2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Construction Project Manager.
3. Floor plans indicating asbestos abatement contractor's current work progress shall be submitted for review by the Construction Project Manager.
4. All asbestos abatement contractors' air monitoring and inspection results.

**C. Project Closeout Submittals:**

Upon completion of the project and as a condition of acceptance, the asbestos abatement contractor shall present two copies of the following items, bound, and indexed:

1. Lien Waivers from asbestos abatement contractor, sub-asbestos abatement contractors and Suppliers,
2. Daily OSHA air monitoring results,
3. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs,
4. Field Sign-In/Sign-Out Logs for every shift,
5. Copies of all Building Department Forms and Permits,
6. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,
7. All Warranties as stated in the Specifications,
  - a. Fully executed disposal certificates and transportation manifest.
8. Project Record: The asbestos abatement contractor shall maintain a project record for all small and large asbestos projects. During the project, the project record shall be kept on site at all times. Upon completion of the project, the project record shall be maintained by the building owner. The project record shall be submitted to DDC as part of the close out documents. The project record shall consist of:
  - a. Copies of licenses of all asbestos abatement contractors involved in the project;
  - b. Copies of NYCDEP and NYSDOL supervisor and handler certificates for all workers engaged in the project;
  - c. Copies of all project notifications and reports filed with NYCDEP, NYSDOL and USEPA for the project, with any amendments or variances;
  - d. Copies of all asbestos abatement permits, including associated approved plans and work place safety plan;
  - e. A copy of the air sampling log and all air sampling results;
  - f. A copy of the abatement asbestos abatement contractor's daily log book;

- g. Copies of all asbestos waste manifests;
- h. A copy of all Project Monitor's Reports (ACP-15).
- i. A copy of each ATR-1 Form completed for the asbestos project (if required).
- j. A copy of each Asbestos Project Conditional Closeout Report (ACP-20) if required.
- k. A copy of the Asbestos Project Completion Form (ACP-21).

### **1.13 PROTECTION OF FURNITURE AND EQUIPMENT**

Cover all furniture and equipment that cannot be removed from Work Areas. Movable furniture and equipment will be removed from Work Areas by the asbestos abatement contractor prior to start of work. At the conclusion of the work (after final air testing), the asbestos abatement contractor will remove all plastic covering on walls, floors, furniture, equipment and reinstall furniture and equipment. He shall remove and store all sheaths, curtains, and drapes, and reinstall same following final clean up.

### **1.14 UTILITIES**

#### **A. General:**

All temporary facilities shall be subject to the approval of the Commissioner. Prior to starting work at any site, locations and/or sketches (if required) of temporary facilities must be submitted to the Construction Project Manager for the required approval.

#### **B. Water:**

The Department of Design and Construction will furnish all water needed for construction, at no cost to the asbestos abatement contractor in buildings under their jurisdiction. However, it is the responsibility of the asbestos abatement contractor to ensure that hot water is provided for showering in the decontamination unit. The asbestos abatement contractor shall furnish, install and maintain any needed equipment to meet these requirements at his own expense.

#### **C. Electricity:**

The Department of Design and Construction will furnish all electricity needed for construction, at no cost to the asbestos abatement contractor in a building, under their jurisdiction. The asbestos abatement contractor is responsible for routing the electric power to the abatement Work Area.

All temporary lighting and temporary electrical service for Work Area shall be in weatherproof enclosures and be ground fault protected.

- D. In leased spaces, arrangements for water supplies and electricity must be made with the landlord. However, all such arrangements must be made through and are subject to approval of the Department of Design and Construction. Utilities will be provided at no cost to the asbestos abatement contractor. However, it is the asbestos abatement contractor's (or the general contractor's) responsibility to furnish and install a suitable distribution system to the Work Area. This system will be provided at no cost to the City.

### **1.15 FEES**

The asbestos abatement contractor shall be responsible for any and all fees or charges imposed by Local, State or Federal Law, Rule, and Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

**END OF SECTION**

**SECTION 03 10 00****CONCRETE FORMWORK****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract City of New York Standard Construction Contract.

**1.2 SUMMARY**

- A. Section includes:
1. Formwork for cast-in-place concrete and related work.

**1.3 RELATED WORK SPECIFIED IN OTHER SECTIONS**

- |   |                  |
|---|------------------|
| A. Concrete Reinforcement and Embedded Assemblies | Section 03 20 00 |
| B. Cast-in-Place Concrete                         | Section 03 30 00 |
| C. Architectural Concrete                         | Section 03 33 00 |
| D. Thermal and Moisture Protection                | Division 7       |

**1.4 CODES AND STANDARDS**

- A. Building Code: Concrete work shall conform to the requirements of the 2014 New York City Building Code, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.
- B. Standards:
1. ACI 117 – Standard Specifications for Tolerances for Concrete Construction and Materials.
  2. ACI 237 – Self Consolidating Concrete.
  3. ACI 301 – Specifications for Structural Concrete.
  4. ACI 318 – Building Code Requirements for Structural Concrete and Commentary.
  5. ACI 347 – Guide to Formwork for Concrete.
  6. ACI 347.2R – Guide for Shoring/Reshoring of Concrete Multistory Buildings.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 SUBMITTALS

- A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with DDC General Conditions Submittals, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.

- a) Submittal Schedule
- b) Shop Drawings
- c) Shoring/Reshoring Calculations
- d) Product Data
- e) Samples
- f) Compatibility Certification
- g) Hazardous Materials Notification

1. Submittal Schedule: See Section 03 30 00 "Cast-in-Place Concrete"

2. Shop Drawings:

- a. Submit for action: Formwork shop drawings sealed and signed by a Structural Engineer licensed in the state of New York. Shop drawings shall clearly indicate but not be limited to the following:
  - 1) Size, type and quality of form materials including conditions at tops and ends of walls. (If wood is used, indicate species.)
  - 2) Form construction indicating structural stability and jointing including special form joints or reveals required by Contract Documents
  - 3) Location and pattern of form tie placement, and other items that affect the appearance of concrete that will remain exposed to view.
  - 4) Form finish clearly indicating proper locations and full coordination with concrete finishes required by Contract Documents.
  - 5) Layout, procedures, and sequencing of shoring and reshoring that correlates with the information contained in the shoring/reshoring calculations described below.
  - 6) Locations and dimensions of openings in structural members including floor slab, shear walls, columns and beams. See SUBMITTALS Section of Specification Section 03 30 00 – "Cast-in-Place Concrete."
  - 7) Location of proposed construction joints in walls, floors, slabs, and beams. See SUBMITTALS Section of Specification Section 03 30 00 – "Cast-in-Place Concrete."

3. Shoring/Reshoring Calculations: Submit for record. Calculations sealed and signed by a Structural Engineer licensed in the state of New York. Calculations shall clearly address but not be limited to the following:
  - a. Shoring removal and reshoring installation procedure including timing and sequencing.
  - b. Concrete age and strength at the time of each shoring/reshoring operation.
  - c. Description of construction loads assumed including concrete, formwork, and construction live load in accordance with ACI 347.
  - d. Description of the distribution of construction loads between the shored/reshored levels.
  - e. The total construction load imposed on all levels supporting shoring/reshoring at each stage of the shoring/reshoring cycle.
  - f. A written statement by the Structural Engineer licensed in the State of New York that the total construction load imposed on any level supporting shoring/reshoring, at all stages of the shoring/reshoring cycle, accounting for concrete age and relative strength at time of loading, meets the requirement of Section 3.2.
4. Product Data: Submit for action copies of manufacturers' product data and installation instructions for proprietary materials used in exposed concrete work, including form liners, release agents, manufactured form systems, ties, and accessories.
5. Samples: At request of Commissioner, submit for record samples of form ties and spreaders.
6. Compatibility Certification: Submit for record a written statement certifying that form release agent used is compatible with subsequent architectural finish materials applied to concrete surfaces. Submit along with manufacturer's data.
7. Hazardous Materials Notification: Submit for record. In the event no product or material is available that does not contain hazardous materials as determined by the New York City Department of Buildings, a "Material Safety Data Sheet" (MSDS) equivalent to OSHA Form 20 shall be submitted for that proposed product or material prior to installation.

B. Refer to DDC General Conditions for submittal process and requirements.

C. Refer to Section 03 30 00 – "Cast-in-Place Concrete" for additional submittal requirements related to concrete trades.

#### 1.7 FORMWORK DESIGN

A. Design of Formwork, Shoring/Reshoring, and its removal is the Contractor's responsibility.

B. Design, erect, support, brace and maintain formwork so that it will safely support vertical and lateral loads per SEI/ASCE 37-02 that might be applied, until such loads can be supported by the concrete structure.

C. Design Requirements:

1. Forms shall be designed for fabrication and erection in accordance with Commissioner's requirements and recommendations of ACI 301, 318 and 347.
2. Design formwork in a manner such that the total construction load does not at any time exceed the total design load of new or existing construction and accounts for concrete age and relative strength at time of loading. See Section 3.2 for shoring/reshoring requirements.
3. Design formwork for loads and lateral pressures outlined in Section 2.2, ACI 347, and wind and seismic loads as specified by SEI/ASCE 37-02 unless otherwise controlled by local building code.
4. Design formwork to include loads imposed during construction, including weight of construction equipment, concrete mix, height of concrete drop, rate of filling of formwork, vibrator frequency, ambient temperature, foundation pressures, lateral stability, temporary imbalance or discontinuity of building components, and other factors pertinent to safety of structure during construction.
5. The use of flowing concrete (8" (200mm) to 10" (250mm) slump) of Self-Consolidating Concrete requires a review of the formwork design based on the rate of placement and setting time of the mix. Unless shown to be sufficient otherwise, formwork design shall conform to the requirements of ACI 237.

#### 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Comply with DDC General Conditions, include the following:

1. Store forms and form materials clear of ground and protect from damage.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

#### 1.10 TESTING AGENCY

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform Special Inspections.
- B. The Contractor shall be responsible for, and bear all expenses associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.
- C. Refer to Section 01 40 00 "Quality Requirements", Article 1.9, of the DDC General Conditions, for additional information regarding Special Inspections.

#### 1.11 QUALITY ASSURANCE BY TESTING AGENCY

- A. Field Quality Assurance: Testing Agency shall test and inspect concrete formwork as Work progresses. Failure to detect any defective work or material shall not in any way prevent later rejection when such a defect is discovered.

- B. Contractor's testing agency shall provide properly instructed inspectors at site in presence of Commissioner to inspect formwork using the latest Contract Documents and approved shop drawings as follows:
  - 1. Prior to placement of reinforcement, inspect formwork for grade, quality of material, absence of foreign matter, and other imperfections that might affect suitability of concrete placement and tolerances stated herein.
  - 2. Inspect forms for location, configuration, compliance with specified tolerances, block outs, camber, shoring ties, seal of form joints and compliance with Contract Documents.
  - 3. Verify condition of bond surfaces, locations and sizes of all accessories, embedment items, and anchorage for prevention of displacement.
  - 4. Verify proper use/application of form release agents.
  - 5. Inspect concrete surfaces immediately after removal of formwork and prior to any patching or restoration work.
- C. The Testing Agency shall submit for record inspection, observation, and/or test reports to the Commissioner, as required herein and shall provide an evaluation statement in each report stating whether or not concrete formwork conforms to requirements of Specifications and Drawings and shall specifically note deviations therefrom.

#### 1.12 QUALITY CONTROL

- A. Section 03 30 00 – “Cast-in-Place Concrete” and the DDC General Conditions.

#### 1.13 OBSERVATIONS BY COMMISSIONER

- A. Section 03 30 00 – “Cast-in-Place Concrete”

#### 1.14 PERMITS AND WARRANTY

- A. Permits: See Section 03 30 00 – “Cast-in-Place Concrete”
- B. See Section 03 30 00 – “Cast-in-Place Concrete.” Failures include but are not limited to the following:
  - 1. Discoloration of concrete scheduled to remain exposed to view.
  - 2. Damage of concrete finishes caused by forms.
  - 3. Damage of concrete caused by form stripping.
  - 4. Non-compliance with form finishes required for designated architectural finishes.
  - 5. Non-compatibility of form release agent with subsequent architectural finish materials applied to concrete surfaces.
  - 6. Excessive and/or noticeable bowing in placed concrete members caused by deflection of formwork during concrete placement.

**1.15 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.16 LEED BUILDING SUBMITTALS**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**PART 2 - PRODUCTS**

**2.1 FORMWORK REQUIREMENTS**

- A. General Requirements
  - 1. Formwork shall meet construction safety regulations for the State of New York.
  - 2. Forms shall be removable without impact, shock or damage to concrete surfaces, the structure and adjacent materials.
  - 3. Forms shall be tight-fitting, designed and fabricated for required finishes and to withstand concrete weight and maintain tolerances as specified in ACI 117 for the following designations: (See architectural drawings for locations).
    - a. Class A – For surfaces prominently exposed to public view where appearance is of special importance.
    - b. Class B – Coarse-textured concrete-formed surfaces intended to receive plaster, stucco or wainscoting.
    - c. Class C – General Standard for permanently exposed surfaces where other finishes are not specified.

- d. Class D - Minimum quality surface where roughness is not objectionable, usually applied where surfaces will be concealed.
- 4. Furnish forms in largest practicable sizes to minimize number of joints and to conform to joint system shown on Drawings, using form materials with sufficient thickness to withstand pressure of newly-placed concrete without bow or deflection.
- 5. Butt Joints: Shall be solid and complete with backup material to prevent leakage of cement paste.
- B. Form Finishes for Exposed Surfaces:
  - 1. Type: Straight, smooth, free of cement paste leaks at butt-joints, surface imperfections and other irregularities detrimental to appearance of finished concrete, fully coordinated with requirements for required finish material.
  - 2. Form exposed areas of columns, beams, ledges, balcony fascias to achieve true alignment and level soffit of edge beams and concrete edges. All such areas must be sharp, straight and true to line and level. Edge beams and concrete canopies and ledges must have adequate shoring to prevent any visible amount of sag and sufficient bracing to prevent any lateral movement during construction.

## 2.2 FORM MATERIALS

- A. General: Plywood, fiberglass, metal, metal-framed plywood faced, or other approved panel-type materials.
  - 1. Provide materials with sufficient strength to prevent warping.
- B. Plywood: Of species and grade suitable for intended use, sound undamaged sheets with clean true edges, minimum 5/8" (16mm) thick, complying with U.S. Product Standard PS-1.
  - 1. Other approved Sheet Materials: 14 gauge (2.0mm) sheet steel or fibrous glass reinforced resin.
- C. Lumber: Construction grade or better consistent with calculation requirements, without loose knots or other defects.
  - 1. Use only where entire width can be covered with one board 11-1/4" (285mm) or less in width.
- D. Forms for Cylindrical Columns and Supports: Metal, glass-fiber reinforced plastic, or paper or fiber tubes that will produce smooth surfaces without joint indications.
  - 1. Provide units with sufficient wall thickness to resist wet concrete loads without deformation.
- E. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to support weight of placed concrete without deformation.
- F. Chamfer for Form Corners:
  - 1. Types: Chamfer strips of wood, metal, PVC or rubber fabricated to produce smooth form lines and tight edge joints, 3/4" (20mm) size, maximum possible lengths.

2. Required for all exposed corners of beam, walls and column forms.

G. Form Ties:

1. Type: Factory-fabricated metal, adjustable length, designed to prevent form deflection and to prevent spalling concrete upon removal.
2. Ties used for architecturally exposed concrete shall be galvanized.
3. Ties shall not leave metal closer than 1-1/2" (40mm) to exposed surface.
4. When removed, ties shall not leave holes larger than 1" (25mm) diameter in concrete surface.
5. Removable Ties: Use type with tapered cones, 1" (25mm) outside diameter, for concrete walls which will remain exposed to view and scheduled for architectural finishes.
6. Snap-Off Ties: Use for concrete walls below grade and walls which will not remain exposed to view and are not scheduled for architectural finishes.
7. Wire Ties: Not acceptable.

H. Nails, Spikes, Lag Bolts, Thru-Bolts, Anchorages:

1. Type: Of size, strength and quality to meet the required quality of formwork.

I. Form Release Agent:

1. Type: Commercial formulation form release agent of non-emulsifiable type which will not bond with, stain, or adversely affect concrete surfaces. Form release agent shall not impair subsequent treatment of concrete surfaces requiring bond or adhesion, or impede the wetting of surfaces to be cured with water or curing compounds. Form release agent shall be compatible with subsequent architectural finish materials applied to concrete surfaces. Apply in compliance with manufacturers' instructions.
2. Form release agent shall meet, at a minimum, all federal and state requirements for volatile organic compounds (VOC's).
3. For Steel Forms: Non-staining rust-preventative type.

J. Reglets: Provide sheet metal reglets formed of same type and gauge as flashing metal, unless indicated otherwise on Drawings. Where resilient or elastomeric sheet flashing, or bituminous membranes are terminated in reglets, provide reglets of not less than 26 gauge (0.55mm) galvanized sheet metal. Fill reglet or cover face opening to prevent intrusion of concrete or debris.

K. Coordinate with materials as specified in Section 03 20 00 "Concrete Reinforcement and Embedded Assemblies."

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 FORMWORK

#### A. General:

1. Inspect areas to receive formwork.
  - a. Immediately notify the Testing Agency and Commissioner in writing of conditions that will adversely affect the Work.
2. Construct forms to sizes, shapes, lines, and dimensions shown on Contract Documents, and to obtain accurate alignment, location, grades, level and plumb work in finished structures.
3. Provide formwork sufficiently tight to prevent leakage of cement paste during concrete placement. Solidly butt joints and provide backup material at joints as required to prevent leakage and fins, and to maintain alignment.
4. Provide for openings, offsets, sinkages, keyways, recesses, moldings, rustications, reglets, drips, bevels, chamfers, blocking, screeds, bulkheads, anchorages and inserts and other features required in the Work.
5. Comply with shop drawings, ACI 301, 318, 347 and Contract Documents.
6. Maintain formwork and finished work construction tolerances complying with ACI 301 and 117.
7. Provide shore and struts with positive means of adjustment capable of taking up formwork settlement during concrete placing operations, using wedges or jacks or a combination thereof.
8. Erect forms for easy removal without hammering or prying against concrete surfaces.
9. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces.
10. Provide top forms for inclined surfaces where slope is too steep to place concrete with bottom forms only.
11. Kerf wood inserts for forming keyways, reglets, recesses, and the like, to prevent swelling and for easy removal.
12. Chamfer exposed corners and edges as indicated on the architectural drawings, using wood, metal, PVC or rubber chamfer strips fabricated to produce smooth lines and tight edge joints.
13. Design, erect, support, brace and maintain formwork and shoring to support loads until such loads can be safely supported by the concrete structure.
14. Where specifically shown on the Contract Documents as monolithic, upturned beams, curbs and similar members in connection with slabs shall be formed so that they can be poured integrally with slabs.

#### B. Concrete Accessories and Embedded Items:

1. Install into forms concrete accessories, sleeves, inserts, anchor bolts, anchorage devices and other miscellaneous embedded items furnished by other trades or that are required for other work that is attached to or supported by cast-in-place concrete.
    - a. Use setting drawings, diagrams, instructions and directions provided by suppliers of items to be attached.
  2. Install reglets to receive top edge of foundation sheet waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, relieving angles, and other conditions.
  3. Install dovetail anchor slots in concrete structures as indicated on drawings or required by other trades.
  4. Forms for Slabs: Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and contours in finished surfaces.
  5. Coordinate with Section 03 20 00 "Concrete Reinforcement And Embedded Assemblies."
  6. Install accessories and embedded items straight, level, plumb and secure in place to prevent displacement by concrete placement.
- C. Temporary Openings:
1. Locate temporary openings in forms at inconspicuous locations.
  2. For clean-outs and inspection before concrete placement, locate temporary openings where interior area of formwork would otherwise be inaccessible.
  3. For cleaning and inspections, locate openings at bottom of forms to allow flushing water to drain.
  4. Securely brace temporary openings and set tightly in forms to prevent loss of concrete.
  5. Close temporary openings with tight fitting panels, flush with inside face of forms, neatly fitted so that joints will not be noticeable on exposed concrete surfaces.
- D. Provisions for Other Trades: Coordinate and provide openings in concrete formwork to accommodate work of other trades.
1. Determine size and location of openings, recesses, chases, offsets, openings, depressions, and curbs from information provided by trades requiring such items.
  2. Accurately place and securely support items built into forms.
- E. Cleaning:
1. Normal Conditions:
    - a. Thoroughly clean forms and adjacent surfaces to receive concrete.
    - b. Remove chips, wood, sawdust, dirt, standing water or other debris just before placing concrete.

- c. Flush with water or use compressed air to remove remaining foreign matter.
    - d. Verify that water and debris can drain from forms through clean-out ports.
  - 2. During Cold Weather:
    - a. Remove ice and snow from within forms.
    - b. Do not use de-icing salts.
    - c. Do not use water to clean out completed forms, unless formwork and concrete construction will proceed within heated enclosure.
    - d. Use compressed air or other means to remove foreign matter.
- F. Form Release Agents
  - 1. Before placing reinforcing steel and miscellaneous embedded items, coat contact surfaces of forms with an approved non-residual, low VOC form release agent in accordance with manufacturer's published instructions.
  - 2. Do not allow release agent to accumulate in forms or come into contact with reinforcement or concrete against which fresh concrete will be placed.
    - a. Coat steel forms with nonstaining, rust-preventative material.
  - 3. Remove form release agent and residue from reinforcement or surfaces not requiring form coating.
- G. Before Placing Concrete:
  - 1. Inspect and check completed formwork, shoring and bracing to ensure that work is in accordance with formwork requirements of this section and Contract Documents, and that supports, fastenings, wedges, ties, and parts are secure.
    - a. Make necessary corrections or adjustment to formwork to meet tolerance requirements.
  - 2. Retighten forms and bracing before concrete placement to prevent mortar leaks and maintain proper alignment.
  - 3. Notify Testing Agency sufficiently in advance of placement of concrete to allow inspection of completed and cleaned forms.
- H. During Concrete Placement:
  - 1. Maintain a check on formwork to ensure that forms, shoring, ties and other parts of formwork have not been disturbed by concrete placement methods or equipment.
  - 2. Use positive means of adjustment as required for formwork settlement during concrete placing operations.
- I. Camber:

1. Provide camber in formwork as required for anticipated deflections due to weight and pressures of fresh concrete and construction loads.
2. Camber bottom forms where indicated on the drawings. Whenever forms are cambered, screeded levels for establishing top of concrete must be cambered to the same amount and to the same profiles such that scheduled depth of member is not reduced by lifting of forms. Check camber and adjust forms before initial set as required to maintain camber.

J. Surface Defects:

1. Install forms that will not impair the texture of the concrete and are compatible with the specified finish type.

K. Formwork Loads on Grade

1. Where loads from formwork bear on grade, provide suitable load-spreading devices for adequate support and to minimize settlement. In no event shall frozen ground or soft ground be utilized directly as the supporting medium.

L. Footings and Grade Beams:

1. Provide forms for footings and grade beams if soil or other conditions are such that earth trench forms are unsuitable.
2. When trench forms are used, provide an additional 1" (25mm) of concrete on each side of the minimum design profiles and dimensions indicated.

- M. For slabs-on-grade, secure edge forms in such a manner as to not move under weight of construction loads, construction and finishing equipment, or workers.

3.3 SHORES AND RESHORES

- A. Comply with ACI 347.2R for shoring and reshoring in multistory construction, and as specified herein.

1. For non-post tensioned flat plate concrete structures of five supported levels or more, extend shoring/reshoring at least four levels below the floor or roof being placed (shore formwork, reshore three levels below)
2. For non-post tensioned flat plate concrete structures of less than five supported levels, extend shoring/reshoring to ground.
3. For all other concrete structures of four supported levels or more, extend shoring/reshoring at least three levels below the floor or roof being placed (shore formwork, reshore two levels below)
4. For all other concrete structures of less than four supported levels, extend shoring/reshoring to ground.
5. For shoring/reshoring placed on mud sills, adjustments shall be made by contractor to account for ground settlement.
6. Locate shores/reshores such that the factored (ultimate) construction load imposed onto any slab or beam at any time during the construction cycle does not exceed 90% of the

factored (ultimate) design load for that slab or beam, scaled down to reflect effect on capacity of lower concrete strength at time of loading.

7. Construction load shall include the weight of wet concrete, total weight of formwork and shoring/reshoring, and a minimum construction live load of 50 psf (2.5kPa) (increase if construction operations will produce higher loading). Design load includes self-weight of the slab, and superimposed dead and live loads as indicated on the drawings.
8. For comparison of construction loads to design loads, compare factored (ultimate) construction loads to factored (ultimate) design loads. For construction dead and live loads, use the same load factors and load combinations as required by ACI 318 for design dead and live loads. The specified strength reduction factors from ACI 318 should also be applied during the strength evaluation of the partially completed structure.
9. For flat plate or flat slab construction “backshores” or “preshores” as defined in ACI 347 shall be permitted only if appropriate calculations and construction sequences are provided demonstrating that the accumulation of shore loads will not overload any slab. In the absence of such calculations and construction sequences, shores must be removed and reshores installed in a sequence such that each floor is permitted to deflect and carry its own weight prior to the installation of reshores.
10. Reshores shall not be removed until the concrete has attained its specified 28 day strength.

#### 3.4 REMOVING FORMS

- A. Formwork not supporting weight of concrete, such as sides of beams, walls, columns, and similar parts of the work, may be removed after cumulatively curing at not less than 50oF (10oC) for 12 hours after placing concrete, provided concrete is sufficiently hard to avoid damage by form-removal operations, and provided curing and protection operations are maintained after removal of formwork.
- B. Formwork supporting weight of concrete, such as beam soffits, joists, slabs, and other structural elements, may not be removed until concrete has attained at least 75% of design compressive strength as proven by cylinder test. If stripping occurs before 3 days, 100% strength must be achieved.
  1. Provide reshores as required per ACI 347.
  2. Determine potential compressive strength of in-place concrete by testing field-cured specimens representative of concrete location or members.
- C. Remove formwork progressively using methods to prevent shock loads or unbalanced loads from being imposed on structure. Comply with ACI 347.
- D. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against concrete surfaces.
- E. Reshore structural members where required due to design requirements, construction requirements, or construction conditions.
  1. Reshore on same day shoring and forms are removed.
- F. Whenever formwork is removed during the curing period, the exposed concrete shall be cured per requirements of Section 03 30 00 – “Cast-in-Place Concrete.”

- G. All wood formwork, including that used in void spaces, pockets and other similar places shall be removed.
- H. Form tie holes shall be filled as per approved samples submitted to the Commissioner.
- I. The Contractor shall assume responsibility for all damage due to removal of the forms.

### **3.5 RE-USING FORMS**

- A. Before forms can be re-used, surfaces that will be in contact with freshly poured concrete must be thoroughly cleaned, damaged areas restored, and projecting nails withdrawn.
  - 1. Split, frayed, delaminated or otherwise damaged form-facing material will not be approved.
  - 2. Apply new form release agent on re-used forms.
- B. When forms are extended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close joints. Align and secure joints to avoid offsets.
- C. Forms for exposed concrete may be reused only if the surfaces have not absorbed moisture and have not splintered, warped, discolored, stained, rusted or peeled, subject to acceptance by the Commissioner. The Commissioner reserves the right to require the Contractor to remove and reconstruct such formwork as will produce subsequent areas that are approvable. Do not use "patched" forms for exposed concrete surfaces, unless approved by the Commissioner.

**END OF SECTION 03 10 00**

## **SECTION 03 20 00**

### **CONCRETE REINFORCEMENT AND EMBEDDED ASSEMBLIES**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract City of New York Standard Construction Contract.

##### **1.2 SUMMARY**

- A. Provide all labor, materials, equipment, services and transportation for reinforcing steel, accessories, embedments and miscellaneous anchorage accessories, joint fillers, and waterstops for cast-in-place concrete work as shown on Drawings, as specified herein, and as required by the job conditions.

##### **1.3 RELATED WORK SPECIFIED IN OTHER SECTIONS**

- |    |                                 |                        |
|----|---------------------------------|------------------------|
| A. | Submittals                      | DDC General Conditions |
| B. | Quality Control                 | DDC General Conditions |
| C. | Concrete Formwork               | Section 03 10 00       |
| D. | Cast-in-Place Concrete          | Section 03 30 00       |
| E. | Thermal and Moisture Protection | Division 7             |
| F. | Architectural Concrete          | Section 03 33 00       |

##### **1.4 CODES AND STANDARDS**

- A. 2014 New York City Building Code: Concrete work shall conform to the requirements of the 2014 New York City Building Code and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.
- B. Standards:
  - 1. ACI 117 – Standard Specifications for Tolerances for Concrete Construction and Materials.
  - 2. ACI 301 – Specifications for Structural Concrete.
  - 3. ACI 315 – Details and Detailing of Concrete Reinforcement.
  - 4. ACI 318 – Building Code Requirements for Structural Concrete and Commentary.
  - 5. ACI 355.2 – Qualification of Post-Installed Mechanical Anchors in Concrete and Commentary
  - 6. ACI 355.4 – Qualification of Post-Installed Adhesive Anchors in Concrete and Commentary

7. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein.
8. AWS D1.1 – Structural Welding Code-Steel.
9. AWS D1.4 – Structural Welding Code-Reinforcing Steel.
10. CRD C 572 – Specification for Polyvinylchloride Waterstops.
11. Concrete Reinforcing Steel Institute "Manual of Standard Practice"
12. ASTM D3963 Fabrication and Jobsite Handling of epoxy Coated Steel Reinforcing Bars.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.6 SUBMITTALS

- A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with DDC General Conditions Submittals, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.

- a) Submittal Schedule
- b) Shop Drawings
- c) Product Data
- d) Mill Reports
- e) Reinforcement Strain Test
- f) Hazardous Materials Notification

1. Submittal Schedule: Section 03 30 00 – "Cast-in-Place Concrete"
2. Shop Drawings: Submit for action shop drawings that shall clearly indicate, but not be limited to:
  - a. All details, dimensions and information required for fabrication and placement of concrete reinforcement in accordance with Contract Documents, prepared in accordance with ACI 315 recommendations.
  - b. Elevations, plans, sections, and dimensions of concrete work with required reinforcement clearances.
  - c. Ledges, brackets, openings, sleeves, anchor rods, embedments, prefabricated bent-in dowel keyway systems, electrical conduit and items of other trades including interference with reinforcing materials.
  - d. Sizes, grade designations, spacing, locations, and quantities of wire fabric, reinforcement bars, temperature and shrinkage reinforcement dowels.

- 1) Do not use dimensions scaled from Contract Drawings to determine bar lengths.
- 2) Hooks and bends not specifically dimensioned shall be detailed per ACI 318.
- e. Bending and cutting schedules, assembly diagrams, splicing and connection requirements, details, and laps.
- f. Each type of supporting and spacing devices, including miscellaneous accessories.
- g. Construction joint type, details, and locations. Coordinate construction joint type, details, and locations with concrete pour schedule. Submittal shall include details for each type of construction joint in accordance with Contract Documents.
- h. Locations and dimensions of openings in structural members including floor slab, shear walls, columns and beams. See SUBMITTALS Section 03 30 00 – “Cast-in-Place Concrete”.
- i. Concrete accessories and embedded items. See SUBMITTALS article of Section 03 30 00 – “Cast-in-Place Concrete”.
3. Product Data: Submit for action for each type of product identified in Part 2. Product Data shall be clearly marked to indicate all technical information which specifies full compliance with this section and Contract Documents, including published installation instructions and I.C.C reports, where applicable, for products of each manufacturer specified in this section.
4. Mill Reports: Submit for record.
5. Reinforcement Strain Test: For Grade 75 reinforcement, submit for record certification that steel has a yield strength of no less than 75 ksi as measured by both ASTM A615 and ACI 318 Section 3.5.3.2 procedures.
6. Hazardous Materials Notification: Submit for record. In the event no product or material is available that does not contain hazardous materials as determined by the City of New York, a "Material Safety Data Sheet" (MSDS) equivalent to OSHA Form 20 shall be submitted for that proposed product or material prior to installation.
- B. Refer to DDC General Conditions for submittal process and requirements.
- C. Refer to Section 03 30 00 – “Cast-in-Place Concrete” for additional submittal requirements related to concrete trades.
- 1.7 DELIVERY, STORAGE, AND HANDLING
  - A. Comply with General Conditions and DDC General Conditions, including the following:
    1. Deliver reinforcing steel to Project site bundled, tagged and marked.
      - a. Use weatherproof tags indicating bar sizes, lengths and other information corresponding to markings shown on placement diagrams.
    2. Deliver welded wire fabric in sheets. Do not deliver in rolls.

3. During construction period, properly store reinforcing steel and accessories to assure uniformity throughout the Project.
4. Deliver and store welding electrodes in accordance with AWS D1.4.
5. Immediately remove from site materials not complying with Contract Documents or determined to be damaged.
6. Store reinforcing steel above ground so that it remains clean.
  - a. Maintain steel surfaces free from materials and coatings that might impair bond.
  - b. Keep covered.
  - c. Protect against corrosion or deterioration of any kind.

#### 1.8 TESTING AGENCY

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform Special Inspections.
- B. The Contractor shall be responsible for, and bear all expenses associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.
- C. Refer to Section 01 40 00 "Quality Requirements", Article 1.9, of the DDC General Conditions, for additional information regarding Special Inspections.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

#### 1.10 QUALITY ASSURANCE BY TESTING AGENCY

- A. Field Quality Assurance : Testing Agency shall test and inspect concrete reinforcement and embedded assemblies as Work progresses. Failure to detect any defective work or material shall not in any way prevent later rejection when such defect is discovered nor shall it obligate the Commissioner for final acceptance.
- B. The Testing Agency shall provide properly instructed inspectors at the site to inspect reinforcement, embedments, and accessories using the latest Drawings and reviewed shop drawings, as follows:
  1. Prior to placement, inspect reinforcement and embeds for grade, quality of material, absence of foreign matter, and for suitable storage.
  2. Provide continuous inspection of reinforcement and embedded assemblies during placement and immediately prior to concreting operations for: size, quantity, vertical and horizontal spacing and location, correctness of bends and splices, mechanical splices, clearances, compliance with specified tolerances, security of supports and ties, concrete cover, and absence of foreign matter.

3. Inspect epoxy-coated reinforcement for coating damage and required applied coatings.
  4. Provide continuous inspection of adhesive anchors installed in horizontal or upwardly inclined orientations and those marked (CERT) on the latest Drawings.
- C. Adhesive anchors shall be proof tested in tension as follows:
1. The Testing Agency shall submit an adhesive anchorage proof testing plan to the Commissioner for review and approval prior to performing the anchor proof testing. The anchorage testing plan shall meet the requirements as specified in this section and indicate which anchors have been selected for testing.
  2. Proof testing shall be performed as a confined tension test in accordance with the guidelines of ASTM E488 and the requirements of ACI 355.4.
  3. Testing shall be performed after the minimum curing period specified by the manufacturer.
  4. 5 percent of each type and size of an adhesive anchor assembly and 100 percent of anchors marked (CERT) shall be proof tested in tension by Testing Agency.
  5. All anchors selected for proof testing shall be production anchors. Sacrificial anchors are not acceptable for inclusion in the proof testing plan unless specifically approved by the Commissioner prior to performance of the testing.
  6. The adhesive anchors proof tension loads shall be as specified in the general notes of the structural drawings.
  7. Anchors shall have no visible indications of displacement or damage during or after proof load application. Concrete cracking in the vicinity of the anchor after loading shall be considered a failure.
  8. If more than 10% of the tested adhesive anchors fail to achieve the specified proof load, 100% of the anchors of the same diameter and type as the failed anchor shall be proof tested, unless otherwise direct in writing by the Commissioner. Immediately notify the Commissioner of all failed proof tests.
- D. Mechanical post-installed anchors shall be proof tested as follows:
1. The Testing Agency shall submit a mechanical anchorage proof testing plan to the Commissioner for review and approval prior to performing the anchor proof testing. The anchorage testing plan shall meet the requirements as specified in this section and indicate which anchors have been selected for testing.
  2. 5 percent of each type and size of mechanical anchor shall be proof tested by Testing Agency. The required proof test for the anchors is as follows:
    - a. For torque-controlled mechanical anchors, a proof torque shall be applied to the anchor using a calibrated torque wrench and the proof torque shall be achieved with no more than one-half turn of the anchor nut.
  3. The required proof torque load for torque-controlled mechanical anchors shall be as specified in the general notes of the structural drawings.

4. All anchors selected for proof testing shall be production anchors. Sacrificial anchors are not acceptable for inclusion in the proof testing plan unless specifically approved by the Commissioner prior to performance of the testing.
  5. Concrete cracking in the vicinity of the anchor during or after proof torque load application shall be considered a failure.
  6. If more than 10% of the tested mechanical anchors fail to achieve the specified proof torque load or set, 100% of the anchors of the same diameter and type as the failed anchor shall be proof tested, unless otherwise direct in writing by the Commissioner. Immediately notify the Commissioner of all failed proof tests.
- E. Periodic inspection for post-installed adhesive and mechanical anchors shall be provided in accordance with the building code except that continuous inspection shall be provided for the conditions identified in section B.4. The inspector shall observe all aspects of the anchor installation and shall, at a minimum, verify the following items:
1. Hole drilling method in accordance with the Manufacturer's Published Installation Instructions (MPII) and these installation requirements.
  2. Anchor spacing and edge distance.
  3. Hole diameter and depth.
  4. Hole cleaning in accordance with the MPII.
  5. Anchor element type, material, diameter, and length.
  6. For adhesive anchors, adhesive identification and expiration date.
  7. For adhesive anchors, adhesive installation in accordance with the MPII.
  8. For torque-controlled mechanical anchors, the number of turns required to achieve the anchor set torque per the MPII.
- F. The Testing Agency shall submit for record inspection, observation, and/or test reports to Commissioner, as required herein and shall provide an evaluation statement in each report stating whether or not concrete reinforcement, embedded assemblies, and post-installed anchors conforms to requirements of Specifications and Drawings and shall specifically note deviations therefrom.
- G. Immediately notify the Contractor, and Commissioner of deficiencies.
- 1.11 QUALITY CONTROL BY CONTRACTOR
- A. See Section 03 30 00 – "Cast-in-Place Concrete"
- 1.12 OBSERVATIONS BY COMMISSIONER
- A. See Section 03 30 00 – "Cast-in-Place Concrete"
- 1.13 PERMITS AND WARRANTY
- A. Permits: See Section 03 30 00 – "Cast-in-Place Concrete"

- B. Warranty: See Section 03 30 00 – “Cast-in-Place Concrete.” Failures include but are not limited to the following:

1. Bars with kinks or bends not indicated on Drawings or on approved shop drawings.
2. Bars damaged due to bending, straightening or cutting.
3. Bars heated for bending.

#### 1.14 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

1. Refer to the following sections:
2. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
3. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
4. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Flyash: Concrete shall incorporate flyash as a replacement for at least 20% (by weight) of the Portland cement. All design mixes are subject to review and approval by the Commissioner.
2. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
3. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 “INDOOR AIR QUALITY MANAGEMENT”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.15 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**PART 2 - PRODUCTS****2.1 REINFORCEMENT****A. Reinforcing Steel:**

1. Type: Deformed billet steel bars, ASTM A 615, Grade 60 or 75 as indicated on Drawings.
2. Size: As indicated on structural Drawings.
3. Where indicated on Drawings, reinforcing steel shall be hot-dipped galvanized after fabrication in accordance with ASTM A 767, Class II, with galvanizing material protected from embrittlement during galvanizing process in accordance with ASTM A 143.
  - a. Galvanized finish shall meet the bend and shear test requirements of ASTM A 615.
4. Epoxy-Coated: ASTM A 775 where indicated on Drawings.
5. Weldable reinforcement: ASTM A 706 where indicated on Drawings.

**B. Welded Wire Reinforcement:**

1. Type: steel wire, deformed, ASTM A 496.
2. Size: As indicated on structural Drawings.
3. Where indicated on Drawings, welded wire reinforcement shall be hot-dipped galvanized after fabrication in accordance with ASTM A 767, Class II, with galvanizing material protected from embrittlement during galvanizing process in accordance with ASTM A 143.
  - a. Galvanized finish shall meet the bend and shear test requirements of ASTM A 615.
4. Plain Steel Welded Wire Reinforcement: ASTM A 1064.
5. Deformed Steel Welded Wire Reinforcement: ASTM A 497.
6. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884, Class A.

**C. Shear Reinforcement At Slab-Column Connections:**

1. Type: Steel studrail assemblies for shear reinforcement at slab-column connections shall be DECON STUDRAILS supplied by DECON USA, Medford New Jersey.
  - a. Shear studs shall be in accordance with ASTM A108, Grade C1015.
  - b. Rails shall be low carbon steel Type 44W.
  - c. Studs shall be welded in accordance with AWS D1.1.
2. Size: As indicated on structural Drawings.
3. Installation: Per manufacturer's instructions.

4. Supports: Use plastic molded plastic chairs as provided by the manufacturer to maintain the bottom rebar cover as specified on the Drawings. Tie studrails to adjacent top bars to maintain vertical position.

D. Reinforcement Coating Restoration Materials:

1. Apply restoration materials in accordance with the manufacturer's written procedures.
2. Galvanized Repair Coating: Zinc-based solder, paint containing zinc dust or sprayed zinc complying with ASTM A780.
3. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/ A 775M.
  - a. The maximum amount of restored damaged areas shall not exceed 2% of the surface area in each linear foot of each bar. If more than 2% of the surface area in each linear foot of bar is damaged, bar shall be replaced.

2.2 ACCESSORIES

A. Tie Wire:

1. Type: Minimum 16 gauge (1.5mm) annealed steel wire, ASTM A 510 and ASTM A 853.
2. Wire Bar Type: Comply with CRSI.

B. Mechanical Splicing Systems:

1. Mechanical tension and compression splicing systems shall be used where indicated on Drawings or at contractor's option. For seismic design categories D, E and F, in plastic hinge regions, only Type 2 mechanical splices are permitted.
2. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
  - a. Bartec Couplers by Dextra, Santa Fe Springs, CA
  - b. Lenton Cadweld by Erico, Solon, OH
  - c. Bar Lock coupler system by Dayton Superior, Miamisburg, OH
  - d. Grip-Twist by Bar Splice, Dayton, OH
  - e. ZAP Screwlok by Bar Splice, Dayton, OH
  - f. Lenton Couplers by Erico, Solon, OH.
  - g. Or approved equal.
3. Splices shall be installed in compliance with manufacturer's requirements.

4. Mechanical and welded tensile mechanical splicing systems shall be capable of developing 125% of the reinforcing steel ASTM specified minimum yield strength (Type 1) except where indicated as Type 2 (100% of specified tensile strength).
5. Mechanical compression splices shall be such that the compression stress is transmitted by end bearing held in concentric contact.

C. Headed Bars:

1. For bar sizes #11 (ø36) or smaller where specifically detailed on Drawings, mechanical bar terminators shall be used.
2. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
  - a. Bartec End Anchors by Dextra, Santa Fe Springs, CA
  - b. Lenton Terminator by Erico, Solon, OH
  - c. Grip-Twist Doughnut by Bar-Splice, Dayton, OH
  - d. Bar Lock End Anchorage System by Dayton Superior, Miamisburg, OH.
  - e. Or approved equal.

D. Supports for Reinforcement:

1. Types: Bolsters, chairs, spacers, clips, chair bars, and other devices for properly placing, spacing, supporting, and fastening the reinforcement, plastic, plastic protected steel, or epoxy coated to match supported reinforcement.
2. For Contact with Forms: Use types with not less than 3/32" (2.5mm) of plastic between metal and concrete surface.
  - a. Plastic tips shall extend not less than 1/2" (12mm) on metal legs.
3. Individual and continuous slab bolsters and chairs shall be of type to suit various conditions encountered and must be capable of supporting 300 pound (1.5kN) load without damage or permanent distortion.
4. Unless otherwise indicated on Drawings, bottom reinforcing bars in footings shall be supported by precast concrete bricks or individual high chairs with welded sand plates on bottom.
5. For Slabs on Grade: Use supports with sand plates or horizontal runners where base material will not support chair legs.

E. Deformed Bar Anchors:

1. Type: Automatic end welded, ASTM A 496 quality.
2. Size and Grade: As indicated on structural Drawings by Nelson Stud Welding.

F. Anchor rods and dowels:

1. Types and Sizes: Provide sizes and types of anchor rods and dowels as indicated on the Drawings. Each type of anchor shall be manufactured of structural quality steel, designed for cast-in-place concrete applications and be of sizes as indicated on Drawings, complete with washers, nuts, plates and miscellaneous accessories required to meet Contract Document requirements.
2. Adhesive Anchors for anchor rods and dowels in existing concrete: See Anchorage Accessories.

G. Prefabricated Bent-In Dowel Keyway System:

1. Type, Size and Grade as indicated on Drawings.
2. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
  - a. Lenton Form Savers by Erico, Solon, OH
  - b. Stabox by Meadow Burke, Tampa, FL
  - c. Metalstrip by Dayton Superior, Miamisburg, OH.
  - d. Or approved equal.
3. Installation: Per Manufacturer's instructions.

2.3 ANCHORAGE ACCESSORIES

- A. General: Miscellaneous anchorage accessories for anchoring structural, architectural, electrical, and mechanical items to poured concrete shall include but not be limited to the following:
1. Concrete Anchors: Headed or bent studs ASTM A 108/Grade 1015 through 1020, minimum yield strength of 50,000 psi (345MPa), minimum tensile strength of 60,000 psi (415MPa).
  2. Anchor Rods: ASTM F1554, Grade as noted on Drawings.
  3. Threaded Inserts:
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) Dayton/Richmond Screw Anchor Co.
      - 2) Powers Fasteners, Inc.
      - 3) Acrow-Richmond Limited
      - 4) Or approved equal.
  4. Adhesive Anchors:
    - a. Basis of Design: See General Notes in structural drawings.

- b. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - 1) HIT-RE 500-SD by Hilti, Inc., Tulsa, OK
    - 2) Epcon C6+ by ITW Red Head, Glendale Heights, IL
    - 3) Epcon G5 by ITW Red Head, Glendale Heights, IL
    - 4) PE 1000+ by Powers Fasteners, Brewster, NY
    - 5) Pure 110+ by Powers Fasteners, Brewster, NY
    - 6) SET-XP by Simpson Strong-Tie Co., Pleasanton, CA
    - 7) Or approved equal.
  - c. The adhesive anchor system used for post-installed anchorage to concrete shall conform to the requirements of ACI 355.4 and commentary and shall possess a current ICC- ES report demonstrating compliance with ACI 318.
- 5. Expansion Anchors:
  - a. Basis of Design: See General Notes in structural drawings.
  - b. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - 1) Power Stud+ SD1 or SD2 by Powers Fasteners, Brewster, NY
    - 2) Power Stud + SD6 (SS) by Powers Fasteners, Brewster, NY
    - 3) Trubolt or Trubolt+ by ITW Red Head, Glendale Heights, IL
    - 4) Strong-Bolt by Simpson Strong-Tie Co., Pleasanton, CA
    - 5) Or approved equal.
  - c. The expansion anchors used for post-installed anchorage to concrete shall conform to the requirements of ACI 355.2 and commentary and shall possess a current ICC- ES report demonstrating compliance with ACI 318.
- 6. Threaded Screw Anchors:
  - a. Basis of Design: See structural drawing General Notes.
  - b. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - 1) Wedge Bolt+ by Powers Fasteners, Brewster, NY
    - 2) Tapcon by ITW Red Head, Glendale Heights, IL
    - 3) Titan HD by Simpson Strong-Tie Co., Pleasanton, CA

- 4) Or approved equal.
7. Inserts and Coil Rods: Yield strength 65,000 psi (450MPa), ASTM B 633,
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Acrow-Richmond Limited
    - 2) Dayton Superior, Dayton, OH.
    - 3) Powers Fasteners
    - 4) Or approved equal.
8. Welding Electrodes: AWS 5.5, Series E70.
9. Welded Deformed Bar Anchors: Welded by full-fusion process, as furnished by TRW Nelson Stud Welding Division or equivalent.
- B. Dovetail Anchor Slots:
  1. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - a. Formed 22 gauge (0.85mm) galvanized steel manufactured by Heckmann Building Products, Chicago, Illinois
    - b. Hohmann and Barnard, Hauppauge, New York
    - c. Pro-Slot by BoMetals, Inc., Carrollton, GA.
    - d. Or approved equal.
  2. Location of Use: Continuous installation of anchor slots, full height of masonry walls, where masonry walls abut poured concrete walls.
  3. Fill slot with temporary filler or cover face opening to prevent intrusion of concrete or debris.
  4. Finish: Hot-dip galvanized or zinc-plated steel.
  5. Stainless steel anchors are acceptable.

