTACHED TO THEIR BIDS.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-2200, (718) 391-1727, or by fax at (718) 391-2615.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	What are the details (partition types) for the interior/perimeter walls – exterior? Addendum #4 indicates to see Drawing Sheet A-501; however, the detail is not shown on this drawing. Please clarify.	Please refer to bubbled note on Drawing Sheet A-501 submitted in Addendum #4, which adds a note regarding the exact plywood and stud details for stained plywood cladding on the inside of exterior walls. Also see revised Drawing Sheet A-805 in Addendum #4, which adds a note clarifying stud type used at the stepped seating.
2	On Drawing Sheet B-102 Boring Surf, the Elevation is shown as 0.00. However, on Drawing Sheet FO-100, the bottom of the pile caps is between +5'-7" to 7'-1", and the first floor elevation is +10.56'. a- What is the boring elevation 0.00 equal to? b- What will be the driving elevation? c- If the driving elevation around +8' and the piles are to be cut off +6'-1" to 7'-7", can contractors drive and test the index piles without 24" caissons?	<ul style="list-style-type: none"> a- The 0.00 is reflective of "depth below existing grade" at the respective boring per Boring Survey B-102. b- Driving elevation is part of Contractor means and methods. c- Yes. The contractor can remove the soil around the pile to the cut off elevation to avoid installing the 24-inch caisson
3	Please refer to Drawing Sheet L-300. What does Parcel 8 PAPPS mean? There are 2 areas of DG that have a striped hatch pattern, though this pattern is not reflected in the Materials Legend. Please identify what this symbol is intended to convey.	The Parcel 8 PAPPS relates to the Queens West Development Corporation designation of public space area along the development site. This is only an area designation and has no bearing on price or bidding. The hatch pattern indicates the PAPPS area only and does not affect materials.
4	Please provide us with an electronic copy of the bid breakdown. Please also confirm it is acceptable to submit this form within 48 hours of the bid opening.	An electronic copy cannot be provided to bidders. The Bid Breakdown must be submitted at the time of Bid.
5	Regarding Addendum #4, Bid Breakdown Sheet 21-19R, is the line item for Section 122413, "Curtains and Drapes" no longer part of the Bid?	No, the line item for Section 122413 "Curtains and Drapes" is still included in the Bid breakdown, as indicated on 21-19R of the Addendum #4.
6	RE: Sheet A002 – Room 100, 200, 300, 401 & 500 are all receiving Stained Plywood finishes at the walls. Please provide information on what the wood species is for the Stained Plywood. Please provide information on what the Stain finish selection is to be. Other Drawings Showing the Stained Plywood are: A602, A604, A707, A708, A709, A710, A711 & A712.	No special veneer is to be used. Use standard birch plywood as base per drawings. Stain finish to be selected by commissioner during shop drawing process.

DDC PROJECT #: LQD122-QW-1

PROJECT NAME: New Construction of the Hunters Point/ Queens West Library

ATTACHMENT B – REVISIONS TO VOLUME 2

Delete Prevailing Wage Schedule and replace with revised Preliminary Prevailing Wage Schedule, included with this Addendum.

**OFFICE OF THE COMPTROLLER, CITY OF NEW YORK
§220 PREVAILING WAGE SCHEDULE**

LABOR LAW §220 PREVAILING WAGE SCHEDULE

Workers, Laborers and Mechanics employed on a public work project must receive not less than the prevailing rate of wage and benefits for the classification of work performed by each upon such public work. Pursuant to Labor Law §220 the Comptroller of the City of New York has promulgated this schedule solely for Workers, Laborers and Mechanics engaged by private contractors on New York City public work contracts.

Agency Chief Contracting Officers should contact the Bureau of Labor Law's Classification Unit with any questions concerning trade classifications, prevailing rates or prevailing practices with respect to procurement on New York City public works contracts. Contractors are advised to review the Comptroller's Prevailing Wage Schedule before bidding on public works contracts. Contractors with questions concerning trade classifications, prevailing rates or prevailing practices with respect to public works contracts in the procurement stage must contact the contracting agency responsible for the procurement.

