- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.5 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

### 3.6 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  - 1. Exterior Concrete Walls above Grade:
    - a. Piping Smaller than NPS 6 (DN 150): Sleeve-seal fittings.
    - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel wall sleeves
  - 2. Exterior Concrete Walls below Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Cast-iron wall sleeves with sleeve-seal system
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6 (DN 150) and Larger: Cast-iron wall sleeves with sleeve-seal system
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
  - 3. Concrete Slabs-on-Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Cast-iron wall sleeves with sleeve-seal system
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6 (DN 150) and Larger: Cast-iron wall sleeves with sleeve-seal system
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
  - 4. Concrete Slabs above Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves
    - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-pipe sleeves

5. Interior Partitions:
  - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves
  - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-sheet sleeves.

**END OF SECTION 22 05 17**

**SECTION 22 05 18****ESCUTCHEONS FOR PLUMBING PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:

- 1. Escutcheons.
- 2. Floor plates.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.
- D. Split-Casting Brass Type: With polished, chrome-plated finish and with concealed hinge and setscrew.
- E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
- B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.
  - 1. Escutcheons for New Piping:
    - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    - b. Chrome-Plated Piping: One-piece, cast-brasstype with polished, chrome-plated finish.
    - c. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
    - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brasstype with polished, chrome-plated finish.

- e. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
  - f. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished, chrome-plated finish.
  - g. Bare Piping in Equipment Rooms: One-piece, cast-brass type with polished, chrome-plated finish.
- C. Install floor plates for piping penetrations of equipment-room floors.
- D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
- E. New Piping: One-piece, floor-plate type.
- 3.3 FIELD QUALITY CONTROL
- A. Replace broken and damaged escutcheons and floor plates using new materials.

**END OF SECTION 22 05 18**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 05 19****METERS AND GAGES FOR PLUMBING PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Bimetallic-actuated thermometers.
2. Thermowells.
3. Dial-type pressure gages.
4. Gage attachments.
5. Test plugs.
6. Test-plug kits.
7. Sight flow indicators.

B. Related Sections:

1. Section 21 12 00 "Fire-Suppression Standpipes" for fire protection pressure gages.
2. Section 21 13 13 "Wet-Pipe Sprinkler Systems"
3. Section 22 11 13 "Facility Water Distribution Piping" for domestic water meters and combined domestic and fire-protection water-service meters outside the building.
4. Section 22 11 16 "Domestic Water Piping" for water meters inside the building.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

#### 1.7 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of meter and gage, from manufacturer.

#### 1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

### PART 2 - PRODUCTS

#### 2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Ashcroft Inc.
  2. Ernst Flow Industries.
  3. Marsh Bellofram.
  4. Miljoco Corporation.
  5. Nanmac Corporation.
  6. Noshok.
  7. Palmer Wahl Instrumentation Group.
  8. REOTEMP Instrument Corporation.
  9. Tel-Tru Manufacturing Company.
  10. Trerice, H. O. Co.
  11. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
  12. Weiss Instruments, Inc.
  13. WIKA Instrument Corporation - USA.
  14. Winters Instruments - U.S.
  15. Or approved equal.
- B. Standard: ASME B40.200.
- C. Case: Liquid-filled and sealed type(s); stainless steel with 5-inch (127-mm) nominal diameter.
- D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F (deg C).
- E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.
- F. Connector Size: 1/2 inch (13 mm), with ASME B1.1 screw threads.

- G. Stem: 0.25 or 0.375 inch (6.4 or 9.4 mm) in diameter; stainless steel.
- H. Window: Plain glass.
- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus or minus 1percent of scale range.

## 2.2 LIGHT-ACTIVATED THERMOMETERS

### A. Remote-Mounted, Light-Activated Thermometers:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Miljoco Corporation.
  - b. Weiss Instruments, Inc.
  - c. Winters Instruments - U.S.
  - d. Or approved equal.
- 2. Case: Plastic, for wall mounting.
- 3. Scale(s): Deg F (Deg C).
- 4. Sensor: Bulb and thermister wire.
  - a. Design for Thermowell Installation: Bare stem.
- 5. Display: Digital.
- 6. Accuracy: Plus or minus 2 deg F (1 deg C).

## 2.3 THERMOWELLS

### A. Thermowells:

- 1. Standard: ASME B40.200.
- 2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
- 3. Material for Use with Copper Tubing: CNR.
- 4. Material for Use with Steel Piping: CRES.
- 5. Type: Stepped shank unless straight or tapered shank is indicated.
- 6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, (DN 15, DN 20, or NPS 25,) ASME B1.20.1 pipe threads.
- 7. Internal Threads: 1/2, 3/4, and 1 inch (13, 19, and 25 mm), with ASME B1.1 screw threads.
- 8. Bore: Diameter required to match thermometer bulb or stem.
- 9. Insertion Length: Length required to match thermometer bulb or stem.
- 10. Lagging Extension: Include on thermowells for insulated piping and tubing.
- 11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

### B. Heat-Transfer Medium: Mixture of graphite and glycerin.

## 2.4 PRESSURE GAGES

### A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AMETEK, Inc.; U.S. Gauge.
  - b. Ashcroft Inc.
  - c. Ernst Flow Industries.
  - d. Flo Fab Inc.
  - e. Marsh Bellofram.
  - f. Miljoco Corporation.
  - g. Noshok.
  - h. Palmer Wahl Instrumentation Group.
  - i. REOTEMP Instrument Corporation.
  - j. Tel-Tru Manufacturing Company.
  - k. Terice, H. O. Co.
  - l. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
  - m. Weiss Instruments, Inc.
  - n. WIKA Instrument Corporation - USA.
  - o. Winters Instruments - U.S.
3. Standard: ASME B40.100.
4. Case: Liquid-filled sealed 6-inch (152-mm) nominal diameter.
5. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
6. Pressure Connection: Brass, with NPS 1/4 or NPS 1/2, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
7. Movement: Mechanical, with link to pressure element and connection to pointer.
8. Dial: Nonreflective aluminum with permanently etched scale markings graduated in.
9. Pointer: Dark-colored metal.
10. Window: Glass.
11. Ring: Metal.
12. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

## 2.5 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with NPS 1/4 (DN 8), ASME B1.20.1 pipe threads and piston porous-metal-type surge-dampening device. Include extension for use on insulated piping.
- B. Valves: Brass or stainless-steel needle, with NPS 1/4 (DN 8), ASME B1.20.1 pipe threads.

## 2.6 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Flow Design, Inc.
  2. Miljoco Corporation.
  3. National Meter, Inc.
  4. Peterson Equipment Co., Inc.
  5. Sisco Manufacturing Company, Inc.

6. Terice, H. O. Co.
7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
8. Weiss Instruments, Inc.
9. Or approved equal.

- B. Description: Test-station fitting made for insertion into piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread Size: NPS 1/2 (DN 15), ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F (3450 kPa at 93 deg C).
- F. Core Inserts: Chlorosulfonated polyethylene synthetic self-sealing rubber.

## 2.7 TEST-PLUG KITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
1. Flow Design, Inc.
  2. Miljoco Corporation.
  3. National Meter, Inc.
  4. Peterson Equipment Co., Inc.
  5. Sisco Manufacturing Company, Inc.
  6. Terice, H. O. Co.
  7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
  8. Weiss Instruments, Inc.
  9. Or approved equal.
- C. Furnish one test-plug kit(s) containing one thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.
- D. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F (minus 4 to plus 52 deg C).
- E. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- (25- to 51-mm-) diameter dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F (minus 18 to plus 104 deg C).
- F. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch- (51- to 76-mm-) diameter dial and probe. Dial range shall be at least 0 to 200 psig.
- G. Carrying Case: Metal or plastic, with formed instrument padding.

## 2.8 SIGHT FLOW INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Archon Industries, Inc.
  - 2. Dwyer Instruments, Inc.
  - 3. Emerson Process Management; Brooks Instrument.
  - 4. Ernst Co., John C., Inc.
  - 5. Ernst Flow Industries.
  - 6. KOBOLD Instruments, Inc. - USA; KOBOLD Messring GmbH.
  - 7. OPW Engineered Systems; a Dover company.
  - 8. Penberthy; A Brand of Tyco Valves & Controls - Prophetstown.
  - 9. Or approved equal.
- B. Description: Piping inline-installation device for visual verification of flow.
- C. Construction: Bronze or stainless-steel body, with sight glass and paddle wheel indicator, and threaded or flanged ends.
- D. Minimum Pressure Rating: 125 psig (860 kPa).
- E. Minimum Temperature Rating: 200 deg F (93 deg C).
- F. End Connections for NPS 2 (DN 50) and Smaller: Threaded.
- G. End Connections for NPS 2-1/2 (DN 65) and Larger: Flanged.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install thermowells with socket extending a minimum of 2 inches (51 mm) into fluid and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

- H. Install remote-mounted pressure gages on panel.
- I. Install valve and snubber in piping for each pressure gage for fluids.
- J. Install test plugs in piping tees.
- K. Install thermometers in the following locations:
  - 1. Inlet and outlet of each water heater.
  - 2. Inlets and outlets of each domestic water heat exchanger.
  - 3. Inlet and outlet of each domestic hot-water storage tank.
  - 4. Inlet and outlet of each remote domestic water chiller.
- L. Install pressure gages in the following locations:
  - 1. Building water service entrance into building.
  - 2. Inlet and outlet of each pressure-reducing valve.
  - 3. Suction and discharge of each domestic water pump.

### 3.3 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

### 3.4 ADJUSTING

- A. Adjust faces of meters and gages to proper angle for best visibility.

### 3.5 THERMOMETER SCHEDULE

- A. Thermometers at inlet and outlet of each domestic water heater shall be one of the following:
  - 1. Sealed, bimetallic-actuated type.
  - 2. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.
- B. Thermometers at inlets and outlets of each domestic water heat exchanger shall be one of the following:
  - 1. Liquid-filled, bimetallic-actuated type.
  - 2. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.
- C. Thermometers at inlet and outlet of each domestic hot-water storage tank shall be one of the following:
  - 1. Sealed, bimetallic-actuated type.
  - 2. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.
- D. Thermometers at inlet and outlet of each remote domestic water chiller shall be one of the following:
  - 1. Sealed, bimetallic-actuated type.
  - 2. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.
- E. Thermometer stems shall be of length to match thermowell insertion length.

3.6 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Domestic Cold-Water Piping: 0 to 100 deg F (Minus 20 to plus 50 deg C).

3.7 PRESSURE-GAGE SCHEDULE

- A. Pressure gages at discharge of each water service into building shall be one of the following:

1. Sealed, Solid-front, direct mounted, metal case.
2. Sealed direct, mounted, plastic case.
3. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.

- B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be one of the following:

1. Sealed, Solid-front, direct mounted, metal case.
2. Sealed, direct, plastic case.
3. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.

- C. Pressure gages at suction and discharge of each domestic water pump shall be one of the following:

1. Sealed Solid-front direct mounted, metal case.
2. Sealed, direct mounted, plastic case.
3. Test plug with chlorosulfonated polyethylene synthetic self-sealing rubber inserts.

3.8 PRESSURE-GAGE SCALE-RANGE SCHEDULE

Scale Range for Water Service Piping: 0 to 160 psi.

- A. Scale Range for Domestic Water Piping: 0 to 200 psi.

**END OF SECTION 22 05 19**

**SECTION 22 05 23****GENERAL-DUTY VALVES FOR PLUMBING PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Bronze angle valves.
2. Bronze ball valves.
3. Iron, single-flange butterfly valves.
4. Iron, grooved-end butterfly valves.
5. Bronze lift check valves.
6. Bronze swing check valves.
7. Iron gate valves.
8. Bronze globe valves.
9. Lubricated plug valves.
10. Chainwheels.

B. Related Sections:

1. Section 220553 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
2. Section 221113 "Facility Water Distribution Piping" for valves applicable only to this piping.
3. Section 221116 "Domestic Water Piping" for valves applicable only to this piping.
4. Section 221319 "Sanitary Waste Piping Specialties" for valves applicable only to this piping.
5. Section 221423 "Storm Drainage Piping Specialties" for valves applicable only to this piping.
6. Section 334100 "Storm Utility Drainage Piping" for valves applicable only to this piping.
7. Section 334600 "Subdrainage" for valves applicable only to this piping.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 DEFINITIONS

- A. CWP: Cold working pressure.
- B. EPDM: Ethylene propylene copolymer rubber.
- C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- D. NRS: Nonrising stem.
- E. OS&Y: Outside screw and yoke.
- F. RS: Rising stem.
- G. SWP: Steam working pressure.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of valve indicated.

#### 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- C. ASME Compliance:
  1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
  2. ASME B31.1 for power piping valves.
  3. ASME B31.9 for building services piping valves.

- D. NSF Compliance: NSF 61 for valve materials for potable-water service.

## 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set angle, gate, and globe valves closed to prevent rattling.
4. Set ball and plug valves open to minimize exposure of functional surfaces.
5. Set butterfly valves closed or slightly open.
6. Block check valves in either closed or open position.

- B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

## PART 2 - PRODUCTS

### 2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Refer to valve schedule articles for applications of valves.

- B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

- C. Valve Sizes: Same as upstream piping unless otherwise indicated.

- D. Valve Actuator Types:

1. Gear Actuator: For quarter-turn valves NPS 8 (DN 200) and larger.
2. Handwheel: For valves other than quarter-turn types.
3. Handlever: For quarter-turn valves NPS 6 (DN 150) and smaller.
4. Wrench: For plug valves with square heads. Furnish The City of New York with 1 wrench for every 5 plug valves, for each size square plug-valve head.
5. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; of size and with chain for mounting height, as indicated in the "Valve Installation" Article.

- E. Valves in Insulated Piping: With 2-inch (50-mm) stem extensions and the following features:

1. Gate Valves: With rising stem.
2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
3. Butterfly Valves: With extended neck.

- F. Valve-End Connections:

1. Flanged: With flanges according to ASME B16.1 for iron valves.
2. Grooved: With grooves according to AWWA C606.
3. Solder Joint: With sockets according to ASME B16.18.
4. Threaded: With threads according to ASME B1.20.1.

G. Valve Bypass and Drain Connections: MSS SP-45.

## 2.2 BRONZE ANGLE VALVES

A. Class 150, Bronze Angle Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Stockham Division.
  - b. Kitz Corporation.
  - c. NIBCO:
  - d. Or approved equal.
2. Description:
  - a. Standard: MSS SP-80, Type 1.
  - b. CWP Rating: 300 psig (2070 kPa).
  - c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
  - d. Ends: Threaded.
  - e. Stem and Disc: Bronze.
  - f. Packing: Asbestos free.
  - g. Handwheel: Malleable iron, aluminum.

## 2.3 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Valve, Inc.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. Crane Co.; Crane Valve Group; Crane Valves.
  - d. Hammond Valve.
  - e. Lance Valves; a division of Advanced Thermal Systems, Inc.
  - f. Legend Valve.
  - g. Milwaukee Valve Company.
  - h. NIBCO INC: T/S 585-70.
  - i. Red-White Valve Corporation.
  - j. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - k. Or approved equal.
2. Description:
  - a. Standard: MSS SP-110.
  - b. SWP Rating: 150 psig (1035 kPa).
  - c. CWP Rating: 600 psig (4140 kPa).

- d. Body Design: Two piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

**B. Two-Piece, Regular-Port, Bronze Ball Valves with Bronze Trim:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Valve, Inc.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. Crane Co.; Crane Valve Group; Jenkins Valves.
  - d. Crane Co.; Crane Valve Group; Stockham Division.
  - e. DynaQuip Controls.
  - f. Hammond Valve.
  - g. Lance Valves; a division of Advanced Thermal Systems, Inc.
  - h. Milwaukee Valve Company.
  - i. NIBCO INC T/S 580-70.
  - j. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-110.
  - b. SWP Rating: 150 psig (1035 kPa).
  - c. CWP Rating: 600 psig (4140 kPa).
  - d. Body Design: Two piece.
  - e. Body Material: Bronze.
  - f. Ends: Threaded.
  - g. Seats: PTFE or TFE.
  - h. Stem: Bronze.
  - i. Ball: Chrome-plated brass.
  - j. Port: Regular.

**C. Three-Piece, Full-Port, Bronze Ball Valves with Bronze Trim:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Conbraco Industries, Inc.; Apollo Valves.
  - b. DynaQuip Controls.
  - c. Hammond Valve.
  - d. Milwaukee Valve Company.
  - e. NIBCO INC.
  - f. Red-White Valve Corporation.
  - g. NIBCO T/S 590-Y.
  - h. Or approved equal.
- 2. Description:

- a. Standard: MSS SP-110.
- b. SWP Rating: 150 psig (1035 kPa).
- c. CWP Rating: 600 psig (4140 kPa).
- d. Body Design: Three piece.
- e. Body Material: Bronze.
- f. Ends: Threaded.
- g. Seats: PTFE or TFE.
- h. Stem: Bronze.
- i. Ball: Chrome-plated brass.
- j. Port: Full.

## 2.4 IRON, SINGLE-FLANGE BUTTERFLY VALVES

### A. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
  - d. Crane Co.; Crane Valve Group; Jenkins Valves.
  - e. Crane Co.; Crane Valve Group; Stockham Division.
  - f. DeZurik Water Controls.
  - g. Flo Fab Inc.
  - h. Hammond Valve.
  - i. Kitz Corporation.
  - j. Legend Valve.
  - k. Milwaukee Valve Company.
  - l. NIBCO INC LD-2000.
  - m. Norriseal; a Dover Corporation company.
  - n. Red-White Valve Corporation.
  - o. Spence Strainers International; a division of CIRCOR International, Inc.
  - p. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - q. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-67, Type I.
  - b. CWP Rating: 200 psig (1380 kPa).
  - c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
  - d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
  - e. Seat: EPDM.
  - f. Stem: One- or two-piece stainless steel.
  - g. Disc: Aluminum bronze.

### B. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Aluminum-Bronze Disc:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.

- b. Conbraco Industries, Inc.; Apollo Valves.
- c. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
- d. Crane Co.; Crane Valve Group; Jenkins Valves.
- e. Crane Co.; Crane Valve Group; Stockham Division.
- f. DeZurik Water Controls.
- g. Flo Fab Inc.
- h. Hammond Valve.
- i. Kitz Corporation.
- j. Legend Valve.
- k. Milwaukee Valve Company.
- l. NIBCO INC LD 2100.
- m. Norriseal; a Dover Corporation company.
- n. Red-White Valve Corporation.
- o. Spence Strainers International; a division of CIRCOR International, Inc.
- p. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- q. Or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: NBR.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Aluminum bronze.

C. 200 CWP, Iron, Single-Flange Butterfly Valves with EPDM Seat and Ductile-Iron Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
- b. American Valve, Inc.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
- e. Crane Co.; Crane Valve Group; Center Line.
- f. Crane Co.; Crane Valve Group; Stockham Division.
- g. DeZurik Water Controls.
- h. Flo Fab Inc.
- i. Hammond Valve.
- j. Kitz Corporation.
- k. Legend Valve.
- l. Milwaukee Valve Company.
- m. Mueller Steam Specialty; a division of SPX Corporation.
- n. NIBCO INC LD 2010.
- o. Norriseal; a Dover Corporation company.
- p. Spence Strainers International; a division of CIRCOR International, Inc.
- q. Sure Flow Equipment Inc.
- r. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- s. Or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: EPDM.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Nickel-plated ductile iron.

D. 200 CWP, Iron, Single-Flange Butterfly Valves with NBR Seat and Ductile-Iron Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

- a. ABZ Valve and Controls; a division of ABZ Manufacturing, Inc.
- b. American Valve, Inc.
- c. Conbraco Industries, Inc.; Apollo Valves.
- d. Cooper Cameron Valves; a division of Cooper Cameron Corporation.
- e. Crane Co.; Crane Valve Group; Center Line.
- f. Crane Co.; Crane Valve Group; Stockham Division.
- g. DeZurik Water Controls.
- h. Flo Fab Inc.
- i. Hammond Valve.
- j. Kitz Corporation.
- k. Legend Valve.
- l. Milwaukee Valve Company.
- m. Mueller Steam Specialty; a division of SPX Corporation.
- n. NIBCO INC LD 2110.
- o. Norriseal; a Dover Corporation company.
- p. Spence Strainers International; a division of CIRCOR International, Inc.
- q. Sure Flow Equipment Inc.
- r. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- s. Or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
- d. Body Material: ASTM A 126, cast iron or ASTM A 536, ductile iron.
- e. Seat: NBR.
- f. Stem: One- or two-piece stainless steel.
- g. Disc: Nickel-plated ductile iron.

2.5 IRON, GROOVED-END BUTTERFLY VALVES

A. 175 CWP, Iron, Grooved-End Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Kennedy Valve; a division of McWane, Inc.
- b. Shurjoint Piping Products.
- c. Tyco Fire Products LP; Grinnell Mechanical Products.
- d. Victaulic Company.
- e. Or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. CWP Rating: 175 psig (1200 kPa).
- c. Body Material: Coated, ductile iron.
- d. Stem: Two-piece stainless steel.
- e. Disc: Coated, ductile iron.
- f. Seal: EPDM.

B. 300 CWP, Iron, Grooved-End Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Anvil International, Inc.
- b. Kennedy Valve; a division of McWane, Inc.
- c. Mueller Steam Specialty; a division of SPX Corporation.
- d. NIBCO INC.
- e. Shurjoint Piping Products.
- f. Tyco Fire Products LP; Grinnell Mechanical Products.
- g. Victaulic Company.
- h. Or approved equal.

2. Description:

- a. Standard: MSS SP-67, Type I.
- b. NPS 8 (DN 200) and Smaller CWP Rating: 300 psig (2070 kPa).
- c. NPS 10 (DN 250) and Larger CWP Rating: 200 psig (1380 kPa).
- d. Body Material: Coated, ductile iron.
- e. Stem: Two-piece stainless steel.
- f. Disc: Coated, ductile iron.
- g. Seal: EPDM.

2.6 BRONZE LIFT CHECK VALVES

A. Class 125, Lift Check Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Crane Co.; Crane Valve Group; Stockham Division.
- d. NIBCO: T/S 413-B
- e. Or approved equal.

2. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Vertical flow.
- d. Body Material: ASTM B 61 or ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

**B. Class 125, Lift Check Valves with Nonmetallic Disc:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Flo Fab Inc.
  - b. Hammond Valve.
  - c. Kitz Corporation.
  - d. Milwaukee Valve Company.
  - e. Mueller Steam Specialty; a division of SPX Corporation.
  - f. NIBCO INC: T/S 413-Y
  - g. Red-White Valve Corporation.
  - h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - i. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-80, Type 2.
  - b. CWP Rating: 200 psig (1380 kPa).
  - c. Body Design: Vertical flow.
  - d. Body Material: ASTM B 61 or ASTM B 62, bronze.
  - e. Ends: Threaded.
  - f. Disc: NBR, PTFE, or TFE.

**2.7 BRONZE SWING CHECK VALVES**

**A. Class 125, Bronze Swing Check Valves with Bronze Disc:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Valve, Inc.
  - b. Crane Co.; Crane Valve Group; Crane Valves.
  - c. Crane Co.; Crane Valve Group; Jenkins Valves.
  - d. Crane Co.; Crane Valve Group; Stockham Division.
  - e. Hammond Valve.
  - f. Kitz Corporation.
  - g. Milwaukee Valve Company.
  - h. NIBCO INC: T/S 413-B.
  - i. Powell Valves.
  - j. Red-White Valve Corporation.
  - k. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - l. Zy-Tech Global Industries, Inc.
  - m. Or approved equal.
- 2. Description:

- a. Standard: MSS SP-80, Type 3.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

**B. Class 150, Bronze Swing Check Valves with Bronze Disc:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Valve, Inc.
  - b. Crane Co.; Crane Valve Group; Crane Valves.
  - c. Crane Co.; Crane Valve Group; Jenkins Valves.
  - d. Crane Co.; Crane Valve Group; Stockham Division.
  - e. Kitz Corporation.
  - f. Milwaukee Valve Company.
  - g. NIBCO INC: T/S 433-B
  - h. Red-White Valve Corporation.
  - i. Zy-Tech Global Industries, Inc.
  - j. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-80, Type 3.
  - b. CWP Rating: 300 psig (2070 kPa).
  - c. Body Design: Horizontal flow.
  - d. Body Material: ASTM B 62, bronze.
  - e. Ends: Threaded.
  - f. Disc: Bronze.

**2.8 IRON GATE VALVES**

**A. Class 125, NRS, Iron Gate Valves:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Jenkins Valves.
  - c. Crane Co.; Crane Valve Group; Stockham Division.
  - d. Flo Fab Inc.
  - e. Hammond Valve.
  - f. Kitz Corporation.
  - g. Legend Valve.
  - h. Milwaukee Valve Company.
  - i. NIBCO INC: F-619 Non Rising Stem.
  - j. Powell Valves.
  - k. Red-White Valve Corporation.
  - l. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - m. Zy-Tech Global Industries, Inc.
  - n. Or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM A 126, gray iron with bolted bonnet.
- d. Ends: Flanged.
- e. Trim: Bronze.
- f. Disc: Solid wedge.
- g. Packing and Gasket: Asbestos free.

B. Class 125, OS&Y, Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Crane Co.; Crane Valve Group; Stockham Division.
- d. Flo Fab Inc.
- e. Hammond Valve.
- f. Kitz Corporation.
- g. Legend Valve.
- h. Milwaukee Valve Company.
- i. NIBCO INC: f-617-0.
- j. Powell Valves.
- k. Red-White Valve Corporation.
- l. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- m. Zy-Tech Global Industries, Inc.
- n. Or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM A 126, gray iron with bolted bonnet.
- d. Ends: Flanged.
- e. Trim: Bronze.
- f. Disc: Solid wedge.
- g. Packing and Gasket: Asbestos free.

C. Class 250, NRS, Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Stockham Division.
- c. Hammond Valve
- d. NIBCO INC: F-619-RW.
- e. Or approved equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. CWP Rating: 500 psig (3450 kPa).
- c. Body Material: ASTM A 126, gray iron with bolted bonnet.
- d. Ends: Flanged.
- e. Trim: Bronze.
- f. Disc: Solid wedge.
- g. Packing and Gasket: Asbestos free.

**D. Class 250, OS&Y, Iron Gate Valves:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Stockham Division.
  - c. Hammond Valve.
  - d. Milwaukee Valve Company.
  - e. NIBCO INC: F-667-0.
  - f. Powell Valves.
  - g. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - h. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-70, Type I.
  - b. CWP Rating: 500 psig (3450 kPa).
  - c. Body Material: ASTM A 126, gray iron with bolted bonnet.
  - d. Ends: Flanged.
  - e. Trim: Bronze.
  - f. Disc: Solid wedge.
  - g. Packing and Gasket: Asbestos free.

**2.9 BRONZE GLOBE VALVES**

**A. Class 125, Bronze Globe Valves with Bronze Disc:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Stockham Division.
  - c. Hammond Valve.
  - d. Kitz Corporation.
  - e. Milwaukee Valve Company.
  - f. NIBCO INC: T/S 211.
  - g. Powell Valves.
  - h. Red-White Valve Corporation.
  - i. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - j. Zy-Tech Global Industries, Inc.
  - k. Or approved equal.
- 2. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
- d. Ends: Threaded.
- e. Stem and Disc: Bronze.
- f. Packing: Asbestos free.
- g. Handwheel: Malleable iron bronze.

**B. Class 125, Bronze Globe Valves with Nonmetallic Disc:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Stockham Division.
  - c. NIBCO INC: T/S-235-Y.
  - d. Red-White Valve Corporation.
- 2. Description:
  - a. Standard: MSS SP-80, Type 2.
  - b. CWP Rating: 200 psig (1380 kPa).
  - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
  - d. Ends: Threaded.
  - e. Stem: Bronze.
  - f. Disc: PTFE or TFE.
  - g. Packing: Asbestos free.
  - h. Handwheel: Malleable iron bronze.

**C. Class 150, Bronze Globe Valves with Nonmetallic Disc:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Hammond Valve.
  - c. Kitz Corporation.
  - d. Milwaukee Valve Company.
  - e. NIBCO INC: T/S 235-Y.
  - f. Powell Valves.
  - g. Red-White Valve Corporation.
  - h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - i. Zy-Tech Global Industries, Inc.
  - j. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-80, Type 2.
  - b. CWP Rating: 300 psig (2070 kPa).
  - c. Body Material: ASTM B 62, bronze with integral seat and union-ring bonnet.
  - d. Ends: Threaded.
  - e. Stem: Bronze.
  - f. Disc: PTFE or TFE.

- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron bronze.

## 2.10 LUBRICATED PLUG VALVES

### A. Class 125, Regular-Gland, Lubricated Plug Valves with Threaded Ends:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Nordstrom Valves, Inc.
  - b. Milliken Valve Company.
  - c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
  - d. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-78, Type II.
  - b. CWP Rating: 200 psig (1380 kPa).
  - c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
  - d. Pattern: Regular or short.
  - e. Plug: Cast iron or bronze with sealant groove.

### B. Class 125, Regular-Gland, Lubricated Plug Valves with Flanged Ends:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Nordstrom Valves, Inc.
  - b. Milliken Valve Company.
  - c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
  - d. Or approved equal.
- 2. Description:
  - a. Standard: MSS SP-78, Type II.
  - b. CWP Rating: 200 psig (1380 kPa).
  - c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
  - d. Pattern: Regular or short.
  - e. Plug: Cast iron or bronze with sealant groove.

### C. Class 125, Cylindrical, Lubricated Plug Valves with Threaded Ends:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Homestead Valve; a division of Olson Technologies, Inc.
  - b. Milliken Valve Company.
  - c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
  - d. Or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type IV.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: Regular or short.
- e. Plug: Cast iron or bronze with sealant groove.

D. Class 125, Cylindrical, Lubricated Plug Valves with Flanged Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Homestead Valve; a division of Olson Technologies, Inc.
- b. Milliken Valve Company.
- c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
- d. Or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type IV.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: Regular or short.
- e. Plug: Cast iron or bronze with sealant groove.

E. Class 250, Regular-Gland, Lubricated Plug Valves with Threaded Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Nordstrom Valves, Inc.
- b. Milliken Valve Company.
- c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
- d. Or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type II.
- b. CWP Rating: 400 psig (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: Regular or short.
- e. Plug: Cast iron or bronze with sealant groove.

F. Class 250, Regular-Gland, Lubricated Plug Valves with Flanged Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Nordstrom Valves, Inc.

- b. Milliken Valve Company.
- c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
- d. Or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type II.
- b. CWP Rating: 400 psig (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: Regular or short
- e. Plug: Cast iron or bronze with sealant groove.

G. Class 250, Cylindrical, Lubricated Plug Valves with Threaded Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Homestead Valve; a division of Olson Technologies, Inc.
- b. Milliken Valve Company.
- c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
- d. Or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type IV.
- b. CWP Rating: 400 psig (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, cast iron with lubrication-sealing system.
- d. Pattern: Regular or short.
- e. Plug: Cast iron or bronze with sealant groove.

H. Class 250, Cylindrical, Lubricated Plug Valves with Flanged Ends:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Homestead Valve; a division of Olson Technologies, Inc.
- b. Milliken Valve Company.
- c. R & M Energy Systems; a unit of Robbins & Myers, Inc.
- d. Or approved equal.

2. Description:

- a. Standard: MSS SP-78, Type IV.
- b. CWP Rating: 400 psig (2760 kPa).
- c. Body Material: ASTM A 48/A 48M or ASTM A 126, Grade 40 cast iron with lubrication-sealing system.
- d. Pattern: Regular or short.
- e. Plug: Cast iron or bronze with sealant groove.

## 2.11 CHAINWHEELS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Babbitt Steam Specialty Co.
  - 2. Roto Hammer Industries.
  - 3. Trumbull Industries.
  - 4. Or approved equal.
- B. Description: Valve actuation assembly with sprocket rim, brackets, and chain.
  - 1. Brackets: Type, number, size, and fasteners required to mount actuator on valve.
  - 2. Attachment: For connection to ball valve stems.
  - 3. Sprocket Rim with Chain Guides: Ductile iron, of type and size required for valve. Include zinc.
  - 4. Chain: Hot-dip, galvanized steel, of size required to fit sprocket rim.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- C. Examine threads on valve and mating pipe for form and cleanliness.
- D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- E. Do not attempt to repair defective valves; replace with new valves.

### 3.3 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.

- E. E. Install valve tags. Comply with requirements in Section 22 05 53 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.
- F. Install check valves for proper direction of flow and as follows:
  - 1. Swing Check Valves: In horizontal position with hinge pin level.
  - 2. Center-Guided Check Valves: In horizontal or vertical position, between flanges.
  - 3. Lift Check Valves: With stem upright and plumb.

### 3.4 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

### 3.5 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
  - 1. Shutoff Service: Ball, butterfly, gate, or plug valves.
  - 2. Butterfly Valve Dead-End Service: Single-flange (lug) type.
  - 3. Throttling Service: Globe or angle valves.
  - 4. Pump-Discharge Check Valves:
    - a. NPS 2 (DN 50) and Smaller: Bronze swing check valves with bronze disc.
    - b. NPS 2-1/2 (DN 65) and Larger for Domestic Water: Iron swing check valves with lever and weight or with spring or iron, center-guided, resilient-seat check valves.
    - c. NPS 2-1/2 (DN 65) and Larger for Sanitary Waste and Storm Drainage: Iron swing check valves with lever and weight or spring.
- B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
  - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
  - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
  - 3. For Copper Tubing, NPS 5 (DN 125) and Larger: Flanged ends.
  - 4. For Steel Piping, NPS 2 (DN 50) and Smaller: Threaded ends.
  - 5. For Steel Piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.
  - 6. For Steel Piping, NPS 5 (DN 125) and Larger: Flanged ends.
  - 7. For Grooved-End Steel Piping: Valve ends may be grooved.

### 3.6 LOW-PRESSURE, COMPRESSED-AIR VALVE SCHEDULE (150 PSIG (1035 kPa) OR LESS)

- A. Pipe NPS 2 (DN 50) and Smaller:
  - 1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
  - 2. Ball Valves: Two piece, regular port, brass with stainless-steel trim.
  - 3. Bronze Lift Check Valves: Class 125, bronze disc.

4. Bronze Swing Check Valves: Class 150, bronze disc.
5. Bronze Gate Valves: Class 150, RS.

**B. Pipe NPS 2-1/2 (DN 65) and Larger:**

1. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
2. Iron, Single-Flange Butterfly Valves: 200 CWP, NBR seat, ductile-iron disc.
3. Iron, Grooved-End Butterfly Valves: 300 CWP.
4. Iron Swing Check Valves: Class 250, metal seats.
5. Iron, Grooved-End Swing Check Valves: 300 CWP.
6. Iron, Center-Guided Check Valves: Class 250 resilient seat.
7. Iron, Plate-Type Check Valves: Class 250, plate; resilient seat.
8. Iron Gate Valves: Class 250, OS&Y.

**3.7 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE**

**A. Pipe NPS 2 (DN 50) and Smaller:**

1. Bronze and Brass Valves: May be provided with solder-joint ends instead of threaded ends.
2. Bronze Angle Valves: Class 150, nonmetallic disc.
3. Ball Valves: Two piece, regular port, brass with brass trim.
4. Bronze Swing Check Valves: Class 150 disc.
5. Bronze Gate Valves: Class 150 RS.
6. Bronze Globe Valves: Class 150 bronze disc.

**B. Pipe NPS 2-1/2 (DN 65) and Larger:**

1. Iron Valves, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): May be provided with threaded ends instead of flanged ends.
2. Iron Ball Valves: Class 150.
3. Iron, Single-Flange Butterfly Valves: 200 CWP, EPDM seat, ductile-iron disc.
4. Iron, Grooved-End Butterfly Valves: 300 CWP.
5. Iron Swing Check Valves: Class 250, metal seats.
6. Iron Swing Check Valves with Closure Control: Class 125, lever and spring.
7. Iron, Grooved-End Swing Check Valves: 300 CWP.
8. Iron, Center-Guided Check Valves: Class 250, compact-wafer, resilient seat.
9. Iron, Plate-Type Check Valves: Class 250; single plate; resilient seat.
10. Iron Gate Valves: Class 250, OS&Y.
11. Iron Globe Valves: Class 250.

**END OF SECTION 22 05 23**

**SECTION 22 05 29****HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Metal framing systems.
4. Thermal-hanger shield inserts.
5. Fastener systems.
6. Pipe stands.
7. Pipe positioning systems.
8. Equipment supports.

B. Related Sections:

1. Section 05 50 00 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 22 05 16 "Expansion Fittings and Loops for Plumbing Piping" for pipe guides and anchors.
3. Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment" for vibration isolation devices.

**1.3 DEFINITIONS**

- A. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry Inc.

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.6 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional Commissioner using performance requirements and design criteria indicated.
- B. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following; include Product Data for components:
  1. Trapeze pipe hangers.
  2. Metal framing systems.
  3. Fiberglass strut systems.
  4. Pipe stands.
  5. Equipment supports.
- C. Engineering Services Submittal: For trapeze hangers indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the Contractor's qualified professional Engineer responsible for their preparation.
  1. Detail fabrication and assembly of trapeze hangers.
  2. Engineering Calculations: Calculate requirements for designing trapeze hangers.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

## 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Structural Steel Welding Qualifications: Qualify procedures according to AWS D1.1/D1.1M, “Structural Welding Code - Steel.”
- C. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

## PART 2 - PRODUCTS

### 2.1 METAL PIPE HANGERS AND SUPPORTS

- A. Carbon-Steel Pipe Hangers and Supports:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
  - 3. Nonmetallic Coatings: Plastic coating, jacket, or liner.
  - 4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
- B. Stainless-Steel Pipe Hangers and Supports:
  - 1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  - 2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  - 3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.
- C. Copper Pipe Hangers:
  - 1. Description: MSS SP-58, Types 1 through 58, copper-coated-steel, factory-fabricated components.
  - 2. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

### 2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural carbon-steel shapes with MSS SP-58 carbon-steel hanger rods, nuts, saddles, and U-bolts.

### 2.3 METAL FRAMING SYSTEMS

- A. MFMA Manufacturer Metal Framing Systems:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Allied Tube & Conduit.
    - b. Cooper B-Line, Inc.

- c. Flex-Strut Inc.
  - d. GS Metals Corp.
  - e. Thomas & Betts Corporation.
  - f. Unistrut Corporation; Tyco International, Ltd.
  - g. Wesanco, Inc.
  - h. Or approved equal.
3. Description: Shop- or field-fabricated pipe-support assembly for supporting multiple parallel pipes.
  4. Standard: MFMA-4.
  5. Channels: Continuous slotted steel channel with inturned lips.
  6. Channel Nuts: Formed or stamped steel nuts or other devices designed to fit into channel slot and, when tightened, prevent slipping along channel.
  7. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
  8. Metallic Coating: Electroplated zinc, Hot-dipped galvanized.
  9. Paint Coating: Epoxy.
  10. Plastic Coating: PVC, Polyurethane.
  11. Combination Coating:

#### 2.4 THERMAL-HANGER SHIELD INSERTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  1. Carpenter & Paterson, Inc.
  2. Clement Support Services.
  3. ERICO International Corporation.
  4. National Pipe Hanger Corporation.
  5. PHS Industries, Inc.
  6. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.
  7. Piping Technology & Products, Inc.
  8. Rilco Manufacturing Co., Inc.
  9. Value Engineered Products, Inc.
  10. Or approved equal.
- C. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psig (688-kPa) minimum compressive strength and vapor barrier.
- D. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass with 100-psig (688-kPa) minimum compressive strength.
- E. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- F. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- G. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

## 2.5 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, stainless-steel anchors, for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

## 2.6 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand: One-piece plastic unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
- C. Low-Type, Single-Pipe Stand: One-piece stainless-steel base unit with plastic roller, for roof installation without membrane penetration.
- D. High-Type, Single-Pipe Stand:
  - 1. Description: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
  - 2. Base: Stainless steel.
  - 3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
  - 4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.
- E. High-Type, Multiple-Pipe Stand:
  - 1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.
  - 2. Bases: One or more; plastic.
  - 3. Vertical Members: Two or more protective-coated-steel channels.
  - 4. Horizontal Member: Protective-coated-steel channel.
  - 5. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.
- F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

## 2.7 PIPE POSITIONING SYSTEMS

- A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

## 2.8 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

## 2.9 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
  - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
  - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
  - 2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Fiberglass Pipe-Hanger Installation: Comply with applicable portions of MSS SP-69 and MSS SP-89. Install hangers and attachments as required to properly support piping from building structure.
- D. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- E. Fiberglass Strut System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled fiberglass struts.
- F. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- G. Fastener System Installation:
  - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
  - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

- H. Pipe Stand Installation:
  - 1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
  - 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 077200 "Roof Accessories" for curbs.
- I. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture.
- J. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- K. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- L. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- M. Install lateral bracing with pipe hangers and supports to prevent swaying.
- N. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 (DN 65) and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- O. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- P. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- Q. Insulated Piping:
  - 1. Attach clamps and spacers to piping.
    - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
  - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
  - 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

- a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.
- 4. Shield Dimensions for Pipe: Not less than the following:
  - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
  - b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
  - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
  - d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
  - e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.
- 5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
- 6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

### 3.3 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### 3.4 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### 3.5 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.6 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).

Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 09 91 00 "Painting". Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

### 3.7 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports, and metal framing systems and attachments for general service applications.
- F. Use stainless-steel pipe hangers and corrosion-resistant attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and stainless-steel attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
  - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F (566 deg C), pipes NPS 4 to NPS 24 (DN 100 to DN 600), requiring up to 4 inches (100 mm) of insulation.
  - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36 (DN 20 to DN 900), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
  - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 (DN 15 to DN 600) if little or no insulation is required.

5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4 (DN 15 to DN 100), to allow off-center closure for hanger installation before pipe erection.
  6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8 (DN 20 to DN 200).
  7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
  8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
  9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8 (DN 15 to DN 200).
  10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8 (DN 10 to DN 200).
  11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3 (DN 10 to DN 80).
  12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30 (DN 15 to DN 750).
  13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
  14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36 (DN 100 to DN 900), with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 (DN 65 to DN 900) if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
  17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30 (DN 25 to DN 750), from two rods if longitudinal movement caused by expansion and contraction might occur.
  18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24 (DN 65 to DN 600), from single rod if horizontal movement caused by expansion and contraction might occur.
  19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 (DN 50 to DN 1050) if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
  20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 (DN 50 to DN 600) if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
  21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 (DN 50 to DN 750) if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24 (DN 24 to DN 600).
  2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 (DN 20 to DN 600) if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
  2. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
  3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
  4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
  5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F (49 to 232 deg C) piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
  8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
  9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb (340 kg).
    - b. Medium (MSS Type 32): 1500 lb (680 kg).
    - c. Heavy (MSS Type 33): 3000 lb (1360 kg).
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
  14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
  15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
  2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
  3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
  4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
  5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
  6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
  7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
  8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
    - a. Horizontal (MSS Type 54): Mounted horizontally.
    - b. Vertical (MSS Type 55): Mounted vertically.
    - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- P. Comply with MSS SP-69 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.
- R. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.
- S. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

**END OF SECTION 22 05 29**

**SECTION 22 05 33****HEAT TRACING FOR PLUMBING PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes plumbing piping heat tracing for freeze prevention, snow and ice melting on roofs and in gutters and downspouts with the following electric heating cables:
  - 1. Constant wattage.
- B. Related Requirements:
  - 1. Section 210533 "Heat Tracing for Fire-Suppression Piping."
  - 2. Section 230533 "Heat Tracing for HVAC Piping."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include rated capacities, operating characteristics, and furnished specialties and accessories.
  - 2. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
- B. Shop Drawings: For electric heating cable.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include diagrams for power, signal, and control wiring.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Field quality-control reports.
- B. Sample Warranty: For special warranty.

**1.8 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.

**1.9 WARRANTY**

- A. Special Warranty: Manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 CONSTANT-WATTAGE HEATING CABLES**

- A. Manufacturers: Subject to compliance with requirements, provide products by the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - 1. BriskHeat.
  - 2. Chromalox.
  - 3. Delta-Therm Corporation.
  - 4. Easy Heat; a division of EGS Electrical Group LLC.
  - 5. Nelson Heat Trace; a division of EGS Electrical Group LLC.
  - 6. Pyrotenax; a brand of Tyco Thermal Controls LLC.
  - 7. Raychem; a brand of Tyco Thermal Controls LLC.
  - 8. Thermon Americas Inc.
  - 9. Trasor Corp.
  - 10. Or approved equal.
- C. Comply with IEEE 515.1.

- D. Heating Element: Pair of parallel stranded copper bus wires with single-stranded resistor wire connected between bus wires. Terminate with waterproof, factory-assembled, nonheating leads with connectors at one end, and seal the opposite end watertight.
- E. Electrical Insulating Jacket: Flame-retardant fluoropolymer.
- F. Cable Cover: Tinned-copper braid.
- G. Maximum Operating Temperature (Power On): 392 deg F (200 deg C).
- H. Maximum Exposure Temperature (Power Off): 185 deg F (85 deg C).
- I. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- J. Capacities and Characteristics:
  - 1. Maximum Heat Output: 12 W/ft. (39.4 W/m).
  - 2. Electrical Characteristics for Single-Circuit Connection:
    - a. Volts:
    - b. Phase:
    - c. Hertz:
    - d. Full-Load Amperes:
    - e. Minimum Circuit Ampacity:
    - f. Maximum Overcurrent Protection: CONTROLS
- K. Pipe-Mounted Thermostats for Freeze Protection:
  - 1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F
  - 2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
  - 3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
  - 4. Corrosion-resistant, waterproof control enclosure.
- L. Precipitation and Temperature Sensor for Snow Melting on Roofs and in Gutters:
  - 1. Automatic control with manual on, automatic, and standby/reset switch.
  - 2. Precipitation and temperature sensors shall sense the surface conditions of roof and gutters and shall be programmed to energize the cable as follows:
    - a. Temperature Span:
    - b. Adjustable Delay-Off Span: 30 to 90 minutes.
    - c. Energize Cables: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
    - d. De-Energize Cables: On detection of a dry surface plus time delay.
  - 3. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
  - 4. Minimum 30-A contactor to energize cable or close other contactors.
  - 5. Precipitation sensor shall be freestanding.

6. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control-system workstation.

M. Programmable Timer for Domestic Hot-Water-Temperature Maintenance:

1. Microprocessor based.
2. Minimum of four separate schedules.
3. Minimum 24-hour battery carryover.
4. On-off-auto switch.
5. 365-day calendar with 20 programmable holidays.
6. Relays with contacts to indicate operational status, on or off, and for interface with central HVAC control-system workstation.

## 2.2 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Warning Labels: Refer to Section 220553 "Identification for Plumbing Piping and Equipment."
- C. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
  1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
  2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
  1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 APPLICATIONS

- A. Install the following types of electric heating cable for the applications described:
  1. Snow and Ice Melting on Roofs and in Gutters and Downspouts: Plastic-insulated, series-resistance heating cable.
  2. Temperature Maintenance for Domestic Hot Water: Self-regulating, parallel-resistance heating cable.

### 3.4 INSTALLATION

- A. Install electric heating cable across expansion, construction, and control joints according to manufacturer's written instructions; use cable-protection conduit and slack cable to allow movement without damage to cable.
- B. Electric Heating-Cable Installation for Freeze Protection for Piping:
  - 1. Install electric heating cables after piping has been tested and before insulation is installed.
  - 2. Install electric heating cables according to IEEE 515.1.
  - 3. Install insulation over piping with electric cables according to Section 22 07 19 "Plumbing Piping Insulation."
  - 4. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- C. Set field-adjustable switches and circuit-breaker trip ranges.

### 3.5 CONNECTIONS

- A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

### 3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Refer to the DDC General Conditions for testing and inspection requirements. Refer to the DDC General Conditions for requirements related to permits and permitting fees.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
  - 2. Test cables for electrical continuity and insulation integrity before energizing.
  - 3. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
- D. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounted cables.
- E. Cables will be considered defective if they do not pass tests and inspections.
- F. Prepare test and inspection reports.

### 3.7 PROTECTION

- A. Protect installed heating cables, including nonheating leads, from damage during construction.

- B. Remove and replace damaged heat-tracing cables.

**END OF SECTION 22 05 33**

**SECTION 22 05 48**

**VIBRATION ISOLATION, SEISMIC, WIND & FLOOD LOAD**

**RESTRAINTS FOR PLUMBING COMPONENTS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 22 08 00 "Commissioning of Plumbing"

**1.2 SUMMARY**

- A. This section includes the following:
  - 1. All equipment and piping as noted on the drawing's schedule or in the specification shall be seismically braced if the building is so classified as listed herein. Vibration control shall apply as described in all cases herein.
  - 2. All outdoor equipment, including roof-mounted components, shall comply with section 1609, Wind Load, IBC-2006. There shall be no decrease of the effects of wind load on a component due to other structures or components acting as blocks or screens.
  - 3. All below, at grade or above grade locations located in a flood hazard area as defined and located herein.
  - 4. Seismic bracing, wind, flood load and isolation materials shall be the certified products of the same manufacturing group and shall be certified by that group.
  - 5. It is the intent of the seismic and wind load portion of this specification to keep all plumbing building system components in place during a seismic or high wind event and additionally operational where the occupancy category of the building so requires as listed herein.
  - 6. All such systems must be installed in strict accordance with seismic/wind codes, component manufacturer's and building construction standards.
  - 7. This specification is considered to be minimum requirements for seismic, wind, flood and vibration control considerations.
  - 8. Any variation, which results in non-compliance with the specification requirements, shall be corrected by the contractor in an approved manner.
- B. The work in this section includes, but is not limited to, the following:
  - 1. Vibration isolation for piping and equipment, all referred to as components.
  - 2. Component isolation bases.
  - 3. Seismic restraints for isolated components.

4. Seismic restraints for non-isolated components.
  5. Wind restraints for isolated components.
  6. Wind restraints for non-isolated components.
  7. Flood restraints for isolated components.
  8. Flood restraints for non-isolated components.
  9. Certification of seismic, wind or flood restraint designs.
  10. Installation supervision.
  11. Design of attachment of housekeeping pads.
  12. All components requiring IBC compliance and certification.
  13. All inspection and test procedures for components requiring IBC compliance.
- C. All plumbing equipment and pipe within, on or outdoors of the building and entry of services to the building, up to but not including, the utility connection, is part of this Specification.
- D. Components referred to below are typical. (Components not listed are still included in this specification.) All systems that are part of the building in any way are referred to as components, including:
1. Air Separators
  2. Boilers
  3. Compressor
  4. Equipment Supports
  5. Gas Detection Systems
  6. Pipe
  7. Pumps (all types)
  8. Risers
  9. Pumps (all types)
  10. Risers
  11. Supports
  12. Tanks (all types)
  13. Unit Heaters
  14. Vibration Isolators
  15. Water Heaters
  16. Pumps

### 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for

LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- D. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- 1. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 PERFORMANCE REQUIREMENTS

- E. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- F. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.7 DEFINITIONS (building and components, 2014 New York City Building Code)

- A. ESSENTIAL FACILITIES, (Occupancy Category IV, 2014 NYCBC)

- 1. Buildings and other structures that are intended to remain operational in the event of extreme environmental loading from flood, wind, snow or earthquakes.

- B. LIFE SAFETY AND HIGH HAZARD

- 1. All systems involved with fire protection, including sprinkler piping, jockey pumps, fire pumps, control panels, service water supply piping, water tanks, fire dampers, smoke exhaust systems and fire alarm panels. (Life Safety)
  - 2. All mechanical, electrical, plumbing or fire protection systems that support the operation of, or are connected to, emergency power equipment, including all lighting, generators, transfer switches and transformers. (Life Safety)
  - 3. All gases or fluids that must be contained in a closed system which are flammable or combustible. Any gas that poses a health hazard if released into the environment and vented Fuel Cells. (High Hazard)
  - 4. Heating systems in any facility in Occupancy Category IV, 2014 NYCBC where the ambient temperature can fall below 32 degrees Fahrenheit. (Life Safety)

- C. General

- 1. Anchor: A device, such as an expansion bolt, for connecting equipment bracing members to the structure of a building.
  - 2. Attachment: See Positive Attachment below.
  - 3. Basic Wind Speed: The basic wind speed, in mph, for determination of the wind loads shall be as per 2014 NYCBC. Section 6.5.4 of ASCE 7-05 shall be used after determination of basic wind speed. See Section 16 09 .3 ASCE 7-05 for basic wind speed determination in non-hurricane prone regions.
  - 4. Bracing: Metal channels, cables or hanger angles that prevent components from breaking away from the structure during an earthquake or high winds. See also Longitudinal Bracing and Transverse Bracing. Together, they resist environmental loads from any

- direction.
5. Certificate of Compliance: A certificate stating that materials and products meet specified standards or that work was done in compliance with approved construction documents, provided by an approved agency. (Certificate to be supplied by equipment component manufacturer.)
  6. Component: A non-structural part or element of an architectural, electrical, mechanical, plumbing or fire protection system within or without of a building system.
  7. Component Importance Factor: Factor applied to a component that defines the criticality of that component. This factor is 1.5.
  8. Component, flexible: Component, including its attachments, having a fundamental period greater than 0.06 seconds.
  9. Component, rigid: Component, including its attachments, having a fundamental period less than or equal to 0.06 seconds.
  10. Consequential Damage: The functional and physical interrelationship of components, their supports and their effect on each other shall be considered so that the failure of an essential or non-essential architectural, mechanical or electrical component shall not cause the failure of an essential architectural, mechanical or electrical component.
  11. Equipment: Systems associated with ducts, pipes and conduits also called components.
  12. Flood or Flooding: A general and temporary condition or partial and complete inundation of normally dry land from:
    - a. The overflow of inland or tidal waters.
    - b. The unusual and rapid accumulation of runoff of surface waters from any source.
  13. Flood Hazard Area: The greater of the following of two areas:
    - a. The area within a flood plain subject to a 1 percent or greater chance of flooding in any year.
    - b. The area designated as a flood hazard area on a community's flood hazard map, or otherwise legally designated.
  14. Special Flood Hazard Area Subject to High Velocity Wave Action: Area within the flood hazard area that is subject to high velocity wave action and shown on a Flood Insurance Rate Map (FIRM) or other flood hazard map as zone V, VO, VE or VI-30.
  15. Flood Insurance Rate Map (FIRM): An official map of a community on which the Federal Emergency Management Agency (FEMA) has delineated both the special flood hazard areas and the risk premium zones applicable to the community.
  16. Gas pipes: For the purposes of this Specification Guide, gas pipe is any pipe that carries fuel, gas, fuel oil, medical gas, or compressed air.
  17. Hazardous Contents: A material that is highly toxic or potentially explosive or corrosive and in sufficient quantity to pose a significant life-safety threat to the general public if an uncontrolled release were to occur.
  18. Hurricane Prone Regions: Areas prone to hurricanes include the U.S. Atlantic Ocean, Gulf Coasts, Hawaii, Puerto Rico, Guam, Virgin Islands, and American Samoa where the wind speed is greater than 90 mph.
  19. Importance Factor, G: A factor that accounts for the degree of hazard to human life and damage to property.
  20. Inspection Certificate: An identification applied on a product by an approved agency containing the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the product or material has been inspected and evaluated by an approved agency (see Section 17 03 .5 and "Label" and "Manufacturer's Designation" and "Mark").
  21. Label: An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the representative sample of the

- product or material has been tested and evaluated by an approved agency (see Section 17 03 .5 and "Inspection Certificate," "Manufacturer's Designation" and "Mark").
22. Lateral forces: A force acting on a component in the horizontal plane. This force can be in any direction.
  23. Longitudinal bracing: Bracing that prevents a component from moving in the direction of its run.
  24. Longitudinal force: An applied force that happens to be in the same direction as the duct or pipe run.
  25. Mark: An identification applied on a product by the manufacturer indicating the name of the manufacturer and the function of a product or material (see also "Inspection Certificate," "Label" and "Manufacturer's Designation").
  26. Manufacturer's Designation: An identification applied on a product by the manufacturer indicating that a product or material complies with a specified standard or set of rules (see also "Inspection Certificate," "Label" and "Mark".)
  27. Occupancy Category: A classification used to determine structural load requirements including those imposed by wind, flood, snow and seismic based on occupancy of the structure.
  28. Positive Attachment: A mechanical device, designed to resist seismic forces, which connects a non-structural element, such as a duct, to a structural element, such as a beam. Bolts and welding are examples of positive attachments. Surface glue and friction anchorage do not constitute positive attachment. Examples of positive attachment are epoxy cast in anchors and drill in wedge shaped anchor bolts to concrete and welded or bolted connections directly to the building structure. Double-sided beam clamps, C type are not acceptable as either brace point attachments to the structure or for the support of the component at the bracing location.
  29. Seismic: Related to an earthquake. Seismic loads on a structure are caused by wave movements in the earth during an earthquake.
  30. Seismic Design Category: A classification assigned to a structure based on its Seismic Use Group or Occupancy Category and the severity of the design earthquake ground motion at the site.
  31. Seismic Forces: The assumed forces prescribed herein, related to the response of the structure to earthquake motions, to be used in the design of the structure and its components.
  32. Seismic Use Group, Occupancy Category: A classification assigned to a building based on its use as defined in Section 16 04 .516.2.
  33. Site Class: A classification assigned to a site based on the types of soils present and their engineering properties as defined in Table 1613.5.2.
  34. Story Drift Ratio: The story drift (Lateral displacement) divided by the story height.
  35. Transverse bracing: Bracing that prevents a component from moving from side to side.
  36. Wind-Borne Debris Region: Portions of hurricane-prone regions that are within 1 mile of the coastal mean high water line where the basic wind speed is 110 mph or greater, or portions of hurricane-prone regions where the basic wind speed is 120 mph or greater; or Hawaii.

## 1.8 GENERAL DESIGN AND PERFORMANCE REQUIREMENTS

### A. General Design Requirements.

1. SEISMIC CONSIDERATIONS: This project has seismic design requirements as follows:
  - a. Occupancy Category, III (Seismic Design Category C) essential facility.
    - 1) All Components, with the additional requirement of a manufacturer's Certificate of Compliance to prove 'on line' capability ( $I_p = 1.5$ )

2. WIND CONSIDERATIONS: This project has wind design requirements as follows:
  - a. Wind load in hurricane, tornado and/or wind-borne debris regions (90 plus mph) having a building height greater than 60 feet. Rooftop structures; Section 6.5.15.1 of ASCE 7-05 design requirements apply.

**B. General Design Performance Requirements**

1. Seismic and Wind Load Certification and Analysis:
  - a. Attachment calculations by the Seismic Restraint Manufacturer's licensed Engineer substantiating the mounting system, seismic or wind restraints, fasteners or ICC Certified Concrete Anchors shall be submitted for approval along with the shop drawings. Seismic loads shall have their calculations based on seismic loads as established in Specification Section 1.4, Paragraph B, article 7, Design Seismic Loads. Wind loads shall have their calculations based on Section 1.4, Paragraph B, article 8, Design Wind Loads. A registered professional engineer licensed in the State of New York shall stamp all analysis, or as required by 2014 NYC Construction Codes.
  - b. Unless otherwise specified, all equipment and piping shall be restrained to resist seismic forces. Restraints shall maintain components in a captive position. Restraint devices shall be designed and selected to meet seismic requirements as defined in the latest issue of:
    - 1) 2014 New York City Building Code, and ASCE.
    - 2) NFPA (fire protection only)
2. Importance Factor,  $I_p = 1.5$  Components:
  - a. In addition to all of the above provisions, for components having an  $I_p$  greater than 1.0, all trades shall comply with Sections 16 and 17 of the NYC Building Code using, when available, vendors that comply with the provisions stated herein and submitting the special inspections listed within these specifications. Where compliance is not possible, each contractor shall submit a vendor report (form CVC-1 at end of this specification) clearly indicating that none of the specified, listed or other vendors known to the contractor meets the compliance, testing and certification portions of the IBC specification's Sections 16 and 17. Special inspections of the component installation shall still be conducted (Section 1.4, Paragraph B, Article 4) even if no vendors meet the following requirements. All non-isolated and isolated equipment (components) shall be secured to the structure in accordance with that code.
3. All component manufacturers shall submit for approval the following as required below:
  - a. For all life safety system components noted in this specification: the Approved Agency's Certificate of Compliance for the specific equipment on this project when the Seismic Design Category is C through F. Analytical or Shaker Test certification through the component's load path to structure at its center of gravity shall include anchorage, structural and on-line capability. Use of seismic experience data shall be permitted if evidence confirms that the historical based component has the same construction and weight and accompanying center of gravity as submitted unit and basis of experience claim conforms to loads derived in testing with accompanying accelerations based on AC-156. Seismic qualification by seismic experience data based upon nationally recognized procedures acceptable to the

NYC Department of Buildings and 2014 NYC Construction Codes shall be deemed to satisfy the design and evaluation requirements provided that the substantiated seismic capacities equal or exceed the seismic demands determined in accordance with Sections 13.3.1 and 13.3.2 of ASCE 7-05.

- b. In addition, all components needed for the continued operation of the facility in the above stated categories will have the manufacturer of that component submit the Approved Agency's Certificate of Compliance for their equipment when the Seismic Design Category is C through F. Analytical or Shaker Test certification through the component's load path to structure at its center of gravity shall include on line capability. This requirement also pertains to projects that combine an emergency preparedness center within a structure of another Use Group. Where components do not affect the facility's functional operation but could affect the performance of other components should they dislodge, only anchorage of that component requires compliance. Components needed for continued operation of the building require Analytical or Shaker Test certification through the total component's load path to structure calculated at its center of gravity. Certification shall prove anchorage, structural and on line capability. For use of seismic experience data, see (a) above.
- c. All components containing hazardous or flammable materials will have the manufacturer of the component submit the Approved Agency's Certificate of Compliance for their equipment when used on any project having a minimum Seismic Design Category of C through F. Testing shall be conducted by Analytical or Shaker Test through the total component's load path to structure at its center of gravity and shall prove anchorage, structural capability and hazardous material containment. Testing shall prove that no internal component will rupture to insure against loss of hazardous or flammable (explosive) material that could support combustion, ignite or contaminate.
- d. All components requiring anchorage compliance only, not listed in the above categories, shall have the manufacturer of each component submit a PE stamped calculation package stating that their project specific equipment will accept anchorage by calculating its reactions through the component's load path to structure at its center of gravity at the designated anchorage locations. This requirement is for all projects having a Seismic Design Category of C through F.

4. Special and Periodic Inspection: (Occupancy Category IV Projects)

- a. The following systems shall require Special Inspection and Periodic Special Inspection for seismic installation and anchorage during the course of construction, as defined earlier in this section for all buildings in Seismic Design Categories C through F.
  - 1) All electrical components for standby or emergency power systems require Periodic Special Inspection.\*
  - 2) All electrical equipment in Seismic Design Categories E and F. (Periodic)\*
  - 3) All flammable, combustible and highly toxic piping and their associated mechanical systems. (Periodic)\*
  - 4) All ductwork containing hazardous materials. (Periodic)\*
  - 5) All equipment using combustible or toxic energy sources. (Special -1)
  - 6) All electric motors, transformers, switchgear unit substations and motor control centers. (Special -1)
  - 7) Reciprocating and rotating type machinery. (Special -1)
  - 8) Pipe, 3" and larger. (Special -1)
  - 9) Tanks, heat exchangers and pressure vessels. (Special -1)
  - 10) Isolator units for seismic isolation system. (Periodic)\*
  - 11) Manufacturer's written Quality Control Program for projects in Seismic

Design Categories E or F.

5. Contractor Responsibilities and Approvals: (Occupancy Category IV Projects)
  - a. Each contractor responsible for the installation of the components asterisked above (\*) shall be responsible for submitting a written contractor's Statement of Responsibility (IBC Section 17 06 .1) (as outlined below) to the design team for their approval.
  - b. In addition, all -1 items above require Special Inspection in accordance with IBC Section 17 07 .8 (Form CQAP and SQA-1) at the end of this specification.
  - c. Contractor Shall:
    - 1) Identify the components that are part of the Quality Assurance Plan. (Asterisked above) \*
    - 2) Identify all Special Inspection and Testing for components installed as part of this contract.
    - 3) List control procedures within the contractor's organization for all special inspection and testing, including methods, frequency of reporting and their distribution of those reports.
6. Seismic Use Group I & II, IBC-2000 & Occupancy Category II & III Structures, IBC-2003-2006, Ip 1.0, Seismic Design Category C:
  - a. Projects in these categories require seismic bracing for all life safety and high hazard components, Paragraph 1.3B sub-paragraphs 1, 2, 5 and 6. In addition, any un-braced component that could adversely affect the performance of a component that must remain functional, Ip 1.5, or could cause the failure or release of hazardous materials (gas or liquid fuel), must be braced or anchored to avoid such failure. This includes any component that could fall or move laterally. (Consequential Damage, ASCE 7-05, Section 16 .2 .3.)
7. Design Seismic Loads:
  - a. Projects in the United States have a minimum design load of 0.4g for statically mounted components and 0.5g for resiliently mounted components. Actual loads for both internal and external isolation and/or anchorage of components shall be as above or as calculated for the specific project location but in no event shall it be less than the above.
  - b. Exclusions for seismic restraint of piping and duct shall be according to 2014 New York City Construction Codes and as stated herein. The minimum horizontal restraint capability shall be 0.4g horizontal and 0.27g vertical (in addition to the gravity load). Life safety equipment defined above shall be designed to withstand a horizontal load of 0.9g and a vertical load of 0.6g.
  - c. Analysis for anchorage must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment depth and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in this section, acting through the equipment center of gravity.
  - d. Vertical load shall be calculated at 1/3 the horizontal load as a minimum, or, as prescribed by the code as 0.2 times Sds.
  - e. Internally isolated equipment in lieu of specified isolation and restraint systems must meet all of the requirements of this section, all articles.
  - f. A Seismic Design Errors and Omissions Insurance Certificate MUST accompany

the seismic restraint equipment manufacturer's calculation. Product liability insurance certificates are not acceptable.

- g. Whether the equipment is internally or externally isolated and restrained, the entire unit assembly must be seismically attached to the structure. Curb or roof rail mounted equipment must not only have seismic or wind attachment of the equipment to the roof but also to the curb or rails. The attachment and certification thereof shall be by this section. Sheet metal screw attachment is acceptable provided that the following five conditions are met and verified.

- 1) Calculations support sufficient quantity and size of sheet metal screws to handle all loads including shear.
- 2) Shear and tension allowables are obtained from an accredited third party source, such as ICC or NDS, not from the screw manufacturer.
- 3) Space or gap between the inside overhang of the rooftop unit and the curb at each of the screw locations is closed with structural material, tapered to contour to both the curb and the components' inside edge structure.
- 4) Attachment points of the roof-mounted unit to curb and the curb to structure demonstrates structural load path.
- 5) The method of attachment does not violate the NRCA rating of the curb by violating the roof member's waterproofing.

- h. Failure is defined as the discontinuance of any attachment point or load path between component and structure. Permanent deformation of the component is acceptable as long as the component continues to operate without failure and, if permanent, it is within acceptable manufacturing or structural tolerances.

8. Design Wind Loads:

- a. All outdoor mounted components shall be positively fastened to their supporting structure as discussed below. Fastening to metal deck is unacceptable.
- 1) If component is curb mounted, article 7, Design Seismic Loads, paragraph g shall be followed for all roof-mounted components in excess of 9 sq. ft. in cross-sectional area. Curbs shall be as described in Base type B-3 if isolated, Base type B-4 if non-isolated.
  - 2) If component is support mounted, article 7, Design Seismic Loads, paragraph g shall be followed for all roof-mounted components requiring waterproofed rail supports. Equipment supports shall be Base type B-5 if isolated, Base type B-6 if non-isolated.
  - 3) If equipment is dunnage mounted, positive attachment shall occur through welding or bolting of equipment to dunnage steel.
- b. Loads and calculations shall be based on IBC-2006, figure 1609 and related sections in ASCE 7-05.
- c. Where buildings are less than or equal to 60 feet in height to the top of the roof slab (not parapet walls), the force on roof-mounted components shall be based on Section 6.5.15.1, ASCE 7-05.
- d. Equivalent basic wind speed shall be based on IBC-2006, Table 1609.3.1.
- e. In no event shall adjacent buildings, structures or screens be considered to diminish the calculated wind load or its effect on an outdoor component.

9. Design Flood Loads:

- a. When a building or structure is located in a flood hazard area, anchorage for all

components subjected to those locations shall follow Section 1.4 B 3d. for their proper fastening to structure.

- b. Components used for anchorage purposes shall be hot dipped galvanized, cadmium-plated or powder-coated for the purpose of anti-corrosion.

#### 1.9 SUBMITTALS

- A. Refer to Part 1, General.

- B. Product Data: The manufacturer of vibration isolation, seismic, wind and flood restraints shall provide submittals for products as follows:

- 1. Descriptive Data:

- a. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with the specification.
- b. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and restraints by referencing numbered descriptive drawings.

- 2. Shop Drawings:

- a. Submit fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
- b. Provide all details of suspension and support for ceiling hung equipment.
- c. Where walls, floors, slabs or supplementary steel work are used for restraint locations, details of acceptable attachment methods for ducts and pipe must be included and approved before the condition is accepted for installation. Restraint manufacturer's submittals must include spacing and maximum seismic/wind loads at the restraint points.
- d. Provide specific details of restraints and anchors, include number, size and locations for each piece of equipment. Restraint and anchor allowables shall be by structural testing, shake testing, analysis or third party certification.
- e. Calculations shall be submitted as required in Section 1.4, General Design and Performance Requirements.
- f. Contractor to submit all calculations, drawings, design and signed by NYSPE.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Manufacturer of vibration isolation, seismic and wind load control equipment or manufacturer's approved representative shall have the following responsibilities:

- 1. Determine vibration isolation and restraint sizes and locations.
- 2. Provide vibration isolation and restraints as scheduled or specified.
- 3. Provide calculations and materials, if required, for restraint of non-isolated equipment.
- 4. Provide installation instructions in writing, drawings and trained field supervision, where necessary, to insure proper installation and performance.
- 5. Certify correctness of installation upon completion, in writing.
- 6. All provisions of Section 1.4, General Design and Performance Requirements.

- C. All manufacturers of any type of equipment including OEM are responsible for Section 1.4.

- D. Equipment manufacturer's substitution of internally or externally isolated and/or restrained

equipment supplied by the equipment vendor, in lieu of the isolation and restraints specified in this section, is acceptable provided all conditions of this section are met. The equipment manufacturer shall provide a letter of guarantee from their engineering department, PE stamped and certified by an engineer licensed in the State of New York per the section on the Seismic Restraint Design (See Section 1.4B, article 3), stating that the seismic restraints are in full compliance with these specifications. Manufacturer's certification proving on line capability shall be required in addition to all requirements stated in Section 1.4B.

- E. All expenses for converting to the specified vibration isolation and/or restraints shall be borne by the component vendor in the event of non-compliance with the preceding. Substitution of internal isolation is unacceptable for:

1. Indoor or outdoor mounted equipment over or adjacent to:
  - a. Office locations
  - b. Assembly areas

F. RELATED WORK

1. Housekeeping pad structural design, including its attachment to building structure, shall be as shown on the contract drawings. Attachment of all components and restraints to the pad and size of the pad shall be designed and certified according to this section by the seismic/isolation supplier. Material and labor required for attachment and construction shall be by the concrete section contractor, or by the contractor where specified. Housekeeping pads shall be sized to accommodate a minimum 6" of clearance all around the equipment; or 12 times the outermost anchor bolt diameter, whichever is greater. Where exterior isolators are used, this distance shall be as measured from the outermost holes in the isolator base plate to the edge of the housekeeping pad.
2. Roof steel supporting roof-mounted equipment shall be designed for all seismic and wind forces including, but not limited to, tension, compression and moment loads.
3. Chimneys, stacks and boiler breeching passing through floors are to be attached at each floor level with a riser guide.
4. Where ceilings are not braced, lay-in lighting fixtures, weighing more than 20 lbs, shall have at least 2 independent corner diagonal wire ties to structure.
5. Lay-in ceilings in compliance with seismic code requirements may use earthquake clips or other approved means of positive attachment to brace fixtures such as panel lights and diffusers less than 40 lbs to T-bar structures. Local codes dictate fixture support requirements.

1.11 CODE AND STANDARDS REQUIREMENTS

A. Codes and Standards

1. 2014 New York City Construction Codes.
2. SMACNA Guidelines for Seismic Restraint of Mechanical Systems, Second Edition (Standard reference, to be used for design purposes only, not code).
3. American Society for Testing and Materials (ASTM) (Standard).
4. International Conference of Building Officials (ICBO) (Standard).
5. ASHRAE (Standard reference, to be used for design purposes only, not code).
6. VISCMA (Vibration Isolation and Seismic Controls Manufacturers Association) (Standard)

reference, to be used for design purposes only, not code).

- B. In cases where requirements vary, the guideline for the most stringent shall be utilized.

## PART 2 - PRODUCTS

### 2.1 DESCRIPTION

- A. All vibration isolators and seismic restraints described in this Section shall be the product of a single manufacturer. Manufacturer shall be a regular member of VISCMA (Vibration Isolation and Seismic Controls Manufacturers Association). Subject to compliance with requirements, provide products manufactured by The VMC Group, including Vibration Mountings & Controls, Amber/Booth or Korfund Dynamics (Basis-of-Design), or a similar product by an approved manufacturer listed below:

1. Senior Flexonics
2. Mason Industries
3. Or approved equal.

### 2.2 VIBRATION ISOLATION TYPES

- A. Type A: Spring Isolator – Free Standing

A\*

1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded elastomeric cup or 1/4" elastomeric acoustical friction pad between the bottom of isolator and the support.
2. All mountings shall have leveling bolts that must be rigidly bolted to the equipment.
3. Spring diameters shall be no less than 0.8" of the compressed height of the spring at rated load.
4. Springs shall have a minimum additional travel to solid equal to 50% of the operating deflection.

- B. Type B: Seismically and Wind Restrained Spring Isolator

1. MS, MSS, AEQM, ASCM, AMSR
2. Restrained spring mountings shall have a Type A spring isolator within a rigid housing that includes vertical limit stops to prevent spring extension if weight is removed. The housing shall serve as blocking during erection. A maximum clearance of 1/4" shall be maintained around restraining bolts and internal elastomeric deceleration bushings. Limit stops shall be out of contact during normal operation. If housings are to be bolted or welded in position, there must be an internal isolation pad or elastomeric cup. Housing shall be designed to resist all seismic forces.

- C. Type C: Combination Spring/Elastomer Hanger Isolator (30° Type)

HRSA

1. Hangers shall consist of rigid steel frames containing minimum 1 1/4" thick elastomeric elements at the top and a steel spring with general characteristics as in Type A. The elastomeric element shall have resilient bushings projecting through the steel box.
2. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30° arc from side to side before contacting the rod bushing

- and short-circuiting the spring.
3. Submittals shall include a hanger drawing showing the 30° capability.
  4. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.

D. Type D: Elastomer Double Deflection Hanger Isolator

HR

1. Molded (minimum 1 ¼" thick) elastomeric element with projecting bushing lining the rod clearance hole. Static deflection at rated load shall be a minimum of 0.35."
2. Steel retainer box encasing elastomeric mounting capable of supporting equipment up to two times the rated capacity of the element.

E. Type E: Combination Spring/Elastomer Hanger Isolator

HRS

1. Spring and elastomeric elements in a steel retainer box with the features as described for Type C and D isolators.
2. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.
3. 30° angularity feature is not required.

F. Type F: Seismically Restrained Elastomer Floor Isolator

RSM, MB, RUD

1. Bridge-bearing elastomeric mountings shall have a minimum static deflection of 0.2" and all-directional seismic capability. The mount shall consist of a ductile iron or aluminum casting containing molded elastomeric elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock-absorbing elastomeric materials shall be compounded to bridge-bearing specifications.

G. Type G: Pad Type Elastomer Isolator (Standard)

Maxiflex

1. One layer of ¾" thick elastomeric pad consisting of 2" square modules for size required.
2. Load distribution plates shall be used as required.
3. Bolting required for seismic compliance. Elastomeric and duck washers and bushings shall be provided to prevent short-circuiting.

H. Type H: Pad Type Elastomer Isolator (High Density)

Fabri-Flex, NDB, NRC

1. Laminated canvas duck and neoprene, maximum loading 1000 psi, minimum ½" thick.
2. Load distribution plate shall be used as required.
3. Bolting required for seismic compliance. Elastomeric and duck washers and bushings shall be provided to prevent short-circuiting.

I. Type I: Thrust Restraints

RSHTR, TRK

1. A spring element similar to Type A isolator shall be combined with steel angles, backup plates, threaded rod, washers and nuts to produce a pair of devices capable of limiting movement of air handling equipment to  $\frac{1}{4}$ " due to thrust forces. Contractor shall supply hardware.
2. Thrust restraints shall be installed on all cabinet fan heads, axial or centrifugal fans whose thrust exceeds 10% of unit weight.

J. Type J: Pipe Anchors

MDPA, AG

1. All-directional acoustical pipe anchor, consisting of two sizes of steel tubing or piping separated by a minimum  $\frac{1}{2}$ " thick 60 durometer elastomer.
2. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction.
3. Applied loads on the isolation material shall not exceed 500 psi and the design shall be balanced for equal resistance in any direction.

K. Type K: Pipe Guides

PG/AG/SWP/SWX

1. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing or piping separated by a minimum  $\frac{1}{2}$ " thickness of 60 durometer elastomer.
2. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and replaceable to allow for selection of pipe movement.
3. Guides shall be capable of  $\pm 1 \frac{5}{8}$ " motion, or to meet location requirements.

L. Type L: Isolated Pipe Hanger System

CIH, CIR, TIH, PIH

1. Pre-compressed spring and elastomer isolation hanger combined with pipe support into one assembly. Replaces standard clevis, single or double rod roller, or double rod fixed support.
2. Spring element (same as Type A) with steel lower spring retainer and an upper elastomer retainer cup with an integral bushing to insulate support rod from the isolation hanger.
3. The elastomeric element under the lower steel spring retainer shall have an integral bushing to insulate the support rod from the steel spring retainer.
4. Hangers shall be designed and constructed to support loads over three times the rated load without failure.
5. Systems shall be pre-compressed to allow for rod insertion and standard leveling.

2.3 SEISMIC RESTRAINT TYPES

A. Type I: Spring Isolator, Restrained

B. MS, MSS, AEQM, ASCM, AMRS

1. Refer to vibration isolation Type B.

C. Type II: Seismically Restrained Elastomer Floor Isolator

MB, RUD

1. Refer to vibration isolation Type F.

D. Type III: All-Directional Seismic Snubber

SR, ER

1. All-directional seismic snubbers shall consist of interlocking steel members restrained by an elastomeric bushing. Bushing shall be replaceable and a minimum of ¼" thick. Applied loading shall not exceed 1000 psi. A minimum air gap of 1/8" shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Elastomeric bushings shall be rotated to insure no short circuits exist before systems are activated.

E. Type IV: Floor or Roof Anchorage

Cast-In Plates

1. Rigid attachment to structure utilizing wedge type anchor bolts, anchored plates, machine screw, bolting or welding. Power shots are unacceptable.

F. Type V: Seismic Cable Restraints

SB, LRC

1. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cable end connections shall be steel assemblies that swivel to final installation angle and utilize two clamping bolts to provide proper cable engagement. Cables must not be allowed to bend across sharp edges.

G. Type VI: Rigid Arm Brace

SAB

1. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two anchor bolts to provide proper attachment spaced to ICBO standards for attachment to concrete.

H. Type VII: Internal Clevis Cross Brace

ICB

1. Internal clevis cross braces at seismic locations shall be pre-cut pipe or other approved device sized for internal dimensions.

I. Type VIII: Seismic Waterproof Foundation Wall Sleeve

## SWFWS

1. Seismic waterproof foundation wall sleeves shall consist of two elastomeric sleeves that shall be mounted both inside and out of the vertical foundation wall. The conical design shall have a suitably waterproof means of fastening to both concrete and to its concentric utility pipe. Allowable vertical drift shall be  $\pm 2"$  from the installed neutral point along the vertical "y" axis. All fittings shall be stainless steel or galvanized.

## 2.4 EQUIPMENT BASES

### A. General

1. All curbs and roof rails are to be bolted or welded to the building steel or anchored to the concrete deck (minimum thickness shall be 4") for resisting wind and seismic forces in accordance with the project location. (Fastening to metal deck is unacceptable.)

### B. Base Types

#### 1. Type B-1: Integral Structural Steel Base

WFB, SFB, WSB

- a. Rectangular bases are preferred for all equipment.
- b. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split case and end suction pumps shall include supports for suction and discharge elbows.
- c. All perimeter members shall be structural steel beams with a minimum depth equal to 1/12 of the longest dimension between isolators.
- d. Base depth need not exceed 12" provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer.
- e. Height saving brackets shall be employed in all mounting locations to provide a minimum base clearance of 2."

#### 2. Type B-2: Concrete Inertia Base

MPF, WPF, CPF

- a. Vibration isolation manufacturer shall furnish rectangular welded or bolted modular steel concrete pouring forms for floating and inertia foundations.
- b. Bases for split case and end suction pumps shall be large enough to provide for suction and discharge elbows.
- c. Bases shall be a minimum of 1/12 of the longest dimension between isolators but not less than 6."
- d. The base depth need not exceed 12" unless specifically recommended by the base manufacturer for mass or rigidity.
- e. Forms shall include a minimum concrete reinforcing consisting of 3/8" bars welded in place a maximum of 16" on centers running both ways in a layer 1 to 1 1/2" above the bottom.
- f. Forms shall be furnished with steel templates to hold the component anchor bolts sleeves and anchors while concrete is being poured.
- g. Height saving brackets shall be employed in all mounting locations to maintain a 2" minimum operational clearance below the base.

#### 3. Type B-5: Isolated Equipment Supports

R7200/R7300

- a. Continuous structural equipment support rails that combine equipment support and isolation mounting into one unitized roof flashed assembly. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind and seismic forces. The lower frame must accept point support for both seismic attachment and leveling. The upper frame must be furnished with positive fastening provisions, (welding or bolting), to anchor the component to the equipment support so as not to violate the National Roofing Contractors Association (NRCA) ratings of the membrane waterproofing. Sheet metal screws are only acceptable if all provisions in Section 1.4, Article B, paragraph 7, Design Seismic Loads, are met. Contact points between the rooftop unit, the curb and the building's structure shall show load path through those locations only.
- b. All-directional elastomeric snubber bushings shall be minimum of ¼" thick. Steel springs shall be laterally stable and rest on ¼" thick elastomeric acoustical pads or cups.
- c. Hardware must be plated and the springs shall be powder-coated or cadmium-plated.
- d. All spring locations shall have full spring view access ports with removable waterproof covers and all isolators shall be adjustable, removable and interchangeable.
- e. System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building steel, capable of carrying the design wind/seismic loads.

4. Type B-6: Non-Isolated Equipment Supports

R7000

- a. This shall have the same provisions as Type B-5 without the spring isolation.

5. Type B-8: Plumbing Components Structural Base Frames

- a. Where roof mounted plumbing components are placed on steel platforms and are incapable of being point loaded or supported, structural frames shall be furnished which will either match the centerline dimensions of the unit's base frame rail or its curb dimensions. The structural frame shall have provisions to be welded or bolted to the unit's base frame and shall be supported on type "B" wind /seismic restrained isolation system.
- b. Isolator deflection shall be either 1.5" or 2.5" depending on the tonnage of the roof mounted component as shown in Isolation Table "A". Structural Base Frame shall be type RTSBF as manufactured by The VMC Group.

2.5 FLEXIBLE CONNECTORS

A. Type FC-2: Flexible Stainless Steel Hose

1. SS-FP, SS-FW, SS-PM, SS-WE
2. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings. Sizes 3" and larger shall be flanged. Smaller sizes shall have male nipples.

B. Type BC-2 connector shall be braided bronze for Freon connections.

1. Minimum lengths shall be as tabulated:
  - a.

Flanged	Male Nipples
3 x 14    10 x 26	½ x 9    1 ½ x 13
4 x 15    12 x 28	¾ x 10    2 x 14
5 x 19    14 x 30	1 x 11    2 ½ x 18
6 x 20    16 x 32	1 ¼ x 12
8 x 22	
2. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. All areas that will receive components requiring vibration control, seismic or wind load bracing shall be thoroughly examined for deficiencies that will affect their installation or performance. Such deficiencies shall be corrected prior to the installation of any such system.
- B. Examine all “rough ins” including anchors and reinforcing prior to placement.

#### 3.3 APPLICATIONS

- A. All vibration isolators and seismic, wind restraint systems must be installed in strict accordance with the manufacturer’s written instructions and all certified submittal data.
- B. Installation of vibration isolators and seismic, wind restraints must not cause any change of position of equipment, piping or ductwork resulting in stresses or misalignment.
- C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system specified herein.
- D. The contractor shall not install any isolated components in a manner that makes rigid connections with the building unless isolation is not specified. “Building” includes, but is not limited to, slabs, beams, columns, studs and walls.
- E. Coordinate work with other trades to avoid rigid contact with the building.
- F. Overstressing of the building structure must not occur due to overhead support of equipment. Contractor must submit loads to the Commissioner for approval. General bracing may occur from flanges of structural beams, upper truss cords in bar joist construction and cast in place inserts or wedge type drill-in concrete anchors.
- G. Seismic cable restraints shall be installed slightly slack to avoid short circuiting the isolated

suspended equipment or piping.

- H. Seismic cable assemblies are installed taut on non-isolated systems. Seismic rigid braces may be used in place of cables on rigidly attached systems.
- I. At locations where seismic cable restraints or seismic single arm braces are located, the support rods must be braced when necessary to accept compressive loads. See Table "E."
- J. At all locations where seismic cable braces and seismic cable restraints are attached to the pipe clevis, the clevis bolt must be reinforced with pipe clevis cross bolt braces or double inside nuts if required by seismic acceleration levels.
- K. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted.
- L. Special and Periodic Inspections for items listed in Section 1.4, Article B shall be conducted and submitted on a timely basis.

### 3.4 EQUIPMENT INSTALLATION

- A. Equipment shall be isolated and/or restrained as per Tables B-E at the end of this section.
- B. Place floor mounted equipment on 4" actual height concrete housekeeping pads properly sized and doweled or expansion shielded to the structural deck to meet acceleration criteria (see Section 1.4). Anchor isolators and/or bases to housekeeping pads. Concrete work is specified under that section of the contract documents.
- C. Additional Requirements:
  - 1. The minimum operating clearance under all isolated components bases shall be 2."
  - 2. All bases shall be placed in position and supported temporarily by blocks or shims, as appropriate, prior to the installation of the equipment, isolators and restraints.
  - 3. All components shall be installed on blocks to the operating height of the isolators. After the entire installation is complete and under full load including water, the isolators shall be adjusted so that the load is transferred from the blocks to the isolators. Remove all debris from beneath the equipment and verify that there are no short circuits of the isolation. The equipment shall be free to move in all directions, within the limits of the restraints.
  - 4. Ceilings containing diffusers or lighting fixtures must meet seismic requirements by using earthquake clips or other approved means of positive attachment to secure diffuser and fixtures to T-bar structure.
  - 5. All floor or wall-mounted equipment and tanks shall be restrained with Type V restraints.

### 3.5 PIPE

- A. Vibration Isolation of Piping:
  - 1. Plumbing Water Piping (Excludes Sanitary and Drainage Lines): All spring type isolation hangers shall be pre-compressed or pre-positioned if isolators are installed prior to fluid charge. If installed afterwards, field pre-compressed isolators can be used. All HVAC piping in the machine room shall be isolated as well as pressurized runs in other locations of the building 6" and larger. Type E hangers shall isolate horizontal pressurized runs in all other locations of the building. Floor supported piping shall rest on Type B isolators. Expansion tanks are considered part of the piping run. The first 3 isolators from

the isolated equipment shall have at least the same static deflection as specified for the mountings under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces, the first 3 hangers shall have 0.75" nominal deflection or greater for pipe sizes up to and including 3," 1 3/8" nominal deflection or greater for pipe sizes greater than 3." Where column spacing exceeds 35', isolation hanger deflection shall be 2½" for pipes exceeding 3" diameter. Type L hangers may be substituted for the above where isolation hangers are required.

2. Condensate Piping: All ceiling suspended piping in the mechanical equipment room shall be isolated with Type D hangers except where anchor or guided if connected to isolated equipment. All floor supported piping shall be supported with Type F isolators.
3. Plumbing Water Lines: Plumbing water lines in the machine room shall only be isolated if connected to isolated equipment. (See Table B.) Isolator type shall be as listed in Article 1, above.
4. Riser Location: All risers shall be supported on Type J or K anchors or guide restraints positively attached to both the riser and structure. Spiders welded to the pipe can substitute for Type K guides using J Type anchors.
5. Control Air Piping: Where control air piping is connected to isolated components, all piping shall be isolated and equipment shall be flexibly connected in horizontal and vertical plane with Type FC-2 flexible connectors.
6. Gas lines shall not be isolated.
7. Fire protection lines shall not be isolated.

**B. Seismic Restraint of Piping.**

1. All high hazard and life safety pipe regardless of size such as fuel oil piping, fire protection mains, gas piping, medical gas piping and compressed air piping and piping with an  $I_p=1.5$  shall be seismically restrained or braced. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type V seismic cable restraints or Type VI single arm braces may be used on non-isolated piping. There are no exclusions for size or distance in this category.
2. Seismically restrain piping, with an  $I_p = 1.0$ , located in boiler rooms, mechanical equipment rooms and refrigeration equipment rooms that is 1¼" I.D. and larger. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type V seismic cable restraints or Type VI single arm braces may be used on non-isolated piping.
3. Seismically restrain all other piping 2½" diameter and larger. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type VI seismic cable restraints or single arm braces may be used on non-isolated piping.
4. See Table D for maximum seismic bracing distances.
5. Multiple runs of pipe on the same support shall have distance determined by calculation.
6. Rod braces shall be used for all rod lengths as listed in Table E.
7. Clevis hangers shall have braces placed inside of hanger at seismic brace locations.
8. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
9. For fuel oil and all gas piping, transverse restraints must be at 20' maximum and longitudinal restraints at 40' maximum spacing.
10. Transverse restraint for one pipe section may also act as longitudinal restraint for a pipe section of the same or smaller size connected perpendicular to it if the restraint is installed within 24" of the centerline of the smaller pipe or combined stresses are within allowable limits at longer distances.
11. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints. Use Type V or VI restraint, if trapeze is smaller than 48" long.
12. Branch lines may not be used to restrain main lines or cross-mains.
13. Where pipe passes through a fire-rated, seismic gypsum wall, the wall can act as a

lateral/transverse brace for pipe sizes up to and including 6," provided fire stopping material is tight to the pipe.

14. Where pipe passes through a seismic block or concrete wall, the wall can act as a lateral/transverse brace.
15. Where horizontal pipe crosses a building's drift expansion joint, allowance shall be part of the design to accommodate differential motion.
16. Vertical pipe rises between floors shall have their differential movement part of the seismic design for building drift.
17. For horizontal passage of all underground utilities through building's foundation wall, all pipes shall pass freely through an oversized opening and waterproofed accordingly to accommodate maximum allowable building drift. (Seismic Restraint Type VIII).

### 3.6 EXEMPTIONS

#### A. EQUIPMENT:

1. Curb-mounted mushroom, exhaust and vent fans with curb area less than nine square feet are excluded.
2. Floor or curb-mounted equipment weighing less than 400 lbs and not resiliently mounted, where the Importance Factor,  $I_p = 1.0$  and there is no possibility of consequential damage.
3. Equipment weighing less than 20 lbs and distribution systems weighing less than 5 lbs/lineal foot, with an  $I_p = 1.0$  and where flexible connections exist between the component and associated piping.

#### B. DUCT (Applies to $I_p = 1.0$ only)

1. Rectangular, square, and oval air handling ducts less than six square feet in cross sectional area.
2. Round air handling duct less than 28 inches in diameter.
3. Duct runs supported at locations by two rods less than 12 inches in length from the structural support to the structural connection to the ductwork.

#### C. PIPING and CONDUIT

1. All high deformability pipe 3" or less in diameter suspended by individual hanger rods where  $I_p = 1.0$ .
2. High deformability pipe in Seismic Design Category C, 2" or less in diameter suspended by individual hanger rods where  $I_p = 1.5$ .
3. High deformability pipe in Seismic Design Category D, E or F, 1" or less in diameter suspended by individual hanger rods where  $I_p = 1.5$ .
4. All clevis supported pipe runs installed less than 12" from the top of the pipe to the underside of the support point and trapeze supported pipe suspended by hanger rods having a distance less than 12" in length from the underside of the pipe support to the support point of the structure.
5. Piping systems, including their supports, designed and constructed in accordance with ASME B31.

#### D. EXEMPTIONS DO NOT APPLY FOR:

##### 1. LIFE SAFETY or HIGH HAZARD COMPONENTS

- a. Including gas, fire protection, medical gas, fuel oil and compressed air needed for the continued operation of the facility or whose failure could impair the facility's continued operation, Occupancy Category IV, IBC-2006 as listed in Section 1.3 B

High Hazard is additionally classified as any system handling flammable, combustible or toxic material. Typical systems not excluded are additionally listed below.

2. ELECTRICAL

- a. Includes critical, standby or emergency power components including conduit (1" nominal diameter and larger) cable tray or bus duct, lighting, panels, communication lines involving 911, etc.

3. PIPING

- a. Fuel oil, gasoline, natural gas, medical gas, steam, compressed air or any piping containing hazardous, flammable, combustible, toxic or corrosive materials. Fire protection standpipe, risers and mains. Fire Sprinkler Branch Lines must be end tied.

4. DUCT

- a. Smoke evacuation duct or fresh air make up connected to emergency system, emergency generator exhaust, boiler breeching or as used by the fire department on manual override.

5. EQUIPMENT

- a. Previously excluded non-life safety duct mounted systems such as fans, variable air volume boxes, heat exchangers and humidifiers having a weight greater than 75 lbs require independent seismic bracing.

3.7 FIELD QUALITY CONTROL, INSPECTION

- A. All Independent Special and Periodic Inspections must be performed and submitted by the Contractor on components as outlined in Section 1.4 B, Article 4. (See also Contractor Responsibility, Section 1.4B, Article 5.) Note: Special Inspection services are to be supplied by the The City of New York.
- B. Upon completion of installation of all vibration isolation devices, the manufacturer's chosen representative shall inspect the completed project and certify in writing to the Contractor that all systems are installed properly, or list any that require correction. The contractor shall submit a report to the Commissioner, including the representative's report, certifying correctness of the installation or detailing corrective work to be done.

3.8 Selection Guide for Vibration Isolation and Seismic Restraint

TABLE "B" PLUMBING EQUIPMENT										
	On Grade, Basement or Slab on Grade						Above Grade			
Equipment (See Notes)	HP	Mtg	Isol	Defl	Base	Restr	Isol	Defl	Base	Rest r
Air Compressors & Vacuum Pumps	Up to 10	Floor	B	0.75	---	IV	B	1.50	---	IV
	Over 10	Floor	B	0.75	B-2	IV	B	1.50	B-2	IV
Base Mounted Pumps	Up to 15	Floor	B	0.75	B-2	IV	B	0.75	B-2	IV
	Over 15	Floor	B	0.75	B-2	IV	B	0.75	B-2	IV

Roof Mounted Components use Spec Type B-5, if over occupied areas, Defl, 1.5".

Roof Mounted Components use Spec Type B-6 if over unoccupied areas.

Minimum Deflection Guide for Equipment with Low RPM

Lowest RPM of Rotating Equipment	Minimum Actual Deflection
Less Than 400	3.5"
401 thru 600	2.5"
601 thru 900	1.5"
Greater than 900	0.75"

A. General Notes for All Tables:

1. Abbreviations:

- a. Mtg = Mounting
- b. ol = Vibration Isolator Type per Section 2.2, Vibration Isolation Types
- c. Defl = Minimum Deflection of Vibration Isolator
- d. Base = Base Type per Section 2.4, Equipment Bases
- e. Restr = Seismic Restraint Type per Section 2.3 Seismic Restraint Types

2. All deflections indicated are in inches.
3. For equipment with variable speed driven components having driven operating speed below 600 rpm, select isolation deflection from minimum deflection guide.
4. For roof applications, use base Type B-5, and/or B-8 where applicable.
5. Static deflection shall be determined based on the deflection guide for Table "A."
6. Deflections indicated are minimums at actual load and shall be selected for manufacturer's nominal 5," 4," 3," 2" and 1" deflection spring series; RPM is defined as the lowest operating speed of the equipment.
7. Single stroke compressors may require inertia bases with thicknesses greater than 14"

maximum as described for base B-2. Inertia base mass shall be sufficient to maintain double amplitude for 1/8."

### 3.9 Spacing Chart for Suspended Components

Table "D" Seismic Bracing			
(Maximum Allowable Spacing Shown – Actual Spacing to Be Determined By Calculation)			
Equipment	On center Transverse	On Center Longitudinal	Change of Direction
Pipe Threaded, Welded, Soldered or Grooved; Conduit and Conduit Racks			
16"	40 Feet	80 Feet	4 Feet
18" – 28"	30 Feet	60 Feet	4 Feet
30" – 40"	20 Feet	60 Feet	4 Feet
2.5" & Larger	10 Feet	20 Feet	4 Feet
Boiler Breeching	30 Feet	60 Feet	4 Feet
Chimneys & Stacks	30 Feet	60 Feet	4 Feet

### 3.10 Vertical Hanger Rod Bracing Schedule

Table "E" Hanger Rod Bracing Schedule					
(Stiffener to be maximum 6" from end of rod)					
Rod Dia.	Clamp Size	Maximum Un-braced Rod Length	Steel Angle Size	Clamp Spacing	Min # of Clamps per Stiffener
3/8"	SRBC-1-1/4	19"	1 x 1 x 1/4"	16"	2
1/2"	SRBC-1-1/4	25"	1 x 1 x 1/4"	20"	2
5/8"	SRBC-1-1/4	31"	1 x 1 x 1/4"	24"	2
3/4"	SRBC-1-1/2	37"	1 1/2 x 1 1/2 x 1/4"	28"	2
7/8"	SRBC-1-1/2	43"	1 1/2 x 1 1/2 x 1/4"	33"	2
1"	SRBC-1-1/2	50"	1 1/2 x 1 1/2 x 1/4"	40"	2
1 1/8"	SRBC-1-1/2	62"	1 1/2 x 1 1/2 x 1/4"	50"	2

**END OF SECTION 22 05 48**

**SECTION 22 05 53****IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Equipment labels.
  2. Warning signs and labels.
  3. Pipe labels.
  4. Stencils.
  5. Valve tags.
  6. Warning tags.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

## 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

## 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

## 1.8 COORDINATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

## PART 2 - PRODUCTS

### 2.1 EQUIPMENT LABELS

#### A. Metal Labels for Equipment:

1. Material and Thickness: Aluminum, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
3. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel self-tapping screws.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

#### B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
2. Letter Color: Black.
3. Background Color: Yellow.

4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
  5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
  6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  7. Fasteners: Stainless-steel rivets or self-tapping screws.
  8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: White
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- F. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inches (38 mm) high.

## 2.4 STENCILS

- A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; and minimum letter height of 3/4 inch (19 mm) for access panel and door labels, equipment labels, and similar operational instructions.
  - 1. Stencil Material: Aluminum.
  - 2. Stencil Paint: Exterior, gloss, alkyd enamel black unless otherwise indicated. Paint may be in pressurized spray-can form.
  - 3. Identification Paint: Exterior, acrylic enamel in colors according to ASME A13.1 unless otherwise indicated.

## 2.5 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.
  - 1. Tag Material: Brass, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
  - 2. Fasteners: Brass wire-link or beaded chain; or S-hook.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  - 1. Valve-tag schedule shall be included in operation and maintenance data.

## 2.6 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
  - 1. Size: Approximately 4 by 7 inches (100 by 178 mm).
  - 2. Fasteners: Brass grommet and wire.
  - 3. Nomenclature: Large-size primary caption such as "Danger," "Caution," or "Do Not Operate."
  - 4. Color: Yellow background with black lettering.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

### 3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### 3.4 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified in Section 09 91 23 "Interior Painting."
- B. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels with painted, color-coded bands or rectangles, complying with ASME A13.1, on each piping system.
  - 1. Identification Paint: Use for contrasting background.
  - 2. Stencil Paint: Use for pipe marking.
- C. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Near each valve and control device.
  - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
  - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 5. Near major equipment items and other points of origination and termination.
  - 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
  - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- D. Pipe Label Color Schedule:
  - 1. Medium-Pressure, Compressed-Air Piping:
    - a. Background Color: White.
    - b. Letter Color: Black.
  - 2. Domestic Water Piping:
    - a. Background Color: Blue
    - b. Letter Color: White.
  - 3. Sanitary Waste and Storm Drainage Piping:
    - a. Background Color: Black.
    - b. Letter Color: Yellow.

### 3.5 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
  - 1. Valve-Tag Size and Shape:
    - a. Cold Water: 2 inches (50 mm), round.
    - b. Hot Water: 2 inches (50 mm), round.
    - c. Low-Pressure Compressed Air: 2 inches (50 mm), round.
    - d. High-Pressure Compressed Air: 2 inches (50 mm), round.
    - e. Vacuum, N<sub>2</sub>O, CO<sub>2</sub>, 2 inches
  - 2. Valve-Tag Color:
    - a. Cold Water: Green.
    - b. Hot Water: Green.
    - c. Low-Pressure Compressed Air: Green.
    - d. High-Pressure Compressed Air: Green.
  - 3. Letter Color:
    - a. Cold Water: Black.
    - b. Hot Water: Black.
    - c. Low-Pressure Compressed Air: Black.
    - d. High-Pressure Compressed Air: Black.

### 3.6 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

**END OF SECTION 22 05 53**

**SECTION 22 07 19****PLUMBING PIPING INSULATION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes insulating the following plumbing piping services:

1. Domestic cold-water piping.
2. Domestic hot-water piping.
3. Domestic recirculating hot-water piping.
4. Roof drains and rainwater leaders.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
  - 2. Detail attachment and covering of heat tracing inside insulation.
  - 3. Detail insulation application at pipe expansion joints for each type of insulation.
  - 4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
  - 5. Detail removable insulation at piping specialties, equipment connections, and access panels.
  - 6. Detail application of field-applied jackets.
  - 7. Detail application at linkages of control devices.
- C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
  - 1. Preformed Pipe Insulation Materials: 12 inches (300 mm) long by NPS 2 (DN 50).
  - 2. Jacket Materials for Pipe: 12 inches (300 mm) long by NPS 2 (DN 50).
  - 3. Sheet Jacket Materials: 12 inches (300 mm) square.
  - 4. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

## 1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified Installer.
- B. Material Test Reports: From a qualified testing agency acceptable to New York City Department of Buildings indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.
- C. Field quality-control reports.

## 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft instructing program recognized by the Department of Labor, Bureau of Apprenticeship and Training.
- C. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84 by a testing agency acceptable to New York City Department of Buildings. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
  - 1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.
  - D. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by the Commissioner. Use materials indicated for the completed Work.
    1. Piping Mockups:
      - a. One 10-foot (3-m) section of NPS 2 (DN 50) straight pipe.
      - b. One each of a 90-degree threaded, welded, and flanged elbow.
      - c. One each of a threaded, welded, and flanged tee fitting.
      - d. One NPS 2 (DN 50) or smaller valve, and one NPS 2-1/2 (DN 65) or larger valve.
      - e. Four support hangers including hanger shield and insert.
      - f. One threaded strainer and one flanged strainer with removable portion of insulation.
      - g. One threaded reducer and one welded reducer.
      - h. One pressure temperature tap.
      - i. One mechanical coupling.
    2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
    3. Notify the Commissioner seven days in advance of dates and times when mockups will be constructed.
    4. Obtain the Commissioner's approval of mockups before starting insulation application.
    5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless the Commissioner specifically approves such deviations in writing.
    6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    7. Demolish and remove mockups when directed.
  - E. Comply with the following applicable standards and other requirements specified for miscellaneous components:
    1. Supply and Drain Protective Shielding Guards: ICC A117.1.
- 1.9 DELIVERY, STORAGE, AND HANDLING
- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.
- 1.10 COORDINATION
- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
  - B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
  - C. Coordinate installation and testing of heat tracing.

## 1.11 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

## PART 2 - PRODUCTS

### 2.1 INSULATION MATERIALS

- A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule," "Outdoor, Aboveground Piping Insulation Schedule," and "Outdoor, Underground Piping Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

#### 1. Products: Subject to compliance with requirements, provide one of the following:

- a. CertainTeed Corp.; SoftTouch Duct Wrap.
- b. Johns Manville; Microlite.
- c. Knauf Insulation; Friendly Feel Duct Wrap.
- d. Manson Insulation Inc.; Alley Wrap.
- e. Owens Corning; SOFTR All-Service Duct Wrap.
- f. Or approved equal.

#### G. Mineral-Fiber, Preformed Pipe Insulation:

#### 1. Products: Subject to compliance with requirements, provide one of the following:

- a. Fibrex Insulations Inc.; Coreplus 1200.
- b. Johns Manville; Micro-Lok.
- c. Knauf Insulation; 1000-Degree Pipe Insulation.
- d. Manson Insulation Inc. ; Alley-K.
- e. Owens Corning; Fiberglas Pipe Insulation.
- f. Or approved equal.

#### 2. Type I, 850 Deg F (454 Deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied

ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

## 2.2 INSULATING CEMENTS

### A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

1. Products: Subject to compliance with requirements, provide Ramco Insulation, Inc.; Super-Stik. (Basis-of-Design), or an equivalent product by one of the following:

- a. Rutland
- b. Amerisafe
- c. Or approved equal.

### B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

1. Products: Subject to compliance with requirements, provide Ramco Insulation, Inc.; Thermokote V. (Basis-of-Design), or an equivalent product by one of the following:

- a. Rutland
- b. Amerisafe
- c. Or approved equal.

### C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449.

1. Products: Subject to compliance with requirements, provide Ramco Insulation, Inc.; Ramcote 1200 and Quik-Cote. (Basis-of-Design) or an equivalent product by one of the following:

- a. Rutland
- b. Amerisafe
- c. Or approved equal.

## 2.3 ADHESIVES

### A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

### B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.

1. Products: Subject to compliance with requirements, provide the following:

- a. Aeroflex USA, Inc.; Aero seal.
- b. Armacell LLC; Armaflex 520 Adhesive.
- c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
- d. K-Flex USA; R-373 Contact Adhesive.
- e. Or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
    - b. Eagle Bridges - Marathon Industries; 225.
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
    - d. Mon-Eco Industries, Inc.; 22-25.
    - e. Or approved equal.
  2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
- D. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
    - b. Eagle Bridges - Marathon Industries; 225.
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-20.
    - d. Mon-Eco Industries, Inc.; 22-25.
    - e. Or approved equal.
  2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Dow Corning Corporation; 739, Dow Silicone.
    - b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
    - c. P.I.C. Plastics, Inc.; Welding Adhesive.
    - d. Speedline Corporation; Polyco VP Adhesive.
    - e. Or approved equal.
  2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  3. Adhesive shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

**2.4 MASTICS**

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
  - 1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below-ambient services.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.
    - b. Vimasco Corporation; 749.
    - c. Mon-Eco Industries, Inc.; 55-50.
    - d. Or approved equal.
  - 2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
  - 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
  - 4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
  - 5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below-ambient services.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.
    - b. Eagle Bridges - Marathon Industries; 501.
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.
    - d. Mon-Eco Industries, Inc.; 55-10.
    - e. Or approved equal.
  - 2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.03 metric perm) at 35-mil (0.9-mm) dry film thickness.
  - 3. Service Temperature Range: 0 to 180 deg F (Minus 18 to plus 82 deg C).
  - 4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
  - 5. Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below-ambient services.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
    - b. Eagle Bridges - Marathon Industries; 570.
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
    - d. Or approved equal.

2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm (0.033 metric perm) at 30-mil (0.8-mm) dry film thickness.
3. Service Temperature Range: Minus 50 to plus 220 deg F (Minus 46 to plus 104 deg C).
4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
5. Color: White.

E. Breather Mastic: Water based; suitable for indoor and outdoor use on above-ambient services.

1. Products: Subject to compliance with requirements, provide one of the following:
  - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
  - b. Eagle Bridges - Marathon Industries; 550.
  - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
  - d. Mon-Eco Industries, Inc.; 55-50.
  - e. Vimasco Corporation; WC-1/WC-5.
  - f. Or approved equal.
2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms (1.2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
4. Solids Content: 60 percent by volume and 66 percent by weight.
5. Color: White.

## 2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A, and shall be compatible with insulation materials, jackets, and substrates.
1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  2. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-50 AHV2.
    - b. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-36.
    - c. Vimasco Corporation; 713 and 714.
    - d. Or approved equal.
  3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over pipe insulation.
  4. Service Temperature Range: 0 to plus 180 deg F (Minus 18 to plus 82 deg C).
  5. Color: White.

## 2.6 SEALANTS

- A. Joint Sealants:
1. Joint Sealants for Cellular-Glass and Phenolic Products: Subject to compliance with requirements, provide the following:

- a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
    - b. Eagle Bridges - Marathon Industries; 405.
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
    - d. Mon-Eco Industries, Inc.; 44-05.
    - e. Pittsburgh Corning Corporation; Pittseal 444.
    - f. Or approved equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Permanently flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
  5. Color: White or gray.
  6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- B. FSK and Metal Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
    - b. Eagle Bridges - Marathon Industries; 405.
    - c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
    - d. Mon-Eco Industries, Inc.; 44-05.
    - e. Or approved equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
  5. Color: Aluminum.
  6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
    - b. Mon-Eco Industries, Inc.; 55-50.
    - c. Vimasco Corporation; WC-1/WC-5.
    - d. Or approved equal.
  2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
  5. Color: White.
  6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

## 2.7 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
  2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
  3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

## 2.8 FIELD-APPLIED CLOTHS

- A. Woven Glass-Fiber Fabric: Comply with MIL-C-20079H, Type I, plain weave, and presized a minimum of 8 oz./sq. yd. (271 g/sq. m).
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Alpha Associates, Inc.; Alpha-Maritex 84215 and 84217/9485RW, Luben 59.
    - b. Thermaxx
    - c. FitTight
    - d. Or approved equal.

## 2.9 FIELD-APPLIED JACKETS

- A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.
- B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Johns Manville; Zeston.
    - b. P.I.C. Plastics, Inc.; FG Series.
    - c. Proto Corporation; LoSmoke.
    - d. Speedline Corporation; SmokeSafe.
    - e. Or approved equal.
  2. Adhesive: As recommended by jacket material manufacturer.
  3. Color: White.
  4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
    - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
- C. Metal Jacket:
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.

- b. ITW Insulation Systems; Aluminum and Stainless Steel Jacketing.
  - c. RPR Products, Inc.; Insul-Mate.
  - d. Or approved equal.
- 2. Aluminum Jacket: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005, Temper H-14.
  - a. Finish and thickness are indicated in field-applied jacket schedules.
  - b. Moisture Barrier for Indoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
  - c. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper
  - d. Factory-Fabricated Fitting Covers:
    - 1) Same material, finish, and thickness as jacket.
    - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
    - 3) Tee covers.
    - 4) Flange and union covers.
    - 5) End caps.
    - 6) Beveled collars.
    - 7) Valve covers.
    - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- 3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.
  - a. Factory cut and rolled to size.
  - b. Material, finish, and thickness are indicated in field-applied jacket schedules.
  - c. Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper.
  - d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
  - e. Factory-Fabricated Fitting Covers:
    - 1) Same material, finish, and thickness as jacket.
    - 2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
    - 3) Tee covers.
    - 4) Flange and union covers.
    - 5) End caps.
    - 6) Beveled collars.
    - 7) Valve covers.
    - 8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- D. Underground Direct-Buried Jacket: 125-mil- (3.2-mm-) thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.
  - 1. Products: Subject to compliance with requirements, products manufactured by one of the following:
    - a. Pittsburgh Corning Corporation; Pittwrap.

- b. Polyguard Products, Inc.; Insulrap No Torch 125.
- c. Perma-Pipe inc.
- d. Or approved equal.

## 2.10 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
  - 1. Products: Subject to compliance with requirements, provide one of the following may be incorporated into the Work include, but are not limited to, the following:
    - a. ABI, Ideal Tape Division; 428 AWF ASJ.
    - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
    - c. Compac Corporation; 104 and 105.
    - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
  - 2. Width: 3 inches (75 mm).
  - 3. Thickness: 11.5 mils (0.29 mm).
  - 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
  - 5. Elongation: 2 percent.
  - 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
  - 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. ABI, Ideal Tape Division; 491 AWF FSK.
    - b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
    - c. Compac Corporation; 110 and 111.
    - d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
  - 2. Width: 3 inches (75 mm).
  - 3. Thickness: 6.5 mils (0.16 mm).
  - 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
  - 5. Elongation: 2 percent.
  - 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
  - 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. ABI, Ideal Tape Division; 370 White PVC tape.
    - b. Compac Corporation; 130.
    - c. Venture Tape; 1506 CW NS.
  - 2. Width: 2 inches (50 mm).
  - 3. Thickness: 6 mils (0.15 mm).
  - 4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
  - 5. Elongation: 500 percent.

6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, provide one of the following:

- a. ABI, Ideal Tape Division; 488 AWF.
- b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
- c. Compac Corporation; 120.
- d. Venture Tape; 3520 CW.
- e. Or approved equal.

2. Width: 2 inches (50 mm).

3. Thickness: 3.7 mils (0.093 mm).

4. Adhesion: 100 ounces force/inch (1.1 N/mm) in width.

5. Elongation: 5 percent.

6. Tensile Strength: 34 lbf/inch (6.2 N/mm) in width.

## 2.11 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, provide one of the following:

- a. ITW Insulation Systems; Gerrard Strapping and Seals.
- b. RPR Products, Inc.; Insul-Mate Strapping and Seals.
- c. Advance Products & Systems
- d. Or approved equal.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, 1/2 inch (13 mm) wide with closed seal.

3. Aluminum: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 3/4 inch (19 mm) wide with wing seal or closed seal.

B. Staples: Outward-clinching Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.

C. Wire: 0.080-inch (2.0-mm) nickel-copper alloy.

## 2.12 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

- a. Engineered Brass Company.
- b. Insul-Tect Products Co.; a subsidiary of MVG Molded Products.
- c. McGuire Manufacturing.
- d. Plumberex.
- e. Truebro; a brand of IPS Corporation.
- f. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
- g. Or approved equal.

2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.

**B. Protective Shielding Piping Enclosures:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Truebro; a brand of IPS Corporation.
  - b. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
  - c. Decoshield Systems
  - d. Or approved equal.
2. Description: Manufactured plastic enclosure for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with ADA requirements.

**PART 3 - EXECUTION**

**3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems to be insulated have been tested and are free of defects.
  2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 PREPARATION**

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:
1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils (0.127 mm) thick and an epoxy finish 5 mils (0.127 mm) thick if operating in a temperature range between 140 and 300 deg F (60 and 149 deg C). Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
  2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F (0 and 149 deg C) with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
- C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

### 3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
  - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
  - 1. Draw jacket tight and smooth.
  - 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
  - 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
    - a. For below-ambient services, apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
  5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above-ambient services, do not install insulation to the following:
1. Vibration-control devices.
  2. Testing agency labels and stamps.
  3. Nameplates and data plates.
  4. Cleanouts.

### 3.5 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
  4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
  - 1. Comply with requirements in Section 07 84 10 "Firestopping" for firestopping and fire-resistive joint sealers.
- F. Insulation Installation at Floor Penetrations:
  - 1. Pipe: Install insulation continuously through floor penetrations.
  - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 07 84 10 "Firestopping."

### 3.6 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
  - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
  - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
  - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
  - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
  - 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
  - 6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
  - 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
  - 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and

- unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation shall conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
  2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
  3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
  4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
  5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

### 3.7 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Flanges:
1. Install pipe insulation to outer diameter of pipe flange.
  2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
  3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
  4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- C. Insulation Installation on Pipe Fittings and Elbows:
1. Install mitered sections of pipe insulation.
  2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.8 INSTALLATION OF MINERAL-FIBER INSULATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

### 3.9 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
  - 1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
  - 2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
  - 3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
  - 1. Draw jacket material smooth and tight.
  - 2. Install lap or joint strips with same material as jacket.
  - 3. Secure jacket to insulation with manufacturer's recommended adhesive.
  - 4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
  - 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.
  - 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

### 3.10 FINISHES

- A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 91 00 "Painting".
  - 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
    - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by the Commissioner. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

### 3.11 FIELD QUALITY CONTROL

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform tests and inspections.
- B. Perform tests and inspections.

C. Tests and Inspections:

1. Inspect pipe, fittings, strainers, and valves, randomly selected by the Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

- D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
1. Drainage piping located in crawl spaces.
  2. Underground piping.
  3. Chrome-plated pipes and fittings, except where exposed hot pipes and location could cause personal injury.

3.13 INDOOR PIPING INSULATION SCHEDULE

A. Domestic Cold Water:

1. NPS 1 (DN 25) and Smaller: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch (25 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
2. NPS 1-1/4 (DN 32) and Larger: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch (25 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

B. Domestic Hot and Recirculated Hot Water:

1. NPS 1-1/4 (DN 32) and Smaller: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch (25 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.
2. NPS 1-1/2 (DN 40) and Larger: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch (25 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

C. Stormwater and Overflow:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch (25 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

D. Roof Drain and Overflow Drain Bodies:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 1 inch (25 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

E. Sanitary Waste Piping Where Heat Tracing Is Installed:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1-1/2 inches (38 mm) thick.

F. Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet (3 m) of Drain Receiving Condensate and Equipment Drain Water below 60 Deg F (16 Deg C):

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 3/4 inch (19 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch (13 mm) thick.

3.14 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Domestic Water Piping:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 2 inches (50 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.

B. Domestic Hot and Recirculated Hot Water:

1. All Pipe Sizes: Insulation shall be one of the following:
  - a. Flexible Elastomeric: 2 inches (50 mm) thick.
  - b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 2 inches (50 mm) thick.

3.15 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
  1. PVC: 30 mils (0.8 mm) thick.
  2. Aluminum, Smooth 0.032 inch (0.81 mm) thick.
  3. Painted Aluminum, Smooth: 0.020 inch (0.51 mm) thick.

4. Stainless Steel, Type 304, Smooth 2B Finish, 0.020 inch (0.51 mm) thick.

D. Piping, Exposed:

1. PVC: 30 mils (0.8 mm) thick.
2. Aluminum, Smooth, 0.040 inch (1.0 mm) thick.
3. Painted Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
4. Stainless Steel, Type 304, Smooth 2B Finish, 0.020 inch (0.51 mm) thick.

3.16 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
  1. PVC: None.
  2. Aluminum, Smooth, 0.032 inch (0.81 mm) thick.
  3. Painted Aluminum, Smooth: 0.016 inch (0.41 mm) thick.
  4. Stainless Steel, Type 304 or Smooth 2B Finish: 0.024 inch (0.61 mm) thick.
- D. Piping, Exposed:
  1. PVC: 40 mils (1.0 mm) thick.
  2. Painted Aluminum, 0.024 inch (0.61 mm) thick.
  3. Stainless Steel, Type 304, Smooth 2B Finish: 0.024 inch (0.61 mm) thick.

3.17 UNDERGROUND, FIELD-INSTALLED INSULATION JACKET

- A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

**END OF SECTION 22 07 19**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 08 00****COMMISSIONING OF PLUMBING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

**1.2 SUMMARY**

- A. This section includes commissioning process requirements for Plumbing systems, assemblies, and equipment.
- B. Related Sections:
  - 1. DDC General Conditions Section for general commissioning process requirements.

**1.3 DESCRIPTION**

- A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the Commissioner's Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.
- B. The Commissioning process does not take away from or reduce the responsibility of the installing contractors to provide a finished and fully functioning product.
- C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Commissioner's Project Requirement's as detailed in the Contract Documents.

**1.4 DEFINITIONS**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for definitions.

**1.5 SUBMITTALS**

- A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment

specifications. The CxA will notify the Contractor and Commissioner as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

- B. The CxA will receive a copy of the final approved submittals.
- C. In addition, the contractor is to provide the following:
  - 1. Certificate of readiness
  - 2. Certificates of completion of installation, prestart, and startup activities.
  - 3. O&M manuals
  - 4. Test reports
- D. Refer to DDC General Conditions for general commissioning submittal requirements.

## **1.6 QUALITY ASSURANCE**

- A. Test Equipment Calibration Requirements: Contractor will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

## **1.7 COORDINATION**

- A. Commissioning Kick-Off Meeting – Construction Team: Contractors will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.
- B. Commissioning Meetings: Contractors will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.
- C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process. This will not include 100% meeting attendance, but the CxA shall be provided with the subsequent meeting minutes for review.
- D. Pre-testing Meetings: Contractors will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, sub-system, equipment, and component to be tested.
- E. Testing: Contractors will coordinate with testing personnel and agencies for timing and access for CxA to witness test.

- F. Manufacturers' Inspection and Startup Services: Contractors will coordinate services of manufacturers' inspection and startup services.
- G. Testing, Adjusting and Balancing: Contractors will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

## **PART 2 - PRODUCTS**

### **2.1 TEST EQUIPMENT**

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the plumbing system in Division 22 except for equipment specific to and used by TAB in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by the contractor.
- B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

## **PART 3 - EXECUTION**

### **3.1 GENERAL DOCUMENTATION REQUIREMENTS**

- A. With assistance from the Contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems. These checklists shall be provided to the Contractors for completion. The CxA shall gather and review the completeness and accuracy of these checklists via site visits.
- B. Red-lined Drawings (As-Built): Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

- D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

### **3.2 CONTRACTOR'S RESPONSIBILITIES**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for contractor's responsibilities.
- B. Attend construction phase controls coordination meetings.
- C. Attend domestic water balancing review and coordination meetings.
- D. Participate in Plumbing systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- E. Provide information requested by the CxA for final commissioning documentation.
- F. Prepare preliminary schedule for Plumbing system orientations and inspections, operation and maintenance manual submissions, orientation sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for the City of New York. Distribute preliminary schedule to commissioning team members. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- G. Provide detailed startup procedures.
- H. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications
- I. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.
- J. Respond to provided new deficiencies and/or responses within five (5) business days.
- K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- L. Coordinate with the CxA to provide 48-hour advanced notice so that the witnessing of equipment and system start-up and testing can begin.
- M. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
- N. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
  - 1. Sanitary waste and vent piping, storm drainage piping, and sump pumps.
  - 2. Domestic water piping, domestic water booster pumps, hot water circulator pumps, and domestic water heaters.

3. Gas piping and gas booster pumps.
  4. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
- O. The equipment supplier shall document the performance of his equipment.
- P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- Q. Test, Adjust and Balance Contractor
1. Attend initial commissioning coordination meeting scheduled by the Commissioning Authority.
  2. Submit the site-specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
  3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
  4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the HVAC contractor and the Contractor.
  5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
  6. Provide recommended setpoints as determined by Testing, Adjusting, and Balancing such as static pressure and differential pressure setpoints.
- R. Equipment Suppliers
1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.
  2. Assist in equipment testing per agreements with Contractors.
  3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

### **3.3 CxA'S RESPONSIBILITIES**

#### **A. Roles and Responsibilities**

1. Refer to DDC General Conditions Section "General Commissioning Requirements" for general CxA responsibilities.

#### **B. Cx Team Meetings**

1. Commissioning during the Construction Phase will begin with a 'Commissioning Kick-Off Meeting – for Construction Team' conducted by the CxA where the commissioning process is reviewed with all of the commissioning team members.
2. Additional meetings will be required throughout the Construction and Acceptance phases. The CxA shall attend select meetings related to commissioning as required by the DDC during the Construction and Acceptances phases.

#### **C. Coordination and Scheduling**

1. Coordinate and direct commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications, and consultations with all necessary parties.

2. Coordinate commissioning work with the Commissioner to ensure that commissioning activities are being scheduled into the master project schedule.
3. Coordinate with the Commissioner to witness tests, inspections, and systems startup.

**D. Commissioning Progress**

1. Perform periodic site visits to observe component and system installations, and qualify contractor completed checklists.
2. Report deficiencies to the Commissioner including but not limited to issues related to adequate accessibility required for component maintenance replacement and repair.
3. Review construction meeting minutes for revisions/substitutions relating to the commissioning process.

**E. Pre-Functional Checks**

1. Verify proper installation of components, equipment, systems and assemblies. Sampling procedures may not be employed on systems and equipment.
2. Pre-Functional checks for a piece of equipment shall only be started once the approved checklist for a piece of equipment has been received from the installing contractor indicating the equipment is ready to being its pre-functional checks.
3. Team will not be allowed to move forward into functional testing until all Pre-Functional testing is completed and the team moves onto the Acceptance Phase for the project.

**F. Equipment and System Startup and Verification**

1. Review and approve component, equipment, system, and assembly startup plan developed and submitted by the Contractor.
2. Approve system startup by reviewing startup reports, if contracted; and by selected site observation.
3. Review the Testing, Adjusting and Balancing execution plan for the project, which shall be submitted by the TAB subcontractor.
4. Verify and document the accuracy of the air and water systems balancing by spot testing the air and water reported field values with TAB subcontractors and by reviewing completed reports.

**G. Functional Performance Testing**

1. With assistance from the Contractor, write Functional Performance Testing procedures for all components, equipment or systems to be commissioned.
2. With the assistance of the Contractors, coordinate Functional Performance Testing. Witness and approve Functional Performance Testing performed by the Contractors.
3. With the assistance of the Contractors, coordinate retesting as necessary until satisfactory performance is achieved.
4. Witness seasonal or deferred Functional Performance Testing as necessary.

**H. Issue/Deficiency Logs**

1. The CxA shall prepare a formal, ongoing, online record of deficiencies, problems and concerns – and their resolution – raised by members of the Commissioning Team during the Commissioning Process.
2. Issues will be recorded on an online Commissioning Issues Log for the contractors to resolve to the satisfaction of the Commissioner. Issues will be added by the CxA. Team members are required to post their own responses to issues pertaining to their work. Team members are required to respond to issues added to the list within five (5) working days of being added by the CxA.
3. Issues will be revisited one (1) time to verify that the proper corrections have been made.
4. When issues are resolved, they will be closed on the Issues Log by the CxA.

**I. Operation and Maintenance Data**

1. The CxA shall review of the documentation submitted by the Contractor as required by the Specifications for completeness and accuracy. This commissioning review supplements, but does not replace, the Commissioner's review.
2. Review equipment warranties.

**J. Instruction**

1. The Contractor will provide all documentation and qualified instruction personnel for instruction.
2. The CxA will verify through the Contractor's plan and schedule, instruction agendas, and select observations that proper instruction procedures were followed on all commissioned systems.
3. The CxA will verify that Instruction Video Recordings are executed, collected, and provided to the Commissioner.
4. See appropriate section below pertaining to instruction.

**K. Systems Manual Requirements**

1. Index of Systems Manual with notation as to content storage location if not in actual manual.
2. Executive Summary
3. A list of recommended operational record keeping procedures at the facility level, including sample forms, trend logs, or others, and a rationale for each.
4. Maintenance procedures, schedules and recommendations.
5. Ongoing Optimization
6. Other Attachments

**L. Post Occupancy Review**

1. The CxA will return to the site within the 12-month warranty period to address the following: review current building operations with facility staff and address outstanding issues related to the Commissioner's Project Requirements; Interview facility staff and identify problems or concerns with operating the building; Identify problems covered under warranty or under the original construction contract.
2. The CxA will make suggestions for improvements in the content of the O&M Manuals. Any required changes shall be made by the contractor responsible for that section.
3. The CxA shall assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

**M. Commissioning Final Report**

1. The CxA shall provide a final report following the completion of all Functional Performance Testing. The report is to outline compliance and non-compliance to the construction documents, as well as identify concerns relative to future performance

**3.4 TESTING PREPARATION**

- A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Plumbing instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

- C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

### **3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION**

- A. Prior to performance of Testing, Adjusting, and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
  - 1. The CxA will notify testing and balancing subcontractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
  - 2. The testing and balancing Contractor shall use the same instruments (by model and serial number) that were used when original data were collected.
  - 3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
  - 4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

### **3.6 GENERAL TESTING REQUIREMENTS**

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Plumbing testing shall include entire Plumbing installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the contractor shall prepare detailed testing plans, procedures, and checklists for Plumbing systems, subsystems, and equipment.

- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Plumbing system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

### **3.7 PLUMBING SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES**

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 22 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. Plumbing Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls." Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 22 piping Sections. Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:
  - 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
  - 2. Description of equipment for flushing operations.
  - 3. Minimum flushing water velocity.
  - 4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.
- D. Plumbing Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, fuel gas, sanitary waste and vent piping, storm drainage piping, sprinkler and domestic water distribution systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- E. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

- F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:

1. Domestic Hot Water System
2. Domestic Water System
3. Domestic Water Heaters
4. Gas System – Natural Gas
5. Hot Water Circulating Pump
6. Water Booster System
7. Elevator Sump Pump
8. Sewage Ejector Pump

### **3.8 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT**

A. Deficiencies/Non-Conformance

1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractors on a standardized form.
2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the contract document in dispute or request further information to clarify the concern.
3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
5. As tests progress and a deficiency is identified, the CxA discusses the issue with the executing Contractor.
6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function.
7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.
8. Deficiencies that are not corrected at the time of documentation, shall be completed by the affected contractor and photo evidence of the deficiency resolution shall be sent to both the Commissioner and the CxA.

B. Failure due to Manufacturer Defect

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable only by the Commissioner. In such case, the Contractor shall provide the Commissioner with the following.

- i. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
- ii. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
- iii. The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
- iv. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
- v. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

### **3.9 APPROVAL**

- A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

### **3.10 DEFERRED TESTING**

- A. Unforeseen Deferred Testing – If any check or test cannot be completed due to the building structure, required occupancy condition or other deficiency, execution of checklists and functional testing may be delayed upon approval of the Commissioner. These tests will be conducted in the same manner as the seasonal tests, as soon as possible. Services of necessary parties will be negotiated.
- B. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the appropriate Contractors, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

### **3.11 MANUFACTURER'S MANUALS**

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in DDC General Conditions.
- B. The specific content and format requirements for the standard O&M manuals are detailed in DDC General Conditions. Special requirements for the Contractor are found in Division 23.
- C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor and Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

### **3.12 INSTRUCTION OF CITY OF NEW YORK PERSONNEL**

- A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.
- B. The CxA shall oversee the instruction of the City of New York for commissioned equipment and systems.
  - 1. The CxA shall interview the City of New York to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor, who will in turn communicate to the subcontractors and vendors who also have instruction responsibilities.
  - 2. In addition to these general requirements, the specific instruction requirements of the City of New York by contractors, subcontractors and vendors are specified in the individual sections listed in Section 1.2 – Summary.
  - 3. The Contractor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.
  - 4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
    - a. Equipment (included in instruction)
    - b. Intended audience
    - c. Location of instruction
    - d. Objectives
    - e. Subjects covered (description, duration of discussion, special methods, etc.)
    - f. Duration of instruction on each subject
    - g. Qualified instructor for each subject
    - h. Instructor qualifications
    - i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
  - 5. For the primary equipment, the Contractor shall provide a discussion of the control of the equipment during the instruction conducted by each subcontractor or vendor.
  - 6. Instruction documentation shall include the following items:
    - a. Copy of the instruction plan, including schedule, syllabus, and agenda.
    - b. Copy of the Commissioner's Project Requirements.
    - c. Copy of the Basis of Design.
    - d. Compiled operations manuals.
    - e. Compiled maintenance manuals.
    - f. Completed manufacturer instruction manuals.
    - g. Red-lined drawings.
    - h. Other pertinent documents.
  - 7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending some of the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.

8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment
9. Videotaping of the instruction sessions in DVD format will be provided by the CxA.

### **3.13 FUNCTIONAL BUILDING SYSTEMS DEMONSTRATION TEST (72 HOURS)**

- A. Refer to Addendum to the General Conditions Section “General Commissioning Requirements” for requirements pertaining to 72-Hour Functional Building Systems Demonstration Testing.

**END OF SECTION 22 08 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 11 13****FACILITY WATER DISTRIBUTION PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract - City of New York Standard Construction Contract.

**1.2 SUMMARY**

- A. This Section includes water-distribution piping and related components outside the building for water service and fire-service mains.
- B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
  - 1. Wiring Diagrams: Power, signal, and control wiring for alarms.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.
- B. Field quality-control test reports.

**1.8 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For water valves and specialties to include in emergency, operation, and maintenance manuals.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Regulatory Requirements:
  - 1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
  - 2. Comply with standards of New York City Department of Buildings for potable-water-service piping, including materials, installation, testing, and disinfection.
  - 3. Comply with standards of New York City Department of Buildings for fire-suppression water-service piping, including materials, hose threads, installation, and testing.
- C. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York City Department of Buildings, and marked for intended use.
- E. Comply with ASTM F 645 for selection, design, and installation of thermoplastic water piping.
- F. Comply with FMG's "Approval Guide" or UL's "Fire Protection Equipment Directory" for fire-service-main products.
- G. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping for fire suppression.

**1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:
  - 1. Ensure that valves are dry and internally protected against rust and corrosion.

2. Protect valves against damage to threaded ends and flange faces.
  3. Set valves in best position for handling. Set valves closed to prevent rattling.
- B. During Storage: Use precautions for valves, including fire hydrants, according to the following:
1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
  2. Protect from weather. Store indoors and maintain temperature higher than ambient dew-point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.
- C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.
- D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.
- E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.
- F. Protect flanges, fittings, and specialties from moisture and dirt.
- G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

#### 1.11 COORDINATION

- A. Coordinate connection to water main with utility company.

### PART 2 - PRODUCTS

#### 2.1 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type K, water tube, drawn temper.
1. Copper, Solder-Joint Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- B. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.
- C. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

#### 2.2 DUCTILE-IRON PIPE AND FITTINGS (FOR INCOMING SERVICES ONLY)

- A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.
1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
  2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

- B. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
  - 1. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
  - 2. Gaskets: AWWA C111, rubber.
- C. Grooved-Joint, Ductile-Iron Pipe: AWWA C151, with cut, rounded-grooved ends.
  - 1. Grooved-End, Ductile-Iron Pipe Appurtenances:
    - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
    - b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Anvil International, Inc.
      - 2) Victaulic Company of America.
      - 3) Hays Fluid Controls; a division of ROMAC Industries Inc.
      - 4) Star Pipe Products.
      - 5) Or approved equal.
    - c. Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
    - d. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.
- D. Flanges: ASME 16.1, Class 125, cast iron.

## 2.3 SPECIAL PIPE FITTINGS

- A. Ductile-Iron Rigid Expansion Joints:
  - 1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. EBAA Iron, Inc.
    - b. U.S. Pipe and Foundry Company.
    - c. Hays Fluid Controls; a division of ROMAC Industries Inc.
    - d. Star Pipe Products.
    - e. Or approved equal.
  - 3. Description: Three-piece, ductile-iron assembly consisting of telescoping sleeve with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with AWWA C110 or AWWA C153. Select and assemble components for expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
    - a. Pressure Rating: 250 psig (1725 kPa) minimum.
    - b. Expansion Required:

**B. Ductile-Iron Flexible Expansion Joints:**

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
  - a. EBAA Iron, Inc.
  - b. Hays Fluid Controls; a division of ROMAC Industries Inc.
  - c. Star Pipe Products.
  - d. Or approved equal.
2. **Description:** Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
  - a. **Pressure Rating:** 250 psig (1725 kPa) minimum.
  - b. **Offset:**
  - c. **Expansion Required:**

**C. Ductile-Iron Deflection Fittings:**

1. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
  - a. EBAA Iron, Inc.
  - b. Hays Fluid Controls; a division of ROMAC Industries Inc.
  - c. Star Pipe Products.
  - d. Or approved equal.
2. **Description:** Compound, ductile-iron coupling fitting with sleeve and 1 or 2 flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
  - a. **Pressure Rating:** 250 psig (1725 kPa) minimum.

**2.4 JOINING MATERIALS**

- A. Refer to Section 330500 "Common Work Results for Utilities" for commonly used joining materials.
- B. **Brazing Filler Metals:** AWS A5.8, BCuP Series.
- C. **Bonding Adhesive for Fiberglass Piping:** As recommended by fiberglass piping manufacturer.
- D. **Plastic Pipe-Flange Gasket, Bolts, and Nuts:** Type and material recommended by piping system manufacturer, unless otherwise indicated.

**2.5 PIPING SPECIALTIES**

- A. **Transition Fittings:** Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

**B. Tubular-Sleeve Pipe Couplings:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Cascade Waterworks Manufacturing.
  - b. Dresser, Inc.; Dresser Piping Specialties.
  - c. Ford Meter Box Company, Inc. (The); Pipe Products Div.
  - d. Hays Fluid Controls; a division of ROMAC Industries Inc.
  - e. JCM Industries.
  - f. Smith-Blair, Inc.
  - g. Viking Johnson.
  - h. Or approved equal.
2. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners and with ends of same sizes as piping to be joined.
  - a. Standard: AWWA C219.
  - b. Center-Sleeve Material: Manufacturer's standard.
  - c. Gasket Material: Natural or synthetic rubber.
  - d. Pressure Rating: 200 psig (1380 kPa) minimum.
  - e. Metal Component Finish: Corrosion-resistant coating or material.

**C. Split-Sleeve Pipe Couplings:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Victaulic Depend-O-Lok.
  - b. Cascade Waterworks Manufacturing.
  - c. Dresser, Inc.; Dresser Piping Specialties.
  - d. Ford Meter Box Company, Inc. (The); Pipe Products Div.
  - e. Or approved equal.
2. Description: Metal, bolted, split-sleeve-type, reducing or transition coupling with sealing pad and closure plates, O-ring gaskets, and bolt fasteners.
  - a. Standard: AWWA C219.
  - b. Sleeve Material: Manufacturer's standard
  - c. Sleeve Dimensions: Of thickness and width required to provide pressure rating.
  - d. Gasket Material: O-rings made of EPDM rubber, unless otherwise indicated.
  - e. Pressure Rating: 150 psig (1035 kPa).
  - f. Metal Component Finish: Corrosion-resistant coating or material.

**D. Flexible Connectors:**

1. Nonferrous-Metal Piping: Bronze hose covered with bronze wire braid; with copper-tube, pressure-type, solder-joint ends or bronze flanged ends brazed to hose.
2. Ferrous-Metal Piping: Stainless-steel hose covered with stainless-steel wire braid; with ASME B1.20.1, threaded steel pipe nipples or ASME B16.5, steel pipe flanges welded to hose.

E. Dielectric Fittings:

1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
2. Dielectric Unions:
  - a. Description:
    - 1) Standard: ASSE 1079.
    - 2) Pressure Rating: 250 psig (1725 kPa).
    - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
3. Dielectric Flanges:
  - a. Description:
    - 1) Standard: ASSE 1079.
    - 2) Factory-fabricated, bolted, companion-flange assembly.
    - 3) Pressure Rating: 175 psig (1200 kPa).
    - 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
4. Dielectric-Flange Insulating Kits:
  - a. Description:
    - 1) Nonconducting materials for field assembly of companion flanges.
    - 2) Pressure Rating:
    - 3) Gasket: Neoprene or phenolic.
    - 4) Bolt Sleeves: Phenolic or polyethylene.
    - 5) Washers: Phenolic with steel backing washers.
5. Dielectric Nipples:
  - a. Description:
    - 1) Standard: IAPMO PS 66
    - 2) Electroplated steel nipple. complying with ASTM F 1545.
    - 3) Pressure Rating:.
    - 4) End Connections: Male threaded or grooved.
    - 5) Lining: Inert and noncorrosive, propylene.

2.6 GATE VALVES

A. AWWA, Cast-Iron Gate Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. American AVK Co.; Valves & Fittings Div.
  - b. American Cast Iron Pipe Co.; American Flow Control Div.
  - c. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
  - d. Crane Co.; Crane Valve Group; Stockham Div.

- e. East Jordan Iron Works, Inc.
- f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
- g. McWane, Inc.; Kennedy Valve Div.
- h. McWane, Inc.; M & H Valve Company Div.
- i. McWane, Inc.; Tyler Pipe Div.; Utilities Div.
- j. Mueller Co.; Water Products Div.
- k. NIBCO INC.
- l. U.S. Pipe and Foundry Company.
- m. Or approved equal.

2. Nonrising-Stem, Metal-Seated Gate Valves:

- a. Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.
  - 1) Standard: AWWA C500.
  - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
  - 3) End Connections: Mechanical joint.
  - 4) Interior Coating: Complying with AWWA C550.

3. Nonrising-Stem, Resilient-Seated Gate Valves:

- a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.
  - 1) Standard: AWWA C509.
  - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
  - 3) End Connections: Mechanical joint.
  - 4) Interior Coating: Complying with AWWA C550.

4. OS&Y, Rising-Stem, Metal-Seated Gate Valves:

- a. Description: Cast- or ductile-iron body and bonnet, with cast-iron double disc, bronze disc and seat rings, and bronze stem.
  - 1) Standard: AWWA C500.
  - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
  - 3) End Connections: Flanged.

5. OS&Y, Rising-Stem, Resilient-Seated Gate Valves:

- a. Description: Cast- or ductile-iron body and bonnet, with bronze or gray- or ductile-iron gate, resilient seats, and bronze stem.
  - 1) Standard: AWWA C509.
  - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
  - 3) End Connections: Flanged.

B. Bronze Gate Valves:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.

- b. Crane Co.; Crane Valve Group; Jenkins Valves.
- c. Crane Co.; Crane Valve Group; Stockham Div.
- d. Hammond Valve.
- e. Milwaukee Valve Company.
- f. NIBCO INC.
- g. Red-White Valve Corporation.
- h. Or approved equal.

2. OS&Y, Rising-Stem Gate Valves:

- a. Description: Bronze body and bonnet and bronze stem.
  - 1) Standards: UL 262 and FMG approved.
  - 2) Minimum Pressure Rating: 175 psig (1207 kPa).
  - 3) End Connections: Threaded.

3. Nonrising-Stem Gate Valves:

- a. Description: Class 125, Type 1, bronze with solid wedge, threaded ends, and malleable-iron handwheel.
  - 1) Standard: MSS SP-80.

2.7 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
  - b. East Jordan Iron Works, Inc.
  - c. Flowserve.
  - d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
  - e. McWane, Inc.; Kennedy Valve Div.
  - f. McWane, Inc.; M & H Valve Company Div.
  - g. Mueller Co.; Water Products Div.
  - h. U.S. Pipe and Foundry Company.
  - i. Or approved equal.
- 2. Description: Sleeve and valve compatible with drilling machine.
  - a. Standard: MSS SP-60.
  - b. Tapping Sleeve: Cast- or ductile-iron or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.
  - c. Valve: AWWA, cast-iron, nonrising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.

- B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches (125 mm) in diameter.

1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

- C. Indicator Posts: UL 789, FMG-approved, vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.

## 2.8 CHECK VALVES

### A. AWWA Check Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. American AVK Co.; Valves & Fittings Div.
  - b. American Cast Iron Pipe Co.; American Flow Control Div.
  - c. APCO Williamette; Valve and Primer Corporation.
  - d. Crane Co.; Crane Valve Group; Crane Valves.
  - e. Crane Co.; Crane Valve Group; Stockham Div.
  - f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
  - g. McWane, Inc.; Kennedy Valve Div.
  - h. McWane, Inc.; M & H Valve Company Div.
  - i. Mueller Co.; Water Products Div.
  - j. NIBCO INC.
  - k. Watts Water Technologies, Inc.
  - l. Or approved equal.
2. Description: Swing-check type with resilient seat. Include interior coating according to AWWA C550 and ends to match piping.
  - a. Standard: AWWA C508.
  - b. Pressure Rating: 175 psig (1207 kPa).

### B. UL/FMG, Check Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
  - b. Crane Co.; Crane Valve Group; Stockham Div.
  - c. Globe Fire Sprinkler Corporation.
  - d. Kidde Fire Fighting.
  - e. MATCO-NORCA, Inc.
  - f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
  - g. McWane, Inc.; Kennedy Valve Div.
  - h. Mueller Co.; Water Products Div.
  - i. NIBCO INC.
  - j. Reliable Automatic Sprinkler Co., Inc.
  - k. Tyco Fire & Building Products.
  - l. United Brass Works, Inc.
  - m. Victaulic Company of America.
  - n. Viking Corporation.
  - o. Watts Water Technologies, Inc.
  - p. Or approved equal.

2. Description: Swing-check type with pressure rating; rubber-face checks, unless otherwise indicated; and ends matching piping.
  - a. Standards: UL 312 and FMG approved.
  - b. Pressure Rating: 250 psig (1725 kPa).

## 2.9 CORPORATION VALVES AND CURB VALVES

### A. Manufacturers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Amcast Industrial Corporation; Lee Brass Co.
  - b. Ford Meter Box Company, Inc. (The); Pipe Products Div.
  - c. Jones, James Company.
  - d. Master Meter, Inc.
  - e. McDonald, A. Y. Mfg. Co.
  - f. Mueller Co.; Water Products Div.
  - g. Red Hed Manufacturing & Supply.
  - h. Or approved equal.

### B. Service-Saddle Assemblies: Comply with AWWA C800. Include saddle and valve compatible with tapping machine.

1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
2. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.

### C. Curb Valves: Comply with AWWA C800. Include bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

### D. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches (75 mm) in diameter.

1. Shutoff Rods: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

## 2.10 WATER METERS

### A. Water meters will be furnished by utility company.

### B. Manufacturers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. AMCO Water Metering Systems.
  - b. Badger Meter, Inc.

- c. Carlon Meter.
- d. Hays Fluid Controls; a division of ROMAC Industries Inc.
- e. McCrometer.
- f. Mueller Co.; Hersey Meters.
- g. Neptune Technology Group Inc.
- h. Sensus Metering Systems.
- i. Or approved equal.

C. Turbine-Type Water Meters:

1. Description:

- a. Standard: AWWA C701.
- b. Registration: Flow in gallons

D. Compound-Type Water Meters:

1. Description:

- a. Standard: AWWA C702.
- b. Registration: Flow in gallons
- c. Remote Registration System:

2. Description: Utility company standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

- a. Standard: AWWA C706.
- b. Registration: Flow in.

E. Remote Registration System:

1. Description: Utility company standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

- a. Standard: AWWA C707.
- b. Registration: Flow in.
- c. Data-Acquisition Units: Comply with utility company requirements for type and quantity.
- d. Visible Display Units: Comply with utility company requirements for type and quantity.

F. Water Control Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:

- a. CLA-VAL Automatic Control Valves.
- b. Flomatic Corporation.
- c. OCV Control Valves.
- d. Watts Regulator Co.; Ames Fluid Control Systems.
- e. Watts Regulator Co.; Watts ACV Division.
- f. Wilkins; a Zurn company.
- g. Or approved equal.

2. Description: Pilot-operation, diaphragm-type, single-seated main water control valve with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.
  - a. Pressure Rating: Initial pressure of 150 psig (1035 kPa) minimum.
  - b. Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
    - 1) Size:
    - 2) Pattern: valve design.
    - 3) Trim: Stainless steel.
  - c. Design Flow Rate:
  - d. Design Inlet Pressure:
  - e. Design Outlet Pressure Setting:
  - f. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.

## 2.11 RELIEF VALVES

### A. Air-Release Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. Crispin-Multiplex Manufacturing Co.
  - b. GA Industries, Inc.
  - c. Val-Matic Valve & Manufacturing Corp.
  - d. Or approved equal.
2. Description: Hydromechanical device to automatically release accumulated air.
  - a. Standard: AWWA C512.
  - b. Pressure Rating:
  - c. Body Material:
  - d. Trim Material: Stainless steel
  - e. Water Inlet Size:
  - f. Air Outlet Size:
  - g. Orifice Size:
  - h. Design Air-Release Capacity:

### B. Air/Vacuum Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. Crispin-Multiplex Manufacturing Co.
  - b. GA Industries, Inc.
  - c. Val-Matic Valve & Manufacturing Corp.
  - d. Or approved equal.
2. Description: Direct-acting, float-operated, hydromechanical device with large orifice to automatically release accumulated air or to admit air during filling of piping.

- a. Standard: AWWA C512.
- b. Pressure Rating:
- c. Body Material:
- d. Trim Material: Stainless steel.
- e. Inlet and Outlet Size:
- f. Orifice Size:
- g. Design Air Capacity:

C. Combination Air Valves:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide a comparable product by one of the following:
  - a. Crispin-Multiplex Manufacturing Co.
  - b. GA Industries, Inc.
  - c. Val-Matic Valve & Manufacturing Corp.
  - d. Or approved equal.
- 2. Description: Float-operated, hydromechanical device to automatically release accumulated air or to admit air.
  - a. Standard: AWWA C512.
  - b. Pressure Rating:
  - c. Body Material: Cast iron
  - d. Trim Material: Stainless steel brass, or bronze.
  - e. Inlet and Outlet Size:
  - f. Orifice Size:
  - g. Design Air Capacity: at differential pressure.

2.12 VACUUM BREAKERS

A. Pressure Vacuum Breaker Assembly:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Regulator Co.
  - b. Conbraco Industries, Inc.
  - c. FEBCO; SPX Valves & Controls.
  - d. Flomatic Corporation.
  - e. Toro Co. (The); Irrigation Division.
  - f. Watts Water Technologies, Inc.
  - g. Wilkins; a Zurn company.
  - h. Or approved equal.
- 2. Standard: ASSE 1020.
- 3. Operation: Continuous-pressure applications.
- 4. Pressure Loss: 5 psig (35 kPa) maximum, through middle 1/3 of flow range.
- 5. Size:
- 6. Design Flow Rate:
- 7. Selected Unit Flow Range Limits:
- 8. Pressure Loss at Design Flow Rate:
- 9. Accessories: Ball valves on inlet and outlet.

## 2.13 BACKFLOW PREVENTERS

### A. Reduced-Pressure-Principle Backflow Preventers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Regulator Co.
  - b. Conbraco Industries, Inc.
  - c. FEBCO; SPX Valves & Controls.
  - d. Flomatic Corporation.
  - e. Watts Water Technologies, Inc.
  - f. Wilkins; a Zurn company.
  - g. Or approved equal.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 12 psig (83 kPa) maximum, through middle 1/3 of flow range.
5. Size:
6. Design Flow Rate:
7. Selected Unit Flow Range Limits:
8. Pressure Loss at Design Flow Rate: for NPS 2 (DN 50) and smaller; for NPS 2-1/2 (DN 65) and larger.
9. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 (DN 65) and larger.
10. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged or NPS 2-1/2 (DN 65) and larger.
11. Configuration: Designed for horizontal, straight through flow.
12. Accessories:
  - a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; OS&Y gate type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.
  - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.

### B. Double-Check, Backflow-Prevention Assemblies:

1. Basis-of-Design Product: Subject to compliance with requirements, provide the product indicated on Drawings or a comparable product by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Regulator Co.
  - b. Conbraco Industries, Inc.
  - c. FEBCO; SPX Valves & Controls.
  - d. Flomatic Corporation.
  - e. Watts Water Technologies, Inc.
  - f. Wilkins; a Zurn company.
  - g. Or approved equal.
2. Standard: ASSE 1015.
3. Operation: Continuous-pressure applications, unless otherwise indicated.
4. Pressure Loss: 5 psig (35 kPa) maximum, through middle 1/3 of flow range.
5. Size:
6. Design Flow Rate:
7. Selected Unit Flow Range Limits:

8. Pressure Loss at Design Flow Rate: for NPS 2 (DN 50) and smaller; for NPS 2-1/2 (DN 65) and larger.
9. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 (DN 65) and larger.
10. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
11. Configuration: Designed for horizontal, straight through flow.
12. Accessories: Ball valves with threaded ends on inlet and outlet of NPS 2 (DN 50) and smaller; OS&Y gate valves with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.

#### 2.14 CONCRETE VAULTS

#### 2.15 ALARM DEVICES

- A. Alarm Devices, General: UL 753 and FMG approved, of types and sizes to mate and match piping and equipment.
- B. Water-Flow Indicators: Vane-type water-flow detector, rated for 250-psig (1725-kPa) working pressure; designed for horizontal or vertical installation; with 2 single-pole, double-throw circuit switches to provide isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal when cover is removed.
- C. Supervisory Switches: Single pole, double throw; designed to signal valve in other than fully open position.
- D. Pressure Switches: Single pole, double throw; designed to signal increase in pressure.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EARTHWORK

- A. Refer to Section 312000 "Earth Moving" for excavating, trenching, and backfilling.

#### 3.3 PIPING APPLICATIONS

- A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.
- B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.
- C. Do not use flanges or unions for underground piping.
- D. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.
- E. Underground water-service piping NPS 4 to NPS 8 (DN 100 to DN 200) shall be any of the following:

1. Soft copper tube, ASTM B 88, Type K (ASTM B 88M, Type A); wrought-copper, solder-joint fittings; and brazed joints.
2. Ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed joints.
3. PE, AWWA pipe; PE, AWWA fittings; and heat-fusion joints.

- F. Water Meter Box Water-Service Piping NPS 6 shall be same as underground water-service piping.

### 3.4 VALVE APPLICATIONS

- A. General Application: Use mechanical-joint-end valves for NPS 3 (DN 80) and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FMG, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 (DN 50) and smaller installation.
- B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
1. Underground Valves, NPS 3 (DN 80) and Larger: AWWA, cast-iron, nonrising-stem, resilient high-pressure, resilient-seated gate valves with valve box.
  2. Relief Valves: Use for water-service piping in vaults and aboveground.
    - a. Air-Release Valves: To release accumulated air.
    - b. Air/Vacuum Valves: To release or admit large volume of air during filling of piping.
    - c. Combination Air Valves: To release or admit air.
  3. Detector Check Valves: Use for water-service piping in vaults and aboveground to detect unauthorized use of water.

### 3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. See Section 33 10 00 "Water Utilities" for piping-system common requirements.

### 3.6 PIPING INSTALLATION

- A. Water-Main Connection: Arrange with utility company for tap of size and in location indicated in water main.
- B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.
- C. Make connections larger than NPS 2 (DN 50) with tapping machine according to the following:
1. Install tapping sleeve and tapping valve according to MSS SP-60.
  2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
  3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
  4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.
- D. Make connections NPS 2 (DN 50) and smaller with drilling machine according to the following:

1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.
  2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
  3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
  4. Install corporation valves into service-saddle assemblies.
  5. Install manifold for multiple taps in water main.
  6. Install curb valve in water-service piping with head pointing up and with service box.
- E. Bury piping with depth of cover over top at least 30 inches with top at least 12 inches below level of maximum frost penetration, and according to the following:
1. Under Driveways: With at least 36 inches (910 mm) cover over top.
- F. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.
- G. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.
1. Terminate water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.
- H. Sleeves are specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
- I. Mechanical sleeve seals are specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
- J. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.
- K. See Section 21 12 00 "Fire-Suppression Standpipes," Section 21 13 13 "Wet-Pipe Sprinkler Systems," for fire-suppression-water piping inside the building.
- L. See Section 22 11 16 "Domestic Water Piping" for potable-water piping inside the building.
- 3.7 JOINT CONSTRUCTION
- A. See Section 33 10 00 "Water Utilities" for basic piping joint construction.
- B. Make pipe joints according to the following:
1. Copper-Tubing, Pressure-Sealed Joints: Use proprietary crimping tool and procedure recommended by copper, pressure-seal-fitting manufacturer.
  2. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
  3. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
  4. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
  5. Fiberglass Piping Bonded Joints: Use adhesive and procedure recommended by piping manufacturer.

6. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
  - a. Dielectric Fittings for NPS 6 and Larger: Use dielectric flange kits.

### 3.8 ANCHORAGE INSTALLATION

- A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
  1. Concrete thrust blocks.
  2. Locking mechanical joints.
  3. Set-screw mechanical retainer glands.
  4. Bolted flanged joints.
  5. Heat-fused joints.
  6. Pipe clamps and tie rods.
- B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:
  1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
  2. Bonded-Joint Fiberglass, Water-Service Piping: According to AWWA M45.
  3. Fire-Service-Main Piping: According to NFPA 24.
- C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

### 3.9 VALVE INSTALLATION

- A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.
- B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.
- C. UL/FMG, Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.
- D. UL/FMG, Valves Other Than Gate Valves: Comply with NFPA 24.
- E. MSS Valves: Install as component of connected piping system.
- F. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.
- G. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves. Install full-size valved bypass. Relief Valves: Comply with AWWA C512. Install aboveground with shutoff valve on inlet.