## 2.4 JOINT FILLERS

- A. Permanent Compressible Joint Filler:
  1. Type: Closed-cell expansion joint filler, ultraviolet stable, minimal moisture absorption, non-impregnated, nonstaining and nonbleeding, inert and compatible with cold-applied sealants.
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. W. R. Meadows: "Ceramar" (Basis-of-Design)
  - b. Peikko
  - c. Emseal
  - d. Or approved equal.
3. Location of Use: Slabs and curbs as indicated on Drawings or required.
  4. Thickness: As indicated on Drawings or required.
- B. Temporary Compressible Joint Filler:
1. Type: White molded polystyrene beadboard.
  2. Location of Use:
    - a. In slabs, curbs, and walls which must be removed prior to joint sealant installation.
    - b. Vertically to isolate walls from columns or other walls.
- C. Semi Rigid Joint Filler:
1. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - a. Product: Euclid Chemical Company "Euco 700" or "Euco QWIKjoint 200"
    - b. Product: Sika Corporation "Sikadur 51 SL"
    - c. Product: W.R. Meadows Sealtight "Rezi-Weld Flex"
    - d. Or approved equal.
- D. Noncompressible Joint Filler:
1. Type: Dow Chemical's "STYROFOAM 40" rigid closed-cell extruded polystyrene board, square edges, 40 psi (275kPa) compressive strength, ASTM C 578, Type IV.
  2. Thickness: As indicated on Drawings.
  3. Location of Use: As indicated on Drawings or required by 2014 NYCBC.
- E. Asphalt-Impregnated Joint Filler:
1. Type: W.R. Meadows Asphalt Expansion Joint Filler, preformed, ASTM D 994.
  2. Thickness: ½" (12mm) maximum, as indicated on Drawings or required by 2014 NYCBC.
  3. Location of Use: Sidewalks at foundation walls and as indicated on Drawings or required by 2014 NYCBC.

- F. Asphalt-impregnated fiberboard expansion joint filler for interior work:
  - 1. Type: ASTM D1751.
- G. Self-expanding cork board expansion joint filler for exterior work:
  - 1. Type: ASTM D1752.
- H. Construction Joints:
  - 1. Type: Tongue and groove type profile of galvanized steel, with knock-out holes at 6" (150mm) on center to receive dowelling, complete with anchorage.

## 2.5 WATERSTOPS

- A. Preformed Swellable Waterproofing Strips especially formulated for concrete cold joints at footings, walls, or slabs.
  - 1. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - a. Volclay Waterstop RX" by CETCO Building Materials Group, Hoffman Estates, IL
    - b. "Adcor ES" by W. R. Grace & Co., Cambridge, MA
    - c. "Hydrotite" by Sika, Lyndhurst, NJ
    - d. Or approved equal
  - 2. Size: 3/4" (20mm) by 3/8" (10mm) strips minimum, 25 ft. (7.5m) long, and weighing at least 0.165 lbs/ft (0.245kg/m).
  - 3. Location of Use: Concrete cold joints at footings, walls and slab joints.
  - 4. Comply with manufacturer product application and installation instructions.
- B. Polyvinyl Chloride Waterstops:
  - 1. Type: PVC Waterstops for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections and directional changes. U.S. Corp of Engineers Specification CRD C 572.
  - 2. Manufacturers and products: Subject to compliance with requirements, provide products by one of the following:
    - a. "PVC Waterstops" by BoMetals, Carrollton, GA
    - b. "Greenstreak" by Sika, Lyndhurst, NJ
    - c. "Sealtight PVC Waterstops" by W.R. Meadows, Hampshire, IL
    - d. Or approved equal.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 FABRICATION**

A. Reinforcing Steel Fabrication:

1. Fabricate in accordance with approved shop Drawings, ACI 315 and Contract Documents.
2. Heating of Reinforcement: Will be permitted only with specific prior approval of the Commissioner.
3. Welding: Comply with ANSI/AWS D1.4; use E9018 electrodes or approved electrodes.
4. Tolerances: Comply with ACI 117.
5. Unacceptable Materials: Reinforcement with any of following defects will not be permitted in Work.
  - a. Bar lengths, depths, and bends exceeding ACI fabrication tolerances.
  - b. Bends or kinks not indicated on Drawings or final shop drawings.
  - c. Bars with reduced cross-section due to excessive rusting or other cause.

B. Welded Wire Reinforcement:

1. Type: As fabricated in accordance with CRSI, unless otherwise noted.

C. Templates:

1. Required for all footing and column dowels, and where required for proper alignment of reinforcing.

D. Assemblies:

1. Fabricate and assemble structural steel items in shop in conformance with AISC and AWS D1.1. Shearing, flame cutting, and chipping shall be done carefully and accurately. Cut, drill, or punch holes at right angles to the surface of the metal. Do not make or enlarge holes by burning. Holes shall be clean-cut without torn or ragged edges.
2. Welding of deformed bar anchors and headed stud anchors shall be installed by full-fusion process equivalent to TRW Nelson Stud Welding Division or KSM Welding Services Division, Omark Industries or Tru-Weld Stud Welding, Medina, OH.
3. Welding of reinforcement shall be done in accordance with AWS requirements. Welding shall be performed subject to the observance and testing by The Testing Agency.
4. Galvanizing where required, shall be applied after fabrication and prior to casting concrete.

5. Welding of crossing bars (tack welding) for assembly of reinforcement is not permitted without use of weldable reinforcement and express written consent of Commissioner.

### 3.3 INSTALLATION OF REINFORCEMENT

#### A. General:

1. Perform the work of this section in accordance with approved shop drawings, ACI 318 and CRSI recommended practice for "Placing Reinforcing Bars", for details and methods of reinforcement placement and supports, and as specified.
2. Before placing reinforcement steel, inspect forms for proper fitting and compliance with allowable tolerances.
3. Reinforcement shall be free of form coatings, sealers, powdered and scaled rust, loose mill scale, earth, ice, and other materials which will reduce or destroy bond with concrete.
4. Do not place concrete until the completed reinforcement steel work has been observed and accepted by The City of New York 's Testing Laboratory.
5. Reinforcement steel is not permitted to be "floated into position".
6. Bend bars cold.
  - a. Do not heat or flame cut bars.
  - b. No field bending of bars partially embedded in concrete is permitted, unless specifically approved by the Commissioner and tested by Independent Testing Agency for cracks.
7. Weld only as indicated.
  - a. Perform welding per ANSI/AWS D12.1 and/or ANSI/AWS D1.4.
  - b. See structural Drawings for additional requirements.
8. Tag reinforcement steel for easy identification.

#### B. Placement of Reinforcement Bars:

1. Comply with approved shop drawings, ACI 318 and Contract Documents.
2. Accurately position, support and secure reinforcement in a manner to prevent displacement before and during placement of concrete.
  - a. Place reinforcement bars within tolerances specified in ACI 117.
  - b. Locate and support reinforcement by metal chairs, runners, bolsters, spacers, hangers and other accessories for fastening reinforcing bars and welded wire reinforcement in place.
3. If bars are displaced beyond specified tolerance when relocating the bars to avoid interference with other reinforcement or embedded items, immediately notify the Commissioner for approval prior to concrete placement.

4. Avoid cutting or puncturing vapor retarder during reinforcement placement.
    - a. Restore damages before placing concrete.
  5. Concrete Coverage: Maintain concrete cover around reinforcement as indicated on Drawings.
  6. Bar Supports: Use type specified in this section.
  7. Tie Wires: After cutting, turn tie wires to the inside of section and bend so that concrete placement will not force ends to be exposed at face of concrete.
- C. Placement of Wire Reinforcement:
1. Install in lengths as long as practicable.
  2. Support in position adequately to prevent bending of reinforcement between supports before and during placement of concrete.
  3. Overlap the wire reinforcement 6" or one panel width + 2", whichever is larger.
    - a. Securely tie together with wire.
  4. Offset laps of adjoining widths to prevent continuous laps in either direction.
  5. Locate wire fabric in the top third of slabs, unless noted otherwise on structural Drawings.
- D. At Construction Joints:
1. Reinforcement bars and wire reinforcement shall be continuous through construction joints, unless otherwise indicated on Drawings. See Drawings for scheduled lap splices.
- E. At Expansion Joints:
1. Reinforcing bars and wire fabric shall NOT be continuous through expansion joints, unless otherwise indicated on Drawings.
- F. Splicing:
1. Unless otherwise indicated on Drawings provide lap splices for bar sizes #11 (ø36) and smaller by lapping ends, placing bars in contact, and tying tightly with wire in accordance with requirements of ACI 318 for lap lengths indicated on Drawings.
  2. At all #14 (ø43) and #18 (ø57) bars and where mechanical splices are specifically indicated on Drawings, comply with requirements specified in this Specification section under "Mechanical Splicing Systems".
  3. Do not splice reinforcement except as indicated on structural Drawings.
  4. Tension couplers may be used and installed per manufacturer's specifications where indicated on Drawings or as approved by Commissioner.
- G. Dowels in Existing Concrete:

1. Install dowels and dowel adhesive in accordance with supplier's recommendations.
2. Minimum embedment length shall be 12 bar diameters, unless noted otherwise.

### 3.4 INSTALLATION OF POST-INSTALLED ADHESIVE ANCHORS

#### A. General:

1. Post-installed adhesive anchors shall be installed in accordance with the Manufacturer's Printed Installation Instructions (MPII).
2. The adhesive anchors shall be supplied as an entire system. Provide all equipment required to install the adhesive anchor in accordance with the MPII.
3. Anchors shall be installed in holes drilled with a rotary impact hammer drill with carbide bit. Obtain prior written approval from Commissioner before using rock drilling or core drilling installation methods.
4. Anchor holes shall be thoroughly cleaned and dry prior to adhesive injection, in accordance with the MPII. Anchors to be installed in the adhesive shall be clean, oil-free, and free of loose rust, paint, or other coatings.
5. Concrete shall have a minimum compressive strength of 2500 psi (17MPa).
6. Concrete at time of adhesive anchor installation shall have a minimum of 21 days.
7. Concrete temperature at the time of adhesive anchor installation shall be at least equal to manufacture's requirements, or 50° F (10°C) if no requirement exists.
8. Support the anchor and protect it from disturbance or loading for the full cure time stated by the manufacturer at that base material temperature.
9. Unless specified otherwise in the contract documents, anchors shall be installed perpendicular to the concrete surface. Anchors displaced or disturbed prior to the adhesive cure time shall be considered damaged and reported to the Commissioner (see Observations and Corrections Section 03 30 00 "Cast-in-Place Concrete").
10. Locate, by non-destructive means, and avoid all existing reinforcement prior to installation of anchors. Immediately notify the Commissioner if existing reinforcement layout prohibits the installation of anchors as indicated in the drawings.
11. Reinforcement bars or all-threaded bars shall not be bent after being adhesively embedded in hardened, sound concrete, unless written approval is given by the Commissioner.
12. All installers installing anchors shall be properly instructed by the manufacturer on proper installation techniques. Submit for record certificate from training documentation from the manufacturer for each installer on this Project
13. Installation of adhesive anchors horizontally or upwardly inclined and anchors that are designated with a (CERT) after the anchor call-out, shall be performed by installers who are properly trained by the ACI/CRSI Adhesive Anchor Installer program.

**3.5 INSTALLATION OF ACCESSORIES AND EMBEDDED ITEMS**

- A. Install concrete accessories in accordance with manufacturer's published instructions and Contract Documents.
  - 1. Set and secure embedments, including embedded plates, bearing plates, and anchor rods, per approved setting drawings and in such a manner to prevent movement during placement of concrete and to allow removal of formwork without damage.
  - 2. Tolerances: Anchor rod and other embedded items placement tolerances shall comply with AISC 303, "Code of Standard Practice", Section 7.5.
  - 3. Inspect locations to receive concrete accessories.
  - 4. Immediately notify the Commissioner in writing of conditions that will adversely affect the Work or fail to meet Contract Document requirements.
  - 5. Do not place concrete until reinforcement, accessories and other built-in items have been inspected and accepted by The Testing Agency.
- B. Construction and Contraction (Control) Joints:
  - 1. Construction and contraction (control) joints indicated on Drawings are mandatory and must not be omitted.
    - a. Provide construction joints in accordance with ACI 318.
    - b. Roughen surface at construction joints as indicated on the drawings.
    - c. Where specifically indicated on drawings, provide 1-1/2" (40mm) deep key type construction joints at end of each placement for slabs, beams, walls and footings.
      - 1) Bevel forms for easy removal.
  - 2. Provide waterstops in construction joints as indicated on the Contract Documents in sizes to suit joint.
  - 3. Install waterstops to form continuous diaphragm in each joint.
  - 4. Support and protect exposed waterstops during progress of Work.
  - 5. Field-fabricate joints in waterstops according to manufacturer's printed instructions.
- C. Coordinate the installation of pipes, bolts, hangers, anchors, flashing and other embedded items with the work of other trades.

**END OF SECTION 03 20 00**

## **SECTION 03 30 00**

### **CAST-IN-PLACE CONCRETE**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract City of New York Standard Construction Contract.

##### **1.2 SUMMARY**

- A. Section includes: Cast-in-place concrete work, not including architectural finish requirements where they are required. For architectural finish requirements on cast-in-place concrete, see Section 03 33 00 "Architectural Concrete".

##### **1.3 RELATED WORK SPECIFIED IN OTHER SECTIONS**

- |    |  |                        |
|----|--|------------------------|
| A. | Submittals                                     | DDC General Conditions |
| B. | Quality Control                                | DDC General Conditions |
| C. | Concrete Formwork                              | Section 03 10 00       |
| D. | Concrete Reinforcement and Embedded Assemblies | Section 03 20 00       |
| E. | Thermal and Moisture Protection                | Division 7             |
| F. | Architectural Concrete                         | Section 03 33 00       |

##### **1.4 CODES AND STANDARDS**

- A. 2014 New York City Building Code: Concrete work shall conform to the requirements of the 2014 New York City Building Code, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.
- B. Standards:
  - 1. ACI 117 – Standard Specifications for Tolerances for Concrete Construction and Materials.
  - 2. ACI 301 – Specifications for Structural Concrete.
  - 3. ACI 318 – Building Code Requirements for Structural Concrete and Commentary.
  - 4. American Concrete Institute "Manual of Concrete Practice", various committee reports as referenced herein.
  - 5. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein, latest addition.

6. AASHTO T318 – Standard Method of Test for Water Content of Freshly Mixed Concrete Using Microwave Oven Drying.

#### 1.5 TESTING AGENCY

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform Special Inspections.
- B. The Contractor shall be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.
- C. Refer to Section 01 40 00 “Quality Requirements”, Article 1.9, of the DDC General Conditions, for additional information regarding Special Inspections.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.7 SUBMITTALS

- A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with DDC General Conditions Submittals, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.
  1. Submittal Schedule
  2. Mix Designs
  3. Concrete Travel Times to the Project Site
  4. Hot and Cold Weather Procedures
  5. Product Data
  6. Concrete Joint Locations
  7. Preconstruction Survey
  8. Survey of Flat Plate or Flat Slab Concrete Floors during construction
  9. FF/FL Testing
  10. Structural Restoration
  11. Patching Defective Concrete Finishes
  12. Conduit and Pipes Embedded in Concrete
  13. Hazardous Materials Notification

B. Detailed submittal requirements: See below for specific requirements for each required submittal.

1. Mix Designs: Submit for action concrete mix designs for each type and strength of concrete required for this Project at least thirty (30) days before placing concrete.
  - a. Mix designs shall be prepared or reviewed by Contractor's approved independent Testing Agency retained by the Contractor in accordance with requirements of ACI 301 and ACI 318, sealed and signed by a Professional Engineer licensed in the State of New York, and shall be coordinated with design requirements and Contract Documents.
  - b. Before submitting to Testing Agency, submit complete mix design data for each separate mix to be used on the Project in a single submittal.
  - c. Mix materials shall be from the same production facility that will be used for this Project.
  - d. Mix Design data shall include but not be limited to the following:
    - 1) Locations on the Project where each mix design is to be used corresponding to Structural General Notes on the Drawings.
    - 2) Design Compressive Strength: As indicated on the Drawings.
    - 3) Proportions: ACI 301 and ACI 318.
    - 4) Gradation and quality of each type of ingredient including fresh (wet) unit weight, aggregates sieve analysis.
    - 5) Water/cementitious material ratio.
    - 6) Evaluation and classification fly ash in accordance with ASTM D 5759.
    - 7) Report of chemical analysis of fly ash in accordance with ASTM C 618.
    - 8) Classification of blast furnace slag in accordance with ASTM C 989.
    - 9) Slump: ASTM C 143.
    - 10) Certification and test results of the total water soluble chloride ion content of the design mix - AASHTO T260 or ASTM C 1218.
    - 11) Air content of freshly mixed concrete by the pressure method, ASTM C 231, or the volumetric method, ASTM C 173.
    - 12) Unit Weight of Concrete: ASTM C 138.
    - 13) Design strength at 28, 56 or 90 days, as indicated on Contract Documents: ASTM C 39.
      - a) Document strength based on basis of previous field experience or trial mixtures per ACI 301. Proportioning by Water-Cement Ratio is not permitted.

- b) Submit strength test records, mix design materials, conditions, and proportions for concrete used for record of tests, standard deviation calculation, and determination of required average compressive strength.
  - c) If early concrete strengths are required, submit trial mixture results as required.
- 14) Manufacturer's product data for each type of admixture.
- 15) Manufacturer's certification that all admixtures used are compatible with each other.
- 16) All information indicating compliance with Contract Documents including method of placement and method of curing.
- 17) Normalweight Concrete: Density per ASTM C 138. Design the mix to produce the strength, modulus of elasticity and density as indicated on the Contract Documents.
- 18) Lightweight Concrete: Density per ASTM C 138. Design the mix to produce the strength, modulus of elasticity and density as indicated on the Contract Documents.
- 19) Certification from Contractor's qualified testing agency indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity in accordance with ASTM C 33
- 2. Concrete Travel Times to the Project Site: Submit for record.
- 3. Hot and Cold Weather Procedures: Submit for record written procedures for placement of concrete in hot and cold weather conditions. Hot and Cold weather are as defined in the Concrete Placement section of this Specification.
- 4. Product Data: Submit for action product data clearly marked to indicate locations to be used and all technical information which specifies full compliance with this section and Contract Documents, including published application instructions, product characteristics, compatibility, and limitations for each of the following:
  - a. Bonding agents.
  - b. Curing compound and liquid sealer densifier. Submit for record to Commissioner a written statement guaranteeing that the compound will not leave discoloration on concrete to be left exposed, or affect the bond for paint or other applied finishes. Include provision in written statement that in the event of failure of applied finishes to bond to membrane cured concrete, to remove the curing compound and leave suitable surfaces for bonding such finishes.
  - c. Absorptive covers and moisture retaining covers.
  - d. Vapor Retarder: See Division 7, Thermal and Moisture Protection.
  - e. Self-leveling concrete topping.

- f. Grout: Submittal of grout by manufacturers not listed herein must be accompanied by independent certification of ASTM C 1107 compliance without modification of standard methods.
- 5. Concrete Joint Locations: Submit for action plans indicating locations and details of construction joints, contraction joints, waterstops, sleeves, embedments, etc. that interact with the joints. Contractor to coordinate joint location with reinforcement shop drawings. Reinforcement shop drawings shall indicate additional reinforcement bars where required at construction joints.
  - a. Joint locations for concrete slabs to receive a terrazzo or similar finish subject to reflective cracking must be coordinated with layout of architectural finish drawings.
- 6. Comprehensive Layout Drawings: Submit for action comprehensive layout drawings (a single drawing per area/element):
  - a. Drawings shall show openings in structural members, including floor slab, shear walls, columns and beams.
  - b. Drawings shall consolidate the work of all trades and shall be coordinated by the Contractor.
  - c. Drawings shall show concrete accessories and embedded items, including fabrication details of items to be placed (exclusive of reinforcement).
  - d. Submit with or prior to reinforcement and formwork submittals for same element/area.
- 7. Preconstruction Survey: Submit for record. Where interface with existing construction occurs, before related shop drawings are prepared survey the existing construction and submit the survey prepared by a professional surveyor employed by the Contractor to the Commissioner.
- 8. Survey of Flat Plate or Flat Slab Concrete Floors during construction: Submit for record. Survey requirements are described on Drawings. Based on survey results, Commissioner may propose adjustments to formwork and camber.
- 9. FF/FL Testing: Submit for record to Testing Agency to test and report flatness (FF), levelness (FL) prior to shoring removal. For slabs that include camber, do not test for levelness (FL). Perform FF/FL testing in accordance with ASTM E 1155 requirements.
- 10. Structural Restoration: Submit for action procedures, intended locations, and product information.
- 11. Patching Defective Concrete Finishes: Submit for action procedures, intended locations, and product information.
- 12. Conduit and Pipes Embedded in Concrete: Submit for action layout of embedded conduit and pipes.
- 13. Hazardous Materials Notification: Submit for record. In the event no product or material is available that does not contain hazardous materials as determined by The City of New York, a "Material Safety Data Sheet" (MSDS) equivalent to OSHA Form 20 shall be submitted for that proposed product or material prior to installation.

**1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Comply with DDC General Conditions.
- B. Storage:
  - 1. Store materials in accordance with ACI 304R.
  - 2. Store cement in weather-tight buildings, bins or silos that will exclude moisture and contaminants.
  - 3. Store admixtures to avoid contamination, evaporation, damage, and in accordance with manufacturer's temperature and other recommendations.
  - 4. Keep packaged material in original containers with seals unbroken and labels intact until time of use.
- C. Handling:
  - 1. Handle fine and coarse aggregates as separate ingredients.
  - 2. Arrange aggregate stockpiles to avoid excessive segregation, and prevent contamination with other materials or with other sizes of like aggregates.
  - 3. Do not use frozen or partially frozen aggregates.
  - 4. Allow sand to drain until it has reached relatively uniform moisture content before use.
  - 5. Protect liquid admixtures from freezing and temperature changes that would adversely affect characteristics, and in accordance with manufacturer's recommendations.

**1.9 PRE-INSTALLATION CONFERENCE**

- A. At least 30 working days prior to the start of concrete construction, hold a meeting to review the approved concrete mix designs and to determine the procedures for producing proper concrete construction. Notify the Commissioner of the meeting and require responsible representatives of every party who is concerned with the concrete Work to attend the conference, including but not limited to the following:
  - 1. Contractor.
  - 2. Testing Agency representative.
  - 3. Ready-mix concrete producer.
  - 4. Admixture manufacturer(s).
- B. Minutes of the meeting shall be recorded and distributed by the Contractor to all parties concerned within five working days of the meeting. One copy of the minutes shall also be furnished to the following:
  - 1. Commissioner.

- C. The minutes shall include a statement by the concrete contractor and admixture manufacturer(s) indicating that the proposed mix design and placing, finishing, and curing techniques can produce the concrete properties and quality required by these Specifications.

1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.11 QUALITY ASSURANCE BY TESTING AGENCY

- A. Quality assurance is testing and inspection to assist The Commissioner in evaluating the Contractor's performance and quality control.
- B. Coordination with Testing Agency: The Contractor shall have sole responsibility for coordinating their work with Testing Agency to assure that all test and inspection procedures required by the Contract Documents and 2014 New York City Construction Codes are provided. Cooperate fully with Testing Agency in the performance of their work and shall provide the following:
  - 1. Information as to time of starting field construction and concrete placement schedule, one week prior to the beginning of the work
  - 2. Site File: At least one copy of each approved shop drawing shall be kept available in the Contractor's field office. Drawings not bearing evidence of approval and release for construction by the Commissioner shall not be kept on the job.
  - 3. Full and ample means of assistance for testing and inspection of material
  - 4. Proper facilities, including scaffolding, temporary work platforms, safety equipment etc., for inspection of the work in shop and field
- C. Duties of Testing Agency:
  - 1. Reports: Testing Agency shall prepare daily reports of the concrete work including progress and description/area of work, tests made and results. The daily reports shall be collected and delivered to the Commissioner weekly.
  - 2. Concrete Strength Spreadsheet Log: The Test Agency shall maintain a log that contains the results of all concrete strength tests. The log shall include the results of each test performed, be in electronic spreadsheet format, and updated and submitted along with concrete test data.
  - 3. Rejection: Testing Agency has the right to reject any material, at any time, when it is determined that the material or workmanship does not conform to the Contract Documents. Testing Agency shall immediately notify Commissioner, and Contractor of deficiencies.
  - 4. Remedial Work: Testing Agency shall indicate to the Contractor where remedial work must be performed and will maintain a current list of work not in compliance with the Contract Documents. This list shall be submitted to the Commissioner on a weekly basis.
  - 5. Certification: When all work has been approved by Testing Agency, Testing Agency shall certify in a letter to the Commissioner that the installation is in accordance with the design and Specification requirements.
- D. Field Quality Assurance
  - 1. General: Testing Agency and the Contractor's Independent Testing Agency shall test and inspect concrete materials and operations as Work progresses. Failure to detect any

defective work or material shall not in any way prevent later rejection when such defect is discovered, nor shall it obligate the Commissioner for final acceptance.

2. Testing Agency is responsible for monitoring concrete placement as follows:
  - a. The Contractor's Independent Testing Agency shall provide properly instructed inspectors at site to monitor concreting operations as follows:
    - 1) Verify use of required design mix
    - 2) Record location of point of concrete discharge of each batch truck tested, cross referenced to grid lines.
    - 3) Record temperature of concrete at time of placement.
    - 4) Record weather conditions at time of placement, including temperature, wind speed, relative humidity, and precipitation.
    - 5) Record types and amounts of admixtures added to concrete at the project site.
    - 6) Record amount of water added at the site and verify that total water content does not exceed amount specified in the mix design. Addition of water at the site is subject to prior approval by the Commissioner.
    - 7) Monitor consistency and uniformity of concrete.
    - 8) Monitor preparation for concreting operations, placement of concrete, and subsequent curing period for conformance with Specifications for following procedures:
      - a) Concrete curing.
      - b) Hot weather concreting operations.
      - c) Cold weather concreting operations.
3. Testing Agency shall conduct tests of concrete as follows and in accordance with ASTM C 1077:
  - a. Testing frequency: Sample sets for all tests listed below of each concrete design mix placed each day shall be taken not less than once a day, nor less than once for each 50 cubic yards of concrete, nor less than once for each 2500 square feet of surface area for slabs or walls. Additional tests shall be performed if deemed necessary by Testing Agency or Commissioner.
  - b. Obtain each test sample from different batches selected on a strictly random basis before commencement of concrete placement. Record location in structure of sampled concrete.
  - c. Determine air content of normal weight concrete in accordance with either ASTM C 231 or ASTM C 138. Determine air content of lightweight concrete in accordance with ASTM C 173.

- d. Determine unit weight of lightweight concrete in accordance with ASTM C 567.
- e. Test water content of freshly mixed concrete on a random basis, a minimum of once per 100 cubic yards (75 cubic meters) or every 5000 square feet (500 square meters) of concrete placement, during placement in accordance with AASHTO T 318 for the following concrete types:
  - 1) Hard troweled slabs exposed to view
  - 2) Slab to receive a bonded finish floor material
  - 3) Slabs with specified concrete compressive strength exceeding 6000 psi (42MPa)
- f. Conduct slump tests in accordance with ASTM C 143.
- g. Slump indicated in mix designs shall be achieved at point of placement. Correlation between slump at point of initial discharge from truck and point of placement must be established to determine amount of slump loss which occurs between initial discharge and point of placement. Adjustment may be necessary to achieve slump indicated in mix designs at point of placement.
- h. Conduct slump tests for Self Consolidating Concrete (SCC) as follows
  - 1) In accordance with ACI 237, where SCC is used, perform slump flow and visual stability index tests in accordance with ASTM C1611 on the first batch of SCC, and then consecutive batches until two consecutively produced batches are within specification. SCC with a visual stability index value of 2 or 3 shall be stabilized, where possible, with a viscosity modifying admixture or rejected at the discretion of the Testing Agency, subject to review by Commissioner. The Ready Mix Producer shall be responsible for adjusting the mix to provide desired flow and stability. After establishing the consistency of the SCC mix, testing shall continue in accordance with the requirements of the above paragraph.
  - 2) In accordance with ACI 237, where SCC is used, perform slump flow tests in accordance with ASTM C1621 using a J-ring to determine the passing ability of the SCC mix around reinforcement. If the reinforcing bars retain the coarse aggregates inside the ring, the mixture has a high potential for blocking and should be reportioned at the direction of Testing Agency, subject to review by Commissioner.
- i. Conduct strength tests of concrete as follows:
  - 1) Secure sample sets in accordance with ASTM C 172.
  - 2) Mold cylinders in accordance with ASTM C 31 and cure under standard moisture and temperature conditions in accordance with ASTM C 31, Section 7 (a). Quantity of cylinders listed below is based on a cylinder size of 4 inch (100mm) diameter x 8 inches (200mm) long. If 6 inch (150mm) diameter by 12 inch (300mm) long cylinders are used, the total quantity of cylinders may be reduced by one with two cylinders instead of three tested at the age designated for determination of  $f'_c$ .

- 3) Test cylinders in accordance with ASTM C 39. For specified concrete strength of 10,000 psi (70MPa) and above, cylinders shall be ground and not capped.
  - 4) For 28 day mixes mold six cylinders. Test two cylinders at seven days and three cylinders at 28 days. The 28 day strength shall be the average of the three 28 day cylinders. One cylinder shall be retained in reserve for later testing if required.
  - 5) For 56 day mixes mold seven cylinders. Test one cylinder at seven days, two cylinders at 28 days, and three cylinders at 56 days. The 56 day strength shall be the average of the three 56 day cylinders. One cylinder shall be retained in reserve for later testing if required.
  - 6) For 90 day mixes mold eight cylinders. Test one cylinder at seven days, one at cylinder at 28 days, two cylinders at 56 days, and three cylinders at 90 days. The 90 day strength shall be the average of the three 90 day cylinders. One cylinder shall be retained in reserve for later testing if required.
  - 7) When high early strength concrete is required by Contractor, additional cylinders shall be made and tested as required at Contractor's expense.
  - 8) If one cylinder in a test manifests evidence of improper sampling, molding or other damage, discard cylinder and base test results on that of remaining cylinder.
4. Testing Agency shall evaluate concrete for conformance with Specifications as follows:
- a. Slump:
    - 1) Testing Agency shall maintain a slump moving average, comprised of the average of all batches or most recent five (5) batches tested, whichever is fewer.
  - b. Strength test:
    - 1) Testing Agency shall perform tests to ensure that the Contractor maintains a compressive strength moving average, comprised of three (3) consecutive strength test results, for each mix design used in Work.
    - 2) Strength level of concrete will be considered satisfactory provided averages of all sets of three (3) consecutive strength test results (i.e. moving average) equal or exceed specified 28-day strength, and no individual strength test result falls below specified 28-day strength by more than 500 psi (3.5MPa).
    - 3) If strength tests fail to meet minimum requirements, concrete represented by such tests shall be considered questionable and shall, if deemed appropriate by the Commissioner, be subject to further evaluation by core testing as specified herein or other testing methods.
  - c. Conduct core tests on questionable concrete in accordance with ACI 318 and ASTM C 42.

- 1) Location of cores shall be coordinated with Commissioner so as to least impair strength of structure. Before testing cores, discard and replace any that show evidence of having been damaged subsequent to or during removal from structure or which have reinforcement present.
  - 2) Cores from structure exposed to soil or constant moisture in service (e.g. basement walls, retaining walls, slab-on-grade, piers, footings, etc.) shall be tested in a fully saturated condition. Cores for all other concrete may be tested dry. Prior to commencement of coring, verify with Commissioner whether cores are to be tested wet or dry.
  - 3) Fill core holes with low slump concrete or mortar with a strength equal to or greater than that specified for area cored.
- d. Concrete in area represented by core test will be considered adequate if average strength of cores is equal to at least 85% of, and if no single core is less than 75% of specified strength.
5. Floor flatness and levelness tolerance compliance testing is to be performed within 72 hours of concrete placement by Testing Agency, and prior to the removal of shores and forms.
- E. Testing Agency shall submit for record inspection, observation, and/or test reports to Commissioner, as required herein and shall provide an evaluation statement in each report stating whether or not concrete placement conforms to requirements of Specifications and Drawings and shall specifically note deviations therefrom.
- F. Immediately report deficiencies to the Commissioner.

#### 1.12 QUALITY CONTROL BY CONTRACTOR

- A. Provide a program of quality control to ensure that the minimum standards specified herein are attained.
- B. Immediately notify the Commissioner of any deficiencies in the work which are departures from the Contract Documents. Propose corrective actions and their recommendations in writing and submit them for review by the Commissioner. After proposed corrective action is accepted by the Commissioner, correct the deficiency at no expense to The City of New York.
- C. Where SCC is used, the Ready Mix Producer shall have a Quality Control Representative on site during placements until mix consistency and stability is established.

#### 1.13 PERMITS AND WARRANTY

- A. Permits: Apply for, procure, renew, maintain, and pay for all permits required by the New York City Department of Buildings and 2014 New York City Building Code necessary to execute work under this Contract. Furnish copies of all permits to Commissioner.
- B. Warranty: Comply with DDC General Conditions, agreeing to restore or replace specified materials or Work that has failed within the warranty period. Failures include but are not limited to the following:

1. Oily, waxy or loose residue which may interfere with the bonding or discoloration of various applied Architectural finish materials.
2. Discoloration of concrete surfaces scheduled to remain exposed as a finish.
3. Areas which show surface failure or defects.
4. Areas which puddle water.
5. Areas which are not properly prepared to receive Architectural finish materials. If necessary, the Contractor, at his own expense, shall have an independent testing agency perform appropriate tests for bond and discoloration.
6. Patches that become crazed, cracked or sound hollow when tapped.
7. Self-leveling concrete topping that has cracked, spalled and/or not performed in accordance with manufacturer's design criteria.

**1.14 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  1. Section 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  1. Flyash: Concrete shall incorporate flyash as a replacement for at least 20% (by weight) of the Portland cement. All design mixes are subject to review and approval by the Commissioner.
  2. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  3. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.15 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED Building Submittal requirements.

**PART 2 - PRODUCTS****2.1 CONCRETE MATERIALS & PRODUCTION****A. Portland Cement:**

- 1. ASTM C150, Type I or Type II
- 2. ASTM C150, Type III, High-early Strength Portland Cement may be used subject to review and approval of the Commissioner. The specified 28-day concrete compressive strength shall occur within 7 days for concrete using Type III Portland Cement.
- 3. Provide the same brand of Portland Cement from a single source throughout the project, as required to meet Commissioner's requirements.
- 4. Provide Portland Cement that is uniform in color.

**B. Aggregates for Normal weight Concrete:**

- 1. ASTM C 33
- 2. Fine Aggregate: Natural sand, or sand prepared from stone or gravel, clean, hard, durable, uncoated and free from silt, loam and clay.
- 3. Provide aggregates from a single source throughout the project for exposed concrete.
- 4. The acceptability of aggregates for the work will depend on proof that their potential alkali reactivity is not deleterious to the concrete.
- 5. Do not use fine or coarse aggregates that contain substances that cause spalling.
- 6. Maximum coarse aggregate size shall conform to the requirements as specified in ACI 301 but shall not exceed the following:
  - Size no. 57 (25mm max) for footings, drilled piers and caissons
  - Size no. 67 (20mm max) for all other locations
  - Size no. 467 or 457 for non-reinforced concrete at locations noted on Drawings.
- 7. Furnish concrete with maximum 3/8" (10mm) aggregate at no additional expense to The City of New York if areas of high reinforcement density require it for placement and consolidation.

**C. Aggregates for Lightweight Concrete:**

- 1. ASTM C 330.

2. Classification of Aggregates: As required to meet Commissioner's requirements.
  3. Provide aggregates from a single source throughout the project for exposed concrete.
  4. Aggregate shall contain the minimum absorbed moisture content recommended by the manufacturer for the project prior to batching.
  5. Maximum coarse aggregate size shall conform to the requirements as specified in ACI 301 but shall not exceed  $\frac{3}{4}$ " (20mm)
- D. Water: ASTM C 94. Clean, and free from injurious amounts of oil, acids, alkali, salts, organic material, or other deleterious materials.
- E. Supplementary Cementitious Material
1. Fly Ash:
    - a. ASTM C 618, Class C or Class F.
    - b. Shall not be used unless part of an approved mix design.
    - c. Limit Loss on Ignition to 2.5%
  2. Ground Granulated Blast-furnace Slag (GGBFS)
    - a. ASTM C 989.
    - b. Shall not be used unless part of an approved mix design.
  3. Silica Fume (Microsilica):
    - a. ASTM C 1240
    - b. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) W. R. Grace "Force 10,000 D"
      - 2) Euclid Chemical Company "Eucon MSA"
      - 3) BASF "MasterLife SF 100"
      - 4) Sika Corporation "Sikacrete 950 DP"
      - 5) Or approved equal.
  4. For concrete subject to Exposure Class F3 conditions as defined in ACI 318, Table 4.2.1, limit the maximum content of supplementary cementitious materials to values shown in ACI 318, Table 4.4.1.
  5. The exact percentages used shall be based on successful test placement on site. Resubmit mix design if percentages change based on test placement.
  6. The fly ash or natural pozzolan supplier shall have an effective quality control program in place to guard against contamination of the fly ash and assure compliance with Specifications.
  7. Fly ash and GGBFS used shall be from one source throughout the project. Substitution of sources will be approved only if testing of concrete mixes containing the substituted

material show similar test results and if the color of concrete produced with the substituted material matches the color of previously poured concrete to the satisfaction of the Commissioner.

F. Ready Mixed Concrete:

1. Shall be batch-mixed and transported in accordance with ASTM C 94.

G. Self-Consolidating Concrete:

1. Produce in accordance with ACI 237R.
2. Perform the following tests and provide report prior to submitting mix design:
  - a. Resistance to Segregation: Achieve a maximum static segregation percentage of 15% when tested according to ASTM C 1610 with a VSI index of 1 maximum.
  - b. Slump Flow: ASTM C 1611 within a range of 20"-30"
  - c. Passing Ability: ASTM C 1621 with a maximum difference of 2" (50mm) between testing with and without the J-Ring.

2.2 CONCRETE MIX DESIGN

A. Concrete Strength:

1. Shall be as indicated on the Structural Drawings

B. Concrete Density (Unit Weight):

1. Shall be as indicated on the Structural Drawings

C. Air Entrainment

1. For concrete exposed to freeze/thaw cycles and/or deicing chemicals, and concrete intended to be watertight, provide entrained air content of  $6\% \pm 1.5\%$ , unless specified otherwise. This includes, but is not limited to, concrete at the following locations:
  - a. Concrete at the exterior of the structure with at least one surface exposed to weather, such as exterior face of grade beams, foundation walls, exterior walls and parapets, exposed columns and edge beams.
  - b. Concrete in parking garages.
  - c. Ramps and loading docks.
  - d. Balconies and terraces with no waterproof membrane.
2. For lightweight concrete less than 120 pcf ( $19 \text{ kN/m}^3$ ) density, air content may be up to 7% regardless of exposure condition.
3. For concrete with a specified compressive strength ( $f'_c$ ) greater than 5000 psi (35MPa), required air content may be reduced to  $5\% \pm 1.5\%$ .

4. Entrained air content noted above shall occur at point of delivery.
5. No entrained air content is required in concrete placed in the foundation with no surface exposed to weather.
6. All interior steel trowel finished, normalweight slabs shall have a maximum air content of 3%.

**D. Water-Cementitious Materials (W/cm) Ratio for Normalweight Concrete**

1. Unless lower limits are stated in the Contract Documents, all concrete exposed to freezing and thawing in moist condition and/or required to be watertight shall have a maximum W/cm ratio of 0.45.
2. All concrete exposed to deicing salts, brackish water seawater or spray from these sources shall have a maximum W/cm ratio of 0.40.
3. Absent the above conditions, all concrete with required strength of 4000 psi (28MPa) or higher shall have a maximum W/cm ratio of 0.50.
4. The water-cementitious materials ratio shall not exceed values indicated, including any water added to meet specified slump in accordance with the requirements of ASTM C 94.
5. Weight of fly ash or pozzolanic admixtures shall be included with the weight of cementitious materials used to determine the water-cementitious materials ratio.

**E. Slump**

1. Concrete design mixes shall be proportioned to meet the following slump limitations. Slump should be measured as described in Testing Agency responsibilities:
  - a. Concrete with high range water-reducing admixture: Concrete slump prior to addition of high range water-reducing admixture shall not exceed 3" (75mm) for normalweight concrete and 4" (100mm) for lightweight concrete. After addition of water-reducing admixture, the concrete shall have a maximum slump of 9" (225mm) unless otherwise approved by the Commissioner.
  - b. Concrete without a water-reducing admixture: Slump shall not exceed 4".

**F. Self-Consolidating Concrete Slump/Flow:** Use for concrete exposed to view and heavily reinforced areas where indicated on the plans, and where conventional mixtures do not provide adequate consolidation. Minimum slump/flow diameter of 20" or as required by the successful test placement onsite, which shall verify proper workability, finish, and setting time. All self-consolidating concrete shall contain the specified high range water-reducing admixture. All self-consolidating concrete shall contain viscosity modifying admixture as required unless proper quantity and grading of fines can be achieved.

**G. Chloride Ion Content**

1. The total water-soluble chloride ion content of the mix including all constituents shall not exceed the limits defined in ACI 318 4.3 unless corrosion inhibiting admixtures are added to the mixture to offset the additional chloride.

2. If the specified level of water-soluble chloride ion content cannot be maintained, appropriate level of corrosion inhibiting admixture shall be added to the mix in accordance with the manufacturer's recommendation to offset the excess amount of chloride at no additional expense to The City of New York.

## 2.3 ADMIXTURES

### A. General:

1. Admixtures specified below can be used only when established in the mix design with Commissioner prior written approval.
2. Each admixture approved by Commissioner shall be used in strict compliance with manufacturer's published instructions.
3. Concrete supplier shall certify all admixtures to be compatible with each other. (See Submittals Section in Part 1)

### B. Air Entraining Admixture:

1. ASTM C 260
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. "MasterAir AE 200" or "MasterAir -AE 90"
  - b. W. R. Grace "Darex Series" or "Daravair Series"
  - c. Euclid Chemical Company "AEA -92 or Air 40"
  - d. Sika Corporation "Sika Air Series" or "Sika AEA Series"
  - e. Or approved equal.

### C. Water-Reducing Admixture:

1. ASTM C 494, Type A
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. BASF "MasterPozzolith 210"
  - b. Euclid Chemical Company "EUCON NW" or "EUCON WR 91"
  - c. W. R. Grace "WRDA" Series, Zyla Series or "Mira" Series
  - d. Sika Corporation "Plastocrete Series"
  - e. Or approved equal.

### D. Retarding Admixture:

1. ASTM C 494, Type B
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. BASF "Masterset R 100"
  - b. Euclid Chemical Company "EUCON RETARDER 100"
  - c. W. R. Grace "Daratard 17"
  - d. Sika Corporation "Plastiment Series"
  - e. Or approved equal.

- E. Non Corrosive Accelerating Admixture:
1. ASTM C 494, Type C
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF "POZZUTEC 20" or "Masterset NC 534"
    - b. Euclid Chemical Company "ACCELGUARD 80", "ACCELGUARD NCA" or "ACCELGUARD 90"
    - c. W. R. Grace "Daraset" Series, "Polarset", or "DCI"
    - d. Sika Corporation "Sikaset NC" or "Plastocrete 161 FL" or "Sika Rapid-1"
    - e. Or approved equal
- F. Water-Reducing and Retarding Admixture:
1. ASTM C 494, Type D
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF "Masterset R 100"
    - b. Euclid Chemical Company "EUCON RETARDER 75" or "EUCON DS"
    - c. W. R. Grace "Daratard 17" or "Recovery Series"
    - d. Sika Corporation "Plastiment Series"
    - e. Or approved equal.
- G. Water-Reducing and Accelerating Admixture:
1. ASTM C 494, Type E
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF "Masterset FP 20"
    - b. Euclid Chemical Company "ACCELGUARD 80" or "ACCELGUARD 90". R. Grace "Libricon NCA"
    - c. Sika Corporation "Sikaset NC" or "Plastocrete 161 FL"
    - d. Or approved equal.
- H. Mid-Range Water-Reducing Admixture:
1. ASTM C 494, Type A
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF "MasterPolyheed Series"
    - b. W. R. Grace "Daracem" or "Mira"
    - c. Sika Corporation "Sikaplast Series" or "Sikament Series"
    - d. Euclid Chemical Company: "Eucon MR" or "Eucon MRX"
    - e. Or approved equal.
- I. High-Range Water-Reducing Admixture:
1. ASTM C 494, Type F

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. BASF "PS 1466" or "MasterGlenium Series"
  - b. Euclid Chemical Company "EUCON 37" or "PLASTOL SERIES"
  - c. R. Grace "Daracem" or "ADVA" Series
  - d. Sika Corporation "Viscocrete Series" or "Sikament Series"
  - e. Or approved equal
- J. High-Range Water-Reducing and Retarding Admixture:
  1. ASTM C 494, Type G
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Euclid Chemical Company "EUCON 537"
    - b. W. R. Grace "Daracem Series" or "Adva Series"
    - c. BASF Rheobuild 561
    - d. Or approved equal.
- K. Viscosity Modifying Admixture (VMA) for Self-Consolidating Concrete (SCC):
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF "MasterMatrix VMA Series"
    - b. W.R. Grace "V-MAR3"
    - c. Euclid Chemical Company "EUCON ABS" or "EUCON WO" or "Visctrol"
    - d. Sika Corporation "Sika Stabilizer Series"
    - e. Or approved equal.
- L. Corrosion Inhibiting Admixtures:
  1. Calcium Nitrite Based: ASTM C 494, Type C, 30% + 2% solution
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) W.R. Grace "DCI or DCI-S"
    - 2) Euclid Chemical Company "EUCON CIA"
    - 3) Sika Corporation "Sika CNI"
    - 4) Or approved equal.
- M. Shrinkage Reducing Admixtures:
  1. ASTM C 157
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. W.R. Grace "Eclipse 4500" (for use with air-entrained concrete exposed to freeze/thaw), or "Eclipse Floor 200"
    - b. Euclid Chemical Company "EUCON SRA" or "Conex"
    - c. Sika Corporation "Sika Control 40"
    - d. Or approved equal

2.4 FIBER REINFORCEMENT

A. General:

1. Fiber reinforcement specified below can be used only with Commissioner prior written approval.
2. See Drawings for location of Fibers.
3. Where macro synthetic fiber reinforcement is proposed to replace welded wire reinforcement, demonstrate that proposed material and dosage rate provides equivalent performance to welded wire reinforcement indicated on Drawings.
4. Fiber reinforcement shall not replace reinforcing bars shown on Drawings.

B. Synthetic Fibrillated or Monofilament Micro Fibers (low volume synthetic used for reduction of plastic shrinkage)

1. ASTM C 1116, Type III
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. W.R. Grace "Grace Fibers", "Grace Microfibers"
  - b. Euclid Chemical Company "Fiberstrand 100 or Fiberstrand 150"
  - c. Sika Corporation "Sika Fiber PPM" or "Sika Fiber PPF" or Sika Fiber HP"
  - d. Or approved equal.

C. Macro Synthetic Fibers (high volume synthetics used for reduction of plastic and drying shrinkage cracking)

1. ASTM C 1116, Type III, minimum of 1.55 inches (40 mm) length, aspect ratio of 50 to 90. The fiber shall have a minimum average residual strength (ARS) of 200 psi (1.4MPa) measured as per ASTM C 1399/ASTM C 1609 "Test Method for Obtaining Average Residual Strength of Fiber-Reinforced Concrete".
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. W.R. Grace "Strux 90/40"
  - b. Euclid Chemical Company "Tuf-Strand SF"
  - c. Sika Corporation "Sika Fiber MS 20"
  - d. Or approved equal.

D. Carbon Steel Fibers (smooth or deformed)

1. ASTM C1116, Type 1 and A820
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Bakaert Corporation's "Dramix 65/60"
  - b. Fiber con International, Inc's "Fibercon"
  - c. Sika Corporation "Sika Fiber S or Sika Fiber SH Series"
  - d. Or approved equal.

## 2.5 ADHESIVES

- A. Bonding Agent for Cured Concrete (existing concrete damp or dry, at least 28 days old, no surface water):
1. ASTM C 881 Type I and IV, Grade 3, Class B and C.
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. BASF "MasterEmaco ADH 327", Class C Only
    - b. Euclid Chemical Company "EUCO #452 Epoxy System"
    - c. Euclid Chemical Company "DURALCRETE LV Series"
    - d. Euclid Chemical Company "FLEXOCRETE System" for bonding topping
    - e. Or approved equal.

- B. Bonding Agent for Uncured Concrete: (existing concrete damp or dry, less than 28 days old, no surface water):
1. ASTM C 881, Type II and V, Grade 2, Class B and C.
  2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Euclid Chemical Company "DURALCRETE MV System"
    - b. Sika Corporation "Sikadur 32 Hi-Mod"
    - c. BASF "MasterEmaco ADH 326" Class C Only
    - d. Or approved equal.