Any questions concerning trade classifications, prevailing rates or prevailing practices on New York City public works contracts that have already been awarded may be directed to the Bureau of Labor Law's Classification Unit by calling (212) 669-7974. All callers must have the agency name and contract registration number available when calling with questions on public works contracts. Please direct all other compliance issues to: Bureau of Labor Law, Attn: Wasył Kinach, P.E., Office of the Comptroller, 1 Centre Street, Room 1122, New York, N.Y. 10007; Fax (212) 669-4002.

Any error as to compensation under the prevailing wage law or other information as to trade classification, made by the contracting agency in the contract documents or in any other communication, will not preclude a finding against the contractor of prevailing wage violation.

The appropriate schedule of prevailing wages and benefits must be posted at all public work sites pursuant to Labor Law §220 (3-a) (a).

This schedule is applicable for work performed during the effective period, unless otherwise noted. You will be notified of any changes to this schedule by addenda published on our web site at www.comptroller.nyc.gov. The rate of wages and supplemental benefits to be paid or provided are those that prevail at the time the work is being performed. Preliminary schedules for future one-year periods are published annually in the City Record on or about June 1st of each succeeding year. Final schedules are published on or about July 1st in the City Record and on our web site at www.comptroller.nyc.gov.

The Comptroller's Office has attempted to include all overtime, shift and night differential, Holiday, Saturday, Sunday or other premium time work. However, this schedule does not set forth every prevailing practice with respect to such rates with which employers must comply. All such practices are nevertheless part of the employer's prevailing wage obligation and contained in the collective bargaining agreements of the prevailing wage unions. These collective bargaining agreements are available for inspection by appointment. Requests for appointments may be made by calling (212) 669-4443, Monday through Friday between the hours of 9 a.m. and 5 p.m.

Prevailing rates and ratios for apprentices are attached to this schedule in the Appendix. Pursuant to Labor Law §220 (3-e), only apprentices who are individually registered in a bona fide program to which the employer contractor is a participant, registered with the New York State Department of Labor, may be employed on a public work project. Workers who are not journey

OFFICE OF THE COMPTROLLER, CITY OF NEW YORK
§220 PREVAILING WAGE SCHEDULE

persons or not registered apprentices pursuant to Labor Law §220 (3-e) may not be substituted for apprentices and must be paid as journey persons.

Public Work construction, reconstruction, demolition, excavation, rehabilitation, repair, renovation, alteration, or improvement contracts awarded pursuant to a Project Labor Agreement ("PLA") in accordance with Labor Law section 222 may have different labor standards for shift, premium and overtime work. Please refer to the PLA's pre-negotiated labor agreements for wage and benefit rates applicable to work performed outside of the regular workday. More information is available at the Mayor's Office of Contract Services (MOCS) web page at <http://www.nyc.gov/html/mocs/html/vendors/pla.shtml>.

All the provisions of Labor Law section 220 remain applicable to PLA work including, but not limited to, the enforcement of prevailing wage requirements by the Comptroller; however, we will enforce shift, premium, overtime and other non-standard rates as they appear in a project's pre-negotiated labor agreement.

In order to meet their obligation to provide prevailing supplemental benefits to each covered employee, employers must either:

- 1) Provide bona-fide benefits which cost the employer no less than the prevailing supplemental benefits rate; or
- 2) Supplement the employee's hourly wage by an amount no less than the prevailing supplemental benefits rate; or
- 3) Provide a combination of bona-fide benefits and wage supplements which cost the employer no less than the prevailing supplemental benefits rate in total.

Particular attention should be given to the supplemental benefits requirement. Although in most instances the payment or provision for supplemental benefits is for each hour worked, some classifications require the payment or provision of supplemental benefits for each hour paid. Consequently, some prevailing practices require benefits to be purchased at the overtime, shift differential, Holiday, Saturday, Sunday or other premium time rate.

Benefits are paid for EACH HOUR WORKED unless otherwise noted.

Wasyi Kinach, P.E.
Director of Classifications
Bureau of Labor Law

WELDER
TO BE PAID AT THE RATE OF THE JOURNEYPERSON IN THE TRADE
PERFORMING THE WORK.