### 3.10 WATER METER INSTALLATION

- A. Install water meters, piping, and specialties according to utility company's written instructions.
- B. Water Meters: Install turbine-type water meters, NPS 2 (DN 50) and smaller, in meter boxes with shutoff valves on water meter inlets. Include valves on water meter outlets and valved bypass around meters unless prohibited by New York City Department of Buildings.

- C. Water Meters: Install turbine-type water meters, NPS 3 (DN 80) and larger, in meter vaults. Include shutoff valves on water meter inlets and outlets and valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
- D. Water Meters: Install detector-type water meters in meter vault according to AWWA M6. Include shutoff valves on water meter inlets and outlets and full-size valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.

### 3.11 ROUGHING-IN FOR WATER METERS

- A. Rough-in piping and specialties for water meter installation according to utility company's written instructions.

### 3.12 VACUUM BREAKER ASSEMBLY INSTALLATION

- A. Install pressure vacuum breaker assemblies of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and New York City Department of Buildings.
- B. Do not install pressure vacuum breaker assemblies in vault or other space subject to flooding.

### 3.13 BACKFLOW PREVENTER INSTALLATION

- A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department, New York City department of Environmental Protection, and New York City Department of Buildings.
- B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.
- C. Do not install bypass piping around backflow preventers.
- D. Support NPS 2-1/2 (DN 65) and larger backflow preventers, valves, and piping near floor and on brick or concrete piers.

### 3.14 PROTECTIVE ENCLOSURE INSTALLATION

- A. Install concrete base level and with top approximately 2 inches above grade.
- B. Install protective enclosure over valves and equipment.
- C. Anchor protective enclosure to concrete base.

### 3.15 CONNECTIONS

- A. See Section 33 05 00 "Common Work Results for Utilities" for piping connections to valves and equipment.
- B. Connect water-distribution piping to existing water main. Use service clamp and corporation valve.
- C. Connect water-distribution piping to interior domestic water and fire-suppression piping.

- D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

### 3.16 FIELD QUALITY CONTROL

- A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.
- B. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.
  - 1. Increase pressure in 50-psig (350-kPa) increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig (0 kPa). Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts (1.89 L) per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.
- C. Prepare reports of testing activities.

### 3.17 IDENTIFICATION

- A. Install continuous underground detectable warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 31 00 00 "Earthwork."
- B. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Section 33 10 00 "Water Utilities" for identifying devices.

### 3.18 CLEANING

- A. Clean and disinfect water-distribution piping as follows:
  - 1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or repaired before use.
  - 2. Use purging and disinfecting procedure prescribed by New York City Department of Buildings or, if method is not prescribed by New York City Department of Buildings, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
  - 3. Use purging and disinfecting procedure prescribed by New York City Department of Buildings or, if method is not prescribed by New York City Department of Buildings, use procedure described in AWWA C651 or do as follows:
  - 4. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
  - 5. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.
    - a. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
    - b. Submit water samples in sterile bottles to New York City Department of Buildings. Repeat procedure if biological examination shows evidence of contamination.

- B. Prepare reports of purging and disinfecting activities.

**END OF SECTION 22 11 13**

**SECTION 22 11 14****FACILITY NATURAL GAS PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Pipes, tubes, and fittings.
  2. Piping specialties.
  3. Piping and tubing joining materials.
  4. Valves.
  5. Pressure regulators.
  6. Service meters.
  7. Mechanical sleeve seals.
  8. Grout.
  9. Concrete bases.
  10. Gas Booster

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

## 1.6 PERFORMANCE REQUIREMENTS

- A. Minimum Operating-Pressure Ratings:
  - 1. Piping and Valves: minimum unless otherwise indicated.
  - 2. Service Regulators: 65 psig (450 kPa) minimum unless otherwise indicated.
  - 3. Minimum Operating Pressure of Service Meter:
- B. Natural-Gas System Pressure within Buildings: 0.5 psig (3.45 kPa) or less.
- C. Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa), and is reduced to secondary pressure of 0.5 psig (3.45 kPa) or less.
- D. Natural-Gas System Pressures within Buildings: Two pressure ranges. Primary pressure is more than 2 psig (13.8 kPa) but not more than 5 psig (34.5 kPa), and is reduced to secondary pressure of more than 0.5 psig (3.45 kPa) but not more than 2 psig (13.8 kPa).

## 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.8 SUBMITTALS

- A. Product Data: For each type of the following:
  - 1. Piping specialties.
  - 2. Corrugated, stainless-steel tubing with associated components.
  - 3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
  - 4. Pressure regulators. Indicate pressure ratings and capacities.
  - 5. Service meters. Indicate pressure ratings and capacities.
  - 6. Dielectric fittings.
  - 7. Mechanical sleeve seals.
  - 8. Escutcheons.
- B. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1. Detail mounting, supports, and valve arrangements for service meter assembly and pressure regulator assembly.
  - C. Engineering Services Submittal: For natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer, licensed in the State of New York responsible for their preparation to be submitted to Commissioner for review and approval.
    1. Detail fabrication and assembly of seismic restraints.
    2. Design Calculations: Calculate requirements for selecting seismic restraints.
  - D. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing Requirements.
  - E. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.
  - F. Qualification Data: For qualified professional engineer licensed in the State of New York.
  - G. Welding certificates.
  - H. Field quality-control reports.
  - I. Operation and Maintenance Data: For pressure regulators and service meters to include in emergency, operation, and maintenance manuals.
- 1.9 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
  - B. Steel Support Welding Qualifications: Qualify procedures according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - C. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
  - D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- 1.10 DELIVERY, STORAGE, AND HANDLING
- A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of the New York City Department of Buildings and FDNY.
  - B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
  - C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.
  - D. Protect stored PE pipes and valves from direct sunlight.

## 1.11 PROJECT CONDITIONS

- A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area of the project.
- B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:
  - 1. Notify the Commissioner no fewer than two days in advance of proposed interruption of natural-gas service.
  - 2. Do not proceed with interruption of natural-gas service the Commissioner's written permission.

## 1.12 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.
- B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Division 08 Section "Access Doors and Frames."

## PART 2 - PRODUCTS

### 2.1 PIPES, TUBES, AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
  - 1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
  - 2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
  - 3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
  - 4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
    - a. Material Group: 1.1.
    - b. End Connections: Threaded or butt welding to match pipe.
    - c. Lapped Face: Not permitted underground.
    - d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
    - e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.
  - 5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.
    - a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.
  - 6. Mechanical Couplings:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) Dresser Piping Specialties; Division of Dresser, Inc.
- 2) Smith-Blair, Inc.
- 3) Or approved equal.

- b. Steel flanges and tube with epoxy finish.
- c. Buna-nitrile seals.
- d. Steel bolts, washers, and nuts.
- e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
- f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.

## 2.2 PIPING SPECIALTIES

### A. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor or outdoor applications.
5. Adjustable, retractable restraining cable.

### B. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig (862 kPa).

### C. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig (5170 kPa).

### D. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

## 2.3 JOINING MATERIALS (ALL GAS PIPING TO BE WELDED)

### A. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

## 2.4 MANUAL GAS SHUTOFF VALVES

### A. See "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.

- B. General Requirements for Metallic Valves, NPS 2 (DN 50) and Smaller: Comply with ASME B16.33.
1. CWP Rating: 125 psig (862 kPa).
  2. Threaded Ends: Comply with ASME B1.20.1.
  3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
  4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  5. Listing: Listed and labeled by an NRTL acceptable to New York City Department of Buildings for valves 1 inch (25 mm) and smaller.
  6. Service Mark: Valves 1-1/4 inches (32 mm) to NPS 2 (DN 50) shall have initials "WOG" permanently marked on valve body.
- C. General Requirements for Metallic Valves, NPS 2-1/2 (DN 65) and Larger: Comply with ASME B16.38.
1. CWP Rating: 125 psig (862 kPa).
  2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
  3. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  4. Service Mark: Initials "WOG" shall be permanently marked on valve body.
- D. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BrassCraft Manufacturing Company; a Masco company.
    - b. Conbraco Industries, Inc.; Apollo Div.
    - c. Lyall, R. W. & Company, Inc.
    - d. McDonald, A. Y. Mfg. Co.
    - e. Perfection Corporation; a subsidiary of American Meter Company.
    - f. Or approved equal.
  2. Body: Bronze, complying with ASTM B 584.
  3. Ball: Chrome-plated bronze.
  4. Stem: Bronze; blowout proof.
  5. Seats: Reinforced TFE; blowout proof.
  6. Packing: Threaded-body packnut design with adjustable-stem packing.
  7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  8. CWP Rating: 600 psig (4140 kPa).
  9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to New York City Department of Buildings.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- E. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BrassCraft Manufacturing Company; a Masco company.
    - b. Conbraco Industries, Inc.; Apollo Div.
    - c. Lyall, R. W. & Company, Inc.

- d. McDonald, A. Y. Mfg. Co.
  - e. Perfection Corporation; a subsidiary of American Meter Company.
  - f. Or approved equal.
- 2. Body: Bronze, complying with ASTM B 584.
  - 3. Ball: Chrome-plated bronze.
  - 4. Stem: Bronze; blowout proof.
  - 5. Seats: Reinforced TFE.
  - 6. Packing: Threaded-body packnut design with adjustable-stem packing.
  - 7. Ends: Threaded, flared, or socket as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  - 8. CWP Rating: 600 psig (4140 kPa).
  - 9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to New York City Department of Buildings.
  - 10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- F. Bronze Plug Valves: MSS SP-78.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Lee Brass Company.
    - b. McDonald, A. Y. Mfg. Co.
    - c. Perfection Corporation; a subsidiary of American Meter Company.
    - d. Or approved equal.
  - 2. Body: Bronze, complying with ASTM B 584.
  - 3. Plug: Bronze.
  - 4. Ends: Threaded, socket, or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  - 5. Operator: Square head or lug type with tamperproof feature where indicated.
  - 6. Pressure Class: 125 psig (862 kPa).
  - 7. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to New York City Department of Buildings.
  - 8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- G. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. McDonald, A. Y. Mfg. Co.
    - b. Mueller Co.; Gas Products Div.
    - c. Xomox Corporation; a Crane company.
    - d. Or approved equal.
  - 2. Body: Cast iron, complying with ASTM A 126, Class B.
  - 3. Plug: Bronze or nickel-plated cast iron.
  - 4. Seat: Coated with thermoplastic.
  - 5. Stem Seal: Compatible with natural gas.
  - 6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  - 7. Operator: Square head or lug type with tamperproof feature where indicated.
  - 8. Pressure Class: 125 psig (862 kPa).

9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to New York City Department of Buildings.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- H. Cast-Iron, Lubricated Plug Valves: MSS SP-78.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Flowserve.
    - b. Homestead Valve; a division of Olson Technologies, Inc.
    - c. McDonald, A. Y. Mfg. Co.
    - d. Milliken Valve Company.
    - e. Mueller Co.; Gas Products Div.
    - f. R&M Energy Systems, A Unit of Robbins & Myers, Inc.
    - g. Or approved equal.
  2. Body: Cast iron, complying with ASTM A 126, Class B.
  3. Plug: Bronze or nickel-plated cast iron.
  4. Seat: Coated with thermoplastic.
  5. Stem Seal: Compatible with natural gas.
  6. Ends: Threaded or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
  7. Operator: Square head or lug type with tamperproof feature where indicated.
  8. Pressure Class: 125 psig (862 kPa).
  9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to New York City Department of Buildings.
  10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.
- I. PE Ball Valves: Comply with ASME B16.40.
- J. Valve Boxes:
1. Cast-iron, two-section box.
  2. Top section with cover with "GAS" lettering.
  3. Bottom section with base to fit over valve and barrel a minimum of 5 inches (125 mm) in diameter.
  4. Adjustable cast-iron extensions of length required for depth of bury.
  5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

## 2.5 EARTHQUAKE VALVES

- A. Earthquake Valves: Comply with ASCE 25.
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Vanguard Valves, Inc.
    - b. Milliken Valve Company.
    - c. Mueller Co.; Gas Products Div.
    - d. Flowserve.
    - e. Homestead Valve; a division of Olson Technologies, Inc.
    - f. Or approved equal.

2. Listing: Listed and labeled by an NRTL acceptable to New York City Department of Buildings.
3. Maximum Operating Pressure: 5 psig (34.5 kPa).
4. Cast-aluminum body with nickel-plated chrome steel internal parts.
5. Nitrile-rubber valve washer.
6. Sight windows for visual indication of valve position.
7. Threaded end connections complying with ASME B1.20.1.
8. Wall mounting bracket with bubble level indicator.

**B. Earthquake Valves: Comply with ASCE 25.**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Pacific Seismic Products, Inc.
  - b. Vanguard Valves, Inc.
  - c. Milliken Valve Company.
  - d. Mueller Co.; Gas Products Div.
  - e. Flowserve.
  - f. Homestead Valve; a division of Olson Technologies, Inc.
  - g. Or approved equal.
2. Listing: Listed and labeled by an NRTL acceptable to New York City Department of Buildings.
3. Maximum Operating Pressure: 0.5 psig (3.45 kPa).
4. Cast-aluminum body with stainless-steel internal parts.
5. Nitrile-rubber, reset-stem o-ring seal.
6. Valve position, open or closed, indicator.
7. Composition valve seat with clapper held by spring or magnet locking mechanism.
8. Level indicator.
9. End Connections: Threaded for valves NPS 2 (DN 50) and smaller; flanged for valves NPS 2-1/2 (DN 65) and larger.

**2.6 PRESSURE REGULATORS**

**A. General Requirements:**

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 (DN 50) and smaller; flanged for regulators NPS 2-1/2 (DN 65) and larger.

**B. Service Pressure Regulators: Comply with ANSI Z21.80.**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Actaris.
  - b. American Meter Company.
  - c. Fisher Control Valves and Regulators; Division of Emerson Process Management.
  - d. Invensys.
  - e. Richards Industries; Jordan Valve Div.
  - f. Or approved equal.

2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
  3. Springs: Zinc-plated steel; interchangeable.
  4. Diaphragm Plate: Zinc-plated steel.
  5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
  6. Orifice: Aluminum; interchangeable.
  7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
  8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
  9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
  10. Overpressure Protection Device: Factory mounted on pressure regulator.
  11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
  12. Maximum Inlet Pressure: 0.5 psig.
- C. Line Pressure Regulators: Comply with ANSI Z21.80.
1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Actaris.
    - b. American Meter Company.
    - c. Eclipse Combustion, Inc.
    - d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
    - e. Invensys.
    - f. Maxitrol Company.
    - g. Richards Industries; Jordan Valve Div.
    - h. Or approved equal.
  2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
  3. Springs: Zinc-plated steel; interchangeable.
  4. Diaphragm Plate: Zinc-plated steel.
  5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
  6. Orifice: Aluminum; interchangeable.
  7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
  8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
  9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
  10. Overpressure Protection Device: Factory mounted on pressure regulator.
  11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
  12. Maximum Inlet Pressure: 2 psig (13.8 kPa).

## 2.7 SERVICE METERS

### A. Diaphragm-Type Service Meters:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Actaris.

- b. American Meter Company.
    - c. Invensys.
    - d. Or approved equal.
  - 2. Case: Die-cast aluminum.
  - 3. Connections: Steel threads.
  - 4. Diaphragm: Synthetic fabric.
  - 5. Diaphragm Support Bearings: Self-lubricating.
  - 6. Compensation: Continuous temperature and pressure.
  - 7. Meter Index: Cubic feet.
  - 8. Meter Case and Index: Tamper resistant.
  - 9. Remote meter reader compatible.
  - 10. Maximum Inlet Pressure: 0.5 psig.
  - 11. Pressure Loss: Maximum 0.5-inch wg (124 Pa).
  - 12. Accuracy: Maximum plus or minus 1.0 percent.
- B. Rotary-Type Service Meters: Comply with ANSI B109.3.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. American Meter Company.
    - b. Invensys.
    - c. Actaris.
    - d. Or approved equal.
  - 3. Case: Extruded aluminum.
  - 4. Connection: Flange.
  - 5. Impellers: Polished aluminum.
  - 6. Rotor Bearings: Self-lubricating.
  - 7. Compensation: Continuous temperature and pressure.
  - 8. Meter Index: Cubic feet.
  - 9. Tamper resistant.
  - 10. Remote meter reader compatible.
  - 11. Maximum Inlet Pressure: 0.5 psig.
  - 12. Accuracy: Maximum plus or minus 2.0 percent.
- C. Service-Meter Bars:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Actaris.
    - b. American Meter Company.
    - c. Lyall, R. W. & Company, Inc.
    - d. McDonald, A. Y. Mfg. Co.
    - e. Mueller Co.; Gas Products Div.
    - f. Perfection Corporation; a subsidiary of American Meter Company.
    - g. Or approved equal.

3. Malleable- or cast-iron frame for supporting service meter.
4. Include offset swivel pipes, meter nuts with o-ring seal, and factory- or field-installed dielectric unions.
5. Omit meter offset swivel pipes if service-meter bar dimensions match service-meter connections.

**D. Service-Meter Bypass Fittings:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Lyall, R. W. & Company, Inc.
  - b. Williamson, T. D., Inc.
  - c. Actaris.
  - d. Or approved equal.
3. Ferrous, tee, pipe fitting with capped side inlet for temporary natural-gas supply.
4. Integral ball-check bypass valve.

**2.8 DIELECTRIC FITTINGS**

**A. Dielectric Unions:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Capitol Manufacturing Company.
  - b. Central Plastics Company.
  - c. Hart Industries International, Inc.
  - d. McDonald, A. Y. Mfg. Co.
  - e. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
  - f. Wilkins; Zurn Plumbing Products Group.
  - g. Or approved equal.
2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

**B. Dielectric Flanges:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Capitol Manufacturing Company.
  - b. Central Plastics Company.
  - c. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
  - d. Wilkins; Zurn Plumbing Products Group.
  - e. Or approved equal.

2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

C. Dielectric-Flange Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Advance Products & Systems, Inc.
  - b. Calpico Inc.
  - c. Central Plastics Company.
  - d. Pipeline Seal and Insulator, Inc.
  - e. Or approved equal.
2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
3. Companion-flange assembly for field assembly.
4. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or PE bolt sleeves, phenolic washers, and steel backing washers.
5. Insulating materials suitable for natural gas.
6. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

2.9 SLEEVES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

2.10 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico Inc.
    - c. Metraflex Company (The).
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or approved equal.
  2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe and sleeve.
  3. Pressure Plates: Carbon steel.
  4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one nut and bolt for each sealing element.

## 2.11 ESCUTCHEONS

- A. General Requirements for Escutcheons: Manufactured wall and ceiling escutcheons and floor plates, with ID to fit around pipe or tube, and OD that completely covers opening.
- B. One-Piece, Deep-Pattern Escutcheons: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Escutcheons: With set screw.
  - 1. Finish: Polished chrome-plated.
- D. Split-Casting, Cast-Brass Escutcheons: With concealed hinge and set screw.
  - 1. Finish: Polished chrome-plated.
- E. One-Piece, Stamped-Steel Escutcheons: With set screw finish.
- F. Split-Plate, Stamped-Steel Escutcheons: With concealed hinge, and chrome-plated finish.
- G. One-Piece, Floor-Plate Escutcheons: Cast-iron floor plate.
- H. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

## 2.12 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.
  - 1. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
  - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
  - 3. Packaging: Premixed and factory packaged.

## 2.13 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored yellow.

## 2.14 GAS BOOSTER

- A. Scope
  - 1. Provide a duplex pre-packaged Natural Gas "GasCube" skid booster system designed and manufactured by Spencer Turbine, Inc., represented by G. A. Fleet Assoc. of Harrison, NY. The skid package shall be pre-wired, pre-piped and factory tested. The following items shall be included in the GasCube; Two (2) UL Listed Natural Gas Boosters, Expansion Joints, Inlet Pressure Switch, Plug Valves and Control Panel.
- B. Hermetic Natural Gas Boosters

1. Each Hermetic Natural Gas Booster, Model GL-1007-R shall be UL Listed and be of centrifugal design built in the overhung construction where the impellers are mounted on the motor shaft. Each booster is rated to compress up to 42,000 ICFH of natural gas at 27.7" WC boost. The specific gravity of the natural gas shall be 0.6.
  2. The pressure shall remain practically constant from the surge limit to the full volume rating while the power consumption shall increase in direct proportion to the volume of gas handled at operating speed. The gas booster performance and design shall be approved and listed by Underwriters Laboratories.
- C. Motors
1. Each motor shall be capable of operating continuously in the natural gas environment. The motor enclosure shall be explosion proof per NEMA Class 1, Division 1, Group D classification with thermal overload protection.
- D. Gas Booster Casings
1. The casing shall be cylindrical fabricated steel construction. The enclosing heads shall be of similar metal, properly braced for strength. The inlet and outlet connections shall be flanged. The casing shall be leak tight to 10-3 cc/sec, with drive fans contained within casing shell.
- E. Impellers
1. The impeller peripheral speed shall not exceed 25,000 FPM. There shall be at least 1/8-inch clearance between each impeller and all stationary parts.
  2. Impellers shall be fabricated from high strength aluminum alloy, and shall be attached to the shaft by a clamped or tapered bushing hub.
- F. Deflectors
1. Fabricated steel deflectors with properly curved guide vanes for directing the gas to each succeeding impeller shall be provided.
- G. Shafts and Bearings
1. The motor shall have an oversized, extended shaft supported by two oversized, anti-friction grease lubricated bearings designed to absorb both thrust and radial loads.
  2. Each shaft shall be sized so that the rotating assembly shall operate at a minimum of 25% removed from the first critical speed.
- H. Check Valves
1. A check valve shall be installed on the inlet of each gas booster. The valve shall be of the low-pressure drop type, approved for natural gas service and mounted in the horizontal position. It shall serve to prevent reversal of natural gas flow. This item is shipped loose and is separate from the GasCube scope of supply.
- I. Flexible Expansion Joints
1. Expansion joints will be supplied for the inlet and discharge of the gas boosters and suitable for natural gas service. Flexible joints will be of the same diameter as the gas

booster's inlet and discharge and shall serve as vibration isolation between the gas booster and the gas train piping.

**J. Low Pressure Switches**

1. Provide one (1) UL Listed, manual reset type low inlet and one (1) UL Listed, low discharge pressure switch. The inlet pressure switch shall shut down the on-line booster in the event of below normal supply pressure, preset at 3.5" W.C. The discharge pressure switch shall activate the low discharge pressure alarm. The switches will be housed in NEMA 4 enclosures and shall not require venting.

**K. Pressure Gauges**

1. Pressure gauges will be supplied on the inlet main to the gas booster and at the discharge of the gas booster. Gauges shall be suitably scaled and shall be suitable by the manufacturer for natural gas service. Gauges will include shut-off cocks.

**L. Inlet and Outlet Plug Valves**

1. Lubricated plug valves will be supplied on the inlet and discharge of each gas booster. Valves shall be gas tight and approved for natural gas service. Valves will be of the same diameter as the gas booster inlet and discharge and shall serve to isolated gas flow to and from each gas booster.

**M. Automatic Recirculation Loop**

1. An automatic recirculation loop from the gas booster discharge to the inlet with heat exchanger shall be supplied, if required by the booster manufacturer, for proper booster operation across the specified full range of flow, otherwise provide a manual recirculation loop.

**N. Control Panel**

1. NEMA 4 PLC Control Panel for the operation of two (2) Spencer Natural Gas Boosters. The control panel will be manufactured by the gas booster manufacturer and will be built in accordance with UL508A Standards for Industrial Control Panels and shall include:
  - a) One (1) OSHA type lock-out/tag-out circuit breaker disconnect switch.
  - b) Two (2) ATL magnetic, non-reversing motor starter for 1-1/2 HP, three phase Gas Booster motor.
  - c) One (1) PLC System
  - d) One (1) Operator Interface Terminal (OIT) color touch screen
  - e) One (1) Control transformer.
  - f) One (1) Power "ON" pilot light.
  - g) One (1) OFF – #1 - #2 - AUTO selector switch to control Gas Boosters.
    - 1) OFF - OFF
    - 2) #1 - Starts Gas Booster #1
    - 3) #2 - Starts Gas Booster #2
    - 4) AUTO - Allows Automatic start/shutdown, lead / lag operation and alternation of booster via direct wiring interconnection with the two (2) chillers. Alternation of the on-line booster shall occur upon each start/shutdown sequence.

- h) Provisions for remote start/shutdown of booster via call to run signals from appliances and individual proof of run contacts to verify booster operation.
- i) Provisions for Low/High Discharge Pressure Switches for Automatic start/shutdown of booster based on GasCube Discharge Pressure
- j) Provisions for a low inlet gas pressure switch to shut down the gas booster, energize a warning indication on OIT, and energize the common alarm relay upon low supply pressure.
- k) Provision for a N.C. motor high temperature switch to shut down the on-line booster, energize a warning light on OIT, energize the common alarm relay and start the stand-by booster motor upon high motor temperature.
- l) Provision for a N.C. high gas temperature switch to shut down the on-line booster, energize a warning light on OIT, energize the common alarm relay and start the stand-by booster upon high gas temperature.
- m) Provisions for a motor starter overload relay to shut down the on-line gas booster, energize a warning indication on OIT, energize the common alarm relay, and start the stand-by booster motor upon a motor overload fault
- n) Provisions for a booster Surge or Overload condition to shut down the on-line gas booster, energize a warning indication on OIT, energize the common alarm relay, and start the stand-by booster motor upon a detected Surge or Overload fault
- o) Provisions to Equalize Booster Run-Time.
- p) Visual displays on OIT:
  - 1) Booster Running
  - 2) Number of starts per hour
  - 3) Motor Starter Aux. Fault
  - 4) Motor Starter Overload Fault
  - 5) Booster Run Time
  - 6) Low Inlet Gas Pressure
  - 7) High Motor Temperature
  - 8) Flow (CFH)
  - 9) Motor Amps
  - 10) Surge
  - 11) Overload
  - 12) E-stop
  - 13) Alarm Silence
  - 14) Alarm Reset
- q) One (1) - Alarm horn (mounted in panel door).
- r) One (1) - "Emergency Stop" Red mushroom-type pushbutton.
- s) One (1) - Set of auxiliary dry alarm contacts for connection to remote common trouble alarm.
- t) Miscellaneous components and hardware to assure proper functioning.

**O. Loss of Power Sequencing**

- P.** In the event of supply power loss to the Spencer Control Panel (SCP), the SCP shall "power up" automatically upon restoration of power supply when the OFF-#1-#2-AUTO selector switch is in the #1 or #2 position (i.e.: facility power outage and restoration by an emergency supply). When in the Auto position, the booster shall "power up" automatically only if a remote dry contact from the appliances or Building Management System (BMS) is maintained in the "closed" position (i.e.: calling for booster to run) or the Low/High Discharge Pressure Switches (Pressure Option) calls for booster to run.

**Q. Vibration, Pneumatic and Performance Test**

1. Each motor and booster assembly shall be balanced for minimum vibration (1.5 mils or less for 3500 RPM units) and shall be capable of operation throughout its' design range without the need for hold down or mounting bolts. Each unit shall be given a complete factory performance test over its full range. The results of this test shall be comparable to ASME Code Test requirements. A multiple orifice plate shall be installed on the end of a fabricated steel pipe section. For this test the pipe section will be at least one and one-half pipe diameters long and the same diameter as the blower outlet on which it will be installed. The outlet sections shall be sized for maximum velocity of 4600 FPM and 100% rated flow.
2. Pressure taps flush with the inside diameter of the test section shall be installed at least one-half pipe diameter before the orifice plate. Sharp-edged orifices shall be opened to atmosphere, a few at a time and pressure, temperature, speed, voltage, amperage, and kilowatt readings shall be recorded for each test point.
3. The air volume at a particular discharge pressure shall then be read from a calibrated orifice chart and the number of open orifices shall multiply this volume. On request, certified performance curves shall then be supplied showing the exact performance and efficiencies of each specific machine. Prior tests on similar or identical machines shall not be acceptable.
4. The GasCube skid shall be pneumatically leak tested at 5 psig.

**R. Start-Up**

1. An authorized factory-trained manufacturer's representative shall perform system start-up services including inspection of the installation and instruction of The City of New York's service staff in the operation and service of the system.

**PART 3 - EXECUTION**

**3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 PREPARATION**

- A. Close equipment shutoff valves before turning off natural gas to premises or piping section.
- B. Inspect natural-gas piping according to NFPA 54 and the NYC Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.
- C. Comply with NFPA 54 and the NYC Fuel Gas Code requirements for prevention of accidental ignition.

**3.4 INDOOR PIPING INSTALLATION**

- A. Comply with NFPA 54 and the NYC Fuel Gas Code for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
- I. Install piping free of sags and bends.
- J. Install fittings for changes in direction and branch connections.
- K. Install escutcheons at penetrations of interior walls, ceilings, and floors.

1. New Piping:

- a) Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
- b) Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
- c) Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
- d) Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
- e) Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type and set screw.
- f) Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished chrome-plated finish.
- g) Piping in Unfinished Service Spaces: One-piece, stamped-steel type with set screw.
- h) Piping in Equipment Rooms: One-piece, cast-brass type.
- i) Piping in Equipment Rooms: One-piece, stamped-steel type with set screw.
- j) Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.
- L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping."
- M. Verify final equipment locations for roughing-in.

- N. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- O. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
  - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches (75 mm) long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- P. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- Q. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.
- R. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.
  - 1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
  - 2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches (38 mm) of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
  - 3. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
  - 4. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
    - a) Exception: Tubing passing through partitions or walls does not require striker barriers.
  - 5. Prohibited Locations:
    - a) Do not install natural-gas piping in or through circulating air ducts, clothes or trash chutes, chimneys or gas vents (flues), ventilating ducts, or dumbwaiter or elevator shafts.
    - b) Do not install natural-gas piping in solid walls or partitions.
- S. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- T. Connect branch piping from top or side of horizontal piping.
- U. Install unions in pipes NPS 2 (DN 50) and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
- V. Do not use natural-gas piping as grounding electrode.

- W. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- X. Install pressure gage upstream and downstream from each line regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."

### 3.5 SERVICE-METER ASSEMBLY INSTALLATION (AS PER NATIONAL GRID)

- A. Install service-meter assemblies aboveground on concrete bases.
- B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.
- C. Install strainer on inlet of service-pressure regulator and meter set.
- D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.
- E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.
- F. Install service meters downstream from pressure regulators.
- G. Install metal bollards to protect meter assemblies. Comply with requirements in Division 05 Section "Metal Fabrications" for pipe bollards.

### 3.6 VALVE INSTALLATION

- A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
- B. Install underground valves with valve boxes.
- C. Install regulators and overpressure protection devices with service access space adequate for servicing and testing.
- D. Install earthquake valves aboveground outside buildings according to listing.
- E. Install anode for metallic valves in underground PE piping.

### 3.7 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
  - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
  - 2. Cut threads full and clean using sharp dies.
  - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
  - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.

5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:

1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
2. Bevel plain ends of steel pipe.
3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.

F. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.

1. Plain-End Pipe and Fittings: Use butt fusion.
2. Plain-End Pipe and Socket Fittings: Use socket fusion.

### 3.8 HANGER AND SUPPORT INSTALLATION

A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment."

B. Comply with requirements for pipe hangers and supports specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:

1. NPS 1 (DN 25) and Smaller: Maximum span, 96 inches (2438 mm); minimum rod size, 3/8 inch (10 mm).
2. NPS 1-1/4 (DN 32): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
4. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Maximum span, 10 feet (3 m); minimum rod size, 1/2 inch (13 mm).
5. NPS 4 (DN 100) and Larger: Maximum span, 10 feet (3 m); minimum rod size, 5/8 inch (15.8 mm).

D. Install hangers for horizontal drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:

1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
2. NPS 1/2 and NPS 5/8 (DN 15 and DN 18): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).
3. NPS 3/4 and NPS 7/8 (DN 20 and DN 22): Maximum span, 84 inches (2134 mm); minimum rod size, 3/8 inch (10 mm).
4. NPS 1 (DN 25): Maximum span, 96 inches (2440 mm); minimum rod size, 3/8 inch (10 mm).

- E. Install hangers for horizontal, corrugated stainless-steel tubing with the following maximum spacing and minimum rod sizes:
  - 1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
  - 2. NPS 1/2 (DN 15): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).
  - 3. NPS 3/4 (DN 20) and Larger: Maximum span, 96 inches (2440 mm); minimum rod size, 3/8 inch (10 mm).

### 3.9 CONNECTIONS

- A. Connect to utility's gas main according to utility's procedures and requirements.
- B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches (1800 mm) of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

### 3.10 LABELING AND IDENTIFYING

- A. Comply with requirements in Section 22 05 53 "Identification for Plumbing Piping and Equipment" for piping and valve identification.
- B. Install detectable warning tape directly above gas piping, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

### 3.11 PAINTING

- A. Comply with requirements in Section 09 91 00 "Painting" for painting interior and exterior natural-gas piping.
- B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.
  - 1. Alkyd System: MPI EXT 5.1D.
    - a) Prime Coat: Alkyd anticorrosive metal primer.
    - b) Intermediate Coat: Exterior alkyd enamel matching topcoat.
    - c) Topcoat: Exterior alkyd enamel semigloss.
    - d) Color: Gray.
- C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Latex Over Alkyd Primer System: MPI INT 5.1Q.

- a) Prime Coat: Quick-drying alkyd metal primer.
- b) Intermediate Coat: Interior latex matching topcoat.
- c) Topcoat: Interior latex flat.
- d) Color: Gray.

2. Alkyd System: MPI INT 5.1E.

- a) Prime Coat: Alkyd anticorrosive metal primer.
- b) Intermediate Coat: Interior alkyd matching topcoat.
- c) Topcoat: Interior alkyd flat.
- d) Color: Gray.

- D. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.12 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to seismic codes at Project.

- 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
- 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
- 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
- 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
- 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
- 6. Use 3000-psig (20.7-MPa), 28-day, compressive-strength concrete and reinforcement as specified in section 03 30 00 "Cast-in-Place Concrete".

3.13 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

- 1. Test, inspect, and purge natural gas according to NFPA 54 and the NYC Fuel Gas Code and New York City Department of Buildings.

C. Natural-gas piping will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.14 DEMONSTRATION

- A. Engage a factory-authorized service representative to train City of New York's service personnel to adjust, operate, and maintain earthquake valves.

**3.15 OUTDOOR PIPING SCHEDULE**

- A. Underground natural-gas piping shall be one of the following:
1. PE pipe and fittings joined by heat fusion, or mechanical couplings; service-line risers with tracer wire terminated in an accessible location.
  2. Steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.
  3. Annealed-temper copper tube with wrought-copper fittings and brazed joints. Coat pipe and fittings with protective coating for copper tubing.
- B. Aboveground natural-gas piping shall be one of the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
  2. Steel pipe with wrought-steel fittings and welded joints.
  3. Annealed-temper copper tube with wrought-copper fittings and brazed joints.
- C. Branch Piping in Cast-in-Place Concrete to Single Appliance: Annealed-temper copper tube with wrought-copper fittings and brazed flared joints. Install piping embedded in concrete with no joints in concrete.
- D. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.

**3.16 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)**

- A. Aboveground, branch piping NPS 1 (DN 25) and smaller shall be one of the following:
1. Corrugated stainless-steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
  2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
  3. Annealed-temper, copper tube with wrought-copper fittings and brazed joints.
  4. Aluminum tube with flared fittings and joints.
  5. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be one of the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
  2. Steel pipe with wrought-steel fittings and welded joints.
- C. Underground, below building, piping shall be one of the following:
1. Steel pipe with malleable-iron fittings and threaded joints.
  2. Steel pipe with wrought-steel fittings and welded joints.
- D. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.
- E. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

**3.17 INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES MORE THAN 0.5 PSIG (3.45 kPa) AND LESS THAN 5 PSIG (34.5 kPa)**

- A. Aboveground, branch piping NPS 1 (DN 25) and smaller shall be one of the following:
  - 1. Corrugated stainless-steel tubing with mechanical fittings having socket or threaded ends to match adjacent piping.
  - 2. Annealed-temper, tin-lined copper tube with flared joints and fittings.
  - 3. Annealed-temper, copper tube with wrought-copper fittings and brazed joints.
  - 4. Aluminum tube with flared fittings and joints.
  - 5. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, distribution piping shall be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with steel welding fittings and welded joints.
  - 3. Drawn-temper copper tube with wrought-copper fittings and brazed joints.
- C. Underground, below building, piping shall be one of the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. Steel pipe with wrought-steel fittings and welded joints.
- D. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat underground pipe and fittings with protective coating for steel piping.
- E. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

**3.18 UNDERGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE**

- A. Connections to Existing Gas Piping: Use valve and fitting assemblies made for tapping utility's gas mains and listed by an NRTL.
- B. Underground:
  - 1. PE valves.
  - 2. NPS 2 (DN 50) and Smaller: Bronze plug valves.
  - 3. NPS 2-1/2 (DN 65) and Larger: Cast-iron plug valves.

**3.19 ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE**

- A. Valves for pipe sizes NPS 2 (DN 50) and smaller at service meter shall be one of the following:
  - 1. One-piece, bronze ball valve with bronze trim.
  - 2. Two-piece, full-port, bronze ball valves with bronze trim.
  - 3. Bronze plug valve.
- B. Valves for pipe sizes NPS 2-1/2 (DN 65) and larger at service meter shall be one of the following:
  - 1. Two-piece, full-port, bronze ball valves with bronze trim.
  - 2. Bronze plug valve.

3. Cast-iron, nonlubricated plug valve.
- C. Distribution piping valves for pipe sizes NPS 2 (DN 50) and smaller shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
  2. Two-piece, full-port, bronze ball valves with bronze trim.
  3. Bronze plug valve.
- D. Distribution piping valves for pipe sizes NPS 2-1/2 (DN 65) and larger shall be one of the following:
1. Two-piece, full-port, bronze ball valves with bronze trim.
  2. Bronze plug valve.
  3. Cast-iron, lubricated plug valve.
- E. Valves in branch piping for single appliance shall be one of the following:
1. One-piece, bronze ball valve with bronze trim.
  2. Two-piece, full-port, bronze ball valves with bronze trim.
  3. Bronze plug valve.

**END OF SECTION 22 11 14**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 11 16****DOMESTIC WATER PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract – [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Under-building-slab and aboveground domestic water pipes, tubes, and fittings inside buildings.
- B. Related Requirements:
1. Section 22 11 13 "Facility Water Distribution Piping" for water-service piping and water meters outside the building from source to the point where water-service piping enters the building.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 ACTION SUBMITTALS

- A. Product Data: For transition fittings and dielectric fittings.

1.8 INFORMATIONAL SUBMITTALS

- A. System purging and disinfecting activities report.
- B. Field quality-control reports.

**PART 2 - PRODUCTS**

2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.
- B. Potable-water piping and components shall comply with NSF 14 and NSF 61. Plastic piping components shall be marked with "NSF-pw."

2.2 COPPER TUBE AND FITTINGS

- A. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) water tube, drawn temper.
- B. Soft Copper Tube: ASTM B 88, Type K water tube, annealed temper.
- C. Cast-Copper, Solder-Joint Fittings: ASME B16.18, pressure fittings.
- D. Wrought-Copper, Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
- E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint ends.
- F. Copper Unions:
  - 1. MSS SP-123.
  - 2. Cast-copper-alloy, hexagonal-stock body.
  - 3. Ball-and-socket, metal-to-metal seating surfaces.
  - 4. Solder-joint or threaded ends.

2.3 DUCTILE-IRON PIPE AND FITTINGS (FOR INCOMING SERVICE ONLY)

- A. Mechanical-Joint, Ductile-Iron Pipe:
  - 1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.

2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
  - B. Standard-Pattern, Mechanical-Joint Fittings:
    1. AWWA C110/A21.10, ductile or gray iron.
    2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
  - C. Compact-Pattern, Mechanical-Joint Fittings:
    1. AWWA C153/A21.53, ductile iron.
    2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
  - D. Push-on-Joint, Ductile-Iron Pipe:
    1. AWWA C151/A21.51.
    2. Push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
  - E. Standard-Pattern, Push-on-Joint Fittings:
    1. AWWA C110/A21.10, ductile or gray iron.
    2. Gaskets: AWWA C111/A21.11, rubber.
  - F. Compact-Pattern, Push-on-Joint Fittings:
    1. AWWA C153/A21.53, ductile iron.
    2. Gaskets: AWWA C111/A21.11, rubber.
  - G. Plain-End, Ductile-Iron Pipe: AWWA C151/A21.51.
  - H. Appurtenances for Grooved-End, Ductile-Iron Pipe:
    1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
      - a. Shurjoint Piping Products.
      - b. Star Pipe Products.
      - c. Victaulic Company.
      - d. Or approved equal.
- 2.4 PIPING JOINING MATERIALS
- A. Pipe-Flange Gasket Materials:
    1. AWWA C110/A21.10, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
    2. Full-face or ring type unless otherwise indicated.
  - B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
  - C. Solder Filler Metals: ASTM B 32, lead-free alloys.

- D. Flux: ASTM B 813, water flushable.
- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

## 2.5 TRANSITION FITTINGS

- A. General Requirements:
  - 1. Same size as pipes to be joined.
  - 2. Pressure rating at least equal to pipes to be joined.
  - 3. End connections compatible with pipes to be joined.
- B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
- C. Sleeve-Type Transition Coupling: AWWA C219.
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Cascade Waterworks Manufacturing.
    - b. Dresser, Inc.; Piping Specialties Products.
    - c. Ford Meter Box Company, Inc. (The).
    - d. JCM Industries.
    - e. Romac Industries, Inc.
    - f. Smith-Blair, Inc.; a Sensus company.
    - g. Viking Johnson.
    - h. Or approved equal.

## 2.6 DIELECTRIC FITTINGS

- A. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- B. Dielectric Unions:
  - 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Capitol Manufacturing Company; member of the Phoenix Forge Group.
    - b. Central Plastics Company.
    - c. Hart Industries International, Inc.
    - d. Jomar International.
    - e. Matco-Norca.
    - f. McDonald, A. Y. Mfg. Co.
    - g. Watts; a division of Watts Water Technologies, Inc.
    - h. Wilkins; a Zurn company.
    - i. Or approved equal.
  - 2. Standard: ASSE 1079.
  - 3. Pressure Rating: 250 psig (1725 kPa)
  - 4. End Connections: Solder-joint copper alloy and threaded ferrous.

**C. Dielectric Flanges:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Capitol Manufacturing Company; member of the Phoenix Forge Group.
  - b. Central Plastics Company.
  - c. Matco-Norca.
  - d. Watts; a division of Watts Water Technologies, Inc.
  - e. Wilkins; a Zurn company.
  - f. Or approved equal.
2. Standard: ASSE 1079.
3. Factory-fabricated, bolted, companion-flange assembly.
4. Pressure Rating: 175 psig (1200 kPa).
5. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

**D. Dielectric-Flange Insulating Kits:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Advance Products & Systems, Inc.
  - b. Calpico, Inc.
  - c. Central Plastics Company.
  - d. Pipeline Seal and Insulator, Inc.
  - e. Or approved equal.
2. Nonconducting materials for field assembly of companion flanges.
3. Pressure Rating: 150 psig (1035 kPa).
4. Gasket: Neoprene or phenolic.
5. Bolt Sleeves: Phenolic or polyethylene.
6. Washers: Phenolic with steel backing washers.

**E. Dielectric Nipples:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Elster Perfection Corporation.
  - b. Grinnell Mechanical Products; Tyco Fire Products LP.
  - c. Matco-Norca.
  - d. Precision Plumbing Products, Inc.
  - e. Victaulic Company.
  - f. Or approved equal.
2. Standard: IAPMO PS 66.
3. Electroplated steel nipple complying with ASTM F 1545.
4. Pressure Rating and Temperature: 300 psig (2070 kPa) at 225 deg F (107 deg C).
5. End Connections: Male threaded or grooved.
6. Lining: Inert and noncorrosive, propylene.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EARTHWORK**

- A. Comply with requirements in Section 31 00 00 "Earthwork" for excavating, trenching, and backfilling.

**3.3 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."
- C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.
- D. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve inside the building at each domestic water-service entrance. Comply with requirements for pressure gages in Section 22 05 19 "Meters and Gages for Plumbing Piping" and with requirements for drain valves and strainers in Section 22 11 19 "Domestic Water Piping Specialties."
- E. Install shutoff valve immediately upstream of each dielectric fitting.
- F. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements for pressure-reducing valves in Section 22 11 19 "Domestic Water Piping Specialties."
- G. Install domestic water piping level without pitch and plumb.
- H. Rough-in domestic water piping for water-meter installation according to utility company's requirements.
- I. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- J. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.
- K. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.
- M. Install piping to permit valve servicing.

- N. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.
- O. Install piping free of sags and bends.
- P. Install fittings for changes in direction and branch connections.
- Q. Install PEX piping with loop at each change of direction of more than 90 degrees.
- R. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.
- S. Install pressure gages on suction and discharge piping for each plumbing pump and packaged booster pump. Comply with requirements for pressure gages in Section 22 05 19 "Meters and Gages for Plumbing Piping."
- T. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Section 22 11 23 "Domestic Water Pumps."
- U. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements for thermometers in Section 22 05 19 "Meters and Gages for Plumbing Piping."
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

#### 3.4 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- D. Brazed Joints for Copper Tubing: Comply with CDA's "Copper Tube Handbook," "Braze Joints" chapter.
- E. Soldered Joints for Copper Tubing: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

- F. Joint Construction for Grooved-End, Ductile-Iron Piping: Make joints according to AWWA C606. Cut round-bottom grooves in ends of pipe at gasket-seat dimension required for specified (flexible or rigid) joint. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections over gasket with keys seated in piping grooves. Install and tighten housing bolts.
- G. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
  - 1. D 2846M Appendix.
  - 2. PVC Piping: Join according to ASTM D 2855.
- H. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

### 3.5 TRANSITION FITTING INSTALLATION

- A. Install transition couplings at joints of dissimilar piping.
- B. Transition Fittings in Underground Domestic Water Piping:
  - 1. Fittings for NPS 1-1/2 (DN 40) and Smaller: Fitting-type coupling.
  - 2. Fittings for NPS 2 (DN 50) and Larger: Sleeve-type coupling.
- C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 (DN 50) and Smaller: Plastic-to-metal transition fittings or unions.

### 3.6 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings.
- C. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric nipples.
- D. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

### 3.7 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger, support products, and installation in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
  - 1. Vertical Piping: MSS Type 8 or 42, clamps.
  - 2. Individual, Straight, Horizontal Piping Runs:
    - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
    - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
    - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  4. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch (10 mm).
- E. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 3/4 (DN 20) and Smaller: 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
  2. NPS 1 and NPS 1-1/4 (DN 25 and DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
  3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
  4. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
  5. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
  6. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
  7. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.
- F. Install supports for vertical copper tubing every 10 feet (3 m).
- G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/4 (DN 32) and Smaller: 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
  2. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
  3. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
  4. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
  5. NPS 3 and NPS 3-1/2 (DN 80 and DN 90): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
  6. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
  7. NPS 6 (DN 150): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
  8. NPS 8 to NPS 12 (DN 200 to DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.
- H. Install supports for vertical steel piping every 15 feet (4.5 m).

### 3.8 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
- C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
  2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.

3. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
4. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 (DN 65) and larger.

### 3.9 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification materials and installation in Section 22 05 53 "Identification for Plumbing Piping and Equipment."
- B. Label pressure piping with system operating pressure.

### 3.10 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:

#### 1. Piping Inspections:

- a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by Commissioner.
- b. During installation, notify Commissioner at least one day before inspection must be made. Perform tests specified below in presence of Commissioner:
  - 1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
  - 2) Final Inspection: Arrange for Commissioner to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
- c. Reinspection: If Commissioner find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
- d. Reports: Prepare inspection reports and have them signed by Commissioner.

#### 2. Piping Tests:

- a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
- b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
- c. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
- d. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
- e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
- f. Prepare reports for tests and for corrective action required.

- B. Domestic water piping will be considered defective if it does not pass tests and inspections.

- C. Prepare test and inspection reports.

### 3.11 ADJUSTING

- A. Perform the following adjustments before operation:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
  - a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
  - b. Adjust calibrated balancing valves to flows indicated.
5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

### 3.12 CLEANING

- A. Clean and disinfect potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging and disinfecting procedures prescribed by New York City Department of Buildings and 2014 NYC Construction Codes; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
  - a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
  - b. Fill and isolate system according to either of the following:
    - 1) Fill system or part thereof with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours.
    - 2) Fill system or part thereof with water/chlorine solution with at least 200 ppm (200 mg/L) of chlorine. Isolate and allow to stand for three hours.
  - c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
  - d. Repeat procedures if biological examination shows contamination.
  - e. Submit water samples in sterile bottles to Commissioner.

- B. Clean non-potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging procedures prescribed by New York City Department of Buildings and 2014 NYC Construction Codes or; if methods are not prescribed, follow procedures described below:

- a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
  - b. Submit water samples in sterile bottles to Commissioner. Repeat procedures if biological examination shows contamination.
- C. Prepare and submit reports of purging and disinfecting activities. Include copies of water-sample approvals from Commissioner.
- D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

### 3.13 PIPING SCHEDULE

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.
- B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.
- C. Under-building-slab, domestic water, building-service piping, NPS 3 (DN 80) and smaller, shall be one of the following:
- 1. Soft copper tube, ASTM B 88, Type K wrought-copper, solder-joint fittings; and brazed joints.
- D. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 8 (DN 100 to DN 200) and larger, shall be one of the following:
- E. Under-building-slab, domestic water piping, NPS 2 (DN 50) and smaller, shall be one of the following:
- 1. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); wrought-copper, fittings; and brazed joints.
- F. Aboveground domestic water piping, NPS 2 (DN 50) and smaller, shall be one of the following:
- 1. Hard copper tube, ASTM B 88, Type L cast- or wrought-copper, solder-joint fittings; and brazed joints.
  - 2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal-joint fittings; and pressure-sealed joints.
  - 3. Hard copper tube, ASTM B 88, Type L; copper push-on-joint fittings; and push-on joints.
- G. Aboveground domestic water piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), shall be one of the following:
- 1. Hard copper tube, ASTM B 88, Type L; cast or wrought copper, solder-joint fittings; and brazed joints.
  - 2. Hard copper tube, ASTM B 88, Type L; copper pressure-seal-joint fittings; and pressure-sealed joints.
  - 3. Hard copper tube, ASTM B 88, Type L (ASTM B 88M, Type B); grooved-joint, copper-tube appurtenances; and grooved joints.
- H. Aboveground domestic water piping, NPS 5 to NPS 8 (DN 125 to DN 200), shall be one of the following:

1. Hard copper tube, ASTM B 88, Type L wrought copper, solder-joint fittings; and brazed joints.
  2. Hard copper tube, ASTM B 88, Type L; grooved-joint, copper-tube appurtenances; and grooved joints.
- I. Aboveground, combined domestic water-service and fire-service-main piping, NPS 6 to NPS 12 (DN 150 to DN 300) the following:
1. Plain-end, ductile-iron pipe; grooved-joint, ductile-iron-pipe appurtenances; and grooved joints.
  2. Galvanized-steel pipe and nipples; galvanized, gray-iron threaded fittings; and threaded joints.
  3. Galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.

### 3.14 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
1. Shutoff Duty: Use ball or gate valves for piping NPS 2 (DN 50) and smaller. Use butterfly, ball, or gate valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
  2. Throttling Duty: Use ball or globe valves for piping NPS 2 (DN 50) and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
  3. Hot-Water Circulation Piping, Balancing Duty: Memory-stop balancing valves.
  4. Drain Duty: Hose-end drain valves.
- B. Use check valves to maintain correct direction of domestic water flow to and from equipment.
- C. Iron grooved-end valves may be used with grooved-end piping.

**END OF SECTION 22 11 16**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 11 19****DOMESTIC WATER PIPING SPECIALTIES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Vacuum breakers.
2. Backflow preventers.
3. Water pressure-reducing valves.
4. Balancing valves.
5. Strainers.
6. Hose bibbs.
7. Wall hydrants.
8. Drain valves.
9. Water-hammer arresters.
10. Air vents.
11. Trap-Seal Primer Device
12. Flexible connectors.
13. Water meters.

B. Related Requirements:

1. Section 220519 "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.
2. Section 221116 "Domestic Water Piping" for water meters.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile

Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For domestic water piping specialties.
  - 1. Include diagrams for power, signal, and control wiring.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Field quality-control reports.

**1.9 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

**PART 2 - PRODUCTS**

**2.1 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES**

- A. Potable-water piping and components shall comply with NSF 61 and NSF 14

**2.2 PERFORMANCE REQUIREMENTS**

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 200 psig unless otherwise indicated.

**2.3 VACUUM BREAKERS**

- A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
    - b. Cash Acme; a division of Reliance Worldwide Corporation.

- c. Conbraco Industries, Inc.
  - d. FEBCO; a division of Watts Water Technologies, Inc.
  - e. Rain Bird Corporation.
  - f. Toro Company (The); Irrigation Div.
  - g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - h. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - i. Or approved equal.
- 2. Standard: ASSE 1001.
  - 3. Size: NPS 1/4 to NPS 3 (DN 8 to DN 80), as required to match connected piping.
  - 4. Body: Bronze.
  - 5. Inlet and Outlet Connections: Threaded.
  - 6. Finish: Rough bronze.

**B. Hose-Connection Vacuum Breakers:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Arrowhead Brass Products.
  - b. Cash Acme; a division of Reliance Worldwide Corporation.
  - c. Conbraco Industries, Inc.
  - d. Legend Valve.
  - e. MIFAB, Inc.
  - f. Prier Products, Inc.
  - g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - h. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - i. Zurn Industries, LLC; Plumbing Products Group; Light Commercial Products.
  - j. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - k. Or approved equal.
- 2. Standard: ASSE 1011.
- 3. Body: Bronze, nonremovable, with manual drain.
- 4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
- 5. Finish: Chrome or nickel plated.

**C. Pressure Vacuum Breakers**

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  - b. Conbraco Industries, Inc.
  - c. FEBCO; a division of Watts Water Technologies, Inc.
  - d. Flomatic Corporation.
  - e. Toro Company (The); Irrigation Div.
  - f. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - g. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - h. Or approved equal.
- 2. Standard: ASSE 1020.
- 3. Operation: Continuous-pressure applications.
- 4. Pressure Loss: 5 psig (35 kPa) maximum, through middle third of flow range.
- 5. Size:

6. Design Flow Rate:
7. Selected Unit Flow Range Limits:
8. Pressure Loss at Design Flow Rate:
9. Accessories:

- a. Valves: Ball type, on inlet and outlet.

**D. Spill-Resistant Vacuum Breakers:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Conbraco Industries, Inc.
  - b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - c. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - d. Or approved equal.
2. Standard: ASSE 1056.
3. Operation: Continuous-pressure applications.
4. Size: NPS 1/2 (DN 15).
5. Accessories:
  - a. Valves: Ball type, on inlet and outlet.

**2.4 BACKFLOW PREVENTERS**

**A. Intermediate Atmospheric-Vent Backflow Preventers:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Cash Acme; a division of Reliance Worldwide Corporation.
  - b. Conbraco Industries, Inc.
  - c. FEBCO; a division of Watts Water Technologies, Inc.
  - d. Honeywell International Inc.
  - e. Legend Valve.
  - f. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - g. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - h. Or approved equal.
2. Standard: ASSE 1012.
3. Operation: Continuous-pressure applications.
4. Size:
5. Body: Bronze.
6. End Connections: Union, solder joint.
7. Finish: Rough bronze.

**B. Reduced-Pressure-Principle Backflow Preventers:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  - b. Conbraco Industries, Inc.

- c. FEBCO; a division of Watts Water Technologies, Inc.
  - d. Flomatic Corporation.
  - e. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - f. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - g. Or approved equal.
- 2. Standard: ASSE 1013.
  - 3. Operation: Continuous-pressure applications.
  - 4. Pressure Loss: 12 psig (83 kPa) maximum, through middle third of flow range.
  - 5. Size: NPS 6.
  - 6. Design Flow Rate:
  - 7. Selected Unit Flow Range Limits:
  - 8. Pressure Loss at Design Flow Rate:
  - 9. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved
  - 10. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged or NPS 2-1/2 (DN 65) and larger.
  - 11. Configuration: Designed for horizontal, straight-through flow.
  - 12. Accessories:
    - a. Valves NPS 2 (DN 50) and Smaller: Ball type with threaded ends on inlet and outlet.
    - b. Valves NPS 2-1/2 (DN 65) and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
    - c. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

**C. Reduced-Pressure-Detector, Fire-Protection, Backflow-Preventer Assemblies**

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  - b. Conbraco Industries, Inc.
  - c. FEBCO; a division of Watts Water Technologies, Inc.
  - d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - f. Or approved equal.
- 2. Standard: ASSE 1047 and is FM Global approved or UL listed.
- 3. Operation: Continuous-pressure applications.
- 4. Pressure Loss: maximum, through middle third of flow range.
- 5. Size:
- 6. Design Flow Rate:
- 7. Selected Unit Flow Range Limits:
- 8. Pressure Loss at Design Flow Rate:
- 9. Body: Cast iron with interior lining that complies with AWWA C550 or that is FDA approved.
- 10. End Connections: Flanged.
- 11. Configuration: Designed for horizontal, straight-through flow.
- 12. Accessories:
  - a. Valves: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
  - b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

- c. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

**D. Hose-Connection Backflow Preventers:**

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Conbraco Industries, Inc.
  - b. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - c. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - d. Or approved equal.
- 2. Standard: ASSE 1052.
- 3. Operation: Up to 10-foot head of water (30-kPa) back pressure.
- 4. Inlet Size: NPS 1/2 or NPS 3/4 (DN 15 or DN 20).
- 5. Outlet Size: Garden-hose thread complying with ASME B1.20.7.
- 6. Capacity: At least 3-gpm (0.19-L/s) flow.

**E. Backflow-Preventer Test Kits:**

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Conbraco Industries, Inc.
  - b. FEBCO; a division of Watts Water Technologies, Inc.
  - c. Flomatic Corporation.
  - d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - f. Or approved equal.
- 2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

**2.5 WATER PRESSURE-REDUCING VALVES**

**A. Water Regulators:**

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Cash Acme; a division of Reliance Worldwide Corporation.
  - b. Conbraco Industries, Inc.
  - c. Honeywell International Inc.
  - d. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - f. Or approved equal.
- 2. Standard: ASSE 1003.
- 3. Pressure Rating: Initial working pressure of 150 psig (1035 kPa).
- 4. Size:
- 5. Design Flow Rate:
- 6. Design Inlet Pressure:
- 7. Design Outlet Pressure Setting:

8. Body: Bronze with chrome-plated finish for NPS 2 (DN 50) and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
9. Valves for Booster Heater Water Supply: Include integral bypass.
10. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).

**B. Water-Control Valves:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. CLA-VAL.
  - b. Flomatic Corporation.
  - c. OCV Control Valves.
  - d. Watts; a division of Watts Water Technologies, Inc.; Control Valves (Watts ACV).
  - e. Zurn Industries, LLC; Plumbing Products Group; Wilkins Water Control Products.
  - f. Or approved equal.
2. Description: Pilot-operated, diaphragm-type, single-seated, main water-control valve.
3. Pressure Rating: Initial working pressure of 150 psig (1035 kPa) minimum with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot-control valve, restrictor device, specialty fittings, and sensor piping.
4. Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
  - a. Size:
  - b. Pattern: Globevalve design.
  - c. Trim: Stainless steel.
5. Design Flow:
6. Design Inlet Pressure:
7. Design Outlet Pressure Setting:
8. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.

**2.6 BALANCING VALVES**

**A. Copper-Alloy Calibrated Balancing Valves:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Armstrong International, Inc.
  - b. Flo Fab Inc.
  - c. ITT Corporation; Bell & Gossett Div.
  - d. NIBCO Inc.
  - e. TAC.
  - f. TACO Incorporated.
  - g. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - h. Or approved equal.
2. Type: Ball valve with two readout ports and memory-setting indicator.
3. Body: Brass

4. Size: Same as connected piping, but not larger than NPS 2 (DN 50).
5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

**B. Cast-Iron Calibrated Balancing Valves:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Armstrong International, Inc.
  - b. Flo Fab Inc.
  - c. ITT Corporation; Bell & Gossett Div.
  - d. NIBCO Inc.
  - e. TAC.
  - f. Watts; a division of Watts Water Technologies, Inc.; Watts Regulator Company.
  - g. Or approved equal.
2. Type: Adjustable with Y-pattern globe valve, two readout ports, and memory-setting indicator.
3. Size: Same as connected piping, but not smaller than NPS 2-1/2 (DN 65).

**C. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.**

**2.7 TEMPERATURE-ACTUATED, WATER MIXING VALVES**

**A. Manifold, Thermostatic, Water Mixing-Valve Assemblies:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Leonard Valve Company.
  - b. Powers; a division of Watts Water Technologies, Inc.
  - c. Symmons Industries, Inc.
  - d. Armstrong International
  - e. Or approved equal.
2. Description: Factory-fabricated, thermostatically controlled, water mixing-valve assembly in three-valve parallel arrangement.
3. Large-Flow Parallel: Thermostatic, water mixing valve and downstream-pressure regulator with pressure gages on inlet and outlet.
4. Intermediate-Flow Parallel: Thermostatic, water mixing valve and downstream-pressure regulator with pressure gages on inlet and outlet.
5. Small-Flow Parallel: Thermostatic, water mixing valve.
6. Thermostatic Mixing Valves: Comply with ASSE 1017. Include check stops on hot- and cold-water inlets and shutoff valve on outlet.
7. Water Regulator(s): Comply with ASSE 1003. Include pressure gage on inlet and outlet.
8. Pressure Rating: 125 psig (860 kPa) minimum unless otherwise indicated.
9. Cabinet: Factory fabricated, stainless steel, for recessed or surface mounting and with hinged, stainless-steel door.
10. Selected Large-Flow, Tempered-Water Valve Size:
11. Tempered-Water Setting: .
12. Unit Tempered-Water Design Flow Rate:
13. Unit Minimum Tempered-Water Design Flow Rate:
14. Selected Unit Flow Rate at 45-psig (310-kPa) Pressure Drop:
15. Unit Pressure Drop at Design Flow Rate:

16. Unit Tempered-Water Outlet Size: end connection.
17. Unit Hot- and Cold-Water Inlet Size: end connections.
18. Thermostatic Mixing Valve and Water Regulator Finish: Rough bronze.
19. Piping Finish: Copper.

## 2.8 STRAINERS FOR DOMESTIC WATER PIPING

### A. Y-Pattern Strainers:

1. Pressure Rating: 125 psig (860 kPa) minimum unless otherwise indicated.
2. Body: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining that complies with AWWA C550 or that is FDA approved, epoxy coated and for NPS 2-1/2 (DN 65) and larger.
3. End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
4. Screen: Stainless steel with round perforations unless otherwise indicated.
5. Perforation Size:
  - a. Strainers NPS 2 (DN 50) and Smaller: 0.020 inch (0.51 mm).
6. Drain: Factory-installed, hose-end drain valve.

## 2.9 HOSE BIBBS

### A. Hose Bibbs:

1. Standard: ASME A112.18.1 for sediment faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 1/2 or NPS 3/4 (DN 15 or DN 20) threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig (860 kPa).
7. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
9. Finish for Service Areas: Rough bronze.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle or operating key.
12. Operation for Service Areas: Operating key.
13. Operation for Finished Rooms: Operating key.
14. Include operating key with each operating-key hose bibb.
15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

## 2.10 WALL HYDRANTS

### A. Nonfreeze Wall Hydrants:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Josam Company.
  - b. MIFAB, Inc.
  - c. Prier Products, Inc.

- d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - e. Tyler Pipe; Wade Div.
  - f. Watts Drainage Products.
  - g. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - h. Zurn Industries, LLC; Plumbing Products Group; Light Commercial Products.
  - i. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
  - j. Or approved equal.
- 2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
  - 3. Pressure Rating: 125 psig (860 kPa).
  - 4. Operation: Loose key.
  - 5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
  - 6. Inlet: NPS 3/4 or NPS 1 (DN 20 or DN 25).
  - 7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
  - 8. Box: Deep, flush mounted with cover.
  - 9. Box and Cover Finish: Polished nickel bronze.
  - 10. Outlet: Exposed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
  - 11. Nozzle and Wall-Plate Finish: Polished nickel bronze.
  - 12. Operating Keys(s): One with each wall hydrant.

**B. Nonfreeze, Hot- and Cold-Water Wall Hydrants:**

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Josam Company.
  - b. Prier Products, Inc.
  - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - d. Tyler Pipe; Wade Div.
  - e. Watts Drainage Products.
  - f. Woodford Manufacturing Company; a division of WCM Industries, Inc.
  - g. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
  - h. Or approved equal.
- 2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
- 3. Pressure Rating: 125 psig (860 kPa).
- 4. Operation: Loose key.
- 5. Casing and Operating Rods: Of length required to match wall thickness. Include wall clamps.
- 6. Inlet: NPS 3/4 or NPS 1 (DN 20 or DN 25).
- 7. Outlet: Concealed.
- 8. Box: Deep, flush mounted with cover.
- 9. Box and Cover Finish: Polished nickel bronze.
- 10. Vacuum Breaker:
  - a. Nonremovable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 or backflow preventer complying with ASSE 1052.
  - b. Garden-hose thread complying with ASME B1.20.7 on outlet.
- 11. Operating Keys(s): One with each wall hydrant.

## 2.11 DRAIN VALVES

### A. Ball-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig (2760-kPa) minimum CWP.
3. Size: NPS 3/4 (DN 20).
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

### B. Gate-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-80 for gate valves.
2. Pressure Rating: Class 125.
3. Size: NPS 3/4 (DN 20).
4. Body: ASTM B 62 bronze.
5. Inlet: NPS 3/4 (DN 20) threaded or solder joint.
6. Outlet: Garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

### C. Stop-and-Waste Drain Valves:

1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
2. Pressure Rating: 200-psig (1380-kPa) minimum CWP or Class 125.
3. Size: NPS 3/4 (DN 20).
4. Body: Copper alloy or ASTM B 62 bronze.
5. Drain: NPS 1/8 (DN 6) side outlet with cap.

## 2.12 WATER-HAMMER ARRESTERS

### A. Water-Hammer Arresters:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AMTROL, Inc.
  - b. Josam Company.
  - c. MIFAB, Inc.
  - d. Precision Plumbing Products, Inc.
  - e. Sioux Chief Manufacturing Company, Inc.
  - f. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
  - g. Tyler Pipe; Wade Div.
  - h. Watts Drainage Products.
  - i. Zurn Industries, LLC; Plumbing Products Group; Specification Drainage Products.
  - j. Or approved equal.
2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Metal bellows.
4. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

**2.13 AIR VENTS**

**A. Bolted-Construction Automatic Air Vents:**

1. Body: Bronze.
2. Pressure Rating and Temperature: 125-psig (860-kPa) minimum pressure rating at 140 deg F (60 deg C).
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 1/2 (DN 15) minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

**B. Welded-Construction Automatic Air Vents:**

1. Body: Stainless steel.
2. Pressure Rating: 150-psig (1035-kPa) minimum pressure rating.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 3/8 (DN 10) minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

**2.14 TRAP-SEAL PRIMER DEVICE (SEE SCHEDULE)**

**2.15 WATER METERS**

**A. Displacement-Type Water Meters:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AALIANT; a Venture Measurement product line.ABB.Badger Meter, Inc.
  - b. Carlon Meter.
  - c. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
  - d. Schlumberger Limited; Water Services.
  - e. Sensus.
  - f. Or approved equal.
2. Description:
  - a. Standard: AWWA C700.
  - b. Pressure Rating: 150-psig (1035-kPa) working pressure.
  - c. Body Design: Nutating disc; totalization meter.
  - d. Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
  - e. Case: Bronze.
  - f. End Connections: Threaded.

**B. Turbine-Type Water Meters:**

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AALIANT; a Venture Measurement product line.

- b. ABB.
- c. Badger Meter, Inc.
- d. Hays Fluid Controls.
- e. Master Meter, Inc.
- f. McCrometer, Inc.
- g. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
- h. Schlumberger Limited; Water Services.
- i. SeaMetrics Inc.
- j. Sensus.
- k. Or approved equal.

2. Description:

- a. Standard: AWWA C701.
- b. Pressure Rating: 150-psig working pressure.
- c. Body Design: Turbine; totalization meter.
- d. Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
- e. Case: Bronze.
- f. End Connections for Meters NPS 2 (DN 50) and Smaller: Threaded.
- g. End Connections for Meters NPS 2-1/2 (DN 65) and Larger: Flanged.

C. Compound-Type Water Meters:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- a. ABB.
- b. Badger Meter, Inc.
- c. Master Meter, Inc.
- d. Mueller Co. Ltd.; a subsidiary of Mueller Water Products Inc.
- e. Schlumberger Limited; Water Services.
- f. Sensus.
- g. Or approved equal.

2. Description:

- a. Standard: AWWA C702.
- b. Pressure Rating: 150-psig (1035-kPa) working pressure.
- c. Body Design: With integral mainline and bypass meters; totalization meter.
- d. Registration: In gallons (liters) or cubic feet (cubic meters) as required by utility company.
- e. Case: Bronze.
- f. Pipe Connections: Flanged.

- D. Remote Registration System: Direct-reading type complying with AWWA C706; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.
- E. Remote Registration System: Encoder type complying with AWWA C707; modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly as required by utility company.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 INSTALLATION**

- A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with NYC DEP standards and 2014 NYC Construction Codes.
1. Locate backflow preventers in same room as connected equipment or system.
  2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
  3. Do not install bypass piping around backflow preventers.
- B. Install water regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gages on inlet and outlet.
- C. Install water-control valves with inlet and outlet shutoff valves and bypass with globe valve. Install pressure gages on inlet and outlet.
- D. Install balancing valves in locations where they can easily be adjusted.
- E. Install temperature-actuated, water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
1. Install cabinet-type units recessed in or surface mounted on wall as specified.
- F. Install Y-pattern strainers for water on supply side of each control valve.
- G. Install outlet boxes recessed in wall or surface mounted on wall. Install 2-by-4-inch (38-by-89-mm) fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 061000 "Rough Carpentry."
- H. Install hose stations with check stops or shutoff valves on inlets and with thermometer on outlet.
1. Install cabinet-type units recessed in or surface mounted on wall as specified. Install 2-by-4-inch (38-by-89-mm) fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 061000 "Rough Carpentry."
- I. Set nonfreeze, nondraining-type post hydrants in concrete or pavement.
- J. Set freeze-resistant yard hydrants with riser pipe in concrete or pavement. Do not encase canister in concrete.
- K. Install water-hammer arresters in water piping according to PDI-WH 201.
- L. Install air vents at high points of water piping.

- M. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
- N. Install drainage-type, trap-seal primer valves as lavatory trap with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting.
- O. Install trap-seal primer systems with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust system for proper flow.

### 3.3 CONNECTIONS

- A. Comply with requirements for ground equipment in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Fire-retardant-treated-wood blocking is specified in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical connections.

### 3.4 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
  - 1. Pressure vacuum breakers.
  - 2. Intermediate atmospheric-vent backflow preventers.
  - 3. Reduced-pressure-principle backflow preventers.
  - 4. Double-check, backflow-prevention assemblies.
  - 5. Dual-check-valve backflow preventers.
  - 6. Reduced-pressure-detector, fire-protection, backflow-preventer assemblies.
  - 7. Double-check, detector-assembly backflow preventers.
  - 8. Water pressure-reducing valves.
  - 9. Manifold, thermostatic, water mixing-valve assemblies.
  - 10. Primary water tempering valves.
  - 11. Outlet boxes.
  - 12. Hose stations.
  - 13. Trap-seal primer systems.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

### 3.5 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections:
  - 1. Test each pressure vacuum breaker, reduced-pressure-principle backflow preventer, double-check, backflow-prevention assembly according to the New York City Department of Buildings and the device's reference standard.

Domestic water piping specialties will be considered defective if they do not pass tests and inspections.

- B. Prepare test and inspection reports.

3.6 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Set field-adjustable flow set points of balancing valves.
- C. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

**END OF SECTION 22 11 19**

**SECTION 22 11 23****DOMESTIC WATER PUMPS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Horizontally mounted, in-line, close-coupled centrifugal pumps.
- B. Related Sections include the following:
  - 1. Section 22 11 23.13 "Domestic-Water Packaged Booster Pumps" for booster systems.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 DEFINITIONS

- A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include materials of construction, rated capacities, certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For domestic water pumps to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.
- C. Comply with pump manufacturer's written rigging instructions for handling.

1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS (SEE SCHEDULE)

2.1 HORIZONTALLY MOUNTED, IN-LINE, CLOSE-COUPLED CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Alyan Pump Co.
  - 2. Armstrong Pumps Inc.
  - 3. Bell & Gossett Domestic Pump; ITT Corporation.
  - 4. Marshall Engineered Products Co.
  - 5. PACO Pumps; Grundfos Pumps Corporation, U.S.A.
  - 6. Pentair Pump Group; Aurora Pump.

7. TACO Incorporated.
  8. Thrush Company, Inc.
  9. Or approved equal.
- B. Description: Factory-assembled and -tested, in-line, single-stage, close-coupled, overhung-impeller centrifugal pumps designed for installation with pump and motor shaft mounted horizontal.
- C. Pump Construction:
1. Casing: Radially split with threaded companion-flange connections for pumps with NPS 2 (DN 50) pipe connections and flanged connections for pumps with NPS 2-1/2 (DN 65) pipe connections.
  2. Impeller: Statically and dynamically balanced, closed, and keyed to shaft.
  3. Shaft and Shaft Sleeve: Steel shaft with deflector, with copper-alloy shaft sleeve. Include water slinger on shaft between motor and seal.
  4. Seal: Mechanical, with carbon-steel rotating ring, stainless-steel spring, ceramic seat, and rubber bellows and gasket.
  5. Bearings: Oil-lubricated; bronze-journal or ball type.
  6. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.
- D. Motor: Single speed, with grease-lubricated ball bearings; and resiliently or rigidly mounted to pump casing.
- E. Capacities and Characteristics:
1. Capacity
  2. Total Dynamic Head:
  3. Casing Material: Bronze.
  4. Impeller Material: ASTM B 584, cast bronze.
  5. Minimum Working Pressure: 175 psig (1200 kPa).
  6. Maximum Continuous Operating Temperature: 225 deg F (107 deg C).
  7. Inlet and Outlet Size:
  8. Pump Control:
  9. Pump Speed
  10. Motor Horsepower:
  11. Electrical Characteristics:
    - a. Volts: 120.
    - b. Phases: Single.
    - c. Hertz: 60.
    - d. Full-Load Amperes:
    - e. Minimum Circuit Ampacity:
    - f. Maximum Overcurrent Protection:

## 2.2 CONTROLS

- A. Thermostats: Electric; adjustable for control of hot-water circulation pump.
1. Type: Water-immersion temperature sensor, for installation in piping.
  2. Range: 65 to 200 deg F (18 to 93 deg C).
  3. Enclosure: NEMA 250.
  4. Operation of Pump: On or off.

5. Transformer: Provide if required.
6. Power Requirement: 120 V, ac.
7. Settings: Start pump at 105 deg F.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

#### 3.3 PUMP INSTALLATION

- A. Comply with HI 1.4.
- B. Install in-line, seal-less centrifugal pumps with shaft horizontal unless otherwise indicated.
- C. Install horizontally mounted, in-line, close-coupled centrifugal pumps with shaft(s) horizontal.
- D. Install vertically mounted, in-line, close-coupled centrifugal pumps with shaft vertical.
- E. Pump Mounting: Install vertically mounted, in-line, close-coupled centrifugal pumps with cast-iron base mounted on concrete base using. Comply with requirements for concrete base specified in Section 03 30 00 "Cast-in-Place Concrete".
  1. Minimum Deflection: 1 inch (25 mm).
  2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
  3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  5. Install anchor bolts to elevations required for proper attachment to supported equipment.
- F. Install continuous-thread hanger rods and spring hangers of size required to support pump weight.
  1. Comply with requirements for vibration isolation devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment." Fabricate brackets or supports as required.
  2. Comply with requirements for hangers and supports specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
- G. Install pressure switches in water supply piping.
- H. Install thermostats in hot-water return piping.
- I. Install time-delay relays in piping between water heaters and hot-water storage tanks.

### 3.4 CONNECTIONS

- A. Comply with requirements for piping specified in Section 22 11 16 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps to allow service and maintenance.
- C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
  - 1. Install flexible connectors adjacent to pumps in suction and discharge piping of the following pumps:
    - a. Horizontally mounted, in-line, separately coupled centrifugal pumps.
    - b. Horizontally mounted, in-line, close-coupled centrifugal pumps.
    - c. Vertically mounted, in-line, close-coupled centrifugal pumps.
    - d. Comply with requirements for flexible connectors specified in Section 22 11 16 "Domestic Water Piping."
  - 2. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping. Comply with requirements for valves specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping" and comply with requirements for strainers specified in Section 22 11 19 "Domestic Water Piping Specialties."
  - 3. Install pressure gage and snubber at suction of each pump and pressure gage and snubber at discharge of each pump. Install at integral pressure-gage tappings where provided or install pressure-gage connectors in suction and discharge piping around pumps. Comply with requirements for pressure gages and snubbers specified in Section 22 05 19 "Meters and Gages for Plumbing Piping."
- D. Connect pressure switches, thermostats, time-delay relays, and timers to pumps that they control.

Interlock pump between water heater and hot-water storage tank with water heater burner and time-delay relay.

### 3.5 IDENTIFICATION

- A. Comply with requirements for identification specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment" for identification of pumps.

### 3.6 STARTUP SERVICE

- A. Perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Check piping connections for tightness.
  - 3. Clean strainers on suction piping.
  - 4. Set thermostats for automatic starting and stopping operation of pumps.
  - 5. Perform the following startup checks for each pump before starting:
    - a. Verify bearing lubrication.

- b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
  - c. Verify that pump is rotating in the correct direction.
- 6. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
  - 7. Start motor.
  - 8. Open discharge valve slowly.
  - 9. Adjust temperature settings on thermostats.
  - 10. Adjust timer settings.

### 3.7 ADJUSTING

- A. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.
- B. Adjust initial temperature set points.
- C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

**END OF SECTION 22 11 23**

**SECTION 22 11 24**

**DOMESTIC WATER PACKAGED BOOSTER PUMPS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Triplex, constant-speed booster pumps.
- B. Related Sections:
  - 1. Section 22 11 23 "Domestic Water Pumps" for domestic-water circulation pumps.

**1.3 DEFINITIONS**

- A. VFC: Variable-frequency controller(s).

**1.4 PERFORMANCE REQUIREMENTS**

- A. Seismic Performance: Booster pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the booster pump will remain in place without separation of any parts from the booster pump when subjected to the seismic forces specified and the booster pump will be fully operational after the seismic event."

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each packaged booster pump specified. Include the following:
  - 1. System design information sheets indicating design parameters of system pressure and flow.
  - 2. Pump type, capacity, power requirements, material and construction.
  - 3. Pump curve indicating design point.
  - 4. Detailed sequence of operation.
  - 5. Packaged system dimension and general arrangement drawing.
  - 6. Catalog information on major components.
  - 7. Electrical power and control wiring diagrams with indication of field wiring connections.
  - 8. All of the above shall be specifically prepared and certified for this project.

## 1.7 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For booster pumps, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

## 1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For booster pumps to include in emergency, operation, and maintenance manuals.

## 1.9 QUALITY ASSURANCE

- A. Reference Standards:
  - 1. ANSI/ASHRAE 90A: Energy Conservation in New Building Design.
  - 2. ASME Section VIII: pressure Vessels; Boiler and Pressure Vessel Codes.
  - 3. Hydraulic Institute
  - 4. NEMA MG 1: Motors and Generators
  - 5. NFPA 70: National Electrical Code
  - 6. UL 508: Standard for Industrial Control Equipment
  - 7. UL 778: for motor-operated water pumps
- B. Manufacturing firms regularly engaged in manufacture of the material meeting all capacities and operating characteristics of the specified manufacturer's product whose products have been in satisfactory use, in similar service, for not less than ten (10) years. Manufacturer must be ISO 9000 certified.
- C. The system shall be independently Third Party labeled as a system suitable for the intended use by a Nationally Recognized Testing Laboratory (NRTL) such as UL or ETL, in accordance with OSHA Federal Regulations and NFPA Pamphlet 70, the National Electric Code (NEC) Article 90-7.
- D. Factory Test: The booster system and its component parts shall undergo a hydrostatic pressure and complete operating flow test from zero to 100% design flow rate under the specified suction and net system pressure conditions. This flow rate under the specified suction and net system pressure conditions. This flow test shall be performed by supplying the control panel with the specified incoming voltage. Each pump's performance shall be tested over its full range of flow. All pressure regulators, pressure switches, and other devices shall be set and functions verified. Components shall be tested for hydraulic shock, vibration, or excessive noise. Testing shall also include a hi—pot voltage test of the system. Any parts found to be defective must be replaced prior to shipment. Full documentation shall be maintained by the manufacturer showing flow rates, pressures and amp draws for future service and troubleshooting reference.
- E. Certification: The final system certification shall include copies of the independent Third Party Certifications and test data as recorded by X-Y plotter. The specifying Engineer shall have the option to witness the test. The entire system shall be painted after testing.

- F. The manufacturer of packaged equipment shall be responsible for the complete pumping system and its satisfactory performance as described in this section and shall provide a written guarantee covering all the equipment as well as the system performance for 12 months from date of start-up, not exceeding 18 months from date of shipment. The services of a factory trained engineer shall be provided for start-up and instruction of maintenance personnel.
- G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

#### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Retain protective coatings and flange's protective covers during storage.

#### 1.11 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

#### 1.12 MANUFACTURER'S WARRANTY

- A. Provide manufacturer's warranty covering all valves shall carry a three (3) year warranty against defect of materials, from date of substantial completion.

### PART 2 - PRODUCTS

#### 2.11 DUPLEX, VARIABLE-SPEED BOOSTER PUMPS

- A. Manufacturers:
  - 1. Subject to compliance with all specified requirements, provide products as produced by the manufacturer used as the basis of design. Other manufacturers, whose products have been in satisfactory use in similar service for not less than 10 years, may be submitted for approval as an equal provided the submission contains sufficient information for evaluation and the manufacturer certifies full compliance with the performance, physical characteristic requirements and all operational features of these Specifications.
- B. Variable speed, constant pressure, triplex booster pumps
  - 1. Description: Factory-assembled and tested, packaged, constant speed, booster pump with multiple pumps, piping, valves, sensors, and controls on skids or base, similar to SyncroFlo/ Peerless – GAF Series.
    - a. Manufacturer Basis of Design:
      - 1) SyncroFlo / Peerless – GAF Series
      - 2) Bell Gossett
      - 3) Federal Pump
      - 4) Or approved equal.
  - 2. Pumps: Overhung impeller assembly, separately coupled, vertically mounted on baseplate, multistage, radially split case, centrifugal. Comply with UL 778 and HI 1.1-1.2 and HI 1.3.

- a. Pump Arrangement: Multiplex, with equal-size pumps.
  - 1) Orientation: Mounted vertically.
  - 2) Construction: Stainless-steel fitted.
    - a) Body: Cast iron or stainless steel
    - b) Impellers: 316 stainless steel with internal thrust balance feature each stage.
    - c) Diffusers: 316 stainless steel.
    - d) Shaft: Stainless steel.
    - e) Shaft Sleeves and Bearings: tungsten carbide.
    - f) Seal: Mechanical, high temperature, reversible, silicon carbide.
    - g) Maximum speed: As scheduled on drawings.
  - 3) Coupling: Rigid type.
3. Motors: Single speed, with grease lubricated bearings, unless otherwise indicated open drip-proof enclosure, 1.15 service factor. Select motor that will not overload through full range of pump performance curve.
4. Packaging: All components shall be mounted on a structural channel or I-beam, steel or aluminum, skid suitable for grouting with all interconnecting piping and wiring completed.
  - a. Piping shall be schedule 40, 304 stainless steel or Type "L" copper. Dielectric fittings shall be used where joining dissimilar metals to prevent galvanic action and to stop corrosion. The piping shall be adequately supported independent of pump connections. It shall be arranged with adequate space for maintenance and to allow for removal of any pump without system shutdown. The suction and discharge manifolds piping shall be sized for a maximum velocity of 7 FPS.
    - 1) The factory assemble package shall be constructed to facilitate system installation and to provide for a field adaptable piping configuration as follows: the system base shall be split, allowing for ease of disassembly and reassembly, by the contractor in the field; the suction and discharge manifolds shall be flanged on both ends allowing for field connection to either end of the suction and discharge headers.
    - 2) Contractor shall inspect the jobsite, noting access and installation space limitations and shall coordinate package construction with the manufacturer.
  - b. Full port ball or lug style butterfly type isolation valves shall be installed on the suction and discharge of each pump. Each pump shall be provided with a thermal safety purge valve for over temperature protection.
  - c. Each pump discharge line shall include a pilot operated diaphragm type combination pressure regulating and non-slam check valve. Valves shall be set for higher than normal pressure to provide emergency pressure regulation in the event of full speed pump operation by means of the bypass starter due to a variable frequency drive failure.

- 1) Materials of construction shall be: 316 stainless steel, globe style body, stem, seat, disc retainer, guide bushing, spring and fasteners, ANSI Class 150 flanges, 250 PSIG maximum working pressure. Valve pilot lines shall be equipped with bronze / brass tubing, regulator, strainer, flow stabilizers/opening speed controls, check valves and a minimum of three (3) isolation ball valves, one at each pilot port to facilitate trouble shooting.
  - 2) Valves shall be designed for ease of assembly and maintenance and shall be completely serviceable in-line without need for special tools. Main valve bonnet shall have a removable cap for easy access to spring and upper bearing without having to remove the main valve bonnet or pilot system, valve stems shall have wrench flats. Each valve shall be tested prior to shipment including a pressure test and a functional operational test.
  - 3) In addition to the standard materials, these valves shall be specially constructed for operator convenience, serviceability, noise reduction and corrosion resistance with the following features:
    - a) Position indicator with air vent valve for visual observation of operation
    - b) Ball valves for pilot line strainer blowdown
    - c) Ball valves at every pilot port to facilitate operational testing
    - d) Ribbed silent seats for quiet operation at low flow.
    - e) Oxy-Nitride coated stems for increased lubricity, resistance to mineral deposits and enhanced corrosion protections
  - 4) The regulating valves shall be guaranteed to maintain accurate pressure control without pulsation or wire drawing across the full range of system operation down to a flow of 1 GPM; where required, individual auxiliary pressure regulating valves shall be installed in parallel with each main valve.
  - d. Controller mounted, 4" diameter, glycerin filled, pressure gauges shall be provided for indication of suction, system, and individual pump discharge pressures. All pressure sensing lines for gauges or pressure switches shall be factory piped in copper with brass with shut-off valves.
  - e. The pumps and all components on the discharge side of the pumps shall have a rated working pressure greater than pump shut-off head plus maximum, suction pressure. Pipe all purge valve discharge lines and, when applicable, packing gland drains (separate from purge lines) to a floor drain and make piping interconnection with the precharged diaphragm tank, as shown on the plans.
5. Controls
- a. Operating Sequence and Alarms:
    - 1) The electrical control system shall start, stop and vary the speed of the pumps as required by system demand, via a single common PID controller. The lead pump shall run continuously with the ability to shutdown on no flow. Should the system demand exceed the capacity of the lead pump or should the lead pump fail to operate, the lag pumps shall be started in sequence upon pressure drop. Upon drop in system flow, the pumps shall be stopped in reverse order. The flow sensor shall also be capable of starting the lag pumps. The pumps shall be automatically alternated. If any pump is out of service, pump sequencing shall be automatically shifted.
    - 2) In the event of a low suction pressure condition, the pumps shall be cut-off and alarm shall be activated. Pumps and alarm shall automatically reset when conditions return to normal.

- 3) In the event of a low system pressure condition, the pumps shall be sequenced on and the alarm shall be activated. The pumps and alarm shall automatically reset when conditions return to normal.
- 4) In the event of a low system pressure condition caused by a drive failure, the automatic bypass circuit shall start pumps, in sequence following time delay across-the-line; alarm horn and light shall be energized. This alarm shall require a manual reset.
- 5) In the event of a high system pressure condition, the pumps shall be cut-off and alarm shall be activated. Pumps and alarm shall automatically reset when conditions return to normal.
- 6) In the event of a drive failure, the alarm shall be activated and the remaining pumps shall be started in sequence.
- 7) In the event of an excessively high system flow due to any condition such as a downstream pipe failure, all pumps shall be cut-off and the alarm shall be activated. Manual reset required.
- 8) In the event of a control power failure, the power failure relay shall activate an auxiliary alarm contact, no audible alarm.
- 9) In the event of a failure of a programmable logic controller ("PLC"), electronic pressure or flow sensor, a failure circuit shall activate redundant electromechanical controls and alarm (no audible) and minimum of one pump shall operate automatically.
- 10) All alarms shall be audio-visual, except as noted, with silencing push-button and two (2) sets of Form "C" auxiliary alarm contacts for remote common system trouble alarm (2-NO, 2-NC).
- 11) All start/stop and alarm set points shall be field adjustable. Activation of all start/stop and alarm functions shall follow field adjustable time delays.

b. Pressure and Flow Sensors:

- 1) Pressure Transducers: Shall be factory mounted inside the control panel and factory piped to the to the suction and system headers. The transducers shall have 1.0% accuracy, stainless steel wetted parts and a waterproof enclosure. Transducers shall be IP67 rated, and capable of withstanding over pressurization of double its range. The transducers shall use a digital 1-6 kHz pulse output that can be directly sent to a programmable logic controller (PLC) without requiring an additional analog module for measuring current. The transducers zero set point must be capable of field calibration.
- 2) Pressure Transducer: An additional pressure transducer shall be field installed at the remote diaphragm tank. It shall be a variable capacitance type with two wire 4-20 MA proportional signal for process by the programmable controller at the pump. Transducer shall be heavy duty, industrial grade having an operating temperature range of -20 degrees F to +200 degrees F and a continuously adjustable timing constant of .2 to 1.67 sec. and 2,000 PSI over-pressurization rating. Incorporated in the body shall be a 316SS air bleed. Transducer shall be capable of zero evaluation of 600% of calibrated span and a zero suppression of 500% of calibrated span.

- a) Wiring for the remote pressure transducer shall be furnished and installed by the electrical contractor using a twisted shielded pair of #18 or larger wires carrying 4-20 milliamps DC.
- 3) Pressure Switches: Shall be non-mercury type.
- 4) Flow rate Transducer: Shall be a non-magnetic type, paddle wheel flow sensor, converting pulse rate into volumetric flow of full scale. The accuracy shall be 1% of full scale and repeatable within 0.3%. A "hot-tap" mounting adapter shall be provided by the manufacturer to allow sensor removal without system shutdown. The transducer shall be factory installed in a full size spool piece providing for a straight run of 10 pipe diameters upstream and 5 pipe diameters downstream of the sensor. The spool piece shall be field installed in the suction piping by the contractor.
- a) The flow sensor shall be provided with 20' of wiring to be installed by the electrical contractor. If additional wiring length is needed provide two conductor shielded cable, carrying 8 volts DC.
- c. Control Panel: Factory installed and connected as an integral part of unit complying with NEMA ICS 2 and UL 508; automatic for multiple-pump, variable and constant speed operation with load control and protection functions. It shall be arranged for single common power feed housed in a NEMA-12 enclosure, complete with the following:
  - 1) Circuit breaker disconnect switches interlocked with compartment door, for each pump.
  - 2) Three pole magnetic motor starters with three phase thermal overload protection and low voltage release, for VFD bypass, for each pump.
  - 3) Bypass drive isolation contactors.
  - 4) 115-volt control circuit transformer fused on both the primary and secondary sides with circuitry for automatic transfer of primary to active power feed.
  - 5) Control power available light with auxiliary alarm contacts.
  - 6) H-O-A selector switches, for each pump.
  - 7) Automatic pump alternator with manual override selector switch.
  - 8) Pump run indicating lights.
  - 9) Alarm indicating lights.
  - 10) Audible alarm, silencing push-button and remote trouble alarm contacts.
  - 11) Set of necessary control relays and other accessory devices required to permit the system to operate in conformance with the specifications.
  - 12) Auxiliary contacts (Form "C" (1-NO, 1-NC)) for interface with building automation system, for the following:
    - a) Control power available.
    - b) On-off status of each pump.
    - c) Common system trouble alarm status.
  - 13) Set of panel mounted pressure gauges and switches.
  - 14) Color Touchscreen HMI (Human Machine Interface).
  - 15) Programmable Logic Controller (PLC).
  - 16) Building management system communication module for pump system data via BACNET /LONWORKS.
  - 17) All components shall be mounted on back panels.
  - 18) All internal wiring shall be numbered corresponding to the wiring diagrams.
- d. Color Touchscreen HMI (Human Machine Interface) shall be flush mounted in the door of the control panel. It shall have the following features:

- 1) 320 x 240 resolution, 256 color, 3 MB memory, 5.7" screen size, 520 characters/screen, 300 touchpoints / screen.
- 2) Serial port (for PLC communication), USB port (for programming), and Compact Flash port (for troubleshooting and field-loading program changes).
- 3) The HMI shall be capable of direct communication with the VFD, in the event of a PLC failure.
- 4) The following data shall be accessible through the operator interface.
  - a) System status including flow rate (GPM), current system pressure and setpoint, pump run status, the current speed of the pumps (in %), and the method of speed control. Display system status on all user screens.
  - b) Usage history shall record the maximum instantaneous flow, along with the date and time. Overall and current day totalized flow, pump starts, and pump run hours are also recorded. Usage history may be reset.
  - c) A Set Points Menu system for adjusting setpoints. Display and adjust flow, pressure, differential pressure, VFD speed, power, minimum speed, lead pump shutdown mode, and tank pressurizer set points and time delays. Restore to either factory defaults or the last saved field defaults. Protect adjustable settings with a password.
  - d) Alarm History of the past 200 alarms. Each log shall include individual pump run status, system pressure and run setpoint, alarm type and the date and time. Alarm Type shall be in plain English, not codes requiring a reference list.
  - e) Alarm List of all possible alarms and their current status. Display any current alarms on all user screens.
  - f) Start-up instructions and checklist.
- 5) The HMI shall include a method for transferring data
  - a) Alarms shall automatically copy to an installed compact flash drive.
  - b) Include fault codes from the PLC and the VFD.
  - c) Copy usage data to the drive daily.
  - d) Data shall be stored in a text file, readable by non-proprietary software.
  - e) HMI Software shall allow for program changes to the HMI and PLC to be transferred via the compact flash drive.
- e. The Programmable Logic Controller (PLC) shall be installed on the control panel base pan, not the door, to protect it from damage. The PLC manufacturer shall be clearly marked on the controller, and non-proprietary. The PLC shall continue to function even if the touchscreen is broken, damaged, or removed. The PLC shall have the following features: 32,000 steps of built-in program memory, 7680 auxiliary relays, 320 timers, 235 counters, 8000 data registers, 24,000 extension registers, and 24,000 extension file registers.
- f. Variable Frequency Drives: Each pump shall have its own variable frequency drive with the following features:
  - 1) The drive shall be a voltage source, GTR or IGBT power transistor based inverter - PWM Type. The inverter shall use a high carrier frequency to reduce drive and motor noise.

- 2) Drive shall be capable of operating in an ambient temperature between 15 °F and 100 °F and a line voltage variation of less than 10%.
  - 3) Self-protection features shall include: under voltage and over voltage protection, current overload protection, short circuit protection, power failure protection, ground fault protection, and over-temperature protection.
  - 4) A four digit LED readout shall be provided to indicate the following: drive enabled, output frequency, and all VFD fault conditions.
  - 5) The drive shall be capable of automatically restarting after any of the following: overload over-voltage, converter over-current, inverter over-current, or power failure.
  - 6) The following drive parameters shall be user adjustable: acceleration speed (1 to 300 seconds), deceleration speed (1 to 300 seconds), minimum speed, and maximum speed.
  - 7) The drive shall have a front mounted "HAND-OFF-AUTO" selector switch and a potentiometer for adjusting drive speed in the "HAND" position.
  - 8) Drives shall have a minimum 100,000-amp short circuit current rating.
  - 9) The VFD shall use the following energy saving techniques
    - a) Slows down the motor
    - b) Reduce current
    - c) Reduces voltage
    - d) Evaluates 6 motor characteristics to further increase efficiency
  - 10) VFD shall communicate with the PLC with a DIGITAL connection, with the following capabilities:
    - a) Able to modify 300 different VFD parameters through the PLC and HMI
    - b) Read all VFD data and communicate it to the PLC, HMI, and write to the compact flash drive.
  - 11) VFD drives mounted external to the control panel shall have dust protection.
8. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembling and testing. Protect flanges, pipe openings, and pump nozzles.
  9. Capacity and Characteristics: (See Schedule on drawings)

**C. Precharged Diaphragm Tank**

1. Precharged pneumatic diaphragm tank, built in accordance with ASME Code standards. The tank shall be installed as indicated on the drawings.
2. Tank shall be vertically mounted with the cold water inlet connection located on the bottom, 1/4" vent and air charging valve. All wetted metal parts must be brass or stainless steel.
3. The tank shall be field piped with pressure gauge, pressure sensor, isolation and hose bibb drain valves. Precharge the tank to 5 PSI less than minimum system pressure at the point of connection.
4. Capacity, Air Charge, Working Pressure, and Location: (See Schedule.)
5. Provide auxiliary contacts in the pump controller for interface to building automation system. Include the following:
  - a. Control power available.
  - b. On-off status of each pump.
  - c. Alarm status.

## 2.12 MOTORS

- A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors.
  - 1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
  - 2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in NFPA 70.

## PART 3 - EXECUTION

### 3.11 EXAMINATION

- A. Examine roughing-in for booster pumps to verify actual locations of piping connections before booster-pump installation.

### 3.12 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for packaged booster pumps. Refer Section 22 00 00 - "Common Work Results for Plumbing."
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be imbedded.
  - 4. Install anchor bolts to elevation required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Section 03 30 00 – "Cast-in-Place Concrete".

### 3.13 BOOSTER PUMP INSTALLATION

- A. Install packaged booster pumps level on concrete bases with access for periodic maintenance including removal of pumps, motors, impellers, couplings, and accessories.
  - 1. Do not dismantle packaged booster pumps or remove individual components, without authorization from the manufacturer.
  - 2. Pipe all packing glands to drain.
  - 3. Pipe all thermal safety purge valves to drain, separate from packing gland drain piping.
  - 4. Completely fill the base with non-shrinking grout prior to pump start-up.
- B. Vibration isolation: As specified in Section 22 05 48 "Vibration and Seismic controls for Plumbing Piping and Equipment."
- C. Support connected domestic water piping so weight of piping is not supported by packaged booster pumps.

### 3.14 CONNECTIONS

- A. Piping installation requirements are specified in other Section 22 11 16 – “Domestic Water Piping”. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect domestic water piping to packaged booster pumps. Install suction and discharge pipe equal to or greater than size of unit suction and discharge headers.
  - 1. Install shutoff valves on piping connections to each booster pump suction and discharge headers. Install ball valves same size as suction and discharge headers. General-duty valves are specified in Division 22 Section "General-Duty Valves for Plumbing Piping."
  - 2. Install union or flanged connections on pump suction and discharge headers at connection to domestic water piping.
  - 3. Install piping adjacent to packaged booster pumps to allow service and maintenance.
- C. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

### 3.15 STARTUP SERVICE

- A. Prior to start-up perform the following:
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Check piping connections for tightness.
  - 3. Clean strainers if any.
  - 4. Verify that pump controls are correct for required application.
- B. Engage a factory-authorized service representative to perform the following startup service:
  - 1. Verify that pump controls are correct for the required application.
  - 2. Verify bearing lubrication.
  - 3. Align pump and motor in accordance with the manufacturer's guideline.
  - 4. Prime pumps by opening suction valves and closing discharge valves, and prepare pumps for operation.
  - 5. Start motors.
  - 6. Open discharge valves slowly.
  - 7. Verify that pump system operates in accordance with the specification, adjust settings as required.
- C. Occupancy Adjustments: When requested within 12 months of date of Substantial completion, provide on-site assistance in adjusting packaged booster pumps to suit actual occupied conditions. Provide up to two visits to project outside normal occupancy hours for this purpose.

### 3.16 LABELING AND IDENTIFICATION

- A. Install identifying equipment markers and equipment signs on booster pumps. Labeling and identification materials are specified in Division 22 Section 22 05 53 - "Identification for Plumbing Piping and Equipment."

3.17 DEMONSTRATION

- A. Engage a service representative that is properly trained by the manufacturer to instruct the City of New York's service operators to adjust, operate, and service packaged booster pumps. Refer to DDC General Conditions for instruction requirements.

**END OF SECTION 22 11 24**

**SECTION 22 12 23****FACILITY INDOOR WATER STORAGE TANKS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 21 08 00 – “Commissioning of Fire Protection”
- C. Section 22 08 00 – “Commissioning of Plumbing”

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Steel Tank, Field Erected (Fire Reserve Tank).

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 “Construction Waste Management and Disposal”
  - 2. Section 01 81 13 “Sustainable Design Requirements for LEED Buildings”
  - 3. Section 01 81 19 “Indoor Air Quality Requirements for LEED Buildings”
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PERFORMANCE REQUIREMENTS**

- A. Seismic Performance: Steel water tanks shall withstand the effects of earthquake motions determined according to.

- 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water storage tanks.
  - 2. Include rated capacities, operating characteristics, and furnished specialties and accessories.

#### 1.8 INFORMATIONAL SUBMITTALS

- A. Seismic Qualification Certificates: For steel water storage tanks, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Product Certificates: For each type of potable-water storage tank, from manufacturer.
- C. Source quality-control reports.
- D. Purging and disinfecting reports.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. ASME Compliance for Steel Tanks: Fabricate and label steel, ASME-code, potable-water storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.
- C. ASME Compliance for FRP Tanks: Fabricate and label FRP, ASME-code, potable-water storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section X, "Fiber-Reinforced Plastic Pressure Vessels."
- D. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic potable-water storage tanks and components. Include appropriate NSF marking.
- E. Comply with NSF 61, "Drinking Water System Components - Health Effects," for

potable-water storage tanks. Include appropriate NSF marking.

1.10 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1 STEEL, NONPRESSURE, POTABLE-WATER STORAGE TANKS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - 1. American Tank
  - 2. Rosenwach
  - 3. Isseks Brothers, Inc.
  - 4. Or approved equal.
- C. Description: Steel, horizontal, nonpressure-rated tank.
- D. Manhole: Watertight, for tank more than 36 inches in diameter.
- E. Cover for Open Tank: Steel, with lining same as or similar to tank lining and with shape that encloses top of tank.
- F. Tappings: Factory-fabricated stainless steel, welded to tank.
  - 1. NPS 2-1/2 (DN 65) and Larger: ASME B16.5, flanged.
- G. Specialties and Accessories: Include tappings in the tank and the following:
  - 1. Vacuum relief valve.
  - 2. Free air vent with insect screen.
  - 3. Thermometer.
  - 4. Gage glass, brass fittings, compression stops, and gage-glass guard.
- H. Horizontal Tank Supports: Factory-fabricated steel saddles, welded to tank before testing and labeling.
  - 1. Tank: fabricate Steel Water Storage Tank. Tank material to be 3/8" Carbon Steel A36, bottom and walls, covers to be 3/16". Covers to be supported by 4: channels, 48" centers. Tank to be internally braced with 2" stayrods (or braced externally). Install two (2) 24" x 24" sliding hatches. Install two (2) epoxy coated steel interior ladders and two (2) steel exterior ladders. Paint exterior of tank with one (1) coat of Black Enamel.

2.2 SOURCE QUALITY CONTROL

- A. Test and inspect potable-water storage tanks according to the following tests and inspections and prepare test reports:
  - 1. Pressure Testing for ASME-Code, Potable-Water Storage Tanks:

Hydrostatically test to ensure structural integrity and freedom from leaks. Fill tanks with water, vent air, pressurize to 1-1/2 times tank pressure rating, disconnect test equipment, hold pressure for 30 minutes with no drop in pressure, and check for leaks.

2. Pressure Testing for Non-ASME-Code, Pressure, Potable-Water Storage Tanks: Hydrostatically test to ensure structural integrity and freedom from leaks at pressure of above system operating pressure, but not less than 150 psig (1035 kPa). Fill tanks with water, vent air, pressurize tanks, disconnect test equipment, hold pressure for two hours with no drop in pressure, and check for leaks.
3. Testing for Nonpressure, Potable-Water Storage Tanks: Fill tanks to water operating level to ensure structural integrity and freedom from leaks. Hold water level for two hours with no drop in water level.

- B. Restore or replace tanks that fail test with new tanks, and repeat until test is satisfactory.

## **PART 3 – EXECUTION**

### **3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

### **3.2 INSTALLATION**

- A. Install water storage tanks on concrete bases, level and plumb, firmly anchored. Arrange so devices needing servicing are accessible.
  1. Install horizontal tanks on concrete pad steel supports and saddles.
- B. Anchor tank supports and tanks to substrate.
  1. Use steel or FRP straps over or around plastic tanks.
- C. Install tank seismic restraints.
- D. Install thermometers and pressure gages on water storage tanks and piping if indicated. Thermometers and pressure gages are specified in Section 220519 "Meters and Gages for Plumbing Piping."
- E. Install the following devices on tanks where indicated:
  1. Pressure relief valves.
  2. Temperature and pressure relief valves.
  3. Vacuum relief valves.
  4. Tank vents on nonpressure tanks.
  5. Connections to accessories.
  6. Provide stainless steel ladder.

- F. After installing tanks with factory finish, inspect finishes and repair damages to finishes.

### **3.3 CONNECTIONS**

- A. Piping installation requirements are specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

- B. Install piping adjacent to potable-water storage tanks to allow service and maintenance.
- C. Connect water piping to water storage tanks with unions or flanges and with shutoff valves. Connect tank drains with shutoff valves and discharge over closest floor drains.
  - 1. General-duty valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."
    - a. Valves NPS 2 (DN 50) and Smaller: Gate or ball.
    - b. Valves NPS 2-1/2 (DN 65) and Larger: Gate or butterfly.
    - c. Drain Valves: NPS 3/4 (DN 20) gate or ball valve. Include outlet with, or nipple in outlet with, ASME B1.20.7, 3/4-11.5NH thread for garden-hose service, threaded cap, and chain.
  - 2. Water Piping Connections: Make connections to dissimilar metals with dielectric fittings. Dielectric fittings are specified in Section 221116 "Domestic Water Piping."
  - 3. Connect air piping to hydropneumatic tanks with unions or flanges and gate or ball valves. Make connections to dissimilar metals with dielectric fittings, which are specified in Section 221513 "General-Service Compressed-Air Piping."

#### 3.4 IDENTIFICATION

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

#### 3.5 FIELD QUALITY CONTROL

- A. Perform the following final checks before filling:
  - 1. Verify that air precharge in precharged tanks is correct.
  - 2. Test operation of tank accessories and devices.
  - 3. Verify that pressure relief valves have correct setting.
    - a. Manually operate pressure relief valves.
    - b. Adjust pressure settings.
  - 4. Verify that vacuum relief valves are correct size.
    - a. Manually operate vacuum relief valves.
    - b. Adjust vacuum settings.
- B. Filling Procedures: Follow manufacturer's written procedures. Fill tanks with water to operating level.

#### 3.6 CLEANING

- A. Clean and disinfect potable-water storage tanks.
- B. Use purging and disinfecting procedure prescribed by 2014 NYC Construction Codes or, if method is not prescribed, use procedure described in AWWA C652 or as described below:

1. Purge water storage tanks with potable water.
  2. Disinfect tanks by one of the following methods:
    - a. Fill tanks with water-chlorine solution containing at least 50 ppm (50 mg/L) of chlorine. Isolate tanks and allow to stand for 24 hours.
    - b. Fill tanks with water-chlorine solution containing at least 200 ppm (200 mg/L) of chlorine. Isolate tanks and allow to stand for three hours.
  3. Flush tanks, after required standing time, with clean, potable water until chlorine is not present in water coming from tank.
  4. Submit water samples in sterile bottles to testing agency approved by New York City Department of Buildings. Repeat procedure if biological examination made by testing agency shows evidence of contamination.
- C. Prepare written reports for purging and disinfecting activities.

**END OF SECTION 22 12 23**

**SECTION 22 13 16****SANITARY WASTE AND VENT PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Pipe, tube, and fittings.
  2. Specialty pipe fittings.
- B. Related Sections:
1. Section 22 13 29 "Sump Pumps" for effluent and sewage pumps.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PERFORMANCE REQUIREMENTS**

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
  - 1. Soil, Waste, and Vent Piping: 10-foot head of water (30 kPa).
- B. Seismic Performance: Soil, waste, and vent piping and support and installation shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For sovent drainage system. Include plans, elevations, sections, and details.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Seismic Qualification Certificates: For waste and vent piping, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Detailed description of piping anchorage devices on which the certification is based and their installation requirements.
- B. Field quality-control reports.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- C. Comply with NSF/ANSI 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

**PART 2 - PRODUCTS****2.1 PIPING MATERIALS**

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

**2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS**

- A. Pipe and Fittings: ASTM A 74, Service.
- B. Gaskets: ASTM C 564, rubber.

- C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.3 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.

- B. CISPI, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. ANACO-Husky.
  - b. Dallas Specialty & Mfg. Co.
  - c. Fernco Inc.
  - d. Matco-Norca, Inc.
  - e. MIFAB, Inc.
  - f. Mission Rubber Company; a division of MCP Industries, Inc.
  - g. Stant.
  - h. Tyler Pipe.
  - i. Wade
  - j. Or approved equal.
2. Standards: ASTM C 1277 and CISPI 310.
3. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

- C. Heavy-Duty, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. ANACO-Husky.
  - b. Clamp-All Corp.
  - c. Dallas Specialty & Mfg. Co.
  - d. MIFAB, Inc.
  - e. Mission Rubber Company; a division of MCP Industries, Inc.
  - f. Stant.
  - g. Tyler Pipe.
  - h. Wade
  - i. Or approved equal.
2. Standards: ASTM C 1277 and ASTM C 1540.
3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.

- D. Cast-Iron, Hubless-Piping Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. MG Piping Products Company.
  - b. Wade

- c. ANACO-Husky.
  - d. Or approved equal.
- 2. Standard: ASTM C 1277.
  - 3. Description: Two-piece ASTM A 48/A 48M, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve with integral, center pipe stop.

## 2.4 SPECIALTY PIPE FITTINGS

### A. Transition Couplings:

- 1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
- 2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
- 3. Unshielded, Non-pressure Transition Couplings:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Dallas Specialty & Mfg. Co.
    - 2) Fernco Inc.
    - 3) Mission Rubber Company; a division of MCP Industries, Inc.
    - 4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
    - 5) Or approved equal.
  - b. Standard: ASTM C 1173.
  - c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
  - d. Sleeve Materials:
    - 1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.
    - 2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
    - 3) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.
- 4. Shielded, Non-pressure Transition Couplings:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Cascade Waterworks Mfg. Co.
    - 2) Mission Rubber Company; a division of MCP Industries, Inc.
    - 3) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
    - 4) Or approved equal.
  - b. Standard: ASTM C 1460.
  - c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
- 5. Pressure Transition Couplings:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1) Cascade Waterworks Mfg. Co.
  - 2) Dresser, Inc.
  - 3) EBAA Iron, Inc.
  - 4) JCM Industries, Inc.
  - 5) Romac Industries, Inc.
  - 6) Smith-Blair, Inc.; a Sensus company.
  - 7) The Ford Meter Box Company, Inc.
  - 8) Viking Johnson.
  - 9) Or approved equal.
- b. Standard: AWWA C219.
- c. Description: Metal, sleeve-type same size as, with pressure rating at least equal to, and ends compatible with, pipes to be joined.
- d. Center-Sleeve Material: Ductile iron.
- e. Gasket Material: Natural or synthetic rubber.
- f. Metal Component Finish: Corrosion-resistant coating or material.

**B. Dielectric Fittings:**

- 1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
- 2. Dielectric Unions:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Capitol Manufacturing Company.
    - 2) Central Plastics Company.
    - 3) Hart Industries International, Inc.
    - 4) Jomar International Ltd.
    - 5) Matco-Norca, Inc.
    - 6) McDonald, A. Y. Mfg. Co.
    - 7) Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    - 8) Wilkins; a Zurn company.
    - 9) Or approved equal.
  - b. Description:
    - 1) Standard: ASSE 1079.
    - 2) Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
    - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
- 3. Dielectric Flanges:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Capitol Manufacturing Company.
    - 2) Central Plastics Company.
    - 3) Matco-Norca, Inc.

- 4) Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- 5) Wilkins; a Zurn company.
- 6) Or approved equal.

b. Description:

- 1) Standard: ASSE 1079.
- 2) Factory-fabricated, bolted, companion-flange assembly.
- 3) Pressure Rating: 125 psig (860 kPa) minimum at 180 deg F (82 deg C).
- 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

4. Dielectric-Flange Insulating Kits:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) Advance Products & Systems, Inc.
- 2) Calpico, Inc.
- 3) Central Plastics Company.
- 4) Pipeline Seal and Insulator, Inc.
- 5) Or approved equal.

b. Description:

- 1) Nonconducting materials for field assembly of companion flanges.
- 2) Pressure Rating: 150 psig (1035 kPa).
- 3) Gasket: Neoprene or phenolic.
- 4) Bolt Sleeves: Phenolic or polyethylene.
- 5) Washers: Phenolic with steel backing washers.

5. Dielectric Nipples:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1) Elster Perfection.
- 2) Grinnell Mechanical Products.
- 3) Matco-Norca, Inc.
- 4) Precision Plumbing Products, Inc.
- 5) Victaulic Company.
- 6) Or approved equal.

b. Description:

- 1) Standard: IAPMO PS 66
- 2) Electroplated steel nipple.
- 3) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
- 4) End Connections: Male threaded or grooved.
- 5) Lining: Inert and noncorrosive, propylene.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EARTH MOVING**

- A. Comply with requirements for excavating, trenching, and backfilling specified in Section 31 00 00 "Earthwork".

**3.3 PIPING INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- K. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if two fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- L. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants,

cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

- M. Install soil and waste drainage and vent piping at the following minimum slopes unless otherwise indicated:
  - 1. Building Sanitary Drain: 2 NPS 3 (DN 80) and smaller; 1 percent downward in direction of flow for piping NPS 4 (DN 100) and larger.
  - 2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
  - 3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.
- N. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
  - 1. Install encasement on underground piping according to ASTM A 674 or AWWA C105/A 21.5.
- O. Install steel piping according to applicable plumbing code.
- P. Install engineered soil and waste drainage and vent piping systems as follows:
  - 1. Combination Waste and Vent: Comply with standards of 2014 New York City Construction Codes.
  - 2. Solvent Drainage System: Comply with ASSE 1043 and solvent fitting manufacturer's written installation instructions.
  - 3. Reduced-Size Venting: Comply with standards of 2014 New York City Construction Codes.
- Q. Install underground, ductile-iron, force-main piping according to AWWA C600. Install buried piping inside building between wall and floor penetrations and connection to sanitary sewer piping outside building with restrained joints. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
  - 1. Install encasement on piping according to ASTM A 674 or AWWA C105/A 21.5.
- R. Install underground, copper, force-main tubing according to CDA's "Copper Tube Handbook."
  - 1. Install encasement on piping according to ASTM A 674 or AWWA C105/A 21.5.
- S. Install force mains at elevations indicated.
- T. Plumbing Specialties:
  - 1. Install backwater valves in sanitary waster gravity-flow piping. Comply with requirements for backwater valves specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
  - 2. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with requirements for cleanouts specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
  - 3. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Section 22 13 19 "Sanitary Waste Piping Specialties."

- U. Do not enclose, cover, or put piping into operation until it is inspected and approved by New York City Department of Buildings.
- V. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
- W. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
- X. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 JOINT CONSTRUCTION

- A. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
- B. Join hub-and-spigot, cast-iron soil piping with calked joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead-and-oakum calked joints.
- C. Join hubless, cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.
- D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- E. Join stainless-steel pipe and fittings with gaskets according to ASME A112.3.1.
- F. Join copper tube and fittings with soldered joints according to ASTM B 828. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
- G. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fitting. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
- H. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

### 3.5 SPECIALTY PIPE FITTING INSTALLATION

- A. Transition Couplings:
  - 1. Install transition couplings at joints of piping with small differences in OD's.
  - 2. In Drainage Piping: Shielded, non-pressure transition couplings.
  - 3. In Aboveground Force Main Piping: Fitting-type transition couplings.

4. In Underground Force Main Piping:
  - a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
  - b. NPS 2 (DN 50) and Larger: Pressure transition couplings.

B. Dielectric Fittings:

1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric nipples.
3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flanges nipples.
4. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

3.6 VALVE INSTALLATION

- A. General valve installation requirements are specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves:

1. Install shutoff valve on each sewage pump discharge.
2. Install gate or full-port ball valve for piping NPS 2 (DN 50) and smaller.
3. Install gate valve for piping NPS 2-1/2 (DN 65) and larger.

- C. Check Valves: Install swing check valve, between pump and shutoff valve, on each sewage pump discharge.

- D. Backwater Valves: Install backwater valves in piping subject to backflow.

1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
2. Floor Drains: Drain outlet backwater valves unless drain has integral backwater valve.
3. Install backwater valves in accessible locations.
4. Comply with requirements for backwater valve specified in Section 22 13 19 "Sanitary Waste Piping Specialties."

3.7 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."

- B. Comply with requirements for pipe hanger and support devices and installation specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."

1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
2. Install stainless-steel pipe hangers for horizontal piping in corrosive environments.
3. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
4. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
5. Vertical Piping: MSS Type 8 or Type 42, clamps.
6. Install individual, straight, horizontal piping runs:
  - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
  - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
  - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.

7. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  8. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting, valve, and coupling.
- D. Support vertical piping and tubing at base and at each floor.
- E. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- F. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
  2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
  3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
  4. NPS 6 and NPS 8 (DN 150 and DN 200): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
  5. NPS 10 and NPS 12 (DN 250 and DN 300): 60 inches (1500 mm) with 7/8-inch (22-mm) rod.
  6. Spacing for 10-foot (3-m) lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).
- G. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).
- H. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/4 (DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
  2. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
  3. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
  4. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
  5. NPS 3 (DN 80): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
  6. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
  7. NPS 6 and NPS 8 (DN 150 and DN 200): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
  8. NPS 10 and NPS 12 (DN 250 and DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.
- I. Install supports for vertical steel piping every 15 feet (4.5 m).
- 3.8 CONNECTIONS**
- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect drainage and vent piping to the following:
1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by 2014 New York City Plumbing Code.

2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by 2014 New York City Plumbing Code.
3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by 2014 New York City Plumbing Code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.
5. Comply with requirements for backwater valves, cleanouts and drains specified in Section 22 13 19 "Sanitary Waste Piping Specialties."
6. Equipment: Connect drainage piping as indicated. Provide shutoff valve if indicated and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 (DN 65) and larger.

D. Connect force-main piping to the following:

1. Sanitary Sewer: To exterior force main.
2. Sewage Pump: To sewage pump discharge.

E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.

F. Make connections according to the following unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

### 3.9 IDENTIFICATION

- A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."

### 3.10 FIELD QUALITY CONTROL

- A. During installation, notify New York City Department of Buildings at least 24 hours before inspection must be made. Perform tests specified below in presence of Commissioner.
1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
  2. Final Inspection: Arrange for final inspection by Commissioner to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If testing agency or Commissioner find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by Commissioner.
- D. Test sanitary drainage and vent piping according to procedures of New York City Department of Buildings or, in absence of published procedures, as follows:
1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water (30 kPa). From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg (250 Pa). Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

### 3.11 CLEANING AND PROTECTION

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.
- D. Exposed Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

### 3.12 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground, soil and waste piping NPS 4 and smaller shall be any of the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings CISPI heavy-duty hubless-piping couplings; and coupled joints.
- C. Aboveground, soil and waste piping NPS 5 and larger shall be any of the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings and solvent stack fittings; heavy-duty hubless-piping couplings; and coupled joints.
  3. Dissimilar Pipe-Material Couplings: Shielded, non-pressure transition couplings.
- D. Aboveground, vent piping NPS 4 and smaller shall be any of the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.
  3. Dissimilar Pipe-Material Couplings: non-pressure transition couplings.

- E. Aboveground, vent piping NPS 5 and larger shall be any of the following:
  - 1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  - 2. Hubless, cast-iron soil pipe and fittings; heavy-duty hubless-piping couplings; and coupled joints.
  - 3. Dissimilar Pipe-Material Couplings: Shielded, non-pressure transition couplings.
- F. Underground, soil, waste, and vent piping shall be any of the following:
  - 1. Service class, cast iron soil pipe and fittings; hub and spigot type with gasketed joints.
  - 2. Dissimilar Pipe-Material Couplings: Shielded, non-pressure transition couplings
- G. Aboveground sanitary-sewage force mains NPS 1-1/2 and NPS 2 shall be any of the following:
  - 1. Galvanized-steel pipe, pressure fittings, and threaded joints.
- H. Aboveground sanitary-sewage force mains NPS 2-1/2 to NPS 6 shall be any of the following:
  - 1. Galvanized-steel pipe, pressure fittings, and threaded joints.
  - 2. Grooved-end, galvanized-steel pipe; grooved-joint, galvanized-steel-pipe appurtenances; and grooved joints.
- I. Underground sanitary-sewage force mains NPS 4 and smaller shall be any of the following:
  - 1. Hard copper tube, Type L (Type B); wrought-copper pressure fittings; and soldered joints.
  - 2. Ductile-iron, mechanical-joint piping and mechanical joints.
  - 3. Ductile-iron, push-on-joint piping and push-on joints.
  - 4. Ductile-iron, grooved-joint piping and grooved joints.
  - 5. Fitting-type transition coupling for piping smaller than NPS 1-1/2 (DN 40) and pressure transition coupling for NPS 1-1/2 (DN 40) and larger if dissimilar pipe materials.
- J. Underground sanitary-sewage force mains NPS 5 and larger shall be any of the following:
  - 1. Hard copper tube, Type L (Type B); wrought-copper pressure fittings; and soldered joints.
  - 2. Ductile-iron, mechanical-joint piping and mechanical joints.
  - 3. Ductile-iron, push-on-joint piping and push-on joints.
  - 4. Ductile-iron, grooved-joint piping and grooved joints.
  - 5. Pressure transition couplings if dissimilar pipe materials.

**END OF SECTION 22 13 16**

## SECTION 22 13 19

## SANITARY WASTE PIPING SPECIALTIES

## PART 1 - GENERAL

## 1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

## 1.2 SUMMARY

## A. Section Includes:

1. Cleanouts.
2. Floor drains.
3. Air-admittance valves.
4. Roof flashing assemblies.
5. Through-penetration firestop assemblies.
6. Miscellaneous sanitary drainage piping specialties.
7. Flashing materials.

## B. Related Requirements:

1. Section 22 14 23 "Storm Drainage Piping Specialties" for storm drainage piping inside the building, drainage piping specialties, and drains.
2. Section 33 41 00 "Storm Utility Drainage Piping" for storm draining piping and piping specialties outside the building.

## 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

## B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 ACTION SUBMITTALS

- A. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.
  - 1. Wiring Diagrams: Power, signal, and control wiring.

1.7 INFORMATIONAL SUBMITTALS

- A. Manufacturer Seismic Qualification Certification: Submit certification that accessories, and components will withstand seismic forces defined in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment." Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."
    - b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York City Department of Buildings, and marked for intended use.

- D. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

#### 1.10 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 03 30 00 "Cast-in-Place Concrete".
- B. Coordinate size and location of roof penetrations.

#### 1.11 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

### PART 2 - PRODUCTS

#### 2.1 CLEANOUTS

- A. Exposed Metal Cleanouts:

- 1. ASME A112.36.2M, Cast-Iron Cleanouts:

- a. Manufacturers: Subject to compliance with requirements, provide products by the following:

- 1) Josam Company.
      - 2) MIFAB, Inc.
      - 3) Smith, Jay R. Mfg. Co.
      - 4) Tyler Pipe.
      - 5) Watts Drainage Products.
      - 6) Zurn Plumbing Products Group.
      - 7) Wade
      - 8) Or approved equal.

- B. Metal Floor Cleanouts:

- 1. ASME A112.36.2M, Cast-Iron Cleanouts:

- a. Manufacturers: Subject to compliance with requirements, provide products by the following and provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- 1) Josam Company.
      - 2) Oatey.
      - 3) Sioux Chief Manufacturing Co., Inc.
      - 4) Smith, Jay R. Mfg. Co.
      - 5) Tyler Pipe.
      - 6) Watts Drainage Products.
      - 7) Zurn Plumbing Products Group.
      - 8) Wade
      - 9) Or approved equal.

**C. Cast-Iron Wall Cleanouts:**

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Josam Company; Josam Div.
  - b. MIFAB, Inc.
  - c. Smith, Jay R. Mfg. Co.
  - d. Tyler Pipe; Wade Div.
  - e. Watts Drainage Products.
  - f. Zurn Plumbing Products Group; Specification Drainage Operation.
  - g. Wade
  - h. Or approved equal.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk cast-iron plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, deep, chrome-plated bronze cover plate with screw.
8. Wall Access: Round, nickel-bronze, wall-installation frame and cover.

**2.2 FLOOR DRAINS****A. Cast-Iron Floor Drains:**

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Commercial Enameling Co.
  - b. Josam Company; Josam Div.
  - c. MIFAB, Inc.
  - d. Prier Products, Inc.
  - e. Smith, Jay R. Mfg. Co.
  - f. Tyler Pipe; Wade Div.
  - g. Watts Drainage Products.
  - h. Zurn Plumbing Products Group
  - i. Or approved equal.
2. Standard: ASME A112.6.3.

**2.3 AIR-ADMITTANCE VALVES****A. Fixture Air-Admittance Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Ayrlett, LLC.
  - b. Durgo, Inc.
  - c. Oatey.
  - d. ProSet Systems Inc.
  - e. RectorSeal.
  - f. Studor, Inc.

- g. Or approved equal.
  - 2. Standard: ASSE 1051, Type A for single fixture or Type B for branch piping.
  - 3. Housing: Plastic.
  - 4. Operation: Mechanical sealing diaphragm.
  - 5. Size: Same as connected fixture or branch vent piping.
- B. Stack Air-Admittance Valves:
- 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Durgo, Inc.
    - b. Oatey.
    - c. Studor, Inc.
    - d. Or approved equal.
  - 2. Standard: ASSE 1050 for vent stacks.
  - 3. Housing: Plastic.
  - 4. Operation: Mechanical sealing diaphragm.
  - 5. Size: Same as connected stack vent or vent stack.
- C. Wall Box:
- 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Durgo, Inc.
    - b. Oatey.
    - c. RectorSeal.
    - d. Studor, Inc.
    - e. Or approved equal.
  - 2. Description: White plastic housing with white plastic grille, made for recessed installation. Include bottom pipe connection and space to contain one air-admittance valve.
  - 3. Size: About 9 inches wide by 8 inches high by 4 inches deep (230 mm wide by 200 mm high by 100 mm deep).

## 2.4 ROOF FLASHING ASSEMBLIES

- A. Roof Flashing Assemblies:
- 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Acorn Engineering Company; Elmdor/Stoneman Div.
    - b. Thaler Metal Industries Ltd.
    - c. Oatey
    - d. Or approved equal.
  - 2. Description: Manufactured assembly made of 6.0-lb/sq. ft. (30-kg/sq. m), 0.0938-inch- (2.4-mm-) thick, lead flashing collar and skirt extending at least 10 inches (250 mm) from pipe, with galvanized-steel boot reinforcement and counterflashing fitting.

- a. Open-Top Vent Cap: Without cap.
- b. Low-Silhouette Vent Cap: With vandal-proof vent cap.
- c. Extended Vent Cap: With field-installed, vandal-proof vent cap.

## 2.5 THROUGH-PENETRATION FIRESTOP ASSEMBLIES

### A. Through-Penetration Firestop Assemblies:

- 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. ProSet Systems Inc.
  - b. Hilti
  - c. 3M
  - d. Or approved equal.
- 2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
- 3. Size: Same as connected soil, waste, or vent stack.
- 4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
- 5. Special Coating: Corrosion resistant on interior of fittings.
- 6. See Section 07 84 10 "Firestopping" for additional requirements.

## 2.6 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

### A. Open Drains:

- 1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
- 2. Size: Same as connected waste piping with increaser fitting of size indicated.

### B. Deep-Seal Traps:

- 1. Description: Cast-iron or bronze casting, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
- 2. Size: Same as connected waste piping.
  - a. NPS 2 (DN 50): 4-inch- (100-mm-) minimum water seal.
  - b. NPS 2-1/2 (DN 65) and Larger: 5-inch- (125-mm-) minimum water seal.

### C. Air-Gap Fittings:

- 1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
- 2. Body: Bronze or cast iron.
- 3. Inlet: Opening in top of body.
- 4. Outlet: Larger than inlet.
- 5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

### D. Sleeve Flashing Device:

1. Description: Manufactured, cast-iron fitting, with clamping device, that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend 1 inch (25 mm) above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
2. Size: As required for close fit to riser or stack piping.

**E. Stack Flashing Fittings:**

1. Description: Counterflashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
2. Size: Same as connected stack vent or vent stack.

**F. Vent Caps:**

1. Description: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
2. Size: Same as connected stack vent or vent stack.

**G. Frost-Resistant Vent Terminals:**

1. Description: Manufactured or shop-fabricated assembly constructed of copper, lead-coated copper, or galvanized steel.
2. Design: To provide 1-inch (25-mm) enclosed air space between outside of pipe and inside of flashing collar extension, with counterflashing.

**H. Expansion Joints:**

1. Standard: ASME A112.21.2M.
2. Body: Cast iron with bronze sleeve, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected soil, waste, or vent piping.

**2.7 FLASHING MATERIALS**

**A. Lead Sheet: ASTM B 749, Type L51121, copper bearing, with the following minimum weights and thicknesses, unless otherwise indicated:**

1. General Use: 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness.
2. Vent Pipe Flashing: 3.0-lb/sq. ft. (15-kg/sq. m), 0.0469-inch (1.2-mm) thickness.
3. Burning: 6-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness.

**B. Copper Sheet: ASTM B 152/B 152M, of the following minimum weights and thicknesses, unless otherwise indicated:**

1. General Applications: 12 oz./sq. ft. (3.7 kg/sq. m or 0.41-mm thickness).
2. Vent Pipe Flashing: 8 oz./sq. ft. (2.5 kg/sq. m or 0.27-mm thickness).

**C. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch (1.01-mm) minimum thickness, unless otherwise indicated. Include G90 (Z275) hot-dip galvanized, mill-phosphatized finish for painting if indicated.**

**D. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil (1.01-mm) minimum thickness.**

- E. Fasteners: Metal compatible with material and substrate being fastened.
- F. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- G. Solder: ASTM B 32, lead-free alloy.
- H. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
  - 1. Size same as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
  - 2. Locate at each change in direction of piping greater than 45 degrees.
  - 3. Locate at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
  - 4. Locate at base of each vertical soil and waste stack.
- B. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- C. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- D. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
  - 1. Position floor drains for easy access and maintenance.
  - 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
    - a. Radius, 30 Inches (750 mm) or Less: Equivalent to 1 percent slope, but not less than 1/4-inch (6.35-mm) total depression.
    - b. Radius, 30 to 60 Inches (750 to 1500 mm): Equivalent to 1 percent slope.
    - c. Radius, 60 Inches (1500 mm) or Larger: Equivalent to 1 percent slope, but not greater than 1-inch (25-mm) total depression.
  - 3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
  - 4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- E. Install fixture air-admittance valves on fixture drain piping.
- F. Install stack air-admittance valves at top of stack vent and vent stack piping.

- G. Install air-admittance-valve wall boxes recessed in wall.
- H. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- I. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.
- J. Install through-penetration firestop assemblies in plastic conductors and stacks at floor penetrations.
- K. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- L. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
  - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
  - 2. Size: Same as floor drain inlet.
- M. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- N. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- O. Install vent caps on each vent pipe passing through roof.
- P. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch (25-mm) clearance between vent pipe and roof substrate.
- Q. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.
- R. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch (25-mm) clearance between vent pipe and roof substrate.
- S. Install wood-blocking reinforcement for wall-mounting-type specialties.
- T. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

### 3.3 CONNECTIONS

- A. Comply with requirements in Section 22 13 16 "Sanitary Waste and Vent Piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

### 3.4 FLASHING INSTALLATION

- A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:

1. Lead Sheets: Burn joints of lead sheets 6.0-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of lead sheets 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness or thinner.
  2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches (250 mm), and skirt or flange extending at least 8 inches (200 mm) around pipe.
  2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.
  3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Section 07 62 00 "Sheet Metal Flashing and Trim."
- F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.
- G. Fabricate and install flashing and pans, sumps, and other drainage shapes.
- 3.5 LABELING AND IDENTIFYING
- A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."
- 3.6 FIELD QUALITY CONTROL
- A. Perform tests and inspections and prepare test reports.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled grease removal devices and their installation, including piping and electrical connections, and to assist in testing.
- C. Tests and Inspections:
1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- 3.7 PROTECTION
- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to train The City of New York's service personnel to adjust, operate, and maintain grease removal devices.

END OF SECTION 22 13 19

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 13 24**  
**INLINE MACERATORS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. References
  - 1. Grinder(s) shall, as applicable, meet the requirements of the following industry standards:
    - a. American Society for Testing and Materials (ASTM) A 36: Standard Specification for Carbon Steel Plate
    - b. American Society for Testing and Materials (ASTM) A 536-84: Standard Specification for Ferritic Ductile Iron Castings
    - c. American Society for Testing and Materials (ASTM) B-16.42-1979: Standard Specification for Class 40 Grey Iron Castings
    - d. American National Standards Institute Standards (ANSI) B16.42-1979, Class 150 (Ductile Iron Class 150) Flanges.
    - e. American Iron and Steel Institute (AISI) 303 Stainless Steel
    - f. American Iron and Steel Institute (AISI) 4130 Heat Treated Alloy Steel
    - g. American Iron and Steel Institute (AISI) 4140 Heat Treated Hexagon Steel
    - h. Rockwell Hardness Scale C.

**1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (Voc) Limits for Adhesives, Sealants, Paints And Coatings for Leed Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.3 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.4 PERFORMANCE REQUIREMENTS**

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Subject to Compliance with requirements, provide SaniBest by Saniflo or a comparable product by one of the following:
  - 1. Yeomans Chicago Corporation: Sewer Chewer
  - 2. Franklin Miller
  - 3. Or approved equal

**2.2 PRODUCT DATA**

- A. Grinder(s)
  - 1. Grinder/pump is manufactured in factory.
- B. Pipe Connections: Sleeved openings large enough for mechanical sleeve seals for drainage piping. Sleeves and mechanical sleeve seals are specified in Division 22 Section "Common Work Results for Plumbing" and drainage piping is specified in Division 22 Section "Sanitary Waste and Vent Piping".

**PART 3 - EXECUTION**

**3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.

- B. Examine walls, floors, cabinets, and counters for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install supports, affixed to building substrate, for wall-mounted fixtures.
  - 1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
  - 2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
  - 3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- B. Install water-supply piping with stop on each supply to each fixture to be connected to water-distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
  - 1. Exception: Use ball, gate, or globe valve if supply stops are not specified with fixture. Comply with valve requirements specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- C. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts, if faucets are not available with required rates and patterns. Include adapters if required.
- D. Install traps on fixture outlets.
  - 1. Exception: Omit trap on fixtures with integral traps.
- E. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with requirements for water piping specified in Section 22 11 16 "Domestic Water Piping."
- C. Comply with requirements for soil and waste drainage piping and vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- D. Comply with requirements for atmospheric vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- E. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."

**3.5 ADJUSTING**

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning healthcare plumbing fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

**3.6 CLEANING AND PROTECTION**

- A. Clean plumbing fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- B. Provide protective covering for installed fixtures and fittings.

**END OF SECTION 22 13 24**

**SECTION 22 13 29****SUMP PUMPS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

**1.2 SUMMARY**

- A. Section Includes:
1. Elevator pit sump pumps.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
1. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 SUBMITTALS**

- A. Product Data: For each type and size of sewage pump specified. Include the following:
  - 1. System design information sheets indicating design parameters pump type, capacity and power requirements.
  - 2. Pump material and construction drawing.
  - 3. Pump curve indicating design point.
  - 4. Detailed sequence of operation.
  - 5. Electrical power and control wiring diagrams with indication of field wiring connections.
  - 6. Catalog information on major components.
  - 7. All of the above shall be specifically prepared and certified for this project.
- B. Submittals which are generic and not specifically designed to meet the requirements of this project shall not be acceptable.
- C. Operation and Maintenance Data: For each pump to include in emergency, operation, and maintenance manuals.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Reference Standards:
  - 1. Hydraulic Institute
  - 2. NEMA MG 1: Motors and Generators
  - 3. NFPA 70: National Electrical Code
  - 4. UL 508: Standard for Industrial Control Equipment
  - 5. UL 778 for motor-operated water pumps
- C. Firms regularly engaged in manufacture of the specified product and system whose products have been in satisfactory use, in similar service, for not less than ten (10) years.
- D. Prior to shipment the pump manufacturer shall perform quality assurance tests to include: checks for compliance with specifications, operating the pumps submerged in water and verification of the integrity of the motor and cable insulation.
- E. The manufacturer of pumping equipment, or his representative, shall be responsible for the complete pumping system and its satisfactory performance as described in this section and shall provide a written guarantee covering all the equipment as well as the system performance for 12 months from date of start-up, not exceeding 18 months from date of shipment, additional extended Warranty shall apply if included below. The services of a factory trained technician shall be provided for start-up and instruction of maintenance personnel.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to NYC DOB, and marked for intended use.

**1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Retain shipping flange protective covers and protective coatings during storage.
- B. Protect bearings and couplings against damage.

- C. Comply with pump manufacturer's written rigging instructions for handling.

#### 1.9 COORDINATION

- A. Coordinate size and location of concrete pits. Concrete, reinforcement, and formwork requirements are specified in Section 03 30 00 "Cast-in-Place Concrete".

### PART 2 - PRODUCTS

#### 2.1 ELEVATOR PIT SUMP PUMPS

- A. Manufacturer: Subject to compliance with requirements, provide Stancor - Oil-Minder GAF Series (Basis-of-Design), or an equivalent product by an approved manufacturer listed below:
  - 1. Liberty pumps
  - 2. Zoeller
  - 3. Or approved equal.
- B. The installed pump and control system shall be a permanent installation in accordance with ASME Elevator Code A17.1. It shall be capable of automatically pumping water from the pit while preventing the discharge of oil. The control unit, pump, floats and sensor probe shall be factory assembled as a complete, ready to use system and shall be tested and approved by a nationally recognized testing laboratory such as ENTELA.
  - 1. Elevator sump pump systems that do not automatically prevent the discharge of oil or that alarm only in the event of a high liquid condition will not be considered for substitution. Only a complete pump and control system that has been tested and certified, by a nationally recognized testing laboratory, to perform in accordance with the specified operation shall be accepted.
- C. The pump shall be a heavy duty submersible effluent type capable of passing a minimum 3/4" solid, approved to UL 778 standards. Construction features shall include cast iron casing and impeller, mechanical seals housed in a separate oil-filled compartment and 304 stainless steel motor housing.
- D. The control system shall provide for fully automatic pump operation and alarm activation in the event of:
  - 1. Oil present in the sump pit
  - 2. High liquid level
  - 3. High motor amps or a locked rotor
- E. The control system shall include: pump control panel; self-cleaning stainless steel oil sensing probe; and dual floats for automatic pump operation and level alarm. The controls shall be factory assembled as a complete, ready to use system and shall be tested and approved to UL 508 standards.
- F. The pump control panel shall be a NEMA 4X, watertight, dust tight, corrosion resistant, gasketed enclosure. The control panel shall include dual "Oil-Minder Relays" with variable sensitivity settings, magnetic contactor with separate over-current relay, Audio-visual alarm station with light, horn, alarm silencing switch, auxiliary contact for common trouble alarm and clearly marked terminal board.
- G. Pump and float cables, 16' each, shall be provided by the manufacturer.

1. Alternative longer cable lengths shall be provided as required, Contractor to coordinate.
- H. Provide a steel frame and cover suitable for a concrete pit as shown on the drawings. The cover shall have all required openings for the pump discharge lines, float switches and pump removal.
- I. Capacities, Characteristics & Quantity: See Schedule.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine roughing-in for plumbing piping to verify actual locations of sanitary drainage and vent piping connections before pump installation.

### 3.3 CONCRETE

- A. Install concrete bases of dimensions indicated for pumps and controllers. Refer to Division 22 Section "Common Work Results for Plumbing."
  1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
  2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

### 3.4 INSTALLATION

- A. Excavating, trenching, and backfilling are specified in section 31 00 00 "Earthwork"
- B. Install pumps according to applicable requirements in HI 1.4.
- C. Set submersible pumps on pit floors. Make direct connections to sanitary drainage piping.
  1. Anchor guide-rail supports to pit bottoms and covers. Install pumps so pump and discharge pipe disconnecting flanges make positive seals when pumps are lowered into place.
- D. Construct pump pits and connect to drainage and vent piping. Set pit curb frame recessed in and anchored to concrete. Fasten pit cover to pit curb flange. Install cover so top surface is flush with finished floor.

### 3.5 CONNECTIONS

- A. Piping installation requirements are specified in Division 22 Section "Sanitary Waste and Vent Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

- B. Install piping adjacent to pumps to allow service and maintenance.
- C. Connect sanitary drainage and vent piping to pumps. Install discharge piping equal to or greater than size of pump discharge piping. Install vent piping equal to or greater than size of pump basin vent connection. Refer to Division 22 Section "Sanitary Drainage and Vent Piping."
  - 1. Install check and shutoff valves on discharge piping from each pump. Install unions on pumps having threaded pipe connections. Install valves same size as connected piping. Refer to Division 26 Section "General-Duty Valves for Plumbing Piping" for general-duty valves for sanitary waste piping.
- D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

### 3.6 STARTUP SERVICE

- A. Prior to startup the Contractor shall perform the following:
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Hang submersible pump power cables, level control cables and pump removal chains permanently so they do not become entangled in the pumps during operation.
  - 3. Verify that each pump is free to rotate by hand. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
  - 4. Clean pit of all construction debris.
  - 5. Verify that pump controls are correct for required application.
- B. Engage a factory-authorized service representative to perform startup service.
  - 1. Verify that pump controls are correct for required application.
  - 2. Perform motor megger test in accordance with manufacturer's instructions.
  - 3. Start motors.
  - 4. Open discharge valves slowly.
  - 5. Check general mechanical operation of pumps and motors.
  - 6. Set pump controls for automatic start, stop, and alarm operation as required for system application.
  - 7. Verify that pump system operates in accordance with the specification, adjust settings as required. Test and adjust controls and safeties.
  - 8. Remove and replace damaged and malfunctioning components.
- C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to project outside normal occupancy hours for this purpose.

### 3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct The City of New York's service staff to adjust, operate, and maintain controls and pumps. Refer to the DDC General

Conditions for instruction requirements.

**END OF SECTION 22 13 29**

**SECTION 22 14 13****FACILITY STORM DRAINAGE PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Pipe, tube, and fittings.
  2. Specialty pipe fittings.
- B. Related Sections:
1. Section 22 14 29 "Sump Pumps" for storm drainage pumps.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
1. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PERFORMANCE REQUIREMENTS**

- A. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:
  - 1. Storm Drainage Piping: 10-foot head of water.
- B. Seismic Performance: Storm drainage piping and support and installation shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For controlled-flow roof drainage system. Include calculations, plans, and details.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Seismic Qualification Certificates: For storm drainage piping, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- B. Field quality-control reports.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- C. Comply with NSF/ANSI 14, "Plastics Piping System Components and Related Materials," for plastic piping components. Include marking with "NSF-drain" for plastic drain piping and "NSF-sewer" for plastic sewer piping.

**1.10 PROJECT CONDITIONS**

- A. Interruption of Existing Storm-Drainage Service: Do not interrupt service to facilities occupied by The City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
  - 1. Notify the Commissioner no fewer than two days in advance of proposed interruption of storm-drainage service.
  - 2. Do not proceed with interruption of storm-drainage service without the Commissioner written permission.

**PART 2 - PRODUCTS****2.1 PIPING MATERIALS**

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

**2.2 HUBLESS, CAST-IRON SOIL PIPE AND FITTINGS**

- A. Pipe and Fittings: ASTM A 888 or CISPI 301.
- B. CISPI, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ANACO-Husky.
    - b. Dallas Specialty & Mfg. Co.
    - c. Fernco Inc.
    - d. Matco-Norca, Inc.
    - e. MIFAB, Inc.
    - f. Mission Rubber Company; a division of MCP Industries, Inc.
    - g. Stant.
    - h. Tyler Pipe.
    - i. Or approved equal.
  - 2. Standards: ASTM C 1277 and CISPI 310.
  - 3. Description: Stainless-steel corrugated shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.
- C. Heavy-Duty, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ANACO-Husky.
    - b. Clamp-All Corp.
    - c. Dallas Specialty & Mfg. Co.
    - d. MIFAB, Inc.
    - e. Mission Rubber Company; a division of MCP Industries, Inc.
    - f. Stant.
    - g. Tyler Pipe.
    - h. Or approved equal.
  - 2. Standards: ASTM C 1277 and ASTM C 1540.
  - 3. Description: Stainless-steel shield with stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve with integral, center pipe stop.
- D. Cast-Iron, Hubless-Piping Couplings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following to, the follow:
    - a. MG Piping Products Company.

- b. ANACO-Husky.
  - c. Clamp-All Corp.
  - d. Dallas Specialty & Mfg. Co.
  - e. Or approved equal.
- 2. Standard: ASTM C 1277.
  - 3. Description: Two-piece ASTM A 48/A 48M, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve with integral, center pipe stop.

## 2.3 SPECIALTY PIPE FITTINGS

### A. Transition Couplings:

- 1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
- 2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified-piping-system fitting.
- 3. Unshielded, Non-pressure Transition Couplings:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Dallas Specialty & Mfg. Co.
    - 2) Fernco Inc.
    - 3) ANACO-Husky.
    - 4) Clamp-All Corp.
    - 5) Dallas Specialty & Mfg. Co.
    - 6) Mission Rubber Company; a division of MCP Industries, Inc.
    - 7) Or approved equal.
  - b. Standard: ASTM C 1173.
  - c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
  - d. Sleeve Materials:
    - 1) For Cast-Iron Soil Pipes: ASTM C 564, rubber.
    - 2) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.
- 4. Shielded, Non-pressure Transition Couplings:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Cascade Waterworks Mfg. Co.
    - 2) Mission Rubber Company; a division of MCP Industries, Inc.
    - 3) ANACO-Husky.
    - 4) Clamp-All Corp.
    - 5) Or approved equal.
  - b. Standard: ASTM C 1460.

- c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.
- 5. Pressure Transition Couplings:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Cascade Waterworks Mfg. Co.
    - 2) Dresser, Inc.
    - 3) EBAA Iron, Inc.
    - 4) Ford Meter Box Company, Inc. (The)
    - 5) JCM Industries, Inc.
    - 6) Romac Industries, Inc.
    - 7) Smith-Blair, Inc.; a Sensus company.
    - 8) Viking Johnson; c/o Mueller Co.
    - 9) Or approved equal.
  - b. Standard: AWWA C219.
  - c. Description: Metal, sleeve-type couplings same size as, with pressure rating at least equal to and ends compatible with, pipes to be joined.
  - d. Center-Sleeve Material: Ductile iron.
  - e. Gasket Material: Natural or synthetic rubber.
  - f. Metal Component Finish: Corrosion-resistant coating or material.
- B. Dielectric Fittings:
  - 1. General Requirements: Assembly of copper alloy and ferrous materials with separating nonconductive insulating material. Include end connections compatible with pipes to be joined.
  - 2. Dielectric Unions:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Capitol Manufacturing Company.
      - 2) Central Plastics Company.
      - 3) Hart Industries International, Inc.
      - 4) Jomar International Ltd.
      - 5) Matco-Norca, Inc.
      - 6) McDonald, A. Y. Mfg. Co.
      - 7) Watts Regulator Co.; a division of Watts Water Technologies, Inc.
      - 8) Wilkins; a Zurn company.
      - 9) Or approved equal.
    - b. Description:
      - 1) Standard: ASSE 1079.
      - 2) Pressure Rating 250 psig (1725 kPa).
      - 3) End Connections: Solder-joint copper alloy and threaded ferrous.
  - 3. Dielectric Flanges:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Capitol Manufacturing Company.
    - 2) Central Plastics Company.
    - 3) Matco-Norca, Inc.
    - 4) Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    - 5) Wilkins; a Zurn company.
    - 6) Or approved equal.
  - b. Description:
    - 1) Standard: ASSE 1079.
    - 2) Factory-fabricated, bolted, companion-flange assembly.
    - 3) Pressure Rating: 175 psig (1200 kPa) minimum.
    - 4) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
4. Dielectric-Flange Insulating Kits:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Advance Products & Systems, Inc.
    - 2) Calpico, Inc.
    - 3) Central Plastics Company.
    - 4) Pipeline Seal and Insulator, Inc.
    - 5) Or approved equal.
  - b. Description:
    - 1) Nonconducting materials for field assembly of companion flanges.
    - 2) Pressure Rating: 150 psig (1035 kPa).
    - 3) Gasket: Neoprene or phenolic.
    - 4) Bolt Sleeves: Phenolic or polyethylene.
    - 5) Washers: Phenolic with steel-backing washers.
5. Dielectric Nipples:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Elster Perfection.
    - 2) Grinnell Mechanical Products.
    - 3) Matco-Norca, Inc.
    - 4) Precision Plumbing Products, Inc.
    - 5) Victaulic Company.
    - 6) Or approved equal.
  - b. Description:
    - 1) Electroplated steel nipple complying with ASTM F 1545.
    - 2) Pressure Rating: 300 psig 225 deg F.
    - 3) End Connections: Male threaded or grooved.

- 4) Lining: Inert and noncorrosive, propylene.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations from layout are approved on coordination drawings.
- B. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- K. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- L. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- M. Install storm drainage piping at the following minimum slopes unless otherwise indicated:
1. Building Storm Drain: 1 percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; 1 percent downward in direction of flow for piping NPS 4 (DN 100) and larger.

2. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.
  - N. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
    1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.
  - O. Install steel piping according to applicable plumbing code.
  - P. Install aboveground copper tubing according to CDA's "Copper Tube Handbook."
  - Q. Install engineered controlled-flow or siphonic drain specialties and storm drainage piping in locations indicated.
  - R. Install underground, ductile-iron, force-main piping according to AWWA C600. Install buried piping inside building between wall and floor penetrations and connection to storm sewer piping outside building with restrained joints. Anchor pipe to wall or floor. Install thrust-block supports at vertical and horizontal offsets.
    1. Install encasement on piping according to ASTM A 674 or AWWA C105.
  - S. Install underground, copper, force-main tubing according to CDA's "Copper Tube Handbook."
    1. Install encasement on piping according to ASTM A 674 or AWWA C105.
  - T. Install force mains at elevations indicated.
  - U. Plumbing Specialties:
    1. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers in storm drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping. Comply with requirements for cleanouts specified in Section 22 14 23 "Storm Drainage Piping Specialties."
    2. Install drains in storm drainage gravity-flow piping. Comply with requirements for drains specified in Section 22 14 23 "Storm Drainage Piping Specialties."
  - V. Do not enclose, cover, or put piping into operation until it is inspected and approved by Commissioner.
  - W. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
  - X. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 05 17 "Sleeves and Sleeve Seals for Plumbing Piping."
  - Y. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 05 18 "Escutcheons for Plumbing Piping."
- 3.3 JOINT CONSTRUCTION
- A. Hubless, Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-piping coupling joints.

- B. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- C. Join copper tube and fittings with soldered joints according to ASTM B 828 procedure. Use ASTM B 813, water-flushable, lead-free flux and ASTM B 32, lead-free-alloy solder.
- D. Grooved Joints: Cut groove ends of pipe according to AWWA C606. Lubricate and install gasket over ends of pipes or pipe and fittings. Install coupling housing sections, over gasket, with keys seated in piping grooves. Install and tighten housing bolts.
- E. Flanged Joints: Align bolt holes. Select appropriate gasket material, size, type, and thickness. Install gasket concentrically positioned. Use suitable lubricants on bolt threads. Torque bolts in cross pattern.

### 3.4 SPECIALTY PIPE FITTING INSTALLATION

- A. Transition Couplings:
  - 1. Install transition couplings at joints of piping with small differences in OD's.
  - 2. In Drainage Piping: Shielded, non-pressure transition couplings.
  - 3. In Aboveground Force-Main Piping: Fitting-type transition couplings.
  - 4. In Underground Force-Main Piping:
    - a. NPS 1-1/2 (DN 40) and Smaller: Fitting-type transition couplings.
    - b. NPS 2 (DN 50) and Larger: Pressure transition couplings.
- B. Dielectric Fittings:
  - 1. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
  - 2. Dielectric Fittings for NPS 2 (DN 50) and Smaller: Use dielectric nipples or unions.
  - 3. Dielectric Fittings for NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Use dielectric flange kits.
  - 4. Dielectric Fittings for NPS 5 (DN 125) and Larger: Use dielectric flange kits.

### 3.5 VALVE INSTALLATION

- A. General valve installation requirements are specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- B. Shutoff Valves: Install shutoff valve on each sump pump discharge.
  - 1. Install gate or full-port ball valve for piping NPS 2 (DN 50) and smaller.
  - 2. Install gate valve for piping NPS 2-1/2 (DN 65) and larger.
- C. Check Valves: Install swing-check valve, between pump and shutoff valve, on each sump pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to backflow.

1. Horizontal Piping: Horizontal backwater valves. Use normally closed type unless otherwise indicated.
2. Install backwater valves in accessible locations.
3. Comply with requirements for backwater valves specified in Section 22 14 23 "Storm Drainage Piping Specialties."

### 3.6 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements for seismic-restraint devices specified in Section 22 05 48 "Vibration and Seismic Controls for Plumbing Piping and Equipment."
- B. Comply with requirements for pipe hanger and support devices and installation specified in Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
  1. Install carbon-steel pipe hangers for horizontal piping in noncorrosive environments.
  2. Install stainless-steel pipe hangers for horizontal piping in corrosive environments.
  3. Install carbon-steel pipe support clamps for vertical piping in noncorrosive environments.
  4. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
  5. Vertical Piping: MSS Type 8 or Type 42, clamps.
  6. Individual, Straight, Horizontal Piping Runs:
    - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
    - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
    - c. Longer Than 100 Feet (30 m) if Indicated: MSS Type 49, spring cushion rolls.
  7. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  8. Base of Vertical Piping: MSS Type 52, spring hangers.
- C. Support horizontal piping and tubing within 12 inches (300 mm) of each fitting, valve, and coupling.
- D. Support vertical piping and tubing at base and at each floor.
- E. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- F. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
  1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
  2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
  3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
  4. NPS 6 and NPS 8 (DN 150 and DN 200): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
  5. NPS 10 and NPS 12 (DN 250 and DN 300): 60 inches (1500 mm) with 7/8-inch (22-mm) rod.
  6. Spacing for 10-foot (3-m) pipe lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).
- G. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).

- H. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/4 (DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
  - 2. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
  - 3. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
  - 4. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
  - 5. NPS 3 (DN 80): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
  - 6. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
  - 7. NPS 6 and NPS 8 (DN 150 and DN 200): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
  - 8. NPS 10 and NPS 12 (DN 250 and DN 300): 12 feet (3.7 m) with 7/8-inch (22-mm) rod.
- I. Install supports for vertical steel piping every 15 feet (4.5 m).
- J. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
  - 1. NPS 1-1/4 (DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
  - 2. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
  - 3. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
  - 4. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
  - 5. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
  - 6. NPS 8 (DN 200): 10 feet (3 m) with 3/4-inch (19-mm) rod.
- K. Install supports for vertical copper tubing every 10 feet (3 m).
- L. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

### 3.7 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.
- C. Connect storm drainage piping to roof drains and storm drainage specialties.
  - 1. Install test tees (wall cleanouts) in conductors near floor, and floor cleanouts with cover flush with floor.
  - 2. Install horizontal backwater valves with cleanout cover flush with floor.
  - 3. Comply with requirements for cleanouts and drains specified in Section 22 14 23 "Storm Drainage Piping Specialties."
- D. Connect force-main piping to the following:
  - 1. Storm Sewer: To rainwater harvesting tank.
  - 2. Sump Pumps: To sump pump discharge.
- E. Where installing piping adjacent to equipment, allow space for service and maintenance of equipment.
- F. Make connections according to the following unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.