- C. Anti-Corrosive Epoxy Cementitious Bonding Compound and Corrosion Protection of Reinforcement (bonding agent for existing concrete saturated surface dry, no surface water):

This adhesive shall be a water-based epoxy/cementitious compound for adhesion and corrosion protection of reinforcing members (20 hour maximum open time).

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "DURALPREP AC"
  - b. Sika Corporation "ARMATEC 110"
  - c. BASF "MasterEmaco P 124"
  - d. Or approved equal

- D. Adhesive Between Cured Concrete Elements:

1. ASTM C 881 Type I and IV, Grade 3, Class B and C
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Sika Corporation "Sikadur 31 Hi-Mod Gel (1:1 Mix Ratio)"
  - b. Euclid Chemical "Dural Fast Set Gel"
  - c. BASF "MasterEmaco ADH 1490"
  - d. Or approved equal

## 2.6 CURING COMPOUNDS AND SEALERS

### A. Interaction with finishes:

1. See architectural Drawings for finish material applied over concrete.
2. Use only curing and sealer compounds that are compatible with finish material.
3. Manufacturer's certification is required.
4. Where finish material is liquid rubberized asphalt, use only strippable type curing compound.

### B. Curing and Sealing Compound (VOC Compliant, 350 g/l):

1. ASTM C1315, Type I, Class A and ASTM C 309, Type 1, Class A or B
2. Water based acrylic, clear, 25% solids curing and sealing compound.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "Super Diamond Clear VOX"
  - b. Dayton Superior "Cure & Seal J22WB)
  - c. BASF (Sonneborn) "Kure 1315"
  - d. W.R. Meadows "VOCOMP-25"
  - e. Or approved equal

### C. Curing Compound-Dissipating/Strippable (VOC Compliant, 350 g/l):

1. ASTM C 309, Type I, Class A or B
2. Water based resin, clear curing compound that begins to dissipate when exposed to UV light and traffic.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "Kurez DR VOX" (Dissipating) or "Kurez RC" in combination with "Kurez RC-Off" (Strippable)
  - b. Dayton Superior "Clear Resin Cure J11W"
  - c. W.R. Meadows: "1100 Clear"
  - d. Or approved equal

## 2.7 SEALERS

### A. Surface Sealer:

1. ASTM C 309, Type I, Class A or B
2. Water based acrylic sealing compound.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "DIAMOND CLEAR VOX"
  - b. Dayton Superior "Cure & Seal 309 EF"

- c. BASF "MasterKure CC 200WB"
- d. "W.R. Meadows "VOCOMP 20"
- e. Or approved equal

**B. Liquid Densifier/Sealer:**

- 1. The liquid densifier compound shall be a silicate based compound that penetrates and chemically hardens concrete surfaces.
- 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "Euco Diamond Hard"
  - b. Dayton Superior "Densifier J13"
  - c. BASF "MasterKure HD 200WB"
  - d. W.R. Meadows "Liqui-Hard"
  - e. Or approved equal

**2.8 DRY SHAKE HARDENERS**

**A. Mineral Aggregate Hardener:**

- 1. The specified mineral aggregate hardener shall be formulated, processed and packaged under stringent quality control at the manufacturer's owned and controlled factory. The hardener shall be a factory-blended mixture of specially processed graded mineral aggregate, selected Portland cement and necessary plasticizing agents
- 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company, "Surflex" to be used with "Kurez DR VOX"
  - b. BASF, "MasterTop 100 to be used with "Masterkure CC 200WB"
  - c. L&M Construction Chemicals "Ferrocon FF" to be used with "Dress & Seal WB 30"
  - d. Or approved equal

**2.9 MISCELLANEOUS CONCRETE PRODUCTS**

**A. Nonshrink Grout**

- 1. Provide pre-packaged natural aggregate grout, high-precision, nonshrink, ready-to-use, complying with the following requirements:
  - a. See General Notes in structural drawings for grout minimum compressive strength.
  - b. Grout shall conform to ASTM C 1107
- 2. All material used including water, mixer and pre-packaged grout must be initially at the 45°F (7°C) and 90°F (32°C) limits when testing is initiated.
- 3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. BASF "MASTERFLOW 928"
  - b. Euclid Chemical Company "HI-FLOW GROUT"
  - c. Five Star Products "Five Star Grout"
  - d. Sika Corporation "Sikagrout 328"
  - e. Or approved equal

2.10 MISCELLANEOUS PRODUCTS

A. Evaporation Retarder:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. BASF "Masterkure ER50"
  - b. Euclid Chemical Company "Eucobar"
  - c. Sika Corporation "Sika Film"
  - d. Or approved equal

B. Moisture-Retaining Covers:

1. Conforming to ASTM C171. A naturally colored, non woven polypropylene fabric with a 4 mil non perforated reflective (white) polyethylene coating containing stabilizers to resist degradation from ultraviolet light. Fabric shall exhibit low permeability and high moisture retention.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Hydracure S-16 by PNA Construction Technologies, Inc., Matthews, NC
  - b. Transguard 4000 by Reef Industries (Armorlon Division), Incorporated, Houston TX
  - c. McTech Group "UltraCure DOT"
  - d. Or approved equal

C. Sand Cushion: Clean, manufactured or natural sand.

D. Expanded Polystyrene (EPS) used as Fill - Geofoam

1. Material: Rigid, closed cell polystyrene blocks formed by expansion of polystyrene beads by steam.
2. Comply with the requirements of ASTM D 6817
3. Unless noted otherwise on the drawings, provide the following types of EPS:
  - a. Fill between a lower slab and a raised slab area: EPS12 -2.2 psi (15 kPa) compressive resistance minimum at 1% deformation, 10 psi (70 kPa) flexural strength minimum
  - b. Typical below interior floor slabs supported on grade (soil fill over EPS fill) or directly on EPS fill: EPS15 - 3.6 psi (25 kPa) compressive resistance minimum at 1% deformation, 25 psi (170 kPa) flexural strength minimum
  - c. Fill below exterior floor slabs or slabs with truck loading: EPS19 - 5.8 psi (40 kPa) compressive resistance minimum at 1% deformation, 30 psi (200 kPa) flexural strength minimum
4. Thickness as indicated on Drawings.
5. Execution: Conform to manufacturer's instructions regarding preparation, installation and protection
6. Gripper plates shall be used as needed to restrain EPS from moving laterally in multi-layer applications

7. Sequence soil or concrete topping placement to avoid EPS block shift or flotation.
  8. Submit the following for review:
    - a. Manufacturer's product literature including physical properties in compliance with ASTM D 6817 and type specified
    - b. 10 year manufacturer warranty
    - c. Proposed plan layout of fill blocks showing gaps between blocks where required for stabilizing and/or load bearing reinforced concrete ribs as shown on drawings, in details or in notes.
  9. Submit the following for record:
    - a. Summary of test compliance with specified performance characteristics and physical properties
    - b. Product Certificates showing evidence of third party quality control
  10. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Foam Control EPS Geofoam by AFM Corporation, Lakeville, MN
    - b. EPS Geofoam by Styrotech, Brooklyn Park, MN
    - c. EPS Geofoam by Universal Foam Products, Hunt Valley, MD
    - d. EPS Geofoam by Dyplast Products, Miami, FL
    - e. Or approved equal
- E. Vapor Retarder: See Division 7, Thermal and Moisture Protection
1. Minimum 15-mil thick polyolefin geomembrane
  2. Manufactured with prime virgin resins
  3. Water Vapor Retarder: ASTM E 1745, meets or exceeds Class A
  4. Water Vapor Transmission Rate: ASTM E 96, 0.008 gr./ft<sup>2</sup>/hr. (0.086 gr./m<sup>2</sup>/hr) or lower
  5. Permeance Rating: ASTM E 96, 0.03 perms or lower for new material and after conditioning tests in accordance with applicable sections of ASTM E 154
  6. Puncture Resistance: ASTM E 1745, minimum 2400 grams
  7. Tensile Strength: ASTM E 1745, minimum 45.0 lbs./in (8.0 kg/cm).
  8. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. W.R.Grace, "Florprufe 120"
    - b. W. R. Meadows, "Perminator"
    - c. Stego Industry LLC, "Stego Wrap"
    - d. Raven Industries, "Raven Vapor Block 15".
    - e. Or approved equal
- F. Non-Slip Aggregate:

1. Abrasive aggregate shall be composed of an aluminum oxide abrasive bonded by a vitreous ceramic material. Use hard, homogeneous, non-glazing, rustproof aggregate which is unaffected by moisture or cleaning compounds.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "NON-SLIP AGGREGATE"
  - b. North Company "Alundum"
  - c. Anti-Hydro International "A-H A-2 Emery Shake-On" or "A-H Aloxx"
  - d. Or approved equal

## 2.11 CONCRETE RESTORATION MATERIALS

### A. Polymer Repair Mortar

1. The following patching mortars may be used when color match of the adjacent concrete is not required. Prior approval by the Commissioner is required.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. (Horizontal Repairs): Euclid Chemical Company "Thin Top Supreme or Tammspatch II" (for 1/16" (2mm) to 3/8" (10mm) thickness), or "Concrete Top Supreme" (for 3/8" (10mm) to 2" (50mm) thickness).
  - b. (Horizontal Repairs): Sika Corporation "Sikatop 121 Plus" or "Sikatop 122 Plus".
  - c. (Vertical and Overhead Repairs): Euclid Chemical Company "Verticoat", "Verticoat Supreme", or "Duraltop Gel"
  - d. (Vertical and Overhead Repairs): Sika Corporation, "Sikatop 123 Plus".
  - e. (Horizontal, Vertical and Overhead Repairs): BASF, "EMACO 100"
  - f. Or approved equal.

### B. High Strength Flowing Repair Mortar

1. For forming and pouring structural members, or large horizontal repairs, provide the flowable one-part, high strength microsilica modified repair mortar with 3/8" (10mm) aggregate.
2. The product shall achieve 9000 psi (62MPa) @ 28-days at a 9-inch (225mm) slump.
3. Prior approval by the Commissioner is required for cold weather applications
4. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "Eucocrete"
  - b. BASF "EMACO S" Series
  - c. Sika Corporation "Sika Repair 211 SCC Plus"
  - d. Or approved equal

### C. Repair Topping

1. Latex and microsilica modified cementitious mortar topping, which meets or exceeds the bond strength requirements of ASTM C 1059.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Euclid Chemical Company, "Thin-Top Supreme or Tammspatch II"
- b. Sika Corporation "Sika Repair 211 SC Plus"
- c. W.R Meadows "Meadow-Crete GPS"
- d. Or approved equal

D. Epoxy Injection:

1. ASTM C881, moisture insensitive maximum viscosity 350 cps at 77°F (25°C).
2. Product: BASF "Concresive 1380"
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Euclid Chemical Company "Eucopoxy Injection Resin"
  - b. Sika Corporation "Sikadur 35, LV, LPL"
  - c. BASF "Masterinject 1380"
  - d. Or approved equal

E. Pressure-Injected Foam Resin:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. DeNeef "HA Sealform"
  - b. 3M "ScotchSeal 5600"
  - c. Sika Corporation "SikaFix HH"
  - d. Or approved equal

F. Semi Rigid Epoxy:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. METZGER/McGUIRE "MM-80 Semi Rigid Epoxy Joint Filler"
  - b. BASF "MasterSeal CR 190"
  - c. W.R Meadows "Rezi-Weld Flex"
  - d. Or approved equal

G. Methyl Methacrylate (MMA)

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Transpo Industries, Inc. "T-78 Methyl Methacrylate Polymer Crack Healer/Sealer"
  - b. BASF "MasterSeal 360"
  - c. Epoxy Systems "MMA #684 LV"
  - d. Or approved equal

H. Sealant:

1. Silicone or Polyurethane Sealant (as selected based on project requirements such as loading, traffic, bond, coatings, etc.).
2. Joint to be routed and cleaned per manufacturer's written directions.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 PREPARATION**

A. Subgrade:

1. Dampen subgrades not covered with membrane by sprinkling immediately before placing concrete.
  - a. Omit when subgrade is already damp.
2. Do not place on water-saturated subgrade unless placing can be done without damage to subgrade (surface is stable) and loading the subgrade does not drive free water to the surface.
3. Do not place concrete on frozen ground.

B. Forms:

1. Coordinate with Section 03 10 00 Concrete Formwork.
2. Remove dirt, sawdust, nails and other foreign material from formed space.
3. Dampen wood forms by sprinkling immediately before placing.
4. Cool metal forms by sprinkling immediately before placing.

C. Concrete Accessories:

1. Coordinate with Section 03 10 00 Concrete Formwork.

D. Dewatering:

1. Remove water from concrete formwork.
2. Divert any flowing water to sump and remove by pumping.
3. Refer to DDC General Conditions for additional dewatering requirements.

E. Vapor Retarder Placement: See Division 7, Thermal and Moisture Protection.

1. Vapor retarder installation shall be in accordance with manufacturer's instructions and ASTM E 1643.
2. Place vapor retarder under slabs-on-grade in position with longest dimension parallel with direction of pour.
3. Joints: Lap 6" (150mm) minimum and seal with manufacturer's recommended mastic or pressure-sensitive tape.

4. Prevent damage to moisture barrier.
5. If moisture barrier is damaged, place a piece of moisture barrier over damaged area (6" (150mm) larger all around) and tape in place with type of tape recommended by moisture barrier manufacturer.
6. Seal laps and intersections of walls with compatible trowel mastic or pressure-sensitive sealing tape.
7. Seal around pipes and other penetrations with compatible trowel mastic.
8. The vapor barrier must be approved prior to concrete placement.

### 3.3 JOINTS IN CONCRETE

- A. Locate construction and contraction joints as indicated on Drawings and on approved joint location submittal.
  1. Do not use contraction joints in framed floors or composite slabs.
  2. Locate and install construction joints so they do not impair strength or appearance of the structure, as approved by Commissioner.
  3. Coordinate location of construction and contraction joints with locations of joints in finish materials where they exist.
    - a. Construction and contraction joints in slabs or slab on grade with terrazzo finish must be reviewed and approved by the Commissioner.
  4. Maximum joint spacing is as indicated on Drawings.
- B. Construction Joints:
  1. Construction joints shall be located within the central third of the span. Any concrete spilling over or through the bulkhead shall be removed at the completion of the pour. All surfaces of the concrete shall have reinforcing extending through the joint.
  2. Horizontal Joints: Horizontal construction joints other than those shown on the Drawings will not be permitted unless approved by the Commissioner.
  3. Joint Preparation: Forms shall be removed in time to permit roughening of construction joints of structural members by chipping and wire brushing to remove all loose and foreign material and roughen to 1/4" 6 mm amplitude. The existing concrete at joints shall either be (a) dampened to the point that the surface is saturated, but all standing water has been removed, promptly followed by placement and vibration of fresh concrete, or (b) not required to be dampened, with one of the specified bonding compounds applied as appropriate for the joint condition, following manufacturer recommendations, with placement and vibration of fresh concrete to follow while the epoxy bonding agent is still tacky. Joints without epoxy bonding agent require fresh concrete with slump 7 inches (180mm) or greater at horizontal joints, and fresh concrete confined to maintain pressure against the joint at vertical joints. Where such conditions are not present, or where applying water to dampen the surface is impractical, use epoxy bonding agent suitable for dry surfaces

C. Isolation Joints:

1. Interrupt structural continuity resulting from bond, reinforcement or keyway at points of contact between slabs-on-grade and vertical surfaces, such as column pedestals, foundation walls and other locations, as indicated.

D. Contraction Joints in Floor Slabs-on-Grade:

1. Maximum slab area controlled by jointing is 400 square feet (35 square meters).
2. Space joints at 36 times slab thickness unless a smaller spacing is indicated on the Drawings, located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays).
3. Contraction joints can be provided by sawcuts, formed joints or appropriately detailed construction joints.
4. Sawcuts shall be made as soon as possible after slab finishing as may be safely done without dislodging aggregate. Early-entry dry cutting green concrete joint saw with anti-ravel skid plate shall be used to a depth of  $\frac{1}{4}$  of slab thickness immediately after final finishing. Conventional saw shall be used as soon as possible after final finish without raveling to a depth as indicated on the Drawings.
5. Where contraction joints coincide with construction joints, detail joint as indicated on Drawings.

E. Joint Fillers: Coordinate with Section 03 20 00 "Concrete Reinforcement and Embedded Assemblies" and Division 7 requirements.

3.4 MIXING

A. Measurement of Materials: Conforming to ASTM C 94

B. Mixing: All concrete shall be ready-mixed conforming to ASTM C 94 except as follows:

1. Provide concrete materials, proportions and properties as herein specified in lieu of ASTM C 94.
2. Water, beyond that required by the mix design, shall not be added at the Project site. Addition of water at the Project site shall be made only in the presence of Testing Agency.
3. Furnish delivery ticket with each load of concrete delivered to the site to the Contractor conforming to the requirements of ASTM C 94.

C. High range water reducing agents (superplasticizer), if added at the batch plant, may be added again at the Project site.

1. If superplasticizers are added at the batch plant, the concrete mix design must account for the delivery time, workability, finishability, and setting time required on the jobsite for proper placing and finishing procedures.
2. If the superplasticizer is redosed at the jobsite in air entrained concrete, air content must be checked after mixing.

- D. Discharge of the concrete shall be completed within 1-1/2 hours or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates.

### 3.5 CONCRETE PLACEMENT

A. Prior to Concrete Placement:

1. Mechanical vibrators are required and must be available for placing concrete.
2. Remove debris from space to be occupied with concrete.
3. Notify Commissioner and Testing Agency 48 hours prior to starting concrete placement.
4. Approved mix designs must be maintained on file in Contractor's Field Office.
5. Reinforcement and accessories shall be in proper locations, clean, free of loose scale, dirt or other foreign coatings that may reduce bond to concrete, and in accordance with Section 03 20 00 "Concrete Reinforcement and Embedded Assemblies" and Drawings.
6. Fog spray forms, reinforcing steel, and subgrade just before pouring concrete.
7. Do not place concrete having a slump outside of allowable slump range.
8. Place concrete before initial set has occurred, but in no event after it has been discharged from the mixer more than 30 minutes. All concrete shall be placed upon clean, damp surfaces, free from puddled water, or upon properly consolidated fills. Placement upon soft mud or dry earth is not permitted.
9. Unless adequate protection is provided, concrete shall not be placed during rain.
10. Rain water shall not be allowed to increase mixing water or to damage the surface finish.
11. At surfaces left exposed to view, do not use equipment in placing and finishing concrete that contain aluminum in the finishing edges that come in contact with the concrete surface.
12. Keep subgrade moisture uniform without puddles or dry areas.
13. Place vapor retarder directly below slabs on grade as specified in Contract Documents.

B. For Conduits and Pipes Embedded in Concrete:

1. For concrete slab, wall, beam or column, conform to requirements of ACI 318, Chapter 6. For variations from these requirements, submit a written request for Commissioner review and response.
2. Conduits and pipes shall not be embedded in concrete slabs on steel deck without approval of Commissioner.
3. Provide sleeves for pipes passing vertically through concrete.
4. Do not embed aluminum materials.

5. Do not cut, bend or displace the reinforcement to facilitate placement of embedded pipes and conduits.
- C. Pumping: Pumping shall be done in strict accordance with ACI 304.2R.
- D. Placing Concrete in Forms:
1. Clean and prepare forms as specified in Section 03 10 00 "Concrete Formwork".
  2. Place concrete continuously without interruption between predetermined construction and contraction joints in walls.
  3. Deposit concrete in forms in horizontal layers no deeper than 24" (600mm) and in a manner to avoid inclined construction joints.
  4. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints.
  5. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping.
    - a. Use equipment and procedures for consolidation of concrete in accordance with ACI 309R.
  6. Do not use vibrators to move fresh concrete laterally inside forms from discharge point; shift discharge point as needed.
  7. Insert and withdraw vibrators vertically at uniformly spaced locations no farther than the visible effectiveness of the machine.
  8. Place vibrators to rapidly penetrate placed layer and at least 6" (150mm) into preceding layer.
  9. Do not insert vibrators into lower layers of concrete that have begun to set.
  10. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing segregation of mix.
  11. Do not vibrate Self-Consolidating Concrete (SCC).
- E. Placing Concrete Slabs:
1. Place concrete continuously without interruption between predetermined construction and contraction joints in floors.
    - a. Place slabs on grade by the long strip cast method. Refer to ACI 302.1R for recommended methods of placement.
  2. Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints, until completing placement of a panel or section.
  3. Consolidate concrete during placing operations so that concrete is thoroughly worked around reinforcement, other embedded items and into corners.

4. Bring slab surfaces to correct level with a straightedge and strike off.
  - a. Use highway straight edges, bullfloats or darbies to smooth surface free of humps or hollows.
  - b. Do not disturb slab surfaces prior to beginning finishing operations.
5. Maintain reinforcing in proper position on chairs during concrete placement.
6. Do not place materials on slabs or impose loads during period of setting.

**F. Placing Concrete on Steel Decks**

1. Exercise care during concrete placement on steel decks to prevent concentrated loads or high pile-ups of concrete and to avoid impacts caused by dumping or dropping of concrete on steel decks.
2. Do not use buggies on unprotected areas of deck. If buggies are used to place concrete, furnish and install planked runways to protect deck from damage.

**G. Placing Concrete at Construction Joints:**

1. To secure full bond at construction joints, surfaces to receive concrete in a subsequent placement shall be left in a roughened state or intentionally roughened by raking while plastic or brushing and chipping immediately after removal.
2. Before new concrete is placed in contact, surfaces of hardened concrete already placed shall be thoroughly cleaned of foreign materials and laitance.
3. At hardened concrete at joints where no bonding agents are used, dampen concrete to achieve a saturated surface dry condition. Leave no standing water. Place and vibrate concrete (slump 7 inches (180mm) or greater) against horizontal joints. Place and vibrate flowing concrete (slump 8 to 10 inches (200 to 250mm)) while maintaining pressure against vertical joints by confinement.
4. At hardened concrete with joints not meeting conditions required for no bonding agents, apply appropriate specified bonding agent for conditions present including age and moisture per manufacturer's specifications. Place new concrete while the bonding agent is still tacky.

**H. Floor Topping Slabs:**

1. Place concrete topping slab to required lines and levels.
2. Minimum topping slab thickness is 2" (50mm).
3. Place dividers, edge strips and other items to be cast in place.
4. At all topping slabs, remove deleterious material before placing topping slab.
5. At topping slabs placed directly against base slab, remove deleterious material and dampen base slab with water immediately before placing concrete. Leave no standing water.

6. Unless noted as a “bonded” topping slab on the Drawings, topping slabs thinner than 4” (100mm) should be placed directly against dampened base slab with no bonding agent. Topping slabs 4” (100mm) or thicker should be placed on bond breaker consisting of two sheets of plastic film.
  7. Where noted on Drawings as a “bonded” topping slab, broom/vacuum clean unsealed surfaces or wire brush sealed or troweled surfaces to expose bare rough surface. Then place approved bonding grout or epoxy adhesive on the base slab per manufacturer’s instructions.
  8. The topping mix shall have a maximum water/cement ratio of 0.45.
  9. The topping mix shall have a maximum shrinkage of 0.04% in 28 days.
  10. The topping mix shall contain a minimum of 5 lbs. per cubic yard (2.43 kg/m<sup>3</sup>) of macro synthetic fibers and achieve an Average Residual Strength (ARS) of 200 psi (1.4MPa) unless a higher dosage or ARS is noted on the plans.
  11. The topping slab shall be moist cured for a minimum of 36 hours after placement.
  12. The topping slab shall have contraction joints located to match any joints in the base slab, to eliminate restraint conditions such as re-entrant corners and to isolate the slab from columns, walls, etc. and to limit the maximum distance between joints to 15 feet (4570mm).
- I. Cold-Weather Placement:
1. Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliance with ACI 306R and as specified in this section.
  2. When air temperature has fallen to or is expected to fall below 40°F (4°C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50°F (10°C), and not more than 80°F (27°C), at point of placement.
  3. Do not use frozen materials or materials containing ice or snow.
    - a. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
  4. Remove frost, snow and ice from forms, reinforcement and other embedments immediately prior to concrete placement.
  5. Use only the specified non-corrosive accelerating admixture previously approved as part of the cold weather mixture. Addition of calcium chloride, salt, thiocyanates or admixtures containing more than 0.05 percent chloride ions is not permitted.
- J. Hot-Weather Placement:
1. Hot weather is defined as air temperature which exceeds 90°F (32°C) or any combination of high temperature, low humidity and/or high wind velocity which causes a rate of evaporation in excess of 0.2 pounds per square feet per hour (1.0 kg/m<sup>2</sup> per hour) as determined by ACI 305R.

2. When hot weather conditions exist that would impair quality and strength of concrete, place concrete in compliance with ACI 305R and as specified in this section.
3. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90°F.
4. Mixing water may be chilled, or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water.
5. Use of liquid nitrogen to cool concrete is Contractor's option.
6. When concrete placement will occur late in the day and reinforcing steel will be heated by the sun, cover reinforcing steel with water-soaked burlap so that steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
7. When concrete operations must be performed in direct sun, wind, high temperatures, low relative humidity, or other adverse placing conditions, the specified evaporation retarder shall be applied one or more times during the finishing operation to prevent plastic cracking.

### 3.6 CONCRETE FINISHES

#### A. General:

1. Comply with recommendations for concrete finishing established by ACI 302.1R and ACI 304R.
2. Comply with dimensional tolerance limitations given by ACI 117.
3. For shored floor or slab on grade construction: Floor flatness/floor levelness tolerance compliance testing is to be performed prior to the removal of shores and forms but not later than 72 hours of concrete placement by Testing Agency.
4. See architectural Drawings for locations of the various finishes listed below.
5. Comply with the specified overall SOFF and SOFL values listed below:
  - a. The specified overall area shall be each individual floor.
  - b.  $F_F/F_L$  shall be measured in accordance with ASTM E 1155.
  - c. The specified minimum local values of  $MLF_F/MLF_L$  shall be 3/5 of the  $SOF_F/SOF_L$  values listed below.
  - d. If an individual test section measures less than either of the specified minimum local  $MLF_F/MLF_L$  numbers, that section may be rejected and remedial measures may be required as specified in CONCRETE RESTORATION.
  - e. If the composite value of the test surface measures less than either of the specified overall  $SOF_F/SOF_L$  numbers, then the entire slab may be rejected and remedial measures may be required.
  - f.  $F_L$  numbers shall not apply to unshored slabs or shored slabs with camber.

- B. Finish for monolithic slab surfaces to receive concrete floor topping or mortar setting beds for tile and other bonded applied cementitious finish flooring material, as indicated on architectural Drawings:
  - 1. Scratch Finish.
    - a. Finish surface to overall value of  $SOF_F=20$  and  $SOF_L=15$ .
    - b. Slope surfaces uniformly to drains where required.
    - c. After leveling, roughen surface before final set with stiff brushes, brooms, or rakes.
- C. Finish for monolithic slab surfaces to be covered with membrane or elastic waterproofing, membrane or elastic roofing, as indicated on architectural Drawings:
  - 1. Float Finish.
    - a. After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating.
    - b. Begin floating, using float blades or float shoes only, when surface water has disappeared, or when concrete has stiffened sufficiently to permit operation of power-driven floats, or both.
    - c. Consolidate surface with power-driven floats or by hand-floating if area is small or inaccessible to power units.
    - d. Finish surfaces to overall value of  $SOF_F=20$  and  $SOF_L=15$ .
    - e. Cut down high spots and fill low spots.
    - f. Uniformly slope surfaces to drains.
    - g. Immediately after leveling, refloat surface to a uniform, smooth, granular texture.
- D. Finishes for Pedestrian Sidewalks and Ramps, Exterior Platforms, Steps, as indicated on architectural Drawings:
  - 1. Sidewalks and Curbs: Light-to-medium broom finish applied with fiber-bristle broom perpendicular to direction of main traffic route immediately after float finishing.
  - 2. Ramps: Scored finish as applied perpendicular to direction of main traffic route immediately after float finishing.
  - 3. Finish surface to overall value of  $SOF_F=20$  and  $SOF_L=15$ .
  - 4. Texture shall be approved by the Commissioner from sample panels.
- E. Finish for interior floor slab surfaces exposed to view and slab surfaces to be covered with resinous flooring, epoxy-resin terrazzo, paint or other thin film-finish coating systems, as indicated on architectural Drawings:
  - 1. Trowel Finish.

- a. After floating, begin first trowel-finish operation using a power-driven trowel.
  - b. Begin final troweling when surface produces a ringing sound as trowel is moved over surface.
  - c. The final hand-troweling operation shall result in a smooth surface, free of trowel marks, uniform in texture and appearance.
  - d. Grind smooth any surface defects that would telegraph through applied floor covering system.
2. Finish surface to overall value of  $SOF_F=25$  and  $SOF_L=20$ .
  3. Floor Slopes: Where drains occur, slope floor slabs uniformly to drains, maintaining scheduled slab thickness.
  4. Floor Edges at Expansion Joints: Tool edges minimum 3/8" (10mm).
  5. Defects: Remove defects of sufficient magnitude to show through floor covering by grinding.
  6. Floor Hardener: Use only where scheduled and in accordance with manufacturer's published instructions.
  7. Dry Cement: Shall not be used during finishing.

**F. Tolerances at Slab Discontinuities**

1. Within 2 ft (600mm) of slab boundaries, construction joints, isolation joints, block-outs, penetrations or other similar discontinuities, where required for travel paths, installation of finishes and partitions, or any other requirements indicated in the Contract Documents, the following equivalent straightedge tolerances shall apply:
  - a. Specified local  $MLF_F = 12$ , use 1/4" (6mm) over 4 ft (1200mm), no offset greater than 1/16" (2mm)
  - b. Specified local  $MLF_F = 15$ , use 1/8" (3mm) over 4 ft (1200mm), no offset greater than 1/32" (0.8mm)

**G. Dry Shake Finish:**

1. Non-slip aggregate where indicated on Drawings.
2. Non-oxidizing metallic hardener on loading docks at a rate of 1.5 lbs. per sq. ft. (7.3 kg/m<sup>2</sup>) and in other locations so noted on the Drawings.
3. Mineral aggregate hardener at a rate of 1.2 lbs. per sq. ft. (5.8 kg/m<sup>2</sup>) where noted on the Drawings.
4. Final finish type, method and tolerance as applicable by location and use.
5. Dry shake finish will be applied only where scheduled and in accordance with the manufacturer's published instructions and the methods and procedures agreed upon at the pre-installation conference.

**H. Rough Formed Finish:**

1. Acceptable for formed concrete surfaces not exposed-to-view in the finish work or by other construction, unless otherwise indicated.
2. Concrete surface shall have texture imparted by form-facing material used, with tie holes and defective areas restored and patched, and fins and other projections exceeding 1/4" (6mm) in height rubber down or chipped off.

**I. Smooth Formed Finish:**

1. Required for formed concrete surfaces exposed to view, or scheduled to be covered with a coating material applied directly to concrete, or a covering material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, painting, or other similar system, as indicated on architectural Drawings.
2. Surface is an as-cast concrete surface obtained with selected form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams.
3. Restore and patch tie holes and defects. Remove fins and other projections completely.

**J. Smooth Rubbed Finish:**

1. "Smooth Rubbed" finish shall consist of a finish free of fins, joint marks smoothed off, blemishes removed and surfaces left smooth and unmarred.
2. Provide smooth rubbed finish to scheduled concrete surfaces, as indicated on architectural Drawings, which have received smooth form finish treatment not later than one day after form removal.
3. Moisten concrete surfaces and rub with carborundum brick or other abrasive until a uniform color and texture is produced.
  - a. Do not apply cement grout other than that created by the rubbing process.

**K. Grout-Cleaned Finish:**

1. Provide grout-cleaned finish on scheduled concrete surfaces, as indicated on architectural Drawings, that have received smooth-formed finish treatment.
2. Combine one part Portland Cement to one and one-half parts fine sand by volume, and a 50:50 mixture of acrylic or styrene butadiene-based bonding admixture and water to form the consistency of thick paint.
3. Blend standard Portland Cement and white Portland Cement in amounts determined by trial patches so that final color of dry grout will match adjacent surfaces.
4. Thoroughly wet concrete surfaces, apply grout to coat surfaces, and fill small holes.
5. Remove excess grout by scraping and rubbing with clean burlap.
6. Keep surface damp by fog spray for at least 36 hours after rubbing.

**L. Unformed Surfaces:**

1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike-off smooth and finish with a texture matching adjacent formed surfaces.
2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

### 3.7 CURING AND PROTECTION

#### A. Normal Conditions:

1. Protect concrete from premature drying, excessive hot or cold temperature, and damage.
2. Concrete shall be kept continuously moist and above 50°F (10°C) for seven days (ASTM C 150 Type I cement) or for 10 days (ASTM C 150 Type II cement). High early strength concrete usage shall be maintained over 50°F (10°C) for three days.
3. Concrete and concrete patching materials shall be cured according to manufacturers published recommendations.
4. Begin curing as soon as free water has disappeared from concrete surface and finishing has been completed.
5. Curing Methods: Cure concrete by curing compound, by moist curing, by moisture-retaining cover curing, or by combining these methods, as specified.
  - a. Apply curing compound on exposed interior slabs and on exterior slabs, walks, and curbs as follows:
    - 1) Apply curing compound to concrete slabs as soon as final finishing operations are complete (within 2 hours and after surface water sheen has disappeared).
    - 2) Apply uniformly in continuous operation by power spray or roller according to manufacturer's directions.
    - 3) Recoat areas subjected to heavy rainfall within 3 hours after initial application.
    - 4) Maintain continuity of coating and repair damage during curing period.
    - 5) Use curing and sealing compounds that will not affect surfaces to be covered with finish materials applied directly to concrete.
    - 6) Floors to receive covering shall be cleaned thoroughly using a power scrubber and industrial strength detergent.
    - 7) Hand-brooming and sweeping is not sufficient.
    - 8) Strippable curing compound may be used in lieu of a moist curing method when approved by the Commissioner.
  - b. Provide moist curing by the following methods:
    - 1) Keep concrete surface continuously wet by covering with water.
    - 2) Use continuous water-fog spray.

- 3) Cover concrete surface with specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with a 4" (100mm) lap over adjacent absorptive covers.
- c. Provide moisture-retaining cover curing as follows:
  - 1) Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least 3" (75mm) and sealed by waterproof tape or adhesive.
    - a) Immediately repair any holes or tears during curing period using cover material and waterproof tape
6. Cure slabs on grade, concrete toppings, concrete pour strips, supported slabs, walls and columns, not subject to conditions of hot or cold weather concreting, in accordance with ACI 308.
7. Cure surfaces exposed to deicing salts, brackish water, etc., such as loading dock slabs, parking garage slabs and ramps in accordance with ACI 308 recommendations for moist curing.
8. Curing Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces, by leaving forms in place for the full curing period (equivalent to moist curing).
  - a. If forms are removed prior to completion of full curing period, continue curing by methods specified above for Unformed Surfaces, as applicable.
- B. Cold-Weather Protection:
  1. When concrete is placed under conditions of cold weather concreting (defined as a period when the mean daily temperature drops below 40°F (4°C) for more than 3 successive days), take additional precautions as specified in ACI 306R when placing, curing, monitoring and protecting the fresh concrete.
- C. Hot-Weather Protection:
  1. When concrete is placed under conditions of hot weather concreting, provide extra protection of the concrete against excessive placement temperatures and excessive drying throughout the placing and curing operations with an evaporation retarder.
    - a. Apply according to manufacturer's instructions after screeding and bull floating, but before power floating and troweling.
  2. Hot weather curing is required if hot weather conditions occur within a 24-hour period after completion of concrete placement.
- D. Floor surfaces, wherever indicated by weather conditions, shall be sprinkled during the interval between finishing operation and the start of curing to positively ensure against the possibility of surface drying.

### 3.8 CONCRETE RESTORATION

- A. Concrete Restoration refers to concrete work that is a required result of damage or adverse effects of other construction work.
- B. Perform patching and repairs in accordance with ACI 301.
- C. Submit patching and restoration methods and materials for review by Commissioner.
- D. When complete, all patches and restoration shall match color and texture of adjoining surfaces.
- E. At surfaces that are exposed to view, prepare test areas at inconspicuous locations for review by Commissioner to verify restoration color and texture match before proceeding with restoration.
- F. Apply all patching and restoration materials in accordance with manufacturer's specifications.
- G. Restoring Cracks In Formed and Unformed Surfaces:
  - 1. Notify Commissioner of all cracks wider than 0.02" (0.50mm) and all cracks wider than 0.01" (0.25mm) that occur in a group of at least three cracks within twelve inches (300mm), in concrete. If Commissioner deems restoration necessary, Contractor shall be responsible for restoring all such cracks per Commissioner recommendation at no expense to The City of New York. Restorations will generally require one or more of the following: Epoxy Injection, Semi-Rigid Epoxy, Pressure Injected Foam Resin, Methyl Methacrylate and/or Sealant with joint routed and cleaned. See Concrete Restoration Materials section of this Specification for approved products.
- H. Restoring Formed Surfaces
  - 1. Immediately after stripping forms, patch all honeycombing, defective joints, voids, etc. before the concrete is thoroughly dry.
  - 2. Remove all burrs, fins, and ridges before the concrete is thoroughly dry.
  - 3. Remove stains from rust, grease and oils, from release agents, etc.
  - 4. Remove and replace concrete having defective surfaces if defects cannot be restored to satisfaction of the Commissioner.
    - a. Surface defects, include color and texture irregularities, cracks as defined above, spalls, air bubbles, honeycomb, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
    - b. Chip away defective areas, honeycomb, rock pockets, voids over 1/4" (6mm) in any dimension and holes left by tie rods and bolts, down to solid concrete but in no case to a depth less than 1" (25mm) and saw-cut edges to prevent feather edging of fill material.
  - 5. Restore concealed formed surfaces, where possible, containing defects that affect the durability of concrete. If defects cannot be restored, remove and replace concrete.
  - 6. Clean out form tie holes and fill with dry pack mortar or precast cone plugs secured in place with bonding agent.

7. If honeycombing exposes reinforcement, chip to provide clear space at least 3/4" (20mm) wide all around steel to allow proper bond.

I. Restoring Unformed Surfaces:

1. High and Low areas in concrete surfaces which are in excess of specified tolerances shall be leveled or ground-smooth.
  - a. Correct high areas by grinding after concrete has cured at least 14 days.
  - b. Correct low areas by applying leveling material. Finish leveling material as specified in this section.
2. Restore surfaces containing defects that affect durability of concrete.
  - a. Surface defects include crazing, cracks as defined above, spalling, popouts, honeycombs, rock pockets, and other objectionable conditions.
3. Restore defective areas, except random cracks and single holes not exceeding 1" (25mm) in diameter, by cutting out and replacing with fresh concrete.
  - a. Remove defective areas with clean, square cuts and expose reinforcing steel with at least 3/4" (20mm) clearance all around.

- J. Filling In: Fill in holes and openings left in concrete for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place.

3.9 EVALUATION AND ACCEPTANCE OF CONCRETE

- A. In accordance with ACI 301, except where otherwise specified.
- B. If, at any time during construction, the concrete resulting from the approved mix design deviates from Specification requirements for any reason, such as lack of workability, or insufficient strength, the Contractor shall have his laboratory verify the deficiency and modify the mix design, until the specified concrete is obtained. Modified mix to be submitted for approval per Part 1 article of this section, - SUBMITTALS.

**END OF SECTION 03 30 00**

**SECTION 03 33 00****ARCHITECTURAL CONCRETE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. This specification covers requirements for the materials and production of cast-in-place architectural concrete walls with formliner surface finishes.
2. Concrete retaining walls at plaza raised plant beds.
3. Freestanding Perimeter Wall along the eastern perimeter of the 116<sup>th</sup> Precinct station House Parking Lot.
4. Between the 105th Precinct Annex parking lot and North Conduit Avenue.
5. Exterior architectural concrete column encasements beneath overhang on south side of building.

B. Related Sections:

1. Section 03 10 00 "Concrete Formwork"
2. Section 03 20 00 "Concrete Reinforcement and Embedded Assemblies"
3. Section 03 30 00 "Cast-in-Place Concrete"
4. Section 03 45 00 "Precast Architectural Concrete"
5. Section 03 48 00 "Precast Concrete Specialties"
6. Section 07 92 00 "Joint Sealants"
7. Section 10 75 00 "Flagpoles"
8. Section 32 05 16 "Aggregate Materials"
9. Section 32 31 19 "Decorative Metal Fences"

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Flyash: Concrete shall incorporate flyash as a replacement for at least 20% (by weight) of the Portland cement. All design mixes are subject to review and approval by the Commissioner.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 REFERENCES

- A. Standards of the organizations referred to in this specification are listed below with their serial designations. The most recently published versions of the referenced standards are declared to be a part of this specification as if fully set forth herein.

## 1.6 DEFINITIONS

- A. Coloring admixture/agent – A blended mixture of color oxides, water-reducing agent and a plasticizer.
- B. Design Reference Standard – Sample prepared under the Commissioner's direction to be used by reference for bidding purposes and construction of the Field Mockup; having a minimum size of 18 by 18 in. (by 2 in. thick, exhibiting the acceptable surfaces, color and texture; and listing the sources and proportions of materials used.
- C. Excessive Contrast – Degree of architectural concrete construction blemish determined unacceptable by comparison to the field mockup and remedial work or restoration is required.
- D. Field Mockup – A sample, which may be specified as to size, constructed in the field by the Contractor incorporating the forming, materials, and procedures proposed for the architectural concrete, which is to be used for comparison during periodic and final acceptance.
- E. Kerf – A saw cut placed on the backside of a wood rustication strip to allow for expansion due to possible water absorption, or a series of cuts on the backside of wood forms to increase flexibility of formwork to follow design radii while maintaining a uniform face.
- F. Overlaid Plywood – A plywood coated with a factory applied paper overlay that is impregnated with phenolic res- ins. MDO is a Medium Density Overlay containing 35–45 percent phenolic resin by weight of the overlay. HDO is a High Density Overlay containing 45–65 percent phenolic resin by weight of the overlay. Finnish birch has an over- lay which contains a minimum of 65 percent phenolic res- in overlay by weight of the overlay.
- G. Reveal – Projection of the aggregate from the mortar after completion of exposure operations. Amount of reveal is specified as brush-sufficient to dull surface sheen but not have any reveal:
  1. Light: a maximum 1/16 in. (2 mm) reveal
  2. Medium: a maximum reveal of 1/4 inch;
  3. Heavy: a maximum reveal of 1/3 of the large aggregate diameter

- H. Zones of influence – Surface area of concrete visibly affected by internal vibration. Size of area will vary with the size and type of internal vibrator used and concrete mixture characteristics and proportions.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.8 SUBMITTALS

- A. Product Data: Items including admixtures, joint systems, release agents, reinforcing, form ties, sealers, coatings, and others as requested by the Commissioner.
- B. Design Data:
  - 1. Submit concrete mix design. Submit separate mix designs when admixtures are required for the following:
    - a. Hot and cold weather concrete work.
    - b. Air entrained concrete work.
  - 2. Identify mix ingredients and proportions, including admixtures.
- C. Laboratory Test Reports: Submit laboratory test reports for concrete materials and mix design test to the Commissioner.
- D. Form TR3: Technical Report Concrete Design Mix: The contractor shall be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including , but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.
- E. Concrete Testing Service: Engage and pay for a testing laboratory acceptable to the Commissioner to perform material evaluation tests and to design concrete mixes.
- F. Materials and installed work may require testing and retesting at any time during progress of work. Tests, including testing of rejected materials for installed work, shall be done at Contractor's expense.
- G. Materials Certificates: Materials certificates certifying that each material item complies with, or exceeds, specified requirements. Provide certification from admixture manufacturers that chloride content complies with specification requirements.
- H. Shop Drawings: Plans, cross sections, elevation, and details showing overall pattern, joint locations, forming system, form tie locations, end locations and other special conditions.
- I. Samples:
  - 1. Form ties and description, showing method of break-back when forms are removed.
  - 2. Design reference samples for initial verification of design intent, for each type of finish indicated, on exposed surfaces of architectural precast concrete units, in sets of three,

representative of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.

J. Field Mockup

1. Construct Field Mockups using procedures, equipment, materials, simulated restorations and quality control plan submitted for production of cast-in-place architectural concrete.
2. For walls, include vertical, horizontal, rustication and finish joints, demonstrate methods of restoration, curing, aggregate exposure, sealers and coating. Construct mockup to include a minimum of two lifts where design height requires multiple pours.

- K. Quality control plan: To be submitted by Contractor prior to commencing construction of architectural concrete.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Quality control plan—Submit quality control plan as outlined in Section 1.9 for acceptance prior to commencing any construction of architectural concrete.

1.10 QUALIFICATIONS AND RESPONSIBILITIES

- A. Contractor qualifications: The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

B. REPORTS

1. Maintain logs of concrete placements. Record date, location and quantities of concrete placement, air temperature, and location and identification of material and architectural concrete sampling. Maintain file of architectural concrete delivery tickets.
2. Report any proposed changes from procedures and materials used in the original Field Mockup. Submit new sample having the same dimensions and texture as the original Design Reference Sample for review. Upon acceptance construct another Field Mockup with the new materials and procedures for acceptance prior to proceeding further with construction of the architectural concrete. Further construction with the new materials shall be planned so as to minimize contrast with previously placed architectural concrete.

1.11 ACCEPTANCE

- A. Periodic acceptance: Failure of the completed architectural concrete to receive acceptance during a periodic review requires the submittal of a plan of remedial restoration and proposed revisions to methods of construction for acceptance before proceeding with additional architectural concrete construction.
- B. Final acceptance: Protect accepted architectural concrete from damage after completion of the architectural concrete construction until completion of project.

**1.12 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials to jobsite in manufacturer's original containers.
- B. Store materials in a clean dry location. Maintain method of storage and temperature of materials as required by manufacturer.

**1.13 ENVIRONMENTAL CONDITIONS**

- 1. Do not install during heavy rain or snowfall.
- B. Do not install over frozen base materials.

**1.14 GENERAL REQUIREMENTS**

- 1. Adhere to local ordinances requiring restrictions on sound, dust and work hours during construction of architectural concrete.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Scope: This section specifies requirements for cast-in-place architectural concrete walls having as-cast surfaces or treated surfaces which are listed in the specifications.
- B. Tolerances: Tolerances shall conform to ACI-117.

**2.2 FORMLINERS**

- A. Product: Textured Architectural Concrete shall be formed using an elastomeric formliner. Subject to compliance with requirements, formliner manufacturers whose products may be incorporated into the Work include the following:
  - 1. US Formliner (Basis of Design)
  - 2. Spec Formliners
  - 3. Architectural Polymers
  - 4. Or Approved Equal.
- B. Formliner Pattern 1 (Faux Sandblast):
  - 1. Basis-of-Design Product subject to compliance with requirements:
    - a. US Formliner; Reckli 2/103 Lena
  - 2. Subject to compliance with requirements, other products that may be incorporated into the Work include the following:
    - a. Spec Formliners; Light Sandblast 1651
    - b. Architectural Polymers; Light Sand Finish #403
    - c. Or approved equal.
- C. Required accessories:

1. Form Release Agent
  2. Rustication Strip 1-1/2" face: Reusable ABS plastic.
  3. Chamfer triangle continuous PVC strip with 1" leg.
  4. Drip line square continuous PVC strip 1"x1"
- D. Formliners for Textured Finish Concrete: Provide special forming materials to produce form surfaces with face design, texture, arrangement, and configuration as indicated on drawings.
- E. Form Release Agent: Formliners shall be coated prior to concrete placement with a biodegradable, water based, reactive – type release agent. Solvent and petroleum-based form release agents can degrade the form liner and will not be accepted.