PRELIMINARY

OFFICE OF THE COMPTROLLER

CITY OF NEW YORK

220 APPRENTICESHIP PREVAILING WAGE SCHEDULE

APPENDIX

Pursuant to Labor Law §220 (3-e), only apprentices who are individually registered in a bona fide program to which the employer contractor is a participant and registered with the New York State Department of Labor, may be employed on a public work project.

Any employee listed on a payroll at an apprentice wage rate, who is not registered as above, shall be paid the journey person wage rate for the classification of work he actually performed.

Apprentice ratios are established to ensure the proper safety, training and supervision of apprentices. A ratio establishes the number of journey workers required for each apprentice in a program and on a job site. Ratios are interpreted as follows: in the case of a 1:1, 1:4 ratio, there must be one journey worker for the first apprentice, and four additional journey workers for each subsequent apprentice.

OFFICE OF THE COMPTROLLER, CITY OF NEW YORK
§230 PREVAILING WAGE SCHEDULE

LABOR LAW § 230 PREVAILING WAGE SCHEDULE

Building service employees on public contracts must receive not less than the prevailing rate of wage and supplements for the classification of work performed. In accordance with Labor Law §230 et seq. the Comptroller of the City of New York has promulgated this schedule of prevailing wages and supplemental benefits for building service employees engaged on New York City public building service contracts in excess of \$1,500.00. Prevailing rates are required to be annexed to and form part of the contract pursuant to §231 (4).

Agency Chief Contracting Officers should contact the Bureau of Labor Law's Classification Unit with any questions concerning trade classifications, prevailing rates or prevailing practices with respect to procurement on New York City building services contracts. Contractors are advised to review the Comptroller's Prevailing Wage Schedule before bidding on building services contracts. Contractors with questions concerning trade classifications, prevailing rates or prevailing practices with respect to building services contracts in the procurement stage must contact the contracting agency responsible for the procurement.

Any error as to compensation under the prevailing wage law or other information as to trade classification, made by the contracting agency in the contract documents or in any other communication, will not preclude a finding against the contractor of prevailing wage violation.

Any questions concerning trade classifications, prevailing rates or prevailing practices on New York City building services contracts that have already been awarded may be directed to the Bureau of Labor Law's Classification Unit by calling (212) 669-7974. All callers must have the agency name and contract registration number available when calling with questions on building services contracts. Please direct all other compliance issues to: Bureau of Labor Law, Attn: Wasyl Kinach, P.E., Office of the Comptroller, 1 Centre Street, Room 1122, New York, N.Y. 10007; Fax (212) 669-4002.

Labor Law § 231 (6) requires contractors to post on the site of the work a current copy of this schedule of wages and supplements.

This schedule is applicable to work performed during the effective period, unless otherwise noted. Changes to this schedule are published on our web site www.comptroller.nyc.gov. Contractors must pay the wages and supplements in effect when the building service employee performs the work. Preliminary schedules for future one-year periods appear in the City Record on or about June 1 each succeeding year. Final schedules appear on or about July 1 in the City Record and on our web site www.comptroller.nyc.gov.

Contractors are solely responsible for maintaining original payroll records delineating, among other things, the hours worked by each employee within a given classification.

Some of the rates in this schedule are based on collective bargaining agreements. The Comptroller's Office has attempted to include all overtime, shift and night differential, Holiday, Saturday, Sunday or other premium time work. However, this schedule does not set forth every prevailing practice with respect to such rates with which employers must comply. All such practices are nevertheless part of the employer's prevailing wage obligation and contained in the collective bargaining agreements of the prevailing wage unions. These collective bargaining agreements are available for inspection by appointment. Requests for appointments may be made by calling (212) 669-4443, Monday through Friday between the hours of 9 a.m. and 5 p.m.

OFFICE OF THE COMPTROLLER, CITY OF NEW YORK
§230 PREVAILING WAGE SCHEDULE

In order to meet their obligation to provide prevailing supplemental benefits to each covered employee, employers must either:

- 1) Provide bona-fide benefits which cost the employer no less than the prevailing supplemental benefits rate; or
- 2) Supplement the employee's hourly wage by an amount no less than the prevailing supplemental benefits rate; or
- 3) Provide a combination of bona-fide benefits and wage supplements which cost the employer no less than the prevailing supplemental benefits rate in total.