### 3.8 IDENTIFICATION

- A. Identify exposed storm drainage piping. Comply with requirements for identification specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."

### 3.9 FIELD QUALITY CONTROL

- A. During installation, notify Commissioner at least 24 hours before inspection must be made. Perform tests specified below in presence of Commissioner.
  1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
  2. Final Inspection: Arrange for final inspection by New York City Department of Buildings to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If New York City Department of Buildings find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by Commissioner.
- D. Test storm drainage piping according to procedures of 2014 NYCPC and New York City Department of Buildings or, in absence of published procedures, as follows:
  1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
  3. Test Procedure: Test storm drainage piping on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water (30 kPa). From 15 minutes before inspection starts until completion of inspection, water level must not drop. Inspect joints for leaks.
  4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  5. Prepare reports for tests and required corrective action.
- E. Test force-main piping according to procedures of New York City Department of Buildings or, in absence of published procedures, as follows:
  1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
  2. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
  3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.

4. Prepare reports for tests and required corrective action.

### 3.10 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

### 3.11 PIPING SCHEDULE

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground storm drainage piping NPS 8 (DN 150) and smaller shall be the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, hubless-piping couplings; and coupled joints.
  3. Galvanized-steel pipe, drainage fittings, and threaded joints.
  4. Dissimilar Pipe-Material Couplings: Unshielded, non-pressure transition couplings.
- C. Aboveground, storm drainage piping NPS 8 (DN 200) and larger shall be any of the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings; CISPI, heavy-duty, hubless-piping couplings; and coupled joints.
  3. Dissimilar Pipe-Material Couplings: Unshielded, non-pressure transition couplings.
- D. Aboveground storm drainage force mains NPS 1-1/2 and NPS 2 (DN 40 and DN 50) shall be any of the following:
  1. Cast iron
- E. Aboveground storm drainage force mains NPS 2-1/2 to NPS 6 (DN 65 to DN 150) shall be any of the following:
  1. Cast Iron.

**END OF SECTION 22 14 13**

THIS PAGE INTENTIONALLY LEFT BLANK

## SECTION 22 14 23

## STORM DRAINAGE PIPING SPECIALTIES

## PART 1 - GENERAL

## 1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

## 1.2 SUMMARY

- A. Section Includes:
1. Roof drains.
  2. Miscellaneous storm drainage piping specialties.
  3. Cleanouts.
  4. Through-penetration firestop assemblies.
  5. Flashing materials.

## 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

## 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
1. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

## 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

## PART 2 - PRODUCTS

### 2.1 METAL ROOF DRAINS (SEE SCHEDULE)

- A. Cast-Iron, Large-Sump, General-Purpose Roof Drains:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Josam Company.
    - b. Marathon Roofing Products.
    - c. MIFAB, Inc.
    - d. Smith, Jay R. Mfg. Co.
    - e. Tyler Pipe.
    - f. Watts Water Technologies, Inc.
    - g. Zurn Plumbing Products Group; Specification Drainage Operation.
    - h. Or approved equal.
  - 2. Standard: ASME A112.6.4, for general-purpose roof drains.
  - 3. Body Material: Cast iron.
  - 4. Dimension of Body: Nominal 14-inch (357-mm) diameter.
  - 5. Combination Flashing Ring and Gravel Stop: Required.
  - 6. Flow-Control Weirs: Required.
  - 7. Outlet: Bottom.
  - 8. Extension Collars: Required.
  - 9. Underdeck Clamp: Required.
  - 10. Expansion Joint: Required.
  - 11. Sump Receiver Plate: Required.
  - 12. Dome Material: Aluminum.
  - 13. Perforated Gravel Guard: Stainless steel.
  - 14. Vandal-Proof Dome: Required.
  - 15. Water Dam: 2 inches (51 mm) high.

### 2.2 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

- A. Downspout Adaptors:
  - 1. Description: Manufactured, gray-iron casting, for attaching to horizontal-outlet, parapet roof drain and to exterior, sheet metal downspout.

2. Size: Inlet size to match parapet drain outlet.

**B. Downspout Boots:**

1. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; NPS 4 (DN 100) outlet; and shop-applied bituminous coating.
2. Size: Inlet size to match downspout and NPS 4 (DN 100) outlet.

**C. Conductor Nozzles:**

1. Description: Bronze body with threaded inlet and bronze wall flange with mounting holes.
2. Size: Same as connected conductor.

**2.3 CLEANOUTS**

**A. Floor Cleanouts:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Josam Company.
  - b. Oatey.
  - c. Sioux Chief Manufacturing Company, Inc.
  - d. Smith, Jay R. Mfg. Co.
  - e. Tyler Pipe.
  - f. Watts Water Technologies, Inc.
  - g. Zurn Plumbing Products Group; Light Commercial Products Operation.
  - h. Zurn Plumbing Products Group; Specification Drainage Operation.
  - i. Or approved equal.
2. Standard: ASME A112.36.2M, for cast-iron soil pipe with cast-iron ferrule cleanouts.
3. Size: Same as connected branch.
4. Type: Cast-iron soil pipe with cast-iron ferrule.
5. Body or Ferrule Material: Cast iron.
6. Clamping Device: Not required.
7. Outlet Connection: Threaded.
8. Closure: Brass plug with tapered threads.
9. Adjustable Housing Material: Cast iron with threads.
10. Frame and Cover Material and Finish: Nickel-bronze, copper alloy.
11. Frame and Cover Shape: Round.
12. Top-Loading Classification: Heavy Duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

**B. Test Tees:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Josam Company.
  - b. MIFAB, Inc.
  - c. Smith, Jay R. Mfg. Co.
  - d. Tyler Pipe.
  - e. Watts Water Technologies, Inc.
  - f. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M and ASTM A 74, ASTM A 888, or CISPI 301, for cleanout test tees.
3. Size: Same as connected drainage piping.
4. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or hubless, cast-iron soil-pipe test tee as required to match connected piping.
5. Closure Plug: Countersunk.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

**C. Wall Cleanouts:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Josam Company.
  - b. MIFAB, Inc.
  - c. Smith, Jay R. Mfg. Co.
  - d. Tyler Pipe.
  - e. Watts Water Technologies, Inc.
  - f. Zurn Plumbing Products Group; Specification Drainage Operation.
  - g. Or approved equal.
3. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
4. Size: Same as connected drainage piping.
5. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch as required to match connected piping.
6. Closure: Countersunk brass plug.
7. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
8. Wall Access: Round, deep, chrome-plated bronze cover plate with screw.
9. Wall Access: Round wall-installation frame and cover.

**2.4 THROUGH-PENETRATION FIRESTOP ASSEMBLIES**

**A. Through-Penetration Firestop Assemblies:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. ProSet Systems Inc.
  - b. Hilti
  - c. Holdrite
  - d. Or approved equal.

2. Standard: ASTM E 814, for through-penetration firestop assemblies.
3. Certification and Listing: Intertek Testing Service NA for through-penetration firestop assemblies.
4. Size: Same as connected pipe.
5. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
6. Stack Fitting: ASTM A 48/A 48M, gray-iron, hubless-pattern, wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
7. Special Coating: Corrosion resistant on interior of fittings.
8. See Section 07 84 10 "Firestopping" for requirements.

## 2.5 FLASHING MATERIALS

- A. Copper Sheet: ASTM B 152/B 152M, 12 oz./sq. ft. (3.7 kg/sq. m or 0.41-mm thickness).
- B. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch (1.01-mm) minimum thickness unless otherwise indicated. Include G90 (Z275) hot-dip galvanized, mill-phosphatized finish for painting if indicated.
- C. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil (1.01-mm) minimum thickness.
- D. Fasteners: Metal compatible with material and substrate being fastened.
- E. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- F. Solder: ASTM B 32, lead-free alloy.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions.
  1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
  2. Install expansion joints, if indicated, in roof drain outlets.
  3. Position roof drains for easy access and maintenance.
- B. Install downspout adapters on outlet of back-outlet parapet roof drains and connect to sheet metal downspouts.
- C. Install downspout boots at grade with top 12 inches (305 mm) above grade. Secure to building wall.
- D. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.

- E. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
  - 1. Use cleanouts the same size as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
  - 2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
  - 3. Locate cleanouts at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
  - 4. Locate cleanouts at base of each vertical soil and waste stack.
- F. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- G. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- H. Install test tees in vertical conductors and near floor.
- I. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
- J. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface unless otherwise indicated.
- K. Assemble channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- L. Install through-penetration firestop assemblies in plastic conductors at concrete floor penetrations.
- M. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

### 3.3 CONNECTIONS

- A. Comply with requirements for piping specified in Section 22 14 13 "Facility Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

### 3.4 FLASHING INSTALLATION

- A. Fabricate flashing from single piece of metal unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
  - 1. Lead Sheets: Burn joints of 6.0-lb/sq. ft. (30-kg/sq. m) lead sheets, 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of 4.0-lb/sq. ft. (20-kg/sq. m) lead sheets, 0.0625-inch (1.6-mm) thickness or thinner.
  - 2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
  - 1. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches (250 mm) and with skirt or flange extending at least 8 inches (200 mm) around pipe.
  - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.

3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.

C. Set flashing on floors and roofs in solid coating of bituminous cement.

D. Secure flashing into sleeve and specialty clamping ring or device.

Fabricate and install flashing and pans, sumps, and other drainage shapes.

### 3.5 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 14 23

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 35 00****DOMESTIC WATER HEATERS****PART 1 – GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. This section includes condensing gas-fired storage water heaters for potable water.

**1.3 REFERENCES**

- A. ASME Boiler and Pressure vessel code, section IV, Part HLW
- B. UL 795 “Industrial Gas Heating Equipment”
- C. ANSI Z21.10.3 -2004/CSA 4.3-2004 “Gas Water Heaters”
- D. ASHRAE/IES 90.1-2010
- E. ISO 9001 Quality Management System
- F. CSD-1-2009 “Controls and Safety Devices for Automatically Fired Boilers”
- G. NFPA 70- National Electric Code
- H. NFPA 54- National Fuel Gas Code
- I. NSF/ANSI Standard 61- Drinking Water System Components
- J. ASTM G123 - 00(2005) “Standard Test Method for Evaluating Stress-Corrosion Cracking of Stainless Alloys with Different Nickel Content in Boiling Acidified Sodium Chloride Solution.”

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project’s environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 “Construction Waste Management and Disposal”
  - 2. Section 01 81 13 “Sustainable Design Requirements for LEED Buildings”
  - 3. Section 01 81 19 “Indoor Air Quality Requirements for LEED Buildings”

- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.4 SUBMITTALS

- A. **Product Data:** Include rated capacities; shipping, installed, and operating weights; furnished specialties and accessories for each model indicated.
- B. **Shop Drawings:** Detail equipment assemblies and indicate dimensions, required clearances, components, and size of each field connection
- C. **Wiring Diagrams:** Detail for wiring power signal, differentiate between manufacture- installed and field-installed wiring
- D. **Maintenance Data:** Include in the maintenance manuals specified in Division 1. Include maintenance guide and wiring diagrams

#### 1.5 REGULATORY REQUIREMENTS

- A. Conform to applicable code for internal wiring of factory wired equipment
- B. **Units:** ETL, UL or CSA Certified as a Complete Gas Fired Water Heater Assembly.
- C. Gas Train shall comply with ANSI Z.21.10.3 or UL 795.
- D. Conform to ASME Section IV. Part HLW for Water Heater construction.

#### 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. **Listing:** The water heater will be listed ETL listed to UL 795 or ANSI Z21.10.3 -2004/CSA 4.3-2004 “Gas Water Heaters”
- C. **ASME Compliance:** Water heater shall bear the ASME HLW stamp and be National Board listed
- D. Water heaters with full rated input of 800,000 BTU will operate at a minimum 94% thermal efficiency at full firing rate when tested to the ANSI Z21.10.3 thermal efficiency test protocol (DOE 10 CFR 431).
- E. The water heater will comply with current ASHRAE 90.1 requirements.
- F. Water heater manufacturer certified to the ISO 9001 International Quality System.

## 1.7 COORDINATION

- A. Coordinate size and location of concrete bases.

## 1.8 MANUFACTURER'S WARRANTY

- A. Storage tank, heating surfaces, and combustion chamber will have a manufacturer's warranty covering manufacturing or material defects, leaks, the production of rusty water and/or chloride stress corrosion cracking. Period of warranty shall be 15 years from date of substantial completion.
- B. Burner and all heater parts: 1-year manufacturer's warranty from date of substantial completion, for all defects.

## PART 2 – PRODUCTS

### 2.1 MANUFACTURERS

- A. Available Manufacturers: The water heaters shall be manufactured by a company that has achieved certification to the ISO 9001 Quality Management System. Subject to compliance with requirements, provide PVI (Basis-of-Design), or one of the following:
  - 1. AO Smith
  - 2. Rheem
  - 3. Or approved equal.
- B. The water heaters shall be ETL listed as a complete unit. The heater shall satisfy 2014 NYCECC standards for both thermal efficiency and stand-by heat losses as established for gas fired water heaters.

### 2.2 CONSTRUCTION

- A. Water heaters will be of the BTU input(s) and storage capacity indicated on the equipment schedule.
- B. The water heater will be a vertical fire tube, design that is constructed and stamped in accordance with Section IV, Part HLW of the ASME code. Water heater will be National Board Registered for a working pressure of 150 psi and will be pressure tested at 1-1/2 times working pressure.
- C. Water heater will be a single-pass, down-fired, spiraled fire tube design contained within an integral storage tank.
- D. Tank, combustion chamber and fire tubes will be unlined. Lined or plated water heaters will not be acceptable.
- E. Tank, combustion chamber and fire tubes will be constructed from phase-balanced austenitic and ferritic duplex steel with a chemical structure containing a minimum of 21% chromium to prevent corrosion and mill certified per ASTM A 923 Methods A to ensure that the product is free of detrimental chemical precipitation that affects corrosion resistance. The material selected shall be tested and certified to pass stress chloride cracking test protocols as defined in ISO 3651-2 and ASTM G123 - 00(2005) "Standard Test Method for Evaluating Stress-Corrosion Cracking of Stainless Alloys with Different Nickel Content in Boiling Acidified Sodium Chloride Solution."

- F. Waterside surfaces shall be welded internally utilizing joint designs to minimize volume of weld deposit and heat input. All heat affected zones (HAZ) shall be processed after welding to ensure the HAZ corrosion resistance is consistent with the mill condition base metal chemical composition. Weld procedures (amperage, volts, welding speed, filler metals and shielding gases) utilized shall result in a narrow range of austenite-ferrite microstructure content consistent with phase balanced objectives for welds, HAZ and the base metal.
- G. All internal and external tank surfaces shall undergo full immersion passivation and pickling processing to meet critical temperature, duration and chemical concentration controls required to complete corrosion resistance restoration of pressure vessel surfaces. Other passivation and pickling methods are not accepted. Immersion passivation and pickling certification documents are required and shall be provided with each product.
- H. Materials shall meet ASME Section II material requirements and be accepted by NSF 61 for municipal potable water systems. Storage tank materials shall contain more than 80% post-consumer recycled materials and be 100% recyclable.
- I. All water contacting tank surfaces will be non-porous and exhibit 0% water absorption.
- J. All tank connections/fittings will be non-ferrous or stainless steel.
- K. To preserve thermal efficiency, the water heater will not use or require a circulator piped from the hot water outlet to the cold water inlet of the heater for the purpose of temperature control during normal operation. Connection for a building return circulation line will be made to a dedicated hot return fitting at the center of the storage vessel and not the cold inlet piping. Connection to a sidearm tank, if used, will be made to a dedicated hot return fitting at the center of the storage vessel and not the cold inlet piping.
- L. Finished vessel will not require sacrificial anode rods or impressed current anode rods and none will be used. Water heaters or sidearm storage tanks that employ anode rods of any type will not be acceptable.
- M. Combustion will be provided by a premix, fan-assisted surface burner with a gas train meeting UL, ANSI and FM standards for the input specified.
- N. Burner will be stainless steel.
- O. Gas train components will capable of self-proportionating gas and air to maintain optimum combustion in response to varying vent pressures.
- P. At 399,000 BTU input, the burner will be fixed input.
- Q. At 500,000 BTU input and higher, the burner will employ non-linkage modulation utilizing only a VFD drive to vary gas and air.
- R. Burner NOx emissions will be less than 20 ppm when corrected to 3% oxygen.
- S. Water heater will be a category IV, condensing appliance and vent through PVC or Polypropylene. Water heater will satisfy requirements for sealed combustion. Vents for inlet air and exhaust can terminate in different pressure zones.
- T. Water heater will be ETL listed for connection to a concentric vent termination.

## 2.3 PERFORMANCE

- A. When tested to the ANSI Z21.10.3 standard, water heaters with inputs from 400,000 to 600,000 BTU shall operate at 96% thermal efficiency at full firing rate.

When tested to the ANSI Z21.10.3 standard, water heaters with input of 700,000 BTU shall operate at 95% thermal efficiency at full firing rate.

When tested to the ANSI Z21.10.3 standard, water heaters with input of 800,000 BTU shall operate at 94% thermal efficiency at full firing rate.

- B. When modulated to low fire due to lower hot water demand, water heater efficiency can improve to up to 99% thermal efficiency.
- C. Water heater will meet the thermal efficiency and standby heat loss requirements of ASHRAE 90.1 – 2010.

## 2.4 WATER HEATER TRIM

- A. As a minimum, the heater will be equipped with the following:
1. Electronic flame monitoring
  2. Electronic low water cutoff
  3. An immersion operating control
  4. An immersion UL listed temperature limiting device
  5. An ASME- rated temperature and pressure relief valve
- B. Operating and safety controls shall meet the requirements of UL 795 and FM.
- C. The water heater shall employ an electronic operating control with digital temperature readout. Operator shall be capable of connecting to a building automation system through serial connection using Modbus RTU protocol.
- D. A protocol gateway for BacNet MSTP/IP will be provided.
- E. A protocol gateway for Lonworks will be provided.
- F. A protocol gateway for Modbus TCP/IP will be provided.

## PART 3 – EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install water heaters level and plumb in accordance with manufacturers written instructions and referenced standards.

### 3.3 FINISHING

- A. The storage and heating sections shall be completely factory packaged on a single skid, requiring only job site hookup to utilities, venting, and plumbing. The heater shall be insulated to meet ASHRAE 90.1-2010 standby loss requirements and jacketed with a polyethylene liner

consisting of 100% recycled material. Pressure vessel shall include a ball-type drain valve. The heater shall fit properly in the space provided and installation shall conform to 2014 NYCBC.

#### **3.4 START-UP**

- A. Start up on the unit will be performed by installers who are properly trained by the manufacturer. Provide a copy of the startup report to the Commissioner.

**END OF SECTION 22 35 00**

**SECTION 22 43 00****PLUMBING FIXTURES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Refer to fixture schedule on drawings.

**1.3 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.5 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
  - 1. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.6 SUBMITTALS**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fixtures.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.

**1.8 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For plumbing fixtures and faucets to include in operation and maintenance manuals.

**1.9 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Faucet Washers and O-Rings: Equal to 10 percent of amount of each type and size installed.
  - 2. Faucet Cartridges and O-Rings: Equal to 5 percent of amount of each type and size installed.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

**PART 2 - PRODUCTS – SEE SCHEDULE ON DRAWINGS****2.1 SUPPLY FITTINGS**

- A. NSF Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.
- C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
- E. Operation: Loose key.
- F. Risers: NPS 1/2 (DN 15) chrome-plated, rigid-copper pipe and brass straight or offset tailpieces.

**2.2 WASTE FITTINGS**

- A. Standard: ASME A112.18.2/CSA B125.2.

- B. Drain: Grid with NPS 1-1/2 DN 40 tailpiece.
- C. Trap:
  - 1. Size: NPS 1-1/2 (DN 40).
  - 2. Material: Chrome-plated, two-piece, cast-brass trap and swivel elbow with 0.032-inch- (0.83-mm-) thick brass tube to wall; and chrome-plated brass or steel wall flange.
  - 3. Material: Stainless-steel, two-piece trap and swivel elbow with 0.012-inch- (0.30-mm-) thick stainless-steel tube to wall; and stainless-steel wall flange.

## 2.3 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls, floors, cabinets, and counters for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install healthcare plumbing fixtures level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-mounted fixtures.
  - 1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
  - 2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
  - 3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- C. Install water-supply piping with stop on each supply to each fixture to be connected to water-distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
  - 1. Exception: Use ball, gate, or globe valve if supply stops are not specified with fixture. Comply with valve requirements specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."

- D. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts, if faucets are not available with required rates and patterns. Include adapters if required.
- E. Install traps on fixture outlets.
  - 1. Exception: Omit trap on fixtures with integral traps.
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 CONNECTIONS

Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

- A. Comply with requirements for water piping specified in Section 22 11 16 "Domestic Water Piping."
- B. Comply with requirements for soil and waste drainage piping and vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- C. Comply with requirements for atmospheric vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- D. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."

### 3.5 ADJUSTING

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning healthcare plumbing fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

### 3.6 CLEANING AND PROTECTION

- A. After installing healthcare plumbing fixtures, inspect and repair damaged finishes.
- B. Clean plumbing fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed fixtures and fittings.

**END OF SECTION 22 43 00**

**SECTION 22 45 00****EMERGENCY PLUMBING FIXTURES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.3 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.4 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.5 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"

**PART 2 - PRODUCTS**

## 2.1 PRODUCTS

### A. Emergency Drench Showers with Eyewash

1. Description: Plumbed, free-standing with emergency shower and eyewash.
2. Basis-of-Design Product: Subject to compliance with requirements, provide Bradley Model No. S19-310SSJP or a comparable product by one of the following:
  - a) Chicago Faucets.
  - b) Encon Safety Products.
  - c) Guardian Equipment Co.
  - d) Haws Corporation.
  - e) Lab Safety Supply Inc.
  - f) Murdock, Inc.
  - g) Sellstrom Manufacturing Co.
  - h) Speakman Company.
  - i) WaterSaver Faucet Co.
  - j) Western Emergency Equipment.
  - k) Or approved equal.

### B. Water-tempering Equipment:

1. Description: Factory-fabricated, hot- and cold-water-tempering equipment with thermostatic mixing valve Bradley Model No S19-2100.
2. Basis-of-Design Product: Subject to compliance with requirements, provide Bradley tempering valve or a comparable product by one of the following:
  - a) Armstrong International, Inc.
  - b) Bradley Corporation.
  - c) Haws Corporation.
  - d) Leonard Valve Company.
  - e) Or approved equal.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls, floors, cabinets, and counters for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install healthcare plumbing fixtures level and plumb according to roughing-in drawings.

- B. Install supports, affixed to building substrate, for wall-mounted fixtures.
  - 1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
  - 2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
  - 3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- C. Install water-supply piping with stop on each supply to each fixture to be connected to water-distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
  - 1. Exception: Use ball, gate, or globe valve if supply stops are not specified with fixture. Comply with valve requirements specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- D. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts, if faucets are not available with required rates and patterns. Include adapters if required.
- E. Install traps on fixture outlets.
  - 1. Exception: Omit trap on fixtures with integral traps.
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with requirements for water piping specified in Section 221116 "Domestic Water Piping."
- C. Comply with requirements for soil and waste drainage piping and vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- D. Comply with requirements for atmospheric vent piping specified in Section 221316 "Sanitary Waste and Vent Piping."
- E. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."

### 3.5 ADJUSTING

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning healthcare plumbing fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.6 CLEANING AND PROTECTION

- A. After installing healthcare plumbing fixtures, inspect and repair damaged finishes.
- B. Clean plumbing fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed fixtures and fittings.

**END OF SECTION 22 45 00**

**PART 2 - PRODUCTS**

## 2.1 PRODUCTS

### A. Security Combination Units, CUR:

1. Description: Back-mounting, accessible, cabinet, security plumbing fixture with integral water closet and lavatory; fabricated from 0.078-inch minimum thickness, ASTM A 666, Type 304 stainless steel. Include SSINA No. 4 polished finish on exposed surfaces, and corrosion-resistant metal for internal piping and bracing.
2. Basis-of-Design Product: Subject to compliance with requirements, provide Willoughby Industries Model No. ECW- 3696-R-OF-BP-PM2-LW1-TWE-TW5-LF-RTH-WS-FVT-FV-TG-GB or a comparable product by one of the following:
  - a) Acorn Engineering Company.
  - b) Bradley Corporation.
  - c) Metcraft Industries Inc.
  - d) Willoughby Industries, Inc.
  - e) Or approved equal.

### B. Security Combination Units, CUL:

1. Description: Back-mounting, accessible, cabinet, security plumbing fixture with integral water closet and lavatory; fabricated from 0.078-inch minimum thickness, ASTM A 666, Type 304 stainless steel. Include SSINA No. 4 polished finish on exposed surfaces, and corrosion-resistant metal for internal piping and bracing.
2. Basis-of-Design Product: Subject to compliance with requirements, provide Willoughby Industries Model No. ECW- 3696-L-OF-BP-PM2-LW1-TWE-TW5-LF-RTH-WS-FVT-FV-TG-GB or a comparable product by one of the following:
  - a) Acorn Engineering Company.
  - b) Bradley Corporation.
  - c) Metcraft Industries Inc.
  - d) Willoughby Industries, Inc.
  - e) Or approved equal.

### C. Security Combination Units, CUFR:

1. Description: Front-mounting, accessible, cabinet, security plumbing fixture with integral water closet and lavatory; fabricated from 0.078-inch minimum thickness, ASTM A 666, Type 304 stainless steel. Include SSINA No. 4 polished finish on exposed surfaces, and corrosion-resistant metal for internal piping and bracing.
2. Basis-of-Design Product: Subject to compliance with requirements, provide Willoughby Industries Model No. ECW- 3696-R-ON-HC-FA-BP-PM2-CW2-TWE-TW5-LF-RTH-FV-TG-GB or a comparable product by one of the following:
  - a) Acorn Engineering Company.
  - b) Bradley Corporation.
  - c) Metcraft Industries Inc.
  - d) Willoughby Industries, Inc.
  - e) Or approved equal.

### D. Security Combination Units, CUFL:

1. Description: Front-mounting, accessible, cabinet, security plumbing fixture with integral water closet and lavatory; fabricated from 0.078-inch minimum thickness, ASTM A 666,

Type 304 stainless steel. Include SSINA No. 4 polished finish on exposed surfaces, and corrosion-resistant metal for internal piping and bracing.

2. Basis-of-Design Product: Subject to compliance with requirements, provide Willoughby Industries Model No. ECW- 3696-L-ON-HC-FA-BP-PM2-CW2-TWE-TW5-LF-RTH-FV-TG-GB or a comparable product by one of the following:
  - a) Acorn Engineering Company.
  - b) Bradley Corporation.
  - c) Metcraft Industries Inc.
  - d) Willoughby Industries, Inc.
  - e) Or approved equal.

## PART 3 – EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls, floors, cabinets, and counters for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install healthcare plumbing fixtures level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-mounted fixtures.
  1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
  2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
  3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- B. Install water-supply piping with stop on each supply to each fixture to be connected to water-distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
  1. Exception: Use ball, gate, or globe valve if supply stops are not specified with fixture. Comply with valve requirements specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- D. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts, if faucets are not available with required rates and patterns. Include adapters if required.
- E. Install traps on fixture outlets.
  1. Exception: Omit trap on fixtures with integral traps.
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of

accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."

- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with requirements for water piping specified in Section 22 11 16 "Domestic Water Piping."
- C. Comply with requirements for soil and waste drainage piping and vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- D. Comply with requirements for atmospheric vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- E. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."

### 3.5 ADJUSTING

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning healthcare plumbing fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

### 3.6 CLEANING AND PROTECTION

- A. After installing healthcare plumbing fixtures, inspect and repair damaged finishes.
- B. Clean plumbing fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed fixtures and fittings.

**END OF SECTION 22 46 00**

**SECTION 22 47 00****ELECTRIC WATER COOLERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Work included in this section:

- 1. Electric water coolers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

- 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

- 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 QUALITY ASSURANCE

Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 – PRODUCTS

2.1 PRODUCTS

A. Electric Water Cooler:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Elkay barrier-free single level wheelchair access Model EZS8 or a comparable product by one of the following:
  - a. Elkay Manufacturing Co.
  - b. Halsey Taylor.
  - c. Haws Corporation.
  - d. Or approved equal.
2. Description:
  - a. Cabinet: All stainless steel.
  - b. Bubbler: One flexible bubbler that will flex on impact and return to original position.
  - c. Glass Filler: Stainless steel gooseneck glass filler 10" high with plastic push lever control.
  - d. Control: Push bar controls on 3 sides.
  - e. Supply: NPS 3/8 with ball valve.
  - f. Filter: One or more water filters complying with NSF 42 and NSF 53 for cyst and lead reduction to below EPA standards; with capacity sized for unit peak flow rate.
  - g. Drain: Grid with NPS 1-1/4 minimum horizontal waste and trap complying with ASME A112.18.2.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine roughing-in of water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls, floors, cabinets, and counters for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Install healthcare plumbing fixtures level and plumb according to roughing-in drawings.

- B. Install supports, affixed to building substrate, for wall-mounted fixtures.
  - 1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
  - 2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
  - 3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- C. Install water-supply piping with stop on each supply to each fixture to be connected to water-distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
  - 1. Exception: Use ball, gate, or globe valve if supply stops are not specified with fixture. Comply with valve requirements specified in Section 22 05 23 "General-Duty Valves for Plumbing Piping."
- D. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts, if faucets are not available with required rates and patterns. Include adapters if required.
- E. Install traps on fixture outlets.
  - 1. Exception: Omit trap on fixtures with integral traps.
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."
- G. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 "Escutcheons for Plumbing Piping."

### 3.4 CONNECTIONS

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with requirements for water piping specified in Section 221116 "Domestic Water Piping."
- C. Comply with requirements for soil and waste drainage piping and vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- D. Comply with requirements for atmospheric vent piping specified in Section 22 13 16 "Sanitary Waste and Vent Piping."
- E. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 22 07 19 "Plumbing Piping Insulation."

### 3.5 ADJUSTING

- A. Operate and adjust faucets and controls. Replace damaged and malfunctioning healthcare plumbing fixtures, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.
- C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

**3.6 CLEANING AND PROTECTION**

- A. After installing healthcare plumbing fixtures, inspect and repair damaged finishes.
- B. Clean plumbing fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed fixtures and fittings.

**END OF SECTION 22 47 00**

**SECTION 23 05 00****COMMON REQUIREMENTS FOR HVAC WORK****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- C. Section 23 05 93 "Testing, Adjusting and Balancing".
- D. Section 23 09 00 "HVAC Instrumentation and Controls".
- E. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes the following:
  - 1. Design Criteria
  - 2. Reference Standards
  - 3. Definitions and Interpretations
  - 4. Codes, Permits and Inspections
  - 5. Submittals
  - 6. Quality Assurance
  - 7. Delivery, Storage and Handling
  - 8. Coordination
  - 9. Equipment installation requirements common to equipment sections.
  - 10. Painting and finishing.
  - 11. Concrete bases.
  - 12. Supports and anchorages.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.5 SCOPE OF WORK**

- A. All equipment and material to be furnished and installed on this project shall be UL or ETL listed, in conformity with the requirements of Commissioner of NYC Dept. of Buildings and suitable for its intended use on this project.

**1.6 DESIGN CRITERIA**

- A. The following will be used as the basis for design and control of the various systems.
- B. The actual peak cooling load occurs on September 16 at 4 PM, when the outdoor conditions are approx. 90 °F DB/ 74 °F WB.
- C. The perimeter cooling capacities are based on closed shades (south side). The SOP for the lab must be that the shades are closed on peak sunny days.
- D. Refer to table on following page for dry bulb and wet bulb design criteria, for both indoor and outside conditions.

Outside Conditions		
	DRY BULB	WET BULB
Summer (New York City Energy Conservation Code)	89 °F.	73°F
Summer (Equipment Sizing)	95°F.	75°F
Cooling Towers	--	78°F
Winter (New York City Energy Conservation Code)	13°F.	--
Winter (Equipment Sizing)	0°F.	--

Indoor Conditions				
Occupancy	Summer		Winter	
	DB	RH	DB	RH
Offices	75°F ± 2°F	50% ± 5%	70°F ± 2°F	Uncontrolled (No Humidification)
Conference Rooms	75°F ± 2°F	50% ± 5%	70°F ± 2°F	Uncontrolled No Humidification
Lunch Room	75°F ± 2°F	50% ± 5%	70°F ± 2°F	Uncontrolled No Humidification
Mechanical Spaces	Ventilation Only		65°F.	Uncontrolled (No Humidification)
Telephone/ Data Closet	72°F ± 3°F		72°F ± 3°F	

## 1.7 VENTILATION RATES

### A. Ventilation rates per ASHRAE 62-2007 & ASHRAE 170-2008.

Occupancy	Ventilation Rate – Minimum OA (Air Changes/hr.)	All Air Exhausted Directly to Outdoors	Fume Hood in Space	Comments
Offices	20 CFM/Person			
Conference Rooms	20 CFM/Person			
Lunch Room	20 CFM/Person			
Mechanical Spaces	Ventilation Only	Yes		
Telephone/Data Closets	Air Conditioning Per Room Load			
Corridors	0.10 CFM/SF			
Toilets	75 CFM exhaust per water closet or urinal	Yes		

## 1.8 HEATING AND COOLING DESIGN LOADS

### A. Heating and Cooling Load

#### 1. People – Labs Spaces

- a. Sensible: 250 BTU/hr per person
  - b. Latent: 250 BTU/hr per person
- 2. People – Offices
  - a. Sensible: 250 BTU/hr per person
  - b. Latent: 200 BTU/hr per person
- 3. People – Conference Rooms, Lunch Room, etc.
  - a. Sensible: 245 BTU/hr per person
  - b. Latent: 155 BTU/hr per person
- 4. Electrical
  - a. Office
    - 1) Lighting = 1.0 watts per sq ft
    - 2) Equipment = 2.2 watts per sq ft
  - b. Public Spaces
    - 1) Lighting = 1.0 watts per sq. ft.

#### 1.9 BUILDING ENVELOPE

- A. The heating and cooling load calculations were based on the following building envelope criteria.
  - 1. The glass will be high-efficiency, insulated, one-inch (1/4-inch glass + ½ inch air space + ¼" float glass), with Low-E coating on surface # 2.
  - 2. Thermally broken frames.
  - 3. Glass with Low-E coating:
    - U glass:
      - Winter: 0.31 (center of glass)
      - Summer: 0.29 (center of glass)
      - U (overall) glass, sash & frame: 0.40
    - SHGF: 0.37
    - SC: 0.42
  - 4. Wall: U value = 0.064 Btu/hr/SF/°F (R-15 insulation)
  - 5. Roof: U value = 0.055 Btu/hr/SF/°F (R-18 insulation)

#### 1.10 HVAC PIPING SYSTEMS PERFORMANCE REQUIREMENTS

- A. The HVAC water, piping components (including valves, fittings, materials, appurtenances, etc.) and installation (including welding, etc.) shall be capable of withstanding the following minimum working pressures and temperatures. Pressures indicated herein are SWP (steam working pressure), unless otherwise noted and are to be considered minimum requirements.

1. Chilled-Water System: 125 psig at 200 deg F.
2. Hot-Water Heating System: 125 psig at 200 deg F.
3. Condenser-Water System: 125 psig at 200 deg F.
4. Makeup-Water System: 125 psig at 200 deg F.
5. Cooling Coil Condensate-Drain System: 125 psig at 200 deg F.
6. Blowdown-Drain System: Equal to pressure of the piping system to which it is connected.
7. Air-Vent and Vacuum-Breaker Piping: Equal to pressure of the piping system to which it is connected.
8. Safety-Valve-Inlet and -Outlet Piping: Equal to pressure of the piping system to which it is connected.

- B. Grooved end piping systems (including piping, couplings, fittings, valves and accessories) is not acceptable.

#### 1.11 REFERENCE STANDARDS

- A. Comply with the NYCBC 2014 and all other applicable laws, rules, standards, regulations, codes and ordinances of Federal, State and NYC Dept. of Buildings. Modifications required by the above shall be made without additional expense to the City of New York.
- B. The entire installation and all equipment, materials and methods shall comply with 2014 New York City Construction Codes, whether indicated on the Contract Documents or not.
- C. The following published specifications, standards, tests or recommendations shall apply to all work in all sections:

1. Air Conditioning and Refrigeration Institute (ARI).
2. American National Standard Institute (ANSI).
3. Air Moving and Conditioning Association (AMCA).
4. American Society of Mechanical Engineers (ASME).
5. American Society for Testing and Materials (ASTM).
6. National Fire Protection Association (NFPA).
7. American Association of Balancing Contractors (AABC).
8. American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE).
9. Air Diffuser Council (ADC)
10. American Welding Society (AWS).
11. Environmental Protection Agency (EPA)
12. National Environmental Balancing Bureau (NEBB).
13. National Electrical Code (NEC).
14. National Electrical Manufacturer's Association (NEMA)
15. Occupational Safety and Health Administration (OSHA).
16. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA)
17. Underwriters Laboratories (UL).
18. American Water Works Association (AWWA)
19. Copper Development Corporation (CDA)
20. Expansion Joint Manufacturers Association (EJMA)
21. Manufacturers Standardization Society (MSS)
22. National Sanitation Foundation (NSF)
23. Tubular Exchange Manufacturers Association (TEMA)
24. North American Insulation Manufacturers Association (NAIMA)

#### 1.12 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred

spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by the building occupants. Examples include above ceilings, within furred spaces, enclosures, trenches, crawl spaces and chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- F. Component: An MEP component or element that is part of an MEP system within or without a building system.
- G. DOB – New York City Department of Buildings
- H. NYCBC – New York City Building Code 2014 – which includes the latest editions of the NYC Building Code, NYC Plumbing Code, NYC Mechanical Code, NYC Fuel Gas Code, NYC Energy Conservation Code.
- I. Licensed Professional Engineer: An independent, qualified, licensed Professional Engineer having PE registration from New York State, with significant experience in the applicable field.
- J. Low Pressure Steam: Steam pressure not exceeding 15 psig
- K. High Pressure Steam: Steam pressure above 15 psig

#### 1.13 INTERPRETATION OF THE DRAWINGS AND SPECIFICATIONS

- A. The drawings show the general layout of the various items of equipment. However, the drawings, in general, are diagrammatic and indicate sizes, general locations and equipment connections and do not necessarily indicate every required fitting, support or similar items required for a complete installation. Provide all necessary offsets, fittings, hangers, supports, valves, drains as required for a complete and fully operational mechanical system.
- B. The drawings of necessity utilize symbols and schematic diagrams to indicate various items of work. Neither of these have any dimensional significance nor do they delineate every item required for the intended installations. The work shall be installed, in accordance with the diagrammatic intent expressed on the electrical and mechanical drawings, and in conformity with the dimensions indicated on final architectural and structural working drawings and on equipment shop drawings.
- C. The contractor shall follow the drawings in laying out the work and check drawings of all trades to verify spaces in which work will be installed. Maintain maximum headroom and where space conditions appear inadequate, the Commissioner shall be notified before proceeding with the installation.
- D. It shall be understood that the specifications and drawings are complementary and are to be taken together for a complete interpretation of the work. Where there are conflicts between the

drawings and specifications or within the specifications or drawings themselves, the items of higher standard shall govern.

- E. No exclusions from, or limitations, in the language used in the drawings or specifications shall be interpreted as meaning that the appurtenances or accessories necessary to complete any required system or item of equipment are to be omitted.
- F. No interpretation shall be made from the limitations of symbols and diagrams that any elements necessary for complete work are excluded.
- G. Certain details appear on the drawings which are specific with regard to the dimensioning and positioning of the work. These details are intended only for the purpose of establishing general feasibility. They do not obviate field coordination for the indicated work.
- H. Typical details, where shown on the drawings, apply to each and every item of the project where such items are applicable. Typical details are not repeated in full on the plans and are diagrammatic only, but with the intention that such details shall be incorporated in full.
- I. Information as to the general construction shall be derived from structural and architectural drawings and specifications only.
- J. The use of words in the singular shall not be considered as limiting where other indications denote that more than one item is referred to.
- K. In the event that extra work is authorized, and performed by this trade, work shown on drawings depicting such work, and/or described by Bulletin is subject to the base building specifications in all respects.

#### 1.14 CODES, PERMITS AND INSPECTIONS

- A. All work shall meet or exceed the following requirements:
  - 1. New York City Building Code 2014
  - 2. New York City Mechanical Code 2014
  - 3. New York City Plumbing Code 2014
  - 4. New York City Fuel Gas Code 2014
  - 5. New York City Electrical Code 2014
  - 6. New York City Energy Conservation 2016
  - 7. New York State Department of Health
  - 8. NFPA National Fire Codes
  - 9. New York City Noise Control Regulation
- B. All equipment and material to be furnished and installed on this project shall be UL or ETL listed, in accordance with the requirements of the NYC Dept. of Buildings and suitable for the intended use on the project.
- C. All required permits and inspection certificates shall be obtained, paid for, and made available by the contractor to the Commissioner, except for special inspections. Refer to the DDC General Conditions for requirements related to permits and permitting fees.
- D. Any portion of the work which is not subject to the approval of the New York City Department of Buildings or the Fire Department of New York City, shall be governed by the applicable sections of the overall National Fire Code, as published by the National Fire Protection Association.
- E. Installation procedures, methods, and conditions shall comply with the latest requirements of

The Federal Occupational Safety and Health Act (OSHA).

**1.15 PERMITS AND FEES**

- A. Refer to the DDC General Conditions for requirements related to permits and permitting fees.
- B. The Contractor shall be responsible for all required testing and inspections except for Special Inspections. Where required, the City of New York will engage a qualified testing agency to perform Special Inspections.
- C. This contractor shall prepare and file all plans, calculation, forms, etc. required for filing with all agencies required for this work including but not limited to The DEP (Department of Environmental Protection), DEC (Department of Environmental Conservation), Bureau of Air Resources, EPA Environmental protection Agency, and FDNY.

**1.16 SPECIAL / CONTROLLED INSPECTION- NYC**

- A. Special inspection shall be provided by the City of New York. The contractor shall coordinate with the Commissioner to accomplish all special inspections and provide any access necessary.

**1.17 INSPECTIONS / TESTING**

- A. Independent testing and progress inspections shall be provided by the contractor.

**1.18 SHOP DRAWING REVIEW**

- A. The purpose of the review of shop drawings is to maintain integrity of the design. Unless the contractor clearly points out changes, substitutions, deletions or any other differences between the submission and the Contract Documents in writing on the Contractor's letterhead, review by the Commissioner does not constitute acceptance. It is not to be assumed that the Commissioner has read the text nor reviewed the technical data of a manufactured item and its components except where the Vendor has clearly and specifically pointed out in writing differences between his product and the specified model.
- B. It is the responsibility of the contractor to confirm all dimensions, quantities, and the coordination of materials and products supplied by him with other trades. Review of shop drawings containing errors does not relieve the contractor from making corrections at his expense.
- C. PW3 Expense Affidavits shall be prepared by the contractor.
- D. Application for Equipment Use Permits shall be filed by contractor.
- E. Prepare and submit to the building department a set of "as-built" record drawings for approval, in a form acceptable to the building department.
- F. The Contractor shall prepare all plans, amendments and pay all filing fees that will be required for the fuel burning installation, including boiler plant, chimney, oil piping, fuel oil tanks, gas piping, breeching, and any or all parts of the system.
- G. The welding of all steam piping 15 psig or higher shall be subjected to DOB Special Inspections and shall be in conjunction with Standard Procedure Specifications No. 1 (71) of The National Certified Pipe Welding Bureau. The Special Inspection will be commissioned and paid for by the City of New York.

- H. This Contractor shall be responsible for the installation and filing until the installation has been approved by NYC Dept. of Buildings.

#### 1.19 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.20 SUBMITTALS

- A. Prior to assembling or installing the work, the following shall be submitted for review:
  1. Scale drawings indicating insert and sleeve locations.
  2. Scale drawings showing all piping and duct runs with sizes, elevations and appropriate indication of coordination with other trades.
  3. Catalog information, factory assembly drawings and field installation drawings as required for a complete explanation and description of all items of equipment.
  4. Coordination drawings for access panel and door locations.
  5. Shop drawings detailing fabrication and installation for supports for mechanical materials and equipment.
  6. Certification from the equipment suppliers for all energy-consuming equipment that the equipment fully complies with the applicable municipal, state and federal "Energy Conservation Codes". Equipment submissions will not be accepted for review unless accompanied by such certification in writing.
- B. Welder Certificates signed by Contractor certifying that welders comply with requirements specified herein under "Welding Procedures".

#### 1.21 SPACE LIMITATIONS – COORDINATION OF WORK

- A. The equipment selections used in the preparation of the Contract Documents will fit into the physical spaces provided and indicated, allowing room for access, servicing, removal and replacement of parts, etc. Adequate space shall be provided by the contractor for the equipment installed for clearance in accordance with Code requirements, the requirements of the NYC Dept. of Buildings, and the equipment manufacturer's recommendations
- B. In the preparation of Drawings, a reasonable effort to accommodate the listed acceptable equipment manufacturer's space requirements has been made. However, since space requirements and equipment arrangement vary according to each manufacturer, the responsibility for initial access, maintenance access, code required access, and proper fit rests with the Contractor.
- C. Ductwork and piping layouts are shown diagrammatically on the contract documents and do not show all offsets, drops and rises of runs. All ductwork shall be kept as high as possible to maintain ceiling heights as shown on the architectural drawings. Changes in duct sizes and/or locations shall be made where necessary to conform to space conditions or to obtain maximum headroom conditions. The contractor shall allow in his bid for routing of ductwork and piping, as described herein, to avoid obstructions and for coordination among the trades. Exact locations are subject to the approval of the Commissioner.
- D. Physical dimensions and arrangements of equipment to be installed shall be subject to the Commissioner's review.
- E. The Contractor shall coordinate the installation of equipment, ductwork, conduit, bus duct, piping, cable, cable trays, etc., with the lighting fixtures, special ceiling construction, air distribution equipment and the structure.

- F. Provide additional rises, drops and offsets as required. If, after installed, new ductwork, conduit, bus duct, piping or cable is found to be in conflict with the architecture, structure, or other trade work which is shown on the Contract or Coordination Documents, the ductwork, conduit, bus duct, piping or cable shall be relocated without additional Expense to the City of New York.
- G. Where piping, lights, and ductwork conflict, ductwork shall be coordinated to site conditions.
- H. Contractor shall coordinate exact location of all air outlets, thermostats and switches with the reflected ceiling plans.

## 1.22 COORDINATION DRAWINGS

- A. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing Requirements.
- B. The Coordination Drawings shall include, but not necessarily be limited to, the following:
  - 1. The elevation, location, support points, static, dynamic and expansion forces and loads imposed on the structure at support and anchor points and the size of all lines shall be indicated. All beam penetrations, slab penetrations and sleeves shall be indicated, sized and coordinated with all other work. All required code clearance space and required maintenance access space shall be indicated and coordinated with all other work. All work routed underground or embedded in concrete shall be indicated by dimension to column and building lines and shall be coordinated.
  - 2. Sheet Metal system layout, including elbow radii and all duct accessories.
  - 3. Piping layout, including valve and specialty locations and valve stem movement.
  - 4. Clearances for servicing and maintaining equipment, including tube removal, filter removal, and space for equipment disassembly required for periodic maintenance.
  - 5. Equipment connections and support details.
  - 6. Exterior wall and foundation penetrations.
  - 7. Fire-rated wall and floor penetrations.
  - 8. Sizes and location of required concrete pads and bases.
  - 9. Clearances as required by Electric Code.
  - 10. Indicate piping loads and support points for all piping 3" and larger, racked piping, and submit to the Commissioner for review.
  - 11. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
  - 12. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installation.
  - 13. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets and inlets, light fixtures, communication systems components, sprinklers, and other ceiling-mounted item.
  - 14. Requirements for vibration isolation, wind and seismic restraints shall be shown on the coordination drawings by each trade.
  - 15. The contractor shall not install any of his work prior to "sign-off" of final Coordination Drawings (as specified herein). If work proceeds prior to sign-off of Coordination Drawings, any change to the work to correct the interferences and conflicts will be made by the Contractor at no additional expense to the project.

## 1.23 RECORD DOCUMENTS

- A. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing Requirements.
  - 1. In addition, the drawings shall show:

- a. Ductwork mains and branches, size and location, for both exterior and interior; locations of all dampers and other control devices; filters, boxes, and terminal units and any other equipment requiring periodic maintenance or repair.
  - b. Mains and branches of piping systems, with valves and control devices located and numbered, concealed unions located, and with items requiring maintenance located (i.e., traps, strainers, expansion compensators, tanks, etc.). Valve location diagrams, complete with valve tag chart, as specified under another section of this work. Indicate horizontal locations of underground piping.
  - c. For underground piping, record dimensions and invert elevations of all piping, including all offsets, fittings, cathodic protection and accessories. Locate dimensions from benchmarks that will be preserved after construction is complete.
  - d. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
  - e. Approved substitutions, Contract Modifications, and actual equipment and materials installed.
  - f. Updating of all equipment schedule sheets.
- B. The contractor shall maintain on site a record of the up-to-date Commissioning Plan, testing records, and pre-functional and functional testing forms and records
- C. This trade shall submit the "as-built" set for approval by the building department in a form acceptable to the department.

#### 1.24 DOCUMENTATION OF FIRE/SMOKE DAMPERS

- A. In addition to the requirements specified elsewhere in the contract documents, the shall prepare a of drawings showing all new fire smoke dampers installed as part of this project.
- B. All new dampers will be assigned a designation and number by the Contractor and coordinated with and submitted to the Commissioner for review and acceptance.

#### 1.25 MAINTENANCE MANUALS

- A. Prepare maintenance manuals in both hard copy and electronic copy in accordance with the DDC General Conditions. In addition to the requirements specified therein, include the following information for equipment items:
1. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.
  2. Manufacturer's printed operating procedures to include start-up, break-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; and summer and winter operating instructions.
  3. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, repair, and reassembly; aligning and adjusting instructions.
  4. Servicing instructions and lubrication charts and schedules.
  5. List of spares: recommended for normal service requirements.
  6. Parts list: identifying the various parts of the equipment for repair and replacement purposes.
  7. Instruction books may be standard booklets but shall be clearly marked to indicate applicable equipment.
  8. Wiring diagrams: generalized diagrams are not acceptable; submittal shall be specifically prepared for this project.
  9. Automatic controls: diagrams and functional descriptions. (See control specification for additional requirements).

1.26 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. All equipment and accessories are to be the product of manufacturers regularly engaged in their manufacture. All items of one type (i.e. fans, pumps, coils, etc.) shall be the products of the same manufacturer.
- C. All equipment furnished as part of the work shall comply with 2014 New York City Energy Conservation Code. Provide certification from the equipment suppliers for all energy-consuming equipment that the equipment fully complies with these codes. Equipment submissions will not be accepted for review unless accompanied by such certification in writing.
- D. Furnish all equipment new and free from defects.
- E. All equipment and materials shall be new and without blemish or defect.
- F. All equipment and materials shall be free of asbestos.
- G. All equipment and material to be furnished and installed on this project shall be listed by Underwriters' Laboratories Inc. (UL) or ETL listed, in accordance with the requirements of the NYC Dept. of Buildings, and suitable for its intended use on the project.
- H. Comply with 2014 New York City Construction Codes.
- I. All insulation, duct lining, etc. shall have a composite (insulation, facing and adhesive) fire and smoke hazard rating as tested by Procedure ASTM E84, NFPA 255 and UL 723 not exceeding:
 

Flame Spread	25
Smoke Developed	50
- J. Electrical equipment and materials shall be products which will meet with the acceptance of the agency inspecting the electrical work. Where such acceptance is contingent upon having the products examined, tested and certified by Underwriters or other recognized testing laboratory, the product shall be examined, tested and certified at no additional expense to the project. Where no specific indication as to the type or quality of materials or equipment is indicated, a first class standard article shall be furnished.
- K. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- L. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
  - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
  - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
- M. Electrical Characteristics for Mechanical Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.
- N. It is the intent of these specifications that wherever a specific manufacturer of a product is specified or scheduled, and the specifications includes other approved manufacturers or the

terms “other approved” or “or approved equal” or “equal” are used, the submitted item must conform in all respects to the specified item. Consideration will not be given to claims that the submitted item meets the performance requirements with lesser construction (such as lesser heat exchange surface, smaller motor HP, etc.). Performance as delineated in schedules and in the specifications shall be interpreted as a minimum performance. In many cases equipment is oversized to allow for pick-up loads which cannot be delineated under the minimum performance.

- O. Substituted equipment or optional equipment where permitted and approved, must conform to space requirements. Any substituted equipment that cannot meet space requirements, whether or not, shall be replaced at the Contractor’s expense. Any modifications of related systems as a result of substitutions shall be made at the Contractor’s expense.
- P. Substitutions of Mechanical Equipment for that shown on the schedules or designated by model number in the specifications will not be considered if the item is not a regular catalogued item shown in the current catalog of the manufacturer.
- Q. Manufacturer’s Recommendations: Where installation procedures of any part thereof are required to be in accordance with the recommendations of the manufacturer of the material being installed, printed copies of these recommendations shall be furnished prior to installation. Installation of the item will not be allowed to proceed until the recommendations are received. Failure to furnish these recommendations can be cause for rejection of the material.

#### 1.27 COMPOSITE CONTROL WIRING DIAGRAM REQUIREMENTS

- A. The Contractor shall furnish the project specific wiring and interlock requirement diagrams from the equipment shop drawings for those items of equipment where there is joint wiring interface responsibility. These wiring and interlock diagrams will be furnished to prepare project specific composite control wiring diagrams that will detail how equipment furnished by the Contractor shall be interconnected to provide fully functioning interrelated systems, including the life safety system, for the overall project.
- B. The items for which the wiring and interlock diagrams shall be furnished shall include but not be limited to motors, starters, variable speed drives, motor operated dampers, water chilling units, cooling towers, fan systems, air handling units, pumping systems, boilers, lighting relays and/or contactors for the remote control of or by lighting systems, the Fire Detection, Alarm and Communication. The Contractor shall add to these drawings, those connections they will make for the control and/or monitoring of the motors, dampers, and other items of equipment. The completed diagram shall include all line and low voltage wiring between control devices, motor start-stop and/or H-O-A stations, control relays, sensors, controllers, switches, differential pressure switches, the Fire Command Station, the Security System, the Building Management System, etc.
- C. The Contractor shall verify that the wiring added to the drawings is correct and can be accommodated. If necessary, corrections shall be made by the Contractor. This process shall be completed prior to commencement of work on the particular piece of equipment or in the area within which the equipment is located.
- D. The intent of this requirement is that single composite drawings shall be available for each item of equipment indicating the wiring that shall be installed in its entirety including interlocks. Any omissions or errors noticed by the Contractor shall be brought to the attention of the Commissioner immediately.
- E. The composite wiring diagrams shall include description of the interlock sequence of operation. The description shall include complete identification of each item shown (relay, motor controller,

etc.), and each item's exact operation shall be related to the interlock sequence.

#### 1.28 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to the project properly identified with names, model numbers, types, grades, compliance labels, and other information needed for identification.
- B. Deliver, store and handle all materials to keep clean and protected from damage.
- C. Equipment shall be shipped with all listed items and control wiring factory installed unless specified otherwise herein and specifically noted on the submittals as a substitution.
- D. Ship materials and equipment in crated sections of sizes to permit passing through available spaces, where required. Store products in shipping containers and maintain in place until installation.
- E. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- F. The Vendor shall shrink-wrap all electronic equipment and spare parts prior to shipping.
- G. Store products in shipping containers and maintain in place until installation.
- H. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of floor.
- I. Protect flanges, fittings, and piping specialties from moisture and dirt.
- J. Protect stored plastic pipes from direct sunlight. Support to prevent sagging and bending.
- K. Protect equipment and other materials from damage after installed from construction debris and other damage.
- L. The Contractor shall check all materials and equipment upon their arrival on the Project Site and verify their condition and compliance with the Contract documents.

#### 1.29 PROTECTION AND CLEANING

- A. It shall be this trade's responsibility to store his materials in a manner that will maintain an orderly clean appearance. If stored on-site in open or unprotected areas, all equipment and material shall be kept off the ground by means of pallets or racks, and covered with tarpaulins.
- B. The inlet and discharge opening of all terminal units as well as all duct and pipe openings (end pieces) shall be kept capped until all local plastering, parging, etc. is completed, and the units are ready to run.
- C. Equipment and material if left in the open and damaged shall be replaced, repainted, or otherwise refurbished at the discretion of the Commissioner. Equipment and material is subject to rejection and replacement if in the opinion of the commissioner, or in the opinion of the manufacturer's engineering department, the equipment has deteriorated or been damaged to the extent that its immediate use is questionable, or that its normal life expectancy has been curtailed.
- D. During the erection, protect all ductwork, duct lining, insulation, piping, and equipment from

damage and dirt. Cap the openings of all ductwork and piping installed. After completion of project, clean the exterior and interior surface of all equipment included in this division of work.

### 1.30 FLUSHING AND CLEANING OF PIPING

- A. All piping systems shall be thoroughly flushed out with the approved cleaning chemicals to remove pipe dope, slushing compounds, cutting oils, and other loose extraneous materials. This also includes any piping systems which are not listed as requiring water treatment.
- B. Water shall not be introduced into piping system without water treatment.
- C. Develop plan for flushing and cleaning piping. Submit plan for approval to completion of piping. Provide all temporary and permanent piping, equipment, materials necessary to complete flushing and cleaning.
- D. Prior to flushing, temporarily remove, isolate or bypass dirt sensitive equipment and devices, including the following:
  - 1. Automatic flow control valves
  - 2. Heating and cooling coils
  - 3. Boilers
  - 4. Flow measuring devices
  - 5. Chillers
  - 6. Heat Exchangers
- E. Reinstall after flushing is complete
- F. Prior to flushing, install fine mesh construction strainers at inlet to all equipment with connections 1-1/2" and larger. Install fine mesh construction element in permanent strainers. During flushing and cleaning, remove and clean strainers periodically. At completion of final flush, clean permanent strainers, remove construction strainers.
- G. Flush all piping with cold water at a minimum velocity of 6 feet per second for a minimum one hour, or until water runs clear. Water supply shall be equivalent to piping to be flushed. Drain all low points.
- H. Circulate flush water and clean strainers prior to installing cleaning chemicals. Provide cleaning chemicals, under the direction of the chemical supplier. Following flushing, install cleaning chemicals and circulate through the entire system for a minimum of one hour, or as directed by chemical supplier. Drain system, including all low points. Flush, drain and fill system, circulate for one hour, sample for The Commissioner's use. Drain, flush, fill, circulate and sample until system is free of cleaning chemicals, as indicated by analysis of samples.
- I. Provide temporary pumps and piping to chemically clean piping at a minimum velocity of 6 fps without using the system pumps.
- J. The cleaning chemicals shall be added by the mechanical trade. The chemical supplier shall instruct and oversee as to proper feed rates, shall check that the cleaning solution is actually in each system, shall instruct and oversee the contractor as to when to flush the system and shall check each system following flushing to insure all cleaning chemicals have been removed from each system.
- K. A certificate of cleaning shall be provided by the cleaning supplier to the Commissioner.

**1.31 FIRE AND SMOKE DETECTION**

- A. Fire and smoke detection system will be provided and installed by the Electrical trade. The HVAC trade will provide suitable openings (as recommended the Smoke Detection System Manufacturer) in sheet metal for sensing elements.
- B. This Trade will provide access doors to make all such detection heads accessible.
- C. This trade will provide bracing for smoke detections sampling tubes which exceed 48" in length.

**1.32 ACCESSIBILITY**

- A. Install all work so that parts requiring periodic inspection, operation, maintenance and repair are readily accessible.
- B. Group concealed vales, expansion joints, controls, dampers, and equipment so as to be freely accessible through access doors.

**1.33 SEQUENCING AND SCHEDULING**

- A. Coordinate mechanical equipment installation with other building components.
- B. Arrange for chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.
- C. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
- D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.
- E. Coordinate connection of electrical services.
- F. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services.
- G. Coordinate requirements for access panels and doors where mechanical items requiring access are concealed behind finished surfaces. Access panels and doors are specified in Division 08.
- H. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices prior to installing acoustical ceilings and similar.

**1.34 ACCESS PANELS**

- A. Locate access panels to access valves, traps, control valves or devices, dampers, damper motors, etc. Access panels shall be sized as necessary for ample access, or as indicated on drawings, but no smaller than 18" x 18" where devices are within easy reach of operator, and at least 24"x24" when operator must pass through opening in order to reach the devices.
- B. See Section 08 31 13 "Access Doors and Frames" for access door requirements.

**1.35 GUARANTEES AND CERTIFICATIONS**

- A. All work shall be guaranteed to be free from leaks or defects. Any defective materials or workmanship as well as damage to the work of all trades resulting from same shall be replaced or repaired as directed for the duration of stipulated guaranteed periods.
- B. The duration of guarantee periods following the date of beneficial use of the system shall be one year. Beneficial use is defined as operation of the system to obtain its intended use. For example, in the case of refrigeration systems, it means that the plant has a cooling load. Similarly, for all other systems.
- C. The date of acceptance shall be the date of the final payment for the work or the date of a formal notice of acceptance, whichever is earlier.
- D. Non-durable replaceable items such as air filter media do not require replacement after the date of acceptance. If received in writing, requests to have earlier acceptance dates established for these items will be honored.
- E. Certification shall be submitted attesting to the fact that specified performance criteria are met by all items of heating and air conditioning equipment.

#### 1.36 DIELECTRIC FITTINGS

- A. For all systems, provide dielectric fittings to isolate joined dissimilar materials to prevent galvanic action and stop corrosion. Fittings shall be of the non-reducing type, which shall be suitable for the system fluid, pressure, and temperature and shall not restrict flow.
- B. For factory fabricated equipment, manufacturer shall submit method of compliance or exceptions (if applicable) in writing as part of the shop drawings submission for review by the Commissioner.
- C. It is the intent of this section that all system components (equipment connections, piping, etc.), whether they are field installed or factory fabricated, shall comply with these requirements.
- D. Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain and weld-neck end types that match piping system materials.
- E. Insulating Material: Suitable for system fluid, pressure, and temperature, does not restrict flow.
- F. Dielectric Unions: Factory-fabricated, union-assembly, for 300-psig minimum working pressure at 180 deg F.
  - 1. Manufacturers: Subject to compliance with these specifications, provide product by one of the following:
    - a. Capital Manufacturing Co.
    - b. Central Plastics Company.
    - c. Eclipse, Inc.
    - d. Epco Sales, Inc.
    - e. Hart Industries, International, Inc.
    - f. Watts Industries, Inc.; Water Products Div.
    - g. Zurn Industries, Inc.; Wilkins Div.
    - h. Or approved equal
- G. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 300-psig minimum working pressure as required to suit system pressures.

1. Manufacturers: Subject to compliance with the specifications, provide product by one of the following:
    - a. Capital Manufacturing Co.
    - b. Central Plastics Company.
    - c. Epco Sales, Inc.
    - d. Watts Industries, Inc.; Water Products Div.
    - e. Or approved equal
  - H. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
    1. Manufacturers: Subject to compliance with the specifications, provide product by one of the following:
      - a. Advance Products & Systems, Inc.
      - b. Calpico, Inc.
      - c. Central Plastics Company.
      - d. Pipeline Seal and Insulator, Inc.
      - e. Or approved equal
    2. Separate companion flanges and steel bolts and nuts shall have 300-psig minimum working pressure where required to suit system pressures.
  - I. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F temperature.
    1. Manufacturers: Subject to compliance with the specifications, provide product by one of the following:
      - a. Calpico, Inc.
      - b. Lochinvar Corp.
      - c. Hart Industrial Unions
      - d. Or approved equal
  - J. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F temperature.
    1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - a. Perfection Corp.
      - b. Precision Plumbing Products, Inc.
      - c. Sioux Chief Manufacturing Co., Inc.
      - d. Or approved equal.
- 1.37 DRIVE GUARDS
- A. For all machinery and equipment (whether factory fabricated or field installed) provide OSHA Approved guards for belts, chains, couplings, pulleys, sheaves, shafts, gears and other moving parts regardless of height above the floor.
  - B. Materials: Sheet steel, cast iron, expanded metal or heavy gauge wire mesh rigidly secured so

as to be removable without disassembling pipe, duct, or electrical connections to equipment.

- C. Access for Speed Measurement: One-inch diameter hole at each shaft center

#### 1.38 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
  - 1. Manufacturers: Subject to compliance with the specifications, provide product by one of the following:
    - a. Advance Products & Systems, Inc.
    - b. Calpico, Inc.
    - c. Metraflex Co.
    - d. Pipeline Seal and Insulator, Inc.
    - e. Or approved equal
  - 2. Sealing Elements: NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 3. Pressure Plates: Stainless steel. Include two for each sealing element.
  - 4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

#### 1.39 SLEEVES

- A. Mechanical Sleeves Seals: Modular, watertight mechanical type. Components include interlocking synthetic rubber links shaped to continuously fill annular spaces between pipe and sleeve. Connecting bolts and pressure plates cause rubbers scaling elements to expand when tightened.
- B. Galvanized-Steel Sheet: 0.025-inch minimum thickness; round tube closed with welded longitudinal joint.
- C. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- D. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

#### 1.40 ESCUTCHEONS

- A. Provide escutcheons all exposed piping passing through walls, floors partitions and ceilings, except provide close fitting metal escutcheons on both sides of piping (whether exposed or not) through required fire rated walls, floors, partitions & ceilings.
- B. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening through required fire rated walls, floors, partitions & ceilings.
- C. Escutcheons: Manufactured wall, ceiling, and floor plates; deep-pattern type where required to conceal protruding fittings and sleeves.
- D. Cast Brass: One-piece, with set-screw.

- E. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- F. One-Piece, Cast-Brass Type: With set screw.
  - 1. Finish: Polished chrome-plated
- G. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
  - 1. Finish: Polished chrome-plated
- H. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.
- I. Split-Plate, Stamped-Steel Type: With concealed hinge, set screw or spring clips, and chrome-plated finish.
- J. One-Piece, Floor-Plate Type: Cast-iron floor plate.
- K. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

#### 1.41 GROUT

- A. Description: ASTM C 1107, Grade B, non-shrink and nonmetallic, dry hydraulic-cement grout.
  - 1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
  - 2. Design Mix: 5000-psi, 28-day compressive strength.
  - 3. Packaging: Premixed and factory packaged.

#### 1.42 FIRE-STOPPING

- A. Refer to Section; "FIRESTOPPING".
- B. The Mechanical trade is responsible for firestopping of mechanical work.
- C. Firestopping system must be U.L. approved.
- D. All spaces between ducts or pipes and their respective sleeves shall be packed full depth with mineral wool, or other equally approved fire resistant material, and compressed firmly in place.
- E. Fiberglass shall not be used. Sleeve clearances shall not exceed ½ inch between pipes (or ducts) and sleeves. Use individual sleeves for each pipe or duct. Use escutcheons on both sides of sleeves. This includes spaces between ducts on pipes and their respective sleeves or opening at fan rooms (whether walls are fire rated or not).

#### 1.43 TOOLS AND LUBRICANTS

- A. Furnish special tools not readily available commercially, that are required for disassembly or adjustment of equipment and machinery furnished.
- B. Lubricants: A minimum of one quart of oil and one pound of grease, of equipment manufacturer's recommended grade and type, in unopened containers and properly identified as to use for each different application.

#### 1.44 SEISMIC AND WIND RESTRAINTS DESIGN

- A. It shall be understood that the requirements of this seismic section are complementary to requirements delineated elsewhere for the support and fastening of equipment and, piping work. Nothing on the drawings or specifications shall be interpreted as a reason to waive the requirements of this seismic section.
- B. This project requires special provisions for the support and restraint of equipment, piping, ductwork, etc., in the event of earthquake or wind condition so as to comply with the latest edition of the New York City Building Code of 2014.
- C. This Contractor shall provide all required design services, labor, materials, tools and equipment necessary for a complete seismic and wind restraint system for all isolated and non-isolated equipment as indicated in these documents or which may be reasonably implied as essential, whether mentioned in the Drawings and Specifications or not.
- D. It is the intent of the seismic section of this specification to keep all HVAC building system components in place during a seismic or wind event and operational after the seismic event.
- E. As part of the work, the contractor shall engage the services of a New York State licensed professional engineer with experience in the field of equipment support, wind and seismic restraints. He shall select and coordinate the restraints and supports based on the final coordinated drawings showing exact location of piping and equipment and shall coordinate with the Commissioner to ascertain that the connections to the structure will resist the wind and seismic forces to which they might be subjected.
- F. Seismic and Wind support and restraints are specified on the drawings as well as under another section of this Work.
- G. All equipment shall be provided with approved seismic and wind control devices as required to prevent overturning or sliding. Seismic and wind restraints shall be capable of keeping equipment captive under seismic and wind loads.

#### 1.45 VFD AND STARTER ENCLOSURES

- A. Refer to Section 23 05 13 “Motors for HVAC Equipment” for additional requirements.
- B. Refer to Section 23 05 14 – “Variable Frequency Drives” for additional requirements.
- C. Refer to Section 23 05 15 – “Enclosed Controllers” for additional requirements.
- D. Enclosures: Unless otherwise specified herein, NEMA 250, to comply with environmental conditions at installed location.
  - 1. Dry and Clean Indoor Conditioned Locations: NEMA 250 Type 1.
  - 2. Outdoor Locations: Type 4X, with space heater and air-cooled cooling unit to maintain temperature within housing as required for proper operation for outdoor temperatures within the range of ASHRAE 99.6 percent winter design temperature and ASHRAE 0.4 percent summer design temperature for the area, plus solar load. Single point electrical connection for controller and enclosure.
  - 3. Other Wet or Damp Indoor Locations: Type 4.
  - 4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
  - 5. Fan Rooms and Refrigeration Rooms: Type 3R
  - 6. Hazardous Areas Indicated on Drawings: Type 7.
- E. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors.

- F. Rain shields installed on fronts, sides and tops of enclosures installed outdoors. Rain shields shall extend a minimum of 30" around all sides of the enclosure. Provide walk-on platform to eliminate standing water.

## PART 2 - PRODUCTS

NOT USED.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 MECHANICAL INSTALLATIONS

- A. General: Sequence, coordinate, and integrate the various elements of mechanical systems, materials, and equipment. Comply with the following requirements:
- B. Coordinate mechanical systems, equipment, and materials installation with other building components.
- C. Verify all dimensions by field measurements.
- D. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for mechanical installations.
- E. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.
- F. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Give particular attention to large equipment requiring positioning prior to closing in the building.
- G. Where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.
- H. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services.
- I. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Commissioner.
- J. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components, where installed exposed in finished spaces.
- K. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.

- L. Install access panel or doors for maintenance or inspection where units are concealed behind finished surfaces. Access panels and doors are specified under another section of the work.
- M. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

### 3.3 CUTTING AND PATCHING

- A. General: Perform cutting and patching in accordance with the DDC General Conditions.
- B. Protection of Installed Work: During cutting and patching operations, protect adjacent installations.
- C. Perform cutting, fitting, and patching of mechanical equipment and materials required to:
  - 1. Uncover Work to provide for installation of ill-timed Work.
  - 2. Remove and replace defective Work.
  - 3. Remove and replace Work not conforming to requirements of the Contract Documents.
  - 4. Remove samples of installed Work as specified for testing.
  - 5. Install equipment and materials in existing structures.
  - 6. Upon written instructions from the Commissioner, uncover and restore Work to provide for observation of concealed Work.
- D. Cut, remove and legally dispose of selected mechanical equipment, components, and materials as indicated, including but not limited to removal of mechanical piping, heating units, plumbing fixtures and trim, and other mechanical items made obsolete by the new Work.
- E. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.
- F. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.
- G. Patch existing finished surfaces and building components using new materials matching existing materials and experienced Installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.
- H. Patch finished surfaces and building components using new materials specified for the original installation and experienced Installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.

### 3.4 ROUGH IN

- A. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.
- B. Refer to equipment specifications for rough-in requirements.

### 3.5 WELDING PROCEDURE

- A. Pipe welding shall comply with the provisions of the latest revision of ANSI/ASME B31.9 Building Services Piping, or such state or local requirements as may supersede codes mentioned above.
- B. Pipe welding for MPS/HPS (15 psig and above) shall be in accordance with ASME B31.1 Power

Piping Code, or such State or local requirements as may supersede codes mentioned above.

- C. Before any new pipe welding is performed, submit a copy of welding Procedure Specifications together with proof of its qualification as outlined and required by the 2014 New York City Construction Codes.
- D. Before any operator shall perform any pipe welding, submit the operator's instructional record in conformance with provisions of the 2014 New York City Construction Codes, showing that the operator was tested under the approved Procedure Specification submitted.
- E. Restore or replace any work not in accordance with these specifications.
- F. The welding of all steam piping 15 psig or higher shall be subjected to Special Inspections and shall be in conjunction with Standard Procedure Specifications No. 1 (71) of The National Certified Pipe Welding Bureau. One hundred percent (100%) of welds for steam piping over 15 psig or higher shall be radiographed in accordance with NYC High Pressure Steam Rules & Regulations. Radiographic examination shall be performed in accordance with ASME B 31.1 based on the piping pressure. Include the expense of X-Raying, by an independent company, in the HVAC expense.
- G. All steam piping over 2" shall be butt-welded. Piping 2" and under may be socket-welded.

### 3.6 PRESSURE TESTING - ALL PIPING SYSTEMS

- A. Water shall not be introduced into piping systems for testing without water treatment.
- B. All piping systems shall be tested to a hydrostatic pressure at least 1 -1/2 times the maximum operating pressure (but not less than 125 psig) for a sufficiently long time, but not less than 4 hours, without losing pressure, to detect all leaks and defects. Where necessary, piping shall be tested in sections to permit the progress of the job.
- C. Hydrostatic Testing Corrosion Inhibitor
  - 1. If sections of system must be hydrostatically tested prior to clean out, appropriate inhibitor shall be added to the test water at sufficient level to totally passivate metal and provide protective film on pipe surfaces to prevent corrosion prior to clean out and treatment.
  - 2. Contractor shall be responsible to coordinate mechanical treatment with the water treatment. At no time shall the Contractor add water to a system without treatment.

### 3.7 EQUIPMENT INSTALLATION--COMMON REQUIREMENTS

- A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.
- B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to the Commissioner.
- C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.
- D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
- E. Install equipment giving right-of-way to piping systems installed at a required slope.

- F. Install equipment to provide the maximum possible headroom where mounting.

### 3.8 EXPANSION ANCHORS

- A. Provide smooth wall, non-self-drilling internal plug expansion type anchors constructed of AISC 12L14 steel and zinc plated in accordance with Fed. Spec. QQ-A-325 Type 1, Class 3.
- B. Do not exceed  $\frac{1}{4}$  of average valves for a specific anchor size using 2000 psig concrete only, for maximum working load.
- C. Provide spacing and install anchors in accordance with manufacturer's recommendations.

### 3.9 PANS AND DRAINS OVER ELECTRICAL EQUIPMENT

- A. The contractor shall examine the drawings and in cooperation with the Electrical Trade confirm the final location of all electrical equipment be installed in the vicinity of piping and duct work. Plan and arrange all overhead piping no closer than 6'-0" feet in all directions from a vertical line above electrical equipment, including but not limited to, motor control centers, starters, electric motors switchboards, panelboards, or similar equipment.
- B. Piping and duct work is not permitted in Electric Equipment, Transformer, Switch Gear, Elevator Equipment, Telephone Gear and Fire Pump Rooms. Where the installation of piping does not comply with the requirements of the foregoing paragraph, where feasible the piping shall be relocated.
- C. Furnish gutters as follows:
  - 1. Provide and erect a gutter of 16-ounce cold rolled copper or 16-gauge aluminum under every pipe which is within 6'-0" from a vertical line to any motor, electric controllers, switchboards panel boards the like.
  - 2. Each gutter shall be reinforced, rimmed, soldered and made watertight, properly suspended and carefully pitched to a convenient point for draining. Provide a 3/4" drain, with valve as directed, to nearest floor drain or slop sink, as approved.
  - 3. In lieu of such separate gutters, a continuous protecting drain pan of similar construction adequately supported and braced properly rimmed, pitched and drained to a floor drain or suitable waste, may be provided over any such electrical equipment, and extending 6'-0" in all directions beyond the electrical equipment, over which such piping has to run.

### 3.10 TOOLS AND LUBRICANTS

- A. Furnish special tools not readily available commercially, that are required for disassembly or adjustment of equipment and machinery furnished.
- B. Lubricants: Furnish a minimum of one quart of oil, and one pound of grease, of equipment manufacturer's recommended grade and type, in unopened containers and properly identified as to use for each different application.

### 3.11 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 23 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated

unless deviations to layout are approved on Coordination Drawings.

- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install pipe escutcheons for pipe penetrations of concrete and masonry walls, wall board partitions, and suspended ceilings according to the following:
  - 1. Piping:
    - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    - b. Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
    - c. Insulated Piping: One-piece, stamped-steel type with spring clips.
    - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    - e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
    - f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, Split-casting cast-brass type with polished chrome-plated finish.
    - g. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    - h. Bare Piping in Equipment Rooms: One-piece, stamped-steel type with set screw or spring clips.
    - i. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
  - 1. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
  3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
    - a. Steel Sheet Sleeves: For pipes 6 inches and larger, penetrating gypsum-board partitions.
    - b. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
      - 1) Seal space outside of sleeve fittings with grout.
  4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 07 Section "Joint Sealants" for materials and installation.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
1. Install steel pipe for sleeves smaller than 6 inches in diameter.
  2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
  3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials.
- P. Verify final equipment locations for roughing-in.
- Q. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

### 3.12 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
- B. Pipe Threads: ASME B1.20 for factory-threaded pipe and pipe fittings.
- C. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- D. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- E. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- F. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- H. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- J. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
  - 1. Plain-End Pipe and Fittings: Use butt fusion.
  - 2. Plain-End Pipe and Socket Fittings: Use socket fusion.

### 3.13 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:
  - 1. Install unions, in piping 2" and smaller, adjacent to each valve and at final connection to each piece of equipment.
  - 2. Install flanges, in piping 2-1/2" and larger, adjacent to flanged valves and at final connection to each piece of equipment.
  - 3. Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.
- B. All welding elbows shall be long radius elbows ANSI B16.9.
- C. Where welding is used, fittings shall be ANSI B-16.9. Welding end fittings shall have the same bursting pressure as pipe of the same size and schedule.

### 3.14 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

### 3.15 PAINTING

- A. Painting of mechanical systems, equipment, and components is specified in Section 09 91 00 "Painting".

- B. Damage and Touchup: Restore marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

### 3.16 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
  - 1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
  - 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
  - 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
  - 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
  - 7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete."
- B. Coordinate concrete base height with air handling unit manufacturer to assure proper coil condensate drainage.

### 3.17 GROUTING

- A. Nonshrink, Nonmetallic Grout: ASTM C 1107, Grade B.
  - 1. Characteristics: Post-hardening, volume adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous and recommended for interior and exterior applications.
  - 2. Design mix: 6000 psi, 28-day compressive strength.
  - 3. Packaging: Premixed and factory packaged.
- B. Mix and install grout for HVAC equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- C. Clean surfaces that will come into contact with grout.
- D. Provide forms as required for placement of grout.
- E. Avoid air entrapment during placement of grout.
- F. Place grout, completely filling equipment bases.
- G. Place grout on concrete bases and provide smooth bearing surface for equipment.
- H. Place grout around anchors.
- I. Cure placed grout.

### 3.18 SUPPLEMENTARY STEEL, CHANNELS AND SUPPORTS:

- A. Provide supplementary steel, channels and supports required for proper installation, mounting

and support of HVAC work.

- B. All supplementary steel shall be fabricated from structural grade steel conforming to ASTM specifications.
- C. All fittings shall be fabricated from steel conforming to ASTM specifications.
- D. No material shall be introduced into the support system that cannot be identified under an approved ASTM material designation.
- E. Connect supplementary steel and channels firmly to building construction in an acceptable manner.
- F. Refer to Division Section "Metal Fabrications" for structural steel.
- G. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.
- H. Determine type and size of supporting channels and supplementary steel. Supplementary steel and channels shall be of sufficient strength and size to allow only a minimum deflection in conformance with manufacturer's requirements of loading.
- I. Structural Integrity: Supports shall be designed and installed so that they cannot become disengaged by movements or weight of the supported equipment.
- J. All supplementary steel, channels, supports shall be submitted to Commissioner for review.
- K. Install supplementary steel and channels in a neat and workmanlike manner parallel to walls, floors, and ceiling construction.
- L. Materials and workmanship shall be first class in every respect and shall be subject to the Commissioner's inspection and approval at any time.
- M. Field Welding: Comply with AWS D1.1

### 3.19 PRE-OCCUPANCY SPACE FLUSH OUT

- A. At completion of construction, prior to turn over of the building, the contractor shall conduct a pre-occupancy flush out of the system as follows:
  - 1. All supply air systems shall be run at 100% fan capacity for a period of two weeks.
  - 2. During the flush out, all outside air dampers shall be locked into 100% outside air position. Return air dampers shall be fully closed and all spill air dampers shall be 100% open. Exhaust fans shall be operated at 100% exhaust.
  - 3. Cooling and/or heating coil valves shall be controlled by the building management system to provide properly tempered and dehumidified air.
    - a. Supply air temperature shall be set to provide a maximum space temperature of 78°F, minimum space temperature of 66°F and a maximum space humidity of 60% RH.
  - 4. All exhaust fans that are required to run to maintain proper building pressurization shall be operated at 100% fan capacity for the flush out period.

### 3.20 REFRIGERANT HANDLING

- A. Refrigerant Installation and Disposal: Perform all work related to refrigerant contained in chillers, cooling coils, air conditioners, and similar equipment, including related piping, in strict accordance with the following requirements:
1. ASHRAE Standard 15 and Related Revisions: Safety Code for Mechanical refrigeration.
  2. ASHRAE standard 34 and Related Revisions: Number Designation and Safety classification of refrigerants.
  3. United States Environmental Protection Agency (US EPA) requirements of Section 808 (Prohibition of Venting and Regulation of CFC) and applicable State and local regulations of NYC Dept. of Buildings.

**END OF SECTION 23 05 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 05 13****MOTORS FOR HVAC EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 14 "Variable Frequency Motor Drives (VFD)".
- D. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- E. Section 23 05 93 "Testing, Adjusting and Balancing".
- F. Section 23 09 00 "HVAC Instrumentation and Controls".
- G. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 REFERENCE STANDARDS**

- A. UL
- B. IEEE standard 143 (latest addition)
- C. IEEE standard C84.1
- D. ANSI,
- E. ANSI C84.1 Electric Power Systems and Equipment.
- F. ANSI/NEMA MG-1 Motors and Generators.
- G. 6ANSI C62.92.4-1991 IEEE Guide for the Application of Neutral Grounding in Electrical Utility Systems, Part IV-Distribution
- H. IEEE 141-1993 IEEE Recommended Practices for Electric Power Distribution for Industrial Plant System
- I. IEEE 519-1992 IEEE Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems.
- J. IEEE 1159-1995 IEEE Recommended Practice for Monitoring Electric Power Quality.
- K. ISO-1400 Standards, such as 14001, 14002, and 14003.
- L. NEMA
- M. ISO-9000 standards (manufacturing standards).

**1.6 DEFINITIONS**

- A. Factory-Installed Motor: A motor installed by motorized-equipment manufacturer as a component of equipment.
- B. Field-Installed Motor: motor installed at Project site and not factory installed as an integral component of motorized equipment.

**1.07 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.8 SUBMITTALS**

- A. Product Data for Field-Installed Motors: For each type and size of motor, provide nameplate data and ratings; shipping, installed, and operating weights; mounting arrangements; size, type, and location of winding terminations; conduit entry and ground lug locations; and information on coatings or finishes.

- B. Shop Drawings for Field-Installed Motors: Dimensional plans, elevations, sections, and details including required clearances and service space around equipment. Include the following:
  - 1. Each installed unit's type and details.
  - 2. Nameplate legends.
- C. Manufacturer Seismic Qualification Certification: Submit certification that motors, accessories, and components will withstand seismic forces defined in 23 05 48 "Vibration Isolation, Seismic and Wind Load Restraints for HVAC Components." Include the following:
  - 1. Test Reports: Written reports specified in Parts 2 and 3.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source Limitations: Obtain field-installed motors of a single type through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to NYC Dept. of Buildings, and marked for intended use.
- D. Comply with NFPA 70, as amended by state and local officials.
- E. Motors shall be UL listed.

#### 1.10 SEISMIC AND WIND LOAD DESIGN

- A. This project is located within a seismic and wind zone requiring special provisions for the support and restraint of equipment, components and piping.
- B. Fabricate unit sections, internal mounting frames and attachments and other section components with restraints to withstand seismic forces defined under another section of this work.

#### 1.11 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
  - 1. Motor controllers.
  - 2. Torque, speed, and horsepower requirements of the load.
  - 3. Ratings and characteristics of supply circuit and required control sequence.
  - 4. Ambient and environmental conditions of installation location.
  - 5. Designed and labeled for use with variable frequency controllers, and suitable for use throughout speed range without overheating.
  - 6. Matched to torque and horsepower requirements of the load.
  - 7. Matched to ratings and characteristics of supply circuit and required control sequence.
- B. Coordinate motor support with requirements for driven load; access for maintenance and motor replacement; installation of accessories, belts, belt guards; and adjustment of sliding rails for belt tensioning.
- C. Coordinate motor and motor control requirements with all factory fabricated equipment.

- D. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03 Section.
- E. Where motors will be controlled by variable frequency controllers, they shall be designed and labeled for use with variable frequency controllers, and suitable for use throughout speed range without overheating.

## PART 2 - PRODUCTS

### 2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
- B. Comply with NEMA MG 1 unless otherwise indicated.
- C. Comply with IEEE 841 for severe-duty motors.
- D. Fan, motor and VFD shall be selected and supplied by air handling unit manufacturer with capacities as indicated on the schedule and fully compatible with specific air handling unit systems.
- E. Motors shall include permanently sealed bearings and shaft grounding to protect the motor bearings from electrical discharge machining due to stray shaft currents.
- F. MANUFACTURERS:
  - 1. Subject to compliance with requirements, provide products by one of the following:
    - a. Baldor
    - b. Toshiba
    - c. General Electric
    - d. U.S. Motor
    - e. Marathon
    - f. Or approved equal.

### 2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Motors ½ HP and Larger: Three Phase.
- C. Motors Smaller Than ½ HP: Single Phase.
- D. Frequency Rating: 60 Hz.
- E. Voltage Rating: NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected.
- F. Service Factor: 1.15
- G. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

- H. Motors shall meet or exceed EPACT (NEMA 1240 Standards) efficiencies. Motors to be NEMA T-frame, 1800 or 3600 RPM, Open Drip Proof (ODP) or Totally Enclosed Fan Cooled (TEFC).
- I. Enclosure: Suitable for the environment at the motor location:
  - 1. Motors located indoors: Open drip-proof.
  - 2. Motors located outdoors and exposed to the weather: Totally enclosed.
  - 3. Motors located within the equipment airstream: Totally enclosed. Open drip-proof motors in the air-stream will not be permitted.
  - 4. Cooling tower motors: Totally enclosed
  - 5. Motors located within a hazardous environment: Explosion resistant, rated for the Class and Division of the motor environment.
- J. Motors shall be suitable for operation in either vertical, horizontal or angular position.
- K. Motors shall be equipped with suitable electric lead wire positioning gasket at the point where such leads pass through the motor frame into the motor terminal box. Such gaskets shall be arranged to ensure that under no condition will the lead wires be subjected to abrasion against the metal of the motor frame.

## 2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design E, medium induction motor.
- B. Efficiency: Premium efficient motors, as defined in NEMA MG 1, and with applicable EPACT efficiency standards.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
  - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
  - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F, unless otherwise indicated.
- J. Code Letter Designation:
  - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
  - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- K. Enclosure Material: Cast iron for motors larger than 7.5 HP; rolled steel for motor smaller than 7.5 HP.

## 2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box,

suited to control method.

**B. Motors Used with Variable Frequency Drives:**

1. Ratings, characteristics, and features shall be coordinated with and approved by VFD controller manufacturer.
2. Efficiency: Premium efficient motors, as specified herein
3. Designed with critical vibration frequencies outside operating range of controller output.
4. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
5. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
6. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
7. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

**C. Severe-Duty Motors:** Comply with IEEE 841, with 1.25 minimum service factor, greased bearings, integral condensate drains and capped relief vents. Windings insulated with non-hygroscopic material.

1. Finish: Chemical Resistant Paint over corrosion resistant primer.

**2.5 SINGLE-PHASE MOTORS**

**A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:**

1. Permanent-split capacitor.
2. Split phase.
3. Capacitor start, inductor run.
4. Capacitor start, capacitor run.

**B. Multispeed Motors:** Variable-torque, permanent-split-capacitor type.

**C. Bearings:** Pre-lubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

**D. Motors 1/20 HP and Smaller:** Shaded-pole type.

**E. Thermal Protection:** Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

**F. Efficiency:** premium efficient motors, as specified herein.

**PART 3 - EXECUTION**

**3.1 EXECUTION REQUIREMENTS**

**A. Refer to DDC General Conditions for execution requirements.**

**3.2 EXAMINATION**

**A. Examine areas to receive field-installed motors for compliance with requirements, installation tolerances, and other conditions affecting performance.**

- B. Examine roughing-in of conduit systems to verify actual locations of conduit connections before motor installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 MOTOR INSTALLATION

- A. Anchor each motor assembly to base, adjustable rails, or other support, arranged and sized according to manufacturer's written instructions. Attach by bolting. Level and align with load transfer link.
- B. Install motors on concrete base complying with Section 03 30 00 "Cast-in-Place Concrete".
- C. Comply with mounting and anchoring requirements specified in Section "Vibration Isolation, Seismic and Wind Load Restraints for HVAC Components."

### 3.4 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
  - 1. Run each motor with its controller. Demonstrate correct rotation, alignment, and speed at motor design load.
  - 2. Test interlocks and control features for proper operation.
  - 3. Verify that current in each phase is within nameplate rating.
- B. Testing: Perform the following field quality-control testing:
  - 1. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.15.1. Certify compliance with test parameters.
  - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

### 3.5 ADJUSTING

- A. Align motors, bases, shafts, pulleys, and belts. Tension belts according to manufacturer's written instructions.

### 3.6 CLEANING

- A. After completing equipment installation, inspect unit components. Remove paint splatters and other spots, dirt and debris. Repair damaged finish to match original finish.
- B. Clean motors, on completion of installation, according to manufacturer's written instructions.

**END OF SECTION 23 05 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 05 14****VARIABLE FREQUENCY MOTOR DRIVES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 13 "Motors for HVAC Equipment".
- E. Section 23 05 93 "Testing, Adjusting and Balancing".
- F. Section 23 09 00 "HVAC Instrumentation and Controls".

**1.2 SUMMARY**

- A. Section includes separately enclosed, pre-assembled, solid-state, PWM, combination VFDs, rated 600 V and less, for speed control of three-phase, squirrel-cage induction motors.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification

section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 REFERENCE STANDARDS

- A. IEEE - Standard 519-1992, IEE Guide for Harmonic Content and Control.
- B. Underwriters Laboratories - UL508C
- C. National Electrical Manufacture's Association (NEMA) - ICS 16800 Parts 1 and 2
- D. NEMA 250: Enclosures for Electrical Equipment (1000 Volts Maximum)
- E. NEMA ICS 2-222: Overload Relay Class Designation
- F. NEMA - MG 1: Motors and Generators
- G. NFPA – 70: National Electrical Code
- H. International Electro-technical Commission (IEC) 947-4-1- Low-voltage switchgear and Control gear, Part 4-1: Contactors and Motor Starters

#### 1.6 DEFINITIONS

- A. BMS: Building management system.
- B. CPT: Control power transformer.
- C. EMI: Electromagnetic interference.
- D. IGBT: Integrated gate bipolar transistor.
- E. LAN: Local area network.
- F. LED: Light-emitting diode.
- G. MCP: Motor-circuit protector.
- H. NC: Normally closed.
- I. NO: Normally open.
- J. OCPD: Overcurrent protective device.
- K. PCC: Point of common coupling.
- L. PID: Control action, proportional plus integral plus derivative.
- M. PWM: Pulse-width modulated.
- N. RFI: Radio-frequency interference.

- O. TDD: Total demand (harmonic current) distortion.
- P. THD (V): Total harmonic voltage demand.
- Q. VFD: Variable-frequency motor controller.

## 1.7 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: VFDs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- B. Harmonics: Submit calculations to demonstrate that the total harmonic produced by all of the VFD's connected to the systems at the electrical service point shall be no greater than the allowable harmonics as follows:
  - 1. The total harmonics produced by all of the VFD's connected to the system, including VFD's provided integral with HVAC equipment, at the point of Common Coupling (PCC) shall be no greater than the allowable harmonics for special systems as specified by IEEE Standard 519, tables 10.2 & 10.3 based on the installed KVA. The PCC shall be the primary side of the electrical service transformer(s) for calculating current distortion and the PCC shall be the secondary side of the electrical service transformer(s) for calculating voltage distortion. Where the installed source KVA is not indicated on the electrical drawings, calculations shall be based on 60 percent of the KVA of the service switch, not including the fire pump.

## 1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.9 SUBMITTALS

- A. Product Data: For each type and rating of VFD indicated. Include features, performance, electrical ratings, operating characteristics, shipping and operating weights, and furnished specialties and accessories.
- B. Shop Drawings: For each VFD. Include dimensioned plans, elevations, and sections; and conduit entry locations and sizes, mounting arrangements, and details, including required clearances and service space around equipment.
  - 1. Show tabulations of installed devices, equipment features, and ratings. Include the following:
    - a. Each installed unit's type and details.
    - b. Factory-installed devices.
    - c. Enclosure types and details.
    - d. Nameplate legends.
    - e. Short-circuit current (withstand) rating of enclosed unit.
    - f. Features, characteristics, ratings, and factory settings of each VFD and installed devices.
    - g. Specified modifications.
    - h. UL listing for series rating of overcurrent protection devices in combination

controllers

2. Schematic and Connection Wiring Diagrams: For power, signal, and control wiring.
  3. Harmonics: Submit calculations to demonstrate that the total harmonic produced by all of the VFD's connected to the systems at the electrical service point shall be no greater than the allowable harmonics, as specified above.
- C. Qualification Data: For qualified testing agency.
- D. Seismic Qualification Certificates: For VFDs, accessories, and components, from manufacturer.
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based, and their installation requirements.
- E. Product Certificates: For each VFD, from manufacturer.
- F. Source quality-control reports.
- G. Field quality-control reports.
- H. Operation and Maintenance Data: For VFDs to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions Section "Operation and Maintenance Data," include the following:
1. Manufacturer's written instructions for testing and adjusting thermal-magnetic circuit breaker and MCP trip settings.
  2. Manufacturer's written instructions for setting field-adjustable overload relays.
  3. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor control modules.
  4. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
- 1.10 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source Limitation: Obtain VFD's of a single type through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70, as amended by 2014 NYCBC.
- E. IEEE Compliance: Fabricate and test VFD according to IEEE 344 to withstand seismic forces defined in Division 26 Section "Vibration Isolation, Seismic, Wind & Flood Load Restraints For Electrical Components."
- F. VFDs and options shall be UL listed as a complete assembly. VFDs that require the customer to supply external fuses for the VFD to be UL listed are not acceptable. VFDs with requiring additional branch circuit protection are not acceptable. The base VFD shall be UL listed for 100

KAIC without the need for input fusing.

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. If stored in space that is not permanently enclosed and air-conditioned, remove loose packing and flammable materials from inside controllers and install temporary electric heating, with at least 250 W per controller.

#### 1.12 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load without de-rating, under the following conditions unless otherwise indicated:
  - 1. Ambient Temperature: 0 deg F to 104 deg F.
  - 2. Ambient Storage Temperature: Not less than minus 4 deg F and not exceeding 140 deg F
  - 3. Humidity: Less than 95 percent (noncondensing).
  - 4. Altitude: Not exceeding 3300 feet.
- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFDs, including clearances between VFDs, and adjacent surfaces and other items.

#### 1.13 COORDINATION

- A. Coordinate features of motors, load characteristics, installed units, and accessory devices to be compatible with the following:
  - 1. Torque, speed, and horsepower requirements of the load.
  - 2. Ratings and characteristics of supply circuit and required control sequence.
  - 3. Ambient and environmental conditions of installation location.
- B. Coordinate layout and installation of VFDs with other construction including conduit, piping, equipment and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- C. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- D. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- E. Submit Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFDs. Show VFD layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements

#### 1.14 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace VFDs that fail in materials or workmanship within specified warranty period.
  - 1. Manufacturer warranty Period: Five years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURED UNITS.

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ABB Power Distribution, Inc.; ABB Control, Inc.
  2. Yaskawa Electric America, Inc; Drives Division.
  3. Toshiba International Corporation.
  4. Or approved equal.

### 2.2 VARIABLE FREQUENCY CONTROLLERS

- A. General Requirements for VFDs: Comply with NEMA ICS 7, NEMA ICS 61800-2, and UL 508C.
- B. VFD Description: Variable-frequency power converter (rectifier, dc bus, and IGBT, PWM inverter) factory packaged in an enclosure, with integral disconnecting means and overcurrent and overload protection; listed and labeled by an NRTL as a complete unit; arranged to provide self-protection, protection, and variable-speed control of one or more three-phase induction motors by adjusting output voltage and frequency.
1. Units suitable for operation of standard efficiency and premium efficiency motors as defined by NEMA MG1.
  2. Units suitable for operation of NEMA MG 1, Design A and Design B motors as defined by NEMA MG 1, Section IV, Part 30, "Application Considerations for Constant Speed Motors Used on a Sinusoidal Bus with Harmonic Content and General Purpose Motors Used with Adjustable-Voltage or Adjustable-Frequency Controls or Both."
  3. Units suitable for operation of inverter-duty motors as defined by NEMA MG 1, Section IV, Part 31, "Definite-Purpose Inverter-Fed Polyphase Motors."
  4. Listed and labeled for integrated short-circuit current (withstand) rating by an NRTL acceptable to NYC Dept of Buildings.
  5. VFD's for operation of motors 15 HP and larger are to be equipped with a minimum of 12 pulse inverter sections.
  6. VFD's for operation of motors 10 HP or less shall be equipped with a minimum of 6 pulse inverter sections.
  7. VFD's for chillers are to be equipped with a minimum of 12 pulse inverter sections
- C. Design and Rating: Match load type, such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.
- D. Output Rating: Three-phase; 10 to 60 Hz, with voltage proportional to frequency throughout voltage range; maximum voltage equals input voltage.
- E. Unit Operating Requirements:
1. Input AC Voltage Tolerance: 208V, Plus or minus 5 percent, 380 – 500 V, plus or minus 10 percent of VFD input voltage rating.
  2. Input AC Voltage Unbalance: Not exceeding 3 percent.
  3. Input Frequency Tolerance of 50/60 Hz., Plus or minus 3 percent of VFD frequency rating.
  4. Minimum Efficiency: 96 percent at 60 Hz, full load.
  5. Minimum Displacement Primary-Side Power Factor: 96 percent under any load or speed condition.
  6. Ambient Temperature Rating: Not less than 0 deg F and not exceeding 104 deg F.

7. Ambient Storage Temperature Rating: Not less than minus 4 deg F and not exceeding 140 deg F
  8. Humidity Rating: Less than 95 percent (noncondensing).
  9. Altitude Rating: Not exceeding 3300 feet.
  10. Vibration Withstand: Comply with IEC 60068-2-6.
  11. Overload Capability: 1.1 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.
  12. Starting Torque: Minimum 100 percent of rated torque from 3 to 60 Hz.
  13. Speed Regulation: Plus or minus 1 percent.
- F. Isolated Control Interface: Allows VFDs to follow remote-control signal over a minimum 40:1 speed range.
- G. Internal Adjustability Capabilities:
1. Minimum Speed: 5 to 25 percent of maximum rpm.
  2. Maximum Speed: 80 to 100 percent of maximum rpm.
  3. Acceleration: 2 to 22 seconds.
  4. Deceleration: 2 to 22 seconds.
  5. Current Limit: 50 to minimum of 110 percent of maximum rating.
- H. Self-Protection and Reliability Features:
1. Input transient protection by means of surge suppressors to provide three-phase protection against damage from supply voltage surges 10 percent or more above nominal line voltage.
  2. Loss of Input Signal Protection: Selectable response strategy, including speed default to a percent of the most recent speed, a preset speed, or stop with alarm.
  3. Under- and overvoltage trips.
  4. Inverter over current trips.
  5. VFD and Motor Overload/Overtemperature Protection: Microprocessor-based thermal protection system for monitoring VFDs and motor thermal characteristics, and for providing VFD overtemperature and motor overload alarm and trip; settings selectable via the keypad; NRTL approved.
  6. Critical frequency rejection, with three selectable, adjustable deadbands.
  7. Instantaneous line-to-line and line-to-ground overcurrent trips.
  8. Loss-of-phase protection.
  9. Reverse-phase protection.
  10. Short-circuit protection.
  11. Motor over-temperature fault.
  12. Control circuit (120 V) for interlocking with dry contacts in load side motor disconnect to disable start-up attempts with system open.
  13. Snubber networks to protect against malfunction due to system voltage transients.
- I. Automatic Reset/Restart: Attempt three restarts after drive fault or on return of power after an interruption and before shutting down for manual reset or fault correction; adjustable delay time between restart attempts.
- J. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped, unless "Bidirectional Autospeed Search" feature is available and engaged.
- K. Bidirectional Autospeed Search: Capable of starting VFD into rotating loads spinning in either direction and returning motor to set speed in proper direction, without causing damage to drive, motor, or load.

- L. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.
- M. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.
- N. Decelerating Energy Absorption: Means of absorbing energy released by decelerating motor (and its driven load) without damage to VFD, motor or load.
- O. DC Bus Choke: For harmonic distortion reduction
- P. Integral Input Disconnecting Means and OCPD: NEMA KS 1, nonfusible switch, with power fuse block and current-limiting fuses with pad-lockable, door-mounted handle mechanism.

## 2.3 CONTROLS AND INDICATION

- A. Status Lights: Door-mounted LED indicators displaying the following conditions:
  - 1. Power on.
  - 2. Run.
  - 3. Overvoltage.
  - 4. Line fault.
  - 5. Over current.
  - 6. External fault.
- B. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
  - 1. Keypad: In addition to required programming and control keys, include keys for HAND, OFF, and AUTO modes.
  - 2. Security Access: Provide electronic security access to controls through identification and password with at least three levels of access: View only; view and operate; and view, operate, and service.
    - a. Control Authority: Supports at least four conditions: Off, local manual control at VFD, local automatic control at VFD, and automatic control through a remote source.
- C. Historical Logging Information and Displays:
  - 1. Real-time clock with current time and date.
  - 2. Running log of total power versus time.
  - 3. Total run time.
  - 4. Fault log, maintaining last four faults with time and date stamp for each.
- D. Indicating Devices: Digital display and additional readout devices as required, mounted flush in VFD door and connected to display VFD parameters including, but not limited to:
  - 1. Output frequency (Hz).
  - 2. Motor speed (rpm).
  - 3. Motor status (running, stop, fault).
  - 4. Motor current (amperes).
  - 5. Motor torque (percent).
  - 6. Fault or alarming status (code).

7. PID feedback signal (percent).
8. DC-link voltage (V dc).
9. Set point frequency (Hz).
10. Motor output voltage (V ac).

**E. Control Signal Interfaces:**

**1. Electric Input Signal Interface:**

- a. A minimum of two programmable analog inputs: 0 to 10 V dc and 4 to 20-mA dc.
- b. A minimum of six multifunction programmable digital inputs.

**2. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BAS or other control systems:**

- a. 0- to 10-V dc.
- b. 4- to 20-mA dc.
- c. Potentiometer using up/down digital inputs.
- d. Fixed frequencies using digital inputs.
- e. RS 485
- f. Keypad Display for local hand operation.

**3. Output Signal Interface: A minimum of two programmable analog output signal(s) (4- to 20-mA dc which can be configured for any of the following:**

- a. Output frequency (Hz).
- b. Output current (load).
- c. DC-link voltage (V dc).
- d. Motor torque (percent).
- e. Motor speed (rpm).
- f. Set point frequency (Hz).

**4. Remote Indication Interface: A minimum of two programmable dry-circuit relay outputs (120-V ac, 1 A) for remote indication of the following:**

- a. Motor running.
- b. Set point speed reached.
- c. Fault and warning indication (overtemperature or overcurrent).
- d. PID high- or low-speed limits reached.

**F. Damper Control Interface: Closes a dry contact upon a start command to open associated dampers before the motor is allowed to operate in drive or bypass mode. Input to accept damper limit switch contact enclosure to allow the motor to operate.**

**G. Safety Control Interface: Input to accept safety device dry contact closure to stop motor operating in drive and bypass mode.**

**H. Over-Ride Control Interface: Input to accept control system dry contact closure to start motor operation in drive mode at variable speed and in bypass mode.**

**I. PID Control Interface: Provides closed-loop set point, differential feedback control in response to dual feedback signals. Allows for closed-loop control of fans and pumps for pressure, flow, or temperature regulation.**

1. Number of Loops: Two.

J. BMS Interface: Factory-installed hardware and software to enable the BAS to monitor, control, and display VFD status and alarms and energy usage. Allows VFD to be used with an external system within a multidrop LAN configuration; settings retained within VFD's nonvolatile memory. Interface shall allow all parameter settings of VFD to be programmed via BMS control and all output signals and alarms of VFD to be monitored by BMS.

1. Network Communications Ports: Ethernet and RS-422/485.
2. Embedded BAS Protocols for Network Communications (coordinate with BMS Trade): ASHRAE 135 BACnet protocols accessible via the communications ports.

## 2.4 LINE CONDITIONING AND FILTERING

A. Input Line Conditioning: Based on the harmonic analysis study and report, provide input filtering, as required, to limit TDD at input terminals of all VFDs to less than 5 percent and THD (V) to 3 percent.

1. Protect each VFD against injurious overheating at its full load rating.
2. Line reactors are incorporated as an integral part of the controller equipment in a single cabinet. Include all required field wiring.
3. DC Bus choke: For harmonic distortion reduction.

B. Output Filtering: The variable frequency controllers are suitable for use with standard NEMA Design B motors having a service factor of 1.15 without producing any injurious "ringing" over-voltages as the motor terminals.

C. Incorporate L-C filters (and/or other items) in the output of the drive as required to prevent such over voltages based on the circuit length from VFD to motor.

D. Provide written certification of the suitability of the VFD for use with "standard motors."

E. EMI/RFI Filtering: CE marked; certify compliance with IEC 61800-3 for Category C2.

## 2.5 BYPASS SYSTEMS

A. Activation of bypass operation shall not disconnect overcurrent, overload or any other motor protection devices.

B. Bypass Operation: Safely transfers motor between power converter output and bypass circuit, manually, automatically, or both. Selector switches set modes and indicator lights indicate mode selected. Unit is capable of stable operation (starting, stopping, and running) with motor completely disconnected from power converter.

C. Bypass Mode: Field-selectable automatic or manual, allows local and remote transfer between power converter and bypass contactor and retransfer, either via manual operator interface or automatic control system feedback.

D. Manual Bypass: magnetic contactor arranged to safely transfer motor between controller output and bypass controller circuit when motor is at zero speed. Controller-Off-Bypass selector switch sets mode and indicator lights give indication of mode selected. Unit shall be capable of stable operation (Starting, stopping and running) with motor completely disconnected from controller (no load).

- E. Bypass Controller: NEMA ICS 2, full voltage, non-reversing enclosed controller with across-the-line starting capability in manual bypass mode. Provide motor overload protection under both modes of operation with control logic that allows common start-stop capability in either mode. Bypass controller for motors 75 HP and larger (10 HP and larger when supplied from an emergency generator) are provided with solid-state reduced voltage controller (soft-start) in series with the bypass contactor.
- F. Two-contactor-style bypass allows motor operation via the power converter or the bypass controller: with input isolating switch and barrier arranged to isolate the power converter and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode.
- G. Isolating Switch: Non-load-break switch arranged to isolate power converter and permit safe troubleshooting and testing of the power converter, both energized and de-energized, while motor is operating in bypass mode; pad-lockable, door-mounted handle mechanism.
- H. Motor protection from single phase power conditions- the Bypass system must be able to detect a single phase input power while running in bypass, disengage the motor in a controlled fashion, and give a single phase input power indication. Bypass systems not incorporating single phase protection in Bypass mode are not acceptable.

## 2.6 ADDITIONAL REQUIREMENTS

- A. Provide a separate terminal strip for connection of freeze, fire, smoke contacts, and external start command. All external safety interlocks shall remain fully functional whether the system is in VFD or Bypass mode. The remote start/stop contact shall operate in VFD and bypass mode. The terminal strip shall allow for independent connection of up to four (4) unique inputs.
- B. There shall be a run permissive circuit for damper or valve control. Regardless of the source of a run command (keypad, time-clock control, or serial communications) the VFD shall provide a dry contact closure that will signal the damper to open (VFD motor does not operate). When the damper is fully open, a normally open dry contact (end-switch) shall close. The closed end-switch is wired to a VFD digital input and allows motor operation. Two separate safety interlock inputs shall be provided when safety is opened; the motor shall be commanded to coast to stop, and the damper shall be commanded to close.
- C. Damper control circuit with end of travel feedback capability.
- D. Motor Preheat Function: Preheats motor when idle to prevent moisture accumulation in the motor.
- E. Firefighter's Override (Smoke Purge) Input: On a remote contact closure from the firefighter's control station, this password-protected input:
  - 1. Overrides all other local and external inputs (analog/digital, serial communication, and all keypad commands).
  - 2. Forces VFD to operate motor, without any other run or speed command, at a field-adjustable, preset speed.
  - 3. Reset VFD to normal operation on removal of override signal manually.
- F. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.
- G. Remote digital operator kit.

- H. The bypass control shall include a programmable time delay for bypass start and keypad indication that this time delay is in process. This will allow VAV boxes to be driven open before the motor operates at full speed in the bypass mode. The time delay shall be field programmable from 0-120 seconds
- I. Communication Port: RS-232 port, USB 2.0 port, or equivalent connection capable of connecting a printer and a notebook computer.

## 2.7 VFD ENCLOSURES

- A. Unless otherwise specified herein, NEMA 250, to comply with environmental conditions at installed location.
  - 1. Dry and Clean Indoor Conditioned Locations: NEMA 250 Type 1.
  - 2. Outdoor Locations: Type 4X, with space heater and air-cooled cooling unit to maintain temperature within housing as required for proper operation for outdoor temperatures within the range of ASHRAE 99.6 percent winter design temperature and ASHRAE 0.4 percent summer design temperature for the area, plus solar load. Single point electrical connection for controller and enclosure.
  - 3. Other Wet or Damp Indoor Locations: Type 4.
  - 4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
  - 5. Fan Rooms and Refrigeration Rooms: Type 3R
  - 6. Hazardous Areas Indicated on Drawings: Type 7, Type 9.
- B. Breather and drain assemblies, to maintain interior pressure and release condensation in NEMA 250, Type 4, Type 4X, Type 12 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- C. Space heaters, with NC auxiliary contacts, to mitigate condensation in NEMA 250, Type 3R Type 4X, Type 12 enclosures installed in unconditioned interior spaces subject to humidity and temperature swings.
- D. Cooling Fan and Exhaust System: For NEMA 250, Type 1, Type 12; UL 508 component recognized: Supply fan, with stainless steel intake and exhaust grills and filters; 120-V ac; obtained from integral CPT.
- E. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors.
- F. Rain shields installed on fronts, sides and tops of enclosures installed outdoors. Rain shields shall extend a minimum of 30" around enclosure. Provide walk-on platform to eliminate standing water.
- G. Plenum Rating: UL 1995; NRTL certification label on enclosure, clearly identifying VFD as "Plenum Rated." e.g., when VFD is located in the air stream inside an air-handling unit or in a space used for environmental air (e.g., above a suspended ceiling used for return air).

## 2.8 ACCESSORIES

- A. General Requirements for Control-Circuit and Pilot Devices: NEMA ICS 5; factory installed in VFD enclosure cover unless otherwise indicated.
  - 1. Push Buttons, Pilot Lights, and Selector Switches: Heavy-duty type.
- B. Standard Displays:

1. Output Frequency
2. Set-Point Frequency
3. Motor Current (amperes)
4. DC- Link-Voltage (VDC)
5. Motor Torque (percent)
6. Motor Speed (RPM)
7. Motor Output Voltage (V).

C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.

D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

1. Current Transformers: Continuous current rating, basic impulse insulating level (BIL) rating, burden, and accuracy class suitable for connected circuitry. Comply with IEEE C57.13.

E. Supplemental Digital Meters:

1. Elapsed-time meter.
2. Kilowatt meter.
3. Kilowatt-hour meter.

F. Spare control-wiring terminal blocks; wired.

## 2.9 SOURCE QUALITY CONTROL

A. Testing: Test and inspect VFDs according to requirements in NEMA ICS 61800-2.

1. Test each VFD while connected to a motor that is comparable to that for which the VFD is rated.
2. Verification of Performance: Rate VFDs according to operation of functions and features specified.

B. VFDs will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

A. Examine areas, surfaces, and substrates to receive VFDs, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance.

B. Examine VFD before installation. Reject VFDs that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for conduit systems to verify actual locations of conduit connections before

VFD installation.

### 3.3 INSTALLATION

- A. VFD's to be installed as part of the Electrical Work.
- B. Coordinate layout and installation of VFDs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- C. Floor-Mounting Controllers: Install VFDs on 4-inch (100-mm) nominal thickness concrete base. Comply with requirements for concrete base specified in Division 03 Section.
- D. Roof-Mounting Controllers: Install VFD on roofs with tops at uniform height and with disconnect operating handles not higher than 79 inches (2000 mm) above finished roof surface unless otherwise indicated, and by bolting units to curbs or mounting on freestanding, lightweight, structural-steel channels bolted to curbs. Seal roof penetrations after raceways are installed.
- E. Seismic Bracing: Comply with requirements specified in Division 26 Section "VIBRATION AND SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS."
- F. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- G. Comply with NECA 1.

### 3.4 IDENTIFICATION

- A. Identify VFDs, components, and control wiring. Comply with requirements for identification specified in Division 26.
  - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
  - 2. Label each VFD with engraved nameplate.
  - 3. Label each enclosure-mounted control and pilot device
- B. Operating Instructions: Frame printed operating instructions for VFDs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFD units.

### 3.5 CONTROL WIRING INSTALLATION

- A. Install wiring between VFDs and remote devices and facility's BMS system.
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic control devices where applicable.
  - 1. Connect selector switches to bypass only those manual- and automatic control devices that have no safety functions when switches are in manual-control position.
  - 2. Connect selector switches with control circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

### 3.6 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- B. Acceptance Testing Preparation:
  - 1. Test insulation resistance for each VFD element, bus, component, connecting supply, feeder, and control circuit.
  - 2. Test continuity of each circuit.
- C. Tests and Inspections:
  - 1. Inspect VFD, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
  - 2. Test continuity of each circuit.
  - 3. Verify that voltages at VFD locations are within 5 percent of motor nameplate rated voltages. If outside this range for any motor, notify the Commissioner before starting the motor(s).
  - 4. Test each motor for proper phase rotation.
  - 5. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
  - 6. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
  - 7. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- D. VFDs will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies the VFD and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

### 3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.

### 3.8 ADJUSTING

- A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.
- B. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable, instantaneous trip elements. Initially adjust to six times the motor nameplate full-load amperes and attempt to start motors several times, allowing for motor cool-down between starts. If tripping

occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify the Commissioner before increasing settings.

- D. Set the taps on reduced-voltage autotransformer controllers.
- E. Set field-adjustable circuit-breaker trip ranges as specified in Division 26 00 00.
- F. Set field-adjustable pressure switches.

### 3.9 PROTECTION

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until controllers are ready to be energized and placed into service.
- B. Replace VFDs whose interiors have been exposed to water or other liquids prior to Substantial Completion.

### 3.10 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service personnel to adjust, operate, reprogram, and maintain VFDs.

**END OF SECTION 23 05 14**

**SECTION 23 05 15****ENCLOSED CONTROLLERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 – “Common Requirements for HVAC Work”.
- C. Section 23 05 48 – “Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components”.
- D. Section 23 05 13 – “Motors for HVAC Equipment”.
- E. Section 23 05 15 – “Variable Frequency Motor Drives”.
- F. Section 23 09 00 – “HVAC Instrumentation and Controls”
- G. Section 23 09 05 – “Sequences of Operation for HVAC Controls”
- H. This Section is itself related to each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes the following:
  - 1. Full-voltage manual.
  - 2. Full-voltage magnetic.
  - 3. Reduced-voltage magnetic.
  - 4. Reduced-voltage solid state.
  - 5. Multispeed.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 “Construction Waste Management and Disposal”
  - 2. Section 01 81 13 “Sustainable Design Requirements for LEED Buildings”
  - 3. Section 01 81 19 “Indoor Air Quality Requirements for LEED Buildings”
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED

Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 DEFINITIONS**

- A. CPT: Control power transformer.
- B. MCCB: Molded-case circuit breaker.
- C. MCP: Motor circuit protector.
- D. N.C.: Normally closed.
- E. N.O.: Normally open.
- F. OCPD: Overcurrent protective device.
- G. SCR: Silicon-controlled rectifier.

**1.6 PERFORMANCE REQUIREMENTS**

- A. Seismic Performance: Enclosed controllers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

**1.7 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.8 ACTION SUBMITTALS**

- A. Product Data: For each type of enclosed controller, include manufacturer's technical data on features, performance, electrical characteristics, ratings, and enclosure types and finishes.
- B. Shop Drawings: For each enclosed controller, include dimensioned plans, elevations, sections, details, and required clearances and service spaces around controller enclosures.
  - 1. Show tabulations of the following:
    - a. Each installed unit's type and details.
    - b. Factory-installed devices.
    - c. Nameplate legends.
    - d. Short-circuit current rating of integrated unit.
    - e. Listed and labeled for integrated short-circuit current (withstand) rating of OCPDs

- f. in combination controllers by an NRTL acceptable to NYC Dept of Buildings  
Features, characteristics, ratings, and factory settings of individual OCPDs in combination controllers.

- 2. Wiring Diagrams: For power, signal, and control wiring.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified testing agency.
- B. Seismic Qualification Certificates: For enclosed controllers, accessories, and components, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.
- D. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions Section "Operation and Maintenance Data," include the following:
  - 1. Routine maintenance requirements for enclosed controllers and installed components.
  - 2. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
  - 3. Manufacturer's written instructions for setting field-adjustable overload relays.
  - 4. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage solid-state controllers.
- E. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.
- F. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.

#### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install temporary electric heating, with at least 250 W per controller.

#### 1.11 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load

without derating, under the following conditions unless otherwise indicated

1. Ambient Temperature: Not less than minus 22 deg F. and not exceeding 104 deg F.
2. Ambient Storage Temperature: Not less than minus 4 deg F. and not exceeding 140 deg F.
3. Humidity: Less than 95 percent (non-condensing).
4. Altitude: Not exceeding 6000 feet.

- B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for controllers, including clearances between controllers and adjacent surfaces and other items.

#### 1.12 COORDINATION

- A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

#### 1.13 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Testing Agency Qualifications: Member company of NETA or an NRTL.
1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. Comply with NFPA 70.
- E. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548.16 "Seismic Controls for Electrical Systems."

### PART 2 - PRODUCTS

#### 2.1 FULL-VOLTAGE CONTROLLERS

- A. General Requirements for Full-Voltage Controllers: Comply with NEMA ICS 2, general purpose, Class A.
- B. Motor-Starting Switches: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.

- b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
    - c. Rockwell Automation, Inc.; Allen-Bradley brand.
    - d. Siemens Energy & Automation, Inc.
    - e. Square D; a brand of Schneider Electric.
    - f. Or approved equal.
  - 2. Configuration: Nonreversing.
  - 3. Surface mounting.
  - 4. Red Green pilot light.
- C. Fractional Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
    - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
    - c. Rockwell Automation, Inc.; Allen-Bradley brand.
    - d. Siemens Energy & Automation, Inc.
    - e. Square D; a brand of Schneider Electric.
    - f. Or approved equal.
  - 2. Configuration: Nonreversing.
  - 3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button bimetallic type.
  - 4. Surface mounting.
  - 5. Red Green pilot light.
- D. Integral Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
    - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
    - c. Rockwell Automation, Inc.; Allen-Bradley brand.
    - d. Siemens Energy & Automation, Inc.
    - e. Square D; a brand of Schneider Electric.
    - f. Or approved equal.
  - 2. Configuration: Nonreversing.
  - 3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters and sensors in each phase, matched to nameplate full-load current of actual protected motor and having appropriate adjustment for duty cycle; external reset push button bimetallic type.
  - 4. Surface mounting.
  - 5. Red Green pilot light.
  - 6. N.O./N.C. auxiliary contact.
- E. Magnetic Controllers: Full voltage, across the line, electrically held.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
  - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
  - c. Rockwell Automation, Inc.; Allen-Bradley brand.
  - d. Siemens Energy & Automation, Inc.
  - e. Square D; a brand of Schneider Electric.
  - f. Or approved equal.
2. Configuration: Nonreversing.
3. Contactor Coils: Pressure-encapsulated type.
  - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
4. Power Contacts: Totally enclosed, double-break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: 24-V ac; obtained from integral CPT, with primary and secondary fuses, with CPT of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.
  - a. CPT Spare Capacity: 50.
6. Melting Alloy Overload Relays:
  - a. Inverse-time-current characteristic.
  - b. Class 10 tripping characteristic.
  - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
7. Bimetallic Overload Relays:
  - a. Inverse-time-current characteristic.
  - b. Class 10 tripping characteristic.
  - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
  - d. Ambient compensated.
  - e. Automatic resetting.
8. Solid-State Overload Relay:
  - a. Switch or dial selectable for motor running overload protection.
  - b. Sensors in each phase.
  - c. Class 10 tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
  - d. Class II ground-fault protection, with start and run delays to prevent nuisance trip on starting.
  - e. Analog communication module.
9. N.C. / N.O., isolated overload alarm contact.
10. External overload reset push button.

F. Combination Magnetic Controller: Factory-assembled combination of magnetic controller,

OCPD, and disconnecting means.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
  - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
  - c. Rockwell Automation, Inc.; Allen-Bradley brand.
  - d. Siemens Energy & Automation, Inc.
  - e. Square D; a brand of Schneider Electric.
  - f. Or approved equal.
2. Fusible Disconnecting Means:
  - a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate Class J fuses.
  - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
  - c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.
3. Nonfusible Disconnecting Means:
  - a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
  - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
  - c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.
4. MCP Disconnecting Means:
  - a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
  - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
  - c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
  - d. N.C. /N.O. alarm contact that operates only when MCP has tripped.
  - e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.
5. MCCB Disconnecting Means:
  - a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
  - b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
  - c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
  - d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
  - e. N.C./N.O. alarm contact that operates only when MCCB has tripped.

## 2.2 ENCLOSURES

- A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.
  - 1. Dry and Clean Indoor Locations: Type 1.
  - 2. Outdoor Locations: Type 3R.
  - 3. Other Wet or Damp Indoor Locations: Type 4.
  - 4. Hazardous Areas Indicated on Drawings: Type 7, Type 9.

## 2.3 ENCLOSURES

- A. Unless otherwise specified herein, NEMA 250, to comply with environmental conditions at installed location.
  - 1. Dry and Clean Indoor Conditioned Locations: NEMA 250 Type 1.
  - 2. Outdoor Locations: Type 4X, with space heater and air-cooled cooling unit to maintain temperature within housing as required for proper operation for outdoor temperatures within the range of ASHRAE 99.6 percent winter design temperature and ASHRAE 0.4 percent summer design temperature for the area, plus solar load. Single point electrical connection for controller and enclosure.
  - 3. Other Wet or Damp Indoor Locations: Type 4.
  - 4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
  - 5. Fan Rooms and Refrigeration Rooms: Type 3R
  - 6. Hazardous Areas Indicated on Drawings: Type 7.
- B. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors.
- C. Rain shields installed on fronts, sides and tops of enclosures installed outdoors. Rain shields shall extend a minimum of 30" around enclosure. Provide walk-on platform to eliminate standing water.

## 2.4 ACCESSORIES

- A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.
  - 1. Push Buttons, Pilot Lights, and Selector Switches: Heavy-duty, oil tight type.
    - a. Pilot Lights: LED types; colors as indicated; push to test.
    - b. Selector Switches: Rotary type.
- B. N.C., N.O., Reversible N.C./N.O. auxiliary contact(s).
- C. Control Relays: Auxiliary and adjustable solid state time-delay relays.
- D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.
- E. Breather and drain assemblies, to maintain interior pressure and release condensation in Type 4, Type 7, Type 9 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.
- F. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

- G. Cover gaskets for Type 1 enclosures.
- H. Terminals for connecting power factor correction capacitors to the load side of overload relays.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. Examine areas and surfaces to receive enclosed controllers, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.3 INSTALLATION

- A. Wall-Mounted Controllers: Install enclosed controllers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."
- B. Floor-Mounted Controllers: Install enclosed controllers on 4-inch nominal-thickness concrete base. Comply with requirements for concrete base specified in Division 03.
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Seismic Bracing: Comply with requirements specified in Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- E. Install fuses in each fusible-switch enclosed controller.
- F. Install fuses in control circuits if not factory installed. Comply with requirements in Division 26 Section "Fuses."
- G. Install heaters in thermal overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- H. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven

equipment.

- I. Install power factor correction capacitors. Connect to the line side of overload relays. If connected to the load side of overload relays, adjust overload heater sizes to accommodate the reduced motor full-load currents.
- J. Comply with NECA 1.

### 3.4 IDENTIFICATION

- A. Identify enclosed controllers, components, and control wiring. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
  - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
  - 2. Label each enclosure with engraved nameplate.
  - 3. Label each enclosure-mounted control and pilot device.

### 3.5 CONTROL WIRING INSTALLATION

- A. Install wiring between enclosed controllers and remote devices and BMS system. Comply with requirements in Division 26 Section "Control-Voltage Electrical Power Cables."
- B. Bundle, train, and support wiring in enclosures.
- C. Connect selector switches and other automatic-control selection devices where applicable.
  - 1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
  - 2. Connect selector switches with enclosed-controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

### 3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Acceptance Testing Preparation:
  - 1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
  - 2. Test continuity of each circuit.
- E. Tests and Inspections:

1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
2. Test insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.
3. Test continuity of each circuit.
4. Verify that voltages at controller locations are within plus or minus 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Commissioner before starting the motor(s).
5. Test each motor for proper phase rotation.
6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:
  - a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multi-pole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
  - b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multi-pole enclosed controller 11 months after date of Substantial Completion.
  - c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

F. Enclosed controllers will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports including a certified report that identifies enclosed controllers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

### 3.7 ADJUSTING

- A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.
- B. Adjust overload-relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.
- C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable instantaneous trip elements. Initially adjust to six times the motor nameplate full-load ampere ratings and attempt to start motors several times, allowing for motor cool down between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Commissioner before increasing settings.
- D. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage solid-state controllers.

- E. Set field-adjustable circuit-breaker trip ranges, as specified in Division 26 Section.

**3.8 PROTECTION**

- A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.
- B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

**3.9 DEMONSTRATION**

- A. Engage a factory-authorized service representative to instruct the City of New York's service staff to adjust, operate, and maintain enclosed controllers, and to use and reprogram microprocessor-based, reduced-voltage solid-state controllers.

**END OF SECTION 23 05 15**

## **SECTION 23 05 16**

### **EXPANSION FITTINGS AND LOOPS FOR HVAC PIPING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- A. Section 23 05 00 "Common Requirements for HVAC Work".
- B. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- C. Section 23 05 93 "Testing, Adjusting and Balancing".
- D. Section 23 09 00 "HVAC Instrumentation and Controls".
- B. This section is a part of each Division 23 00 00 section.

##### **1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.3 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.4 SUMMARY

- A. All piping shall be installed in such a manner as to allow for expansion and contraction by means of offsets or pipe loops without causing undue stress in piping or at connections to equipment
- B. Pipe loops and swing connections.
- C. Alignment guides and anchors.

#### 1.5 PERFORMANCE REQUIREMENTS:

- A. It shall be understood that the requirements of this section are complementary to requirements delineated elsewhere for the support, fastening and restraining of equipment and piping work. Nothing on the drawings or specifications shall be interpreted as a reason to waive the requirements of this section.
- B. Engineering Services:
  - 1. As part of this scope of work, the HVAC contractor shall engage the services of a licensed professional engineer with experience in the field of piping supports and anchoring and thermal expansion.
  - 2. The contractor's Engineer shall calculate the requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections. He shall select and coordinate the expansion joints, loops, swing connections, anchors, guides and supports based on the final coordinated drawings showing exact location of piping and equipment and shall coordinate requirements with the structural engineer.
  - 3. He shall submit signed and sealed details and calculations as required to demonstrate compliance and obtain approval from the Commissioner.
- C. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- D. Capability: Products to absorb 200 percent of maximum axial movement between anchors.
- E. Where pipe offsets or loops are not detailed or dimensioned on drawings, the contractor is to submit calculations, prepared by a licensed professional engineer, to show that the stress range of the pipe does not exceed 15000 psi. In addition, Contractor shall submit anchoring loads.
  - 1. Where the system is detailed on the documents and the contractor proposes an alternate system or design, the contractor shall submit calculations (sealed and signed by a licensed Professional Engineer licensed in the State of New York) for review.
- F. All expansion compensators shall have a metal nameplate permanently attached bearing inscription of size, type, pressing rating, allowable movement, year of fabrication and manufacturers identification number.
- G. Contractor, in conjunction with information provided by the the expansion joint manufacturer is to submit anchor load calculations for both operating and hydrostatic test conditions.

#### 1.6 SUBMITTALS

- A. Refer to DDC General Conditions 01 33 00 "Submittal Procedures"
- B. Product Data: For each type of product indicated.
- C. Engineering Services Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer, licensed in the State of New York, responsible for their preparation, to be submitted to Commissioner for review and approval.
  - 1. Design Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
  - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
  - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
  - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.
  - 5. Welding certificates.

## 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Welding Qualifications: Qualify procedures according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. ASME Boiler and Pressure Vessel Code: Section IX.

## PART 2 - PRODUCTS

### 2.1 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Adscos Manufacturing LLC.
    - b. Advanced Thermal Systems, Inc.
    - c. Flex-Hose Co., Inc.
    - d. Flexicraft Industries.
    - e. Flex-Weld, Inc.
    - f. Hyspan Precision Products, Inc.
    - g. Metraflex, Inc.
    - h. Senior Flexonics Pathway.
    - i. Unisource Manufacturing, Inc.
    - j. U.S. Bellows, Inc.
    - k. Or approved equal
  - 2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.
- B. Anchor Materials:
  - 1. Steel Shapes and Plates: ASTM A 36/A 36M.

2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.
  - a. Stud: Threaded, zinc-coated carbon steel.
  - b. Expansion Plug: Zinc-coated steel.
  - c. Washer and Nut: Zinc-coated steel.
5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
  - a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
  - b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
  - c. Washer and Nut: Zinc-coated steel.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PIPE LOOP AND SWING CONNECTION INSTALLATION

- A. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.
- B. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.
- C. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

### 3.3 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install two guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe and secure guides to building structure.
- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
  1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.
- F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.
1. Anchor Attachment to Steel Structural Members: Attach by welding.
  2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

**END OF SECTION 23 05 16**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 23 05 19**

### **METERS AND GAGES FOR HVAC PIPING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 23 "Valves for HVAC".
- D. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- E. Section 23 05 93 "Testing, Adjusting and Balancing".
- F. Section 23 07 00 "HVAC Insulation".
- G. Section 23 21 13 "HVAC Piping".
- H. This section is itself related to each Division 23 section.

##### **1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.3 LEED BUILDING SUBMITTALS:**

- 1. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.4 SUMMARY

- A. Section Includes:

1. Bimetallic-actuated thermometers.
2. Filled-system thermometers.
3. Liquid-in-glass thermometers.
4. Light-activated thermometers.
5. Thermowells.
6. Dial-type pressure gages.
7. Gage attachments.
8. Test plugs.
9. Test-plug kits.
10. Sight flow indicators.
11. Orifice flow meters.
12. Pitot-tube flow meters.
13. Turbine flow meters.
14. Venturi flow meters.
15. Vortex-shedding flow meters.
16. Impeller-turbine, thermal-energy meters.
17. Ultrasonic, thermal-energy meters.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: For each type of product indicated.
- C. Wiring Diagrams: For power, signal, and control wiring.
- D. Product Certificates: For each type of meter and gage, from manufacturer.
- E. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

#### 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

### PART 2 - PRODUCTS

#### 2.1 BIMETALLIC-ACTUATED THERMOMETERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Ashcroft Inc.
  2. Ernst Flow Industries.
  3. Marsh Bellofram.
  4. Miljoco Corporation.
  5. Nanmac Corporation.
  6. Palmer Wahl Instrumentation Group.

7. REOTEMP Instrument Corporation.
8. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
9. Weiss Instruments, Inc.
10. Or approved equal.

- B. Standard: ASME B40.200.
- C. Case: Sealed type(s); stainless steel with 3" nominal diameter.
- D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F and deg C.
- E. Connector Type(s): Union joint, adjustable angle with unified-inch screw threads.
- F. Connector Size: 1/2 inch with ASME B1.1 screw threads.
- G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.
- H. Window: Plain glass.
- I. Ring: Stainless steel.
- J. Element: Bimetal coil.
- K. Pointer: Dark-colored metal.
- L. Accuracy: Plus or minus 1 percent of scale range.

## 2.2 FILLED-SYSTEM THERMOMETERS

### A. Direct-Mounted, Metal-Case, Vapor-Actuated Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Ashcroft Inc.
  - b. Marsh Bellofram.
  - c. Miljoco Corporation.
  - d. Palmer Wahl Instrumentation Group.
  - e. REOTEMP Instrument Corporation.
  - f. Terice, H. O. Co.
  - g. Weiss Instruments, Inc.
  - h. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Sealed type, cast aluminum; 5-inch nominal diameter.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, dampening type, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Pointer: Dark-colored metal.
8. Window: plastic.
9. Ring: Stainless steel.

10. Connector Type(s): Union joint, adjustable, 180 degrees in vertical plane, 360 degrees in horizontal plane, with locking device with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range.

**B. Remote-Mounted, Metal-Case, Vapor-Actuated Thermometers:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AMETEK, Inc.; U.S. Gauge.
  - b. Ashcroft Inc.
  - c. Marsh Bellofram.
  - d. Miljoco Corporation.
  - e. Palmer Wahl Instrumentation Group.
  - f. REOTEMP Instrument Corporation.
  - g. Terice, H. O. Co.
  - h. Weiss Instruments, Inc.
  - i. WIKA Instrument Corporation - USA.
  - j. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Sealed type, cast aluminum; 4-1/2-inch nominal diameter with flange and holes for panel mounting.
4. Element: Bourdon tube or other type of pressure element.
5. Movement: Mechanical, with link to pressure element and connection to pointer.
6. Dial: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Pointer: Dark-colored metal.
8. Window: plastic.
9. Ring: Stainless steel.
10. Connector Type(s): Union joint, with ASME B1.1 screw threads.
11. Thermal System: Liquid-filled bulb in copper-plated steel, aluminum, or brass stem and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
12. Accuracy: Plus or minus 1 percent of scale range.

**2.3 LIQUID-IN-GLASS THERMOMETERS**

**A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:**

1. Manufacturer: Terice, H. O. Co.
2. Standard: ASME B40.200.
3. Case: Cast aluminum; 6-inch nominal size.
4. Case Form: Straight unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.

6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Window: Glass or plastic.
8. Stem: Aluminum or brass and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
9. Connector: 3/4 inch, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

**B. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Flo Fab Inc.
  - b. Miljoco Corporation.
  - c. Palmer Wahl Instrumentation Group.
  - d. Tel-Tru Manufacturing Company.
  - e. Terice, H. O. Co.
  - f. Weiss Instruments, Inc.
  - g. Winters Instruments - U.S.
  - h. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Cast aluminum; 7-inch nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F and deg C.
7. Window: Glass.
8. Stem: Aluminum, and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

**2.4 LIGHT-ACTIVATED THERMOMETERS**

**A. Direct-Mounted, Light-Activated Thermometers:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Flo Fab Inc.
  - b. REOTEMP Instrument Corporation.
  - c. Terice, H. O. Co.
  - d. Weiss Instruments, Inc.
  - e. WIKA Instrument Corporation - USA.

- f. Winters Instruments - U.S.
  - g. Or approved equal.
- 2. Case: Metal; 7-inch nominal size unless otherwise indicated.
- 3. Scale(s): Deg F and deg C.
- 4. Case Form: Adjustable angle.
- 5. Connector: 1-1/4 inches with ASME B1.1 screw threads.
- 6. Stem: Aluminum and of length to suit installation.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
- 7. Display: Digital.
- 8. Accuracy: Plus or minus 2 deg F.

**B. Remote-Mounted, Light-Activated Thermometers:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Miljoco Corporation.
  - b. Weiss Instruments, Inc.
  - c. Winters Instruments - U.S.
  - d. Or approved equal.
- 2. Case: Metal, for wall mounting.
- 3. Scale(s): Deg F and deg C.
- 4. Sensor: Bulb and thermister wire.
  - a. Design for Air-Duct Installation: With ventilated shroud.
  - b. Design for Thermowell Installation: Bare stem.
- 5. Display: Digital.
- 6. Accuracy: Plus or minus 2 deg F.

**2.5 DUCT-THERMOMETER MOUNTING BRACKETS**

- A. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

**2.6 THERMOWELLS**

- A. Thermowells:
  - 1. Standard: ASME B40.200.
  - 2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
  - 3. Material for Use with Copper Tubing: CNR.
  - 4. Material for Use with Steel Piping: CRES.
  - 5. Type: Stepped shank unless straight or tapered shank is indicated.
  - 6. External Threads: NPS 1/2, NPS 3/4, or NPS 1 ASME B1.20.1 pipe threads.
  - 7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
  - 8. Bore: Diameter required to match thermometer bulb or stem.
  - 9. Insertion Length: Length required to match thermometer bulb or stem.
  - 10. Lagging Extension: Include on thermowells for insulated piping and tubing.

11. Bushings: For converting size of thermowells internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

## 2.7 PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AMETEK, Inc.; U.S. Gauge.
  - b. Ashcroft Inc.
  - c. Flo Fab Inc.
  - d. Miljoco Corporation.
  - e. Palmer Wahl Instrumentation Group.
  - f. REOTEMP Instrument Corporation.
  - g. Terice, H. O. Co.
  - h. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
  - i. Weiss Instruments, Inc.
  - j. Or approved equal.
2. Standard: ASME B40.100.
3. Case: Liquid-filled Sealed type(s); cast aluminum; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

B. Remote-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AMETEK, Inc.; U.S. Gauge.
  - b. Ashcroft Inc.
  - c. Flo Fab Inc.
  - d. Miljoco Corporation.
  - e. Noshok.
  - f. Palmer Wahl Instrumentation Group.
  - g. REOTEMP Instrument Corporation.
  - h. Tel-Tru Manufacturing Company.
  - i. Terice, H. O. Co.
  - j. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
  - k. Weiss Instruments, Inc.
  - l. Or approved equal.
2. Standard: ASME B40.100.

3. Case: Sealed type; cast aluminum 4-1/2-inch nominal diameter with flange and holes for panel mounting.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Stainless steel
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

## 2.8 GAGE ATTACHMENTS

- A. Snubbers: ASME B40.100, brass; with ASME B1.20.1 pipe threads and surge-dampening device. Include extension for use on insulated piping.
- B. Siphons: Loop-shaped section of stainless-steel pipe with pipe threads.
- C. Valves: Brass or stainless-steel needle with ASME B1.20.1 pipe threads.

## 2.9 TEST PLUGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Flow Design, Inc.
  2. Miljoco Corporation.
  3. National Meter, Inc.
  4. Peterson Equipment Co., Inc.
  5. Sisco Manufacturing Company, Inc.
  6. Trerice, H. O. Co.
  7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
  8. Weiss Instruments, Inc.
  9. Or approved equal.
- B. Description: Test-station fitting made for insertion into piping tee fitting.
- C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.
- D. Thread: ASME B1.20.1 pipe thread.
- E. Minimum Pressure and Temperature Rating: 500 psig at 200 deg F.
- F. Core Inserts: self-sealing rubber.

## 2.10 TEST-PLUG KITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Flow Design, Inc.
  2. Miljoco Corporation.

3. National Meter, Inc.
4. Peterson Equipment Co., Inc.
5. Sisco Manufacturing Company, Inc.
6. Trerice, H. O. Co.
7. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
8. Weiss Instruments, Inc.
9. Or approved equal.

- B. Furnish two (2) test-plug kit(s) containing two thermometer(s), one pressure gage and adapter, and carrying case. Thermometer sensing elements, pressure gage, and adapter probes shall be of diameter to fit test plugs and of length to project into piping.
- C. Low-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch-diameter dial and tapered-end sensing element. Dial range shall be at least 25 to 125 deg F.
- D. High-Range Thermometer: Small, bimetallic insertion type with 1- to 2-inch- dial and tapered-end sensing element. Dial range shall be at least 0 to 220 deg F.
- E. Pressure Gage: Small, Bourdon-tube insertion type with 2- to 3-inch, 0 to 200 psig
- F. Carrying Case: Metal or plastic, with formed instrument padding.

#### 2.11 SIGHT FLOW INDICATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
1. Archon Industries, Inc.
  2. Dwyer Instruments, Inc.
  3. Emerson Process Management; Brooks Instrument.
  4. Ernst Co., John C., Inc.
  5. Ernst Flow Industries.
  6. KOBOLD Instruments, Inc. - USA; KOBOLD Messring GmbH.
  7. OPW Engineered Systems; a Dover company.
  8. Penberthy: A Brand of Tyco Valves & Controls - Prophetstown.
  9. Or approved equal.
- B. Description: Piping inline-installation device for visual verification of flow.
- C. Construction: Bronze or stainless-steel body, with sight glass and ball, flapper, or paddle wheel indicator, and threaded or flanged ends.
- D. Minimum Pressure Rating: 150 psig.
- E. Minimum Temperature Rating: 200 deg F.
- F. End Connections for 2" and Smaller: Threaded.
- G. End Connections for 2-1/2" and Larger: Flanged.

#### 2.12 FLOWMETERS

- A. Turbine Flow meters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
  - a. ABB; Instrumentation and Analytical.
  - b. Data Industrial Corp.
  - c. EMCO Flow Systems; a division of Spirax Sarco, Inc.
  - d. ERDCO Engineering Corp.
  - e. Hoffer Flow Controls, Inc.
  - f. Liquid Controls; a unit of IDEX Corporation.
  - g. McCrometer, Inc.
  - h. Midwest Instruments & Controls Corp.
  - i. ONICON Incorporated.
  - j. SeaMetrics, Inc.
  - k. Sponsler, Inc.; a unit of IDEX Corporation.
  - l. Or approved equal.
2. Description: Flow meter with sensor and indicator.
3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
4. Sensor: Impeller turbine; for inserting into pipe fitting or for installing in piping and measuring flow directly in gallons per minute.
  - a. Design: Device or pipe fitting with inline turbine and integral direct-reading scale.
  - b. Construction: Bronze or stainless-steel body, with plastic turbine or impeller.
  - c. Minimum Pressure Rating: 150 psig.
  - d. Minimum Temperature Rating: 180 deg F.
5. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.
6. Accuracy: Plus or minus 1-1/2 percent.
7. Display: Shows rate of flow, with register to indicate total volume in gallons.
8. Operating Instructions: Include complete instructions with each flow meter.

**B. Venturi Flow meters:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
  - a. ABB; Instrumentation and Analytical.
  - b. Gerand Engineering Co.
  - c. Hyspan Precision Products, Inc.
  - d. Preso Meters; a division of Racine Federated Inc.
  - e. S. A. Armstrong Limited; Armstrong Pumps Inc.
  - f. Or approved equal.
2. Description: Flow meter with calibrated flow-measuring element, hoses or tubing, fittings, valves, indicator, and conversion chart.
3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
4. Sensor: Venturi-type, calibrated, flow-measuring element; for installation in piping.
  - a. Design: Differential-pressure-type measurement
  - b. Construction: Bronze, brass, or factory-primed steel, with brass fittings and attached tag with flow conversion data.
  - c. Minimum Pressure Rating: 250 psig.

- d. Minimum Temperature Rating: 250 deg F.
  - e. End Connections for 2" and Smaller: Threaded.
  - f. End Connections for 2-1/2" and Larger: Flanged or welded.
  - g. Flow Range: Flow-measuring element and flow meter shall cover operating range of equipment or system served.
5. Permanent Indicators: Meter suitable for wall or bracket mounting, calibrated for connected flow meter element, and having 6-inch diameter, or equivalent, dial with fittings and copper tubing for connecting to flow meter element.
- a. Scale: Gallons per minute.
  - b. Accuracy: Plus or minus 1 percent between 20 and 80 percent of scale range.
6. Portable Indicators: Hand-held, differential-pressure type, calibrated for connected flow meter element and having two 12-foot hoses, with carrying case.
- a. Scale: Gallons per minute.
  - b. Accuracy: Plus or minus 2 percent between 20 and 80 percent of scale range.
7. Display: Shows rate of flow, with register to indicate total volume in gallons.
8. Conversion Chart: Flow rate data compatible with sensor.
9. Operating Instructions: Include complete instructions with each flow meter.
- C. Vortex-Shedding Flow meters:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. Eastech Flow Controls.
  - b. EMCO Flow Systems; a division of Spirax Sarco, Inc.
  - c. Emerson Process Management; Rosemount.
  - d. Endress+Hauser.
  - e. ISTECH Corporation.
  - f. Or approved equal.
2. Description: Flow meter with sensor and indicator.
3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
4. Sensor: Inline type; for installing between pipe flanges and measuring flow directly in gallons per minute.
- a. Design: Flow obstruction device, vortex-measurement type.
  - b. Construction: Stainless-steel body, with integral transmitter and direct-reading scale.
  - c. Minimum Pressure Rating: 1000 psig.
  - d. Minimum Temperature Rating: 500 deg F.
  - e. Integral Transformer: For low-voltage power operation.
5. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.
6. Accuracy: Plus or minus 0.25 percent for liquids and 0.75 percent for gases.
7. Display: Shows rate of flow, with register to indicate total volume in gallons.
8. Operating Instructions: Include complete instructions with each flow meter.

## 2.13 THERMAL-ENERGY METERS

**A. Impeller-Turbine, Thermal-Energy Meters:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Data Industrial Corp.
  - b. Hoffer Flow Controls, Inc.
  - c. ISTECH Corporation.
  - d. ONICON Incorporated.
  - e. Or approved equal.
2. Description: System with strainer, flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.
3. Flow Sensor: Impeller turbine with corrosion-resistant-metal body and transmitter; for installing in piping.
  - a. Design: Total thermal-energy measurement.
  - b. Minimum Pressure Rating: 150 psig.
  - c. Minimum Temperature Range: 40 to 250 deg F.
4. Temperature Sensors: Insertion-type transducer.
5. Indicator: Solid-state, integrating-type meter with integral battery pack; for wall mounting.
  - a. Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or BTUs.
  - b. Battery Pack: Five-year lithium battery.
6. Accuracy: Plus or minus 1 percent.
7. Display: Visually indicates total fluid volume in gallons and thermal-energy flow in kilowatts per hour or BTUs.
8. Strainer: Full size of main line piping.
9. Operating Instructions: Include complete instructions with each thermal-energy meter system.

**B. Ultrasonic, Thermal-Energy Meters:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. EMCO Flow Systems; a division of Spirax Sarco, Inc.
  - b. Siemens Energy & Automation, Inc.
  - c. Flexim
  - d. Panametrics
  - e. Or approved equal.
2. Description: Meter with flow sensor, temperature sensors, transmitter, indicator, and connecting wiring.
3. Flow Sensor: Transit-time ultrasonic type with transmitter.
4. Temperature Sensors: Insertion-type or strap-on transducer.
5. Indicator: Solid-state, integrating-type meter with integral battery pack.
  - a. Data Output: Six-digit electromechanical counter with readout in kilowatts per hour or BTUs.
  - b. Battery Pack: Five-year lithium battery.

6. Accuracy: Plus or minus 1 percent.
7. Display: Visually indicates total fluid volume in gallons and thermal-energy flow in kilowatts per hour or BTUs.
8. Operating Instructions: Include complete instructions with each thermal-energy meter system.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
- B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
- C. Install thermowells with extension on insulated piping.
- D. Fill thermowells with heat-transfer medium.
- E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
- F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.
- G. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.
- H. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
- I. Install remote-mounted pressure gages on panel.
- J. Install valve and snubber in piping for each pressure gage for fluids (except steam).
- K. Install valve and syphon fitting in piping for each pressure gage for steam.
- L. Install test plugs in piping tees.
- M. Install flow indicators in piping systems in accessible positions for easy viewing.
- N. Assemble and install connections, tubing, and accessories between flow-measuring elements and flow meters according to manufacturer's written instructions.
- O. Install flow meter elements in accessible positions in piping systems.
- P. Install wafer-orifice flow meter elements between pipe flanges.
- Q. Install differential-pressure-type flow meter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.

- R. Install permanent indicators on walls or brackets in accessible and readable positions.
- S. Install connection fittings in accessible locations for attachment to portable indicators.
- T. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.
- U. Install thermometers in the following locations:
  - 1. Inlet and outlet of each hydronic zone.
  - 2. Inlet and outlet of each hydronic boiler.
  - 3. Two inlets and two outlets of each chiller.
  - 4. Inlet and outlet of each hydronic coil in air-handling units.
  - 5. Two inlets and two outlets of each hydronic heat exchanger.
  - 6. Inlet and outlet of each thermal-storage tank.
  - 7. Outside-, return-, supply-, and mixed-air ducts.
- V. Install pressure gages in the following locations:
  - 1. Discharge of each pressure-reducing valve.
  - 2. Inlet and outlet of each chiller chilled-water and condenser-water connection.
  - 3. Suction and discharge of each pump.

### 3.3 CONNECTIONS

- A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.
- B. Connect flow meter-system elements to meters.
- C. Connect flow meter transmitters to meters.
- D. Connect thermal-energy meter transmitters to meters.

### 3.4 ADJUSTING

- A. After installation, calibrate meters according to manufacturer's written instructions.
- B. Adjust faces of meters and gages to proper angle for best visibility.

### 3.5 THERMOMETER SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 150 deg F.
- B. Scale Range for Condenser-Water Piping: 20 to 140 deg F
- C. Scale Range for Heating, Hot-Water Piping: 30 to 240 deg F.
- D. Scale Range for Steam and Steam-Condensate Piping: 50 to 400 deg F.
- E. Scale Range for Air Ducts: 20 to 160 deg F.

### 3.6 PRESSURE-GAGE SCHEDULE

- A. Pressure gages at discharge of each pressure-reducing valve shall be Sealed, Solid-front,

pressure-relief direct-mounted, metal case.

- B. Pressure gages at inlet and outlet of each chiller chilled-water and condenser-water connection shall be the following:

- 1. Sealed, Solid-front, pressure-relief direct-mounted, metal case.

- C. Pressure gages at suction and discharge of each pump shall be the following:

- 1. Sealed, Solid-front, pressure-relief direct-mounted, metal case.

### 3.7 PRESSURE-GAGE SCALE-RANGE SCHEDULE

- A. Scale Range for Chilled-Water Piping: 0 to 300 psi.
- B. Scale Range for Condenser-Water Piping: 0 to 300 psi.
- C. Scale Range for Heating, Hot-Water Piping: 0 to 300 psi.
- D. Scale Range for Steam Piping: 0 to 350 psi.

### 3.8 FLOWMETER SCHEDULE

- A. Flow meters are specified under another section of this work.

### 3.9 THERMAL-ENERGY METER SCHEDULE

- A. Thermal-Energy Meters are specified under another section of this work.

**END OF SECTION 23 05 19**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 05 23**

**VALVES FOR HVAC PIPING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".
- F. Section 23 21 13 "HVAC Piping".
- G. Section 23 22 13 "Steam and Condensate Heating Piping".
- H. This section is a part of each Division 23 00 00 section.

**1.02 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.03 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.4 SUMMARY

A. Section Includes:

1. Bronze ball valves.
2. High-performance butterfly valves.
3. Bronze swing check valves.
4. Iron swing check valves.
5. Bronze gate valves.
6. Iron gate valves.
7. Bronze globe valves.
8. Iron globe valves.
9. Stop Check Valve
10. Bronze, calibrated – orifice, balancing valve
11. Diaphragm operated, Pressure Reducing valves
12. Diaphragm operated Safety valves
13. Automatic Flow Control valve

B. Triple-Duty valves are not permitted.

#### 1.5 DEFINITIONS

- A. Branch Piping – Any piping from either main distribution piping that serves more than one piece of hydronic equipment or piping from main distribution piping to vertical risers.
- B. CWP: Cold working pressure.
- C. EPDM: Ethylene propylene copolymer rubber.
- D. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.
- E. NRS: Non-rising stem.
- F. OS&Y: Outside screw and yoke.
- G. RS: Rising stem.
- H. SWP: Steam working pressure.
- I. WOG: Water, oil, gas pressure

#### 1.06 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.7 SUBMITTALS

- A. Product Data: For each type of valve indicated. Include body, seating and trim materials; valve design; pressure and temperature classifications; end connections; arrangements; dimensions and required clearances.
- B. Include list indicting every valve and its application. Include rated capacities, shipping, installed and operating weights; furnished specialties and accessories.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
- C. ASME Compliance:
  - 1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
  - 2. ASME B31.1 for power piping valves.
  - 3. ASME B31.9 for building services piping valves.
- D. ANSI Compliance:
  - 1. ANSI B16.5 Steel pipe flanges and flange fittings
  - 2. ANSI B16.4 Cast iron fittings
  - 3. ANSI B16-3 Malleable iron fittings
  - 4. ANSI B16-9, ASTM A-234 Weld end fittings
  - 5. ANSI B16.11 Socket weld fittings
  - 6. ASTM B-32, ANSI B16.22 Copper fittings
  - 7. ASTM-A105; ANSI B16.5 Welded flanges, B16.18 Cast copper.
  - 8. ANSI B16.1 Cast iron threaded flanges.
  - 9. ASTM A197 Malleable iron threaded flanges
  - 10. ASME B16.39 Malleable iron unions
- E. MSS Compliance
  - 1. MSS-SP-25 Standard marking systems for valves
  - 2. MSS-SP-55 Quality standard for steel casting
  - 3. MSS-SP-61 Pressure Testing of Steel Valves
  - 4. MSS-SP-67 Butterfly Valves
  - 5. MSS-SP-68 High Pressure Offset Disc Butterfly Valves.

**1.9 DELIVERY, STORAGE, AND HANDLING**

- A. Prepare valves for shipping as follows:
  - 1. Protect internal parts against rust and corrosion.
  - 2. Protect threads, flange faces, grooves, and weld ends.
  - 3. Set angle, gate, and globe valves closed to prevent rattling.
  - 4. Set ball and plug valves open to minimize exposure of functional surfaces.
  - 5. Set butterfly valves closed or slightly open.
  - 6. Block check valves in either closed or open position.
- B. Use the following precautions during storage:
  - 1. Maintain valve end protection.
  - 2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.
- C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

**PART 2 - PRODUCTS****2.1 HVAC PIPING SYSTEMS PERFORMANCE REQUIREMENTS**

- A. System Pressure and Temperature Ratings shall be as specified in Section 23 05 00 – “Common Requirements for HVAC Work” for the HVAC Piping systems minimum working operating system pressures and temperatures.
- B. Regardless of system pressure rating, valves shall not be designed for less than 150 psi SWP.