## 2.3 CONCRETE MATERIALS

- A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
1. Portland Cement shall comply with the requirements of ASTM Designation C 150 and shall be of the following types:
    - a. Type I Normal
    - b. Type IA Air-entraining Normal
    - c. Type II Moderate Sulphate Resistant
    - d. Type IIA Air-entraining Moderate Sulphate Resistant
  2. Portland Cement shall be uniform in color. The brand shall have an established reputation of uniformity of character and have been successfully used for at least two (2) years unless otherwise approved by the Commissioner.
  3. Portland Cement shall be stored in such a manner as to permit easy inspection and to protect the cement from dampness and minimize warehouse set.
  4. Portland Cement may be supplemented with the following:
    - a. Fly Ash: ASTM C 618, Class F.
    - b. Ground Granulated Blast-Furnace Slag: AASHTO M 302, Grade 100
- B. Aggregate
1. Normal-Weight Aggregates, uniformly graded, meeting ASTM C 33.
  2. Provide aggregates from a single source with documented service-record data of at least 3 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.
  3. Coarse Aggregate: Broken Stone or gravel, moderately resistant to abrasion, Size No. 67, meeting the following requirements:

Sieve Size/No.	% Passing (by Weight)
1"	100
3/4"	90-100
1/2"	--
3/8"	20-55
#4	0-10

#8

0-5

4. Fine Aggregate: Hard, durable mineral particles, meeting the following requirements:

Sieve Size/No.	% Passing (by Weight)
3/8"	100
# 4	95-100
# 8	----
# 16	45-85
# 50	10-30
# 100	0-6

5. Sand shall not contain any deleterious substances in excess of that shown in Table 1 of ASTM Designation C 33. The calculated quantity of sodium chloride in Type 1A sand shall not exceed three-tenths (0.3) of one percent, by weight.
6. SOUNDNESS: For natural sand, intended for use in Portland cement mixtures, the loss by magnesium sulfate test after five (5) cycles shall not exceed ten (10) percent by weight. The soundness test shall be made only when required by the Commissioner.
7. ORGANIC IMPURITIES: Natural sand, intended for use in Portland cement mixtures, which, when subjected to the color test for organic impurities, produce a color in the sodium hydroxide solution darker than the standard color, will not be accepted, unless the subsequent test for structural strength indicates it to be suitable for use.
8. **STRUCTURAL STRENGTH**: Natural sand, intended for use in Portland cement mixtures, when subjected to the mortar strength test, shall produce a mortar having a compressive strength at the age of three (3) days and seven (7) days of not less than ninety (90) percent of that developed by an Ottawa sand mortar when tested in accordance with ASTM Designation C 87.

C. Water

- Potable and complying with ASTM C 94.
- Temperature of water for curing shall be not more than 20 F (10 C) lower than the concrete surface temperature.

D. Admixtures—Calcium chloride, or any admixture containing calcium chloride, shall not be used.

- Air-entraining agents shall meet ASTM C 260.
- Water-reducing admixtures shall meet ASTM C 494, Type A
- Water-reducing and retarding admixtures shall meet ASTM C 494, Type D.
- High-range water reducers (superplasticizers) shall meet ASTM C 494, Types F or G
- Accelerating admixtures shall meet ASTM C 494, Types C and E
- Admixtures for flowing concrete shall meet ASTM C 1017, Type I or II
- Mineral admixtures fly ash shall meet ASTM C 618, ground granulated blast-furnace slag shall meet ASTM C 989, and silica fume shall meet ASTM C 1240. Mineral admixtures shall be compatible with other admixtures.
- Coloring admixture/agents shall meet ASTM C 979 and ASTM C 494.

E. Concrete

1. Slump, strength and durability requirements shall be as shown in the Contract Documents.
  2. Concrete shall match color and surface of the Design Reference Standard and the accepted Field Mockup.
  3. Concrete shall comply with Section 6 of ACI 301.
  4. For colored concrete, prepare trial batches of the final design mix with specified slump at highest and lowest ambient temperatures anticipated during concrete placements. Adjust color amounts to match Design Reference Standard and the accepted Field Mockup.
  5. Concrete curing compound shall conform to ASTM C 309. The cured surface shall match the Design Reference Standard. Solids content shall be between 14–22 percent. For colored concrete use curing compounds recommended by pigment or color admixture manufacturer and accepted by Commissioner.
- F. Sheet materials for concrete curing: Plastic film, wet burlap or burlap-backed plastic film shall not be used for curing colored horizontal architectural concrete.
- G. Expansion Joint
1. ½" wide, full depth, pre-molded bituminous joint filler compatible with joint sealer, ASTM D1751.
  2. Joint Sealant: Subject to compliance with requirements, products that may be incorporated into the Work include the following:
    - a. Vulkem 200
    - b. SikaFlex 1A
    - c. Sealtight Purthane
    - d. or approved equal.
  3. Sealant must be color matched to adjacent architectural concrete, color subject to review and acceptance by Commissioner.

## 2.4 CONCRETE MIX

- A. Concrete Design Mix shall conform to NYC Department of Transportation specifications for Class A-40 designation for concrete and meeting the following requirements:
1. Design Mix Proportions (Cement/Sand/Gravel) – Based on dry-rodded volumetric measurement of ingredient materials: 1 : 1-3/4 : 2-3/4.
  2. Batch shall contain a minimum of seven (7) bags of cement per cubic yard
  3. Compressive Strength at 28 Days: 4000 psi
  4. Maximum W/C Ratio at Point of Placement: 0.44
  5. Fine Aggregate: 29-37% by weight of Total Aggregate
  6. Slump: 1 1/2" to 3 1/2". 4 inch maximum.
- B. Prepare design mixture, proportioned as per above and ACI 301, for normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
- C. Obtain each color, size, type, and variety of concrete mixture from single manufacturer with resources to provide concrete of consistent quality in appearance and physical properties.
- D. Cementitious Materials

1. Type IIA Portland Cement, Moderately Sulphate Resistant Air-Entrained.
2. Pozzolans: Use fly ash, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.

E. Aggregate:

1. Diabase: clean crushed stone material with a fine, but visible texture of plagioclase feldspar crystals set in a finer matrix of clinopyroxenes and accessory minerals.

F. Admixtures:

1. Air-Entraining
  - a. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:
2. Air Content (by volume of concrete): 6 1/2 percent plus or minus 1.5%.
3. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.
4. Water-Reducing and Water-Reducing and Retarding Admixtures:
  - a. Use water-reducing admixture or water-reducing and retarding admixture in concrete as required for placement and workability.
  - b. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
  - c. Use of chemical admixtures permitted for pigmented concrete pavements only on color additive manufacturer recommendation and on approval by Commissioner.

## 2.5 REINFORCEMENT

- A. Reinforcing bars shall conform to ASTM A 615 or ASTM A 706. Welded wire fabric shall conform to ASTM A 185 or ASTM A 497.
- B. Epoxy coated reinforcement shall conform to ASTM A 775 and epoxy-coated welded wire fabric to ASTM A 884.
- C. Galvanized reinforcement shall conform to ASTM A 767.
- D. Use plastic coated tie wire for epoxy coated reinforcement. Use soft stainless-steel complying with ASTM A 493, or plastic coated tie wire, for securing other reinforcement.
- E. Bar supports shall be Class 1, as defined in CRSI MSP-1. Stainless steel for bar supports shall comply with ASTM A 493.

## 2.6 ARCHITECTURAL TREATMENTS

- A. General: This section specifies the additional requirements for cast-in-place architectural concrete where the resulting concrete face is specially treated after form removal.
- B. Acceptance: Receive acceptance of the appearance of the first day's aggregate exposure operations before proceeding further.
- C. Color and finish:

1. Landscape elements including architectural concrete retaining walls and freestanding perimeter wall along the 105th Precinct Annex parking lot and east end of site:
    - a. Color: Match color of Precast Concrete Institutes' "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers, as follows: Light Gray, PCI # 230, subject to review and acceptance by Commissioner.
    - b. Finish:
      - 1) Vertical Surfaces to be finished with formliners; see Section 2.1 FORMLINERS.
      - 2) Subgrade Vertical Surfaces: Fibered Liquid Asphalt Coating as manufactured by Black Jack, Gardner, Henry, or approved equal.
      - 3) Horizontal surfaces – Smooth Float Finish.
  2. Exterior architectural concrete column encasements beneath overhang on south side of building:
    - a. Match color of Precast Concrete Institutes' "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers, as follows: Light Gray, PCI # 230, subject to review and acceptance by Commissioner.
    - b. Finish:
      - 1) Vertical Surfaces to be finished with formliners; see Section 2.1 FORMLINERS.
      - 2) Subgrade Vertical Surfaces: Fibered Liquid Asphalt Coating as manufactured by Black Jack, Gardner, Henry, or approved equal.
      - 3) Horizontal surfaces – Smooth Float Finish.
- D. Forms and formliners: Use high density and non-vapor transmitting materials.
- E. Sealers or coatings: Use concrete sealers to match accepted Design Reference Standard and Field Mockup surface.
- F. Joint sealants in vertical surfaces and horizontal areas not subject to traffic shall conform to ASTM C 920, Use NT; joints subject to traffic shall conform to ASTM C 920, Use T.
1. Prepared expansion joints shall be coated with a primer followed by installation of a bond breaker and a self-leveling two-component polyurethane-based elastomeric sealant. Apply Sikaflex 429 primer with Sikaflex – 2C, SL sealant, or Sonneborn 733 primer with sonolastic SL 2 sealant, or MasterSeal P 173 primer with MasterSeal SL1 Sealant, or approved equal. Match color of adjacent architectural concrete, color subject to review and acceptance by Commissioner.
    - a. Asphalt cement will not be approved as a sealant.
    - b. Sikaflex products are manufactured by Sika Corp., Lyndhurst, NY.
    - c. Sonolastic products are manufactured by Sonneborn and Chem Rex, Inc., Shakopee, MN.
    - d. MasterSeal products are manufactured by BASF Construction Chemicals, LLC.
    - e. Or approved equal.
  2. Concrete sealer: Test compatibility with sealant on Field Mockup and conform to final color of Design Reference Standard.
  3. The granular base and bedding materials shall consist of granular material graded as specified in Section 32 05 16 "Aggregate Materials"

**2.7 WEEPS**

1. 341 Round Plastic Weep Holes as manufactured by Hohmann & Barnard, or an approved equivalent product by Sandell's, Advanced Building Products, or approved equal.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 REINFORCEMENT**

- A. Place reinforcement in accordance with ACI 315.
- B. Provide specified concrete cover over reinforcement and coated steel embedment's. Concrete cover shall be as specified after removal of rustication strips or face mortar by further treatment such as sandblasting or bush hammering.
- C. Use bar supports in sufficient number, size and location to prevent vertical displacement of the reinforcement and gouging of the forming. Use bar supports or spacers in walls and columns to maintain clear distance between reinforcement and face of concrete.
- D. Bend back and keep tie wires 2 in. from form face. Remove tie wire clippings from horizontal surfaces that will be sandblasted, exposed to view, or weather.
- E. Perform welding or similar heat processes on reinforcement or accessories prior to form erection.

**3.3 FORMWORK FOR ARCHITECTURAL CONCRETE**

- A. Verify locations, lines, and levels before proceeding with formwork. Ensure that dimensions agree with shop drawings.

**3.4 RUSTICATION STRIPS**

- A. Provide rustication joints and chamfers as shown on the Contract Drawings.
- B. Wood strips shall be kerfed on the back side.
- C. Provide minimum concrete cover of 2 inches over all reinforcement. Cover shall be measured from bar reinforcement to the most deeply recessed depth of rustication or other recess in the concrete surface.
- D. Provide closure backing materials when indented rustication is used over a ribbed form liner. Seal joint between rustication strip and form with non-absorbent caulking.
- E. Apply impermeable coating to wood rustications or chamfers.

**3.5 BATCHING, MIXING, AND TRANSPORTING**

- A. Deliver concrete in initially clean equipment which is exclusively limited to mix and transport the architectural concrete.

- B. Deliver concrete of uniform slump and proportions so the resulting concrete shall match the Field Mockup.
- C. Deliver colored concrete in full loads.

### 3.6 CONVEYING AND PLACEMENT

- A. Support runs or gangways for the concrete trans- porters, pump lines, wheel barrows, other similar equipment and foot traffic so as not to disturb reinforcement or interfere with concrete placing operations.
- B. Place concrete after forms and reinforcement have been set and accepted by Commissioner.
- C. Schedule arrival of concrete to avoid delays in placement.
- D. Take precautions to minimize mortar splatter on form faces. Remove accidental mortar splatter from architectural form face.
- E. Deposit concrete in the final position without segregation or loss of material. Do not move concrete horizontally.
- F. Place concrete in uniform horizontal layers not more than 36 in. (0. 9 m) high for consolidation.
- G. Place concrete continuously without exceeding rate of placement used in design of forms.
- H. Vibrate placed concrete for maximum consolidation of concrete. Overlap the zones of influence a minimum of 50 percent. Withdraw internal vibrators at a rate of 3 in. (75 mm) per second. Keep internal vibrators 2 in. (50 mm) away from the architectural face.
- I. Revibrate the top 6 in. (150 mm) layer of a concrete lift during delays of up to a maximum 30 minutes as long as the vibrator will penetrate of its own weight. After 30 minutes or failure of the vibrator to penetrate of its own weight, stop placement, level lift and set construction joint.

### 3.7 CURING

- A. Mist concrete surface with water before applying curing compounds. Apply curing compounds at rate recommended by manufacturer.
- B. Maintain complete contact when using cotton mat curing.
- C. Curing during cold weather shall comply with ACI 306.1.

### 3.8 RESTORATION AND CLEANUP

- A. Restore defects on as-cast architectural surfaces immediately to conform to that accepted on the Field Mockup.
- B. Cure by covering with curing seal or edge-taped waterproof cover or as accepted by trial on Field Mockup.
- C. Finish tie holes as accepted on Field Mockup.

### 3.9 FORM STRIPPING

- A. Strip formwork completely from vertical architectural concrete surfaces when the concrete has achieved a compressive strength of 1000 psi (7 MPa) or 24 hours after placement, whichever is later. Schedule formwork stripping to maintain surface appearance matching accepted Field Mockup.
- B. Loosen forms carefully and remove without hammering or prying against finished concrete surfaces.
- C. Protect concrete surface from damage. Store removed forms for re-use, as appropriate, and remove damaged forms from the site and dispose of.
- D. As soon as the forms have been stripped and the concrete surfaces exposed, commence finishing and restoration such as removal of fins and other projections, filling recesses left by the removal of form ties, and restore surface defects. Clean exposed concrete surfaces and adjoining work stained by leakage of concrete.

### 3.10 CLEANING AND STORAGE

- A. Clean forms after each use and discard damaged forms.
- B. Store steel forms horizontally and fully supported.
- C. Store plastic coated forms and liners horizontally and under cover.

### 3.11 ARCHITECTURAL TREATMENTS

- A. Restoration
  - 1. Restored areas shall be subject to final acceptance under comparison to Field Mockup restoration.
  - 2. Restore defects as required to match adjacent surface after architectural surface has been treated.
  - 3. Cure restored areas.
  - 4. Finish tie holes to match accepted Field Mockup.
- B. Finishing and final cleanup
  - 1. Protect completed architectural cast-in-place concrete surfaces from damage, staining or other contaminants by subsequent construction.
  - 2. Do not allow laitance from subsequent construction or restorations to stain or harden on surfaces that have been finished.
  - 3. Clean concrete surfaces just prior to project submittal for acceptance.
  - 4. Use cleaning materials and processes that do not change color or texture of the completed concrete surfaces.
  - 5. Rinse architectural surface thoroughly with clean water after cleaning.
  - 6. Protect adjacent materials during cleaning operations.
- C. Final acceptance of architectural concrete
  - 1. Upon completion of architectural concrete, final acceptance is based upon the matching of the architectural cast-in-place concrete with the accepted Field Mockups when viewed at a distance of 20 ft (6 m) in daylight.

2. Only concrete listed in the specifications or identified on the plans as architectural concrete is to be included in this final acceptance.
3. Defective work, including restoration areas not accepted, shall be removed and replaced.

3.12 MISCELLANEOUS

- A. Apply concrete joint sealants prior to any application of concrete sealer.
- B. Apply sealers and sealants in accordance to manufacturer's specifications.
- C. Match accepted Design Reference Standard and Field Mockup.

**END OF SECTION 03 33 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 03 45 00**

### **PRECAST ARCHITECTURAL CONCRETE**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section includes
  - 1. Insulated, architectural precast concrete units.
  - 2. Thin brick-faced, insulated architectural precast concrete units.
  - 3. Installation accessories.
- B. Related Sections:
  - 1. Section 03 30 00 "Cast-in-Place" Concrete for installing connection anchors in concrete.
  - 2. Section 03 45 10 "Thin Shell Precast Architectural Concrete."
  - 3. Section 04 20 00 "Unit Masonry" for thin brick products,
  - 4. Section 05 12 00 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
  - 5. Section 05 50 00 "Metal Fabrications" for miscellaneous steel shapes.
  - 6. Section 07 21 00 "Thermal Insulation" for materials.
  - 7. Section 08 44 13 "Glazed Aluminum Curtain Walls" for units set into or installed in conjunction with architectural precast concrete units.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Flyash: Concrete shall incorporate flyash as a replacement for at least 20% (by weight) of the Portland cement. All design mixes are subject to review and approval by the Commissioner.

2. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
3. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate PCI project color selections with design mixes used.
- B. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

#### 1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- C. Shop Drawings:
  1. Detail fabrication and installation of architectural precast concrete units.
  2. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit.
  3. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
  4. Indicate details at building corners.
  5. Indicate rough openings for penetrating, adjacent, and adjoining work. Including but not limited to windows, curtain walls, storefronts, louvers, MEP/ FP fixtures, other penetrations, devices and fittings.

- D. Samples: Design samples for initial verification of design intent, for each type of finish indicated, on exposed surfaces of architectural precast concrete units, in sets of three, representative of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.
- E. Engineering Services Submittal: For architectural precast concrete units and connections, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Material certificates.
- C. Material Test Reports: For aggregates.
- D. Field quality-control and special inspection reports.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Manufacturer (Fabricator) Qualifications: Manufacturer providing the material used in this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
  - 1. Firm shall assume responsibility for engineering architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
  - 2. Designated as an APA-certified plant for production of architectural precast concrete products.
- C. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."
- D. Installer's Qualifications: Installer performing the work of this section shall, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- E. Welding Qualifications: Comply with qualify procedures according to the following:
  - 1. AWS D1.1/D.1.1M, "Structural Welding Code - Steel"
  - 2. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

- F. Range Samples: After sample approval and before fabricating architectural precast concrete units, produce a minimum of three sets of samples, approximately 16 sq. ft. in area, representing anticipated range of each color and texture on Project's units. Maintain one set of range samples at Project site and remaining range sample sets at manufacturer's plant as color and texture approval reference.
1. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of restoration techniques proposed for restoration of surface blemishes.
  2. After acceptance of restoration technique, maintain one (1) sample panel at manufacturer's plant and one at Project site in an undisturbed condition as a standard for judging the completed Work.
  3. Demolish and remove sample panels when directed by the Commissioner.
- G. On-site Facade Mockups: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
1. Provide complete insulated precast architectural concrete wall panels of each type, in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
  2. Incorporate full-scale details of the architectural features, approved finished and textures, structural attachment points, picking anchors, and insulation to be provided at full-scale building.
  3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
  4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis of Design, Fabricators: Subject to compliance with requirements, provide precast architectural concrete panels as supplied by High Concrete Group or comparable product from one of the following, as approved by the Commissioner:
1. Altus Group
  2. Gate Precast Concrete.
  3. Oldcastle Building Envelope.
  4. Or approved equal.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design architectural precast concrete units including connections. All products of engineering services shall be submitted to Commissioner for review and acceptance prior to incorporation into the work.
1. Engineering Services shall include complete design calculations for precast units and connections required for this project.

- a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
  - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.
- B. Design Standards: Comply with ACI 318 and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.
- C. Structural Performance: Provide architectural precast concrete units and connections capable of withstanding design loads indicated within limits and under conditions indicated.
  - 1. Precast architectural concrete wall panels shall be engineered and reinforced as a composite panel, with both interior and exterior wythe performing in composite action to resist thermal bowing, as well as meeting load requirements.
  - 2. Precast architectural concrete wall panels shall be engineered to span the full vertical distance between the connection points indicated on drawings. Panels engineered to require additional connection points located vertically between the connection points indicated on drawings, such as at mid-story, will not be accepted.
  - 3. Subject to review and acceptance by Commissioner, the Contractor can propose horizontal changes to anchor locations, or additional connection points aligned horizontally with similar connection points, as necessary to meet panel engineering requirements or to coordinate connection point locations with other trades.

## 2.3 MOLD MATERIALS

- A. Configuration shall match Design Samples.
- B. Use with manufacturer's recommended form- release agent that does not bond with, stain, or adversely affect precast concrete surfaces and does not impair subsequent surface or joint treatments of precast concrete.

## 2.4 FORMLINER MATERIALS

- A. Description: Textured Architectural Concrete shall be formed using an elastomeric formliner.
- B. Formliner Pattern 1 (Faux Sandblast):
  - 1. Basis-of-Design, Product: subject to compliance with requirements, provide US Formliner; Reckli 2/103 Lena or one of the following:
    - a. Spec Formliners; Light Sandblast 1651
    - b. Architectural Polymers; Light Sand Finish #403
    - c. Or approved equal.
- C. Formliner Pattern 2 (Faux Broom):
  - 1. Basis-of-Design, Products: subject to compliance with requirements, provide US Formliner; Reckli 2/61 Thames or one of the following:
    - a. Spec Formliners; Broom/Rake Texture 1605
    - b. Architectural Polymers; Broom Finish: Broom #407

c. Or approved equal.

D. Other Manufacturers:

1. Spec Formliners.
2. Architectural Polymers.
3. Or Approved Equal.

E. Required Accessories:

1. Form Release Agent
2. Rustication Strip 1-1/2" face: Reusable ABS plastic.
3. Chamfer triangle continuous PVC strip with 1" leg.
4. Drip line square continuous PVC strip 1"x1"

F. Formliners for Textured Finish Concrete: Provide special forming materials to produce form surfaces with face design, texture, arrangement, and configuration as indicated on drawings.

G. Form Release Agent: Biodegradable, water based, reactive- type release agent. Solvent and petroleum-based form release agents may degrade the form liner and will not be accepted.

## 2.5 REINFORCING MATERIALS

A. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M, deformed.

C. Plain-Steel Welded Wire Reinforcement: ASTM A185/A185M, fabricated from galvanized-steel wire into flat sheets.

D. Deformed-Steel Welded Wire Reinforcement: ASTM A497/A497M, flat sheet.

E. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

## 2.6 PRESTRESSING TENDONS

A. Prestressing Strand: ASTM A416/A416M, Grade 270, uncoated, seven-wire, low-relaxation strand.

1. Coat unbonded post-tensioning strand with post-tensioning coating complying with ACI 423.7 and sheath with polypropylene tendon sheathing complying with ACI 423.7. Include anchorage devices and coupler assemblies.

## 2.7 CONCRETE MATERIALS

A. Regional Materials: Concrete shall be manufactured within 100 miles of Project site from aggregates and cementitious materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

B. Portland Cement: ASTM C150/C150M, Type I or Type III, gray, unless otherwise indicated.

1. For surfaces exposed to view in finished structure, use gray or white cement, of same type, brand, and mill source.

C. Supplementary Cementitious Materials:

1. Fly Ash: ASTM C618, Class C or F, with maximum loss on ignition of 3 percent.
2. Metakaolin: ASTM C618, Class N.
3. Silica Fume: ASTM C1240, with optional chemical and physical requirement.
4. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.
5. Blended Hydraulic Cement: ASTM C595, Type IP, portland-pozzolan cement.

D. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C33/C33M, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.

E. Coloring Admixture: ASTM C979/C979M, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.

F. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.

G. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.

H. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

## 2.8 MISCELLANEOUS MATERIALS

A. Bearing Pads: Multi-monomer plastic strips that are non-leaching and support construction loads with no visible overall expansion.

B. Carbon-Steel Shapes and Plates: ASTM A36/A36M.

C. Carbon-Steel-Headed Studs: ASTM A108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or Type B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.

D. Carbon-Steel Plate: ASTM A283/A283M, Grade C.

E. Malleable Iron Castings: ASTM A47/A47M, Grade 32510 or Grade 35028.

F. Carbon-Steel Castings: ASTM A27/A27M, Grade 60-30.

G. High-Strength, Low-Alloy Structural Steel: ASTM A572/A572M.

H. Carbon-Steel Structural Tubing: ASTM A500/A500M, Grade B or Grade C.

I. Wrought Carbon-Steel Bars: ASTM A675/A675M, Grade 65.

J. Deformed-Steel Wire or Bar Anchors: ASTM A496/A496M or ASTM A706/A706M.

- K. Carbon-Steel Bolts and Studs: ASTM A307, Grade A or ASTM F1554, Grade 36; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A563; and flat, unhardened steel washers, ASTM F844.
- L. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325 Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
- M. Zinc-Coated Finish: For exterior steel items, steel in exterior walls, and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A123/A123M or ASTM A153/A153M.
  - 1. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight and complying with DOD-P-21035B or SSPC-Paint 20.
- N. Shop-Primed Finish: Prepare surfaces of nongalvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79 according to SSPC-PA 1.

## 2.9 GROUT MATERIALS

- A. Sand-Cement Grout: Portland cement, ASTM C150/C150M, Type I, and clean, natural sand, ASTM C144 or ASTM C404. Mix at ratio of 1-part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C1218/C1218M.
- B. Nonmetallic, Nonshrink Grout: Packaged, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C1107/C1107M, Grade A for dry pack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C1218/C1218M.
- C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C881/C881M, of type, grade, and class to suit requirements.

## 2.10 INSULATED PANEL ACCESSORIES

- A. Wythe Connectors: Epoxy-coated interlaid carbon fiber mesh or approved equivalent performance low-thermal-conductivity wythe connectors
  - 1. Construction and architecture shall be supplied in accordance with minimum MARV tensile strength tow values, reported in pounds force per single end, complying with the following:
    - a. Yarn Type: Industrial Grade PAN based carbon fiber with suitable epoxy sizing as approved by the manufacturer (24K - 50K carbon fiber tows).
    - b. Binder Chemistry: Chomarat Formulation: Epoxy D1156 (standard Tg) and Epoxy D2047 (High Tg).
    - c. Yarn/Strand Direction: Warp and Weft Strands to be laid perpendicular to each other; warp yarns to be superimposed.
    - d. Cross over bond: Fully bonded to ensure proper tow integrity.

e. Strands: No missing, broken, or degraded strands.

B. Polyisocyanurate Board Insulation: Comply with Section 07 21 00 "Thermal Insulation" and the following:

1. Unfaced insulation with thickness of 4 inches; per ASTM C 591, Type I, 1.8 lbs. per cu. ft., unless higher density is required to obtain project thermal resistance.
2. Overall panel continuous thermal resistance: R- 25 minimum.
3. Provide minimum 1 inch continuous insulation at all structural embeds and anchor points.

## 2.11 CONCRETE MIXTURES

A. Prepare design mixtures for each type of precast concrete required.

B. Limit use of fly ash and ground granulated blast-furnace slag to 20 percent of portland cement by weight; limit metakaolin and silica fume to 10 percent of portland cement by weight.

C. Design mixtures may be prepared by a qualified independent testing agency or by qualified architectural precast concrete plant at fabricator's option.

D. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 or PCI MNL 117 when tested according to ASTM C1218/C1218M.

E. Normal-Weight Concrete Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi minimum.

F. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to ASTM C642, except for boiling requirement.

G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.

H. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

## 2.12 MOLD FABRICATION

A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.

1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement.
2. Coat form liner with form-release agent.

B. Maintain molds to provide completed architectural precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.

1. Form joints are not permitted on faces exposed to view in the finished work.
2. Edge and Corner Treatment: Uniformly radiused, unless otherwise indicated.

#### 2.13 THIN BRICK FACING

- A. Refer to Section 04 20 00 - Unit Masonry for products.
- B. Place templates accurately to provide grid for thin-brick facings. Provide solid backing and supports to maintain stability of liners while placing thin bricks and during concrete placement.
- C. Securely place thin-brick units face down into pockets and place concrete backing mixture.
- D. Clean faces and joints of thin-brick facing.

#### 2.14 INSULATED PANEL CASTING

- A. Where required by project application, cast, screed, and consolidate bottom concrete wythe supported by mold.
- B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation holes and consolidate concrete around connectors according to connector manufacturer's written instructions.
- C. Ensure bottom wythe and insulation layer are not disturbed after bottom wythe reaches initial set.
- D. Cast, screed, and consolidate top wythe to meet required finish.
- E. Maintain temperature below 150 deg F in bottom concrete wythe.

#### 2.15 FABRICATION

- A. Make every effort to fabricate panels to allow the maximum possible thickness of continuous insulation at panel embedment, up 4 inches. At panel embedment, a minimum of 1 inch continuous rigid insulation shall be maintained, aligned with the insulation provided throughout the remainder of the insulated precast concrete panel.
  1. No solid concrete zones shall be allowed between the interior and exterior panel wythes, except as required at vertical grout tube connections as indicated on drawings.
  2. Solid concrete zones at vertical grout tubes shall be maximum of 9 by 9 inches at each occurrence, with proposed connection details, counts, and locations subject to review and acceptance by Commissioner.
- B. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations.
  1. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
  2. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."

- C. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- D. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on the Contract Drawings.
- E. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.
- F. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses and specified in-place loads.
- G. Prestress tendons for architectural precast concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 117.
- H. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- I. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.
- J. Place concrete in a continuous operation to prevent cold joints or planes of weakness from forming in precast concrete units.
  - 1. Place backup concrete mixture to ensure bond with face-mixture concrete.
- K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air voids on surfaces. Use equipment and procedures complying with PCI MNL 117.
  - 1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants." Ensure adequate bond between face and backup concrete, if used.
- L. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.
- M. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that does not show in finished structure.
- N. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.
- O. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless restoration meets requirements in PCI MNL 117 and has Commissioner's approval.

## 2.16 FABRICATION TOLERANCES

- A. Fabricate architectural precast concrete units to shapes, lines, and dimensions indicated so each finished unit complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.

## 2.17 FINISHES

- A. Exposed faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp with canted edges as indicated on drawings.
- B. Finish exposed- face surfaces of architectural precast concrete units to match approved Sample Panels and as follows:
  - 1. As-Cast Surface, Finish; Inside Face: Provide surfaces to match approved sample for acceptable surface, air voids, sand streaks, and honeycomb.
  - 2. Thin-Brick Facing: Refer to "Thin-Brick Facings" Article.
  - 3. Formliner Finishes:
    - a. Formliner Pattern 1 finish on outermost exterior surface: For exterior surfaces of 2<sup>nd</sup> Floor precast architectural concrete wall panels, .
    - b. Formliner Pattern 2 on recessed exterior surfaces. Refer to architectural drawings.
  - 4. Finish exposed exterior wythe edge surfaces of architectural precast concrete units to match exterior wythe face- surface finish.
  - 5. Finish unexposed surfaces of architectural precast concrete units with as cast finish.
- C. Colors, Exposed Surfaces: PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers, as follows:
  - 1. 1st Floor with thin brick on exterior surface: Dark Gray PCI #545.
  - 2. 2nd Floor: Light Gray, PCI #230.

## 2.18 SOURCE QUALITY CONTROL

- A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, ASTM C1610/C1610M, ASTM C1611/C1611M, ASTM C1621/C1621M, and ASTM C1712.
- B. City will employ an independent testing agency to evaluate architectural precast concrete fabricator's quality-control and testing methods.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.
- B. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.
  - 1. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
  - 2. Unless otherwise indicated, maintain uniform joint widths of 3/4 inch.
- C. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
- D. Welding: Comply with applicable requirements in AWS D1.1/D1.1M and AWS D1.4/D1.4M for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
- E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
- F. Grouting or Dry-Packing Connections and Joints: Grout connections where required or indicated. Retain flowable grout in place until hard enough to support itself.
  - 1. Alternatively, pack spaces with stiff dry-pack grout material, tamping until voids are completely filled.
  - 2. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces.
  - 3. Promptly remove grout material from exposed surfaces before it affects finishes or hardens. Keep grouted joints damp for not less than 24 hours after initial set.

### 3.4 ERECTION TOLERANCES

- A. Erect architectural precast concrete units level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.

### 3.5 FIELD QUALITY CONTROL

- A. Testing Agency: City of New York will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Visually inspect field welds and test according to ASTM E165 or to ASTM E709 and ASTM E1444. High-strength bolted connections are subject to inspections.
- C. Testing agency will report test results promptly and in writing to Contractor and Commissioner.
- D. Restore or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

- E. Additional testing and inspecting, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

### 3.6 RESTORATION

- A. Restore damaged architectural precast concrete units if permitted by Commissioner. Commissioner reserves the right to reject restored units that do not comply with requirements.
- B. Mix patching materials and restore units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and restored work, when viewed in typical daylight illumination from a distance of 20 feet.
  - 1. Restoration mixes provided shall match those approved on restored portions of submitted Sample Panels.
- C. Prepare and restore damaged galvanized coatings with specified material according to ASTM A780/A780M.
- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged architectural precast concrete units when restoration does not comply with requirements.

### 3.7 CLEANING

- A. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
- B. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
  - 1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Protect other work from staining or damage due to cleaning operations.
  - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

**END OF SECTION 03 45 00**

**SECTION 03 45 10****THIN- SHELL PRECAST ARCHITECTURAL CONCRETE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes
1. Thin- shell (Thin cast) architectural precast concrete units.
  2. Installation accessories.
- B. Related Sections:
1. Section 03 30 00 "Cast-in-Place Concrete" for installing connection anchors in concrete.
  2. Section 03 45 00 "Precast Architectural Concrete."
  3. Section 04 20 00 "Unit Masonry" for brick veneer products,
  4. Section 05 12 00 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
  5. Section 05 50 00 "Metal Fabrications" for shelf angles and other miscellaneous steel shapes.
  6. Section 08 44 13 "Glazed Aluminum Curtain Walls" for units set into or installed in conjunction with architectural precast concrete units.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Flyash: Concrete shall incorporate flyash as a replacement for at least 20% (by weight) of the Portland cement. All design mixes are subject to review and approval by the Commissioner.

2. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
3. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate PCI project color selections with design mixes used.
- B. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.7 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
- C. Shop Drawings:
  1. Detail fabrication and installation of thin shell architectural precast concrete units.
  2. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit.
  3. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
  4. Indicate details at building corners.
  5. Indicate rough openings for penetrating, adjacent, and adjoining work. Including but not limited to windows, curtain walls, storefronts, louvers, MEP/ FP fixtures, other penetrations, devices and fittings.

- D. Samples: Design reference samples for initial verification of design intent, for each type of finish indicated on exposed surfaces of thin shell architectural precast concrete units, in sets of three, representative of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.
- E. Engineering Services Submittal: For thin- shell architectural precast concrete units and connections, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York .responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior any incorporation into the work.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Material certificates.
- C. Material Test Reports: For aggregates.
- D. Field quality-control and special inspection reports.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Manufacturer (Fabricator) Qualifications: Manufacturer providing the material used in this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer shall have been in satisfactory service for not less than five (5) years
  - 1. Firm shall assume responsibility for engineering thin shell architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
  - 2. Designated as a PCI-certified plant for Group A, Category A1 - Architectural Cladding and Load Bearing Units or designated as an APA-certified plant for production of thin shell architectural precast concrete products.
- C. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."
- D. Welding Qualifications: Comply with qualify procedures according to the following
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."
- E. On-site Facade Mockups: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.

1. Provide complete thin- shell precast architectural concrete wall panels in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
2. Incorporate full-scale details of the architectural features, approved finished and textures, structural attachment points, picking anchors, and insulation to be provided at full-scale building.
3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis of Design, Fabricators: Subject to compliance with requirements, provide thin shell precast architectural concrete panels as supplied by High Concrete Group or comparable product from one of the following, as approved by the Commissioner:
1. Altus Group
  2. Gate Precast Concrete.
  3. Oldcastle Building Envelope.
  4. Or approved equal.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design thin shell architectural precast concrete units including connections. All products of engineering services shall be submitted to Commissioner for review and acceptance prior to incorporation into the work.
1. Engineering Services shall include complete design calculations for thin shell precast units and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.
- B. Design Standards: Comply with ACI 318 and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of thin shell architectural precast concrete units indicated.
- C. System Description: Thin precast cladding placed under compression with type 316 stainless steel prestressing tendons.
- D. Structural Performance: Provide thin shell architectural precast concrete units and connections capable of withstanding design loads indicated within limits and under conditions indicated.

## 2.3 REINFORCING MATERIALS

- A. Reinforcing: Type 316 stainless steel prestressing tendons: ASTM A492, ASTM A240.
- B. Supports: Hot dip galvanized after fabrication: ASTM A 123 Grade 100 or ASTM A653 G210.
- C. Fasteners to structure, Elco Industries drill flex, Elco Bi-Flex Stainless Steel, or approved equal.

## 2.4 CONCRETE MATERIALS

- A. Portland Cement: ASTM C150/C150M, Type I or Type III, gray, unless otherwise indicated.
  - 1. For surfaces exposed to view in finished structure, use gray or white cement, of same type, brand, and mill source.
- B. Supplementary Cementitious Materials:
  - 1. Fly Ash: ASTM C618, Class C or F, with maximum loss on ignition of 3 percent.
  - 2. Metakaolin: ASTM C618, Class N.
  - 3. Silica Fume: ASTM C1240, with optional chemical and physical requirement.
  - 4. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.
  - 5. Blended Hydraulic Cement: ASTM C595, Type IP, portland-pozzolan cement.
- C. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C33/C33M, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
- D. Coloring Admixture: ASTM C979/C979M, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
- E. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.
- F. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.
- G. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

## 2.5 STEEL CONNECTION MATERIALS

- A. Carbon-Steel Shapes and Plates: ASTM A36/A36M.
- B. Carbon-Steel-Headed Studs: ASTM A108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or Type B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.
- C. Carbon-Steel Plate: ASTM A283/A283M, Grade C.
- D. Malleable Iron Castings: ASTM A47/A47M, Grade 32510 or Grade 35028.
- E. Carbon-Steel Castings: ASTM A27/A27M, Grade 60-30.

- F. High-Strength, Low-Alloy Structural Steel: ASTM A572/A572M.
- G. Carbon-Steel Structural Tubing: ASTM A500/A500M, Grade B or Grade C.
- H. Wrought Carbon-Steel Bars: ASTM A675/A675M, Grade 65.
- I. Deformed-Steel Wire or Bar Anchors: ASTM A496/A496M or ASTM A706/A706M.
- J. Carbon-Steel Bolts and Studs: ASTM A307, Grade A or ASTM F1554, Grade 36; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A563; and flat, unhardened steel washers, ASTM F844.
- K. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325 Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.
- L. Zinc-Coated Finish: For exterior steel items, steel in exterior walls, and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A123/A123M or ASTM A153/A153M.
  - 1. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight and complying with DOD-P-21035B or SSPC-Paint 20.
- M. Shop-Primed Finish: Prepare surfaces of nongalvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79 according to SSPC-PA 1.

## 2.6 GROUT MATERIALS

- A. Sand-Cement Grout: Portland cement, ASTM C150/C150M, Type I, and clean, natural sand, ASTM C144 or ASTM C404. Mix at ratio of 1 part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C1218/C1218M.
- B. Nonmetallic, Nonshrink Grout: Packaged, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C1107/C1107M, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C1218/C1218M.
- C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C881/C881M, of type, grade, and class to suit requirements.

## 2.7 CONCRETE MIXTURES

- A. Prepare design mixtures for each type of precast concrete required.
- B. Limit use of fly ash and ground granulated blast-furnace slag to 20 percent of portland cement by weight; limit metakaolin and silica fume to 10 percent of portland cement by weight.

- C. Design mixtures may be prepared by a qualified independent testing agency or by qualified thin shell architectural precast concrete plant at fabricator's option.
- D. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 or PCI MNL 117 when tested according to ASTM C1218/C1218M.
- E. Normal-Weight Concrete Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:
  - 1. Compressive Strength (28 Days): 5000 psi minimum.
- F. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to ASTM C642, except for boiling requirement.
- G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.
- H. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

## 2.8 BRICK VENEER FACING

- A. Refer to Section 04 20 00 - Unit Masonry for products.

## 2.9 FABRICATION

- A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
  - 1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."
- B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing thin shell architectural precast concrete units to supporting and adjacent construction.
- C. Cast-in reglets, slots, holes, and other accessories in thin shell architectural precast concrete units as indicated on the Contract Drawings.
- D. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.
- E. Reinforce thin shell architectural precast concrete units to resist handling, transportation, and erection stresses and specified in-place loads.
- F. Prestress tendons for thin shell architectural precast concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 117.

- G. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- H. Place concrete in a continuous operation to prevent cold joints or planes of weakness from forming in precast concrete units.
  - 1. Place backup concrete mixture to ensure bond with face-mixture concrete.
- I. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air voids on surfaces. Use equipment and procedures complying with PCI MNL 117.
  - 1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants." Ensure adequate bond between face and backup concrete, if used.
- J. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.
- K. Identify pickup points of thin shell architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each thin shell architectural precast concrete unit on a surface that does not show in finished structure.
- L. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.
- M. Discard and replace thin shell architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless restoration meets requirements in PCI MNL 117 and Commissioner's approval.
- N. Brick-Faced Thin Shell Architectural Precast Concrete Units: Restrict the following misalignments to 2 percent of number of bricks in a unit.
  - 1. Alignment of Mortar Joints:
    - a. Jog in Alignment: 1/8 inch.
    - b. Alignment with Panel Centerline: Plus or minus 1/8 inch.
  - 2. Variation in Width of Exposed Mortar Joints: Plus or minus 1/8 inch.
  - 3. Tipping of Individual Bricks from the Panel Plane of Exposed Brick Surface: Plus 1/16 inch; minus 1/4 inch less than or equal to depth of form liner joint.
  - 4. Exposed Brick Surface Parallel to Primary Control Surface of Panel: Plus 1/4 inch; minus 1/8 inch.
  - 5. Individual Brick Step in Face from Panel Plane of Exposed Brick Surface: Plus 1/16 inch; minus 1/4 inch less than or equal to depth of form liner joint.

## 2.10 FABRICATION TOLERANCES

- A. Fabricate thin shell architectural precast concrete units to shapes, lines, and dimensions indicated so each finished unit complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.

## 2.11 FINISHES

- A. Exposed faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp. Finish exposed-face surfaces of thin shell architectural precast concrete units to match approved sample panels and as follows:
  - 1. As-Cast Surface Finish: Provide surfaces to match approved sample for acceptable surface, air voids, sand streaks, and honeycomb.
  - 2. Finish exposed surfaces of thin shell architectural precast concrete units to match face-surface finish.
  - 3. Finish unexposed surfaces of thin shell architectural precast concrete units with as cast finish.
- B. Colors, Exposed Surfaces: PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers, as follows:
  - 1. 1st Floor: Light Gray, PCI #230.

## 2.12 SOURCE QUALITY CONTROL

- A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, ASTM C1610/C1610M, ASTM C1611/C1611M, ASTM C1621/C1621M, and ASTM C1712.
- B. City will employ an independent testing agency to evaluate thin shell architectural precast concrete fabricator's quality-control and testing methods.

# PART 3 - EXECUTION

## 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

## 3.2 INSTALLATION

- A. Install clips, hangers, bearing pads, and other accessories required for connecting thin shell architectural precast concrete units to supporting members and backup materials.
- B. Erect thin shell architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.
  - 1. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
  - 2. Unless otherwise indicated, maintain uniform joint widths of 3/4 inch.

- C. Connect thin shell architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
- D. Welding: Comply with applicable requirements in AWS D1.1/D1.1M and AWS D1.4/D1.4M for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
- E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
- F. Grouting or Dry-Packing Connections and Joints: Grout connections where required or indicated. Retain flowable grout in place until hard enough to support itself. Alternatively, pack spaces with stiff dry-pack grout material, tamping until voids are completely filled.
  - 1. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces.
  - 2. Promptly remove grout material from exposed surfaces before it affects finishes or hardens. Keep grouted joints damp for not less than 24 hours after initial set.

### 3.3 ERECTION TOLERANCES

- A. Erect thin shell architectural precast concrete units level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.

### 3.4 FIELD QUALITY CONTROL

- A. Testing Agency: City of New York will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- B. Visually inspect field welds and test according to ASTM E165 or to ASTM E709 and ASTM E1444. High-strength bolted connections are subject to inspections.
- C. Testing agency will report test results promptly and in writing to Contractor and Commissioner.
- D. Restore or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

### 3.5 RESTORATION

- A. Restore thin shell architectural precast concrete units if permitted by Commissioner. Commissioner reserves the right to reject restored units that do not comply with requirements.
- B. Mix patching materials and restore units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and restored work, when viewed in typical daylight illumination from a distance of 20 feet.
- C. Prepare and restore damaged galvanized coatings with galvanizing restoration paint according to ASTM A780/A780M.

- D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
- E. Remove and replace damaged thin shell architectural precast concrete units when restoration does not comply with requirements.

### 3.6 CLEANING

- A. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
- B. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
  - 1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Protect other work from staining or damage due to cleaning operations.
  - 2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

**END OF SECTION 03 45 10**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 03 48 00****PRECAST CONCRETE SPECIALTIES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:

1. This specification covers requirements for the materials and production of precast architectural concrete forms with formliner surface finishes.
2. Precast Concrete Base for RPL Backless Bench "A" and "C".
3. Precast Concrete Base for RPL Raised Planter Bench "B".
4. Precast Concrete Base for RPL Bleacher.

- B. Related Documents and Sections: Examine Contract Documents for requirements that directly affect or are affected by Work of this Section. A list of those Documents and Sections include, but is not limited to the following:

1. Section 03 20 00 "Concrete Reinforcement and Embedded Assemblies"
2. Section 03 30 00 "Cast-in-Place Concrete"
3. Section 03 33 00 "Architectural Concrete"
4. Section 07 92 00 "Joint Sealants"
5. Section 12 93 00 "Site Furnishings"
6. Section 32 05 16 "Aggregate Materials"

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 REFERENCES

### A. American Society for Testing and Materials:

1. ASTM A36 - Standard Specification for Carbon Structural Steel
2. ASTM A185 - Standard Specification for Steel Welded Wire Fabric, Plain, for Concrete Reinforcement.
3. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
4. ASTM A416 - Standard Specification for Steel Strand, Uncoated Seven-Wire for Prestressed Concrete
5. ASTM A615 - Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
6. ASTM C31 - Standard Practice for Making and Curing Concrete Test Specimens in the Field.
7. ASTM C33 - Standard Specification for Concrete Aggregates.
8. ASTM C143 - Standard Test Method for Slump of Hydraulic Cement Concrete.
9. ASTM C150 - Standard Specification for Portland Cement.
10. ASTM C260 - Standard Specification for Air-Entraining Admixtures for Concrete.
11. ASTM C330 - Standard Specification for Lightweight Aggregates for Structural Concrete.

### B. Precast/Prestressed Concrete Institute:

1. PCI MNL-117 - Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products.
2. PCI MNL-120 - PCI Design Handbook - Precast and Prestressed Concrete.
3. PCI MNL-122 - Architectural Precast Concrete.
4. PCI MNL-123 - Design and Typical Details of Connections for Precast and Prestressed Concrete.

## 1.6 DEFINITION

- A. Design Reference Sample: Sample of approved architectural precast concrete color, finish and texture, preapproved by Commissioner.
- B. Provide precast concrete materials suitable for exterior applications capable of withstanding freeze-thaw cycles, exposure to solar rays, rain, snow, and ice.

## 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.8 SUBMITTALS

- A. Design Mixtures: For each precast concrete mixture include compressive strength and water absorption rates.
- B. Shop Drawings: Detail fabrication and installation of architectural precast concrete units. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit. Indicate joints, reveals, and extent and location of each surface finish. Shop Drawings shall be at a sufficient scale to indicate unique and unusual conditions and to indicate adjacent construction or finishes affected by the Work. Shop Drawings shall indicate the location of all required seams.

- C. Samples: Submit samples for approval to illustrate quality, color, and texture of surface finish; slight variation in color/finish from approved sample shall be deemed acceptable. For each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of 3, illustrating full range of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.
- D. Templates: Templates taken shall supersede all Shop Drawing dimensions unless noted otherwise. Templates must be approved by the Commissioner.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Material Certificates: Signed by manufacturers.
- B. Material test reports: For aggregates.
- C. Field quality-control test reports.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Perform Work in accordance with PCI MNL-117, PCI MNL-120, PCI MNL-122, PCI MNL-123, and ACI 318.
- C. Qualifications
  - 1. Manufacturer qualified in accordance with PCI MNL-117 Group A1 - Architectural Concrete.
- D. Special Experience
  - 1. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work. In addition, the contractor or subcontractor must be licensed or approved by the manufacturer.
  - 2. The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. Handle pre-cast units to position, consistent with their shape and design. Lift and support only from support points.
- B. Blocking and Lateral Support During Transport and Storage: Clean, non-staining, without causing harm to exposed surfaces. Provide temporary lateral support to prevent bowing and warping.
- C. Protect units to prevent staining, chipping, or spalling of concrete.

**PART 2 - PRODUCTS****2.1 GENERAL**

- A. Scope: This section specifies requirements for precast architectural concrete furnishings having treated surfaces which are listed in the specifications.
- B. Tolerances: Tolerances shall conform to ACI-117.