Particular attention should be given to the supplemental benefits requirement. Although in most instances the payment or provision for supplemental benefits is for each hour worked, some classifications require the payment or provision of supplemental benefits for each hour paid. Consequently, some prevailing practices require benefits to be purchased at the overtime, shift differential, Holiday, Saturday, Sunday or other premium time rate.

Benefits are paid for **EACH HOUR WORKED** unless otherwise noted.

(Local #32 B/J)

NYC ADMINISTRATIVE CODE § 6-109 SCHEDULE OF "LIVING WAGES"

Contractors who provide the following services to the City of New York must post a copy of this Living Wage Schedule at their work site(s) as required by New York City Administrative Code § 6-109:

- Building Services,
- Day Care Services,
- Food Services,
- Head Start Services,
- Homecare Services,
- Services to Persons with Cerebral Palsy, and
- Temporary Services.

In accordance with NYC Administrative Code § 6-109, the Comptroller of the City of New York promulgated this schedule of living wages for the above services on contracts for non-emergency work in excess of the small purchase limit set by the Procurement Policy Board; contracting agencies must annex this schedule to such contracts.

A city service contractor or subcontractor that provides homecare services, day care services, head start services or services to persons with cerebral palsy must pay its covered employees that directly render such services in performance of the city service contract or subcontract no less than the living wage and must provide its employees health benefits (supplemental benefits) or must supplement their hourly wage rate by an amount no less than the health benefits supplement rate. This requirement applies for each hour that the employee works performing the city service contract or subcontract.

A city service contractor or subcontractor that provides building services, food services or temporary services must pay its employees that are engaged in performing the city service contract or subcontract no less than the living wage or the prevailing wage, whichever is greater. Where the living wage is greater than the prevailing wage, the city service contractor or subcontractor must either provide its employees health benefits or must supplement their hourly wage rate by an amount no less than the health benefits supplement rate. Where the prevailing wage is greater than the living wage, the city service contractor or subcontractor must provide its employees the prevailing wage and supplements. These requirements apply for each hour that the employee works performing the city service contract or subcontract.

The appropriate schedule of living wages must be posted at all work sites pursuant to NYC Administrative Code 6-109.

The schedule is applicable for work performed during the effective period, unless otherwise noted. You will be notified of any changes to this schedule by addenda published on our web site www.comptroller.nyc.gov. Schedules for future one-year periods will be published annually in the City Record on or about July 1st of each succeeding year and on our web site www.comptroller.nyc.gov.

OFFICE OF THE COMPTROLLER, CITY OF NEW YORK
§6-109 PREVAILING WAGE SCHEDULE

The living wage rate and the health benefit supplement rate are known through June 30 of each year and those rates are listed in this schedule.

The living wage rates listed in this schedule may not include all hourly wage calculations for overtime, shift differential, Holiday, Saturday, Sunday or other premium time work. Similarly, this schedule does not set forth every living wage practice with which employers must comply.

Some of the rates in this schedule are based on collective bargaining agreements. These agreements are available for inspection by appointment. Requests for appointments may be made by calling (212) 669-4443, Monday through Friday between the hours of 9 a.m. and 5 p.m.

Answers to questions concerning prevailing wage practices may be obtained from the Classification Unit by calling (212) 669-7974. Please direct all other compliance issues to; Bureau of Labor Law, Attn: Wasyl Kinach, P.E., Office of the Comptroller, 1 Centre Street, Room 1122, New York, N.Y. 10007; Fax (212) 669-4002.

Contractors are solely responsible for maintaining original payroll records, which delineate, among other things, the hours each employee worked within a given classification. Contractors using rates and/or classifications not promulgated by the Comptroller do so at their own risk. Additionally, prior to bid, an agency's chief contracting officer must contact the Bureau of Labor Law to obtain a wage determination for a work classification not published in this schedule.

The information listed below is intended to assist you in meeting your living wage and prevailing wage obligation. Contractors are advised to review the Comptroller's Living Wage Schedule prior to submitting a bid for City work. Any wage rate error made by the contracting agency in the contract documents will not preclude a finding against the contractor for an underpayment of the applicable living wage or the applicable prevailing wage.