**2.2 GENERAL REQUIREMENTS FOR VALVES**

- A. Furnish and install valves shown on the drawings, specified herein and/or as required for the control and maintenance of all piping and equipment.
- B. All valves shall be of first quality of approved manufacture, shall have proper clearances, and shall be tight at the specified test pressure.
- C. Each valve shall have the manufacturer's name or brand, the figure or list number and guaranteed ANSI working pressure cast on the body and cast or stamped on the bonnet.
- D. Refer to HVAC valve schedule (Part 3) for applications of valves.
- E. Triple Duty Valves are not permitted.
- F. Valve Packing and Gasket shall be Asbestos free.
- G. It is the intention to use ball and butterfly valves for shut-off wherever possible.
- H. Gate valves shall be used for steam systems where ball and butterfly valves may not be practical by pressure/temperature or NYC Dept of Buildings.
- I. Valve Sizes: Same as upstream piping unless otherwise indicated.
- J. All valves shall be designed to ANSI B16.5 and B16.34
- K. All gate and globe valves shall be suitable for repacking under system pressure.
- L. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP classes or CWP ratings may be substituted.
- M. Memory stops, which shall be fully adjustable after insulation is applied, shall be provided for all HVAC valves.
- N. All valves are to be able to take full pressure differential pressure when dead-ended in either direction.
- O. All valves to be functionally tested. To include cycling of valves and topworks, measuring seating torque and verifying leaktight performance of seat.
- P. All valves shall be capable of thermal cycling over its complete pressure vessel rating.
- Q. Valves used for balancing shall be certified suitable for continuous throttling service at a position 35% open.

- R. The shaft packing must be capable of sealing at 1.5 times the pressure vessel rating. Valve stem packing shall be fully accessible for adjustment without removal of operator.
- S. Valves shall be designed to convert from handle operation to automated valve operation without removing the valve from the pipeline.
- T. There must be external indication of disc position on all valves.
- U. Seats shall be fully replaceable in the field.
- V. Valve Actuator Types:
  - 1. Gear Actuator: For valves 6" and larger.
  - 2. Handwheel: For valves other than quarter-turn types.
  - 3. Handlever: Seven-position levers for valves 6" and smaller except plug valves.
  - 4. Wrench: For plug valves with square heads. Furnish The City of New York with 1 wrench for every 5 plug valves, for each size square plug-valve head.
  - 5. Chainwheel: Device for attachment to valve handwheel, stem, or other actuator; for all valves 3" or larger (all valves sizes for steam over 15 psig) in equipment areas which is more than 7'-0" above finished floor shall be provided with operating chains, sprockets, and guides.. Extend chains to 60 inches above finished floor.
- W. Valves in Insulated Piping: With 2-1/4" stem extensions and the following features:
  - 1. Gate Valves: With rising stem.
  - 2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
  - 3. Butterfly Valves: With extended neck.
- X. Valve-End Connections:
  - 1. Flanged: With flanges according to ASME B16.1 for iron valves.
  - 2. Threaded: With threads according to ASME B1.20.1.
- Y. Valve Bypass and Drain Connections: MSS SP-45.
- Z. If manually operated, the valve must have a positively retained shaft in case there is a failure of the shaft to disc attachment.
- AA. Self-lubricated bearings should be used. There will be a method of retention to prevent bearing movement.
- BB. No loose parts should be used to attach the shaft to the disc. Two or more pins should be used for complete attachment.
- CC. A double offset shaft should be used to reduce seating torque.
- DD. Valves body material shall be carbon steel. Stainless steel for ball and stem. Shafts shall be 17-4 PH stainless steel. Discs shall be 316 stainless steel. Stem seals shall be TFE. Seats shall be self-energizing TFE or self-energizing TFE totally encapsulating as elastomeric "O" ring. Metal springs or components shall not be used to and in seat sealing

## 2.3 BRONZE BALL VALVES

### A. General

1. All ball valves shall have the following options:
  - a. Balancing stop for hydronic installations.
  - b. 2 1/4" stem extensions all piping systems.
  - c. Stainless steel ball and stem, and multi-filled TFE seats for steam, condensate and high temperature hot water systems.

### B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Apollo Valves.
2. Milwaukee Valve Company.
3. NIBCO INC.
4. Or approved equal.

### C. Class 150 - two-piece, full-port, bronze ball valves with bronze trim:

1. Description:
  - a. Standard: MSS SP-80
  - b. SWP Rating: 300 psig.
  - c. CWP Rating: 600 psig.
  - d. Body Design: Two piece.
  - e. Body Material: Bronze.
  - f. Ends: Threaded or Socket Welded
  - g. Seats: PTFE or TFE. Multi-filled PTFE-C seats for steam, condensate and high temperature water
  - h. Stem: Stainless Steel
  - i. Ball: Stainless Steel.
  - j. Port: Full.
  - k. Locking handles to allow for servicing and equipment removal.
  - l. Stem Extension: 2-1/4"

## 2.4 HIGH PERFORMANCE BUTTERFLY VALVES

### A. General

1. Butterfly valves shall be industrial grade, high performance, lug type, ANSI Class 150.
2. Valves shall be bi-directional dead end service at full ANSI ratings. Valve shall hold full pressure with either flanged connections removed – in either direction.
3. Manufacturer shall certify compliance with bubble tight shutoff requirements at full rated design pressure when flanged
4. The face-to-face dimensions must meet AP Spec I 609 MSS SP 67.
5. Butterfly valves shall have gear operator 6" diameter and larger for ANSI 150 valves;. Valves smaller shall have multi-position latching handle.

### B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bray Controls; a division of Bray International.

2. Jamesbury; a subsidiary of Metso Automation.
3. Milwaukee Valve Company.
4. NIBCO INC.
5. Or approved equal.

C. Class 150, high-performance butterfly valves:

1. Description:
  - a. Standard: MSS SP-68.
  - b. CWP Rating: 285 psig at 100 deg F.
  - c. Body Design: Lug type; suitable for bidirectional dead-end service at full rated pressure without use of downstream flange.
  - d. Body Material: Carbon steel.
  - e. Seat: Reinforced PTFE.
  - f. Stem: Stainless steel; offset from seat plane, blow-out proof
  - g. Disc: Stainless Steel
  - h. Service: Bidirectional, bubble-tight shut-off
  - i. Internal Travel Stop

2.5 BRONZE GATE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Milwaukee Valve Company.
2. NIBCO INC.
3. Jamesbury; a subsidiary of Metso Automation.
4. Or approved equal.

B. Class 125, RS Bronze Gate Valves:

1. Description:
  - a. Standard: MSS SP-80, Type 2.
  - b. CWP Rating: 200 psig.
  - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
  - d. Ends: Threaded.
  - e. Seat: R-PTFE
  - f. Stem: Bronze.
  - g. Disc: Solid wedge; bronze.
  - h. Packing: Asbestos free.
  - i. Handwheel: Malleable iron, bronze.

2.6 IRON GATE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Milwaukee Valve Company.

B. Class 125, NRS, Iron Gate Valves:

1. Description:

- a. Standard: MSS SP-70, Type I.
- b. 2-1/2" to 12", CWP Rating: 200 psig.
- c. 14" to 24", CWP Rating: 150 psig.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Disc: Solid wedge.
- h. Seat: R-PTFE
- i. Packing and Gasket: Asbestos free.

C. Class 125, OS&Y, Iron Gate Valves:

1. Description:

- a. Standard: MSS SP-70, Type I.
- b. 2-1/2" to 12", CWP Rating: 200 psig.
- c. 14" to 24", CWP Rating: 150 psig.
- d. Body Material: ASTM A 126, gray iron with bolted bonnet.
- e. Ends: Flanged.
- f. Trim: Bronze.
- g. Disc: Solid wedge.
- h. Seat: R-PTFE
- i. Packing and Gasket: Asbestos free.

2.7 BRONZE GLOBE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1. Milwaukee Valve Company.
- 2. NIBCO INC.
- 3. Jamesbury; a subsidiary of Metso Automation.
- 4. Or approved equal.

B. Class 125, Bronze Globe Valves with Bronze Disc:

1. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: 200 psig.
- c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
- d. Ends: Threaded.
- e. Stem and Disc: Bronze.
- f. Seat: R-PTFE
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron.

C. Class 125, Bronze Globe Valves with Nonmetallic Disc:

1. Description:

- a. Standard: MSS SP-80, Type 2.
- b. CWP Rating: 200 psig.
- c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
- d. Ends: Threaded.

- e. Stem: Bronze.
- f. Disc: PTFE.
- g. Packing: Asbestos free.
- h. Handwheel: Malleable iron.

**2.8 STOP-CHECK VALVES – CLASS 150:**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1. Crane Co.
- 2. Jenkins Valves; a Crane Company.
- 3. Jamesbury; a subsidiary of Metso Automation.
- 4. Or approved equal.

- B. Description

- 1. Body and Bonnet: Malleable iron.
- 2. End Connections: Flanged.
- 3. Disc: Cylindrical with removable liner and machined seat.
- 4. Stem: Brass alloy.
- 5. Operator: Outside screw and yoke with cast-iron handwheel.
- 6. Packing: Polytetrafluoroethylene-impregnated packing with two-piece packing gland assembly.
- 7. Pressure Class: 150.

**2.9 BRONZE, CALIBRATED-ORIFICE, BALANCING VALVES: CLASS 150:**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- 1. Armstrong Pumps, Inc.
- 2. Bell & Gossett Domestic Pump; a division of ITT Industries.
- 3. Flow Design Inc.
- 4. Griswold Controls.
- 5. Taco.
- 6. Or approved equal.

- B. Description:

- 1. Body: Bronze, ball type.
- 2. Ball: Brass or stainless steel.
- 3. Plug: Resin.
- 4. Seat: Reinforced Teflon
- 5. Stem: Blow out proof.
- 6. End Connections: Threaded or socket.
- 7. Flow element: Low loss/high signal Venturi type (+/- % accuracy), 1 to 10 rangeability.
- 8. Pressure Gage Connections: Dual Pete's plug test ports, Integral seals for portable differential pressure meter.
- 9. Handle Style: Full size lever, with memory stop to retain set position.
- 10. Entire assembly shall be rated to working pressures of system, as defined under another section of this work. In no case shall the rating be less than:
  - a. CWP Rating: Minimum 150 psig.
  - b. Maximum Operating Temperature: 250 deg F.

**2.10 DIAPHRAGM-OPERATED, PRESSURE-REDUCING VALVES:**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Amtrol, Inc.
  - 2. Armstrong Pumps, Inc.
  - 3. Bell & Gossett Domestic Pump; a division of ITT Industries.
  - 4. Or approved equal.
- B. Description:
  - 1. Body: Bronze or brass.
  - 2. Disc: Glass and carbon-filled PTFE.
  - 3. Seat: Brass.
  - 4. Stem Seals: EPDM O-rings.
  - 5. Diaphragm: EPT.
  - 6. Low inlet-pressure check valve.
  - 7. Inlet Strainer: removable without system shutdown.
  - 8. Valve Seat and Stem: Noncorrosive.
  - 9. Valve Size, Capacity, and Operating Pressure: Selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

**2.11 DIAPHRAGM-OPERATED SAFETY VALVES:**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Amtrol, Inc.
  - 2. Armstrong Pumps, Inc.
  - 3. Bell & Gossett Domestic Pump; a division of ITT Industries.
  - 4. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
  - 5. Or approved equal.
- B. Description:
  - 1. Body: Bronze or brass.
  - 2. Disc: Glass and carbon-filled PTFE.
  - 3. Seat: Brass.
  - 4. Stem Seals: EPDM O-rings.
  - 5. Diaphragm: EPT.
  - 6. Wetted, Internal Work Parts: Brass and rubber.
  - 7. Inlet Strainer: removable without system shutdown.
  - 8. Valve Seat and Stem: Noncorrosive.
  - 9. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

**2.12 AUTOMATIC, PRESSURE-INDEPENDENT, FLOW/PRESSURE CONTROL VALVES:**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Belimo PICCV
  - 2. Siemens PICV

3. Flow Control Industries
  4. Or approved equal
- B. All modulating control valves shall be provided by the same manufacturer.
- C. All control valves shall be industrial quality and must be fully re-buildable.
- D. Balancing valves shall not be used. The control valve must have the ability to limit flow to the maximum design flow for each coil at all valve differential pressure ranges of 5 to 70 PSID.
- E. Each control valve shall be individually flow tested and factory verified to deviate no more than +/-5% through the entire operating pressure range of 5 to 70. All valves shall be tested on a test stand calibrated and verified with traceability to NIST standards.
- F. Manufacturer shall test each valve at an approved third party testing facility with test equipment calibrated and verified with traceability to NIST standards. Testing to verify flow deviates no more than +/-5% when tested at 10 degree increments between 0 and 90 degrees and 5 PSID increments between 5 and 70 PSID. Test reports must be provided with O & M Manual.
- G. In addition to testing, each control valve shall have a calibrated performance tag listing the measured flow rate in 10° rotation increments.
- H. Valves shall require no more than 5 PSID to operate at the flow rates indicated on the flow tag.
- I. Control valve range ability shall be a minimum of 100: 1 through the operating pressure range, at 5 to 70, PSID
- J. Valve bodies 2" and smaller shall be brass. Valve bodies 3" thru 8" shall be ductile iron. All internal parts shall be brass, carbon steel or Teflon except that the Ball and stem shall be stainless steel. Plastic internal parts are not acceptable.
- K. Valve flow characteristics may be modified in valves 8" and smaller without removal from the piping system. All seals may be replaced in valves 3" and smaller without removal from the piping system.
- L. Valve differential pressure rating shall be equal to or greater than the associated pump's design head pressure. Valve assembly and actuator torque shall be selected to close off against this differential pressure.
- M. All valves shall have three (3) factory installed pressure/temperature ports to allow factory and field verification of flow and proper operation.
- N. Description:
1. Body: Brass
  2. Piston and Spring Assembly: Stainless steel, tamper proof, self-cleaning, and removable.
  3. Combination Assemblies: Include bronze or brass-alloy ball valve.
  4. Identification Tag: Marked with zone identification, valve number, and flow rate.
  5. Size: Same as pipe in which installed.
  6. Performance: Each control valve shall be individually flow tested and factory verified to deviate no more than  $\pm 5\%$  through the entire operating pressure range.
  7. Minimum CWP Rating: 150 psig.
  8. Maximum Operating Temperature: 250 deg F.

- O. All valves shall be warranted by the manufacturer for no less than a full 5 years from the date of substantial completion. The warranty provided by the actuator manufacturer shall apply to actuators.
- P. The control valve manufacturer shall provide written guarantee that the heating and cooling coils will meet or exceed design delta T performance at all load conditions as projected by an ARI certified coil program at time of commissioning. The valve manufacturer will replace the valve if this performance level cannot be met.

### **PART 3 - EXECUTION**

#### **3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

#### **3.2 EXAMINATION**

- A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
- B. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance.
  - 1. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.
- D. Examine threads on valve and mating pipe for form and cleanliness.
- E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
- F. Do not attempt to repair defective valves; replace with new valves.

#### **3.3 VALVE INSTALLATION**

- A. Piping installation requirements are specified under another section of this work.
- B. Drawings indicate general arrangements of piping, fittings and specialties.
- C. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- D. Locate valves for easy access and provide separate support where necessary.
- E. Install valves in horizontal piping with stem at or above center of pipe.
- F. Install chainwheel for all valves 3" and larger (and all valve sizes for steam over 15 psig) in equipment areas which is more than 6' – 0" above the finished floor. Provide operating chains, sprockets and guides. Extend chain to 60 inches above finished floor.
- G. Install valves in position to allow full stem movement.

H. Install check valves for proper direction of flow and as follows:

1. Center-Guided and Plate-Type Check Valves: In horizontal or vertical position, between flanges.
2. Lift Check Valves: With stem upright and plumb.

### 3.4 VALVE APPLICATIONS

- A. On all branch piping, provide an isolation valve on supply line and shut-off valve on return line.
- B. Chilled water piping connections to air conditioning units, fan coil units, etc. shall include all necessary gate valves, air vent valves, drain connections and automatic valves.
- C. Chilled and hot water piping connections to individual chilled beams shall include an isolation valve on the supply lines and combination balancing/shut-off valve on return lines.
- D. Hydronic Equipment (cabinet heaters, unit ventilators, unit heaters, fin tube, water coil, hydronic terminal equipment, etc. – except chilled beams) – Return Line: shut-off valves.
- E. Branch Piping from hydronic main distribution piping- provide an isolation valve on supply and combination balancing and shut-off valve on return line.
- F. All radiators, fin tube, hydronic equipment shall be individually valved on both the supply and return lines.
- G. For hot water systems above 200°F, use valves rated for 300 psi operating pressures.
- H. Open condenser-water valve schedule
  1. 150 Psig Working Pressure
    - a. Pipe 2-1/2" And Smaller:
      - 1) Ball Valves: Two-piece, full port, bronze with stainless-steel trim.
      - 2) Bronze Swing Check Valves: Class 150, bronze with bronze disc.
      - 3) Gate Valves: Not used
      - 4) Globe Valves: Class 150, bronze, metallic disc.
    - b. Pipe 3" and Larger:
      - 1) Iron Valves, 2-1/2" to 4": flanged ends.
      - 2) Iron Ball Valves, 2-1/2" to 10": Class 150.
      - 3) Iron, High Performance Butterfly Valves, Flanged, 2-1/2" to 12": 200 CWP, EPDM seat, stainless-steel disc.
      - 4) Iron, High Performance Butterfly Valves, Flanged, 14" to 24": 150 CWP, EPDM seat, stainless-steel disc.
    - c. Iron Swing Check Valves: Class 125, nonmetallic-to-metal seats.
    - d. Iron Swing Check Valves with Closure Control, 2-1/2" to 12": Class 125, lever.
    - e. Iron, Center-Guided Check Valves, 2-1/2" to 24": Class 125, resilient seat.
    - f. Iron, Plate-Type Check Valves: Class 150
- I. Steam-condensate valve schedule
  1. 150 psig Working Pressure – 600# WOG, ANSI 150#

- a. Pipe 2" and Smaller:
  - 1) Ball Valves: Two piece, full port, bronze with stainless-steel trim.
- b. Pipe 2-1/2" and Larger:
  - 1) High-Performance Butterfly Valves: Class 150, single flange.

**J. VAV Terminal Box Reheat Coils**

- 1. Supply:
  - a. Ball Valves (shut-off).
    - 1) Note that with a PICC control valve, as specified above, no balancing valve is required.
  - b. Y-Type strainer with blow-off valve
- 2. Return:
  - a. Ball Valve (shut-off)
  - b. Automatic, Pressure-Independent Control valve (Automatic throttling/Modulating).

**K. Pumps:**

- 1. Discharge:
  - a. Balancing Valve (Balancing Valve not required for Pumps with VFD or where pressure independent valves are used)
    - 1) 2" and Smaller: Ball valve.
    - 2) 2-1/2" and Larger: Lubricated plug valve.
  - b. Isolation/Shutoff Service:
    - 1) 2-1/2" and below – Ball valves.
    - 2) 3" and above – Butterfly Valves
  - c. Multi-Port Check Valves:
    - 1) 2" and Smaller: Bronze swing check valves with nonmetallic disc.
    - 2) 2-1/2" and Larger: Iron swing check valves with lever and weight or with spring or iron, center-guided, metal -seat check valves.
- 2. Suction:
  - a. Y-Type strainer with blow-off valve
  - b. Isolation/Shutoff Service:
    - 1) 2-1/2" and below – Ball valves.
    - 2) 3" and above – Butterfly Valves

- L. If valve applications are not indicated, use the following:
1. Isolation/Shutoff Service:
    - a. 2-1/2" and below – Ball valves.
    - b. 3" and above – Butterfly Valves
  2. Dead-End Service: High Performance Butterfly Valve, Single-flange (lug) type.
  3. Throttling Service, Steam: Globe. Butterfly valves shall not be used for throttling/modulating.
- M. Select valves, except wafer types, with the following end connections:
1. All valves shall be threaded or flanged, sweat valves are not acceptable.
  2. For Copper Tubing, 2" and Smaller: Threaded ends.
  3. For Copper Tubing, 2-1/2" to 4": Flanged ends except where threaded valve-end option is indicated in valve schedules below.
  4. For Copper Tubing, 5" and Larger: Flanged ends.
  5. For Steel Piping, 2" and Smaller: Threaded ends.
  6. For Steel Piping, to 4": Flanged ends except where threaded valve-end option is indicated in valve schedules below.
  7. For Steel Piping, 5" and Larger: Flanged ends.
- N. Isolation/shut-off valves
1. Closed Water Systems – Chilled Water, Hot Water, Dual-Temp Water, etc.
    - a. 150 psig Working Pressure – Class 150
      - 1) Pipe 2-1/2" and Smaller:
        - a) Ball Valves: Two-piece, full port, stainless steel trim.
      - 2) Pipe 3" and Larger:
        - a) High-Performance Butterfly Valves: Class 150 flanged.
  2. Open Water Systems – Condenser Water, etc.
    - a. 150 psig Working Pressure – Class 150
      - 1) Pipe 2" and Smaller:
        - a) Ball Valves: Two-piece, full port, bronze with stainless steel trim.
      - 2) Pipe 2-1/2" and Larger:
        - a) High-Performance Butterfly Valves: Class 150 flanged.
        - b) Resilient seated valves for cooling towers.
    - b. All cooling tower valves shall be motorized.
  3. Low Pressure Steam and Condensate (Up To 14 Psig)

- a. 150 psig Working Pressure – 600 # WOG, ANSI 150 #
  - 1) Pipe 2" and Smaller:
    - a) Ball Valves: Two-piece, full port, stainless steel trim.
  - 2) Pipe 2-1/2" and Larger:
    - a) High-Performance Butterfly Valves: Class 150 flanged.

O. Lubricated Plug Valves at Pump Discharge

CATEGORY	SIZE	RATING	FITTING	NORDSTROM VALVE FIGURE NUMBER	WALWORTH VALVE FIGURE NUMBER
Up to 125 psi Operating pressure	Up to 3"	200# CWP (190# @ 200° F)	Threaded, Wrench Operated	Figure 142	Figure 1796
	3" to 5"	200 # CWP (190# @ 200° F)	Threaded, Wrench Operated	Figure 143	Figure 1797
	6" – 12"	200 # CWP (190# @ 200° F)	Flanged, Worm Gear Operated	Figure 1169	Figure 1707

P. Check valves (other than multi-port check valves)

- 1. Check valves shall be bronze, threaded for sizes 2-1/2" and smaller with regrinding bronze disc. For sizes 3" and larger, check valves shall be iron body with regrind – renew bronze disc and seat ring with bolted cover.

CATEGORY	SIZE	RATING	FITTING	STOCKHAM VALVE FIGURE NUMBER	MILWAUKEE VALVE FIGURE NUMBER
Up to 125 psi Operating pressure	Up to 2-1/2"	CLASS 125	Threaded	Figure B 321	Figure 509
	3" and larger	CLASS 125	Threaded	Figure G-931	Figure F-2974M

Q. Multi-port check valves at pump discharge

- 1. Multi-port check valve shall be semi-steel.
- 2. Multi-port check valves shall be installed at pump discharge, as follows

CATEGORY	SIZE	RATING	MANUFACTURER	MUELLER VALVE FIGURE NUMBER
Up to 125 psi Operating pressure	Up to 3"	125# ANSI (175#@100°F)	Mueller	101 MAP Wafer
	4" and larger"	125# ANSI (200# @ 150°F)	Mueller	105 MAP Globe Type

**3.5 ADJUSTING**

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

**END OF SECTION 23 05 23**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 05 33****HEAT TRACING FOR HVAC PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- A. Section 23 05 00 "Common Requirements for HVAC Work".
- B. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- C. Section 23 05 93 "Testing, Adjusting and Balancing".
- D. Section 23 09 00 "HVAC Instrumentation and Controls".
- B. Section 23 21 13 "HVAC Piping".
- C. This section is itself related to each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes heat tracing with the following electric heating cables:
  - 1. Self-regulating, parallel resistance.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 SUBMITTALS**

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
  - 1. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
- B. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Field quality-control test reports.
- D. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
- E. Warranty: Special warranty specified in this Section.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to NYC Dept. of Buildings, and marked for intended use.

**1.8 WARRANTY**

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within specified warranty period.
  - 1. Manufacturer Warranty Period: 10 years from date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Chromalox, Inc.; Wiegard Industrial Division; Emerson Electric Company.

2. Nelson Heat Trace.
  3. Pyrotenax; a division of Tyco Thermal Controls.
  4. Raychem; a division of Tyco Thermal Controls.
  5. Trasor Corp.
  6. Or approved equal.
- B. Heating Element: Pair of parallel No. 16 AWG, nickel-coated stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled non-heating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
- C. Electrical Insulating Jacket: Flame-retardant polyolefin.
- D. Cable Cover: Stainless-steel braid and polyolefin outer jacket with UV inhibitor.
- E. Maximum Operating Temperature (Power On): 150 deg F
- F. Maximum Exposure Temperature (Power Off): 185 deg F.
- G. Maximum Operating Temperature: 300 deg F.
- H. Capacities and Characteristics:
1. Maximum Heat Output: 12 W/ft.
  2. Piping Diameter: 2" – 16".
  3. Number of Parallel Cables: 2
  4. Spiral Wrap Pitch: 4 inches
  5. Volts: 120/208 V. Coordinate with electrical trade.
  6. Phase: 3
  7. Hertz: 60
  8. Full-Load Amperes: As Scheduled
  9. Minimum Circuit Ampacity: As Scheduled.

## 2.2 CONTROLS

- A. Remote bulb unit with adjustable temperature range from 30 to 50 deg F.
- B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
- C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
- D. Corrosion-resistant, waterproof control enclosure.
- E. Provide end-of-circuit light indicator with installation kit, similar to Terminator Beacon, as manufactured by Thermon.
- F. Provide output signal to BMS indicating operation.

## 2.3 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Warning Labels: Refer to Section 23 05 53 "Identification for HVAC Piping and Equipment."
- C. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
  - 1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches: 3/4 inch minimum.
  - 2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches or Larger: 1-1/2 inches minimum.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.
  - 1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
  - 2. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.
- B. Install electric heating cables after piping has been tested and before insulation is installed.
- C. Install electric heating cables according to IEEE 515.1.
- D. Install insulation over piping with electric cables according to Section 23 07 00 - "HVAC Insulation."
- E. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- F. Set field-adjustable switches and circuit-breaker trip ranges.
- G. Protect installed heating cables, including non-heating leads, from damage.

### 3.4 CONNECTIONS

- A. Ground equipment according to Division 26.
- B. Connect wiring according to Division 26.

**3.5 FIELD QUALITY CONTROL**

- A. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
  - 1. Test cables for electrical continuity and insulation integrity before energizing.
  - 2. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
- B. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
- C. Remove and replace malfunctioning units and retest as specified above.

**END OF SECTION 23 05 33**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 05 48****VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING.
- D. Section 23 09 00 – HVAC INSTRUMENTATION AND CONTROLS.

**1.2 SUMMARY**

- A. This section specifies required vibration control and seismic restraints for all equipment. Also included are the wind load requirements for all equipment in outdoor locations.
- B. It is the intent of this section to keep all HVAC building system components in place during a seismic or high wind event and remain fully operational after such an event.
- C. The work in this section includes, but is not limited to the following:
  - 1. Vibration isolation of HVAC piping, ductwork and equipment.
  - 2. Seismic restraints design requirements for equipment (components).
  - 3. Wind design requirements for equipment (components).
  - 4. Seismic restraints for all isolated and non-isolated HVAC equipment.
  - 5. Wind restraints for isolated and non-isolated HVAC piping, ductwork and equipment.
  - 6. Provisions for flood control for all below, at grade or above grade locations located within flood hazard area.
  - 7. Certification of seismic restraint designs and installation supervision.
  - 8. Certification of wind load restraint designs and installation supervision.
  - 9. All equipment, components requiring NYCBD certification.
  - 10. All inspection and test procedures for equipment, components requiring NYCBD certification.
  - 11. Equipment isolation bases
  - 12. Metal pipe hangers and supports.
  - 13. Trapeze pipe hangers
  - 14. Metal framing systems.
  - 15. Thermal-hangers shield inserts.
  - 16. Fastener systems.
  - 17. Pipe stands.
  - 18. Equipment supports.
  - 19. Isolation pads.
  - 20. Isolation mounts.
  - 21. Restrained elastomeric isolation mounts.
  - 22. Freestanding and restrained spring isolators.
  - 23. Housed spring mounts.

24. Elastomeric hangers.
25. Spring hangers.
26. Spring hangers with vertical-limit stops.
27. Pipe riser resilient supports.
28. Resilient pipe guides.
29. Freestanding and restrained air-mounting system.
30. Restrained vibration isolation roof-curb rails.
31. Seismic snubbers.
32. Steel and inertia vibration isolation equipment bases.

- D. All mechanical equipment, pipe and ductwork, within, on or outdoors of the building and entry of services to the building, up to and including, the utility connection, is part of this Specification.
- E. Unless otherwise specified, all equipment, piping and ductwork shall be restrained to resist seismic forces. Restraints shall maintain equipment, piping or ductwork in a captive position. Restraint devices shall be designed and selected to meet seismic requirements as defined in the contract documents.
- F. This specification is considered to be minimum requirements for seismic, wind, flood and vibration control considerations.

### 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

### 1.5 GENERAL DESIGN AND PERFORMANCE REQUIREMENTS

- A. General Design Requirements.
  1. Seismic Considerations: This project has seismic design requirements as follows:

- a. Seismic Use Group II.
  - b. Seismic Design Category C.
  - c. All Components, with the additional requirement of a manufacturer's Certificate of Compliance to prove 'on line' capability ( $I_p = 1.0$ )
2. Wind Considerations: This project has wind design requirements as follows:
  - a. Wind load in hurricane, tornado and/or wind-borne debris regions (90 plus mph) having a building height greater than 60 feet. Rooftop structures; Section 6.5.15.1 of ASCE 7-05 design requirements apply
3. Refer to Structural Design Load Parameters in Structural contract documents.

#### 1.6 SCOPE OF WORK

- A. The Contractor under this section of the specifications shall provide all required design, labor, materials, tools, equipment and services necessary for the complete and safe control of excessive noise and vibration due to the operation of equipment and/or due to interconnecting piping, ductwork or conduit as well as to provide complete seismic and wind restraint systems for all isolated and non-isolated equipment as indicated herein or which may be reasonably implied as essential, whether mentioned in the Drawings and Specifications or not.
- B. Design seismic restraints and wind restraints for the HVAC systems and components including preparing comprehensive engineering analysis (signed and sealed) by a qualified professional engineer, commissioned by contractor, using performance requirements and design criteria defined herein and under another section of the work.
- C. It shall be understood that the requirements for the seismic and wind restraints as specified herein and on the drawings are complementary to requirements delineated elsewhere under other sections of this work for the support, fastening and isolating of equipment, ductwork and piping work. Nothing on the drawings or specifications shall be interpreted as a reason to waive the requirements of this and other related sections.
- D. All such systems must be installed in strict accordance with seismic codes, component manufacturer's and building construction standards. Whenever a conflict occurs between the manufacturers or construction standards, the most stringent shall apply.
- E. This specification is considered to be minimum requirements for seismic consideration.
- F. This Section includes general and procedural requirements for the design of seismic control for mechanical components and installations.
- G. Seismic Restraints shall be installed to restrain and protect piping in the event of an earthquake and shall be installed in addition to pipe hangers, brackets and supports. Seismic Restraints shall not be used in lieu of regular hangers and supports as are otherwise required to support the piping.
- H. Anchors shall be designed to accommodate seismic forces plus any forces imposed by expansion joints or pipe bends and loops. Loads and details of attachment to structure shall be submitted to Commissioner for coordination and approval.
- I. Provide seismic restraints for every mechanical system including piping, equipment and ductwork within the building and on the roof of the building, complete, as shown and specified per Contract Documents.

- J. All outdoor equipment, including roof-mounted components shall comply with "Wind Load", (NYCDBD) Requirements, as specified herein. There shall be no decrease of the effects of wind load on component due to other structures or components acting as blocks or screens.
- K. All below, at grade or above grade locations located in a flood hazard area as defined and located herein, shall comply with the requirements of this section.
- L. Seismic bracing, wind and flood load, and isolation materials shall be of the same manufacturer and shall be certified by the manufacturer.
- M. The equipment referred to below are typical. (Equipment not listed is still included in this specification.) All systems that are part of the building in any way are referred to as equipment, including, but not limited to:
  - 1. AC Units
  - 2. Adapter Curb
  - 3. Air Handling Units
  - 4. Chilled Beams
  - 5. Air Separators
  - 6. Boilers
  - 7. Cabinet Unit Heaters
  - 8. Chillers
  - 9. Compressor
  - 10. Cooling Towers
  - 11. Ductwork
  - 12. Equipment Supports
  - 13. Fans (all types)
  - 14. Fan Coil Units
  - 15. Heat Exchangers
  - 16. Humidifiers
  - 17. Pipe
  - 18. Pumps (all types)
  - 19. Risers
  - 20. Supports
  - 21. Tanks (all types)
  - 22. Unit Heaters
  - 23. Unit Ventilators
  - 24. VAV Boxes
  - 25. Vibration Isolators
  - 26. Water Heaters

#### 1.7 DEFINITIONS

- A. IBC: International Building Code.
- B. ICC-ES: ICC-Evaluation Service.
- C. OSHPD: Office of Statewide Health Planning and Development for the State of California.
- D. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry Inc.
- E. Life Safety Systems:
  - 1. All systems involved with fire protection including fire dampers and smoke exhaust systems.

- F. Anchor: A device, such as an expansion bolt, for connecting duct or pipe bracing members into
- G. Approved Agency: An established and recognized agency, or other qualified person, regularly engaged in conducting tests or furnishing inspection services, when such agency has been approved by the New York City Department of Buildings as being qualified for such purposes.
- H. Attachments, Seismic: Means by which components and their supports are secured or connected to the seismic-force-resisting system of the structure. Such attachments include anchor bolts, welded connections and mechanical fasteners.
- I. Basic Wind Speed: The basic wind speed, in mph, for determination of the wind loads shall be as per section BC1609 of 2014 NYCBC. New York City Department of Buildings shall determine wind speeds for indicated special wind regions located near gorges or mountainous terrain. Section 6.5.4 of ASCE-7-05 shall be used after determination of basic wind speed by New York City Department of Buildings. See 2014 NYCBC Section 1609.3 ASCE-7-05 for basic wind speed determination in non-hurricane prone regions. In no event shall the wind speed for the wind load design be less than 100 mph.
- J. Bracing: Metal channels, cable or hanger angles that prevent ducts and pipe from breaking away from the structure during an earthquake. See also Longitudinal Bracing and Transverse Bracing. Together, they resist lateral loads from any direction.
- K. Certificate of Compliance: A certification stating that materials and products meet specified standards or that work was done in compliance with approved construction documents by an approved agency. (Certificate to be supplied by equipment component manufacturer)
- L. Component: A part or element of an architectural, electrical, mechanical, or structural system.
- M. Component, equipment: A mechanical or electrical components or element that is part of a mechanical and/or electrical system within or without a building system.
- N. Dynamic properties or piping: The tendency of pipe to change in weight and size because of the movement and temperature of fluids in them. This does not refer to movement due to seismic forces.
- O. Equipment: Systems associated with ducts, pipe and conduit. It includes all non-structural components within the facility and/or serving this facility, such as equipment located in/out of building or outside of the main structure on grade - also called components.
- P. Essential Facilities: Buildings and other structures that are intended to remain operational in the event of extreme environmental loading from flood, wind, snow or earthquakes.
- Q. Flood or Flooding: A general and temporary condition or partial and complete inundation of normally dry land from:
  - 1. The overflow of inland or tidal waters.
  - 2. The unusual and rapid accumulation of runoff of surface waters from any source.
- R. Flood Hazard Area: The greater of the following of two areas:
  - 1. The area within a flood plain subject to a 1-percent or greater chance of flooding in any year.
  - 2. The area designated as a flood hazard area on a community's flood hazard map, or otherwise legally designated.

- S. Flood Hazard Area Subject to High Velocity Wave Action: Area within the flood hazard area that is subject to high velocity wave action and shown on a Flood Insurance Rate Map (FIRM) or other flood hazard map as zone V, VO, VE or VI-30.
- T. Flood Insurance Rate Map (FIRM): An official map of a community on which the Federal Emergency Management Agency (FEMA) has delineated both the special flood hazard areas and the risk premium zones applicable to the community.
- U. Gas pipes: For the purposes of this Section gas pipe is any pipe that carries fuel, gas fuel oil, medical gas, or compressed air.
- V. Hazardous Contents: A material that is highly toxic or potentially explosive or corrosive and in sufficient quantity to pose a significant life-safety threat to the general public if an uncontrolled release were to occur.
- W. Hurricane Prone Regions: Areas prone to hurricanes include the U.S. Atlantic Ocean, Gulf Coasts, Hawaii, Puerto Rico, Guam, Virgin Islands, and American Samoa where the wind speed is greater than 90 mph.
- X. Inspection Certificate: An identification applied on a product by an approved agency containing the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the product or material has been inspected and evaluated by an approved agency.
- Y. Isolation System: The collection of structural elements that includes individual isolator units, structural elements that transfer force between elements of the isolation system and connections to other structural elements.
- Z. Label: An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the same and identification of an approved agency and that indicated that the representative sample of the product or materials has been tested and evaluated by an approved agency.
- AA. Lateral Forces: force acting on a duct or pipe in the horizontal plane. This force can be in any direction.
- BB. Licensed Professional Engineer: An independent, qualified, licensed Professional Engineer having PE registration from New York State, with significant experience in the field of seismic design, equipment support and seismic restraints.
- CC. Life Safety and High Hazard:
  - 1. All systems involved with fire protection including but not limited to sprinkler piping, jockey pumps, fire pumps, control panels, service water supply piping, water tanks, fire dampers, smoke exhaust systems and fire alarm panels. (Life Safety)
  - 2. All mechanical, electrical, plumbing or fire protection systems that support the operation of, or are connected to, emergency power equipment including but not limited to, all lighting, generators, fuel oil systems, transfer switches and transformers. This also includes critical, standby or emergency power components including conduit (1" nominal diameter and larger) cable tray or bus duct, lighting, panels, communication lines involving 911, etc. (Life Safety)
  - 3. Fuel oil, gasoline, natural gas, medical gas, steam, compressed air or any piping containing hazardous, flammable, combustible, toxic or corrosive materials. Fire protection standpipe, risers and mains. Branches must be end tied.

4. Smoke evacuation duct or fresh air make up connected to emergency system, emergency generator exhaust, boiler breeching or as used by the fire department on manual override!
  5. Non life safety duct mounted systems such as fans, variable air volume boxes, heat exchangers and humidifiers shaving a weight greater than 75 lbs. require independent seismic bracing.
  6. Automated supply, exhaust, fresh air and relief air systems on emergency control sequence, including air handlers, duct, dampers, etc. or manually operated systems used for smoke evacuation, purge or fresh air relief. (Life Safety)
  7. All gases or fluids which must be contained in a closed system which are flammable or combustible including but not limited to fuel oil piping, gas piping. Any gas which poses a health hazard if released into the environment including but not limited to, lab gas piping, compressed air piping. (High Hazard)
  8. Heating systems
- DD. Longitudinal Bracing: Bracing that prevents a duct or pipe from moving in the direction of its run.
- EE. Longitudinal Force: A lateral force that happens to be in the same direction as the duct or pipe.
- FF. Manufacturer's Designation: identification applied on a product by the manufacturer indicating that a product or material complies with a specified standard or set of rules.
- GG. NYCBC – 2014 New York City Construction Codes – which includes the latest editions of the NYC Building Code, NYC Plumbing Code, NYC Mechanical Code, NYC Fuel Gas Code, NYC Energy Conservation Code.
- HH. Occupancy Category: A classification used to determine structural load requirements including those imposed by wind, flood, snow, and seismic based on occupancy of the structure.
- II. Occupancy Importance Factor: A factor assigned to each structure according to its Seismic Use Group as prescribed in 2014 NYCBC Chapter 16.
- JJ. Positive Attachment: A mechanical device designed to resist seismic forces that connected a non-structural element, such as a duct, to a structural element, such as a beam. Bolts and welding are examples of positive attachments. Glue and friction due to gravity do not create positive attachments. Examples of positive attachment are epoxy cast in anchors and drill in wedge shaped anchor bolts to concrete and welded or bolted connections directly to the building structure. Double sided beam clamps, C type are not acceptable as either brace point attachments to the structure or for the support of the component at the bracing location.
- KK. Seismic Design Category: A classification assigned to a structure based on its Seismic Use Group or occupancy category and the severity of the design earthquake ground motion at the site.
- LL. Seismic Force: The assumed forces prescribed herein, related to the response of the structure to earthquake motions, to be used on the design of the structure and its components.
- MM. Seismic Use Group: A classification assigned to a building based on its use as defined in NYCBC Chapter 16.
- NN. Seismic: Related to an earthquake. Seismic loads on a structure are caused by wave movements in the earth during an earthquake.
- OO. Site Class: A classification assigned to a site based on the types of soils present and their engineering properties as defined in the 2014 NYC Building Code Chapter 16.

- PP. Special Inspection: Inspection as herein required of the materials, installation, fabrication, erection or placement of equipment or components and connections to ensure compliance with the approved contract documents and referenced standards as required by the 2014 NYC Building Code or its referenced standards. Special Inspectors shall be retained by the City of New York.
- QQ. Special Inspection, Continuous: The full-time observation of work requiring special inspection by an approved special inspector who is present in the area where the work is being performed.
- RR. Special Inspection, Periodic: The part-time or intermittent observation of work requiring special inspection by an approved special inspector who is present in the area where the work has been or is being performed and at the completion of the work.
- SS. Transverse bracing: Bracing that prevents a duct or pipe from moving from side to side.
- TT. Wind –Borne Debris Region: Portions of hurricane-prone regions that are within 1 mile of the coastal mean high water line where the basic wind speed is 110 mph or greater, or portions of hurricane-prone regions where the basic wind speed is 120 mph or greater.

#### 1.8 APPLICABLE PUBLICATIONS CODES AND STANDARDS

- A. NYC Building Code 2014 (NYCBC)
- B. NYC Mechanical Code 2014
- C. NYC Energy Conservation Code 2016
- D. NFPA 70 - National Electric Code
- E. International Energy Conservation Code
- F. SMACNA Guidelines for Seismic Restraint of Mechanical Systems
- G. NFPA 13 and 14 for Fire Protection System (Standard)
- H. American National Standard Institute (ANSI)
- I. Air Moving and Conditioning Association (AMCA)
- J. American Society of Mechanical Engineers (ASME)
- K. American Society for Testing and Materials (ASTM)
- L. National Fire Protection Association (NFPA)
- M. American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE).
- N. Occupational Safety and Health Administration (OSHA).
- O. Underwriters Laboratories (UL).

#### 1.9 PERFORMANCE REQUIREMENTS:

- A. Engineering Services:

1. As part of this work, engage the services of a professional engineer licensed in the State of New York with experience in the field of equipment support, vibration isolation and seismic and wind restraints.
2. The Contractor's Engineer shall prepare comprehensive engineering analysis using performance requirements and design criteria indicated and as required by the NYC Department of Buildings.
3. The Contractor's Engineer shall select and coordinate the isolators, restraints and supports based on the final coordinated drawings showing exact location of ductwork, piping and equipment and shall coordinate with the structural engineer to ascertain that the connections to the structure will resist the forces to which they might be subjected. He shall design seismic-restraint hangers and supports for piping and equipment
4. He shall engineer supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water and design the equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
5. Participate in the preparation of Coordination Drawings to show space requirements for the seismic restraints and supports for the piping, ductwork and equipment.
6. Be responsible for the performance of all special inspections as required by the 2014 NYCBC.
7. Be responsible for the continuous inspections and periodic inspections as required by the 2014 NYCBC.
8. Purchased and/or fabricated equipment must be designed to safely accept external forces of load in any direction for all rigidly and resiliently supported equipment, piping and ductwork without failure and permanent displacement of the equipment. Life safety equipment such as fire pumps, smoke exhaust fans, emergency generators and other life safety designated equipment must be capable of accepting external forces (as required by the specific design category for the project) in any direction without permanent displacement or failure of the equipment.
9. He shall submit signed and sealed details and calculations as required demonstrating compliance and obtaining approval to the Commissioner for review and approval.

**B. Wind-Restraint Loading**

1. Minimum 150 MPH - 60-lb/sq. ft. (or greater where required by 2014 NYCBC) multiplied by the maximum area of the HVAC component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

**C. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.**

**1.10 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.11 SUBMITTALS**

- A. The manufacturers of the vibration isolation and seismic and wind restraints shall provide submittals for products as follows:

1. Descriptive Data:
  - a. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with specifications.

- b. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and seismic and wind restraints by referencing numbered descriptive drawings.
- B. Shop Drawings: Signed and sealed by a qualified Professional Engineer licensed in the State of New York.
  1. Submit fabrication and installation details for equipment bases including dimensions, structural member sizes and support point locations and include calculations for the vibration isolators and restraints detailing compliance with the specifications.
  2. Provide all details of suspension and support for ceiling hung equipment.
  3. Provide specific details of seismic restraints, wind restraints and anchors, include number, size and locations of each piece of equipment.
- C. Product Data: For the following:
  1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
  2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
    - a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear as evaluated by an agency acceptable to the New York City Department of Buildings.
    - b. Annotate to indicate application of each product submitted and compliance with requirements.
  3. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
- D. Engineering Services Submittal: For vibration isolation, wind and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.
  1. Engineering Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic and wind forces required to select vibration isolators, seismic and wind restraints, and for designing vibration isolation bases.
    - a. Coordinate engineering calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Division 23 Sections for equipment mounted outdoors.
  2. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.
  3. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads.
  4. Seismic and Wind Restraint Details:
    - a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.

- b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
  - c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply with requirements in other Division 23 Sections for equipment mounted outdoors.
  - d. Preapproval and Evaluation Documentation: By an agency acceptable to the New York City Department of Buildings, showing maximum ratings of restraint items and the basis for approval (tests or calculations).
- E. Coordination Drawings: Show coordination of seismic bracing for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and seismic restraints.
- F. Welding certificates.
- G. Qualification Data: For professional engineer and testing agency.
- H. Field quality-control test reports.
- I. Operation and Maintenance Data: For air-mounting systems to include in operation and maintenance manuals.

#### 1.12 MANUFACTURER'S RESPONSIBILITY

- A. The manufacturer of the vibration isolation and seismic and wind restraint equipment shall have the following responsibilities:
  - 1. Determine vibration isolation and seismic and wind restraint sizes and locations.
  - 2. Provide vibration isolation and seismic and wind restraints as scheduled or specified.
  - 3. Provide calculations and materials for restraint of un-isolated equipment.
  - 4. Provide installation instructions, drawings and trained field supervision to insure proper installation and performance.
  - 5. Certify correctness of installation upon completion.
  - 6. All manufacturers providing equipment and/or vibration/seismic/wind control systems must provide a Seismic Design Error and Omissions Insurance Certificate for their firm and their design consultant to certify their ability to provide engineering and design as required by this section.

#### 1.13 QUALITY ASSURANCE:

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Substitution of internally or externally isolated and restrained equipment supplied by the equipment manufacturer, in lieu of the isolation and restraints specified herein, will be acceptable provided that all the requirements of the specifications are fully met. The equipment manufacturer shall provide a letter of guarantee from their Engineering Department, signed and sealed by the Contractor's Professional Engineer licensed in the State of New York stating that the isolators and restraints are in full compliance with these specifications.
- C. Letters from field offices or representatives are not acceptable. All expenses for converting to the specified vibration isolation and/or restraints shall be borne by the contractor.

- D. Internal isolation is not acceptable for the following:
  - 1. Roof Mounted Equipment located over or adjacent to:
    - a. Lab spaces
    - b. Critical Office locations such as Executive and Conference areas
    - c. Assembly Areas.
- E. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to New York City Department of Buildings.
- F. Comply with seismic-restraint requirements in the NYCBC unless requirements in this Section are more stringent.
- G. Welding: Qualify procedures according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- H. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval OPA number from OSHPD, preapproval by ICC-ES, or preapproval by another agency acceptable to New York City Department of Buildings, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer licensed in the State of New York.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following:
  - 1. Vibration Mountings & Controls, Inc. (VMC)
  - 2. Amber/Booth Company, Inc. (AB)
  - 3. Korfund Dynamics Corporation.
  - 4. Kinetics Noise Control.
  - 5. Mason Industries.
  - 6. Or approved equal.

### 2.2 VIBRATION ISOLATORS

- A. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel base plates, and factory cut to sizes that match requirements of supported equipment.
- B. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with base plate for bolting to structure. Color-code or otherwise identify to indicate capacity range.
- C. Restrained Mounts: All-directional mountings with seismic restraint.

1. **Materials:** Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
  2. **Neoprene:** Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.
- D. **Restrained Spring Isolators:** Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.
- E. **Housed Spring Mounts:** Housed spring isolator with integral seismic snubbers.
- F. **Elastomeric Hangers:** Single or double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.
- G. **Spring Hangers:** Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.
- H. **Spring Hangers with Vertical-Limit Stop:** Combination coil-spring and elastomeric-insert hanger with spring and insert in compression and with a vertical-limit stop.
- I. **Pipe Riser Resilient Support:** All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch- thick neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig and for equal resistance in all directions.
- J. **Resilient Pipe Guides:** Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch- thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

## 2.3 SEISMIC-RESTRAINT

- A. **General Requirements for Restraint Components:** Rated strengths, features, and applications shall be as defined in reports by an agency acceptable to New York City Department of Buildings.
- B. **Snubbers:** Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.
1. **Anchor bolts** for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
  2. **Resilient Isolation Washers and Bushings:** Oil- and water-resistant neoprene.
  3. **Maximum 1/4-inch air gap, and minimum 1/4-inch thick resilient cushion.**
- C. **Channel Support System:** MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.
- D. **Restraint Cables:** ASTM A 603 galvanized-steel cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

- E. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections to hanger rod.
- F. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.
- G. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.
- H. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.
- I. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.
- J. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

## 2.4 FACTORY FINISHES

- A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.
  - 1. Powder coating on springs and housings.
  - 2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
  - 3. Baked enamel or powder coat for metal components on isolators for interior use.
  - 4. Color-code or otherwise mark vibration isolation and seismic - and wind-control devices to indicate capacity range.

## 2.5 VIBRATION ISOLATION TYPES

- A. Type A - Spring Isolators, Freestanding,
  - 1. Spring type isolator shall be freestanding, laterally stable without housing, snubbers or guides and shall include a steel reinforced, ribbed neoprene cup (1/4-inch minimum thickness) between the baseplate and the support.
  - 2. Mountings shall have leveling bolts on top, consisting of an adjusting bolt, cap screw and washer.
  - 3. Springs shall not be welded to the base plate or cup.
  - 4. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
  - 5. Minimum Additional Travel to solid: 50 percent of the required deflection at rated load.
  - 6. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
  - 7. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
  - 8. Base plates: Factory drilled for bolting to structure and bonded to 1/4-inch- thick, rubber isolator pad attached to base plate underside.
  - 9. Base plates shall limit floor load to 500 psi

10. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.
11. Similar to:
  - a. Type AC – VMC
  - b. Type SW – AB
  - c. Or approved equal

**B. Type B - Spring Isolator – Housed Springs with Seismic Restraint Limit Stops**

1. Restrained spring type isolator shall be free standing, laterally stable and shall have a Type A spring isolator within a rigid welded steel housing that includes vertical limit stops to prevent spring extension when weight is removed. Or when equipment is exposed to uplift loads such as wind loading.
2. The housing serves as blocking during erection and shall be located between the equipment and supporting structure. Housing shall be hot dip galvanized.
3. There shall be a minimum clearance of ¼ inch between the restraining bolts and the housing and spring to prevent interference with spring performance.
4. Limit stops shall be out of contact during normal operation.
5. When used in seismic applications, neoprene bushings shall be incorporated in the limit stop plate.
6. Springs shall not be welded to the housing or cup.
7. Minimum Additional Travel to solid: 50 percent of the required deflection at rated load.
8. Similar to:
  - a. Type AWRS - VMC
  - b. Type ASCM – AB
  - c. Or approved equal

**C. Type C – Combination Spring/Elastomer Hanger Isolator**

1. Hangers shall consist of rigid steel spring in series with a 0.2-inch (minimum) deflection neoprene element. Spring shall be color-coded and elastomeric element molded in specific colors for proper identification of rated load capacity.
2. Frames containing minimum 1-1/4" thick elastomeric elements at the top and a steel spring with general characteristics as in type 1.
3. Minimum additional travel time to solid: 50 percent of the required election at rated load.
4. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30-degree arc from side to side before short-circuiting the spring.
5. Hanger locations requiring pre-compression for holding pipe at fixed elevation shall be type pre-compressed or pre-positioning.
  - a. Type RSH-30 – VMC
  - b. Type BRSA – AB
  - c. Or approved equal

**D. Type D - Elastomer Double Deflection Isolator**

1. Hangers shall consist of rigid steel frames containing minimum 1-1/2" elastometric elements at the top and a steel spring with general characteristics as in type 1. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30-degree arc from side to side before short-circuiting the spring. Hanger locations requiring pre-compression for holding pipe at fixed elevation shall be type pre-compressed or pre-positioning.

- a. Type RHD – VMC
- b. Type HRD/BRB – AB
- c. Or approved equal

**E. Type E – Combination Spring/ Elastomer Hanger Isolator**

- 1. Spring and Durulene elements in a steel retainer box with the features as described for Type C and Type D isolators.
- 2. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.
  - a. Type RSH – VMC
  - b. Type BSR – AB
  - c. Or approved equal

**F. Type F – Seismically Restrained Elastomeric Floor Isolator**

- 1. Captive elastomeric mount molded from neoprene or EPDM compound conforming to the requirements of ASTM D2000.
- 2. Load bearing elastomeric element shall be housed in a cast ductile iron housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection.
- 3. A minimum clearance of ¼" shall be maintained around restraining bolts and internal elastomeric d bushings.
- 4. Mount shall incorporate a fail-safe captive design and shall have minimum deflection of 0.2", restrained spring isolator shall have a type 1 spring isolator within a rigid housing
  - a. Type RSM/MB – VMC
  - b. Type RSM – AB
  - c. Or approved equal

**G. Type G – Pad Type Elastomer Isolator (Standard)**

- 1. One layer of ¾" thick elastomeric pad consisting of 2" square modules for size required.
- 2. Load distribution plates shall be as required.
- 3. Bolting required for seismic compliance. Elastometric and duct washers and bushings shall be provided to prevent short-circuiting.
  - a. Type Maxiflex – VMC
  - b. Type Maxiflex – AB
  - c. Or approved equal

**H. Type H – Pad Type Elastomer Isolator (High Density)**

- 1. Laminated canvas duct and neoprene, maximum loading 1000 psi, minimum ½" thick.
- 2. Load distribution plate shall be used, as required.
- 3. Bolting required for seismic compliance. Elastometric and duct washers and bushings shall be provided to prevent short-circuiting.
  - a. Type Fabriflex – VMC
  - b. Type NDB – AB
  - c. Or approved equal

I. Type I - Thrust Restraints

1. A spring element similar to Type A Isolator shall be combined with steel angles, backup plates, threaded rod, washers and nuts to produce a pair of devices capable of limiting movement of air handling equipment to  $\frac{1}{4}$ ". Hardware may be supplied by contractor.
2. Restraint shall be easily converted in the field from compression type to tension type.
3. Thrust restraints shall be installed on all cabinet head fans, axial or centrifugal fans whose thrust exceeds 10% of unit weight.
  - a. Type RSHTR – VMC
  - b. Type TRK – AB
  - c. Or approved equal

J. Type J - Pipe Anchors

1. All-directional acoustical pipe anchor, consisting of two sizes of steel tubing separated by a minimum of  $\frac{1}{2}$ " thick 60 durometer elastomer.
2. Vertical restraints shall be provided by similar material arranged to prevent vertical travel in either direction.
3. Allowable loads on the isolation material should not exceed 500 psi and the design shall be balanced for equal resistance in any direction.
  - a. Type MDPA – VMC
  - b. Type AB/AG – AB
  - c. Or approved equal

K. Type K – Pipe Guides:

1. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing separated by a minimum  $\frac{1}{2}$ " thickness of 60 durometer elastomer.
2. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and re-insertable to allow for selection of pipe movement.
3. Guides shall be capable of a +/- 1-5/8" motion, or to meet location requirements.
  - a. Type PG – VMC
  - b. Type PG – AB
  - c. Or approved equal

L. Type L – Isolated Pipe Hanger System

1. Pre-compressed spring and elastomer isolation hanger combined with pipe support into one assembly. Replaces standard clevis, single or double rod roller, or double rod fixed support.
2. Spring element (same as Type A) with steel lower spring retainer and an upper elastomer retainer cup with an integral bushing to insulate support rod from the isolation hanger.
3. The elastomeric element under the lower steel spring retainer shall have an integral bushing to insulate the support rod from the steel spring retainer.
4. Hangers shall be designed and constructed to support loads over three times the rated load without failure.
5. System shall be pre-compressed to allow for rod insertion and standard leveling.
  - a. Type CIH, CIR, TIH, PIH – VMC
  - b. Type CIH, CIR, TOH, PIH – AB
  - c. Or approved equal

## 2.6 SEISMIC RESTRAINT TYPES

### A. Type I - Seismic Restrained Steel Mounts

1. Refer to Isolation Type B.
2. Steel spring isolators incorporating elastomeric snubbers in all directions. The snubbers shall be adjustable in all directions and allow a maximum of 1/4" travel in all directions before contacting the elastomer cushion.
3. Spring diameters shall be no less than 0.8 times the compressed height of the spring at the rated load.
4. Springs shall also have a minimum additional travel to solid equal to 50% of the rated deflection.
5. Housing shall be of welded steel construction. Gray iron castings are not permitted.
6. Springs shall be color coded for proper identification of rated load capacity.
  - a. Type Series AEQM, AWMR, ASCM – VMC
  - b. AB
  - c. Or approved equal

### B. Type II Seismically - Restrained Elastomer Floor Isolator

1. Refer to Vibration Isolation Type F
  - a. Type RSM - VMC
  - b. Type RSM – AB
  - c. Or approved equal

### C. Type III - All Directional Seismic Snubber

1. All-directional seismic snubbers shall consist of interlocking steel members restrained by an elastomeric bushing. Bushing shall be replaceable and a minimum of 1/2" thick. Rated loading shall not exceed 1000 psi. A minimum air gap of 1/8" shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Elastomeric bushings shall be rotated to insure no short circuits exist before systems are activated.
  - a. Type SR - VMC
  - b. Type ER – AB
  - c. Or approved equal

### D. Type IV - Floor or Roof Anchorage

1. Rigid attachment to structure utilizing wedge type anchor bolts, anchored plates machine screw, bolting or welding. Power shots are unacceptable.
  - a. Cast-In Plates - VMC
  - b. Type FA – AB
  - c. Or approved equal

### E. Type V - Seismic Cable Restraints

1. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cable end connections shall be steel assemblies that swivel to final installation.

angle and utilize two clamping bolts to provide proper cable engagement. Cables must not be allowed to bend across sharp edges. Single arm braces with resilient bushings can be substituted for seismic cable restraints.

- a. Type SCR - VMC
- b. Type ERS – AB
- c. Or approved equal

**F. Type VI - Rigid Arm Brace**

- 1. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of two and arranged to provide all directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two through bolts to provide proper attachment spaced to ICBO standards for attachment to concrete.

- a. Type SAB - VMC
- b. Type SAB – AB
- c. Or approved equal

**G. Type VII - Internal Clevis Cross Brace**

- 1. Internal clevis cross braces at seismic locations shall be pre-cut pipe sized for internal dimensions.

- a. Type ICB - VMC
- b. Type SAB – AB
- c. Or approved equal

**H. Type VIII - Seismic Waterproof Foundation Wall Sleeve**

- 1. Seismic waterproof foundation wall sleeves shall consist of two elastomeric sleeves that shall be mounted both inside and out of the vertical foundation wall. The conical design shall have a suitably waterproof means of fastening to both concrete and to its concentric utility pipe. Allowable vertical drift shall be plus or minus 2" from the installed neutral point along the vertical "y" axis. All fittings shall be stainless steel or galvanized.

- a. Type SWFWS - VMC
- b. Type SWFWS – AB
- c. Or approved equal

**2.7 EQUIPMENT BASES**

- A. Steel Base: Factory-fabricated, welded, structural steel bases and rails.
- B. Inertia Base: Factory-fabricated, welded, structural steel bases and rails ready for placement of cast-in-place concrete.
- C. All curbs and roof rails are to be bolted or welded to the building steel or anchored to the concrete deck (minimum thickness shall be 4") for resisting wind and seismic forces in accordance with the project location (fastening to metal deck is unacceptable).

## 2.8 EQUIPMENT BASE TYPES

### A. Type B-1 – Integral Structural Steel Base

1. Rectangular bases are preferred for all equipment.
2. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is limited. Pump bases for split case and end suction pumps shall include supports for suction and discharge elbows.
3. All perimeter members shall be wide flange, structural steel beams with a minimum depth equal to 1/10 of the longest dimension of the equipment. Built-in adjustable motor slide rails shall be supplied as an integral part of the base.
4. Base depth need not exceed 12" provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer.
5. Height saving brackets shall be used in all mounting locations to provide a minimum base clearance of 2".
  - a. Type WFB – VMC
  - b. Type SFB/WSB – AB
  - c. Or approved equal

### B. Type B-2 - Concrete Inertia Base

1. Vibration isolation manufacturer shall furnish rectangular welded or bolted modular steel concrete pouring forms for floating and inertial foundations.
2. Bases for split case and end suction pumps shall be large enough to provide for suction and discharge elbows.
3. Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6" and the base depth shall not exceed 12" unless specifically recommended by the base manufacturer for mass or rigidity.
4. Height saving brackets shall be used in all mounting locations to provide a minimum base clearance of 2".
  - a. Type MPF/WPF – VMC
  - b. Type CPF – AB
  - c. Or approved equal

5. Concrete inertia bases thickness shall be in accordance with the following schedule:

MOTOR SIZE	MINIMUM INERTIA BASE THICKNESS
5 HP TO 20 HP	6"
20 HP TO 75 HP	8"

### C. Type B – 3 - Seismic Roof Isolation Curb

1. The structural steel spring isolation curbs shall bear directly on the roof support structure and be flashed and waterproofed into the roof's membrane waterproofing system.
2. Equipment manufacturer's or field-fabricated curbs shall not be used.
3. The curb shall consist of a rigid steel lower section containing properly spaced pockets with fully adjustable spring isolators. All springs shall be color-coded for proper identification and spring pocket shall allow for easy removal or replacement of any spring without disturbance of the supported equipment. Pockets shall have removable waterproof covers to allow for spring adjustment.
4. Spring pockets shall contain combination vertical and horizontal restraint in conjunction with a 1/4-inch thick neoprene rubber bushing that will resist wind and seismic forces. All springs shall be installed in series with a 1/4-inch-thick neoprene acoustical cup or pad.

5. The curb shall be the sound attenuating type utilizing standard 2-inch roof insulation supplied and installed to act thermally outside and acoustically inside. Curbs supplied without this feature shall be factory acoustically lined with 2-inch duct liner. An airtight neoprene seal shall be incorporated into the curb design to prevent air leakage or infiltration. Air seal must not be exposed so that it could be damaged or that in the event of the air seal failure, water could leak into the curb's interior.
6. Wood nailer and flashing shall be provided and curbs shall be manufactured to NRCA standards. Curbs shall include a means of incorporating a sound barrier package, consisting of two layers of waterproof gypsum board. Individual pier supported curbs are not acceptable.
  - a. Type RIC or Type P – VMC
  - b. Or approved equal

**D. Type B-3: Seismic Restrained Vibration Isolation Roof Curb**

Option: Sound Package 1 & 2 VMC/AB-RPFMA/SRPFMA

1. General Requirements for Restrained Vibration Isolation Roof-Curb Rails: Factory-assembled, fully enclosed, insulated, air- and watertight curb rail designed to resiliently support equipment and to withstand seismic and wind forces.
2. Curb-mounted rooftop equipment shown on isolation schedule shall be mounted on structural seismic spring isolation curbs. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind and seismic forces. The lower frame must accept point support for both seismic attachment and leveling. The upper frame must be designed with positive fastening provisions (welding or bolting), to anchor the rooftop unit to the curb, which will not violate the National Roofing Contractors Association (NRCA) ratings of the membrane waterproofing. Contact points between the rooftop unit, the curb and the building's structure shall show load path through those locations only.
3. All-directional elastomeric snubber bushings shall be minimum of ¼" thick. Steel springs shall be laterally stable and rest on ¼" thick elastomeric acoustical pads or cups.
4. Hardware must be plated and the springs shall be powder-coated or cadmium-plated.
5. The curb's waterproofing shall be designed to meet all NRCA requirements.
6. All spring locations shall have full spring view access ports with removable waterproof covers and all isolators shall be adjustable, removable and interchangeable.
7. Spring Isolators: Adjustable, restrained spring isolators shall be mounted on 1/4-inch- (6-mm-) thick, elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.
8. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or wind restraint.
9. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
10. Snubber Bushings: All-directional, elastomeric snubber bushings at least 1/4 inch thick.
11. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counter flashed over roof materials.
12. Isolated curbs shall be supplied with a continuous air seal between the upper floating member and the stationary wood nailer.

Option #1 Where sound barrier package is required, curb shall have full size lay in attenuation panels having a minimum STC rating of 60 when combined with the roof

deck's rating. Attenuation system shall add a full sound attenuation structural floor to the curb capable of spanning the curb's width and designed for live loads of 20 psf. Panels shall not weigh more than 6 psf. The 4" nominal galvanized panel shall be joined to allow for airtight construction and additionally shall have a support system where the panels are used below an outside condenser section. Panels shall be waterproof for both outdoor and indoor application. The space below the curb panels and the roof deck shall have 4" of insulation contractor furnished and installed.

Curb wall construction shall utilize the roofer's standard insulation where curbs use the TAS open thermal acoustical screening system. Solid wall curbs shall use 2" of the factory duct liner installed by the curb manufacturer. The entire curb shall have a continuous neoprene elastomeric air seal. Type RPFMA shall use an open return system with the roof return opening set as far as possible from the unit's return opening.

- a. Type P6200/P6300 – VMC
- b. Or approved equal

**E. Type B-4: Seismic Non-Isolated Curbs**

**Sound Package VMC-RPFMA/SRPFMA System**

- 1. Seismic curbs shall have all provisions as Type B-3 curbs with the exception of spring isolation.
- 2. System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building steel, capable of carrying the design seismic loads.
  - a. Type P6000 – VMC
  - b. Or approved equal

**F. Type B-5 - Isolated Equipment Supports**

- 1. Continuous structural equipment support rails that combine equipment support and isolation mounting into one unitized roof flashed assembly with all features as described for Type B-3.
- 2. System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building steel, capable of carrying the design seismic loads.
- 3. Hardware must be plated and the springs shall be powder coated or cadmium plated.
- 4. The curb's waterproofing shall be designed to meet all area requirements.
- 5. Curb shall have sound attenuation panels having a minimum STC rating of 60 when combined with the roof deck's rating. As well as continuous elastomeric air seal. Panels shall be waterproof.
- 6. The space below the curb panel and the roof deck shall have 4" of insulation provided by the contractor.
  - a. Type R7200/7300 – VMC
  - b. Type RT7200/7300 – AB
  - c. Or approved equal

**G. Type B-6 – Non- Isolated Equipment Supports**

- 1. Same provisions as Type B-5 base – Isolated Equipment supports but without spring isolation.
  - a. Type R7000 – VMC
  - b. Type R7000 – AB

- c. Or approved equal

**H. Type B-7: Computer Room Unit Base**

1. Computer Room air conditioning units shall be welded or bolted to welded structural steel stands having a minimum 0.5 “G” certified lateral acceleration capabilities, but no less than the design seismic loads.
  2. Elastomeric isolated stands shall have 1” of adjustment to accommodate floor irregularities and 0.25” of nominal static deflection.
  3. Spring isolated stands shall have 1” of adjustment to accommodate floor irregularities and 2” of nominal static deflection.
  4. Bolting or welding is required to meet seismic criteria.
  5. Stands to have positive fastening provisions for bolting of computer room unit to seismic floor stand and fastening of seismic isolated floor stand to structure, capable of carrying the design seismic loads.
- a. Type SFS – VMC
  - b. Or approved equal

**I. Type B-8 AHU / AC unit Structural Base Frames**

1. Where roof mounted Air Conditioning or Air Handling Units are placed on steel platforms and are incapable of being point loaded or supported, structural frames shall be furnished which will either match the centerline dimensions of the unit’s base frame rail or its curb dimensions. The structural frame shall have provisions to be welded or bolted to the unit’s base frame and shall be supported on type “B” wind /seismic restrained isolation system.
  2. Isolator deflection shall be either 1.5” or 2.5” depending on the tonnage of the roof mounted component as shown in Isolation Table “A”.
- a. Type RTSBF - VMC.
  - b. Or approved equal

**J. Type B-9: Structural Adapter Curbs**

1. Structural Adapter Curbs will be designed to match the replacement unit’s curb dimensions to the existing unit’s curb dimensions, matching both supply and return air delivery systems of both components or creating a plenum to accommodate airflow of both components.
  2. The new adapter curb will be structurally designed to rest on the existing curb only and carry the new unit’s load directly to building steel or concrete thru stanchions that are welded or bolted to both within the confines of the existing curb. Additionally, the new roof mounted unit will be welded or bolted to the structural adapter and shall demonstrate load path of all loads from all components into the building structure.
  3. Where the installed unit component’s height to the unit’s electrical disconnect box is in excess of 78”, a service platform or other suitable staging shall be utilized.
- a. Type PSAC-6000 -VMC
  - b. Or approved equal

**K. Type B-10 Structural Isolated Adapter Curbs:**

1. Where isolation is required to be incorporated into the adapter curb, isolation and restraining system shall be similar to the requirements highlighted under Base Type B-

3. Isolator deflection shall be either 2" or 3" deflection as required by Isolation Table "A".

- a. Type PSAC-6200 or PSAC-6300 - VMC
- b. Or approved equal

### PART 3 - EXECUTION

#### 3.1 EQUIPMENT ISOLATION AND RESTRAINT

- A. Equipment shall be isolated and restrained as per the requirements specified herein.
- B. Isolation and seismic restraint systems must be installed in strict accordance with the manufacturer's written instructions and all submittal data. Locations of all vibration isolation products shall be selected for ease of inspection and adjustment, as well as for proper operation.
  - 1. Place floor mounted equipment on 4" high concrete housekeeping pads properly doweled or expansion shielded to the deck to meet acceleration requirements. Anchor isolators and/or bases to housekeeping pads. Concrete work is specified under another Division.
  - 2. Additional requirements:
    - a. The minimum operating clearance under inertia bases shall be 2"
    - b. The minimum operating clearances under other bases shall be 2"
    - c. Ceilings containing diffusers must meet seismic zone requirements by using earthquake clips or other approved means of positive attachment to secure diffuser.
- C. Spring isolators shall be installed after all equipment is installed without changing equipment elevations. After the entire installation is complete and under full operational load, the spring isolators shall be adjusted so that the load is transferred from the blocks to the isolators. Remove all debris from beneath the equipment and verify that there are no short circuits of the isolators or the isolation system.

#### 3.2 PIPING AND DUCTWORK ISOLATION AND RESTRAINTS

- A. Vibration isolation hangers shall be positioned as close as possible to the structure without coming in contact with any object (including the structure).
- B. Hanger rods shall not contact any object that would short circuit the isolator.
- C. Parallel running pipes may be hung together on a trapeze that is isolated from the building. Do not mix vibration isolated and non-isolated pipes on the same trapeze.
- D. Attention must be paid to movements of piping caused in expansion and contraction. Pre-compressed hangers shall only be used if installed along with piping.
- E. Isolation hangers shall be installed for all piping in equipment rooms or for 50 ft. from vibrating equipment, whichever is greater. To avoid reducing the effectiveness of equipment isolators, at least three of the first hangers from the equipment should provide the same deflection as the equipment isolators, with a maximum limitation of 2-inch deflection. The remaining hangers shall be spring or combination spring and rubber with a minimum of 0.75-inch deflection.
- F. To prevent load transfer to the equipment flanges when the piping system is filled, the first three hangers adjacent to the equipment shall be the positioning type.

- G. Floor supports for piping in equipment rooms and adjacent to isolated equipment shall use restrained vibration isolators. They should be selected according to the guidelines for hangers.

### 3.3 VIBRATION ISOLATION OF PIPING

- A. All spring type isolation hangers shall be pre-compressed if isolators are installed prior to fluid charge. If installed afterwards, field pre-compressed isolators can be used. All piping in the machine room shall be isolated as well as pressurized runs in other locations of the building.
- B. Horizontal pressurized piping runs in all other locations of the buildings shall be isolated by Type E hangers.
- C. Floor supported piping shall rest on Isolators. Heat exchangers and expansion tanks are considered part of the piping run. The first 3 isolators from the isolated equipment will have the same static deflection as specified for the mountings under the connected equipment.
- D. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces, the first 3 hangers shall have 0.75" deflection for pipe sizes up to and including 3", 1 3/8" deflection for pipe sizes thereafter. Where column spacing exceeds 35', isolation hangers' deflection shall be 2 1/2" for pipes exceeding 3" diameter. Type L hangers may be substituted for the above where isolation hangers are required.
- E. Steam and Condensate Piping:
  - 1. All ceiling suspended piping in the mechanical equipment room shall be isolated with Type D hangers.
  - 2. All floor supported piping shall be supported with Type F isolators.
- F. Domestic water lines in the machine room shall only be isolated if connected to isolated equipment. Isolator type shall be as listed in Article 1, above.
- G. All risers shall be supported on Type J or K anchors or guided restraints positively attached to both the riser and structure. Spiders welded to the pipe can substitute for Type K guides using J Type anchors.
- H. Control Air Piping:
  - 1. Where control air piping is connected to mechanical piping equipment shall be flexibly connected in horizontal and vertical plane with Type FC-2 flexible connectors.
- I. Gas lines shall not be isolated.
- J. Vertical riser supports for pipe 3" diameter and larger shall be isolated from the structure using anchors and guides.

### 3.4 SEISMIC RESTRAINT OF PIPING:

- A. All high hazard and life safety pipe regardless of size such as fuel oil piping, fire protection mains, gas piping, medical gas piping and compressed air piping and piping with an  $I_p=1.5$  shall be seismically restrained or braced. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type V seismic cable restraints or Type VI single arm braces may be used on non-isolated piping. There are no exclusions for size or distance in this category.

- B. Seismically restrain piping, with an  $I_p = 1.0$ , located in boiler rooms, mechanical equipment rooms and refrigeration equipment rooms that is 1½" I.D. and larger. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type V seismic cable restraints or Type VI single arm braces may be used on non-isolated piping.
- C. Seismically restrain all other piping 2½" diameter and larger. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type VI seismic cable restraints or single arm braces may be used on non-isolated piping.
- D. Multiple runs of pipe on the same support shall have distance determined by calculation.
- E. Rod braces shall be used for all rod lengths as listed in Table E.
- F. Clevis hangers shall have braces placed inside of hanger at seismic brace locations.
- G. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
- H. For fuel oil and all gas piping, transverse restraints must be at 20' maximum and longitudinal restraints at 40' maximum spacing.
- I. Transverse restraint for one pipe section may also act as longitudinal restraint for a pipe section of the same or smaller size connected perpendicular to it if the restraint is installed within 24" of the centerline of the smaller pipe or combined stresses are within allowable limits at longer distances.
- J. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints. Use Type V or VI restraint, if trapeze is smaller than 48" long.
- K. Branch lines may not be used to restrain main lines or cross-mains.
- L. Where pipe passes through a fire-rated, seismic gypsum wall, the wall can act as a lateral/transverse brace for pipe sizes up to and including 6," provided fire stopping material is tight to the pipe.
- M. Where pipe passes through a seismic block or concrete wall, the wall can act as a lateral/transverse brace.
- N. Where horizontal pipe crosses a building's drift expansion joint, allowance shall be part of the design to accommodate differential motion.
- O. Vertical pipe rises between floors shall have their differential movement part of the seismic design for building drift.
- P. For horizontal passage of all underground utilities through building's foundation wall, all pipes shall pass freely through an oversized opening and waterproofed accordingly to accommodate maximum allowable building drift. (Seismic Restraint Type VIII).

### 3.5 VIBRATION ISOLATION OF DUCTWORK:

- A. All discharge runs for a distance of 50' from the connected equipment shall be isolated from the building structure by means of Type A or Type E isolators. Actual spring deflection shall be a minimum of 0.75."

- B. All duct runs having air velocity of 1500 feet per minute (fpm) or more shall be isolated from the building structure by Type E combination spring elastomer hangers or Type A floor spring supports. Spring deflection shall be a minimum of 0.75."

### 3.6 SEISMIC RESTRAINT OF DUCTWORK:

- A. Restrain rectangular ductwork with cross sectional area of 4 square feet or larger. Type V seismic cable restraints or Type VI single arm braces shall be used on duct.
- B. Ducts that serves a life safety function or carries toxic materials in an "Essential or High Hazard Facility" must be braced with no exceptions regardless of size or distance requirements.
- C. Restrain round ducts with diameters of 20" or larger. Type V seismic cable restraints or Type VI single arm braces.
- D. Restrain flat oval ducts the same as rectangular ducts of the same nominal size.
- E. See Table D for maximum seismic bracing distances.
- F. Duct must be reinforced at the restraint locations. Reinforcement shall consist of an additional angle on top of the ductwork that is attached to the support hanger rods. Ductwork is to be attached to both upper angle and lower trapeze. Additional reinforcing is not required if duct sections are mechanically fastened together with frame bolts and positively fastened to the duct support suspension system.
- G. A group of ducts may be combined in a larger frame so that the combined weights and dimensions of the ducts are less than or equal to the maximum weight and dimensions of the duct for which bracing details are selected.
- H. Walls, including gypsum board non-bearing partitions, which have ducts running through them, may replace a typical transverse brace. Provide channel framing around ducts and solid blocking between the duct and frame.
- I. If ducts are supported by angles, channels or struts, ducts shall be fastened to it at seismic brace locations in lieu of duct reinforcement.

### 3.7 SCHEDULE OF ISOLATORS RESTRAINTS AND EQUIPMENT BASES

HVAC EQUIPMENT TABLE "A"										
			ON GRADE, BASEMENT OR SLAB ON GRADE				ABOVE GRADE			
EQUIPMENT (SEE NOTE)		MTNG	ISOL	DEFL. (IN)	BASE	RESTR	ISOL	DEFL. (IN)	BASE	RESTR

UNITS LOWEST R.P.M	DEFLECTION
LESS THAN 400	3.50"
401 TO 600	2.50"
601 TO 900	1.50"
OVER 900	0.75"

NOTES FOR TABLE A

GENERAL: ISOL = ISOLATOR,  
DEFL = DEFLECTION,  
REST = SEISMIC RESTRAINT.  
MTNG = MOUNTING.

ALL DEFLECTIONS INDICATED ARE IN INCHES.

- Note 1: For equipment with variable speed driven components having driven operating speed below 600 rpm, select isolation deflection from minimum deflection guide
- Note 2: For roof applications, use base Type B-5.
- Note 3: Curb Type B-3 shall use sound barrier RPFMA when there is no concrete under rooftop units. Curbs can be used for return plenums. (See Option #1)
- Note 4: Curb Type B-3: Where curbs require supply and return sound attenuation, package type SRRFMA shall be used. (See Option #2)
- Note 5: Units may not be capable of point support. If external isolation is required, provide Type B-1 base for entire unit.
- Note 6: Static deflection shall be determined based on the deflection guide for Table "A".
- Note 7: Deflection indicated are minimums at actual load and shall be selected for manufacturer's nominal 5", 4", 3", 2" and 1" deflection spring series, RPM is defined as the lowest operating speed of the equipment.
- Note 8: Single stroke compressors may require inertia bases with thickness greater than 14" maximum as described for base B-2. Inertia base mass shall be sufficient to maintain double amplitude for 1/8".
- Note 9: Floor mounted fans, substitute base Type B-2 for class 2 or 3 or any fan having static pressure over 5".
- Note 10: Indoor utility sets with wheel diameters less than 24" need not have deflections greater than .75".
- Note 11: Curb mounted fans with curb area less than 9 square feet are excluded.
- Note 12: For equipment with multiple motors, Horse Power classification applies to largest single motor.

### 3.8 SPACING CHART FOR SUSPENDED COMPONENTS

Table "D" Seismic Bracing (Maximum Allowable Spacing Shown- Actual Spacing to Be Determined by Calculation)			
Equipment	On Center Transverse	On Center Longitudinal	Change Of Direction
Duct			
All Sizes	30 Feet	60 Feet	4 Feet

Pipe Threaded, Welded, Soldered, Conduit and Conduit Racks			
To 16"	40 Feet	80 Feet	4 Feet
18" – 28"	30 Feet	60 Feet	4 Feet
30" – 40"	20 Feet	60 Feet	4 Feet
42" & Larger	10 Feet	30 Feet	4 Feet

### 3.9 VERTICAL HANGER ROD BRACING SCHEDULE

Table "E" Hanger Rod Bracing Schedule (Stiffener to be maximum 6" from end of rod)					
Rod Dia.	Clamp Size	Maximum Un-braced Rod Length	Steel Angle Size	Clamp Spacing	Min # of Clamps per Stiffener
3/8"	SRBC-1-1/4	19"	1 x 1 x 1/4"	16"	2
1/2"	SRBC-1-1/4	25"	1 x 1 x 1/4"	20"	2
5/8"	SRBC-1-1/4	31"	1 x 1 x 1/4"	24"	2
3/4"	SRBC-1-1/2	37"	1 1/2 x 1 1/2 x 1/4"	28"	2
7/8"	SRBC-1-1/2	43"	1 1/2 x 1 1/2 x 1/4"	33"	2
1"	SRBC-1-1/2	50"	1 1/2 x 1 1/2 x 1/4"	40"	2
1 1/8"	SRBC-1-1/2	62"	1 1/2 x 1 1/2 x 1/4"	50"	2

### 3.10 EXAMINATION

- A. Examine areas and equipment to receive vibration isolation and seismic - and wind-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.11 APPLICATIONS

- A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application by an agency acceptable to New York City Department of Buildings.
- B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.
- C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

### 3.12 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

- A. Comply with requirements in Division 07 Section "Roof Accessories" for installation of roof curbs, equipment supports, and roof penetrations.
- B. Equipment Restraints:
  - 1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
  - 2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
  - 3. Install seismic-restraint devices using methods approved by an agency acceptable to New York City Department of Buildings providing required submittals for component.
- C. Piping Restraints:
  - 1. Comply with requirements in MSS SP-127.
  - 2. Space lateral supports a maximum of 30 feet o.c., and longitudinal supports a maximum of 50 feet o.c.
  - 3. Brace a change of direction longer than 12 feet (3.7 m).
- D. Install cables so they do not bend across edges of adjacent equipment or building structure.
- E. Install seismic-restraint devices using methods approved by an agency acceptable to New York City Department of Buildings providing required submittals for component.
- F. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolts and mounting hole in concrete base.
- G. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.
- H. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- I. Drilled-in Anchors:
  - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the structural engineer if reinforcing steel or other embedded items are

- encountered during drilling. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
  3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
  4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
  5. Set anchors to manufacturer's recommended torque, using a torque wrench.
  6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

### 3.13 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

- A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements in Division 23 Section "Hydronic Piping" for piping flexible connections.

### 3.14 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
  1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
  2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping, and support together on field-assembled metal framing systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
  1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
  2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
  2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Division 07 Section "Roof Accessories" for curbs.
- G. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- J. Install lateral bracing with pipe hangers and supports to prevent swaying.
- K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, 2-1/2" and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- L. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- N. Insulated Piping:
1. Attach clamps and spacers to piping.
    - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
  2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe 4" and larger if pipe is installed on rollers.
  3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
    - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe 4" and larger if pipe is installed on rollers.
  4. Shield Dimensions for Pipe: Not less than the following:
    - a. 1/4" to 3-1/2": 12 inches long and 0.048 inch thick.

- b. 4" - 12" long and 0.06 inch thick.
- c. 5" and 6": 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.

5. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

### 3.15 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### 3.16 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
- D. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### 3.17 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.18 INSPECTION

- A. On completion of installation of all vibration isolated and seismic restraint devices herein specified, the local representative of the isolation materials manufacturer shall inspect the completed system and report in writing any installation errors, improperly selected isolation or restraint devices, or other faults that could affect the performance of the system. Contractor shall submit a report to the Commissioner, including the manufacturer's representative's final report, indicating all isolation reported as properly installed or requiring correction, and include a report by the Contractor on steps taken to properly complete the isolation work.
- B. All special inspections on components required to be seismically restrained must be performed in accordance with the 2014 New York City Construction Codes.

1. The professional engineer engaged by the City of New York shall be responsible for the performance of all special inspection.
  - C. Continuous inspection: The full –time observation of work by an approved special inspector pursuant to the 2014 NYC Building Code Chapter 17. The following pieces of equipment require these inspections:
    1. All equipment using combustible energy sources.
    2. All electric motors, transformers, switchgear unit substations and motors control centers.
    3. Reciprocating and rotating type machinery.
    4. Pipe, 3 inches & larger.
    5. Tanks, heat exchangers & pressure vessels.
  - D. Periodic inspection: Intermittent observation of work by an approved special inspector of the following pieces of equipment in compliance with the NYCBC Chapter 17.
    1. All smoke control systems during construction & prior to concealment for leakage testing
    2. All smoke control systems prior to occupancy for pressure differential testing.
    3. Isolator units for seismic isolation system.
    4. All flammable, combustible piping and their associated mechanical systems.
- 3.19 FIELD QUALITY CONTROL
- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
  - B. Tests and Inspections:
    1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to New York City Department of Buildings.
    2. Schedule test with The Commissioner, before connecting anchorage device to restrained component (unless post-connection testing has been approved), and with at least seven days' advance notice.
    3. Obtain Commissioner's approval before transmitting test loads to structure. Provide temporary load-spreading members.
    4. Test at least four of each type and size of installed anchors and fasteners selected by Commissioner.
    5. Test to 90 percent of rated proof load of device.
    6. Measure isolator restraint clearance.
    7. Measure isolator deflection.
    8. Verify snubber minimum clearances.
    9. Test and adjust air-mounting system controls and safeties.
    10. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
  - C. Remove and replace malfunctioning units and retest as specified above.
  - D. Prepare test and inspection reports.
- 3.20 ADJUSTING
- A. Adjust isolators after piping system is at operating weight.

- B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.
- C. Adjust air-spring leveling mechanism.
- D. Adjust active height of spring isolators.
- E. Adjust restraints to permit free movement of equipment within normal mode of operation.

### 3.21 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service personnel to adjust, operate, and maintain air-mounting systems. Refer to the DDC General Conditions for instruction requirements.

**END OF SECTION 23 05 48**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 05 53****IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- A. Section 23 05 00 "Common Requirements for HVAC Work".
- B. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- C. Section 23 05 93 "Testing, Adjusting and Balancing".
- D. Section 23 09 00 "HVAC Instrumentation and Controls".
- B. This section is itself related to each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Equipment labels.
  - 2. Warning signs and labels.
  - 3. Pipe labels.
  - 4. Duct labels.
  - 5. Stencils.
  - 6. Valve tags.
  - 7. Warning tags.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the

LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

**1.7 COORDINATION**

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

**PART 2 - PRODUCTS**

**2.1 EQUIPMENT LABELS**

- A. Metal Labels for Equipment:
  - 1. Material and Thickness: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
  - 2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

4. Fasteners: Stainless-steel rivets.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

**B. Plastic Labels for Equipment:**

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8-inch-thick, and having predrilled holes for attachment hardware.
2. Letter Color: Black.
3. Background Color: Yellow.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

**C. Label Content:** Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

**D. Equipment Label Schedule:** For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## **2.2 WARNING SIGNS AND LABELS**

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Red.
- C. Background Color: Yellow.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch .
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inches high.

## 2.4 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Blue.
- C. Background Color: Yellow.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch .
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inches high.

## 2.5 STENCILS

- A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; minimum letter height of 1-1/4 inches for ducts; and minimum letter height of 3/4 inch for access panel and door labels, equipment labels, and similar operational instructions.
  - 1. Stencil Material: Brass.

2. Stencil Paint: Exterior, gloss, alkyd enamel black unless otherwise indicated. Paint may be in pressurized spray-can form.
3. Identification Paint: Exterior, alkyd enamel in colors according to ASME A13.1 unless otherwise indicated.

## 2.6 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  1. Tag Material: Stainless steel, 0.025-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
  2. Fasteners: Brass wire-link chain.
- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  1. Valve-tag schedule shall be included in operation and maintenance data.

## 2.7 WARNING TAGS

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
  1. Size: Approximately 4 by 7 inches.
  2. Fasteners: Brass grommet and wire.
  3. Nomenclature: Large-size primary caption such as "Danger," "Caution," or "Do Not Operate."
  4. Color: Yellow background with black lettering.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

### 3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### 3.4 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified under another section.

- B. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels, complying with ASME A13.1, on each piping system.
  - 1. Identification Paint: Use for contrasting background.
  - 2. Stencil Paint: Use for pipe marking.
- C. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Near each valve and control device.
  - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
  - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 5. Near major equipment items and other points of origination and termination.
  - 6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
  - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- D. Pipe Label Color Schedule:
  - 1. Primary Chilled-Water Piping:
    - a. Background Color: White.
    - b. Letter Color: Yellow.
  - 2. Secondary Chilled Water (serving Chilled Beams)-Water Piping:
    - a. Background Color: White.
    - b. Letter Color: Blue.
  - 3. Condenser-Water Piping:
    - a. Background Color: White.
    - b. Letter Color: Black.
  - 4. Heating Water Piping:
    - a. Background Color: White.
    - b. Letter Color: Red.
  - 5. Refrigerant Piping:
    - a. Background Color: Red.
    - b. Letter Color: Yellow.
  - 6. Low-Pressure Steam Piping:
    - a. Background Color: Blue.
    - b. Letter Color: Yellow.

7. Steam Condensate Piping:
  - a. Background Color: Blue.
  - b. Letter Color: White.

### 3.5 DUCT LABEL INSTALLATION

- A. Install plastic-laminated duct labels with permanent adhesive on air ducts in the following color codes:
  1. Blue: For cold-air supply ducts.
  2. Yellow: For hot-air supply ducts.
  3. Green: For exhaust-, outside-, relief-, return-, and mixed-air ducts.
  4. ASME A13.1 Colors and Designs: For hazardous material exhaust.
- B. Stenciled Duct Label Option: Stenciled labels, showing service and flow direction, may be provided instead of plastic-laminated duct labels, at Installer's option, if lettering larger than 1 inch high is needed for proper identification because of distance from normal location of required identification.
- C. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

### 3.6 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
  1. Valve-Tag Size and Shape:
    - a. Chilled Water: 2 inches, round.
    - b. Condenser Water: 2 inches, round.
    - c. Refrigerant: 2 inches, round.
    - d. Hot Water: 2 inches, round.
    - e. Gas: 2 inches, square.
    - f. Low-Pressure Steam: 2 inches, round.
    - g. High-Pressure Steam: 2 inches, square.
    - h. Steam Condensate: 2 inches, round.
  2. Valve-Tag Color:
    - a. Chilled Water: Green.
    - b. Condenser Water: Natural.
    - c. Refrigerant: Natural.
    - d. Hot Water: Green.
    - e. Gas: Yellow.
    - f. Low-Pressure Steam: Natural.
    - g. Steam Condensate: Natural.

3. Letter Color:
  - a. Chilled Water: Black.
  - b. Condenser Water: Black
  - c. Refrigerant: Black
  - d. Hot Water: Black
  - e. Gas: Black
  - f. Low-Pressure Steam: Black
  - g. Steam Condensate: Black

### 3.7 WARNING-TAG INSTALLATION

- A. Write required message on, and attach warning tags to, equipment and other items where required.

**END OF SECTION 23 05 53**

## **SECTION 23 05 93**

### **TESTING, ADJUSTING, AND BALANCING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 09 00 "HVAC Instrumentation and Controls".
- E. This section is itself related to each Division 23 00 00 section.

##### **1.2 SUMMARY**

- A. Section includes
  - 1. Testing, Adjusting and Balancing of Air Systems:
    - a. Constant-volume air systems.
    - b. Variable-air-volume systems.
  - 2. Testing, Adjusting and Balancing of Hydronic Piping Systems:
    - a. Constant-flow hydronic systems.
    - b. Variable-flow hydronic systems.
  - 3. Leakage Testing, Air Distribution System
  - 4. Measurement of final operating conditions of HVAC Systems.
  - 5. Sound measurement of equipment operating conditions.
  - 6. Vibration measurement of equipment operating conditions.
  - 7. Measurement of the Indoor Air Quality (IAQ) after the completion of the final balancing.
- B. Testing, balancing and adjusting shall in no way relieve the Contractor of the warranty requirements.
- C. The Contractor shall furnish all fuel, water and electricity required in performing the testing, balancing and adjusting of mechanical systems.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SCOPE OF WORK

A. General:

1. Testing, adjust and confirm design airflows and water flow rates, pressure drops, operating pressures, temperatures and heat transfer performance for HVAC systems, including, but not limited to chilled water system, condenser water system, electric heating system, outside ventilation air, supply air, return air, fire safety ventilating systems and exhaust air systems, including all associated pumps, heat exchangers, coils, fans, dampers, diffusers, fan coil units, terminal devices, chilled beams, lab hoods, valves and accessories, cooling towers, chillers, etc.
2. Provide all necessary labor, materials, products, equipment and services to balance and test all HVAC systems, to verify conformance to specified quantities, and to the design of the mechanical system and for the testing of all the fire safety ventilations systems.
3. Provide openings required for pitot tube traverses. After balancing, close sheet metal openings with removable gasketed plugs. Submit samples of proposed plugs to the Commissioner for approval.
4. Conduct regular inspections during the mechanical systems installation and report on ductwork installation (likely to produce abnormal leakage or restrictions to airflow), piping installation, proper placement of dampers or valves, and any circumstance which will encumber the testing and balancing of the mechanical systems.
5. Review Drawings and Specifications prior to submitting the tender and ensure that adequate provisions are made in the mechanical installation to facilitate the balancing of all air, steam and water systems; make written recommendations to the Commissioner with the tender where additional measures may be required.
6. Include all items of labor, materials, products, equipment and devices required to comply with standards and codes of the NYC Dept of Buildings in accordance with the contract documents to balance all air and hydronic systems, to verify conformance to specified quantities and to the design of the mechanical system. Where quantities, sizes or other requirements indicated on the drawings or herein specified are in excess of the standard or local code requirements, the specifications and drawings shall govern.

- B. All work related to the preparation of the systems shall be the responsibility of the Contractor. No work shall proceed on the Testing, Balancing and Adjusting until all items required to be

completed prior to the start of Tab work outlined in this section are complete.

## 1.6 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. NEBB: National Environmental Balancing Bureau.
- C. TAB: Testing, adjusting, and balancing.
- D. TABB: Testing, Adjusting, and Balancing Bureau.
- E. TAB Specialist: An entity engaged to perform TAB Work
- F. Systems testing, adjusting, and balancing is the process of checking and adjusting all the building environmental systems to produce the design objectives. It includes
  - 1. The balance of air, and hydronic distribution systems.
  - 2. Adjustment of all systems to provide design quantities and pressures.
  - 3. Verification of performance of all equipment and automatic controls;
  - 4. Sound and vibration measurements.
  - 5. Indoor Air Quality (IAQ) measurements
- G. Test: To determine quantitative performance of equipment.
- H. Adjust: To regulate the specified air and fluid flow rates and air patterns at the terminal equipment (e.g., reduce fan speed, throttling, diffuser directional vane adjustment, etc.).
- I. Balance: To proportion flows within the distribution system (submains, branches, and terminals) according to specified design quantities.
- J. Procedure: Standardized approach and execution of sequence of work operations to yield reproducible results.
- K. Report forms: Test data sheets arranged for collecting test data in logical order for submission and review. These data sheets should also form the permanent record to be used as the basis for required future testing, adjusting, and balancing.
- L. Terminal: The point where the controlled fluid enters or leaves the distribution system. These are supply inlets on water terminals, supply outlets on air terminals, return outlets on water terminals, and exhaust or return inlets on air terminals such as registers, grilles, diffusers, louvers, and hoods.
- M. Main: Duct or pipe containing the system's major or entire fluid flow.
- N. Submain: Duct or pipe containing part of the systems' capacity and serving two or more branch mains.
- O. Branch main: Duct or pipe serving two or more terminals.
- P. Branch: Duct or pipe serving a single terminal.
- Q. "Data Register": See description hereinafter.

## 1.7 REFERENCE STANDARDS

- A. All testing, balancing, and adjusting shall be performed in accordance with the latest applicable industry standards, those standards referenced in the applicable Division 23 specifications, including the following:
- B. Code for Design of Heating, Ventilation and Air Conditioning (GBJ 19-87, GB 50019-2003).
- C. Environmental Air Quality Standards GB 3095-96.
- D. NEEB Testing, Adjusting and Balancing model specifications
- E. NEBB "Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems"
- F. ASHRAE - Standard 111 - 1988 Practices for Measurement, Testing, Adjusting, and Balancing of Building Heating, Ventilation, Air Conditioning, and Refrigeration Systems.
- G. ASHRAE - 2003 HVAC Applications Handbook: Chapter 37, Testing, Adjusting and Balancing.
- H. SMACNA - HVAC System Testing, Adjusting and Balancing (TAB) and Certification of Testing, Adjusting and Balancing Technicians.
- I. SMACNA "HVAC Air Duct Leakage Test Manual", First Edition, 1985.
- J. All equipment and material to be furnished and installed on this Project shall be in accordance with the requirements of the NYC Dept of Buildings and suitable for its intended use on this Project.

1.8 SUBMITTAL PROCEDURES

1.9 Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.10 SUBMITTALS

- A. Contract Documents Examination Report: Submit the Contract Documents review report as specified in Part 3.
- B. Strategies and Procedures Plan: Submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- C. Submittal data shall include, but not be limited to:
  - 1. Water and Air Balance Procedures, Recording Forms and Test Equipment.
  - 2. Water and Air Balance Test Reports.
  - 3. Vibration and Alignment Readings.
  - 4. Sound Level Reading Test Equipment and Reporting Forms.
  - 5. Pump Test Data.
  - 6. Ductwork Leakage Test Data.
  - 7. Chiller Test Data.
  - 8. Cooling Tower Test Data.
  - 9. Air Handling Unit Test Data.
  - 10. Fan Coil Unit Test Data.
  - 11. Terminal Equipment including fan coil units and VAV terminal test data.
  - 12. Heat Exchange Test Data.
  - 13. Hydrostatic Test Logs.
  - 14. Final Air and Water Balance Readings.

- D. Certified TAB reports.
- E. Instrument calibration reports, to include the following:
  - 1. Instrument type and make.
  - 2. Serial number.
  - 3. Application.
  - 4. Dates of use.
  - 5. Dates of calibration.

#### 1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Testing and Balancing Agency Qualifications:
  - 1. The Contractor shall employ the services of an independent testing, adjusting, and balancing agency meeting the qualifications specified below, to be the single source of responsibility to test, adjust, and balance the building mechanical systems identified above, to produce the design objectives. Services shall include checking installations for conformity to design, measurement and establishment of the fluid quantities of the mechanical systems as required to meet design specifications, and recording and reporting the results.
  - 2. The independent testing, adjusting, and balancing agency shall be qualified in those testing and balancing disciplines required for this project.
- C. IAQ Testing:
  - 1. The Independent Testing, Adjusting and Balancing agency shall test the building air systems identified above, to produce an IAQ report.
  - 2. The testing and balancing agency, shall provide IAQ testing shall include checking installations for conformity to design, measurement and establishment of the fluid quantities of the mechanical systems as required to meet design specifications, and recording and reporting the results.

#### 1.12 CONTRACTOR RESPONSIBILITIES

- A. Prepare each system for testing and balancing.
- B. Cooperate with the testing agencies, provide access to all work, equipment and systems. Operate individual equipment and systems as requested by the testing and balancing agency.
- C. Put all heating, ventilating and air conditioning systems and equipment into full operation and shall continue the operation of same during each working day of testing and balancing. Operate systems and under conditions required for proper testing, adjusting, and balancing.
- D. Notify the Commissioner two weeks prior to time system will be ready for testing, adjusting, and balancing. Project readiness shall include:
  - 1. Systems are started and running (fans and pumps have been checked for proper rotation).
  - 2. Permanent electrical power wiring is complete.
  - 3. Verification that all ductwork is fabricated and installed as specified.
  - 4. Ceilings are installed in critical areas where diffuser air pattern adjustment may be required. Access to balancing devices is provided.

5. All equipment and ductwork access doors are securely closed.
6. A complete review of the Contractor Combined Services Drawings (CSD) for coordination of the provisions for the TAB process and instrumentation needed.
7. All balancing, smoke and fire/smoke dampers are installed and in full open positions.
8. All isolation and balancing valves are open and control valves are operational.
9. System installation is complete, with Controls and Instrumentation installed and fully operational.
10. The Testing Agency will provide the necessary input in the form of recommendation, and engineering drawings to facilitate testing construction.

E. This Contractor shall be responsible for the leakage testing of the duct work. The Contractor shall provide the required equipment and labor for testing. The Contractor shall provide any special instrumentation and record all data for submittal to the Commissioner. The Commissioner shall be given two weeks prior notification of and be present during initial testing. Subsequent testing shall be coordinated with and witnessed by the Commissioner.

F. All duct work etc. that is found to exceed the permissible leakage rates shall be immediately repaired by the Contractor, at no additional expense to the City of New York and in a timely manner so as not to interfere with the progress of the work.

#### 1.13 SEQUENCING AND SCHEDULING

A. Sequencing work to commence after completion of systems and schedule completion of work before Substantial Completion of Project.

B. Engage a TAB entity certified by NEBB or TABB.

1. TAB Field Supervisor: Employee of the TAB contractor and certified by AABC, NEBB or TABB.
2. TAB Technician: Employee of the TAB contractor and who is certified by AABC, NEBB or TABB as a TAB technician.

C. TAB Conference: Meet with Commissioner on approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Require the participation of the TAB field supervisor and technicians. Provide seven days' advance notice of scheduled meeting time and location.

1. Agenda Items:

- a. The Contract Documents examination report.
- b. The TAB plan.
- c. Coordination and cooperation of trades.
- d. Coordination of documentation and communication flow.

D. Certify TAB field data reports and perform the following:

1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.

E. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

#### 1.14 DRAWING AND CONSTRUCTION REVIEW

- A. Perform a preconstruction review of the following documents:
  - 1. Contract construction drawings
  - 2. Contract specifications
  - 3. Addenda
  - 4. Submittal data
  - 5. Shop drawings
  - 6. Automatic Control drawings
  - 7. Contractors Combined Services Drawings (all trades).
- B. Prepare a report of the preconstruction review list of recommended changes to allow most effective balancing.
- C. Perform a construction review of the mechanical installation during the progress of the project. Purpose of the reviews to be:
  - 1. Identify potential problems for performing balancing.
  - 2. Identify modifications which will aid balancing.
  - 3. Schedule and coordinate balancing with other work and other trades.
- D. Prepare a report of both preconstruction review and construction review to verify acceptance of installed conditions.
- E. Pre-Balancing Conference: Prior to beginning of the testing, adjusting, and balancing procedures, the Contractor shall schedule and conduct a conference with the Commissioner and installers of the mechanical systems. The objective of the conference is to review the preconstruction and construction report and final coordination and verification of system operation and readiness for testing, adjusting, and balancing.

#### 1.15 PROJECT/SITE CONDITIONS

- A. General: Do not proceed until systems requiring testing, adjusting and balancing are clean and free from debris, dirt, and discarded building materials.
- B. Air balance and testing shall not begin until system has been completed and is in full working order. The Contractor shall put all heating, ventilating and air conditioning systems and equipment into full operation with the final filters in place on all air handling units and shall continue the operation of same during each working day of testing and balancing.

#### 1.16 PROJECT CONDITIONS

- A. Occupancy: The City of New York will occupy the site and existing building during entire TAB period. Cooperate with the City of New York during TAB operations to minimize conflicts with the City of New York's operations.

#### 1.17 COORDINATION

- A. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.
- B. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

### PART 2 - PRODUCTS

Not Used

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 FACTORY TESTING

- A. All factory testing shall be performed in accordance with the latest applicable industry standards, with the manufacturer's recommendations and as specified in other sections of this work.

#### 3.3 FIELD TESTING - GENERAL

- A. During the progress of the Work, tests shall be made as specified herein and as required by the Commissioner. Tests shall be conducted by the Contractor and shall include all equipment apparatus and services required to perform the tests.
- B. The Contractor shall submit proposed test procedures, in soft and hard copy, recording forms and test equipment for review at least six (6) months prior to the start and execution of testing.
- C. Leaks, damage, or defects discovered or resulting from tests shall be repaired or replaced to a like new condition. Leaky pipe joints, ductwork, etc., shall be removed and replaced with acceptable materials.
- D. All equipment and instruments required for tests as well as additional thermometer wells, gauge and instrument connections shall be installed at no additional expense to the City of New York.
- E. All instruments used for testing and balancing must have been calibrated within a period of three (3) months prior to balancing. Instrument calibration shall be certified.
- F. Submit six (6) hard copies and six (6) soft copies of each complete testing and balancing and IAQ report to the Contractor, and to the Commissioner's review. Send two (2) copies of the report to the Contractor and the Commissioner. The Contractor shall submit individual testing and balance reports for each individual office floor, hotel floor, and residential floor air distribution system and each ventilation system within two (2) weeks after the completion of the testing and balancing of systems.

#### 3.4 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.
- B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

- E. Examine ceiling plenums and under floor air plenums used for supply, return, or relief air to verify that they are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
- F. Verify that all required air transfer ducts have been properly located and installed.
- G. Examine equipment performance data including fan and pump curves.
  - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
  - 2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
- H. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- I. Examine test reports specified in individual system and equipment Sections.
- J. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
- K. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible and their controls are connected and functioning.
- L. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.
- M. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.
- N. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
- O. Examine system pumps to ensure absence of entrained air in the suction piping.
- P. Examine operating safety interlocks and controls on HVAC equipment.
- Q. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

### 3.5 PREPARATION

- A. Prepare a TAB plan that includes strategies and step-by-step procedures.
- B. Complete system-readiness checks and prepare reports. Verify the following:
  - 1. Permanent electrical-power wiring is complete.
  - 2. Hydronic systems are filled, clean, and free of air.
  - 3. Automatic temperature-control systems are operational.
  - 4. Equipment and duct access doors are securely closed.
  - 5. Balance, smoke, and fire dampers are open.

6. Isolating and balancing valves are open and control valves are operational.
7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
8. Windows and doors can be closed so indicated conditions for system operations can be met.

### 3.6 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" and ASHRAE 111 and in this Section.
  1. Comply with requirements in ASHRAE 62.1-2004, Section 7.2.2, "Air Balancing."
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
  1. After testing and balancing, install test ports and duct access doors that comply with requirements specified under another section of this work.
  2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to the requirements specified under another section of this work.
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) units.

### 3.7 WELDING INSPECTION:

- A. Visual Inspection: Perform in accordance with Industry Standards. Cut out and test defective welds. If the percentage of defective welds is excessive, cut out and test additional welds as directed by the Commissioner.
- B. Obtain the radiographs of the steam piping. If any welds are in question, then cut out and test welds. If, based on the radiographs, the percentage of defective welds is excessive, then cut out and test additional welds as directed by the Commissioner.

### 3.8 VERIFICATION OF CONTROL OPERATION

- A. General: Perform the checks outlined in the following for all air system controls:
- B. Thermostats and humidistats - Verify calibration and operation of all thermostats and humidistats. Any Deficiencies shall be reported for correction. Recheck after correction. Record thermostat set point and output signal, space temperature.
- C. Damper Operation - Verify operation and position for all dampers. Any Deficiencies shall be reported for correction. Recheck after correction.
- D. Other Controls - Simulate control operations in accordance with design requirements and manufacturer's recommendations. Any deficiencies shall be reported for correction. Recheck after correction.

### 3.9 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. For variable-air-volume systems, develop a plan to simulate diversity.
- D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- G. Verify that motor starters are equipped with properly sized thermal protection.
- H. Check dampers for proper position to achieve desired airflow path.
- I. Check for airflow blockages.
- J. Check condensate drains for proper connections and functioning.
- K. Check for proper sealing of air-handling-unit components.
- L. Verify that air duct system is sealed as specified in Division 23 Section "Metal Ducts."

### 3.10 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
- B. Note that fan powered mixing boxes are calibrated at factory. However, due to changing inlet conditions, recalibrate each mixing box in field as part of this work and provide reading for box (CFM), and primary air at maximum and minimum setting and corresponding inlet and outlet static pressure.
  - 1. NC (Noise Criteria) Tests: Operate the air handling systems after balancing, to determine that the schedule NC ratings in the spaces are not exceeded.
- C. All volume dampers and VAV boxes shall be positioned for maximum air flow before taking initial supply airflow and static pressure readings. Advise Commissioner immediately if design airflows of air handling units are not achieved before proceeding with further testing.
  - 1. Measure total airflow.
    - a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
  - 2. Measure fan static pressures as follows to determine actual static pressure:
    - a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
    - b. Measure static pressure directly at the fan outlet or through the flexible connection.

- c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
    - d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
  - 3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
    - a. Report the cleanliness status of filters and the time static pressures are measured.
    - b. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions
    - c. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
    - d. Obtain approval from the City of New York for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in Division 23 Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
    - e. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full cooling, full heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- D. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.
  - 1. Measure airflow of submain and branch ducts.
    - a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
  - 2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.
  - 3. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.
- E. Measure air outlets and inlets without making adjustments.
  - 1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.
- F. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.
  - 1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
  - 2. Adjust patterns of adjustable outlets for proper distribution without drafts.

### 3.11 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

- A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
- B. Note that VAV boxes are calibrated at factory. Nevertheless, recalibrate each VAV box in field as part of this work. Air balancer shall show two readings for each box, minimum and maximum and corresponding inlet and outlet static pressure.
- C. Note that fan powered mixing boxes are calibrated at factory. However, due to changing inlet conditions, recalibrate each mixing box in field as part of this work and provide reading for box (CFM), and primary air at maximum and minimum setting and corresponding inlet and outlet static pressure.
  - 1. NC (Noise Criteria) Tests: Operate the air handling systems after balancing, to determine that the schedule NC ratings in the spaces are not exceeded.
- D. All volume dampers and VAV boxes shall be positioned for maximum air flow before taking initial supply airflow and static pressure readings. Advise Commissioner immediately if design airflows of air handling units are not achieved before proceeding with further testing.
- E. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
  - 1. Set outdoor-air dampers at minimum, and set return- and exhaust-air dampers at a position that simulates full-cooling load.
  - 2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
  - 3. Measure total system airflow. Adjust to within indicated airflow.
  - 4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
  - 5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
    - a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.
  - 6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
    - a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.
  - 7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
  - 8. Record final fan-performance data.

- F. Pressure-Dependent, Variable-Air-Volume Systems without Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Balance variable-air-volume systems the same as described for constant-volume air systems.
  2. Set terminal units and supply fan at full-airflow condition.
  3. Adjust inlet dampers of each terminal unit to indicated airflow and verify operation of the static-pressure controller. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
  4. Readjust fan airflow for final maximum readings.
  5. Measure operating static pressure at the sensor that controls the supply fan if one is installed, and verify operation of the static-pressure controller.
  6. Set supply fan at minimum airflow if minimum airflow is indicated. Measure static pressure to verify that it is being maintained by the controller.
  7. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow the same as described for constant-volume air systems.
    - a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.
  8. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow.
    - a. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.
- G. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
  2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
  3. Set terminal units at full-airflow condition.
  4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
  5. Adjust terminal units for minimum airflow.
  6. Measure static pressure at the sensor.
  7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

### 3.12 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.

- C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
1. Open all manual valves for maximum flow.
  2. Check liquid level in expansion tank.
  3. Check makeup water-station pressure gage for adequate pressure for highest vent.
  4. Check flow-control valves for specified sequence of operation, and set at indicated flow.
  5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
  6. Set system controls so automatic valves are wide open to heat exchangers.
  7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
  8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

### 3.13 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

- A. Measure water flow at pumps. Use the following procedures except for positive-displacement pumps:
1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
    - a. If impeller sizes must be adjusted to achieve pump performance, obtain approval from Commissioner and comply with Section 23 21 23 "HVAC Pumps".
  2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
    - a. Monitor motor performance during procedures and do not operate motors in overload conditions.
  3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
  4. Report flow rates that are not within plus or minus 10 percent of design.
- B. Measure flow at all automatic flow control valves to verify that valves are functioning as designed.
- C. Measure flow at all pressure-independent characterized control valves, with valves in fully open position, to verify that valves are functioning as designed.
- D. Set calibrated balancing valves, if installed, at calculated presettings.
- E. Measure flow at all stations and adjust, where necessary, to obtain first balance.
1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
- F. Measure flow at main balancing station and set main balancing device to achieve flow that is 5

percent greater than indicated flow.

G. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:

1. Determine the balancing station with the highest percentage over indicated flow.
2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
3. Record settings and mark balancing devices.

H. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.

I. Measure the differential-pressure-control-valve settings existing at the conclusion of balancing.

J. Check settings and operation of each safety valve. Record settings.

### 3.14 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Balance systems with automatic two-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

### 3.15 PROCEDURES FOR STEAM SYSTEMS

A. Measure and record upstream and downstream pressure of each piece of equipment, including, but not limited to, pre-heat coils, CPD equipment, etc.

B. Measure and record upstream and downstream steam pressure of pressure-reducing valves.

C. Check settings and operation of automatic temperature-control valves, self-contained control valves, and pressure-reducing valves. Record final settings.

D. Check settings and operation of each safety valve. Record settings.

E. Verify the operation of each steam trap.

### 3.16 PROCEDURES FOR HEAT EXCHANGERS

A. Measure water flow through all circuits.

B. Adjust water flow to within specified tolerances.

C. Measure inlet and outlet water temperatures.

D. Measure inlet steam pressure.

E. Check settings and operation of safety and relief valves. Record settings.

### 3.17 PROCEDURES FOR MOTORS

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer's name, model number, and serial number.
2. Motor horsepower rating.
3. Motor RPM.
4. Efficiency rating.

5. Nameplate and measured voltage, each phase.
6. Nameplate and measured amperage, each phase.
7. Starter thermal-protection-element rating.

- B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

### 3.18 PROCEDURES FOR CHILLERS

- A. Balance water flow through each evaporator and condenser to within specified tolerances of indicated flow with all pumps operating. With only one chiller operating in a multiple chiller installation, do not exceed the flow for the maximum tube velocity recommended by the chiller manufacturer. Measure and record the following data with each chiller operating at design conditions:

1. Evaporator-water entering and leaving temperatures, pressure drop, and water flow.
2. For water-cooled chillers, condenser-water entering and leaving temperatures, pressure drop, and water flow.
3. Evaporator and condenser refrigerant temperatures and pressures, using instruments furnished by chiller manufacturer.
4. Power factor if factory-installed instrumentation is furnished for measuring kilowatts.
5. Kilowatt input if factory-installed instrumentation is furnished for measuring kilowatts.
6. Capacity: Calculate in tons of cooling.

### 3.19 PROCEDURES FOR COOLING TOWERS

- A. Shut off makeup water for the duration of the test, and verify that makeup and blowdown systems are fully operational after tests and before leaving the equipment. Perform the following tests and record the results:

1. Measure condenser-water flow to each cell of the cooling tower.
2. Measure entering- and leaving-water temperatures.
3. Measure wet- and dry-bulb temperatures of entering air.
4. Measure wet- and dry-bulb temperatures of leaving air.
5. Measure condenser-water flow rate recirculating through the cooling tower.
6. Measure cooling-tower spray pump discharge pressure.
7. Adjust water level and feed rate of makeup water system.
8. Measure flow through bypass.

### 3.20 PROCEDURES FOR CONDENSING UNITS

- A. Verify proper rotation of fans.
- B. Measure entering- and leaving-air temperatures.
- C. Record compressor data.

### 3.21 PROCEDURES FOR BOILERS

- A. Steam Boilers: Measure and record entering-water temperature and flow and leaving-steam pressure, temperature, and flow.

### 3.22 PROCEDURES FOR HEAT-TRANSFER COILS

- A. Measure, adjust, and record the following data for each water coil:
  - 1. Entering- and leaving-water temperature.
  - 2. Water flow rate.
  - 3. Water pressure drop.
  - 4. Dry-bulb temperature of entering and leaving air.
  - 5. Wet-bulb temperature of entering and leaving air for cooling coils.
  - 6. Airflow.
  - 7. Air pressure drop.
- B. Measure, adjust, and record the following data for each electric heating coil:
  - 1. Nameplate data.
  - 2. Airflow.
  - 3. Entering- and leaving-air temperature at full load.
  - 4. Voltage and amperage input of each phase at full load and at each incremental stage.
  - 5. Calculated kilowatt at full load.
  - 6. Fuse or circuit-breaker rating for overload protection.
- C. Measure, adjust, and record the following data for each steam coil:
  - 1. Dry-bulb temperature of entering and leaving air.
  - 2. Airflow.
  - 3. Air pressure drop.
  - 4. Inlet steam pressure.

### 3.23 LEAKAGE TESTING, AIR DISTRIBUTION SYSTEM

- A. General: Each air distribution system shall be tested for leakage before insulation is applied. After portions of the Work are completed, the following tests shall be made in the presence of the Commissioner. Five (5) days advance written notice of the tests shall be given to the Commissioner, who in turn will notify other parties interested.
- B. Furnish all gauges, blowers, instruments, test equipment, and labor required for tests, and make all provisions for removal of test equipment after tests have been made.
- C. Test all ductwork unless otherwise indicated in this Section.
- D. Leakage test shall be in accordance with test method described in Section 5 of SMACNA HVAC Air Duct Leakage Test Manual, except as modified in this Section. Air leakage shall not exceed limits specified.
- E. Air leakage testing during erection shall include separate leakage air tests of built up air handling casings, discharge and intake plenums, machine room ductwork, complete and/or partial air risers, each completed and/or partial horizontal distribution system, and, after all ductwork is installed and central station apparatus is erected, leakage testing of the pressure side of the whole system up to the inlet of the variable air volume and fan powered terminal unit boxes. Test ducts/casings with positive pressure on the discharge side of the system fan and under negative pressure on the suction side of the system fan. Include testing of flexible runouts. It is the intent of the Specifications that ductwork shall be tested in sections, if required, in order to permit work of other trades to proceed.
- F. Do not insulate ductwork until it has been successfully tested.

G. Ductwork (+/-) 2.0" w.g (or less) external static pressure class (see following schedule):

1. Representative samples of ductwork (approximately 20% of total linear feet of ductwork) shall require leakage test as described below.
2. Commissioner will decide samples of ductwork to be tested and date of leakage test to be conducted.
3. If test results are good, remainder of ductwork is permitted to proceed without further testing. If ductwork fails test, repair all ductwork including ductwork not tested. Then repeat leakage tests for new samples of ductwork as described above.
4. Before insulation is applied, run fan at design static pressure and check all joints for all ductwork, risers and branches.

H. Ductwork (+/-) 3.0" w.g (or greater) external static pressure class (see following schedule):

1. All distribution ductwork, plenums, headers, mains and branches shall be individually tested with a blower, orifice section, U-tube gauge board tubing and cocks. arranged to indicate the amount of air leakage Tests shall be made during installation. The blower shall maintain the required test pressure differential across the orifice plate. Leaks which cause an air loss greater than the permissible leakage rate, defined below and, noisy or whistling leaks, shall be repaired and a retest made.
2. Each branch shall be isolated from the remainder of the system by means of seals, plugs, or caps.
3. Leakage Testing: Leakage testing shall utilize blower which shall maintain the design pressure class (see chart below) pressure differential across the orifice plate. Leaks which cause an air loss greater than the permissible leakage rate, defined below or noisy or whistling leaks, shall be repaired and a retest made.

I. All ductwork:

1. All ductwork on the roof, spaces shall be tested after all riser tests have been accepted (where required) and after risers have been connected to the mains but before the branches have been connected to the risers.
2. Mains shall be tested as described for risers and branches.

J. After the acceptance of the tests by the City of New York, the branches shall be connected to the risers and the ductwork shall be released for insulation.

K. Permissible leakage rates:

Duct System	Pressure Classification External Static Pressure	SMACNA Seal	SMACNA Leakage Classification (Table 4-1)
All supply ducts with VAV/CV terminal boxes from fan discharge to terminal box	+4" wg	A	6
All supply ducts in systems without VAV/CV terminal boxes from fan discharge to terminal box	+4" wg	A	6
All supply ducts downstream of VAV/CV terminal boxes to diffusers or chilled beams	+3" wg	B	12
All return and general exhaust ducts (toilets, MER Ventilation, non-lab exhaust)	-3" wg	B	12
All fume hood, laboratory and all other special exhaust systems.	-4" wg	A	6

### 3.24 OPERATING TESTS

- A. General: After the various systems are pressure-tested and cleaned as hereinbefore specified, each piping and air handling system shall be tested in the presence of the Commissioner. Five-days advance written notice of the tests shall be given to the Commissioner by the Contractor who in turn will notify other parties interested.
- B. Furnish all gauges, instruments, test equipment and labor required for the tests. Adjust all equipment to perform with the least possible noise and vibration consistent with its duty. Quietness of operation of all equipment is a requirement. Any equipment producing objectionable noise in occupied spaces must be repaired or removed and replaced with satisfactory equipment.
- C. Piping Systems: operate the heating systems, and make adjustments in controls and equipment, and complete necessary balancing to deliver not less than the water quantities shown on the drawings at each equipment item.
- D. NC (Noise Criteria) Tests: Operate the air handling systems after balancing, to determine that the scheduled NC ratings in the spaces are not exceeded.

### 3.25 SOUND AND VIBRATION TESTING

- A. Sound Traps and Silencers:
  - 1. After installation: measure total system pressure before and after attenuators.
  - 2. If pressure loss exceeds maximum static pressure loss schedules on drawings: at no charge, replace attenuators and/or modify entrance and/or discharge aerodynamic flow to obtain specified performance.
- B. Noise Criterion Levels:
  - 1. After air systems are properly air balanced, the resulting octave band noise levels should be measured in all spaces specified to determine compliance, in accordance with National Environmental Balancing Board (NEBB) Procedural Standards for the Measurement and Assessment of Sound and Vibration.
  - 2. If design noise levels are exceeded, the air balancer shall check all air moving devices to insure all fan systems are operating at the lowest rpm and static pressure to deliver (exhaust) the design cfm from the most remote point. If the balancer needs to make a sheave change to accomplish this, the change should be at no charge to the City of New York's.
- C. Rotating Equipment Vibration Levels
  - 1. After systems are properly air and water flow balanced, vibration levels of all equipment shall be tested in accordance with National Environmental Balancing Board (NEBB) Procedural Standards for the Measurement and Assessment of Sound and Vibration.
  - 2. If equipment vibration levels are found to be excessive then the equipment shall have the necessary repairs performed and/or be dynamically balanced to reduce vibration.

### 3.26 INDOOR AIR QUALITY TESTING

- A. Equipment Specification:
  - 1. An infrared photo acoustic analyzer shall be used to monitor for carbon dioxide, carbon monoxide, and total volatile organic compounds levels. It is a real time analyzer

equipment. The sampling installation in the building shall extend into the outside air, supply air and return air of each central HVAC system. In tenant areas the sampling points shall be as close as possible to the occupants breathing zones.

2. Calibration shall be performed in accordance with manufacturer specifications and recommended procedures.

**B. Application (Analytical Methodology)**

1. The analytical method used shall be a direct reading of the infrared spectroscopy technique, which classifies different organic compounds by their ability to absorb energy of specific wavelengths in the infrared region, specifically, center wavelength 3.4  $\mu\text{m}$  and 3.6  $\mu\text{m}$  respectively, as well as determine carbon dioxide and carbon monoxide in parts per million (ppm). The sub detection levels of the instrument, in parts per million (ppm) and milligrams per cubic meter ( $\text{mg}/\text{m}^3$ ), shall be as follows:
  - a. Carbon dioxide = 1.7 ppm;
  - b. Carbon monoxide = 0.2 ppm;
  - c. Total volatile organic compounds, center wavelength 3.4  $\mu\text{m}$  = 0.036  $\text{mg}/\text{m}^3$ . The instrument is calibrated for propane at this wavelength. The detection level of this filter is sensitive to changes in relative humidity.
  - d. Total volatile organic compounds center wavelength 3.6  $\mu\text{m}$  = 0.07  $\text{mg}/\text{m}^3$ . The instrument is calibrated for formaldehyde at this wavelength.

**C. Indoor Air Quality Periodic Testing**

1. Two different sampling strategies shall be used, time specific sampling and 24-hour Continuous Monitoring.
2. The first strategy shall be the collection of indoor gaseous air quality data from a floor at a specific point in time (known as Time Specific Sampling), providing a snapshot of ambient conditions which are to be compared to applicable indoor air quality standards for verification of compliance with operating parameters.
3. The second strategy (known as 24-Hour Continuous Monitoring) expands upon the first through the use of additional equipment and provides a 24-hour study of conditions on the floor. The enhanced data produced by this configuration provides a more comprehensive view of ambient conditions and can record transient conditions that occur any time during monitoring. A graphical representation of gas concentrations over the sampling period is provided as part of the report.

**D. Time-Specific Sampling**

1. Indoor Gaseous Air Quality Monitoring for carbon dioxide ( $\text{CO}_2$ ), carbon monoxide (CO) and two classes of total volatile compounds (TVOC) utilizing air sampling and the Infrared Photo acoustic Multi-Gas Analyzer shall be performed at 4 locations on each floor as well as at the central HVAC equipment. This survey shall also include a visual inspection of the MER for parameters adversely affecting indoor air quality. The inspection should be focused on mechanical hygiene and should follow the parameters dictated by EPA's guidelines such as the "Building Air Quality: A Guideline for Building Owners and Facilities Managers".
2. 24-Hour Continuous Monitoring
  - a. Continual monitoring of Gaseous Indoor Air Quality Parameters shall include: carbon dioxide ( $\text{CO}_2$ ), carbon monoxide (CO) and two classes of total volatile organic compounds (TVOC). This monitoring shall be performed utilizing air sampling installations and Infrared Photo-acoustic Multi-Gas Analyzer configured

for continuous, unattended operation for a 24-hour period. This survey shall include a visual inspection of the MER for parameters adversely affecting indoor quality. The inspection should be focused on mechanical hygiene and should follow the parameters dictated by EPA's guidelines such as the "Building Air Quality" A Guideline for Building Owners and Facilities Managers"

### 3.27 TOLERANCES

- A. Set HVAC system's air flow rates and water flow rates within the following tolerances:
  - 1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 3 percent.
  - 2. Air Outlets and Inlets: Plus or minus 3 percent.
  - 3. Heating-Water Flow Rate: Plus or minus 3 percent.
  - 4. Cooling-Water Flow Rate: Plus or minus 3 percent.

### 3.28 REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
- B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

### 3.29 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
  - 1. Include a certification sheet at the front of the report's binder, signed and sealed by the contractor's testing and balancing engineer.
  - 2. Include a list of instruments used for procedures, along with proof of calibration.
- B. Final Report Contents: In addition to certified field-report data, include the following:
  - 1. Pump curves.
  - 2. Fan curves.
  - 3. Manufacturers' test data.
  - 4. Field test reports prepared by system and equipment installers.
  - 5. Other information relative to equipment performance; do not include Shop Drawings and product data.
- C. General Report Data: In addition to form titles and entries, include the following data:
  - 1. Title page.
  - 2. Summary of contents including the following:
    - a. Indicated versus final performance.
    - b. Notable characteristics of systems.
    - c. Description of system operation sequence if it varies from the Contract

Documents.

3. Nomenclature sheets for each item of equipment.
  4. Data for terminal units, including manufacturer's name, type, size, and fittings.
  5. Notes to explain why certain final data in the body of reports vary from indicated values.
  6. Test conditions for fans and pump performance forms including the following:
    - a. Settings for outdoor-, return-, and exhaust-air dampers.
    - b. Conditions of filters.
    - c. Cooling coil, wet- and dry-bulb conditions.
    - d. Face and bypass damper settings at coils.
    - e. Fan drive settings including settings and percentage of maximum pitch diameter.
    - f. Inlet vane settings for variable-air-volume systems.
    - g. Settings for supply-air, static-pressure controller.
    - h. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
  2. Water and steam flow rates.
  3. Duct, outlet, and inlet sizes.
  4. Pipe and valve sizes and locations.
  5. Terminal units.
  6. Balancing stations.
  7. Position of balancing devices.
- E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and unit size.
    - e. Manufacturer's serial number.
    - f. Unit arrangement and class.
    - g. Discharge arrangement.
    - h. Number, make, and size of belts.
    - i. Number, type, and size of filters.
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and rpm.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
  3. Test Data (Indicated and Actual Values):
    - a. Total air flow rate in cfm.
    - b. Total system static pressure in inches wg.
    - c. Fan rpm.
    - d. Discharge static pressure in inches wg.

- e. Filter static-pressure differential in inches wg.
- f. Preheat-coil static-pressure differential in inches wg.
- g. Cooling-coil static-pressure differential in inches wg.
- h. Heating-coil static-pressure differential in inches wg.
- i. Outdoor airflow in cfm.
- j. Return airflow in cfm.
- k. Outdoor-air damper position.
- l. Return-air damper position.
- m. Vortex damper position.

**F. Apparatus-Coil Test Reports:**

**1. Coil Data:**

- a. System identification.
- b. Location.
- c. Coil type.
- d. Number of rows.
- e. Fin spacing in fins per inch o.c.
- f. Make and model number.
- g. Face area in sq. ft.
- h. Tube size in NPS.
- i. Tube and fin materials.
- j. Circuiting arrangement.

**2. Test Data (Indicated and Actual Values):**

- a. Air flow rate in cfm.
- b. Average face velocity in fpm.
- c. Air pressure drop in inches wg.
- d. Outdoor-air, wet- and dry-bulb temperatures in deg F.
- e. Return-air, wet- and dry-bulb temperatures in deg F.
- f. Entering-air, wet- and dry-bulb temperatures in deg F.
- g. Leaving-air, wet- and dry-bulb temperatures in deg F.
- h. Water flow rate in gpm.
- i. Water pressure differential in feet of head or psig.
- j. Entering-water temperature in deg F.
- k. Leaving-water temperature in deg F.
- l. Refrigerant expansion valve and refrigerant types.
- m. Refrigerant suction pressure in psig.
- n. Refrigerant suction temperature in deg F.
- o. Inlet steam pressure in psig.

**G. Gas-Fired Heat Apparatus Test Reports:** In addition to manufacturer's factory startup equipment reports, include the following:

**1. Unit Data:**

- a. System identification.
- b. Location.
- c. Make and type.
- d. Model number and unit size.
- e. Manufacturer's serial number.
- f. Fuel type in input data.
- g. Output capacity in Btu/h.

- h. Ignition type.
- i. Burner-control types.
- j. Motor horsepower and rpm.
- k. Motor volts, phase, and hertz.
- l. Motor full-load amperage and service factor.

2. Test Data (Indicated and Actual Values):

- a. Total air flow rate in cfm.
- b. Entering-air temperature in deg F.
- c. Leaving-air temperature in deg F.
- d. Air temperature differential in deg F.
- e. Entering-air static pressure in inches wg.
- f. Leaving-air static pressure in inches wg.
- g. Air static-pressure differential in inches wg.
- h. Low-fire fuel input in Btu/h.
- i. High-fire fuel input in Btu/h.
- j. Manifold pressure in psig.
- k. High-temperature-limit setting in deg F.
- l. Operating set point in Btu/h.
- m. Motor voltage at each connection.
- n. Motor amperage for each phase.
- o. Heating value of fuel in Btu/h.

H. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:

- a. System identification.
- b. Location.
- c. Make and type.
- d. Model number and size.
- e. Manufacturer's serial number.
- f. Arrangement and class.

2. Motor Data:

- a. Motor make, and frame type and size.
- b. Horsepower and rpm.
- c. Volts, phase, and hertz.
- d. Full-load amperage and service factor.
- e. Sheave make, size in inches, and bore (if applicable).
- f. Center-to-center dimensions of sheave, and amount of adjustments in inches (if applicable).
- g. Number, make, and size of belts.

3. Test Data (Indicated and Actual Values):

- a. Total airflow rate in cfm.
- b. Total system static pressure in inches wg.
- c. Fan rpm.
- d. Discharge static pressure in inches wg.
- e. Suction static pressure in inches wg.

- I. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
    - a. System and air-handling-unit number.
    - b. Location and zone.
    - c. Traverse air temperature in deg F.
    - d. Duct static pressure in inches wg.
    - e. Duct size in inches.
    - f. Duct area in sq. ft.
    - g. Indicated air flow rate in cfm.
    - h. Indicated velocity in fpm.
    - i. Actual air flow rate in cfm.
    - j. Actual average velocity in fpm.
    - k. Barometric pressure in psig.
- J. Air-Terminal-Device Reports:
1. Unit Data:
    - a. System and air-handling unit identification.
    - b. Location and zone.
    - c. Apparatus used for test.
    - d. Area served.
    - e. Make.
    - f. Number from system diagram.
    - g. Type and model number.
    - h. Size.
    - i. Effective area in sq. ft.
  2. Test Data (Indicated and Actual Values):
    - a. Air flow rate in cfm.
    - b. Air velocity in fpm.
    - c. Preliminary air flow rate as needed in cfm.
    - d. Preliminary velocity as needed in fpm.
    - e. Final air flow rate in cfm.
    - f. Final velocity in fpm.
    - g. Space temperature in deg F.
- K. System-Coil Reports: For reheat coils, chilled beams and water coils of terminal units, include the following:
1. Unit Data:
    - a. System and air-handling-unit identification.
    - b. Location and zone.
    - c. Room or riser served.
    - d. Coil make and size.
    - e. Flowmeter type.

2. Test Data (Indicated and Actual Values):
  - a. Air flow rate in cfm.
  - b. Entering-water temperature in deg F.
  - c. Leaving-water temperature in deg F.
  - d. Water pressure drop in feet of head or psig.
  - e. Entering-air temperature in deg F.
  - f. Leaving-air temperature in deg F.
- L. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:
  1. Unit Data:
    - a. Unit identification.
    - b. Location.
    - c. Service.
    - d. Make and size.
    - e. Model number and serial number.
    - f. Water flow rate in gpm.
    - g. Water pressure differential in feet of head or psig.
    - h. Required net positive suction head in feet of head or psig.
    - i. Pump rpm.
    - j. Impeller diameter in inches.
    - k. Motor make and frame size.
    - l. Motor horsepower and rpm.
    - m. Voltage at each connection.
    - n. Amperage for each phase.
    - o. Full-load amperage and service factor.
    - p. Seal type.
  2. Test Data (Indicated and Actual Values):
    - a. Static head in feet of head or psig.
    - b. Pump shutoff pressure in feet of head or psig.
    - c. Actual impeller size in inches.
    - d. Full-open flow rate in gpm.
    - e. Full-open pressure in feet of head or psig.
    - f. Final discharge pressure in feet of head or psig.
    - g. Final suction pressure in feet of head or psig.
    - h. Final total pressure in feet of head or psig.
    - i. Final water flow rate in gpm.
    - j. Voltage at each connection.
    - k. Amperage for each phase.
- M. Instrument Calibration Reports:
  1. Report Data:
    - a. Instrument type and make.
    - b. Serial number.
    - c. Application.
    - d. Dates of use.
    - e. Dates of calibration.

### 3.30 INSPECTIONS

#### A. Initial Inspection:

1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the final report.
2. Check the following for each system:
  - a. Measure airflow of at least 75 percent of air outlets.
  - b. Measure water flow of at least 75 percent of terminals.
  - c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
  - d. Verify that balancing devices are marked with final balance position.
  - e. Note deviations from the Contract Documents in the final report.

#### B. Final Inspection:

1. After initial inspection is complete and documentation by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by the Commissioner.
2. The Contractor's TAB test and balance engineer shall conduct the inspection in the presence of the Commissioner
3. The Commissioner shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10 percent of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
4. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "Failed."
5. If the number of "Failed" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

#### C. TAB Work will be considered defective if it does not pass final inspections. If TAB Work fails, proceed as follows:

1. Recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.

#### D. Prepare test and inspection reports.

### 3.31 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

**END OF SECTION 23 05 93**

**SECTION 23 07 00****HVAC INSULATION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".
- F. Section 23 31 20 "Fire-Resistive Duct-Pipe Insulation and Enclosure".

**1.2 SUMMARY**

- A. Section includes thermal insulation on all ductwork, casings, plenums, housing, piping, fittings, valves, equipment and all other necessary items connected into the system subject to condensation or loss of heat.
- B. In addition, the section includes:
  - 1. Insulation Materials
    - a. Fiberglass
    - b. Calcium silicate.
  - 2. Insulating cements, Adhesives & Mastics.
  - 3. Sealants.
  - 4. Factory-applied jackets.
  - 5. Field-applied fabric-reinforcing mesh.
  - 6. Field-applied cloths.
  - 7. Field-applied jackets.

**1.3 DEFINITIONS:**

- A. Exposed: Indoor ducts, piping or equipment located in mechanical rooms and in areas which will be visible without removing ceilings or opening access panels.
- B. Concealed: Indoor ducts, piping or equipment which is not exposed.
- C. Outdoor: ducts, piping or equipment which is exposed to the weather.
- D. Insulation thermal conductivity: No greater than value listed, in Btu- inch/hour-square foot-

degrees F at 75 degrees F mean temperature.

- E. Water Vapor Permeance (ASTM E97 or E96, Procedure A): No more than value listed, in perms.
- F. Water vapor permeability (ASTM C355): No greater than value listed, in perm-inch.
- G. Puncture resistance (ASTM D781): No less than value listed.
- H. Density: no less than value listed, in pounds per cubic foot.

#### 1.4 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.6 REFERENCE STANDARDS

- A. The following published Specifications' standards, tests or recommended methods apply to work in this Section:
  - 1. ASTM E 84, 'Standard Test Method for Surface Burning Characteristics of Building Materials'.
  - 2. NFPA 255 – Surface Burning Characteristics of Building Materials.
  - 3. UL 723 – Surface Burning Characteristics of Building Materials.
  - 4. ANSI/ASTM C553 – Mineral Fiber Blanket and Felt Insulation.
  - 5. ASTM C335 – Thermal Conductivity of Pipe Insulation.
  - 6. ANSI/ASTM C612 – Mineral Fiber Block and Board Thermal Insulation.
  - 7. ASTM C411 - Standard Test Method for Hot-Surface Performance of High Temperature Thermal Insulation.
  - 8. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties

- by Means of the Heat Flow Meter Apparatus.
9. ASTM C533 – Standard Specifications for Calcium Silicate Block and Pipe Thermal Insulation
  10. ASTM C 547 - Standard Specification for Mineral Fiber Pipe Insulation.
  11. ASTM C 585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Normal Sizes of Pipe and Tubing (NPS System).
  12. ASTM C 795 – Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel
  13. ASTM C 916 (1985; R 2007) Standard Specification for Adhesives for Duct Thermal Insulation
  14. ASTM C 920 (2008) Standard Specification for Elastomeric Joint Sealants
  15. ASTM C 921 (2009) Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation
  16. ASTM D 774/D 774M (1997; R 2007) Bursting Strength of Paper
  17. ASTM C 1136, Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
  18. ASTM E 96 - Test Method for Water Vapor Transmission of Materials
  19. ASTM E119 Standard Test Methods for Fire Tests of Building Construction and Materials.
  20. ASTM E136 Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C.
  21. ASTM E814 Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
  22. ASTM E 2336, 'Standard Test Methods for Fire Resistive Grease Duct Enclosure Systems'
  23. ASTM C 1338, 'Fungi Resistance of Insulation Materials and Facings Standard'.
  24. ASTM E119, Standard Method of Fire Tests of Building Construction and Materials; 2-hour Wall Panel Test, and 2-hour External Total Engulfment Test.
  25. ASTM E814, Standard Method of Fire Test of Through-Penetration Fire Stops; 2-hour Firestop Test.
  26. ASTM E136, Combustibility.
  27. C518-91, Aging Test.
  28. UL 1978, First Edition of the Standard for Grease Ducts.
  29. UL 263, Full Scale External (Engulfment) Fire Test.
  30. UL 1479, Through - Penetration 3-hour Firestop Test.
  31. Underwriters Laboratories of Canada, ISO 6944-1985, 1- & 2-hour Large Ventilation Duct Fire Resistive Enclosure Test.
  32. Underwriters Laboratories of Canada, CAN4-S115-M85/UL1479, 1- & 2-hour Through-Penetration Firestop Tests.
  33. Underwriters Laboratories of Canada, ULC S102-M88, flammability.
  34. ISO 6944-1985, 'Fire Resistive Tests - Ventilation Ducts'.

## 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. All insulation materials, including jackets, facings, adhesives, coatings, and accessories shall be fire hazard rated and listed by Underwriters' Laboratory, Inc., using the Steiner Tunnel Test Method for Fire Hazard Classification of Building Materials, Standard UL 723 (ASTM E-84) and NFPA 255. Insulation shall be tested in the same density and installed thickness as the material to be used in the actual construction.
- C. All Insulation shall have composite (insulation, jacket or facing, and adhesive used to adhere the facing or jacket to the insulation) fire and smoke hazard ratings as tested by procedure ASTM E.84, NFPA 255 or UL 723 not exceeding:

Flame Spread            25  
Smoke Developed       50

- D. Flameproofing treatments which are subject to deterioration from moisture or humidity are not acceptable.
- E. Accessories such as adhesives, mastics, cements, and tapes for fittings shall have the same component rating as listed above. All products or their shipping cartons shall bear a label indicating that flame and smoke ratings do not exceed requirements. Treatment of jackets or facings to impart flame and smoke-safety shall be permanent. The use of water soluble treatments is prohibited.
- F. Provide insulation that meets or exceed the requirements of ASHRAE 90.1, ASHRAE 90.2. Insulation exterior shall be cleanable, grease resistant, non-flaking and non-peeling.
- G. Materials shall be compatible with insulation materials. jackets and substrates and for bonding insulation to itself and shall not contribute to corrosion, soften, or otherwise attack surfaces to which applied in either wet or dry state.
- H. Products shall not contain asbestos, lead, mercury or mercury compounds.
- I. Products that come in contact with stainless steel shall meet ASTM C 795 requirements and shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- J. Materials shall be compatible and shall not contribute to corrosion, soften, or otherwise attack surfaces to which applied in either wet or dry state.
- K. All insulation materials shall be designed, manufactured, and tested in facilities which are certified and registered to ISO 9000 (ANSI/ASQ 90) series quality standards.
- L. All equipment and materials shall be UL listed.
- M. Maintain ambient conditions required by manufacturers of tapes, adhesives, mastics, cements and insulation materials.
- N. Insulation materials and accessories furnished and installed hereunder shall be accompanied by manufacture's current submittal or data sheets showing compliance with applicable specifications.
- O. Insulation materials, including all weather and vapor barrier materials, closures, hangers, supports, fitting covers, and other accessories, shall be furnished and installed in strict accordance with project drawings, plans, and specifications.
- P. Insulation materials and accessories shall be installed in a workmanlike manner by skilled and experienced workers who are regularly engaged in commercial insulation work.
- Q. Fire resistive duct wrap shall be installed by manufacturer trained, experienced workers specializing in fire resistive ductwork enclosure application with 3 years minimum experience in such installations.
- R. Standard Products: Provide materials which are the standard products of manufacturers regularly engaged in the manufacture of such products and that essentially duplicate items that have been in satisfactory use for at least 3 years prior.
- S. All equipment and materials shall be approved for use in New York City by the NYC DOB and

FDNY.

#### 1.08 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.9 SUBMITTALS

- A. Submit shop drawings for insulation materials, vapor barrier materials, adhesives, fastening devices and finishes and jacketing.
- B. Submit a schedule listing the work that will be insulated and a description of insulation materials and finishing procedures and a certificate indicating compliance with 2014 NYCBC.

#### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.
- B. All of the insulation materials and accessories covered by this specification shall be delivered to the job site in the manufacturer's unopened containers and stored in a safe, dry place with appropriate labels and/or other product identification.
- C. Use whatever means are necessary to protect the insulation materials and accessories before, during, and after insulation. No insulation materials shall be installed that has become damaged in any way. Also use all means necessary to protect work and materials installed by other trades.
- D. If any insulation material has become wet because of transit or job site exposure to moisture or water, Do not install such material, and shall remove it from the job site.

#### 1.11 COORDINATION

- A. Coordinate size and location of supports, hangers, and insulation shields specified in Section 232113 "HVAC Piping."
- B. Coordinate clearance requirements with piping Installer for piping insulation application, duct Installer for duct insulation application, and equipment Installer for equipment insulation application. Before preparing piping and ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

#### 1.12 SCHEDULING

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:

1. Fiberglass:

- a. Owens Corning Fiberglass Corp.
- b. Certain Teed Corp./Insulation Group
- c. Johns Manville Corp.
- d. Knauf Fiberglass Armstrong Pumps Inc.
- e. Or approved equal.

2. Calcium Silicate:

- a. Industrial Insulation Group
- b. Certain Teed Corp./Insulation Group
- c. Johns Manville Corp.
- d. Or approved equal.

3. Finishes, adhesives and sealants:

- a. Foster Products Div.,
- b. H.B. Fuller Co.,
- c. Epolux Mfg Co.,
- d. Childers Products Co.
- e. Armstrong World Industries.
- f. Or approved equal

4. Weld pins:

- a. AGM Industries, Inc. and Duro-Dyne Corp.
- b. Childers Products Co. and
- c. Armstrong World Industries.
- d. Or approved equal

5. Custom-Fit, pre-molded, PVC pre-molded fittings covers (UL Class 1):

- a. Manville Corp. (Zeston).
- b. Epolux Mfg Co.,
- c. Childers Products Co.
- d. Or approved equal.

6. Insulating & finishing cement:

- a. Keene Corp.,
- b. Insulation Industries, Inc. and
- c. Ryder Industries, Inc.
- d. Or approved equal.

7. Fire Resistive Duct, Pipe and Equipment Insulation

- a. 3M
  - b. Hilti
  - c. Holdrite
  - d. Or approved equal.
- B. Insulation shall have composite (insulation, jacket or facing, and adhesive used to adhere the facing or jacket to the insulation) fire and smoke hazard ratings as tested by procedure ASTM E.84, NFPA 255 or UL 723 not exceeding:
- Flame Spread 25  
Smoke Developed 50
- C. All fiberglass insulation products used for ductwork, piping, or equipment insulation shall be formaldehyde free.
- D. Materials shall be compatible with insulation materials, jackets and substrates and for bonding insulation to itself and to surfaces to be insulated.
- E. Sealants shall be permanently flexible, with a temperature range of minus 100 deg F to plus 300 deg F.
- F. Products shall not contain asbestos, lead, or mercury compounds.
- G. Note that insulation (with vapor barrier) shall be continuous across all duct joints, pipe joints, hot water reheat coil pipe bends (insulated end caps), diffusers, etc. so as to provide a continuous, fully insulated (with uninterrupted vapor barrier) from the fan discharge to the diffusers.
- H. Insulation on all cold surfaces must be applied with a continuous unbroken vapor seal. Hangers, supports, anchors, etc. that are secured directly to cold surfaces must be adequately insulated and vapor sealed to prevent condensation. All penetrations of the All Service Jacket and exposed ends of insulation shall be sealed with vapor barrier mastic.
- I. On cold systems, particular care must be given to vapor sealing the fitting cover or finish to the pipe insulation vapor barrier. All valve stems shall be sealed with caulking to allow free movement of the stem but provide a seal against moisture incursion.
- J. All piping and ductwork shall be supported in such a manner that neither the insulation nor the vapor/weather barrier is compromised by the hanger or the effects of the hanger. In all cases, hanger spacing shall be such that the circumferential joint may be made outside the hanger. On cold systems, vapor barrier shall be continuous, including material covered by the hanger saddle.
- K. Sections of ductwork or equipment (such as heads, pumps, etc.) requiring periodic servicing shall be insulated with sheet metal covers lined with the same type and thickness of material as the adjoining insulation.

## 2.2 PIPE INSULATION

- A. Fiberglass pipe insulation located in equipment rooms and/or where exposed shall be of the sectional type having a density of 6 lbs./cu. ft. (minimum). Other fiberglass insulation to be of the 1-piece type with a density of 5-lbs./cu ft. (minimum).
- B. Type P-1: Molded Fiberglass, Pre-Formed Insulation for Cold Pipes.
1. The maximum K factor shall be 0.24 at 75°F mean temperature with a minimum density

- of 4 lb. per cubic foot.
2. Insulation shall be pre-formed, rigid, molded, one-piece fiberglass insulation that is bonded with thermosetting resin.
  3. The insulation shall be provided with a factory applied all service or all-purpose vapor barrier jacket consisting of fire retardant laminate with white kraft facing, glass scrim reinforcing and aluminum foil. White, kraft paper, reinforced with a glass fiber yarn and bonded to an aluminum foil, with self- sealing longitudinal closure laps (SSL) and butt strips. Comply with ASTM C547.
  4. The insulation shall be similar to Owens-Corning 650 ASJ or approved equal.
- C. Type P-1A: Molded Fiberglass, Pre-Formed Insulation for Cold Pipes with Custom Fit Covers.
1. Insulation material, thickness and vapor seal shall be the same as for Type P-1, with custom fit covers. Covers shall be as specified herein.
- D. Type P-2: Molded Fiberglass, Pre-Formed Insulation for Hot Pipes.
1. High temperature, Type I, glass fibers bonded with a thermosetting resin.
  2. The maximum K factor shall be 0.24 at 75°F mean temperature. Insulation shall be capable of continuous service at a pipe temperature of 450° F without oxidation, burnout of binders or development of odors or smoke. The insulation shall be provided with a factory applied, All-Service (ASJ) Vapor-Retarder Jacket - white, kraft paper, reinforced with a glass fiber yarn and bonded to an aluminum foil, with self- sealing longitudinal closure laps (SSL) and butt strips.
  3. Insulation shall be pre-formed, rigid, molded, one-piece fiberglass insulation that is bonded with thermosetting resin. Insulation shall be 11 lbs. per cubic foot density fiberglass rated for a maximum service temperature of 850° F (454C).
  4. Minimum thickness of insulation shall be as specified herein. However, sufficient thickness of insulation shall be used to maintain the outer surface temperature of the operating system below +110F.
  5. All fittings, valves, flanges and pipe terminations shall be fully insulated with glass fiber insulation and molded fitting covers. Comply with ASTM C533.
  6. The insulation shall be similar to Johns Manville Micro-Lok HP or approved equal.
- E. Type P-2A: Molded Fiberglass for Hot Pipes with Custom Fit Covers.
1. Insulation material and thickness shall be the same as for Type P-2 with custom fit covers.
  2. Covers shall be as specified herein.
- F. Type P-3: Calcium Silicate.
1. High temperature, noncombustible, inorganic, hydrous calcium silicate with non-asbestos fibrous reinforcement.
  2. The maximum K factor shall be 0.41 at 200° F mean temperature with a minimum density of 14 lbs. per cu. ft. Insulation shall be fastened in place with 16-gauge copper-clad wire on 18" maximum centers. Comply with ASTM C533, ASTM C450, and ASTM C585.
  3. The insulation shall be similar to Industrial Insulation Group Thermo-12 Gold or approved equal.

## 2.3 INSULATION COVERS

- A. Covers shall be designed and fabricated especially for utilization on piping, including all flanges, fittings, valves, expansion joints, vents, pipe terminations, drains and all other parts of the system.

- B. The covers shall be molded white PVC jacket, UL Class 1 with a maximum permeance of 0.05.
- C. Comply with ASTM C 450 and ASTM C 585 for dimensions used in pre-forming insulation to cover valves, elbows, tees and flangers.
- D. Removable and reusable insulation covers must be fabricated to conform to the shape and contour of the equipment requiring insulation. Covers to ensure good appearance and proper thermal performance.
- E. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
- F. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
- G. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
- H. Install removable insulation covers as indicated in the contract documents. Installation shall conform to the following:
  - 1. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
  - 2. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.
- I. Custom-Fit Covers:
  - 1. Cover Components shall be:
    - a. Inner Jacketing – 18 oz. color-coded Teflon fiberglass cloth with a nominal weight of at least 18 oz. per square yard and a service temperature rating of at least 550 F.
    - b. Outer Jacketing - 18 oz. color coded Teflon fiberglass cloth.
    - c. All Hardware – 304 stainless steel
    - d. Covers shall be constructed as a preformed single piece cover and the closing seam shall be located at the gravitational bottom.
    - e. All valve covers shall be manufactured as one (1) piece body and bonnet.
    - f. Individual covers thereof shall not weigh more than 75#. All seams shall be sewn using a locked stitch with a minimum of eight (8) stitches per inch. The thread must be able to withstand the full process temperature without degradation.
    - g. Gussets - 18 oz. color-coded Teflon fiberglass cloth.
    - h. D Rings – D – Rings for use with seam attachment shall be welded double D – shaped rings of .12 or greater diameter Type 304 stainless steel wires.
    - i. Velcro fastening system for securement of loose strap ends and closing system for small covers shall be heat and flame resistant nylon and shall be a minimum of 1" wide.
    - j. Sewing Thread - .021 – 20# tensile strength Teflon Coated fiberglass thread.

- k. ID Tags – 304 Stainless steel.
- l. Terminal ends – The draw cord for cinching of cover terminal ends around adjacent insulation, valve packing, etc. shall be of 3/16" braided Nomex cord. Terminal ends shall be 8 oz. color coded Teflon cloth flaps.
- m. Individual covers thereof shall not weigh more than 75#. All seams shall be sewn using a locked stitch with a minimum of eight (8) stitches per inch. The thread must be able to withstand the full process temperature without degradation.
- n. Hog rings or staples shall not be used as a method of seam closure.
- o. Insulation within the jacket shall be held in place with stainless steel quilt pins to prevent shifting.
- p. Cinch belts and Velcro flaps shall be used to hold the cover in place. Belts shall be made of outer jacket materials and two stainless steel D-ring fasteners. Velcro fasteners shall be used to secure end of belts to cover after cinching.
- q. Belts and D-Rings and Velcro flaps shall be used on all parting faces. Securement of the belts and Velcro flap traps to the weather barrier (pouter skin of the cover) shall be sewn to the cover and shall be sufficient to withstand the stress of removing and reinstalling the cover. Belt lengths and number of straps utilized shall be sufficient to affect a snug and proper fit without gaps or sagging of the cover.
- r. Each cover shall have a SS identification tag.

## 2.4 DUCT AND EQUIPMENT INSULATION

### A. Type D-1: Fiberglass Blanket with Vapor Barrier.

- 1. The maximum K factor shall be 0.28 at 75°F mean temperature with a minimum density of 1 lb. pcf. The insulations shall be provided with a factory-applied reinforced foil faced, flame resistant, scrim-kraft facing vapor barrier. Comply with ASTM C533 and ASTM C1290.
- 2. The insulation shall be equal to Johns Manville Microlite or approved equal.

### B. Type D-2: Rigid Fiberglass Board with Vapor Barrier.

- 1. The maximum K factor shall be 0.23 at 75°F mean temperature with a minimum density of 4.25 lb. pcf. The insulation shall be provided with a factory-applied reinforced foil faced, flame resistant, scrim-kraft facing vapor barrier. Comply with ASTM C612.
- 2. The insulation shall be equal to Manville Type 814 Spin-Glas AP or approved equal.

### C. Type D-3: Fiberglass Blanket for Hot Ducts.

- 1. The maximum K factor shall be 0.28 at 75°F mean temperature with a minimum density of 1 lb pcf. The insulations shall be provided with a factory-applied, flame resistant, reinforced foil facing. Comply with ASTM C553.
- 2. The insulation shall be equal to Johns Manville Microlite or approved equal.

### D. Type D-4: Fiberglass Board for Hot Ducts.

- 1. The maximum K factor shall be 0.23 at 75°F mean temperature with a minimum density of 4.25 lb. pcf. The insulation shall be provided with a factory-applied reinforced foil faced, flame resistant, scrim-kraft facing. Comply with ASTM C612.
- 2. The insulation shall be equal to Manville Type 814 Spin-Glas AP or approved equal.