**2.2 FORMLINERS**

- A. Product: Textured Architectural Concrete shall be formed using an elastomeric formliner. Subject to compliance with requirements, formliner manufacturers whose products may be incorporated into the Work include the following:
  - 1. US Formliner (Basis of Design)
  - 2. Spec Formliners
  - 3. Architectural Polymers
  - 4. Or Approved Equal.
- B. Formliner Pattern 1 (Faux Sandblast):
  - 1. Basis-of-Design Product subject to compliance with requirements:
    - a. US Formliner; Reckli 2/103 Lena
  - 2. Subject to compliance with requirements, other products that may be incorporated into the Work include the following:
    - a. Spec Formliners; Light Sandblast 1651
    - b. Architectural Polymers; Light Sand Finish #403
    - c. Or approved equal.
- C. Required accessories:
  - 1. Form Release Agent
- D. Formliners for Textured Finish Concrete: Provide special forming materials to produce form surfaces with face design, texture, arrangement, and configuration as indicated on drawings.
- E. Additional backing may be needed depending on application.
- F. Form Release Agent: Formliners shall be coated prior to concrete placement with a biodegradable, water based, reactive – type release agent. Solvent and petroleum-based form release agents can degrade the form liner and will not be accepted.

**2.3 FABRICATORS**

- A. Subject to compliance with requirements, products that may be incorporated in the Work include the following:
  - 1. Concrete Works East, LLC., East Brunswick, NJ 08816 (732.390.9944)

2. Nelson Precast Products, LLC, 2501 west Lexington Street, Baltimore, MD 21223 (410.732.3408)
3. Southside Precast Products, 1951 Hamburg Turnpike, Buffalo, NY 14218, (716.825.9300)
4. Or Approved Equal.

## 2.4 MATERIALS

- A. Concrete Material: Units shall be composed of a proprietary mix of Portland Cement (ASTM C150), Aggregate (ASTM C33), and Pigment achieving a design weighing no less than 110 lbs./cf. and a compressive strength of 3500 psi minimum at 28 days.
- B. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C 33, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.
  1. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate, unless otherwise approved by the Commissioner.
- C. Coloring Admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.
- D. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.
- E. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.
- F. Reinforcement: Primary Reinforcing: ASTM A 615, Grade 60 bar (note: may not be required for thin elements). strength and size commensurate with pre-cast unit design. Secondary Reinforcing (where applicable) will be glass fiber.

## 2.5 MORTAR

- A. Mortar Setting Bed: Shall be type "S" mortar

## 2.6 ARCHITECTURAL TREATMENTS

- A. General: This section specifies the additional requirements for cast-in-place architectural concrete where the resulting concrete face is specially treated after form removal.
  1. Landscape elements including precast concrete base for backless bench "A" and "C", precast concrete base for raised planter bench "B," and precast concrete base for bleacher. retaining walls and freestanding perimeter wall along the 105th Precinct Annex parking lot and east end of site:
    - a. Color: Match color of Precast Concrete Institutes' "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers, as follows: Light Gray, PCI # 230, subject to review and acceptance by Commissioner.
    - b. Finish:
      - 1) Vertical Surfaces to be finished with formliners; see Section 2.2 FORMLINERS.

- 2) Subgrade Vertical Surfaces: Fibered Liquid Asphalt Coating as manufactured by Black Jack or approved equal.
- 3) Horizontal surfaces – Smooth Float Finish.

## 2.7 SUPPORT DEVICES

- A. Stainless steel dowels and wall anchors as shown on the drawings. Subject to compliance with requirements, provide dowels and wall anchors from one of the following approved manufacturers:
  1. Hohmann & Barnard, Inc.,
  2. Halfen
  3. Hilti
  4. Or approved equal.

## 2.8 ACCESSORIES

- A. Provide all materials required to complete the work as shown on drawings and specified herein. Deliver, store, and transport materials to avoid damage to the product or to any other work. Return any products or materials delivered in a damaged or unsatisfactory condition.
- B. Store materials in a safe, secure location, protected from moisture and extreme temperature.

# PART 3 - EXECUTION

## 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements

## 3.2 PREPARATION

- A. Examine and verify that job conditions are satisfactory for speedy and acceptable work prior to installation of precast units. This includes verifying accessibility to the site.
- B. Physical templates shall be taken and used for fabrication
  1. When templating for wall panels, level and plumb lines shall be established on the templates for reference during fabrication

## 3.3 MIX

- A. Prepare design mixture of precast concrete required.
  1. Limit use of silica fume and metakaolin to meet design requirements.
- B. Units shall be composed of a proprietary mix of Portland Cement (ASTM C150), Aggregate (ASTM C33), and Pigment achieving a design weighing no less than 110 lbs./cf. and a minimum compressive strength of 3500 psi at 28 days.
- C. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to PCI MNL 117.
- D. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.

- E. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

### 3.4 FABRICATION

- A. All units shall be factory sealed. Sealer is to be determined by Manufacturer based on application of product.
- B. Units shall be cast in largest pieces practicable (approximately 8'L and 24sf) if applicable.
- C. Reinforcing bars shall be placed at the entire perimeter of product (minimum #3) and around all cutouts (minimum #2).
- D. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during pre-casting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.
  - 1. Weld headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."
- E. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.
- F. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on the Contract Drawings.
- G. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.
- H. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses.
- I. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
- J. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units.
  - 1. Place backup concrete mixture to ensure bond with face-mixture concrete.
- K. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 117.
  - 1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."
- L. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.

- M. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that will not show in finished structure.
- N. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.
- O. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless restorations meet requirements in PCI MNL 117 and Commissioner's approval.

### 3.5 FABRICATION TOLERANCES

- A. Fabricate architectural precast concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items. Edges to be standard 1/8" eased unless otherwise specified.
- B. Dimensional Tolerances of Finished Units:
  - 1. Overall height, width or length:  $\pm 1/8"$ .
  - 2. Angular deviation of plane of side:  $1/16"$
  - 3. Warp (out of plane):  $1/8"$  per 5'

### 3.6 FINISHES

- A. Bench faces shall be free of joint marks, grain, pockets, sand streaks, and Honeycomb, and other obvious defects free of unless warranted by sample; with uniform color and texture to match approved control sample. Corners, including false joints shall be uniform, straight, and sharp. Entrapped air voids or similar casting variations will be filled with a portland cement based colored filler (unless otherwise specified). Finish exposed-face surfaces of architectural precast concrete units to match approved design reference sample and as follows:
  - 1. Design Reference Sample: 825 T with a polished finish
- B. Finish exposed top, sides and back surfaces of architectural precast concrete units to match face-surface finish.
- C. Finish unexposed surfaces of architectural precast concrete units by float finish.

### 3.7 SOURCE QUALITY CONTROL.

- A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."

### 3.8 INSTALLATION

- A. Tolerances

1. Installed units shall have seams no wider than 3/16" and shall be filled with corresponding colored caulk.

**B. Installation**

1. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.
2. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment as units are being permanently connected.
  - a. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
  - b. Installed units shall have seams no wider than 3/16" and shall be filled with corresponding colored caulk.
3. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
4. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
5. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
6. Grouting Connections: Grout connections where required or indicated. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces. Keep grouted joints damp for not less than 24 hours after initial set. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.
7. Erect architectural precast concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.
8. Installation shall be performed by experienced, well-trained workers competent to complete the work as specified.
9. Use only materials approved by the manufacturer for use with its product.
10. All work shall comply with 2014 NYCBC.

**C. Restoration and Touch-Up**

1. After installation, inspect all work for improper installation or damage.
2. Restore any work damaged during installation. Make restoration work undetectable. Slight variations from original condition are to be expected and deemed acceptable.
3. Patching of damaged exposed face surfaces is acceptable. Restorations will be accepted if unnoticeable from a distance of 3'
4. Mix patching materials and restore units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and restored work, when viewed in typical daylight illumination from a distance of 3'.
5. Prepare and restore damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.
6. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.
7. Remove and replace damaged architectural precast concrete units when restorations do not comply with requirements.

**D. Cleaning**

1. Clean surfaces of precast concrete units exposed to view.
2. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
3. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
  - a. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Protect other work from staining or damage due to cleaning operations.
  - b. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

**E. Erection Tolerances**

1. Maximum Variation from Plane of Location: 1/4 inch in 10 feet and 3/8 inch in 100 feet, non-cumulative.
2. Maximum Offset from Indicated Alignment Between Two Connecting Units: 1/4 inch.
3. Joint Tolerance: Plus or minus 1/4 inch.

**F. Adjusting**

1. Adjust units so joint dimensions are within tolerances.

**END OF SECTION 03 48 00**

**SECTION 03 49 00**

**GLASS-FIBER-REINFORCED CONCRETE (GFRC)**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes;
1. Glass-fiber-reinforced concrete (GFRC) fins used as vertical SunShade devices.
  2. Anchors and connection hardware.
- B. Related Sections:
1. Section 03 45 00 "Precast Architectural Concrete" for matching colors and design reference sample.
  2. Section 08 44 13 "Glazed Aluminum Curtain Walls."
  3. Section 07 92 00 "Joint Sealants" for elastomeric joint sealants and sealant backings.

**1.3 DEFINITIONS**

- A. Design Reference Sample: Sample of GFRC color, finish, and texture that has been preapproved by Commissioner.

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.6 COORDINATION

- A. Coordinate aluminum brackets for GFRC attachment to curtain wall mullions and other adjoining work to provide a leakproof, secure, and noncorrosive installation.
- B. Coordinate dead load, wind load, and attachment points and brackets of GFRC members with curtain wall manufacturer to ensure that curtain walls are designed and properly reinforced to bear all forces of the GFRC members without reducing either the curtain wall and GFRC manufacturer's warranties

#### 1.7 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.9 ACTION SUBMITTALS

- A. Product Data: For each type of product. Include GFRC design mixes.
- B. Shop Drawings: Show fabrication and installation details for GFRC units including the following:
  1. Elevations, sections, and dimensions.
  2. Thickness of facing mix and GFRC backing.
  3. Finishes.
  4. Joint and connection details.
  5. Erection details.
  6. Locations and details of connection hardware attached to structure.
  7. Sizes, locations, and details of flex, gravity, and seismic anchors where required.

8. Relationship to adjacent materials.
  9. Description of loose, cast-in, and field hardware.
- C. Samples: For each type of finish indicated on exposed GFRC surfaces, representative of finish, color, and texture variations expected, approximately 12 by 12 inches by actual thickness.
- D. Engineering Services Submittal: For GFRC attachment, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

#### 1.10 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.
- C. Source Quality-Control Program: For GFRC manufacturer.
- D. Source Quality-Control Test Reports: For GFRC, inserts, and anchors.

#### 1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Manufacturer (Fabricator) Qualifications: Manufacturer providing the material used in this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- C. Installer Qualifications: Manufacturer of GFRC units or installer properly trained by the manufacturer.
- D. Welding Qualifications: Comply with qualify procedures according to the following:
  1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  2. AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."
- E. On-site Facade Mockup: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  1. Provide complete GFRC fins in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
  2. Incorporate full-scale details of the architectural features, approved finished and textures, brackets, and attachments to be provided at full-scale building.

3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

#### 1.12 DELIVERY, STORAGE, AND HANDLING

- A. Handle and transport GFRC units supported on nonstaining material and with nonstaining resilient spacers between units.
- B. Store GFRC units off of ground on firm, level, and smooth surfaces supported on nonstaining material and with nonstaining resilient spacers between units. Place stored units so identification marks are clearly visible.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Source Limitations: Obtain GFRC units from single source from single manufacturer.
- B. Basis- of- Design, Fabricator: Subject to compliance with requirements, provide fibreC as supplied by Rieder Smart Elements GmbH or comparable product from one of the following as approved by the Commissioner:
  1. Stromberg Architectural
  2. Willis Construction Co. Inc.
  3. Or approved equal.
- C. Fin Size and Shape: 4 inch face by 2 inch deep, as indicated on drawings.
- D. Fin Heights: As indicated on the drawings.
- E. Product Characteristic:
  1. Materials shall comply with ASTM C1185.
  2. Non-combustible as per ASTM E 136 & ASTM E 84.
  3. Wind load test as per ASTM E 330.
  4. Weather resistance test as per ASTM 1186.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design GFRC units, including Fin frames, anchors, and connections.
  1. Engineering Services shall include complete design calculations for precast units and connections required for this project.

- a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
  - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.
- B. Structural Performance: GFRC units, including Fin frames, anchors, and connections, shall withstand the following design loads as well as the effects of thermal- and moisture-induced dimensional changes within limits and under conditions indicated:
  1. Wind Loads: 30 psf positive and negative, unless otherwise required by as required by 2014 New York City Building Code or ASCE/SEI 7.
  2. Deflection Limits: Design supports to withstand design loads without lateral deflections greater than 1/240 of wall span.
  3. Thermal Movements: Provide for thermal movements resulting from annual ambient temperature changes of 120 deg F.
  4. Design supports and connections to accommodate deflections and other building movements.
- C. PCI Manuals: Comply with requirements and recommendations in the following PCI manuals unless more stringent requirements are indicated by selected product fabricator:
  1. PCI MNL 128, "Recommended Practice for Glass Fiber Reinforced Concrete Units."
  2. PCI MNL 130, "Manual for Quality Control for Plants and Production of Glass Fiber Reinforced Concrete Products."
- D. AISC Specifications: Comply with AISC 360, "Specification for Structural Steel Buildings."

## 2.3 MOLD MATERIALS

- A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that provides continuous GFRC surfaces within tolerances; nonreactive with GFRC and capable of producing required finish surfaces.
  1. Mold-Release Agent: Commercially produced liquid-release agent that does not bond with, stain, or adversely affect GFRC surfaces and does not impair subsequent surface or joint treatments of GFRC.

## 2.4 GFRC MATERIALS

- A. Portland Cement: ASTM C 150/C 150M; Type I, II, or III.
  1. For surfaces exposed to view in finished structure, use gray or white of same type, brand, and source throughout GFRC production.
- B. Metakaolin: ASTM C 618, Class N.
- C. Glass Fibers: Alkali resistant, with a minimum zirconia content of 16 percent, 1 to 2 inches long, specifically produced for use in GFRC, and complying with ASTM C 1666/C 1666M.
- D. Sand: Washed and dried silica, complying with composition requirements in ASTM C 144; passing a No. 20 sieve with a maximum of 2 percent passing a No. 100 sieve.

- E. Coloring Admixture: ASTM C 979/C 979M, synthetic mineral-oxide pigments or colored water-reducing admixtures, temperature stable, nonfading, and alkali resistant.
- F. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of GFRC and complying with chemical limits in PCI MNL 130.
- G. Polymer-Curing Admixture: Acrylic thermoplastic copolymer dispersion complying with PCI MNL 130.
- H. Air-Entraining Admixture: ASTM C 260/C 260M, containing not more than 0.1 percent chloride ions.

## 2.5 ANCHORS, CONNECTORS, AND MISCELLANEOUS MATERIALS

- A. Brackets and Reinforcement: Refer to Section 08 44 13 "Glazed Aluminum Curtain Walls."
- B. Stainless-Steel Plates: ASTM A 240/A 240M or ASTM A 666, Type 304.
- C. Stainless-Steel Bars and Shapes: ASTM A 276, Type 304.
- D. Malleable-Iron Castings: ASTM A 47/ A 47M, Grade 32510.
- E. Bolts: ASTM A 307 or ASTM A 325, finished as follows:
  - 1. Finish: Zinc coated by hot-dip process according to ASTM A 123/A 123M, after fabrication, and ASTM A 153/A 153M, as applicable.

## 2.6 GFRC MIXES

- A. Mist Coat: Portland cement, sand slurry, and admixtures; of same proportions as backing mix without glass fibers.
- B. Face Mix: Proportion face mix of portland cement, sand, facing aggregates, and admixtures to comply with design requirements.
- C. Backing Mix: Proportion backing mix of Portland cement, glass fibers, sand, and admixtures to comply with design requirements. Provide nominal glass-fiber content of not less than 5 percent by weight of total mix.
- D. Polymer-Curing Admixture: 6 to 7 percent by weight of polymer-curing admixture solids to dry portland cement.
- E. Air Content: 8 to 10 percent; ASTM C 185.
- F. Coloring Admixture: Not to exceed 10 percent of cement weight.

## 2.7 MOLD FABRICATION

- A. Construct molds that result in finished GFRC complying with profiles, dimensions, and tolerances indicated, without damaging GFRC during stripping. Construct molds to prevent water leakage and loss of cement paste.
  - 1. Coat contact surfaces of molds with form-release agent.
  - 2. Coat contact surfaces of molds with surface retarder.
- B. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during GFRC application. Coat form liner with form-release agent.
- C. Locate, place, and secure flashing reglets accurately.

## 2.8 GFRC FABRICATION

- A. Proportioning and Mixing: For backing mix, meter sand/cement slurry and glass fibers to spray head at rates to achieve design mix proportions and glass-fiber content according to fabricator's procedures.
- B. Spray Application: Comply with general procedures as follows:
  - 1. Spray mist coat over molds to a nominal thickness of 1/8 inch on planar surfaces.
  - 2. Spray or place face mix in thickness indicated on Shop Drawings.
  - 3. Proceed with spraying backing mix before mist coat has set, using procedures that produce a uniform thickness and even distribution of glass fibers and matrix.
  - 4. Consolidate backing mix by rolling or other technique to achieve complete encapsulation of glass fibers and compaction.
  - 5. Measure thickness with a pin gage or other acceptable method at least once for every 5 sq. ft. of unit surface. Take no fewer than six measurements per Sunshade Fin.
- C. Hand form and consolidate intricate details, incorporate formers or infill materials, and overspray before material reaches initial set to ensure complete bonding.
- D. Build up homogeneous GFRC bonding pads over anchor feet, maintaining a minimum thickness of 1/2 inch over tops of anchor feet, before initial set of GFRC backing. Measure bonding pad thickness at 25 percent of anchor locations.
- E. Inserts and Embedment: Build up homogeneous GFRC bosses or bonding pads over inserts and embedment to provide enough anchorage and embedment to comply with design requirements.
- F. Curing: Employ initial curing method that ensures sufficient strength for removing units from mold.
  - 1. Keep moisture off of the surfaces of mixes with polymer curing admixtures during the first three hours of curing. Maintain temperature between 60 and 120 deg F during the first 16 hours.
  - 2. Prevent drying of moist curing mixes during the first 24 hours. Maintain units in surface-damp condition at a temperature above 60 deg F and 95 percent relative humidity for seven days.

- G. Fin Identification: Mark each GFRC Fin to correspond with identification mark on Shop Drawings. Mark each Fin with its casting date.

## 2.9 FABRICATION TOLERANCES

- A. Manufacturing Tolerances: Manufacture GFRC units so each finished unit complies with the following dimensional tolerances, unless otherwise required and indicated by selected product fabricator:

1. Edge Return Thickness: Plus 1/2 inch, minus zero inch.
2. Architectural Facing Thickness: Plus 1/8 inch, minus zero inch.
3. Backing Thickness: Plus 1/4 inch, minus zero inch.
4. Angular Variation of Plane of Side Mold: Plus or minus 1/32 inch per 3 inches of depth, or plus or minus 1/16 inch total, whichever is greater.
5. Variation from Square or Designated Skew (Difference in Length of Two Diagonal Measurements): Plus or minus 1/8 inch per 72 inches or plus or minus 1/4 inch total, whichever is greater.
6. Local Smoothness: 1/4 inch per 10 feet.
7. Bowing: Not to exceed L/240 unless unit complies with erection tolerances using connection adjustments.
8. Maximum Permissible Warpage of One Corner out of the Plane of the Other Three: 1/16 inch per 12 inches of distance from nearest adjacent corner.

- B. Fin Tolerances: As follows:

1. Vertical and Horizontal Alignment: 1/4 inch per 10 feet.

## 2.10 FINISHES

- A. Exposed faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints, shall be uniform, straight, and sharp. Finish exposed-face surfaces of GFRC to match approved design reference sample and as follows:

1. Finish: Provide the following as provided by Rieder, or equal as selected by the Commissioner:
  - a. FL | ferro light: Sandblasted: blasted at low pressure.
2. Refer to Section 03 45 00 "Precast Architectural Concrete" for matching color and design reference sample.
  - a. Custom Color: Match Dark Gray PCI #545.

## 2.11 SOURCE QUALITY CONTROL

- A. Quality-Control Testing: Establish and maintain a quality-control program for manufacturing GFRC units according to ISO 9001 and ISO 14001.

1. Test materials and inspect production techniques.
2. Quality-control program shall monitor glass-fiber content, spray rate, unit weight, product physical properties, anchor pull-off and shear strength, and curing period and conditions.

3. Prepare test specimens and test according to ASTM C 1228 and fabricator's procedures.
4. Test GFRC inserts and anchors according to ASTM C 1230 to validate design values.
5. Produce test boards at a rate of no fewer than one per work shift per operator for each spray machine and for each mix design.
  - a. For each test board, determine glass-fiber content according to ASTM C 1229 and flexural yield and ultimate strength according to ASTM C 947.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine structure and conditions for compliance with requirements for installation tolerances, bearing surfaces, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 ERECTION

- A. Install brackets, clips, hangers, and other accessories required for connecting GFRC units to supporting members and backup materials.
- B. Install GFRC units level, plumb, square, and in alignment. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.
  1. Maintain horizontal and vertical joint alignment and uniform joint width.
  2. Remove projecting hoisting devices.
- C. Connect GFRC units in position by bolting or welding, or both, as indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as possible after connecting is completed.
- D. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.3/D1.3M requirements for welding, appearance, quality of welds, and methods used in correcting welding work.
  1. Protect GFRC units from damage by field welding or cutting operations, and provide noncombustible shields as required.
- E. At bolted connections, use lock washers or other acceptable means to prevent loosening of nuts.

### 3.4 ERECTION TOLERANCES

- A. Erect GFRC units to comply with the following noncumulative tolerances:
1. Maximum Plumb Variation over the Lesser of Height of Structure or 100 Feet: 1 inch.
  2. Plumb in Any 10 Feet of Element Height: 1/4 inch.
  3. Maximum Offset in Alignment of Matching Edges: 1/4 inch.
  4. Face Width of Joint: As follows (governs over joint taper):
    - a. Fin Dimension 20 Feet or Less: Plus or minus 1/4 inch.
    - b. Fin Dimension More Than 20 Feet: Plus or minus 3/8 inch.
  5. Maximum Joint Taper: 3/8 inch.
  6. Maximum Joint Taper in 10 Feet: 1/4 inch.
  7. Differential Bowing, as Erected, between Adjacent Members of Same Design: 1/4 inch.

### 3.5 RESTORATION

- A. Mix patching materials and restore GFRC so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces.
- B. Wire brush and clean accessible weld areas on prime-painted components and paint with same type of shop primer.
- C. Remove and replace damaged GFRC units when restoration does not comply with requirements.

### 3.6 CLEANING AND PROTECTION

- A. Perform cleaning procedures, if necessary, according to GFRC manufacturer's written instructions.
- B. Clean soiled GFRC surfaces with detergent and water, using soft fiber brushes and sponges, and rinse with clean water.
- C. Prevent damage to GFRC surfaces and staining of adjacent materials.

**END OF SECTION 03 49 00**

## **SECTION 04 20 00**

### **UNIT MASONRY**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

A. Section Includes:

1. Concrete masonry units.
2. Prefaced concrete masonry units.
3. Thin- brick units.
4. Mortar and grout.
5. Steel reinforcing bars.
6. Masonry-joint reinforcement.
7. Ties and anchors.
8. Embedded flashing.
9. Miscellaneous masonry accessories.

B. Products Installed but not Furnished under This Section:

1. Steel lintels in unit masonry.
2. Steel shelf angles for supporting unit masonry.

C. Related Sections:

1. Section 03 45 00 "Precast Architectural Concrete."
2. Section 03 45 10 "Thin Shell Precast Architectural Concrete."
3. Section 05 12 00 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
4. Section 07 62 00 "Sheet Metal Flashing and Trim" for sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

##### **1.3 DEFINITIONS**

- A. CMU(s): Concrete masonry unit(s).
- B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

##### **1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Flyash: Concrete shall incorporate flyash as a replacement for at least 20% (by weight) of the Portland cement. All design mixes are subject to review and approval by the Commissioner.
2. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
3. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
  1. For reinforcing steel. Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315. Show elevations of reinforced walls.
  2. Dimensioned plans and elevations of masonry partitions and walls containing prefinished glazing or special shapes, such as bullnoses or angles, as indicated on drawings,
    - a. Indicate any special shapes and extents of finishes for prefinished units.
    - b. Include drawings for each unique shape of glazed CMU block to be furnished by manufacturer, showing extents of finishes for prefinished units.
- C. Samples: For each type and color of exposed masonry unit and colored mortar.

## 1.8 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For each type and size of product. For masonry units, include data on material properties and material test reports substantiating compliance with requirements.
- B. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
  - 1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91/C91M for air content.
  - 2. Include test reports, according to ASTM C1019, for grout mixes required to comply with compressive strength requirement.

## 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Sample Panels: Build sample panels to verify selections made under Sample submittals and to demonstrate aesthetic effects.
  - 1. Build sample panels for each type of exposed unit masonry construction in sizes approximately 48 inches long by 36 inches high, unless otherwise indicated.
- C. On-site Facade Mockups: Include as part of on-site facade mockup required by other sections, as indicated on the drawings, work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  - 1. Provide complete thin brick installation in sizes, quantities, and configuration indicated on the drawings.
  - 2. Incorporate full-scale details of the architectural features, approved finished and textures, brackets and attachment components required for installation.
  - 3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
  - 4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

## 1.10 FIELD CONDITIONS

- A. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
- B. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.
- B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Provide unit masonry that develops indicated net-area compressive strengths at 28 days.
  - 1. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

### 2.3 UNIT MASONRY, GENERAL

- A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.
- B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work.
- C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.
  - 1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to the City of New York Department of Buildings and City of New York Fire Department.

### 2.4 CONCRETE MASONRY UNITS

- A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
  - 1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
- B. CMUs: ASTM C90.
  - 1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2800 psi unless otherwise indicated.
  - 2. Density Classification: Normal weight unless otherwise indicated.

- C. Concrete Building Brick: ASTM C55.
  - 1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2800 psi unless otherwise indicated.
- D. Prefaced CMUs: Lightweight, solid concrete units complying with ASTM C90, with manufacturer's standard smooth resinous facing complying with ASTM C744.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
    - a. Echelon/ Trenwyth Architectural Masonry Blocks.
    - b. Spectra Glaze, A Hi-Standard Family of Companies.
    - c. Westbrook Concrete Block Co., Inc.
    - d. Approved equal.
  - 2. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2800 psi unless otherwise indicated.
  - 3. Size: Manufactured with pre-faced surfaces having 1/16-inch-wide returns of facing to create 1/4-inch-wide mortar joints.
  - 4. Colors and Patterns: As selected by Commissioner from manufacturer's full range.

## 2.5 CONCRETE LINTELS

- A. Concrete Lintels, where indicated: ASTM C1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. Provide lintels with net-area compressive strength not less than that of CMUs.

## 2.6 BRICK

- A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
- B. Thin Brick: ASTM C 1088, Type TBX.
  - 1. Initial Rate of Absorption: Tested according to ASTM C 67.
  - 2. Efflorescence: Tested according to ASTM C 67 and is rated "not effloresced."
  - 3. Size (Dimensions As indicated on drawings): Thin brick, modular face., 1/ 2 inch thick.
  - 4. Color and Texture: Manganese Ironspot, Smooth.
- C. Trim Units: Matching thin brick, unless otherwise indicated.
- D. Basis- of- Design, Manufacturers: Subject to compliance with requirements, provide products as supplied by the following, or equal as approved by the Commissioner:
  - 1. Endicott Clay Products Co. (Endicott Thin Brick & Tile, LLP).
- E. Other Manufacturers:
  - 1. Sioux City Brick
  - 2. Glen-Gary
  - 3. Approved equal.

## 2.7 MORTAR AND GROUT MATERIALS

- A. Portland Cement: ASTM C150/C150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
- B. Hydrated Lime: ASTM C207, Type S.
- C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
- D. Colored Cement Products: Packaged blend made from portland cement and hydrated lime and mortar pigments, all complying with specified requirements, and containing no other ingredients.
  - 1. Colored Portland Cement-Lime Mix:
  - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
    - a. Essroc.
    - b. Holcim (US) Inc.
    - c. Lafarge North America Inc.
    - d. Lehigh Hanson; HeidelbergCement Group.
    - e. Approved equal.
- E. Aggregate for Mortar: ASTM C144.
  - 1. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
  - 2. White-Mortar Aggregates: Natural white sand or crushed white stone.
  - 3. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- F. Aggregate for Grout: ASTM C404.
- G. Water: Potable.

## 2.8 REINFORCEMENT

- A. Uncoated-Steel Reinforcing Bars: ASTM A615/A615M or ASTM A996/A996M, Grade 60.
- B. Masonry-Joint Reinforcement, General: ASTM A951/A951M.
  - 1. Interior Walls: Hot-dip galvanized carbon steel.
  - 2. Exterior Walls: Stainless steel.
  - 3. Wire Size for Side Rods: 0.148-inch diameter.
  - 4. Wire Size for Cross Rods: 0.148-inch diameter.
  - 5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
  - 6. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.
- C. Masonry-Joint Reinforcement for Single-Wythe Masonry: Ladder or truss type with single pair of side rods.

## 2.9 TIES AND ANCHORS

- A. General: Ties and anchors shall extend at least 1-1/2 inches into veneer but with at least a 5/8-inch cover on outside face.
- B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:
  - 1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A82/A82M, with ASTM A153/A153M, Class B-2 coating.
  - 2. Steel Sheet, Galvanized after Fabrication: ASTM A1008/A1008M, Commercial Steel, with ASTM A153/A153M, Class B coating.
  - 3. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- C. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches wide.
  - 1. Wire: Fabricate from 3/16-inch- diameter, hot-dip galvanized-steel wire.
- D. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
  - 1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch-diameter, hot-dip galvanized-steel wire.
  - 2. Tie Section: Triangular-shaped wire tie made from 0.25-inch- diameter, hot-dip galvanized-steel wire.
- E. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
  - 1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 0.060-inch-thick steel sheet, galvanized after fabrication
  - 2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- diameter, hot-dip galvanized-steel wire.
- F. Partition Top Anchors: 0.105-inch-thick metal plate with a 3/8-inch-diameter metal rod 6 inches long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.
- G. Rigid Anchors: Fabricate from steel bars 1-1/2 inches wide by 1/4 inch thick by 24 inches long, with ends turned up 2 inches or with cross pins unless otherwise indicated.
  - 1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A153/A153M.

## 2.10 EMBEDDED FLASHING MATERIALS

- A. Metal Flashing: Provide metal flashing complying with SMACNA's "Architectural Sheet Metal Manual" and as follows:
  - 1. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.016 inch thick.
  - 2. Fabricate metal drip edges from stainless steel. Extend at least 3 inches into wall and 1/2 inch out from wall, with outer edge bent down 30 degrees.
  - 3. Fabricate metal sealant stops from stainless steel. Extend at least 3 inches into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch and down into joint 1/4 inch to form a stop for retaining sealant backer rod.

- B. Solder and Sealants for Sheet Metal Flashings: As specified in Section 07 62 00 "Sheet Metal Flashing and Trim."
- C. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

## 2.11 MISCELLANEOUS MASONRY ACCESSORIES

- A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene.
- B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.
- C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).
- D. Weep/ Cavity Vent Products: Use the following unless otherwise indicated:
  - 1. Mesh Weep/ Vent Description: Free-draining mesh; made from polyethylene strands that will not degrade within the wall cavity, full height and width of head joint and depth 1/8 inch less than depth of outer wythe; in color selected from manufacturer's standard.
  - 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
    - a. Advanced Building Products Inc.
    - b. CavClear/Archovations, Inc.
    - c. Heckmann Building Products, Inc.
    - d. Hohmann & Barnard, Inc.
    - e. Keene Building Products.
    - f. Mortar Net Solutions.
    - g. Approved equal.
  - 3. Configuration, unless otherwise indicated and required by project application: Strips, full depth of cavity and 10 inches high, with dovetail shaped notches 7 inches deep that prevent clogging with mortar droppings.

## 2.12 MASONRY CLEANERS

- A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  - 1. Diedrich Technologies, Inc.; a Hohmann & Barnard company.
  - 2. EaCo Chem, Inc.
  - 3. PROSOCO, Inc.
  - 4. Approved equal.

## 2.13 MORTAR AND GROUT MIXES

- A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
  - 1. Do not use calcium chloride in mortar or grout.
  - 2. Use portland cement-lime mortar unless otherwise indicated.
- B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
- C. Mortar for Unit Masonry: Comply with ASTM C270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
  - 1. For masonry below grade or in contact with earth, use Type M.
  - 2. For reinforced masonry, use Type S.
  - 3. For exterior, above-grade, load-bearing and nonload-bearing walls and parapet walls; for interior load-bearing walls; for interior nonload-bearing partitions; and for other applications where another type is not indicated, use Type N.
  - 4. For interior nonload-bearing partitions, Type O may be used instead of Type N.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION, GENERAL

- A. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- B. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
- C. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested according to ASTM C67. Allow units to absorb water so they are damp but not wet at time of laying.

### 3.3 TOLERANCES

- A. Dimensions and Locations of Elements:
  - 1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch.
  - 2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.

3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

**B. Lines and Levels:**

1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet, or 1/2-inch maximum.
2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.

**C. Joints:**

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
2. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
3. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch.

### **3.4 LAYING MASONRY WALLS**

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.
- C. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- D. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.
- E. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

### **3.5 MORTAR BEDDING AND JOINTING**

**A. Lay CMUs as follows:**

1. Bed face shells in mortar and make head joints of depth equal to bed joints.
2. Bed webs in mortar in all courses of piers, columns, and pilasters.
3. Bed webs in mortar in grouted masonry, including starting course on footings.
4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.

- B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
- C. Lay structural clay tile as follows:
  - 1. Lay vertical-cell units with full head joints unless otherwise indicated. Provide bed joints with full mortar coverage on face shells and webs.
  - 2. Lay horizontal-cell units with full bed joints unless otherwise indicated. Keep drainage channels, if any, free of mortar. Form head joints with sufficient mortar so excess will be squeezed out as units are placed in position. Butter both sides of units to be placed, or butter one side of unit already in place and one side of unit to be placed.
  - 3. Maintain joint thicknesses indicated except for minor variations required to maintain bond alignment. If not indicated, lay walls with 1/4- to 3/8-inch-thick joints.
- D. Rake out mortar joints at pre-faced CMUs to a uniform depth of 1/4 inch and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.
- E. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
- F. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

### 3.6 MASONRY-JOINT REINFORCEMENT

- A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.
  - 1. Space reinforcement not more than 16 inches o.c.
  - 2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
  - 3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.
- B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
- C. Provide continuity at wall intersections by using prefabricated T-shaped units.
- D. Provide continuity at corners by using prefabricated L-shaped units.

### 3.7 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

- A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
  - 1. Provide an open space not less than 1/2-inch-wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
  - 2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
  - 3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

### 3.8 FLASHING, WEEP HOLES, AND CAVITY VENTS

- A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install cavity vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.
- B. Install flashing as follows unless otherwise indicated:
  - 1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
  - 2. At lintels and shelf angles, extend flashing a minimum of 6 inches into masonry at each end. At heads and sills, extend flashing 6 inches at ends and turn up not less than 2 inches to form end dams.
  - 3. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall and adhere flexible flashing to top of metal drip edge.
  - 4. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall and adhere flexible flashing to top of metal flashing termination.
- C. Install weep holes in exterior wythes in head joints of first course of masonry immediately above embedded flashing.
  - 1. Use weep/ cavity vent products to form weep holes.
  - 2. Space weep holes 24 inches o.c. unless otherwise indicated.
  - 3. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.

### 3.9 REINFORCED UNIT MASONRY

- A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
  - 1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
  - 2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and that of other loads that may be placed on them during construction.
- B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6.
- C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
  - 1. Comply with requirements in TMS 602/ACI 530.1/ASCE 6 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
  - 2. Limit height of vertical grout pours to not more than 60 inches.

### 3.10 FIELD QUALITY CONTROL

- A. Testing and Inspecting: City of New York will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.
- B. Inspections: Special inspections according to Level B, unless otherwise indicated and required, in TMS 402/ACI 530/ASCE 5.
  - 1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
  - 2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
  - 3. Place grout only after inspectors have verified proportions of site-prepared grout.
- C. Testing Prior to Construction: One set of tests.
- D. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.
- E. Grout Test (Compressive Strength) where required by project application: For each mix provided, according to ASTM C1019.
- F. Prism Test: For each type of construction provided, according to ASTM C 1314 at 7 days and at 28 days.

### 3.11 RESTORING, POINTING, AND CLEANING

- A. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
- B. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
  - 1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
  - 2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes.
  - 3. Protect adjacent surfaces from contact with cleaner.
  - 4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
  - 5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
  - 6. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.

### 3.12 MASONRY WASTE DISPOSAL

- A. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.

**END OF SECTION 04 20 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 05 12 00****STRUCTURAL STEEL****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract City of New York Standard Construction Contract.

**1.2 SUMMARY**

- A. The work covered by this Section shall include all labor, material, equipment, permits, engineering and other services necessary for the fabrication and installation of structural steel and related work, complete, in accordance with the Drawings and as specified herein.

**1.3 RELATED WORK SPECIFIED IN OTHER SECTIONS**

- |                           |                        |
|---------------------------|------------------------|
| A. Submittals             | DDC General Conditions |
| B. Quality Control        | DDC General Conditions |
| C. Cast-in-Place Concrete | Section 03 30 00       |
| D. Steel Joists           | Section 05 12 00       |
| E. Steel Deck             | Section 05 30 00       |
| F. Metal Fabrications     | Section 05 50 00       |
| G. Applied Fireproofing   | Section 07 81 00       |
| H. Painting               | Section 09 91 00       |

**1.4 CODES AND STANDARDS**

- A. Building Code: Structural steel work shall conform to the requirements of the 2014 New York City Building Code, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.
- B. Standards:
1. American Institute of Steel Construction (ANSI/AISC 360) "Specification for Structural Steel Buildings" per Structural General Notes.
  2. American Institute of Steel Construction (AISC 303), "Code of Standard Practice", shall apply except:
    - a. Where a conflict exists between the Code of Standard Practice and the Contract Documents, the Contract Documents shall govern.

- b. In item 3.1.2 delete all references to item 4.4 and replace with the requirements of the project Specification.
  - c. Item 3.6 shall be deleted.
  - d. Item 4.4 shall be deleted and replaced with the requirements of the project Specification.
  - e. The second paragraph of item 7.10.3 shall be revised from "... The Owner's designated representatives for design and construction" to "The Commissioner".
  - f. The last sentence of items 8.5.2 and 8.5.4 shall be deleted.
  - g. Item 8.5.3 shall be deleted.
- 3. American Welding Society, AWS D1.1, "Structural Welding Code".
  - 4. Research Council on Structural Connections (RCSC) - "Specification for Structural Joints Using ASTM A325 or A490 Bolts".
  - 5. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein.
  - 6. The Society for Protective Coatings (formerly Steel Structures Painting Council, "SSPC") "Steel Structures Painting Manual".

C. Definitions:

- 1. The term "Heavy Shapes" in this Specification is defined to include hot rolled steel shapes with flanges exceeding 2 inches (50mm) in thickness and built up cross sections with plates exceeding 2 inches (50mm) in total thickness.
- 2. The term "High Restraint Weld" describes welds in which there is almost no freedom of movement for members joined due to geometry or material thickness.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

- A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with DDC General Conditions Submittals, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested. Reproduction of structural drawings for shop drawings is not permitted.
  - 1. Submittal Schedule
  - 2. Calculations, Shop Drawings and Erection Drawings
  - 3. Submittal Letters
  - 4. Pre-construction Survey

5. Quality Control Program
  6. Product Data
  7. Samples
  8. Welding Procedures Specification (WPS)
  9. Welder Certifications
  10. Mill Reports
  11. As-built surveys
- B. Detailed submittal requirements: See below for specific requirements for each required submittal.
1. Calculations, Shop Drawings and Erection Drawings (including Field Work drawings): Submit for action required connection calculations, shop drawings and erection drawings for all structural steel indicated on the Contract Documents.
    - a. Material shall not be fabricated or delivered before the shop and erection drawings have been approved or approved as noted by the Commissioner and returned to the Contractor.
    - b. Connection engineering calculations: Calculations are required for all structural steel connection details. Each calculation package shall be sealed and signed by the Contractor's Engineer licensed in the State of New York.
    - c. Structural Steel Shop Drawings: Submitted shop drawings shall include layouts and details for each member showing the steel type and grade, size, connections, cuts, copes, holes, bolts, welds, surface treatments (cleaning, shop paint, etc.) and provisions for the connection of other work. Steel type, grade and size for all attached elements shall also be shown.
    - d. Shop and erection drawings shall contain complete dimensional and geometric information, based on established dimensions shown on Contract Documents, and shall not be scaled from Contract Documents. The shop drawings shall clearly distinguish between shop and field welds and bolts, identify pretensioned high strength bolts and identify surface preparation requirements at slip critical connections.
    - e. Welds: All welds shall be indicated by standard welding symbols in the "Standard Code for Arc and Gas Welding in Building Construction" or as accepted by the Commissioner. Shop and erection drawings shall show the size, length, and type of each weld, including the electrode type to be used.
    - f. Bolts: Details for bolt assemblies shall indicate bolt size, length, type and the presence, type and location of washers where required as part of the assembly; distinguish between N and X bolts, distinguish between slip-critical and bearing bolts; specify approved slip critical coatings; and distinguish between shop and field bolts. Also, indicate bolt orientation where required by the Contract Documents.
    - g. Erection Drawings: The erection drawings shall include plans showing exact locations of base and bearing plates, and/or anchor rods and other embedded items.

All field connections not specifically shown on shop drawings shall be shown on erection drawings, including field bolt size, type, number, location and any special installation requirements, and field weld size, type, length and location.

2. **Preconstruction Survey:** Submit for record. Where interface with existing construction occurs, before related shop drawings are prepared survey the existing construction and submit the survey prepared by a professional surveyor employed by the Contractor to the Commissioner. For all steel construction, before steel erection commences, perform and submit to the Commissioner a complete survey for position and alignment at all points where construction by other trades will support steel elements, including but not limited to pockets, embedded plates, anchor rods and base plates. Include plan location positions relative to the building gridlines and elevations of bearing surfaces and tops of bolts relative to building Datum elevation. Immediately notify the Commissioner of elements that are not within tolerance.
3. **Quality Control Program:** Submit for record complete details of the Contractor's quality control program.
4. **Product Data:** Submit for action manufacturers' specifications, test reports and applicable standards for all products listed under Part 2: Products. Standard literature shall be edited to suit job conditions.
5. **Samples:** Submit for record (2) samples each, (2) of shop painted products and (2) of field touch-up painted products. Samples shall be steel material.
6. **Welding Procedures Specification (WPS):** Submit for record written welding procedures for all AWS D1.1 prequalified joints, and qualification procedures for all joints not prequalified by Section 3 of AWS D1.1. Submit written welding procedures developed by Contractor's welding consultant for Heavy Shapes and High Restraint Welds described in this Specification. Use the forms in AWS D1.1, Annex M. Submit all welding and qualification procedures to Testing Agency for approval before submitting to the Commissioner.
7. **Mill Reports:** Submit for record copies of all mill reports to the Commissioner and to the Testing Agency, covering the chemical and physical properties of all structural steel and accessories (as defined in this Specification) for the project
  - a. Such certificates shall be obtained from the mills producing the steel and shall certify in a cover letter submitted with the certificates, that the steel meets the minimum requirements as to physical properties, inspection, marking and tests for structural steel as defined by the current edition of the relevant ASTM Standard Specifications. Any steel that does not meet the ASTM requirements must be clearly identified in a cover letter submitted with the certificates.
  - b. Prior to commencing steel erection, deliver certificates to The Commissioner in number and form as may be required by the New York City Department of Buildings.
8. **As-Built Surveys:** Execute and submit for record a comprehensive survey of steel structure at each level adequate to assess if the structure has been built within the tolerances specified in the Contract Documents. Each survey, performed by a professional surveyor registered in the State of New York and employed by the Contractor, shall be submitted to the Contractor's Engineer licensed in the State of New York and the Commissioner for their approval before proceeding to the next stage of erection. If deviations from the tolerances are discovered, present corrective measures to the Commissioner within 48 hours of

completion of that stage of erection. Upon completion of steel erection, submit the complete package of steel surveys for record to the Commissioner.

**C. Submittal Process**

1. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
2. Connection design calculations: Calculations are required for all structural steel connection details. Calculations shall be prepared by Contractor's structural engineer licensed in the State of New York. Submit connection engineering calculations and receive approval from Commissioner prior to submitting shop drawings related to those calculations. The shop drawings shall incorporate all comments provided on the calculations.
3. Shop and erection drawings: Submit in complete packages so that individual parts and the assembled unit may be reviewed together. This Specification Section and the applicable drawings used in the development of the shop and erection drawings shall be referenced on each shop and erection drawing to facilitate checking. Unless the piece marks are self-indexing, furnish index sheets with the shop drawings, relating piece marks for all beam, girder and column details to the sheet numbers on which they are located.

**D. Submittal Review**

1. The review of connection engineering and the review and approval of shop and erection drawings and other submittals by the Commissioner shall be for general conformance with the design intent of the work and with the information given in the Contract Documents only and will not in any way relieve the Contractor from:
  - a. Responsibility for the adequacy of the connections engineered by the Contractor's Engineer licensed in the State of New York.
  - b. Responsibility for all required detailing.
  - c. Responsibility for the proper fitting of construction work in strict conformance with the contract requirements.
  - d. The necessity of furnishing material and workmanship required by contract Drawings and Specifications which may not be indicated on the shop and erection drawings.
  - e. Conforming to the Contract Documents.
  - f. Coordination with other trades.
  - g. Control or charge of construction means, methods, techniques, sequences or procedures, for safety precautions and programs in connection with the work.

**1.7 TEMPORARY SUPPORT OF STRUCTURAL STEEL FRAME**

- A. The structure as shown on the Contract Documents is designed to withstand the design loads only when all structural elements are installed and fully connected. The contractor shall be responsible for the analysis of all components and assemblies for stresses and displacements that may be imposed by fabrication, shipping, handling, erection, temporary conditions, construction loads, etc. The analysis of such shall be performed by the Contractor's Engineer licensed in the State of New York.

## 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Unload all structural steel promptly upon arrival and store in an area designated and approved by The Commissioner at the site of the work. The Contractor shall be responsible for any charges from failure to unload material promptly.
- B. Storage: Store structural steel to drain properly. Provide weep holes and clean out as required to keep steel free from water. Provide adequate protection and shoring to prevent distortion and other damage. Store structural steel on timber; do not lay on mud, directly on ground or cinders, or otherwise handle in a manner that damages finishes. Stored sections shall be readily accessible for inspection.
- C. Store fasteners in a protected place.
- D. Welding materials to be in moisture resistant, undamaged package. Maintain packages effectively sealed until electrode is required for use. Storage and handling shall be per AWS D1.1.

## 1.9 CONNECTION ENGINEERING AND DETAILING CONFERENCE

- A. At least 20 working days prior to starting connection engineering and detailing, the Fabricator shall hold a meeting to verify all connection engineering assumptions and procedures and shop drawing preparation and submittal procedures.
- B. Prepare an agenda and require responsible representatives of every party who is concerned with the connection engineering and detailing to attend this meeting, including but not limited to:
  - 1. Contractor
  - 2. Fabricator
  - 3. Detailer
  - 4. Contractor's Connection Engineer licensed in the State of New York
  - 5. Commissioner
  - 6. Erector
- C. The Fabricator shall prepare an agenda prior to the meeting, and shall distribute meeting minutes to all parties within 5 working days of the meeting.

## 1.10 ENGINEERING SERVICES FOR CONNECTIONS

- A. All engineering services shall be conducted by Contractor's engineer licensed in the state of New York, and submitted for review and acceptance by Commissioner.
- B. All connections and details shown on shop and erection drawings shall be prepared under the supervision of the Contractor's Engineer licensed in the State of New York, in accordance with AISC "Load and Resistance Factor Design Specification for Structural Steel Buildings."
- C. Provide and engineer any stiffener plates, doubler plates, reinforcing plates, etc. and their connections that may be required to develop and/or transfer the forces and/or connection design criteria called for in the Contract Documents.