This schedule sets forth the living wage and benefit rates required to be annexed to and form part of the contract specifications for work covered by New York City Administrative Code § 6-109. Contractors performing such work are required to pay not less than the rates specified in this schedule for the applicable trade or occupation.

Benefits are paid for **EACH HOUR WORKED** unless otherwise noted.

Wasyl Kinach, P.E.
Director of Classifications
Bureau of Labor Law

For the above building service classification, see the Labor Law Section 230 Schedule.

CLEANER (PARKING GARAGE)

For the above building service classification, see the Labor Law Section 230 Schedule.

DAY CARE SERVICES

Day Care Services

'Day Care Services' means provision of day care services through the city's center-based day care program administered under contract with the city's Administration for Children's Services. No other day care programs shall be covered, including family-based day care programs administered by city-contracted day care centers.

Effective Period: 7/1/2014 - 6/30/2015

Wage Rate per Hour: \$10.00

Supplemental Benefit Rate per Hour: \$1.50

(NYC Administrative Code §6-109)

FOOD SERVICE EMPLOYEES

Cook

Effective Period: 7/1/2014 - 6/30/2015

Wage Rate per Hour: \$15.62

Supplemental Benefit Rate per Hour: \$1.72

Cafeteria Attendant

OFFICE OF THE COMPTROLLER, CITY OF NEW YORK

Effective Period: 7/1/2014 - 6/30/2015
Wage Rate per Hour: \$10.48
Supplemental Benefit Rate per Hour: \$1.72

Counter Attendant

Effective Period: 7/1/2014 - 6/30/2015
Wage Rate per Hour: \$9.95
Supplemental Benefit Rate per Hour: \$1.72

Kitchen Helper / Dishwasher

Effective Period: 7/1/2014 - 6/30/2015
Wage Rate per Hour: \$9.60
Supplemental Benefit Rate per Hour: \$1.72

Overtime

Time and one half the regular hourly rate after 40 hours in any work week.

(Based on data from NYS Department of Labor Occupational Employment Statistics and US Department of Labor Bureau of Labor Statistics)

GARDENER

For the above building service classification, see the Labor Law Section 230 Schedule.

HEAD START SERVICES

Head Start Services

'Head Start Services' means provision of head start services through the city's center-based head start program administered under contract with the city's Administration for Children's Services. No other head start programs shall be covered.

Effective Period: 7/1/2014 - 6/30/2015
Wage Rate per Hour: \$10.00
Supplemental Benefit Rate per Hour: \$1.50

(NYC Administrative Code §6-109)

HEMOCARE SERVICES

Home Care Services

'Homecare Services' means the provision of homecare services under the city's Medicaid Personal Care/Home Attendant or Housekeeping Programs, including but not limited to the In-Home Services for the Elderly Programs administered by the Department for the Aging.

For homecare services provided under the Personal Care Services program, the wage and supplemental benefit rate above shall apply only as long as the state and federal government maintain their combined aggregate proportionate share of funding and approved rates for homecare services in effect as of the date of the enactment of this section.

For contractors or subcontractors providing homecare services, the supplemental benefit rate may be waived by the terms of a bona fide collective bargaining agreement with respect to employees who have never worked a minimum of eighty (80) hours per month for two consecutive months for that covered employer, but such provision may not be waived for any employee once a minimum of eighty (80) hours for two consecutive months has been achieved.

Effective Period: 7/1/2014 - 6/30/2015

Wage Rate per Hour: \$10.00

Supplemental Benefit Rate per Hour: \$1.50

(NYC Administrative Code §6-109)

SECURITY GUARD (ARMED)

For the above building service classification, see the Labor Law Section 230 Schedule.

SECURITY GUARD (UNARMED)

For the above building service classification, see the Labor Law Section 230 Schedule.

SERVICES TO PERSONS WITH CEREBRAL PALSY

Services To Person With Cerebral Palsy

'Services to Persons with Cerebral Palsy' means provision of services which enable persons with cerebral palsy and related disabilities to lead independent and productive lives through an agency that provides health care, education, employment, housing and technology resources to such persons under contract with the city or the department of education.