### E. Type D-5: Weatherproof Fiberglass Board.

- 1. The maximum K factor shall be 0.22 at 75°F mean temperature with a minimum density

- of 6 lb. The insulation shall be provided with a factory-applied all purpose or all service jacket facing.
2. The insulation shall be equal to Manville Type 817 Spin-Glas AP or approved equal.
- F. Type D-6: High Temperature Calcium Silicate Insulation.
1. The maximum K factor shall be 0.42 at 200° F mean temperature with a minimum density of 14 lbs. per cu. ft. Insulation shall be fastened in place with 16-gauge copper-clad wire on 18" maximum centers.
  2. The insulation shall be equal to Industrial Insulation Group Thermo-12 Gold or approved equal.
- G. Type D-7: Fire Resistive Duct Wrap Insulation/enclosure, as specified herein and under section 233120.

## 2.5 FIRE RESISTIVE WRAP INSULATION/ENCLOSURE (TYPE D-7)

- A. Fire resistive duct wrap/enclosure must be approved for use in NYC by NYCDOB and FDNY.
- B. Fire resistive wrap insulation/enclosure is specified under section 23 31 20 – Fire-Resistive Duct-Pipe Insulation and Enclosure.
- C. The Smoke Developed Index and Flame Spread Index (ASTM E 84) of the bare blanket and of the foil-encapsulated blanket shall be 0/0. The foil encapsulation shall be bonded to the core blanket material.
- D. The product shall be listed with both UL and Intertek (OPL) for 2 hour rated application.

## 2.6 EQUIPMENT INSULATION

- A. Type E-1: Fiberglass Rigid Equipment Insulation with Vapor Barrier.
  1. The maximum K factor shall be 0.23 at 75°F mean temperature with a minimum density of 4.25 lb. pcf. The insulation shall be provided with a factory-applied reinforced foil faced, flame resistant, scrim-kraft facing vapor barrier. Comply with ASTM C612.
  2. Insulation shall be firmly held in place with copper clad wire or pins and clips on 12" centers.
  3. All joints and voids shall be filled with mineral wool cement.
  4. All joints and breaks in the vapor barrier shall be sealed with strips of the vapor barrier facing adhered with vapor barrier adhesive.
  5. The insulation shall be similar to Johns Manville Microlite or approved equal.
- B. Type E-2: Fiberglass Rigid Equipment Insulation:
  1. The maximum K factor shall be 0.23 at 75°F mean temperature with a minimum density of 4.25 lb. pcf. The insulation shall be provided with a factory-applied reinforced foil faced, flame resistant, scrim-kraft facing vapor barrier. Comply with ASTM C612.
  2. Insulation shall be firmly held in place with copper clad wire or pins and clips on 12" centers.
  3. All joints and voids shall be filled with mineral wool cement.
  4. The insulation shall be equal to Manville Type 814 Spin-Glas AP or approved equal.
- C. Type E-3: High Temperature Block Insulation.
  1. High temperature insulation shall be molded hydrous calcium silicate with a maximum K

- factor of 0.42 at 200°F mean temperature and a minimum density of 11 lb. pcf.
2. The insulations shall be provided with a factory-applied, flame resistant, reinforced foil facing. Comply with ASTM C553.
  3. Insulation shall be firmly wired in place with copper clad wire or galvanized steel bands on 12" centers.
- D. Type E-4: Fire Resistive Duct Wrap Insulation, as specified herein and under another under section 233120.

INSULATION SCHEDULE - PIPING			
PIPING SYSTEM	INSULATION TYPE	THICKNESS	VAPOR BARRIER REQUIRED
CHILLED WATER SUPPLY & RETURN	P-1	1-1/2"	YES
CHILLED WATER SUPPLY AND RETURN EXPOSED IN MER	P-1A	1-1/2"	YES
HOT WATER SUPPLY & RETURN (100°F - 140°F)	P-2	1-1/2"	NO
HOT WATER SUPPLY & RETURN (100°F - 140°F) EXPOSED IN MER	P-2A	2"	NO
HOT WATER SUPPLY & RETURN (140°F - 250°F) UP TO 6" IPS	P-2	2"	NO
OVER 6" IPS	P-2	3"	NO

PIPING SUBJECT TO SWEATING	P-1	1-1/2"	YES

## 2.7 DUCTWORK, EQUIPMENT, BREECHINGS & EXHAUST

- A. Exhaust air ductwork between automatic dampers and louvers, outdoor air intake duct from louvers to air handling unit, outside air intake duct from plenum to air handling unit, and any system when temperature may exceed 85°F.
- B. Ducts and sheet metal plenums behind louvers that containing a percentage of outside air. Provide vapor barrier. Insulation shall be: 2" thick, Type D-2.
- C. All supply air sheet metal plenums. Insulation shall be: 2" thick, Type D-2.
- D. Thickness shall be equal to the depth of the steel angles, except that the thickness shall be not less than 1 inch and not more than 2 inches. Insulation is not required where sound-lining is of minimum thickness specified for insulation.

## 2.8 PLENUMS, HOUSINGS AND CASINGS

- A. Insulate plenums, housings and casings in the following systems:
  - 1. Air conditioning systems supply and return.
  - 2. Outside air intake: all systems.
  - 3. Mixing plenums: all systems.
  - 4. Exhaust ductwork between dampers and louvers.

5. All humidifier housings.

## 2.9 FINISHES, ADHESIVES, SEALANTS AND JACKETS

- A. Materials shall be compatible with insulation materials, jackets and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
- B. Custom-Fit Covers. The covers shall be as specified herein.
- C. Vapor barrier coating. The white vapor barrier coating shall be applied over 10 x 10 or 20 x 20 mesh white glass, polyester or nylon cloth reinforcing membranes. It shall have a 31 mil dry film thickness with a maximum permeance of 0.05. The coating shall be similar to Foster Tite-Fit 30-35 with UL label.
- D. White finishing and insulating cement. One (1) coat shall be applied over hexagonal wire mesh. The cement shall be similar to Keene Superslick or approved equal.
- E. Off-white vapor seal adhesive. The adhesive shall be non-flammable, solvent based, quick setting and with a maximum permeance of 0.05. The adhesive shall be equal to Foster Spark-fas 85-20 or approved equal.
- F. Flexible vapor barrier sealant and bedding compound. The compound shall be equal to Foster Foamseal 30-45 or approved equal.

## 2.10 WIRE, BANDING AND FASTENING DEVICES

- A. The wire shall be a minimum 16-gauge copper clad annealed steel wire. The bands shall be ¾ inch nominal width with wing seals, of minimum thickness as follows:
  1. Aluminum: 0.007 inches where exposed to weather, 0.20 inches.
  2. Galvanized steel: 0.005 inches.
  3. Stainless steel: 0.005 inches.
- B. The staples shall be the outward clinching type of corrosion resistant steel. The weld pins which support and fasten the duct insulation shall be a minimum 1/8-inch diameter with speed washer or integral flange of minimum 1-3/8 inch diameter.
- C. Insulation tape: The tape shall be UL rated with all service or foil-scrim jacket to match insulation and of width as noted. The tape shall be similar to Compac Corp. UL ASJ or UL FKJ PS Tape or approved equal.

## 2.11 PIPING, VALVES AND FITTING

- A. Minimum insulation thickness in inches, shall comply with the table below for the associated piping system and pipe sizes. Overall conductance shall comply with ASHRAE 90.
- B. Piping Systems described shall be fully insulated including all flanges, fittings, valves, expansion joints, vents, drains and all other parts of the systems.
- C. All fittings, valves, flanges, pipe terminations shall be fully insulated with preformed molded fitting insulation of same material, density and thickness as used for adjacent piping. Finish shall be with molded PVC fitting cover.
- D. Flange insulation shall extend a minimum of 1" beyond the end of the bolts, and the bolt area shall be filled with Mineral Wool Cement.

**2.12 HEAT TRACING FOR PIPING**

- A. Heat tracing for piping is specified under section 230523.
- B. Piping shall be insulated as described herein, except thickness shall not be less than 2" for all pipe sizes. Insulation will be installed over electric heat tracing.
- C. Staples for fastening insulation shall not be used in order to prevent potential short circuiting of electric wires. Use stainless steel bands.
- D. The following piping shall be heat traced:
  - 1. Outdoor Condenser Water
  - 2. Outdoor Domestic Water
  - 3. Water piping exposed to unheated spaces or ambient conditions.
  - 4. All piping located within ceiling spaces located below roofs shall be insulated with a minimum of 2" insulation and heat traced.
  - 5. All piping located within ceiling spaces located below or above other spaces that are subject to ambient conditions shall be insulated with a minimum of 2" insulation and heat traced.

**2.13 WEATHERPROOFING FINISHES FOR OUTDOOR DUCTWORK**

- A. Ductwork shall be insulated as specified herein and provided with a weatherproof finish as described herein.
- B. Finish with a .016" thick aluminum jacket which has a factory applied moisture barrier. For all applications where it is available, the jacketing shall be factory attached to the insulation and installed per manufacturer's recommendation.
- C. Where field applied jacketing must be used, it shall be applied with 2" overlap facing down from the weather and shall be secured with aluminum bands and seals applied on 12" centers with bands applied directly over butt overlaps.
- D. Fittings shall be insulated and finished with mitered sections of the insulation with factory attached aluminum jackets installed per manufacturer's recommendation.

**2.14 WEATHERPROOF FINISHES FOR OUTDOOR PIPING**

- A. Piping shall be insulated as specified herein and provided with a weatherproof finish.
- B. Finish with a .016" thick aluminum jacket which has a factory applied moisture barrier. For all applications where it is available, the jacketing shall be factory attached to the insulation and installed per manufacturer's recommendation.
- C. Where field applied jacketing must be used, it shall be applied with 2" overlap facing down from the weather and shall be secured with aluminum bands and seals applied on 12" centers with bands applied directly over butt overlaps.
- D. Fittings and valves shall be insulated and finished with mitered sections of the insulation with factory attached aluminum jackets installed per manufacturer's recommendation.

**2.15 FANS**

- A. Insulate air conditioning supply and return fans located in non-air conditioned spaces, except

non-ducted double width, double inlet fans and fans located inside insulated casings.

- B. Insulation shall be minimum 2 inch, or as required to match sizes of reinforcing angles, Type D-2, with vapor seal.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 SITE INSPECTION

- A. Before starting work under this section, carefully inspect the site and installed work of other trades and verify that such work is complete to the point where installation of materials and accessories under this section can begin.
- B. Verify that all materials and accessories can be installed in accordance with project drawings and specifications and material manufactures recommendations.
- C. Verify, by inspecting product labeling, submittal data, and/ or certifications which may accompany the shipments, that all materials and accessories to be installed on the project comply with applicable specifications and standards and meet specified thermal and physical properties.

### 3.3 PREPARATION

- A. Ensure that all pipe and fitting surfaces over which insulation is to be installed are clean and dry
- B. Ensure that insulation is clean, dry, and in good mechanical condition with all factory- applied vapor or weather barriers intact and undamaged. Wet, dirty, or damaged insulation shall not be acceptable for installation.
- C. Ensure that pressure testing of piping and fittings has been completed prior to installing insulation.
- D. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.
  - 1. Verify that systems and equipment to be insulated have been fully tested and are free of defects.
  - 2. Verify that surfaces to be insulated are clean and dry.
  - 3. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.4 GENERAL INSTALLATION REQUIREMENTS

- A. Before applying insulation, complete and approve the required pressure leakage tests of joints and connections. In addition, clean surfaces of dust, grease and foreign matter and dry before application of insulation.
- B. Insulation shall not be installed on pipe and black metal until the surface has received a prime coat of paint. All insulation joints shall be butted firmly together and all jackets shall be smoothly and securely installed.
- C. Insulate each pipe and duct individually. Do not use scrap pieces of insulation where a full

length section will sit. Except for specific exception, insulate entire specified equipment, piping and duct systems.

- D. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts, piping including fittings, valves, and specialties.
- E. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, pipe and duct system as specified herein.
- F. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- G. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- H. Install multiple layers of insulation with longitudinal and end seams staggered.
- I. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- J. Keep insulation materials dry during application and finishing.
- K. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- L. Install insulation with least number of joints practical.
- M. Sections of ductwork or equipment (such as heads, pumps, etc.) requiring periodic servicing shall be insulated with sheet metal covers lined with the same type and thickness of material as the adjoining insulation.
- N. Do not startup and operate chilled water system prior to completion of insulation for the entire chilled water piping system and complete closure of building from the external atmosphere.
- O. Do not operate air handling system with conditioned air prior to completion of insulation of the entire duct distribution system for that air handling system.
- P. Proceed with installation only after unsatisfactory conditions have been corrected.
- Q. Insulation on all cold surfaces must be applied with a continuous unbroken vapor seal. Hangers, supports, anchors, etc. that are secured directly to cold surfaces must be adequately insulated and vapor sealed to prevent condensation.
- R. Note that insulation (with vapor barrier) shall be continuous across all duct joints, hot water or steam reheat coil pipe bends (insulated end caps), diffusers, etc. so as to provide a continuous, fully insulated with uninterrupted vapor barrier from the fan discharge to the diffusers.
- S. Do not weld anchor pins to ASME labeled pressure vessels.
- T. Select insulation hangers and adhesive that are compatible with service temperatures and substrates.
- U. Do not over-compress the insulation during construction.
- V. Repair punctures, tears and penetrations with tape or mastic to maintain vapor-barrier seal.

### 3.5 INSULATION INSTALLATION REQUIREMENTS - PIPING

- A. Piping systems described shall be insulated as follows, including all flanges, fittings, valves, expansion joints, vents, drains and all other parts of the system. Valve and flange insulation shall be removable and re-installable.
- B. All piping subject to freezing such as in outdoor air or discharge plenums or outdoors shall be insulated with a minimum of 2" insulation.
- C. On longitudinal overlaps, provide 2 inch minimum. For exposed work, install toward ceiling or wall. Insulation passing through sleeves or other openings shall be continuous. Install metal frames to protect edges of openings in insulation. At penetration of fire or smoke barriers, wrap pipe with rock-wool insulation, seal jackets seam and seal end joints to adjacent sections of insulation.
- D. Where specified thickness of insulation exceeds available single layer thickness, install insulation in two (2) layers with joints staggered.
- E. Fill voids with insulating cement.
- F. For valves, fittings, flanges and accessories insulation type shall be as noted on the Schedule. Insulate valves including bonnets, flanges, fittings, strainers, expansion joints and specialties.
- G. Insulation for strainers, expansion joints, fittings and accessories requiring servicing or inspection shall be removable and replaceable without damage, and enclosed within two-piece, No. 18-gauge aluminum covers fastened with cadmium-plated bolts and nuts. Insulation shall be of the same material, density and thickness as adjacent piping insulation.
- H. Wiring, banding and fastening devices: Secure the insulation to the piping in accordance with the following minimum requirements:
  - 1. Molded fiberglass: self-sealing laps may be used. Staples are not permitted on vapor sealed piping.
  - 2. For pipe fitting insulation, loops or wire shall be installed to secure mitered segments of insulation. The wire shall be spiraled from end to end on blanket insulation. Outdoor piping weatherproof aluminum jackets shall be banded at circumferential joints and at the center of each section.
- I. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
  - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
  - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
  - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
  - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with

- insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
  6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
  7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
  8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
  9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.
- J. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- 3.6 INSULATION INSTALLATION REQUIREMENTS – DUCTS, PLENUMS, CASINGS, HOUSINGS & EQUIPMENT
- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins. Apply adhesives according to manufacturer's recommended coverage rates per unit area.
  - B. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
  - C. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
  - D. Do not over compress insulation during installation.
  - E. Impale insulation over pins and attach speed washers.
  - F. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
    1. Fiberglass blanket: Install 2-inch lap strip at one end; peel insulation for 2 inch and lap strip along longitudinal joints. Secure bottom of rectangular ducts over 24 inches wide with two rows of weld pins 12 inches on center. Secure joints with outward clinching staples 6 inches on center. Seal all strips with foil vapor barrier tape and vapor seal adhesive.
    2. Fiberglass board: Seal joints and breaks in facings with 3-inch-wide tape to match facing and adhere with vapor seal adhesive. Apply 5-inch-wide tape corners. Weld pins on top, sides and bottom.

3. Weld pins and anchors: spacing shall be minimum 12 inch centers and minimum two (2) rows per side of duct. Maximum permissible load shall be 5 lb. for 2-inch x 2-inch baseplate and 10 lb. for 2-3/4-inch x 2-3/4-inch baseplate. Clip off pin penetrations flush with insulation surface or facing. Seal pins and washers with 4 inch square pieces of Type F-9 vapor barrier tape to match facing and adhere with vapor seal adhesive
4. Adhesives and coatings:
  - a. Apply at following rates, in accordance with the manufacturer's recommendations:
    - 1) Vapor barrier coating shall be 50 sq. ft./gal.
    - 2) Vapor seal adhesive shall be 100 sq. ft./gal.
    - 3) Outdoor mastic (vinyl acrylic) shall be 12 sq. ft./gal.
  - b. Adhere jackets and facing with adhesive. Lap sealing for full width of lap. Surface which will be adhered shall be completely coated with adhesive.

### 3.7 VAPOR BARRIER - GENERAL INSTALLATION REQUIREMENTS

- A. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  1. Install insulation continuously through hangers and around anchor attachments.
  2. Extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- B. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- C. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- D. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- E. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
  1. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
  2. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

### 3.8 INSTALLATION OF MINERAL-FIBER INSULATION - PIPING

- A. Insulation Installation on Straight Pipes and Tubes:
  1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten

- bands without deforming insulation materials.
- 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
- 3. For insulation with factory-applied jackets on above-ambient surfaces, secure laps with outward-clinched staples at 6 inches o.c.
- 4. For insulation with factory-applied jackets on below-ambient surfaces, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

**B. Insulation Installation on Pipe Flanges:**

- 1. Install preformed pipe insulation to outer diameter of pipe flange.
- 2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
- 3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
- 4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

**C. Insulation Installation on Pipe Fittings and Elbows:**

- 1. Install preformed sections of same material as straight segments of pipe insulation when available.
- 2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

**D. Insulation Installation on Valves and Pipe Specialties:**

- 1. Install preformed sections of same material as straight segments of pipe insulation when available.
- 2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
- 3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
- 4. Install insulation to flanges as specified for flange insulation application.

**3.9 INSTALLATION OF MINERAL-FIBER INSULATION – DUCTS AND PLENUMS**

**A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.**

- 1. Apply adhesives according to manufacturer's recommended coverage of duct and plenum surfaces.
- 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
- 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
  - a. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
  - b. Do not over compress insulation during installation.
  - c. Impale insulation over pins and attach speed washers.
  - d. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation

facing.

4. For ducts and plenums, if required, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
    - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
    - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
  5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
  6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
  7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.
- B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage of duct and plenum surfaces.
  2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    - b. Do not over compress insulation during installation.
    - c. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
    - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
    - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface.

Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

### 3.10 FIELD-APPLIED JACKET INSTALLATION

- A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.
  1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
  2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
  3. Completely encapsulate insulation with coating, leaving no exposed insulation.
- B. Where FSK jackets are indicated, install as follows:
  1. Draw jacket material smooth and tight.
  2. Install lap or joint strips with same material as jacket.
  3. Secure jacket to insulation with manufacturer's recommended adhesive.
  4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch wide joint strips at end joints.
  5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
  1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

### 3.11 FIRE-RATED INSULATION SYSTEM INSTALLATION

- A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- B. Insulate duct access panels and doors to achieve same fire rating as duct.
- C. Install firestopping at penetrations through fire-rated assemblies.

### 3.12 INSTALLATION OF EQUIPMENT, TANK, AND VESSEL INSULATION

- A. Mineral-Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage of tank and vessel surfaces.
  2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
  3. Protect exposed corners with secured corner angles.
  4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
    - a. Do not weld anchor pins to ASME-labeled pressure vessels.
    - b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
    - c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
    - d. Do not over compress insulation during installation.
    - e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
    - f. Impale insulation over anchor pins and attach speed washers.
    - g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  5. Secure each layer of insulation with stainless-steel bands. Select band material compatible with insulation materials.
  6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
  7. Stagger joints between insulation layers at least 3 inches.
  8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
  9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
  10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.
- B. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
  2. Seal longitudinal seams and end joints.
- C. Insulation Installation on Pumps:
1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.

2. Fabricate boxes from aluminum, at least 0.060 inch thick.
3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

### 3.13 INSTALLATION OF CALCIUM SILICATE INSULATION

#### A. Insulation Installation on Boiler Breechings:

1. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation material.
2. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.
3. On exposed applications without metal jacket, finish insulation surface with a skim coat of mineral-fiber, hydraulic-setting cement. When cement is dry, apply flood coat of lagging adhesive and press on one layer of glass cloth. Overlap edges at least 1 inch. Apply finish coat of lagging adhesive over glass cloth. Thin finish coat to achieve smooth, uniform finish.

### 3.14 INSTALLATION OF PHENOLIC INSULATION

- A. Secure single-layer insulation with stainless-steel bands at 12-inch intervals and tighten bands without deforming insulation materials.
- B. Install two-layer insulation with joints tightly butted and staggered at least 3 inches. Secure inner layer with 0.062-inch wire spaced at 12-inch intervals. Secure outer layer with stainless-steel bands at 12-inch intervals.

### 3.15 FIELD-APPLIED JACKET INSTALLATION

#### A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch-thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

#### B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch-wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

#### C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

#### D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end

joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

E. Where PVDC jackets are indicated, install as follows:

1. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches or less. 33-1/2-inch- circumference limit allows for 2-inch- overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
2. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

### 3.16 FIRESTOPPING AT FIRE SEPARATIONS

- A. Refer to Division 7 Section; "Firestopping"
- B. Firestopping system must be U.L. approved.
- C. Firestop all wrapped ductwork and piping penetrating fire rated concrete floors, gypsum board, block, concrete wall assemblies and gypsum board shaft wall assemblies.

### 3.17 FIELD QUALITY ASSURANCE

- A. Upon completion of all insulation work covered by this specification, visually inspect the work and verify that it has been correctly installed. This may be done while work is in progress, to assure compliance with requirements herein to cover and protect insulation materials during installation.

### 3.18 PROTECTION

- A. Replace damaged insulation, which cannot be satisfactory repaired, including insulation with vapor barrier damage and moisture- saturated insulation.
- B. Coordinate protection of the insulation work during the remainder of the construction period, to avoid damage and deterioration of the finished insulation work.

### 3.19 SAFETY PRECAUTIONS

- A. Contractor's employees shall be properly protected during installation of all insulation. Protection shall include proper attire when handling and applying insulation materials, and shall include (but not be limited to) disposable dust respirators, gloves, hard hats, and eye protection.
- B. Conduct all job site operations in compliance with applicable provisions of the Occupational safety and health Act, as well as with all state and/ or local safety and health codes and regulations that may apply to the work.

**END OF SECTION 23 07 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 08 00****COMMISSIONING OF HVAC****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

**1.2 SUMMARY**

- A. This section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.
- B. Related Sections:
  - 1. DDC General Conditions Section for general commissioning process requirements.

**1.3 DESCRIPTION**

- A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the Commissioner's Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.
- B. The Commissioning process does not take away from or reduce the responsibility of the installing contractors to provide a finished and fully functioning product.
- C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Commissioner's Project Requirement's as detailed in the Contract Documents.

**1.4 DEFINITIONS**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for definitions.

**1.5 SUBMITTALS**

- A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment

specifications. The CxA will notify the Contractor and Commissioner as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

- B. The CxA will receive a copy of the final approved submittals.
- C. In addition, the contractor is to provide the following:
  - 1. Certificate of readiness
  - 2. Certificates of completion of installation, prestart, and startup activities.
  - 3. O&M manuals
  - 4. Test reports
- D. Refer to DDC General Conditions for general commissioning submittal requirements.

## **1.6 QUALITY ASSURANCE**

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

## **1.7 COORDINATION**

- A. Commissioning Kick-Off Meeting – Construction Team: Contractors will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.
- B. Commissioning Meetings: Contractors will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.
- C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process. This will not include 100% meeting attendance, but the CxA shall be provided with the subsequent meeting minutes for review.
- D. Pre-testing Meetings: Contractors will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.

- E. Testing: Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.
- F. Manufacturers' Inspection and Startup Services: Contractor will coordinate services of manufacturers' inspection and startup services.
- G. Testing, Adjusting and Balancing: Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

## **PART 2 - PRODUCTS**

### **2.1 TEST EQUIPMENT**

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the contractor shall ultimately be responsible for all standard testing equipment for the HVAC&R system and controls system in Division 23, except for equipment specific to and used by TAB in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

## **PART 3 - EXECUTION**

### **3.1 GENERAL DOCUMENTATION REQUIREMENTS**

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems. These checklists shall be provided to the Contractors for completion. The CxA shall gather and review the completeness and accuracy of these checklists via site visits.
- B. Red-lined Drawings (As-Builts): The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The contracted party, as defined in the Contract Documents will create the as-built drawings.

- C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any orientation. A orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

### **3.2 CONTRACTOR'S RESPONSIBILITIES**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for contractor's responsibilities.
- B. Attend construction phase controls coordination meetings.
- C. Attend testing, adjusting, and balancing review and coordination meetings.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Prepare preliminary schedule for mechanical system orientations and inspections, operation and maintenance manual submissions, orientation sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for The City of New York. Distribute preliminary schedule to commissioning team members at the beginning of the construction phase.
- F. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- G. Provide detailed startup procedures.
- H. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications
- I. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.
- J. Respond to provided new deficiencies and/or responses within five (5) business days.
- K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- L. Coordinate with the CxA to provide 48-hour advanced notice so that the witnessing of equipment and system start-up and testing can begin.
- M. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
- N. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.

1. HVAC&R equipment including all chillers, boilers, pumps, fans, air handling units, ductwork, dampers, terminals, unit heaters, and all other equipment furnished under this Division.
  2. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
  3. Fire detection and smoke detection devices furnished under other divisions of the specification.
- O. The equipment supplier shall document the performance of his equipment.
- P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- Q. Test, Adjust and Balance Contractor
1. Attend initial commissioning coordination meeting scheduled by the Commissioning Authority.
  2. Submit the site-specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
  3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
  4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the Contractor.
  5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
  6. Provided recommended setpoints as determined by Testing, Adjusting, and Balancing such as static pressure and differential pressure setpoints.
- R. Equipment Suppliers
1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.
  2. Assist in equipment testing per agreements with Contractors.
  3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

### **3.3 CxA'S RESPONSIBILITIES**

#### **A. Roles and Responsibilities**

1. Refer to DDC General Conditions Section "General Commissioning Requirements" for general CxA responsibilities.

#### **B. Cx Team Meetings**

1. Commissioning during the Construction Phase will begin with a 'Commissioning Kick-Off Meeting – for Construction Team' conducted by the CxA where the commissioning process is reviewed with all of the commissioning team members.
2. Additional meetings will be required throughout the Construction and Acceptance phases. The CxA shall attend select meetings related to commissioning as required by the DDC during the Construction and Acceptances phases.

#### **C. Coordination and Scheduling**

1. Coordinate and direct commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications, and consultations with all necessary parties.
2. Coordinate commissioning work with the Commissioner to ensure that commissioning activities are being scheduled into the master project schedule.
3. Coordinate with the Commissioner to witness tests, inspections, and systems startup.

**D. Commissioning Progress**

1. Perform periodic site visits to observe component and system installations, and qualify contractor completed checklists.
2. Report deficiencies to the Commissioner including but not limited to issues related to adequate accessibility required for component maintenance replacement and repair.
3. Review construction meeting minutes for revisions/substitutions relating to the commissioning process.

**E. Pre-Functional Checks**

1. Verify proper installation of components, equipment, systems and assemblies. Sampling procedures may not be employed on systems and equipment.
2. Pre-Functional checks for a piece of equipment shall only be started once the approved checklist for a piece of equipment has been received from the installing contractor indicating the equipment is ready to being its pre-functional checks.
3. Team will not be allowed to move forward into functional testing until all Pre-Functional testing is completed and the team moves onto the Acceptance Phase for the project.

**F. Equipment and System Startup and Verification**

1. Review and approve component, equipment, system, and assembly startup plan developed and submitted by the Contractor.
2. Approve system startup by reviewing startup reports, if contracted; and by selected site observation.
3. Review the Testing, Adjusting and Balancing execution plan for the project, which shall be submitted by the Contractor.
4. Verify and document the accuracy of the air and water systems balancing by spot testing the air and water reported field values with Contractor and by reviewing completed reports.

**G. Functional Performance Testing**

1. With assistance from the Contractor, write Functional Performance Testing procedures for all components, equipment or systems to be commissioned.
2. With the assistance of the Contractors, coordinate Functional Performance Testing. Witness and approve Functional Performance Testing performed by the Contractor.
3. With the assistance of the Contractor, coordinate retesting as necessary until satisfactory performance is achieved.
4. Witness seasonal or deferred Functional Performance Testing as necessary.

**H. Issue/Deficiency Logs**

1. The CxA shall prepare a formal, ongoing, online record of deficiencies, problems and concerns – and their resolution – raised by members of the Commissioning Team during the Commissioning Process.
2. Issues will be recorded on an online Commissioning Issues Log for the contractors to resolve to the satisfaction of the Commissioner. Issues will be added by the CxA. Team members are required to post their own responses to issues pertaining to their work. Team members are required to respond to issues added to the list within five (5) working days of being added by the CxA.

3. Issues will be revisited one (1) time to verify that the proper corrections have been made.
4. When issues are resolved, they will be closed on the Issues Log by the CxA.

**I. Operation and Maintenance Data**

1. The CxA shall review of the documentation submitted by the Contractor as required by the Specifications for completeness and accuracy. This commissioning review supplements, but does not replace, the Commissioner's review.
2. Review equipment warranties.

**J. Instruction**

1. The Contractor will provide all documentation and qualified instruction personnel for instruction.
2. The CxA will verify through the Contractor's plan and schedule, instruction agendas, and select observations that proper instruction procedures were followed on all commissioned systems.
3. The CxA will verify that Instruction Video Recordings are executed, collected, and provided to the Commissioner.
4. See appropriate section below pertaining to instruction.

**K. Systems Manual Requirements**

1. Index of Systems Manual with notation as to content storage location if not in actual manual.
2. Executive Summary
3. A list of recommended operational record keeping procedures at the facility level, including sample forms, trend logs, or others, and a rationale for each.
4. Maintenance procedures, schedules and recommendations.
5. Ongoing Optimization
6. Other Attachments

**L. Post Occupancy Review**

1. The CxA will return to the site within the 12-month warranty period to address the following: review current building operations with facility staff and address outstanding issues related to the Commissioner's Project Requirements; Interview facility staff and identify problems or concerns with operating the building; Identify problems covered under warranty or under the original construction contract.
2. The CxA will make suggestions for improvements in the content of the O&M Manuals. Any required changes shall be made by the contractor responsible for that section.
3. The CxA shall assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

**M. Commissioning Final Report**

1. The CxA shall provide a final report following the completion of all Functional Performance Testing. The report is to outline compliance and non-compliance to the construction documents, as well as identify concerns relative to future performance

### **3.4 TESTING PREPARATION**

- A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

- B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

### **3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION**

- A. Prior to performance of Testing, Adjusting, and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
  - 1. The CxA will notify testing and balancing subcontractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
  - 2. The Contractor shall use the same instruments (by model and serial number) that were used when original data were collected.
  - 3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
  - 4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

### **3.6 GENERAL TESTING REQUIREMENTS**

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

- D. The CxA along with the contractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

### **3.7 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES**

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls." Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 23 piping Sections. The Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:
  - 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
  - 2. Description of equipment for flushing operations.
  - 3. Minimum flushing water velocity.
  - 4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.
- D. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

- E. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.
- F. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:
  - 1. Air Handling Unit with Enthalpy Wheel
  - 2. Heating & Ventilation Unit
  - 3. Variable Air Volume Units
  - 4. Water Cooled Chiller
  - 5. Cooling Tower
  - 6. Side Stream Filter
  - 7. Chilled Water Pumps
  - 8. Hot Water Pumps
  - 9. Freeze Protection Pumps
  - 10. Condensing Boiler
  - 11. Hot Water Unit Heater
  - 12. Fuel Oil Pumps
  - 13. Fuel Oil Tank
  - 14. Fin Tube Radiators
  - 15. Exhaust Fans
  - 16. Gas Fired Unit Heaters
  - 17. Air Curtain
  - 18. CRAC Units
  - 19. Cabinet Unit Heater
  - 20. Plate & Frame Heat Exchanger
  - 21. Fuel Oil Pumps
  - 22. Air Separator
  - 23. Expansion Tank
  - 24. Ductwork
  - 25. Testing, Adjusting and Balancing
  - 26. VFD

### **3.8 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT**

- A. Deficiencies/Non-Conformance
  - 1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractors on a standardized form.
  - 2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the contract document in dispute or request further information to clarify the concern.
  - 3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
  - 4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.

5. As tests progress and a deficiency is identified, the CxA discusses the issue with the executing Contractor.
6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function.
7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.
8. Deficiencies that are not corrected at the time of documentation, shall be completed by the affected contractor and photo evidence of the deficiency resolution shall be sent to both the DDC Project Manager and the CxA.

**B. Failure due to Manufacturer Defect**

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable only by the Commissioner. In such case, the Contractor shall provide the Commissioner with the following.
  - i. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
  - ii. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
  - iii. The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
  - iv. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
  - v. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

**3.9 APPROVAL**

- A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

**3.10 DEFERRED TESTING**

- A. Unforeseen Deferred Testing – If any check or test cannot be completed due to the building structure, required occupancy condition or other deficiency, execution of checklists and functional testing may be delayed upon

approval of the Commissioner. These tests will be conducted in the same manner as the seasonal tests, as soon as possible. Services of necessary parties will be negotiated.

- B. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the Contractor, with The City of New York and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

### **3.11 OPERATION AND MAINTENANCE MANUALS**

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in DDC General Conditions.
- B. The specific content and format requirements for the standard O&M manuals are detailed in DDC General Conditions. Special requirements for the Contractor are found in Division 23.
- C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

### **3.12 INSTRUCTION OF NEW YORK CITY PERSONNEL**

- A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.
- B. The CxA shall oversee the instruction of the City of New York for commissioned equipment and systems.
  - 1. The CxA shall interview the City of New York to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor. Who will in turn communicate to the subcontractors and vendors who also have instruction responsibilities.
  - 2. In addition to these general requirements, the specific instruction requirements of the City of New York by contractors, subcontractors and vendors are specified in the individual sections listed in Section 1.2 – Summary.
  - 3. The Contractor responsible for instruction will submit a written instruction plan for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.
  - 4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
    - a. Equipment (included in instruction)
    - b. Intended audience

- c. Location of instruction
  - d. Objectives
  - e. Subjects covered (description, duration of discussion, special methods, etc.)
  - f. Duration of instruction on each subject
  - g. Qualified instructor for each subject
  - h. Instructor qualifications
  - i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
5. For the primary HVAC equipment, the Contractor shall provide a discussion of the control of the equipment during the mechanical or electrical instruction conducted by each subcontractor or vendor.
6. Instruction documentation shall include the following items:
- a. Copy of the instruction plan, including schedule, syllabus, and agenda.
  - b. Copy of the Commissioner's Project Requirements.
  - c. Copy of the Basis of Design.
  - d. Compiled operations manuals.
  - e. Compiled maintenance manuals.
  - f. Completed manufacturer instruction manuals.
  - g. Red-lined drawings.
  - h. Other pertinent documents.
7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending some of the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.
8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment
9. Videotaping of the instruction sessions in DVD format will be provided by the CxA

### **3.13 FUNCTIONAL BUILDING SYSTEMS DEMONSTRATION TEST (72 HOURS)**

- A. Refer to Addendum to the General Conditions Section "General Commissioning Requirements" for requirements pertaining to 72-Hour Functional Building Systems Demonstration Testing.

**END OF SECTION 230800**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 23 09 00**

### **HVAC INSTRUMENTATION AND CONTROLS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 19 "Meters and Gauges for HVAC Piping".
- D. Section 23 05 23 "Valves for HVAC Piping".
- E. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- F. Section 23 05 93 "Testing, Adjusting and Balancing".
- G. Section 23 09 05 "Sequences of Operation for HVAC Controls".
- H. Section 23 33 10 "Dampers".
- I. Section 23 36 00 "Air Terminal Units".
- J. Section 23 08 00 "Commissioning of HVAC"
- K. This section itself related to each Division 23 00 00 section.

##### **1.2 SUMMARY**

- A. Contractor shall provide all required labor, materials, tools, equipment and services necessary for the complete and safe installation and properly operating monitoring and control systems described and/or indicated herein or on the drawings or which may be reasonably implied as essential, whether mentioned in the Drawings and Specifications or not.
- B. Furnish an open protocol Building Management System (BMS) that is a totally native BACnet-based networked Direct Digital Control (DDC) system, including an operator's workstation using Microsoft Windows, Windows 7 Professional, vista Professional, Windows Server 2008 or SQL Server 2008 as the operating system and shall be based on a distributed control system in accordance with this specification. The operator's workstation, all building controllers, application controllers, and all input/output devices shall communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135, BACnet. In other words, all workstations and DDC controllers, including unitary controllers, shall be native BACnet devices. No gateways shall be used for communication to controllers installed under this section. Gateways may only be used for communication to systems installed under other sections.
- C. Provide all necessary BACnet-compliant hardware and software to meet the system's functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-

based control software and every controller in system, including unitary controllers. These must be in compliance with front end systems PICS and BACnet Interoperability Building Blocks (BIBBs). Provide all hardware and software to backup, restore, troubleshoot and install the system.

- D. Provide all line and low voltage power, interlock and control wiring to all BMS panels, devices, terminal units, controllers, dampers, equipment, etc. All wiring shall be installed neatly and professionally, in accordance with Specification Division 26 and all national, state and local electrical codes.
- E. Cables for 120/24 volt AC. wiring, communications wiring and low level signal wiring (i.e., 4-20 mA analog) shall always be run in separate raceways.
- F. Furnish and install controls for the Air Valves as outlined in other sections of this work. The airflow controls shall be seamlessly integrated into the BMS by the Contractor using BACnet-compliant hardware and software so that there is no distinction from the operator's interface between the different control systems. Furnish air valve controls and associated duct mounted devices to the sheet metal contractor for installation. Furnish and install all control devices for a complete and operable airflow tracking control system. Contractor's BMS trade shall be responsible for a complete turnkey control system including design documents, furnishing all required air valves and related control devices, installation of all equipment other than that which must be done by the sheet metal trade, start-up, commissioning, final acceptance and customer instruction.
- G. Furnish and install controls for the Air Quality Monitoring System. The air quality monitoring system shall be seamlessly integrated into the BMS by the Contractor using BACnet-compliant hardware and software so that there is no distinction from the operator's interface between the different control systems. Furnish and install all control devices for a complete and operable air quality monitoring system. BMS trade shall be responsible for a complete turnkey control system including design documents, furnishing all required central and remote sampling equipment and all related control devices, installation of all equipment, start-up, commissioning, final acceptance and customer instruction.
- H. Prepare individual hardware layouts, interconnection drawings, and software configuration from project design data.
- I. Implement the detailed design for all analog and binary objects, system databases, graphic displays, logs, and management reports based on control descriptions, logic drawings, configuration data, and bid documents.
- J. Design, provide, and install all equipment cabinets, panels, data communication network cables needed, and all associated hardware.
- K. Provide and install all interconnecting cables between supplied cabinets, application controllers, and input/output devices.
- L. Provide and install all interconnecting cables between all operator's terminals and peripheral devices (such as printers, etc.) supplied under this section.
- M. Provide all power wiring to all control panels and control devices requiring power.
- N. Provide complete manufacturer's specifications for all items that are supplied. Include vendor name of every item supplied.

- O. Provide supervisory specialists and technicians at the job site to assist in all phases of system installation, startup, and commissioning.
- P. Provide a comprehensive operator and technician instruction program as described herein.
- Q. Provide as-built documentation, operator's terminal software, diagrams, and all other associated project operational documentation (such as technical manuals) on approved media, the sum total of which accurately represents the final system.
- R. Provide new sensors, dampers, valves, and install only new electronic actuators. No used components shall be used as any part or piece of installed system.
- S. All standard, devices and system set up shall conform to customer's facility procedures and standards.
- T. Furnish, install and fit-up in complete working order, with all accessories required, the Automatic Temperature Control (ATC) and Building Management System (BMS), shown on the design drawings, construction documents and specified herein. The systems shall be properly connected, piped and wired in a manner conforming to NYC codes, laws, ordinances and guidelines. Contractor shall be responsible for installing all needed cabling and Ethernet connections required for proper network communications for the entire BMS.
- U. All point and device names shall comply with the MSKCC Plant Operations/IT standards and conventions and shall be approved before implementation and included in the shop drawings submittal. Coordinate graphics and user interface programming with Commissioner to ensure that all specified points and alarms communicate and operate on the Head End system.
- V. Coordinate with air quality monitoring system.

### 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SYSTEM DESCRIPTION**

- A. A distributed logic control system complete with all software and hardware functions shall be provided and installed. System shall be completely based on ANSI/ASHRAE Standard 135, BACnet. This system is to control all mechanical equipment, including all unitary equipment such as VAV boxes, heat pumps, fan-coils, AC units, etc. and all air handlers, boilers, chillers, and any other listed equipment using native BACnet-compliant components. Non-BACnet-compliant or proprietary equipment or systems (including gateways) shall not be acceptable and are specifically prohibited.
- B. The Building Management System (BMS) application program shall be written to communicate specifically utilizing BACnet protocols. Software functions delivered on this project shall include password protection, scheduling (including optimum start), alarming, logging of historical data, full graphics including animation for the operator interface, after-hours billing program, demand limiting, full suite of field engineering tools including graphical programming and applications. Systems using operating systems other than that described above are strictly prohibited. All software and associated passwords required to program application specific controllers and all field level devices and controllers will be left with the Commissioner. All software and associated passwords required to make any program changes anywhere in the system along with scheduling, and trending applications will be left with the Commissioner. All software and associated passwords required to program and make future changes to field engineering tools including graphical programming and applications will be left with the Commissioner.
- C. Building controllers shall include complete energy management software, including scheduling building control strategies with optimum start and logging routines. All energy management software and firmware shall be resident in field hardware and shall not be dependent on the operator's terminal. Operator's terminal software is to be used for access to field-based energy management functions only. Provide zone-by-zone direct digital logic control of space temperature, scheduling, runtime accumulation, equipment alarm reporting, and override timers for after-hours usage.
- D. All application controllers for every terminal unit (VAV, HP, UV, etc.) air handler, all central plant equipment, and any other piece of controlled equipment shall be fully programmable. Application controllers shall be mounted next to controlled equipment and communicate with building controller via BACnet LAN.
- E. Room sensors shall be provided with digital readout that allows the user to view room temperature, view outside air temperature, adjust the room set point within preset limits and set desired override time. User shall also be able to start and stop unit from the digital sensor. Include all necessary wiring and firmware such that room sensor includes field service mode. Field service mode shall allow technician to balance VAV zones and access any parameter in zone controller.
- F. All control equipment used to perform any or all of the specified smoke control sequences shall be UL-864 UUKL listed and tested by FDNY. FDNY approval letter required. This includes all field controllers and global control devices. Non UUKL rated equipment shall not be networked

to any devices on the network performing smoke control sequences unless isolated by a UUKL rated device. See drawings for actual sequence of operations.

- G. All system alarms are to be set up based on the alarm parameters specified in the system sequence of operations. Alarms shall be enabled and put into service only after they have been tested and commissioned. Contractor shall submit a list of points containing alarm extensions for review and approval. After approval the contractor will be responsible for full implementation of alarm including alarm names, alarm texts and alarm enabling.
- H. The electrical power and interlock wiring for all controls, signal devices, equipment, alarms, etc., shall be in accordance with the manufacturers and or suppliers detailed wiring diagrams and instructions.
- I. All power and control wiring, conduit and wiring connections required for the complete installation, including wiring to smoke dampers and combination fire/smoke dampers and their motors, shall be provided by Contractor in accordance with the Electrical Specification requirements.

Control system shall be on emergency power. Network control panels, servers, dedicated operator interface PC's and advanced application control panels serving major mechanical systems shall be furnished with an Uninterruptable Power Supply (UPS). UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt Amps needed for panel.

#### 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- C. The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- D. The Building Management System (BMS) shall be configured and installed, commissioned and serviced by a factory instructed installer. Contractor's installer shall have an in-place support facility within 2 hours response time of the site with technical staff, spare parts inventory and necessary test and diagnostic equipment.
- E. The BMS trade shall provide a full time, on site, project management for this work for direct supervision of the configuration, installation, start up, and commissioning of the BMS system. The contractor's installer shall provide emergency contact cell phone numbers and email addresses to the Commissioner. The Contractor's vendor shall provide a detailed project design and installation schedule with time markings and details for hardware items and software development phases. Schedule shall show all the target dates for transmission of project information and documents and shall indicate timing and dates for system installation, debugging, and commissioning.
- F. The Contractor and their vendors shall manufacturer, manage, and distribute all equipment, control devices, accessories and related items to ISO 9000 series and 14000 series standards.

- G. All BMS peer-to-peer network controllers, central system controllers and local user displays shall be UL Listed under Standard UL 916, category PAZX.
- H. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Governing Radio Frequency Electromagnetic Interference and be so labeled.
- I. Testing of the control system as per testing procedures based on ASHRAE standards 135 and 135.1 and that the components were tested to BACnet International, BACnet Testing Laboratories standards.

#### 1.7 REFERENCE STANDARDS

- A. The latest edition of the following standards and codes in effect and amended as of supplier's proposal date, and any applicable subsections thereof, shall govern design and selection of equipment and material supplied:
  - 1. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
  - 2. Latest ANSI/ASHRAE Standard 135, BACnet.
  - 3. Uniform Building Code (UBC), including local amendments.
  - 4. UL 916 Underwriters Laboratories Standard for Energy Management Equipment. US.
  - 5. National Electrical Code (NEC).
  - 6. FCC Part 15, Subpart J, Class A.
  - 7. EMC Directive 89/336
  - 8. UL-864 UUKL listing for Smoke Controls for any equipment used in smoke control sequences
  - 9. NFPA 90A
  - 10. 2014 New York City Construction Codes
  - 11. NEMA Standards
  - 12. UL-873 (Temperature Indication and Regulating Equipment)
  - 13. The BACnet Manufacturers Association (BMA)
  - 14. BACnet International, BACnet Testing Laboratories - BACnet Testing Laboratories was established by BACnet International to test products as per BACnet standard and support compliance testing and interoperability testing activities.
  - 15. All ISO 9000 series standards, ISO 14000 series standards (for environmental issues), ISO 16484-5, etc.
  - 16. Except as otherwise indicated the Contractor shall secure and pay for all permits, inspections, and certifications required for his work and arrange for necessary approvals by NYC Dept of Buildings and the Commissioner.
- B. The control system installation shall comply with NFPA, NEMA, NEC, and all NYC and national codes, standards, and guidelines referenced in this specification.

#### 1.8 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."
- B. Design and Installation Submittals - Submittal shall include the following;
  - 1. Control riser diagram showing all DDC controllers, network repeaters, and network wiring.
  - 2. One-line schematics and system flow diagrams showing the location of all control devices.

3. Points list for each DDC controller, including: Tag, Point Type, System Name, Object Name, Expanded ID, Display Units, Controller Type, Address, Cable Destination, Module Type, Terminal ID, Panel, Slot Number, Reference Drawing, and Cable Number.
4. The contractors written description for each sequence of operations, to include the following:
5. Sequences shall reference input/output and software parameters by name and description.
6. The sequences of operations provided in the submittal that shall represent the detailed analysis needed to create actual programming code from the design documents based on the controls design documents.
7. Points shall be referenced by name, including all software points such as but not limited to programmable set points, range limits, time delays, alarms, and so forth.
8. The sequence of operations shall cover normal operation and operation under the various alarm conditions applicable to that system.
9. Detailed Bill of Material list for each panel, identifying: quantity, part number, description, the number of modules in each panel and associated options.
10. Control Damper Actuator Schedules. This spreadsheet type schedule shall include a separate line for each damper and a column for each of the damper attributes, including: Fail-Safe Position, Damper Type and Actuator Type.
11. Control Valve Schedules. This spreadsheet type schedule shall include a separate line for each valve and a column for each of the valve attributes, including: Code Number, Configuration, Fail Position, Pipe Size, Valve Size, Body Configuration, Close off Pressure, Capacity, Valve CV, Calculated CV, Design Pressure, Actual Pressure, and Actuator Type.
12. Cataloged cut sheets of all equipment used. This includes, but is not limited to, the following: DDC panels, peripherals, sensors, actuators, dampers, and so forth.
13. Product Data: Submit manufacturer's technical product data for each control device furnished, indicating dimensions, capacities, performance and electrical characteristics, and material finishes, also include installation and start up instructions
14. Range and scale information for all transmitters and sensors. This sheet shall clearly indicate one device and any applicable options. Where more than one device to be used is on a single sheet, submit two sheets, individually marked.
15. Hardware data sheets for all operator workstations, local access panels, and portable operator terminals.
16. Software manuals for all applications programs to be provided as a part of the operator workstations, portable operator terminals, programming devices, and so forth for evaluation for compliance with the performance requirements of this Specification.
17. The controls contractor shall include their BACnet PICS and BIBB statements (as described in ASHRAE 135) for each device.
18. The controls contractor shall supply to the MSKCC the Commissioner all certified testing documentation from its vendors, subcontractors, suppliers and/or distributors.

**C. BACnet Device Object Naming Conventions**

1. The Contractor's BMS manufacturer's representative shall submit a BACnet Device Object Naming Convention Plan (DONCP) to the Commissioner during the submittal process. The plan must be approved by the Commissioner prior to implementation. It is the responsibility of the Contractor to coordinate the DONCP with the Commissioner.
2. The DONCP shall be designed to eliminate any confusion between individual points in a facility/campus wide BMS system. It will also be designed to allow for future expansion and consistency. Each device on a BACnet internetwork (including other manufacturer's devices) must have a unique device instance. This is a major consideration when adding to an existing system or interconnecting networks. Thorough and accessible site documentation is critical.

3. A consistent object (point) naming convention shall be used to facilitate familiarity and operational ease across an eventual large campus or inventory of facilities. The following section is designed as recommendations only. It is the responsibility of the Contractor to coordinate the DONCP with the Commissioner.
  4. BACnet requires that all devices have a Device object name that is unique throughout the entire work. To comply with this requirement all BACnet devices should be configured with a Device Object Name that is based on the naming conventions described in this section. This includes all physical devices as well as any logical BACnet devices that are represented by gateways. The vendor shall coordinate with the Commissioner's staff to ensure that the correct names are used. Device Object Name properties shall support strings of at least 50 characters in length.
  5. Every system device has addresses by which any other BACnet device can identify it and route information to and from it. Although there are a number of addresses to consider, the scheme is fairly straightforward. It can become complicated, however, if addresses have not been documented adequately or there is no logical addressing scheme.
  6. When you set up and plan a BACnet network or add to an existing network, considering and documenting your addressing scheme is of the utmost importance. Adopt a hierarchical and uniform addressing scheme for device instances to help you quickly identify the function and location of different devices when troubleshooting. Additionally, it's very important to document every element of your addressing scheme and update the site documentation with any changes.
  7. This section first covers the important addressing issues with respect to BACnet LANs and it gives a practical application you can use to check your understanding. BACnet addressing - Three types of addresses are important in any BACnet system: network numbers, media access control (MAC) addresses, and device instances. Each BACnet device has these addresses associated with it. Though all three can be thought of as addresses, they are all very different both in how they function and how they are assigned.
    - a. Network numbers - Identifies the network to which a BACnet device belongs. Every network on a BACnet LAN has a unique numerical identifier—a network number. This network number is used by BACnet devices only; it does not rely on nor does it affect any other network protocols. LANs connected by a router must have different network numbers. No interconnected BACnet networks can have the same network number. Network number range is 1–65534, for a maximum of 65534 interconnected BACnet networks.
    - b. MAC addresses - Hardware-oriented. The MAC address uniquely identifies a device on its particular network. Each network type—Ethernet and MS/TP—has its own MAC addressing scheme. A device that exists on two or more networks will have a MAC address for each one. Devices can have the same MAC addresses as long as they are on networks with different network numbers.
    - c. Ethernet devices - For Ethernet LANs, the IEEE assigns a certain range of MAC addresses to manufacturers of Ethernet products. Manufacturer then assigns a unique MAC address to each of its Ethernet devices.
    - d. MS/TP devices - For devices on an MS/TP LAN, you assign the MAC address for each controller. For BACtalk VLCs, these are assigned with DIP switches. Devices on an MS/TP LAN are designated as either masters or slaves, which affects how they can be addressed. This is a requirement of the BACnet specification. All BACtalk MS/TP devices are masters.
    - e. Device instances - Software-oriented. The device instance identifies the device to the BACnet software and is the address most often encountered. The device instance is a shortcut to having to specify a MAC address and network number each time an operation is performed. Device instances range from 0–4194302.
- D. Closeout Submittals including Operator and Maintenance Data – Submittal shall include the following;

1. Operation and Maintenance Instructions - Contractor shall prepare five (5) three ring bound binders, titled "Automatic Temperature Control and Monitoring Systems Submittal and Operation and Maintenance Data." Mark the identification on both front and spine of each binder. Each binder shall be a heavy duty 3 ring, vinyl covered binder (3" maximum) with pocket folders for folded sheet information. Binders shall be properly indexed (thumb tabbed). In addition to these hardcopy documents, contractor will also provide a CD with soft copy pdf files of the same information included in the binders.
2. Each binder shall contain the following information:
  - a. Name and address of Commissioner, Contractor, and index of equipment, including vendor (name and address).
  - b. Complete brochures, descriptive data and parts list, etc., on each piece of equipment, including all approved shop drawings.
  - c. Complete maintenance and operating instructions, prepared by the manufacturer, on each major piece of equipment.
  - d. Complete shop drawing submittal on temperature and monitoring controls including control diagrams updated to reflect "as built" conditions.
  - e. All wiring and component schematics necessary for building operators to troubleshoot, repair and expand the system.
  - f. All brochures shall be submitted to the Commissioner prior to final inspection of the building.
  - g. Provide a framed set of schematic drawings and sequence of operation to be hung at each local panel and at the central computer as directed by the Commissioner.
  - h. The recommended spare parts list. Maintenance instructions and spare parts list for each type of control device. Include that type data, product and shop drawings in maintenance manual.
3. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing Requirements.

#### 1.9 DELIVERY, STORAGE AND HANDLING

- A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to unit manufacturer.

#### 1.10 TECHNICAL PROPOSAL

- A. Technical proposals shall be prepared in accordance with these specifications. Six (6) copies of the proposal shall be submitted with the bid. Proposals that are unbound, loose, loose in a file folder, stapled, stapled in a manila file folder, etc., will not be acceptable. The technical proposal shall include the following data/information as a minimum. The order of listing here is not intended to indicate, nor should it be construed to indicate, the relative importance of the data/information:

1. Information on organizational capability to handle this project (management, operators, manufacturing, single source responsibility, etc.)

#### B. Service Capabilities:

1. Number of Service Technicians dedicated to service of building automation systems including, technician names, years of service with the contractor, and factory instructing records.
2. Evidence of 24 hr x 7-day emergency service capability including:
3. After Hours service procedures

4. List of locally installed building automation systems of similar size and scope
5. Information on instructing program to demonstrate specification compliance.

C. System Configuration as Proposed:

1. Describe system architecture including a schematic layout with location and type (model number) of all control panels.
2. Describe system operation, functions and control techniques.
3. Network layout including topologies, speeds, protocols, location of switches and ring managers.
4. Modularity.
5. Migration strategies to protect the City of New York's investment in BMS system.
6. Technical data to support the information on the hardware and software proposed for this solution including any integrated systems and/or solutions.
7. Panel Specification Sheets including communication port interfaces
8. Front End Server Hardware and Software Specification Sheets including:
9. Include remote alarm paging capabilities
10. Operator help menu descriptions
11. Custom Report Generator Description
12. Graphical Zone Scheduling Application Details
13. Include environment and space requirements for panels, CPU's and other major devices.
14. Detailed description of all operating, command, application and energy management software provided for this project.
15. Include a point's list for all input and output devices provided by the proposed systems.
16. Include a list of pre-built reports provided to the Commissioner to demonstrate specification compliance.

D. A signed certificate stating the Contractor "has read the performance and functional requirements, understands them and his technical proposal will comply with all parts of the specification."

1. Line by line specification concordance statement.

E. Other requirements for inclusion in the technical proposal are located throughout this specification.

F. Submit technical proposals with pricing in accordance with "Instructions to Bidders".

G. Failure to submit technical proposal containing the information outlined above will result in rejection of bidder's proposal.

1.11 WARRANTY

- A. Manufacturer Warranty shall cover all expenses for parts, labor, associated travel, and expenses for a period of one year from date of Substantial Completion.
- B. Hardware and software vendors supporting this warranty agreement shall provide on-site or off-site service in a timely manner after failure notification to the vendor. The maximum acceptable response time to provide this service at the site shall be 24 hours.
- C. This warranty shall apply equally to both hardware and software.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Subject to compliance with requirements, provide HVAC instrumentation and controls by one of the following:
  - 1. Johnson Controls BACnet
  - 2. Alerton Controls BACnet
  - 3. Siemens Apogee BACnet
  - 4. Or approved equal.

**2.2 Network Architecture**

- A. Intranet Network
  - 1. The Contractor shall be responsible for installation of primary and secondary LAN's required to support the complete BMS system. The Operator Workstation for the building shall be located as advised by the Commissioner.
- B. BACnet Primary LAN
  - 1. Primary LAN for the building automation system shall consist of a high speed network utilizing BACnet over Ethernet or BACnet/IP. The Primary LAN shall be used for communications between BACnet B-BC devices, B-AAC devices, B-ASC devices, and the Operator Workstation. The network shall be configured to allow for a redundant communication path from all network level controllers to the server. Managed network switches shall be used for this purpose.
- C. BACnet Secondary LAN
  - 1. A secondary LAN, separate from the Primary LAN shall be used for communications between B-ASC devices and the B-BC or B-AAC that provides BACnet router services for the device. The Secondary LAN shall utilize BACnet MS/TP for communications. The intent of the separate Primary LAN and Secondary LAN is to isolate traffic between B-BC's or B-AAC's and their associated B-ASC devices from the primary LAN.

**2.3 OPERATOR INTERFACE**

- A. The system shall be capable of supporting an unlimited number of clients using standard Web browser. Systems requiring additional software (to enable a standard Web browser) to be resident on the client machine, or manufacture-specific browsers shall not be acceptable.
- B. The Web browser software shall run on any operating system and system configuration that is supported by the Web browser. Systems that require specific machine requirements in terms of processor speed, memory, etc., in order to allow the Web browser to function with the Building Automation System (BAS), shall not be acceptable.
- C. The Web browser client shall support at a minimum, the following functions:
  - 1. User log-on identification and password shall be required. If an unauthorized user attempts access, notice of access failure shall be displayed. Security using authentication and encryption techniques to prevent unauthorized access shall be implemented.

2. HTML programming shall not be required to display system graphics or data on a Web page. HTML editing of the Web page shall be allowed if the user desires a specific look or format.
3. Storage of the graphical screens shall be in the Network Area Controller (NAC), without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.
4. Real-time values displayed on a Web page shall update automatically without requiring a manual "refresh" of the Web page.
5. Users shall have administrator-defined access privileges. Depending on the access privileges assigned, the user shall be able to perform the following:
  - a. Modify common application objects, such as schedules and setpoints in a graphical manner.
  - b. Commands binary objects to start and stop.
  - c. View logs and charts.
  - d. View alarms.
6. Graphic screens on the Web Browser client shall support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.

**D. Alarms**

1. Alarm feature shall allow user configuration of criteria to create, route, and manage alarms and events. It shall be possible for specific alarms from specific points to be routed to specific alarm recipients. System shall be capable of routing alarms to recipients via email and texting. The alarm management portion of the user interface shall, at the minimum, provide the following functions:
  - a. Allow configuration to generate alarms on any numeric, binary, or data point in the system.
  - b. Generate alarm records that contain a minimum of a timestamp, original state, acknowledged state, alarm class and priority.
  - c. Allow the establishment of alarm classes that provide the routing of alarms with similar characteristics to common recipients.
  - d. Allow a user, with the appropriate security level, to manage alarms - including sorting, acknowledging, and tagging alarms.

**E. Reports and Summaries**

1. Reports and Summaries shall be generated and directed to the user interface displays, with subsequent assignment to printers, or disk. As a minimum, the system shall provide the following reports:
  - a. All points in the BAS
  - b. All points in each BAS application
  - c. All points in a specific controller
  - d. All points in a user-defined group of points
  - e. All points currently in alarm
  - f. All BAS schedules
  - g. All user defined and adjustable variables, schedules, interlocks and the like.
2. Reports shall be exportable to .pdf, .txt, or .csv formats.
3. The system shall allow for the creation of custom reports and queries.

**F. Schedules**

1. A graphical display for time-of-day scheduling and override scheduling of building operations shall be provided. At a minimum, the following functions shall be provided:
  - a. Regular schedules
  - b. Repeating schedules
  - c. Exception Schedules
2. Weekly schedules shall be provided for each group of equipment with a specific time use schedule.
3. It shall be possible to define one or more exception schedules for each schedule including references to calendars
4. Monthly calendars shall be provided that allow for simplified scheduling of holidays and special days. Holidays and special days shall be user-selected with the pointing device or keyboard.

**G. Password**

1. Multiple-level password access protection shall be provided to allow the user/manager to user interface control, display, and database manipulation capabilities deemed appropriate for each user, Based on an assigned password.
2. Each user shall have the following: a user name, a password, and access levels.
3. The system shall provide the capability to require a password of minimum length and require a combination of characters and numerical or special characters.
4. When entering or editing passwords, the system shall not echo the actual characters for display on the monitor.
5. The system shall provide unlimited flexibility with access rights. A minimum of four levels of access shall be provided along with the ability to customize the system to provide additional levels.
6. A minimum of 100 unique passwords shall be supported.
7. Operators shall be able to perform only those commands available for their respective passwords. Display of menu selections shall be limited to only those items defined for the access level of the password used to log-on.
8. The system shall automatically generate a report of log-on/log-off and system activity for each user.
9. All log data shall be available in .pdf, .txt, and .csv formats.

**H. Dynamic Color Graphics**

1. The graphics application program shall be supplied as an integral part of the User Interface.
2. The graphics applications shall include a create/edit function and a runtime function. The system architecture shall support an unlimited number of graphics documents (graphic definition files) to be generated and executed.
3. The graphics shall be able to display real-time data that is acquired, derived, or entered.
4. Graphics runtime functions –Each graphic application shall be capable of the following functions:
  - a. All graphics shall be fully scalable
  - b. The graphics shall support a maintained aspect ratio.
  - c. Multiple fonts shall be supported.
  - d. Unique background shall be assignable on a per graphic basis.

5. Operation from graphics – It shall be possible to change values (set points) and states in systems controlled equipment within the Web browser interface.
6. Graphic editing tool – A graphic editing tool shall be provided that allows for the creation and editing of graphic files. The graphic editor shall be capable of performing/defining all runtime binding.

**I. Historical Data Collection**

1. All numeric, binary or data points in the system database shall allow their values to be logged over time (trend log). Each historical record shall include the point's name, a time stamp including time zone, and the point's value.
2. The configuration of the historical data collection shall allow for recording data based on change of value or on a user-defined time interval.
3. The configuration of the historical data collection shall allow for the collection process to stop or rollover when capacity has been reached.
4. A historical data viewing utility shall be provided with access to all history records. This utility shall allow historical data to be viewed in a table or chart format.
5. The history data table view shall allow the user to hide/show columns and to filter data based on time and date. The history data table shall allow exporting to .txt, .csv, or .pdf file formats.
6. The historical data chart view shall allow different point histories to be displayed simultaneously, and also provide panning and zooming capabilities.

**J. Audit Log**

1. For each log entry, provide the following data;
2. Time and date
3. User ID
4. Change or activity: i.e., Change set point, add or delete objects, commands, etc.

**K. Database Backup and Storage**

1. The user shall have the ability to back up the System Controller databases.

**2.4 OPERATOR INTERFACE DASHBOARD**

**A. General**

- B.** Contractor shall provide browser-accessed dashboard that shall reside on the BMS server and can support up to 150 simultaneous users as part of standard installation for viewing of system data on a display, kiosk or personal computer. The dashboard software shall reside on the BMS BACnet network, and can share the BMS server for the control system.

**C. Information Display - The web-based dashboard information screens shall:**

1. Support displaying up to 50 buildings.
2. User shall be able to navigate by clicking on icons and/or navigate via a touchscreen without the need for any additional configuration.
3. The dashboard shall support auto rotation of pages to support a display with no user interface (for example, touchscreen, mouse or keyboard). The pages to be displayed can be selected as a subset of all possible pages in the dashboard. The time to view each page and the order in the pages are cycled through shall be configurable.
4. The dashboard application shall include the following pages at a minimum:

- a. Home page
  - b. Consumption page
  - c. Summary page
  - d. Demand page
  - e. Green Facts page
  - f. Weather page
5. The end user shall be able to compare measured data for one (1) entity against measured data for a second entity.
6. For each resource that is defined (e.g. Water, Gas, etc.) one (1) consumption page shall be used.
7. The end user shall be able to view current data on one of the following time scales:
  - a. Cumulative data for today, displayed in hour increments.
  - b. Cumulative data for the current week, displayed in daily increments.
  - c. Cumulative data for the current month, displayed in daily increments.
  - d. Cumulative data for the current year, displayed in monthly increments.
8. The user shall be able to see:
  - a. Today's data compared against the data for the same day last week.
  - b. This week's data compared against the data for the same week last year.
  - c. This month's data compared against the data for the same month last year.
  - d. This year's data compared against the data for last year.
9. The end user shall be able to view historical data in one of the following time scales:
  - a. Complete data for yesterday, displayed in hour increments.
  - b. Complete data for last week, displayed in daily increments.
  - c. Complete data for last month, displayed in daily increments.
  - d. Complete data for last year, displayed in monthly increments.

**D. Dashboard Data**

1. The database for the dashboard must be on the BMS enterprise network and remotely hosted on a third-party network. The database should be on-site to maintain security and privacy.
2. Energy Dashboard data shall reside on site and shall remain in the BMS.
3. The dashboard shall support Microsoft SQL database.
4. The dashboard shall allow for the importation of external data via CSV file format.
5. BMS shall utilize Web Services to pull real time weather data via the world wide web.

**E. Browser Technology**

1. The following browsers shall be supported:
  - a. Microsoft Edge
  - b. Firefox
  - c. Safari
  - d. Google Chrome

**F. Dashboard Licensing**

1. The Energy Dashboard shall utilize software licensing that will run in perpetuity, without the need for additional service and/or subscription fees.
2. No dedicated server or embedded controller shall be needed to host energy dashboard software.

**G. Configuration**

1. End users shall be able to connect remotely (including dashboard location) to the system to make changes to the configuration using a browser.
2. Energy Dashboard shall be maintainable by end-user staff with limited instructing and support common image files including JPEG and PNG.
3. User generated/supplied content to include foreground images, background images, text, and icons.
4. Consumption pages for the resources defined—one (1) for each resource type for which he wishes to display consumption data. Consumption data is the total amount of a resource used over time, for example this is a kWh reading.
5. The system designer shall be able to configure:
  - a. One or more home pages.
  - b. One or more summary consumption pages. This page shows the total consumption for each configured entity within the system and a total for the entire enterprise.
  - c. One or more current demand pages. This page shows the current demand for a given entity.
  - d. One or more weather pages using weather station data from either NOAA or Google.
  - e. One or more green facts pages. This page is intended to inform the user of relevant environmental information. It is expected that this type of display will be used in relation to LEED certification.
6. Support ability to add additional capacity (more buildings, more meters) without the need for additional hardware.

**H. Security**

1. Dashboard Ability to restrict data behind a firewall or within a DMZ.
2. Dashboard application shall not allow the user to update the system data. For example, the user shall not be allowed to update the present-value of an analog-value.
3. The dashboard shall require a user authorization via user name and password to access the configuration screens.

**I. Reporting**

1. BMS shall be provided with reporting software containing both template reports and the ability to create custom reports without any additional software or hardware.

**J. Automated Monitoring Based Commissioning**

1. The AMBCx system provided shall be able to satisfy fault detection and diagnostics (FDD) and analysis of the following major mechanical and energy systems in the facility, including, but not limited to, the following:
  - a. Boiler and other related heating plants.
  - b. Chilled water plants.

- c. Building radiation
  - d. Heat pumps for heating, cooling, and heat recovery, plus associated cooling towers and boilers as applicable.
  - e. Constant and variable speed fan and pumps.
  - f. Variable frequency drives.
  - g. Air and water economizers and heat recovery cycles.
  - h. Air distribution and ventilation systems, including, but not limited to, terminal devices (VAV, mixing boxes, reheats).
  - i. Exhaust fan systems.
  - j. Fan coils with heating and/or cooling.
  - k. Building related process systems and equipment (medical gas, medical vacuum, compressed air).
  - l. Lighting systems and controls.
  - m. Operating schedules.
  - n. Combined heat and power systems.
- 2. The AMBCx system shall be able to interface directly with the project BMS and energy/performance metering system to provide information on HVAC and lighting systems that are being controlled.
  - 3. Measurement and sensing devices shall be supplied and installed and field-tested by the Contractor according to the requirements specified in the contract documents
  - 4. The AMBCx system shall be able to analyze a combination of hard-wired (analog and digital I/O) and virtual points (setpoints, calculated variables) in a system using real-time and historical time-series data to the following (the actual set of analysis capabilities for a particular building shall be dependent on the BMS data available from that building):
    - a. Minimum Required Capabilities:
      - 1) Determine the stability of control devices (valves/actuators/speed drives).
      - 2) Determine the degree of error above reasonable thresholds.
      - 3) Compare sensor readings to setpoint and flag out-of-range errors from faulty sensors.
      - 4) Compare outputs (controllers) setpoints to actual conditions to find failed devices.
      - 5) Calculate and report on energy consumption for systems under BMS control.
      - 6) Ensure economizer systems are working to provide optimal free cooling opportunities.
      - 7) Diagnose flow measurement systems to ensure readings are in range of expectations.
      - 8) Categorize faults according to various priorities (energy, comfort, and system maintenance impact).
      - 9) Identify simultaneous heating and cooling in a system and sub system (pre-cool/reheat).
      - 10) Ensure ventilation rates are adequate (testing minimum outdoor air volume settings).
      - 11) Report heating and cooling plant efficiency through efficiency measurement.
      - 12) Optimize air filter replacement by monitoring changes in filter pressure drop.
      - 13) Monitor chiller evaporator and condenser tube bundle pressure drops for degradation in performance.

## 2.5 operator interface / Dedicated Servers

A. Operator Interface / Dedicated Server:

1. Contractor shall furnish 2 new servers to host the operator interface software for the BMS. The new servers shall have the ability to operate in a redundant fashion so that upon the failure of one server the second server continues to operate without any degradation to system performance. The new servers shall be installed at a location to be determined by the Commissioner.
2. Server Hardware Requirements: The server hardware platform shall have the following requirements:
  - a. Processor: Intel Xeon E3-1220 v2, 3.10 GHz, 8M Cache, Turbo, Quad Core/4T processors or approved equal.
  - b. Memory: 8 GB RAM.
  - c. Flash BIOS: BIOS 8MB flash memory for system BIOS
  - d. Storage: CD-RW/DVD Combo
  - e. Hard Drive: SATA 3.0Gb/s: 7200RPM with 8MB DataBurst Cache up to 1.5TB, 10K RPM with 16MB DataBurst Cache up to 300GB, SAS: 15K RPM up to 450GB. CD-RW/DVD Combo
  - f. Network Interface: 2 Onboard Network Adapters
  - g. Audio controller: Integrated High Definition Audio, 24-bit analog-to-digital; 24-bit digital-to-analog stereo conversion
  - h. Monitor: Minimum 19" high definition flat panel display.
  - i. Ports: Eleven USB 2.0: two on front panel, six on back panel, three internal (UDOC) on motherboard; eSATA: one rear; one serial, one parallel; two PS/2; one RJ-45; stereo line-in and headphone line-out on back panel; microphone and headphone connector in front.
  - j. The PC workstation operating system shall be Microsoft Windows 10 Professional, with current Service Pack. Provide all licenses required for operation.
3. Remote Access: Local Area Network installations shall have remote access to the BMS provided for local Intranet. The Commissioner shall provide a connection to the Intranet to be used by the facility.
4. Servers to be powered by emergency power and UPS. UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt Amps needed for panel.

2.6 LOCAL WEB BROWSER / PC Work station

A. Local Web Browser / PC Workstation:

1. Contractor shall furnish PC workstations for local operator interface to the BMS. The quantity and locations shall be as outlined on the BMS riser with exact location to be determined by the Commissioner.
2. PC Workstation Hardware Requirements: The PC workstation hardware platform shall have the following requirements:
  - a. Processor: Dual-core Intel Xeon 3500 series processors or approved equal.
  - b. Memory: 4 GB RAM.
  - c. Flash BIOS: BIOS 8MB flash memory for system BIOS
  - d. Storage: CD-RW/DVD Combo
  - e. Hard Drive: SATA 3.0Gb/s: 7200RPM with 8MB DataBurst Cache up to 1.5TB, 10K RPM with 16MB DataBurst Cache up to 300GB, SAS: 15K RPM up to 450GB. CD-RW/DVD Combo

- f. Network Interface: Integrated Broadcom 5761 Gigabit Ethernet controller with Remote Wake UP and PXE support
  - g. Audio controller: Integrated High Definition Audio, 24-bit analog-to-digital; 24-bit digital-to-analog stereo conversion
  - h. Monitor: Minimum 19" high definition flat panel display.
  - i. Ports: Eleven USB 2.0: two on front panel, six on back panel, three internal (UDOC) on motherboard; eSATA: one rear; one serial, one parallel; two PS/2; one RJ-45; stereo line-in and headphone line-out on back panel; microphone and headphone connector in front.
  - j. The PC workstation operating system shall be Microsoft Windows 10 Professional, with current Service Pack. Provide all licenses required for operation.
- 3. In addition to above monitor furnish a 50" high definition, wall mount, flat panel display to be located in close proximity to one of the PC Workstations. The exact location to be determined by the Commissioner.
  - 4. PC workstation to be configured to only allow access to the BMS system. Access to outside is to be denied. CD drive and USB ports are to be limited to the highest level.
  - 5. PC workstation to be powered by emergency power and UPS. UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt/ Amps needed for panel.
  - 6. Contractor shall include BMS workstation web server for main campus. Contractor is responsible for coordinating with MSKCC's IT department for access.

## 2.7 PORTABLE OPERATOR TERMINAL

### A. Tablet PC Portable Operator's terminal

- 1. The Contractor shall provide 3 tablet portable operator's terminals for programming purposes. The terminal shall be configured as follows:
  - a. Tablet touch screen Personal laptop computer
  - b. Intel Core i5 i5-2467M, 1.6 GHz, Dual-Core
  - c. 4.0 GB - DDR3 SDRAM – Microsoft Windows 10 Professional 64-bit Edition.
  - d. SVGA 1366 x 768 resolution color display
  - e. Complete workstation software packages, including any hardware or software.
  - f. Software registration cards for all included software shall be provided to the Commissioner.
  - g. External power supply/battery charger.
  - h. Wireless network adapter.
- 2. Software
  - a. Portable operator terminals shall support all controllers within the system on a direct-connect communications basis.
  - b. When used to access first or second tier controllers, the portable operator terminal shall utilize the standard operator workstation software, as previously defined.
  - c. When used to access application specific controllers, the portable operator terminal shall utilize either the standard operator workstation software, as previously defined, or controller-specific utility software.
  - d. Portable operator terminal shall have ability to wirelessly connect to the BMS network as an operator workstation when customer WiFi network is in place.

## 2.8 BUILDING CONTROLLER

### A. BACnet Devices

1. Network Area Controller (NAC)
  - a. The NAC must provide the following hardware features as a minimum:
    - 1) Communications
      - a) One 10/100 Mb Ethernet Port – RJ-45 connection
      - b) One RS-232 port
      - c) One RS-485 port (up to 57,600 baud)
      - d) Optional internal auto-dial/auto-answer 56K modem.
      - e) All required protocol drivers are included.
    - 2) Inputs/Outputs
      - a) Modular expansion modules for adding hardwired analog and digital inputs and outputs directly to the NAC panel.
    - 3) Battery Backup
      - a) Battery backup provided for all on board functions including I/O.
      - b) Battery is monitored and trickle charged.
      - c) Battery maintains processor operation through power failures for a pre-determined interval, and then writes all data to flash memory, shuts the processor down, and maintains the clock for five years.
      - d) Battery backup is to annunciate a trouble alarm to the BMS if problems occur.
      - e) NAC shall be powered by Uninterruptable Power Supply (UPS). UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt Amps needed for panel.
    - 4) Environment
      - a) Must be capable of operation over a temperature range of 0°C to 55°C.
      - b) Must be capable of withstanding storage temperatures of between 0°C and 70°C.
      - c) Must be capable of operation over a humidity range of 5% to 95% RH, non-condensing
    - 5) Performance
      - a) Supports up to 100 devices.
      - b) All digital outputs shall include three position manual override switches to allow selection of the ON, OFF, or AUTO output state. These switches shall be built into the unit and shall provide feedback to the controller so that the position of the override switch can be obtained through software. In addition, each analog output shall be equipped with an override potentiometer to allow manual adjustment of the analog output signal over its full range, when the 3 position manual override switch is placed in the ON position.
  2. The Network Area Controller (NAC) shall be a fully user-programmable device.
  3. Automation network – The Network Area Controller (NAC) shall reside on the automation network. Each NAC shall support one or more sub-networks of controllers.

4. User Interface – Each Network Area Controller (NAC) shall have the ability to deliver a web based user interface as previously described. All computers connected physically or virtually to the automation network shall have access to the web based UI.
  5. Power Failure – In the event of the loss of normal power, The Network Area Controller (NAC) shall continue to operate for a define period after which there shall be an orderly shutdown of all programs to prevent the loss of database or operating system software. Flash memory shall be incorporated for all critical controller configuration data.
    - a. During a loss of normal power, the control sequences shall go to the normal system shutdown conditions.
    - b. Upon restoration of normal power and after a minimum off-time delay, the controller shall automatically resume full operation without manual intervention through a normal soft-start sequence.
    - c. Certification – All controllers shall be listed by Underwriters Laboratories (UL).
- B. Advanced Application Controller
1. Control of AO's and BO's and monitoring of AI's and BI's are permitted on devices that conform to the requirements for the BACnet Advanced Application Controller (B-AAC) as identified in ASHRAE Standard 135. B-AAC's shall be provided with all supporting BACnet services as a local function. The device shall not depend upon any other devices for the functionality of schedule or alarm activities. B-AAC's serving major mechanical systems shall utilize an Uninterruptible Power Supply (UPS). UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt Amps needed for panel
  2. A single piece of equipment shall utilize a single controller. Control functions for a single piece of equipment may not be divided among controllers.
- C. Application Specific Controllers
1. Control of AO's and BO's and monitoring of AI's and BI's are permitted on devices that conform to the requirements for the BACnet Application Specific Controller (B-ASC) as identified in ASHRAE Standard 135. Where B-ASC's are utilized, any supporting NAC or B-AAC must be provided with an Uninterruptible Power Supply (UPS) to avoid any unintentional loss in the support of BACnet services due to a power outage for the NAC while the B-ASC is functional. UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt Amps needed for panel.
- D. Gateways
1. Gateways between BACnet and any other protocols shall not be allowed for this project.
- E. Smart Sensor/Actuator
1. BACnet Smart sensors (B-SS) and actuators (B-SA) shall not be permitted for use on this project. All system I/O must be connected directly to a B-AAC or B-ASC device.
- F. Standalone Un-Interruptible Power Supply
1. Furnish and install a standalone Un-Interruptible Power Supply (UPS) for each network control panel, server, dedicated operator interface PC and advanced application control panels serving each major mechanical system. There shall be a separate UPS for each device. The UPS shall include external batteries, line conditioner, and all other accessories for a complete system. The UPS shall be sized by the controls contractor and submitted to the Commissioner for approval. The UPS shall provide the BMS equipment with un-

interrupted power for a minimum of 15 minutes and shall be sized for 50% spare capacity. The UPS shall be APC, Sola, Exide or approved equal. All wiring between the emergency power source, UPS and BMS equipment panel shall be provided by the Contractor.

2. UPS to be online UPS similar to Liebert GXT3 and sized for proper Volt Amps needed for panel.

## 2.9 SENSORS AND MISCELLANEOUS DEVICES

### A. General - field devices

1. The project that is the subject of this specification may not require all types of hardware listed in this section.
2. Provide field devices for input and output of digital (binary), and analog, signals into BACnet devices. Provide signal conditioning and/or filtering for all field devices as recommended by field device manufacturers, and as required for proper operation of the system.
3. It the responsibility of the building automation contractor to provide equipment as identified in this specification section. This section may identify devices which are not required to be provided in the scope of this project (i.e. The EP transducer is included in this section, but may not be required on a project where all electric controls are found).
4. It shall be this building automation contractor's responsibility to assure that all field devices are compatible with the controllers to be used on the project.
5. Transmitters specified herein are generally 4-20 ma "two-wired" type transmitters, with power for the device expected to be supplied from the transformer powering the controller.
6. For field devices specified hereinafter that require signal conditioners, signal boosters, signal repeaters, or other devices for proper interface to controllers, the building automation contractor shall furnish and install proper device. Such devices shall have accuracy equal to, or better than, the accuracy listed for respective field devices.
7. Accuracy, as stated in this section, shall include combined effects of non-linearity, non-repeatability and hysteresis.

### B. Temperature Sensors

1. Sensor range: when matched with a/d converter of the controller, sensor range shall provide a resolution of no larger than 0.36°F (unless noted otherwise).
2. Room temperature sensor shall be an element contained within a ventilated cover, suitable for wall mounting. Sensors located in mechanical areas, plenums, garages, or designated institutional locations shall be a flat plate sensor with no possible adjustment. Security screws shall be used in institutional settings as deemed necessary by the Commissioner. The building automation contractor shall coordinate requirements with the Commissioner during the submittal process. Provide an insulated base when used on an outside wall, on an interior wall within 18 inches of an outside wall, or on a wall adjacent to an unconditioned space. The following sensing elements are acceptable:
  - a. Sensing element - platinum RTD, thermistor, or integrated circuit, +/- 0.36°F accuracy at calibration point.
3. Intelligent room sensor with LCD readout
  - a. Sensor shall contain a backlit LCD digital display and user function keys along with temperature sensor. Controller shall function as room control unit, and shall allow occupant to raise and lower setpoint, and activate terminal unit for override use—all within limits as programmed by building operator. Sensor shall also allow

- service technician access to hidden functions as described in sequence of operation.
- b. Intelligent room sensor shall simultaneously display room setpoint, room temperature, outside temperature, and fan status (if applicable) at each controller. This unit shall be programmable, allowing site developers the flexibility to configure the display to match their application. The site developer should be able to program the unit to display time-of-day, room humidity and outdoor humidity. Unit must have the capability to show temperatures in Fahrenheit or Centigrade.
  - c. Override time may be set and viewed in half-hour increments. Override time count down shall be automatic, but may be reset to zero by occupant from the sensor. Time remaining shall be displayed. Display shall show the word "off" in unoccupied mode unless a function button is pressed.
  - d. See sequence of operation for specific operation of LCD displays and function keys in field service mode and in normal occupant mode. Provide intelligent room sensors as specified in point list.
  - e. Field service mode shall be customizable to fit different applications. If intelligent room sensor is connected to VAV controller, VAV box shall be balanced and all air flow parameters shall be viewed and set from the intelligent room sensor with no computer or other field service tool needed.
4. Single point duct temperature sensor shall consist of sensing element, junction box for wiring connections and gasket to prevent air leakage or vibration noise. Temperature range as required for resolution indicated in paragraph (a) below. Sensor probe shall be 300 or 400 series corrosion resistant steel (cres).
- a. Sensing element - platinum RTD, thermistor, or integrated circuit, +/- 0.36°F accuracy at calibration point.
5. Averaging duct temperature sensor shall consist of an averaging element, junction box for wiring connections and gasket to prevent air leakage. Provide enough sensors to give one lineal foot of sensing element for every three square feet of cooling coil face area. Temperature range as required for resolution indicated in paragraph (a) below.
- a. Sensing element - platinum RTD, thermistor, or integrated circuit, +/- 0.36°F accuracy at calibration point.
6. Liquid immersion temperature sensor shall include stainless steel (or brass for copper piping) thermo well, sensor and connection head for wiring connections.
- a. Sensing element for chilled water applications - platinum RTD, thermistor, or integrated circuit, +/- 0.36°F accuracy at calibration point. Temperature range shall be as required for resolution indicated in paragraph a.
  - b. Sensing element for non-chilled water applications - platinum RTD, +/- 0.2°F (0.2°C) accuracy at calibration point. Temperature range shall be as required for resolution of no worse than 0.1°F (0.06°C).
7. Outside air temperature and humidity station shall consist of a single device with a ventilated non-metallic sun shield, utility box for terminations, and water tight gasket to prevent water seepage. These devices shall be mounted at least 10 feet above ground level in a north-facing location that is not exposed to the draft from an exhaust fan, cooling tower exhaust, AHU relief air, flue vent from a gas combustion heater, or any source of conditioned air. In the event a suitable wall mounting location cannot be found, the devices may be mounted in an open location provided they are supplied with a housing intended

for mounting in such a location. Temperature range shall be as required for resolution indicated in paragraphs (a) and (b) below.

- a. Sensing element - platinum RTD, thermistor, or integrated circuit, +/- 0.36°F (0.2°C) temperature accuracy at calibration point.
- b. Accuracy (% RH): +/- 3% 0-100% RH at 68°F (20°C), including hysteresis, linearity and repeatability.
- c. Manufacturer: Vaisala (Basis of-Design), or an equivalent product from an approved manufacturer as listed above.

**C. Humidity transmitters**

1. Units shall be suitable for duct, wall (room) or outdoor mounting. Unit shall be two-wire transmitter utilizing bulk polymer resistance change or thin polymer film capacitance change humidity sensor. Unit shall produce linear continuous output of 4-20ma for percent relative humidity (% RH). Sensors shall have the following minimum performance and application criteria:
  - a. Input range: 0 to 100% RH
  - b. Accuracy (% RH): +/- 3% 0-100% RH at 68°F (20°C), including hysteresis, linearity and repeatability.

**D. Energy Consumption Meter**

1. The energy meter shall consist of digital electronic circuitry and conform to ANSI C12.1 metering accuracy standards and meet UL and CUL specifications as listed in 3111-1.
2. The energy meter system shall consist of a meter and included ct(s) calibrated together as a system with accuracy of +/- 1% from 2 % to 100 % of the rated current over a temperature range of 0-50° C. It shall require no annual recalibration by users in the field.
3. The meter shall derive operating power from its metering connections, and shall not require a separate control power connection and shall automatically correct for CT phase reversal.
4. The energy meter LCD display shall show accumulated KWH on the top half of the display while the bottom half of the display scrolls through amps, voltage, PF, KVAR, KVA, KW and real power. The information and capabilities provided by the energy meter shall include the following:
  - a. Current, per phase & three-phase total
  - b. Voltage, per phase & three-phase total, phase-to-phase & phase-neutral
  - c. Real power (kw), per phase & three-phase total
  - d. Reactive power (kvar), three phase total
  - e. Apparent power (kva), three phase total
  - f. Power factor, per-phase & three-phase total
  - g. Real energy (kwh), three phase total
5. The energy meter shall directly accept any voltage input from 120-480 VAC and be internally isolated to 2500 VAC.
6. The energy meter shall have a N.O. pulse output with selectable pulse output rates of 0.10, 0.25, 0.50, or 1.00 KWH per pulse and a N.C. phase-loss alarm output operating at 100ma @ 24vac/dc. It should be also capable of networking via BACnet MS/TP.
7. The energy meter shall be the H8163 series supplied by Veris industries (Basis of-Design), or an equivalent product from an approved manufacturer as listed above.

**E. Differential pressure sensor, air**

1. The differential pressure sensor for air applications shall provide a current or voltage signal (4-20 Ma, 0-10 VDC, or 0-5 VDC) with an accuracy of +/- 1% fs (including non-linearity, hysteresis, and non-repeatability). Accuracy for pressure sensors used in flow measurement applications shall be +/- 0.5%. Operating temperature range and compensated temperature range shall be as appropriate for the temperature extremes of the environment where it is used and the application it is intended for.

**F. Differential pressure sensor, water**

1. Sensor shall be proportional output, +/- 0.25% full range accuracy, 0 to 100 PSID range (max 250 PSI). Provide Siemens Sitrans, Rosemount (Basis-of-Design), or an equivalent product from an approved manufacturer as listed above.

**G. Fluid flow meters**

1. Provide non-intrusive flow measuring device. Refer to manufacturer for recommendation installation, control and accessories.
2. As an alternative provide magnetic flow meter.
3. The meter must be a clamp-on design with no liquid contact that mounts externally on the pipe. The meter must utilize the transit-time flow measurement technique and employ the use of two microprocessors and have the ability to monitor two independent flow channels simultaneously (second channel optional).
4. The metering electronics must have the ability to operate high temperature flow sensors capable of monitoring liquids at temperatures in excess of 750°F. The meter must also have the ability to employ an alternate Doppler measurement technique for liquids with high air or solid content.
5. The meter must have a transducer encased in stainless steel with an integral armored stainless steel jacketed triax cable. The transducers are to have the ability to be coupled using permanent coupling pads (grease is NOT acceptable). All transducer markings and identification must be laser scribed and solvent resistant. The use of adhesive labels for transducer identification will not be acceptable. All transducers supplied must have a multi-point wet flow calibration certificate accredited from an international standards agency with an accuracy of better than 1%. All calibration and transducer data must reside in a non-volatile memory chip located in the transducer junction box or flow meter.
6. The meter must have the ability to automatically recognize the transducers when connected. Programming of the transducer type into the meter will not be acceptable. The meter must be of a type that requires no zero calibration. The zero calibration must be factory pre-set automatic without the need for zero check/calibration after installation. There must not be any zero drift mechanisms (i.e. temperature change related drift) as the meters cannot be installed with any low-flow cutoff or "dead band".
7. The meter must also provide automatic Reynolds number, liquid sonic velocity compensation, and have built in liquid tables for automatic sound velocity, viscosity, and density settings.
8. The flow meter electronics shall be housed in a NEMA 4X enclosure and must have the ability to indicate flow rate, flow velocity, mass flow, total flow, signal strength, signal quality, liquid sonic velocity, Reynolds regime (laminar/turbulent/transition).

9. The meter must have the ability to have dynamic (automatic) compensation for changes in viscosity and density.
10. The meter shall be capable of outputting multiple 4-20ma, Voltage 0-1v or 0-10v, high precision frequency 0-1kHz or 0-10kHz galvanically isolated, RS-232, RS-484, binary output pulse or alarm for relay total and meter status.
11. The meter shall have the ability to status alarm for conditions of fault, flow direction, sound velocity limit, flow velocity limit.
12. The meter shall have the ability to set the 4-20ma to a settable status condition (i.e. 2ma for an alarm condition).
13. The meter shall have RS-232 output and internal memory with a minimum storage of 100K data points
14. The flow meter shall be a Flexim 7407, Siemens SITRANS, Panametrics (Basis-of-Design), or an equivalent product from an approved manufacturer as listed above.
15. Field start-up and commissioning is to be performed by a factory certified service person. Included is mounting the sensors to the pipe, terminating the sensor wires, programming the meter & providing a startup report.

**H. Airflow Measuring Stations**

1. Airflow measuring stations required to accomplish the specified control sequence shall be furnished under this section but installed by the Contractor's mechanical trade. Airflow measuring stations shall be of heavy gauge metal construction, and shall be furnished with an air straightening section with an open face area of not less than 97%.
2. Each airflow measuring station shall measure airflow by means of a network of static and total pressure sensors factory positioned and connected in parallel to produce an averaged velocity pressure. The measured velocity pressure converted to airflow (CFM) shall have an accuracy of 2% of the full scale throughout the velocity range from 700 to 4,000 FPM when measured under ideal laboratory conditions. The location of stations shall meet manufacturer's guidelines.
3. The maximum resistance to airflow shall not exceed 0.6 times the velocity head. The unit shall be suitable to withstand temperatures up to 250°F.
4. All interconnecting tubing between the air measuring and any remote metering or control shall be furnished and installed by the supplier of the station. A minimum of one static and one total pressure sensor shall be used for every 16 sq. Inches of duct cross sectional area for ducts up to four sq.ft. In cross section. For larger ducts, a minimum of one static and one total pressure sensor shall be used for every 36 sq. Inches of duct cross sectional area.
5. Interconnecting sensor manifolds shall equalize and relate each type of sensor measurement into one total pressure and one static pressure metering port. The permanent system pressure loss created by the unit shall not exceed .15 of a velocity head. Each airflow measuring station shall consist of 16-gauge sheet metal casing and an air straightening section with an open face area not less than 97%. The sheet metal contractor shall install air measuring stations.
6. Provide air monitor Fan-E or equal with an accuracy of + 2%, a turndown of 6 to 1, and no pressure loss across the station.
7. Final locations to be coordinated with sheet-metal contractor and manufacturer to ensure installed actual accuracy meets specifications.

8. Air flow sensing tubes may be mounted in the fan inlet as approved by the manufacturer for AHU applications and shall be piezometer. No other type of fan inlet flow sensor shall be acceptable.

**I. Outdoor Air Volume Measuring Station**

1. Outdoor air volume measuring required to accomplish the specified control sequence shall be furnished and installed under this section. Conventional airflow measuring stations shall not be used for measuring outdoor air intake into an air handling unit.
2. Each outdoor air volume measuring station shall measure airflow by means of an airflow measuring probe specifically designed for the application, matched transducer and monitor. The monitor shall be located between the intake louvers and the outdoor air damper. The quantity of probes must be based on the size of the outdoor air intake opening and must conform to the manufacturer's recommendation.
3. The measured velocity pressure converted to airflow (CFM) shall have an accuracy of 5% of the full scale throughout the velocity range from 200 to 1,000 FPM when measured under ideal laboratory conditions. The location of stations shall meet manufacturer's guidelines.
4. The monitor shall include a built-in display that allows for local indication of all relevant data about the outdoor air. Data can be assessed and viewed by using the 80-character display and intuitive keypad sequences. The display also provides a means to trouble shoot the operation of the hardware. Diagnostic functions monitor the performance of the differential pressure transducer, auto-zero valve, temperature sensors, and transducer heater. Hardware malfunctions are pinpointed and displayed in the alarm list display.
5. Provide TEK-AIR IAQ-TEK or equal.

**J. Current switches**

1. Current switch (input only) shall consist of 0 to 135 a continuous amperage rating, adjustable trip set-point to +/- 1% of range, .1a @ 110 VAC resistive rating. Direct drive motors are permitted to utilize a current switch without an adjustable set point. Non direct-drive motors shall utilize a device with an adjustable set point as well as status and power led indication.
2. Current switch and load control relay (input/output device) shall consist of 0 to 135 a continuous amperage rating current switch, adjustable trip set-point to +/- 1% of range, .1a @ 110 VAC resistive rating. Load control relay shall be capable of 5a @ 240 VAC resistive. The device shall have adjustable trip set point as well as status, power, and relay command status led indication.
3. Current switches for VFD-controlled loads shall be specifically designed for this purpose. A Veris H-934 or approved equivalent device shall be used.

**K. Damper end switch**

1. Damper end switches shall be devices that directly detect the desired position of the damper blades. The switch shall not be a component of the actuator nor shall it be mounted on the damper shaft.
2. All fire/smoke and smoke rated dampers shall be provided with two (2) factory installed damper end switches.
3. All automatic control dampers shall be provided with one (1) factory installed damper end switch.
4. The end switches are specified under another section of this work.

**L. Air Differential Pressure Switch**

1. Air differential pressure switches shall be diaphragm type, die-cast aluminum housing, adjustable set point, with a SPDT switch. Rating shall be a minimum of 5 amps at 120 vac. Switch pressure range shall be suited for the application. Provide Johnson Controls, Dwyer or equal.

**M. Low Temperature Detector (Freeze-Stat)**

1. Provide low temperature detector (freeze-stat) for each chilled water coil located in air handling units. Furnish one detector for each coil section.
2. Low temperature detector (LTD) shall be automatic reset, DPDT type. LTD shall be installed in a serpentine fashion across the coil in the air stream in accordance with the manufacturer's recommendations. Element shall be arranged to lock out the associated fan should the temperature at any point along the sensing element fall below 38 °f for an adjustable time period.

**N. Single Point Leak Detector**

1. Provide Liebert It-410 (Basis-of-Design), or an equivalent product from an approved manufacturer as listed above. The alarm module shall indicate that water has contacted the sensors by actuating two output relays. The relays shall remain activated until the module is reset.

**O. Zone Leak Detector**

1. Provide Liebert It-460 (Basis-of-Design), or an equivalent product from an approved manufacturer as listed above. The alarm module shall indicate that water has contacted the sensors cable by actuating two output relays. The relays shall remain activated until the module is reset.

**2.10 AIR SAMPLING SENSORS**

**A. Carbon Dioxide Sensor**

1. Coordinate with air quality monitoring system.
2. The carbon dioxide detectors shall be catalytic-bead type with a demonstrated resistance to silicones and reduced sulfur compounds. Detectors shall have a minimum life span of three years. The sensors shall have a dual housing with the sensor and transmitter in separate housings, with sensors located up to 50 feet from the transmitter. Housings shall be explosion proof for class 1, Group b, c and d, Division 1 areas. Input power shall be 250ma at 24vdc. Response time shall be less than 5 seconds to final reading, from a step change in gas concentration. Sensor/transmitter repeatability shall be +/- 1% full scale. Transmitter signal shall be 4-20 mA.
3. The detection system shall be Veris model CDE / CWE (Basis-of-Design), or an equivalent product from an approved manufacturer as listed above.
4. Power 24vdc power supply as required from emergency source.

**B. Carbon Monoxide Monitoring and Control System**

1. Coordinate with air quality monitoring system.
2. The sensor/transmitter shall be the MSA model 212376 (Basis of-Design), or an equivalent product from an approved manufacturer as listed above, with a range of 0-200 ppm full scale.

3. The sensor/transmitter shall incorporate a solid-state, semi-conductor type sensor offering a minimum useful life span of 8 years.
4. The sensor/transmitter shall be 3-wire, 4-20 ma design and shall operate on 24vdc. The output of the unit shall be linearized to the full scale range.
5. The transmitter circuitry shall include full temperature and humidity compensation and shall incorporate a purge cycle to periodically heat the semiconductor to a high temperature to allow recovery from interfering gases and high CO concentrations.
6. The response time of the unit, accounting for the purge cycle, shall be 150 seconds or less to 90% of a step change in CO level.
7. The sensor unit shall be provided with a suitable NEMA enclosure for wall mounting in loading dock area and garage area.
8. Provide a green LED for power on, a red LED for sensor failure, a yellow LED for CO warning level reached and a red LED for CO alarm level reached. LEDs shall be visible from the outside of the unit enclosure.
9. Provide a calibration kit (flow system type) including zero gas and test gas. Turn over complete kit to the Commissioner at warranty start date.
10. Power 24vdc power supply as required from emergency source.
11. Provide one sensor/transmitter per 500 square feet of driveway and loading dock.

**C. Methane Monitoring System**

1. Coordinate with air quality monitoring system.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Acme (model ST-40)
  - b. MSA
  - c. Honeywell Analytics
  - d. Or approved equal.
3. The methane detector shall be catalytic-bead explosion proof sensor. Detectors shall have a typical life span of two years. The sensors shall have a dual housing with the sensor and transmitter in separate housings, with sensors located up to 50 feet from the transmitter. Housings shall be explosion proof for class 1, group b, c and d, and areas specified in the DDC General Conditions. Input power shall be 250ma at 24vdc. Response time shall be less than 5 seconds to final reading, from a step change in gas concentration. Sensor/transmitter repeatability shall be +/- 1% full scale. Transmitter signal shall be 4-20 ma.
4. Power 24vdc power supply as required from emergency source.
5. Provide methane detection for each gas riser shaft. Provide three sensors per riser or as per manufacturers recommendation, whichever is greater. Submit sensor and electronic transmitter locations for approval.

**2.11 ELECTRIC CONTROL COMPONENTS**

- A. Limit switches (LS): limit switches shall be UL listed, with adjustable trim arm. Limit switches shall be as manufactured by Square "D", Allen Bradley (Basis-of-Design), or an equivalent product from an approved manufacturer as listed above; SPDT or DPDT type.
- B. Control relays: all control relays shall be UL listed, with contacts rated for the application, and mounted in minimum NEMA 1 enclosure.
  1. Control relays for use on electrical systems of 120 volts or less shall have, as a minimum, the following:

- a. Poles – relays having a single pole or single-throw type shall not be used. Relays shall be double-throw type with a minimum of two poles.
  - b. Relays shall incorporate an LED that indicates when the relay coil is energized.
  - c. Ac coil pull-in voltage range of +10%, -15% or nominal voltage.
  - d. Coil – sealed, with required volt amperes (va) not greater than four (4) va.
  - e. Silver cadmium form c (SPDT) contacts in a dust-proof enclosure, with 8 or 11 pin or spade type plug.
  - f. Pilot light indication of power-to-coil shall be provided for relays installed remotely from the controlling device.
  - g. Relays shall be Allen Bradley - model 700hk, Idec RH-series or approved equal.
2. Relays used for remote start/stop control of motors and shall have a current rating at least 1.5 times full load amps of the load it is controlling. In addition to the relays specified above, the functional devices ribu1c is also permitted for use here.
  3. Relays used for stop/start control shall have low voltage coils (30 Vac or less), and shall be provided with transient and surge suppression devices at the controller interface.
- C. Control transformers: furnish and install control transformers as required. Control transformers shall be machine tool type, and shall be us and CSA listed. Primary and secondary sides shall be fused in accordance with the NEC. Transformer shall be proper size for application, and mounted in minimum Nema 1 enclosure. Each controller device requiring a low voltage power supply to operate shall be provided with a dedicated transformer.
1. Westinghouse, Square “D”, Jefferson or approved equal shall manufacture transformers.
- D. Electric push button switch: switch shall be momentary contact, oil tight, push button, with number of N.O. and/or N.C. contacts as required. Contacts shall be snap-action type, and rated for minimum 120 Vac operation. Switch shall be 800t type, as manufactured by Allen Bradley or approved equal.
- E. Pilot light: panel-mounted pilot light shall be oil tight, transformer type, with screw terminals, led type, rated for 24 Vac or 120 Vac. Unit shall be as manufactured by Allen Bradley or approved equal.

## 2.12 NETWORK CONNECTION TOOL

1. Network connection tool shall allow technician to connect a laptop to any ms/tp network or at any ms/tp device and view and modify all information throughout the entire BACnet network. Laptop connection to tool shall be via Ethernet or PTP.
2. Provide quick connect to ms/tp Lan at each controller. Tool shall be able to adjust to all ms/tp baud rates specified in the BACnet standard.

## 2.13 ELECTRONIC ACTUATORS AND VALVES

- A. Quality Assurance for Actuators and Valves
1. UL Listed Standard 873 and C.S.A. Class 4813 02 certified.
  2. NEMA 2 rated enclosures for inside mounting, provide with weather shield for outside mounting.
  3. Five-year manufacturer's warranty. Two-year unconditional and three-year product defect from date of installation.
- B. Valves are specified under another specification section of this work.

**C. Execution Details for Actuators and Valves**

1. Furnish a Freeze-stat and install "Hard Wire" interlock to disconnect the mechanical spring return actuator power circuit for fail-safe operation. Use of the control signal to drive the actuators closed is not acceptable.
2. Each DDC analog output point shall have an actuator feedback signal, independent of control signal, wired and terminated in the control panel for true position information and troubleshooting. Or the actuator feedback signal may be wired to the DDC as an analog input for true actuator position status.
3. VAV box damper actuation shall be Floating type where possible.
4. Booster-heat valve actuation shall be Floating type or Analog (2-10vdc, 4-20ma).
5. Primary valve control shall be Analog (2-10vdc, 4-20ma).

**D. Actuators for Damper and Control Valves ½" to 6" shall be Electric, provide actuators as follows:**

1. UL Listed Standard 873 shall certify Actuators.
2. NEMA 2 rated actuator enclosures are. Use additional weather shield to protect actuator when mounted outside.
3. 5-year Manufacturer's Warranty. Two-year unconditional + Three-year product defect from date of installation.
4. Mechanical spring shall be provided when specified. Capacitors or other non-mechanical forms of fail-safe are not acceptable.
5. Position indicator device shall be installed and made visible to the exposed side of the Actuator. For damper short shaft mounting, a separate indicator shall be provided to the exposed side of the Actuator.
6. Overload Protection: Actuators shall provide protection against actuator burnout by using an internal current limiting circuit or digital motor rotation sensing circuit. Circuit shall insure that actuators cannot burn out due to stalled damper or mechanical and electrical paralleling. End switches to deactivate the actuator at the end of rotation are acceptable only for Butterfly Valve actuators.
7. A push button gearbox release shall be provided for all non-spring actuators.
8. Modulating actuators shall be 24Vac and consume 10VA power or less.
9. Conduit connectors are required when specified and when code requires it.

**E. Damper Actuators:**

1. Outside Air and Exhaust Air Damper Actuators shall be Mechanical Spring Return. Capacitors or other non-mechanical forms of fail-safe are not acceptable. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the damper as required.
2. Economizer Actuators shall utilize Analog control 2-10 VDC, Floating control is not acceptable.
3. Electric damper actuators (including VAV box actuators) shall be direct shaft mounted and use a V-bolt and toothed V-clamp causing a cold weld effect for positive gripping. Single bolt or setscrew type fasteners are not acceptable.
4. One electronic actuator shall be direct shaft mounted per damper section. No connecting rods or jackshafts shall be needed. Small outside air and return air economizer dampers may be mechanically linked together if one actuator has sufficient torque to drive both and damper drive shafts are both horizontal installed.
5. Multi-section dampers with electric actuators shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per damper section. (See below execution section for more installation details.)

**F. Valve Actuators ½" to 6"**

1. Control Valves – Refer to section 23 05 23 “Valves for HVAC Piping” for valve requirements.
  2. Mechanical spring shall be provided on all actuators for pre-heat coil and actuators for AHU heating or cooling coil when units are mounted outside. See plans for fail save flow function: Normal Open or Normal Closed. Capacitors or other non-mechanical forms of fail-safe are not acceptable.
  3. All zone service actuators shall be non-spring return unless otherwise specified.
  4. The valve actuator shall be capable of providing the minimum torque required for proper valve close off for the required application.
  5. All control valves actuators shall have an attached 3-foot cable for easy installation to a junction box.
  6. Override handle and gearbox release shall be provided for all non-spring return valve actuators.
- G. Control Dampers.
1. Dampers are specified under another section of this work.
- H. Damper Trade Responsibilities - The following summarizes the trade responsibilities with respect to automatic dampers:
1. Non-Fire or non-Smoke Rated Dampers
    - a. Furnish Damper - HVAC
    - b. Install damper – HVAC
    - c. Furnish Actuator – BMS
    - d. Install Actuator – HVAC
    - e. Provide junction box complete with all relays, wiring, etc. – BMS
    - f. Provide wiring between actuator, end switches, sensors, and junction box – BMS
    - g. Provide wiring from BMS to damper junction box - BMS
    - h. Provide wiring from FAS to damper junction box - N/A
    - i. Furnish 120V main power to elect. Actuators – BMS
    - j. Provide wiring from damper junction box to junction box for interlocked motors, etc. – BMS
    - k. Provide wiring from damper junction box directly to thermostats, etc. – BMS
  2. Fire and/or Smoke Rated Dampers not controlled by Fire Alarm system (FAS)
    - a. Furnish Damper - HVAC
    - b. Install damper – HVAC
    - c. Furnish Actuator – HVAC
    - d. Install Actuator – HVAC
    - e. Furnish and install junction box complete with all relays, wiring, etc. – HVAC
    - f. Provide wiring between actuator, end switches, heat sensors, and junction box – HVAC
    - g. Provide wiring from Central Control System (BMS) to damper junction box – BMS
    - h. Provide wiring from FAS to damper junction box – N/A
    - i. Furnish 120V main power to elect. actuators – BMS
    - j. Provide wiring from damper junction box strip to junction boxes for interlocked motors, etc. – BMS
    - k. Provide wiring from damper junction box directly to thermostats, etc.- BMS
  3. Fire or Smoke Rated Dampers controlled by Fire Alarm system (FAS).

- a. Furnish Damper - HVAC
  - b. Install damper – HVAC
  - c. Furnish Actuator – HVAC
  - d. Install Actuator – HVAC
  - e. Furnish and install junction box complete with all relays, wiring, etc. – HVAC
  - f. Provide wiring between actuator, end switches, heat sensors, and junction box – HVAC
  - g. Provide wiring from Central Control System (BMS) to damper junction box - BMS
  - h. Provide wiring from FAS to damper junction box – Electrical (FAS)
  - i. Furnish 120V main power to elect. Actuators – Electrical
  - j. Provide wiring from damper junction box to junction boxes for interlocked motors, etc. – BMS
  - k. Provide wiring from damper junction box directly to thermostats, etc. – BMS
4. Controls contractor shall have overall responsibility for the complete coordination of the work and the operation of the damper/actuator installation.
  5. In mechanical or electrical rooms 120V power circuits will be provided from an emergency distribution board. These circuits will be terminated in a junction box located in each associated mechanical room and shall be used by the controls contractor to supply local control panels and critical equipment.
  6. These circuits will also be used by the electrical trade to supply dampers, etc., requiring control by the Fire Alarm System. Final connection from the junction boxes to the actuators, end switches and sensors shall be by the mechanical trade.
  7. For dampers not requiring control by the fire alarm system and for other non-critical equipment, obtain power from either the emergency circuits as detailed above or from the motor starter junction box. All wiring shall be by the controls contractor.

I. Butterfly Valve Industrial Actuators

1. Actuators shall be approved under Nationally Recognized Testing Laboratory to UL standards. CSA Class 4813 02 or equal. Enclosure shall be NEMA 4 (weatherproof) enclosure and will have an industrial quality coating.
  - a. Actuator shall have a motor rated for continuous duty. The motor shall be fractional horsepower; permanent split capacitor type designed to operate on a 120 VAC, 1 pH, 60 Hz supply. Two adjustable cam actuated end travel limit switches shall be provided to control direction of travel. A self-resetting thermal switch shall be imbedded in the motor for overload protection.
  - b. Reduction gearing shall be designed to withstand the actual motor stall torque. Gears shall be hardened alloy steel, permanently lubricated. A self-locking gear assembly or a brake shall be supplied.
  - c. Actuator shall have a 6 ft wiring harness provided for ease in field wiring (above 1500 in-lbs). Two adjustable SPDT cam-actuated auxiliary switches, rated at 250 VAC shall be provided for indication of open and closed position. Actuator shall have heater and thermostat to minimize condensation within the actuator housing.
  - d. Actuator shall be equipped with a hand wheel for manual override to permit operation of the valve in the event of electrical power failure or system malfunction. Hand wheel must be permanently attached to the actuator and when in manual operation electrical power to the actuator will be permanently interrupted. The hand wheel will not rotate while the actuator is electrically driven.
  - e. The actuator shall be Analog, floating, or two position as called out in the control sequence of operation. All Analog valves shall be positive positioning, and respond to a 2-10 VDC, 4-20 mA, or adjustable signal as required. Analog

actuators shall have a digital control card allowing any voltage input for control and any DC voltage feedback signal for position indication.

2. Performance Verification Test
  - a. Control loops shall cause productive actuation with each movement of the actuator and actuators shall modulate at a rate which is stable and responsive. Actuator movement shall not occur before the effects of previous movement have affected the sensor.
  - b. Actuator shall have capability of signaling a trouble alarm when the actuator Stop-Go Ratio exceeds 30%.
3. Actuator Mounting for Damper and Valve arrangements shall comply with the following:
  - a. Damper Actuators: Shall not be installed in the air stream
  - b. A weather shield shall be used if actuators are located outside. For Damper Actuators use clear plastic enclosure.
  - c. Damper or valve actuator ambient temperature shall not exceed 122 degrees F through any combination of medium temperature or surrounding air. Appropriate air gaps, thermal isolation washers or spacers, standoff legs, or insulation shall be provided as necessary
  - d. Actuator cords or conduit shall incorporate a drip leg if condensation is possible. Water shall not be allowed to contact actuator or internal parts. Location of conduits in temperatures dropping below dew point shall be avoided to prevent water from condensing in conduit and running into actuator.
  - e. Damper mounting arrangements shall comply with the following:
    - 1) The contractor shall furnish and install damper channel supports and sheet metal collars.
    - 2) No jack shafting of damper sections shall be allowed.
    - 3) Multi-section dampers shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per section.
  - f. Size damper sections based on actuator manufacturers specific recommendations for face velocity, differential pressure and damper type. In general:
    - 1) Damper section shall not exceed 24 ft-sq. with face velocity £ 1500 FPM.
    - 2) Damper section shall not exceed 18 ft-sq. with face velocity £ 2500 FPM.
    - 3) Damper section shall not exceed 13 ft-sq. with face velocity £ 3000 FPM.
  - g. Multiple section dampers of two or more shall be arranged to allow actuators to be direct shaft mounted on the outside of the duct.
  - h. Multiple section dampers of three or more sections wide shall be arranged with a 3-sided vertical channel (8" wide by 6" deep) within the duct or fan housing and between adjacent damper sections. Vertical channel shall be anchored at the top and bottom to the fan housing or building structure for support. The sides of each damper frame shall be connected to the channels. Holes in the channel shall allow damper drive blade shafts to pass through channel for direct shaft mounting of actuators. Open side of channel shall be faced down stream of the airflow, except for exhaust air dampers.
  - i. Multiple section dampers to be mounted flush within a wall or housing opening shall receive either vertical channel supports as described above or sheet metal standoff collars. Sheet metal collars (12" minimum) shall bring each damper

section out of the wall to allow direct shaft mounting of the actuator on the side of the collar.

4. Valve Sizing for Water Coil

- a. On/Off Control Valves shall be line size.
- b. Modulating Control Valve Body Size may be reduced at most two pipe sizes from the line size or not less than ½ the pipe size. Size all water coil control valves for the application as follows:
  - 1) Booster-heat valves shall be sized not to exceed 4-9psi differential pressure. Size valve for 50% Valve Authority. Valve design pressure drop is equal to the sum of coil drop plus the balance valve drop.
  - 2) Primary valves shall be sized not to exceed 5-15psi differential pressure. Size valve for 50% Valve Authority. Valve design pressure drop is equal to the sum of coil drop plus the balance valve drop.
- c. Valve Mounting arrangements shall comply with the following:
  - 1) Unions shall be provided on all ports of two-way and three-way valves.
  - 2) Install three-way equal percentage Characterized Control valves in a mixing configuration with the “A” port piped to the coil.
  - 3) Install 2½ inch and above, Three-Way globe valves, as manufactured for mixing or diverting service to the coil.

2.14 ENCLOSURES

- A. All controllers, power supplies and relays shall be mounted in enclosures.
- B. Enclosures may be NEMA 1 when located in a clean, dry, indoor environment. Indoor enclosures shall be NEMA 12 when installed in other than a clean environment.
- C. Enclosures shall have hinged, locking doors.
- D. Provide laminated plastic nameplates for all enclosures in any mechanical room or electrical room. Include location and unit served on nameplate. Laminated plastic shall be 1/8” thick sized appropriately to make label easy to read.
- E. When enclosures are installed above accessible ceilings the ceiling grid must be labeled to easily identify enclosure location.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION (GENERAL)

- A. Install in accordance with manufacturer's instructions.
- B. Provide all miscellaneous devices, hardware, software, interconnections installation and programming required to ensure a complete operating system in accordance with the sequences of operation and point schedules.

- C. Provide a low temperature detector (freeze-stat) for each chilled water coil that has the potential to be exposed to freezing temperatures. Furnish one detector for each coil section.
- D. Provide one heating coil discharge temperature sensor and one heating coil control valve for each separate heating coil.
- E. Provide a discharge temperature sensor for each VAV box with heating coil and utilize Dual Maximum DDC control logic for reheat control.
- F. Chilled water control valves
  - 1. Install chilled water control valves in return piping downstream of cooling coil.
  - 2. Do not install balancing valves, circuit setters or other flow limiting devices.
- G. Cooling coil leaving air temperature sensor
  - 1. Install directly downstream of cooling coil, within 12" of coil face
    - a. No other equipment between coil face and temperature sensor.
    - b. Install sensing element in center of airstream; minimum 8" from each coil edge.
- H. Chilled water temperature sensor
  - 1. Install immersion temperature sensor well in CHWR piping downstream of cooling coil prior to branch isolation valve.
  - 2. Install in a full flow location (avoid T fittings, elbows, etc.).
- I. Chilled water differential pressure sensor
  - 1. Install directly across the hydraulically most remote control valves as identified in the hydraulic model.
  - 2. Install taps with manual isolation valves for service maintenance.
  - 3. Provide venting and equalizing capability (can be included with sensor manifold)
  - 4. Install taps horizontally in piping to minimize air and sediment affecting sensor.

### 3.3 LOCATION AND INSTALLATION OF COMPONENTS

- A. Locate and install components for easy accessibility; in general, mount 48 inches above floor with minimum 3'-0" clear access space in front of units. Obtain approval on locations from the Commissioner prior to installation.
- B. All instruments, switches, transmitters, etc., shall be suitably wired and mounted to protect them from vibration, moisture and high or low temperatures.
- C. Identify all equipment and panels. Provide permanently mounted tags for all panels.
- D. Provide stainless steel or brass thermowells suitable for respective application and for installation under other sections—sized to suit pipe diameter without restricting flow.

### 3.4 INTERLOCKING AND CONTROL WIRING

- A. Provide all interlock, line and low voltage and control wiring. All wiring shall be installed neatly and professionally, in accordance with Specification Division 26 and all national, state and local electrical codes.

- B. All wiring in Mechanical Equipment Rooms, communications or electrical closets shall be in approved raceways (cable tray, conduit, EMT, etc.). Other open wiring strung above ceilings shall be plenum rated cable, bundled together and protected from mechanical damage. Wiring within drywall cavities or enclosures or beneath raised floor construction shall be in conduit. Wiring shall be independently supported from the building structure with bridal rings and clips. The supporting of wiring from mechanical ductwork, piping or hangers is not acceptable.
- C. Cables for 120/24 volt AC. wiring, communications wiring and low level signal wiring (i.e., 4-20 mA analog) shall always be run in separate raceways.
- D. Use liquid tight flexible metal conduit, ½ inch minimum size, for making connections at instruments and devices mounted on piping or vessels or on equipment subject to vibration.
- E. Provide wiring as required by functions as specified and as recommended by equipment manufacturers, to serve specified control functions. Provide shielded low capacitance wire for all communications trunks.
- F. Control wiring shall not be installed in power circuit raceways. Magnetic starters and disconnect switches shall not be used as junction boxes. Provide auxiliary junction boxes as required. Coordinate location and arrangement of all control equipment with the City of New York prior to rough-in.
- G. Provide auxiliary pilot duty relays on motor starters as required for control function.
- H. Power used for control and instrumentation shall be taken from panelboards connected to the emergency power distribution system. Wiring and raceway materials and installation for ATC system power requirements shall be furnished under this Section.
- I. All control wiring in the mechanical, electrical, telephone and boiler rooms to be installed in raceways. All other wiring to be installed neatly and inconspicuously per local code requirements. If local code allows, control wiring above accessible ceiling spaces may be run with plenum rated cable (without conduit).
- J. Install all line voltage wiring, concealed or exposed, in conduit in accordance with the Division 26 specifications, NEC and local building code.
- K. All Primary Network wiring throughout the building shall be run in conduit. Terminal equipment sensors and the secondary network wiring may be run in plenum rated cable above accessible hung ceilings. Plenum cable shall be run parallel to building lines and supported from the building structure (not from duct, pipe or associated hangers) with bridle rings.
- L. Where conduit is required, it shall be steel Electric Metallic Tubing (EMT), except that it shall be Rigid Galvanized Steel (RGS) conduit where located outdoors, is exposed to mechanical damage or is intended for embodiment in concrete.
- M. Conduit runs which extend from the interior to the exterior of a building shall be sealed to prevent the circulation of air. This shall be accomplished by the installation of sealing fittings.
- N. All wires terminating at each field device, terminal box, field equipment cabinet, DDC control unit, or any other terminals, shall be identified using Brady clip sleeve type nonmetallic wire markers or equivalent. The identification shall be consistent with the tagging indicated on the approved shop drawings. The same identification code shall be carried through from the field device to the final termination point. After identification is complete, the wire markers shall be anchored using a single layer of non-yellowing clear polymer tape.

- O. Wires shall be terminated with insulated spade type lugs on screw terminals. Soldered connections shall only be made at instruments where no other means of termination is practical.
- P. Perform continuity testing for all wiring installed.
- Q. Control raceways shall not be hung from electrical raceways or attached to ceiling grid hanger wires.
- R. Percent fill of conduit, EMT or IMC shall not exceed Code maximum, regardless of service.
- S. No 300 volt insulated wiring shall terminate within or occupy any enclosure containing conductors operating at a voltage greater than 300 volts. This particularly applies to any analog or digital I/O wiring entering 460-volt motor starter enclosures or motor control centers.
- T. Use of tie wraps for supporting conduit, wire, cable, etc., will not be permitted.

### 3.5 DDC OBJECT TYPE SUMMARY

- A. Provide all database generation.
- B. Displays
  - 1. System displays shall show all analog and binary object types within the system. They shall be logically laid out for easy use. Provide outside air temperature indication on all system displays associated with economizer cycles.
  - 2. Each major system display shall link the associated “As Built” control flow drawing and sequence of operations to the system graphic for easy reference.
- C. Run Time Totalization
  - 1. At a minimum, run time totalization shall be incorporated for each monitored supply fan, return fan, exhaust fan, hot water and chilled water pumps. Warning limits for each point shall be entered for alarm and or maintenance purposes.
- D. Trend Log
  - 1. All binary and analog object types (including zones) shall have the capability to be automatically trended.
- E. Alarm
  - 1. All analog inputs (High/Low Limits) and selected binary input alarm points shall be prioritized and routed (locally or remotely) with alarm message per the Commissioner’s requirements.
- F. Database Save
  - 1. Provide back-up database for all stand-alone application controllers on disk.

### 3.6 TESTING, CALIBRATING, AND COMMISSIONING

- A. After completion of the installation of work in this Section, test, regulate, and adjust system equipment, controllers, alarms, thermostats, humidistats, automatic control valves, automatic damper motors, and related system accessories, each entire automation system, including

- interconnections with the building life safety system, and place these items in complete and satisfactory operating condition.
- B. Furnish labor and test apparatus required to calibrate and prepare for service instruments, controls and accessory equipment furnished under this Section. This work includes: Zero, span and range calibration checks of instruments and accessories, both field and panel mounted. In addition, the Vendor shall check actuators, control valves and automatic dampers, to insure proper action, stroke each actuator valve and automatic damper, and make necessary adjustments for stem and blade travel.
  - C. Furnish labor and test apparatus required to check the operation of control loops, set points and interlocks, as well as electronic equipment. The Contractor shall test every input/output point for proper performance through the entire system and maintain accurate test records for each point throughout the testing cycle and thereafter. Commissioner reserves the right to inspect those test records at any time and also to witness any of the point tests he deems appropriate. Testing shall be witnessed and accepted by the Commissioner.
  - D. Upon completion of the testing and calibration and in the presence of the Commissioner conduct an inspection of the control system and perform such tests that will be required to determine that contract obligations have been fulfilled. Notify the Commissioner two (2) weeks in advance of readiness to make such tests.
  - E. For site tests, the Contractor shall submit a test plan and commissioning plan for each system (i.e., air conditioning system, exhaust fans, pumps, chillers, cooling towers, etc.) for review by the Commissioner. After review of the plan, the Contractor shall prepare and submit a detailed test procedure for review. The test procedure shall also include reference to the Specification Section and Paragraph with which each test is intended to demonstrate compliance, together with the criteria for acceptance or rejection. The site system test, conducted by the Contractor in accordance with the test procedures and project schedules, and witnessed by the Commissioner shall be a comprehensive test of the system to demonstrate that all aspects of the hardware and software are in conformance with the Specification requirements. The system test shall include testing of all workstations so as to demonstrate no substantial degradation of performance of their functions as buildings, blocks, and workstations are added to the system. The Commissioner shall be notified at least five (5) working days prior to any testing and shall have the option of witnessing any and all tests.
  - F. Minimum validation and sign-off requirement (on all work stations) shall be as follows:
    - 1. Run samples of specified reports and trends.
    - 2. Execute menu tree.
    - 3. Display all required graphics.
    - 4. Execute digital and analog commands via mouse and keyboard.
    - 5. Demonstrate data entry/point modification/programming.
    - 6. Demonstrate program downloading.
    - 7. Demonstrate program uploading.
    - 8. Demonstrate control loop execution and stability.
    - 9. Demonstrate specified diagnostics.
    - 10. Demonstrate scan, update and alarm response.
    - 11. Execute all-points summary.
    - 12. Execute communication status checks.
  - G. The guarantee period shall not start until systems in this Section have been approved and accepted by the Commissioner, as detailed in the previous paragraphs, at which time the Commissioner will accept, in writing, the system of this Section in its entirety. This does not

preclude the beneficial use by the City of New York of any portion of the system prior to final acceptance of the whole system.

- H. During the guarantee period, the Vendor shall test the system under varying seasonal conditions to ensure that all operational sequences, as specified, are performed correctly. This shall include at least three additional visits after initial Commissioner acceptance. Where necessary, the Vendor shall make programming adjustments and instrument calibrations at no expense to the City of New York.
- I. After control devices have been initially commissioned (i.e. calibrated, tested and signed off), each BMS program shall be put on line and commissioned. The contractor shall, in the presence of the City of New York demonstrate each programmed sequence of operation and compare the results in writing. In addition, each control loop shall be tested to verify proper response and stable control, within specified accuracies. System program test results shall be recorded on commissioning data sheets and submitted for record. Any discrepancies between the specification and the actual performance will be immediately rectified and retested.
- J. Demonstration of DDC controller operational qualification shall include signed program commissioning documents.
  - 1. Program commissioning documents shall include: Provide a report including all DDC programs resident in the BMS system as a table of contents.
  - 2. Provide a report including all DDC programs resident in the BMS system as a table of contents.
  - 3. Provide the sequence of operations for each DDC program
  - 4. Follow the sequence of operations with a print out of the DDC program. Include comment statements in the DDC program referring to the sequence of operations.
  - 5. For each control loop in the sequence of operation, include a verification grid inclusive of indication of program pass/fail, date, technician initials the Commissioner and commissioning agent's initials, date.
    - a. Trend inputs, outputs, and setpoint of each control loop.
    - b. Include a graphical trend report indicating verification of loop tuning.
    - c. For each action due to change in HVAC equipment operation mode, safety cutout, operator override, etc., include a verification grid inclusive of indication of program pass/fail, date, technician initials, the Commissioner's and commissioning agent's initials, date.
- K. After control devices have been initially commissioned (i.e. calibrated, tested and signed off), each BMS program shall be put on line and commissioned. The contractor shall, in the presence of the Commissioner demonstrate each programmed sequence of operation and compare the results in writing. In addition, each control loop shall be tested to verify proper response and stable control, within specified accuracies. System program test results shall be recorded on commissioning data sheets and submitted for record. Any discrepancies between the specification and the actual performance will be immediately rectified and retested.
- L. Demonstration of DDC controller operational qualification shall include signed program commissioning documents. Program commissioning documents shall include:
  - 1. Provide a report including all DDC programs resident in the BMS system as a table of contents.
  - 2. Provide the sequence of operations for each DDC program
  - 3. Follow the sequence of operations with a print out of the DDC program. Include comment statements in the DDC program referring to the sequence of operations.

4. For each control loop in the sequence of operation, include a verification grid inclusive of indication of program pass/fail, date, technician initials, the City of New York, and commissioning agent's initials, date.
5. Trend inputs, outputs, and setpoint of each control loop.
6. Include a graphical trend report indicating verification of loop tuning.
7. For each action due to change in HVAC equipment operation mode, safety cutout, operator override, etc, include a verification grid inclusive of indication of program pass/fail, date, technician initials, the Commissioner and commissioning agent's initials, date.
8. Demonstration of ASC terminal unit controller operational qualification shall include signed digital terminal box commissioning documents.

**M. Digital Terminal Box Commissioning**

1. Perform digital terminal box commissioning composed of commanding terminal box airflow control dampers and reheat valves gradually between 0 and 100% open and recording feedback
2. Each point shall be recorded. Controlled variable outputs and sensor feedback input points shall be recorded in a list format.
3. Systems shall be given a pass or fail recommendation by the Contractor based upon empirical data gathered by the digital terminal box commissioning program. Contractor shall remediate box control deficiencies and retest repaired boxes. Successful digital terminal box commissioning reports shall be submitted to the Commissioner.

**3.7 CHECKOUT**

- A. Prior to beginning testing and acceptance, the Contractor shall submit a testing procedure for review and approval.
- B. Prior to starting work, carefully inspect installed work of other trades and verify that such work is complete to the point where work of this Section may properly commence.
- C. All testing listed herein shall be performed by the Contractor and shall make up part of the necessary verification of an operating control system. This testing shall be completed before the Commissioner is notified of the system demonstration.
- D. The Contractor shall furnish all labor and test apparatus required to calibrate and prepare for service of all instruments, controls, and accessory equipment furnished under this specification.
- E. Verify that all control wiring is properly connected and free of all shorts and ground faults. Verify that terminations are tight.'
- F. Enable the control systems and verify calibration of all input devices individually. Perform calibration procedures per manufacturers' recommendations.
- G. Verify that all binary output devices (relays, solenoid valves, two-position actuators and control valves, magnetic starters, etc.) operate properly and that the normal positions are correct.
- H. Verify that all analog output devices (I/Ps, actuators, etc.) are functional, that start and span are correct, and that direction and normal positions are correct. The Contractor shall check all control valves and automatic dampers to ensure proper action and closure. The Contractor shall make any necessary adjustments to valve stem and damper blade travel.

- I. Verify that the system operation adheres to the Sequences of Operation. Simulate and observe all modes of operation by overriding and varying inputs and schedules. Tune all DDC loops and optimum Start/Stop routines.
- J. Alarms and Interlocks:
  - 1. Check each alarm separately by including an appropriate signal at a value that will trip the alarm.
  - 2. Interlocks shall be tripped using field contacts to check the logic, as well as to ensure that the fail-safe condition for all actuators is in the proper direction.
  - 3. Interlock actions shall be tested by simulating alarm conditions to check the initiating value of the variable and interlock action.
- K. Contactor shall supply to the Commissioner all certified testing documentation from its vendors, subcontractors, suppliers and/or distributors as part of submittals and closeout documentation.

### 3.8 FIELD SERVICES

- A. Prepare and start logic control system under provisions of this section.
- B. Start-up and commission systems. Allow sufficient time for start-up and commissioning prior to placing control systems in permanent operation.
- C. Provide the capability for off-site monitoring at control contractor's local or main office. At a minimum, off-site facility shall be capable of system diagnostics and software download. The Commissioner shall provide phone line for this service for 1 year or as specified.
- D. Provide Commissioner with spare parts list. Identify equipment critical to maintaining the integrity of the operating system.

### 3.9 checkout & testing

- A. Prior to beginning testing and acceptance, the Contractor shall submit a testing procedure for review and approval.
- B. Prior to starting work, carefully inspect installed work of other trades and verify that such work is complete to the point where work of this Section may properly commence.
- C. All testing listed herein shall be performed by the Contractor and shall make up part of the necessary verification of an operating control system. This testing shall be completed before the Commissioner is notified of the system demonstration.
- D. The Contractor shall furnish all labor and test apparatus required to calibrate and prepare for service of all instruments, controls, and accessory equipment furnished under this specification.
- E. Verify that all control wiring is properly connected and free of all shorts and ground faults. Verify that terminations are tight.
- F. Enable the control systems and verify calibration of all input devices individually. Perform calibration procedures per manufacturers' recommendations.
- G. Verify that all binary output devices (relays, solenoid valves, two-position actuators and control valves, magnetic starters, etc.) operate properly and that the normal positions are correct.

- H. Verify that all analog output devices (I/Ps, actuators, etc.) are functional, that start and span are correct, and that direction and normal positions are correct. The Contractor shall check all control valves and automatic dampers to ensure proper action and closure. The Contractor shall make any necessary adjustments to valve stem and damper blade travel.
- I. Verify that the system operation adheres to the Sequences of Operation. Simulate and observe all modes of operation by overriding and varying inputs and schedules. Tune all DDC loops and optimum Start/Stop routines.
- J. Alarms and Interlocks:
  - 1. Check each alarm separately by including an appropriate signal at a value that will trip the alarm.
  - 2. Interlocks shall be tripped using field contacts to check the logic, as well as to ensure that the fail-safe condition for all actuators is in the proper direction.
  - 3. Interlock actions shall be tested by simulating alarm conditions to check the initiating value of the variable and interlock action.
- K. Contactor shall supply to the Commissioner all certified testing documentation part of submittals and closeout documentation.

### 3.10 DEMONSTRATION AND ACCEPTANCE

- A. Demonstration:
  - 1. Prior to acceptance, the control system shall undergo a series of performance tests to verify operation and compliance with this specification. These tests shall occur after the Contractor has completed the installation, started up the system, and performed its own tests.
  - 2. The tests described in this section are to be performed in addition to the tests that the Contractor performs as a necessary part of the installation, startup, and debugging process and as specified in the "Control System Checkout and Testing" section of this specification. Commissioner will be present to observe and review these tests. The Commissioner shall be notified at least 10 days in advance of the start of the testing procedures.
  - 3. The demonstration process shall follow that approved checklists and forms submitted shall be completed for all systems as part of the demonstration.
  - 4. The Contractor shall provide at least two persons equipped with two-way communication, and shall demonstrate actual field operation of each control and sensing point for all modes of operation including day, night, occupied, unoccupied, fire/smoke alarm, seasonal changeover, and power failure. modes. The purpose is to demonstrate the calibration, response, and action of every point and system. Any test equipment required to prove the proper operation shall be provided by and operated by the Contractor.
  - 5. As each control input and output is checked, a log shall be completed showing the date, technician's initials, and any corrective action taken or needed.
  - 6. Demonstrate compliance with Sequences of Operation through all modes of operation.
  - 7. Demonstrate complete operation of Operator Interface.
  - 8. Additionally, the following items shall be demonstrated:
    - a. DDC Loop Response. The Contractor shall supply trend data output in a graphical form showing the step response of each DDC loop. The test shall show the loop's response to a change in set point which represents a change of actuator position of at least 25% of its full range. The sampling rate of the trend shall be from 10 seconds to 3 minutes, depending on the speed of the loop. The trend data shall show for each sample the set point, actuator position, and controlled variable

- values. Any loop that yields unreasonably under-damped or over-damped control shall require further tuning by the Contractor.
- b. Demand limiting (if implemented) The Contractor shall supply a trend data output showing the action of the demand limiting algorithm. The data shall document the action on a minute-by-minute basis over at least a 30-minute period. Included in the trend shall be building kW, demand limiting set point, and the status of sheddable equipment outputs.
  - c. Demand limiting (if implemented) The Contractor shall supply a trend data output showing the action of the demand limiting algorithm. The data shall document the action on a minute-by-minute basis over at least a 30-minute period. Included in the trend shall be building kW, demand limiting set point, and the status of sheddable equipment outputs.
  - d. Optimum Start Stop (if implemented). The Contractor shall supply a trend data output showing the capability of the algorithm. The hour-by-hour trends shall include the output status of all optimally started and stopped equipment, as well as temperature sensor inputs of affected areas.
  - e. Interface to the building fire alarm system (if implemented).
9. Operational logs for each system that indicate all set points, operating points, valve positions, mode, and equipment status shall be submitted to the Commissioner. These logs shall cover three 48-hour periods and have a sample frequency of not more than 10 minutes. The logs shall be provided in both printed and disk formats.
  10. Any tests that fail to demonstrate the operation of the system shall be repeated at a later date. The Contractor shall be responsible for any necessary repairs or revisions to the hardware or software to successfully complete all tests.

**B. Acceptance**

1. All tests described in this specification shall have been performed to the satisfaction of the Commissioner to the acceptance of the control system as meeting the requirements of Completion. Any tests that cannot be performed due to circumstances beyond the control of the Contractor may be exempt from the Completion requirements if stated as such in writing by the Commissioner. Such tests shall then be performed as part of the warranty.
2. The system shall not be accepted until all forms and checklists completed as part of the demonstration are submitted and approved as required in Part 1: Submittals
3. Prior to starting work, carefully inspect installed work of other trades and verify that such work is complete to the point where work of this Section may properly commence.
4. Testing procedures for the control system shall be based on ASHRAE standards 135 and 135.1 and that the components were tested to BACnet International, BACnet Testing Laboratories standards.
5. All testing listed herein shall be performed by the Contractor and shall make up part of the necessary verification of an operating control system. This testing shall be completed before the Commissioner is notified of the system demonstration.
6. The Contractor shall furnish all labor and test apparatus required to calibrate and prepare for service of all instruments, controls, and accessory equipment furnished under this specification.

**3.11 DEMONSTRATION**

- A. Provide systems demonstration under provisions of Section 23 08 00 "Commissioning of HVAC".
- B. Demonstrate complete operating system to Commissioner.
- C. Provide certificate stating that control system has been tested and adjusted for proper operation.

**END OF SECTION 23 09 00**

**SECTION 23 09 05****SEQUENCES OF OPERATION FOR HVAC CONTROLS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 23 "Valves for HVAC Piping"
- D. Section 23 05 48 "Vibration Isolation, Seismic and Wind Restraints for HVAC Components"
- E. Section 23 05 93 "Testing, Adjusting and Balancing"
- F. Section 23 08 00 "Commissioning of HVAC Work"
- G. Section 23 09 00 "HVAC Instrumentation and Controls"
- H. Section 23 34 16 "Damper"
- I. This section is a part of each Division 23 00 00 section.

**1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.3 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - SEQUENCES OF OPERATION

2.1 GENERAL

- A. Provide a complete and operational temperature control and building automation system based on the following points and sequence of operation. The system shall be complete as to sequences and standard control practices. The determined point list is the minimum amount of points that are to be provided. If additional points are required to meet the sequence of operation, they will be provided.
- B. BACnet Object List
- C. The following points as defined for each piece of equipment are designated as follows:
  - 1. Binary Out (BO) - Defined as any two-state output (start/stop) (enable/disable), etc.
  - 2. Binary In (BI) - Defined as any two-state input (alarm, status), etc.
  - 3. Analog In (AI) - Defined as any variable input (temperature) (position), etc.
  - 4. Analog Out (AO) - Defined as any electrical variable output. 0–20mA, 4–20mA and 0–10VDC are the only acceptable analog outputs. The driver for analog outputs must come from both hardware and software resident in the controllers. Transducers will not be acceptable under any circumstance.
- D. All set points referenced in this section are subject to change and shall be adjustable from the BMS Operator Interface.
- E. Refer to separate BMS Points List for the complete listing of DDC points.
- F. All fan and pump Variable Frequency Drives (VFD) shall be furnished with a BACnet network communications card for serial interface to the BMS. The contractor shall provide network interface and all programming to monitor and control all points from the VFD's to the BMS. Communication interface shall be via BACnet MS/TP.
- G. In addition to the network interface each VFD shall be hardwired to the DDC controller for the following points:
  - 1. Start/Stop
  - 2. Status (Pressure switch or current switch)
  - 3. VFD Speed Control
  - 4. VFD Lock Out

- H. All pumps shall be monitored by a differential pressure switch piped across the pump for positive status indication to the BMS.
- I. All fans shall be monitored by a current switch for positive status indication to the BMS.
- J. Global DDC Points to be provided for the BMS:
  - 1. Outside Air Temperature
  - 2. Outside Air Humidity
  - 3. Outside Air CO2

## 2.2 EXHAUST FANS – CONSTANT VOLUME (Toilet Exhaust Fans)

- A. General:
  - 1. The system consists of a constant volume supply exhaust fan.
  - 2. All dampers for all fans shall be proved open/closed (via end switches) prior to starting/stopping fans.
- B. System Off:
  - 1. When the system is off, the exhaust damper shall be closed and the fan shall be off.
- C. System Start / Run:
  - 1. On a fan start command from the BMS, exhaust fan shall start.
- D. System Stop:
  - 1. When the system is called to stop, the system shall revert to the “Off” state as described above.

## 2.3 EXHAUST FANS – VARIABLE VOLUME

- A. General:
  - 1. The system consists of a Variable volume exhaust fan, exhaust damper with end switch, and a pressure transmitter.
  - 2. Pressure transmitter shall be wired directly into the VFD.
  - 3. VFD shall be UL listed. VFD's internal PID loop shall be utilized for fan speed control.
  - 4. All dampers for all fans shall be proved open/closed (via end switches) prior to starting/stopping fans.
- B. System Off:
  - 1. When the system is off, the exhaust damper shall be closed and the fan shall be off.
- C. System Start:
  - 1. On a fan start command from the BMS system, exhaust damper shall open and when it's end switch proves open, exhaust fan shall start.
- D. System Run:

1. Pressure transmitter shall modulate fan VFD speed to maintain required static pressure setpoint.

E. System Stop:

1. When the system is called to stop, the system shall revert to the “Off” state as described above.

## 2.4 REFRIGERANT MONITORING & EXHAUST SYSTEM – 2 SPEED

A. General:

1. The system consists of a 2 speed exhaust fan, exhaust damper with end switch, and a refrigerant leak detection system.
2. Contractor shall provide local control of the exhaust fan which shall cycle on and off to maintain the space temperature at or below 80°F (adj.). Provide a temperature sensor and annunciate an alarm to the BMS if the space temperature goes above the high alarm set point.
3. Contractor shall provide a complete installation of a refrigerant leak detection system including a main control panel, sensors, audible/visual alarm devices and emergency break glass switches. This system shall be linked to the BMS for alarm annunciation.
4. Refrigerant Leak Detection is specified under another section of this work.
5. When a refrigerant leak is detected, the exhaust fan shall start and the leak detection system shall activate the local alarm and transmit the alarm to the BMS. Provide an alarm horn, strobe light and silence switch for local annunciation at each entrance to the chiller room, above the break glass switch.
6. Break-glass stations shall be located at the outside of each door to the MER and shall initiate a shutdown for the chiller plant: shutting down all chillers, pumps, cooling towers and closing all isolation valves. A critical alarm shall be sent to the BMS.
7. An audio / visual alarm shall be wired to the refrigerant leak detection system.
8. Refrigerant sensors shall be wired directly to the refrigerant leak detection system.

B. System Off:

1. When the system is off, the exhaust damper shall be closed and the fan shall be off.

C. System Start:

1. On a fan start command from the refrigerant leak detection system, exhaust damper shall open and when it's end switch proves open, exhaust fan shall start.
2. Although System Start sequences have been given here, the intent of these systems is 24/7 operation and these sequences are only applicable during startup.

D. System Run:

1. System shall run in the lower speed 24/7 to ventilate the chiller MER.
2. On a signal from the refrigerant leak detection system, Audio / Visual Alarm shall engage, exhaust fan shall ramp up to the higher speed.

E. System Stop:

1. When the system is called to stop, the system shall revert to the “Off” state as described above.

## 2.5 CHILLED WATER AND CONDENSER WATER SYSTEMS

### A. General:

1. The system consists of a primary and secondary loop. The primary loop consists of (1) free-cooling plate & frame heat exchangers, two water-cooled centrifugal chillers, two variable volume primary chilled water pumps, and one chilled water differential pressure bypass valve. The primary loop serves chilled water to Fan Coil Units & the C3 level Air Handling Units. The secondary loop consists of two plate & frame heat exchangers, two variable volume secondary chilled water pumps, and one chilled water differential pressure bypass valve. The secondary loop serves chilled water to activate the chilled beams.

### B. Chillers (CH-1, 2) / Chilled Water System (CHWP--1, 2)

1. The contractor shall furnish BACnet DDC controls for monitoring and control of the chiller and chilled water system. The contractor shall connect the DDC controller to the BMS network for point monitoring and control. The operator shall have the ability to select CHW pump lead/lag and pump manual/auto operation from switches mounted on the face of the local control panel. Indicator lights on the face of the panel shall indicate pump running status for each pump. A local alarm with audible/visual indication and silence switch shall also be mounted on the face of the panel. Local alarms annunciated shall be pump fail and CHW high temperature alarm.
2. The controls provided by the manufacturer of the chillers shall operate to maintain its programmed chilled water set point. The set point shall be adjustable from the BMS system through a 4-20 milliamp analog output signal. Start/stop and status shall also be hardwired points to the BMS system control panel.
3. Chiller monitoring shall be via a two-wire BACnet interface to the chiller manufacturer's microprocessor controller (Approximately 50 points). The chiller control panel shall be furnished with a BACnet interface for communication to the BMS. Chiller manufacturer to provide chiller network communication card. The contractor shall provide network interface and all programming to monitor and control all points from the chillers to the BMS.
4. The contractor shall furnish, install, and wire all devices necessary for a complete operational chilled water system including but not limited to miscellaneous interlock and control wiring for chillers, refrigerant compressors, pumps, flow switches, etc. The contractor shall mount and wire all components furnished by the chiller manufacturer that are not factory installed. Coordinate requirements with the chiller manufacturer.
5. Chillers shall start through a manual command from the BMS. Upon a need for chilled water, the chiller shall be manually enabled through the BMS after the lead chilled water and condenser water pumps are started and the necessary isolation and switchover valves have been properly positioned. The enabled chiller CHW and CW isolation valves shall open and prove open through operator mounted limit switches indicating valve position. Once the isolation valves are opened, the lead chilled water pump shall start and slowly ramp up to speed control set point. Refer to the Condenser Water System for further detail on condenser water control. Once started, the chiller shall stay on for a minimum time, determined by the chiller manufacturer.
6. The Central Plant Energy Control System (CPECS) shall monitor and control all mechanical equipment and instrumentation, through the BMS, that are directly involved in the production and distribution of chilled water (CHW) including the compressors, chillers, cooling towers, pumps and valves located in the central chilled water plant. The CPECS shall continuously and automatically optimize the plant energy usage using adaptive control methodology, data correlation and real time self-calibrating data feedback loops that continually adjusts logic in accordance with actual system conditions such as chiller approach, pumping efficiency and cooling tower performance, as measured in KW per

- ton of cooling. The CPECS will also monitor and control the air handler (as shown on drawings).
7. The Chilled Water Plant operation will be performed through the BMS via manual commands by the plant operations personnel. Advisory messages shall be posted through the BMS to alert operations personnel on when additional chillers, cooling towers, chilled water pumps and condenser water pumps should be enabled and disabled in order to meet the current demand in the most efficient manner.
  8. When an additional chiller is enabled, the CHW and CW isolation valves shall open and prove open through operator mounted limit switches indicating valve position. When a chiller is disabled the chiller CHW and CW isolation valves shall close after flow is no longer required by the machine.
  9. The CHW pump VFD speed shall be controlled automatically through the BMS to maintain the chilled water system differential pressure at set point. A differential pressure sensor and pressure bypass valve shall be located just prior to the last load on the circuit. The sensor shall be wired to the same controller that controls the pump VFD and bypass valve. The pump VFD shall be controlled to maintain the minimum chilled water system differential pressure set point and shall also maintain the chiller flow requirements. The minimum flow set point shall vary and shall be determined by the quantity of chillers or heat exchangers enabled. When the pump VFD is running at the minimum flow required and system pressure is too high the pressure bypass valve shall modulate to maintain the system pressure at set point.
  10. For each set of pumps one pump is primary and the other is stand-by. Provide staging control of the pumps so if the primary pump fails, lock it out and start the stand-by pump. An alarm shall be annunciated to the BMS. Rotate the primary and stand-by pumps on a regular schedule (adj.) to equalize runtime.
  11. The BMS shall monitor the water flow meter located in the chilled water supply pipe to each chiller. The water flow meter along with the matched pair of temperature sensors located on the chillers chilled water supply and return lines shall be used to calculate BTU.
  12. The BMS shall monitor the water flow meter located in the supply pipe for the chilled water system. The water flow meter along with the matched pair of temperature sensors located on the chilled water system supply and return lines shall be used to calculate BTU.

## 2.6 CONDENSER WATER SYSTEM

### A. Cooling Towers (CT-1, 2, 3) / Condenser Water System (CWP-1, 2)

1. The contractor shall furnish BACnet DDC controls for monitoring and control of the cooling towers and condenser water system. The contractor shall connect the DDC controller to the BMS network for point monitoring and control. The operator shall have the ability to select CW pump lead/lag and pump manual/auto operation from switches mounted on the face of the local control panel. Indicator lights on the face of the panel shall indicate pump running status for each pump. A local alarm with audible/visual indication and silence switch shall also be mounted on the face of the panel. Local alarms annunciated shall be pump fail and CW high temperature alarm.
2. The contractor shall provide all low voltage control electrical installation and wiring for makeup water system, sand filtration system, low water alarm, high water alarm, pan heater and low temperature controls, vibration controls, water treatment system, etc. Refer to the cooling tower specifications for details.
3. Basin heaters shall cycle as required to maintain a minimum water temperature and to prevent freezing. Under no load conditions, the system pumps shall de-energize and the starter interlock shall energize the heater circuit. All active fans shall be cycled during cold weather operation to avoid long periods of idle operation, and subsequent possibility of ice build-up. Basin heaters shall be inhibited when a low water condition exists. A low

- or high water level condition shall be annunciated to the BMS. A basin water temperature sensor shall annunciate high and low temperature alarms to the BMS.
4. Cooling tower vibration switches shall stop the fan through a local hardwired interface when vibration exceeds set point. Monitor each switch and annunciate alarms to the BMS.
  5. The Central Plant Energy Control System (CPECS) shall monitor and control all mechanical equipment and instrumentation, through the BMS, that are directly involved in the production and distribution of chilled water (CHW) including the compressors, chillers, cooling towers, pumps and valves located in the central chilled water plant. The CPECS shall continuously and automatically optimize the plant energy usage using adaptive control methodology, data correlation and real time self-calibrating data feedback loops that continually adjusts logic in accordance with actual system conditions such as chiller approach, pumping efficiency and cooling tower performance, as measured in KW per ton of cooling. The CPECS will also monitor and control the air handler (as shown on drawings).
  6. The Chilled Water Plant operation will be performed through the BMS via manual commands by the plant operations personnel. Advisory messages shall be posted through the BMS to alert operations personnel on when additional chillers, cooling towers, chilled water pumps and condenser water pumps should be enabled and disabled in order to meet the current demand in the most efficient manner.
  7. When a cooling tower is enabled, the sump and spray valves shall open and prove open through operator mounted limit switches indicating valve position. When a cooling tower is disabled the sump and spray valves shall close.
  8. The CW pump VFD speed shall be controlled automatically through the BMS to maintain the recommended condenser water flow set point as measured by the condenser water flow meter. The flow set point shall vary and shall be determined by the quantity of chillers or heat exchangers enabled.
  9. For each set of pumps one pump is primary and the other is stand-by. Provide staging control of the pumps so if the primary pump fails, lock it out and start the stand-by pump. An alarm shall be annunciated to the BMS. Rotate the primary and stand-by pumps on a regular schedule (adj.) to equalize runtime.
  10. The CW supply temperature shall be maintained by enabling and staging the cooling towers and cooling tower fans. The enabling of the towers shall be done manually by the plant operations personnel via an advisory message through the BMS. Once a tower has been enabled the tower fans shall be controlled automatically through the BMS to maintain the desired condenser water supply temperature set point.
  11. The BMS shall monitor the water flow meter located in the condenser water supply pipe to each chiller. The water flow meter along with the matched pair of temperature sensors located on the chillers condenser water supply and return lines shall be used to calculate BTU.
  12. The BMS shall monitor the water flow meter located in the condenser water supply pipe for the condenser water system. The water flow meter along with the matched pair of temperature sensors located on the condenser water system supply and return lines shall be used to calculate BTU.

**B. Economizer (Free Waterside Cooling) Heat Exchanger (HX-1)**

1. The contractor shall furnish BACnet DDC controls for monitoring and control of the economizer heat exchanger. The contractor shall connect the DDC controller to the BMS network for point monitoring and control.
2. The economizer heat exchanger shall be used for free cooling and shall be activated whenever any mechanical equipment requiring chilled water is operating and the outside wet bulb temperature is below set point. The Central Plant Energy Control System (CPECS) shall indicate when the plant personnel shall enable the PHX via an advisory sent through the BMS.

3. When the PHX is enabled the heat exchanger CHW and CW isolation valves shall open and prove open through operator mounted limit switches indicating valve position. When a PHX is disabled the PHX CHW and CW isolation valves shall close.
4. Control cooling towers to maintain set point. The calculated set point shall be the sum of the tower approach temperature and outside wet bulb. If the calculated set point is above chilled water temperature requirements, the chillers shall be enabled and PHX shall be disabled. If the calculated set point is equal to or below the chilled water temperature requirements, the PHX shall be enabled.
5. In the switch over from free cooling to mechanical cooling, the condenser water supply temperature shall be allowed to reach a minimum temperature of 60° F (adj.) prior to enabling mechanical cooling.
6. The BMS shall track the run time of the economizer heat exchanger and shall totalize the time on a monthly basis. The run time shall be based on the time the isolation valves are open to the heat exchangers.
7. The BMS shall monitor the water flow meter located in the condenser water supply pipe to the PHX. The water flow meter along with the matched pair of temperature sensors located on the PHX condenser water supply and return lines shall be used to calculate BTU.
8. The BMS shall monitor the water flow meter located in the chilled water supply pipe to the PHX. The water flow meter along with the matched pair of temperature sensors located on the PHX chilled water supply and return lines shall be used to calculate BTU.

## 2.7 HOT WATER SYSTEM

### A. General

1. Hot Water system consists of three condensing boilers, two variable speed primary hot water pumps, two variable speed primary hot water pumps, and a differential pressure bypass valves. The system serves hot water to Air Handling Units on C-3 level, perimeter radiation, fan coil units & chilled beams throughout the building.
2. Boilers will be provided with their manufacturer's PLC control package which shall stage and control boilers fire rate to maintain proper loop temperature set point. The boiler master control panel shall be furnished with a BACnet interface for communication to the BMS. The contractor shall provide an interface and all programming to monitor and control all points from the boilers to the BMS.
3. Refer to Section 23 51 01 – BOILER DRAFT CONTROL SYSTEM for additional requirements.
4. The hot water system will consist of both a primary hot water system (serving the AHU pre-heat coils, reheat coils, perimeter radiation).
5. The boiler master control panel shall be furnished with a BACnet interface for communication to the BMS. The contractor shall provide an interface and all programming to monitor and control all points from the boilers to the BMS.
6. The contractor shall install all field wiring required for boiler operation that cannot be factory installed.
7. The contractor shall furnish and install BACnet DDC controls for automatic stand-alone control of both the primary and secondary hot water system. The DDC controls shall be connected to the BMS for remote monitoring and control. The operator shall have the ability to select HW pump lead/lag and pump manual/auto operation from switches mounted on the face of the local control panel. Indicator lights on the face of the panel shall indicate pump running status for each pump.
8. A local alarm with audible/visual indication and silence switch shall also be mounted on the face of the panel. Local alarms annunciated shall be pump fail and HW high temperature alarm.