- D. Engineer connections to withstand the combined effects of shears, axial forces, moments and torques and as required by 2014 NYCBC and the Contract Documents.
- E. All forces shown on the Drawings are to be assumed reversible unless noted otherwise and must be checked for both directions. If no transfer/pass-through forces are shown on the Contract Documents, the most critical combinations of member forces and directions shall be assumed for the connection design.
- F. Use types of shop and field connections shown on Contract Documents or, in absence of such indication, propose appropriate type for Commissioner review.
- G. Welding of High Restraint Welds: Use double bevels in lieu of single bevels where practical. Detail joints to allow for weld shrinkage. In cases of plates in more than one plane, show welding operation sequence on the drawings. In general, start welding at the most restrained part of the weldment and proceed to the least restrained.
- H. All welded connection must utilize pre-qualified joints or joints that have been qualified by AWS D1.1, section 2.
- I. Comply with all connection notes on Drawings in conjunction with these Specifications.
- J. The connection design calculation submittals shall meet the following criteria:
  - 1. Number each calculation in a logical and orderly system. Once submitted for review, calculations shall not be renumbered. Resubmitted calculations shall be indicated by using the same number with an "R" suffix. All changes must be clouded.
  - 2. Provide sketches for results of each calculation, with all pertinent dimensions relating to the calculations (including pitch, gage, edge distance, unbraced lengths, Whitmore lengths, etc.) clearly shown. Geometry must be shown accurately and to scale. Provide enough sketches to clearly document the full range of geometric conditions applicable to each connection design calculation proposed.
  - 3. For repetitive connections provide a spreadsheet or computer program summary table for each specific location, and a standard calculation which shows how the spreadsheet or program calculation applies.
  - 4. Provide drawings showing the overall locations of the connections that are keyed/referenced to each connection calculation.
  - 5. Calculations shall be typed, or performed by spreadsheet, or by computer program, or by other method approved by the Commissioner. All spreadsheet calculations shall show the input and results for every calculation step and include appropriate text and sketches explaining all calculation assumptions.
  - 6. Provide calculation checks for all forces shown on the Drawings. All AISC code requirements apply. Provide calculations for each check. "OK by inspection" is not permitted.

#### 1.11 STRUCTURAL STEEL PRE-ERECTION CONFERENCE

- A. At least twenty (20) working days prior to the commencing of steel erection, hold a meeting to review the detailed requirements of the steel erection.

- B. Prepare an agenda and require responsible representatives of every party who is concerned with the steel erection to attend the conference, including but not limited to the following:
  - 1. Contractor
  - 2. Steel Erector / Steel Fabricator
  - 3. Erector's Surveyor
  - 4. Roof Deck trade
  - 5. All Testing and Inspection Agencies
  - 6. Commissioner
  - 7. Precast or Cladding trade as appropriate.
- C. Minutes of the meeting shall be recorded, typed and distributed by the Contractor to all parties listed above within 5 working days of the meeting.
- D. The minutes shall include a detailed outline of the erection procedure including a schedule of milestone dates for surveys and sign-offs on erection stages which represents an agreement reached by all parties involved. It shall also include the surveying program and submission schedule for approval.
- E. Notwithstanding any provision of the Specification, the Commissioner shall not be responsible for and not have charge over any safety programs or precautions at the site of the Project.

#### 1.12 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Contractor Qualifications: The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

#### 1.13 TESTING AGENCY

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform Special Inspections.
- B. Refer to Section 01 40 00 "Quality Requirements", Article 1.9, of the DDC General Conditions, for additional information regarding Special Inspections.

#### 1.14 QUALITY ASSURANCE BY TESTING AGENCY

- A. Quality assurance is testing and inspection to assist the Commissioner in evaluating the Contractor's performance and quality control in the fabrication shop and field. It is not a substitute for the testing and inspection which is required as part of the Contractor's quality control program (see the following section on quality control).
- B. Coordination with Testing Agency: The Contractor shall have sole responsibility for coordinating their work with Testing Agency to assure that all test and inspection procedures required by the

Contract Documents and NYCDOB are provided. Cooperate fully with the Testing agency in the performance of their work and provide the following:

1. Information as to time and place of starting shop fabrication and a field construction and erection schedule, one week prior to the beginning of the work.
2. Site File: At least one copy of each approved shop drawing shall be kept available in the contractor's field office and the drawings not bearing evidence of approval and release for construction by the Commissioner shall not be kept on the job. Provide drawings for the work to be performed in the shop or field one week prior to the start of work.
3. Representative sample pieces requested by the inspection agency for testing, if necessary.
4. Full and ample means of assistance for testing and inspection of material.
5. Proper facilities, including scaffolding, temporary work platforms, safety equipment etc., for inspection of the work in shop and field.

C. Duties of the Testing Agency:

1. Reports: The Testing Agency shall prepare daily reports of the structural steel work including progress and description/area of work, tests made and results. Reports of inspection of welding shall include deficiencies noted and corrections made, and other items pertinent to acceptance or rejection of the work. The reports shall state whether specimens comply with or deviate from contract requirements. The daily reports shall be collected and delivered to the Commissioner weekly.
2. Rejection: Testing Agency has the right to reject any material, at any time, when it is determined that the material or workmanship does not conform to the Contract Documents. The Testing Agency shall immediately notify Commissioner and Contractor of deficiencies.
3. Structural steel work and general testing requirements: The Testing Agency shall perform the following shop and field inspections in addition to any other inspections enumerated above or specified on the Contract Documents:
  - a. Shop inspection of steel shall include alignment and straightness of members, camber, preparation for connections, dimensional checks, testing of shop bolts, witnessing of welding procedures, testing of cuts, weld access holes and copes of Heavy Shapes as defined in this Specification, examination and testing of completed welds, headed studs and deformed bar anchors, cutting of Heavy Shapes, finishing of column ends, cleaning, painting and storage of material. All shop fabrication shall be inspected in the shop. Camber shall be verified in a minimum of 10% of all members requiring camber. If, in the opinion of the Commissioner and Testing Agency this testing discloses a large ratio (10% or more) of unacceptable cambers, the required percentage of tested cambers may be increased by the Commissioner to 100% at no expense to The City of New York.
  - b. Field inspection of steel shall include connections, proper tensioning of bolts, levelness, plumbness and alignment of the frame, conformance to AWS welding methods, examination of surface before welding, examination and testing of completed welds, headed studs and deformed bar anchors and field painting, including touch-up.
  - c. Check the following in the shop and in the field:

- 1) Welding certificates and procedures.
  - 2) Stud welding setup and operators
  - 3) Bolting procedure and crew
- d. Where testing is required for less than 100% of locations, select test locations at random and throughout the project.
- e. Review mill certifications for compliance with the Contract Documents.
4. High Strength Bolting: The Testing Agency inspector shall inspect high strength bolted construction in accordance with RCSC "Specification for Structural Joints using ASTM A 325 or A 490 Bolts," including but not limited to:
  - a. Surface preparation and bolt type conforms to plans and Specifications prior to start of bolting operations.
  - b. Proper bolt storage and handling procedures per codes and standards referenced by this Specification are being followed.
  - c. Visually inspect all bolted connections.
  - d. For all bolted connections that are indicated as snug tight, connections are properly compacted and brought to the snug tight condition progressing outward from the most rigid part.
  - e. For all bolted connections that are indicated as pretensioned or slip critical, pre-installation verification testing is performed by the inspector in cooperation with the contractor in accordance with RCSC section 9.2 and section 7.
  - f. For all bolted connections that are indicated as pretensioned or slip critical, through routine observation, as defined in RCSC 9.2.1, 9.2.3 or 9.2.4, that the pretensioning methods of RCSC 8.2.1, 8.2.3, or 8.2.4, as appropriate, are performed.
    - 1) "Routine observation" is defined as observation of 10 bolts for every 100 bolts with a minimum of 2 bolts per connection.
  - g. Retest bolted connections that fail initial inspection after correction by the Fabricator or Erector.
5. Welding:
  - a. Review of submittals: Welding procedures including prequalification, qualifications test and, for Heavy Shapes and High Restraint Welds, the welding procedure prepared by the Contractor.
  - b. Complete Joint Penetration welds: Test all complete joint penetration welds for soundness by means of either radiographic or ultrasonic testing in accordance with AWS D1.1 and ASTM E164 procedures. All flaws in plate or flange material revealed during such tests shall be restored and retested by the Contractor at the Contractor's expense.

- c. Partial Joint Penetration welds: Test all partial joint penetration welds for soundness by means of visual and magnetic particle inspection, unless other methods are specified in the Contract Documents. All flaws in plate or flange material revealed during such tests shall be restored and retested by the Contractor at the Contractor's expense.
  - d. Testing of welds at Heavy Shapes and High Restraint Welds shall be performed not less than 48 hours after the weld has been completed.
  - e. Fillet welds: Visually inspect all fillet welds. In addition test ten percent (10%) of all fillet welds using a non-destructive method, such as dye penetrant or magnetic particle. Select test locations randomly throughout the structure, but test at least one weld in each location with 6 or more welds per connection. If, in the opinion of the Commissioner and Testing Agency this testing discloses a large ratio (10% or more) of unacceptable welds, the required percentage of tested welds may be increased by the Commissioner to 100%, all at the Contractor's expense.
  - f. Inspection and Testing by the Testing Agency of High Restraint Welds and where Heavy Shapes are to be joined by partial or complete joint penetration welds in tension:
    - 1) Joint Preparation: Monitor fit up and joint preparation (bevel angle, etc.) for conformance to the submitted welding procedures including preheat and interpass temperature. Monitor base metal temperature during welding operations.
    - 2) Test Complete Joint Penetration Welds in accordance to the requirements of this Specification section, ultrasonically in accordance with AWS D1.1 procedures. On T or corner joints, pay careful attention to the heat affected zone and base metal where the weld shrinkage stresses are in the through thickness direction.
    - 3) Test Partial Joint Penetration Butt Joints in accordance with this Specification section by the magnetic particle method. At T or corner joints, in addition to the magnetic particle testing, ultrasonically scan the heat affected zone and adjacent base metal from face "C" per AWS D1.1 Table 6.7 and Annex Q7 to detect lamellar tears and shall be done with a compression wave. The Testing Agency shall submit a testing procedure that includes evaluation (acceptance criterion) procedures to the Commissioner for review.
  - g. At Heavy Shapes and High Restraint Welds: provide pre-production sample testing of heat treatment, observe fabrication, welding and heat treatment of the samples for conformance with submitted welding procedures. Establish locations of testing coupons following AWS procedures. Test coupons following AWS procedures to verify satisfactory results using the welding procedure and heat treatment.
6. Headed Studs and Deformed Bar Anchors: Visually inspect all headed studs and deformed bar anchors for complete fusion and full 360-degree weld flash (or fillet).
- a. Check all studs with incomplete fusion, and at random five studs at each of six beams per floor, by bending to an angle of 15 degrees from its original axis (away from any missing flash). If more than twenty percent of studs fail on one member, check all studs on member. In addition, for each member with any defective studs, test an additional member.

- b. Contractor to replace any studs that crack or break. Contractor to only straighten studs that would foul other work or have less than 1 inch (25mm) cover in bent position.
- 7. Cleaning & Painting:
  - a. Examine shop painting to verify conformance with this Specification.
  - b. Examine loading and unloading of steel to visually observe that damage does not occur during shipping and handling.
- 8. Remedial Work: The Testing Agency shall indicate to the Contractor where remedial work must be performed and will maintain a current list of work not in compliance with the Contract Documents. This list shall be submitted to the Commissioner on a weekly basis.
- 9. Certification: When all work has been approved by the Testing Agency, the Testing Agency shall certify in a letter to the Commissioner that the installation is in accordance with the design and Specification requirements (including 2014 New York City Building Code).

#### 1.15 QUALITY CONTROL BY CONTRACTOR

- A. Provide a program of quality control to ensure that the minimum standards specified herein are attained.
- B. The Commissioner's general review during construction and activities of the Testing Agency are undertaken to inform the Commissioner of performance by the Contractor but shall in no way replace or augment the Contractor's quality control program or relieve the Contractor of total responsibility for quality control.
- C. Immediately notify the Commissioner of any deficiencies in the work which are departures from the Contract Documents which may occur during construction. Propose corrective actions and their recommendations in writing and submit them for review by the Commissioner. After proposed corrective action is accepted by the Commissioner, correct the deficiency at no expense to The City of New York.

#### 1.16 OBSERVATIONS BY COMMISSIONER

- A. Observations: The Commissioner will observe the construction for general compliance with the provisions of the Contract Documents during various phases of construction.

#### 1.17 PERMITS AND WARRANTY

- A. Permits: Apply for, procure, renew, maintain, and pay for all permits required, necessary to execute work under this Contract. Furnish copies of all permits to the Commissioner.
- B. Warranty: Comply with General Conditions, agreeing to restore or replace specified materials or Work that has failed within the warranty period.

#### 1.18 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.19 LEED BUILDING SUBMITTALS

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

### PART 2 - PRODUCTS

#### 2.1 STRUCTURAL STEEL

- A. Structural steel shall conform to the requirements listed on the Structural Drawing General Notes.

#### 2.2 SHOP COATINGS

- A. Standard Primer: Rust inhibitive, universal phenolic alkyd metal primer 2-4mls. Color to be determined by Commissioner. Primer shall be compatible with, and from the same manufacturer as, top coats specified in Division 9 specification.
- B. Zinc Rich Primer: SSPC-Paint 20, Type I or Type II, Zinc rich primer utilizing either an organic or inorganic binder with a minimum zinc content of 80 percent by weight in the dry film. The primer shall provide a surface meeting AISC Slip Critical Class B (slip coefficient =0.50 min) requirements. Color to be determined by Commissioner. Primer shall be compatible with, and from the same manufacturer as, top coats specified in Division 9 specification.
- C. Hot Dip Galvanizing: ASTM A123, weight of coating shall average not less than 2.3 oz per square foot, with no individual thickness less than 2.0 oz per square foot.
- D. Galvanizing Repair Paint: ZRC Cold Galvanizing Compound, or other coating complying with SSPC-Paint 20.

## 2.3 ACCESSORIES

- A. High Strength Bolts: Conform to the provisions of the Research Council on Structural Connections (RCSC) "Specification for Structural Joints Using High-Strength Bolts" except that nuts shall be ASTM A563 Grades DH or DH3 (hardened) for both A325 and A490 bolts. Twist off type bolts (Tension Control bolts) shall additionally conform to ASTM F1852 or ASTM F2280.
- B. All bolts shall be new, and not re-used.
- C. Where A325 galvanized bolts nuts and washers are required, they shall be in accordance with ASTM F2329 and ASTM A153, Class C. Where A588 steel is used, bolts, nuts and washers shall be Type 3.
- D. Direct Tension Indicators: Meet requirements of ASTM F959.
- E. Anchor Rods: Per structural General Notes.
- F. Washers:
  - 1. Round washers shall conform to American Standard B 27.2 type b
  - 2. Washers in contact with high-strength bolt heads and nuts shall be hardened in accordance with ASTM Standard F436.
  - 3. Beveled washers shall be square, smooth and sloped so that contact surfaces of the bolt head and nut are parallel.
  - 4. The diameter of the hole of square beveled washers shall be 1/16 inch (1.5mm) greater than the bolt size for bolts smaller than one inch (25mm), and shall be 1/8 inch (3.0mm) greater than the bolt size for bolts larger than one inch (25mm).
  - 5. Comply with requirements of RCSC for all washers including thickness, size and hardness, depending on connection details.
- G. Welding Electrodes: Electrodes shall be low hydrogen and shall be selected from Table 3.2 of AWS D1.1.
  - 1. Shielded Metal-Arc Welding: Welding electrodes for manual shielded metal-arc welding shall conform to the specification for Mild Steel Covered Arc-Welding Electrodes, AWS A5.1 E70 or 80, or the specification for Low-Alloy Steel Covered Arc-Welding Electrode, AWS A5.5.
  - 2. Submerged-Arc Welding: Bare electrodes and granular flux used in submerged-arc welding shall conform to F70 or F80 AWS flux classifications of the specification for Mild Steel Electrodes and Fluxes for submerged-arc Welding, AWS A5.17.
- H. Headed Studs (shear connectors) shall be per Structural General Notes.
- I. Deformed Bar Anchors shall be as specified in Structural General Notes.
- J. Steel Castings shall conform to ASTM A27, Grade 65-35, medium strength carbon steel.
- K. Grout: Refer to General Notes.

- L. Post-installed Anchors shall be per Structural General Notes.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 PREPARATION

- A. Examine all work prepared to receive work of this Section and report any defects affecting installation to Commissioner. Commencement of work will be construed as complete acceptance of preparatory work. The Contractor alone shall be responsible for checking the dimensions and coordination of the structural steel work with other portions of the work.
- B. Anchor Rods: At least 20 working days prior to the start of the structural steel erection, ascertain by accurate survey the existing location, alignment, and elevation of the anchor rods embedded in the concrete. Immediately notify the Commissioner of any discrepancies observed between the Contract Documents and the as-built conditions. Steel erection shall not start until corrective measures, if required, have been performed.

#### 3.3 FABRICATION

- A. Fabricate and assemble structural steel in the shop to the greatest extent possible.
- B. Tolerances:
  - 1. Conform to the tolerances of the AISC "Code of Standard Practice," compensate for the difference between the temperature at time of fabrication and the mean temperature in service.
  - 2. Elevator shafts used for temporary hoists shall conform to the detailed requirements of the hoist manufacturer.
- C. Holes: Holes shall be provided in members to permit connections to the work of other trades or contracts, and for passage through the member of work of other trades. All holes shall be accurately drilled or punched at right angles to the surface of the metal in accordance with AISC Specifications. Holes shall not be made or enlarged by burning. Burning or drifting unfair holes will not be permitted. Holes that must be enlarged shall be reamed. Drift pins will be allowed only to bring together the several parts for connection. Holes in base plates shall be drilled. Holes shall be clean-cut without torn or ragged edges. Outside burrs resulting from drilling operations shall be removed with a suitable tool.
- D. Camber: Provide camber as indicated on the Contract Documents. Where no camber is indicated, provide natural camber up.
- E. Cutting: Manual gas-cutting in the shop may be used only if automatic or semi-automatic methods are not possible. If manual shop cutting is required, it shall be done only with a mechanically guided torch, except that an unguided torch may be used where the cut is more than 1/2 inch (12mm) from the finished dimension and final removal is completed by means such as chipping or grinding to produce a gouge-free surface of quality equal to that of the base metal. At restrained joints and as indicated elsewhere, weld access holes shall be ground smooth.

- F. Cutting of Heavy Shapes: Where Heavy Shapes are to be joined by partial or complete joint penetration welds in tension, preheating shall be required for all thermal cutting operations. Preheat shall be sufficient to prevent cracking but in no case less than 150 degrees F (65°C). Weld access holes and copes shall be ground to a smooth radius after cutting and tested for cracks by the magnetic particle method. All cut edges shall be free of sharp notches and gouges.
- G. Anchor Rods: Rigid steel templates and anchor rods shall be furnished, labeled and shipped in sets indicating sizes and locations of columns, together with instructions for setting of anchor rods. Plate washers per Typical Details shall be provided.
- H. Bolting: Bolts shall be driven accurately into the holes without damaging the threads. Bolt heads shall be protected from damage during driving. Bolt heads and nuts shall rest squarely against the metal. Where bolts are to be used on beveled surfaces having slopes greater than 1 in 20 with a plane normal to the bolt axis, beveled washers shall be provided to give full bearing under the head or nut.
- I. Bolts indicated as "finger tight" on the Contract Documents shall be prevented from backing off by using lock nuts, thread compound or deformed threads.
- J. Installation of High Strength Bolts:
  - 1. Except where "snug tight" installation is specifically permitted on design Drawings, all high strength bolts shall be installed with full pretensioning using Turn-of-Nut Pretensioning, Twist-Off Type Tension Control Bolt Pretensioning or Direct-Tension-Indicator (DTI) Pretensioning in accordance with the "Specification for Structural Joints Using ASTM A325 or A490 Bolts".
  - 2. Comply with special washer requirements of the RCSC, such as those related to slotted and oversize holes, and tapered flanges. DTI "washers" shall not be substituted for such required washers.
  - 3. All high strength bolt assemblies (including Tension Control bolts and DTI's) used in pretensioned connections shall be verified in accordance with the Pre-Installation Verification section of the RCSC.
  - 4. Clean and re-lubricate bolts and nuts that become dry or rusty before use, except Tension Control bolts must be re-lubricated by manufacturer.
- K. Welding of Structural Steel:
  - 1. Pre-Weld Inspection: The surface to be welded and the filler material to be used shall be subject to inspection before welding is performed.
  - 2. Welds indicated on the Contract Documents or the approved shop or erection drawings shall be created by electric arc welding processes that comply in all respects with the codes and specifications herein noted covering the design, fabrication, and inspection of welded structures and the qualifications of welders and supervisors. Control the heat input, weld length, weld sequence and cooling process to prevent distortion of the completed assembly.
  - 3. Each welder's work shall be traceable.
  - 4. Special Requirements: For High Restraint welds and welds at Heavy Shapes, follow approved welding procedures for weld process, sequence, pre-heating and cooling. Use

stress relieving techniques where shown in the approved procedure developed by the Contractor's Welding Consultant.

- a. Special Procedures: Prior to the start of production welding, demonstrate to the Testing Agency that preheat can be maintained without relying on heat from the arc. For field welding, provide a shelter to protect each joint from inclement weather (rain, snow, etc.), from start until completion of the joint.
  - b. Preheat and Postheat: Preheat shall be sufficient to prevent cracking, but in no case less than required by AWS D1.1. Prepare a written welding sequence and distortion control plan to be included in the welding procedures submittal. Assembly sequence of adjoining parts shall balance applied induced heat from preheat and welding processes to minimize distortion and shrinkage. The preheat shall be maintained throughout the thickness of the material for a distance equal to twice the material thickness on both sides of the joint at a minimum. Where different thicknesses of steel are being joined, the greater thickness shall govern. Preheat shall be measured on the face opposite the side of the heat application. Preheat shall be applied uniformly in a manner that does not harm the surface of the material nor cause surface temperatures to exceed 1100 degrees F (600oC). Should stress relief heat treatment be required, submit a written procedure.
  - c. Prior to heat treatment on a production weld, prepare and treat a test sample per the Contractor's written procedure for tests in accordance with ASTM requirements.
5. Deficient Welds: Welds found deficient in dimensions but not in quality may be enlarged by additional welding. Any weld found deficient in quality shall be removed by grinding or melting and the weld shall be remade.

L. Bearing:

1. Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.
2. Finish bearing areas of base plates per AISC M2.8.

M. Stiffeners: Fitted stiffeners shall be ground to fit closely against flanges.

N. Cleaning and Preparation of Steel Surfaces:

1. Clean all steel work in accordance with the Society for Protective Coatings (SSPC) Method specified herein that corresponds to its location and exposure. Steel work to be painted shall be painted within the same day that it is cleaned.
  - a. Interior, Not Exposed to View (above suspended ceilings, under sprayed-on fireproofing, steel to be encased in concrete): SSPC-SP-2, Hand Tool Cleaning.
  - b. Interior, Exposed in the Finished Building: SSPC-SP-6, Commercial Blast Cleaning, unless noted otherwise on the Drawings.
  - c. Exterior (exposed to weather or in unconditioned space): SSPC-SP-6, Commercial Blast Cleaning, unless noted otherwise on the Drawings.
  - d. Members to be Hot Dipped Galvanized: SSPC-SP3, Power Tool Cleaning, before galvanizing.

O. Shop Coating:

1. Where painting is specified, paint all steel work in accordance with the Society for Protective Coatings (SSPC) Method specified herein that corresponds to its location and exposure and in accordance with manufacturer's written instructions. Paint steel work the same day that it is cleaned.
  - a. Interior, Not Exposed to View (above suspended ceilings, under sprayed-on fireproofing, steel to be encased in concrete): No Paint.
  - b. Interior, Exposed in the Finished Building: SSPC – Paint 25
  - c. Exterior (exposed to weather or in unconditioned space): SSPC – Paint 20
2. Protect finished bearing surfaces with a rust-inhibiting coating which is to be removed immediately prior to erection.
3. Do not paint:
  - a. Surfaces within six (6) inches (150mm) of field welds
  - b. Surfaces to be encased in concrete or to receive cementitious fireproofing
  - c. Contact surfaces of high-strength bolted Slip Critical connections (unless surface prep and paint has been specifically prequalified by the contractor or approved for use in this location by the Commissioner)
  - d. Surfaces required for testing and preheat, until all testing and preheat has been performed
  - e. Finished bearing surfaces (use removable rust-inhibiting coating)
  - f. Top flange of the beam where steel deck or headed studs are to be attached
4. Paint shall be applied thoroughly and evenly to dry surfaces only when surface temperatures are above dew-point, in strict accordance with manufacturer's instructions.
5. Surfaces of exterior members which are inaccessible after assembly or erection shall receive their second coat of the approved paint, in a different shade, in the shop.
6. Hot-dip galvanize the following steel members:
  - a. All angles, steel plates and shims supporting exterior masonry or exposed to the weather, including shelf, arch and relieving angles
  - b. All connections between the above angles and steel plates and the supporting structural member, including clip angles and hardware
  - c. Any other steel members indicated as "Galvanized" on the Contract Documents.
  - d. All miscellaneous metal, angles, clips, etc. on exterior masonry walls.

### 3.4 ERECTION

- A. Tolerances: Erect all work plumb, square and true to lines and levels in strict accordance with the structural requirements of the building within tolerances of the AISC Code of Standard Practice, unless otherwise indicated on the Contract Documents. Compensate for the difference between the temperature at time of erection and the mean temperature in service.
- B. Bracing: Brace the frame during erection in accordance with the Contractor's erection procedure.
- C. Errors: Immediately notify the Commissioner of any errors in shop fabrication, deformations resulting from handling and transportation, and improper erection that affects the assembly and fitting of parts. Prepare details for corrective work and obtain approval of the method of correction. Approved corrections shall be made expeditiously at the sole expense of the Contractor.
- D. Column Base Plates: Support and align on steel shims or setting bolts. After the supported members have been plumbed and properly positioned, tighten anchor rod nuts in preparation for grouting. Cut off wedges and shims flush with edges of plates and leave in place. The use of leveling plates will not be permitted.
- E. Grouting: Refer to General Notes. Grout base plates immediately after the first tier of columns are plumbed. Do not proceed with steel erection above the first tier until base plates are grouted.
- F. Bolting and Welding of Structural Steel: See Section on "Fabrication".
- G. Bearing Surface: Clean bearing surfaces and surfaces that will be in permanent contact before the members are assembled.
- H. Splices: Splices will be permitted only where indicated on the Contract Drawings or the reviewed shop drawings. Fasten splices of compression members only after surfaces are cleaned and abutting surfaces have been brought completely into contact. Fill any remaining gaps with steel shims driven into place and cut flush. Tack weld shims to each other and to members. Use runoff tabs at bevel weld splices. Cut off runoff tabs and ground smooth after weld completion.
- I. Driftpins: Driftpins may be used only to bring together the several parts, and shall not be used in such a manner as to distort or damage the metal. Correct poor matching of holes by drilling to the next larger size and using a larger size bolt. Plug welding and redrilling will not be permitted, unless a specific instance arises and is approved by the Commissioner.
- J. Erection bolts: On exposed welded construction, remove erection bolts, fill holes with plug welds and grind smooth at exposed surfaces. On non-exposed welded construction, remove erection bolts.
- K. Hammering: Hammering which may damage or distort the members will not be permitted.
- L. Do not use cutting torches in the field without the specific approval of the Commissioner for each application. Where cutting torch use is permitted, all the requirements of the Section on "Fabrication" shall apply.
- M. Additional Material and Labor: If the Contractor furnishes additional material and labor for the purpose of erection or if the erection method requires that material be added to certain members, the required modifications shall be at the sole expense of the Contractor.

- N. Alignment: Following erection, accurately align, level, and adjust all members prior to final fastening. Conform to AISC standard tolerances unless otherwise noted in the Contract Documents.
- O. Touch-Up and Field Applied Paint: After erection, clean all damaged areas in the shop coat, exposed surfaces of bolts, bolt heads, nuts and washers and all field welds and unpainted areas adjacent to field welds according to manufacturers recommendations and paint with the same paint used for the shop coat. Match the touch up and field applied paint color to the as-built paint color. After touch up, at exterior (exposed to the weather or in unconditioned space) steel members apply a full coat of the specified paint in a different shade than the shop applied coat.
- P. After erection, clean all damaged galvanized areas, welds and areas adjacent to welds and paint with the specified galvanizing repair paint.
- Q. Clean all steel members of mud and debris and construction residue prior to erection.
- R. Headed Studs and Deformed Bar Anchors:
  - 1. End weld headed studs and deformed bar anchors with an automatic process in accordance with section 7 of AWS D1.1.
  - 2. Areas to which studs are to be attached must be free of foreign material, such as rust, oil, grease, paint etc. When mill scale is sufficiently thick to cause difficulty in obtaining proper welds, remove by grinding or sand blasting.
  - 3. Remove ceramic ferrules from studs and work after welding.

**END OF SECTION 05 12 00**

**SECTION 05 30 00****STEEL DECK****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract City of New York Standard Construction Contract.

**1.2 SUMMARY**

- A. The work covered by this Section shall include all labor, material, equipment, permits, engineering and other services necessary for the installation of composite and non-composite structural steel floor deck systems, steel roof deck systems and related work with all attachments, flashings, metal closures, concrete stops, accessories and fittings as required for a complete installation in accordance with the Drawings and as specified herein.

**1.3 RELATED WORK SPECIFIED IN OTHER SECTIONS**

| G. | Painting             | Section 09 91 00       |

**1.4 CODES AND STANDARDS**

- A. Building Code: Steel deck work shall conform to the requirements of the Building Code identified on the Structural General Notes, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.
- B. Standards:
1. All steel floor and roof deck manufacturers shall be listed in the Underwriter's Laboratories "Fire Resistance Index of Companies".
  2. American Iron and Steel Institute (AISI) "Specification for the Design of Cold-Formed Steel Structural Members".
  3. American Welding Society AWS D1.3 , "Structural Welding Code – Sheet Steel."

4. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein.
5. Steel Deck Institute (SDI) "Design Manual for Composite Decks, Form Decks and Roof Decks".

C. Definitions:

1. See Section 05 12 00 "Structural Steel".

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

- A. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.

1. Submittal Schedule
2. Shop Drawings and Erection Drawings
3. Manufacturer's Certification
4. Manufacturer's Installation Instructions
5. Welder Certifications
6. Research Reports or Evaluation Reports

- B. Detailed submittal requirements: See below for specific requirements for each required submittal.

1. Shop Drawings and Erection Drawings (including Field Work Drawings): Submit for record manufacturers standard load tables and calculations for items designed by the Contractor's Engineer licensed in the State of New York. Submit for approval shop drawings and erection drawings for all steel deck indicated on the Contract Documents.
  - a. Materials shall not be fabricated or delivered to the site before the shop drawings have been approved or approved as noted by the Commissioner and returned to the Contractor.
  - b. Shop Drawings shall clearly indicate:
    - 1) Deck types (profiles), steel gauges, and deck finishes.
    - 2) Deck layout, including panel locations, number of deck spans per panel, structural support locations and joint locations.
    - 3) Deck dimensions and sections keyed to layout plans, including side and end details and bearing requirements.
    - 4) Deck fastener types (welds, screws, pins, manufactured systems) and layout patterns at panel sides, ends and interior supports.

- 5) Deck manufacturer, profiles, properties, vertical load capacity and in-plane diaphragm shear capacity for all as-detailed conditions.
  - 6) Details and locations of accessories including hardware, framing reinforcement anchorage, sump pans, cant strips, ridge plates, valley plates and closure plates.
  - 7) Fabrication necessary to incorporate steel deck into the job.
  - 8) Correlation with other requirements, openings and flashings.
  - 9) Fully dimensioned layout of field-installed headed studs (shear connectors).
  - 10) Contractor-coordinated openings for mechanical, electrical, plumbing, fire protection and other trades.
- c. A letter shall be submitted along with the shop drawings. It shall bear the registration number seal, signature and address of the Structural Engineer Licensed in the state of New York who prepared or supervised the calculation and reviewed the shop drawing submittal.
2. **Manufacturer's Certification:** Submit for record a letter of certification from the deck manufacturer stating that the design, the detailing and fabrication of the steel deck to be installed under this Section are in accordance with the SDI Design Manual for Composite Decks, Form Decks and Roof Decks.
  3. **Manufacturer's Installation Instructions:** Submit for record Manufacturer's literature providing recommended installation instructions.
  4. **Welder Certifications:** Submit for record welder certificates signed by the Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.
  5. **Research or Evaluation Reports:** Submit for record research reports or evaluation reports of the model code organization acceptable to the New York City Department of Buildings that evidence steel deck's compliance with the 2014 New York City Building Code.
- C. Refer to DDC General Conditions for submittal process and requirements.
- D. Refer to Section 03 30 00 – "Cast-in-Place Concrete" for additional submittal requirements related to concrete trades.
- 1.7 COORDINATION AND TEMPORARY SUPPORT**
- A. Coordinate any special support requirements such as shoring of deck for wet concrete loads.
  - B. Coordinate any construction loads on deck before concreting, and on completed deck in excess of the design loads shown. Such conditions may include both gravity and lateral loads.
- 1.8 DELIVERY, STORAGE, AND HANDLING**
- A. Do not bend or mar decking.
  - B. Store off ground with one end elevated for drainage.

- C. Cover decking with waterproof material, ventilated to avoid condensation.
- D. Do not store deck bundles on framing unless material is securely tied down and the framing has been analyzed to ensure that such storage will not cause an overload.

#### 1.9 STRUCTURAL STEEL PRE-ERECTION CONFERENCE

- A. See Section 05 12 00 "Structural Steel".

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

#### 1.11 TESTING AGENCY

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform Special Inspections.
- B. Refer to Section 01 40 00 "Quality Requirements", Article 1.9, of the DDC General Conditions, for additional information regarding Special Inspections.

#### 1.12 QUALITY ASSURANCE

- A. Testing Agency:
  - 1. Reports: The Testing Agency shall include in the daily reports of the structural steel, steel deck progress and description/area of work, tests made and results.
  - 2. Coordination: The Contractor shall have sole responsibility for coordinating his work with the Testing Agency to assure that all test and inspection procedures required by the Contract Documents and/or 2014 New York City Building Code, are properly provided. Cooperate fully with the Testing Agency in the performance of their work.
- B. Decking is subject to inspection and testing once connected in place:
  - 1. Remove work found to be defective and provide acceptable work at no additional expense to The City of New York.
- C. Field Inspection:
  - 1. All steel deck shall be inspected after erection to ascertain the following relative to approved shop drawings:
    - a. Deck profile, type (acoustic, cellular, vented), gage and finish
    - b. Deck orientation, alignment, bearing and laps (if applicable)
    - c. Supplementary items including secondary supports, closures, pour stops, sumps and their connections to deck and to other members
    - d. Damage of members during transportation, storage and erection
    - e. Installation for proper erection

- f. Connections (for quantity, size and spacing, and quality of welds) including inspection of deck welding
- 2. Headed studs (shear connectors):
  - a. At the start of each day's operations for attaching headed studs, first weld a minimum of two studs to demonstrate proper welding set up for that day's typical deck and support conditions. Testing Agency to observe Contractor hammer-bending the studs to an angle 15 degrees from the vertical without weld failure.
  - b. Should failure occur in the weld zone of either stud, adjust welding set up and repeat the test until two consecutive studs are, tested and found satisfactory before any production welding of studs may begin.
  - c. Perform demonstration tests at each significant change in conditions including deck thickness, deck coating (painted to galvanized) or number of deck layers.
  - d. Do not weld studs through more than one layer of steel deck, except where cellular deck is specified.
  - e. Failed test studs shall be removed and replaced by production studs.
  - f. During production installation, bend testing of headed studs is required where incomplete weld flash is observed, and at random locations on each floor. For production testing requirements see Section 05 12 00 "Structural Steel".

**D. Testing Agency Reports & Certifications:**

- 1. Indicate to the Contractor where remedial work must be performed. Track and retest all locations of remedial work.
- 2. Upon completion of work and resolution of remedial items, certify in a letter to the Commissioner and that the installation is in accordance with the design and Specification requirements, and 2014 New York City Building Code.

**1.13 QUALITY CONTROL**

- A. See Section 05 12 00 "Structural Steel".

**1.14 OBSERVATIONS BY COMMISSIONER**

- A. See Section 05 12 00 "Structural Steel".

**1.15 PERMITS AND WARRANTY**

- A. See Section 05 12 00 "Structural Steel".

**1.16 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

#### 1.17 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  1. **Recycled Content:** Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.18 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

### PART 2 - PRODUCTS

#### 2.1 GENERAL

- A. All steel deck units shall be of the same depth and profile as shown on the Drawings and the product of one manufacturer. Provide products from approved manufacturers that are equivalent to the basis of design product.

#### 2.2 MANUFACTURERS:

- A. **Basis-of-Design Product:** Subject to compliance with requirements provide Vulcraft; or comparable product by one of the following:
  1. Wheeling
  2. Verco Manufacturing Co.
  3. Or approved equal.

## 2.3 DESIGN

- A. Section properties of the steel deck units shall be calculated in accordance with the AISI "Specification for the Design of Cold-Formed Steel Structural Members". The minimum positive and negative section moduli so obtained shall be used in calculations involving positive and negative moments, respectively, in determining the required gauges of steel deck units.

## 2.4 MATERIALS

- A. Prime Painted Cold Rolled Steel Sheet for deck and accessories: ASTM A1008 SS Grade 33 (minimum) with minimum yield strength of 33ksi (230MPa). Surface in contact with concrete (typically top) to be phosphatized. Exposed surface (typically bottom) to have oven cured gray or white lead- and chromate-free rust-inhibitive primer to 0.3 mil nominal dry film thickness.
- B. Galvanized Steel: roof steel deck, floor galvanized steel deck and all closures and flashings shall be formed from steel sheets conforming to ASTM A653, Structural Quality Grade 33 (minimum) with minimum yield strength of 33 ksi (230MPa). Before forming, the steel sheet shall be coated with a zinc coating conforming to ASTM A653 Zinc coated per ASTM A653 G60.
- C. Floor decking shall be formed with integral locking lugs or embossments to provide a mechanical lock between the steel floor and the concrete slab sufficient to resist at least twice the design shear force. Minimum depth of embossments or locking lugs shall be .050"(1.3mm).
- D. All steel decking shall be roll formed for uniformity in dimension and strength.
- E. Floor and roof decking shall be classified by Underwriters' Laboratories, Inc. Each unit or bundle shall be labeled and marked as required by UL, indicating manufacturer, testing, and inspection.

## 2.5 ACCESSORIES

- A. General: Provide accessory materials for steel deck that comply with requirements indicated and recommendations of the steel deck manufacturer.
- B. Side Lap Fasteners: Manufacturer's standard, corrosion-resistant, hexagonal washer head; self-drilling, carbon steel screws, No. 10 minimum diameter. Where Factory Mutual is indicated in the Contract Documents, fasteners must be approved by Factory Mutual as a method for securing steel roof deck for Class indicated.
- C. Pour Stops and Girder Fillers: Steel sheet, of same material as deck panels, and of thickness and profile indicated, but not less than the deck gauge.
- D. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material and thickness as deck panels, unless otherwise indicated.
- E. Hanger Tabs: Manufacturer's standard UL rated piercing steel sheet hanger attachment devices for floor deck panels.
- F. Recessed Sump Pans: Manufacturer's standard size, single piece steel sheet 0.071-inch (1.8mm) thick minimum, of same material as deck panels, with 1-1/2-inch (40mm) minimum deep level recessed pans and 3-inch (75mm) wide flanges. Cut holes for drains in the field.
- G. Flat Receiver Pan: Manufacturer's standard size, single-piece steel sheet, 0.071" (1.8mm) thick minimum units, of same material as deck panels.

- H. Miscellaneous Roof Deck Accessories: Steel sheet ridge and valley plates, finish strips, and reinforcing channels, of same material and thickness as roof deck unless otherwise indicated.
- I. Headed Studs (shear connectors) shall be per Structural General Notes.
- J. Steel Sheet Accessories: ASTM A 653, galvanized to G 90 coating class.
- K. Galvanizing Repair Paint: SSPC Paint 20 or MIL-P-21035, with dry film containing a minimum of 94% zinc dust by weight.
- L. Flexible Rib Closure Strips: Manufacturer's standard vulcanized, closed-cell, synthetic rubber.
- M. Sound-Absorbing Insulation: As required by the Contract Documents, provide manufacturer's standard premolded roll or strip glass fiber or mineral fiber.

## 2.6 SIDE JOINT HANGER SYSTEM FOR USE IN COMPOSITE STEEL FLOOR DECK ONLY

- A. Provide hanger tabs along the side joints of units at 1'-0" (300mm) centers.
- B. Side joint hanger tabs shall have a minimum allowable static load capacity of at least 100 lbs (45kg). and shall accommodate a flat bar hanger (no rod hangers).
- C. All hangers, their installation, and tab activation shall be by trades requiring the tabs.
- D. No plastered ceilings shall be hung from side joint hanger tabs.
- E. No mechanical, electrical, plumbing or fire protection loads shall be hung from deck side joint hanger tabs.

## 2.7 MISCELLANEOUS MATERIALS

- A. Arc-Welding Electrodes: AWS A5.1 E70XX Series, as required for the conditions of use.
- B. Touch Up Paint: use galvanized repair paint specified above.
- C. Closure Tape as required to maintain cells clear of concrete at abutting panel ends.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Examine all work prepared to receive work of this Section, especially plan and elevation locations of supporting frames and walls. Report any defects affecting installation to Commissioner. The Contractor alone shall be responsible for checking the dimensions and coordination of the steel deck work.
- B. Do not place deck units on supports with debris or unapproved coatings that could affect full, level bearing and proper connections.
- C. Do not place deck units on concrete supporting structures until concrete has cured and is dry.

- D. Coordinate the location of decking bundles with a structural steel erector to prevent overloading of structural members.

### 3.3 ERECTION – PLACEMENT

- A. Erect steel deck in accordance with the decking manufacturer's recommendations and the requirements of the Drawings and these Specifications.
- B. Place steel deck on the supporting framework and adjust to final position with ends accurately aligned and bearing on supporting members before making permanent connections. Do not stretch or contract sidelap interlocks.
- C. Place deck units flat, square, without warping or excessive deflections, in straight alignment for entire length of run of cells and with close alignment between the cells at ends of abutting units.
- D. Abutting ends of deck panels shall occur over supports. End bearing shall be a minimum of 2 inches (50mm), or greater if required (web crippling) by deck manufacturer.
- E. Where deck panels nest, laps shall be a minimum of 2" (50mm) and shall occur over supports. Nesting is permitted only where profiles are designed to nest and are fabricated with offset ends.
- F. Install slab edge closures and pour stops at the theoretical position with maximum tolerance of + 3/8" (10mm). Closures and pour stops shall have adequate adjustments to maintain this tolerance while accommodating the structural steel frame tolerances.

### 3.4 ERECTION - CONNECTIONS

- A. Connect steel deck to the steel framework at ends of units and at intermediate supports as shown on the Contract Documents and approved shop drawings.
- B. Deck to support welds shall be puddle welds of diameter and spacing shown on Contract Documents and/or approved shop drawings.
- C. Use welding washers for puddle welding at deck thinner than 22 gauge (0.85mm) and where recommended by the manufacturer
- D. Where headed studs occur, if fused to deck for full weld perimeter each headed stud may be considered to replace one puddle weld
- E. Fasten side laps and perimeter edges of panels between supports by button punching, side seam welding or screws, or as noted on Construction Drawings.

### 3.5 ERECTION – OPENINGS AND CLOSURES

- A. Contractor to coordinate location of all openings with other trades (see Submittals).
- B. Cut and install sleeves and holes through decking for openings indicated on the Architectural, Structural, and/or Mechanical, Electrical, Plumbing, and Fire Protection Drawings. Sleeves will be furnished by the various trades requiring them. Provide and install reinforcement as required around sleeves. Where possible, leave deck intact and use block outs to hold back concrete at openings. Cut deck after concrete cures.

- C. Provide miscellaneous headers and other steel reinforcing and supports welded to decking and structural steel as required at penetrations, around columns, etc. per typical details and manufacturer's recommendations.
- D. Field cutting parallel to flutes shall be done in the low flutes, taking care to leave sufficient horizontal material to permit satisfactory welding of deck to supporting steel.
- E. Openings required for work of other trades and not indicated on Architectural, Structural, Mechanical, Electrical, Plumbing, Fire Protection, and Telecom Drawings shall be permitted only upon approval of the Commissioner as to size and location.
- F. Furnish and install tight-fitting closures at locations including but not limited to
  - 1. Open ends of flutes and sides of decking (neoprene or sheet steel)
  - 2. Open ends of all flutes at columns, walls and openings shown on Contract Drawings
  - 3. Panel ends where panels change direction or abut (sheet steel or closure tape)
  - 4. Between deck units and columns (sheet steel)
  - 5. Between columns and exterior cladding (sheet steel)
  - 6. Welding hole cover, with friction fastening, to close excess holes when required (sheet steel).

### 3.6 WELDING

- A. Welding of steel deck shall follow the technique outlined by the steel deck manufacturer.
- B. Welding of headed studs shall conform to all AWS requirements, including workmanship, quality control, and inspection, which shall be performed by the Contractor and observed by the Commissioner and Testing Agency for Special Inspections.

### 3.7 ROOF SUMP PANS

- A. Place over openings provided in roof decking and weld to top decking surface. Space welds not more than 12 inches (300mm) o.c. with at least one weld at each corner. Cut opening in roof sump bottom to accommodate drain size shown, coordinate with Plumbing Drawings.

### 3.8 CONCRETE PLACEMENT

- A. Concrete with admixtures containing chloride salts or other deleterious materials shall not be used with steel deck.
- B. Steel deck used to support concrete buggy runways shall be adequately protected against wheel damage. Decking and any runways or shoring shall be evaluated and engineered by Contractor's Engineer licensed in the State of New York to be submitted for review and approval by the Commissioner.

### 3.9 TOUCH-UP

- A. After installation touch-up welds on galvanized decking with specified galvanized repair paint to a dry film thickness of 2 mils, at all locations that will not receive concrete fill.

- B. Touch-Up Painting: Where exposed to view, wire brush, clean, and paint scarred areas, welds, and rust spots on both surfaces of installed deck panels.
  - 1. Touch up painted surfaces with same type of shop paint used on adjacent surfaces.
  - 2. Where shop-painted surfaces are exposed in-service, apply touch-up paint to blend into adjacent surfaces.

**END OF SECTION 05 30 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 05 40 00**

**COLD-FORMED METAL FRAMING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Exterior non-load-bearing wall and soffit framing.
  2. Installation accessories.
- B. Related Sections:
1. Section: 07 42 13 "Insulated Metal Wall Panels."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings:
  - 1. Include layout, spacings, sizes, thicknesses, and types of cold- formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
  - 2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
- C. Engineering Services Submittal: For cold- formed steel framing and connections, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York .responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Product Tests: Mill certificates or data from a qualified independent testing agency.
- C. Welding Qualifications: Comply with qualify procedures according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
- D. On-site Facade Mockups: Include as part of on-site facade mockup required by other sections, as indicated on the drawings, work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.

1. Provide complete cold- formed steel framing installation in sizes, quantities, and configuration indicated on the drawings.
2. Incorporate full-scale details of the architectural features, approved finished and textures, brackets and attachment components required for installation.
3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products as supplied by one of the following, as approved by the Commissioner:
  1. CEMCO; California Expanded Metal Products Co.
  2. ClarkDietrich.
  3. MarinoWARE.
  4. Telling Industries.
  5. Approved equal.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design architectural precast concrete units including connections.
  1. Engineering Services shall include complete design calculations for cold- formed steel framing and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.

### 2.3 COLD-FORMED STEEL FRAMING MATERIALS

- A. Steel Sheet: ASTM A1003/A1003M, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
  1. Grade: As required by structural performance.
  2. Coating: G90 or equivalent.

### 2.4 EXTERIOR NON-LOAD-BEARING WALL FRAMING

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base- Metal Thickness: 0.0428 inch minimum and greater where required to meet performance requirements.
  2. Flange Width: 1- 3/8 inches unless otherwise required by project application.
  3. Section Properties: As required to meet performance requirements.
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and matching minimum base-metal thickness of steel studs.
- C. Vertical Deflection Clips: Manufacturer's standard head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.
- D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure.

## 2.5 SOFFIT FRAMING

- A. Exterior Soffit Frame: Manufacturer's standard C-shaped steel sections, of web depths indicated, with stiffened flanges, and as follows:
1. Minimum Base- Metal Thickness: Same as wall framing unless otherwise required to meet performance requirements.
  2. Flange Width: As required by project application.
  3. Section Properties: As required to meet performance requirements.

## 2.6 FRAMING ACCESSORIES

- A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members.
- B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated.

## 2.7 ANCHORS, CLIPS, AND FASTENERS

- A. Steel Shapes and Clips: ASTM A36/A36M, zinc coated by hot-dip process according to ASTM A123/A123M.
- B. Anchor Bolts: ASTM F1554, Grade 36, threaded carbon-steel hex-headed bolts, carbon-steel nuts, and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A153/A153M, Class C.
- C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report for project substrate, acceptable to the New York City Department of Buildings.
1. Uses: Securing cold-formed steel framing to structure.

2. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
- D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report based on ICC-ES AC70, acceptable to the New York City Department of Buildings.
- E. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screws.
  1. Head Type: Low-profile head beneath sheathing; manufacturer's standard elsewhere.

## 2.8 MISCELLANEOUS MATERIALS

- A. Galvanizing Repair Paint: ASTM A780/A780M or SSPC-Paint 20.
- B. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107/C1107M, and with a fluid consistency and 30-minute working time.
- C. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.
- B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.

### 3.4 COLD- FORMED METAL FRAMING, GENERAL

- A. Comply with combined written instructions of manufacturers, unless more stringent requirements are indicated, including those in referenced publications.

### 3.5 INSTALLATION, GENERAL

- A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.
- B. Install cold-formed steel framing according to AISI S200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.
- C. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.
- D. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.
- E. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
- F. Install insulation, specified in Section 07 21 00 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.
- G. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

### 3.6 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

- A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
- B. Fasten both flanges of studs to top and bottom track unless otherwise indicated. Space studs as follows:
  - 1. Stud Spacing: As indicated on Drawings.
- C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.
- D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
  - 1. Install single deep-leg deflection tracks and anchor to building structure.
  - 2. Install double deep-leg deflection tracks and anchor outer track to building structure.
- E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

- F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners, to provide a complete and stable wall-framing system.

### 3.7 ERECTION TOLERANCES

- A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
  - 1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

### 3.8 FIELD QUALITY CONTROL

- A. Testing: City will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Field and shop welds will be subject to testing and inspecting.
- C. Testing agency will report test results promptly and in writing to Contractor and Commissioner.
- D. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

### 3.9 RESTORATION AND PROTECTION

- A. Restoration: Prepare and restore damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, and approved by the Commissioner, to ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

**END OF SECTION 05 40 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 05 50 00**

**METAL FABRICATIONS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Miscellaneous steel framing and supports.
2. Shelf angles.
3. Ladders and transfer platform with ladder- assist post to serve as safety railing.
4. Elevator pit sump covers.
5. Miscellaneous steel trim.
6. Metal bollards.
7. Loose bearing and leveling plates.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.
2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
3. Steel weld plates and angles for casting into concrete.

C. Related Sections:

1. Section 07 52 16 "SBS Modified Bituminous Membrane Roofing."
2. Section "12 93 00 Site Furnishings."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Coordinate installation of covers for steel bollards.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For the following:
  1. Fasteners.
  2. Shop primers.
  3. Shrinkage-resisting grout.
  4. Slotted channel framing.
  5. Ladders.
  6. Metal bollards.
  7. Abrasive metal nosings.
- B. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items. Include shall include but not be limited to the following:
  1. Metal bollards.
  2. Abrasive metal nosings.
  3. Aluminum ladders.

- C. Engineering Services Submittal: For aluminum ladders and transfer platforms, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.
- D. Samples: For each type and finish of nosing.

## 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Welding Qualifications: Qualify procedures according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
  - 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design aluminum ladders and transfer platforms.
  - 1. Engineering Services shall include complete design calculations aluminum ladders and transfer platforms required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. Structural Performance of Aluminum Ladders: Ladders including transfer platforms shall withstand the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
  - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

### 2.2 METALS

- A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.
- B. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

- C. Stainless Steel Bars and Shapes: ASTM A276/A276M, Type 316 and 316L.
  - D. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 316.
  - E. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.
  - F. Rolled-Stainless Steel Floor Plate: ASTM A793.
  - G. Abrasive-Surface Floor Plate: Steel plate with abrasive granules rolled into surface.
  - H. Steel Tubing: ASTM A500/A500M, cold-formed steel tubing.
  - I. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40) unless otherwise indicated.
  - J. Zinc-Coated Steel Wire Rope: ASTM A741.
    - 1. Wire Rope Fittings: Hot-dip galvanized-steel connectors with capability to sustain, without failure, a load equal to minimum breaking strength of wire rope with which they are used.
  - K. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.
    - 1. Size of Channels: 1-5/8 by 1-5/8 inches unless otherwise indicated.
    - 2. Material: Galvanized steel, ASTM A653/A653M, commercial steel, Type B structural steel, Grade 33, with G90 coating; 0.108-inch nominal thickness.
    - 3. Material: Cold-rolled steel, ASTM A1008/A1008M, commercial steel, Type B; 0.0966-inch minimum thickness; hot-dip galvanized after fabrication.
  - L. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.
  - M. Aluminum Extrusions: ASTM B221, Alloy 6063-T6.
  - N. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.
  - O. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.
  - P. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (extruded architectural bronze).
  - Q. Bronze Castings: ASTM B584, Alloy UNS No. C83600 (leaded red brass) or UNS No. C84400 (leaded semired brass).
  - R. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).
- 2.3 FASTENERS
- A. General: Unless otherwise indicated, provide Type 316 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

- B. Cast-in-Place Anchors in Concrete: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F2329/F2329M.
- C. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors.
  - 1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
  - 2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless steel bolts, ASTM F593, and nuts, ASTM F594.
- D. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 1-5/8 by 7/8 inches by length indicated with anchor straps or studs not less than 3 inches long at not more than 8 inches o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B633, Class Fe/Zn 5, as needed for fastening to inserts.

#### 2.4 MISCELLANEOUS MATERIALS

- A. Water-Based Primer: Emulsion type, anticorrosive primer for mildly corrosive environments that is resistant to flash rusting when applied to cleaned steel, complying with MPI#107 and compatible with topcoat.
- B. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
- C. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.
- D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- F. Shrinkage-Resistant Grout: Factory-packaged, nonmetallic, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- G. Concrete: Comply with requirements in Section 03 30 00 "Cast-in-Place Concrete" for normal-weight, air-entrained concrete with a minimum 28-day compressive strength of 3000 psi.

#### 2.5 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

- D. Form exposed work with accurate angles and surfaces and straight edges.
- E. Weld corners and seams continuously to comply with the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.
- G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.
- H. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, not less than 8 inches from ends and corners of units and 24 inches o.c.

## 2.6 MISCELLANEOUS FRAMING AND SUPPORTS

- A. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.
- B. Fabricate steel girders for wood frame construction from continuous steel shapes of sizes indicated.
  - 1. Where wood nailers are attached to girders with bolts or lag screws, drill or punch holes at 24 inches o.c.
- C. Fabricate steel pipe columns for supporting wood frame construction from steel pipe with steel baseplates and top plates as indicated. Drill or punch baseplates and top plates for anchor and connection bolts and weld to pipe with fillet welds all around. Make welds the same size as pipe wall thickness unless otherwise indicated.

## 2.7 SHELF ANGLES

- A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 3/4-inch bolts, spaced not more than 6 inches from ends and 24 inches o.c., unless otherwise indicated.
  - 1. Provide mitered and welded units at corners.
  - 2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 2 inches larger than expansion or control joint.
- B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.
- C. Galvanize shelf angles located in exterior walls.

- D. Prime shelf angles located in exterior walls with zinc-rich primer.
- E. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

## 2.8 METAL LADDERS

- A. Aluminum Ladders: Comply with ANSI A14.3.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or equal as approved by the Commissioner:
    - a. Halliday Products.
    - b. O'Keeffe's Inc.
    - c. Precision Ladders, LLC.
    - d. Or approved equal.
  - 2. Source Limitations: Obtain aluminum ladders from single source from single manufacturer.
- B. Wall- mounted ladders at Roof: Comply with the following unless otherwise indicated.
  - 1. Space siderails 16 inches apart unless otherwise indicated.
  - 2. Siderails: Continuous extruded-aluminum channels or tubes, not less than 2 1/2 inches deep, 3/4 inch wide, and 1/8 inch thick.
  - 3. Rungs: Extruded-aluminum tubes, not less than 3/4 inch deep and not less than 1/8 inch thick, with ribbed tread surfaces.
  - 4. Fit rungs in centerline of siderails; fasten by welding or with stainless steel fasteners or brackets and aluminum rivets.
  - 5. Provide transfer platforms, at ladder top rung, as indicated fabricated from pressure-locked aluminum bar grating or extruded-aluminum plank grating, supported by extruded-aluminum framing. Limit openings in gratings to no more than 1/2 inch in least dimension.
  - 6. Support each ladder at top and bottom and not more than 60 inches on center with welded or bolted aluminum brackets.
  - 7. Provide minimum 72-inch- high, hinged security door with padlock hasp at foot of ladder to prevent unauthorized ladder use.
- C. Ladder-Assist Post (Pass-through Side Rail Guards): Manufacturer's standard device for attachment to ladders .
  - 1. Operation: Post locks in place on full extension; release mechanism returns post to closed position.
  - 2. Height: 42 inches above finished upper roof surface.
  - 3. Material: Aluminum.
  - 4. Post: 1-5/8-inch- diameter pipe.
- D. Finish: Mill.

## 2.9 METAL FLOOR PLATE

- A. Fabricate from rolled-stainless steel floor plate of thickness indicated
- B. Provide stainless steel angle supports as indicated.

- C. Provide flush stainless steel bar drop handles for lifting removable sections, one at each end of each section.

#### 2.10 ELEVATOR PIT SUMP COVERS

- A. Fabricate from 1/8-inch rolled-steel floor plate with four 1-inch-diameter holes for water drainage and for lifting.

#### 2.11 MISCELLANEOUS STEEL TRIM

- A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.
- B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.
  - 1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.
- C. Galvanize exterior miscellaneous steel trim.
- D. Prime miscellaneous steel trim with zinc-rich primer.

#### 2.12 METAL BOLLARDS

- A. Crash Rating: M50 (formerly K12) in accordance with ASTM 2656. Fabricate metal bollards as follows:
  - 1. Type B1, Fixed with Cover: 10 inch round, Schedule 140 steel pipe with 1 inch thick, continuous steel stiffener plate. Set in concrete foundation/ footing.
  - 2. Type B2, Removable with Cover: 10 inch round, Schedule 140 steel pipe with 1 inch thick, continuous steel stiffener plate. Install with steel sleeve set in concrete.
  - 3. Height: 36 inches above finished pavement.
- B. Type B3, Site Bollards: Fabricate metal bollards as follows:
  - 1. 8 inch round, Schedule 80 galvanized steel pipe.
  - 2. Cap bollards with 1/4-inch-thick steel.
  - 3. Height: 48 inches above finished pavement.
- C. Bollard Covers, where indicated: Refer to Section "12 93 00 Site Furnishings."
- D. Concrete foundation/ footings: As indicated on structural drawings.
- E. Steel Finishes: Shop prime steel bollards with zinc-rich primer ready for field painting. Galvanized steel bollards shall be shop- primed with field painted with compatible coating.

#### 2.13 ABRASIVE METAL NOSINGS

- A. Cast-Metal Units: Cast aluminum, with an integral-abrasive, as-cast finish consisting of aluminum oxide, silicon carbide, or a combination of both. Fabricate units in lengths necessary to accurately fit openings or conditions.

- B. Extruded Units: Aluminum, with abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Fabricate units in lengths necessary to accurately fit openings or conditions.
  - 1. Provide ribbed units, with abrasive filler strips projecting 1/16 inch above aluminum extrusion.
  - 2. Provide solid-abrasive-type units without ribs.
- C. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
- D. Drill for mechanical anchors and countersink. Locate holes not more than 4 inches from ends and not more than 12 inches o.c., evenly spaced between ends, unless otherwise indicated. Provide closer spacing if recommended by manufacturer.
- E. Apply bituminous paint to concealed surfaces of cast-metal units.
- F. Apply clear lacquer to concealed surfaces of extruded units.

#### 2.14 LOOSE BEARING AND LEVELING PLATES

- A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.
- B. Galvanize bearing and leveling plates.
- C. Prime plates with zinc-rich primer.

#### 2.15 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.
- B. Galvanize and shop- prime loose steel lintels located in exterior walls.

#### 2.16 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

#### 2.17 GENERAL FINISH REQUIREMENTS

- A. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.
- B. Finish metal fabrications after assembly to the greatest extent possible.
- C. Appearance of Finished Work: Noticeable variations in the same piece are not acceptable. Variations in appearance of components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.18 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
  - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
  - 1. Shop prime with unless zinc-rich primer.
- C. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:
  - 1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
  - 2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
  - 3. Items Indicated to Receive Primers Specified in Section 09 96 00 "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
  - 4. Other Steel Items: SSPC-SP 3, "Power Tool Cleaning."
  - 5. Galvanized-Steel Items: SSPC-SP 16, "Brush-off Blast Cleaning of Coated and Uncoated Galvanized Steel, Stainless Steels, and Non-Ferrous Metals."
- D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

## 2.19 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
  - 1. Run grain of directional finishes with long dimension of each piece.
  - 2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

## 2.20 ALUMINUM FINISHES

- A. As-Fabricated Finish (Mill): AA-M12.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION, GENERAL

- A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- C. Field Welding: Comply with the following requirements:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
  - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
- D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

### 3.3 INSTALLATION OF MISCELLANEOUS FRAMING AND SUPPORTS

- A. Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.
- B. Anchor supports for overhead doors and other items securely to, and rigidly brace from, building structure.
- C. Anchor shelf angles securely to construction.
- D. Support steel girders on solid grouted masonry, concrete, or steel pipe columns. Secure girders with anchor bolts embedded in grouted masonry or concrete or with bolts through top plates of pipe columns.

### 3.4 INSTALLATION OF METAL BOLLARDS

- A. Anchor bollards in place with concrete foundation/ footings as indicated on structural drawings.
- B. Fill metal- capped bollards solidly with concrete and allow concrete to cure seven days before installing cap.

**3.5 INSTALLATION OF BOLLARD COVERS**

- A. Refer to Section “12 93 00 Site Furnishings.” .
- B. Secure to bollard in a manner to maintain bollard crash rating indicated.

**3.6 INSTALLATION OF BEARING AND LEVELING PLATES**

- A. Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surface of plates.
- B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with shrinkage-resistant grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

**3.7 ADJUSTING AND CLEANING**

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and restorer galvanizing to comply with ASTM A780/A780M.

**END OF SECTION 05 50 00**

**SECTION 05 51 13****METAL PAN STAIRS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Preassembled steel stairs with precast terrazzo treads and platforms.

B. Related Sections:

1. Section 05 52 13 "Pipe and Tube Railings."
2. Section 09 66 21 "Resinous Matrix" Terrazzo matrix color requirements and accessories.
3. Section 10 22 13 "Wire Mesh Partitions."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.
- B. Loads of Attached Work: Coordinate with manufacturers of precast terrazzo treads and risers, wire mesh partitions, and pipe and tube railings, as indicated on drawings, to confirm that metal pan stairs and stringers will fully support all loads imposed by products proposed for installation onto stair components.
- C. Coordinate installation of anchorages for metal stairs.
  - 1. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.
  - 2. Deliver such items to Project site in time for installation.
- D. Coordinate locations of hanger rods and struts with other work so they do not encroach on required stair width and are within fire-resistance-rated stair enclosure.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For metal pan stairs and the following:
  - 1. Shop primer products.
  - 2. Precast terrazzo.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, details, and attachments to other work.
  - 2. Indicate sizes of metal sections, thickness of metals, profiles, holes, and field joints.
  - 3. Include plan at each level.
  - 4. Indicate locations of anchors, weld plates, and blocking for attachment of wall-mounted handrails.
- C. Engineering Services Submittal: For metal stairs, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York .responsible for their preparation.

1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.
- D. Design Calculations: Include all loads for all work supported by stair pans and stringers, including but not limited to precast terrazzo tread and risers, pipe and tube railings, wire mesh partitions, and metal framed gypsum board soffits and fascia.

## 1.8 INFORMATIONAL SUBMITTALS

- A. Welding certificates.

## 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Welding Qualifications: Qualify procedures according to the following:
  1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

## 1.10 DELIVERY, STORAGE, AND HANDLING

- A. Store materials to permit easy access for inspection and identification.
  1. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers.
  2. Protect steel members and packaged materials from corrosion and deterioration.
  3. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures.
    - a. Restore or replace damaged materials or structures as directed.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design metal stairs including stringer and framing, and attachment to building construction.
  1. Engineering Services shall include complete design calculations for stairs required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.

- B. Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Uniform Load: 100 lbf/sq. ft.
  2. Concentrated Load: 300 lbf applied on an area of 4 sq. in.
  3. Uniform and concentrated loads need not be assumed to act concurrently.
  4. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.
  5. Limit deflection of treads, platforms, and framing members to  $L/720$  or  $1/4$  inch, whichever is less.
- C. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

## 2.2 METALS

- A. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- B. Steel Tubing for Railings: ASTM A500/A500M (cold formed) or ASTM A513/A513M.
- C. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008/A1008M, either commercial steel, Type B, or structural steel, Grade 25, unless another grade is required by design loads; exposed.
- D. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011/A1011M, either commercial steel, Type B, or structural steel, Grade 30, unless another grade is required by design loads.

## 2.3 FASTENERS

- A. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.

## 2.4 MISCELLANEOUS MATERIALS

- A. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
- B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.
- C. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107/C1107M, factory-packaged, nonmetallic aggregate grout; recommended by manufacturer for use; noncorrosive and nonstaining; mixed with water to consistency suitable for application and a 30-minute working time.

## 2.5 PRECAST TERRAZZO TREADS AND PLATFORMS

- A. Treads and Platforms: Precast Terrazzo Units complying with NTMA's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated.
1. Colors: Match terrazzo mixes as indicated in Section 09 66 21 - Resinous Matrix Terrazzo.
  2. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer.
  3. Finish exposed-to-view edges and reveals to match face finish.
  4. Ease exposed edges to 1/8-inch radius.
  5. Abrasive Strips: Abrasive nosing strip and two-line abrasive inserts at nosing. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
    - a. Width: 1/2 inch unless otherwise indicated.
    - b. Depth: As required by terrazzo thickness.
    - c. Length: 4 inches less than stair width unless otherwise indicated.

## 2.6 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
1. Join components by welding unless otherwise indicated.
  2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs in shop to greatest extent possible.
1. Disassemble units only as necessary for shipping and handling limitations.
  2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
1. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated.
  2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  2. Obtain fusion without undercut or overlap.
  3. Remove welding flux immediately.
  4. Weld exposed corners and seams continuously unless otherwise indicated.
  5. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 - No evidence of welded joint.

- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
  - 1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
  - 2. Locate joints where least conspicuous.
  - 3. Fabricate joints that will be exposed to weather in a manner to exclude water.
  - 4. Provide weep holes where water may accumulate internally.

## 2.7 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Architectural Class, unless more stringent requirements are indicated.
- B. Stair Framing:
  - 1. Fabricate stringers as indicated on Drawings.
    - a. Stringer Size: As indicated on Drawings, unless otherwise required by Engineering Services analysis.
    - b. Provide closures for exposed ends of channel and rectangular tube stringers.
    - c. Finish: Shop primed.
  - 2. Construct platforms of steel plate or channel or rectangular tube headers and miscellaneous framing members as required to comply with "Performance Requirements" Article.
    - a. Provide closures for exposed ends of channel and rectangular tube framing.
    - b. Finish: Shop primed.
  - 3. Weld or bolt stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
  - 4. Where stairs are enclosed by gypsum board shaft-wall assemblies, provide hanger rods or struts to support landings from floor construction above or below.
    - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
  - 5. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch.
  - 1. Steel Sheet: Uncoated, cold-rolled steel sheet unless otherwise indicated.
  - 2. Directly weld metal pans to stringers; locate welds where they will be concealed by finish. Do not weld risers to stringers.
  - 3. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.

## 2.8 FINISHES

- A. Finish metal stairs after assembly.
- B. Preparation for Shop Priming: Prepare uncoated, ferrous-metal surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."
- C. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedment for compliance with requirements.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLING METAL PAN STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
  - 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
  - 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials and roughen surfaces prior to setting plates.
    - a. Clean bottom surface of plates.
    - b. Set plates for structural members on wedges, shims, or setting nuts.
    - c. Tighten anchor bolts after supported members have been positioned and plumbed.
    - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.

- e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
  - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
  - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
  - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
  - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
  - 3. Comply with requirements for welding in "Fabrication, General" Article.
- F. Install precast concrete treads set in mortar with clips attached to back of precast.

#### 3.4 RESTORATION

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
  - 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

**END OF SECTION 05 51 13**

**SECTION 05 52 13****PIPE AND TUBE RAILINGS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Stainless-steel pipe and tube railings.
- B. Related Sections:
1. Section: 10 22 13 "Wire Mesh Partitions."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
- B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.
- D. Coordinate installation of pipe and tube railings with wire mesh infill panels.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For the following:
  - 1. Manufacturer's product lines of mechanically connected railings.
  - 2. Railing brackets.
  - 3. Grout, anchoring cement, and paint products.
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
- C. Samples: For each type of exposed finish required.
- D. Engineering Services Submittal: For railings and connections, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design railings, including attachment to building construction.
  - 1. Engineering Services shall include complete design calculations for railings, including attachment to building construction required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.
- B. Structural Performance: Railings, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
  - 1. Handrails and Top Rails of Guards:
    - a. Uniform load of 50 lbf/ ft. applied in any direction.
    - b. Concentrated load of 200 lbf applied in any direction.
    - c. Uniform and concentrated loads need not be assumed to act concurrently.
  - 2. Infill of Guards:
    - a. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft..
    - b. Infill load and other loads need not be assumed to act concurrently.

2.2 METALS, GENERAL

- A. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.
  - 1. Provide type of bracket with flange tapped for concealed anchorage to threaded hanger bolt and that provides 1-1/2-inch clearance from inside face of handrail to finished wall surface.

2.3 STAINLESS STEEL

- A. Tubing: ASTM A554, Grade MT 316L.

- B. Pipe: ASTM A312/A312M, Grade TP 316L.
- C. Castings: ASTM A743/A743M, Grade CF 8M or CF 3M.
- D. Plate and Sheet: ASTM A240/A240M or ASTM A666, Type 316L.

## 2.4 FASTENERS

- A. General: Provide the following:
  - 1. Stainless-Steel Railings: Type 316 stainless-steel fasteners.
- B. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
  - 1. Material: Alloy Group 1 stainless-steel bolts, ASTM F593, and nuts, ASTM F594.

## 2.5 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

## 2.6 FABRICATION

- A. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- B. Form work true to line and level with accurate angles and surfaces.
- C. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove flux immediately.
  - 4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
- D. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
- E. Form changes in direction by bending or by inserting prefabricated elbow fittings.

- F. For changes in direction made by bending, use jigs to produce uniform curvature for each repetitive configuration required. Maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- G. Close exposed ends of railing members with prefabricated end fittings.
- H. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated.
- I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.
  - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

## 2.7 STAINLESS-STEEL FINISHES

- A. Stainless Steel Tubing Finishes:
  - 1. 180-Grit Polished Finish: Uniform, directionally textured finish.
- B. Stainless Steel Sheet and Plate Finishes:
  - 1. Directional Satin Finish: ASTM A489/A480, No. 4.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements are clearly marked for Installer. Locate reinforcements and mark locations if not already done.

### 3.3 INSTALLATION, GENERAL

- A. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
  - 1. Do not weld, cut, or abrade surfaces of railing components that are coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
  - 2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
  - 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

- B. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
  - 1. Coat, with a heavy coat of bituminous paint, concealed surfaces of aluminum that are in contact with grout, concrete, masonry, wood, or dissimilar metals.

#### 3.4 ANCHORING POSTS

- A. Use metal sleeves preset and anchored into concrete for installing posts. After posts are inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.
- B. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members.

#### 3.5 ATTACHING RAILINGS

- A. Attach railings to wall with wall brackets, except where end flanges are used. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.
- B. Secure wall brackets and railing end flanges to building construction as follows:
  - 1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.

#### 3.6 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and restore galvanizing to comply with ASTM A780/A780M.

**END OF SECTION 05 52 13**

**SECTION 05 53 13****BAR GRATINGS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Galvanized steel bar gratings at catwalk.
  2. Metal frames and supports for gratings.
  3. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate installation of anchorages for gratings, grating frames, and supports. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.7 ACTION SUBMITTALS**

- A. Product Data: For the following:
  - 1. Clips and anchorage devices for gratings.
  - 2. Paint products.
- B. Shop Drawings: Include plans, sections, details, and attachments to other work.
- C. Engineering Services Submittal: For gratings and transfer platforms, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Welding Qualifications: Qualify procedures according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

**1.10 FIELD CONDITIONS**

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Products: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
1. Alabama Metal Industries Company; a Gibraltar Industries company.
  2. Fisher & Ludlow; a NUCOR Company.
  3. Ohio Gratings, Inc.
  4. Harsco Industrial IKG, a division of Harsco Corporation.
  5. Approved equal.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design gratings including connections.
1. Engineering Services shall include complete design calculations for gratings and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. Structural Performance: Gratings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Walkways and Elevated Platforms Other Than Exits: Uniform load of 60 lbf/sq. ft.
  2. Walkways and Elevated Platforms Used as Exits: Uniform load of 100 lbf/sq. ft.
  3. Limit deflection to L/360 or 1/4 inch, whichever is less.
- C. Seismic Performance: Gratings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. Component Importance Factor: 1.0 unless otherwise indicated and required by project application.

**2.3 METAL BAR GRATINGS**

- A. Metal Bar Grating Standards: Comply with NAAMM MBG 531, "Metal Bar Grating Manual" and NAAMM MBG 532, "Heavy-Duty Metal Bar Grating Manual" as applicable to project application.
- B. Pressure-Locked, Galvanized Steel Grating: Fabricated by pressing rectangular flush-top crossbars into slotted bearing bars or swaging crossbars between bearing bars.
1. Bearing Bar Spacing: 7/16 or 1/2 inch o.c.

2. Bearing Bar Depth: As required to comply with structural performance requirements.
3. Bearing Bar Thickness: As required to comply with structural performance requirements.
4. Crossbar Spacing: 4 inches o.c.
5. Traffic Surface: Plain or Serrated.
6. Finish: Galvanized steel, unless otherwise selected by the Commissioner.

## 2.4 FERROUS METALS

- A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
- B. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 33, with G90 coating.

## 2.5 FASTENERS

- A. General: Unless otherwise indicated, provide Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
- B. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, nuts, and, where indicated, flat washers; ASTM F 593 for bolts and ASTM F 594 for nuts, Alloy Group 2.
- C. Post-Installed Anchors: Torque-controlled expansion or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.

## 2.6 MISCELLANEOUS MATERIALS

- A. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

## 2.7 FABRICATION

- A. Shop Assembly: Fabricate grating sections in shop to greatest extent possible to minimize field splicing and assembly.
  1. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces.
  2. Clearly mark units for reassembly and coordinated installation.
- B. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- C. Form from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
- D. Fit exposed connections accurately together to form hairline joints.

- E. Welding: Comply with AWS recommendations and the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.
- F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.
- G. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
  - 1. Edge-band openings in grating that interrupt four or more bearing bars with bars of same size and material as bearing bars.
- H. Do not notch bearing bars at supports to maintain elevation.

## 2.8 GRATING FRAMES AND SUPPORTS

- A. Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
  - 1. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors. Unless otherwise indicated, space anchors 24 inches o.c. and provide minimum anchor units in the form of steel straps 1-1/4 inches wide by 1/4 inch thick by 8 inches long.
- B. Galvanize steel frames and supports in the following locations:
  - 1. Exterior.

## 2.9 STEEL FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION, GENERAL

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
- D. Fit exposed connections accurately together to form hairline joints.
  - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- E. Field Welding: Comply with AWS recommendations and the following:
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove welding flux immediately.

### 3.3 INSTALLING METAL BAR GRATINGS

- A. General: Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.
- B. Attach nonremovable units to supporting members by welding where both materials are same; otherwise, fasten by bolting as indicated above.

### 3.4 ADJUSTING AND CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and restore galvanizing to comply with ASTM A 780/A 780M.

**END OF SECTION 05 53 13**

## **SECTION 05 58 13**

### **COLUMN COVERS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section includes:
  - 1. Snap-together metal column covers.
  - 2. Installation accessories.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product, including finishing materials.
- B. Shop Drawings: Show fabrication and installation details for column covers.
- C. Samples: For each type of exposed finish required, prepared on 6-inch-square Samples of metal of same thickness and material indicated for the Work.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For fabricator, anodic finisher, and powder-coating applicator.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Fabricator Qualifications: A firm experienced in producing column covers like that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated to metals of types indicated and conducts continuing, effective quality-control program to ensure compliance with requirements.
- D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
  - 1. Build mockups of typical column covers, as directed by the Commissioner.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver column covers wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.

## PART 2 - PRODUCTS

### 2.1 SNAP-TOGETHER COLUMN COVERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  - 1. ATAS International, Inc.
  - 2. Ceilings Plus.
  - 3. Fry Reglet Corporation.
  - 4. Pittcon Industries.
  - 5. Approved equal.
- B. Form column covers to shapes indicated from metal of type and minimum thickness indicated below. Return vertical edges and bend to form hook that engages continuous mounting clips.
  - 1. Aluminum Sheet: ASTM B 209, with not less than strength and durability properties of Alloy 5005-H32, 0.063 inch thick.
    - a. Finish: Baked enamel or Powder-Coat.
  - 2. Column covers may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
  - 3. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide flat surfaces where indicated.
  - 4. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
  - 5. Form returns as indicated on drawings:
    - a. At vertical joints to provide hairline V-joints.
    - b. At vertical joints to provide 1/2-inch-wide reveal at joints. Provide snap-in metal filler strips at reveals that leave reveals 1/2 inch deep or flush, as indicated.
    - c. At vertical joints to accommodate backer rod and sealant.
  - 6. Fabricate column covers as indicated on drawings:
    - a. With hairline horizontal V-joints produced by forming returns on mating ends of column cover sections. Locate horizontal joints as indicated.
    - b. Column covers without horizontal joints.
    - c. Column covers with horizontal butt joints, tightly fitted and backed with a sleeve for field splicing with adhesive.
    - d. Column covers with 1/2-inch-wide reveals at horizontal joints produced by forming returns on mating ends of column cover sections. Provide snap-in metal filler strips at reveals matching reveals at vertical joints. Locate horizontal joints as indicated.

7. Fabricate base and ceiling ring, where indicated, to match column covers.
8. Fabricate with calk stop/stiffener ring where ceiling ring is not used.
9. Apply manufacturer's recommended sound-deadening insulation or mastic to backs of column covers.

## 2.2 MISCELLANEOUS MATERIALS

- A. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
  1. Provide concealed fasteners for interconnecting column covers and for attaching them to other work unless exposed fasteners are unavoidable or are the standard fastening method.
  2. Provide tamper-resistant flat-head machine screws for exposed fasteners unless otherwise indicated.
- B. Sound-Deadening Materials:
  1. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
  2. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- C. Backing Materials: Provided or recommended by column cover manufacturer.

## 2.3 PAINTS AND COATINGS

- A. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
- B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

## 2.4 FABRICATION, GENERAL

- A. Coordinate dimensions and attachment methods of column covers with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- B. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends.

## 2.5 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.
- B. Protect finishes on exposed surfaces from damage in accordance with coating manufacturers requirement.
- C. Apply organic finishes to formed metal after fabrication unless otherwise indicated.

- D. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.6 ALUMINUM FINISHES

- A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
  - 1. Color and Gloss: White, semi-gloss.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of column covers.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Locate and place column covers plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install column covers.
  - 1. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- B. Use concealed anchorage unless unavoidable.
- C. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
- D. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.

### 3.4 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean abraded areas of shop paint and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
  - 1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

### 3.5 PROTECTION

- A. Protect finishes from damage during construction period. Remove temporary protective coverings at time of Substantial Completion.

**END OF SECTION 05 58 13**

**SECTION 05 59 63****DETENTION ENCLOSURES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Bar-grille assemblies and swing doors.
2. Detention benches.
3. Installation accessories.

B. Related Sections:

1. Section 03 30 00 "Cast-in-Place" Concrete for installing connection anchors in concrete.
2. Section 04 20 00 "Unit Masonry" for CMU and accessories for installation.
3. Section 05 50 00 "Metal Fabrications" for miscellaneous steel shapes.
4. Section 08 70 00 "Finish Hardware" for detention hardware.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 COORDINATION

- A. Coordinate installation of anchorage. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- B. Schedule installation so wall and ceiling attachments are made only to completed walls.

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For detention enclosures and benches.
  - 1. Include plans, elevations, sections, and attachment details.
- C. Samples: For factory-applied color finishes.
- D. Samples for Verification:
  - 1. Include 12-by-12-inch cut-away corner section of bar-grille assembly.

1.9 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Material Certificates: For tool-resisting steel.
- C. Anchor-inspection reports.

1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Welding Qualifications: Qualify procedures according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code - Sheet Steel."
3. AWS D1.6, "Structural Welding Code - Stainless Steel."

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

### PART 2 - PRODUCTS

#### 2.1 BAR-GRILLE ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  1. Maximum Security Products Corp.
  2. Southern Steel Company.
  3. Sweeper Metal Fabricators Corp.
  4. Or approved equal.

#### 2.2 STEEL GRILLE HOLDING CELL - FRONT CONSTRUCTION

- A. Cell front construction shall consist of panels constructed of 7/ 8-inch diameter steel vertical bars spaced as indicated on the Drawings.
- B. Vertical bars shall be rotated and interlocked at each intersection with flat horizontal bars.
- C. Top, bottom and side frame members shall be of the same size as the horizontal bars.
- D. Vertical bars shall extend into the top and bottom horizontal base half of the depth of the horizontal bar and shall be securely welded to the top and bottom horizontal frame members.
- E. Horizontal flat intermediate bars shall be shouldered and tenoned and back or plug-welded to the vertical side frame bars. Horizontal top and bottom frame members shall be welded to vertical side frame members.
- F. Panel construction shall be anchored to slab as detailed. Cell front shall be attached to masonry walls as detailed.
- G. Where indicated, provide steel wire 2 by 2 by 1/ 4-inch mesh in steel channel welded to flat bar as indicated.

#### 2.3 STEEL GRILLE HINGED DOOR

- A. Steel grille hinged door shall be constructed to the same materials, sizes and spacing as specified for the cell front panel construction.
- B. Door frame shall consist of 3/16-inch steel formed frame, welded at corners, and provided with three adjustable anchors at each jamb, and with head reinforcing and anchors, and sill as detailed.

- C. The door shall be provided with the following hardware, as manufactured by the Folger Adam Co., or approved equal:
- D. Back plate of mounting shall be welded to channel frame. Lock shall be mounted to back plate with four flat-head spanner screws.
- E. Front cover plate of lock mounting shall be attached to channel frame with eight Torx prison-type security screws.
- F. Keeper shall be installed with two Torx prison-type security screws. Door pull and escutcheon shall each be installed with Torx prison type security screws.
- G. Each hinge shall be installed with six countersunk rivets or prison-type security screws.
- H. Door, Food Pass:
  - 1. Door: Flat steel door with reinforcement plate.
  - 2. Frame: Steel frame, 4 sides, cut and notched at each at each corner to create a square corner as indicated.
  - 3. Size: As indicated.
  - 4. Hinges: Two steel butt hinges with non-removable pin with 90 degree hold open bracket prepped for detention deadbolt lock, concealed bolt receiver.

## 2.4 DETENTION BENCH ASSEMBLIES

- A. Product Description: Detention furniture in form of benches for use at Holding Cells and Juvenile Interview rooms.
- B. Basis-of-Design, Product: Subject to compliance with requirements, provide products by Cornerstone Detention, an equivalent product by one of the approved manufacturers listed below, as approved by the Commissioner:
  - 1. Bluff Manufacturing
  - 2. Prisoner Bench, LLC
  - 3. Or approved equal
- C. Dimensions: As indicated on drawings.
- D. Finish and Materials: As indicated on drawings.

## 2.5 ACCESSORIES

- A. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.
- B. Cast-in-Place Anchors in Concrete: Fabricated from corrosion-resistant materials capable of sustaining, without failure, a load equal to four times the load imposed, as determined by testing according to ASTM E488/E488M, conducted by a qualified testing agency; of type indicated below.
  - 1. Threaded or wedge type; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed; hot-dip galvanized according to ASTM A153/A153M or ASTM F2329/F2329M.

- C. Embedded Plate Anchors: Fabricated from mild-steel shapes and plates, minimum 3/16-inch-thick; with minimum 1/2-inch-diameter, headed studs welded to back of plate.
- D. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

## 2.6 FABRICATION, GENERAL

- A. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly.
- B. Coordinate dimensions and attachment methods of detention enclosures with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- C. Shear and punch metals cleanly and accurately. Remove burrs.
- D. Form and grind edges and corners to be free of sharp edges or rough areas.
- E. Form metal in maximum lengths to minimize joints. Form sheet-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.
- F. Weld corners and seams continuously to comply with referenced AWS standard.
- G. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure detention enclosures rigidly in place and to support indicated loads.
- H. Cut, reinforce, drill, and tap detention enclosures as indicated to receive hardware, security fasteners, and similar items.
- I. Form exposed work true to line and level with accurate angles, surfaces, and straight sharp edges.
- J. Form exposed connections with hairline joints flush and smooth using concealed fasteners where possible.

## 2.7 SECURITY FASTENERS

- A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener.

## 2.8 GENERAL FINISH REQUIREMENTS

- A. Finish metal fabrications after assembly.

## 2.9 STEEL AND IRON FINISHES

- A. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.
  - 1. Shop prime with unless zinc-rich primer.
- B. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:

1. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- C. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
  1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
- D. Field Finish: refer to Section 099100 – Painting for requirements.
  1. Color as selected by the Commissioner.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of detention enclosures.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of detention enclosure connections before installation.
- C. Inspect built-in and cast-in anchor installations, before installing detention enclosures, to verify that anchor installations comply with requirements. Prepare inspection reports.
- D. Proceed with installation only after unsatisfactory conditions have been correct to the satisfaction of the Commissioner,

#### 3.3 INSTALLATION, GENERAL

- A. Install detention enclosures plumb, rigid, properly aligned, and securely fastened in place, complying with manufacturer's written recommendations.
- B. Install detention enclosures and benches in accordance with approved Shop Drawings and manufacturers requirements.
- C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing detention enclosures to in-place construction. Include threaded fasteners for inserts, security fasteners, and other connectors.
- D. Cutting, Fitting, and Placement: Obtain manufacturer's written approval for cutting, drilling, and fitting required for installing detention enclosures. Set detention enclosures accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- E. Provide temporary bracing or anchors in formwork for items that are to be built into adjacent construction.

- F. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
- G. Field Welding: Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

#### 3.4 INSTALLATION OF BAR- GRILLE ASSEMBLIES

- A. Wall and Ceiling Anchorage: Weld framing to continuous angles with continuous welds. Anchor angles to embedded anchors by welding, unless bolting is standard with enclosure fabricator.
- B. Partitions: Weld adjacent framing members to each other with continuous 1/4-inch-deep welds on both sides; grind smooth.
- C. Doors: Install 2 inches above finish floor. Adjust to operate easily without binding.

#### 3.5 FIELD QUALITY CONTROL

- A. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Prepare field quality-control certification that states installed products comply with requirements in the Contract Documents.

**END OF SECTION 05 59 63**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 05 73 20****DECORATIVE METAL SCREENS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Rooftop Architectural Metal Screen.
2. Aluminum fence panels for compactor enclosure aluminum screens and screens at end of 1-story wing.
3. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate installation of anchorages for screens. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.
- B. Schedule installation so wall attachments are made only to completed walls. Do not support screens temporarily by any means that do not meet structural performance requirements.

**1.6 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.7 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.8 ACTION SUBMITTALS**

- A. Product Data: For the following:
  - 1. Manufacturer's product lines of screens assembled from standard components.
  - 2. Grout, anchoring cement, and paint products.
- B. Shop Drawings: For rooftop architectural metal screen and aluminum fence panels.
  - 1. Include plans, elevations, sections, and attachment details.
- C. Samples for Verification: For each type of exposed finish required.
  - 1. Fittings and brackets.
  - 2. Welded connections.
  - 3. Brazed connections.
  - 4. Assembled Samples of screen systems, made from full-size components, including top rail, post, and infill. Show method of finishing members at intersections. Samples need not be full height.

- D. Engineering Services Submittal: For metal screens and connections, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York responsible for their preparation.

1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Welding certificates.
- B. Evaluation Reports: For post-installed anchors, from ICC-ES.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer's Qualifications: Installer performing the work of this section shall, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work
- C. Welding Qualifications: Qualify procedures according to the following:
1. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- D. Product Options: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods, including structural analysis, preconstruction testing, field testing, and in-service performance.
1. Do not modify intended aesthetic effects, as judged solely by Commissioner, except with Commissioner's approval. If modifications are proposed, submit comprehensive explanatory data to Commissioner for review.
- E. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
1. Build mockups for each form and finish of screens consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than 24 inches in length.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.11 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with screens by field measurements before fabrication and indicate measurements on Shop Drawings.

1.12 WARRANTY

- A. Special Finish Warranty: Standard form in which manufacturer agrees to restore finishes or replace aluminum that shows evidence of deterioration of finishes within specified warranty period.
  - 1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain each type of metal screen from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design metal screen.
  - 1. Engineering Services shall include complete design calculations for screens, including attachment to building construction required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria specified herein.
- B. General: In engineering screens to withstand structural loads indicated, determine allowable design working stresses of screens materials based on the following:
  - 1. Aluminum: The lesser of minimum yield strength divided by 1.65 or minimum ultimate tensile strength divided by 1.95.
- C. Structural Performance: Screens, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under project conditions.

2.3 ROOFTOP ARCHITECTURAL METAL SCREENS

- A. Description: Aluminum decorative screens with guard infill.
- B. Basis of Design, Products: Subject to compliance with requirements, provide 'EcoScreen' as supplied by Centria or comparable product from one of the following, as approved by the Commissioner:
  - 1. Architectural Screens & Grilles, Inc.
  - 2. VIVA Screens, LLC.

3. Wagner, R & B, Inc.
4. Approved equal.

C. Finish: Three-coat fluoropolymer.

## 2.4 ALUMINUM FENCE PANELS

A. Description: 7 inch face, concealed-fastener, flush formed aluminum panel with interlocking design and no reveals.

1. Panel thickness: 1 inch.

B. Basis of Design, Products: Subject to compliance with requirements, provide 'Pac-Clad Flush Panel' as supplied by Petersen Aluminum Corp. or comparable product from one of the following, as approved by the Commissioner:

1. ATAS.
2. Centria.
3. MBCI.
4. Or approved Equal

C. Finish: Three-coat fluoropolymer.

## 2.5 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

1. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.
2. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.

## 2.6 ALUMINUM

A. Aluminum, General: Provide alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.

B. Extruded Bars and Shapes, Including Extruded Tubing: ASTM B 221, Alloy 6063-T5/T52.

C. Extruded Structural Pipe and Round Tubing: ASTM B 429/B 429M, Alloy 6063-T6.

1. Provide Standard Weight (Schedule 40) pipe unless otherwise indicated.

D. Drawn Seamless Tubing: ASTM B 210, Alloy 6063-T832.

- E. Plate and Sheet: ASTM B 209, Alloy 5005-H32.
- F. Die and Hand Forgings: ASTM B 247, Alloy 6061-T6.
- G. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.
- H. Perforated Metal: Corrugated, aluminum sheet, ASTM B 209, Alloy 6061-T6, 0.063 inch thick, with 1/4-inch holes 3/8 inch o.c. in staggered rows.

## 2.7 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
  - 1. Aluminum Components: Type 316 stainless-steel fasteners.
  - 2. Dissimilar Metals: Type 316 stainless-steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring screens to other types of construction indicated and capable of withstanding design loads.
- C. Provide concealed fasteners for interconnecting screens components and for attaching screens to other work unless exposed fasteners are unavoidable.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to the New York City Department of Buildings, based on ICC-ES AC193 or ICC-ES AC308.
  - 1. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

## 2.8 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
  - 1. For aluminum screens, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- B. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
- C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

## 2.9 FABRICATION

- A. General: Fabricate screens to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

- B. Assemble screens in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate screens with welded or nonwelded connections to suit project application.
- H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
  - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  - 2. Obtain fusion without undercut or overlap.
  - 3. Remove flux immediately.
  - 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds; no evidence of a welded joint.
- I. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
  - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- J. Form changes in direction as follows:
  - 1. As detailed.
  - 2. By bending to smallest radius that will not result in distortion of screens member.
    - a. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- K. Close exposed ends of hollow screens members with prefabricated end fittings.
- L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch or less.
- M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect screens members to other work unless otherwise indicated.

- N. Provide inserts and other anchorage devices for connecting screens to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by screens. Coordinate anchorage devices with supporting structure.
- O. Perforated-Metal Infill Panels: Fabricate infill panels from perforated metal made from same metal as screens in which they are installed.
  - 1. Edge panels with U-shaped channels made from metal sheet, of same metal as perforated metal and not less than 0.043 inch thick.
  - 2. Orient perforated metal with pattern as indicated on Drawings.

## 2.10 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual" recommendations for applying and designating finishes.
- B. Protect finishes on exposed surfaces from damage in accordance with coating manufacturers requirements.
- C. Apply organic finishes to formed metal after fabrication, unless otherwise indicated.
- D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- E. Exposed fasteners where used, shall have finish matching appearance, including color and texture, of screens.

## 2.11 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
  - 1. Color and Gloss: As selected by Commissioner from manufacturer's full range.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install rooftop architectural metal screen and aluminum fence panels in accordance with approved shop drawings.
- B. Fit exposed connections together to form tight, hairline joints.
- C. Perform cutting, drilling, and fitting required for installing screens. Set screens accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
  - 1. Do not weld, cut, or abrade surfaces of screens components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
  - 2. Set posts plumb within a tolerance of 1/16 inch in 3 feet.
  - 3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.
- D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
  - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- E. Adjust screens before anchoring to ensure matching alignment at abutting joints.
- F. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing screens and for properly transferring loads to in-place construction.

### 3.3 CONNECTIONS

- A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting screens components. Use wood blocks and padding to prevent damage to screens members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of screens.
- B. Welded Connections: Use fully welded joints for permanently connecting screens components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.
- C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 6 inches of post.

### 3.4 ANCHORING POSTS

- A. Anchor posts to metal and concrete surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to supporting structure as follows:

1. For aluminum screens, attach posts as indicated using fittings designed and engineered for this purpose.

### 3.5 ATTACHING SCREENS

- A. Anchor screen ends to concrete and masonry with brackets connected to screen ends and anchored to wall construction with anchors and bolts.
- B. Secure wall brackets to building construction as follows:
  1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
  2. For hollow masonry anchorage, use toggle bolts.

### 3.6 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

### 3.7 PROTECTION

- A. Protect finishes of screens from damage during construction period with temporary protective coverings approved by screens manufacturer. Remove protective coverings at time of Substantial Completion.
- B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.
- C. Remove and replace screens that they do not comply with project requirements, unless they can be restored in a manner satisfactory to Commissioner and comply with specified requirements.

**END OF SECTION 05 73 20**

**SECTION 06 10 00****ROUGH CARPENTRY****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Wood blocking, cants, and nailers.
  2. Wood furring.
  3. Plywood backing panels.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Engineered wood, not including salvaged wood, shall contain a minimum of 10% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
  2. All composite wood, engineered wood, or agrifiber products (e.g., plywood, particleboard, medium density fiberboard) shall contain no added urea-formaldehyde resins. Acceptable resins and binders include, but are not limited to, phenol formaldehyde and methyl diisocyanate (MDI). Certification of these products shall be in accordance with the Submittal Requirements of this Section.
  3. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies shall contain no added urea-formaldehyde resins.

4. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant treated material, an inspection agency periodically who performs inspections to verify that the material bearing the classification marking is representative of the material tested and be acceptable to the New York City Department of Buildings and New York City Fire Department,
- C. Inspection Agencies: Inspection agencies and the abbreviations used to reference them with lumber grades and species include the following:
  1. SPIB - Southern Pine Inspection Bureau.
  2. WCLIB - West Coast Lumber Inspection Bureau.
  3. WWPA - Western Wood Products Association.
- D. Grade Stamps: Provide lumber with each piece factory-marked with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

**PART 2 - PRODUCTS****2.1 WOOD PRODUCTS, GENERAL**

- A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
1. Factory mark each piece of lumber with grade stamp of grading agency.
  2. For exposed lumber indicated to receive a stained or natural finish, mark grade stamp on end or back of each piece.
  3. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.
  4. Provide dressed lumber, S4S, unless otherwise indicated.

**2.2 WOOD-PRESERVATIVE-TREATED LUMBER**

- A. Preservative Treatment by Pressure Process: AWWPA C2, except that lumber that is not in contact with the ground and is continuously protected from liquid water may be treated according to AWWPA C31 with inorganic boron (SBX).
1. Preservative Chemicals: Approved products containing no arsenic or chromium.
- B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or does not comply with requirements for untreated material.
- C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
- D. Application: Treat all rough carpentry that has not been fire-retardant-treated, unless otherwise indicated.