### B. Primary Hot Water System

1. An outside air temperature interlock or manual command through the BMS shall enable the primary hot water system.
  2. When enabled to run, the lead boiler isolation valve shall open through a hardwire connection to the boiler control panel. Once the valve is open the lead primary hot water system pump shall start and slowly ramp up to speed control set point. A water flow meter shall provide positive flow indication to the boiler panel and once flow is proven the boiler shall fire. The boiler controls shall maintain the hot water supply temperature at set point (140°F adj.). When an additional boiler is enabled the associated isolation valve shall be opened prior to enabling boiler.
  3. A differential pressure sensor shall be located just prior to the last load on the circuit. The sensor shall be wired to the same controller that controls the pump VFD and bypass valve. The pump VFD shall be controlled to maintain the hot water system differential pressure set point. If the pump is operating at the minimum VFD speed and the differential pressure is above set point, the differential pressure bypass valve shall modulate open to maintain set point.
  4. For each set of pumps one pump is primary and the other is stand-by. Provide staging control of the pumps so if the primary pump fails, lock it out and start the stand-by pump. An alarm shall be annunciated to the BMS. Rotate the primary and stand-by pumps on a regular schedule (adj.) to equalize runtime.
  5. The BMS shall monitor the water flow meter located in the supply pipe for the primary hot water system. The water flow meter along with the matched pair of temperature sensors located on the hot water system supply and return lines shall be used to calculate BTU.
- C. The temperature control valves shall maintain the primary hot water supply temperature at set point. The set point shall be adjustable and shall be reset by outside air temperature as follows:

Outside Air Temperature	Set Point
50°F	110°F
30°F	130°F
0°F	140°F

- D. The temperature control valves shall maintain the secondary hot water supply temperature at set point. The set point shall be adjustable and shall be reset by outside air temperature as follows:

Outside Air Temperature	Set Point
50°F	100°F
30°F	110°F
0°F	120°F

- E. The BMS shall monitor the water flow meter located in the supply pipe for the secondary hot water system. The water flow meter along with the matched pair of temperature sensors located on the hot water system supply and return lines shall be used to calculate BTU.

## 2.8 AIR SYSTEMS

- A. General

1. Interlock all associated dampers to open/close with fan start/stop.
2. BMS shall monitor the fan status via a current switch and shall track run times when fan is in operation. If the fan fails to operate an alarm shall be annunciated at the BMS and dampers shall be indexed to their normal off positions.
3. For fans greater than 2,000 CFM, provide a high discharge static pressure switch if dampers are located upstream of the fan and/or a low static pressure switch if dampers are located downstream of the fan to prevent mechanical damage if a damper fails to open. The switch shall stop the fan when duct pressure exceeds design. The fan shall remain off until the pressure switch is reset.
4. Duct smoke detector shall stop the fan upon the presence of smoke through a signal from the fire alarm system. The Fire Alarm System shall stop all fans greater than 2000 CFM through a hard wired safety circuit in the fan starter/VFD and signal the BMS when a fire alarm is present.
5. Fire/smoke dampers shall be wired back to the associated fan so that the dampers open/close with fan start/stop. Where dampers are located just up or down stream from the fan, the damper shall open and prove open via a damper mounted end switch prior to starting the fan motor. All fire/smoke dampers shall be monitored through the BMS for damper open/close status.
6. BMS shall control heating coil freeze protection pumps so that the pump is commanded on whenever the outdoor air temperature falls below 42°F (adj.). The pump shall run continuously until the outdoor air temperature rises 2°F above the set point at which the pump was commanded on.
7. Dirty filter status shall be monitored by a differential pressure transmitter and the alarm indication shall be through DDC high analog alarm limit set point.
8. Each individual supply, return and exhaust fan in all the air-handling units' fan arrays and lab exhaust fan array shall be provided with an integral back flow prevention device (damper) that prohibits recirculation of air in the event that a fan or multiple fans become disabled or are not operating

## 2.9 VARIABLE AIR VOLUME ENERGY RECOVERY UNIT

A. These sequences are for system AHU-C-1, 1-1, 2-1

B. General

1. The contractor shall furnish BACnet DDC controls for monitoring and control of the air handling unit and associated exhaust fan. The contractor shall connect the DDC controller to the BMS network for point monitoring and control.
2. The unit consists of a minimum and maximum modulating outside air intake damper, a modulating return damper, a modulating spill air damper, a backdraft damper, a pre-filter and final filter section, a hot water heating coil and freeze protection pump, a chilled water cooling coil, a humidifier control valve and humidifier summer / winter isolation valve, an array of three variable volume supply air fans and a variable volume return air fan. Units are equipped with air flow measuring stations on the outside air, return air, & supply air. Units are providing conditioned air for VAV boxes
3. The contractor shall furnish all necessary controls to accomplish the sequence of operation as described below.

C. System Off

1. When the system is off, the outside air and spill air dampers are closed. The return air damper is open. The heating coil control valve is under control of its discharge temperature sensor to maintain the plenum temperature of 50 degrees whenever the outside air temperature is less than 40 degrees. The supply and return fans are off. The CHW cooling coil valve shall be closed. The Humidifer Control Valve Shall be closed.

2. All safeties shall be fully operation when the system is off.

**D. System Start**

1. The AHU shall be started through the BMS by a manual command or automatically and remotely from the BMS based upon the time of day, operator command, or other programmed parameters.
2. Upon a command to start all associated fire/smoke dampers shall open, the minimum outside air damper shall open to the airflow set point and the exhaust and return air dampers shall be modulated to their corresponding positions.
3. Supply fan isolation dampers shall be opened and shall prove open through a damper mounted end switch prior to fan start. This shall be hard wired to the fan VFD safety circuit so that if the damper is not in the open position while the fan is running the fan shall stop.
4. The return fan shall be interlocked to run whenever the supply fan is running.
5. The supply and return fans shall slowly ramp up to speed control set point and shall run continuously. The supply fan variable speed drive shall be controlled to maintain the supply static pressure set point, as sensed at a point 2/3 downstream of the supply fan. The return fan variable speed drive shall be controlled to maintain a constant air volume differential as measured by the supply and return airflow measuring stations, to maintain positive pressurization of the space.
6. The heating coil valve shall be controlled in sequence with the cooling coil valve and economizer dampers to maintain discharge air set point (55°F adj.) as reset by return air temperature.

**E. System Run**

1. The supply and return fans shall start on a slow speed and gradually ramp up to attain setpoint.
2. A temperature sensor located in the mixed air shall through the BMS modulate the variable outside air, return air dampers in unison, and spill air damper as required to maintain its setpoint, initially 55 degrees (adjustable). Provide a return air and outside air humidity sensor to allow enthalpy overcall of the mixed air control loop.
3. Provide a CO2 sensor in each space to monitor carbon dioxide. Demand Control Ventilation Mode shall be initiated whenever the CO2 level is detected to be in excess of 1000 PPM. When initiated, the supply fan speed shall increase and the mixed air temperature control loop will be overridden and the outside air and return air dampers shall position to allow more outside air into the system. The DCV mode will seek to maintain a differential of 570 PPM, when the space CO2 measurements drop to 800 PPM, DCV mode will terminate.
4. Refer to Section 23 09 11 "Air Quality Monitoring System" for additional requirements.
5. A temperature sensor located in the fan discharge shall through the BMS modulate the heating coil control valve in sequence with the cooling coil control valve without overlap as required to maintain its setpoint. When favorable outside air conditions are sensed, the BMS shall reset the mixed air temperature control loop to affect the first stage of cooling.
6. A humidity sensor located in the fan discharge shall through the BMS modulate the humidifier control valve as required to maintain its setpoint initially set at 45% (adj). The humidifier summer / winter isolation valve shall be open in the heating season and closed in the cooling season.
7. Economizer dampers shall be enabled to provide free cooling when the AHU is in the cooling mode and the outside air enthalpy is less than the air handling unit return air enthalpy. The outside air and exhaust dampers shall modulate open and return air damper shall modulate closed. The chilled water coil shall be enabled as necessary to

maintain temperature set point if the outdoor air damper is open 100% and the unit cannot maintain the discharge temperature set point.

8. Humidification: The space humidity levels shall be maintained at a minimum of 40% RH (adj.). If the humidity level approaches the low limit set point the humidifier shall be enabled by opening the steam isolation valve and controlling the humidity control valve to maintain the supply humidity set point of 75% RH (adj.). The humidifier shall continue to operate until all of the space humidity levels have risen 3% RH (adj.) above the low limit set point. The high humidity limit shall be located downstream from the humidifier and shall disable the humidifier through a hardwired interlock if the high humidity level of 85% RH (adj.) is exceeded.
9. De-humidification: The space humidity levels shall be maintained at a maximum of 60% RH (adj.). If the humidity level approaches the high limit set point, the cooling coil valve shall modulate open to maintain the discharge air humidity set point subject to a supply air temperature low limit of 50°F (adj.). The dehumidification cycle shall continue until all of the space humidity levels have dropped 3% RH (adj.) below the high limit set point.
10. When the unit is indexed off, all fans shall stop, the associated fire smoke dampers shall close, the outside air and exhaust air dampers shall close and the return air
11. A duct static pressure sensor mounted in the supply duct will through the BMS vary the speed of the supply fan as required to maintain system static pressure at setpoint (determined at balancing).
12. An air flow sensor mounted in the inlet of the supply fan shall measure the volume (CFM) of the supply air. This value shall be used to establish the setpoint for the return fan. An air flow sensor mounted in the inlet of the return fan shall measure the volume (CFM) of the return air. The BMS shall then adjust the speed of the return fan so that the return volume is 10% less than the supply volume for pressurization control.

**F. Unoccupied Mode**

1. When the system is shut down (not due to a safety trip shutdown), it will revert to the status described above in "System Off". If the average space temperature exceeds the summer or winter setback temperature, the system will start and operate in 100% recirculation, on cooling or full heating until the average space temperature is brought to occupied mode setpoint, at which time the unit will stop.

**G. System Stop**

1. When the system is called to stop, the system shall revert to the "Off" state as described above.

**H. Safeties**

1. A freezestat with its element serpentine across the face of the cooling coil will stop the supply fan and return fan, close the outside air and return air dampers, open the heating coil control valve 100% and activate a critical alarm at the BMS. The freezestat shall be the manually reset type. The freezestat shall start the freeze protection pump.
2. A smoke detector located in the supply fan discharge and a second smoke detector located in the return air shall stop the supply fan and return fan through the fire alarm system if the products of combustion are sensed.
3. A differential pressure switch with indicator gauge installed across the filter shall indicate whenever the filter is obstructed and initiate a non-critical alarm at the BMS.
4. Static pressure sensors located on the inlet and discharge of the supply fan and return fan shall stop the supply and return fans and sound an alarm at the BMS if the fan suction pressure or discharge pressure exceeds the setting of the respective sensor. Pressure sensors shall be hard-wired to the respective fan start circuit.

5. BMS shall monitor differential pressure sensor across the energy recovery wheel and generate maintenance alarm if it's setpoint is exceeded.
6. A high humidity limit sensor mounted in the supply fan discharge shall close the humidifier control valve (in heating season) and open the cooling coil control valve (in cooling season) 100% until the discharge humidity levels return to normal.

#### 2.10 2-PIPE FAN COIL UNITS

- A. The fan coil units are 2-pipe cooling only units, controlled by a networked space thermostat to maintain space temperature at setpoint. The BMS shall monitor space temperature and generate and alarm if the space temperature deviates more than 2 degrees from setpoint.
- B. The contractor shall furnish BACnet DDC controls for monitoring and control of each fan coil unit. The contractor shall connect the DDC controller to the BMS network for point monitoring and control.
- C. A space temperature sensor shall control the supply fan and cooling coil valve.
- D. When the room temperature is below the cooling set point, the cooling valve shall be closed and the fan shall be off. On a rise in room temperature above the cooling set point the cooling coil valve shall open and the fan shall start.
- E. An alarm shall be sent to the BMS if the space temperature rises above the high alarm limit set point.
- F. The contractor shall furnish and install a leak detector in the auxiliary drip pan. Upon detection of a high water condition the fan shall stop and the chilled water valve shall close and an alarm shall be annunciated to the BMS.
- G. A temperature sensor mounted in the discharge duct shall monitor the discharge temperature at the BMS.
- H. A leak detector mounted in the auxiliary drain pan shall initiate an alarm at the BMS.
- I. Modulate the chilled water control valve to maintain space cooling set point.
- J. A pressure sensor mounted across the filter shall initiate an alarm at the BMS when the filter becomes loaded.

#### 2.11 4-PIPE FAN COIL UNITS

- A. The fan coil units are 4-pipe cooling and heating units, controlled by a networked space thermostat to maintain space temperature at setpoint. The BMS shall monitor space temperature and generate and alarm if the space temperature deviates more than 2 degrees from setpoint.
- B. The contractor shall furnish BACnet DDC controls for monitoring and control of each fan coil unit. The contractor shall connect the DDC controller to the BMS network for point monitoring and control.
- C. A space temperature sensor shall control the supply fan and cooling and heating coil valves.
- D. When the room temperature is between the occupied heating and cooling set points (inside of the bias), the fan shall be off and the heating and cooling valves shall be closed. On a rise in

room temperature above the cooling set point the fan shall start and the cooling valve shall modulate open, and the heating valve shall remain closed. On a drop in room temperature below the heating set point, the fan shall start and the heating valve shall modulate open, and the cooling valve shall remain closed. The same shall occur for the unoccupied heating and cooling set points when the system is indexed to the unoccupied mode through the BMS time schedule.

- E. An alarm shall be sent to the BMS if the space temperature rises above the high alarm limit set point or falls below the low limit set point.
- F. The contractor shall furnish and install a leak detector in the auxiliary drip pan. Upon detection of a high water condition the fan shall stop and the chilled water valve shall close and an alarm shall be annunciated to the BMS.
- G. A temperature sensor mounted in the discharge duct shall monitor the discharge temperature at the BMS.
- H. A leak detector mounted in the auxiliary drain pan shall initiate an alarm at the BMS.
- I. Modulate the chilled water and hot water control valves to maintain space set point.
- J. A pressure sensor mounted across the filter shall initiate an alarm at the BMS when the filter becomes loaded.

## 2.12 HEATING & VENTILATING UNIT

### A. General

- 1. The unit consists of an outside air intake damper, one filter section, hot water heating coil with freeze protection pump, freezestat, and variable speed supply fan.
- 2. These units serve heated ventilation air to mechanical spaces.
- 3. The contractor shall furnish all necessary controls to accomplish the sequence of operation as described below.

### B. System Off

- 1. When the system is off, the outside air damper is closed. The heating control valve is under control of its discharge temperature sensor to maintain the plenum temperature of 50 degrees whenever the outside air temperature is less than 40 degrees. The supply fan is off. The chilled water cooling coil control valve shall be closed.
- 2. All safeties shall be fully operational when the system is off.

### C. System Start

- 1. The supply fan shall be started manually at the VFD or automatically and remotely from the BMS based upon the time of day, operator command, or other programmed parameters. When the supply fan is started the system shall come under control.
- 2. When the supply fan is called to start the outside air damper shall open. When all interlocked dampers have proven open 100% via damper actuated end switches, the supply fan will start. The supply fans will start on a slow speed and gradually ramp up to attain setpoint.
- 3. Although System Start sequences have been given here, the intent of these systems is 24/7 operation and these sequences are only applicable during startup.

D. System Run

1. A temperature sensor located in the fan discharge shall through the BMS modulate the heating coil control valve as required to maintain its discharge setpoint.

E. System Stop

1. When the system is called to stop, the system shall revert to the “Off” stat as described above.

F. Monitoring, Safeties, & Alarms

1. A freezestat with its element serpentine across the face of the cooling coil will open the heating coil control valve 100% and activate a critical alarm at the BMS. The freeze protection circulating pump shall be started. The freezestat shall be the manually reset type.
2. A smoke detector located in the supply fan discharge shall stop the supply fan through the fire alarm system if the products of combustion are sensed.
3. A differential pressure switch with indicator gauge installed across the filters shall indicate whenever the filter is obstructed and initiate a non-critical alarm at the BMS.

## 2.13 FIN-TUBE RADIATOR

- A. The contractor shall furnish, install and wire DDC controls for local control of each finned tube radiator and connect to the BMS for remote monitoring and control. Contractor shall provide all required field wiring of controls that cannot be factory installed for proper unit operation.
- B. Provide Automatic, Pressure-Independent, Flow/Pressure Control Valves to control finned tube elements as indicated on the plans. Refer to Section 23 05 23 “Valves for HVAC Piping” for additional details.
- C. The BMS shall control in sequence the heating coil control valve in the 4-pipe chilled beams and the fin-tube radiator control valve in each zone.
- D. The BMS shall monitor space temperature via a wall mounted temperature sensor.
- E. There shall be a base cooling setpoint of 72 deg F and a base heating setpoint of 70 deg F.
- F. Upon a drop in room temperature below the occupied heating temperature setpoint, the perimeter radiation hot water control valve will modulate open to maintain occupied space temperature setpoint of 70 deg F (adjustable). Upon a further drop in temperature below the setpoint, the chilled beam hot water valve will modulate open to maintain the occupied space temperature setpoint of 70 deg F (adjustable). As the room temperature rises the hot water valve in reverse order will modulate closed.

## 2.14 HOT WATER CABINET UNIT HEATER

- A. The contractor shall furnish, install, and wire a control valve to control the cabinet unit heater. The thermostat shall be integral to the unit. On a fall in space temperature below set point, the thermostat shall open the valve and energize the unit fan. On a rise in space temperature, the fan shall be de-energized and the valve shall close.
- B. A pipe-mounted electric aqua-stat shall lock out the fan if hot water is not available.

- C. Cycle the 2-position hot water control valve to maintain space heating set point.
- D. Controls shall be standalone and not connected to the BMS.

## 2.15 CRAC (COMPUTER ROOM AIR CONDITIONING) UNIT

### A. General

- 1. The requirements of this sequences shall apply to all equipment designated as CRAC & CRAH.
- 2. CRAC units shall be provided with their manufacturer's DDC controller which shall manage all aspects of CRAC equipment operation and sequencing. BMS shall have a communication interface with CRAC control package. The control valve shall be provided by the contractor and field installed but shall be wired back to the CRAC local controller.

### B. Safeties

- 1. A spot type leak detector shall be installed in the CRAC unit auxiliary drain pan and shall be wired directly to solenoid isolation valves on the supply and return piping to the unit. The leak detector shall also initiate an alarm at the BMS.

## 2.16 CONDENSER WATER SYSTEM

### A. Cooling Towers (CT-1, 2) / Condenser Water System (P-4, 5)

- 1. The contractor shall furnish BACnet DDC controls for monitoring and control of the cooling towers and condenser water system. The contractor shall connect the DDC controller to the BMS network for point monitoring and control. The operator shall have the ability to select CW pump lead/lag and pump manual/auto operation from switches mounted on the face of the local control panel. Indicator lights on the face of the panel shall indicate pump running status for each pump. A local alarm with audible/visual indication and silence switch shall also be mounted on the face of the panel. Local alarms annunciated shall be pump fail and CW high temperature alarm.
- 2. The contractor shall provide all low voltage control electrical installation and wiring for makeup water system, sand filtration system, low water alarm, high water alarm, pan heater and low temperature controls, vibration controls, water treatment system, etc. Refer to the cooling tower specifications for details.
- 3. Basin heaters shall cycle as required to maintain a minimum water temperature and to prevent freezing. Under no load conditions, the system pumps shall de-energize and the starter interlock shall energize the heater circuit. All active fans shall be cycled during cold weather operation to avoid long periods of idle operation, and subsequent possibility of ice build-up. Basin heaters shall be inhibited when a low water condition exists. A low or high water level condition shall be annunciated to the BMS.
- 4. Cooling tower vibration switches shall stop the fan when vibration exceeds set point. Monitor each switch and annunciate alarms to the BMS.
- 5. The Central Plant Energy Control System (CPECS) shall monitor and control all mechanical equipment and instrumentation, through the BMS, that are directly involved in the production and distribution of chilled water (CHW) including the compressors, chillers, cooling towers, pumps and valves located in the central chilled water plant. The CPECS shall continuously and automatically optimize the plant energy usage using adaptive control methodology, data correlation and real time self-calibrating data feedback loops that continually adjusts logic in accordance with actual system conditions such as chiller approach, pumping efficiency and cooling tower performance, as measured in KW per

ton of cooling. The CPECS will also monitor and control the air handler (as shown on drawings).

6. The Chilled Water Plant operation will be performed through the BMS via manual commands by the plant operations personnel. Advisory messages shall be posted through the BMS to alert operations personnel on when additional chillers, cooling towers, chilled water pumps and condenser water pumps should be enabled and disabled in order to meet the current demand in the most efficient manner.
7. When a cooling tower is enabled, the sump and spray valves shall open and prove open through operator mounted limit switches indicating valve position. When a cooling tower is disabled the sump and spray valves shall close.
8. The CW pump VFD speed shall be controlled automatically through the BMS to maintain the recommended condenser water flow set point as measured by the condenser water flow meter. The flow set point shall vary and shall be determined by the quantity of chillers or heat exchangers enabled. When there is more than one pump operating, both pumps shall operate at the same VFD speed set point.
9. There are two primary pumps and one standby pump. Provide staging control of the pumps so if a primary pump fails, the BMS controls shall lock it out and start the standby pump. An alarm shall be annunciated to the BMS. Advisory message shall be sent through BMS to rotate the primary and stand-by pumps on a regular schedule (adj.) to equalize runtime.
10. The CW supply temperature shall be maintained by enabling and staging the cooling towers and cooling tower fans. The enabling of the towers shall be done manually by the plant operations personnel via an advisory message through the BMS. Once a tower has been enabled the tower fans shall be controlled automatically through the BMS to maintain the desired condenser water supply temperature set point.

**B. Economizer Heat Exchanger (HX-1)**

1. The contractor shall furnish BACnet DDC controls for monitoring and control of the economizer heat exchangers. The contractor shall connect the DDC controller to the BMS network for point monitoring and control.
2. The economizer heat exchanger shall be used for free cooling and shall be activated whenever any mechanical equipment requiring chilled water is operating and the outside wet bulb temperature is below set point. The Central Plant Energy Control System (CPECS) shall indicate when the plant personnel shall enable the HX via an advisory sent through the BMS.
3. When the HX is enabled the enabled heat exchanger CHW and CW isolation valves shall open and prove open through operator mounted limit switches indicating valve position. When a HX is disabled the HX CHW and CW isolation valves shall close.
4. Control cooling towers to maintain set point. The calculated set point shall be the sum of the tower approach temperature and outside wet bulb. If the calculated set point is above chilled water temperature requirements, the chillers shall be enabled and EHX shall be disabled. If the calculated set point is equal to or below the chilled water temperature requirements, the EHX shall be enabled.
5. In the switch over from free cooling to mechanical cooling, the condenser water supply temperature shall be allowed to reach a minimum temperature of 60° F (adj.) prior to enabling mechanical cooling.
6. The BMS shall track the run time of the free cooling heat exchanger and shall totalize the time on a monthly basis. The run time shall be based on the time the isolation valves are open to the heat exchangers.

**2.17 MISCELLANEOUS SYSTEMS**

**A. Boiler Room**

1. Combustion supply air fan shall be hardwired interlocked to the boiler/burner control so that ventilation is proven prior to firing any burners.
2. All associated dampers shall be interlocked to open/close with fan operation.
3. Contractor shall provide carbon monoxide (CO) and natural gas (CH<sub>4</sub>) sensors that shall control the boiler room exhaust fan to maintain a maximum CO/CH<sub>4</sub> set point. Sensor quantity and location shall provide full area coverage for the approved CO/CH<sub>4</sub> sensor as recommended by the sensor manufacturer. When preset limits of natural gas (CH<sub>4</sub>) or carbon monoxide (CO) are exceeded, the following shall occur.
  - a. CO - When any CO sensor detects a low limit level of 25 PPM (adj.), the exhaust fan shall start and run after associated dampers open. The fan shall run for a minimum time of 5 minutes (adj.) after the CO level falls below the low limit set point to prevent excessive cycling of the fan. If the CO level exceeds the high alarm limit set point of 200 PPM (adj.) a local alarm shall annunciate the condition (audible and visual alarms) and an alarm shall be annunciated to the BMS.
  - b. CH<sub>4</sub> - When the space CH<sub>4</sub> level reaches the low limit set point of 25% LEL (adj.), the exhaust fan shall start and run and a local alarm shall annunciate the condition (audible and visual alarms) and an alarm shall be annunciated to the BMS. The fan shall run for a minimum time of 5 minutes (adj.) after the CH<sub>4</sub> level falls below the low limit set point to prevent excessive cycling of the fan. If the CH<sub>4</sub> level exceeds the high alarm limit set point of 50% LEL (adj.) a local alarm shall annunciate the condition (audible and visual alarms), a second alarm shall be annunciated to the BMS and a relay output of the condition and shall simultaneously initiate the following:
4. Shutdown all equipment including boilers and burners irrespective of mode of operation.
5. Close the gas safety shut off valve feeding the, boilers and domestic hot water heaters.
6. Break glass switches shall be wired such that all boilers and domestic hot water heaters shall be shut down when glass is broken. The BMS will monitor break glass switch position. If an emergency occurs, the boiler control panel will initiate a shutdown for the boiler plant: shutting down all pumps and closing all isolation valves. A critical alarm will be issued to the BMS.
7. Provide an alarm horn, strobe light and silence switch at each entrance to the boiler room, above the break glass switch. Alarm to activate when gas leak occurs. Horn shall be silenced from switch and strobe shall continue to operate until condition is cleared.

## 2.18 MISCELLANEOUS SYSTEMS

### A. Hot Water Unit Heater / Cabinet Unit Heater

1. The contractor shall furnish and install all devices for local control. The space thermostat shall start/stop the unit heater and open/close the two-position hot water coil valve to maintain an adjustable room temperature set point.
2. An aquastat shall stop the unit when hot water is not available.

### B. Electric Air Curtain

1. Contractor shall wire air curtain controls that are furnished with the unit for local control.
2. Field-Installed Thermostat
3. Automatic Door Switch: Combination roller-plunger type installed in door area to activate air curtain when door opens and to deactivate air curtain when door closes.
4. Three-Speed Switch: Manually activates, deactivates, and controls air-curtain fan speed.
5. Three-Delay Relay: Factory installed and adjustable to allow air curtain to operate from 0.5 seconds to 10 hours.

6. Motor-Control Panel: Complete with motor starter, 115-V ac transformer with primary and secondary fuses, terminal strip, and NEMA 250, Type 1 enclosure with door-mounted hands-off-auto switch.

C. Heat Trace

1. The BMS shall monitor a common alarm contact from each heat trace control panel.
2. The contractor shall provide CT's on each Heat Trace circuit to monitor status at the front end.
3. The BMS shall annunciate an alarm if outside air temperature falls below 40°F and the heat trace system has not activated.

D. Sump Pit and Sewage Ejector

1. The contractor shall monitor each sump pit and sewage ejector for high water condition.

E. Domestic Hot Water

1. The contractor shall monitor the supply water temperature off of each domestic hot water heater and annunciate a high temperature alarm if the analog limit is exceeded.

F. Fuel Oil System

1. Install and wire all fuel oil level sensing equipment for fuel oil tanks. Install and wire all fuel oil leak sensing equipment for tanks and containment piping. Fuel oil leak and level panels shall be installed in the fuel oil pump areas.
2. Install and hard wire interlock between the generator start and generator fuel oil pump start.
3. Install fuel oil tank level sensors in fuel oil storage tank. Provide all power and control wiring as required.
4. Install fuel oil tank overfill alarm at tank. Provide all power and control wiring as required.
5. Install fuel oil tank overfill alarm light and horn at tank fill connection on loading dock. Strobe light shall be activated whenever tank level exceeds 95% of capacity. Alarm horn shall be activated whenever tank level exceeds 99% of capacity. Install key operated silence switch and key operated alarm light disable switch at tank fill connection.
6. Provide monitoring of fuel oil system from BMS per the points listed on the BMS Point List.

G. Emergency Generator

1. The BMS shall monitor points for the emergency generator through a network serial interface provided as part of the emergency generator controls package.
2. Contractor shall provide actuators and control wiring for two motorized dampers, one for each generator. Each damper will require 2 actuators for a total of 4.

H. Damper Actuators Serving Emergency Generators

1. Actuators used with emergency generator dampers shall be electrically activated spring-return type with 15 second travel time to fail open. Actuators' torque requirements shall be 175 lb-in for holding and spring return and 475 lb-in for stall maximum. Each actuator shall be suitable for smoothly positioning a 25 square foot damper. Actuators to be mounted outside of air stream. Temperature rating shall be -40°F to 130°F. Actuator power shall be 120 VAC. Actuator shall be manufactured by Honeywell Model MS4120F series or as approved by the Commissioner.

- I. Automatic Transfer Switch
  - 1. The BMS shall monitor points for the ATS through a network serial interface provided as part of the ATS controls package.
- J. Uninterruptible Power Supply
  - 1. The BMS shall monitor points for the UPS through a network serial interface provided as part of the UPS controls package.
- K. Electric Power Meter
  - 1. The Contractor shall furnish and install electric power meters to monitor power where shown on the plans. Refer to the electrical plans for quantity and locations.
  - 2. Power meters shall connect to the BMS via BACnet interface and all point data made available through the BMS.
- L. Miscellaneous Points
  - 1. The contractor shall monitor the miscellaneous points as listed in the BMS Points List. Contractor shall furnish any field devices required to monitor the points as listed.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

**END OF SECTION 23 09 05**

**SECTION 23 11 13****FACILITY FUEL-OIL PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".
- F. Section 23 31 20 "Fire-Resistive Duct-Pipe Insulation and Enclosure.
- G. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes fuel-oil distribution systems including, but not limited to the following:
  - 1. Pipes, tubes, and fittings.
  - 2. Piping and tubing joining materials.
  - 3. Piping specialties.
  - 4. Valves.
  - 5. Fuel-oil storage tank piping specialties.
  - 6. Fuel oil transfer pumps.
  - 7. Fuel oil day tank and accessories - day tank system
  - 8. Fuel maintenance system.
  - 9. Controls
  - 10. Liquid-level gage system.
  - 11. Leak-detection and monitoring system.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.5 DEFINITIONS**

- A. AST: Aboveground storage tank.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- E. UST: Underground storage tank.

**1.6 SYSTEM PERFORMANCE REQUIREMENTS**

- A. Minimum Working Pressure Ratings: Except where indicated otherwise, minimum pressure requirements are as follows:
  1. Oil Piping and Fittings: 150 psig
  2. Underslab, containment conduit piping: 175 psig

**1.7 SEISMIC AND WIND LOAD DESIGN**

- A. This project is located within a seismic and wind zone requiring special provisions for the support and restraint of equipment, components and piping in the event of earthquake or wind conditions.
- B. Seismic Performance: Field-installed support attachments for fuel oil piping system, including fuel oil pumps shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
  1. The term "withstand" means "the complete system will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event."

- C. Engineering Services: Design seismic restraints and wind restraints for the fuel oil piping system, pipe connections, connecting piping supports, fuel oil pumps, generators, ASTs, and equipment, including comprehensive engineering analysis by a qualified professional engineer licensed in the State of New York, using performance requirements and design criteria indicated under another section of this work.
- D. Provide Seismic Qualifications Certification that the fuel oil system, accessories and components will withstand the seismic and wind forces as defined under another section of this work. Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. The term "withstand" means "the fuel oil system will remain in place without separation of any parts from the device when subjected to the seismic or wind forces specified and the will be fully operational after the seismic event."
  - 2. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. It is the intent to keep all HVAC building system components in place during a seismic or wind event and operational after the seismic event.
- F. It shall be understood that the requirements for the seismic and wind restraints and vibration control as specified herein are complementary to requirements delineated elsewhere under other sections of this work for the support, fastening and isolating of equipment work. Nothing on the drawings or specifications shall be interpreted as a reason to waive the requirements of this and other related sections.

#### 1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.9 SUBMITTALS

- A. Product Data: For each type of product indicated. Include construction details, material descriptions, and dimensions of individual components and profiles. Also include, where applicable, rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
  - 1. Piping specialties.
  - 2. Valves: Include pressure rating, capacity, settings, and electrical connection data of selected models.
  - 3. Fuel-oil storage tank accessories.
  - 4. Fuel-oil storage tank piping specialties.
  - 5. Conduit containment piping system
  - 6. Fuel-oil transfer pumps.
  - 7. Fuel maintenance system.
  - 8. Liquid-level gage system.
  - 9. Leak-detection and monitoring system.
- B. Shop Drawings: For facility fuel-oil piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

- C. Engineering Services Submittal: For fuel-oil piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation to be submitted to Commissioner for review and approval.
    - 1. Detail fabrication and assembly of anchors and seismic restraints.
    - 2. Design Calculations: Calculate requirements for selecting seismic restraints.
    - 3. Detail fabrication and assembly of pipe anchors, hangers, supports for multiple pipes, and attachments of the same to building structure.
  - D. Coordination Drawings: Plans and details, drawn to scale, on which fuel-oil piping is shown and coordinated with other installations, using input from installers of the items involved.
  - E. Qualification Data: For qualified professional engineer.
  - F. Seismic Qualification Certificates: For ASTs, pumps, accessories, and components, from manufacturer.
    - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
    - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
  - G. Brazing certificates.
  - H. Welding certificates.
  - I. Field quality-control reports.
  - J. Warranty: Sample of special warranty.
  - K. Operation and Maintenance Data: For fuel-oil equipment and accessories to include in emergency, operation, and maintenance manuals.
  - L. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    - 1. Drive Belt: One for each belt-driven pump.
- 1.10 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
  - B. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
  - C. Steel Support Welding Qualifications: Qualify procedures according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - D. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Comply with ASME B31.9, "Building Services Piping," for fuel-oil piping materials, installation, testing, and inspecting.
- G. Comply with requirements of the EPA and of New York City Department of Buildings and New York City Department of Environmental Protection. Include recording of fuel-oil storage tanks and monitoring of tanks and piping.

#### 1.11 FACTORY TESTING

- A. Prior to shipment, the manufacturer shall test all "packaged" assemblies.
- B. Electrical components shall be functionally tested with all instruments and controls.
- C. Pump sets shall be fully tested prior to shipment. Testing shall include both a pressure and vacuum testing period. Following the pressure and vacuum tests the pump set shall be given a full operational test. The pump shall be connected to a fuel oil supply and return. The pump set shall be operated normally.

#### 1.12 DELIVERY, STORAGE, AND HANDLING

- A. Lift and support fuel-oil storage tanks only at designated lifting or supporting points, as shown on Shop Drawings. Do not move or lift tanks unless empty.
- B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.
- C. Store pipes and tubes with protective PE coating to avoid damaging the coating and to protect from direct sunlight.
- D. Store PE pipes and valves protected from direct sunlight.

#### 1.13 PROJECT CONDITIONS

- A. Interruption of Existing Fuel-Oil Service: Do not interrupt fuel-oil service to facilities occupied by The City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary fuel-oil supply according to requirements indicated:
  - 1. Notify The Commissioner no fewer than three days in advance of proposed interruption of fuel-oil service.
  - 2. Do not proceed with interruption of fuel-oil service without Commissioner's written permission.

#### 1.14 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

#### 1.15 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of fuel-oil storage tanks and flexible, double-containment piping and related equipment that fail in materials or workmanship within specified warranty period.

1. Storage Tanks:
  - a. Failures include, but are not limited to, the following when used for storage of fuel oil at temperatures not exceeding 180 deg F:
    - 1) Structural failures including cracking, breakup, and collapse.
    - 2) Corrosion failure including external and internal corrosion of steel tanks.
  - b. Warranty Period: 30 years from date of Substantial Completion.
2. Flexible, Double-Containment Piping and Related Equipment:
  - a. Failures due to defective materials or workmanship for materials installed together, including piping, dispenser sumps, entry boots, and sump mounting adapters.
  - b. Warranty Period: 10 years from date of Substantial Completion.

## PART 2 - PRODUCTS

- 2.1 MANUFACTURERS: Subject to compliance with requirements, provide products by one of the following:

- A. Gate, Globe, and Check Valves:
  1. Conbraco Industries, Inc.; Apollo Div.
  2. Grinnell Corp.
  3. Milwaukee Valve Co., Inc.
  4. Stockham Valves & Fittings, Inc.
  5. Or approved equal.
- B. Ball and Butterfly Valves:
  1. DeZurik.
  2. Neles-Jamesbury, Inc.
  3. Milwaukee Valve Co., Inc.
  4. Or approved equal.
- C. Fuel Oil Transfer Pumps:
  1. Preferred Utilities Manufacturing Corp.
  2. Viking Pump, Inc.
  3. Webster Heating.
  4. Or approved equal.

## 2.2 PIPES, TUBES, AND FITTINGS

- A. All piping shall be provide with ground joint unions at piece of apparatus to facilitate connecting and disconnecting.
- B. All horizontal fuel oil piping within the building or outside the building shall be installed in a minimum 10 gauge containment conduit and completely encased with an approved 2-hour (minimum) fire resistive enclosure. All vertical fuel oil piping shall also be installed in a 10 gauge conduit and run within a masonry or concrete shaft.
- C. Fire Resistive enclosure is specified under section 23 31 20 "Fire-Resistive Duct-Pipe Insulation and Enclosure".

- D. All piping shall be steel with welded fittings (galvanized pipe and fittings are not permitted).
- E. Victaulic piping or fittings are not permitted.
- F. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type S, Grade B.
  - 1. Wrought-Steel Welding Fittings: ASTM A 234/A 234M, for butt and socket welding.
  - 2. Unions: ASME B16.39, Class 300, malleable iron with brass-to-iron seat, ground joint, and threaded ends conforming to ASME B1.20.1.
  - 3. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 300, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
    - a. Material Group: 1.1.
    - b. End Connections: Butt welding to match pipe.
    - c. Lapped Face: Not permitted underground.
    - d. Gasket Materials: Asbestos free, ASME B16.20 metallic, or ASME B16.21 nonmetallic, gaskets compatible with fuel oil.
    - e. Bolts and Nuts: ASME B18.2.1, cadmium-plated steel.

## 2.3 DOUBLE-CONTAINMENT PIPE AND FITTINGS

- A. Containment piping shall be steel with welded fittings (galvanized pipe and fittings are not permitted).
  - 1. Include design and fabrication of double-containment pipe and fitting assemblies with provision for field installation of cable leak-detection system in annular space between carrier and containment piping.

## 2.4 PIPE INSULATION

- A. As specified under another section.

## 2.5 JOINING MATERIALS

- A. Common Joining Materials: Refer to Section 23 05 00 "Common Requirements for HVAC Work" for joining materials not included in this Section.
- B. Gaskets for Flanged Joints: Full faced for cast-iron flanges and ring type for steel flanges. Select materials that suit service of piping in which gasket is installed and is not detrimentally affected by chemical and thermal conditions of fuel oil.

## 2.6 PIPING SPECIALTIES

- A. Pipe Connectors: UL 567, swivel or compression type for connection to equipment.
- B. Strainers: Y pattern, full size of connecting piping. Include stainless-steel screens with 3/64-inch perforations, except where other screens are indicated.
  - 1. Pressure Rating: 300-psig WOG working pressure.
  - 2. 2-Inch NPS and Smaller: Bronze body.
  - 3. 2-1/2-Inch NPS and Larger: Cast-iron body.
  - 4. Screwed screen retainer with centered blow-down and pipe plug.
- C. Flexible Connectors: Comply with UL 567.

1. Metallic Connectors:

- D. Basket Strainers: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection, flanged ends.

1. Pressure Rating: 300-psig WOG working pressure.

- E. T-Pattern Strainers: malleable iron with removable access coupling and end cap for strainer maintenance.

1. Pressure Rating: 300-psig WOG working pressure.

F. Manual Air Vents:

1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Pressure Rating: 300-psig WOG working pressure.
4. Maximum Operating Temperature: 225 deg F.

2.7 VALVES

- A. General: All valves shall be rated for a minimum of 350 psig WOG working pressure.
- B. Valves shall be as specified under another section of Division 23.

2.8 SPECIALTY VALVES

- A. Oil Safety Valves: UL listed for flammable or volatile liquids, 350-psig working pressure, and 550 deg F operating temperature. Include ASTM B 61 bronze body, bronze bases and discs; and field-adjustable, cadmium-plated, carbon-steel springs; factory set at 20 percent above operating pressure; and threaded ends conforming to ASME B1.20.1.
- B. Provide and install on the tank suction stub a bronze, 1-1/2" Double Poppet Foot Valve, with lapped-in seat, double guided poppet stems and 20 mesh monel screen. Double Poppet Foot Valve shall be as supplied by Preferred Utilities Manufacturing Corporation, Model Type 22. The foot valve shall come with a 233-FV foot valve extractor fitting which shall allow for easy access to and repair of the foot valve. The 233-FV foot valve extractor fitting shall come with an extractor wrench of the appropriate size.
- C. Pressure Relief Valves: Comply with UL 842.
- D. Emergency Shutoff Valves: Comply with UL 842.

2.9 FUEL OIL TRANSFER PUMPS AND PIPING

- A. Provide and install a factory assembled, "packaged" Automatic Duplex Fuel Oil Transfer system to ensure a reliable supply of fuel oil to the generator fuel oil day tank. System to be factory fabricated, tested and certified as a complete unit. Field assembly of units are not acceptable.
- B. Provide a complete duplex fuel oil pump and piping system with a PLC based control system for monitoring and control as scheduled and detailed on drawings. The set shall be piped and wired, with components mounted on a steel base support fabricated of 1/4" steel plate with 4" steel side rails continuously welded to the base. The base support to be fabricated with 2-3/4" overflow containment lip and base shall extend beyond any fitting, valve, pump, strainer or selector valve. Any fuel leaking from any component, fitting or packing in the system shall be

contained by this baseplate. Base shall be grouted and anchored in the field to the housekeeping pad to minimize vibration and movement.

- C. In the Rupture Basin through a 3/4" welding boss, shall be a Preferred Utilities Manufacturing Corporation RBS switch for leak detection. Switch shall be redundantly sealed against vapors and fluids, be lever float operated and magnetically actuated. Wiring enclosure shall be cast aluminum and constructed to NEMA 4 standards. Visual and audible alarm and annunciation for the pump set rupture basin shall be located on the pump set control cabinet. Provide a 2" plugged drain connection in the Rupture Basin.
- D. Description: UL 343, single-stage, internal-gear, positive-displacement, rotary type. Include foot-mounted, cast-iron housing; steel gears; bronze bearings; steel shaft; mechanical seals; built-in pressure relief bypass; steel base; and drive coupling.
  - 1. Drive: Direct drive, close coupled.
- E. Motor: Split phase for single-phase motors; capacitor start, induction run, totally enclosed for 3-phase motors.
- F. The pumps shall be connected to the piping in the set through stainless steel flexible metallic metal jackets, and the pump and motor assemblies shall be mounted to the base plate via elastomeric vibration isolators. Pumps and motors shall be mounted on a structural steel channel and equipped with flexible coupling and full OSHA approved coupling guard. Pumps and motors shall be removable for ease of maintenance.
- G. Flexible coupling general: The pumps shall be connected to the motor by an elastomeric jaw type flexible coupling that does not require lubrication. The coupling wear member shall be replaceable without disturbing the alignment of either the pump or motor. Sizing of the flexible coupling shall be based on motor horsepower and rpm. Materials of construction: The coupling body shall be sintered iron and case iron. The elastomeric wear member shall be NBS rubber.
- H. Provide a time delayed flow sensing switch on the discharge of the pumpset to bring on the lag pump should the lead pump fail to maintain flow in the loop. Switch will be wired back to the main control cabinet for alarm and annunciation.
- I. The PLC based control system shall be housed in a cabinet, NEMA 4 construction, factory wired.
- J. Furnish and install a complete system of piping with all necessary valves between the system components. Provide a swing check valve and gate valve at the pump inlet. Provide approved anti-syphon valve at high points of suction line. Install fusible link valve on oil supply immediately adjacent to point where pipe enters generator room in accessible location. Valve shall have provision to close manually (Preferred or equal). Install whatever additional valves may be required by local or state regulations.

## 2.10 FUEL OIL GENERATOR "BELLY" TANK AND ACCESSORIES

- A. See Generator Specification in Division 26.
- B. Tank connections shall include: fuel inlet, required vent openings, manual fill, tank level sensor, 2 inlets for engine supply, and 2 outlets for engine return. All piped with reinforced, welded pipe adapters. Fuel fill, inlet and return must be supplied with factory installed drop tubes to prevent surging and foaming in the tank.

- C. Tank Level Controller. Level Controls shall have five (5) float operated switches rated at 100 watts and factory installed in the day tank. Levels of control: emergency high-level alarm and total pump shutdown (90% capacity), pump off (80% capacity), pump on (50% capacity), and emergency low-level secondary pump on and annunciation (40% capacity) and 10% Engine shutdown (direct to engine panel). Unit shall be suitable for pressures to 150 psi, and shall be made entirely of non-ferrous material. Electrical connections shall be contained in a factory installed weatherproof junction box.
- D. Vent Sensor. Provide and factory install a leak detector for alarming and fuel supply pump shut down via detection of oil in the vent line. Unit to be lever float operated and magnetically actuated with redundant vapor and fluid provisions. Electrical connections shall be contained in a factory installed weatherproof junction box.
- E. Tank Leak Sensor. Provide and factory install a rupture basin leak detector for alarming and fuel supply pump shut down. Electrical connections shall be contained in a factory installed NEMA 4X weatherproof junction box.

## 2.11 OIL FILL LINES & VENT TERMINALS

- A. Vent pipe line shall be provided from the fuel oil storage tank to the required height within building construction and shall terminate with a vent to atmosphere. set. Fitting shall be one piece. Each oil tank vent pipe terminal shall be provided with a weatherproof vent head the approved equal of "Preferred Junior Vent Protector with Screens."
- B. Fuel oil fill line shall be provided from the fuel oil storage tank within the building property line terminating with a fill box. Fuel oil fill box shall be EPA and local code approved. Fuel oil fill box shall include cover and spill containment cap. Provide remote overfill alarm bell and light with tank mounted sensor. Fuel oil fill box shall be manufactured by EBW or approved equal.
- C. Provide and install where shown on the drawings a Preferred Utilities Model 3 Sidewalk Fill Station per NFPA 31 Standard for the Installation of Oil Burning Equipment. The Fill Station is designed for below grade installation with flush mounting on horizontal surfaces.
- D. The Model 3 Sidewalk fill station body shall be made from heavy-duty carbon steel with welded body and painted for corrosion resistance. The fill station shall include a gasket equipped water-tight carbon steel Highway-20 rated cover held down with recessed screw heads. It shall also include an integral recessed handle for easy cover removal. The steel cover has a Buna-N gasket and recessed head bolts.
- E. The fill line shall enter the fill station through a boot connection. Boot connection shall be flexible for extreme temperature conditions that may affect piping expansion. Integral to the fill station shall be a hand pump for evacuation of spilled media. The spill container holds a minimum of 15 gallons of spilled fuel. A hose is provided so that clean oil can be pumped into the fill pipe. Contaminated oil or water can be pumped into a bucket for safe removal.
- F. Internally mounted in the fill station shall be an audible/visual overfill alarm system for single tank installations to be activated by a High Level Switch. The station shall consist of an "Overfill Alarm" light, alarm horn, "Alarm Silence" push button and a digital readout of tank contents in US gallons. All wiring shall be in Liquid-Tite waterproof flexible conduit. The alarm light and horn shall be automatically silenced in 90 seconds or instantly silenced with the operator depresses the "Alarm Silence" button. The digital display shall flash during a high level condition.
- G. Provide permanently mounted and prominently displayed inside the Fill Station a durable nameplate displaying the main oil storage tanks inventory capacity in US gallons. For the fill

line connection, include a composite top-seal, tight fill adapter and lockable fill cap. The system shall include a preferred FA-S caution sign.

- H. The fill and vent terminal shall be provided with approved identification indicating the tank number with which it is connected.

## 2.12 JOINING MATERIALS

- A. Joint Compound and Tape: Suitable for fuel oil.
- B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

## 2.13 SPECIALTY VALVES

- A. Mechanical Leak Detector: Comply with UL 842.
  - 1. Listed and labeled for fuel-oil service by an NRTL acceptable to New York City Department of Buildings.
  - 2. Body: ASTM A 126, cast iron.
  - 3. O-Rings: Elastomeric compatible with fuel oil.
  - 4. Piston and Stem Seals: PTFE.
  - 5. Stem and Spring: Stainless steel.
  - 6. Piston Cylinder: Burnished brass.
  - 7. Indicated Leak Rate: Maximum 3 gph (3 mL/s) at 10 psig (69 kPa).
  - 8. Leak Indication: Reduced flow.

## 2.14 FUEL OIL MANAGEMENT CONTROL SYSTEM

- A. Provide a Fuel Oil Management system housed in a Control Cabinet mounted on the fuel oil pump set. The control cabinet shall be completely pre-wired, factory programmed and tested to ensure job site reliability. The pump set and control cabinet shall be the product of a single manufacturer for single source responsibility.
- B. Description: Factory fabricated and wired fuel maintenance system for fuel-oil filtration; with enclosure, filter, fuel-oil pump, and controls; FMG approved, listed, and labeled by an NRTL acceptable to New York City Department of Buildings.
  - 1. Enclosure: NEMA 250, Type 3R, painted steel containing pumps, filters, accessories, and controls. Hinged door on the front of enclosure.
  - 2. Pump: Comply with HI M109, steel-gear-with-crescent, positive-displacement, direct-coupled, rotary-type.
  - 3. Materials: Cast-iron housing; bronze bearings; steel shaft; mechanical seals; and built-in, pressure relief bypass valve.
  - 4. Motor: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified under another section of this work.
    - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
    - b. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in electrical Sections.
  - 5. Piping: Steel with wrought-steel fittings and welded joints.
  - 6. Multistage Filter: Spin-on, replaceable types.

- a. Stage 1: 100-mesh strainer.
  - b. Stage 2: Centrifuge to separate particulates and water from oil.
  - c. Stage 3: Coalescing water and particulate filter.
  - d. Stage 4: 30-micron particulate removal.
  - e. Stage 5: 10-micron particulate removal.
  - f. Stage 6: Minimum 99.5 percent water removal with see-through bowl and water-sensor probe.
  - g. Stage 7: 1.5-micron particulate removal.
7. Programmable Logic Controller:
- a. Alarm on maximum 15-in. Hg vacuum at pump suction indicating plugged filter.
  - b. Alarm on high water level in filter.
  - c. Alarm leak in enclosure.
  - d. Touch screen; with minimum 2-line, 20-character, backlit, LCD display.
  - e. Controller strip heater with thermostat.
8. Interface with automatic control system is specified in Section 23 09 00 "HVAC Instrumentation and Controls" to control and indicate the following:

#### 2.15 LIQUID-LEVEL GAGE SYSTEM

- A. Provide and install a Storage Tank Liquid Level Management System. Third party tested 0.1 gph In-Tank and or external 0.2 gph Out-of-Tank Detection capabilities which meet and exceed the current standard EPA required protocols. Console shall include integral printer.
- B. Description: Calibrated, liquid-level gage system complying with UL 1238 with probes or other sensors and remote annunciator panel.
- C. Annunciator Panel: With visual and audible, high-tank-level and low-tank-level alarms, fuel indicator with registration in gallons and overfill alarm. Include gage volume range that covers fuel-oil storage capacity.

#### 2.16 LEAK-DETECTION AND MONITORING SYSTEM

- A. Provide fuel oil leak detector that shall be float operated, suitable for #2 oil to 150 psi. It shall have brass and Buna N wetted parts. Switch shall be hermetically sealed and fully isolated from contents and external atmosphere. Electrical connections shall be made externally to the tank in an explosion-proof head assembly approved by UL for Class 1, Group D applications.
  1. Provide dry contact input to the BMS.
- B. Cable and Sensor System: Comply with UL 1238.
  1. Calibrated, leak-detection and monitoring system with probes and other sensors and remote alarm panel for fuel-oil storage tanks and fuel-oil piping.
  2. Include fittings and devices required for testing.

#### 2.17 FUEL OIL

- A. Fuel Oil: ASTM D 396, Grade No. 2.

#### 2.18 LABELING AND IDENTIFYING

- A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, continuously inscribed with a description of utility.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. Examine roughing-in for fuel-oil piping system to verify actual locations of piping connections before equipment installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.3 PREPARATION

- A. Comply with NFPA 30 and NFPA 31 requirements for prevention of accidental ignition.

#### 3.4 INDOOR PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping free of sags and bends.
- G. Install fittings for changes in direction and branch connections.
- H. Verify final equipment locations for roughing-in.
- I. Prohibited Locations:
  - 1. Do not install fuel-oil piping in or through circulating air ducts, ventilating ducts, or dumbwaiter or elevator shafts.
  - 2. Do not install fuel-oil piping in solid walls or partitions.
- J. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
- K. Connect branch piping from top or side of horizontal piping.

- L. Install unions in pipes 2" and smaller at final connection to each piece of equipment and elsewhere as indicated. Unions are not required on flanged devices.
- M. Do not use fuel-oil piping as grounding electrode.
- N. Install Y-pattern strainer on inlet side of fuel-oil pump.
- O. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 23 05 17 "Sleeves and Sleeve Seals for HVAC Piping."
- P. Install sleeve seals for piping penetrations of concrete walls and slabs.
- Q. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 23 05 18 "Escutcheons for HVAC Piping."

### 3.5 VALVE INSTALLATION

- A. Install manual fuel-oil shutoff valves on branch connections to fuel-oil appliance.
- B. Install valves in accessible locations.
- C. Protect valves from physical damage.
- D. Install metal tag attached with metal chain indicating fuel-oil piping systems.
- E. Install oil safety valves at inlet of each oil-fired appliance.
- F. Install pressure relief valves in distribution piping between the supply and return lines.
- G. Install one-piece, bronze ball valve with hose end connection at low points in fuel-oil piping.
- H. Install manual air vents at high points in fuel-oil piping.
- I. Install emergency shutoff valves at dispensers.

### 3.6 PIPING JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- D. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to "Quality Assurance" Article.
  - 1. Bevel plain ends of steel pipe.

2. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- F. Flanged Joints: Install gasket material, size, type, and thickness for service application. Install gasket concentrically positioned.
- G. Flared Joints: Comply with SAE J513. Tighten finger tight, then use wrench according to fitting manufacturer's written recommendations. Do not overtighten.

### 3.7 FUEL-OIL PUMP INSTALLATION

- A. Transfer Pumps:
  1. Install pumps with access space for periodic maintenance including removal of motors, impellers, and accessories.
  2. Set pumps on and anchor to concrete base.
- B. Install two-piece, full-port ball valves at suction and discharge of pumps.
- C. Install mechanical leak-detector valves at pump discharge.
- D. Install Y-pattern strainer on inlet side of simplex fuel-oil pumps.
- E. Install check valve on discharge of simplex fuel-oil pumps.
- F. Install suction piping with minimum fittings and change of direction.
- G. Install vacuum and pressure gage, upstream and downstream respectively, at each pump to measure the differential pressure across the pump.

### 3.8 FUEL MAINTENANCE SYSTEM INSTALLATION

- A. Install suction line, with foot valve, at one end of storage tank, 1 inch from the bottom of tank.
- B. Install return line at the opposite end of storage tank from suction line.

### 3.9 LIQUID-LEVEL GAGE SYSTEM INSTALLATION

- A. Install liquid-level gage system. Locate panel inside building where indicated.

### 3.10 LEAK-DETECTION AND MONITORING SYSTEM INSTALLATION

- A. Install leak-detection and monitoring system. Install alarm panel inside building where indicated.
  1. Single-Wall, Fuel-Oil Storage Tanks: Install probes as indicated.
  2. Double-Containment, Fuel-Oil Piping: Install leak-detection sensor cable probes in interstitial space of double-containment piping.
  3. Install liquid-level gage.

### 3.11 CONNECTIONS

- A. Install piping adjacent to equipment to allow service and maintenance.
- B. Install unions, in piping 2" and smaller, adjacent to each valve and at final connection to each piece of equipment having threaded pipe connection.
- C. Install flanges, in piping 2-1/2" and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.
- D. Connect piping to equipment with ball valve and union. Install union between valve and equipment.
- E. Install flexible piping connectors at final connection to burners or oil-fired appliances that must be moved for service access.

### 3.12 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplates and signs on or near each service regulator, service meter, and earthquake valve.
  - 1. Text: In addition to identifying unit, distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
  - 2. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
  - 3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
  - 4. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
  - 5. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 6. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 7. Use 3000-psi, 28-day, compressive-strength concrete and reinforcement as specified in Section 03 30 00 "Cast-in-Place Concrete."

### 3.13 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  - 1. Piping: Minimum hydrostatic or pneumatic test-pressures measured at highest point in system:
    - a. Fuel-Oil Distribution Piping: Minimum 75 psig for minimum 90 minutes.
    - b. Fuel-Oil, Double-Containment Piping:
      - 1) Carrier Pipe: Minimum 75 psig for minimum 60 minutes.

- 2) Containment Conduit: Minimum 75 psig for minimum 60 minutes.
    - c. Suction Piping: Minimum 20-in. Hg for minimum 90 minutes.
    - d. Isolate storage tanks if test pressure in piping will cause pressure in storage tanks to exceed 15 psig.
  2. Inspect and test fuel-oil piping according to NFPA 31, "Tests of Piping" Paragraph; and according to requirements of New York City Department of Buildings.
  3. Test liquid-level gage for accuracy by manually measuring fuel-oil levels at not less than five different depths while filling tank and checking against gage indication.
  4. Test leak-detection and monitoring system for accuracy by manually operating sensors and checking against alarm panel indication.
  5. Start fuel-oil transfer pumps to verify for proper operation of pump and check for leaks.
  6. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  7. Bleed air from fuel-oil piping using manual air vents.
  - D. Fuel-oil piping and equipment will be considered defective if it does not pass tests and inspections.
  - E. Prepare test and inspection reports.
- 3.14 DEMONSTRATION
- Engage a factory-authorized service representative to instruct The City of New York's service operators to adjust, operate, and maintain liquid-level gage systems, leak-detection and monitoring systems, fuel-oil pumps.

**END OF SECTION 23 11 13**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 23 13 13**

### **UNDERGROUND FUEL STORAGE TANKS AND FUEL SYSTEMS**

#### **PART 1 – GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the City of New York Standard Construction Contract.

##### **1.2 SUMMARY**

- A. Section includes underground fuel storage tanks, motor fuel dispensing systems, and related pumps, systems, alarms, and equipment.

##### **1.3 RELATED WORK SPECIFIED ELSEWHERE**

- A. Earthwork: Section 31 00 00 "Earthwork".
- B. Cast-In Place Concrete: 03 30 00 "Cast-in-Place Concrete".
- C. Common Requirements for Electrical Work: Section 26 05 00 "Common Requirements for Electrical Work".
- D. Low-Voltage Electrical Power Conductors and Cables: Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables".
- E. Raceway and Boxes for Electrical Systems: Section 26 05 33 "Raceway and Boxes for Electrical Systems".
- F. Underground Ducts and Raceways for Electrical Systems: Section 26 05 43 "Underground Ducts and Raceways for Electrical Systems".
- G. Panelboards: Section 26 24 16
- H. Wiring Devices: Section 26 27 26

##### **1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – Construction Waste Management and Disposal
  - 2. Section 01 81 13 – Sustainable Design Requirements for LEED Buildings
  - 3. Section 01 81 19 – Indoor Air Quality Requirements for LEED Buildings

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.6 REFERENCES

- A. NFPA 30 - Flammable and Combustible Liquids Code.
- B. NFPA 30A - Automotive and Marine Service Station Code.
- C. Underwriters Laboratories (UL) Standard for Safety 1316 Glass-Fiber--Reinforced Plastic Underground Storage Tanks for Petroleum Products, Alcohols, and Alcohol-Gasoline Mixtures.
- D. NFPA 70 - National Electric Code.
- E. API 1615 - Installation of Underground Liquid Storage Systems.
- F. Underwriter's Laboratories (UL).
- G. ETL Testing Laboratories (ETL).
- H. Factory Mutual Engineering and Research (FM).
- I. NYS Department of Environmental Conservation Regulations.
- J. US Environmental Protection Agency Regulations.

1.7 DEFINITIONS

- A. Motor Fuel Dispensing System: Fuel storage tank, leak containment and detection for tank and underground piping, overfill prevention, high level alarm, gage system, remote pump, dispenser, optional automated fuel management system, and automated fire extinguishing system with manual backup operation (unleaded gasoline systems only).

1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.9 SUBMITTALS

- A. Submittals Package: Submit the Product Data, and Quality Control Submittals specified

below at the same time as a package.

- B. Product Data: Catalog sheets, specifications, illustrations, wiring diagrams, CARB Stamp (where applicable), and installation instructions for each item specified for each type of system.
  - 1. Factory Test Certificate: For each fuel storage tank.
  - 2. Final test procedure documentation.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Qualifications:
  - 1. Contractor: The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
  - 2. Manufacturer: The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years."
- C. Listings: Components of the system(s) for which Underwriters' Laboratories, Inc. (UL) provides product listing service, shall be listed and bear the listing mark.
- D. Regulatory Requirements:
  - 1. Systems for storing diesel fuel or unleaded gasoline for motor fuel dispensing systems shall comply with the applicable requirements of UL 58, NFPA 30 and NFPA 30A.
  - 2. New York State Department of Environmental Conservation Bulk Storage Regulations 6 NYCRR Parts 612, 613, and 614.
  - 3. New York State Department of Environmental Conservation Petroleum and Volatile Organic Liquid Storage and Transfer 6 NYCRR Part 229.
  - 4. New York State Department of Environmental Conservation Dispensing Site and Transport Vehicles 6 NYCRR Part 230.
  - 5. New York City Administrative Code, Title 27, and applicable New York City Fire Department Rules and Regulations.
- E. Company Field Advisor:
  - 1. Secure the services of a Company Field Advisor of the manufacturer of the leak and overfill monitoring system for a minimum of 8 hours for the following:
    - a. Inspect installation and witness initial startup of the system.
    - b. Instruct the City of New York's service operators in the operation and service of the system (minimum of two 2-hour instruction sessions). Schedule instruction sessions with the Commissioner.
  - 2. Secure the services of a Company Field Advisor of the manufacturer of the fuel management system for a minimum of 8 hours for the following:

- a. Inspect installation and witness initial startup of the system.
- b. Instruct the City of New York's service operators in the operation and service of the system (minimum of two 2-hour instruction sessions). Schedule instruction sessions with the Commissioner.

#### 1.11 WARRANTY

- A. Fiberglass Tanks: Thirty-year manufacturer's warranty for each tank, starting on the day of substantial completion.

#### 1.12 PROVISION OF TOOLS

- A. Special Tools to be provided by Contractor:
  1. One stick gage and two calibration charts for each fuel tank.
  2. Two tools for each type and size vandal resistant fastener.
  3. Two lifting arms for composite type manhole frames and lids.

### PART 2 – PRODUCTS

#### 2.1 FIBERGLASS FUEL STORAGE TANKS

##### A. Tank Capacities

1. 6,000-gallon regular gasoline tank
2. 4,000-gallon diesel tank

##### B. Manufacturers:

- a. Containment Solutions
- b. Xerxes Fiberglass Tanks
- c. Or approved equal

##### C. Features:

1. Double wall fiberglass reinforced plastic (FRP) underground storage tanks with a primary (internal) tank and a secondary (external) tank.
2. Interstitial space between the primary and secondary tank walls to allow for the free flow and containment of all leaked product from the primary tank, and the insertion of a monitoring device at bottom of the secondary tank.

##### D. Design Criteria:

1. UL labeled for underground service in accordance with UL-1316 Construction Standard for Glass-Fiber-Reinforced Plastic Underground Storage Tanks and conforming to 2014 New York City Construction Codes.
2. Internal Load: Primary and secondary tanks shall withstand air pressure test as recommended by tank manufacturer to meet 2014 New York City Construction Codes. Maximum test pressure as recommended by tank manufacturer.
3. Internal and external tanks shall be factory vacuum tested to assure structural integrity.
4. Surface Loads: H-20 axles loads when properly installed according to current manufacturer's installation instructions.
5. External Hydrostatic Pressure: 7 feet of overburden with the hole fully flooded.

6. Tanks capable of supporting accessory equipment such as drop tubes, submersible pumps and ladders when installed according to tank manufacturer's recommendations and limitations.
7. Vent primary and secondary tanks to atmospheric pressure. The tanks are not designed as pressure vessels.

**E. Product Storage:**

1. Tanks capable of storing gasoline, gasohol, 100 percent ethanol or methanol, jet fuel, diesel fuel, AV gas, kerosene, and potable water at ambient underground temperature, fuel oil at temperatures not to exceed 150 degrees F, and fuels with a specific gravity up to 1.1.

**F. Construction:**

1. Materials (Primary and Secondary Tanks): Isophthalic polyester resin and glass fiber reinforcement.
2. Manway:
  - a. Above liquid level type with 22-inch minimum inside diameter. Provide one manway on tanks.
  - b. Bolted cover with UL listed gasket and welded threaded openings of number and sizes required. Secure nuts or heads of bolts to the underside of the flange.
  - c. Protect threads on bolts during transit and installation.
3. Containment Sump Mounting Collar: Sized to accept 42-inch fiberglass containment sump.
4. Monitor Fittings: 4-inch NPT fitting.
5. Gage/Deflector Plates (Under Manways and Fitting Openings): Steel.

**G. Containment Sump: Flat sided type with watertight lids, 42-inch dia., by fiberglass tank manufacturer.**

1. Construction: Same material as the tank.
2. Bonding Kit: As recommended by fiberglass tank manufacturer.

**H. Tank Hold-Down Device:**

1. Hold-Down Strap (By Tank Manufacturer): Fiberglass reinforced plastic, pre-shaped to fit the tank contour. The quantity and location of hold down straps shall be as recommended by tank manufacturer.
2. Eye Bolt: Cadmium plated ASTM A 36 steel, eye on one end, and the other threaded and fitted with an 1/4" x 4" square steel plate, structural nut and washer. Rod length as required for proper anchoring into the concrete mat.
3. Wire Rope: Improved plow steel, 6 x 19 strand, galvanized, fiber core, minimum tensile strength 12500 pounds.
4. Wire Rope Clamps: Cadmium plated for corrosion resistance.

**I. Tank Identification: Permanent stencils, labels, or plates mounted on tanks, and include the following information:**

1. Manufacturer's statement that tank conforms to Bulk Storage Regulation 6 NYCRR Part 614.

2. Standard of Design by which tank was manufactured.
3. List of products and additives which may be permanently stored in the tank.
4. Year in which tank was manufactured.
5. Unique identification number.
6. Dimensions, design, working capacity, and tank model number.
7. Name of tank manufacturer.

J. Flanged Manway: One required.

1. Ring Pattern (Tanks with Mounting Collar): One ring pattern for mounting cover plate.

## 2.2 CONTAINMENT SUMP

A. Fiberglass Containment Chamber (watertight):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Containment Solutions
  - b. OPW two-piece sump
  - c. Franklin Fueling System
  - d. Or approved equal.
2. Minimum I.D.: 42 inches.
3. Watertight cover lid.
4. Manway Mounting Kit- Subject to compliance with requirements, provide products by one of the following:
  - a. Containment Solutions EZ-fit adhesive (Basis-of-Design)
  - b. Franklin Fueling System
  - c. OPW
  - d. Or approved equal.
5. Entry Fitting and Test Boot with Air Stem:
  - a. Smith Fibercast or an equivalent product from an approved manufacturer listed above (entry boots), and Franklin Fueling System or an equivalent product from an approved manufacturer listed above (test boots).
6. Containment chamber shall seal watertight to the tank and secondary containment system.

## 2.3 FLUSH MOUNT WATERTIGHT ACCESS LID ASSEMBLY (AT GRADE)

- A. Manufacturers - Subject to compliance with requirements, provide products by one of the following:
1. Containment Solutions
  2. Franklin Fueling System
  3. OPW
  4. Or approved equal.
- B. Cover: Fiber reinforced composite type complying with DOT H-20 load requirements, and identified with API color coding, and fuel identification plate, minimum 44-inch dia.

- C. Skirt: 1/4 inch rolled steel angle iron ring welded to 14 gage steel skirt with galvaneel finish, and provisions to secure cover to skirt ring with vandal resistant fasteners.
- D. Slide Action Handle: Allows cover removal from a standing position.

## 2.4 TANK ACCESSORY PACKAGE

### A. Tank Fill Assembly:

- 1. Cover: Waterproof, hinged, locking type.
- 2. Shell: Durable polyethylene, or fiberglass shell with plastic or cast-iron base.
- 3. Cover Lid Manhole: Plastic or steel skirt with composite manhole cover complying with DOT H-20 load requirements.
- 4. Drain valve.
- 5. Top Seal Fill Pipe Cap: Subject to compliance with requirements, provide products by one of the following:
  - a. Diesel – OPW Model 634TT-7085-EVR
  - b. Regular Unleaded – OPW Model 634TT-7085-EVR
  - c. Stage I Vapor Recovery – OPW Model 1711T-7085-EVR
  - d. Or approved equal.
- 6. Top Seal Fill Pipe Swivel Adapter: Subject to compliance with requirements, provide products by one of the following:
  - a. Diesel – OPW Model 61SALP
  - b. Regular Unleaded – OPW Model 61SALP
  - c. Stage I Vapor Recovery – OPW Model 61VSA-1020-EVR
  - d. Or approved equal.
- 7. Below Grade Spill Containment Assembly: Subject to compliance with requirements, provide products by one of the following:
  - a. Diesel – OPW Model 1C-31532D, 15-Gallon Double -Wall Unit
  - b. Regular Unleaded – OPW Model 1C-31532D, 15-Gallon Double -Wall Unit
  - c. Stage I Vapor Recovery – OPW Model 1C-3132P, 5-Gallon Double -Wall Unit
  - d. Or approved equal.
- 8. Fill Limiting Valve: Subject to compliance with requirements, provide products by one of the following:
  - a. Diesel – OPW Model 71SO-4000
  - b. Regular Unleaded – OPW Model 71SO-420C
  - c. EMCO A1100
  - d. Or approved equal.
  - e. Any hydraulic shock resulting from valve operation shall be minimal to prevent damage to the delivery hose.

- B. Nameplate Holders: Corrosion resistant steel plates and straps (4 inch) with vandal resistant fasteners;

1. OPW 107
2. EBW 787
3. Wifco
4. Or approved equal.

C. Fill Port Nameplate:

1. Construction: Minimum 1/8-inch-thick two color laminated plastic engravers stock with the following items engraved in contrasting symbol and background colors conforming to the American Petroleum Institute (API) color coding for the fuel type, and consistent with facility fuel supplier's marking.
  - a. Manufacturer's statement that tank conforms to Bulk Storage Regulation 6 NYCRR Part 614.
  - b. Standard of Design by which tank was manufactured.
  - c. List of products and additives which may be permanently stored in tank.
  - d. Year in which tank was manufactured.
  - e. Unique identification number.
  - f. Dimensions, design, working capacity, and tank model number.
  - g. Name of tank manufacturer.
  - h. Date of tank installation.
  - i. API color symbol.
  - j. Installers name.

D. Padlock: Bronze, 2-1/8" wide covered laminated steel 5-pin tumbler, boron alloy shackle, and keyway protection.

1. Key all locks alike.

E. Stick Gage: Hardwood, calibrated in 1/8-inch increments.

F. Manhole for Leak Monitor System: H-20 loading, 18-inch diameter cast iron body, minimum 18-inch steel skirt and cover secured with minimum of 2 cap screws;

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. OPW 6110-18WT,
  - b. Morrison Bros. 418TM (18 inch dia.)
  - c. EBW MW-1800.
  - d. Or approved equal.

## 2.5 UNLEADED GASOLINE TANK INSTALLATION PACKAGE

A. Vent (Unleaded Gasoline Tanks): Composite body, pressure-vacuum vent type, CARB and EVR certified, designed to direct vapors upward. Fitting relief valve shall be set for 3 inches water column pressure and 8 inches water column vacuum;

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Oemco Model No. 412,
  - b. OPW 623V, EBW 802,
  - c. Morrison Bros. 749,

- d. Or approved equal.
- B. Remote Pump: Single phase 2 HP, 208/230 VAC; with control box and mechanical line leak detector. Subject to compliance with requirements, provide products by one of the following:
  - 1. F.E. Petro IST-VS2
  - 2. Red Jacket P75T-X (quick set finial)
  - 3. Or approved equal.
- C. Mechanical Line Leak Detector: Subject to compliance with requirements, provide products by one of the following:
  - 1. F.E. Petro STP-MLD
  - 2. Red Jacket FX-1V,
  - 3. Or approved equal.
- D. Extractor fitting (for tank testing): Subject to compliance with requirements, provide products by one of the following:
  - 1. Universal V421,
  - 2. OPW 233,
  - 3. EBW 300 Series,
  - 4. Morrison Bros. 560,
  - 5. Or approved equal.
  - 6. Cap: EVR certified; OPW 1711T-7085-EVR, or EBW 304 Series.
  - 7. Adapter: EVR certified; OPW 61VSA-1020-EVR, or Franklin SWV-101-B.
- E. Manual Shutoff Valve: Steel ball valve, 1 1/2-inch size. Subject to compliance with requirements, provide products by one of the following:
  - 1. Jomar T-2000, Morrison Bros. 6191BSS (stainless steel) (Basis-of-Design),
  - 2. McMaster-Carr 46495K25
  - 3. Morrison Bros.
  - 4. Or approved equal.
- F. Drop Tube: Subject to compliance with requirements, provide products by one of the following:
  - 1. OPW model 61T-SS-0412 (Basis-of-Design)
  - 2. Franklin
  - 3. EBW
  - 4. Or approved equal.

## 2.6 DIESEL MOTOR FUEL TANK INSTALLATION PACKAGE

- A. Vents (Diesel Motor Fuel Tanks): Aluminum body and cover, open type 30 or 40 mesh brass screen, and rain shield, designed to direct vapors upward;
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. OPW 23;
    - b. EMCO Wheaton A4103,
    - c. Morrison Bros. 354,

- d. EBW 800 series,
  - e. Or approved equal.
- B. Remote Pump: Single phase 3/4 HP, 208/230 Vac; with control box and mechanical line leak detector;
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. F.E. Petro IST-R-VS2-VL1
    - b. Red Jacket P75 T-X (quick set finial).
    - c. Or approved equal.
  - 2. Mechanical Line Leak Detector: Subject to compliance with requirements, provide products by one of the following:
    - a. F.E. Petro STP-MLD-D
    - b. Red Jacket FX-1DV,
    - c. Or approved equal.
- C. Manual Shutoff Valve: Brass, full port ball valve, 1 1/2-inch size,
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Jomar T-100NE,
    - b. Morrison Bros. 691B,
    - c. McMaster-Carr 47865K27,
    - d. Or approved equal.

## 2.7 DIESEL TANK INSTALLATION PACKAGE

- A. Vents (Diesel Motor Fuel Tanks): Aluminum body and cover, open type 30 or 40 mesh brass screen, and rain shield, designed to direct vapors upward;
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. OPW 23;
    - b. EMCO Wheaton A4103,
    - c. Morrison Bros. 354,
    - d. EBW 800 series,
    - e. Or approved equal.
- B. Foot Valve Extractor Assembly:
  - 1. Pipe Cap: Die cast zinc, steel cross bar, (4 inch); Subject to compliance with requirements, provide products by one of the following:
    - a. OPW 116,
    - b. Morrison Bros. 578,
    - c. EBW 320 series.
    - d. Or approved equal.

2. Foot Valve: Double poppet type with bronze body and poppet, metal to metal seat, 8 or 24 mesh galvanized brass screen, and extension legs; Subject to compliance with requirements, provide products by one of the following:
  - a. OPW 92,
  - b. Morrison Bros. 335A,
  - c. EBW 50 thru 201 series,
  - d. Or approved equal.
3. Extractor Fitting: Cadmium plated cast iron body with bronze cap and chromed tanned leather gasket; Subject to compliance with requirements, provide products by one of the following:
  - a. OPW 233,
  - b. Morrison Bros. 560,
  - c. EBW 320 series.
  - d. Or approved equal.
- C. Locking Pipe Cap with Adapter (Fuel Oil and Diesel Fuel for Diesel Generators): Cast iron collar and cap with buna gasket (3 inch);
- D. Cap and Adaptor: Subject to compliance with requirements, provide products by one of the following:
  1. OPW 634TE-7085 cap with OPW 633T-8076 adapter,
  2. Morrison Bros. 178 cap with Morrison Bros. 305 adapter,
  3. EBW 779-200-01 cap with 778-302-01 adapter,
  4. Or approved equal.
- E. Riser: Standard weight galvanized steel pipe with 150 lb galvanized malleable iron fittings, and threaded joints with thread sealant.
- F. Drop Tube – Subject to compliance with requirements, provide products by one of the following:
  1. OPW model 61T-SS-0206 (Basis-of-Design)
  2. Franklin
  3. EBW
  4. Or approved equal.

## 2.8 DISPENSER ISLAND FACIA

- A. Type: 2 inch rolled top edge, welded anchor clips and bottom return edge.
  1. Material: 12 gage stainless steel.
  2. Overall Height: 13 inches.
  3. Radius: Standard.

## 2.9 DISPENSER SUMP

- A. Type: One-piece Polyethylene with stabilizer bar kits for shear valves, and rain lip;
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. OPW, Model DS-1928 (Basis-of-Design)
2. APT LM Series,
3. Morrison
4. Or approved equal.

## 2.10 SAFETY SERVICE VALVE

- A. Type: Double poppet valve, normally open, designed to automatically shut down fuel delivery to the pump upon impact or in the event of fire;
1. Fusible Link Melting Temperature: 160 degrees F.
  2. Valves: Subject to compliance with requirements, provide products by one of the following:
    - a. Universal Valve 521,
    - b. EMCO Wheaton A60-003,
    - c. EBW 662,
    - d. OPW 10BFP5726,
    - e. Or approved equal.

## 2.11 FUEL DISPENSER

- A. Types and manufacturers:
1. Dual Hose, Non-blending, Single Product Type Dispenser: 1-grade, 2-sided, 1 hose per side with hose with swivel fittings on each end, breakaway fitting, light, pulser, and high hose retractor; 115/230 VAC.
    - a. Wayne G6202D-2GJK/W1 (Basis-of-Design),
    - b. Gasboy,
    - c. Veeder-Root,
    - d. Or approved equal.
- B. Nozzles:
1. Standard Nozzle:
    - a. OPW 11B (Basis-of-Design),
    - b. Gasboy,
    - c. Veeder-Root,
    - d. Or approved equal
  2. Diesel Nozzle:
    - a. "Husky" XS Series, Model No.: 159507 (Basis-of-Design),
    - b. Gasboy,
    - c. Veeder-Root,
    - d. Or approved equal.
  3. Diesel Nozzle Swivel:
    - a. "Husky" Model No.: HS-0350 (Basis-of-Design),
    - b. Gasboy,

- c. Veeder-Root,
- d. Or approved equal.

**C. Hoses:**

- 1. Diesel Fuel Hose – One-inch dia, minimum 16 feet long:
  - a. "Goodyear" Flexsteel, Model No.: GY-532-327-120-23769
  - b. "Flex-Ever" Hardwall Dispense Hose 7280-1002A Series
  - c. "Husky"
  - d. Or approved equal.
- 2. Diesel Breakaway Valve:
  - a. "Husky" Model No.: HS-3360,
  - b. "OPW" 66RN,
  - c. "Parker",
  - d. Or approved equal.
- 3. Diesel Whip Hose:
  - a. "Goodyear" Flexsteel, Model No.: GY-532-327-120-00169,
  - b. "Flex-Ever"
  - c. Husky,
  - d. Or approved equal.
- 4. Unleaded Gasoline Hose: 3/4-inch dia, minimum 16 feet long:
  - a. "Goodyear" Flexsteel, Model No.: GY-532-327-120-23769,
  - b. "Flex-Ever" Hardwall Dispense Hose 7280-752A Series,
  - c. Husky
  - d. Or approved equal.

**D. Dispenser Accessories:**

- 1. Totalizer.
- 2. Gasoline filter as recommended by the manufacturer,
- 3. Double swivel fitting.
- 4. Pulser.
- 5. Fuel Filters: As manufactured by Cim-Tek, Parker or approved equal, for each required fuel type and environmental conditions.
- 6. Hose Mast Assembly: Wayne 889918-001, OPW or approved equal.
- 7. Hose Mast Vapor Recovery Clamp: Wayne 890898-001, OPW or approved equal.
- 8. Balance Adapter: OPW 38CS-0380, or approved equal.

**E. Cabinet and Frame:**

- 1. All stainless-steel construction.

**F. Mark dispensers with a warning sign reading "NO SMOKING - TURN OFF ENGINE - DO NOT DISPENSE GASOLINE INTO UNAPPROVED CONTAINERS".**

**2.12 TANK GAGING, LEAK AND OVERFILL MONITOR SYSTEM**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Veeder Root Inc., Simsbury, CT, (800) 873-3313. (Basis-of-Design)
  - 2. OPW, Hotchkins, IL, (708) 465-4200.
  - 3. Pneumercator Co., Inc., Farmingdale, NY, (516) 293-8450.
  - 4. Intelligent Controls Inc., Saco, ME, (800) 225-9787.
  - 5. OMNTEC/Electro Levels Mfg. Co., Ronkonkoma, NY, (516) 467-5787.
  - 6. Or approved Equal.
- B. Type: Continuous operation tank gaging, leak detection and overfill monitor system for double wall storage tanks, double wall product piping, and containment sumps.
  - 1. Systems shall have system test capability, and shall be UL listed and/or FM approved.
- C. Alarm Monitor Panels: Locate panel inside nearest appropriate building as shown on design plans.
  - 1. The alarm panel shall visually indicate the following:
    - a. Status of each tank's interstitial space.
    - b. Status of each containment system.
    - c. Status of high level sensor set at 95 percent of tank operating capacity (on or off). When sensor is tripped, audio alarm shall be activated and be audible at fill port location.
- D. Non-Discriminating Leak Sensors:
  - 1. Detects leaks in the following:
    - a. Interstitial space between tank walls.
    - b. Piping system which drains into containment sump.
  - 2. Sensors: Non-discriminating type not sensitive to condensation forming on the sensor surface, or dripping across the sensor surface.
- E. Magnetostrictive Gage Probe:
  - 1. Includes temperature sensors, and both product and water floats capable of sensing product level to nearest 0.001 inch.
  - 2. Upon demand, the system shall indicate water level, product level, and average product temperature.
  - 3. System shall sense and alarm leakage rates greater than 0.2 gal/hr.
- F. Instrumentation Control Cable: Connect probe and sensor to alarm monitor panel, as recommended by manufacturer of leak and overfill monitor system.
- G. Audible Overfill Alarm Device: Weatherproof, surface mounted basic grille type, 120 VAC as manufactured by tank gaging, leak detection and overfill monitor system manufacturer.
- H. Overfill Alarm Device Sign: Constructed of 1/8-inch-thick two color laminated plastic engravers stock, with the words "OVERFILL ALARM DEVICE" engraved in white on red background. Size sign and lettering for easy reading from ground level.

- I. Printer: As recommended by system manufacturer. If printer is thermal type provide 6 rolls of thermal paper at each location.

## 2.13 FUEL MANAGEMENT SYSTEMS

- A. Stand alone, magnetic stripe card activated, self-contained, island mounted type capable of 24-hour monitoring, and accepted and readily utilized by NYPD.
  1. Systems - Subject to compliance with requirements, provide products by one of the following:
    - a. FCT-XT Fuel Control Terminal by E.J. Ward, 8801 Tradeway, San Antonio, TX 78217, (210) 824-7383, [www.ejward.com](http://www.ejward.com).
    - b. FuelMaster 2500 System by Syn-Tech Systems, Inc., 100 Four Points Way, Tallahassee, FL 32305, (800) 888-9136, [www.marketing@syntech-fuelmaster.com](mailto:www.marketing@syntech-fuelmaster.com).
    - c. K800 Fuel Control System by OPW, 6900 Santa Fe Drive, Hodgkins, IL 60525, (708) 485-4200, [www.opwglobal.com](http://www.opwglobal.com).
    - d. Or approved equal.
  2. Features:
    - a. Microprocessor:
      - 1) Capable of reprogramming without changing hardware and communicates with communication controller by internal network or by dial-up phone lines.
    - b. Keypad: Heavy duty, alpha-numeric membrane type with separate key for each letter (no shift or function keys required).
    - c. Display: Backlit LCD with contrast adjustment that is highly visible and easy to read in total darkness or direct sunlight.
    - d. Dispenser selection controlled thru system logic by vehicle and/or operator card data.
    - e. Programmable to limit delivery by card or vehicle identification.
    - f. Audible "Card Left in Reader" alarm.
    - g. Capable of recording and storing transaction data including operator vehicle, quantities, day and time, odometer reading; and printing this information on demand.
    - h. Interfaces with fuel dispensers, tank monitoring equipment, and capable of data transfer via modem to facility computers.
    - i. Storage capacity with battery backup for minimum 500 transactions.
    - j. Transient protection on AC power input and modem communication.
    - k. Manual system override switches.
    - l. Weatherproof Cabinet and Stand: Powder coated steel construction.
    - m. Capable of reconciliation reporting.
    - n. Maximum Operating Temperature: -40 degrees F to 122 degrees F.

## 2.14 FASTENERS

- A. Vandal Resistant Fasteners: Stainless steel, Allen or Torx head, both with center post.

## 2.15 DIESEL FILTRATION SYSTEM

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Diesel Pure DP200 (Basis-of-Design)
2. Donaldson
3. WASP PFS
4. Or approved equal.

**B. System requirements:**

1. Furnish and install a factory assembled and tested system capable of continuously filtering and de-watering stored Ultra Low Sulphur Diesel (ULSD) and ULSD blended biodiesel fuel. Coalesce and remove both free-standing water and saturated/emulsified water from the fuel. The factory filter must be SAE J1488 ver. 2010 certified to effectively remove emulsified water to at least 95% efficiency with ULSD and ULSD blended to a minimum of B15 (an IFT or Interfacial tension of 15Nm/m).
2. All system components shall be Class 1, Division 1 rated.
3. The System will have been certified to effectively remove emulsified water to at least 95% efficiency with ULSD and ULSD blended to a minimum of B15 (an IFT or Interfacial tension of 15Nm/m) while operating at 90psii operating pressure with fuels up to B20
4. The systems shall filter and treat the entire contents of one main tank by circulating the complete volume every 8-10 hours of system operating time. Oily water removed from the fuel shall be able to be drained off, filtered to less than 10ppm and stored in a corrosion proof container until disposal can be arranged.
  - a. The fuel quality monitoring control and management system shall be integrated with each main fuel oil transfer pump control system contained in separate NEMA 3R cabinet. The control system cabinet shall contain (as a minimum) the following devices:
  - b. A Programmable Logic Controller (PLC) or programmable relay to control and manage system functions as described herein to monitor the performance and integrity of the fuel maintenance system and to alert service staff to drain excessive water in filter canister, a fuel leak in the unit, motor overload, or to notify a required filter change.
  - c. The following alarm points shall send an alarm notice and illuminate an alarm indicating light which shall remain lit until the alarm is acknowledged and cleared:
    - 1) Failure during Flow Test.
    - 2) Excess Water in Fuel Canister.
    - 3) 'Filter Dirty' Alarm.
    - 4) Leakage into System Drip Tray Alarm.
    - 5) Motor overload.
    - 6) Anti-siphon solenoid valve control - When the lowest piping inside the filtration cabinet is below the top of the fuel tank, anti-siphon solenoid valves must be installed on both the supply and the return lines to the filtration unit.
    - 7) Two-way communication with Veeder Root Console, or approved manufacturer console by an approved manufacturer listed above.
5. Water detection sensor -The presence of water in the tank can be used as a trigger to run a filtration cycle.
  - a. All of the components shall be factory mounted on a structural steel backing panel with integral 2.5-inch-high steel containment lip, seam welded to form a

leak-tight drip tray. Base shall extend beyond any fitting, valve, pump or strainer to assure that a fuel leak from any component, fitting, or packing in the system shall be contained within the pan. The same steel base and containment tray shall be used to support the fuel transfer pumping and straining system described elsewhere in this Specification.

- 1) The suction fuel lines from the fuel filtration system shall extend to the lowest point of the diesel tank so that any water accumulating from leakage, contaminated fuel delivery, or condensation will be drawn into the filter and dewatering system. The fuel pick-up line should be within 2 inches of the bottom of the tank, cut on a 45-degree angle, and should not make contact with the tank bottom. This fuel pick-up line should be located as close to one end of the tank as possible. The fuel pick-up line should be a solid material that meets 2014 New York City Construction Codes and a minimum of one-inch ID. Pipe will be Brugg Flexwell, entry boots ZJI petroseal filled, UV rated, or approved equal.
  - 2) The fuel return line from the fuel filtration system must be installed at the opposite end of the tank to where the fuel pick-up line is located. The return line must just barely penetrate far enough into the tank so as to minimize fuel siphoning back into the fuel filtration system. The fuel return line should be a solid material that meets 2014 New York City Construction Codes and a minimum of one-inch ID. Pipe will be Brugg Flexwell, entry boots ZJI petroseal filled, UV rated, or approved equal.
  - 3) The fuel filtration canister shall be a pressure vessel fabricated out of solid stainless steel and be capable of obtaining an ASME "U" stamp. Vessel must be built in a certified shop in accordance to code and be capable of certification, if required. No component of the fuel filtration system shall be constructed of plastic, polycarbonate or any other material that will not withstand regulated or specified heat and fire ratings.
  - 4) The stainless-steel filter canister shall have a removable, gasketed VITON "O" ring top, and be fitted with an integral water containment sump with a certified intrinsically safe electronic water detector. The electronic water sensor in the fuel canister must be CE certified to be intrinsically safe. The stainless-steel fuel canister shall be a pressure vessel manufactured in a U-stamp ASME certified shop. It shall be engineered and tested to hold replaceable SAE J1488 ver. 2010 certified coalescing fuel filters. These filters must have a greater than 95 percent efficiency rating from SAE for removing emulsified and saturated water from ULSD and ULSD blended with biodiesel to an interfacial tension (IFT) of 15 mN/m.
- b. The replaceable SAE J1488 ver. 2010 filter must also filter particulate to a 0.2 sub-micron level.

## PART 3 – EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

A. Testing Prior to Installation:

1. Before placing the tank into its excavation, plug all openings and pressure test tank in accordance with manufacturer's printed test instructions, unless otherwise specified.
2. Tanks should not be pressurized beyond manufacturer's specified limits. The tank must hold the test pressure for 30 minutes.
3. Check fitting connections, and seams in outermost tank by applying a soap suds solution.
4. Reject any leaking tanks.

3.3 INSTALLATION

- A. Install the Work of this section in accordance with the item manufacturer's printed installation instructions, unless otherwise shown or specified.

3.4 FUEL STORAGE TANKS

- A. Lower tank carefully into the excavation using lifting lugs provided on the tank. Set the tank on a full length concrete slab covered with a 12-inch layer of pea gravel.
- B. Do not use chocks or saddles to support or block the tank in position.
- C. Install tank anchoring devices to secure tank firmly in place.
- D. Do not place fuel into tank until backfilling is completed.
- E. Plug and seal all unused openings in containment sump.

3.5 TANK ACCESSORIES

- A. Fuel Identification: Attach laminated plastic nameplate to each tank fill pipe to identify the fuel in the tank.
- B. Tank Identification: Affix tank identification stencil, label, or plate permanently to tanks and fill ports.
- C. Install padlocks on all lockable caps on fill and vapor recovery piping.
- D. Terminate vent lines with vent caps.
- E. Overfill Alarm Device Sign: Mount sign adjacent to alarm device in a location that is easily readable from ground level.
- F. Vent Caps:
1. Install vent caps at end of vent piping minimum of 12 feet above finished grade.

3.6 FIELD QUALITY CONTROL

- A. All Tank & Piping Testing and Inspection shall be in accordance with NYCFD/NYSDEC standards and regulations.

3.7 ALARMS

- A. The high-level sensor shall be set to trip the system at 90% of full tank capacity. The visual and audible alarm devices shall be seen and heard from the fill port location.

**END OF SECTION 23 13 13**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 23 21 13**

### **HVAC PIPING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- A. Section 23 05 00 "Common Requirements for HVAC Work".
- B. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- C. Section 23 05 93 "Testing, Adjusting and Balancing".
- D. Section 23 09 00 "HVAC Instrumentation and Controls".
- E. This section is a part of each Division 23 00 00 section.

##### **1.2 SUMMARY**

- A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the HVAC piping systems including, but not limited to the following:
  - 1. Hot-water heating piping.
  - 2. Chilled water piping.
  - 3. Condenser-water piping.
  - 4. Makeup-water piping.
  - 5. Condensate-drain piping.
  - 6. Blowdown-drain piping.
  - 7. Air-vent piping.
  - 8. Safety-valve-inlet and -outlet piping.
  - 9. Pipe and fittings.
  - 10. Strainers.
  - 11. Safety valves.
  - 12. Pressure-reducing valves.
  - 13. Thermostatic air vents and vacuum breakers.
- B. Additional refrigerant piping requirements are specified under another section of this work.
- C. Utility Company steam and condensate piping and installation requirements, including but not limited to piping, fittings, traps, pressure-reducing valves, flash tanks, etc. are specified under another section of this work.
- D. Low pressure and high-pressure steam and condensate piping and installation requirements including but not limited to piping, fittings, traps, pressure-reducing valves, flash tanks, etc. are specified under another section of this work.

### 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

### 1.5 DEFINITIONS

- A. HP Systems: High-pressure piping operating at more than 15 psig as required by ASME B31.1.
- B. LP Systems: Low-pressure piping operating at 15 psig or less as required by ASME B31.9.

### 1.6 HVAC PIPING SYSTEM PERFORMANCE REQUIREMENTS

- A. Refer to Section "Common Requirements for HVAC Work" for minimum working pressures and temperatures for the Water, Steam and Condensate systems.

### 1.7 REFERENCE STANDARDS

- A. ANSI/ASME B31.9 Building Services Piping
- B. ANSI/ASME B 31.1 Power Piping
- C. ANSI B16.4
- D. ANSI B16.3
- E. ANSI B16.9; ASTM A-234
- F. ANSI B16.11
- G. ASTM B32; ANSI B16.22

H. ASTM A105; ANSI B16.5

I. ANSI B16.18

J. ANSI B16.1

K. ASTM A197

L. ASME B16.39

## 1.8 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Provide manufacturer's Literature and data for the following:

1. Pipe and equipment supports
2. Pipe and tubing, with specifications, class or type and schedule, complete with mill reports.
3. Pipe fittings, including miscellaneous adapters and special fittings
4. Flanges, gaskets and bolting
5. Strainers
6. Flexible connectors for water service
7. Pipe alignment guides
8. Expansion joints
9. Expansion compensators
10. Dielectric Fittings
11. All specified hydronic system components
12. Water flow measuring devices
13. Gauges
14. Thermometers and test wells
15. Seismic bracing details for piping
16. Factory pre-insulated piping components and installation instructions
17. Pipe fittings and mechanical couplings, if used, for preinsulated chilled water piping
18. Anchors and thrust blocking for preinsulated chilled water piping
19. Pressure-seal fittings.
20. Valves. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
21. Pressure reducing and safety valve.
22. Steam trap.
23. Air vent and vacuum breaker.
24. Flash tank.
25. Meter
26. Air control devices.
27. Hydronic specialties.

C. Shop Drawings: Submit the following:

1. Piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, flash tank assemblies, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
2. Piping Shop Standards and specifications, including but not limited to, materials, fittings, joint construction and sealing, fabrication, assembly, and spacing of hangers and supports.

3. Mill Certificates
4. Hangers and supports, including methods for pipe and building attachment, seismic restraints, and vibration isolation.

D. Welding certificates.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For air control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.

## 1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Installer Qualifications:

1. Installers of Pressure-Sealed Joints: Installers shall be certified by the pressure-seal joint manufacturer as having been properly instructed to join piping with pressure-seal pipe couplings and fittings.

C. Steel Support Welding: Qualify processes and operators according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

D. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

E. ASME Compliance: Comply with ASME B31.1, "Power Piping" and ASME B31.9, "Building Services Piping," for materials, products, and installation.

F. Safety valves and pressure vessels shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

G. All equipment and material to be provided for this project shall be UL or ETL listed, in accordance with the requirements of the New York City Department of Buildings.

## PART 2 - PRODUCTS

### 2.1 GENERAL

A. Unless specified otherwise, all steel piping shall be Type ASTM-A-53-Grade B seamless or ERW. Furnace butt weld pipe is not acceptable.

B. All pipe shall be of the domestic manufacture, delivered to the job properly primed and marked and supplied with the interior surfaces clean and rust free. Each end to be capped. Piping found to be in violation of this specification may be required to be removed from the job site, at the sole discretion of the Commissioner, whether or not already installed. Mill certifications from the pipe supplier shall be provided as part of the shop drawing submission.

C. Grooved piping is NOT permitted.

- D. Type “M” copper tubing is not permitted.
- E. Open water systems are defined as systems in which the atmosphere is in direct contact with water in piping system (i.e. via an open cooling tower, etc.).
- F. Secondary water branches shall be shop fabricated. Steel branches shall be shop fabricated complete with valve and accessory fittings and suitable for welding to risers without further work. Copper branches similarly shall be shop fabricated with all accessories suitable for ready attachment to unit and steel branches.
- G. All vertical riser piping (regardless of service or size) shall be either brazed or welded.

## 2.2 DIELECTRIC FITTINGS

- A. For all systems, provide dielectric fittings to isolate joined dissimilar materials to prevent galvanic action and stop corrosion. Fittings shall be of the non-reducing type, which shall be suitable for the system fluid, pressure, and temperature and shall not restrict the flow.
- B. Brass valves are not an acceptable substitute for a dielectric fitting.
- C. For factory fabricated equipment, manufacturer shall submit method of compliance or exceptions (if applicable) in writing as part of the shop drawings submission for review by the Commissioner.
- D. It is the intent of this section that all system components (equipment connections, piping, etc.), whether they are field installed or factory fabricated, shall comply with these requirements.
- E. Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain and weld-neck end types that match piping system materials.
- F. Insulating Material: Suitable for system fluid, pressure, and temperature, does not restrict flow.

## 2.3 COPPER TUBE AND FITTINGS

- A. Fittings for copper tubing shall be Chase Sweat Fittings, Mueller Brass Co’s “Streamline” solder fittings or “Arco” wrought-copper fittings.
- B. Type “M” copper tubing is not permitted.
- C. “T-Drill” type fittings are NOT acceptable.
- D. All copper tubing shall be not less than 99.9 percent pure copper. Tubing shall conform to ASTM B88.
- E. Hard Drawn-Copper Tubing: ASTM B 88, Type K.
- F. Wrought-Copper Fittings: ASME B16.22, ASTM-B-32
- G. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Anvil International, Inc.
  - 2. S. P. Fittings; a division of Star Pipe Products.
  - 3. Ferguson
  - 4. Or approved equal.

## 2.4 STEEL PIPE AND FITTINGS

- A. Steel Pipe: ASTM A 53/A 53M, black steel with plain ends; type, grade, and wall thickness. Temperature and Pressure ratings shall be as specified in Section COMMON REQUIREMENTS FOR HVAC WORK.
- B. Cast-Iron Threaded Fittings: ASME B16.4; Classes 125, 150 and 300. Temperature and Pressure ratings shall be as specified in Section “Common Requirements for HVAC Work.”
- C. Malleable-Iron Threaded Fittings: ASME B16.3, Classes 150 and 300 Temperature and Pressure ratings shall be as specified in Section “Common Requirements for HVAC Work.”
- D. Malleable-Iron Unions: ASME B16.39; Classes 150, 250, and 300. Temperature and Pressure ratings shall be as specified in Section “Common Requirements for HVAC Work.”
- E. Weld End Fittings: ASTM A-234, ASME B16.9; Classes 150, 250, and 300. Temperature and Pressure ratings shall be as specified in Section “Common Requirements for HVAC Work.”
- F. Socket Weld Fittings: ASME B16.11; Classes 150, 250, and 300. Temperature and Pressure ratings shall be as specified in Section “Common Requirements for HVAC Work.”
- G. Cast-Iron Pipe Flanges and Flanged Fittings: ASME B16.1, Classes 125 and 250; raised ground face, and bolt holes spot faced. Temperature and Pressure ratings shall be as specified in Section “Common Requirements for HVAC Work.”
- H. Wrought-Steel Fittings: ASTM A 234/A 234M, wall thickness to match adjoining pipe.
- I. Welded Flanges ASTM-A105, ANSI B16.5
- J. Wrought Cast- and Forged-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
  - 1. Material Group: 1.1.
  - 2. End Connections: Butt-welding.
  - 3. Facings: Raised face.
- K. Wrought-Steel Flanges and Flanged Fittings: ASME B16.5, including bolts, nuts, and gaskets of the following material group, end connections, and facings:
  - 1. Material Group: 1.1.
  - 2. End Connections: Butt-welding.
  - 3. Facings: Raised face.
- L. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, black steel of same Type, Grade, and Schedule as pipe in which installed.
- M. Stainless-Steel Bellows, Flexible Connectors:
  - 1. Body: Stainless steel bellows with woven, flexible, bronze, wire-reinforced, protective jacket.
  - 2. End Connections: Threaded or flanged to match equipment connected.
  - 3. Performance: Capable of 3/4-inch misalignment.
  - 4. CWP Rating: As specified in Section “Common Requirements for HVAC Work.”  
Maximum Operating Temperature: 250 deg F.

## 2.5 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
  - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
    - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- D. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze.
- E. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- F. Welding Materials: Comply with Section II, Part C, of ASME Boiler and Pressure Vessel Code for welding materials appropriate for wall thickness and for chemical analysis of pipe being welded.
- G. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

## 2.6 VALVES

- A. Valves shall be as specified under Section 23 05 23 "Valves for HVAC Piping".
- B. Automatic Temperature Control Valve Actuators, and Sensors: Comply with requirements specified in Section "HVAC Instrumentation and Controls."

## 2.7 STRAINERS

- A. There shall be approved strainers in the inlet connections to each bucket or combination float and thermostatic steam trap, each water feeder and make-up connection, each water regulating valve, each pump, each vent and each valve. The intention is to protect, by strainers, all apparatus of an automatic or manual character whose proper functioning would be interfered with by dirt on the seat, or by scoring of the seat.
- B. All strainers in waterlines (including all pump inlets) and in steam lines shall be Y-pattern, set in a horizontal (or vertical downward) run of pipe. Where this is not feasible, strainers may be of the enlarged cross-section type. Strainers shall be arranged so as not to "trap" pipes and to facilitate disconnection and opening up for cleaning. Unless otherwise indicated, strainers shall be line size.
- C. Provide approved valved and capped dirt blow off connection for each strainer.
- D. All strainers shall be provided with flanged covers for screen removal in lieu of screwed covers for screen removal wherever obtainable.

- E. All strainer screens 6" and above shall be reinforced for the operating conditions.
- F. Y-Pattern Strainers:
  - 1. Body: ASTM A 126, Class B cast iron, with bolted cover and bottom drain connection.
  - 2. End Connections: Threaded ends for strainers 2" and smaller; flanged ends for strainers 2-1/2" and larger.
  - 3. Strainer Screen: Stainless-steel mesh strainer, and stainless steel basket - perforated (1/32" for steam and condensate and for water: 1/16" for sizes up to 3" and 1/8" for sizes above 4")
  - 4. Tapped blowoff plug.
  - 5. CWP Rating: 300-psig working steam pressure.
- G. Basket Strainers:
  - 1. Body: ASTM A 126, Class B high-tensile cast iron, with bolted cover and bottom drain connection.
  - 2. End Connections: Threaded ends for strainers 2" and smaller; flanged ends for strainers 2-1/2" and larger.
  - 3. Strainer Screen: Stainless steel, mesh strainer, and perforated (1/32" for steam and condensate and for water: 1/16" for sizes up to 3" and 1/8" for sizes above 4") stainless-steel basket.
  - 4. CWP Rating: 300-psig working steam pressure.
- H. T-Pattern Strainers:
  - 1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
  - 2. End Connections: Threaded ends for strainers 2" and smaller; flanged ends for strainers 2-1/2" and larger.
  - 3. Strainer Screen: 60-mesh startup strainer, and perforated (1/32" for steam and condensate and for water: 1/16" for sizes up to 3" and 1/8" for sizes above 4") stainless-steel basket.
  - 4. CWP Rating: 250 psig working steam pressure.

## 2.8 FLASH TANKS

- A. Shop or factory fabricated of welded steel according to ASME Boiler and Pressure Vessel Code, for 300-psig rating; and bearing ASME label. Fabricate with tappings for low-pressure steam and condensate outlets, high-pressure condensate inlet, air vent, safety valve, and legs. As specified in Section "Common Requirements for HVAC Work."

## 2.9 SAFETY VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Armstrong International, Inc.
  - 2. Kunkle Valve; a Tyco International Ltd. Company.
  - 3. Spirax Sarco, Inc.
  - 4. Watts Water Technologies, Inc.
  - 5. Or approved equal.
- B. Disc Material: Forged copper alloy.

- C. End Connections: Threaded inlet and outlet.
- D. Spring: Fully enclosed steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
- E. Pressure Class: 150.
- F. Drip-Pan Elbow: Cast iron and having threaded inlet and outlet with threads complying with ASME B1.20.1.
- G. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.

## 2.10 CAST-IRON SAFETY VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Armstrong International, Inc.
  - 2. Kunkle Valve; a Tyco International Ltd. Company.
  - 3. Spirax Sarco, Inc.
  - 4. Watts Water Technologies, Inc.
  - 5. Or approved equal.
- B. Disc Material: Forged copper alloy with bronze nozzle.
- C. End Connections: Raised-face flanged inlet and threaded or flanged outlet connections.
- D. Spring: Fully enclosed cadmium-plated steel spring with adjustable pressure range and positive shutoff, factory set and sealed.
- E. Pressure Class: 150.
- F. Drip-Pan Elbow: Cast iron and having threaded inlet, outlet, and drain, with threads complying with ASME B1.20.1.
- G. Exhaust Head: Cast iron and having threaded inlet and drain, with threads complying with ASME B1.20.1.
- H. Size and Capacity: As required for equipment according to ASME Boiler and Pressure Vessel Code.

## 2.11 PRESSURE-REDUCING VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Armstrong International, Inc.
  - 2. Hoffman Specialty; Division of ITT Industries.
  - 3. Leslie Controls, Inc.
  - 4. Spence Engineering Company, Inc.
  - 5. Spirax Sarco, Inc.
  - 6. Or approved equal.
- B. Size, Capacity, and Pressure Rating: Factory set for inlet and outlet pressures indicated.

- C. Description: Pilot-actuated, diaphragm type, with adjustable pressure range and positive shutoff.
- D. Body: Cast iron.
- E. End Connections: Threaded connections for valves 2" and smaller and flanged connections for valves 2-1/2" and larger.
- F. Trim: Hardened stainless steel.
- G. Head and Seat: Replaceable, main head stem guide fitted with flushing and pressure-arresting device cover over pilot diaphragm.
- H. Gaskets: Non-asbestos materials.

## 2.12 AIR CONTROL DEVICES

### A. Expansion Tanks:

- 1. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature, with taps in bottom of tank for tank fitting and taps in end of tank for gage glass. Tanks shall be factory tested with taps fabricated and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- 2. Air-Control Tank Fitting: Cast-iron body, copper-plated tube, brass vent tube plug, and stainless-steel ball check, 100-gal. unit only; sized for compression-tank diameter. Provide tank fittings for 125-psig working pressure and 250 deg F maximum operating temperature.
- 3. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig working pressure and 240 deg F maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.
- 4. Gage Glass: Full height with dual manual shutoff valves, 3/4-inch diameter gage glass, and slotted-metal glass guard.

### B. Diaphragm-Type Expansion Tanks:

- 1. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- 2. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
- 3. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

## 2.13 SEPARATORS

- A. Maximum Working Pressure: As specified in Section 230500 "Common Requirements for HVAC Work."
- B. Maximum Operating Temperature: Up to 300 deg F.
- C. Tangential-Type Air Separators:
  - 1. Tank: Welded steel; ASME constructed and labeled for 125-psig minimum working pressure and 375 deg F maximum operating temperature.
  - 2. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.

3. Tangential Inlet and Outlet Connections: Threaded for 2" and smaller; flanged connections for 2-1/2" and larger.
4. Blowdown Connection: Threaded.
5. Size: Match system flow capacity.
6. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Bell & Gossett Type RL
  - b. Armstrong,
  - c. Amtrol,
  - d. Taco,
  - e. Or approved equal.

**D. In-Line Air Separators:**

1. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
2. Cartridge type impingement filter, with replaceable 100 micron or 300 micron filter media. Size and capacity shall be as indicated on drawings.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Bruner,
  - b. Culligan,
  - c. Cuno,
  - d. Dollinger,
  - e. Honeywell,
  - f. Or approved equal.

**E. Air Purgers:**

1. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
2. Maximum Working Pressure: As specified in Section "Common Requirements for HVAC Work."

**F. Coalescing Separator:**

1. Provide coalescing type air and dirt separator of size and location as indicated on the drawings. Separator shall include separate air chamber for air removal and lower vessel extension for dirt separation.
2. Separator shall be steel fabricated with ANSI B16.5 flange connections and rated for 150 psig design pressure. Separator shall include internal copper coalescing medium and stainless steel collector tube.
3. Separators shall include manufacturer's integral high capacity air vent or cast iron air vent as specified herein. Separator shall also include manufacturers side tap valve to facilitate system filling and bottom drain connection with ball valve drain.
4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Spirotherm (Spirovent Dirt HV),
  - b. LAKOS,
  - c. Griswold Controls
  - d. Bruner
  - e. Honeywell

f. Or approved equal.

G. Centrifugal SOLID Separator:

1. Provide centrifugal solids separator, with efficiency of 98% to 40 microns, as scheduled and detailed on drawings. Body shall be steel, ASME stamped for 125 psig, with flanged connections and factory painted exterior. Provide 4"x6" cleanout for lower section, and flanged upper dome for easy maintenance access.
2. Provide automatic recovery tank with bag filter (solids collection vessel) as scheduled and detailed. Controlled continuous flow, 25 micron solids collection bag, 600 cubic inches capacity, manual isolation valves, sight glass for flow verification and differential pressure switch, Annunciator in an independent junction box, contacts rated for 4 amps at 115 volts, set at 10 psid with a range of 4 to 25 psid.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. LAKOS,
  - b. Griswold Controls
  - c. Bruner
  - d. Honeywell
  - e. Or approved equal.

2.14 HVAC PIPING SPECIALTIES

A. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.
3. Performance: Capable of 3/4-inch misalignment.
4. CWP Rating: As specified in Section "Common Requirements for HVAC Work."
5. Maximum Operating Temperature: 250 deg F.

B. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.
2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
3. Performance: Capable of misalignment.
4. CWP Rating: As specified in Section "Common Requirements for HVAC Work."
5. Maximum Operating Temperature: 250 deg F.

C. Expansion fittings and loops are specified under another section of this work.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

A. Piping materials, components and installation shall be capable of withstanding the minimum system working pressure and temperature as specified under Section "Common Requirements for HVAC Work."

- B. Grooved piping is not permitted
- C. Type "M" copper tubing is not permitted.
- D. For all systems, provide dielectric fittings to isolate joined dissimilar materials to prevent galvanic action and stop corrosion. Fittings shall be of the non-reducing type, which shall be suitable for the system fluid, pressure, and temperature and shall not restrict the flow.

### 3.3 PIPING MATERIALS

#### A. LP Steam Piping Applications

- 1. LP Steam and condensate Piping is specified under another section of this work.

#### B. HP Steam Piping Applications

- 1. HP Steam and condensate Piping is specified under another section of this work.

#### C. Hot Water Piping

- 1. Hot-water heating piping 2-1/2" and smaller, shall be Schedule 40 steel pipe; ASTM – A53, Grade B, Seamless. cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints. Brazed Type "K" copper is also acceptable.
- 2. Hot-water heating piping, 3" and larger, shall be Schedule 40 steel pipe, ASTM – A53, Grade B, Seamless wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded joints.

#### D. Chilled Water Piping Applications

- 1. Chilled-water piping 2-1/2" and smaller shall be Schedule 40 steel pipe; ASTM-A53, Grade B, seamless, cast-iron fittings; cast-iron flanges and flange fittings; and threaded joints. Brazed Type "K" copper is also acceptable.
- 2. Chilled-water piping, aboveground, 3" and larger, shall be Schedule 40 steel pipe, ASTM – A53, seamless, wrought-steel fittings and forged-steel flanges and flange fittings, and welded and flanged joints.

#### E. Condenser Water Piping Applications

- 1. Condenser-water piping, aboveground, 2-1/2" and smaller shall be Schedule 40 steel pipe, ASTM – A53, seamless; malleable-iron fittings; cast-iron flanges and flange fittings; and threaded joints. Brazed Type "K" copper is also acceptable.
- 2. Condenser-water piping, aboveground, 3" and larger shall be Schedule 40 steel pipe, ASTM-A53, seamless, wrought-steel fittings and forged-steel flanges and flange fittings, and welded and flanged joints.
- 3. Condenser-water piping installed belowground and within slabs shall be Type K (A), annealed-temper copper tubing, wrought-copper fittings, and brazed joints. Use the fewest possible joints.

#### F. Ancillary Piping Applications

- 1. Makeup-water piping installed aboveground shall be Type L (B), hard drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
- 2. Makeup-Water Piping Installed belowground and within Slabs: Type K, hard drawn temper copper tubing, wrought-copper fittings, and brazed joints. Use the fewest

- possible joints.
3. Condensate-Drain Piping: Type L, hard drawn-temper copper tubing, wrought-copper fittings, and brazed joints.
  4. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.

G. Air-Vent Piping:

1. Inlet: Same as service where installed.
2. Outlet: Type K (A), annealed-temper copper tubing with soldered joints.

H. Safety-Valve-Inlet and - Outlet Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed.

I. Vacuum-Breaker Piping: Outlet, same as service where installed.

J. Safety-Valve-Inlet and -Outlet Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed.

### 3.4 VALVE APPLICATIONS

- A. Install shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.
- B. Install throttling-duty valves at each branch connection to return main.
- C. Install check valves at each pump discharge and elsewhere as required to control flow direction.
- D. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; and pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.
- E. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

### 3.5 PIPING INSTALLATIONS

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- E. Install piping to permit valve servicing.
- F. Install piping at indicated slopes.

- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Install piping to allow application of insulation.
- J. Select system components with pressure rating equal to or greater than system pressures specified in section "Common Requirements for HVAC Work."
- K. Install groups of pipes parallel to each other, spaced to permit applying insulation, insulation covers and servicing of valves.
- L. Install drains, consisting of a tee fitting, ¾" ball valve, and short ¾" threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
- M. Install steam supply piping at a minimum uniform grade of 0.2 percent downward in direction of steam flow.
- N. Install condensate return piping at a minimum uniform grade of 0.4 percent downward in direction of condensate flow.
- O. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
- P. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
- Q. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
- R. Install valves according to Section "Valves for HVAC Piping."
- S. Install unions in piping, 2" and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
- T. Install flanges in piping, 2-1/2" and larger, adjacent to valves, at final connections of equipment and elsewhere as indicated.
- U. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install ¾" nipple and ball valve in blowdown connection of strainers 2" and larger. Match size of strainer blowoff connection for strainers smaller than 2".
- V. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in another section of this work.
- W. Identify and label piping as specified under another section of this work.
- X. Install drip legs at low points and natural drainage points such as ends of mains, bottoms of risers, and ahead of pressure regulators, and control valves.
  - 1. On straight runs with no natural drainage points, install drip legs at intervals not exceeding 300 feet.
  - 2. Size drip legs same size as main. In steam mains 6" and larger, drip leg size can be reduced, but to no less than 4".
- Y. Flash Tank:

1. Pitch condensate piping down toward flash tank.
2. If more than one condensate pipe discharges into flash tank, install a check valve in each line.
3. Install thermostatic air vent at tank top.
4. Install safety valve at tank top.
5. Install full-port ball valve, and swing check valve on condensate outlet.
6. Install inverted bucket or float and thermostatic trap at low-pressure condensate outlet, sized for three times the calculated heat load.
7. Install pressure gage on low-pressure steam outlet.

### 3.6 SAFETY VALVE INSTALLATION

- A. Install safety valves according to ASME B31.1, "Power Piping" and ASME B31.9, "Building Services Piping."
- B. Pipe safety-valve discharge without valves to atmosphere outside the building.
- C. Install drip-pan elbow fitting adjacent to safety valve and pipe drain connection to nearest floor drain.
- D. Install exhaust head with drain to waste, on vents equal to or larger than 2-1/2 ".

### 3.7 HANGERS AND SUPPORTS

- A. Piping support must account for expansion and contraction, vibration, dead load of piping and its contents and seismic bracing requirements.
- B. Hangers, supports, anchor devices and seismic restraints are specified in Section "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components."
- C. Install the following pipe attachments:
  1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
  2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
  3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
  4. Spring hangers to support vertical runs.
  5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
  6. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.
- D. Install hangers for steel piping with the following maximum spacing and minimum rod sizes:
  1. 3/4" through 1-1/4" - Maximum span, 7 feet; minimum rod size, 3/8 inch.
  2. 1-1/2": Maximum span, 9 feet; minimum rod size, 3/8 inch.
  3. 2": Maximum span, 10 feet; minimum rod size, 3/8 inch.
  4. 2-1/2": Maximum span, 11 feet; minimum rod size, 1/2 inch.
  5. 3": Maximum span, 12 feet; minimum rod size, 1/2 inch.
  6. 3-1/2": Maximum span, 13 feet; minimum rod size, 1/2 inch.
  7. 4": Maximum span, 14 feet; minimum rod size, 5/8 inch.
  8. 5": Maximum span, 16 feet; minimum rod size, 5/8 inch.
  9. 6": Maximum span, 17 feet; minimum rod size, 3/4 inch.
  10. 8": Maximum span, 19 feet; minimum rod size, 3/4 inch.

11. 10": Maximum span, 22 feet; minimum rod size, 7/8 inch.
12. 12": Maximum span, 23 feet; minimum rod size, 7/8 inch.
13. 14": Maximum span, 25 feet; minimum rod size, 1 inch.
14. 16": Maximum span, 27 feet; minimum rod size, 1 inch.
15. 18": Maximum span, 28 feet; minimum rod size, 1 inch.
16. 20": Maximum span, 30 feet; minimum rod size, 1-1/4 inches.

- E. Install hangers for drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:

1. 3/4": Maximum span, 5 feet; minimum rod size, 3/8 inch.
2. 1": Maximum span, 6 feet; minimum rod size, 3/8 inch.
3. 1-1/2": Maximum span, 8 feet; minimum rod size, 3/8 inch.
4. 2": Maximum span, 8 feet; minimum rod size, 3/8 inch.
5. 2-1/2": Maximum span, 9 feet; minimum rod size, 1/2 inch.
6. 3": Maximum span, 10 feet; minimum rod size, 1/2 inch.

- F. Support vertical runs at roof, at each floor, and at 10-foot intervals between floors.

### 3.8 PIPE JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
  2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- I. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.
- J. Mechanically Formed, Copper-Tube-Outlet Joints: Use manufacturer-recommended tool and

procedure, and brazed joints.

- K. Pressure-Sealed Joints: Use manufacturer-recommended tool and procedure. Leave insertion marks on pipe after assembly.

### 3.9 HYDRONIC SPECIALTIES INSTALLATION

- A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.
- B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Manual vents at heat-transfer coils and elsewhere as required for air venting.
- C. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.
- D. Install in-line air separators in pump suction. Install drain valve on air separators 2" and larger.
- E. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.
- F. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
  - 1. Install tank fittings that are shipped loose.
  - 2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.
- G. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system Project requirements.

### 3.10 TERMINAL EQUIPMENT CONNECTIONS

- A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
- B. Install control valves in accessible locations close to connected equipment.
- C. For terminal reheat coils, install control valves in return line close to connected equipment.
- D. Install traps and control valves in accessible locations close to connected equipment.
- E. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.
- F. Install vacuum breakers downstream from control valve, close to coil inlet connection.
- G. Install a drip leg at coil outlet.
- H. Install ports for pressure gages and thermometers at coil inlet and outlet connections.

### 3.11 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and

inspect components, assemblies, and equipment installations, including connections.

- B. Prepare piping according to ASME B31.1, "Power Piping" and ASME B31.9, "Building Services Piping," and as follows:
1. Leave joints, including welds, uninsulated and exposed for examination during test.
  2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
  3. Flush piping systems with clean water; then remove and clean or replace strainer screens.
  4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
  5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.
- C. Perform the following tests on hydronic piping:
1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
  2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
  3. Isolate expansion tanks and determine that hydronic system is full of water.
  4. All piping systems shall be tested to a hydrostatic pressure at least 1-1/2 times the maximum operating pressure (but not less than 125 psig) for a sufficiently long time, but not less than 4 hours, without losing pressure, to detect all leaks and defects. Where necessary, piping shall be tested in sections to permit the progress of the job.
  5. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
  6. After hydrostatic test pressure has been applied for at least 10 minutes, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
  7. Prepare written report of testing.
- D. Prepare written report of testing.
- E. Perform the following before operating the system:
1. Open manual valves fully.
  2. Inspect pumps for proper rotation.
  3. Set makeup pressure-reducing valves for required system pressure.
  4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
  5. Set temperature controls so all coils are calling for full flow.
  6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
  7. Verify lubrication of motors and bearings.

**END OF SECTION 23 21 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 21 23****HVAC PUMPS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 13 "Motors for HVAC Equipment".
- E. Section 23 05 15 "Variable Frequency Motor Drives".
- F. Section 23 05 23 "Valves for HVAC".
- G. Section 23 21 13 "HVAC Piping".
- H. Section 23 22 13 "Steam and Condensate Heating Piping".
- I. This Section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes the following:
  - 1. In-line centrifugal pumps.
  - 2. End-suction centrifugal pumps.
  - 3. Horizontal split-case pumps
  - 4. Duplex condensate pump units.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile

Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings” where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 REFERENCE STANDARDS**

- A. The latest published edition of a reference shall be applicable to this Project unless identified by a specific edition date.
- B. All reference amendments adopted prior to the effective date of this Contract shall be applicable to this Project.
- C. All materials, installation and workmanship shall comply with the applicable requirements and standards addressed within the following references and where noted within this Division of work.

- 1. ANSI/UL 778 – Motor Operated Water Pumps

**1.6 DEFINITIONS**

- A. Buna-N: Nitrile rubber.
- B. EPT: Ethylene propylene terpolymer.

**1.7 SYSTEM PERFORMANCE REQUIREMENTS**

- A. Pump Pressure Ratings: As described in section 23 05 00 “Common Requirements for HVAC Work,” but at least equal to system’s maximum operating pressure at point where installed, but not less than 250 psi. Factory test at 1.5 times working pressure.
- B. Water Temperature: Pump to comply with specific application.
- C. Mounting: As described in section 23 05 48 “Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components”.
- D. Pumps shall be selected to operate at or near their point of peak efficiency thus allowing for operation at capacities of approximately 25% beyond design capacity. In addition, the design impeller diameter shall be selected so that the design capacity of each pump (GPM and TDH) shall not exceed 90% of the capacity obtainable with maximum impeller diameter at the design speed for that model.
- E. Rising Curve: Pump characteristic curve shall rise continuously from maximum capacity to shut-off, with shut-off head minimum 10 percent greater than the design head, except for double suction pumps to shut-off head shall be 20 percent greater than the design head.
- F. Working Pressure: Construct pumps for the working pressure in pounds per square inch as specified under another section of this work.

- G. Each pump shall be thoroughly cleaned and painted with (1) coat of machinery enamel prior to shipment.
- H. The manufacturer shall include a set of installation instructions with the pumps at the time shipment.

#### 1.8 SEISMIC AND WIND LOAD DESIGN

- A. This project is located within a seismic and wind zone requiring special provisions for the support and restraint of equipment, components and piping.
- B. Fabricate pumps, mounting frames and attachments and other section components with restraints to withstand seismic forces defined under another section of this work.
- C. Provide manufacturer's Seismic Qualifications Certification that the pumps, controllers, accessories and components will withstand seismic forces as defined under another section of this work. Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Dimensioned Outlined Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchoring provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

#### 1.9 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.10 SUBMITTALS

- A. Product Data: Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump's operating point on curves.
- B. Shop Drawings: Show pump layout and connections. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
  - 2. Submit certified pump curves showing performance characteristics with pump and system operating point plotted. Include NPSH information.
- C. Product Certificates from Pump manufacturer certifying accuracies under specified operating conditions and compliance with specified requirements.
- D. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

#### 1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

- B. Alignment: Base mounted pumps shall be aligned by qualified millwright and alignment certified.
- C. Source Limitations: Obtain Hydronic pumps through one source from a single manufacturer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York Department of Buildings, and marked for intended use.
- E. Regulatory Requirements: Comply with provisions of the following:
  - 1. UL Compliance: Comply with UL 778 for motor-operated water pumps.
  - 2. ASME B31.9 "Building Services Piping" for piping materials and installation.
  - 3. Hydraulic Institute's "Standards for Centrifugal, Rotary & Reciprocating Pumps" for pump design, manufacture, testing, and installation.
  - 4. UL 778 "Standard for Motor Operated Water Pumps" for construction requirements. Include UL listing and labeling.
  - 5. NEMA MG 1 "Standard for Motors and Generators" for electric motors. Include NEMA listing and labeling.
  - 6. NFPA 70 "National Electric Code" for electrical components and installation.
- F. Single-Source Responsibility. Obtain each category of pumps from a single-source and by a single manufacturer. Include responsibility and accountability to answer questions and resolve problems regarding compatibility, installation, performance and acceptance of pumps.

#### 1.12 DELIVERY, STORAGE, AND HANDLING

- A. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.
- B. Store pumps in dry location.
- C. Retain protective covers for flanges and protective coatings during storage.
- D. Protect bearings and couplings against damage from sand, grit, and other foreign matter.
- E. Comply with pump manufacturer's written rigging instructions.

#### 1.13 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

### PART 2 - PRODUCTS

#### 2.1 PUMPS, GENERAL

- A. General: Factory assembled and tested.
- B. Base-Mounted Pumps: Include pump casings that allow removal and replacement of impellers without disconnecting piping.
- C. Types, Sizes, Capacities, and Characteristics: As specified.

- D. To insure cavitation-free operation, each pump's NPSH requirement must be low enough to permit stable, continuous operation at 120% or greater of best efficiency point.
- E. Provide premium efficient motors.
- F. Motor kW ratings shown on the schedule are minimum acceptable and have been sized for continuous operation without exceeding full load nameplate rating over the entire pump curve, exclusive of motor service factor.
- G. Pumps shall be hydrostatically tested to 150% of the maximum pump working pressure.
- H. The pump and motor shall be mounted and aligned at the pump manufacturer's factory on a common baseplate. Final alignment shall be made, on site, after the pump is installed and brought to operating temperature.
- I. For all pumps, provide a flushing line from the discharge volute to the flush seal cap. Provide an abrasive separate in the flushing line. See Details.
- J. Furnish single, multiple, or variable-speed, premium efficiency motors, with type of enclosures and electrical characteristics indicated and as specified under another section of this work. Include built-in thermal-overload protection and grease-lubricated ball bearings. Select each motor to be non-overloading over full range of pump performance curve.
- K. Factory Finish: Manufacturer's standard paint applied to factory-assembled and -tested units before shipping.
- L. Manufacturer's Preparation for Shipping: Clean flanges and exposed machine metal surfaces and tear with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.

## 2.2 CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Armstrong
  - 2. Bell & Gossett; Div. of ITT Industries.
  - 3. PACO Pumps.
  - 4. Peerless Pump; a Member of the Sterling Fluid Systems Group.
  - 5. Taco, Inc.
  - 6. Weinman; Div. of Crane Pumps & Systems.
  - 7. Or Approved Equal.
- B. Description: Factory-assembled and tested, centrifugal, overhung-impeller, radially split case design, close-coupled, in-line pump, designed for installation with pump and motor shafts mounted horizontally or vertically.
- C. Pump shall be rated for 250-psig minimum working pressure and a continuous water temperature of 250 deg F.
- D. Pump Construction:
  - 1. Casing: Radially split, ductile iron, with suction and discharge flanges of the same size for piping connections, located on a common center line 180 degrees apart for mounting

- in the pipe line. Drain plug in bottom of volute and threaded gage tapings at inlet and outlet.
2. Flanges shall be ANSI rated drilling for pump rated working pressure.
  3. Pumps shall include a volute type casing suction branch to minimize pumping noise.
  4. Impeller: ASTM B 584, cast bronze; single suction, statically and dynamically balanced, enclosed, overhung and keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
  5. Pump Shaft and Sleeve: Ground and polished stainless steel shaft with bronze sleeve and integral thrust bearing. Include flinger on motor shaft between motor and seals to prevent liquid that leaks past pump seals from entering motor bearings.
  6. Wearing Rings: Replaceable, bronze casing ring.
  7. Mechanical Seal: Single balance, Mechanical Type, suitable for 250 degrees F, with all metal parts to be 316 stainless steel Viton elastomers and tungsten carbon and seat carbon washer.
  8. A flush line shall be provided between the pump discharge and the flush connection on the seal face to supply a source of water to the seal face. For open type water systems, provide an abrasive separator in the flush line to insure clean water.
  9. Pump Bearings: Oil lubricated, thrust type.
  10. Motor: Direct mounted to pump casing. Include lifting and supporting lugs in top of motor enclosure. Motor shall be as specified under another section of this work."

## 2.3 END-SUCTION CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with the requirements, provide products by one of the following:
1. Armstrong
  2. Bell & Gossett; Div. of ITT Industries.
  3. PACO Pumps.
  4. Peerless Pump; a Member of the Sterling Fluid Systems Group.
  5. Taco, Inc.
  6. Weinman; Div. of Crane Pumps & Systems.
  7. Or approved equal.
- B. Description: Factory-assembled and tested, centrifugal, overhung-impeller, close-coupled, end-suction pump, designed for installation with pump and motor shafts mounted horizontally.
- C. Rate pump for 250-psig minimum working pressure and a continuous water temperature of 250 deg F.
- D. Pump Construction:
1. Casing: Radially split, ductile iron, with threaded gage tapings at inlet and outlet, and flanged connections. Discharge nozzle shall be capable of being swiveled through any of three positions for greater flexibility of application. A separate suction cover shall be bolted to the casing and aligned with a machined locked fit. Openings shall be provided for priming, venting, draining and for suction and discharge gauge connections.
  2. Suction and discharge connections shall be flanged, ANSI suitable for working pressures scheduled on the drawings, flat faced.
  3. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
  4. Pump Shaft: Steel, with copper-alloy shaft sleeve.
  5. Bearings: Provide regreasable ball bearings with 50,000-hour life, rated L10 and dust-sealed.

6. Seals: Hot water pump shall be provided with mechanical seals of carbon ring, Viton Elastomer and ceramic stationary seats. Condenser water and chilled water shall be provided with mechanical seals of carbon ring Buna elastomer and ceramic stationary seat.
7. Provide a flushing line from the discharge volute to the flush seal cap. For condenser water (or open water system) pumps, provide an abrasive separate in the flushing line.
8. Wearing Rings: Replaceable, bronze casing rings to maintain proper running clearances and minimize leakage between suction and discharge side of casing.
9. Motor: Direct mounted to pump casing. Include supporting legs as integral part of motor enclosure. Motor shall be sized for non-overloading over full characteristic curve of the pump. Motors shall be close coupled type. Motor shall be as specified under another section of this work."

#### 2.4 SEPARATELY COUPLED, BASE-MOUNTED, END-SUCTION CENTRIFUGAL PUMPS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Armstrong
  2. Bell & Gossett; Div. of ITT Industries.
  3. PACO Pumps.
  4. Taco, Inc.
  5. Weinman; Div. of Crane Pumps & Systems.
  6. Or approved equal.
- B. Description: Horizontally mounted, factory assembled and tested, centrifugal, overhung-impeller, separately coupled, end-suction pump designed for base mounting, with pump and motor shafts horizontal. Rate pump for 250-psig minimum working pressure and a continuous water temperature of 250 deg F.
- C. Pump Construction:
  1. Casing: Radially split, ductile iron, with threaded gage tappings at inlet and outlet, and flanged connections. Discharge nozzle shall be capable of being swiveled through any of three positions for greater flexibility of application. A separate suction cover shall be bolted to the casing and aligned with a machined locked fit. Openings shall be provided for priming, venting, draining and for suction and discharge gauge connections.
  2. Suction and discharge connections shall be flanged, ANSI suitable for working pressures scheduled on the drawings, flat faced.
  3. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
  4. Shaft and Sleeve: A replaceable bronze shaft sleeve shall be furnished to cover the wetted area of the shaft extending through the seal box. The shaft shall be high strength S.A.E. 1045 steel accurately machined and of sufficient size to transmit the maximum horsepower and loading from the impeller to the bearing impeller at the maximum allowable operating speed. Shaft shall be furnished with a deflector between the casing and bearing frame to prevent leakage of the fluid into the bearings.
  5. Bearings: Provide greasable ball bearings with 50,000-hour life, rated L10 and dust-sealed.
  6. Wearing Rings: Replaceable, bronze casing rings to maintain proper running clearances and minimize leakage between suction and discharge side of casing.
  7. Seals: Hot water pumps shall be provided with mechanical seals which shall be stainless steel with a rotating face of babbitt filled carbon and a stationary face of tungsten carbide, balanced type designed for 250 degrees F.

8. Condenser water and chilled water shall be provided with mechanical seals of carbon ring Buna elastomer and ceramic stationary seat.
9. Provide a flushing line from the discharge volute to the flush seal cap.
10. For condenser water pumps, provide an abrasive separate in the flushing line. For pumps with working pressures above 150 PSIG, mechanical seals shall be stainless steel with a rotating face of babbitt filled carbon and a stationary face of tungsten carbide, balanced type designed for 250 degrees F.
11. Motor: Motor shall be sized for non-overloading over full characteristic curve of the pump. Motor: Direct mounted to pump casing. Include supporting legs as integral part of motor enclosure. Motors shall be close coupled type. Motor shall be as specified under another section of this work.
12. Packing Seal: Stuffing box, with a minimum of four rings of graphite-impregnated braided yarn with bronze lantern ring between center two graphite rings, and bronze packing gland.
13. Flexible Coupling: For pumps with variable speed drives or constant speed over 40 HP, provide Falk Type "T" Steel with coupling guard. For constant speed pumps with motors less than 40 HOP, Woods type will be permitted/
14. Coupling Guard: Dual rated; ANSI B15.1, Section 8; OSHA 1910.219 approved; steel; removable; attached to mounting frame.
15. Mounting Frame: Welded-steel frame and cross members, factory fabricated from ASTM A 36/A 36M channels and angles. Fabricate to mount pump casing, coupling guard, and motor. Grind welds smooth before application of factory finish. Field drill motor mounting holes for field installed motors.
16. Motor: Motor: secured to mounting frame, with adjustable alignment. Motor shall be sized for non-overloading over full characteristic curve of the pump. Motor shall be as specified under another section of this work."

## 2.5 HORIZONTAL SPLIT-CASE PUMPS

- A. Provide Horizontal Split Case pumps, single stage, double suction type, with pump characteristics which provide rising heads to shut off.
- B. Refer to pump schedules for pump flows, heads, motor speed, enclosure, efficiency and power requirements.
- C. Pumps shall be Horizontal Split Case type, each with flexible type coupling and OSHA guard and mounted, with motor, on a fabricated steel baseplate.
- D. Pump Casing – Cast iron, axially split, with 15° angle tilted parting to allow for lower NPSH requirements and to minimize pump dimensions. Suction and discharge connections, located in the lower casing, shall be flanged and of sizes indicated in the schedule and shall be drilled and tapped for gauge connections. Suction and discharge connections shall be on the same elevation. The top of the casing and the rotating assembly shall be removable without disturbing the piping connections.
- E. Wearing Rings – The pump casing shall be fitted with replaceable bronze wearing rings.
- F. Impeller – Bronze, double suction, fully enclosed type. Dynamically balanced.
- G. Shaft – Carbon steel, designed for minimum deflection and vibration.
- H. Shaft Sleeves – Shall be stainless steel and form components of the cartridge mechanical seals.

- I. Mechanical Seals – Each seal chamber shall be fitted with a cartridge type mechanical seal. The seal component shall be of stainless steel construction with carbon vs ceramic faces and EPDM secondary seal. The mechanical seal, shaft sleeve and seal plate shall be easily removable as a single component. Provide seal plates with factory installed flush lines.
- J. Bearings – Supply dust tight deep groove ball bearings. With permanently sealed grease type lubrication.
- K. Bearings shall be mounted in cartridge type housings that are replaceable without opening the pump casing.
- L. Bearings shall be removable by simply rotating the removal nut behind the bearing. No special tools or pullers are to be necessary.
- M. Motor kW ratings shown on the schedule are minimum acceptable and have been sized for continuous operation without exceeding full load nameplate rating over the entire pump curve, exclusive of motor service factor.
- N. Pumps shall be hydrostatically tested to 150% of the maximum pump working pressure.
- O. The pump and motor shall be mounted and aligned at the pump manufacturer's factory on a common baseplate. Final alignment shall be made, on site, after the pump is installed and brought to operating temperature.
- P. If supplied, the drip pan tapped connection shall be piped to the nearest drain.
- Q. Supply in each flush line to the cartridge mechanical seal a 50-micron cartridge filter and sight flow indicator, to suit the working pressure encountered.
- R. Filters shall be changed, by the installing contractor, after system flushing and on a regular basis until turned over to the Commissioner.
- S. Supply in each flush line to the cartridge mechanical seal a cyclone type separator, with sight flow indicator.

## 2.6 DUPLEX CONDENSATE PUMP UNITS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Shipco
  - 2. Bell & Gossett; Div. of ITT Industries.
  - 3. PACO Pumps.
  - 4. Taco, Inc.
  - 5. Weinman; Div. of Crane Pumps & Systems.
  - 6. Federal
  - 7. Or Approved Equal.
- B. Description: Complete Unit with corrosion-resistant pump, Cast-Iron Receiver with cover, and automatic controls. Pumps shall be as made by manufacturer noted on drawings or approved.

- C. Pumps shall be of the centrifugal, close-coupled type, with enclosed bronze impeller and stainless steel shaft. The pump shall be so constructed that access may be had to impeller and other interior parts without breaking pipe connections. The motor shall be ball bearing type, designed for continuous operation, rate for electrical characteristics noted elsewhere. Operation of motor shall be controlled by automatic float-operated switch.
- D. Mechanical alternator shall be provided with the duplex unit. It shall provide simultaneous operation of both pumps when peak flow of condensate occurs. It shall also provide alternate operation of pumps or operation of one pump when the other is inoperative. A manual lock-out shall be provided to permit maintenance on one pump with the other in operation.
- E. Unit shall be furnished with wiring suitable for dual electrical feed.
- F. This trade shall connect the overflow to the nearest floor drain and shall connect a vent pipe terminating in a gooseneck near the ceiling. No vent shall be less than 1" regardless of unit size.

## 2.7 PUMP SUCTION DIFFUSER/STRAINER

- A. Unit shall consist of cast iron angle type body with easily removable end cap, pressure gauge tapping, stainless steel straightening vanes, stainless steel diffuser-strainer-orifice cylinder with free area equal to five times cross-sectional area of actual pump suction connection, removable permanent magnet located with the flow stream and adjustable foot to carry weight of suction pipe.
- B. Design working pressure shall be as required to match specified pump working pressure. Inlet shall be full line size as shown on the drawings. Outlet shall be same size as actual pump suction connection. Maximum pressure drop shall not exceed 7 feet water pressure drop.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before pump installation.
- C. Examine foundations and inertia bases for suitable conditions where pumps are to be installed.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for pumps and controllers.
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Section 03 30 00 "Cast-in-Place Concrete".

### 3.4 PUMP INSTALLATION

- A. Install pumps according to manufacturer's written installation and alignment instructions.
- B. Refer to Section: 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components" for additional installation requirements.
- C. Install pumps with access for periodic service including removal of motors, impellers, couplings, and accessories.
- D. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.
- E. Install continuous-thread hanger rods with vibration isolators of sufficient size to support pump weight. Vibration isolation devices are specified under another section of this work. Fabricate brackets or supports as required. Hanger and support materials are specified under another section of this work.
- F. Suspend vertically mounted, in-line centrifugal pumps independent of piping. Install pumps with motor and pump shafts vertical. Use continuous-thread hanger rods and vibration isolators of sufficient size to support pump weight. Vibration isolation devices are specified under another section of this work. Hanger and support materials are specified under another section of this work.
- G. Set base-mounted pumps on concrete foundation. Disconnect coupling before setting. Do not reconnect couplings until alignment procedure is complete.
1. Support pump base plate on rectangular metal blocks and shims, or on metal wedges with small taper, at points near foundation bolts to provide a gap of 3/4 to 1-1/2 inches between pump base and foundation for grouting.
  2. Adjust metal supports or wedges until pump and driver shafts are level. Check coupling faces and suction and discharge flanges of pump to verify that they are level and plumb.
- H. Bedplate (Motor Drive): Cast iron, channel steel or structural steel with drip collection chamber and tapped drain connections and a large opening for grouting. Jig drilled and tapped for pumps and NEMA frame motors. On close-coupled pumps, motor assembled as integral part of the complete unit; no bedplate required. Pumps and/or pumps sets shall be leveled with tapered steel wedges to allow a minimum of 3/4 inch pump base and inertia base or concrete pad.
- I. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.

### 3.5 ALIGNMENT

- A. Align pump and motor shafts and piping connections after setting on foundation, grout has been set and foundation bolts have been tightened, and piping connections have been made.

- B. Comply with pump and coupling manufacturers' written instructions.
- C. Adjust pump and motor shafts for angular and offset alignment by one of two methods specified in HI 1.1-1.5, "Centrifugal Pumps for Nomenclature, Definitions, Application and Operation" or HI 2.1-2.5, "Vertical Pumps for Nomenclature, Definitions, Application and Operation."
- D. After alignment is correct, tighten foundation bolts evenly but not too firmly. Completely fill base plate with non-shrink, nonmetallic grout while metal blocks and shims or wedges are in place. After grout has cured, fully tighten foundation bolts.

### 3.6 CONNECTIONS

- A. Piping installation requirements are specified in other Sections of this work. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.
- C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.
- D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.
- E. Install check valve and throttling valve on discharge side of pumps.
- F. Triple-Duty valves are not permitted.
- G. Connect pump suction diffuser strainer and shutoff valve on suction side of pumps.
- H. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.
- I. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.
- J. Install check valve and gate or ball valve on each condensate pump unit discharge.
- K. Install electrical connections for power, controls, and devices.

### 3.7 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Check piping connections for tightness.
  - 3. Clean strainers on suction piping.
  - 4. Perform the following startup checks for each pump before starting:
    - a. Verify bearing lubrication.
    - b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
    - c. Verify that pump is rotating in the correct direction.
  - 5. Prime pump by opening suction valves and closing drains, and prepare pump for operation.
  - 6. Start motor.

7. Open discharge valve slowly.

3.8 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's service operators to adjust, operate, and maintain hydronic pumps. Refer to DDC General Conditions for instruction requirements.

**END OF SECTION 23 21 23**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 25 00****HVAC WATER TREATMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".

**1.2 SUMMARY**

- A. This Section includes the following HVAC water-treatment systems:
  - 1. Chemical treatment for Closed Loop Heat Transfer Systems
  - 2. Chemical treatment for Open Loop Heat Transfer Systems Bypass chemical-feed equipment and controls.
  - 3. Biocide chemical-feed equipment and controls.
  - 4. Chemical treatment test equipment.
  - 5. HVAC water-treatment chemicals.
  - 6. Makeup water softeners.
  - 7. Water filtration units for HVAC makeup water.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the

LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 DEFINITIONS**

- A. EEPROM: Electrically erasable, programmable read-only memory.
- B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.
- C. RO: Reverse osmosis.
- D. TDS: Total dissolved solids.
- E. UV: Ultraviolet.

**1.6 PERFORMANCE REQUIREMENTS**

- A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.
- B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of New York Department of Buildings.
- C. Closed hydronic systems, including hot-water heating and chilled water shall have the following water qualities:
  - 1. pH: Maintain a value within 9.0 to 10.5.
  - 2. "P" Alkalinity: Maintain a value within 100 to 500 ppm.
  - 3. Boron: Maintain a value within 100 to 200 ppm.
  - 4. Chemical Oxygen Demand: Maintain a maximum value of 100 ppm.
  - 5. Soluble Copper: Maintain a maximum value of 0.20 ppm.
  - 6. TDS: Maintain a maximum value of 10 ppm.
  - 7. Ammonia: Maintain a maximum value of 20 ppm.
  - 8. Free Caustic Alkalinity: Maintain a maximum value of 20 ppm.
  - 9. Microbiological Limits:
    - a. Total Aerobic Plate Count: Maintain a maximum value of 1000 organisms/ml.
    - b. Total Anaerobic Plate Count: Maintain a maximum value of 100 organisms/ml.
    - c. Nitrate Reducers: Maintain a maximum value of 100 organisms/ml.
    - d. Sulfate Reducers: Maintain a maximum value of 0 organisms/ml.
    - e. Iron Bacteria: Maintain a maximum value of 0 organisms/ml.
- D. Steam Boiler and Steam Condensate:
  - 1. Steam Condensate:
    - a. pH: Maintain a value within 7.8 to 8.4.

- b. Total Alkalinity: Maintain a value within 5 to 50 ppm.
      - c. Chemical Oxygen Demand: Maintain a maximum value of 15 ppm.
      - d. Soluble Copper: Maintain a maximum value of 0.20 ppm.
      - e. TDS: Maintain a maximum value of 10 ppm.
      - f. Ammonia: Maintain a maximum value of 20 ppm.
      - g. Total Hardness: Maintain a maximum value of 2 ppm.
    2. Steam boiler operating at 15 psig and less shall have the following water qualities:
      - a. "OH" Alkalinity: Maintain a value within 200 to 400 ppm.
      - b. TDS: Maintain a value within 600 to 3000 ppm.
    3. Steam boiler operating at more than 15 psig shall have the following water qualities:
      - a. "OH" Alkalinity: 200 to 400 ppm.
      - b. TDS: Maintain a value within 600 to 1200 ppm to maximum 30 times RO water TDS.
  - E. Open hydronic systems, including condenser water, shall have the following water qualities:
    1. pH: Maintain a value within 8.0 to 9.1.
    2. "P" Alkalinity: Maintain a maximum value of 100 ppm.
    3. Chemical Oxygen Demand: Maintain a maximum value of 100 ppm.
    4. Soluble Copper: Maintain a maximum value of 0.20 ppm.
    5. TDS: Maintain a maximum value of 10 ppm.
    6. Ammonia: Maintain a maximum value of 20 ppm.
    7. Free "OH" Alkalinity: Maintain a maximum value of 0 ppm
    8. Microbiological Limits:
      - a. Total Aerobic Plate Count: Maintain a maximum value of 10,000 organisms/ml.
      - b. Total Anaerobic Plate Count: Maintain a maximum value of 1000 organisms/ml.
      - c. Nitrate Reducers: Maintain a maximum value of 100 organisms/ml.
      - d. Sulfate Reducers: Maintain a maximum value of 0 organisms/ml.
      - e. Iron Bacteria: Maintain a maximum value of 0 organisms/ml.
    9. Polymer Testable: Maintain a minimum value within 10 to 40.
  - F. Passivation for Galvanized Steel: For the first 60 days of operation.
    1. pH: Maintain a value within 7 to 8.
    2. Calcium Carbonate Hardness: Maintain a value within 100 to 300 ppm.
    3. Calcium Carbonate Alkalinity: Maintain a value within 100 to 300 ppm.
- 1.7 SUBMITTAL PROCEDURES
- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."
- 1.8 SUBMITTALS
- A. Manufacturer's Literature and Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:
    1. Cleaning Compounds and recommended procedures for their use
    2. Chemical treatment for Closed systems, including installation and operating instructions
    3. Chemical Treatment for open loop systems, including installation and operating

- instructions
  - 4. Bypass feeders.
  - 5. Water meters.
  - 6. Inhibitor injection timers.
  - 7. pH controllers.
  - 8. TDS controllers.
  - 9. Biocide feeder timers.
  - 10. Chemical solution tanks.
  - 11. Injection pumps.
  - 12. Chemical test equipment.
  - 13. Chemical material safety data sheets.
  - 14. Water softeners.
  - 15. Multimedia filters.
  - 16. Self-cleaning strainers.
  - 17. Bag- or cartridge-type filters.
  - 18. Centrifugal separators.
- B. Shop Drawings: Pretreatment and chemical, and ozone-generator biocide and UV-irradiation biocide treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems. Include plans, elevations, sections, details, and attachments to other work.
- 1. Wiring Diagrams: Power and control wiring.
- C. Field quality-control test reports.
- D. Manufacturer Seismic Qualification Certification: Submit certification that the water treatment equipment and components will withstand seismic forces as defined in section 230548 of this work. Include the following:
- 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. Operation and Maintenance Data: For sensors, injection pumps, equipment and controllers to include in emergency, operation, and maintenance manuals.
- F. Other Informational Submittals:
- 1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in the "Performance Requirements" Article above.
  - 2. Water Analysis: Illustrate water quality available at Project site.
  - 3. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces and confirm this observation in a letter to Commissioner.

## 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section and having at minimum of 5 years' experience with similar projects.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York City Department of Buildings, and marked for intended use.

## PART 2 - PRODUCTS

### 2.1 HVAC WATER TREATMENT – GENERAL

- A. Provide, for the full construction period as well as for 1 additional year starting from the date, complete water treatment equipment, associated piping, chemicals and service for systems as specified and/or shown on the drawings. Equipment, chemicals and service shall be provided by the independent water treatment company. That company shall supervise the installation of the chemical feed equipment, chemical cleaning of the systems and testing. Provide all necessary wiring to an adequate source of electric power, and all required interwiring.
- B. Obtain and become familiar with all necessary building technical plant and operating information. Appointments must be made with facility management and engineering personnel for this purpose.
- C. Daily records of all water treatment activities shall be maintained by the water treatment company and made available to the building operators of The City of New York. These records shall consist of all communications and test records from the water treatment company, all chemical additions, all fill and drain cycles, cleanings, additions to the piping system and any other pertinent data, starting at the first filling of the system.
- D. The water treatment company shall include with service all required chemicals for testing, initial cleaning, startup treatments, test equipment and all chemicals required for the two-year period during which service is rendered.
- E. All service visits shall be confirmed in writing to the Commissioner.
- F. The water treatment company selected shall be responsible for insuring that all pipe systems and equipment for which they are responsible remain clean and free from all corrosion during all testing or filling and draining operations.
- G. Under no circumstances shall raw, untreated water be introduced into these pipes and equipment or be allowed to remain in place anytime during construction. All hydronic testing shall only be with treated water at all times.
- H. Upon completion of all building construction operations associated with the piping system in question, the system shall be cleaned by the water treatment company using appropriate chemicals which are nonaggressive to the materials in that pipe system, but which will clean surface rust, oil, grease and silt from the steel piping and other contaminants associated with the piping fabrication process.
- I. Cooling systems shall be cleaned with an alkaline phosphate and/or detergent solution.
- J. Chemicals for initial treatment of the water must be on-hand before cleaning is started, so that

these chemicals can be added to the initial water fill after cleaning is complete. Under no circumstances shall the cleaned system be filled with untreated water or allowed to stand empty between cleaning and initial fill.

- K. The start-up chemical treatment program shall be, at a minimum, 3-4 times the dosage of the maintenance chemical treatment program.
- L. The cleaning operation shall be completed when agreed upon representative pipe lengths which have been in place during the entire building process have been satisfactorily cleaned as established by all interested parties.
- M. At no time shall the Contractor add water to a system without that water containing a corrosion inhibiting treatment chemical. The addition of minimal amounts of untreated water to an already treated system is allowed.

## 2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. GE Betz
  - 2. Aqua-Chem, Inc.; Cleaver-Brooks Div.
  - 3. ONDEO Nalco Company.
  - 4. U.S. Water
  - 5. Clarity Water Technologies
  - 6. Or approved equal.

## 2.3 MICROBIOLOGICAL CONTROL

- A. The Supplier must provide a specific microbiological control program. Both oxidizing and non-oxidizing biocides are acceptable, along with biodispersants and other control measures. The program must list specific biocides with application dosages and frequency, and must include all of the information specified herein. Acquired immunity to one biocide must be considered.

## 2.4 CHEMICAL PROGRAMS

- A. All chemicals provided for use in the open condenser water and all closed water systems, and for testing purposes, must meet EPA and OSHA requirements as well as 2014 New York City Construction Codes. In addition, all chemicals must meet the following criteria:
- B. Toxicity
  - 1. Chemicals must be non-toxic to personnel and safe to handle when usual precautions are observed.
- C. Disposal and Cleanup
  - 1. At use concentrations in the systems, all chemicals must be acceptable in the building's sewer system. The supplier must provide clear directions for cleanup of accidental chemicals spills, including necessary safety precautions, and must ensure that sufficient supplies and equipment required for cleanup of chemical spills are on hand for emergency use.
- D. Furnish chemicals recommended by water treatment system company for treating water to meet specified water quality. Provide only chemicals that are compatible with piping materials, seals

and all accessories.

## 2.5 MANUAL CHEMICAL-FEED EQUIPMENT

- A. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum 3-1/2-inch fill opening in the top, and 3/4" bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.
1. Capacity: 5 gal.
  2. Minimum Working Pressure: 125 psig.

## 2.6 AUTOMATIC CHEMICAL-FEED EQUIPMENT

- A. Water Meter:
1. AWWA C701, turbine-type, totalization meter.
  2. Body: Bronze.
  3. Minimum Working-Pressure Rating: 150 psig.
  4. Maximum Pressure Loss at Design Flow: 3 psig.
  5. Registration: Gallons.
  6. End Connections: Flanged.
  7. Controls: Flow-control switch with normally open contacts; rated for maximum 10 A, 250-V ac; and that will close at adjustable increments of total flow. Control: Low-voltage signal capable of transmitting 1000 feet.
- B. Inhibitor Injection Timers:
1. Microprocessor-based controller with LCD display in NEMA 250, Type 12 enclosure with gasketed and lockable door. Interface for start/stop and status indication at the BMS.
  2. Programmable timers with infinite adjustment over full range, and mounted in cabinet with hand-off-auto switches and status lights.
  3. Test switch.
  4. Hand-off-auto switch for chemical pump.
  5. Illuminated legend to indicate feed when pump is activated.
  6. Programmable lockout timer with indicator light. Lockout timer to deactivate the pump and activate alarm circuits.
  7. LCD makeup totalizer to measure amount of makeup and bleed-off water from two water meter inputs.
- C. pH Controller:
1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 14 units. Incorporate solid-state integrated circuits and digital LCD display in NEMA 250, Type 12 enclosure with gasketed and lockable door. Interface for start/stop and status indication at the BMS.
  2. Digital display and touch pad for input.
  3. Sensor probe adaptable to sample stream manifold.
  4. High, low, and normal pH indication.
  5. High or low pH alarm light, trip points field adjustable; with silence switch.
  6. Hand-off-auto switch for acid pump.
  7. Internal adjustable hysteresis or deadband.
- D. TDS Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 5000 micromhos. Incorporate solid-state integrated circuits and digital LCD display in NEMA 250, Type 12 enclosure with gasketed and lockable door. Interface for start/stop and status indication at the BMS.
  2. Digital display and touch pad for input.
  3. Sensor probe adaptable to sample stream manifold.
  4. High, low, and normal conductance indication.
  5. High or low conductance alarm light, trip points field adjustable; with silence switch.
  6. Hand-off-auto switch for solenoid bleed-off valve.
  7. Bleed-off valve activated indication.
  8. Internal adjustable hysteresis or deadband.
  9. Bleed Valves:
    - a. Cooling Systems: Forged-brass body, globe pattern, general-purpose solenoid with continuous-duty coil, or motorized valve.
    - b. Steam Boilers: Motorized ball valve, steel body, and TFE seats and seals.
- E. Biocide Feeder Timer:
1. Microprocessor-based controller with digital LCD display in NEMA 250, Type 12 enclosure with gasketed and lockable door. Interface for start/stop and status indication at the BMS.
  2. 24-hour timer with 14-day skip feature to permit activation any hour of day.
  3. Precision, solid-state, bleed-off lockout timer and clock-controlled biocide pump timer. Prebleed and bleed lockout timers.
  4. Solid-state alternator to enable use of two different formulations.
  5. 24-hour display of time of day.
  6. 14-day display of day of week.
  7. Battery backup so clock is not disturbed by power outages.
  8. Hand-off-auto switches for biocide pumps.
  9. Biocide A and Biocide B pump running indication.
- F. Chemical Solution Tanks:
1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
  2. Molded cover with recess for mounting pump.
  3. Capacity: 50 gal.
- G. Chemical Solution Injection Pumps:
1. Self-priming, positive-displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
  2. Adjustable flow rate.
  3. Metal and thermoplastic construction.
  4. Built-in relief valve.
  5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Division 23 Section "Common Requirements for HVAC Equipment."
- H. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.
- I. Injection Assembly:
1. Quill: Minimum ½" with insertion length sufficient to discharge into at least 25 percent of

- pipe diameter.
- 2. Ball Valve: Two-piece, stainless steel as described in "Stainless-Steel Pipes and Fittings" Article below; and selected to fit quill.
- 3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
- 4. Assembly Pressure/Temperature Rating: Minimum 600 psig at 200 deg F.

## 2.7 CHEMICAL TREATMENT TEST EQUIPMENT

- A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TDS, inhibitor, chloride, alkalinity, and hardness; sulfite and testable polymer tests for high-pressure boilers, and oxidizing biocide test for open cooling systems.
- B. Sample Cooler:
  - 1. Tube: Sample.
    - a. Size: 1/4" tubing.
    - b. Material: ASTM A 666, Type 316 stainless steel.
    - c. Pressure Rating: Minimum 2000 psig.
    - d. Temperature Rating: Minimum 850 deg F.
  - 2. Shell: Cooling water.
    - a. Material: ASTM A 666, Type 304 stainless steel.
    - b. Pressure Rating: Minimum 250 psig.
    - c. Temperature Rating: Minimum 450 deg F.
  - 3. Capacities and Characteristics:
    - a. Tube: Sample.
      - 1) Flow Rate: 0.25 gpm.
      - 2) Entering Temperature: 400 deg F.
      - 3) Leaving Temperature: 88 deg F.
      - 4) Pressure Loss: 6.5 psig.
    - b. Shell: Cooling water.
      - 1) Flow Rate: 3 gpm.
      - 2) Entering Temperature: 70 deg F.
      - 3) Pressure Loss: 1.0 psig.
- C. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.
  - 1. Three (3) station racks for closed-loop systems.
  - 2. Five (5) station rack for open systems.

## 2.8 CHEMICALS

- A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment, and that can attain water quality specified in Part 1 "Performance Requirements" Article.

B. Water Softener Chemicals:

1. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock. Resin exchange capacity minimum 30,000 grains/cu. ft. of calcium carbonate of resin when regenerated with 15 lb. of salt.
2. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are not acceptable.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.

3.3 INSTALLATION

- B. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- C. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Refer to Section 23 05 48 "Vibration Isolation, Seismic, Flood And Wind Load Restraints For HVAC Components" for seismic restraints.
- D. Install water testing equipment on wall near water chemical application equipment.
- E. Install interconnecting control wiring for chemical treatment controls and sensors.
- F. Mount sensors and injectors in piping circuits.
- G. Bypass Feeders: Install in closed hydronic systems, including hot-water heating and chilled water, and equipped with the following:
1. Install bypass feeder in a bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
  2. Install water meter in makeup water supply.
  3. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
  4. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
  5. Install a swing check on inlet after the isolation valve.
  6. As manufactured by Neptune or approved equal.
- H. Install automatic chemical-feed equipment for steam boiler and steam condensate systems and include the following:
1. Install makeup water softener.
  2. Install water meter in makeup water supply.
  3. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.

- a. Pumps shall operate for timed interval when contacts close at water meter in makeup water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
- 4. Install test equipment and furnish test-kit to Commissioner.
- 5. Install TDS controller with sensor and bleed valves.
  - a. Bleed valves shall cycle to maintain maximum TDS concentration.
- 6. Install inhibitor injection timer with injection pumps and solution tanks.
  - a. Pumps shall operate for timed interval on contact closure at water meter in makeup water supply connection. Injection pump shall discharge into main steam supply header.
- I. Install automatic chemical-feed equipment for condenser water and include the following:
  - 1. Install makeup water softener.
  - 2. Install water meter in makeup water supply.
  - 3. Install inhibitor injection pumps and solution tanks with injection timer sensing contacts in water meter.
    - a. Pumps shall operate for timed interval on contact closure at water meter in makeup water supply connection. Injection pump shall discharge into boiler feedwater tank or feedwater supply connection at boiler.
  - 4. Install test equipment and provide test-kit to Commissioner. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
  - 5. Install TDS controller with sensor and bleed valves.
    - a. Bleed valves shall cycle to maintain maximum TDS concentration.
  - 6. Install pH sensor and controller with injection pumps and solution tanks.
    - a. Injector pumps shall operate to maintain required pH.
  - 7. Install biocide feeder alternating timer with two sets of injection pumps and solution tanks.
    - a. Injection pumps shall operate to feed biocide on an alternating basis.

### 3.3 WATER SOFTENER INSTALLATION

- A. Install water softener equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor mineral and brine tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for tanks and floor-mounting accessories and anchor to building structure. Refer to Division 23 Section 23 05 48 "Vibration Isolation, Seismic, Flood And Wind Load Restraints For HVAC Components" for seismic restraints.
- C. Install brine lines and fittings furnished by equipment manufacturer but not factory installed.
- D. Prepare mineral-tank distribution system and underbed for minerals and place specified mineral into mineral tanks.

- E. Install water-testing sets on wall adjacent to water softeners.

### 3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service.
- C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified.
- D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified.
- E. Backflow preventers are required in makeup water connections to potable-water systems, as specified.
- F. Confirm applicable electrical requirements as specified.
- G. Ground equipment according to requirements.
- H. Connect wiring according to requirements.

### 3.5 FIELD QUALITY CONTROL.

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Tests and Inspections:
  - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
  - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
  - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
  - 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
  - 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  - 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
  - 7. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
  - 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- C. Remove and replace malfunctioning units and retest as specified above.
- D. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and

prepare test report advising the Commissioner of changes necessary to adhere to Part 1 "Performance Requirements" Article for each required characteristic. Sample boiler water at four week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.

- E. At four week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising The Commissioner of changes necessary to adhere to Part 1 "Performance Requirements" Article.
- F. Comply with ASTM D 3370 and with the following standards:
  - 1. Silica: ASTM D 859.
  - 2. Steam System: ASTM D 1066.
  - 3. Acidity and Alkalinity: ASTM D 1067.
  - 4. Iron: ASTM D 1068.
  - 5. Water Hardness: ASTM D 1126.

### 3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct The City of New York's service operators to adjust, operate, and service HVAC water-treatment systems and equipment. Refer to the DDC General Conditions for instruction requirements.

**END OF SECTION 23 25 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 25 10****HVAC WATER FILTRATION SYSTEM****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work"
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".
- F. Section 23 25 00 "HVAC Water treatment".
- G. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes providing a complete high-efficiency water filtration system for the HVAC water systems.
- B. Filter shall be designed to provide 0.5-micron filtration.
- C. The system shall include, but not be limited to the following: filter, filter media, filtration tank(s), circulation pump(s), backwash tank(s), interconnecting piping, controls and all other appurtenances required for a complete and fully operational system.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the

Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements

#### 1.5 DEFINITIONS

- A. EEPROM: Electrically erasable, programmable read-only memory.
- B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote control, signaling power-limited circuits.
- C. RO: Reverse osmosis.
- D. TDS: Total dissolved solids.
- E. UV: Ultraviolet.

#### 1.6 PERFORMANCE REQUIREMENTS

- A. Water Filtration for HVAC water systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.
- B. Provide a High Efficiency Sand Filtration System rated for 0.5-micron particle removal for the condenser water system.
- C. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, operating personnel capabilities, and requirements and guidelines of New York Department of Buildings.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.8 SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:
  - 1. Multimedia filters.
  - 2. Self-cleaning strainers.
  - 3. Bag- or cartridge-type filters.
  - 4. Centrifugal separators.
- B. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems. Include plans, elevations, sections,

details, and attachments to other work.

1. Wiring Diagrams: Power and control wiring.
  - C. Field quality-control test reports.
  - D. Manufacturer Seismic Qualification Certification: Submit certification that water filtration units and components will withstand seismic forces defined in Division 23 Section "Vibration Isolation, Seismic and Wind Load Restraints for HVAC Components." Include the following:
    1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
      - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
    2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
    3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
  - E. Operation and Maintenance Data: For sensors, injection pumps, water filtration units and controllers to include in emergency, operation, and maintenance manuals.
- 1.9 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
  - B. Source Limitations: Obtain water filtration equipment through one source from a single manufacturer.
  - C. Manufacturer's Certification: Certify filtration system performance.
  - D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York Department of Buildings, and marked for intended use.
- 1.10 MAINTENANCE SERVICE
- A. Scope of Maintenance Service: Provide service program to maintain water conditions required above to provide 0.5-micron filtration by utilizing ultrafine sand with an effective size of not more than 0.16 millimeters.
  - B. Services shall be provided for a period of one year from date of Substantial Completion, and shall include the following:
    1. Startup assistance for Contractor to flush the systems, clean filters and tanks.
    2. Customer report charts and log sheets.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AmeriWater Corp.
2. Diamond Water Systems
3. Aqua-Chem, Inc.; Cleaver-Brooks Div.
4. GE Betz.
5. ONDEO Nalco Company.
6. Or approved equal.

## 2.2 CONDENSER WATER FILTRATION

- A. Description: Factory-fabricated and tested, high efficiency Sand Filtration System rated for 0.5-micron particle removal for the condenser water system. The system shall include filter tank, backwash tank, media, strainer, circulating pump, piping, and controls for removing particles from condenser water.
- B. Filter shall be designed to provide 0.5-micron filtration by utilizing ultrafine sand with an effective size of not more than 0.16 millimeter.
- C. Filter shall operate continuously to remove suspended particles from the tower water until either a pressure drop across filter bed of 18 PSI is reached or 24 hours has elapsed. At either point filter shall automatically backwash for 5 minutes on each vessel sequentially. After backwash cycle, filter shall automatically return to filtration mode.
- D. Filter shall be capable of field adjustment to utilize either City water or condenser water as the backwash source.
- E. Filter shall be comprised of #304L Stainless Steel vessels (filter tank(s) and backwash storage tank(s)) with Type L copper manifold and cast iron circulating backwash booster pump.
- F. A separate backwash collection tank shall be provided (sized by manufacturer) to maintain a low flow (limited flow) of the backwash water to the drain.
- G. Filter and Backwash Tanks: Corrosion resistant with distribution system and media.
1. Tanks shall be #304L Stainless Steel rated for 125 PSIG operating pressure.
  2. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
  3. Pipe Connections
    - a. 2" and Smaller: Threaded according to ASME B1.20.1.
    - b. 2-1/2" and Larger: Steel, Class 150 flanges according to ASME B16.5.
- H. The filter shall be mounted on a Stainless Steel skid. The backwash storage tank shall be sized to limit the drainage flow.
1. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
  2. Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
- I. Components:

1. Natural quartz media shall meet AWWA B-100, ANSI, and NSF-61 standards for consistently uniform and chemically inert filter media. Crushed or ground media is not acceptable.
  2. Valves shall be JC two-piece 125 psig bronze ball type with multi-piece packing set, blowout proof stem design, adjustable packing gland, stainless ball and stem, RPTFE seat. Valves shall be actuated with individual 24V electric motors on each valve.
  3. Filter shall be equipped with two pressure gauges. The gauges shall be anti-flutter and shall have a stainless steel casing, with brass internals. The minimum face size shall be no less than 2-1/2". One gauge marked (IN) shall be connected to the filter pump discharge and the second gauge marked (OUT) shall be connected to the outlet side of the filter.
  4. Top inlet distributor shall be 304 stainless steel. Under drain shall be 316 stainless steel wedgewire screen pipe.
  5. Backwash flow control shall be rated for full backwash flow from 25 PSIG to 120 PSIG.
  6. Safety Valves: Automatic and manual pressure relief.
    - a. Steel Tank Pipe Connections 2-1/2" and Larger: Steel, Class 150 flanges according to ASME B16.5.
    - b. Motorized Valves: Flanged, ductile-iron butterfly type with EPDM valve seat and stem seal; with ASTM B 148 aluminum bronze disc.
    - c. Strainer: Basket type mounted on pump suction.
    - d. Piping: ASTM A 53/A 53M, Type S, F, or E; Grade B, Schedule 40 black steel, with flanged joints and malleable, steel welding fittings.
    - e. Piping: ASTM B 88, Type L copper water tube, copper-alloy solder-joint fittings, and brazed, flanged, or grooved joints.
    - f. Safety Valves: Automatic pressure relief.
- J. Support:
1. The filter and tanks shall be mounted on stainless steel skid.
  2. Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
- K. Circulating Pump: Overhung impeller, close coupled, single stage, end suction, centrifugal. Comply with UL 778 and with HI 1.1-1.2 and HI 1.3.
1. Casing: Radially split, cast iron.
  2. Pressure Rating: 150 psig minimum.
  3. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, and keyed to shaft.
  4. Shaft and Shaft Sleeve: Steel shaft, with copper-alloy shaft sleeve.
  5. Seal: Mechanical.
  6. Pump motor to be TEFC with a service factor of not less than 1.15. Motor to be supported on the pump bearing frame. General requirements for motors are specified under another section of this work.
- L. Filter pump shall be cast iron, close coupled with mechanical seal.
- M. Piping: ASTM B 88, Type L copper water tube, copper-alloy solder-joint fittings, and brazed or flanged joints.
- N. Provide a NEMA 4X (corrosion resistant) control panel containing the filter controls, a service disconnect switch with thermal overload and short circuit protection, a motor contactor, a fused

step-down transformer, access door with door interlock, controller to be connected to BMS, Backwash lockout switch and automatic controls for backwash holding tanks.

1. Control Panel shall also contain the following:
  - a. Allen Bradley 1200 Series PLC
  - b. An Allen Bradley motor starter and service disconnect.
  - c. A step-down transformer to convert 3 phase power to 115 VAC to operate control components and convert 115 VAC to 24V for valve actuation.
  - d. A pressure differential switch factory set to initiate backwash at 18 PSI differential across the filter bed.
  - e. A manual backwash switch, of a momentary contact design, mounted on the outside of the control panel door.
  - f. A backwash indicating light, pump status light and pump on/off switch mounted on the outside of the control panel door.
  - g. A non-resettable backwash counter mounted on the outside of the control panel door to indicate the number of times the filter has backwashed.
  - h. PLC shall be programmed to control valve actuation, duration of the backwash cycle, and pump on/off. Backwash shall be initiated by the 24-hour timer, pressure differential switch, or manual backwash button. An internal delay of no less than 15 seconds shall be built into the program timer to avoid false backwashing.
  - i. PLC shall also include a set of dry contacts that can be connected to the BMS to monitor backwash frequency.
  - j. A 24-hour timer to force backwash once per day.
  - k. A pressure differential switch which is factory set to initiate backwash at 18 psi differential across the filter bed.
  - l. A manual override switch, of a momentary contact design, mounted on the control box door.
  - m. A program timer shall be designed to control the duration of the backwash cycle. It shall be engaged by either the 24-hour timer, pressure differential switch, or the manual override button. This program timer shall control a valve sequence multiport valve. An internal delay of no less than 90 seconds shall be built into the program timer to avoid false backwashing.
  - n. A valve sequence multiport valve which shall operate filter's diaphragm actuated valves. It shall be equipped with a position indicator and two control switches. One switch shall be used electrically to override the multiport valve, in the event that it is not in sequence with the program timer, and will automatically reset the multiport valve to filtration position.
  - o. A backwash indicating light mounted on the outside of the panel door.
  - p. A non-resettable backwash counter mounted on the outside of the panel door to indicate the number of times the filter has backwashed.
  - q. A motor starter and disconnect.
  - r. A step down transformer to convert 3 phase power to 115 volts AC to operate control components.
  - s. Dry Contacts outputs to BMS for the following:
    - 1) System Backwash running/frequency
    - 2) Common alarm
    - 3) High level holding tank alarm
2. The filter shall be provided with factory-installed, Schedule 40 steel interconnecting piping with inlet, clean water return and waste water outlet connections, as well as city water connection.

- O. Filter system shall be rated for 75 PSIG inlet pressure to filter pump.
- P. System shall be factory assembled and tested for rated pressure and control functions.

## 2.3 SOURCE QUALITY CONTROL

- A. Description: Factory-fabricated and -tested, simplex, sand-filter system of filter tank, media, strainer, circulating pump, piping, and controls for removing sediment particles from water.
- B. Filter Tank: Corrosion resistant with distribution system and media.
- C. Construction:
  - 1. Fabricate and label steel filter tanks to comply with ASME Boiler and Pressure Vessel Code, Section VIII, Division 1.
  - 2. Fabricate supports and base and attachment to tank with reinforcement strong enough to resist filter movement during a seismic event when filter base is anchored to building structure.
- D. Strainer: Basket type.
- E. Safety Valves: Automatic and manual pressure relief.
- F. Motor: General requirements for motors are specified under another section of this work.
- G. Support: Skid mounting.
- H. Hydrostatically test before shipment to minimum of one and one-half times pressure rating.
- I. Filtration system shall be guaranteed to perform the capacities as specified herein. Manufacturer shall submit a written guarantee, certifying the performance of the filter in the location and shown on the drawings. Such guarantee shall be furnished with first shop drawings submitted.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine proposed route of moving filtration system into place and verify that it is free of interferences.
- B. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of filters.
- C. Examine roughing-in for piping systems to verify actual locations of piping connections before equipment installation.
- D. Examine walls and floors for suitable conditions where filters will be installed.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

- F. Examine elements and surfaces to support equipment.
- G. Verify piping and wiring roughing-in locations.
- H. Verify suitability of branch-circuit wiring.

### 3.3 INSTALLATION

- A. Install filtration system according to manufacturer's written instructions.
- B. Install equipment on concrete bases level and plumb, and fasten to supporting structure with vibration isolators and seismic restraints.
- C. Place vessels as shown in installation drawing and level. Use manifold as guide for spacing.
- D. Install upper and lower manifolds as per manufacturer's instructions.
- E. Install piping between manifold and pumps.
- F. Anchor control panel to floor or wall mount.
- G. Connect control tubing to valves and manifold according to manufacturer's instructions.
- H. Connect electrical power to pumps, control panel and control to pumps according to local electrical codes and wiring diagram supplied by manufacturer.
- I. Install media according to manufacturer's instructions.
- J. Maintain recommended clearances for service and maintenance.
- K. Install filters and their support structures to withstand the effects of seismic events according to New York Department of Buildings.
- L. Electrical Wiring: Install electrical devices furnished by manufacturer that are not factory mounted.

### 3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. The following are specific connection requirements
- B. Install piping valves, etc., adjacent to filtration system to allow service.
- C. Connect system to water piping.
- D. Install piping for fresh water
- E. Connect overflow and tank drain and bleed lines to sanitary sewage system.
- F. Domestic Water Piping: Comply with applicable requirements of Division 23 Sections. Connect to filtration system with backflow preventer, shutoff valve, strainer and union or flange at each connection.

- G. Condenser-Water Piping: Comply with applicable requirements of Division 23 Sections. Connect to supply and return water piping with shutoff valve, strainer, and union or flange on supply connection and shutoff valve and union or flange to return connection.
- H. Electrical: Comply with applicable requirements in Division 26 Sections.
  - 1. Ground equipment.
  - 2. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

### 3.5 CONDENSER WATER FILTER PIPING REQUIREMENTS

- A. Filter unit piping shall include two 3-way diverting valves to accomplish normal filter mode and backwash mode. Valves shall be bronze ball valve with actuator. Actuators shall be controlled by the differential pressure switch located in the control panel. Coordinate requirements with filter manufacturer.
- B. Connect a feed water line from the system sump or piping to the inlet connection. If the inlet connection is located above the operating water level of the system sump, install a foot/check valve to prevent loss of suction on the pump.
- C. Connect the return line from the outlet connection to the system sump or piping.
- D. A service valve should be installed on the inlet, outlet, and backwash water line to allow servicing of the filter. If municipal water is used for backwash, a backflow preventer (see details) is required in the line on all units (to conform to local codes).
- E. Connect the backwash waste line to the storage tank to collect the waste water.
- F. All interconnecting piping, fittings, valves, or other accessories connected to the filter system must be independently supported to eliminate stress on piping.
- G. Coordinate municipal water requirements with Contractor's plumbing trade.
- H. Provide heat tracing (with insulation) for the pre-strainer tank, filter tank, pump, piping valves, pressure switch tubing, and all other components subject to freezing.

### 3.6 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.

### 3.7 STARTUP AND TESTING

- A. Startup by factory-authorized agent shall be provided.
- B. Submit cooling water particle analysis reports showing frequency and volume of particles within the following micron size ranges: 0.5 to 1, 1 to 5, 5 to 10, 10 to 15, 15 to 20, and 20 and larger at time of startup.
- C. Submit cooling water particle analysis reports showing frequency and volume of particles within the following micron size ranges: 0.5 to 1, 1 to 5, 5 to 10, 10 to 15, 15 to 20, and 20 and larger

30 days after startup.

- D. Submit report analyzing results confirming that system meets performance specifications.

### 3.8 ADJUSTING

- A. Set and balance condenser-water flow to filtration unit.

### 3.9 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes including chips, scratches, and abrasions.

### 3.10 COMMISSIONING

- A. Complete installation and startup checks according to manufacturer's written instructions and do the following:
  - 1. Clean entire unit and washbasins.
  - 2. Ensure accessories are properly installed.
  - 3. Check makeup backwash water controls.
  - 4. Check clearances for servicing.
  - 5. Check for vibration isolation and structural support.
- B. Start cooling-tower and condenser-water pumps. Follow manufacturer's written starting procedures.
  - 1. Check operation of filtration backwash line, and controlling devices.
  - 2. Check operation of basin immersion heater and control thermostat.
- C. Ensure system chemical treatment is working, and measure chemical treatment levels. Check operation of tower basin automatic blow-down, and controlling device.

### 3.11 DEMONSTRATION

- A. Engage a factory-authorized service representative (for a minimum of 1-8 hour day) to instruct the City of New York's facility operators.
- B. Instruction the City of New York's facility operators on procedures and schedules for starting up and shutting down, troubleshooting, and servicing cooling towers.
- C. Review data in maintenance manuals. Refer to the DDC General Conditions.
- D. Review data in maintenance manuals. Refer to the DDC General Conditions.
- E. Schedule training with The Commissioner, with at least seven days' advance notice.

### 3.12 WATER ANALYSIS

- A. Perform an analysis of supply water to determine quality of water available at Project site.
- B. Submit cooling water particle analysis reports showing count and volume of particles within the following micron size ranges: 0.5 to 1, 1 to 2, 2 to 5, 5 to 10, 10 to 20, and 20 and larger at time

of start-up.

- C. Submit cooling water particle analysis reports showing count and volume of particles within the following micron size ranges: 0.5 to 1, 1 to 2, 2 to 5, 5 to 10, 10 to 20, and 20 and larger 30 days after start-up.
- D. Submit report analyzing above results confirming that filtration system meets performance specifications as described herein.

### 3.13 INSTALLATION

- A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.
- B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Refer to Section "Vibration Isolation, Seismic, Flood And Wind Load Restraints For HVAC Components" for seismic restraints.
- C. Install water-testing equipment on wall near water chemical application equipment.
- D. Install interconnecting control wiring for chemical treatment controls and sensors.
- E. Mount sensors and injectors in piping circuits.

### 3.14 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Make piping connections between HVAC equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified under another section of this work.
- D. Install shutoff valves on HVAC equipment inlet and outlet. Metal general-duty valves are specified under another section of this work."
- E. Refer to Division 22 Section "Domestic Water Piping Specialties" for backflow preventers required in makeup water connections to potable-water systems.
- F. Connect system to CW piping.
- G. Install piping for fresh water
- H. Connect overflow and tank drain and bleed lines to sanitary sewage system.
- I. Domestic Water Piping: Comply with applicable requirements of Division 23 Sections. Connect to filtration system with backflow preventer, shutoff valve, strainer and union or flange at each connection.
- J. Condenser-Water Piping: Comply with applicable requirements of Division 23 Sections. Connect to supply and return condenser water piping with shutoff valve, strainer, and union or flange on supply connection to the CW and shutoff valve and union or flange to return

connection to CW.

### 3.15 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Perform tests and inspections and prepare test reports.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  - 1. Inspect field-assembled components and equipment installation, including piping and electrical connections.
  - 2. Inspect piping and equipment to determine that systems and equipment have been cleaned, flushed, and filled with water, and are fully operational before introducing chemicals for water-treatment system.
  - 3. Place HVAC water-treatment system into operation and calibrate controls during the preliminary phase of HVAC systems' startup procedures.
  - 4. Do not enclose, cover, or put piping into operation until it is tested and satisfactory test results are achieved.
  - 5. Test for leaks and defects. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
  - 6. Leave uncovered and unconcealed new, altered, extended, and replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.
  - 7. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow test pressure to stand for four hours. Leaks and loss in test pressure constitute defects.
  - 8. Repair leaks and defects with new materials and retest piping until no leaks exist.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. At eight-week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising The City of New York of changes necessary to adhere to Part 1 "Performance Requirements" Article.
- F. Comply with ASTM D 3370 and with the following standards:
  - 1. Silica: ASTM D 859.
  - 2. Steam System: ASTM D 1066.
  - 3. Acidity and Alkalinity: ASTM D 1067.
  - 4. Iron: ASTM D 1068.
  - 5. Water Hardness: ASTM D 1126.

**3.16 DEMONSTRATION**

- A. Engage a factory-authorized service representative to instruct The City of New York's service operators to adjust, operate, and maintain HVAC water-treatment systems and equipment. Refer to the DDC General Conditions for instruction requirements.
- B. Instruction: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment.

**END OF SECTION 23 25 10**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 31 13****METAL DUCTS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 08 00 "Commissioning of HVAC".

**1.2 SUMMARY**

- A. This section includes all the rectangular, round and flat-oval metal ducts and plenums for the complete heating, ventilating and air conditioning systems in all pressure classes. In addition, this section includes the following:
  - 1. Sheet Metal
  - 2. Flexible Air Duct
  - 3. Fume Extractor Arms (Snorkels)
  - 4. Stainless Steel Sheet Metal for Fume Hood Exhaust Systems
  - 5. Air Casings and Plenums
  - 6. Air Casings and Plenums (Acoustical Type).
  - 7. Dampers for Balancing
  - 8. Access Doors in Sheet Metal Work.
  - 9. Inspection Portholes
  - 10. Flexible Connections
  - 11. Sheet Metal Materials
  - 12. Turning Vanes
  - 13. Sealants and Gaskets
  - 14. Hangers and Supports
  - 15. Seismic-Restraint Devices.
  - 16. Refer to other Division 23 00 00 sections for air distribution devices and accessories required in conjunction with this work.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- D. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- E. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 REFERENCE STANDARDS

- A. SMACNA
- B. ASHRAE
- C. NFPA
- D. ASTM
- E. International Mechanical Code
- F. ACGIH - American Conference of Industrial Hygienists

#### 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Qualify welding processes and welding operators in accordance with AWS.D1.1 "Structural Welding Code - Steel" for hangers and supports and SWS.D9.1 "Sheet Metal Welding Code."
- C. Qualify each welder in accordance with AWS qualification tests for welding processes involved. Certify that their qualification is current.
- D. NFPA Compliance: Comply with the following NFPA Standards:
  1. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems," except as indicated otherwise.
  2. NFPA 96, "Standard for the Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors for Commercial Cooking Equipment," Chapter 3, "Duct System," for kitchen hood duct systems, except as indicated otherwise.
- E. SMACNA - HVAC Duct Construction Standards, Latest Edition.

- F. SMACNA – HVAC Air Duct Leakage Test Manual.
- G. At the discretion of the Commissioner, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.8 SUBMITTALS

- A. Submit product data under provisions of Section 01 30 00.
- B. Include product description, list of materials for each service, and locations.
- C. Product data including details of construction relative to materials, dimensions of individual components, profiles, and finishes for the following items:
  - 1. Sealing Materials.
  - 2. Fire-Stopping Materials.
  - 3. Dampers, turning vanes, access doors, plenums, flexible connectors, etc.
- D. Ductwork Shop Standards, including but not limited to, materials, duct gauges, fittings, joint and seam construction and sealing, reinforcement details and spacing., materials, fabrication, assembly, and spacing of hangers and supports.
- E. Fabrication, assembly, and installation, including plans, elevations, sections, components, take-offs and attachments to other work.
- F. Duct layout for all areas of work, indicating pressure classifications and sizes in plan view.
- G. For exhaust duct systems, indicate the classification of the materials handled as defined in this Section.
- H. Shop drawings from duct fabrication shop, drawn to scale not smaller than 3/8 inch equals 1 foot, detailing:
  - 1. Factory- and shop-fabricated ducts and fittings.
  - 2. Fittings.
  - 3. Reinforcing details and spacing.
  - 4. Seam and joint construction details.
  - 5. Penetrations through fire-rated and other partitions.
  - 6. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
  - 7. Elevation of top and bottoms of ducts.
  - 8. Dimensions of main duct runs from building grid lines.
  - 9. Fittings.
  - 10. Reinforcement and spacing.
  - 11. Seam and joint construction.
  - 12. Penetrations through fire-rated and other partitions.
  - 13. Equipment installation based on equipment being used on Project.
  - 14. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
  - 15. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.

- a. AC unit, equipment, terminal unit, coil installations.
    - b. Hangers and supports, including methods for building attachment, seismic restraint, vibration isolation, and duct attachment.
  - I. Welding certificates including welding procedures specifications, welding procedures qualifications test records, and welders qualifications test records complying with requirements specified in "Quality Assurance" above.
  - J. Service data for volume control devices, fire dampers, and smoke dampers, in accordance with Division 23 Section "Common Requirements for HVAC Work" and the DDC General Conditions.
  - K. Submit all fan room sheet metal ductwork shop drawings to the AC unit manufacturer prior to submission to Commissioner for review. AC unit manufacturer shall approve the air performance and acoustical performance of the AC units in the location and with the ductwork configuration and construction as shown on the shop drawings. AC unit manufacturer shall indicate approval directly on the ductwork shop drawing.
  - L. Welding certificates.
  - M. Field quality-control reports
  - N. Engineering services Submittal:
    - 1. Engineering Services Calculations: Calculations, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation for selecting hangers and supports and seismic restraints.
- 1.9 COORDINATION DRAWINGS:
- A. Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved. Refer to Section, General Requirements for HVAC Work for additional requirements.
    - 1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
    - 2. Suspended ceiling components.
    - 3. Structural members to which duct will be attached.
    - 4. Size and location of initial access modules for acoustical tile.
    - 5. Penetrations of smoke barriers and fire-rated construction.
    - 6. Items penetrating finished ceiling including the following:
      - a. Lighting fixtures.
      - b. Air outlets and inlets.
      - c. Sprinklers.
      - d. Access panels.
      - e. Perimeter moldings.
- 1.10 DEFINITIONS
- A. Sealing Requirements Definitions: For the purposes of duct systems sealing requirements specified in this Section, the following definitions apply.

1. Seams: A seam is defined as jointing of two longitudinally (in the direction of airflow) oriented edges of duct surface material occurring between two joints. All other duct surface connections made on the perimeter are deemed to be joints.
2. Joints: Joints include girth joints, branch and subbranch intersections; so-called duct collar tap-ins; fitting subsections, louver and air terminal connection to ducts; access door and access panel frames and jambs; duct, plenum and casing abutments to building structures.

#### 1.11 SYSTEM PERFORMANCE REQUIREMENTS

- A. All ductwork indicated on the Drawings, specified or required for the air conditioning and ventilating systems shall be of materials as hereinafter specified unless indicated otherwise. All air distribution ductwork shall be fabricated, erected, supported, etc., in accordance with all applicable standards of SMACNA Duct Manuals where such standards do not conflict with NFPA 90A and where class of construction equals or exceeds that specified herein.
- B. All ductwork shown on the Drawings, specified or required for the heating, ventilating and air conditioning systems shall be constructed and erected in a first class workmanlike manner. The work shall be guaranteed against noise, chatter, whistling, vibration, and free from pulsation under all conditions of operation. After the system is in operation, should these defects occur, they shall be corrected as directed by the Commissioner.
- C. Except for special ducts specified elsewhere herein, all sheet metal used on the project shall be constructed from prime galvanized steel sheets and/or coils up to 60" in width. Each sheet shall be stenciled with manufacturer's name and gauge. Coils of sheet steel shall be stenciled throughout on ten foot (10') centers with manufacturer's name and must be visible after duct is installed. Sheet metal must conform to SMACNA sheet metal tolerances as outlined in SMACNA's "HVAC Duct Construction Standards."
- D. Provide a duct system with minimum resistance to airflow. Take-offs shall be throated and transitions made as gradual as possible. 'Bullhead' or sharp take-offs are not acceptable. Branch take-offs shall be 45 deg entry type. Straight tap or butt flanged connections are not acceptable. Clinch lock connections are preferred.
- E. The duct system design, as indicated, has been used to select and size air moving and distribution equipment and other components of the air system. Changes or alterations to the layout of configuration of the duct system must be specifically approved in writing. Accompany requests for layout modifications with calculations showing that the proposal layout will provide the original design results without increasing the system total pressure.
- F. Structural Performance: Duct hangers and supports, wind and seismic restraints shall withstand the effects of gravity, wind and seismic loads and stresses within limits and under conditions described in section 230548 of this work.
- G. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

#### 1.12 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Welding Qualifications: Qualify procedures according to the following:
  1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.

2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
  3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004.
- E. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems,"
- F. NFPA 96, "Standard for the Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors for Commercial Cooking Equipment," Chapter 3, "Duct System," for kitchen hood duct systems, except as indicated otherwise.
- G. SMACNA – HVAC Duct Construction Standards, Latest Edition.
- H. SMACNA – "Guidelines for Welding Sheet Metal."
- I. The contractor must comply with the specification in its entirety.
- J. At the discretion of the Commissioner, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.
- K. Duct sealants, liners, insulation, etc. shall have a UL label and shall have a Flame Spread rating not over 25 and a Smoke Developed rating no higher than 50, when in the final dry state.

#### 1.13 SEISMIC DESIGN

- A. This project is located within a seismic zone requiring special provisions for the support and restraint of equipment, components and piping.
- B. See Sections 23 05 00 "Common Requirements for HVAC Work" and 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components" for additional requirements.

### PART 2 - PRODUCTS

#### 2.1 GENERAL

- A. Duct dimensions indicated on drawings are clear, inside dimensions. The sheet metal dimensions shall be increased to accommodate internal liner where liner is required.
- B. Drawings are diagrammatic and indicate the arrangement of the principal apparatus, ductwork and piping and shall be followed as closely as possible. All offsets, rises, drops, fittings and accessories are not indicated on drawings, but shall be provided as required to install system. Carefully investigate structure, finish conditions, and the work of other sections affecting sheet metal work, including work associated with testing, adjusting and balancing, in order to arrange all items accordingly. Provide best possible arrangement so as to provide maximum headroom and maintenance clearances.

- C. In addition to sheet metal ductwork specified herein, furnish and install, or install as furnished by section 233113, accessories and devices including, but not limited to, air distribution devices, smoke detectors, plenums, canopy hoods, and blank-off panels at unused louver areas.
- D. Furnish and install intake and exhaust plenums attached to louvers.
- E. Except as noted, all reinforcement shall be external.

## 2.2 DUCTWORK FABRICATION REQUIREMENTS

- A. All Ductwork construction shall comply with both the “SMACNA HVAC Duct Construction Standards” and “SMACNA HVAC Air Duct Leakage Test Manual”, latest editions.
- B. Joints and Seams: Select joint and seam types and fabricate according to SMACNA's “HVAC Duct Construction Standards - Metal and Flexible” and SMACNA HVAC Air Duct Leakage Test Manual”, latest editions for static-pressure class, applicable sealing requirements, materials involved, reinforcement, duct-support intervals, etc.
- C. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's “HVAC Duct Construction Standards - Metal and Flexible,” Chapter 2, “Fittings and Other Construction,” for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's “HVAC Duct Construction Standards - Metal and Flexible.”
- D. Duct systems other than fume hood exhaust, lab exhaust, and high humidity exhaust shall be galvanized steel
- E. The specifications refer to SMACNA standards, which shall be considered minimal. Use the standards of 2014 New York City Building Code if and where they are more stringent.

Duct System	SMACNA Table No.	SMACNA Pressure Classification	SMACNA Seal Classification
All supply ducts on systems with VAV/CV terminal boxes from fan discharge to terminal box.	2-6	+4” wg	A
All supply ducts downstream of VAV/CV terminal boxes to diffusers.	2-4	+3” wg	B
All supply ducts downstream of Fan Coil Unit to diffusers	2-3	+2” wg	C
All return ducts and general exhaust ducts (toilets, MER Ventilation, non-lab exhaust, etc.)	2-4	-3” wg	B
All generator room exhaust. All fume hood, laboratory and other special exhausts	2-6	-4” wg	A

## 2.3 STAINLESS STEEL SHEET METAL FOR FUME HOOD EXHAUST DUCTWORK

- A. All fume hood exhaust ductwork including fan inlet and discharge; shall be constructed of Type 316 stainless steel, U.S. Standard Gage in accordance with SMACNA HVAC Duct Construction Standards, second edition, 1995 for 4" W.G. (Table 1-8), except that 20 gage will be the minimum acceptable gage.
- B. Welded flange connections shall be provided at all joints.
- C. All longitudinal seams and transverse joint shall be continuously welded.
- D. Where bracing is required by SMACNA, angles are to be located 4" to 6" away from joint and secured to ductwork by tack welding.
- E. All fume hood exhaust ductwork located inside building, shall be supported by 1" wide x 1/8" stainless steel bands clamped to ducts and securely attached to concrete floor construction with concrete inserts. Spacing of horizontal duct hangers shall not exceed 8'-0" on center.
- F. Fume exhaust ductwork located exposed to weather shall be supported with stainless steel angles attached to building roof slab. Spacing of duct supports shall not exceed 8'-0" on center. Provide pitch pockets (copper for all angles attached to roof).
- G. Fume exhaust risers passing thru floor construction shall be provided with stainless steel, 10 gage, floor sleeves. Floor sleeves shall be carefully located in concrete floor construction by this Trade and shall extend a minimum of 4" above finished floor. Space between sleeve and outside wall or duct shall be caulked with an acid resistant flexible caulking material to make a watertight joint.
- H. Vertical fume hood risers passing thru floors shall be supported at each level with a split band clamp installed at the ceiling on each floor. In addition, the fume hood riser shall be fitted with an intermediate stainless steel band type wall brace.
- I. All flexible connections at fume hood exhaust fans shall be heavy gage glass fabric coated with Teflon fluorocarbon resin (airtight, watertight and flame resistant) attached with stainless steel clamping bands.
- J. All volume dampers and fire dampers in fume hood exhaust system ductwork shall be of stainless steel construction.
- K. This trade shall make the final connection to the hoods.

## 2.4 SPECIAL DUCTWORK CONSTRUCTION

- A. Ductwork required to be removable shall be companion flanged SMACNA Type T-22.
- B. Ductwork serving areas of high humidity shall be constructed of aluminum, with gauges in accordance with SMACNA standards, as referenced herein. Minimum gauge shall be 20 gauge. Ductwork shall be continuously welded and watertight. Pitch duct to low point drains. Pipe drains (1" copper drain line with dielectric fitting) to floor drains or other open drains.
  - 1. Areas Include, but are not limited to:
    - a. Exhaust ductwork exposed on roof.
    - b. Exhaust from sterilizers

- C. Ductwork exposed to weather: After exposed ductwork and joints are sealed and tested, as specified, apply over and around the same areas of possible leakage (joints), an approved sealer system. Refer to Section INSULATION for additional requirements for outdoor ductwork.
- D. Exhaust Stacks on Top of Exhaust Fan:
  - 1. Construct stacks from same material as exhaust duct.
  - 2. Stacks shall be self-supporting and constructed for wind velocities up to 125 MPH from all directions.
  - 3. Fabricate stackhead as indicated on ACGIH Fig. 8-6 for vertical discharge stack. Refer to drawings for additional details.

## 2.5 DAMPERS FOR BALANCING

- A. General Volume Damper Requirements:
  - 1. Provide factory fabricated manual volume dampers in all supply, return and exhaust branch ducts for properly regulating and balancing airflow to all terminal outlets, whether indicated on drawings or not. Dampers shall be constructed per SMACNA Latest Edition, with locking quadrant and 8" maximum blade width.
  - 2. Volume dampers are specified under section 23 33 10 "Dampers."
  - 3. When installing dampers in ducts to be insulated provide raised bracket for damper quadrant with height equal to insulation thickness such that the adjustment of the damper handle will not disturb the insulation.
  - 4. Locate damper as far as possible from air outlet to avoid noise transmission.
  - 5. For inaccessible ceilings, as well as for specialty areas such as lobbies, etc., furnish remote damper actuator operable through face of nearest diffuser. Damper controller and cable shall be concealed above the ceiling. Similar to Bowden remote cable control system with Young regulator damper controllers or approved equal. Balancing dampers shall include all necessary hardware to ensure compatibility with remote cable control system
  - 6. Coordinate with for easy access to damper.
  - 7. Dampers in stainless steel ductwork shall be of stainless steel construction.

## 2.6 ACCESS DOORS IN SHEET METAL WORK

- A. Provide suitable access doors and frames to permit inspections, operation and maintenance of all valves, all coils including reheat coils, controls, fire dampers, air monitors where applicable, automatic or motorized dampers, filters, bearings, traps or other apparatus concealed behind the sheet metal work. All such doors shall be of double construction of not less than No. 20-gauge sheet metal and shall have sponge rubber gaskets around their entire perimeter. Doors in insulated ducts or insulated casings shall have rigid fiberglass insulation between the metal panels.
- B. All access doors in sheet metal ducts shall be hung on heavy flat hinges and shall be secured in the closed position by means of cast zinc clinching type latches. Where space conditions preclude hinges, use four heavy window type latches. Doors into ducts shall in general not be smaller than 18" x 18" except for access door to fire dampers which will depend on size of fire damper. Submit samples for approval.
- C. In no case shall access to any items of equipment requiring inspections, adjustment, or servicing require the removal of nuts, bolts, screws, wing nuts, wedges, or any other screwed or loose device.

- D. Each sheet metal chamber shall have access doors for access to all parts of the system. Doors shall be fitted with cast zinc door latches, two per door. Latches shall be operable from both sides of casing. Hinges shall be extra heavy, zinc plated hinges, minimum of two per door. The doors shall be felted or provided with rubber gaskets so as to make them airtight. The doors shall be made with inner and outer shells 2 inches apart so that they may be properly insulated and properly operated. Doors shall be a minimum size of 20" x 48".
- E. See Section 08 31 13 "Access Doors and Frames" for access door requirements.

## 2.7 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M, A924.
  - 1. Galvanized Coating Designation: G90.
  - 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.
- D. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 316L cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B.
- E. Aluminum Sheets: Comply with ASTM B 209 (ASTM B 209M) Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
- F. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
  - 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- G. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

## 2.8 INSPECTION PORTHOLES

- A. Provide viewing portholes at both sides of fan sections and return air mixing plenums at air handling units 10,000 CFM or larger (package or built-up) to allow for inspection of fan belts, inlet vanes, damper actuators, etc.
- B. Portholes shall be 16" dia. or 12" x 8" made of 1/4" thick acrylic reinforced with flanges in both sides.

## 2.9 FLEXIBLE CONNECTIONS

- A. Where indicated, provide connections made with flexible material so as to prohibit the transfer of vibration from fans to ductwork connecting thereto, without air leakage. The material between the clamps shall have sufficient slack so as to prevent tearing due to fan movement.

- B. The flexible connections shall be a minimum of 12" long. Material shall be mechanically locked to the outside helix. Use of adhesives to lock fabric in place is not acceptable. The helix is constructed of a corrosive resistant galvanized steel, formed and mechanically locked to the ducts fabric on the outside to prevent tearing.
- C. Flexible fabric ductwork shall be rated at 6" positive pressure and at 4" negative pressure.
- D. Flexible metal duct shall be listed UL Class 1.
- E. Flexible connections shall be fabricated from approved flame proofed fabric conforming to NFPA 90A. Asbestos cloth is not permitted.
- F. Indoor installations shall be Neoprene or vinyl coated fabrics.
- G. Outdoor installations shall use Hypalon coated fabric.
- H. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Flexmaster, Type 8.
  - 2. Kinetics
  - 3. Durodyne
  - 4. Or approved equal.

#### 2.10 FLEXIBLE AIR DUCTS

- A. Flexible air ducts shall be all metal construction consisting of a core of stranded triple lock metal flexible ducting for strength and air tightness. The ducting shall have applied at the factory a UL listed glass or mineral wool insulating blanket, sheathed in a UL approved seamless exterior vapor barrier jacket. Flexible air ducts shall be semi-rigid construction capable of being easily hand pre-formed into required elbows or offsets to suit job conditions without subsequent sagging or droop. Duct connections to equipment outlet collars shall be made in accordance with the duct manufacturer's recommendations.
- B. The joint shall consist of a triple lock that is mechanically performed without the use of adhesives to make a durable, airtight seam. A double lock is not acceptable.
- C. Length of flexible duct shall be as shown on the drawings, but shall not exceed length dictated by 2014 New York City Construction Codes.
- D. Bends shall be made with not less than 1 duct diameter centerline radius. Ducts should extend a few inches beyond the end of a sheet metal connection before bending. Ducts shall not be compressed.
- E. The complete assembly shall have been tested by UL and given the listing ULK 181 Class I Duct Material and shall also comply with NFPA 90A & 90B.
- F. Flexible duct shall be Flexmaster Triple Lock Type V, as manufactured by Flexmaster USA Corporation or approved equal.

#### 2.11 AIR INTAKES AND DISCHARGES

- A. Air intake and discharge louvers and screens in the façade of the building shall be furnished and installed under Louver, Screens specification section.

## 2.12 BLANK-OFF PANELS FOR UNUSED LOUVER AREAS

- A. Provide a minimum 20-gauge sheet metal blank-off panels for unused louver areas that are not enjoined or connected to an active plenum.
- B. Exterior/visible face of blank-off panel shall be cleaned and painted flat black, prior to installation.
- C. Provide safing consisting of 2" rigid insulation on an aluminum panel for all unused portions of the louver.
- D. Louver areas on mechanical drawings may be indicated in free area. Contractor to review architectural drawings and fixed louver and glazed aluminum curtain wall shop drawings, as applicable, to determine actual louver areas.

## 2.13 TURNING VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ductmate Industries, Inc.
  - 2. Duro Dyne Inc.
  - 3. METALAIRE, Inc.
  - 4. SEMCO Incorporated
  - 5. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
  - 6. Or approved equal
- B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
  - 1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-3, "Vanes and Vane Runners," and 2-4, "Vane Support in Elbows."
- E. Vane Construction: Single wall for ducts up to 32 inches wide and double wall for larger dimensions.

## 2.14 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
  - 1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
  - 2. Sealant: Modified styrene acrylic.

3. Water resistant.
4. Mold and mildew resistant.
5. Service: Indoor and outdoor.
6. Service Temperature: Minus 40 to plus 200 deg F.
7. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
8. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Water-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
3. Shore A Hardness: Minimum 20.
4. Water resistant.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. Maximum Static-Pressure Class: 10-inch w.g, positive and negative.
8. Service: Indoor or outdoor.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S
3. Grade: NS
4. Class: 25
5. Use: O
6. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

F. Round Duct Joint O-Ring Seals:

1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch w.g and shall be rated for 10-inch w.g static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

## 2.15 HANGERS AND SUPPORTS

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electro galvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," "Rectangular Duct Hangers Minimum Size," and "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.

- E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
- F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
  - 1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
  - 2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
  - 3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. All ductwork indicated on drawings is schematic. Therefore, changes in duct size and/or location shall be made where necessary to conform to space conditions, at no additional expense to The City of New York.
- C. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- D. Provide necessary offsets, transitions and streamliners to avoid interference with the building construction, piping, or equipment. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.
- E. Provide fittings, branches, inlets and outlets in such a manner that air turbulence is reduced to a minimum.
- F. Provide a duct system with minimum resistance to airflow. Take-offs shall be throated and transitions made as gradual as possible. 'Bullhead' or sharp take-offs are not acceptable. Branch take-offs shall be 45 deg entry type. Straight tap or butt flanged connections are not acceptable. Clinch lock connections are preferred.
- G. Provide straight runs of ductwork at equipment, fans, coils, terminal boxes and humidifiers per manufacturer's recommendations.
- H. Tees and laterals at 90 deg or round ducts shall be 45 deg lateral or 90 deg tee with oval to round tap. 90 deg tee fitting or 90 deg tap is not acceptable. Conical tees are acceptable.

- I. Provide flexible connector where ductwork connects to fans, air handling units and other rotating equipment and where indicated on drawings.
- J. Furnish and install manual dampers, fire dampers, registers, grilles, register boxes, access doors, sound traps, etc., as described elsewhere in the specifications and as required for a complete system, ready for operation.
- K. Where fire and smoke dampers, automatic dampers or combination fire/smoke dampers are shown on drawings or are required, their selection shall be made so that the dampers of all ratings and types shall be of the nominal 100% face area type, with blade package and frame components out of the airstream. These dampers shall include the required oversize enclosures that shall be sealed by the damper manufacturer for the appropriate duct pressure class into which they are installed. Such dampers shall have appropriate rectangular, flat oval or round duct collars to facilitate connection of mating ductwork. The Contractor shall be responsible for any additional sealing of duct collars and connections required to maintain the duct seal class requirements, but shall not jeopardize the UL breakaway connection.
- L. All dampers are to be selected and installed with duct transitions so that the damper clear open area (including frames, stops, etc.), equals to or exceeds the connecting duct (inlet and outlet) clear open area (duct clear inside dimensions). Provide the required duct transitions.
- M. Install ducts with fewest possible joints.
- N. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- O. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- P. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- Q. Install ducts with a clearance of 1 inch (25 mm), plus allowance for insulation thickness.
- R. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures as well as avoid any NEC required working and service space.
- S. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches (38 mm).
- T. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.
- U. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "Duct Cleanliness for New Construction Guidelines." Ductwork shall not be left exposed for more than 8 hours at a time.
- V. Ductwork connected to intake or discharge louvers shall be galvanized steel, painted for the first 10 feet with bitumastic, pitched to a low point, and provided with a 1-1/2" copper drain piped by this trade to a building drain.

- W. Provide companion flange joints, fabricated in the contractor's shop, similar to SMACNA Type T-24a, T-25a or T-25b (Table 2-32, SMACNA, "HVAC DUCT CONSTRUCTION STANDARDS"). Joints shall be consistent with ductwork pressure class. PVC clips are not permitted (use metal) and all corners shall be bolted (boltless connectors are not permitted).
- X. For fire damper (or fire/smoke damper) use UL approved, flanged breakaway bolted connections, assembled in the contractor's shop.
- Y. Use gasketed type joint when dissimilar metals are joined.
- Z. All ductwork unless otherwise noted shall be hung with 1 in. x 1/8 in. galvanized iron bands. Ductwork with cross sectional area under 4 square feet shall be hung on 8'-0 in. centers. For ducts with a cross-sectional area of more than 4 sq. ft. but not over 10 sq. ft. hangers shall be no more than 6 feet apart, and for ducts with a cross sectional area of more than 10 sq. ft. hangers shall be no more than 4 ft. apart. All hangers shall be bent (2" minimum) under the bottom as well as the sides and secured with sheet metal screws.
- AA. Where ducts are stacked they shall be independently supported as above or shall be supported on minimum 1 1/4" x 1 1/4" x 1/8" angle cradle hung by either 1 1/4" x 1 1/4" x 1/8" angles or 3/8" diameter threaded rod.
- BB. All ductwork shall be substantially built with approved joints and seams smooth on the inside and a neat finish on the outside. Duct joints as near air tight as possible, with laps made in the direction of air flow and no flanges projecting into the air stream. Ducts shall be adequately braced to prevent vibration. All angles shall be galvanized or shop painted with two coats or rust resistant paint.
- CC. Changes in shape and dimension shall conform to the following:
  - 1. Increase and reduce duct sizes gradually. Limit transition angle (for each side) to the following:
    - a. For increases in cross-sectional area, the shape of the transformation shall not exceed 1" in 7".
    - b. For reductions in area the slope may be 1" in 4" but 1" in 7" is preferred.
- DD. Changes in direction shall conform to the following:
  - 1. Unvaned elbow with throat radius not less than 1/2 the width of the duct.
  - 2. Provide square elbows in rectangular ducts where radius elbows will not fit or where specifically noted on drawings. Square elbows with single thickness duct turns shall be as per SMACNA with 3-1/4" spacing, and are acceptable in ducts with not more than 2200 FPM air velocity. For higher velocities, use sweep type vanes.

### 3.3 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

### 3.4 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified herein according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Sealant: Water based elastomeric compound, gun or brush grade, maximum 25 flame spread and 50 smoke developed (dry state) specifically for sealing ductwork. Use products as recommended by manufacturer for low, medium or high pressure systems.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Aeroseal
  - 2. Hardcast
  - 3. United McGill
  - 4. Ductmate
  - 5. Or approved equal
- D. Provide liquid sealant, with or without compatible tape, for low clearance slip joints and heavy, permanently elastic mastic type where clearances are larger. Oil base caulking and glazing compounds are not acceptable.
- E. Tape: Use only tape specifically designated by the sealant manufacturer. SMACNA recommends that foil tape not be used and that pressure sensitive tape not be used on bare metal surface or on dry sealant.

### 3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."
- B. Provide fasteners appropriate for construction materials to which hangers are being attached.
  - 1. Where practical, install concrete inserts before placing concrete.
  - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
  - 3. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1 (Table 4-1M), "Rectangular Duct Hangers Minimum Size," and Table 4-2,
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum interval of 16 feet (5 m).

- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### 3.6 SEISMIC-RESTRAINT-DEVICE INSTALLATION

- A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by 2014 NYCBC. Comply with SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems." ASCE/SEI 7.
- B. Refer to Section: "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components" for additional requirements.
- C. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.
- D. Install cables so they do not bend across edges of adjacent equipment or building structure.
- E. Install cable restraints on ducts that are suspended with vibration isolators.
- F. Install seismic-restraint devices using methods approved by an agency acceptable to New York Department of Buildings.
- G. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

### 3.7 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with these specifications.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

### 3.8 PAINTING

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Division 09 painting Sections.

### 3.9 FIELD QUALITY CONTROL

- A. Perform tests and inspections.

### 3.10 LEAKAGE, TESTING, AIR DISTRIBUTION SYSTEMS

- A. Each air distribution system shall be tested for leakage before insulation is applied.
- B. Testing will be done under another section of this work. Refer to section 23 05 93 "TESTING, ADJUSTING AND BALANCING" for additional requirements.
- C. This contractor is responsible to provide all necessary labor to assist in the testing as well as make all provisions for the installation and removal of testing equipment, probes, sensors, etc.

- D. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
- E. Give (7) seven days' advance notice for testing.

### 3.11 START UP

- A. Air Balance: Comply with requirements in Section 230593 "TESTING, ADJUSTING, AND BALANCING FOR HVAC."

### 3.12 DUCT SCHEDULE

- A. A perforated inner metal liner consisting of 22 ga. galv. Steel with 3/32" dia. Holes on 3/16" or 1/4" centers or the equivalent aluminum shall be installed in every one of the following conditions. (Fastening for metal liners shall only be by welded stud. Where duct cross section exceeds 48" the top section shall be fastened with twice the amount of clips).

- 1. Where shown on drawings.
- 2. Where called for elsewhere in these documents.
- 3. Where the duct can be walked on, metal liners shall be used on bottom portions.
- 4. Where the velocity in the duct exceeds 3500 FPM.

- B. Double-Wall Duct Interstitial Insulation:

- 1. Supply Air Ducts: 1-1/2 inches (38 mm).
- 2. Return Air Ducts: 1 inch (25 mm).
- 3. Exhaust Air Ducts: 1 inch (25 mm).

- C. Elbow Configuration:

- 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
  - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
  - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
  - c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
- 2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
  - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
    - 1) Velocity 1000 fpm (5 m/s) or Lower: 0.5 radius-to-diameter ratio and three segments for 90-degree elbow.
    - 2) Velocity 1000 to 1500 fpm (5 to 7.6 m/s): 1.0 radius-to-diameter ratio and four segments for 90-degree elbow.
    - 3) Velocity 1500 fpm (7.6 m/s) or Higher: 1.5 radius-to-diameter ratio and five segments for 90-degree elbow.
    - 4) Radius-to Diameter Ratio: 1.5.

**END OF SECTION 23 31 13**

## **SECTION 23 31 20**

### **FIRE-RESISTIVE DUCT-PIPE INSULATION AND ENCLOSURE**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 07 00 "HVAC Insulation".
- F. Section 23 11 13 "Facility Fuel Oil Piping".
- G. Section 23 31 13 "Metal Ducts".
- H. This section is a part of each Division 23 00 00 section.

##### **1.2 SUMMARY**

- A. Supply all labor, material, methods and equipment to provide, where shown on the Drawings, 1 and/or 2-hour fire rated duct or pipe wrap insulation or enclosures for piping, ventilation, exhaust or kitchen exhaust grease ducts and for zero-inch clearance to combustible materials.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with

the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 REFERENCES

- A. Test standards and reports for evaluating and rating performance of fire resistive and zero-inch clearance duct wrap systems.

#### 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Applicator: Manufacturer trained, specializing in fire resistive ductwork enclosure application with seven years minimum experience.

**1.7 SYSTEM PERFORMANCE REQUIREMENTS**

- A. A lightweight, high-temperature, fiber blanket thermal insulation encapsulated in a fiberglass-reinforced aluminized polyester foil.
- B. Duct wrap density shall be nominal 6 pcf and have a nominal 1-1/2" thickness. The fiber blanket shall have a continuous use limit of 1000°C (1832°F).
- C. The blanket thermal resistance (R-value) at ambient temperature shall be a minimum of 6.3 °F-ft<sup>2</sup>-hr/BTU.
- D. The bare blanket and the foil encapsulated blanket insulation shall have composite (insulation, foil encapsulation, facing, and adhesive used to adhere the facing to the blanket) fire and smoke hazard Index as tested by procedure ASTM E.84, NFPA 255 or UL 723 of:

Flame Spread	0
Smoke Developed	0

- E. The wrap shall provide a 2-hour fire resistive rated enclosure system, shaft enclosures, when used with a listed or approved through-penetration protection system.
- F. Two-hour rated fire resistive enclosure assembly, ASTM E119: Large Scale Wall Test and Total Engulfment Test.
- G. Non-Combustibility, ASTM E136
- H. Class 1 interior finish materials, ASTM E84.
- I. Zero-inch clearance to combustibles, maximum allowable surface temperature on unexposed side, UL 1978.
- J. Listing Agency: Provide products that are listed by the following:
1. Underwriters Laboratories Inc. (UL), in "Fire Resistance Directory" category HNLJ, HNMF or XHEZ as appropriate.
  2. Intertek Testing Services (ITS) (formerly Omega Point Laboratories (OPL)), in "Intertek Directory of Listed Products."
  3. International Code Council, Evaluation Services (ICC-ES). See report ESR-1255.
  4. Furnish products identical to those tested for classification by listing agency.
- K. Mark product packing with classification marking of listing agency.
- L. Fire-resistant Enclosure Listings – Provide the below listings or a similar approved listing with identical rating and similar material construction:
1. Chemical Fume Duct:
    - a. Intertek 3MU/FRD 120-10, 3MU/FRD 120-11
  2. Ventilation Duct:

- a. Intertek 3MU/DI 60-01, 3MU/DI 120-01
- b. UL: HNLJ.V-27

- M. Fire Rating (Ventilation Air Duct): All duct wraps must be One (1) hour rated, but in no case less than the rating of any time-rated assemblies which are penetrated.
- N. Fire Rating (Ventilation Air Duct): All duct wraps must be Two (2) hour rated, but in no case less than the rating of any time-rated assemblies which are penetrated.
- O. Fire Rating (Grease Duct): All duct wraps must be compliant to all five (5) sections of ASTM E 2336. All duct wraps must be a minimum one (1) hour rated, but in no case less than the rating of any time-rated assemblies which are penetrated.
- P. Fire Rating (Plenum Rated): All plenum wraps must be compliant to NFPA 262 (electrical cables) and/or UL 1887 (non-metallic pipe).

#### 1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.9 SUBMITTALS

- A. Submit test reports substantiating performance requirements and Code compliance.

#### 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original sealed containers or unopened packages, and clearly labeled with manufacturer's name, product identification, and lot numbers.
- B. Store materials out of weather and in an enclosed shelter fully protected from physical damage.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS:

- A. Subject to compliance with requirements, provide products by one of the following:
  - 1. 3M
  - 2. Premier Refractories International
  - 3. Hilti
  - 4. Or approved equal

#### 2.2 FIRE BARRIER DUCT WRAP INSULATION - GENERAL

- A. A lightweight, high-temperature, fiber blanket thermal insulation encapsulated in a fiberglass-reinforced aluminized polyester foil.
- B. Duct wrap density shall be nominal 6 pcf and have a nominal 1-1/2" thickness. The fiber blanket shall have a continuous use limit of 1000°C (1832°F).
- C. The blanket thermal resistance (R-value) at ambient temperature shall be a minimum of 6.3 °F-ft<sup>2</sup>-hr/BTU.
- D. Smoke developed Index and Flame Spread Index of the bare blanket and of the foil

encapsulated blanket shall be 0/0. The foil encapsulation shall be bonded to the core blanket material.

- E. Duct wrap system shall provide zero-inch clearance to combustible construction.
- F. The bare blanket and the foil encapsulated blanket insulation shall have composite (insulation, jacket or facing, and adhesive used to adhere the facing or jacket to the insulation) fire and smoke hazard Index as tested by procedure ASTM E.84, NFPA 255 or UL 723 of:

Flame Spread	0
Smoke Developed	0

- G. The duct wrap shall provide zero clearance to combustible construction throughout the entire enclosure system.
- H. The duct wrap shall be certified according to ASTM E2336 (Grease Duct Test Standard) in two-layer system and ISO 6944 (Air Duct Test Standard) in single layer system.
- I. The product shall be listed with both UL and Intertek (OPL) for 2 hour rated application.

## 2.3 FIRE RATED DUCT ACCESS DOORS

- A. Provide fire rated duct access doors meeting the rating required for the adjacent construction as indicated on the drawings and as specified herein as well as other sections of this work, as well as per 2014 New York City Construction Codes.
- B. The doors and accessories shall be UL 1978 listed for grease leakage and Intertek/OPL listed when combined with the submitted Duct Wrap.
- C. Doors shall meet the requirements of NFPA 96.
- D. See Section 08 31 13 "Access Doors and Frames".

## 2.4 FIRESTOPPING:

- A. As part of this work, for penetrations through fire rated walls, ceilings or floors, furnish and install a complete, UL and Intertek approved firestop system sole sourced from a single approved manufacturer, as listed above.
- B. Firestop Listings:
  - 1. The following is only a partial list of ASTM E 814 tested through-penetration designs. Consult with the manufacturer for more information.
    - a. UL: W-L-7180, W-J-7104, C-AJ-7096, F-C-7054.
  - 2. Intertek (formerly Omega Point Laboratories): Note: Intertek Design Listings for fire-resistant enclosures contain the information about firestopping the ducts where they penetrate a fire rated assembly; they are stand-alone listings which do not require an additional firestop listing.
  - 3. Firestopping Exposed to View: Provide products with flame spread index of less than 25 and smoke developed index of less than 450, when tested in accordance with ASTM E 84.
  - 4. Materials: Use only products specifically listed for use in listed systems.

5. Compatibility: Provide products that are compatible with each other, with the substrates forming openings, and with the items, if any, penetrating the firestopping, under the conditions represented by this project, based on testing and field performance demonstrated by manufacturer.
  - C. Firestopping material must be asbestos-free and capable of maintaining an effective barrier against flame, smoke and gases in compliance with the requirements of ASTM and UL standards cited in this section.
  - D. Firestopping materials must meet and be acceptable for use by all building codes and NFPA codes cited in this section.
    1. Materials must be suitable for the firestopping of penetrations made by steel or duct wrap
    2. Through-penetration firestop materials:
      - a. Packing materials: Pieces of 4 pcf mineral wool.
      - b. Sealants: 1000 NS non-slump silicone sealant, 1003 SL self-leveling silicone sealant, 2000+ premium non-slump silicone sealant, or CP 25WB+ premium intumescent latex caulk, as stated in firestop Design Listing.
  - E. The firestopping shall be installed under the direction and supervision of the Fire Duct Wrap manufacturer.
  - F. Products shall conform to the appropriate system design Listings for the intended application:
  - G. The contractor shall be Manufacturer instructed, specializing in fire duct wrap insulation and firestopping applications.
  - H. Refer to Section – FIRESTOPPING for additional details
- 2.5 FIRE BARRIER DUCT WRAP INSULATION (TYPE D-7)
- A. Fire resistive duct wrap must be approved for use in NYC.
  - B. Duct wrap density shall be a nominal 6 pcf and have a nominal 1-1/2" thickness. The fiber blanket shall have a continuous use limit of 1832 F. The single layer R-value at 77 F temperatures shall be a minimum of 6.3.
  - C. Duct wrap shall provide zero clearance to combustible construction throughout the entire enclosure system.
  - D. Products to conform to the following system design Listings for the intended application, or equivalent designs offering an identical UL rating with similar construction:
    1. Ventilation Air Ducts: UL Design No. V-27 or Intertek Design No. 3MU/FRD-120-15.
    2. Kitchen Exhaust Grease Ducts: Intertek Design Listing No's. GD 531 F, GD 547 F, GD 556 F or GD 557 F.
    3. Firestop Listings: UL Design Nos. W-L-7180, W-J-7104, C-AJ-7096 or Intertek Design No's. FS 557 W – FS 563 W, FS 565 W – FS 574 F, FS 576 F, FS 578 F, FS 579 W.
  - E. 3M Fire Barrier Duct Wrap 615 (Basis-of-Design), or equivalent product from an approved manufacturer listed above:
    1. Lightweight, non-asbestos, high temperature, bio-soluble, calcium-magnesium-silicate

- (CMS) woven wool blanket, encapsulated in a scrim-reinforced foil, blanket thickness of 1.5 inches.
2. The Smoke Developed Index and Flame Spread Index (ASTM E 84) of the bare blanket and of the foil-encapsulated blanket shall be 0/0. The foil encapsulation shall be bonded to the core blanket material.
  3. The duct wrap shall provide zero clearance to combustible construction throughout the entire enclosure system.
  4. The duct wrap shall be certified according to ASTM E2336 (Grease Duct Test Standard) in two-layer system and ISO 6944 (Air Duct Test Standard) in single layer system.
  5. Fire Resistance Rating (ASTM E119, ASTM E814): 2 hour
  6. ISO 6944-1985 – Fire Resistance test.
- F. 3M Fire Barrier Duct Wrap 615+(Plus) (Basis-of-Design), or equivalent product from an approved manufacturer listed above:
1. High temperature, lightweight, non-asbestos, bio-soluble, fiber blanket thermal insulation encapsulated in a fiberglass – reinforced aluminized polyester foil.
- G. 3M Fire Barrier Plenum Wrap 5A+ (Basis-of-Design), or equivalent product from an approved manufacturer listed above:
1. High-Temperature, Lightweight, non-asbestos, high temperature, bio-soluble, calcium-magnesium-silicate (CMS) non-woven blanket, encapsulated in a scrim-reinforced foil, blanket thickness of 0.5 inches for protection of items within a plenum area.
  2. Color: White blanket, aluminum foil encapsulated.
  3. Weight: 0.25 psf.
  4. Density: 6 pcf nominal.
  5. Thermal Conductivity (k-value) at 500 Degrees F (ASTM C411, ASTM C518): 0.48 Btu/(ft<sup>2</sup> × h × F)
  6. Service range up to 2000°F.
  7. Plenum Rating (electrical cables): Product complies with NFPA 262 (UL 910).
  8. Plenum Rating (non-metallic pipe): Product complies with UL 1887.
  9. Non-combustible per ASTM E 136
- H. 3M Fire Barrier Duct Wrap 20A (Basis-of-Design), or equivalent product from an approved manufacturer listed above:
1. Non-asbestos, biosoluble, patented inorganic fire resistant blanket encapsulated with a scrim-reinforced foil, blanket thickness of 2.0 inches for kitchen exhaust grease duct applications.
- I. The products shall be listed with both UL and Intertek (OPL) for 2 hour rated application.
- J. Products shall conform to the appropriate system design listings for the intended application:
- K. The contractor shall be Manufacturer instructed, specializing in fire duct wrap insulation and firestopping applications.
- L. Ventilation Duct Applications:
1. Ventilation Ducts:
    - a. 3M Fire Barrier Duct Wrap 615+ + (Basis-of-Design), or equivalent product from an approved manufacturer listed above:

- 1) For Ventilation Duct enclosures, provide a minimum of 1 layers of wrap with 3" perimeter and 3" longitudinal overlaps.
  2. Fire Resistance Rating (ASTM E119, ASTM E814): 2 hour
  3. Provide a minimum of 2 layers of wrap with 3" perimeter and 3" longitudinal overlaps.
  4. Two-layer grease duct application – meets the criteria of ASTM E 2336 Standard Test Methods for Fire Resistive Grease Duct Enclosure Systems.
- M. 3M Fire Barrier Duct Wrap 20A + (Basis-of-Design), or equivalent product from an approved manufacturer listed above:
1. Non-asbestos, biosoluble, patented inorganic fire resistant blanket encapsulated with a scrim-reinforced foil, blanket thickness of 2.0 inches for kitchen exhaust grease duct applications.
  2. Materials: Fire resistive duct wrap insulation; 1.5" or 2" thick, fully encapsulated with a scrim-reinforced foil, marked with Manufacturer's logo and UL and Intertek markings.
  3. Tapes: High performance filament tape, Aluminum foil tape (for sealing cut blanket edges and seams).
  4. Banding material: Stainless steel banding:
  5. Insulation pins and clips: Copper-coated steel pins (10 ga), 1.5" diameter or square galvanized steel speed clips.
  6. Through-penetration firestop materials:
    - a. Packing materials: 4 pcf mineral wool.
    - b. Sealants: 1000 NS non-slump silicone sealant, 1003 SL self-leveling silicone sealant, 2000+ premium non-slump silicone sealant, or CP 25WB+ premium intumescent latex caulk, as stated in firestop Design Listing.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Remove dirt and dust, and clean surfaces of openings and items penetrating rated floors and rated walls.

### 3.3 INSTALLATION

- A. Install Duct Enclosure system in accordance with manufacturer's instructions and referenced standards.
- B. Install Duct Enclosure in direct contact with the duct it encloses. Protect every portion of duct including access doors with no less than 2 layers for 2-hour air duct enclosures. Overlap both perimeter and longitudinal joints minimum of 3" per layer of material. Filament tape is used as temporary hold on both layers until banding hardware is in place. Band exterior layer spaced minimum of 10.5" on center. For duct widths greater than 24", weld insulation pins to bottom, sides and vertical duct runs. Impale Duct Wrap over pins and secure with stainless steel speed clips until banding is applied.
- C. In transition areas (at bends and elbows) and at access door openings, provide additional pins

to assure integrity of the fire barrier. Perimeter of access door openings shall be sealed with approved, non-slump grade sealant.

- D. Protect floor and wall penetrations with an approved through-penetrations firestopping system having an hourly rating not less than that of assembly penetrated and installed in accordance with manufacturer's instructions.

#### 3.4 REPAIR PROCEDURE

- A. Repair damaged Duct Enclosure in accordance with manufacturer's instructions.
- B. Completely remove damaged section. Apply a new section of same direction. Place and fit ensuring same overlap that existed previously. Place banding around new material and tension to sufficiently hold in place.
- C. If damage has penetrated to interior layer, the affected sections of duct be stripped and reinstalled as specified in installation.

#### 3.5 INSPECTION

- A. Manufacturer's representative shall visit the site to verify that installation conform to manufacturer's requirements.

**END OF SECTION 23 31 20**

**THIS PAGE INTENTIONALLY LEFT BLANK**

**SECTION 23 33 10****DAMPERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".

**1.2 SUMMARY**

- A. This Section Includes:
  - 1. Damper junction box and wiring
  - 2. Dampers – Trade responsibilities
  - 3. Backdraft and pressure relief dampers.
  - 4. Dampers for balancing
  - 5. Dampers for Fire Protection
  - 6. Fire dampers
  - 7. Smoke dampers
  - 8. Combination fire and smoke dampers
  - 9. Smoke/Isolation dampers
  - 10. Positive Seal (Bubble-tight) Dampers
  - 11. Remote damper operators

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per subcontractor) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

#### 1.5 REFERENCE STANDARDS

- A. AMCA 500 - Test Methods for Louvers, Dampers and Shutters.
- B. AMCA 511 - Certified Ratings Program for Air Control Devices.
- C. NFPA 90A - Installation of Air Conditioning and Ventilating Systems.
- D. NFPA 90B – Installation of Warm Air Heating and Air Conditioning Systems
- E. NFPA 92A - Smoke-Control Systems.
- F. NFPA 101 – Life Safety Code.
- G. UL 555 - Standard for Safety; Fire Dampers.
- H. UL 555S - Standard for Safety; Leakage Rated Dampers for Use in Smoke Control Systems.
- I. SMACNA – HVAC Duct Construction Standards, Latest Edition.
- J. BSA - Department of Buildings, Board of Standards and Appeals.
- K. MEA –Department of Buildings, Material and Acceptance Division.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.7 SUBMITTALS

- A. General:
  1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
    - a. Dampers:
      - 1) Verify Conformance to NFPA, UL, BSA, MEA and 2014 NYCBC.
      - 2) Indicate materials, construction, and dimensions.
      - 3) Include damper pressure drop data for all damper sizes in accordance with AMCA 500-D test figure 5.3 (Ducted Inlet, Ducted Outlet).

- 4) Indicate damper leakage meets AMCA Class 1A in accordance with AMCA 500-D.
  - 5) Indicate damper is licensed to bear the AMCA Certified Ratings Seal for Air Performance and Air Leakage.
  - 6) Include a copy of the Installation Instructions.
- b. Special fittings.
  - c. Manual volume damper installations.
  - d. Control damper installations.
  - e. Fire-damper, smoke-damper, combination fire/smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
  - f. Duct security bars.
  - g. Wiring Diagrams: For power, signal, and control wiring.
2. Clearly indicate location, size and rating of all dampers on the shop drawings and shall provide access doors in the ducts at each damper of sufficient size (min. 14" x 14") and type to permit inspection and replacement of linkage or actuator. Provide itemized list (indicating size, location and type) of all fire, smoke and combination fire/smoke dampers for inspection and for posting in Engineers office. Coordinate all locations of duct access doors.
3. Provide installation detail showing the damper mountings as well as duct transitions, if required, to maintain the 100% damper free area in the ductwork.
4. Include damper manufacturer's installation instructions. These instructions shall describe the applicable requirements for damper sleeve thickness, retaining angles, sealing, duct to sleeve connections, preparation of wall, floor or ceiling openings, and all other requirements to provide an installation equivalent to that tested by the damper manufacturer during the UL 555, UL 555S and UL 555C qualification process. Detail any propose deviations. Any deviations must be approved by the Commissioner.

## 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- C. Comply with AMCA 500-D testing for damper pressure drop rating.
- D. Dampers shall be licensed to bear the AMCA Certified Ratings Seal. Ratings based on tests and procedures performed in accordance with AMCA 511 and comply with AMCA Certified Ratings Program. AMCA Certified Ratings Seal applies to Air Performance and Air Leakage.

## 1.9 DEFINITIONS

- A. Sealing Requirements Definition: For the purposes of duct systems sealing requirements specified in this section, the following definitions apply:
  1. Seams: A seam is defined as jointing

## PART 2 - PRODUCTS

### 2.1 GENERAL

- A. Furnish and install all electric operated dampers as well as all fire dampers for fire protection, manual dampers for balancing and/or shut-off as well as dampers which are specified as part of factory built air handling units or terminal units.
- B. Actuators for all fire and/or smoke rated dampers shall be factory installed by the damper manufacturer, as per their UL listing. The actuators shall be mounted outside of the airstream.
- C. Furnish the damper actuators for all non-rated dampers. The actuators shall be shipped to the factory and installed by the damper manufacturer. The actuators shall be mounted outside of the airstream.
- D. All dampers installed in air handling units or exposed to ambient conditions shall be constructed of aluminum with stainless steel linkages, fittings, etc.
- E. The mechanical contractor shall install all dampers.
- F. All dampers are to be selected and installed so that the frames, stops, etc. are located outside of the airstream so as to provide a nominal 100% free area damper.
- G. Dampers shall be installed per the condition of their UL listing and the manufacturer's installation instructions. The maximum single damper assembly whether single or multi-section shall not exceed the limit as certified by UL. Where multiple assemblies are required, provide UL approved mullions.
- H. Provide wiring as follows:
  - 1. Line and low voltage wiring for all motor operated fire and/or smoke rated dampers.
  - 2. Line and low voltage wiring for all motor operated control dampers
  - 3. Wiring from the damper actuator and any associated end switches and sensors to a junction box that is wall mounted alongside the damper.
  - 4. Between the central control system BMS and the junction box for all dampers monitored and/or controlled by the BMS.
  - 5. Between the junction box for all dampers and their associated thermostats, pressure switches, etc.
- I. Multi-section dampers with electric actuators shall be arranged so that each damper section operates individually. One electronic actuator shall be direct shaft mounted per damper section. (See section below for more installation details.)
- J. Dampers incorporating multiple sections shall be designed in such a way that the actuators are easily accessible. Under no circumstances shall it be necessary to remove damper sections or structural or other fixtures to facilitate removal of damper motors. Provide access doors wherever necessary to meet this requirement.
- K. Multi-blade type, with parallel blades for two-position, throttling and modulating service shall be provided. Damper blades or frames shall not distort or rack under operation.
- L. For inaccessible ceilings, as well as for special areas such as lobbies, etc., furnish remote damper actuator operable through face of nearest diffuser. Damper controller and cable shall be concealed above the ceiling. Similar to Bowden remote cable control system with Young regulator damper controllers. Balancing dampers shall include all necessary hardware to ensure compatibility with remote cable control system

## 2.2 DAMPER JUNCTION BOX AND WIRING

- A. Provide junction box(es) for each motorized damper.
- B. Provide the necessary relays, interconnect wiring and other components to meet the requirements detailed below. The junction box(es) relays, etc. shall be housed in wall-mounted enclosures, which meet the specifications detailed for local starter enclosures.
- C. The junction boxes shall be wired such that the Building Management System (BMS) can undertake the following control and monitoring functions:
  - 1. Open Control - A pair of terminals shall be wired such that when a controls (BMS) relay closes a contact pair across these terminals the damper is driven open. If the damper is two position with an actuator which drives closed and springs open on loss of power then these terminals shall not be used. This signal from the BMS shall be overridden by a close signal from the Fire Alarm System (FAS). Where dampers are interlocked to motors then the wiring shall be to these terminals.
  - 2. Close Control - A pair of terminals shall be wired such that when a controls (BMS) relay closes a contact pair across these terminals the damper is driven closed. If the damper is two positions with an actuator which drives open and springs closed on loss of power then these terminals shall not be used. This signal from the BMS shall be overridden by an open signal from the FAS.
  - 3. Motor Interlock - A pair of terminals shall be wired to an end switch on the actuator such that the contacts between the terminals shall be closed when the damper is fully open and open when the damper is not fully open. This pair of terminals shall be used for interlocking a damper with a motor such that the motor will not be able to start if the damper is not fully open.
  - 4. Damper Status: A pair of terminals shall be wired to an end switch on the damper such that the contacts between the terminals shall be closed when the damper is fully open and open when the damper is not fully open. This pair of terminals shall be used for open/closed status monitoring at the BMS.
- D. Smoke Evacuation Dampers
  - 1. For each damper which is to be monitored and/or controlled by the Fire Alarm System (FAS), the damper actuator, heat sensor and end switches shall each be wired by the mechanical trade to a junction box mounted adjacent to the damper so that the FAS can undertake the following control and monitoring functions:
    - a. FAS "Open/Close" Control - The damper will be driven open in response to closure of an FAS relay contact and will spring closed in response to opening of this relay contact.
    - b. FAS "Override Open" Control (Smoke Evacuation Dampers Only) - The damper will be re-opened, subsequent to a heat sensor initiated closure, in response to closure of a second FAS relay contact (or reclosure of the first contact for single sensor dampers).
    - c. FAS "Open/Closed" Status Monitoring Control (Smoke Evacuation Dampers Only) - End Switch closures will cause activation of FAS "opened" and "closed" relays in response to operation of end switches at both ends of travel.
    - d. FAS "Override of BMS" Control - For each damper requiring both FAS and BMS control, mount an interface relay within 30 circuiting feet of the junction box, so wired as to permit FAS override of the BMS control.
- E. The controls contractor's damper manufacturer shall provide all necessary wiring diagrams to the FAS contractors.

- F. Dampers furnished by the mechanical trade shall have similar junction boxes to which the controls contractor shall wire where necessary.
- G. Comply with code requirements. Segregate high and low voltage wiring & circuits and segregate the FAS and controls BMS terminals.

## 2.3 DAMPERS – TRADE RESPONSIBILITIES

- A. The following summarizes the trade responsibilities with respect to automatic dampers:
  - 1. Non-Fire or non-Smoke Rated Dampers
    - a. Furnish Damper - HVAC
    - b. Install damper – HVAC
    - c. Furnish Actuator – BMS
    - d. Install Actuator – HVAC
    - e. Provide junction box complete with all relays, wiring, etc. – BMS
    - f. Provide wiring between actuator, end switches, sensors, and junction box – BMS
    - g. Provide wiring from BMS to damper junction box - BMS
    - h. Provide wiring from FAS to damper junction box - N/A
    - i. Furnish 120V main power to elect. Actuators – BMS
    - j. Provide wiring from damper junction box to junction box for interlocked motors, etc. – BMS
    - k. Provide wiring from damper junction box directly to thermostats, etc. – BMS
  - 2. Fire and/or Smoke Rated Dampers not controlled by Fire Alarm system (FAS)
    - a. Furnish Damper - HVAC
    - b. Install damper – HVAC
    - c. Furnish Actuator – HVAC
    - d. Install Actuator – HVAC
    - e. Furnish and install junction box complete with all relays, wiring, etc. – HVAC
    - f. Provide wiring between actuator, end switches, heat sensors, and junction box – HVAC
    - g. Provide wiring from Central Control System (BMS) to damper junction box – BMS
    - h. Provide wiring from FAS to damper junction box – N/A
    - i. Furnish 120V main power to elect. Actuators – BMS
    - j. Provide wiring from damper junction box strip to junction boxes for interlocked motors, etc. – BMS
    - k. Provide wiring from damper junction box directly to thermostats, etc.- BMS
  - 3. Fire or Smoke Rated Dampers controlled by Fire Alarm system (FAS).
    - a. Furnish Damper - HVAC
    - b. Install damper – HVAC
    - c. Furnish Actuator – HVAC
    - d. Install Actuator – HVAC
    - e. Furnish and install junction box complete with all relays, wiring, etc. – HVAC
    - f. Provide wiring between actuator, end switches, heat sensors, and junction box – HVAC
    - g. Provide wiring from Central Control System (BMS) to damper junction box - BMS
    - h. Provide wiring from FAS to damper junction box – Electrical (FAS)
    - i. Furnish 120V main power to elect. Actuators – Electrical
    - j. Provide wiring from damper junction box to junction boxes for interlocked motors, etc. – BMS

k. Provide wiring from damper junction box directly to thermostats, etc. – BMS

4. Emergency Generator Intake Dampers - HVAC

- B. Controls contractor shall have overall responsibility for the complete coordination of the work and the operation of the damper/actuator installation.
- C. In mechanical or electrical rooms 120V power circuits will be provided from an emergency distribution board. These circuits will be terminated in a junction box located in each associated mechanical room and shall be used by the controls contractor to supply local control panels and critical equipment.
- D. These circuits will also be used by the electrical trade to supply dampers, etc., requiring control by the Fire Alarm System. Final connection from the junction boxes to the actuators, end switches and sensors shall be by the mechanical trade.
- E. For dampers not requiring control by the fire alarm system and for other non-critical equipment, obtain power from either the emergency circuits as detailed above or from the motor starter junction box. All wiring shall be by the controls contractor.

2.4 DAMPER END SWITCH

- A. All fire/smoke and smoke rated dampers shall be provided with two (2) factory installed end switches.
- B. All automatic control dampers shall be provided with one (1) factory installed end switches.
- C. Damper end switches shall be devices that directly detect the desired position of the damper blades. The switch shall not be a component of the actuator nor shall it be mounted on the damper shaft.
- D. The damper end switches shall be wired by the BMS contractor to enable the BMS to exercise, monitor and log the status (open/closed) of each damper. The BMS shall be able to open and close the individual dampers for verification and maintenance programs. This BMS wiring and monitoring is independent of the fire alarm system.
- E. The end switch shall be as manufactured by Square D, Allen Bradley, Cutler hammer, or approved equal.

2.5 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ruskin Company
  - 2. Imperial
  - 3. Pottorff; a division of PCI Industries, Inc.
  - 4. Or approved equal
- B. Description: Gravity balanced.
  - 1. Maximum Air Velocity: 5000 fpm.
  - 2. Maximum Pressure drop: 0.05" w.g.
  - 3. Maximum System Pressure: 10-inch w.g.
  - 4. Maximum Leakage: 2cfm/sf @ 1" sp.

5. Frame: Minimum of 3 inches wide with a maximum of 1/8-inch-thick extruded aluminum, with welded corners and mounting flange.
6. Blades: Single piece, maximum width of 6 inches, counter-balanced, 0.050-inch- thick aluminum sheet with sealed edges, blade ends shall overlap for maximum closure.
7. Blade Seals: Neoprene and mechanically attached to blade edge.
8. Bearings: Stainless steel
9. Linkages: Stainless steel.
10. Blade Axles:
  - a. Material: Stainless Steel.
  - b. Diameter: 0.20 inch.
11. Mounting shall be suitable for the required orientation.
12. Fittings: Stainless steel
13. Accessories:
  - a. Mounting holes.
  - b. Adjustment device to permit setting for varying differential static pressure.
  - c. Counterweights and spring-assist kits for vertical airflow installations.
  - d. Electric actuators.
  - e. Chain pulls.
  - f. Screen Mounting: Front mounted in sleeve.
  - g. Sleeve Thickness: 20-gage minimum.
  - h. Sleeve Length: 6 inches minimum.
  - i. Screen Mounting: Rear mounted.
  - j. Screen Material: Aluminum
  - k. Screen Type: Insect
  - l. 90-degree stops.

## 2.6 DAMPERS FOR BALANCING

### A. Low-Leakage, Steel, Manual Volume Damper

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Ruskin Company
  - b. Imperial.
  - c. Pottorff; a division of PCI Industries, Inc.
  - d. Or approved equal
2. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
3. Suitable for horizontal or vertical applications.

### B. General Volume Damper Requirements:

1. Provide factory fabricated manual volume dampers in all supply, return and exhaust branch ducts for properly regulating and balancing airflow to all terminal outlets, whether indicated on drawings or not. Dampers shall be constructed per SMACNA, latest edition, figures 2-12 and 2-13 with locking quadrant and 8" maximum blade width.
2. Volume dampers shall be controlled by an approved galvanized locking quadrant indicating the damper position.

3. When installing dampers in ducts to be insulated provide raised bracket for damper quadrant with height equal to insulation thickness such that the adjustment of the damper handle will not disturb the insulation.
4. Locate damper as far as possible from air outlet to avoid noise transmission.
5. Coordinate with G.C. for easy access to damper.
6. Dampers in stainless steel ductwork shall be of stainless steel construction.
7. Frames:
  - a. Galvanized-steel channels, 0.064 inch thick.
  - b. Mitered and welded corners.
  - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
8. Blades:
  - a. Multiple or single blade.
  - b. Parallel- or opposed-blade design.
  - c. Stiffen damper blades for stability.
  - d. Galvanized, roll-formed steel, 0.064 inch thick.
  - e. Maximum 6-inch width.
9. Blade Axles: Aluminum.
10. Bearings:
  - a. Stainless-steel sleeve.
  - b. Dampers in ducts with pressure classes of 3-inch w.g or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
11. Blade Seals: Neoprene.
12. Jamb Seals: Cambered aluminum.
13. Tie Bars and Brackets: Galvanized steel.
14. Accessories:
  - a. Include locking device to hold single-blade dampers in a fixed position without vibration.

## 2.7 AUTOMATIC CONTROL DAMPERS

- A. Automatic control damper actuators are specified under section 23 09 00 - HVAC Instrumentation and Controls.
- B. Dampers used for modulating service shall be opposed blade type arrange for normally open or normally closed operation as required. The damper is to be sized so that when wide open the pressure drop is a sufficient amount of its close-off pressure drop for effective throttling.
- C. All dampers used for two-position or open-close control shall be parallel blade type arranged for normally open or closed operation as required.
- D. All dampers installed in air handling units or exposed to ambient conditions shall be constructed of aluminum with stainless steel linkages, fittings, etc.
- E. For dampers not located in air handling units or are not exposed to ambient conditions shall be constructed of aluminum with aluminum or corrosion resistant zinc & nickel-plated steel linkages, fittings, etc.

- F. Bearing support bracket and drive blade pin extension shall be provided for each damper section. Sheet metal contractor shall install bearing support bracket and drive blade pin extension. Sheet metal contractor shall provide permanent indication of blade position by scratching or marking the visible end of the drive blade pin extension.
- G. Drive pin may be round only if V-bolt and toothed V-clamp is used to cause a cold weld effect for positive gripping. For Single bolt or set-screw type actuator fasteners, round damper pin shafts must be milled with at least one side flat to avoid slippage.
- H. Damper manufacturer shall supply alignment plates for all multi-section dampers.

## 2.8 DAMPERS FOR FIRE PROTECTION - GENERAL

- A. Dampers and fire doors for fire protection shall be installed where shown on the drawings and where required by code and shall be of the folding blade type.
- B. Dampers shall bear the UL label and shall be provided with factory installed UL rated full sleeves. Comply with UL recommendations for break-away connections at maximum distance of 6" from wall and all other UL recommendations and code requirements. Retaining angles must be wide enough to have sufficient bearing on wall (minimum surface contact) of 1".
- C. Type: Static and dynamic rated and labeled according to UL 555 by an NRTL.
- D. For installation in 1-1/2 Hr. or 2 Hr. fire separations of fire divisions provide 1-1/2 hour fusible link fire dampers U.L. labeled for use in Class B openings. For installation in 3 or 4 hour fire separations or fire divisions provide two fire dampers in series U.L. labeled for use in Class A openings, or other U.L. classified damper rated for 3 hrs.
- E. Damper blades and frame shall be out of airstream, to provide nominal 100% free area dampers and to minimize pressure drops.
- F. Dampers shall be approved by the New York Department of Buildings. NYC codes shall take precedence where they supersede NFPA. However, the notify the Engineer in writing citing such differences by reference to such codes should the contract documents not reflect these differences.
- G. Provide duct access doors at each damper of sufficient size and type to permit inspection and replacement of linkage. It shall be the contractor's responsibility to coordinate all locations for duct access doors.
- H. Access doors shall be cam latched with vinyl gasket to provide tightest possible seal between the duct and frame. Doors shall be self-tightening and gasketed with hand operated cam locks and will be fully insulated. Access doors shall be Air Balance Inc. Fire/Seal or approved equal.
- I. Units shall be MEA and Board of Standards and Appeals for use in New York City.

## 2.9 FIRE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ruskin Company
  - 2. Imperial
  - 3. Pottorff; a division of PCI Industries, Inc.
  - 4. Or approved equal

- B. Type: Static and dynamic rated and labeled according to UL 555 by an NRTL.
- C. Closing rating in ducts up to 4-inch w.g. static pressure class and minimum 4000-fpm velocity.
- D. Fire Rating: 1-1/2 hours.
- E. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.
- F. Mounting Sleeve: Factory- installed, galvanized sheet steel, UL approved.
- G. Minimum Thickness: 0.138 inch thick, and of length to suit application.
- H. Mounting Orientation: Vertical or horizontal as indicated.
- I. Blades: Roll-formed, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.
- J. Horizontal Dampers: Include blade lock and stainless steel closure spring with locking devices to insure closure.
- K. Heat-Responsive Device: Fusible link, factory installed, 212 deg F rated.

#### 2.10 SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ruskin Company
  - 2. Imperial
  - 3. Potoroff. Pottorff; a division of PCI Industries, Inc.
  - 4. Greenheck Fan Corporation
  - 5. Nailor Industries Inc.
  - 6. Or approved equal
- B. Similar to Ruskin SD 60.
- C. Dampers shall meet the requirements of NFPA90A, 92A and 92B and shall be classified as Smoke Dampers in accordance with the latest version of UL555S.
- D. General Requirements: Label according to UL 555S by an NRTL.
- E. Damper length shall not exceed UL approved damper size. Provide intermediate supports and bearings for damper blades, as required.
- F. All dampers shall be provided with two (2) factory installed position indicator end switches to enable remote status of open or closed positions by the BMS. Those dampers designated in the documents as being controlled by the central fire alarm (FAS) system (or central fire command station) will be wired for both remote status (BMS) and remote open/closed operation (FAS).
- G. The damper manufacturer shall provide the damper actuators.
- H. Dampers shall have UL label and be provided with factory installed UL-rated sleeves.
- I. Type: Static and dynamic rated and labeled according to UL 555 and UL 555S.

- J. Closing rating in ducts up to 4-inch w.g static pressure class and minimum 4000-fpm velocity.
- K. Smoke Detector: Integral, factory mounted and wired for single-point connection, located within airstream.
- L. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.
- M. Blades: Roll-formed, horizontal, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.
- N. Leakage: Class I in accordance with UL 555S.
- O. Rated pressure and velocity to exceed design airflow conditions.
- P. Temperature rating: 350 deg F.
- Q. Mounting Sleeve: Factory-installed, 0.052-inch- thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone calking.
- R. Damper Motors: Modulating action.
  - 1. Motor Sizes: Sized so driven load will not require motor to operate in service factor range above 1.0.
  - 2. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
  - 3. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
- S. Accessories:
  - 1. Auxiliary switches for signaling or position indication.
  - 2. Test and reset switches, remote mounted

## 2.11 COMBINATION FIRE AND SMOKE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Ruskin Company
  - 2. Inperial
  - 3. Pottorff; a division of PCI Industries, Inc.
  - 4. Or approved equal
- B. Similar to Ruskin FSD60 or approved equal.
- C. All dampers shall be provided with two (2) factory installed position indicator end switches to enable remote status of open or closed positions by the BMS. Those dampers designated in the documents as being controlled by the central fire alarm (FAS) system (or central fire command station) will be wired for both remote status (BMS) and remote open/closed operation (FAS).
- D. Damper length shall not exceed UL approved damper size. Provide intermediate supports and bearings for damper blades, as required.

- E. Dampers that are controlled from a central fire command station shall be provided with the following:
  - 1. A 212 deg F heat sensor with normally closed contacts (manual reset) to close and lock damper, if open.
  - 2. Dampers shall be factory equipped with a second normally close heat sensor correlating to the operator/actuator degradation temperature classification (250 deg F to 350 deg F depending on actuator used). The second sensor is wired through a manual override switch on the central fire command station.
- F. The damper manufacturer shall provide the damper actuators.
- G. Dampers shall have UL label and be provided with factory installed UL-rated sleeves.
- H. Type: Static and dynamic rated and labeled according to UL 555 and UL 555S.
- I. Closing rating in ducts up to 4-inch w.g. static pressure class and minimum 4000-fpm velocity.
- J. Fire Rating: 1-1/2 hours in accordance with UL555.
- K. Temperature rating: 350 deg F
- L. Frame: Multiple-blade type; fabricated with roll-formed, 0.034-inch-thick galvanized steel; with mitered and interlocking corners.
- M. Heat-Responsive Device: See above.
- N. Smoke Detector: Integral, factory wired for single-point connection.
- O. Blades: Roll-formed, opposed, horizontal, interlocking, minimum 14 gauge thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- thick, galvanized-steel blade connectors.
- P. Bearings: Self-Lubricating, stainless steel sleeve.
- Q. Leakage: Class I in accordance with UL555S.
- R. Rated pressure and velocity to exceed design airflow conditions.
- S. Mounting Sleeve: Factory-installed, UL rated, stainless sheet steel; length to suit wall or floor application with factory-furnished silicone caulking.
- T. Damper Motors: Modulating action.
  - 1. Motor Sizes: Sized so driven load will not require motor to operate in service factor range above 1.0.
  - 2. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
  - 3. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F.
- V. Accessories:
  - 1. Auxiliary switches for signaling or position indication.

2. Test and reset switches, remote mounted

#### 2.12 SMOKE/ISOLATION DAMPERS

- A. Smoke/isolation dampers, shall be provided at air handling units in discharge and return ductwork, shall comply with NFPA 90A and the above requirements for smoke dampers, except that dampers shall have UL rated electronic actuators, with a minimum of one actuator for each sixteen square feet of damper area.

#### 2.13 POSITIVE SEAL (BUBBLE-TIGHT) DAMPERS

- A. Provide positive seal dampers at the inlet of each Mixed-Flow Induced Dilution Fans to allow for fan removal or for maintenance.
- B. Dampers shall have zero leakage rating at 10" WG differential pressure as per ANSI/ASME N510/ Furnish dampers with two flanges for connection to flanges in the ductwork. Provide duct transitions in connecting ductwork as required to accommodate dampers.
- C. Materials of construction:
  1. Casing: 304 Stainless Steel
  2. Dish: 304 Stainless Steel
  3. Shaft: 304 Stainless Steel
  4. Linkages: 304 Stainless Steel
  5. Gasket: Silicone
  6. Bearings: Nylon
  7. Tandem Seal Casing: 304 Stainless Steel
  8. Tandem Seals: Nitroxile
- D. Provide industrial grade manual operated actuators which shall be factory mounted, Actuator assemblies shall be installed outside airstream, linked to damper by jackshaft penetrating through tandem seals for airtight seal. Actuator shall be capable of closing damper at pressures encountered in system.
- E. Size positive seal dampers as close as possible to duct size, but in no case is damper size to be less than duct size.

#### 2.14 REMOTE DAMPER OPERATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Bowden
  2. Pottorff; a division of PCI Industries, Inc.
  3. Young Regulator Company.
  4. Or approved equal
- B. For inaccessible ceilings, as well as for specialty areas such as lobbies, etc., furnish remote damper actuator operable through face of nearest diffuser. Damper controller and cable shall be concealed above the ceiling. Similar to Bowden remote cable control system with Young regulator damper controllers or approved equal. Balancing dampers shall include all necessary hardware to ensure compatibility with remote cable control system

- C. Description: Cable system designed for remote manual damper adjustment.
  - 1. Tubing: Brass.
  - 2. Cable: Stainless steel.
  - 3. Wall-Box Mounting: Recessed, 2 inches deep, coordinate with Commissioner.
  - 4. Wall-Box Cover-Plate Material: Stainless steel, coordinate with Commissioner.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts.
- B. All dampers are to be selected and installed with duct transitions so that the damper clear open area (including frames, stops, etc.) equals to or exceeds the connecting duct (inlet and outlet) clear free area (duct inside clear dimensions). The mechanical contractor shall furnish and install all required duct transition segments.
- C. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and stainless steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- D. Install control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- E. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
- F. Install steel volume dampers in steel ducts.
- G. Install aluminum volume dampers in aluminum ducts.
- H. Install aluminum dampers with stainless steel linkages in ductwork exposed to ambient air.
- I. Set dampers to fully open position before testing, adjusting, and balancing.
- J. Install test holes at fan inlets and outlets and elsewhere as indicated.
- K. Install fire, smoke and combination fire/smoke dampers according to UL listing.
- L. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
  - 1. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
  - 2. Adjacent to and close enough to fire, smoke and combination fire/smoke dampers, to reset or reinstall fusible links or service dampers.

3. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation.

M. Install access doors with swing against duct static pressure.

N. Access Door Sizes: minimum 14" x 14".

O. Label access doors according to indicate the purpose of access door.

### 3.3 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

**END OF SECTION 23 33 10**

**SECTION 23 33 11****HVAC SOUND ATTENUATION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. SECTION INCLUDES:

1. Reactive sound attenuator devices for air ducts. May be referred to as silencers or sound traps.
2. Factory built packless (no media) sound attenuators & Duct Silencers

- B. Furnish and install reactive air duct sound attenuators with no fiber media of the type (encapsulated or exposed) and sizes shown on the plans and/or listed in the schedule and in accordance with the requirements of the contract documents.

- C. All systems, equipment and materials shall be approved for use in the State of New York.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

## 1.5 DEFINITIONS

- A. Decibel (dB): A standard unit of measure for sound pressure level or level difference. The sound pressure level in decibels (dB) is  $dB = 20 \log_{10} (P/P_0)$  where P is the instantaneous sound pressure and  $P_0$  is a reference sound pressure of  $20 \times 10^{-6}$  Pascals.

## 1.6 REFERENCE STANDARDS

- A. Each duct silencer and all components shall be designed, manufactured, and tested in accordance with the following standards:
1. ADC
  2. AMCA
  3. ASHRAE
  4. ASTM A 90 / A 90M-01
  5. ASTM A 568 / A 568M
  6. ASTM Procedure C-423-66
  7. ASTM Procedure E90-70
  8. ASTM E477-06a
  9. NFPA
  10. SMACNA
  11. UL

## 1.7 PERFORMANCE REQUIREMENTS

- A. All sound attenuators and assemblies shall have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84, NFPA 255 or UL 723.
- B. Prefabricated sound attenuators shall be constructed of all incombustible materials and shall be the standard product of an approved manufacturer. The shell of the attenuator shall be at least 22-gauge galvanized steel sheet and shall be leak proof when subjected to a differential pressure of 6 inches w.g.
- C. Pressure drop shall be not greater than 0.34" w.c. Total system pressure before and after the sound attenuator shall be measured after the traps are installed. Should the pressure drop be greater than specified or scheduled, replace the attenuator and/or modify the entrance or discharge aerodynamic flow to achieve the specified results. Make all corrective measures at no additional expense to the City of New York.
- D. There shall be no acoustic fill within sound attenuator or within the air stream. No sound absorptive material of any kind is to be used in the attenuator. The sound attenuator shall attenuate air/gas transmitted noise solely by virtue of controlled impedance membranes and broadly tuned resonators
- E. All terminal units serving spaces designed for NC-35 or lower shall include a sound trap on the discharge.
- F. All main air handling units shall include sound attenuators on the main inlet and return or fresh air paths.
- G. The sound attenuators shall provide the following net insertion ratings under design airflow velocities as scheduled on the drawings. The ratings shall be determined by the duct to reverberant room test method.

- H. The maximum self-generated noise by the above sound trap types shall not exceed the following sound power levels at face velocities of 1,500 fpm.

Sound Attenuator Dynamic Insertion Loss (dB)				
		Unit Type		
Band #	Band Center Frequency (Hertz, cps)	A	B	C
1	63	8	8	11
2	125	7	11	15
3	250	15	19	22
4	500	17	23	27
5	1000	11	16	20
6	2000	11	14	18
7	4000	9	13	16
8	8000	8	11	15

Sound Power Level (dB re: 10 <sup>-12</sup> Watts)			
		Unit Type	
Band #	Band Center Frequency (Hertz, cps)	A	B, C & D
1	63	54	66
2	125	54	67
3	250	57	65
4	500	54	61
5	1000	54	58
6	2000	62	63
7	4000	65	69
8	8000	59	67

## 1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.9 SUBMITTALS

- A. Sound attenuator manufacturer to provide submittal drawings detailing all duct attenuator data specified in the mechanical drawing schedule. Duct silencers for all equipment are included under this Section. Shop drawings shall state the sound attenuator manufacturer, tag number, cfm, static pressure loss, sound reduction in all eight (8) octave bands, model number, dimensions, weight and hanging point loads. In addition, any special tools, materials or details shall be listed on these drawings.
- B. Submit laboratory acoustic and aerodynamic performance obtained according to ASTM E477-06a and so certified when submitted for approval. The laboratory must be currently NVLAP

accredited for the ASTM E477-06a test standard. A copy of the accreditation certificate must be included with the submittals. Data from non-NVLAP accredited test facilities will not be accepted. Shop drawings submitted without proper certifications will be rejected.

1. Submitted sound attenuator pressure drops shall not exceed those listed in the silencer schedule. Sound attenuator pressure drop measurements shall be made in accordance with the ASTM E-477-06a test standard. Tests shall be conducted and reported on the identical units for which acoustical data is presented.
2. The manufacturer shall supply certified dynamic insertion loss and self-noise power level data for each scheduled silencer. The data shall match the project's air distribution system requirement for forward or reverse flow, and total system airflow. All ASTM E-477-06a tests to obtain this data shall be conducted in the same facility and shall utilize the same silencer.
  - a. Silencer dynamic insertion loss shall not be less than that listed in the silencer schedule.
  - b. Silencer generated noise shall not be greater than that listed in the silencer schedule
3. The silencer manufacturer shall test the silencer(s) as indicated in the silencer schedule. The Commissioner shall be notified of the test date at least two weeks in advance and the test may be witnessed by the Commissioner. Test shall show compliance with the project criteria and is subject to Commissioner approval. Test facilities and test reports shall be open to inspection upon request from the Commissioner.
4. For specific silencers indicated on the silencer schedule, the silencer manufacturer shall provide Computational Fluid Dynamics (CFD) aerodynamic analysis. The analysis shall include the attached ductwork, a minimum of 5 equivalent duct diameters up and downstream of the silencer, as shown on the drawings, to determine silencer pressure drop, including system effects, at design airflow. The manufacturer must report and validate a converged solution domain of the CFD analysis to show the solution is independent of mesh refinement such that two models of different mesh refinement levels produce equivalent results, each with a maximum residual tolerance of 0.001. The minimum cell count shall be 200,000 and the validation model shall have a cell count at least 50% higher. The manufacturer must report the selection of CFD parameters, including mesh type, mesh size, boundary conditions, convergence criteria, and turbulence model. Each CFD analysis shall also include additional post-processed information including number of iterations, convergence status, and resulting y+ values.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Comply with NYS/IBC Section 717, "Installation of Air Conditioning and Ventilating Systems," and with NYS/IBC Section 717, "Installation of Warm Air Heating and Air Conditioning Systems."
- C. Silencer performance must have been substantiated by laboratory testing in a duct-to-reverberant room test facility according to ASTM E477-06a. The test facility must provide for airflow in both directions through the test silencer. The test set-up, procedure and facility shall eliminate all effects due to flanking, directivity, end reflection, standing waves and reverberation room absorption. The aero-acoustic laboratory must be currently NVLAP accredited for the ASTM E477-06a test standard.

- D. Provide a written test report by a third party organization showing silencer assemblies have flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84, NFPA 255 or UL 723.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Subject to the compliance with the requirements, provide reactive sound attenuators from one of the following:
1. Vibro-Acoustics Corporation
  2. Industrial Acoustics Company
  3. Kinetics Noise Control
  4. Or approved equal.

### 2.2 FACTORY BUILT PACKLESS (NO MEDIA) SOUND ATTENUATORS & DUCT SILENCERS

- A. Silencers shall be of the reactive (no media) type with size, configuration, capacity and acoustic performance as scheduled on the drawings. All silencers shall be factory fabricated and supplied by the same manufacturer.
- B. Silencer inlet and outlet connection dimensions must be equal to the duct sizes shown on the drawings. Duct transitions at silencers are not permitted unless shown on the contract drawings.
- C. Outer casings of reactive (no media) rectangular straight and elbow silencers shall be made of solid, lockformer quality 304 stainless steel in the following gauges and shall be leak proof when subjected to a differential pressure of 8 inches w.g.
1. OUTSIDE DIA. METAL GAUGE- (0-10"wg+)
    - a. 12-26 inches: 20 ga.
    - b. 27-60 inches: 18 ga.
    - c. 61-84 inches: 16 ga
- D. Internal casings shall be made of lockformer quality, 304 stainless steel.
- E. Sound attenuating units shall be leak proof and shall not fail structurally when subjected to a differential air pressure of 8" W.G. from inside to outside the casing.
- F. No sound absorptive material of any kind is to be used in the silencers. The silencers shall attenuate transmitted air noise solely by virtue of controlled impedance membranes and broadly tuned resonators.
- G. Units shall be constructed in accordance with the ASHRAE Guide recommendations for high-pressure ductwork. Seams shall be lockformed and mastic filled. Rectangular casing seams shall be in the corners of the silencer shell to provide maximum unit strength and rigidity. Interior partitions shall be fabricated from single piece sheets and shall have die-formed entrance and exit shapes so as to provide the maximum aerodynamic efficiency and minimum self-noise characteristics in the sound attenuator. Blunt noses or squared off partitions will not be accepted.
- H. The interior partitions shall be attached to the casing by means of an interlocking track assembly or spot welded to the outer silencer casing. Tracks shall be solid stainless steel and

shall be welded to the outer casing. Attachment of the interior partitions to the tracks shall be such that a minimum of 4 thicknesses of metal exists at this location.

- I. The track assembly shall stiffen the exterior casing, provide a reinforced attachment detail for the interior partitions, and shall maintain a uniform airspace width along the length of the silencer for consistent aerodynamic and acoustic performance.
- J. Sound attenuating units shall be leak proof and shall not fail structurally when subjected to a differential air pressure of 8" W.G. from inside to outside the casing.
- K. Acoustic Performance
  - 1. Silencer ratings shall be determined in a duct-to-reverberant room test facility, which provides for airflow in both directions through the test silencer in accordance with ASTM Specification E-477. The test facility shall be NVLAP accredited for the ASTM E477 test standard. Data from a non-accredited laboratory will not be acceptable. The test set-up and procedure shall be such that all effects due to end reflection, directivity, flanking transmission, standing waves and test chamber sound absorption are eliminated.
  - 2. Acoustic ratings shall include Dynamic Insertion Loss (DIL) and Self-Noise (SN) Power Levels both for forward flow (air and noise in same direction) and reverse flow (air and noise in opposite directions) with airflow of at least 1000 fpm entering face velocity. Data for rectangular silencers shall be presented for tests conducted using silencers no smaller than the following cross-sections:
    - a. Rectangular, in. - 24x24, 24x30, or 24x36
- L. Aerodynamic Performance -
  - 1. Airflow measurements shall be made in accordance with ASTM specification E 477 and applicable portions of ASME, AMCA, and ADC airflow test codes.
  - 2. Airflow data shall be reported on the identical units for which acoustic data is presented.
  - 3. Airtight construction where required shall be provided by use of a duct sealing compound on the job site, material and labor furnished by the contractor.
- M. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2007.
- N. Accessories:
  - 1. Access Doors: Where indicated on the silencer schedule, silencers shall be supplied with an access door(s) to permit fire damper service. The silencer manufacturer shall supply access doors as an integral part of the silencer.
  - 2. Shipping Protection: Silencers shall be shipped with factory-installed end caps to prevent contamination during shipping.
  - 3. Airflow Measuring Devices: Where indicated on the silencer schedule, silencers shall have airflow measuring devices factory installed as part of the silencer assembly.

## 2.3 SOURCE QUALITY CONTROL:

- 1. Test the silencer(s) according to ASTM E 477-06a. The Commissioner shall be notified of the test date at least two weeks in advance and the test may be witnessed by the Commissioner. Test shall show compliance with the project criteria and is subject to Commissioner approval.
- 2. Test facilities and test reports shall be open to inspection upon request from the Commissioner. Silencer performance must have been substantiated by laboratory testing

according to ASTM E-477-06a and so certified when submitted for approval. The aero-acoustic laboratory must be NVLAP accredited for the ASTM E-477-06a test standard. A copy of the accreditation certificate must be included with the submittals. Data from non-NVLAP accredited test facilities will not be accepted.

### **PART 3 - EXECUTION**

#### **3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

#### **3.2 INSTALLATION**

- A. Install silencer according to manufacturer's written installation instructions.

#### **3.3 FIELD QUALITY CONTROL**

- A. Tests and Inspections:
  - 1. Ensure duct silencers are installed with airflow arrows in direction of airflow.

**END OF SECTION 23 33 11**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 33 13****ACOUSTICAL DUCT LINING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Ductwork acoustical lining.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.5 REFERENCES**

- A. ANSI/ASTM C553 - Mineral Fiber Blanket and Felt Insulation.

- B. ANSI/ASTM C612 - Mineral Fiber Block and Board Thermal Insulation.
- C. ASTM C 1071 – Standard Specification for Thermal and Acoustical Insulation (Glass Fiber, Duct Lining Material).
- D. NFPA 90A
- E. NFPA 90B
- F. NAIMA AH 124
- G. ASTM E84 - Surface Burning Characteristics of Building Materials.
- H. NFPA 255 - Surface Burning Characteristics of Building Materials.
- I. UL 723 - Surface Burning Characteristics of Building Materials.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.7 SUBMITTALS

- A. Submit product data under provisions of the DDC General Conditions.
- B. Include product description, list of materials and thickness for each service, and locations.

#### 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Applicator: Company specializing in ductwork acoustic lining application with three years minimum experience.

### PART 2 - PRODUCTS

#### 2.1 ACCEPTABLE MANUFACTURERS

- A. Acoustical Duct Lining Materials manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Owens Corning Aeroflex
  - 2. Manville Linacoustic
  - 3. CertainTeed Ultralite 150
  - 4. Substitutions are not acceptable.
  - 5. Or approved equal.

#### 2.2 MATERIALS

- A. Acoustical Duct Lining density shall be 1-1/2 lb. per cubic foot, minimum thickness of 1", unless specified greater.
- B. Lining shall have a composite fire and smoke hazard rating (UL 723) not exceeding:

Flame Spread: 25  
Smoke Developed: 50

- C. Asbestos shall not be used in the manufacture of lining products.
- D. Polymer film lining shall be pre-formed polyvinyl fluoride film, 1.5 mil thick.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 PREPARATION

- A. Clean surfaces before applying adhesives.

#### 3.3 INSTALLATION

- A. This contractor shall make all necessary repairs to the lining where improperly applied, or damaged.
- B. Duct sizes shown on drawings shall be considered as clear inside dimensions.
- C. A perforated inner metal liner consisting aluminum (0.03 in thick) with 3/32" dia. holes on 3/16" or 1/4" centers or the equivalent aluminum shall be installed as specified herein. (Fastening for metal liners shall only be by welded stud. Where duct cross section exceeds 48" the top section shall be fastened with twice the amount of clips.)
- D. Refer to Details for additional requirements.
- E. The leading edge of acoustical duct liner (facing into the air flow) of each non-abutting section such as the first section facing into the fan, or the first section after a sound trap, or ducts having a velocity in excess of 3,500 FPM shall have a metal nosing.
- F. All portions of duct designated to receive acoustical duct liner shall be completely covered with acoustical duct liner. Transverse joints shall be neatly butted and there shall be no interruptions or gaps. The black coated surface of the acoustical duct liner shall face the air stream. The acoustical duct liner shall be adhered to the sheet metal with 100% coverage of adhesive and all exposed leading edges and all transverse joints coated with adhesive. Adhesive shall conform to Adhesive and Sealant Council Standards for Adhesives for duct liner; ASC-C-7001C-1972. The acoustical duct liner shall be additionally secured with mechanical fasteners (Mechanical fasteners shall conform to Mechanical Fastener Standard MF-1-1971, available from Sheet Metal and Air Conditioning Contractors National Association), except that gripnails or the equivalent shall not be allowed. Acoustical duct liner shall be cut to assure overlapped and compressed longitudinal corner joints. Fasteners shall start within 3" of the upstream transverse edges of the liner and 3" from the longitudinal joints and shall be spaced as recommended by SMACNA.
- G. The film lining shall be placed on the airstream face of the acoustical duct lining material.
- H. Provide a perforated metal inner duct liner (as specified herein) for full extent of acoustical lining with polymer film.

- I. Duct liner shall not be installed within 15 downstream of humidifiers.
- J. Acoustical duct liner shall be installed per manufacturers' recommendation.

### 3.4 SCHEDULE

- A. The following items shall be acoustically lined. Where distances of lining are indicated, the intent is that all ductwork in any direction be acoustically lined.
  - 1. Ductwork downstream of fan coil units and terminal units a minimum distance of 10 feet.
  - 2. Upstream of return fans and exhaust fans, a minimum distance of 15 feet.
  - 3. Upstream of outside air supply fans, a minimum of 15 feet.
  - 4. Downstream from exhaust fans a minimum of 10 feet if the discharge of the exhaust fan runs through occupied spaces.
  - 5. Where shown on drawings.
- B. The following items shall, in addition to being acoustically lined (as specified above), shall also be provided with a Polymer film inner lining and perforated metal inner liner. For distances of lining, see above.
  - 1. All supply air ductwork located downstream of air handling Equipment (i.e. fan coil units, etc.).
  - 2. Where shown on the drawings.
  - 3. Where called for elsewhere in these documents.
  - 4. Where the duct can be walked on, metal liners shall be used on bottom portions.
  - 5. Where the velocity in the duct exceeds 3500 FPM.

**END OF SECTION 23 33 13**

**SECTION 23 34 16****HVAC FANS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".
- F. Section 23 34 17 "Vane Axial Fans".
- G. Section 23 34 18 "Mixed Flow Induced Dilution Fan".
- H. Section 23 34 19 "Plenum Fans".
- I. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Section includes the following:
  - 1. Airfoil centrifugal fans.
  - 2. Backward-inclined centrifugal fans.
  - 3. Forward-curved centrifugal fans.
  - 4. Tubeaxial fans.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.5 PERFORMANCE REQUIREMENTS**

- A. Project Altitude: Base fan performance ratings on sea level.
- B. Operating Limits: Classify according to AMCA 99
- C. AMCA Compliance:
  1. Comply with AMCA performance requirements and bear the AMCA-Certified Ratings Seal.
  2. Operating Limits: Classify according to AMCA 99.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

**1.7 SUBMITTALS**

- A. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:
  1. Certified AMCA fan performance curves with system operating conditions indicated.
  2. Fan RPM shall be selected 10% above specified fan operating point.
  3. Certified AMCA fan sound-power ratings for the eight octave bands, decibels, and sones.
  4. Motor ratings and electrical characteristics, plus motor and electrical accessories.
  5. Material thickness and finishes, including color charts.
  6. Dampers, including housings, linkages, and operators.
  7. Provide dimensional drawings and product data on each fan.
  8. Provide manufacturer's certification that exhaust fans are licensed to bear Air Movement and Control Association (AMCA), Certified Rating Seal for sound and air performance
- B. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  1. Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
  2. Duct installation in congested spaces, indicating coordination with general construction,

building components, and other building services. Indicate proposed changes to duct layout.

- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
  - 2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
  - 3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.
  - 4. Conditions for Review
    - a. Submission for review must show air flow, static pressure, brake horsepower, KW input sound power ratings and full load efficiency complying with motor efficiency as specified under another section of this work.
    - b. Fans to be selected at or near efficiency peak (submit fan curves).
- D. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For centrifugal fans to include in emergency, operation, and maintenance manuals.

1.8 REFERENCE STANDARDS;

- A. AMCA 99, "Standards Handbook"
- B. ANSI/AMCA Standard 204-96, "Balance Quality and Vibration Levels for Fans"
- C. ANSI/AMCA Standard 210-99, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating"
- D. AMCA Publication 211-05, "Certified Ratings Program – Product Rating Manual for Fan Air Performance"
- E. AMCA Standard 300-96, "Reverberant Room Method for Sound Testing of Fans"
- F. AMCA Publication 311-05, "Certified Ratings Program – Product Rating Manual for Fan Sound Performance"
- G. AMBA - Method of Evaluating Load Ratings of Bearings ANSI-11 (r1999).

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Fan shall be listed by Underwriters Laboratories (UL 705) for US.
- C. For smoke control applications, fan shall be listed by Underwriters Laboratories (Power Ventilator for Smoke Control Systems) for US.
- D. Classification for spark resistant fan construction shall conform to AMCA 99.
- E. For restaurant applications, fans shall be listed by Underwriters Laboratories (UL 762) for USA. Fans shall conform to NFPA 96.
- F. Centrifugal fans to be non over-loading having a sharply rising pressure characteristic which will extend throughout the operating range and continue to rise well beyond the efficiency peak to insure quiet, stable operation under all conditions.
- G. Performance ratings: Conform to AMCA standard 211 and 311. Fans must be tested in accordance with ANSI/AMCA Standard 210-99 and AMCA Standard 300-96 in an AMCA accredited laboratory. Fans shall be certified to bear the AMCA seal for air performance and sound.
- H. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York Department of Buildings, and marked for intended use.
- I. Each fan shall be given an electronic vibration analysis in accordance with ANSI/AMCA Standard 204-96, while operating at the specified fan RPM. The vibration signatures shall be taken on each bearing in the horizontal, vertical and axial direction. The maximum allowable fan vibration shall be 0.15 in/sec peak velocity, filter-in as measured at the fan RPM. Report shall be provided at no charge to the customer upon request.
- J. ARI Compliance: Test and rate air devices in accordance with ARI Standards.
- K. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- L. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004, Section 6.4.4 - "HVAC System Construction and Insulation."
- M. ADC Seal: Provide devices bearing ADC Certified Rating Seal.
- N. UL Compliance: The complete device must be labeled and listed by UL and must be installed to meet their requirements.
- O. All devices must be tested and approved for safety in accordance with the latest N.E.C.

- P. Each fan shall be given a balancing analysis which is applied to wheels at the outside radius. The maximum allowable static and dynamic imbalance is 0.05 ounces (Balance grade of G6.3).
- Q. Wheels shall be statically and dynamically balanced in accordance with AMCA Standard 204-96 "Balance Quality and Vibration Levels for Fans."
- R. High pressure air handling units shall only be furnished with Class III air foil fan wheels.
- S. NEMA Compliance: Motors and electrical accessories shall comply with NEMA 1 and NEMA 4 if exposed to the elements.
- T. NFPA Compliance: Comply with the following NFPA Standards:
  - 1. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems," except as indicated otherwise.
  - 2. NFPA 96, "Standard for the Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors for Commercial Cooking Equipment," Chapter 3, "Duct System," for kitchen hood duct systems, except as indicated otherwise.

#### 1.10 SEISMIC DESIGN

- A. This project is located within a seismic zone requiring special provisions for the support and restraint of equipment, components and piping.
- B. Refer to section 23 05 48 "Vibration Isolation, Seismic and Wind Restraints for HVAC Components".

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering with labels clearly indicating manufacturer, material, products included, and location of installation.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.
- D. Protect materials and finishes during handling and installation to prevent damage. Follow all safety warnings posted by the manufacturer.
- E. Store materials in a dry area indoor, protected from damage, and in accordance with manufacturer's instructions. For long term storage follow manufacturer's Installation, Operations, and Maintenance Manual.

#### 1.12 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items

are specified in Division 7 Section "Roof Accessories."

**1.13 WARRANTY**

- A. Manufacturer's Warranty: Submit, for Commissioner's acceptance, manufacturer's standard warranty document executed by authorized company official.
  - 1. The warranty of this equipment is to be free from defects in material and workmanship for a period of five (5) years from date of Substantial Completion. Any units or parts which prove defective during the warranty period will be replaced at no expense to the City of New York.
  - 2. Motor Warranty is warranted by the motor manufacturer for a period of ten (10) years from Substantial Completion. Should motors furnished by us prove defective during this period, it will be replaced at no expense to the City of New York.

**PRODUCTS**

**1.14 MANUFACTURERS:**

- A. Subject to compliance with requirements, provide products by one of the following:
  - 1. Twin City
  - 2. Greenheck
  - 3. Bayley Fans, a division of Lau Industries, Inc.
  - 4. New York Blower Company
  - 5. Chicago Blower
  - 6. Howden Fan Co.
  - 7. Or approved equal

**1.15 FANS GENERAL:**

- A. It shall be understood that the requirements of this section are complementary to requirements delineated under other sections of this work.
- B. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure.
- C. Housings: Formed panels to make curved-scroll housings with shaped cutoff, with doors or panels to allow access to internal parts and components.
  - 1. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories.
  - 2. Spun inlet cone with flange.
  - 3. Minimum 1" discharge flange.
  - 4. The entire fan housing shall have continuously welded seams for leak proof operation.
  - 5. A performance cut-off shall be furnished to prevent the recirculation of air in the fan housing. Braced to prevent vibration or pulsation.
  - 6. Inlet to be fully streamlined.
- D. Fans shall be statically and dynamically balanced at the factory prior to shipment. Wheels shall be statically and dynamically balanced in accordance with AMCA Standard 204-96 "Balance Quality and Vibration Levels for Fans."

- E. Fans shall be balanced for inverter duty operation (Variable Frequency Drives). The fan will be balanced over the entire range of fan operation (30% to 100% of RPM). Filter-in measurements shall not exceed 5 mils in the horizontal and vertical planes. Filter-out measurements shall not exceed 7.5 mils in the horizontal, vertical and axial planes.
- F. Fans to be non-overloading having a sharply rising pressure characteristic which will extend throughout the operating range and continue to rise well beyond the efficiency peak to insure quiet, stable operation under all conditions. The horsepower characteristic shall be truly self-limiting and shall reach a peak in the normal selection area.
- G. Spark-Resistant Construction: AMCA 99.
- H. Inlet Screens: Required for all fans, constructed for easy removal, of heavy wire mesh.
- I. Drain Connections: Provide 1" drain connection at bottom of fan.
- J. Access Doors: Are required in all fan scrolls of the quick opening type, secured to the frame by hand grip bolts and provided with lift handles. Raised type access doors shall be provided on all insulated fans (inner surface to be flush with the scroll).
- K. Cleanout Door: Quick-opening, latch-type gasketed door allowing access to fan scroll, of same material as housing.
- L. Companion Flanges: Rolled flanges for duct connections of same material as housing.
- M. Discharge Dampers: Assembly with opposed blades constructed of two plates formed around and to shaft, channel frame, and sealed ball bearings; with blades linked outside of airstream to single control lever of same material as housing.
- N. Fans shall be provided with mechanical brake, coordinate with BMS.
- O. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.
- P. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.
- Q. Finish: Interior and exterior of fan to be factory coated
- R. Standard finish shall be a baked industrial grade finish conforming to the following ASTM Standards. Final coating thickness is 1.5 - 2.5 mils.

Property	Test Method	Value
Salt Spray	ASTM B117	1000+ hours
Humidity Resistance	ASTM D2247	1000+ hours
Impact Resistance	ASTM D2794	100 in. lbs.
Pencil Hardness	ASTM D3363	2H
Crosshatch Adhesion	ASTM D3359-B	100%
Max Service Temperature		230 deg F

- S. Vibration Isolation: Vibration isolators shall be provided as specified under another section of this work.
- T. In cases of fans where more than one speed is specified isolators shall be selected for the lowest speed.

- U. Motors: Motors shall meet or exceed the requirements specified herein and as specified in Section 23 05 13 "Motors for HVAC Equipment."
- V. The motor and fan base shall be welded or bolted to form a common base to prevent any uncommon physical motion of the fan and motor
- W. All fans that are field assembled, or are 75 HP or over, shall require the services of a factory engineer to balance and check bearings, pulleys, belts, etc. A report shall be filed attesting to the readiness of the fan to run and that the bearings are properly lubricated. He shall sign the lubrication tag which shall be turned over to the building maintenance personnel.
- X. Bearings: Heavy duties, self-aligning pillow block, grease lubricated, anti-friction ball or roller type bearings. Provide extended fittings to be mounted externally. Bearings shall be 100% tested for noise and vibration by the manufacturer. Bearings shall be 100% tested to insure the inner race diameter is within tolerance to prevent vibration.
  - 1. Ball-Bearing Rating Life: ABMA 9, LI0 at 120,000 hours at maximum operating speed.
  - 2. Roller-Bearing Rating Life: ABMA 11, LI0 at 120,000 hours at maximum operating speed.
  - 3. Bearings shall be fixed to the fan shaft using concentric mounting locking collars, which reduce vibration, increase service life and improve serviceability. Bearings that use set screws shall not be allowed.
  - 4. Extend lubrication lines to outside of casing and terminate with grease fittings.
- Y. Shafts: Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
  - 1. Turned, ground, and polished hot-rolled steel with keyway. Ship with protective coating of lubricating oil.
  - 2. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
  - 3. Fan shaft shall be ground and polished solid steel. (AISI 1018 steel through 2-inch diameter and AISI 1045 steel for greater than 2-inch diameter) with an anti-corrosive coating.
  - 4. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.

#### 1.16 AIRFOIL CENTRIFUGAL FANS

- A. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure.
- B. Airfoil Wheels: Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange; heavy backplate; hollow die-formed, airfoil-shaped blades continuously welded at tip flange and backplate cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws and special coating.
- C. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
  - 1. Service Factor Based on Fan Motor Size: 1.5
  - 2. For motors 3 HP and larger, there shall be at least two (2) belts; and drive capable of carrying the entire load with an additional 50% safety factor

3. Sheaves shall be adjustable ratio type; they shall be sized to give the required fan speed with motor sheave at about the middle of its range of adjustment.
  4. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
  5. Motor Pulleys: Adjustable pitch for use with motors through 15 HP; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
  6. Belts: Oil resistant, non-sparking, and non-static; matched sets for multiple belt drives.
  7. Belt Guards: Fabricate of steel to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
  8. Motor Mount: Adjustable for belt tensioning.
- D. Replacement of Sheaves: Provide additional adjustable or fixed sheaves at no extra expense, if required for balancing
- E. Characteristics:
1. Housing Material: Reinforced steel
  2. Special Housing Coating: Epoxy.
  3. Wheel Material: Steel.
  4. Special Wheel Coating: Epoxy

#### 1.17 BACKWARD-INCLINED CENTRIFUGAL FANS

- A. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure.
- B. Backward-Inclined Wheels:
1. Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange, backplate, backward-inclined blade welded to flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.
  2. Statically and dynamically balanced in accordance to AMCA Standard 204-05
  3. The wheel cone and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency
  4. Constructed of aluminum
- C. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.
1. Service Factor Based on Fan Motor Size: 1.5
  2. For motors 3 HP and larger, there shall be at least two (2) belts; and drive capable of carrying the entire load with an additional 50% safety factor
  3. Sheaves shall be adjustable ratio type; they shall be sized to give the required fan speed with motor sheave at about the middle of its range of adjustment.
  4. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
  5. Motor Pulleys: Adjustable pitch for use with motors through 15 HP; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
  6. Belts: Oil resistant, non-sparking, and non-static; matched sets for multiple belt drives.
  7. Belt Guards: Fabricate of steel to comply with OSHA and SMACNA requirements of

diamond-mesh wire screen welded to steel angle frame, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.

8. Motor Mount: Adjustable for belt tensioning.

D. Characteristics;

1. Housing Material: reinforced Steel
2. Special Housing Coating: Epoxy
3. Special wheel Coating: Epoxy
4. Vibration isolators: Restricted spring isolators having a static deflection of 1 inch

1.18 FORWARD-CURVED CENTRIFUGAL FANS

A. Description:

1. Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure.

- B. Forward-Curved Wheels: Black-enameled or galvanized steel construction with inlet flange, backplate, shallow blades with inlet and tip curved forward in direction of airflow, mechanically secured to flange and backplate; cast-steel hub swaged to backplate and fastened to shaft with set screws.

- C. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.

1. Service Factor Based on Fan Motor Size: 1.5
2. For motors 3 HP and larger, there shall be at least two (2) belts; and drive capable of carrying the entire load with an additional 50% safety factor
3. Sheaves shall be adjustable ratio type; they shall be sized to give the required fan speed with motor sheave at about the middle of its range of adjustment.
4. Fan Pulleys: Cast iron or cast steel with split, tapered bushing; dynamically balanced at factory.
5. Motor Pulleys: Adjustable pitch for use with motors through 15 HP; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
6. Belts: Oil resistant, non-sparking, and non-static; matched sets for multiple belt drives.
7. Belt Guards: Fabricate of steel to comply with OSHA and SMACNA requirements of diamond-mesh wire screen welded to steel angle frame, prime coated. Secure to fan or fan supports without short circuiting vibration isolation. Include provisions for adjustment of belt tension, lubrication, and use of tachometer with guard in place.
8. Motor Mount: Adjustable for belt tensioning.

D. Characteristics:

1. Housing Material: Reinforced steel
2. Special Housing Coating: Epoxy
3. Special Wheel Coating: Epoxy
4. Vibration Isolators: Restrained spring isolators having a static deflection of 1 inch

1.19 TUBEAXIAL FANS

- A. Description: Fan wheel and housing, factory-mounted motor with direct drive, an inlet cone

section, and accessories.

- B. Housings: Galvanized steel with flanged inlet and outlet connections.
- C. Wheel Assemblies: Cast or extruded aluminum with airfoil-shaped blades mounted on cast-iron wheel plate keyed to shaft with solid-steel key.
- D. Wheel Assemblies: Fiberglass-reinforced plastic cured under pressure with airfoil-shaped blades keyed to stainless-steel shaft.
- E. Wheel Assemblies: Cast aluminum, machined and fitted to shaft.
- F. Belt Drives:
  - 1. Factory mounted, with adjustable alignment and belt tensioning.
  - 2. Service Factor Based on Fan Motor Size: 1.5.
  - 3. Fan Shaft: Turned, ground, and polished steel designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.
  - 4. Fan Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
  - 5. Motor Pulleys: Adjustable pitch for use with motors through 5 hp; fixed pitch for use with larger motors. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
  - 6. Belts: Oil resistant, nonsparking, and nonstatic; matched sets for multiple belt drives.
  - 7. Belt Guards: Fabricate of steel for motors mounted on outside of fan cabinet.
  - 8. Motor Mount: Adjustable base.
  - 9. Shaft Bearings: Radial, self-aligning bearings.
    - a. Ball-Bearing Rating Life: ABMA 9, L10 of 120,000 hours.
    - b. Roller-Bearing Rating Life: ABMA 11, L10 of 120,000 hours.
    - c. Extend lubrication lines to outside of casing and terminate with grease fittings.
- G. Accessories:
  - 1. Companion Flanges: Rolled flanges of same material as housing.
  - 2. Inspection Door: Bolted door allowing limited access to internal parts of fan, of same material as housing.
  - 3. Propeller Access Section Door: Short duct section bolted to fan inlet and outlet allowing access to internal parts of fan for inspection and cleaning, of same material as housing.
  - 4. Swingout Construction: Assembly allowing entire fan section to swing out from duct for cleaning and servicing, of same material as housing.
  - 5. Mounting Clips: Clips welded to fan housing, of same material as housing.
  - 6. Horizontal Support: Pair of supports bolted to fan housing, of same material as housing.
  - 7. Vertical Support: Short duct section with welded brackets bolted to fan housing, of same material as housing.
  - 8. Inlet Screen: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
  - 9. Outlet Screen: Wire-mesh screen on fans not connected to ductwork, of same material as housing.
  - 10. Backdraft Dampers: Butterfly style, for bolting to the discharge of fan or outlet cone, of same material as housing.
  - 11. Shaft Seal: Elastomeric seal and Teflon wear plate, suitable for up to 300 deg F.
  - 12. Motor Cover: Cover with side vents to dissipate motor heat, of same material as housing.
  - 13. Inlet Vanes: Adjustable; with peripheral control linkage operated from outside of

airstream, bronze sleeve bearings on each end of vane support, and provision for manual or automatic operation of same material as housing.

14. Inlet Bell: Curved inlet for when fan is not attached to duct, of same material as housing.
15. Inlet Cone: Round-to-round transition of same material as housing.
16. Outlet Cone: Round-to-round transition, of same material as housing.
17. Stack Cap: Vertical discharge assembly with backdraft dampers, of same material as housing.
18. Direct-Driven Units: Encase motor in housing outside of airstream factory wired to disconnect switch located on outside of fan housing. Extend lubrication lines to outside of casing and terminate with grease fittings.

H. Factory Finishes:

1. Sheet Metal Parts: Prime coat before final assembly.
2. Exterior Surfaces: Baked-enamel finish coat after assembly.
3. Coatings: Epoxy.
  - a. Apply to finished housings.
  - b. Apply to fan wheels.

1.20 PLENUM FAN

- A. Plenum fans are specified under another section of this work.

1.21 LOW VIBRATION VANEAXIAL FANS

- A. Vane Axial fans are specified under another section of this work.

1.22 MIXED-FLOW FANS

- A. Mixed flow fans are specified under another section of this work.

1.23 FAN OUTLET BACKDRAFT DAMPERS

- A. Each individual supply, return and exhaust fan in the air-handling units' fan arrays shall be provided with an integral back flow prevention device (damper) that prohibits recirculation of air in the event a fan or multiple fans become disabled or is not operating.
- B. All fans shall be provided with a back flow prevention means that produces near zero static pressure drop and/or system effect when that fan is enabled.
- C. The system effects for the back flow prevention device(s) shall be included in the criteria for TSP determination for fan selection purposes, and shall be indicated as a separate line item SP loss in the submittals.
- D. Damper performance data that is per AMCA ducted inlet and discharge arrangements will not be accepted. Damper data must be for the specific purpose of preventing back flow in any disabled fan and that is close coupled to the entering face of the inlet of each fan.
- E. AHU Manufacturers that do not manufacture the fans being submitted must provide tested and certified performance data for fans as installed in the AHU unit including the backflow prevention damper system effects introduced by close coupled back flow prevention dampers at the fan inlet.

- F. Backdraft dampers are specified under another section of this work.
- G. Dampers shall be factory installed in the air-handling units.
- H. All dampers installed in air handling units or exposed to ambient conditions shall be constructed of aluminum with stainless steel linkages, fittings, etc.

**1.24 FAN MOTORS AND DRIVE.**

- A. Motors shall meet or exceed the requirements specified herein and as specified in Section 23 05 13 MOTORS FOR HVAC EQUIPMENT
- B. Motors shall meet or exceed EPACT (NEMA 1240 standards) efficiencies. Motors to be NEMA T-frame, 1800 or 3600 RPM, Open Drip Proof (ODP) or Totally Enclosed Fan Cooled (TEFC) with a 1.15 service factor.
- C. Each fan shall be provided with a premium efficiency electrical motor and motor controller as specified elsewhere. Coordinate motor and motor control requirements with fan manufacturer.
- D. To minimize obstruction to air flow and to allow motors to be replaced without realignment, all motors are to be "C" Face, flange mounted type with the flange recessed into a machined motor support plate.
- E. Motor frame sizes shall be selected to deliver nominal horsepower at a maximum air-over velocity of 500 FPM.
- F. For VFD applications, motors shall be designed and labeled for use with VFDs and suitable for use throughout speed range without overheating and shall be approved by VFD controller manufacturer.
- G. Motor shall be mounted on vibration isolators, out of the airstream.
- H. For motor cooling there shall be fresh air drawn into the motor compartment through an area free of discharge contaminants.
- I. Fan motors shall be accessible for maintenance
- J. Shaft length shall allow wheel adjustment for wall thickness up to 4 inches.
- K. Bearings shall have zerk fittings to allow for lubrication.
- L. Motors:
  - 1. The motor and fan base shall be welded or bolted to form a common base to prevent any uncommon physical motion of the fan and motor
  - 2. Motor shall be foot-mounted, totally enclosed fan cooled (TEFC), continuous duty, ball bearing type.
  - 3. Efficiency: Premium efficient motors, as defined in NEMA MG 1, and with applicable EPACT efficiency standards.
  - 4. Service Factor: 1.15.
  - 5. Insulation Type: Class F
  - 6. Cast Iron Construction
  - 7. Wiring connections shall be extended to an exterior conduit box located on the exterior of the fan housing.

8. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
9. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

**M. Variable Frequency Drives (VFD):**

1. The variable frequency drives shall control the fan motors.
2. The VFD shall be as specified under another section of this work.
3. There shall be a separate VFD drive system for each fan motor. Controlling multiple motors by one drive system will not be allowed.
4. The VFD shall be furnished and installed at the air handling unit factory by the AHU manufacturer. The variable speed controller shall be mounted in a NEMA 4 enclosure with all power and control wiring between the VFD and fan factory installed. Electrical lugs for incoming power wiring shall be provided.
5. The VFD shall be compatible with a BACnet BMS system.
6. The fan manufacturer shall supply a start-up engineer to identify and lock out critical speeds, and to verify correct operation.
7. Designed with critical vibration frequencies outside operating range of controller output.

**1.25 VIBRATION ISOLATION:**

- A. Double studded or pedestal mount true isolators
- B. No metal to metal contact
- C. Sized to match the weight of each fan
- D. Comply with requirements in section 23 05 48 "Vibration, Isolation, Seismic and Wind Restraints for HVAC Components".

**1.26 DISCONNECT SWITCHES:**

- A. NEMA Compliance: Motors and electrical accessories shall comply with NEMA 1 and NEMA 4 if exposed to the elements.
- B. Positive electrical shut-off
- C. Wired from fan motor to junction box installed within motor compartment.

**1.27 SOURCE QUALITY CONTROL**

- A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
- B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

**PART 2 - EXECUTION**

**2.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

## 2.2 INSTALLATION

- A. Install centrifugal fans level and plumb.
- B. Support floor-mounting units using restrained spring isolators having a static deflection of 1 inch. Vibration- and seismic-control devices are specified under another section of this work.
  - 1. Secure vibration and seismic controls to concrete bases using anchor bolts cast in concrete base.
- C. Install floor-mounting units on concrete bases. Concrete, reinforcement, and formwork requirements are specified under another section.
- D. Fan mounting on concrete bases shall be designed to withstand, without damage to equipment, the seismic force required by New York Department of Buildings. Concrete, reinforcement, and formwork requirements are specified under another section.
- E. Support suspended units from structure using threaded steel rods and spring hangers with vertical-limit stops having a static deflection of 1 inch. Vibration-control devices are specified in another section of this work.
- F. Install units with clearances for service and maintenance.

## 2.3 CONNECTIONS

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified under another section of this work
- B. Duct installation and connection requirements are specified in another section of this work.
- C. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Division 23 Section "Duct Accessories."
- D. Install ducts adjacent to fans to allow service and maintenance.
- E. Install line-sized piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain.
- F. Ground equipment according to Division 26 Section "Grounding and Bonding."
- G. Connect wiring according to Division 26 Section "Conductors and Cables."

## 2.4 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
  - 1. Verify that shipping, blocking, and bracing are removed.
  - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.

3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Adjust damper linkages for proper damper operation.
7. Verify lubrication for bearings and other moving parts.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
9. Refer to Section "Testing, Adjusting, and Balancing" for testing, adjusting, and balancing procedures.
10. Remove and replace malfunctioning units and retest as specified above.

- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

## 2.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and maintain centrifugal fans. Refer to the DDC General Conditions for instruction requirements.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

**END OF SECTION 23 34 16**

**SECTION 23 34 33****AIR CURTAINS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 23 "Valves for HVAC"
- D. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- E. Section 23 05 93 "Testing, Adjusting and Balancing".
- F. Section 23 09 00 "HVAC Instrumentation and Controls".
- G. Section 23 21 13 "HVAC Piping".

**1.2 SUMMARY**

- A. This Section includes air doors/curtains with hot-water heat.
- B. Air curtain shall be completely factory assembled. The unit shall consist of stainless steel casing, centrifugal fan, raised stainless steel inlet screen and grille, discharge nozzle and grille, motor filter and heating element.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED

Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

**1.6 SUBMITTALS**

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each unit.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer licensed in the State of New York.
  - 1. Engineering Calculations: Calculate requirements for selecting vibration isolators and seismic restraints.
  - 2. Include plans, elevations, sections, details, and attachments to other work.
  - 3. Wiring Diagrams: Power, signal, and control wiring.
- C. Coordination Drawings: Plans and details drawn to scale and coordinating penetrations of exterior walls.
- D. Samples for Initial Selection: For units with factory-applied color finishes.
- E. Operation and Maintenance Data: For air curtains to include in maintenance manuals.
- F. Warranties: Special warranties specified in this Section.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Product Options: Drawings indicate size, profiles, and dimensional requirements of air curtains and are based on the specific product indicated.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York Department of Buildings, and marked for intended use.
- D. Comply with AMCA 220, "Test Methods for Air Curtain Units," for airflow, outlet velocity, and power consumption.
- E. Comply with ARI 410, "Forced-Circulation Air-Cooling and Air-Heating Coils," for components, construction, and rating.
  - 1. Certify coils according to ARI 410.

- F. Comply with NSF 37, "Air Curtains for Entranceways in Food and Food Service Establishments."

## 1.8 COORDINATION

- A. Coordinate layout and installation of air curtains and suspension system components with other construction, including light fixtures, fire-suppression-system components, and partition assemblies.
- B. Coordinate installation of wall penetrations and louvers. These items are specified in Section 08 91 19 Section "Fixed Louvers".

## 1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of air curtains that fail in materials or workmanship within specified warranty period.

- 1. Warranty Period (Water Heating Units): Five years from Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Powered Aire, Inc.
  - 2. Berner International Corp.
  - 3. Loren Cook Company.
  - 4. Marley Engineered Products.
  - 5. Mars Air Products; Dynaforce Division.
  - 6. Mars Air Products; Mars Air Door Division.
  - 7. Miniveil Air Systems.
  - 8. TMI Inc.
  - 9. Or approved equal

### 2.2 AIR DOORS/CURTAINS

- A. Housing Materials: Heavy-gage, aluminum construction.
  - 1. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
  - 2. Mounting Brackets: Steel.
- B. Intake Louvers: Integral part of the housing, mechanically field adjustable and capable of reducing air-outlet velocity by 60 percent with louver in totally closed position.
- C. Discharge Nozzle: Integral part of the housing, containing adjustable air-directional vanes with 40 -degree sweep front to back.

2.3 FANS

- A. Fans: Galvanized steel, Centrifugal, statically and dynamically balanced.
- B. Wheels and Housings: Dynamically balanced curved double inlet double width galvanized blower wheels with brazed hubs and matched blower housings.
- C. Drives: Direct Drive. Belt Drive Not Acceptable

2.4 MOTORS

- A. Motor Type: Multispeed, resiliently mounted, continuous duty, totally enclosed, air over, with integral thermal-overload protection.
- B. Bearings: Permanently sealed, lifetime, pre-lubricated, ball bearings.
- C. Disconnect: Internal power cord with plug and receptacle.
- D. Bearings: Heavy duty type, shielded ball bearings of equal size

2.5 WATER COILS

- A. Description: Continuous-circuit coil.
- B. Piping Connections: Threaded on same end.
- C. Tubes: Copper, complying with ASTM B 75 (ASTM B 75M).
  - 1. Tube Diameter: 0.625 inch.
- D. Fins: Copper with fin spacing 0.067 inch.
- E. Fin and Tube Joint: Mechanical bond.
- F. Headers: Seamless copper tube with brazed joints, prime coated
- G. Frames: Galvanized-steel channel frame, 0.0625 inch.
- H. Ratings: According to ASHRAE 33.
  - 1. Working-Pressure Ratings: 200 psig, 325 deg F.
- I. Source Quality Control: Test to 300 psig and to 200 psig underwater.

2.6 FILTERS

- A. Disposable Panel Filters: Factory-fabricated, viscous-coated, flat-panel-type, disposable air filters with glass-fiber media sprayed with nonflammable adhesive in galvanized-steel frame.
- B. Mounting Frames: Welded, galvanized steel with gaskets and fasteners and suitable for bolting together into built-up filter banks.

## 2.7 ACCESSORIES

- A. Field-Installed Thermostat: Line voltage, factory installed and wired to the junction box on air curtain.
- B. Automatic Door Switch: Plunger type installed in door area to activate air curtain when door opens and to deactivate air curtain when door closes.
- C. Start-Stop, Push-Button Override Switch: Manually activates and deactivates air curtain.
- D. Motor-Control Panel: Complete with motor starter, 115-V ac transformer with primary and secondary fuses, terminal strip, and NEMA 250, Type 12 enclosure.
- E. Mounting Brackets: Adjustable mounting brackets for drum-type roll-up doors.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas and conditions where air curtains will be installed for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Examine roughing-in for hot-water piping systems to verify actual locations of piping connections before air-curtain installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install air curtains with clearance for equipment service and maintenance.

### 3.4 CONNECTIONS

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to air curtain to allow service and maintenance.
- C. Ground equipment according to Section "Grounding and Bonding."
- D. Connect wiring according to Section "Conductors and Cables."

### 3.5 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
  - 1. After installing air curtains completely, perform visual and mechanical check of individual components.
  - 2. After electrical circuitry has been energized, start unit to confirm motor rotation and unit operation. Certify compliance with test parameters.

3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- B. Repair or replace malfunctioning units and retest as specified above.

### 3.6 ADJUSTING

- A. Adjust belt tension.
- B. Adjust motor and fan speed to achieve specified airflow.
- C. Adjust discharge louver and dampers to regulate airflow.
- D. Adjust air-directional vanes.

### 3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and service air curtains.

**END OF SECTION 23 34 33**

**SECTION 23 36 00****AIR TERMINAL UNITS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 09 00 "HVAC Instrumentation and Controls".

**1.2 SUMMARY**

- A. This section includes the air terminal units.
  - 1. Single duct variable air volume units.
  - 2. Or approved equal

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.5 REFERENCE STANDARDS**

- A. All air distribution equipment shall be designed, manufactured and tested in accordance with the latest applicable industry standards including the following:
  - 1. SMACNA
  - 2. ASHRAE - Test and rate air devices in accordance with ASHRAE Standards.
  - 3. ARI – Test and rate air devices in accordance with ARI Standards.
  - 4. ADC Seal – Provide devices bearing ADC Certified Rating Seal.
  - 5. AMCA Compliance: Test and rate air devices in accordance with AMCA Standards and shall bear AMCA Certified Seal.
  - 6. NFPA Compliance: Install air devices in accordance with NFPA90A “Standard for the Installation of Air Conditioning and Ventilating Systems.”
- B. All equipment and material to be furnished and installed as part of this work shall be UL or ETL listed, in accordance with the requirements of the New York Department of Buildings and suitable for its intended use.

**1.6 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Manufacturer’s Qualifications: Firms regularly engaged in manufacture of air distribution devices, air outlets and inlets of types and capacities required, whose products have been in satisfactory use in similar service for not less than 3 years.
- C. Codes and Standards:
  - 1. ARI Compliance: Test and rate air devices in accordance with ARI Standards.
  - 2. ASHRAE Compliance: Test and rate air devices in accordance with ASHRAE Standards.
  - 3. ADC Seal: Provide devices bearing ADC Certified Rating Seal.
  - 4. AMCA Compliance: Test and rate air devices in accordance with AMCA Standards and shall bear AMCA Certified Rating Seal.
  - 5. NFPA Compliance: Install air devices in accordance with NFPA90A “Standard for the Installation of Air Conditioning and Ventilating Systems.”
  - 6. UL Compliance: The complete device must be labeled and listed by UL and must be installed to meet their requirements.
  - 7. All devices must be tested and approved for safety in accordance with the latest N.E.C.

**1.7 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Hangers and supports and seismic restraints shall withstand the effects of gravity and seismic loads and stresses within limits and under conditions described under section 230548 of this work.

- B. Refer to Section 23 33 11 – “HVAC Sound Attenuation” for additional casing lining and duct acoustical lining requirements.

#### 1.08 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.9 SUBMITTALS

- A. For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.
  - 1. Air terminal units.
- B. For each type of terminal unit, submit manufacturer’s technical product data including, but not limited to the following:
  - 1. Manufacturer’s technical product data, including performance data for each size and type of air distribution device furnished; schedule showing drawing designation, room location, number furnished, model number, size and accessories furnished and installation and start-up instructions.
  - 2. Data sheet for each type of air outlet and inlet, and accessory furnished, indicating construction, finish and mounting details.
  - 3. Performance data for each type of air outlet and inlet furnished, including aspiration ability, temperature and velocity traverses, throw and drop, and noise criteria ratings. Indicate selections on data.
- C. Shop Drawings: For air terminal units, include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Wiring Diagrams: For power, signal, and control wiring. Wiring Diagrams: Submit ladder-type wiring diagrams for electric power and control components, clearly indicating required field electrical connections.
  - 3. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.
- D. Engineering Services Submittal:
  - 1. Materials, fabrication, assembly, and spacing of hangers and supports.
  - 2. Design Calculations: Calculations, including analysis data signed and sealed by the qualified professional engineer, licensed in the State of New York responsible for their preparation for selecting hangers and supports and seismic restraints, to be submitted to Commissioner for review and approval.
- E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
  - 1. Ceiling suspension assembly members.
  - 2. Size and location of initial access modules for acoustic tile.
  - 3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

- F. Field quality-control reports.

#### 1.10 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Deliver air distribution devices wrapped in factory-fabricated fiber-board type containers. Identify on outside of container type of device and location to be installed. Avoid crushing or bending and prevent dirt and debris from entering and settling in devices.
- B. Store air outlets and inlets in original cartons and protect from weather and construction work traffic. Where possible, store indoors, when necessary to store outdoors, store above grade and enclose with waterproof wrapping.

### PART 2 - PRODUCTS

#### 2.1 SINGLE DUCT VARIABLE AIR VOLUME UNITS (ELECTRONIC ACTUATOR)

##### A. MANUFACTURERS:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Titus
  - b. Siemens ZCU
  - c. Nailor
  - d. HVAC Manufacturing
  - e. Anemostat
  - f. Or approved equal
- B. Provide single duct variable volume terminal units in locations shown on the plans. Capacities and performance shall be as indicated on the schedule and are based upon Nailor Industries type 3000 or equal as approved. All units shall be capable of shutoff features without additional control components or piping.
- C. Sizes, capacities, and performance are based upon units as manufactured by Nailor Industries. Units as manufactured by other manufacturers shall be considered as equal, if they meet performance specifications. Any substituted product shall, in all aspects, conform to the engineered sound and pressure drops specified.
- D. The units shall be pressure independent and shall reset CFM air volume within +/- 5% of required air flow, as determined by the space thermostat, regardless of changes in system air pressure. Devices utilizing CFM limiters will not be acceptable. The terminal air valve shall normally open on loss of electrical power. The minimum setting shall be 20% of peak flow.
- E. The internal resistance of the terminal shall not exceed 0.4 inch w.g. for all sizes when handling maximum air volume shown on schedules.
- F. A Diamond-Flow (basis of design) sensor or approved equal shall be incorporated within the terminal. Differential pressure taps (separate from the control pressure taps) shall be provided for air flow measurement with a 0-1 inch gauge. Each terminal shall have a flow chart attached.
- G. The units shall be designed, installed and field adjusted, if necessary, to maintain controlled pressure independent air flow.

- H. Features to accommodate field calibration and readjustment of air volume settings shall include gauge taps for balancing with a standard pressure gauge and adjustable flow settings at the controller.
- I. Unit casing shall be 22 ga. Galvanized steel with round or flat oval inlets meeting SMACNA or ASHRAE standards. Outlets shall be rectangular with slip and drive connections. Valve assemblies of 16 ga. Steel are to have opposed blade dampers to reduce air turbulence and fitted with special seals for tight closure and minimized sound generation. In the fully closed position, air leakage past the closed damper shall not exceed 3% of the nominal catalog rating at 3" inlet static pressure, as rated by the Air Diffusion Council test procedure.
- J. All units are lined with 3/4", 1-1/2 lb. density fiberglass insulation. Edges are sealed against air flow erosion. Materials are to be in accordance with NFPA - 90A and 90B and UL 181 standards. All insulation/sound absorbing material shall be fully covered by a protective polymer film (3 mil) to prevent any contact between the airstream and the insulation and be protected by means of 24 gauge galvanized perforated steel panels to retain the insulation.
- K. The acoustical performance of the variable volume unit shall be tested in accordance with ADC Test Code 1062R4 standards, in an ADC, or independent approved laboratory. The manufacturer shall submit guaranteed sound power levels by octave bands. The sound power level shall be based on 10-13 watts. The octave band analysis shall be shown for .75", 1-1/2" and 3" S.P. differential across the terminal unit. Neither the manufacturer nor the specific unit selection will be approved until such ratings have been submitted.
- L. The sound power level data submitted shall substantiate that the equipment types and sizes operating, as in an installed condition per plans and specifications, shall conform with data scheduled.
- M. Prior to the approval of variable air volume boxes, the manufacturer shall demonstrate to the Commissioner, the operation of a typical unit. This demonstration shall be conducted over the full operational range. If the unit so demonstrated is acceptable, the manufacturer shall make and submit an octave band analysis of this unit over the full operational range in an acoustical laboratory reverberant chamber. All similar production units shall have acoustical characteristics within plus or minus 2 db of the unit demonstrated, when operated under the same design conditions in the same test facility.
- N. The manufacturer shall submit the following information determined in a reverberant chamber subsequent to the demonstration of the unit in the typical space for both discharge and radiated sound:
  - 1. Sound power data by octave bands.
  - 2. A description of the technique and apparatus used to determine sound power.
  - 3. The test chamber room constants by octave bands.
  - 4. The technique and apparatus used to determine the room constant.
  - 5. Complete operating conditions at the time of testing, including room temperature, air temperature, static pressures, etc.
- O. Furnish and ship the DDC controller and actuator to the VAV terminal unit manufacturer for installation at the factory. The Contractor shall supply written instructions and drawings containing sufficient information to enable the VAV unit manufacturer to undertake the installation satisfactorily.
- P. Furnish and ship all electronic room type thermostat (one stat per VAV terminal box) with locked cover.

- Q. Terminal box manufacturer shall provide for each unit proportional control electric actuator and electronic room type thermostat (one stat per VAV terminal) with locked cover. Actuators shall be factory mounted and linked. The controls shall have capability of field adjustment of maximum and minimum cfm quantities. There shall be separate adjustments for maximum and minimum cfm. Each unit shall include a warm-up sensor factory set at 75°F (adjustable setting from 70°F to 85°F) to provide morning warm-up features. Include the expense of mounting thermostats and wiring between terminals and thermostats.
- R. The electronic room thermostat and actuator (one (1) each per box) shall control the VAV as follows:
- S. Room thermostat on a call for less cooling shall modulate the air flow from 100% cfm to 25% cfm. On a call for cooling, reverse sequence shall occur.
- T. The VAV terminal box manufacturer shall provide a 24 VAC transformer, flow sensor, electric heat SCR controller, and controls enclosure. The VAV box manufacturer shall install and connect all controls in the factory.
- U. Box manufacturer shall provide field calibration and check-out of all control components and shall furnish wiring diagrams and provide one years free service on the box and control components.
- V. Where indicated provide hot water reheat coils of capacities on the terminal unit schedule. Heating coils shall be furnished as part of the terminal unit.
- W. Box manufacturer shall provide access door upstream of reheat coil for ease of cleaning.
- X. Terminal Unit Hot Water Heating Coils:
1. Hot water heater coils shall be integral to the unit, not an add on.
  2. The heating coils shall be constructed and installed in accordance with the requirements of the New York City Department of Buildings and shall be ETL listed as component of Box
  3. The heating coils shall be fabricated from round seamless copper tubes rolled into headers to form a permanent pressure tight joint. Coils are to be self-venting type. A vent connection is to be provided in the supply header and a drain connection in the return header. Coil Finned tube shall be fabricated to permit expansion without transmitting stresses to casing. Provide even distribution of water to each tube.
  4. Headers: constructed of close-grained gray cast iron, heavy wall copper, having pipe threads for supply and return connections.
  5. Tubes: seamless deoxidized copper, 5/8" O.D. and 0.020" minimum wall thickness.
  6. Fittings: return bends and expansion bends to be fabricated from 5/8" O.D. or 1" O.D. seamless deoxidized copper tubing. Wall thickness, after forming, must be equal to or greater than the tube wall thickness.
  7. Fins: aluminum or copper plate type or helically wound on the tubes. The plate type fins shall be continuous across entire coil width. Provide efficient bond between fin and tube, making each fin perform as an integral part of the tube.
  8. The coils are to be designed, tested and guaranteed for operation with steam or water pressure and temperature as per system pressures for valves and fittings.
  9. Coil Performance: all data pertaining to coil performance are shown on drawings. Pipe all coils counterflow. All water coils to have not more than 6 feet/second water velocity and not more than 10 fins per inch.
- Y. Heating coils shall be provided with automatic control valves and shall be designed for operation with the DDC controller and control system as specified in the BMS section.

- Z. Shop Drawings shall be submitted for review as specified. These Shop Drawings shall indicate specifically the exact construction, materials, etc., of the heating coils to be furnished under these Specifications.

### **PART 3 - EXECUTION**

#### **3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

#### **3.2 PREPARATION**

- A. Clean sheet metal.

#### **3.3 INSPECTION**

- A. Examine areas and conditions under which air distribution devices are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

#### **3.4 INSTALLATION**

- A. See Specification section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Restraints for HVAC Components"
- B. General: Install air devices in accordance with manufacturer's written instructions and in accordance with recognized industry practices to insure that products serve intended function.
- C. Coordinate with other work, including ductwork and duct accessories, as necessary to interface installation of air devices.

**END OF SECTION 23 36 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 23 37 13**

### **DIFFUSERS, REGISTERS AND GRILLES**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 "Common Requirements for HVAC Work".
- C. Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- D. Section 23 05 93 "Testing, Adjusting and Balancing".
- E. Section 23 31 13 "Metal Ducts".
- F. This section is a part of each Division 23 00 00 section.

##### **1.2 SUMMARY**

- A. This section includes the following:
  - 1. Square panel diffusers.
  - 2. Linear slot diffusers
  - 3. Radial Air Pattern Diffuser
  - 4. Panel face diffuser
  - 5. Grilles and Registers

##### **1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.3 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.4 REFERENCE STANDARDS

- A. All air distribution equipment shall be designed, manufactured and tested in accordance with the latest applicable industry standards including the following:
  - 1. SMACNA
  - 2. ASHRAE - Test and rate air devices in accordance with ASHRAE Standard 70-2006.
  - 3. ARI – Test and rate air devices in accordance with ARI Standards.
  - 4. ADC Seal – Provide devices bearing ADC Certified Rating Seal.
  - 5. AMCA Compliance: Test and rate air devices in accordance with AMCA Standards and shall bear AMCA Certified Seal.
  - 6. NFPA Compliance: Install air devices in accordance with NFPA90A "Standard for the Installation of Air Conditioning and Ventilating Systems."
- B. All equipment and material to be furnished and installed as part of this work shall be UL or ETL listed, in accordance with the requirements of the New York Department of Buildings and suitable or its intended use.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

- A. Product Data: For each type of product indicated, include the following:
  - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
  - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. Manufacturer shall submit engineering data in a manner to facilitate convenient review of the following factors:
  - 1. Throw, terminal velocity, noise criteria (NC), sound power, static pressure and total pressure of each type and size of air outlet.
  - 2. Supply air units shall distribute the specified quantity of air evenly throughout the occupied zone uniformly, draftlessly and noiselessly. Sound levels shall not exceed ratings as required in the "Acoustical Treatment" section of these specifications.
- C. The manufacturer shall provide published performance data for the diffusers, registers and grilles. They shall be tested in accordance with ANSI/ASHRAE Standard 70-2006.
- D. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.
- E. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

- F. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
  - 1. Ceiling suspension assembly members.
  - 2. Method of attaching hangers to building structure.
  - 3. Size and location of initial access modules for acoustical tile.
  - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
  - 5. Duct access panels.
- G. Source quality-control reports.

#### 1.7 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Deliver air distribution devices wrapped in factory-fabricated fiber-board type containers. Identify on outside of container type of device and location to be installed. Avoid crushing or bending and prevent dirt and debris from entering and settling in devices.
- B. Store air outlets and inlets in original cartons and protect from weather and construction work traffic. Where possible, store indoors, when necessary to store outdoors, store above grade and enclose with waterproof wrapping.

### PART 2 - PRODUCTS

#### 2.1 DIFFUSERS, REGISTERS AND GRILLES - GENERAL

- A. Contractor shall furnish and install where shown on the drawings all air devices, diffusers, grilles and registers of the sizes, types and capacities indicated and as required for proper distribution of conditioned air within the conditioned spaces and for return of conditioned air from the conditioned spaces to the various air conditioning systems. Exhaust grilles and registers shall also be provided where indicated on the drawings and as required for the proper flow of exhaust air.
- B. Devices shall be aluminum or steel, as specified by the Commissioner and shall be factory finished with baked enamel finish or extruded aluminum finish of color selected by Commissioner.
- C. Air inlets and outlets shall be tested in accordance with ASHRAE 70.
- D. Throw, horizontal distance from the diffuser to the point where the theoretical centerline velocity is 50 feet per minute, shall not exceed the horizontal distance between the diffuser and the nearest wall, or half the horizontal distance between ceiling diffusers.
- E. Equipment manufacturer shall submit engineering data in a manner to facilitate convenient review of the following factors:
- F. Supply air units shall distribute the specified quantity of air evenly throughout the occupied zone uniformly, draftlessly and noiselessly. Sound levels shall not exceed ratings as required in the "Acoustical Treatment" section of these specifications.
- G. For devices installed in plaster construction, supply plaster frames as required for setting. All design and margin construction shall be coordinated with architectural requirements. Plaster frames where required shall be constructed of same material and finish as air terminal.

- H. The air outlet manufacturer shall review architectural plans and shall be responsible for furnishing all air outlets with mounting frames and margins that are fully compatible with ceiling construction.
- I. All ceiling diffusers shall be furnished and installed with an equalizing deflector and volume damper. If diffuser is to be used for return air, omit equalizing deflector. Supply diffusers shall be designed to protect ceilings from streaking and smudging. Blank-off or sectorizing baffles shall be furnished as indicated.
- J. For VAV systems, devices shall be specifically designed for variable-air-volume flows.
- K. Coordinate duct connections with coordination drawings.

## 2.2 MANUFACTURERS:

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Titus
  - 2. Anemostat
  - 3. Price
  - 4. Or approved equal

## 2.3 DIFFUSERS - GENERAL

- A. Diffusers shall be constructed with quick positioning pattern control permitting 180-degree air pattern adjustment.
- B. Diffusers shall have dampers which operate separate from pattern control. Inner pattern control and brackets shall be black coated.
- C. Slot opening shall be as shown on plans.
- D. Throw terminal velocity, noise criteria (NC), sound power, static pressure and total pressure of each type and size of air outlet.

## 2.4 SQUARE PANEL DIFFUSER

- A. Architectural square panel ceiling diffusers shall be provided either as steel or aluminum diffusers of the same design, of the sizes and mounting types shown on the plans and outlet schedule. The steel diffuser shall have a 22-gauge steel face panel that captures a secondary 22-gauge panel. The aluminum diffuser shall have a heavy gauge aluminum face panel that captures a secondary heavy gauge aluminum panel.
- B. The face panel is removable by means of four hanger brackets. The exposed surface of the face panel shall be smooth, flat, and free of visible fasteners.
- C. The airflow discharge pattern shall be field adjustable from horizontal to vertical by repositioning the plaque assembly using the adjustment screws. The plaque assembly shall be constructed as a single inner assembly and must be easily removable using a spring lock mechanism.
- D. The back of the face panel shall have an aerodynamically shaped, rolled edge to ensure a tight horizontal discharge pattern.
- E. A single metal thickness on the edges of the face panel will not be accepted. Ceiling diffusers

with a 24 x 24-inch full face shall have no less than an 18 x 18-inch face panel size. Ceiling diffusers with a 12 x 12-inch full face shall have no less than a 9 x 9-inch face panel size.

- F. The back pan shall be one-piece precision die-stamped and shall include an integrally drawn inlet (welded-in inlets and corner joints are not acceptable). The diffuser back pan shall be constructed of 22-gauge steel (OMNI) or aluminum (OMNI-AA). The diffuser neck shall have a minimum of 1<sup>0</sup>-inch depth available for duct connection.
- G. The finish shall be #26 white. The finish shall be an anodic acrylic paint, baked at 315 deg F for 30 minutes. The pencil hardness must be HB to H.
- H. The paint must pass a 100-hour ASTM B117 Corrosive Environments Salt Spray Test without creepage, blistering or deterioration of film. The paint must pass a 250-hour ASTM D870 Water Immersion Test. The paint must also pass the ASTM D2794 Reverse Impact Cracking Test with a 50-inch pound force applied.
- I. Damper shall be constructed of heavy gauge steel and shall have radially opposed blades. Damper must be operable from the face of the diffuser. Directional Blow clips shall be available to restrict the discharge air in certain directions.
- J. Molded insulation blanket shall be provided for each supply diffuser to prevent condensation. The insulation will be R-6, foil-backed with vapor barrier and provide an additional 1-inch gap around the neck to install insulated duct.
- K. Accessories:
  - 1. Equalizing grid.
  - 2. Safety chain.
  - 3. Sectorizing baffles.
- L. The manufacturer shall provide published performance data for the square panel diffuser. The diffuser shall be tested in accordance with ANSI/ASHRAE Standard 70-1991.

## 2.5 RECTANGULAR AND SQUARE CEILING

- A. Furnish and install Adjustable Stamped Architectural Square or rectangular ceiling diffusers. The diffuser shall be manufactured from corrosion resistant steel and incorporate four die-formed concentric cones. Diffuser shall have an adjustable sliding type inner cone assembly that is securely retained by a spring-loaded friction arrangement. The inner core assembly is to be removable using a spring clip arrangement. The diffuser shall have a removable plug for screwdriver adjustment of damper without removing the core.
  - 1. Face Size: Refer to drawings.
  - 2. Mounting: Refer to drawings.
  - 3. Pattern: Adjustable.
  - 4. Dampers: Radial opposed blade.
  - 5. Accessories:
  - 6. Equalizing grid.
  - 7. Safety chain.
  - 8. Sectorizing baffles.
  - 9. Operating rod extension.
  - 10. External Foil Back Insulation
- B. Subject to compliance with requirements, product shall be equivalent to:

1. Titus OMNI (Basis-of-Design)
2. Price (Equivalent product)
3. Anemostat (Equivalent product)

## 2.6 LINEAR SLOT DIFFUSER

- A. Furnish and install Linear Slot Diffusers of the sizes and capacities as indicated in the contract documents. The slot diffusers shall be TITUS Model ML (supply) (Basis-of-Design), or an equivalent product by an approved equal manufacturer listed above. with slot spaces of the sizes shown on the plans and schedules.
- B. The maximum length of a single section shall be 72" long. All sizes longer than 72" will be provided in continuous multiple sections. Alignment strips are to be provided for joining continuous diffuser sections.
- C. The manufacturer shall provide all alignment components. The return models shall be constructed the same as the supply diffusers without the pattern controllers.
- D. The linear shall be supplied in 1 – 8 slots wide as specified. Pattern control deflectors shall have an aerodynamic "ice tong" shape that can be adjusted to regulate the volume and direction of the airflow from the face of the diffuser. Deflector shall be capable of 180 ° pattern adjustment. The maximum length of the deflectors shall be 24". Longer sizes shall be provided in multiple sections. The pattern deflector finish shall be black.
- E. Optional diffuser curving to a 6-foot minimum radius with fixed deflection shall be available as required.
- F. The frame and support bars shall be constructed of heavy gauge extruded aluminum.
- G. Heavy gauge extruded aluminum end borders; end caps and mitered corners shall be available to close off the ends of the diffusers.
- H. Provide factory fabricated and installed plenums for all linear slot diffusers. Plenums shall be manufactured by the same manufacturer of the linear slot diffusers. The plenums shall include side inlet for connection to duct. The width shall fit the linear slot diffuser as specified and the length shall be in standard nominal lengths. When continuous sections are required, end caps shall be folded up to provide uninterrupted airflow.
- I. Plenums shall have internal insulation with polymer film and perforated panels. Insulation shall be as specified under another section of this work.
  1. Material - Shell: insulated. Insulation shall be as specified under another section of this work
  2. Material - Pattern Controller and Tees: Aluminum.
  3. Finish - Face and Shell: Baked enamel, color selected by Commissioner.
  4. Finish - Pattern Controller: Baked enamel, black.
  5. Finish - Tees: Baked enamel, color selected by Commissioner.
  6. Slot Width: Refer to Drawings
  7. Number of Slots: Refer to Drawings.
  8. Length Refer to Drawings.
  9. Accessories: Refer to architectural ceiling plans.

## 2.7 RADIAL AIR PATTERN DIFFUSER

- A. Low velocity hemispherical 2-way pattern.
- B. Diffusers shall be constructed using a maximum 6 inches tall backpan designed for optimum performance with the diffuser. The backpan shall be divided into two chambers: upper and lower. The backpan shall have integral hanger tabs for securing the unit to the overhead structure.
- C. The upper velocity dampening chamber shall be separated from the lower air dampening chamber by a pressure induction plate. All pattern controllers shall be internal to the unit and shall be located in the lower air dampening chamber.
- D. The face of the diffuser shall be 51 percent free area perforated steel with 3/16-inch diameter holes on 1/4-inch staggered centers, and shall match the appearance of industry standard perforated diffusers. The face shall not hang below the ceiling more than 5/8 inches and shall have 6 clips securing it in place.
- E. The diffuser face shall have factory attached retainer cables. The cables shall have removable clips to allow field cleaning of all diffuser components.
- F. Quarter-turn fasteners on the face are not acceptable.
- G. The face, lower air chamber, directional blades, and the pressure induction plate shall be one assembly that can be removed from the face of the unit for sanitizing in an autoclave. The face shall be provided with two retainer cables.
- H. The backpan shall be manufactured of 22-gauge steel. The diffuser must be available for full radial air diffusion (two-way) and/or 1/2 radial air diffusion (one-way).
- I. NC values shall be published. Throw for terminal velocities of 100, 75 and 50 fpm shall be published along with corresponding pressure drop.
- J. Performance tests shall have been conducted per ASHRAE Standards 70-2006 and 113.

## 2.8 GRILLES AND REGISTERS

### A. Return Air Grilles

- 1. Return air grilles shall be TITUS Model 350 F (3/4" spacing) or 355F (1/2" spacing).
- 2. The fixed deflection blades shall be parallel to the long or short dimension of the grille.
- 3. Construction material: Extruded aluminum with 1-1/4" wide border on all sides.
- 4. Corners shall be welded with full penetration resistance welds.
- 5. Deflection blades shall be contoured to a specifically designed and tested cross section to meet test performance data.
- 6. Opposed blade damper shall be constructed of heavy gauge steel or aluminum. Damper must be operable from face of the grille.

### B. Supply Air Grilles

- 1. Supply air grilles shall be single deflection type with one set of fully adjustable airfoil shaped deflection blades spaced 3/4in. on center. The blades shall run parallel to the (long/short) dimension of the grille.
- 2. Both blades and border shall be of heavy extruded aluminum construction.
- 3. The grille shall be finished in (B12 White Powder Coat / B15 Aluminum Powder Coat). Paint finish shall pass 500 hours of salt spray exposure with no measurable creep in

accordance with ASTM D1654 and 1000 hours with no rusting or blistering as per ASTM D610.

C. Supply Air Registers

1. Registers shall be double deflection type with two sets of fully adjustable airfoil shaped deflection blades spaced  $\frac{3}{4}$ " on center.
2. The front set of blades shall run parallel to the (long / short) dimension of the register.
3. Both blades and border shall be of heavy extruded aluminum construction.
4. The integral volume control damper shall be of the opposed blade type and shall be constructed of aluminum construction 22DAL). The damper shall be operable from the register face. The damper shall be coated steel (mill finish aluminum 22DAL). The grille shall be finished in (B12 White Powder Coat / B15 Aluminum Powder Coat). Paint finish shall pass 500 hours of salt spray exposure with no measurable creep in accordance with ASTM D1654 and 1000 hours with no rusting or blistering as per ASTM D610 an

D. Transfer Grilles:

1. Shall match return grilles in appearance.

2.9 PERIMETER DIFFUSERS

- A. Perimeter diffusers shall be of two (2) slot combination heating-cooling type suitable for overhead heating without exceeding stratification factor of 4.0 when handling CFM ranges shown on the drawings at a maximum discharge temperature of 90°F. Cooling air shall be at 18%dt and comfort conditions of velocity and room stratification factor shall be maintained below 3.0.
- B. Diffuser face shall consist of one adjustable volume control and one adjustable direction vertical pattern factory set for proper angle but with adjustable locking device to facilitate field adjustment. Unit shall be of extruded aluminum construction throughout. Diffusers shall be of lengths indicated on drawings and complete with sheet metal plenum, having a maximum height of 7".
- C. Diffusers shall be painted in flat black with center septum in off-white for installation on exposed ceiling T-Bars.
- D. The diffuser manufacturer shall demonstrate (by laboratory mock-up) to the Commissioner complete diffuser performance of discharge angle, volume control, pressure drop and sound level.

2.10 SOURCE QUALITY CONTROL

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. The air outlet manufacturer shall review architectural plans and shall be responsible for furnishing all air outlets with mounting frames and margins that are fully compatible with ceiling construction.

### 3.2 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Commissioner for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

### 3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

**END OF SECTION 23 37 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 41 00****AIR FILTERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS.
- D. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING.
- E. Section 23 08 00 – COMMISSIONING OF HVAC WORK.
- F. Section 23 73 15 – FACTORY FABRICATED CUSTOM AIR HANDLING UNITS.
- G. Section 23 73 16 – FACTORY FABRICATED SEMI-CUSTOM MODULAR AIR HANDLING UNITS.
- H. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Disposable Pleated Panel Filters – medium efficiency – MERV 8.
  - 2. Disposable Pleated Panel Filters – medium efficiency – MERV 9.
  - 3. Disposable Pleated Panel Filters – medium efficiency – MERV 11.
  - 4. Rigid synthetic offset rigid, extended surface, V filter – MERV 15.
  - 5. Front- and rear-access filter frames.
  - 6. Side-service housings.
  - 7. Filter gages.
  - 8. Low-leak filter bank isolation dampers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (Voc) Limits for Adhesives, Sealants, Paints And Coatings for Leed Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: For each type of product indicated. Include dimensions; operating characteristics; required clearances and access; rated flow capacity, including initial and final pressure drop at rated airflow; efficiency and test method; fire classification; furnished specialties; and accessories for each model indicated.
- C. Shop Drawings: For air filters. Include plans, elevations, sections, details, and attachments to other work.
  1. Show filter rack assembly, dimensions, materials, and methods of assembly of components.
  2. Include setting drawings, templates, and requirements for installing anchor bolts and anchorages.
  3. Wiring Diagrams: For power, signal, and control wiring.
- D. Manufacturer shall issue a standard certificate of compliance certifying that the filter meets the materials, components, performance and construction characteristics as indicated in the contract documents.
- E. Operation and Maintenance Data: For each type of filter and rack to include in emergency, operation, and maintenance manuals.

#### 1.6 REFERENCE STANDARDS

- A. All filters, media, frames and ancillary equipment shall be designed, manufactured and tested in accordance with the latest applicable industry standards including the following:
  1. ASHRAE 62.1, Section 4 - "Outdoor Air Quality"; Section 5 - "Systems and Equipment"; and Section 7 - "Construction and Startup."
  2. ASHRAE 52.1 for arrestance and ASHRAE 52.2 for MERV for methods of testing and rating air-filter units.
  3. NFPA 90A and NFPA 90B.
  4. Underwriters Laboratories: UL 900, UL 586
  5. National Air Filtration Association (NAFA)

- B. All equipment and material furnished and installed on this project shall be UL or ETL listed, in accordance with the requirements of the New York Department of Buildings and suitable for its intended use on this project.

#### 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Fire Performance Characteristics: Provide filters identical with those tested for the fire performance characteristics specified.
- D. Comply with provisions of ARI Standard 850 pertaining to testing and performance of air filter units.
- E. NFPA Compliance: Comply with applicable portions of NFPA 90A and 90B pertaining to installing air filters.
- F. Provide minimum arrestance according to ASHRAE 52.1, and a minimum efficiency reporting value (MERV) according to ASHRAE 52.2.
- G. UL Rating: Air filters shall have either a Class 1 or Class 2 rating in accordance with UL 900, standard for test performance of air filter units.
- H. Provide filter holding frames arranged for flat or angular orientation, with access doors on both sides of unit. Filters shall be removable from one side or lifted out from access plenum.
- I. All products shall be National Air Filtration Association (NAFA) certified for performance. Filter style code and MERV rating shall be stamped on each filter cell.

#### 1.8 COORDINATION

- A. Coordinate sizes and locations of concrete bases. Cast anchor-bolt inserts into bases.

#### 1.9 EXTRA MATERIALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Provide one complete set of filters for each filter bank. If system includes pre-filters, provide for all filters.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS:

- A. Subject to compliance with requirements, provide products by one of the following:
- B. Air Filters and Filter Holding Frames:
  - 1. Viledon.
  - 2. American Air Filter

3. Cambridge Filter Corp.
4. Camfil Farr
5. Flanders-Precisionaire.
6. Or approved equal.

C. Filter Gages:

1. Cambridge Filter Corp.
2. Dwyer Instruments, Inc.

**2.2 DISPOSABLE PLEATED PANEL FILTERS – MEDIUM EFFICIENCY - MERV 8**

- A. Description: Factory-fabricated, dry, self-supported, pleated, panel-type, disposable air filters with holding frames. Thickness shall be as scheduled.

1. High capacity.
2. Disposable Filters,
3. Permanent washable types will not be acceptable.
4. Filter Unit Class: UL 900, Class 1.

- B. Media: 100% non-woven synthetic fibers coated with nonflammable adhesive.

1. Pleat Design: V-Pleat
2. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Media shall be coated with an antimicrobial agent.
4. Metal Retainer: Upstream side and downstream side.

- C. Mounting Frames: Material shall match air handling interior casing, with gaskets and fasteners; suitable for bolting together into built-up filter banks.

- D. Capacities and Characteristics:

1. Maximum or Rated Face Velocity: 500 FPM.
2. Maximum Initial Pressure drop: 0.23" wg
3. MERV Rating: 8 when tested according to ASHRAE 52.2 - 2007.
4. Average efficiency of 30 % – 35% based on ASHRAE Test Standard 52.1.

**2.3 DISPOSABLE PLEATED PANEL FILTERS – MEDIUM EFFICIENCY - MERV 9**

- A. Description: Factory-fabricated, dry, self-supported, pleated, panel-type, disposable air filters with holding frames. Thickness shall be as scheduled.

1. High capacity.
2. Disposable Filters,
3. Permanent washable types will not be acceptable.
4. Filter Unit Class: UL 900, Class 1.

- B. Media: 100% non-woven synthetic fibers coated with nonflammable adhesive.

1. Pleat Design: V-Pleat
2. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Media shall be coated with an antimicrobial agent.

4. Metal Retainer: Upstream side and downstream side.
- C. Mounting Frames: Material shall match air handling interior casing, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- D. Capacities and Characteristics:
1. Maximum or Rated Face Velocity: 500 FPM.
  2. Maximum Initial Pressure drop: 0.28" wg
  3. MERV Rating: 9 when tested according to ASHRAE 52.2 - 2007.
  4. Average efficiency of 40 % – 45% based on ASHRAE Test Standard 52.1.

#### 2.4 DISPOSABLE PLEATED PANEL FILTERS – MEDIUM EFFICIENCY - MERV 11

- A. Description: Factory-fabricated, dry, self-supported, pleated, panel-type, disposable air filters with holding frames. Thickness shall be as scheduled.
1. High capacity.
  2. Disposable Filters,
  3. Permanent washable types will not be acceptable.
  4. Filter Unit Class: UL 900, Class 1.
- B. Media: 100% non-woven synthetic fibers coated with nonflammable adhesive.
1. Pleat Design: V-Pleat
  2. Adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
  3. Media shall be coated with an antimicrobial agent.
  4. Metal Retainer: Upstream side and downstream side.
- C. Mounting Frames: Material shall match air handling interior casing, with gaskets and fasteners; suitable for bolting together into built-up filter banks.
- D. Capacities and Characteristics:
1. Maximum or Rated Face Velocity: 500 FPM.
  2. MERV Rating: 11 when tested according to ASHRAE 52.2 - 2007.
  3. Average efficiency of 60 % – 65% based on ASHRAE Test Standard 52.1.

#### 2.5 RIGID SYNTHETIC OFFSET RIGID, EXTENDED SURFACE, V FILTER – MERV 15

- A. The filter media shall be 100% synthetic and manufactured from two distinct layers of polyester and polypropylene microfibers. The pre-filter layer shall be a spunbond polyester while the microfiber layer shall be constructed from electrostatically enhanced microfiber.
- B. The filter media shall be resistant to mechanical damage caused by handling.
- C. The filter media packs shall be potted within the top and bottom horizontal end caps, while the media packs shall be sealed to nonwoven vertical support stabilizers with hot melt glue that creates a molecular bond to the nonwoven vertical supports, eliminating any possibility of air filter bypass.
- D. The filter shall not contain metal parts to ensure 100% incinerability.

- E. The nominal size shall be 24 x 24 x 12.5 (594x594x317.5mm) and the filter shall contain no less than 8 media panels.
- F. The filter media shall be non-hydroscopic and the filter shall operate unaffected at relative humidity up to 100%.
- G. The filter shall be UL 900 classified as to flammability, Class 1. Filter shall meet NYC Material Acceptance Code Certification, MEA-438-00-M, Vol 11, Pursuant to Administrative Code Section 27-131.
- H. Performance
  - 1. The filter shall have a documented maximum initial pressure drop of 0.31 inches WC when tested at 492 FPM.
  - 2. The filter shall be tested to ASHRAE test standard 52.-2 and conducted by an independent lab, and have a MERV 15 Efficiency when tested at 1968 CFM.
  - 3. The filter shall have a documented burst strength of no less than > 12" w.g.
  - 4. The filter shall have a microbial resistance "Level 4" certification in accordance to ASTM Standard D632G.
  - 5. The filter shall be certified by Greenguard Environmental Institute Certification No: ACIAF97011-1- low-emitting materials and products. Provide a Certificate of Certification
- I. The filter shall be a Viledon MVFR 95 1" offset or approved equal.

## 2.6 FRONT AND REAR ACCESS FILTER FRAMES

- A. Framing System: Aluminum framing members having minimum thickness of 0.09 inch (2.3 mm), designed for either upstream (front) or downstream (rear) filter servicing. Cut to size and pre-punch members for assembly into modules of size and capacity as indicated. Vertically support filters to prevent deflection of horizontal members without interfering with either filter installation or operation. Provide hardware necessary for field assembly.
- B. Pre-filters: Incorporate a separate track, removable from front or removable from back, after removing after filters.
- C. Sealing: Permanently gasket framing members to prevent bypass of unfiltered air. Provide factory-installed, positive-sealing device for each row of filters to ensure seal between gasketed filter elements.

## 2.7 SIDE-SERVICE HOUSINGS

- A. Description: Factory-assembled, side-service housings with flanges to connect to duct system as indicated. Construct of 16-gage (1.6mm) galvanized steel.
- B. Pre-filters: Integral tracks to accommodate 2-inch (50mm) throw-away or cleanable filters.
- C. Access Doors: Continuous gaskets on perimeter and positive locking devices. Arrange so filter cartridges can be loaded from either access door.
  - 1. Sealing: Incorporate positive-sealing gasket material on channels to seal top and bottom of filter cartridge frames to prevent air bypass.

## 2.8 FILTER GAGES

- A. Provide Differential pressure sensor across each fan bank. In addition to having a visual gage and pointer the differential pressure sensor for air filter applications shall provide a current or voltage signal (4-20 Ma, 0-10 VDC, or 0-5 VDC) with an accuracy of +/- 1% fs (including non-linearity, hysteresis, and non-repeatability). Accuracy for pressure sensors used in flow measurement applications shall be +/- 0.5%. Operating temperature range and compensated temperature range shall be as appropriate for the temperature extremes of the environment where it is used and the application it is intended for.
- B. The gauge shall be in a metal case, have vent valves, with black figures on white background, and front recalibration adjustment.
  - 1. Diameter: 4-1/2 inches (115 mm).
  - 2. Scale Range for Filter Media Having a Recommended Final Resistance of 0- to 2.0-inch wg (0 to 500 Pa).
- C. Manometer-Type Filter Gage: Molded plastic, with epoxy-coated aluminum scale and logarithmic-curve tube gage with integral leveling gage, graduated to read from 0- to 3.0-inch wg and accurate within 3 percent of the full scale range.
- D. Static pressure taps shall be located in the airstream as recommended by the manufacturer and connected to gauges located on air handling unit casings, or on walls for in-duct HEPA filter locations, as directed, with 1/4" O.D. aluminum tubing.
- E. Accessories: Static-pressure tips, tubing, gage connections, and mounting bracket.

## 2.9 LOW-LEAK FILTER BANK ISOLATION DAMPERS

- A. The dampers shall be Flanders Model CV-D as manufactured by Flanders Filters, Inc. of Washington, NC.
- B. The dampers shall be fabricated of unpainted 14-gauge type 316L stainless steel with a 2-B mil finish and shall be designated to mount to Flanders containment housings. All seams and joints shall be free of burrs and sharp edges. The dampers shall have type 316L stainless steel convex damper width 1/2" thick silicone gasket seals. Each blade shall be independently operated by a drive mechanism. The torque required to operate the damper shall be approximately 20 foot-pounds. Operating position shall be shown on the frame adjacent to the drive mechanism. The maximum permissible leak rate shall be no greater than 0.2% of the internal volume of the damper assembly per hour at 10" w.g. when tested per the pressure decay method described in ANSI N510-1980.
  - 1. Pneumatic actuators shall be provided for remote damper operation.
  - 2. Damper end switches to be supplied as part of bag filter damper assembly.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Charcoal Service Corp.,
  - 2. Flander,
  - 3. American Air Filter
  - 4. Barnebey Cheney.
  - 5. Or approved equal.

## PART 3 - EXECUTION

3.1 Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Filters, filter frames, filter housings, and filter gauges shall be installed in accordance with manufacturer recommendations and approved submittals.
- B. Position each filter unit with clearance for normal service and maintenance. Anchor filter holding frames to substrate.
- C. Install filters in position to prevent passage of unfiltered air.
- D. Install filter gage for each filter bank.
- E. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.
- F. Install filter-gage, static-pressure taps upstream and downstream from filters. Install filter gages on filter banks with separate static-pressure taps upstream and downstream from filters. Mount filter gages on outside of filter housing or filter plenum in an accessible position. Adjust and level inclined gages.
- G. Coordinate filter installations with duct and air-handling-unit installations.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:
  - 1. Operate automatic roll filters to demonstrate compliance with requirements.
  - 2. Filters: Leak-test housing by pressurizing to a minimum 3 inches w.g. (750 Pa) or to designed operating pressure. Soap-bubble test housing joints, door seals, and filter sealing edges.
  - 3. Test for leakage of unfiltered air while system is operating.
- D. Air filter will be considered defective if it does not pass tests and inspections.
- E. Prepare test and inspection reports.

3.4 CLEANING

- A. After completing system installation and testing, adjusting, and balancing of air-handling and air-distribution systems, clean filter housings and install new filter media.

**END OF SECTION 23 41 00**

**SECTION 23 51 00****BREECHINGS, CHIMNEYS, AND STACKS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC AND WIND RESTRAINTS FOR HVAC COMPONENTS
- D. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING
- E. Section 23 09 00 – HVAC INSTRUMENTATION AND CONTROLS
- F. Section 23 31 20 – FIRE RESISTIVE DUCT/PIPE INSULATION AND ENCLOSURES
- G. Section 23 52 16 – CONDENSING BOILERS
- H. Section 23 52 39 – CLEAN STEAM GAS FIRED BOILER
- I. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes the following:
  - 1. Prefabricated Boiler Stack and Breeching
  - 2. Prefabricated Double Wall Generator Exhaust Pipe and Vents
  - 3. Listed double-wall vents & chimneys.
  - 4. Listed, refractory-lined breechings and stacks.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Product Data: For the following:
  1. Prefabricated Boiler Stack and Breeching
  2. Prefabricated Double Wall Generator Exhaust Pipe and Vents
  3. Type B and BW vents.
  4. Type L vents.
  5. Special gas vents.
  6. Guy wires and connectors.
- C. The shop drawings shall be prepared and approved by a registered structural engineer licensed in the State of New York designated by the manufacturer. Drawings shall be prepared showing all features of the work including thickness of steel shell and refractory, overall height and diameter, and the design of the anchor system (including seismic) and foundation. The stack shall be through roof, which includes a drain. Detailed design calculations for tension, compression, cantilever, vibration ovaling, dynamic stability and seismic forces shall be furnished (signed and sealed) by the registered structural engineer. Wind forces are to be calculated in accordance with the requirements of ANSI-A58.1-1972. Deflection shall in no case exceed a ratio of 1 to 200 in reference to stack height.
- D. Engineering report certifying that stacks meet the design wind and seismic loads.
- E. Shop Drawings: For vents, breechings, chimneys, and stacks. Include plans, elevations, sections, details, and attachments to other work.
  1. Drawings showing the actual layout and drawn to scale.
  2. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, methods of field assembly, components, hangers and seismic restraints, and location and size of each field connection.
  3. Submit for review for installed products indicated to comply with design loads, include calculations required for selecting seismic restraints and structural analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

4. Design, materials, weights, construction, pressure and temperature limitations of breeching and stack systems, flue gas recirculation system. Seismic design data.
  5. Drawings showing all components, system arrangement and dimensions.
  6. Design, construction, allowable movements, movement forces, pressure and temperature limitations of expansion joints.
  7. Damper design, construction, pressure and temperature limitations, pressure loss at design flow, and leakage of closed damper.
  8. Support designs, locations and loads for entire assembly.
  9. Written statement from boiler/burner manufacturer that the design of the system is satisfactory to achieve the required boiler/burner performance.
- F. Shop drawings detailing fabrication and installation of breechings and stacks, including plans, elevations, sections, details of components, and attachments to other construction elements. Detail connections to equipment.
- G. The chimney manufacturer shall certify that the shop drawings' proposed exhaust system complies with the appliance manufacturers' written requirements and that the installation will safely exhaust the connected equipment. For listed Category I equipment, listed equipment equipped with a draft hood or equipment listed for use with Type B gas vent, the draft calculation shall be based upon the requirements set forth in the latest edition of NFPA 54 including NFPA 54's 'Sizing of Category I Venting Systems' and NFPA 54's Vent Tables. For all other Categories and appliance types, draft calculations shall be based upon the appliance manufacturers' written requirements. The draft calculation shall be based upon ASHRAE's Chimney Design Equation and submitted with the appliance manufacturers' requirements for review and approval by the Commissioner. Draft calculations indicating non-compliance with NFPA 54 or insufficient draft shall have a termination-mounted mechanical draft system installed.
- H. Welding certificates.
- I. Manufacturer Seismic Qualification Certification: Submit certification that factory-fabricated breeching, chimneys, and stacks; accessories; and components will withstand seismic and wind forces defined in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment." Include the following:
1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic or wind forces specified and the unit will be fully operational after the seismic event."
  3. Dimensioned Outline Drawings of Breeching, Chimneys, and Stacks: Identify center of gravity and locate and describe mounting and anchorage provisions.
  4. Detailed description of anchorage devices on which the certification is based and their installation requirements.
- 1.6 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source Limitations: Obtain listed system components through one source from a single manufacturer.

- C. Welding: Qualify procedures according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," for hangers and supports and AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents, breechings, and stacks.
- D. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations.
- E. Welder Qualifications: Certified according to AWS D9.1.
- F. Manufacturer Qualifications: Firm experienced in manufacturing breechings, chimneys, and stacks similar to those indicated for this Project and that have a record of successful in-service performance.
- G. Provide scale drawings showing nominal dimensions and weight of the systems.
- H. Boiler and burner manufacturer shall review complete system from boiler flue gas outlet to stack outlet to atmosphere and advise the Commissioner of any changes required to meet boiler and burner performance requirements. Note the altitude of plant site.
- I. Flue gas recirculation ductwork shall be designed and provided by the burner manufacturer.
- J. Conform to NFPA 54 and NFPA 31 for installation of fuel burning equipment and appliances.
- K. Comply with NFPA 211 for components and installation.
- L. Comply with SMACNA "HVAC Duct Construction Standards, Metal and Flexible" for fabricated breechings.
- M. Comply with SMACNA "Guide for Steel Stack Design and Construction."
- N. Comply with AWS D1.1 for welder qualifications, welding details, and workmanship standards.
- O. Comply with ASHRAE "Systems and Equipment Handbook", Chapter 31 for "Chimney, Gas Vent, and Fireplace Systems," for material requirements and design criteria.
- P. UL Listing and Labeling: Provide products specified in this Section that are UL listed and labeled.
- Q. Structural Steel - ASTM - A36 (36,000 PSI Min.) American Institute of Steel Construction.
- R. Light Gauge Sheet - ASTM A570-30 (30,000 PSI Min.)
- S. Concrete - 3000 PSI (Min.) American Concrete Institute Specifications.
- T. Anchor Bolts - ASTM A-307 (Min.)
- U. Refractory – UL 959
- V. Single-Source Responsibility: Obtain all system components from 1 source and by a single manufacturer.

#### 1.7 COORDINATION

- A. Bases: Concrete, reinforcement, and formwork requirements are specified with concrete under another section..

- B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 07 72 00 "Roof Accessories."

## 1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of venting system that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, structural failures caused by expansion and contraction.

- 1. Warranty Period: 20 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PREFABRICATED BOILER STACK & BREECHINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Selkirk Metalbestos
  - 2. Van-Packer
  - 3. Metal-fab
  - 4. Ampco,
  - 5. Schebler
  - 6. Or approved equal.
- B. Boiler stack & breechings shall be completely factory fabricated of the sectional type listed by Underwriters Laboratories, Inc.
- C. The manufacturer shall furnish all items which form a part of the assembly, including cleanout section, tee section, straight sections, elbows, expansion joints, boiler adapter kits, guybands, flashing, counter flashing, and insulated thimble where required. Each section shall bear the factory applied Underwriters Laboratories label.
- D. In addition, manufacturer shall furnish all items which form a part of the breeching assembly, including sections with cleanout and access doors, tee sections, straight sections, expansion joints, increasers, elbows, hanger bands, end caps and sample ports.
- E. Each stack section shall be up to 4 ft. in length with an insulating refractory wall encased in an 11 gage galvanized steel jacket with welded seams. Insulating refractory shall be flush and square with ends of jacket to insure 100% bearing surface between sections after erection. Insulating refractory shall be suitable for high incinerator exit temperatures and shall be centrifugally spun into the metal jacket. Slumped or poured mix is not acceptable.
- F. All portions of the chimney system shall be supplied, including appliance adapters straight lengths, adjustable lengths, elbows, drain sections, reducers, lateral tees, tees, tee caps, barometric dampers, support plates, storm collar, flashing and chimney top.
- G. Chimney shall have a 304 stainless steel inner wall, an aluminized steel outer jacket, and 2" of fiber insulation between the walls. Outdoor portions of the chimney shall have a 304 stainless steel outer jacket.
- H. The chimney system shall be installed per the chimney manufacturer's recommendations and in conformance with the manufacturer's warranty.

- I. System configuration must confirm to the equipment manufacturer's venting recommendations, pertinent local codes and the most recent edition of NFPA 31 or NFPA 54 and NFPA 211.
- J. Provide removable insulated flue connection to each boiler to facilitate access to the boiler for removal, inspection and cleaning.
- K. Stack sections shall be circular with diameter as shown on drawing.
- L. Assembly shall be made by joining stack sections with high temperature joint cement and covering joint with aluminized steel joint bands by stack manufacturer. Total height shall be as shown on drawings, with lateral and/or vertical bracing and support as recommended by the stack manufacturer.
- M. A Barometric Damper shall be installed as required by the stack manufacturer.
- N. An insulated thimble supplied by the stack manufacturer shall be installed wherever the stack passes through roof of combustible material with flashing and counter flashing as required.
- O. A rain cap shall be provided at top of stack.
- P. Tee sections shall be required height and shall have a 6" refractory projection for the breeching condition.
- Q. Cleanout door sections shall be provided at the heel of the stack and at 15' maximum intervals in horizontal breeching.
- R. Installation shall be made in accordance with the Manufacturer's recommendation and in compliance with the Underwriters Laboratories, Inc. listing.

## 2.2 DOUBLE WALL GENERATOR EXHAUST PIPE AND VENTS.

- A. Factory fabricated, all steel, positive pressure, double wall metal, diesel generator exhaust system.
- B. Manufacturers: subject to compliance with requirements, provide products by one of the following:
  - 1. Chiminee Lining.E Inc, model IPPL2F
  - 2. Selkirk Metalbestos
  - 3. Van-Packer
  - 4. Metal-fab
  - 5. Or approved equal.
- C. The manufacturer shall furnish all items which form a part of the assembly, including cleanout section, tee section, straight sections, elbows, expansion joints, boiler adapter kits, guybands, flashing, counter flashing, and insulated thimble where required. Each section shall bear the factory applied Underwriters Laboratories label.
- D. The factory built exhaust system shall be fabricated in accordance with NFPA 211. The system shall be designed and installed to be gas tight. It shall be UL Listed to withstand up to 60" w.c. positive pressure. Exhaust system shall be designed to compensate for all flue gas induced thermal expansions.

- E. Insulation shall be Ceramic Fibre between inner and outer pipe and shall be 2 inches thick. Clearances to combustible materials shall be per installation instructions and shall have been determined for a continuous operation at temperatures up to 1400 F. Mineral wool insulation will not be acceptable.
- F. The UL listed insulated exhaust system shall have skin temperatures that have been obtained by UL test procedures. The published surface temperatures shall be the result of the UL 103 chimney test.
- G. Each system component shall include a factory installed alignment sleeve at each connection flange. Sleeve to be laser welded 360 degrees to components inner pipe wall and shall extent a minimum 2.5 inches in length beyond the mounting flange. Sleeve to provide long term protection to each joint seal from condensate, water and exhaust gas temperature. Sleeve to provide for added ease of installation. Include flange to flange termination with V-band assembly. Pipe that does not include the factory installed alignment sleeve are not acceptable.
- H. The double wall exhaust pipe has an inner gas carrying pipe of 20-gauge type 304 stainless steel. The outer jacket shall be 24 gauge 304 stainless steel. The materials and construction of the modular sections and accessories shall be as specified by the terms of the product's UL Listing.
- I. The entire generator exhaust system shall be designed, fabricated and installed to include all components connecting from generator muffler outlet to the atmospheric termination point. Included accessories for pressure relief, expansion, v bands with hardware, sealant, guiding and support connections, shall be from one manufacturer.
- J. This exhaust system shall be designed and installed to be gas tight and thus prevent leakage of combustion products into a building.
- K. The exhaust system shall be designed to compensate for all flue gas induced thermal expansion.
- L. Manufacturer shall provide certified design drawings and calculations for the entire generator exhaust system. Drawings and calculations shall be signed and sealed by the manufacturers licensed professional engineer licensed in the State of New York. and submitted as part of the shop drawing submission.
- M. Provide sufficient types, quantities and locations of expansion joints to completely absorb all thermal expansion of the system without imposing excessive loads on equipment or building structure. Use bellows-type joints engineered by designer of the generator exhaust system. Provide bellows joints between all rigid support locations.
- N. Provide threaded pipe drain section at the base of the generator exhaust to allow drainage.
- O. Provide rainshield at the top of the chimney designed to exclude all rainfall penetration into the exhaust system.
- P. The generator exhaust system shall be warranted against functional and structural failure for a period of 10 years from the date of completed installation.
- Q. The manufacturer shall provide drawings showing the actual layout and drawn to scale shall be provided by the manufacturer. The system shall be installed as designed by the manufacturer and certified by their licensed professional engineer licensed in the State of New York.

- R. The inner diameter for the generator exhaust shall be verified by the manufacturer's computations. The computation shall be technically sound, shall follow ASHRAE calculation methods and incorporate the specific flow characteristics of the inner pipe. Computations shall be certified by the manufacturer's professional engineer licensed in the State of New York. Certification shall be included as part of the shop drawing submittal.
- S. The factory fabricated modular system shall be furnished by a vendor and representative organization which guarantees design, installation and service coordination and provides in-warranty and post warranty unified responsibility.

## 2.3 LISTED SPECIAL GAS VENTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Heat-Fab, Inc.
  - 2. Metal-Fab, Inc.
  - 3. Selkirk Inc.; Selkirk Metalbestos and Air Mate.
  - 4. Or approved equal.
- B. Description: Double-wall metal vents tested according to UL 1738 and rated for 480 deg F continuously, with positive or negative flue pressure complying with NFPA 211.
- C. Construction: Inner shell and outer jacket separated by at least a 1/2- 1 inch airspace.
- D. Vent shall be factory-built special gas type, double wall, engineered and designed for use on Category I, II, III, and IV appliances, or as specified by the equipment manufacturer.
- E. Maximum continuous flue gas temperature not to exceed 550°F for gas burning appliances. Maximum temperature for appliances approved to vent with Type L-Vent (gas or oil) is 570°F.
- F. Vent shall be constructed with an inner conduit constructed of AL29-4C or 29-4 (S44735) superferritic stainless steel with a minimum thickness of .015" for diameters 3"-8", .020" for diameters 10"-16", .025" for diameters 18"-24", and .035" for 26" and greater.
- G. Vent shall be listed for an internal static pressure of 15" w.g. and tested to 37" w.g.
- H. All inner wall conduit components shall be manufactured for AL29-4C or 29-4 (S44735). The joint closure system shall be an Inner Wall Mechanical Locking Strap design. Joints shall not use screws or fasteners that penetrate the inner conduit.
- I. Vent shall be constructed with a factory installed gasket used to seal the joint for diameters 4"-16". Use of gasket lube, available from the factory, should be used for maximizing gasket life and ease of installation. For diameters 18'-32", joints shall be sealed with factory supplied RTV sealant.
- J. Inner wall joints shall be designed with a male and female overlapping metal-metal connection to maintain condensate on the AL29-4C stainless steel. Proper 1/4" per foot pitch must be maintained at all times and condensate should flow back toward the appliance to the required number of drains.
- K. The outer wall casing shall be constructed of 430 stainless that shall not require additional surface preparation, such as painting, in order to withstand the outdoors or high humidity environments.

- L. Inner conduit and outer wall casing shall be constructed with a one-inch air space between them and in such a fashion that prevents cross-alloy contamination. Optional 1" fiber insulation is available to maintain higher flue temperatures, but does not reduce clearances beyond the standard clearances tested for 1" airspace model CI Plus.
- M. Tees and elbows shall provide a pressure drop less than 15 feet equivalent horizontal vent.
- N. Fittings that increase or decrease vent diameter shall be asymmetric in construction with a flat wall that maintains a straight line with adjoining parts in order to facilitate the unobstructed flow of all condensate.
- O. All parts shall be compatible with other single wall and double wall products of the same manufacturer.
- P. System is to be sized in accordance with the appliance manufacturer's specifications, NFPA 54-national Fuel gas code (ANSI Z223.1), and ASHRAE recommendations.
- Q. Vent shall be warranted by the manufacturer against defects for a period of (15) fifteen years from date of substantial completion.
- R. SEALANT
  - 1. General Electric RTV106 (aka Mumentive) or Dow Corning 736 High Temperature Sealant shall be used to seal all joints on systems where the maximum flue gas temperature will not exceed 550°F.

## 2.4 BOILER OUTLET DAMPERS AND ACCESSORIES

- A. Type: Multi-blade, opposed horizontal blades, automatically controlled. Modulating operation for draft control. Locate at the outlets of the boilers and economizers.
- B. Boiler outlet draft control is specified under another section of this work.
- C. Service: Design for 1000 °F, 5 inches W.C. positive and negative pressure. Maximum leakage, when closed, shall be ten percent of maximum required flow. Maximum pressure loss at maximum boiler output, 0.05 inches WC.
- D. Construction:
  - 1. Blades: ASTM A242 carbon steel, air foil, dowelled to shafts.
  - 2. Shafts: Stainless steel. Provide seals at casing penetrations.
  - 3. Bearings: External to flow stream, carbon, self-contained, bushing, packing-gland assemblies, self-lubricating.
  - 4. Linkages: Control arms dowelled to shafts. All control arms linked to drive motor. External to flow stream. All steel construction.
- E. Accessories:
  - 1. Interlock Switch Mounting: Rigid mounting located to allow switch to sense damper linkage position. Switch is connected to burner control system.
  - 2. Damper Drive Unit: Electric type that shall operate damper without overload. Provide 100 percent duty cycle maintenance-free motors that never overheat or burnout under stalled conditions. Constant speed coordinated with the controlled process so that performance parameters remain within requirements. For systems without draft control, the drive unit

shall automatically open damper 90 degrees on boiler purge and firing cycle; close damper on boiler shut down. For systems with draft control, the drive unit shall automatically open damper 90 degrees on boiler purge cycle, position damper as required for proper burner ignition, modulate damper during boiler firing to maintain constant outlet draft, close damper on boiler shut down.

## 2.5 DRAFT CONTROL

- A. The Draft Control System (MODS) is specified under another section of this work.

## 2.6 EXPANSION JOINTS

- A. Provide sufficient types, quantities, and locations of expansion joints to completely absorb all thermal expansion of the system without imposing excessive loads on equipment or building structure. Fabric joints shall be used on single-wall stack and breeching system. On factory-fabricated double wall stack or breeching system, use slip-type, bellows-type, or fabric expansion joints engineered by manufacturer of the stack and breeching system.
- B. Service: Design for 575 °F, 20 inches WC positive and negative internal pressure, continuous duty.
- C. Construction, Fabric Joints:
  - 1. Fabric: High strength, designed for dewpoint service.
  - 2. Internal Baffles: Carbon steel with stiffeners. Designed to protect interior surfaces of fabric from wiping action of the flue gases.
  - 3. Welded frame, 1/4-inch-thick ASTM A568 steel with 4-inch minimum flange height, flat-belt design, fabricated by expansion joint manufacturer. Fabric element bolting, 3/8-inch diameter, 6 inch maximum centers.
- D. Construction, Factory-Fabricated Double-Wall System Joints:
  - 1. Materials: Same as factory-fabricated breeching system.
  - 2. Packing Gland: High temperature rating. Provide seal between sliding and fixed portions of joint.

## 2.7 ACCESSORIES

- A. Provide all necessary Tees, elbows, increasers, draft-hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, firestop spacers, and fasteners; fabricated from similar materials and designs as straight sections; all listed for same assembly.
- B. Drains:
  - 1. Provide threaded pipe drain section at the base of the chimney and generator exhaust to allow stack drainage.
  - 2. Provide drains at all low points and drain connections in stack and breeching systems.
  - 3. Slope piping system to the drain.
  - 4. Pipe size shall be 1 inch minimum.
- C. Rain Cap/Rainshield:
  - 1. Provide rainshield at the top of each chimney to prevent any rain penetration into the stack.

2. Raincap shall be made from .025" thick type 304 stainless steel.
  3. Provide wind and rain shield to prevent wind driven rain from entering the chimney.
- D. Instrument Ports: Locate on individual stack or breeching serving each boiler. Locate in non-turbulent zone within 12 feet of boiler room floor between boiler and economizer (when economizer is provided) or locate accessible from platform. Provide separate ports for the following:
1. Flue gas oxygen analyzer: Coordinate with analyzer furnished.
  2. Opacity monitor: Coordinate with sensor furnished. Locate downstream from oxygen analyzer.
  3. Stack temperature sensor: Coordinate with sensor furnished.
  4. Draft gauge: 1-inch diameter coupling, plugged.
  5. Test instruments: 1-inch diameter coupling, plugged.
- E. Access Doors: Bolted, gasketed, insulated, with handles. Minimum opening 16 inches x 16 inches.

## 2.8 GUYING AND BRACING MATERIALS

- A. Cable: Four galvanized, stranded wires of the following thickness:
  1. Minimum Size: 1/4-inch diameter.
  2. For ID Sizes 4 to 15 Inches: 5/16 inch
- B. Pipe: Three galvanized steel, 1-1/4".
- C. Angle Iron: Three galvanized steel, 2 by 2 by 0.25 inch.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work.
  1. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 APPLICATION

- A. Listed Chimney Liners: High-efficiency boiler or furnace vents in masonry chimney, dishwasher exhaust, or Type II commercial kitchen hood.
- B. Listed Type B and BW Vents: Vents for certified gas appliances.
- C. Listed Type L Vent: Vents for low-heat appliances.
- D. Listed Special Gas Vent: Condensing gas appliances.

- E. Listed Building-Heating-Appliance Chimneys: Dual-fuel boilers, oven vents, water heaters, and exhaust for engines. Fireplaces and other solid-fuel-burning appliances.
- F. Listed Grease Ducts: Type I commercial kitchen grease duct.
- G. Listed, Refractory-Lined Metal Breechings and Chimneys: Freestanding dual-fuel boiler vents, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- H. Field-Fabricated Metal Breechings and Chimneys: Dual-fuel boilers, oven vents, water heaters, exhaust for engines, fireplaces, and other solid-fuel-burning appliances.
- I. Field-Fabricated Metal Breechings and Chimneys: Steel pipe for use with engine exhaust.

### 3.4 INSTALLATION OF LISTED VENTS AND CHIMNEYS

- A. The exhaust systems shall be installed according to the manufacturer's installation instructions. The joining of pipe sections must be made using the assembly band, the finishing band and the appropriate sealing material. Roof penetrations shall be suitable for a combustible roof and shall be according to the manufacturer's detail drawings and installation instructions.
- B. Provide all modular straight sections, fittings, supports, guides, expansion joints, guy sections, guy tensioners, roof thimbles, roof flashings, storm collars and stack cap terminations as required to provide a complete system per the manufacturer's installation instructions.
- C. When installed according to the manufacturer's installation instructions the generator exhaust pipe and its supporting system shall resist side loads at least 1.5 times the weight per foot of piping for both horizontal and vertical portions of the system.
- D. The entire flue system from the appliance outlet to the termination point, including all accessories shall be from one manufacturer.
- E. Locate to comply with minimum clearances from combustibles and minimum termination heights according to product listing or NFPA 211, whichever is most stringent.
- F. Seal between sections of positive-pressure vents and grease exhaust ducts according to manufacturer's written installation instructions, using sealants recommended by manufacturer.
- G. Support vents at intervals recommended by manufacturer to support weight of vents and all accessories, without exceeding appliance loading.
- H. Slope breechings down in direction of appliance, with condensate drain connection at lowest point piped to nearest drain.
- I. Lap joints in direction of flow.
- J. Connect base section to foundation using anchor lugs of size and number recommended by manufacturer.
- K. Join sections with acid-resistant joint cement to provide continuous joint and smooth interior finish.
- L. Erect stacks plumb to finished tolerance of no more than 1 inch out of plumb from top to bottom.

3.5 CLEANING

- A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.
- B. Clean breechings internally, during and after installation, to remove dust and debris. Clean external surfaces to remove welding slag and mill film. Grind welds smooth and apply touchup finish to match factory or shop finish.
- C. Provide temporary closures at ends of breechings, chimneys, and stacks that are not completed or connected to equipment.

**END OF SECTION 23 51 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 52 16****CONDENSING BOILERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 13 - MOTORS FOR HVAC EQUIPMENT.
- D. Section 23 05 15 – VARIABLE FREQUENCY MOTOR DRIVES.
- E. Section 23 05 23 – VALVES FOR HVAC.
- F. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS.
- G. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING.
- H. Section 23 07 00 – HVAC INSULATION.
- I. Section 23 09 00 – HVAC INSTRUMENTATION AND CONTROLS.
- J. Section 23 21 13 – HVAC PIPING.
- K. Section 23 21 23 – HVAC PUMPS.
- L. Section 23 25 00 – HVAC WATER TREATMENT.
- M. Section 23 50 00 – FACTORY ASSEMBLED, SKID MOUNTED, PACKAGED BOILER PLANTS.
- N. Section 23 51 00 – BREECHINGS, CHIMNEYS AND STACKS.
- O. This Section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Section includes packaged, factory-fabricated and -assembled, gas-fired, condensing boilers, trim, and accessories for generating hot water.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Include performance data, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings: For boilers, boiler trim, and accessories. Include plans, elevations, sections, details, and attachments to other work.
  1. Design calculations and vibration isolation base details signed and sealed by a qualified professional engineer.
    - a. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
    - b. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails and equipment mounting frames.
  2. Include diagrams for power, signal, and control wiring.
- D. Manufacturer Seismic Qualification Certification: Submit certification that boiler, accessories, and components will withstand seismic forces defined in Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints For HVAC Components." Include the following:
  1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

- b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- E. Source quality-control reports.
- F. Field quality-control reports.
- G. Warranty: Special warranty specified in this Section.
- H. Other Informational Submittals:
- 1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by New York Department of Buildings, and document hydrostatic testing of piping external to boiler.
- F. Engineering Services Submittal:
- 1. Engineering calculations and detailed fabrication and assembly of pipe anchors and alignment guides, hangers and supports for multiple pipes, expansion joints and loops, and attachments of the same to the building structure.
  - 2. Locations of pipe anchors and alignment guides and expansion joints and loops.
  - 3. Locations of and details for penetrations, including sleeves and sleeve seals for exterior walls, floors, basement, and foundation walls.
  - 4. Locations of and details for penetration and firestopping for fire- and smoke-rated wall and floor and ceiling assemblies.
  - 5. All Engineering Services shall be performed by Contractor's professional engineer licensed in the State of New York, and submitted to Commissioner for review and acceptance.
- G. Coordination Drawings: Piping layout, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
- 1. Suspended ceiling components.
  - 2. Other building services.
  - 3. Structural members.
- H. Qualification Data: For Installer.
- I. Welding certificates.
- J. Field quality-control reports.
- I. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.
- 1.6 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Manufacturer's Qualifications: Firms engaged in the manufacturing of steel, steam boilers, of types and sizes required. Manufacturer must be in the business of manufacturing heat transfer equipment for no less than sixty years.
- C. The boiler package shall be certified to UL 795.
- D. The Steam boiler maximum working pressure shall be 15 psig.
- E. The Tribute Boiler Flame Safeguard Control will be of an accepted quality manufacturer bearing UL Certification.
- F. The entire boiler system and its installation shall conform to the manufacturer's instructions, applicable local, state and federal codes and associated National Board requirements.
- G. The equipment shall, as a minimum, be in strict compliance with the requirements of this specification and shall be the manufacturer's standard commercial product unless specified otherwise. Additional features, details, accessories, etc. which are not specifically identified but which are a part of the manufacturer's standard commercial product, shall be included in the equipment being furnished.
- H. The equipment shall be of the type, design, and size that the manufacturer currently offers for sale and appears in the manufacturer's current catalog.
- I. The equipment shall fit within the framework of the skid. The skid shall fit within the allocated space, leaving ample allowance for clearances, maintenance and inspection.
- J. The equipment shall be new and fabricated from new materials. The equipment shall be free from defects in materials and workmanship.
- K. Boilers must be fully factory test fired prior to shipment. Manufacturer shall supply copies of the Test Fire Report, including fuel/air settings and combustion test results.
- L. All units of the same classification shall be identical to the extent necessary to ensure interchangeability of parts, assemblies, accessories, and space parts wherever possible.
- M. In order to provide unit responsibility for the specified capacities, efficiencies, and performance, the boiler manufacturer shall certify in writing that the equipment being submitted shall perform as specified.
- N. Installer Qualifications:
  - 1. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- K. Pipe Welding: Qualify procedures and operators according to the following:
  - 1. ASME Compliance: Comply with ASME B31.1, "Power Piping," and ASME B31.9, "Building Services Piping," for materials, products, and installation.
  - 2. ANSI/ASME SEC 9 – Welding and Brazing Qualifications
  - 3. ANSI/AWS D10.12 – Guide for Welding Mild Steel Pipe
  - 4. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.
  - 5. ASTM A234 – Pipe Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.

6. ASTM B36.1 – Standardization of dimensions of welded and seamless wrought steel pipe for high or low temperatures and pressures.
  7. Welding Materials and Procedures: Conform to Chapter V, ANSI/ASME SEC B31.9 and applicable local regulations.
- N. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York Department of Buildings, and marked for intended use.
- A. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- B. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- C. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, "Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers."
- D. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to New York Department of Buildings.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to New York Department of Buildings, and marked for intended use.
- F. ASME Compliance: Fabricate and label boilers to comply with ASME Boiler and Pressure Vessel Code.
- G. "ASHRAE/IESNA 90.1 Compliance" Paragraph may be required to comply with Project requirements or New York Department of Buildings. Also, LEED Prerequisite EA 2 requires compliance with ASHRAE/IESNA 90.1.
- H. ASHRAE/IESNA 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
- I. Delete first paragraph below if boiler rating exceeds 300,000 Btu/h (87.9 kW).
- J. DOE Compliance: Minimum efficiency shall comply with 10 CFR 430, Subpart B, Appendix N, "Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers."
- K. UL Compliance: Test boilers for compliance with UL 795, "Commercial-Industrial Gas Heating Equipment." Boilers shall be listed and labeled by a testing agency acceptable to New York Department of Buildings.
- 1.7 COORDINATION
- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified with concrete.
- 1.8 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period for Pulse-Combustion Boilers:
    - a. Heat Exchanger Damaged by Thermal Shock: 15 years from date of Substantial Completion.
    - b. Heat-Exchanger Corrosion: 15 years from date of Substantial Completion.
  - 2. Warranty Period for Fire-Tube Condensing Boilers:
    - a. Leakage and Materials: 10 years from date of Substantial Completion.
    - b. Heat Exchanger Damaged by Thermal Stress and Corrosion: 15 years from date of Substantial Completion.
  - 3. Warranty Period for Water-Tube Condensing Boilers: 20 years from date of Substantial Completion.
  - 4. Warranty Period for Water-Jacketed Condensing Boilers:
    - a. Leakage and Materials: 15 years from date of Substantial Completion.
    - b. Heat Exchanger Damaged by Thermal Stress and Corrosion: 15 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following:
  - 1. Lochinvar Corporation; (Basis-of Design),
  - 2. AERCO International,
  - 3. Patterson Kelly,
  - 4. Or approved equal.

### 2.2 MANUFACTURED UNITS

- A. Description: Factory fabricated and assembled.
  - 1. The Condensing boiler shall be provided with a fully modulating burner. The 316L stainless steel combustion chamber shall be designed to drain condensate to the bottom of the heat exchanger assembly. A built in trap shall allow condensate to drain from the heat exchanger assembly.
- B. Heat Exchanger Section Design:
  - 1. Configuration: Fire tube design; 316L stainless steel fire-tube heat exchanger
  - 2. Number of Passes: Single pass; condensate shall flow through and drain to the bottom of the vessel.
  - 3. Fully welded tube/header assembly. There shall be no banding material, bolts, gaskets or "O" rings in the header construction.
  - 4. Tubes shall be precision welded into the top and bottom tube sheets. Tube sheet weld area shall not have overlapping tube weld deposits to help prevent cracking and breaking of welds.

5. ASME "H" stamp for 160-psi working pressure

C. Combustion Chamber:

1. Equipped with insulation and flame observation port
2. Sealed and completely enclosed, independent of the outer jacket assembly, so that integrity of the outer jacket does not affect a proper seal.
3. Fuel supply: Natural gas or Liquid Propane where noted on the schedule.

D. Casing:

1. Jacket: Heavy gauge primed and pre-painted sheet metal, with snap-in or interlocking closures and baked-enamel protective finish.
2. Insulation: Minimum 2-inch- (50-mm-) thick, mineral-fiber insulation surrounding the heat exchanger.
3. Combustion Chamber Access: Back, removable panel access
4. Sealed combustion for direct venting of the combustion and flue vent. Stainless Steel, category VI vent.
5. Boiler based designed to permit boiler to be installed on combustible floor.
6. Mounting Frame: Steel rails to mount assembled boiler package on concrete base.
  - a. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler, accessories, and components with reinforcement strong enough to withstand seismic forces. Seismic restraints by others.
7. Control Cabinet: Sheet metal casing shall cover all controls, gas train, and burner.

## 2.3 BURNER

- A. Burner: Shall be a premix design and constructed of high temperature stainless steel with a woven metal fiber outer covering to provide modulating firing rates. Boiler shall operate in a safe condition with gas supply pressures as low as 4 inches of water column. Manufacturers unable to provide stable operation at 4-inches water column shall provide a gas booster at the expense of the contractor.
- B. Blower: Forward-curved centrifugal fan integral, directly driven by motor; fully modulating
  1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
- C. Gas Train: Control devices and modulating control sequence shall comply with requirements in IRI and UL. The gas valve shall be designed with negative pressure regulation and be equipped with a variable speed blower system to precisely control the fuel/air mixture to provide modulating boiler firing from 100% to 5.5% of full load capacity.
- D. Pilot: Intermittent-electric-spark pilot ignition with 100 percent main-valve and pilot-safety shutoff with electronic supervision of burner flame.

## 2.4 TRIM

- A. Include devices sized to comply with ANSI B31.9, "Building Services Piping."
- B. Boiler shall be equipped with: a temperature/pressure gauge, high limit temperature control certified to UL353, ASME certified pressure relief valve, outlet water temperature sensor, return

water temperature sensor, a UL353 certified flue temperature sensor, outdoor air sensor, low water flow protection, and built-in adjustable freeze protection.

- C. Safety Relief Valve: ASME rated set for 50-psi as standard with an optional range up to 160-psi; see drawings for safety relief valve rating.
- D. Multiple boilers shall be able to utilize a common venting system. For common vented systems, manufacture shall provide vent dampers to positively seal against backflow of exhaust gases into the non-operating boiler(s). Boiler control shall verify proper position of dampers and static air pressure prior to boiler operation. Dampers shall be pre-tested by manufacture for proper operation prior to shipment.

## 2.5 EMISSIONS

- A. The low emissions burner shall be design certified to SCAQMD Rule 1146.2.
- B. The low emissions burner shall be capable of operating at less than 20 ppm NOx, 50 ppm CO, corrected to 3% O2 throughout the range of operation.

## 2.6 CHIMNEY AND BREECHING

- A. Breechings, Chimneys and stacks are specified under another section of this work.

## 2.7 CONTROLS

- A. Refer to Section 23 09 00 - HVAC Instrumentation and Controls.
- B. Boiler operating controls shall include the following devices and features:
  - 1. The Boiler shall utilize a 24 VAC control circuit and components. The control system shall have an 8" multi-color liquid crystal touch screen display for boiler set-up, status, and diagnostics. All components shall be easily accessed and serviceable from the front of the boiler jacket.
  - 2. The boiler shall feature the "Smart System" control with password security, outdoor air reset, pump delay with freeze protection, pump exercise, domestic hot water prioritization, night set-back, service reminder, time clock, data logging of run hours and space heating. A USB PC port connection provided standard for direct PC connection
  - 3. The Boiler shall have the capability to accept a 0-10 VDC input connection from a BMS control of modulation or set-point, enable/disable of the boiler.
  - 4. The boiler shall have a built-in Cascade with sequencing options for "efficiency optimized" modulation logic; capable of rotation while maintaining modulation of up to eight boilers without utilization of an external controller. Supply voltage shall be 120volt/60hz/1-ph.
  - 5. Built-in controls for each boiler shall incorporate Open Protocol Communications. Controls shall interface with the BMS system as outlined in section 23 09 00 HVAC INSTRUMENTATION AND CONTROLS. Communications shall be achieved by means of a job specific, boiler manufactures supplied and pre-programmed gateway device.
- C. Interface to Boiler Control Panel: BMS shall hard wire can hardware to boiler control panel to monitor, control, and display boiler status and alarms. Microprocessor interface noted in item B.5 above.
  - 1. Hardwired Points:
    - a. Monitoring: On/off status, common trouble alarm

- b. Control: On/off operation, hot water supply temperature set-point adjustment.

## 2.8 ELECTRICAL POWER

- A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in Division 26 Sections.
- B. The BOILER shall be equipped with two terminal strips for electrical connection.
  - 1. The low voltage connection board provided with 30 data points for safety and operating controls including: Alarm contacts, runtime contacts, louver proving switch, 2 flow switches, DHW tank thermostat, remote enable/disable (wall thermostat/zone control), system supply sensor, outdoor sensor, tank sensor, Modbus BMS signal and cascade control circuit.
  - 2. The high voltage terminal strip shall be provided for supply voltage. Supply voltage shall be 120v/1ph/60hz. The boiler may be factory trimmed for optional supply voltages of 208/3/60, 480/3/60, and 240/1/50.
  - 3. The high voltage terminal strip plus integral relays are provided for independent pump control of up to (3) pumps: 1) System pump, 2) Boiler pump, 3) Domestic Hot Water pump.
  - 4. The System pump and Boiler pump dry contacts shall be sized for up to 1.5-hp @ 120/1/60 or 3-hp @ 240/1/50, or 30 amps.

## 2.9 CAPACITIES AND CHARACTERISTICS:

- A. Refer to plan schedules for additional information.
  - 1. Heating Medium: Hot water.
  - 2. Design Water Pressure Rating: 160 psi
  - 3. Safety Relief Valve Setting: 50 psig standard. Optional range up to 160 psig
  - 4. Design Pressure Drop: 5 psig
  - 5. Minimum Efficiency: 92% AFUE
  - 6. Number of Passes: Single
  - 7. Blower: Variable Speed
  - 8. Electrical Characteristics: refer to plan schedules.

## 2.10 SOURCE QUALITY CONTROL

- A. Test and inspect factory-assembled boilers, before shipping, according to ASME Boiler and Pressure Vessel Code.
- B. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test. The boilers shall have an independent laboratory rating for Oxides of Nitrogen (NOx) to meet the requirements of South Coast Air Quality Management District in Southern California and the requirements of Texas Commission on Environmental Quality. The manufacture shall verify proper operation of the burner, all controls and the heat exchanger by connection to water and venting for a factory fire test prior to shipping.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Before boiler installation, examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting boiler performance, maintenance, and operations.
  - 1. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- B. Examine mechanical spaces for suitable conditions where boilers will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 SKID MOUNTING**

- A. Refer to Section 23 50 00 Factory Assembled, Skid Mounted, Packaged Boiler Plant for additional details.
- B. All the components in this specification, unless otherwise specified, shall be mounted on steel skid(s) with the appropriate number of lifting fork holes to insure ease of movement and installation of system. The steel skid shall be constructed of ¼ inch thick steel decking material welded to 4-inch structural steel channel primed and painted. All components shall be welded or bolted to the deck of the skid. Boiler feedwater piping shall include a check valve, globe valve, and discharge pressure gauge, in order to properly facilitate throttling of the pump discharge, to position the pumps operating characteristics at the correct point on its corresponding pump curve. All cold water piping will be sweated/threaded copper. All blow-down piping and fittings are to be forged steel. All interconnecting steel piping shall be SA 53 F schedule 80. All piping shall be factory supported, unless otherwise clearly defined on the factory submittal drawings. All specified components are to be completely factory piped to allow for single point field connections for cold water make-up, drain, steam supply, condensate return, and fuel. Connections for air/steam/fuel venting, as well as safety relief valve outlets, shall not be manifolded together, and must be accomplished per 2014 New York City Construction Codes. All specified components shall be completely factory wired to allow for a single point field power, fused disconnect connection. Multiple skid assemblies may also require some field re-assembly and wire pulling of loosely shipped, factory supplied components and wire. This re-assembly of loosely shipped components shall be provided by others, during the installation process.

**3.4 BOILER INSTALLATION**

- A. Equipment Mounting: Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases specified under another section.
  - 1. Coordinate sizes and locations of concrete bases with actual equipment provided.
  - 2. Construct bases to withstand, without damage to equipment, seismic force required by code.

3. Construct concrete bases 4 inches high and extend base not less than 6 inches in all directions beyond the maximum dimensions of boiler unless otherwise indicated or unless required for seismic anchor support.
  4. Minimum Compressive Strength: 5000 psi at 28 days.
  5. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
  6. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
  7. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  8. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Install gas-fired boilers according to NFPA 54.
- C. Assemble and install boiler trim.
- D. Install electrical devices furnished with boiler but not specified to be factory mounted.
- E. Install control wiring to field-mounted electrical devices.

### 3.5 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to boiler to allow service and maintenance.
- C. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.
- D. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified under another section of this work.
- E. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas train connection. Provide a reducer if required.
- F. Connect hot-water piping to supply- and return-boiler tapplings with shutoff valve and union or flange at each connection.
- G. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tapplings with shutoff valve and union or flange at each connection.
- H. Install piping from safety relief valves to nearest floor drain.
- I. Install piping from safety valves to drip-pan elbow and to nearest floor drain.
- J. Boiler Venting:
1. Install flue venting kit and combustion-air intake.
  2. Connect full size to boiler connections.
  3. Comply with requirements in Section 23 51 00 "Breechings, Chimneys, and Stacks."

- K. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- L. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

### 3.6 FIELD QUALITY CONTROL

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform special inspections only. The Contractor shall be responsible for conducting and coordinating all required progress inspections and their associated expenses, and submitting testing and inspection data to the Commissioner.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Perform installation and startup checks according to manufacturer's written instructions.
  - 2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
  - 3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
    - a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level and water temperature steam pressure.
    - b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Prepare test and inspection reports.
- F. Occupancy Adjustments: When requested within 24 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to five visits to Project during other than normal occupancy hours for this purpose.
- G. Performance Tests:
  - 1. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
  - 2. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
  - 3. Perform field performance tests to determine capacity and efficiency of boilers.
    - a. Test for full capacity.
    - b. Test for boiler efficiency at low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20 percent of full capacity. Determine efficiency at each test point.
  - 4. Repeat tests until results comply with requirements indicated.
  - 5. Provide analysis equipment required to determine performance.
  - 6. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are not adequate.

7. Notify Commissioner in advance of test dates.
8. Document test results in a report and submit to Commissioner.

**3.7 DEMONSTRATION**

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and maintain draft control devices. Refer to the DDC General Conditions for instruction requirements.

**END OF SECTION 23 52 16**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 55 33****GAS-FIRED UNIT HEATERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract.

**1.2 SUMMARY**

- A. Section includes gas-fired unit heaters.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 SUBMITTALS**

- A. **Product Data:** For each type of gas-fired unit heater.

1. Include rated capacities, operating characteristics, and accessories.
- B. Shop Drawings: For gas-fired unit heaters. Include plans, elevations, sections, and attachment details.
  1. Prepare by or under the supervision of a qualified professional engineer detailing fabrication and assembly of gas-fired unit heaters, as well as procedures and diagrams.
  2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
  3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  4. Include diagrams for power, signal, and control wiring.

#### 1.7 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  1. Structural members to which equipment will be attached.
  2. Items penetrating roof and the following:
    - a. Vent and gas piping rough-ins and connections.
- B. Seismic Qualification Certificates: For gas-fired unit heaters, accessories, and components, from manufacturer.
  1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- C. Field quality-control reports.
- D. Sample Warranty: For special warranty.

#### 1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For gas-fired unit heaters to include in emergency, operation, and maintenance manuals.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

1.10 MANUFACTURER'S WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace heat exchanger of gas-fired unit heater that fails in materials or workmanship within specified warranty period.

1. Warranty Period: 3 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

- A. Reznor  
B. Indecco  
C. Vulcan  
D. Or approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Gas-fired unit heaters shall withstand the effects of earthquake motions determined according to ASCE/SEI 7
1. Seismic Fabrication Requirements: Fabricate and reinforce suspension attachments of gas-fired unit heaters, accessories mountings, and components with reinforcement strong enough to withstand seismic forces defined in Section 23 05 48 "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components" when gas-fired unit heater is anchored to building structure.
2. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Capacities and Characteristics: See schedules on M-600.

2.3 MANUFACTURED UNITS

- A. Description: Factory assembled, piped, and wired, and complying with ANSI Z83.8/CSA 2.6.
- B. Gas Type: Design burner for natural gas having characteristics same as those of gas available at Project site.
- C. Type of Venting: Gravity vented.
- D. Housing: Steel, with integral draft hood and inserts for suspension mounting rods.
1. External Casings and Cabinets: Baked enamel over corrosion-resistant-treated surface.
2. Discharge Louvers: Independently adjustable, horizontal blades.
3. Discharge Nozzle: Discharge at 25 to 65 degrees (0.44 to 1.13 radians)] from horizontal.
- E. Accessories:

1. Four-point suspension kit.
  2. Power Venter: Centrifugal aluminized-steel fan, with stainless-steel shaft; 120-V ac motor.
  3. Concentric, Terminal Vent Assembly: Combined combustion-air inlet and power-vent outlet with wall or roof caps. Include adapter assembly for connection to inlet and outlet pipes, and flashing for wall or roof penetration.
- F. Heat Exchanger: Aluminized steel.
- G. Burner Material: Aluminized steel with stainless-steel inserts.
- H. Propeller Unit Fan:
1. Formed-steel propeller blades riveted to heavy-gage steel spider bolted to cast-iron hub, dynamically balanced, and resiliently mounted.
  2. Fan-Blade Guard: Galvanized steel, complying with OSHA specifications, removable for maintenance.
- I. Centrifugal Unit Fan:
1. Steel, centrifugal fan dynamically balanced and resiliently mounted.
  2. Belt-Driven Drive Assembly:
    - a. Resiliently mounted to housing, with the following features:
      - 1) Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
      - 2) Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
      - 3) Pulleys: Cast-iron, adjustable-pitch motor pulley.
- J. Motors:
1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 230513 "Common Motor Requirements for HVAC Equipment."
  2. Enclosure Materials: Rolled steel.
  3. Motor Bearings: as required
  4. Unusual Service Conditions:
    - a. Ambient Temperature: 15 deg F.
  5. Efficiency: Premium efficient.
- K. Controls: Regulated redundant gas valve containing pilot solenoid valve, electric gas valve, pilot filter, pressure regulator, pilot shutoff, and manual shutoff all in one body.
1. Gas Control Valve: Two stage
  2. Ignition: Electronically controlled electric spark with flame sensor.
  3. Fan Thermal Switch: Operates fan on heat-exchanger temperature.
  4. Vent Flow Verification: Flame rollout switch
  5. Control transformer.
  6. High Limit: Thermal switch or fuse to stop burner.
  7. Thermostat: Devices and wiring are specified in Section 230923.27 "Temperature Instruments."
  8. Wall]-Mounted Thermostat:

- a. Two stage.
- b. Fan on-off-automatic switch.
- c. 24-V ac.
- d. 50 to 90 deg F (10 to 32 deg C) operating range.

L. Electrical Connection: Factory wire motors and controls for a single electrical connection.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

- A. Install and connect gas-fired unit heaters and associated gas and vent features and systems according to NFPA 54 NYC DOB and FDNY regulation, and manufacturer's written instructions.

### 3.2 EQUIPMENT MOUNTING

- A. Suspended Units: Suspend from substrate using threaded rods, spring hangers, and building attachments. Secure rods to unit hanger attachments. Adjust hangers so unit is level and plumb.
- B. Substrate-Mounted Units: Provide supports connected to substrate. Secure units to supports.
  - 1. Spring hangers and seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC."
  - 2. Threaded Rods, Spring Hangers, and Building Attachments: Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment" and Section 230548 "Vibration and Seismic Controls for HVAC."
  - 3. Threaded Rods, Spring Hangers, Building Attachments, and Seismic Restraints: Comply with requirements in Section 230529 "Hangers and Supports for HVAC Piping and Equipment." and Section 230548 "Vibration and Seismic Controls for HVAC."
  - 4. Anchor the unit to resist code-required horizontal acceleration.

### 3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to gas-fired unit heater, allow space for service and maintenance.
- C. Gas Piping: Comply with the Plumbing section on Natural gas piping. Connect gas piping to gas train inlet; provide union with enough clearance for burner removal and service.
- D. Vent Connections: Comply with Section 23 51 23 "Gas Vents."
- E. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- F. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

#### 3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a service representative that is properly trained by the manufacturer to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - 2. Verify bearing lubrication.
  - 3. Verify proper motor rotation.
  - 4. Test Reports: Prepare a written report to record the following:
    - a. Test procedures used.
    - b. Test results that comply with requirements.
    - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- C. Gas-fired unit heater will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

#### 3.5 ADJUSTING

- A. Adjust initial temperature and humidity set points.
- B. Adjust burner and other unit components for optimum heating performance and efficiency.

#### 3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and service gas-fired unit heaters.

**END OF SECTION 23 55 33**

**SECTION 23 57 00****HEAT EXCHANGERS FOR HVAC****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS.
- D. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING.
- E. Section 23 09 00 – HVAC INSTRUMENTATION AND CONTROLS.
- F. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Furnish and install on suitable pipe frame on structural steel supports, converters and exchangers of size and capacity as scheduled on the drawings. Manufacturer shall be as noted on drawings or approved equal.
- B. This Section includes:
  - 1. Shell-and-tube Heat Exchangers
  - 2. Flat plate heat exchangers.
  - 3. Automatic Backflushing System

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile

Organic Compound (Voc) Limits for Adhesives, Sealants, Paints And Coatings for Leed Buildings” where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements

**1.5 SUBMITTALS**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings: Signed and sealed by a qualified professional engineer licensed in the State of New York. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 1. Design Calculations: Calculate requirements for selecting seismic restraints and for designing bases.
  - 2. Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment.
- D. Coordination Drawings: Equipment room, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
  - 1. Tube-removal space.
  - 2. Structural members to which heat exchangers will be attached.
- E. Manufacturer Seismic Qualification Certification: Submit certification that heat exchanger, accessories, and components will withstand seismic forces defined in Division 23 Section "Vibration Isolation, Seismic, Flood and Wind Load Restraints For HVAC Components." Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- F. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.

**1.6 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Product Options: Drawings indicate size, profiles, performance, and dimensional requirements of heat exchangers and are based on the specific equipment indicated. Refer to Division 01 Section "Product Requirements."
- C. ASME Compliance: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.
- D. Registration: Fabricate and label shell-and-tube heat exchangers to comply with the Tubular Exchanger Manufacturers Association's standards.

**PART 2 - PRODUCTS****2.1 HEAT EXCHANGERS – GENERAL**

- A. Furnish and install on suitable pipe frame on structural steel supports exchangers of size and capacity as scheduled on the drawings.
- B. The contractor shall furnish and install all auxiliary steel required to support and restrain all converters and exchangers.
- C. All heat exchangers shall be selected for a .0005 fouling factor.
- D. Convertors and exchangers shall be ASME constructed and furnished with insurance certificates.
- E. Provide automatic backflush valve for free cooling heat exchangers on open side.

**2.2 SHELL-AND-TUBE HEAT EXCHANGERS**

- A. Manufacturers:
  - 1. Subject to compliance with requirements, provide products by one of the following manufacturers:
    - a. API Heat Transfer Inc.
    - b. Armstrong Pumps, Inc.
    - c. ITT Industries; Bell & Gossett.
    - d. Taco, Inc.
    - e. Or approved equal.
- B. General:
  - 1. Water to water exchangers shall conform to the following:
    - a. Primary water through tubes, secondary water in baffled shell. Channel type construction with removable cover plate for inspection of tubes with breaking pipe connections. Straight tube connections with fixed tube sheet at each end of the shell. Removable return head at far end. Shell and channel shall be fabricated steel ASTM-A-285 Gr. C Tubes shall be seamless copper ¾" OD x 18 ga. Shell flanges and cover plate shall be steel ASTM – A 201 Gr. B Baffles to be steel.

Provide relief valve or valves on secondary waterside between exchanger and shut off valves set at 15 psi above the normal working water pressures at the exchanger. Relief valves shall be furnished by the exchanger manufacturer in conformance with 2014 New York City Construction Codes.

- C. Configuration: Straight tube with removable bundle.
- D. Shell Materials: ASTM A-285 Gr. C Steel. Shell flanges and cover plate shall be steel ASTM A-201 Gr.B.
- E. Head:
  - 1. Materials: Fabricated stainless steel with removable cover.
  - 2. Flanged and bolted to shell.
- F. Tube:
  - 1. Seamless copper tubes.
  - 2. Tube diameter is determined by manufacturer based on service.
- G. Tubesheet Materials: Steel tubesheets.
- H. Baffles: Steel.
- I. Piping Connections:
  - 1. Shell: Flanged inlet and outlet fluid connections, threaded drain, and vent connections.
  - 2. Head: Flanged inlet and outlet fluid connections.
  - 3. Provide relief valve or valves on secondary water side between exchanger and shut-off valves set 15 p.s.i. above the normal working water pressures at the exchanger. Relief valves shall be furnished by exchanger manufacturer in conformance with 2014 New York City Construction Codes.
- J. Support Saddles:
  - 1. Fabricated of material similar to shell.
  - 2. Foot mount with provision for anchoring to support.
  - 3. Fabricate attachment of saddle supports to pressure vessel with reinforcement strong enough to resist heat-exchanger movement during a seismic event when heat-exchanger saddles are anchored to building structure.
- K. Testing and Certification:
  - 1. Heat exchangers are to be hydrostatically tested at the factory.
  - 2. All factory hydrostatic testing of the heat exchangers is to be scheduled in conjunction with the Commissioner.
  - 3. The heat exchanger manufacturer is required to make factory representation available should field thermal and/or pressure testing be required.

## 2.3 FLAT PLATE HEAT EXCHANGERS

- A. Manufacturers:

1. Subject to compliance with requirements, provide products by one of the following manufacturers:
  - a. Alfa Laval Thermal, Inc.
  - b. API Heat Transfer Inc.
  - c. Armstrong Pumps, Inc.
  - d. ITT Industries; Bell & Gossett.
  - e. Mueller, Paul Company.
  - f. Or approved equal.
- B. Configuration: Freestanding assembly consisting of frame support, top and bottom carrying and guide bars, fixed and movable end plates, tie rods, individually removable plates, and one-piece gaskets.
- C. The plate heat exchangers shall be shipped to the site as completely assembled units. The exchangers shall be pressure tested and flushed clean at the factory prior to shipment. All nozzle connections shall be factory sealed prior to shipment to prevent the entrance of foreign matter into the heat exchangers during shipment, storage and installation.
- D. Codes and Standards:
  1. The plate heat exchangers shall be factory tested in accordance with the requirements of Section VIII, Div. I of the ASME Code.
  2. Flanged nozzle connections shall conform to ANSI B16.5 standards, and shall be of the pressure rating design as indicated on the schedule or as specified under another section of this work.
  3. Pressure ratings assume full pressure on one side and zero pressure on the other side. Studded port construction is not acceptable.
- E. Design Requirements:
  1. Heat exchanger performance and design shall be in accordance with the schedule. Surface area shown per plate heat exchanger is the minimum acceptable. All performance calculations must include a minimum of ten percent (10%) additional surface for fouling. Calculated heat transfer surface area, with and without the additional fouling surface, must be indicated on the manufacturer's submitted performance calculation data sheets. Heat transfer rates fouled in excess of 750 BTU/HR/FT<sup>2</sup>/Deg. F are not acceptable.
  2. Pressure drops in pounds per square inch across each circuit of the plate heat exchanger indicated on the schedules are the maximum allowed.
  3. Heat exchanger design is to be of diagonal flow to optimize fluid flow distribution across the plate surfaces.2.3
- F. Frame:
  1. Frame shall be constructed of carbon steel in sufficient thickness and strength to operate within the designated design and test pressures. Design strength calculations are to be submitted at the Commissioner's request.
  2. Frame tightening bolts shall receive a rust-protective coating of molybdenum grease and shall also be covered with plastic sleeves.
  3. All exposed frame parts shall be surface prepared to an SSP-6 finish, receive two prime coats of a glycerophthalic zinc chromate primer and two finish coats of an epoxy enamel to a minimum dry film thickness of 3mm.
  4. Capacity to accommodate 25 percent additional plates.

5. Painted carbon steel with provisions for anchoring to support.
  - G. Top and Bottom Carrying and Guide Bars: Painted carbon steel, aluminum, or stainless steel.
    1. Fabricate attachment of heat-exchanger carrying and guide bars with reinforcement strong enough to resist heat-exchanger movement during a seismic event when heat-exchanger carrying and guide bars are anchored to building structure.
  - H. End-Plate Material: Painted carbon steel.
  - I. Tie Rods and Nuts: Steel or stainless steel.
  - J. Plate Material:
    1. Plates shall be fabricated from SA312-304 stainless steel having a 2B finish. Pattern shall be Chevron and shall be of a minimum thickness as indicated for the following Design/Test Pressure requirements:
      - a. 150 psi design/225 psi test - .024-inches minimum plate thickness before stamping
      - b. 300 psi design/450 psi test - .032-inches minimum plate thickness before stamping
  - K. Gasket Material: One piece molded design formulated of Nitrile rubber. Inactive port gasket areas shall be vented to the exterior in such a manner that no mixing can occur between fluid circuits.
  - L. Nozzles shall be flanged and shall comply with the requirements of ANSI B 16.5 for a 300 pound - 150-pound rating, as applicable.
  - M. Heat exchanger frames shall have a minimum of two external lifting lugs per frame.
  - N. Piping Connections:
    1. End plate with welded carbon-steel nozzles. Threaded pipe connection for 2" and smaller; carbon-steel flanged pipe connection for larger sizes.
  - O. Enclose plates in a solid stainless-steel removable shroud.
  - P. Testing and Certification:
    1. Plate heat exchangers are to be hydrostatically tested at the factory.
    2. All factory hydrostatic testing of the plate heat exchangers is to be scheduled in conjunction with the Commissioner.
    3. The plate heat exchanger manufacturer is required to make factory representation available should field thermal and/or pressure testing be required.
- 2.04 AUTOMATIC BACKFLUSHING SYSTEM
- A. General:
    1. An Automatic Backflushing System (ABS) shall be supplied as an integral part of each plate and frame heat exchanger to maintain optimum heat transfer surface cleanliness.
  - B. Manufacturers:

1. Subject to compliance with requirements, provide products by the following:

- a. Water Technology of Pensacola, Inc.
- b. Hydac
- c. WSA Engineered Systems
- d. Or approved equal.

C. Product Description:

1. The ABS automatically maintains clean heat transfer surfaces without interrupting normal equipment operation.
2. The ABS System consists of an integrally mounted 4-way reversing valve that permits the reversing of the direction of water flow in the heat exchanger. This flow reversal has been found to significantly reduce fouling in the plate and frame heat exchanger. The flow reversal is controlled by a control panel mounted to the plate and frame heat exchanger or at a separate location as desired. The frequency of flow reversal is set up to match job conditions. Normally, flow reversal would occur once every six to eight hours.

D. Equipment Specification:

1. Four-Way Valve: Valve shall be per Water Technology's standard HX or CX configuration and shall be of steel construction (A36 or better), positive sealing type with all internal sealing parts of hard rubber and 304 stainless steel. It shall be manufactured in accordance with ASME Unfired Pressure Vessel Code Specification per Section VIII for operation at a minimum system working pressure of 125 PSIG with a maximum system differential of 35 PSIG. The valve will be mounted as an integral part of the plate and frame heat exchanger. It shall be hydro-statically tested to 1.5 times designed working pressure. Valve shall allow for manual fail-safe turning, and have a mechanical position indicator.
2. Electronic Actuator: To be pre-mounted on the valve. Double actuating cylinder to assure trouble-free operation.
3. Position Control Switches: Micro-switch to be supplied for valve to indicate complete turn of valve in normal and reverse flow.
4. Control Panel: The on-load control shall have the following features:
  - a. Nema 4x enclosure with mounting bracket.
  - b. Cycle counter.
  - c. 24-hour timer to automatically initiate the on-load cleaning cycle.
  - d. Manual Override of pre-set cleaning cycle.
  - e. Power On light
  - f. Diverter Position Indicator Lights:
    - 1) Normal Flow
    - 2) Reverse Flow
    - 3) Malfunction Light: To indicate slow turning or incomplete valve turning.
    - 4) 4-way solenoid valve for actuator operation to be mounted at control panel or actuator.
    - 5) Electric Unloading Feature
    - 6) Flow Switch Bypass
  - g. Operation and Installation Manual: Two (2) copies to be provided.
  - h. Shop Testing: In addition to tests specified for the valve, Manufacturer will functionally test the entire system prior to shipment including valve, actuator and control panel.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine areas for compliance with requirements for installation tolerances and for structural rigidity, strength, anchors, and other conditions affecting performance of heat exchangers.
  - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 HEAT-EXCHANGER INSTALLATION**

- A. Install shell-and-tube heat exchangers on saddle supports.
- B. Install shell-and-tube heat exchangers on concrete base.
- C. Provide automatic backflush valve for free cooling heat exchangers on open side.
- D. Concrete Bases: Anchor heat exchanger to concrete base.
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 5. Cast-in-place concrete materials and placement requirements are specified in Division 03.

**3.4 CONNECTIONS**

- A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Maintain manufacturer's recommended clearances for service and maintenance. Install piping connections to allow service and maintenance of heat exchangers.
- C. Install shutoff valves at heat-exchanger inlet and outlet connections.
- D. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full size of valve connection, to floor drain.
- E. Install vacuum breaker at heat-exchanger steam inlet connection.
- F. Install hose end valve to drain shell.

**3.5 FIELD QUALITY CONTROL**

- A. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.6 CLEANING

- A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and maintain heat exchangers. Refer to the DDC General Conditions for instruction requirements.

**END OF SECTION 23 57 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 64 18****HEAT RECOVERY CHILLER HEATER PACKAGED MODULAR WATER CHILLER****PART 1 - GENERAL****1.01 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 13 – MOTORS FOR HVAC EQUIPMENT.
- D. Section 23 05 14 – VARIABLE FREQUENCY MOTOR DRIVES.
- E. Section 23 05 19 – METERS AND GAUGES FOR HVAC PIPING.
- F. Section 23 05 23 - VALVES FOR HVAC PIPING.
- G. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS.
- H. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING.
- I. Section 23 08 00 – COMMISSIONING OF HVAC.
- J. Section 23 09 00 – HVAC INSTRUMENTATION AND CONTROLS
- K. Section 23 09 05 - SEQUENCES OF OPERATION FOR HVAC CONTROLS.
- L. Section 23 25 00 – HVAC WATER TREATMENT.
- M. Section 23 25 10 – HVAC WATER FILTRATION SYSTEM.
- N. Section 23 82 50 – MISCELLANEOUS MECHANICAL SYSTEMS.
- O. This section is a part of each Division 23 00 00 section.

**1.02 SUMMARY**

- A. Provide factory fabricated and factory run tested, outdoor, packaged, modular, air-cooled centrifugal chillers with integral free cooling complete with base and frame with the capacities as scheduled on the Documents.
- B. Each chiller shall consist of hermetic scroll compressors, brazed plate evaporator, brazed plate water-cooled condensers, control system and all components necessary for proper unit operation.
- C. Refrigerant shall be R-410A.

- D. Compressor motors must not exceed 15 Horsepower
- E. Provide all related appurtenances to allow for a complete, fully operational system that will supply chilled water for HVAC use, whether indicated herein or which may be reasonably implied as essential, irrespective of it being mentioned in the Drawings and Specifications or not.
- F. System Description: Chiller shall incorporate Scroll type compressors and can consist of multiple modules. Each refrigerant circuit shall consist of an individual compressor set, common dual circuit evaporator, dual circuited condenser, electronic expansion valves, liquid line solenoid valves, filter driers, fin and tube condenser, and control system. Each circuit shall be constructed to be independent of other circuits from a refrigeration and electrical stand-point. The multi-circuit chiller must be able to produce chilled water even in the event of a failure of one or more refrigerant circuits.
- G. Chiller Modules shall be ETL listed in accordance with UL Standard 1995, CSA certified per Standard C22.2#236. Chiller modules shall be AHRI certified.
- H. The manufacturer shall, prior to submitting bid, examine the complete set of the Contract Documents in order to verify that the chillers will perform under installed conditions.
- I. Manufacturer shall certify that the performance of the chillers will meet the requirements as indicated on the schedules, including, but not limited to the entering air-dry bulb temperatures, entering and leaving chilled water temperatures, entering and leaving condenser water temperatures, water flow rates, compressor motor horsepowers, pressure drops, etc.
- J. The manufacturer shall also certify that the space requirements and location for the chillers as indicated on the contract requirements are sufficient for a complete, safe, fully operational, maintainable and satisfactory installation.
- K. All equipment and material to be furnished and installed on this project shall be UL or ETL listed, in conformity with the requirements of all New York Department of Buildings and suitable for its intended use on this project.
- L. Grooved piping or connections shall not be unacceptable.

#### 1.03 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile

Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.04 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**1.05 REFERENCED STANDARDS**

- A. All factory fabricated chillers and accessories shall be designed, manufactured and tested in accordance with the latest applicable industry standards including, but not limited to the following:
  - 1. ANSI/ASHRAE Standard 15
  - 2. ASHRAE 147
  - 3. ANSI B31.5 Refrigeration Piping Code.
  - 4. ARI 550/590
  - 5. ANSI/UL 465
  - 6. ANSI/ASME SEC 8
  - 7. ANSI/ASHRAE 90.1
  - 8. ANSI/ ASME SEC 8
  - 9. ANSI/ UL 465
  - 10. ANSI/UL-1995
  - 11. ASME Section VIII Unified Pressure Vessel Code.
  - 12. UL Standard.
  - 13. OSHA – Occupational Safety and Health Act.
  - 14. ISO – International Organization for Standardization

**1.06 DEFINITIONS**

- A. Chiller or chillers: Fully assembled refrigeration machine(s) consisting of multiple modules.
- B. Refrigeration machine: Chiller or chillers, fully assembled, consisting of multiple modules.
- C. BMS: Building management system.
- D. COP: Coefficient of performance. The ratio of the rate of heat removal to the rate of energy input using consistent units for any given set of rating conditions.
- E. EER: Energy-efficiency ratio. The ratio of the cooling capacity given in terms of Btu/h to the total power input given in terms of watts at any given set of rating conditions.
- F. GFI: Ground fault interrupt
- G. IPLV: Integrated part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and referenced to ARI standard rating conditions.
- H. kW/Ton (kW/kW): The ratio of total power input of the chiller in kilowatts to the net refrigerating capacity in tons (kW) at any given set of rating conditions.

- I. NPLV: Nonstandard part-load value. A single-number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and intended for operating conditions other than the ARI standard rating conditions.

#### 1.07 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Centrifugal chillers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
- B. Performance Tolerance: Comply with the following in lieu of ARI 550/590:
  - 1. Allowable Capacity Tolerance: Two (2) percent.
  - 2. Allowable IPLV/NPLV Performance Tolerance: Two (2) percent.
  - 3. Allowable Capacity Tolerance: Zero percent.
  - 4. Allowable Full-Load Energy Efficiency Tolerance: Zero percent.
  - 5. Allowable Part-Load Energy Efficiency Tolerance: Zero percent.
- C. AHRI Rating: Rate water chiller performance according to requirements in AHRI 550/590.
- D. ASHRAE Compliance: ASHRAE 15 for safety code for mechanical refrigeration.
- E. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- G. Comply with NFPA 70.
- H. Comply with requirements of UL 1995, "Heating and Cooling Equipment," and include label by a qualified testing agency showing compliance.
- I. Operation Following Loss of Normal Power:
  - 1. Equipment, associated factory- and field-installed controls, and associated electrical equipment and power supply connected to backup power system shall automatically return equipment and associated controls to the operating state occurring immediately before loss of normal power without need for manual intervention by an operator when power is restored either through a backup power source, or through normal power if restored before backup power is brought on-line.
  - 2. See drawings for equipment served by backup power systems.
  - 3. Provide means and methods required to satisfy requirement even if not explicitly indicated.

#### 1.08 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit shop drawings and product data in accordance with contract specifications.
- C. Submittals shall include the following:

1. Dimensioned plan and elevation view drawings, required clearances, and location of all field connections.
  2. Summary of all auxiliary utility requirements such as: electricity, water, etc. Summary shall indicate quality and quantity of each required utility.
  3. Single-line schematic drawing of the power field hookup requirements, indicating all items that are furnished.
  4. Chiller Controls:
    - a. Schematic diagram of control system indicating points for field connection. Diagram shall fully delineate field and factory wiring.
    - b. Chiller control hardware layout, wiring diagrams depicting factory installed wiring, field installed wiring with points of connection, and points of connection for BMS control/interface points.
    - c. Sequence of operation depicting overview of control logic used.
  5. Installation and Operating Manuals.
  6. Manufacturer certified performance data at full load in addition to either IPLV or NPLV.
  7. Installation manual.
- D. Product Data: For each type of product.
1. Include refrigerant, rated capacities, operating characteristics, and furnished specialties and accessories.
  2. Performance at AHRI standard conditions and at conditions indicated.
  3. Performance at AHRI standard unloading conditions.
  4. Minimum evaporator flow rate.
  5. Refrigerant capacity of water chiller.
  6. Oil capacity of water chiller.
  7. Fluid capacity of evaporator.
  8. Characteristics of safety relief valves.
  9. Force and moment capacity of each piping connection.
  10. Minimum entering air.
  11. Performance at varying capacities with constant design condenser-fluid temperature. Repeat performance at varying capacities for different condenser-fluid temperatures from design to minimum in 5 deg F increments.
- E. Sustainable Design Submittals
1. Product Data: For refrigerants.
  2. Product Data: For energy performance.
- F. LEED Submittal:
1. Product Data for Credit EA 4: Documentation required by Credit EA 4 indicating that equipment and refrigerants comply.
- G. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
1. Assembled unit dimensions.
  2. Weight and load distribution.
  3. Required clearances for maintenance and operation.
  4. Size and location of piping and wiring connections.
  5. Diagrams for power, signal, and control wiring.

**1.09 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings:
  - 1. Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
    - a. Structural supports.
    - b. Piping roughing-in requirements.
    - c. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
    - d. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
  - 2. Coordination drawings showing plan, section and elevation views.
  - 3. Each view to show screened background with the following:
    - a. Column grids, beams, columns, and concrete housekeeping pads.
    - b. Layout with walls, floors, and roofs, including each room name and number.
    - c. Equipment and products of other trades that are located in vicinity of chillers and part of final installation, such as plumbing systems.
- B. Certificates: For certification required in "Quality Assurance" Article.
- C. Seismic Qualification Data: Certificates, for water chillers, accessories, and components, from manufacturers.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Installation instructions.
- E. Source quality-control reports.
- F. Startup service reports.
- G. Warranty: For special warranty.

**1.10 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.
- B. Spare Parts List: Recommended spare parts list with quantity for each.
- C. Touchup Paint Description: Detailed description of paint used in application of finish coat to allow for procurement of a matching paint.
- D. Instructional Videos: Including those that are prerecorded and those that are recorded during instruction.

**1.11 SERVICE MATERIAL SUBMITTALS**

- A. Tool kit to include the following:
  - 1. A tool kit specially designed by chiller manufacturer for use in servicing chiller(s) furnished.
  - 2. Special tools required to service chiller components not readily available to service personnel in performing routine service.
  - 3. Lockable case with hinged cover, marked with large and permanent text to indicate the special purpose of tool kit, such as "Chiller Tool Kit.
  - 4. A list of each tool furnished. Permanently attach the list to underside of case cover.
- B. Touchup Paint: 32 oz. container of paint used for finish coat. Label outside of container with detailed description of paint to allow for procurement of a matching paint in the future.

**1.12 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Company specializing in manufacture of refrigeration machines with ten years minimum experience.
- C. Chiller shall be manufactured in a facility, which has been registered by Underwriters' Laboratories, Inc. (UL) to the International Organization for Standardization ISO Series Standards for quality.
- D. ARI Certification: Certify chiller according to ARI 550/590 certification program. Chillers must be certified as shipped and not altered in any way that would affect AHRI certification.
- E. ARI Rating: Rate chiller performance according to requirements in ARI 550/590.
- F. ASHRAE Compliance:
  - 1. ASHRAE 15 for safety code for mechanical refrigeration.
  - 2. ASHRAE 147 for refrigerant leaks, recovery, and handling and storage requirements.
- G. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2013.
- H. ASME Compliance: Fabricate and label chillers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, as applicable to chiller design.
- I. Compressor impellers shall be dynamically balanced and over-speed tested by the manufacturer at a minimum of 120% design operating speed. Each compressor assembly shall undergo a mechanical run-in test to verify vibration levels and oil pressures and temperatures are within acceptable limits.
- J. Entire chiller assembly shall be proof tested at 232 psig and leak tested at 355 psig with a tracer gas mixture on the refrigerant side. The leak test shall not allow any leaks greater than 0.5 oz/year of refrigerant. The waterside of each heat exchanger shall be hydrostatically tested at 1.5 times rated working pressure.
- K. Chiller and VFD shall be factory wired and tested together to verify proper starter operation prior to shipment.

- L. All motors controlled by VFD shall be compatible for inverter duty (VFD) operation and fully tested at the factory
- M. Comply with NFPA 70.
- N. Comply with requirements of UL and include label by a qualified testing agency showing compliance.
- O. Green Seal Compliance: Signed by Green Seal certifying compliance with GS-31.
- P. All electrical fitting connections shall be watertight.

#### 1.13 VERIFICATION OF CAPACITY AND EFFICIENCY FACTORY RUN-IN TEST

- A. The completed chiller (each unit) shall be factory performance tested, before shipment, according to ARI 550/590 procedures and tolerances, under full and partial load conditions in an ARI certified test facility. The manufacturer shall supply a certified test report to confirm performance as specified. Proper ARI certification documents for the test loop shall be made available for inspection.
- B. Tonnage shall be measured on the water side of the evaporator.
- C. Each chiller shall undergo a series of factory performance tests to ensure that the completed unit is leak tight, that all electrical components operate as intended, and that every aspect of unit fabrication meets stringent quality standards in accordance with good practice and the manufacturer's quality assurance requirements. Chiller shall be fully assembled in factory and tested in the factory.
- D. Factory test and inspect evaporator, condenser, and heat-reclaim condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- E. Pressure test fluid side of chiller modules to 1.5 times the rated pressure. Pressure proof test refrigerant side to a minimum of 45 psig. Vacuum and pressure test for leaks.
- F. Factory testing using components (such as vessels) other than the actual components to be installed in the field, or field run-testing in lieu of factory run-testing, shall not be acceptable.
- G. Test at the following conditions:
  - 1. Design conditions indicated.
  - 2. Reduction in capacity from design to minimum load in steps of 20% or 5 points selected by the Commissioner.
  - 3. The performance test shall be run in accordance with ARI 550/590 to include the following:
    - a. A downward temperature adjustment to the design leaving evaporator water temperature to adjust from the design fouling to the clean tube condition.
    - b. An upward temperature adjustment to the design entering condenser water temperature to adjust from the design fouling to the clean tube condition.
    - c. There shall be no exceptions to conducting the performance test with clean tubes and with temperature adjustments above. The manufacturer shall clean tubes, if necessary, prior to test to obtain a test fouling factor of .00025 hr. sq. ft. F/BTU for condenser and 0.0001 hr sq. ft. F/BTU for evaporator.

4. The performance test shall also include sound tests, according to ARI 575.
  5. Compressor assembly shall be tested. Vibrations shall not exceed 0.14 (inch per second) at the compressor housing
- H. Prepare test report indicating test procedures, instrumentation, test conditions, and results. Submit copy of results within one week of test date.
- I. The factory test instrumentation shall be per latest edition ARI Standard 550/590 and the calibration of all instrumentation shall be traceable to the National Institute of Standards Technology (formerly NBS).
- J. A certified test report of all data shall be submitted to the Commissioner prior to shipping. The factory certified test report shall be signed by an officer of the company from the manufacturer. Preprinted certification will not be acceptable; certification shall be in the original.
- K. The chiller automated controls test shall be executed to check for proper wiring and ensure correct controls operation. Provide demonstration of BACnet interface of all chiller data.
- L. For Performance Test Tolerances, see the requirements specified herein.
- M. Factory performance tests shall be witnessed by Commissioner. All expenses associated with the attendance Commissioner shall be borne by the Contractor.
- N. Notify Commissioner 14 days in advance of testing.
- O. The equipment will be accepted if the test procedures and results are in conformance with ARI Standard 550/590. If the equipment fails to perform within allowable tolerances, the manufacturer will be allowed to make necessary revisions to his equipment and retest as required.

#### 1.14 DELIVERY, STORAGE AND HANDLING

- A. Unit shall be stored and handled in accordance with manufacturer's instructions.
- B. Unit shall be shipped with all refrigerant piping and control-wiring factory installed.
- C. Unit shall be shipped charged with a nitrogen holding charge. The initial charge of refrigerant and oil will be supplied, shipped in containers and cylinders for field installation. Refrigerant shall be stored by the manufacturer, until requested for delivery by Contractor. Unit shall be field charged with refrigerant by the manufacturer.
- D. Unit shall be shrink wrapped at the factory prior to shipment with the lugs lifting expose. Unit shall be provided with waterproof protection for outdoor storage.
- E. Unit shall be shipped with firmly attached labels that indicate name of manufacturer, chiller model number, chiller serial number, and refrigerant used.
- F. Rigging: Refrigeration machine shall be fully assembled. Units field charged shall be pressure tested at the factory and charged, at the site, by the manufacturer. Machines requiring disassembly for rigging shall be factory assembled and pressure tested. Disassembly, reassembly in the field with new gaskets, pressure testing shall be by this Contractor and supervised by the manufacturer's representative and charging with refrigerant shall be by the manufacturer.

- G. Manufacturer's representative and this Contractor shall be at the storage site when each unit is delivered to verify that delivered unit set and means of storage meets manufacturer's requirements and shall indicate such approval in writing. Manufacturer's representative along with this contractor shall visit storage site monthly to verify same, and issue report to Commissioner after each visit.
- H. Manufacturer's representative shall be on site for delivery of each unit, unit set, and float units to verify that such operations meets manufacturer's requirements and shall indicate such approval in writing.
- I. Manufacturer shall visit site monthly after delivery to site to review condition, progress, address questions and check and log the holding charges or holding vacuums. They shall document each unit in writing.

#### 1.15 STORAGE AND HANDLING (BY INSTALLING CONTRACTOR)

- A. Store equipment in dry location. Protect from damage. Retain all protective covers.
- B. Provide shipping from riggers yard for all equipment and materials required for delivery and installation at site.

#### 1.16 COORDINATION

- A. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. Modules shall require clearance on only two sides in order to perform all service functions.

#### 1.17 WARRANTY

- A. Special Warranty: Manufacturer shall provide full parts and labor warranty coverage for entire chiller for a period of two years.
- B. Manufacturer shall provide full parts-only extended warranty coverage for entire chiller for an additional period of three years.
- C. Manufacturer shall provide full parts and labor warranty for the chillers' compressors for a period of five years.
- D. Warranty Period: Shall commence from date of Substantial Completion.

#### 1.18 START-UP SERVICE

- A. Manufacturer shall provide the services of a Factory Authorized Service Engineer to provide complete start-up supervision. After start-up a Manufacturer's Representative shall provide a minimum of 12-hours of operator instruction to the City of New York's service operators.

### PART 2 - PRODUCTS

#### 2.01 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Multi-Stack
2. Aermec
3. Climacool
4. Or approved equal.

## 2.02 HEAT RECOVERY CHILLER/HEATER MODULAR, WATER-COOLED CHILLER

- A. Description: Chiller/Heater shall be a heat recovery Chiller/Heater. Chiller/Heater shall be equipped with integral valves that allows the assembly to serve the following functions:
  1. Simultaneous Heating and Cooling Mode – Chiller/Heater assembly must be capable of varying the flow rate on the evaporator and condenser sides of the modules to maintain heating and cooling water set points simultaneously. Simultaneous loads must be satisfied with a single compression cycle and cannot use the source/sink solution as the means of energy transfer. Systems that require double compression to satisfy simultaneous loads are not acceptable.
  2. Cooling Dominant Mode – Chiller/Heater must be able to reject cooling dominant load to the source/sink. Cooling dominant modules must be capable of running at a lower head pressure than simultaneous modules to minimize power consumption.
  3. Heating Dominant Mode – Chiller/Heater must be able to satisfy heating dominant load by extracting heat from the source/sink. Heating dominant modules must be capable of running at optimal suction pressure to minimize power consumption.
  4. Packaged System Shall Be Reversing Valve Free Design – Chiller/Heater must be reversing valve free and optimize heat transfer in all control modes.
  5. Source/Sink Water Connections – Chiller/Heater must allow geothermal loop water to enter both the evaporator and condenser side of the machine.
- B. System shall be configured to allow modules to run in simultaneous Heat/ Cool mode, dominant cooling mode, and dominant heating mode. The Chiller/Heater must be capable of allowing modules to run in multiple modes at the same time to optimize efficiency..
- C. Chiller/Heater shall be designed to operate using R-410a Refrigerant.
- D. The liquid to be heated and cooled will be water containing corrosion inhibitors or other Multistack approved heat transfer fluid.
- E. System Description: Chiller/Heater shall incorporate Scroll-type compressors and consist of multiple refrigerant circuits. Each refrigerant circuit shall consist of an individual compressor (two compressors per circuit on Quad Scroll modules), condenser, evaporator circuit, electronic expansion valve (thermal expansion valve not acceptable), and control system. Each circuit shall be constructed to be independent of other circuits from a refrigeration and electrical standpoint. The multi-circuit Chiller/Heater must be able to produce chilled or heated water even in the event of a failure of one or more refrigerant circuits.
  1. Each circuit shall not contain more than 10 lb. of R-410a refrigerant.

## 2.03 Chiller/Heater

- A. The Chiller/Heater shall be designed for simultaneous variable heating and cooling capacity. VME II valve module shall contain fast-acting motorized butterfly valves that open/close on a command from the central control system. The motorized actuators shall be modulating NEMA 4X rated with easily visible position indicators and internal thermal motor overload protection.

Valves shall be fast acting type with a maximum stroke time (full closed to full open) of 30 seconds. Valve modules shall be built into pre-engineered headers and powered by the Chiller/Heaters buss bar. VME II valves shall be grooved connection type.

- B. Heat Exchanger Variable Flow Valves: Condenser and Evaporator heat exchangers shall be equipped with motorized modulating butterfly type valves driven independently by signals from the module controller and powered from the main power feed. The motorized actuators shall be modulating NEMA 2, IP-54 with a stroke time of no more than 35 seconds.

1. Optional: NEMA 4X rated valves with easily visible position indicators and internal thermal motor overload protection. Valves shall be fast acting type with a maximum stroke time (full closed to full open) of 15 seconds. NEMA 4X are standard on Quad Scroll Modules

Load side valves shall modulate to maintain modular leaving load temperatures. When heat exchangers are using sink/source due to unequal heating/cooling duty, master controller shall modulate valve to provide minimum required head pressure control in order to maximize efficiency of those Chiller/Heater modules and to provide equipment protection. All valves must be installed such that proper piping practices are observed, including proper distances before and after elbows.

C. General

1. All Modules shall be ETL listed in accordance with UL Standard 1995, CSA certified per Standard C22.2#236
2. All modules shall be AHRI certified according to the AHRI 550 certification program
3. Modules shall ship wired and charged with refrigerant. All modules shall be factory run tested prior to shipment on an AHRI certified test stand.
4. Compressors, heat exchangers, piping and controls shall be mounted on a heavy gauge steel frame. Electrical controls, contactors, and relays for each module shall be mounted within that module.

- D. Water Mains: Each module shall include supply and return mains for both load and source-sink water. Cut grooved end connections are provided for interconnection with grooved type couplings. Water Mains shall be installed such that they are beneath any power or control wiring so as to insure for safe operation in the event of condensation or minor piping leaks.

- E. Heat Exchangers: Each load and source-sink heat exchanger shall be brazed plate heat exchangers constructed of 316 stainless steel; designed, tested, and stamped in accordance with UL 1995 code for 650 psig refrigerant side working pressure and 360 psig water side working pressure. Both the load side and source-sink side heat exchangers shall be mounted below the compressor, to eliminate the effect of migration of refrigerant to the cold heat exchanger with consequent liquid slugging on start-up.

F. Total Access Design

1. Isolation valves shall be installed between the heat exchangers and water supply mains for heat exchanger isolation and removal without the requirement to remove a module or shut down the entire chiller allowing for total access to all serviceable components.

G. Sound Reduction Panel Package

1. Each module shall be supplied with a light weight aluminum frame with sound reduction panels. Panels are powder coated 20 gauge steel with 1" of fiberglass insulation to

reduce sound levels. Optional sound package will reduce sound pressure levels measured at 1 meter at a minimum of 12 dBA

- H. Compressor: Each module shall contain two hermetic scroll compressors independently circuited and mounted to the module with rubber-in-shear isolators. Each system also includes high discharge pressure and low suction pressure manual reset safety cut-outs.
- I. Master Controller
  - 1. Sequencing and operation of the of the various compressors, VME Isolating Valves, and Heat Exchanger Variable Flow Valves shall be performed and coordinated by a microprocessor based controller to maximize efficiency and minimize system energy usage.
  - 2. The Master Controller shall monitor and report the following on each refrigeration system:
    - a. Discharge Pressure Fault
    - b. Suction Pressure Fault
    - c. Suction Temperature
    - d. Load Leaving Water Temperature
    - e. Source-Sink Leaving Water Temperature
  - 3. The Master Controller shall be powered by the chillers single point power connection and shall monitor and report the following system parameters:
    - a. Cooling Load Water Entering and Leaving Temperature
    - b. Heating Load Water Entering and Leaving Temperature
    - c. Source-Sink Water Entering and Leaving Temperature
    - d. Load Water (both heating and cooling) and Source Sink Water Flow
  - 4. An out of tolerance indication from these controls or sensors shall cause a "fault" indication at the Master Controller and shutdown of that compressor with the transfer of load requirements to the next available compressor. In the case of a System Fault the entire Chiller/Heater will be shut down. When a fault occurs, the Master Controller shall record conditions at the time of the fault and store the data for recall. This information shall be capable of being recalled through the keypad of the Master Controller and displayed on the Master Controller's 2 line by 40 character back-lit LCD. A history of faults shall be maintained including date and time of day of each fault (up to the last 20 occurrences).
  - 5. Individual monitoring of leaving water temperatures from each refrigeration system shall be programmed to protect against heat exchanger freeze-up.
  - 6. The control system shall evaluate the water temperatures of the heating and cooling systems to assess the required capacity of each and cycle compressors of the Chiller/Heater Modules, open/close VME Isolation Valves, and modulate Heat Exchanger Variable Flow Valves to meet load requirements, optimize efficiency, minimize system energy usage and equalize compressor run times.  
Chiller/Heater shall have a single point power connection and external inputs and outputs to be compatible with the building management system. Hardwire Inputs/Outputs include:
    - a. Remote Start/Stop
    - b. General Alarm
    - c. Cooling Load Limit
    - d. Heating Load Limit
    - e. Cooling Load Reset
    - f. Heating Load Reset

7. The Chiller/Heater shall be capable of communicating the above points with the Building Automation System via an Interoperability Web Portal. BACnet, available. Additional points shall include:
  - a. Chiller/Heater leaving chilled water temperature
  - b. Chiller/Heater leaving hot water temperature
  - c. Chiller/Heater percent cooling capacity
  - d. Chiller/Heater percent heating capacity
  - e. Module level leaving condenser temperature
  - f. Module level leaving evaporator temperature
  - g. Individual Compressor Status On/Off
  - h. Condenser VME valves Open/Close status
  - i. Evaporator VME valve Open/Close status

J. Single Point Power

1. Chiller shall be equipped with a pre-engineered genuine buss bar electrical system for single point power at a 5,000 amp SCCR. Where the equipment size exceeds the amp rating of the buss bar, multiple power connections may be applied. Pre-engineered system shall also incorporate individual module isolation circuit breakers for full redundancy and ability of a module to be taken off-line for repair while the rest of the modules continue to operate. Individual power feeds to each module shall be unacceptable.

- K. IFM flow switch per module. Integral to each module and powered by the module for individual module proof of flow and flow safety. Modules without independent IFM switches per module are not acceptable alternates.

L. Interoperability Web Portal

1. The Chiller shall be capable of interfacing to a building automation system. Interface shall be accomplished using an Interoperability Web Portal and shall be capable of communication over BACnet.

## 2.4 SAFETIES, CONTROLS AND OPERATION

- A. Chiller/Heater safety controls system shall be provided with the unit (minimum) as follows:

1. Low refrigerant pressure
2. Loss of flow through the source/sink heat exchanger
3. Loss of flow through the load (cooling and/or heating) heat exchanger
4. High refrigerant pressure
5. High compressor motor temperature
6. Low suction gas temperature
7. Low leaving water temperature

- B. Failure of Chiller/Heater/Heater to start or Chiller/Heater shutdown due to any of the above safety cutouts shall be enunciated by display of the appropriate diagnostic description at the unit control panel. This annunciation will be in plain English. Alphanumeric codes shall be unacceptable.

- C. The Chiller/Heater/Heater shall be furnished with a Master Controller as an integral portion of the Chiller/Heater control circuitry to provide the following functions:

1. Provide automatic Chiller/Heater shutdown during periods when the load level decreases below the normal operating requirements of the Chiller/Heater. Upon an increase in load, the Chiller/Heater shall automatically restart.
2. Provisions for connection to automatically enable the Chiller/Heater from a remote energy management system.
3. The control panel shall provide alphanumeric display showing all system parameters in plain English language with numeric data in English units.

**D. Normal Chiller/Heater Operation.**

1. When Chiller/Heater/Heater is enabled, the factory supplied Master Controller modulates the Chiller/Heater heating and cooling capacity from minimum to maximum as required by building load
2. The Chiller/Heater/Heater control system shall respond to Entering Water Temperature and will have an integral reset based on entering water temperature to provide for efficient operation at part-load conditions

**E. Power Phase Monitor**

1. Provide a Power Phase Monitor on the incoming power supply to the Chiller/Heater. This device shall prevent the Chiller/Heater from operating during periods when the incoming power is unsuitable for proper operation
2. The Power Phase Monitor shall provide protection against the following conditions:
  - a. Low Voltage (Brown-Out)
  - b. Phase Rotation
  - c. Loss of Phase
  - d. Phase Imbalance

**2.05 SOURCE QUALITY CONTROL**

- A. Perform functional test of water chillers before shipping.
- B. Factory performance test water chillers, before shipping, according to AHRI 550/590.
  1. Test the following conditions:
    - a. Design conditions indicated.
    - b. AHRI 550/590 part-load points.
  2. Allow Commissioner access to place where water chillers are being tested. Notify Commissioner 30 days in advance of testing.
- C. Factory test and inspect evaporator and water-cooled condenser according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1. Stamp with ASME label.
- D. For water chillers located outdoors, rate sound power level according to AHRI 370 procedure.

**2.06 SERVICE:**

- A. Units shall be Easily accessible for inspection and service.
- B. Compressor's internal components shall be accessible without having to remove compressor-drive assembly from chiller.

- C. Provide lifting lugs or eyebolts attached to casing.

### PART 3 - EXECUTION

#### 3.01 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.02 EXAMINATION

- A. Examine chillers before installation. Reject chillers that are damaged.
- B. Examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, and electrical connections to verify actual locations, sizes, and other conditions affecting chiller performance, maintenance, and operations before equipment installation.
  - 1. Final chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.03 PIPING SYSTEM FLUSHING PROCEDURE

- A. Prior to connecting the chiller to the building chilled water loop, the piping shall be flushed with a detergent and hot water (110-130° F) mixture to remove previously accumulated dirt and other organic residue. In old piping systems with heavy encrustation of inorganic materials consult a water treatment specialist for proper passivation and/or removal of these contaminants.
- B. During the flushing a 30 mesh (max.) Y-strainers (or acceptable equivalent) shall be in place in the system piping and examined periodically as necessary to remove collected residue. The use of on board chiller strainers shall not be acceptable. The flushing process shall take no less than 6 hours or until the strainers, when examined after each flushing, are clean. Old systems with heavy encrustation shall be flushed for a minimum of 24 hours and may take as long as 48 hours before the filters run clean. Detergent and acid concentrations shall be used in strict accordance with the respective chemical manufacturer's instructions. After flushing with the detergent and/or dilute acid concentrations the system loop shall be purged with clean water for at least one hour to ensure that all residual cleaning chemicals have been flushed out.
- C. Prior to supplying water to the chiller, the Water Treatment Specification shall be consulted for requirements regarding the water quality during chiller operation. The appropriate chiller manufacturer's service literature shall be available to the operator and/or service contractor and consulted for guidelines concerning preventative maintenance and off-season shutdown procedures.

#### 3.04 WATER TREATMENT REQUIREMENTS

- A. Supply water for the chilled water circuit shall be analyzed and treated by a professional water treatment specialist who is familiar with the operating conditions and materials of construction specified for the chiller's heat exchangers, headers and associated piping. Cycles of concentration shall be controlled such that recirculated water quality for modular chillers using 316 stainless steel brazed plate heat exchangers and carbon steel headers is maintained within the following parameters:
  - 1. pH Greater than 7 and less than 9

2.	Total Dissolved Solids (TDS)	Less than 1000 ppm
3.	Hardness as CaCO <sub>3</sub>	30 to 500 ppm
4.	Alkalinity as Ca CO <sub>3</sub>	30 to 500 ppm
5.	Chlorides	Less than 200 ppm
6.	Sulfates	Less than 200 ppm

### 3.05 CHILLER INSTALLATION

- A. Install chillers on concrete pad as indicated.
- B. Equipment Mounting: Comply with requirements for vibration isolation devices specified in Division 23 Section "Vibration Isolation, Seismic and Wind Restraints for HVAC Components."
- C. Maintain manufacturer's recommended clearances for service and maintenance.
- D. Charge chiller with refrigerant and fill with oil if not factory installed.
- E. Install separate devices furnished by manufacturer and not factory installed.

### 3.06 FIELD INSTALLED ACCESSORIES

- A. Mounting Package:
  - 1. Unit manufacturer shall furnish a floor plate package consisting of floor plates, jacking screws, leveling pads, and neoprene pads.

### 3.07 CONNECTIONS

- A. Comply with requirements for piping specified in other sections of this work. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to chiller to allow service and maintenance.
- C. Evaporator Fluid Connections: Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage. Connect to evaporator outlet with shutoff valve, balancing valve, flow switch, thermometer, plugged tee with shutoff valve and pressure gage, flow meter, and drain connection with valve. Make connections to chiller with a flange.
- D. Connect each chiller drain connection with a union and drain pipe, and extend pipe, full size of connection, to nearest floor or roof drain. Provide a shutoff valve at each connection.:
- E. Shall supply and install pressure gages in readily accessible locations in piping adjacent to the chiller such that they can be easily read from a standing position on the floor. Scale range shall be such that design values shall be indicated at approximately mid-scale. Gages shall be installed in the entering and leaving water lines of the evaporator.

### 3.08 START-UP

- A. Manufacturer shall provide the services of a Factory Authorized Service Engineer licensed in the State of New York to provide complete start-up supervision. Factory Authorized Service Engineer shall also be responsible for assembly of the chillers cabinetry package and electrical bus bar system. After start-up a Manufacturer's Representative shall provide a minimum of 8-hours of operator instruction to the City of New York's service operators.

- B. Factory-authorized service representative shall perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.
  - 2. Verify that refrigerant charge is sufficient and chiller has been leak tested.
  - 3. Verify that pumps are installed and functional.
  - 4. Verify that thermometers and gages are installed.
  - 5. Operate chiller for run-in period.
  - 6. Check bearing lubrication and oil levels.
  - 7. Verify that refrigerant pressure relief device is vented outside.
  - 8. Verify proper motor rotation.
  - 9. Verify static deflection of vibration isolators, including deflection during chiller startup and shutdown.
  - 10. Verify and record performance of fluid flow and low-temperature interlocks for evaporator, condenser, and heat-reclaim condenser.
  - 11. Verify and record performance of chiller protection devices.
  - 12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- C. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assembly, installation, and connection.
- D. Prepare test and inspection startup reports.

### 3.09 DEMONSTRATION

- A. Contractor's factory-authorized service representative shall instruct The City of New York's service operators to adjust, operate, and maintain chillers.

## PART 4 - EXECUTION

### 4.01 EXAMINATION

- A. Before water chiller installation, examine roughing-in for equipment support, anchor-bolt sizes and locations, piping, controls, and electrical connections to verify actual locations, sizes, and other conditions affecting water chiller performance, maintenance, and operations.
  - 1. Water chiller locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping, controls, and electrical connections.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 4.02 WATER CHILLER INSTALLATION

- A. Coordinate sizes and locations of bases with actual equipment provided. Cast anchor-bolt inserts into concrete bases.
- B. Coordinate sizes, locations, and anchoring attachments of structural-steel support structures with actual equipment provided.
- C. Install water chillers on support structure indicated.
- D. Equipment Mounting:

1. Install water chillers on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
  2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."
  3. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."
- E. Maintain manufacturer's recommended clearances for service and maintenance.
- F. Maintain clearances required by 2014 New York City Building Code.
- G. Chiller manufacturer's factory-trained service technicians shall charge water chiller with refrigerant if not factory charged and fill with oil if not factory installed.
- H. Install separate devices furnished by manufacturer and not factory installed.
1. Chillers shipped in multiple major assemblies shall be field assembled by chiller manufacturer's factory-instructed service technicians.

#### 4.03 PIPING CONNECTIONS

- A. Comply with requirements in Section 23 21 13 "HVAC Piping". Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to chillers, allow space for service and maintenance.
- C. Evaporator Fluid Connections:
1. Connect to evaporator inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage.
  2. Connect to evaporator outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
  3. Make connections to water chiller with a union flange or mechanical coupling.
- D. Heat Recovery Condenser Fluid Connections:
1. Connect to condenser inlet with shutoff valve, strainer, flexible connector, thermometer, and plugged tee with pressure gage.
  2. Connect to condenser outlet with shutoff valve, balancing valve, flexible connector, flow switch, thermometer, plugged tee with pressure gage, flow meter, and drain connection with valve.
  3. Make connections to water chiller with a union flange or mechanical coupling.
- E. Connect each drain connection with a drain valve, full size of drain connection. Connect drain pipe to drain valve with union and extend drain pipe to terminate over floor drain.
- F. Connect each chiller vent connection with an automatic or a manual vent, full size of vent connection.

**4.04 ELECTRICAL POWER CONNECTIONS**

- A. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- C. Provide nameplate for each electrical connection indicating electrical equipment designation and circuit number feeding connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high. Locate nameplate where easily visible.

**4.05 CONTROLS CONNECTIONS**

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring between chillers and other equipment to interlock operation as required to provide a complete and functioning system.
- C. Connect control wiring between chiller control interface and DDC system for remote monitoring and control of chillers. Comply with requirements in Section 23 09 00 "HVAC Instrumentation and Controls".
- D. Provide nameplate on face of chiller control panel indicating control equipment designation serving chiller and the I/O point designation for each control connection. Nameplate shall be laminated phenolic layers of black with engraved white letters at least 1/2 inch (13 mm) high.

**4.06 STARTUP SERVICE**

- A. Engage a factory-authorized service representative to perform startup service.
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
  - 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
  - 2. Verify that pumps are installed and functional.
  - 3. Verify that thermometers and gages are installed.
  - 4. Operate water chiller for run-in period.
  - 5. Check bearing lubrication and oil levels.
  - 6. Verify that refrigerant pressure relief device for chillers installed indoors is vented outside.
  - 7. Verify proper motor rotation.
  - 8. Verify static deflection of vibration isolators, including deflection during water chiller startup and shutdown.
  - 9. Verify and record performance of water flows and low-temperature interlocks.
  - 10. Verify and record performance of water chiller protection devices.
  - 11. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.

- D. Visually inspect chiller for damage before starting. Repair or replace damaged components, including insulation. Do not start chiller until damage that is detrimental to operation has been corrected.
- E. Prepare a written startup report that records results of tests and inspections.

#### 4.07 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and maintain chiller. Refer to the DDC General Conditions for instruction requirements.
  - 1. Instructor shall be properly instructed by the factory.
  - 2. Provide not less than eight hours of instruction.
  - 3. Instruct the City of New York's staff in operation and service and to obtain maximum efficiency in plant operation.
  - 4. Provide instructional videos showing general operation and maintenance that are coordinated with operation and maintenance manuals.
  - 5. Obtain Commissioner sign-off that instruction is complete.
  - 6. Instruction shall be held at Project site.

**END OF SECTION 23 65 18**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 23 64 27****REFRIGERANT MONITORING AND ALARM****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS.
- D. Section 23 05 93 – TESTING, ADJUSTING AND BALANCING.
- E. Section 23 09 00 – HVAC INSTRUMENTATION AND CONTROLS.
- F. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. This Section includes refrigerant monitoring system, notification appliances, and SCBA. The refrigerant monitoring system shall employ photo-acoustic technology and shall be UL certified to accurately distinguish between different compounds.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

#### 1.5 DEFINITIONS

- A. CPIR: Photoacoustic infrared.
- B. BMS: Building Management System

#### 1.6 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data:
  - 1. For each type of refrigerant monitor, include refrigerant sensing range in ppm, temperature and humidity range, alarm outputs, display range, furnished specialties, installation requirements, and electric power requirement.
  - 2. For SCBA, include mounting details, service requirements, and compliance with authorized Federal agency.
- C. Shop Drawings:
  - 1. Air-Sampling Tubing: Size, routing, and termination including elevation above finished floor.
  - 2. Wiring Diagrams: Power, signal, and control wiring.
- D. Coordination Drawings: Include machinery-room layout showing location of monitoring devices and air-sampling tubing with filter/inlet locations in relation to refrigerant equipment.
- E. Product Certificates: For monitoring devices and SCBA, signed by product manufacturer.
- F. Field quality-control test reports.
- G. Operation and Maintenance Data: For refrigerant monitoring equipment and SCBA to include in emergency, operation, and maintenance manuals.

#### 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"

#### 1.8 COORDINATION

- A. Coordinate refrigerant detection and alarm system with refrigerant contained in refrigeration equipment for compatibility.

#### 1.9 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. One calibration kit including clean air calibration gas bottle for zero calibration and

specific refrigerant calibration gas for span calibration, minimum 58-L capacity, pressure regulator, and tubing.

## PART 2 - PRODUCTS

### 2.1 PHOTOACOUSTIC INFRARED REFRIGERANT MONITOR

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Chillgard Refrigerant Monitors; MSA; Instrument Division.
  - 2. Haloguard Monitors; Thermal Gas Systems, Inc.
  - 3. Lumasense Technologies
  - 4. Or approved equal.
- B. Description: Sensor shall be factory tested, calibrated, and certified to continuously measure and display the specific gas concentration and shall be capable of indicating, alarming, shutting down fuel-fired equipment and automatically activating ventilation system.
- C. ASHRAE: Monitoring system shall comply with ASHRAE 147.
- D. Refrigerant monitoring system shall be manufactured and installed in compliance with ASHRAE Standard 15 equipment room guidelines.
- E. The accuracy of the refrigerant monitor shall be certified per UL 2075 and CSA 22.2.
- F. Performance:
  - 1. Refrigerant to Be Monitored: R-134a.
  - 2. Range: 0 to 1000 ppm.
  - 3. Sensitivity:
    - a. Minimum Detectability: 1 ppm.
    - b. Accuracy: 0 to 50 ppm; plus or minus 1 ppm. 51 to 1000 ppm; plus or minus 10 percent of reading.
    - c. Repeatability: Plus or minus 1 percent of full scale.
    - d. Response: Maximum 10 seconds per sample.
    - e. Detection Level Set Points:
      - 1) Detection Level 1: 1 ppm.
      - 2) Detection Level 2: 50 ppm.
      - 3) Detection Level 3: 250 ppm.
  - 4. Operating Temperature: 32 to 104 deg F (0 to 40 deg C).
  - 5. Relative Humidity: 20 to 95 percent, noncondensing over the operating temperature range. Compensate sensor for relative humidity.
  - 6. Site Elevation: Maximum 6560 feet (2000 m)
- G. Input/Output Features:
  - 1. Maximum Power Input: 120-V ac, 60 Hz, 75 W.
  - 2. Number of Air-Sampling Points: Four.
  - 3. Air-Sampling Point Inlet Filter: 0.10-micron filter element for each sampling point.
  - 4. Air-Sampling Point Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k

- ohms matched to sensor output.
5. Alarm Relays: Minimum 4 relays at a minimum of 5-A resistive load each.
  6. Alarm Set Points: Displayed and adjustable through keypad on front of meter.
  7. Alarm Silence Switch: Mount in the front panel of the monitor to stop audible and visual notification appliances, but alarm LED remains illuminated.
  8. Alarm Manual Reset: Momentary-contact push button in the front panel of the monitor stops audible and visual notification appliances, extinguishes alarm LED, and returns monitor to detection mode at current detection levels.
  9. Display: Alphanumeric LCD, LED indicating lights for each detection level; acknowledge switch and test switch mounted on front panel; alarm status LEDs and service fault/trouble LEDs.
  10. Audible Output: Minimum 75 dB at 10 feet (3 m).
  11. Visible Output: Strobe light.
  12. Sensor Analog Output: 0- to 10-V dc into 2k ohms, or 4- to 20-mA into 1k ohms.
  13. Serial Output: RS-232 or RS-485 - compatible with HVAC controls.
  14. Enclosure: NEMA 250, Type 1, with locking quarter-turn latch and key.

## 2.2 MONITOR ALARM SEQUENCE

- A. Detection Level 1: Notify HVAC control workstation of detection in the refrigeration equipment room on a rise or fall of refrigerant concentration to this level. Start ventilation system at low speed to allow occupancy by maintenance technicians to identify leaks. Cycle blue strobe lights.
- B. Detection Level 2: Notify the HVAC control workstation of the detection in the refrigeration equipment room on a rise or fall of refrigerant concentration to this level. Run ventilation system at high speed on a rise in concentration to this level, and change to low speed on a reduction in concentration below this level. Operate the ventilation system at high speed for a minimum of five minutes. Cycle amber strobe lights.
- C. Detection Level 3: Notify the HVAC control workstation of the detection in the refrigeration equipment room on a rise or fall of refrigerant concentration to this level. Sound alarm horns and cycle red strobe lights inside and outside refrigeration equipment room. Terminate operation of any combustion-process equipment located in the refrigeration equipment room. Provide manual reset for this detection level.
- D. Sensor Fault/Trouble: Notify HVAC control workstation of fault/trouble detection in monitor.

## 2.3 NOTIFICATION APPLIANCES

- A. Horns: Comply with UL 464; electric-vibrating-polarized type, listed by a qualified testing agency with provision for housing the operating mechanism behind a grille. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet (3 m) from the horn.
- B. Visible Alarm Devices: Comply with UL 1971; three color xenon strobe lights, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The words "REFRIGERANT DETECTION" printed in minimum 1/2-inch- (13-mm-) high letters on the lens. Rated light output is 75 candela.
- C. Provide both horn and visible alarm devices at each entrance to chiller plant.

## 2.4 AIR-SAMPLING TUBING

- A. Annealed-Temper Copper Tubing: ASTM B 88, Type L (ASTM B 88M, Type B).

- B. Polyethylene Tubing: ASTM D 2737, flame-retardant, nonmetallic tubing rated for ambient temperature range of 10 to 150 deg F (minus 13 to plus 65 deg C).

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 INSTALLATION

- A. Comply with ASHRAE 15 and ASHRAE 147.
- B. Provide emergency power to system
- C. The refrigerant monitoring system shall include contacts to start the MER purge ventilation system, activate local and remote alarms and shutdown chillers in the alarm mode. Coordinate with chiller manufacturer.
- D. The refrigerant monitoring system shall integrate directly with the BMS system. Provide dry contacts for transmitting alarms to BMS.
- E. Refrigerant monitors shall be factory calibrated for the specific compound utilize
- F. Install air-sampling inlets, or diffusion type monitors in pits, tunnels, or trenches in machinery room that are accessible to personnel.
- G. Floor mount diffusion-type monitor, sensor/transmitters, or air-sampling inlets on slotted channel frame 12 to 18 inches (300 to 450 mm) above the floor in a location near the refrigerant source or between the refrigerant source and the ventilation duct inlet.
- H. Wall mount air-sampling multiple-point monitors with top of unit 60 inches above finished floor.
- I. Run air-sampling tubing from monitor to air-sampling point, in size as required by monitor manufacturer. Install tubing with maximum unsupported length of 36 inches, for tubing exposed to view. Terminate air-sampling tubing at sampling point with filter recommended by monitor manufacturer.
- J. Install air-sampling tubing with sufficient slack and flexible connections to allow for vibration of tubing and movement of equipment.
- K. Purge air-sampling tubing with dry, oil-free compressed air before connecting to monitor.
- L. Number-code or color-code air-sampling tubing for future identification and service of air-sampling multiple-point monitors.
- M. Extend air-sampling tubing from exhaust part of multiple-point monitors to outside.
- N. Extend air-sampling tubing from outdoors to outdoor inlet connection of NDIR monitors. Terminate air-sampling tubing at outdoor inlet location with filter recommended by monitor manufacturer.
- O. Install warning signs, labels, and nameplates to identify detection devices and SCBA according to Division 23 Section "Mechanical Identification."

- P. Place warning signs inside and outside each door to the refrigeration equipment room. Sample wording: "AUDIBLE AND VISUAL ALARM SOUNDING INDICATES REFRIGERANT DETECTION - ENTRY REQUIRES SCBA."
- Q. Audible Alarm-Indicating Devices: Install at each entry door to refrigeration equipment room, and position not less than 6 inches below the ceiling. Install horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.
- R. Visible Alarm-Indicating Devices: Install adjacent to each alarm horn at each entry door to refrigeration equipment room, and position at least 6 inches below the ceiling.
- S. Mount primary and secondary backup SCBA on wall outside each interior door to refrigeration equipment room.

### 3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- C. Tests and Inspections:
  - 1. Inspect field-assembled components, equipment installation, and electrical connections for compliance with requirements.
  - 2. Test and adjust controls and safeties.
  - 3. Test Reports: Prepare a written report to record the following:
    - a. Test procedures used.
    - b. Test results that comply with requirements.
    - c. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.
- D. Restore or replace malfunctioning units and retest as specified above.

### 3.4 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service operators to adjust, operate, and service refrigerant monitoring and alarm devices. Refer to the DDC General Conditions for instruction requirements.

**END OF SECTION 23 64 27**

**SECTION 23 65 00****COOLING TOWERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]
- B. Section 23 05 00 – COMMON REQUIREMENTS FOR HVAC WORK.
- C. Section 23 05 48 – VIBRATION ISOLATION, SEISMIC, FLOOD AND WIND LOAD RESTRAINTS FOR HVAC COMPONENTS.
- D. This section is a part of each Division 23 00 00 section.

**1.2 SUMMARY**

- A. Furnish and install all factory fabricated cooling towers specified herein and as indicated on the contract documents.
- B. All systems, equipment and materials shall be approved for use in the City of New York.
- C. Cooling towers shall meet all the requirements, as specified herein, including, but not limited to:
  - 1. The towers shall be tested, rated, and certified in accordance with Cooling Technology Institute (CTI) Standard 201, and shall bear the CTI certification label.
  - 2. The cooling towers shall have the manufacturer's Seismic Qualifications Certification confirming that the cooling towers, accessories and components will withstand the seismic and wind forces as defined under another section of this work.
  - 3. The towers shall be tested both at the factory before shipping and at the site, once system is operational.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile

Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED Building Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

#### 1.5 SECTION INCLUDES

- A. Open-circuit, induced-draft, crossflow cooling towers.

#### 1.6 DEFINITIONS

- A. BMS: Building management system.
- B. FRP: Fiber-reinforced polyester.

#### 1.7 REFERENCE STANDARDS

- A. All factory assembled cooling towers shall be designed, manufactured, tested and certified in accordance with the latest applicable industry standards including the following:
  - 1. Cooling Tower Institute (CTI) – ATC Code 105, 128 and 201
  - 2. UL
  - 3. ASME PTC 23-03 – Performance Test Codes on Atmospheric Water Cooling Equipment
  - 4. NEC – National Electric Code
  - 5. NEMA Standard ICS – 2-1983 – Industrial Control Devices, Controllers and Assembly Standards.
  - 6. NEMA – ICS 3-303
  - 7. IEEE Standard 444 (ANSI C34.3)
  - 8. IEEE Standard 519-1992
  - 9. ASTM Standard E-64
  - 10. OSHA
  - 11. American Hot Dip Galvanizer Association Inc.
  - 12. SMACNA
  - 13. ASHRAE
  - 14. NFPA 214, Edition 2011
  - 15. ASTM E2058
  - 16. ISO 14000 Series
  - 17. NYC Mechanical Code
  - 18. NYC Energy Conservation Controls

- B. All wiring, equipment and materials to be furnished and installed on the cooling towers shall be UL listed, in accordance with the requirements of the New York Department of Buildings and suitable for its intended use on this project.

#### 1.8 PERFORMANCE REQUIREMENTS

- A. The cooling tower manufacturer shall examine the contract documents prior to bid to verify that the towers will perform under installed conditions.
- B. Manufacturer shall certify that the performance of cooling towers will meet the contract requirements as indicated on the schedules, stating entering air wet bulb temperature, entering and leaving condenser water temperatures, water flow rates, fan motor kW (horsepower) and pump head at base of towers in the location and in the enclosure shown on the architectural and mechanical drawings. The possibility of recirculation shall be evaluated and considered by the manufacturer in the selection of the cooling tower to be furnished for this project.
- C. The towers shall be tested, rated, and certified in accordance with Cooling Technology Institute (CTI) Standard 201, and shall bear the CTI certification label, and shall be listed in the CTI directory of certified cooling towers.
- D. The alignment and balancing of the fans, motors and drive shaft as installed shall operate within the vibration tolerance specified in specification sections "Vibration Isolation, Seismic, Flood and Wind Load Restraints for HVAC Components".
- E. Manufacturers' performance guarantees or performance bonds without CTI Certification or independent field thermal performance test shall not be accepted.
- F. The tower shall be capable of withstanding water having a pH of 6.5 to 8.0; a chloride content (NaCl) up to 750 ppm; a sulfate content (SO<sub>4</sub>) up to 1200 ppm; a sodium bicarbonate content (NaHCO<sub>3</sub>) up to 200 ppm; a calcium content (CaCO<sub>3</sub>) up to 800 ppm; silica (SiO<sub>2</sub>) up to 150 ppm; and design hot water temperatures up to 120°F.
- G. The cooling tower shall comply with the energy efficiency requirements of ASHRAE Standard 90.1.
- H. The towers sound levels at 5 feet and 55 feet in any direction from the tower shall not exceed 73 dBA and 60 dBA, respectively and meet the sound power level (dB re: 10<sup>-12</sup> Watts).

#### 1.9 SEISMIC AND WIND LOAD DESIGN

- A. This project is located within a seismic and wind zone requiring special provisions for the support and restraint of equipment, components and piping in the event of earthquake or wind conditions.
- B. Design seismic restraints and wind restraints for the cooling tower, cooling tower support, mounting base, access platforms, structure, vibration isolators, pipe connections and connecting piping supports, including preparing comprehensive engineering analysis (signed and sealed) by a qualified professional engineer, commissioned by the tower manufacturer, using performance requirements and design criteria defined under another section of this work.
- C. Provide manufacturer's Seismic Qualifications Certification that the cooling towers, accessories and components will withstand the seismic and wind forces as defined under another section of this work. Include the following:
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation. The term "withstand" means "the towers will remain in place without separation of any parts from the device when subjected to the seismic or wind forces specified and the towers will be fully operational after the seismic event."
  - 2. Dimensioned Outlined Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchoring provisions.
  - 3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
- D. Fabricate cooling tower mounting base with reinforcement strong enough to resist cooling tower movement during a seismic event and when subject to wind forces, as described herein, when cooling tower is anchored to field support structure.
- E. It is the intent to keep all HVAC building system components in place during a seismic or wind event and operational after the seismic event.
- F. It shall be understood that the requirements for the seismic and wind restraints and vibration control as specified herein are complementary to requirements delineated elsewhere under other sections of this work for the support, fastening and isolating of equipment work. Nothing on the drawings or specifications shall be interpreted as a reason to waive the requirements of this and other related sections.
- G. Deflection Limits:
  - 1. Design system to withstand design loads without deflections greater than the following:
    - a. 2.5"
- H. Wind Design Loading
  - 1. The cooling tower shall be designed and constructed so when erected it will withstand wind forces as defined under another section of this work.
  - 2. The cooling towers shall be thoroughly braced and tied together so that the structural parts; casing, basin and support beams, when anchored to a suitable base will withstand the overturning moments of the tower out of service and the basin is not filled with water.

#### 1.10 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

- B. Product Data: Include rated capacities, flow rates, pressure drop, fan performance data, rating curves with selected points indicated, startup instructions, furnished specialties, and accessories.
- C. Cooling towers shall be guaranteed to perform the capacities as listed in the schedules.
- D. Manufacturer to submit a written guarantee certifying the performance of the cooling tower in the locations and within the enclosure as indicated on the contract documents.
- E. All certifications shall be made at the time of submittals and during project closeout.
- F. In addition, provide the following data:
  - 1. Maximum flow rate.
  - 2. Minimum flow rate.
  - 3. Drift loss as percent of design flow rate
  - 4. Sound power levels
    - a. Sound Power testing and data shall be in conformance with CTI ATC-128.
    - b. Sound testing to be conducted at the factory of the cooling tower manufacturer under controlled conditions. Submit data in all eight octave bands for operation on full speed with full water flow, with fans off at full water flow, fans at minimum with full water flow and design speed.
    - c. Measure sound power levels at all five sides of the cooling tower,
  - 5. Performance curves for the following:
    - a. Varying entering-water temperatures from design to minimum (summer and winter).
    - b. Varying ambient wet-bulb temperatures from design to minimum (summer and winter).
    - c. Varying water flow rates from design to minimum.
    - d. Varying fan operation (off, minimum, and design speed).
- G. Fan airflow, brake horsepower, and drive losses.
- H. Pump flow rate, head, brake horsepower, and efficiency.
- I. Motor amperage, efficiency, and power factor at 100, 75, 50, and 25 percent of nameplate horsepower.
- J. Electrical power requirements for each cooling tower component-requiring power. Include electrical rating, detail wiring for power, signals and controls.
- K. Sound curves and sound characteristics information of sound required to meet the noise criteria listed herewith
- L. Shop Drawings: Complete set of manufacturer's prints of cooling tower assemblies, control panels, sections and elevations, and unit isolation. Include the following:
  - 1. Detailed, dimensional, equipment loading drawings, which show the location of all anchor bolts and the size and location of load bearing areas with the loads imposed on them specifically showing dunnage steel requirements. The initial and operating weight of the assembled tower, as well as the weight of each major component, shall also be shown on Shop Drawings. In addition, the weight of component parts, which must be removed for maintenance and service operations, shall be indicated.

2. Materials
  3. Required clearances for maintenance and operation.
  4. Sizes and locations of piping and wiring connections.
  5. Wiring Diagrams: For power, signal, and control wiring.
  6. Submit five copies of performance curves, showing compliance with actual conditions specified, at least two weeks prior to the delivery of the equipment.
  7. At least two weeks prior to final inspection, submit five copies of the following:
    - a. Certification from the manufacturer that the cooling tower(s), accessories, and components are suitable for project seismic design category installations and that the unit will be fully operational after the seismic event at the project site.
    - b. Certification by the manufacturer that the cooling towers conform to the requirements of the drawings and specifications.
    - c. Certification by the Contractor that the cooling towers have been installed, adjusted, and tested in accordance with all standards and manufacturers procedures.
- M. Design Submittal: For cooling tower support structure indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
1. Detail fabrication and assembly of support structure.
  2. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
  3. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and wind restraints and for designing vibration isolation bases.
- N. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
1. Structural supports.
  2. Piping roughing-in requirements.
  3. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
  4. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- O. Certificates: For certification required in "Quality Assurance" Article.
- P. Source quality-control reports.
- Q. Field quality-control reports.
- R. Startup service reports.
- S. Operation and Maintenance Data: For each cooling tower to include in emergency, operation, and maintenance manuals.
- T. Warranty: Sample of special warranty.
- 1.11 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
  - B. Manufacturer's Certification: Certify cooling tower's thermal performance according to CTI 201.

- C. The cooling tower manufacturer shall guarantee that the tower supplied will meet the specified performance conditions when the tower is installed according to plans, in accordance with CTI
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. ASHRAE/IESNA 90.1-2007 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2007, Section 6 - "Heating, Ventilating, and Air-Conditioning."
- F. ASME Compliance: Fabricate and label heat-exchanger coils to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- G. CTI Certification: Cooling tower thermal performance according to CTI STD 201, "Certification Standard for Commercial Water-Cooling Towers Thermal Performance."
- H. FMG approval and listing in the latest edition of FMG's "Approval Guide."
- I. Maximum drift loss from the tower not to exceed .05 of 1% of the water circulated.
- J. The cooling tower manufacturer shall have a Management System certified by an accredited registrar as complying with the requirements of ISO 9001: 2000 to ensure consistent quality of products and services. Manufacturers that are not ISO 9001 Certified shall not be acceptable.

#### 1.12 SOURCE QUALITY CONTROL

- A. Verification of Performance: Test and certify cooling tower performance according to CTI STD 201, "Certification Standard

#### 1.13 COORDINATION

- A. Coordinate sizes, locations, and anchoring attachments for the cooling tower support.

#### 1.14 WARRANTY

- A. In addition to the standard one-year warranty against defects in materials and workmanship, the cooling tower manufacturer shall provide the following extended warranty:
  - 1. Cooling tower manufacturer shall warrant the entire cooling tower including, but not limited to each gearbox, coupling, fan and mechanical equipment support, motor, drive system, bearings, and structure, VFD and motor accessories - to be free from all defects in materials and workmanship, including leakage, for a period of ten (10) years from the date of substantial completion. The obligation under this warranty is to replace defective materials. This warranty shall be in addition to any other warranties set forth in the contract.

### PART 2 - PRODUCTS

#### 2.1 COOLING TOWERS - GENERAL

- A. Manufacturers:
  - 1. Subject to compliance with the requirements, provide cooling towers from one of the following:

- a. Marley Cooling Towers, Inc.
- b. Baltimore Aircoil Company
- c. Evapco Inc.
- d. Or approved equal.

**B. Construction:**