**2.3 FIRE-RETARDANT-TREATED MATERIALS**

- A. Identify fire-retardant-treated wood with appropriate classification marking of Testing and Inspecting agency. Comply with performance requirements in AWWPA C20 (lumber) and AWWPA C27 (plywood).
1. Use treatment for which chemical manufacturer publishes physical properties of treated wood after exposure to elevated temperatures, when tested by a qualified independent testing agency according to ASTM D 5664, for lumber and ASTM D 5516, for plywood.
  2. Use treatment that does not promote corrosion of metal fasteners.
  3. Use Exterior type for exterior locations and where indicated.
  4. Use Interior Type A High Temperature (HT), unless otherwise indicated.
  5. Comply with 2014 New York City Building Code.

6. Products: Subject to compliance with requirements, provide one of the following:

- a. "Dricon," Hickson Corporation.
- b. "Pyro-Guard," Hoover Treated Wood Products.
- c. "Flameproof LHC-HTT," Osmose Wood Preserving Co, Inc.
- d. Approved equal.

B. Application: Treat all rough carpentry, unless otherwise indicated.

1. Concealed blocking.
2. Roof construction.
3. Plywood backing panels.

## 2.4 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:

1. Blocking.
2. Nailers.
3. Cants.
4. Furring.
5. Grounds.

B. For items of dimension lumber size, provide Standard, Stud, or No. 3 grade lumber with 15 percent maximum moisture content of any species.

C. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used if it is cut and selected to eliminate defects that will interfere with its attachment and purpose.

D. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.

E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

## 2.5 PLYWOOD BACKING PANELS

A. Telephone, Radio Room and Electrical Equipment Backing Panels: DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 1/2-inch nominal thickness.

## 2.6 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.

1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M.

- B. Nails, Brads, and Staples: ASTM F 1667.
- C. Power-Driven Fasteners: NES NER-272.
- D. Wood Screws: ASME B18.6.1.

## 2.7 MISCELLANEOUS MATERIALS

- A. Adhesives for Gluing Furring to Concrete or Masonry: Formulation complying with ASTM D 3498 that is approved for use indicated by adhesive manufacturer.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION, GENERAL

- A. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, grounds, and similar supports to comply with requirements for attaching other construction.
- B. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
  - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.
- C. Provide fire blocking in furred spaces, stud spaces, and other concealed cavities as indicated and as follows:
  - 1. Fire block furred spaces of walls, at each floor level, at ceiling, and at not more than 96 inches o.c. with solid wood blocking or noncombustible materials accurately fitted to close furred spaces.
  - 2. Fire block concealed spaces of wood-framed walls and partitions at each floor level, at ceiling line of top story, and at not more than 96 inches o.c. Where fire blocking is not inherent in framing system used, provide closely fitted solid wood blocks of same width as framing members and 2-inch nominal thickness.
  - 3. Fire block concealed spaces between floor sleepers with same material as sleepers to limit concealed spaces to not more than 100 sq. ft. and to solidly fill space below partitions.
  - 4. Fire block concealed spaces behind combustible cornices and exterior trim at not more than 20 feet o.c.

- D. Sort and select lumber so that natural characteristics will not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- E. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
  - 1. Use inorganic boron for items that are continuously protected from liquid water.
  - 2. Use copper naphthenate for items not continuously protected from liquid water.
- F. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
  - 1. NES NER-272 for power-driven fasteners.
  - 2. Fastening Schedule: As per 2014 New York City Building Code.
- G. Use common wire nails, unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood; do not countersink nail heads, unless otherwise indicated.

### 3.3 WOOD GROUND, SLEEPER, BLOCKING, AND NAILER INSTALLATION

- A. Install where indicated and where required for screeding or attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.
- B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces, unless otherwise indicated.
- C. Provide permanent grounds of dressed, pressure-preservative-treated, key-beveled lumber not less than 1-1/2 inches wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

### 3.4 WOOD FURRING INSTALLATION

- A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.
- B. Furring to Receive Plywood or Hardboard Paneling: Install 1-by-3-inch nominal- size furring horizontally and vertically at 24 inches o.c.
- C. Furring to Receive Gypsum Board: Install 1-by-2-inch nominal- size furring vertically at 16 inches o.c.

**3.5 PROTECTION**

- A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.
- B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

**END OF SECTION 06 10 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 06 16 00**

### **SHEATHING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Wall sheathing.
  - 2. Sheathing joint and penetration treatment.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

##### **1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of process and factory-fabricated product.

1.7 INFORMATIONAL SUBMITTALS

- A. Product Certificates: From water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance Ratings: As tested according to ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 WALL SHEATHING

- A. Glass-Mat Gypsum Wall Sheathing: ASTM C 1177/1177M.
- B. Products: Subject to compliance with requirements, provide one of the following:
  - 1. CertainTeed Gypsum; CertainTeed GlasRoc Type X Sheathing.
  - 2. Continental Building Products, LLC; Weather Defense.
  - 3. Georgia-Pacific Gypsum LLC; Dens-Glass Gold.
  - 4. National Gypsum Company; Gold Bond eXP Extended Exposure Sheathing.
  - 5. USG Corporation; Securock.
  - 6. Approved equal.
- C. Type and Thickness: Type X, 5/8 inch thick.
- D. Size: 48 by 96 inches for vertical installation.

## 2.3 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.
  - 1. For sheathing, provide fasteners of Type 304 stainless steel.
- B. Power-Driven Fasteners: NES NER-272.
- C. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
  - 1. For steel framing less than 0.0329-inch-thick, attach sheathing to comply with ASTM C 1002.
  - 2. For steel framing from 0.033 to 0.112-inch-thick, attach sheathing to comply with ASTM C 954.

## 2.4 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant for Glass-Mat Gypsum Sheathing Board: Silicone emulsion sealant complying with ASTM C 834, compatible with sheathing tape and sheathing, and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
- B. Sheathing Tape for Glass-Mat Gypsum Sheathing Board: Self-adhering glass-fiber tape, minimum 2 inches wide, 10 by 10 or 10 by 20 threads/inch, of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing board and with a history of successful in-service use.

## PART 3 - EXECUTION

### 3.1 INSTALLATION, GENERAL

- A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction, unless otherwise indicated.
- C. Securely attach to substrate by fastening as indicated, complying with the following:
  - 1. NES NER-272 for power-driven fasteners.
  - 2. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."
- D. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

- F. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

### 3.2 GYPSUM SHEATHING INSTALLATION

- A. Comply with GA-253 and with manufacturer's written instructions.
  - 1. Fasten gypsum sheathing to cold-formed metal framing with screws.
  - 2. Install boards with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
  - 3. Install boards with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing boards but do not cut into facing.
- C. Vertical Installation: Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
  - 1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch from edges and ends of boards.

### 3.3 SHEATHING JOINT-AND-PENETRATION TREATMENT

- A. Seal sheathing joints according to sheathing manufacturer's written instructions.
- B. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient quantity of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
- C. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing board joints and apply and trowel silicone emulsion sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.

**END OF SECTION 06 16 00**

**SECTION 06 40 23****INTERIOR ARCHITECTURAL WOODWORK****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Main desk and other desks as indicated.
2. Benches.
3. Plastic laminate- clad cabinets, shelving, vertical and horizontal supports, and other surfaces, as indicated.
4. Solid surfacing materials including window stools, countertops, vertical assemblies and other surfaces, as indicated.
5. Epoxy resin countertops at main desk.
6. Stainless steel vertical and horizontal surfaces, as indicated.
7. Cabinet hardware and accessories.
8. Coat hooks.
9. Closet and utility shelving.
10. Installation accessories.

B. Related Sections:

1. Section 05 52 13 "Pipe and Tube Railings" for handcuff rail at main desk.
2. Section 06 10 00 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing interior architectural woodwork that are concealed within other construction before interior architectural woodwork installation.
3. Section 09 66 21 "Resinous Matrix Terrazzo" for precast unit materials at main desk.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Engineered wood, not including salvaged wood, shall contain a minimum of 10% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
2. All composite wood, engineered wood, or agrifiber products (e.g., plywood, particleboard, medium density fiberboard) shall contain no added urea-formaldehyde resins. Acceptable resins and binders include, but are not limited to, phenol formaldehyde and methyl diisocyanate (MDI). Certification of these products shall be in accordance with the Submittal Requirements of this Section.
3. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies shall contain no added urea-formaldehyde resins.
4. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections, to ensure that interior architectural woodwork can be supported and installed as indicated.

#### 1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For the following:
  1. Anchors.
  2. Adhesives.

3. Shop finishing materials.
  4. Fire-Retardant Treatment: Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
- B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.
1. Show details full size.
  2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
  3. Show locations and sizes of cutouts and holes for all devices, plumbing fixtures, faucets, soap dispensers, and other items installed in architectural woodwork.
  4. Provide coordination drawings with electrical, telecommunication, fire alarm and systems by others to be incorporated into architectural woodwork.
  5. Indicate location of joints in countertops.
- C. Samples for Initial Selection:
1. Plastic laminates.
  2. Solid surface materials.
  3. Metals.
- D. Samples for Verification:
1. Plastic laminates, 8 by 10 inches, for each type, color, pattern, and surface finish, with 1 sample applied to core material.
  2. Metals, 8 by 10 inches, for each type, color, pattern, and surface finish, with 1 sample applied to core material.
  3. Solid-surfacing materials, 6-inches square.
  4. Epoxy resin countertops.
  5. Exposed cabinet hardware and accessories, one unit for each type and finish.

## 1.9 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For the following:
1. Composite wood and agrifiber products.
  2. Adhesives.
- B. Evaluation Reports: For preservative-treated and fire-retardant-treated wood materials, from ICC-ES.

## 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups of interior architectural woodwork as follows:
  - a. Typical section of the main desk, 36- inches wide, including all precast terrazzo vertical and horizontal surfaces, plastic laminates, solid surfaces, handcuff rail, shelving, blocking, fasteners, and wood elements.
    - 1) Provide any blocking and support required to allow the mockup to stand freely without obscuring portions of the mockup that will be exposed to view in the final installation.
  - b. Staff Lounge Typical Wall Cabinet: 30 inches wide, including all finishes, hardware, shelving, trims, and two cabinet doors.
  - c. Staff Lounge Typical Base Cabinet: 17 inches wide including all finishes, countertop, backsplash, hardware, shelving, drawer, trims, and cabinet door.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. Comply with the Architectural Woodwork Standards, Section 2.
- B. Do not deliver interior architectural woodwork until painting and similar finish operations that might damage woodwork have been completed in installation areas.
- C. Store woodwork in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
  1. Handle and store fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions.

#### 1.12 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install interior architectural woodwork until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.
- B. Established Dimensions: Where interior architectural woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

## PART 2 - PRODUCTS

### 2.1 WOOD MATERIALS

- A. General: Provide materials that comply with requirements of AWI's quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.
- B. Wood Species for Opaque Finish: Any closed-grain hardwood, unless otherwise indicated.
- C. Wood Products: Comply with the following:
  - 1. Hardboard: AHA A135.4.
  - 2. Softwood Plywood: DOC PS 1.
  - 3. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.
- D. Plywood: Veneer core, minimum 3/4 inch thick unless otherwise noted, interior grade using exterior type waterproof glue.

### 2.2 PLASTIC- LAMINATE SURFACES

- A. High-Pressure Decorative Laminate: NEMA LD 3, matte finish, 0.05 in. thick for all exposed surfaces; backing grade and cabinet liner grade where appropriate.
- B. Manufacturers: Subject to compliance with requirements, provide products as supplied by one of the following, as approved by the Commissioner:
  - 1. Arborite.
  - 2. Formica Group.
  - 3. Wilsonart.
  - 4. Or approved equal.
- C. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:
  - 1. Horizontal Surfaces Other Than Tops: Grade HGS.
  - 2. Postformed Surfaces: Grade HGP.
  - 3. Vertical Surfaces: Grade HGS.
  - 4. Edges: Grade HGS.
- D. Materials for Semiexposed Surfaces:
  - 1. Horizontal and Vertical Surfaces: High-pressure decorative laminate, Grade VGS.
    - a. Edges of Plastic-Laminate: Matching laminate in color, pattern, and finish.
    - b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, Grade VGS.
- E. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL.

## 2.3 SOLID- SURFACING MATERIALS

- A. Description: Homogeneous solid sheets of filled plastic resin complying with material and performance requirements in ANSI Z124.3, for Type 5 or Type 6, without a precoated finish.
- B. Manufacturers: Subject to compliance with requirements, provide products as supplied by one of the following, as approved by the Commissioner:
  - 1. E. I. Dupont.
  - 2. Wilsonart.
  - 3. Formica Group.
  - 4. Or approved equal.
- C. Solid-Surfacing-Material for Horizontal and Vertical Surfaces:
  - 1. Horizontal surfaces: 3/4 inch.
  - 2. Vertical surfaces: 1/2-inch.
  - 3. Fabricate tops and sides as indicated on the Drawings. Comply with solid-surfacing-material manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing.
    - a. Fabricate tops and sides with shop-applied edges of materials and configuration indicated on the Shop Drawings.
    - b. Drill holes in countertops for required electrical openings in shop.

## 2.4 EPOXY RESIN COUNTERTOPS

- A. Description: Factory-molded, modified epoxy-resin formulation with smooth, non-specular finish with no embossment or drip edges. Ease exposed edges.
  - 1. Thickness: 1 inch.
- B. Manufacturers: Subject to compliance with requirements, provide products as supplied by Durcon Inc. or comparable product from one of the following, as approved by the Commissioner:
  - 1. Chemtops.
  - 2. Duratop.
  - 3. Laboratory Design and Supply.
  - 4. Blair Company.
  - 5. Or approved equal.
- C. Physical Properties:
  - 1. Flexural Strength: Not less than 10,000 psi.
  - 2. Modulus of Elasticity: Not less than 2,000,000 psi.
  - 3. Hardness (Rockwell M): Not less than 100.
  - 4. Water Absorption (24 Hours): Not more than 0.02 percent.
  - 5. Heat Distortion Point: Not less than 260 deg F.
- D. Chemical Resistance: Epoxy-resin material has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.4.5:

1. No Effect: Acetic acid (98 percent), acetone, ammonium hydroxide (28 percent), benzene, carbon tetrachloride, dimethyl formamide, ethyl acetate, ethyl alcohol, ethyl ether, methyl alcohol, nitric acid (70 percent), phenol, sulfuric acid (60 percent), and toluene.
2. Slight Effect: Chromic acid (60 percent) and sodium hydroxide (50 percent).

## 2.5 STAINLESS STEEL

- A. Description: Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 304.
- B. Products: Subject to compliance with requirements, provide products as approved by the Commissioner:
- C. Specialty Steel Finish for Horizontal and Vertical Surfaces and Trim at Main desk:
  1. Sizes and Profiles: As shown on the Drawings.
  2. Material: 1/16 inch (2 mm) thick; hot-rolled, colored stainless steel with protective coating.
  3. Finish and Texture: 'Ultra Gloss' finish with mottled color as indicated on drawings.
  4. Manufacturers: Subject to compliance with requirements, provide products supplied by Pure + Freeform or comparable product from one of the following, as approved by the Commissioner:
    - a. Zahner
    - b. Forms+Surfaces
    - c. Or approved equal.
  5. Fabrication: Form custom stainless steel fabrications to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
- D. Stainless Steel for Horizontal and Vertical Surfaces and Trim:
  1. Vertical Surfaces: Provide custom fabricated siding formed from stainless steel sheet, laminated to a 3/4" thick plywood core, as indicated. Secure stainless steel sheet to surface using recommended adhesive or as indicated on the Drawings. Form and fabricate items in the shop to greatest extent possible to minimize field splicing and assembly.
  2. Horizontal Surfaces: Fabricate from 1/4-inch thick solid stainless steel sheet as indicated on the Drawings.
    - a. Sizes and Profiles: Provide horizontal and vertical surfaces, of sizes, and profiles as shown on the Drawings.
  3. Finish and Texture: No. 4, directional finish, smooth texture, match approved samples.
- E. Stainless Steel Hand Rail and Support at Desk:
  1. Performance Requirements: Refer to Section 05 52 13 "Pipe and Tube Railings."
  2. Materials: Stainless steel; refer to Section 05 52 13 "Pipe and Tube Railings" for additional information.

3. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

- a. Provide vandal proof flat head bolts as indicated and required by project application.

## 2.6 FIRE-RETARDANT-TREATED MATERIALS

- A. Comply with requirement as specified in Section 06 10 00 – Rough Carpentry and the following:
  1. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
  2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
  3. Identify fire-retardant-treated materials with appropriate classification marking of testing and inspecting agency.

## 2.7 CABINET HARDWARE AND ACCESSORIES

- A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 8 Section "Door Hardware."
- B. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081.
- C. Grommets for Cable Passage through Countertops: 2- inch OD, stainless steel grommets and matching stainless steel caps with slot for wire passage.
- D. Cabinet pulls: Stainless steel edge pull, wrapping cabinet door face and mechanically attached with two screws at interior face. 304 Stainless steel finish, 1/16 inch bent stainless steel plate. 6 inch in length, 1 15/32 inch projection, 1 inch width.
  1. Basis-of-Design, Products: Subject to compliance with requirements, provide "Richelieu, BP57606170" or comparable product from the following, as approved by the Commissioner:
    - a. Assa Abloy, Rockwood RM753
    - b. Sugatsune, SN Series
    - c. Or approved equal.
- E. Cabinet hinge: Silent, 110-degree European-style (concealed) cabinet hinge with spring closing mechanism and 3-dimensional adjustment at mounting plate. Screw attachment. Full overlay.
  1. Basis-of-Design, Products: Subject to compliance with requirements, provide "Richelieu, CLIP top hinge 110-degree # 71T355180" or comparable product from the following, as approved by the Commissioner:
    - a. Hafele, Salice PUSH 110 # C2PPA99
    - a. Sugatsune H110C-34/28
    - b. Or approved equal.

## 2.8 SHELVING AND ACCESSORIES

- A. Grade: Premium.
- B. Shelf Material: High-Pressure Decorative Laminate: Grade HGS.
- C. Shelf Brackets and Supports: Shelf brackets and supports shall be sized to support shelving widths indicated, Provide the following to suit project application, as approved by the Commissioner:
  - 1. Low- profile concealed type.
  - 2. Shelf Rests: ANSI/BHMA A156.9, B04013; metal.
  - 3. Adjustable Shelf Standards and Supports: ANSI/BHMA A156.9, B04102; with shelf brackets, B04112.
  - 4. BHMA No. B 84112, nickel zinc-plated steel.
- D. Coat Hooks:
  - 1. Description: Double- prong unit.
  - 2. Stainless steel, ASTM A480/A480M No. 4 finish (satin).
- E. Clothes Pole and Supports: Provide stainless steel clad pipe or tubing cut to lengths required, with brushed chrome flanges; with one open top.
  - 1. Size: 1- 1/16 inch O.D. with 0.087 inch wall thickness.
  - 2. Finish: Brushed.

## 2.9 MISCELLANEOUS MATERIALS

- A. Furring, Blocking and Shims: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.
- B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.
- C. Fasteners: Fasteners: All fasteners to be concealed, unless otherwise indicated, where indicated to be exposed provide material, driver type and head profile as approved by Commissioner.
  - 1. Wood Screws: FS FF-S-111, type, size, material and finish as required for the condition of use.
  - 2. Nails: FS FF-N-105, type, size, material and finish as required for the condition of use.
  - 3. Staples: Type, size, to provide sufficient strength to hold upholstered fabric taut and in place without sagging.
  - 4. Anchors: Type, size, material and finish as required for the condition of use.
- D. Adhesives:
  - 1. For Laminating Plastic Laminate Surfaces: Melamine, phenol-resin, or resorcinol-resin complying with FS MMM-A-181; type, grade and class best suited for the purpose.

2. For Countertops: Two-part epoxy or polyester adhesive, formulated specifically for bonding material to material, with an initial set time of not more than 2 hours at 70 degrees F.
  3. For Other Uses: Moisture resistant complying with FS MMM-A-125, Type II, or MMM-A-188, Type I, II or III; type best suited for the purpose.
- E. Sealants: Single-component, nonstaining neutral acid-curing silicone sealant, as per Division 07 Section "Joint Sealants."
1. Colors: As selected by the Commissioner.
- F. Inspection Agencies: Refer to Section 06 10 00 – Rough Carpentry.
- G. Grade Stamps: Refer to Section 06 10 00 – Rough Carpentry.
1. For exposed lumber furnish pieces with grade stamps applied to ends or back of each piece or omit grade stamps entirely and provide certificates of grade compliance issued by inspection agency.

## 2.10 FABRICATION, GENERAL

- A. Interior Woodwork Grade: Unless otherwise indicated, provide Premium-grade interior woodwork complying with referenced quality standard.
- B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
- C. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
1. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated on the Drawings.
- D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
1. Notify the Commissioner seven days in advance of the dates and times woodwork fabrication will be complete.
  2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.
- E. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
1. Seal edges of openings in countertops with a coat of varnish.

## 2.11 MAIN, RECEPTION AND MUSTER ROOM DESKS

- A. Fabricate cladding assemblies in one piece to the greatest extent possible. Where unavoidable, provide shop fitted hairline-type jointed assemblies with tooled edges in the profiles indicated. Comply with manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing.
- B. Provide custom fabricated supports and trim assemblies of the sizes and profiles indicated. Comply with all requirements and recommendations of AWI for premium grade materials and workmanship.

## 2.12 FINISHING

- A. Grade: Provide finishes of same grades as items to be finished.
- B. Field Finishing: The primary and prefinishing (if any) of interior architectural woodwork required to be performed at factory is work of this section. Refer to Division-9 sections for final finishing of installed architectural woodwork, requiring an opaque finish, and for material and application requirements of prime coats for woodwork not specified to receive final finish as work of this section.
- C. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.
  - 1. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require backpriming when surfaced with plastic laminate, backing paper, or thermoset decorative panels.
- D. Where finishes are indicated to be field applied, refer to Section 09 91 00 - Painting for additional opaque field applied finishes.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.
- B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

### 3.3 INSTALLATION

- A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.
- B. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 2, to extent that it was not completed in the shop.
- C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.
- D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and restore damaged finish at cuts.
- E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.
- F. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.
- G. Countertops: Anchor securely to base supports as indicated.
  - 1. Install countertops with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
  - 2. Seal space between backsplash and wall with sealant specified in Division 07 Section "Joint Sealants."
- H. Cladding: Anchor solid surface and stainless steel cladding materials to properly prepared main desk surrounds and other support systems as indicated, or as required. Use the manufacturer's premium grade neoprene-based, permanent adhesive specifically designed for this purpose.
- I. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

### 3.4 RESTORATION

- A. Restore damaged and defective interior architectural woodwork, where possible, to eliminate functional and visual defects and to result in interior architectural woodwork being in compliance with requirements of Architectural Woodwork Standards for the specified grade.
- B. Where not possible to restore, replace defective woodwork.
- C. Shop Finish: Touch up finishing work specified in this Section after installation of interior architectural woodwork.
  - 1. Fill nail holes with matching filler where exposed.
  - 2. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.

- D. Field Finish: Refer to Section 099100 "Painting" for final finishing of installed interior architectural woodwork not indicated to be shop finished.

### 3.5 CLEANING

- A. Clean interior architectural woodwork on exposed and semiexposed surfaces.

**END OF SECTION 06 40 23**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 07 10 00****FOUNDATION WATERPROOFING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 03 30 00 – Cast-In-Place Concrete
- C. Section 31 00 00 – Earthwork
- D. Section 31 50 00 – Excavation Support and Protection
- E. Section 31 61 00 – Footings
- F. Section 31 68 00 – Foundation Soil Anchor

**1.2 SUMMARY**

- A. Work of this section, as shown or specified, shall be in accordance with the requirements of the Contract Documents. Contractor shall examine all contract drawings to determine the sequence of operations and relation to work of other trades. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.
- B. Provide waterproofing in accordance with the requirements of the Contract Documents. Work of this section includes, but is not necessarily limited to, the following:
  - 1. Below-grade foundation waterproofing of horizontal (footings, pile caps including pile penetrations, footings, and slabs) and vertical foundation walls and pit walls.
  - 2. Installation accessories including sealers, flashings, fasteners, tapes, reglets, liquid membranes, and similar accessories.
  - 3. Installation of working surface for horizontal and vertical surfaces.

- 1.4 SUSTAINABLE DESIGN REQUIREMENTS
- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- 1.5 LEED BUILDING SUBMITTALS:
- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.
- 1.6 SUBMITTALS PROCEDURES
- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- 1.7 SUBMITTALS
- A. Submit the following information for review by the Commissioner:
1. Manufacturer's product data, specifications, installation instructions, product samples.
  2. Laboratory test results demonstrating the properties of the product meet or exceed the required values in Part 2.02 of this Section.
  3. Quality Assurance Submittal for the Installer.
  4. Project-specific shop drawings shall contain:
    - a. Penetrations, curbs, drains, projections, and point of entry terminations.

- b. Flashing details, including inside and outside corner reinforcement and terminations.
- c. Typical installation details, showing details at the intersection of horizontal and vertical surfaces and penetrations in the membrane system.
- d. Crack and joint treatments, including expansion joints.
- e. Interface with contiguous materials.
- f. Location of One-Phase and Two-Phase Wall pours, and overlap details at the location of transitions.
- g. Location of post-injection ports for the injectable water-stops

**B. Prior to commencing work, submit the following:**

- 1. **Contractor's Review:** Before commencing work submit written statement signed by the Installer stating that the Contract Documents have been reviewed with a qualified representative of the Manufacturer of the waterproofing system, and that he is in agreement that the selected materials are proper, compatible with contiguous materials and adequate for the application shown. Indicate by transmittal form that a copy of the statement has been sent to the Manufacturer.
- 2. **Substrate Acceptability:** Submit a certified statement issued by the Manufacturer of the waterproofing materials, and countersigned by the Installer, attesting that all areas and surfaces designated to receive waterproofing have been inspected and found satisfactory for the reception of the Work covered under this Section; and are not in conflict with the "Warranty" requirements. Installation of materials will be construed as acceptance of surfaces.

**C. Upon project closeout, submit the following:**

- 1. **Statement of Supervision:** Upon completion of Work submit a written statement signed by the Manufacturer stating that the field supervision by the Manufacturer's representative was sufficient to ensure proper application of the materials, that the Work was installed in accordance with the Contract Documents and that the installation is acceptable to the Manufacturer.
- 2. **Warranty:** Submit Manufacturer's Warranty upon date of substantial completion, further described later in this Part.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. **Contractor Qualifications:** The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) project similar in scope and type to the required work. In addition, the contractor or subcontractor must be licensed or approved by the manufacturer.
- C. **Single-Source Responsibility:** Obtain waterproofing materials from a single manufacturer regularly engaged in manufacturing waterproofing.
- D. **Pre-installation Conference:**

1. Before installing waterproofing, meet with the Commissioner, independent testing agency, waterproofing manufacturer, waterproofing trade, and other concerned entities.
  2. Review requirements for waterproofing, including surface preparation specified under other Sections waterproofing manufacturer's requirements, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, inspection and testing procedures, and protection and repairs.
  3. Notify participants at least seven days before pre-installation conference.
- E. Contractor shall provide a daily waterproofing observation report each day when there are waterproofing installation activities. Any deficiencies and non-conformances shall be recorded in the reports, which shall be sent to the Commissioner for review. The reports shall have detailed descriptions and photos of the waterproofed areas, waterproofing details, and waterproofing materials.
- F. Observation by Manufacturer's Representative and Contractor's Certification:
1. Representative of the waterproofing material manufacturer shall be required to provide field instructions and supervision for the installation of the waterproofing systems at the start of the work of this Section.
  2. The manufacturer's representative shall be required to make sure that the workmen for waterproofing systems on the site of the project are fully instructed in the handling and application of all the materials, and shall see that all the materials are correctly installed. Manufacturer's representative shall submit a waterproofing observation report to the Commissioner for review and acceptance after each site visit.
  3. Upon completion of the installation, submit to the Commissioner a certification that the manufacturer of the waterproofing material has observed the work of this Section and that all materials are installed per manufacturer recommendations and instructions.

#### 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original packaging with seals unbroken, labeled with manufacturer's name, product, date of manufacture and directions for storage.
- B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer. Protect stored materials from direct sunlight.
- C. Liquid Materials, such as adhesives, thinners, and primers, shall be stored in areas away from sparks, open flames and excessive heat.

#### 1.10 PROJECT CONDITIONS

- A. Maintain adequate ventilation during the preparation and application of waterproofing materials.
- B. Environmental Conditions: Apply waterproofing within range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.

#### 1.11 WARRANTY

- A. Special Warranty: Submit a written warranty signed by waterproofing manufacturer agreeing to repair or replace waterproofing that does not meet requirements or that does not remain watertight during the specified warranty period.
  - 1. Warranty Period: 2 years after the date of "Substantial Completion."
  - 2. Manufacturer to perform periodic site visit inspections to verify installation in accordance with Manufacturer's recommendations and requirements.

#### 1.12 PROTECTION

- A. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.
- B. Against Traffic: Do not permit traffic on horizontally installed work of this Section, except for workmen doing the work, during the installation, and after the installation until membrane systems are covered with protective boards or with the specified finishing materials.
- C. Against Damage: Protect vertically installed work of this section from damage by reinforcing and placement.
  - 1. Take and maintain necessary preventative measures to protect work of this Section from damage until Project is accepted.
  - 2. Rejection of Damaged Work
    - a. Damaged materials or work will be rejected.
    - b. Rejected materials or work must be immediately removed and replaced with new materials.

#### 1.13 SUBSURFACE STRUCTURES AND UTILITIES

- A. The Contractor shall become acquainted with the existence and location of all surface and subsurface structures and utilities within the project area and beneath the surrounding streets. Contractor shall not damage any of those that are to remain and shall leave them accessible and make the necessary provision by sheeting, hanging, supporting or other means necessary to obtain this result, subject to the approval of the New York City Transit Authority, New York City Building Department and Department of Transportation, and the utility companies involved.

#### 1.14 DEFINITIONS

- A. Temporary Support System: Support system utilized to support earth excavation sides. Support system includes but not limited to anchors, soldier piles, concrete piers, rakers, lagging, etc.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- A. Provide below grade foundation vapor barrier and waterproofing system of vertical foundation walls, horizontal slabs, pits, and pile caps. The vapor barrier shall consist of 20 mil polyethylene or approved equal. Subject to compliance with requirements, waterproofing shall be manufactured by one of the following approved manufacturers:
  - 1. GCP Applied Technologies (Basis-of-Design)
  - 2. Carlisle Coatings and Waterproofing

3. CETCO
4. Or approved equivalent.
- B. Horizontal Applications, horizontal surfaces below slabs, and Sidewalks: "Preprufe 300R" as specified on Contract Documents, or an equivalent product from approved manufacturer listed above.
- C. Vertical Applications, "Blind-Side Walls", or "One-Phase Walls". Conditions: "Preprufe 160R", as specified on Contract Documents, or an equivalent product from approved manufacturer listed above.
- D. Vertical Applications, "Two-Phase Walls". Conditions: "Bituthene 4000", as specified on contract documents, or an equivalent product from approved manufacturer listed above.
- E. Waterproofing Protection: 1/4-inch-thick semi-rigid protection board, Bituthene Asphaltic Hardboard, or an equivalent product from approved manufacturer listed above.
- F. Waterstops, at the interface between concurrent concrete pours (e.g., slab to wall interface), shall consist of the multiple injection grout hose – "TRIOject" manufactured by de neef, or an equivalent product from approved manufacturer listed above.
- G. Vapor Barrier shall meet or exceed the requirements specified for Class A performance in ASTM E175-11 standard specification for plastic water vapor retarders used in contact with soil or granular fill under concrete slabs.
- H. Provide "One-Phase Wall" waterproofing complying with the following:
  1. Tensile Strength, Film: 4,000 psi minimum; ASTM D412
  2. Low-Temperature Flexibility: Unaffected at -10°F; MOAT 31:6D.
  3. Peel Adhesion to Concrete: 5 lbs/in; MOAT 27:5.1.3.
  4. Lap Adhesion: 2.5 lbs/in minimum; ASTM D1876, modified.
  5. Hydrostatic-Head Resistance: 231 feet; ASTM D5385, modified.
- I. Provide "Two-Phase Wall" waterproofing complying with the following:
  1. Compressive Strength: 3,000 psi minimum; ASTM C109, modified
  2. Bond/Adhesion: 220 psi minimum; ASTM C321
  3. Hydrostatic-Head Resistance: 234 ft; ASTM D5385, modified.

## 2.2 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for the intended use and compatible with waterproofing sheet membrane.
- B. Furnish liquid-type auxiliary materials that meet VOC limits of the DDC General Conditions.
- C. Primer: Liquid primer recommended by the manufacturer of sheet waterproofing material for the substrate.
- D. Sheet Flashing: Self-adhering, rubberized asphalt composite sheet of same material, construction and thickness as waterproofing sheet membrane.

- E. Liquid membrane: Elastomeric, 2-component, liquid, cold-fluid applied, trowel grade or low viscosity, as recommended by waterproofing manufacturer and vapor barrier manufacturer for the application.
- F. Patching Membrane: Low-viscosity, 2-component, asphalt modified coating.
- G. Mastic, Adhesives, and Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer and vapor barrier manufacturer.
- H. Penetration Seal: Self-adhering reinforced membrane, 2 ½-inches wide, with a tack-free protective adhesive coating on one side and release the film on the self-adhering side.
- I. Metal Termination Bars: Aluminum bars, approximately 1-inch by 1/8-inch thick, predrilled at 22-mm-centers.
- J. Waterproofing Protection: 1/4" thick semi-rigid protection board.
- K. Vapor Barrier Protection: Approved manufacturer's rigid protection board.
- L. Protection Board Adhesive: Protection board adhesive recommended by the manufacturer to secure protection board to waterproofing membrane.
- M. Joint Tape: 1/16 inches felt reinforced self-adhesive tape, 6-inches wide, with a release film on the adhesive side.

## 2.3 CONCRETE WORKING SLAB

- A. Concrete fill shall be composed of materials proportioned to provide a minimum compressive strength of at least 3,000 psi at 28 days. Slump shall be between 4 and 7 inches at the time of placement. All other requirements related to concrete transportation, handling, etc. shall conform to the requirements of the applicable specifications of the American Concrete Institute (ACI).

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions under which waterproofing systems will be applied, with Installer present, for compliance with requirements. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Do not proceed with installation until after minimum concrete curing period recommended by waterproofing manufacturer.
- C. Verify substrate is visibly dry and free of moisture. Test for capillary moisture for plastic sheet method according to ASTM D4263.
- D. Notify Commissioner in writing of anticipated problems using waterproofing over the substrate.

### 3.3 SUBGRADE SURFACE PREPARATION

- A. Clean, prepare, and treat working surface according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.

- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage affecting other construction.
- C. Remove grease, oil, form release agents, and other penetrating contaminants.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
- E. Prepare, fill, prime, and treat joints and cracks in the substrate. Remove dust and dirt from joints and cracks according to ASTM D4258.
- F. Install membrane strip and center over construction and control joints and cracks exceeding a width of 1/16 inch.
- G. Inside Corners: Prepare, prime, and treat inside corners according to waterproofing manufacturer's written instructions.
- H. Install membrane strip centered over vertical inside corners. Install 19 mm fillets of the liquid membrane on horizontal inside corners. All pile cap-to-wall intersections extend liquid membrane each direction from corner or install membrane strip centered over the corner.
- I. Outside Corners: Prepare and treat outside corners according to waterproofing manufacturer's written instructions.
  - 1. Install strips of membrane 12-inches-wide, centered over the corner.
- J. Prepare, treat, and seal horizontal and vertical surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to waterproofing manufacturer's written instructions.
  - 1. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge and cover with sheet membrane strips.

### 3.4 SOIL SUBGRADE PREPARATION

- A. Install a minimum 3-inch-thick concrete working slab beneath all building slabs, pits and foundations receiving waterproofing.
- B. Prepare the surface of concrete working slab in accordance with paragraph 3.2 above.
- C. Place membrane waterproofing directly on top of concrete working slab, in accordance with paragraph 3.2 above.

### 3.5 PREPARATION FOR VERTICAL BLINDSIDE (ONE-PHASE WALLS) APPLICATIONS

- A. Provide a continuous, smooth, rigid vertical facing to receive the waterproofing material per manufacturer's recommendations. The material may consist of plywood or rigid insulation. Vertical bracing to be sufficiently braced and supported so as not to displace during placement of concrete.
- B. Support of Excavation Systems (Steel sheet piles, etc.) must be treated with a rigid facing.
- C. Timber lagging must be close-buttressed to provide support and to be less than 0.5 inches out of plumb.

### 3.6 INSTALLATION OF WATERPROOFING FOR ACCESSIBLE WALLS (TWO-PHASE WALLS)

- A. General: Conform to recommendations and published specifications of the manufacturer including environmental requirements.
- B. Wall Applications
  - 1. General: The membrane, when in place, must withstand a minimum static groundwater pressure of 150 feet.
  - 2. Priming: Application of primer shall be limited to what can be covered with post-applied waterproofing membrane in a given work day. Primed areas not covered by membrane during the work day will be reprimed. Apply primer by spray, roller or brush at a rate of 250 - 350 sq. ft. per gallon. Roller shall be natural material such as lamb's wool, having a nap of approximately one inch. Primer shall be applied to a clean, dry, frost-free and dust-free surface. Sufficient primer must be used on the day surface to condition it to a dust-free state suitable for the application of post-applied waterproofing membranes.
    - a. Post-applied Waterproofing Surface Conditioner shall not be applied below 40 deg. F. on vertical surfaces. Allow primer to dry 30 minutes.
  - 3. Membrane Installation: Apply post-applied waterproofing membrane vertically in sections of 8 feet in length or less. On higher walls apply two or more sections with the upper overlapping the lower by at least 2.5 inches. Press all membrane in place with heavy hand pressure or rollers during application.
  - 4. Sealing Edges: Post-applied waterproofing membrane shall be applied over the edge of the slab or the top of the foundation or parapet wall. If the membranes are terminated on the vertical surface, a reglet or counter flashing may be used, or the membrane may be terminated directly on the vertical surface by pressing very firmly to the wall. Press edges with a metal or hardwood tool such as a hammer or knife handle. Apply a troweled bead of post-applied waterproofing mastic to all vertical and horizontal terminations. Waterproofing liquid membrane can be used as an alternative method at the Contractor's option. Refer to Contract Drawings for termination details.
  - 5. Sealing Seams: All edges and end seams must be overlapped at least 2.5 inches. Apply succeeding sheets with a minimum 2.5 inches overlap and stagger end laps. Roll or press the entire membrane firmly and completely as soon as possible. Patch misaligned or inadequately lapped seams with post-applied waterproofing membrane. Slit any fish mouths, overlap the flaps, and repair with a patch of post-applied waterproofing membrane and press or roll in place. The edges of the patch shall be sealed with a troweling of mastic. Laps within 12 inches of all corners shall be sealed with a troweling of mastic.
  - 6. Corner Forming: Outside corners must be free of sharp edges. Inside corners shall receive a fillet formed with waterproofing liquid membrane, latex-modified cement mortar, mixed with cement mortar or epoxy mortar. Do not use fiber or wood cants. One of two methods may be used for treating corners at the Contractor's option:
    - a. Apply waterproofing liquid membrane 6 inches in each direction from the corner and form a fillet with a minimum 3/4-inch face.
    - b. Install an 11-inch minimum strip of post-applied waterproofing membrane centered on the corner. Install post-applied waterproofing membrane over the treated inside and outside corners.

7. Over waterproofing, apply protection, and/or drainage composite board per contract documents by adhering board to the cured membrane using tape or adhesive per manufacturer's recommendations.
8. Seal penetrations through the membrane to provide a watertight seal with penetration seal patches or wrapping and liquid membrane fillet as recommended by the waterproofing system manufacturer.

### 3.7 INSTALLATION OF WATERPROOFING FOR BLINDSIDE WALLS (ONE PHASE WALLS) AND UNDERSLAB WATERPROOFING

- A. General: Install blindside wall membrane sheet according to waterproofing manufacturer's written instructions.
- B. Wall Applications
  1. Refer to manufacturer's literature for complete installation instructions not limited to the following:
    - a. Apply membrane in accordance with the manufacturer's recommendations to the soil retention system or adjacent foundation.
    - b. Apply succeeding sheets by overlapping the previous sheet 3 inches along the uncoated edge of the membrane.
    - c. Overlap the ends of the membrane 3 inches. Apply waterproofing tape centered over the end lap and roll firmly. Remove release liner.
    - d. Concrete must be poured within 30 days of membrane application.
    - e. Protect membrane until concrete pour.
    - f. If membrane ties into a vertical membrane, leave an additional 12-inch flap of blindside wall membrane to tie into post-applied waterproofing membrane.
- C. Underslab Applications
  1. Refer to manufacturer's literature for complete installation instructions not limited to the following:
    - a. Apply membrane in accordance with the manufacturer's recommendations to the approved substrate. Remove the release liner and fasten membrane to substrate firmly.
    - b. Apply a waterproofing liquid membrane termination bead at the edge of the sheet membrane.
    - c. Secure the sheet membrane and liquid membrane by applying Waterproofing Tape centered over the end lap and roll firmly. Remove the release liner.
    - d. Concrete must be poured within 30 days of membrane application.
    - e. Protect waterproofing membrane until concrete pour.

### 3.8 SEAM REINFORCEMENT FOR BLINDSIDE WATERPROOFING SHEETS ONLY

- A. Provide a 6-inch strip of Waterproofing Tape centered behind all laps.

- B. At locations where a salvage edge is not present and at end laps, lap sheets 6 inches, apply a 1/8-inch thick by 6-inch wide application of liquid membrane between sheets, to provide a 6-inch wide seal.
- C. Integration of old onto new Blindside Sheet Membrane.
  - 1. Integration of sheet membrane onto sheet membrane that has been installed in excess of 30 days prior.
    - a. Lap sheets 12 inches, apply a 1/8-inch thick by 12-inch wide application of fluid membrane between sheets, to provide a 12-inch wide seal at this location.
    - b. Install Waterproofing Tape centered at the edge of lap and roll firmly into place with an approved roller.
    - c. Install additional Waterproofing Tape to cover white film that has been installed over 30 days prior.
  - 2. Patching Damaged Blindside Sheet Membrane
    - a. Scratch on white coating exposing underlying black surfacing of sheet membrane: Install waterproofing tape at areas where the white coating of the membrane is damaged, including boot scuff marks and abrasions by rebar.
    - b. Damage or Puncture of sheet membrane: Install patch of sheet membrane set in liquid membrane. The patch must extend 3 inches in every direction around the extent of the damaged area. Install waterproofing tape centered over the edge of the patch. If the damaged area does not have 5 inches of sound material around it, inject liquid membrane into puncture until liquid membrane backs out, and proceed with the patch as space allows.

### 3.9 PROTECTING AND CLEANING

- A. Protect waterproofing from damage and wear during application and remainder of the construction period, especially during installation of steel reinforcement, according to manufacturer's written instructions.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by the manufacturer of affected construction.
- C. Horizontal Applications: Protect the top surface of the membrane with protection board from punctures, tears, or burns.
- D. Vertical Applications: Protect membrane waterproofing from damage due to the uneven substrate. This includes placement of a rigid barrier such as plywood or rigid insulation between the membrane waterproofing and the soil backfill material.

**END OF SECTION 07 10 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 07 21 00**

### **THERMAL INSULATION**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

A. Section Includes:

1. Extruded polystyrene foam-plastic board.
2. Polyisocyanurate foam-plastic board.
3. Glass- fiber blanket.
4. Mineral- wool blanket.
5. Installation accessories.

B. Related Sections:

1. Section 03 45 00 "Precast Architectural Concrete."
2. Section 04 20 00 "Unit Masonry."
3. Section 06 16 00 "Sheathing" for foam-plastic board sheathing installed directly over steel framing.
4. Section 07 52 16 "SBS Modified Bituminous Membrane Roofing" for roof insulation requirements.
5. Section 08 44 13 - Glazed Aluminum Curtain Walls for mineral- wool insulation at shadow boxes.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.7 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- B. Evaluation Reports: For foam-plastic insulation, from ICC-ES.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. On-site Facade Mockups: Include as part of on-site facade mockup required by other sections, as indicated on the drawings, work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  - 1. Provide each type of insulation installation in sizes, quantities, and configuration indicated on the drawings.
  - 2. Incorporate full-scale details of the architectural features, approved finished and textures, brackets and attachment components required for installation.
  - 3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
  - 4. Maintain on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect foam-plastic board insulation as follows:
  - 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
  - 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
  - 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

## PART 2 - PRODUCTS

### 2.1 FOAM-PLASTIC BOARD INSULATION

- A. Extruded polystyrene boards in this article are also called "XPS boards." Roman numeral designators in ASTM C 578 are assigned in a fixed random sequence, and their numeric order does not reflect increasing strength or other characteristics.
- B. Exterior wall insulation below grade at foundation walls, grade beams, and exposed edges of slabs on grade. Provide the following types as indicated and required by project application:
  - 1. Extruded Polystyrene Board, Type VI: ASTM C578, Type VI, 40-psi minimum compressive strength; maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E84.
  - 2. Type VI, Drainage Panels, 40-psi minimum compressive strength; unfaced; maximum flame-spread and smoke-developed indexes of 25 and 450, respectively, per ASTM E 84; fabricated with shiplap or channel edges and with one side having grooved drainage channels.
  - 3. Minimum thermal resistance by nominal thickness, as determined using ASTM C518 at 75 degrees mean temperature: R-5 per inch.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  - 1. Dow Chemical Company (The); STYROFOAM Brand insulation.
  - 2. DiversiFoam Products.
  - 3. Kingspan Insulation Limited.
  - 4. Owens Corning;
  - 5. Or approved equal.

### 2.2 POLYISOCYANURATE FOAM-PLASTIC BOARD INSULATION

- A. Exterior Insulation above grade- Polyisocyanurate Board, Glass-Fiber-Mat Faced: ASTM C 1289, glass-fiber-mat faced, Type II, Class 2.
  - 1. Minimum thermal resistance by nominal thickness, as determined using ASTM C518 at 75 degrees mean temperature, for thickness as follows:
    - a. 2 inch - R-12.1.
    - b. 3 inch - R-18.5.
    - c. 4 inch - R-25.0.
- B. Precast Concrete Panel Insulation: ASTM C 591, Type I, 1.8 lbs. per cu. ft., unless higher density required to obtain project thermal resistance; unfaced, with thickness of 4 inches.
  - 1. Minimum Thermal resistance: R- 25.
- C. Manufacturers: Subject to compliance with requirements, provide products as supplied by Rmax, Inc. or comparable product from one of the following, as approved by the Commissioner:
  - 1. Carlisle Coatings & Waterproofing Inc.
  - 2. Hunter Panels.
  - 3. Or approved equal.

- D. Fire Propagation Characteristics, where required by project application: Passes NFPA 285 testing as part of an approved assembly.

## 2.3 GLASS-FIBER BLANKET INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  - 1. CertainTeed Corporation.
  - 2. Guardian Building Products, Inc.
  - 3. Johns Manville.
  - 4. Knauf Insulation.
  - 5. Owens Corning.
  - 6. Or approved equal.
- B. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

## 2.4 MINERAL-WOOL BLANKETS

- A. Mineral-Wool Blanket, Unfaced: ASTM C665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E84; passing ASTM E136 for combustion characteristics.
- B. Products: Subject to compliance with requirements, provide one of the following, as approved by the Commissioner:
  - 1. Johns Manville; a Berkshire Hathaway company; MinWool Sound Attenuation Fire Batt.
  - 2. Rockwool International; AFB, AFB evo, or COMFORTBATT.
  - 3. Thermafiber, Inc.; an Owens Corning company; FS-15 or SAFB (Sound Attenuation Fire Blankets).
  - 4. Or approved equal.

## 2.5 INSULATION FASTENERS

- A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
  - 1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following, as approved by the Commissioner:
    - a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
    - b. Gemco; Spindle Type.
    - c. Gripnail Fastening Systems.
    - d. Or approved equal.
  - 2. Plate: Perforated, galvanized carbon-steel sheet, 0.030-inch-thick by 2 inches square.
  - 3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.

- B. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.
  - 1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following, as approved by the Commissioner:
    - a. ADO Products.
    - b. AGM Industries, Inc.; RC150 or SC150.
    - c. Gemco; Dome-Cap, R-150 or S-150.
    - d. Or approved equal.
  - 2. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
    - a. Provide capped washers to tops of spindles where foundation wall insulation is not covered by building materials and where indicated.
- C. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.
  - 1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following, as approved by the Commissioner:
    - a. AGM Industries, Inc.; TACTOO Adhesive.
    - b. Gemco; Tuff Bond Hanger Adhesive.
    - c. SIMPSON STRONG-TIE; Epoxy Anchor Adhesive.
    - d. Or approved equal.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 PREPARATION

- A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

#### 3.3 INSTALLATION, GENERAL

- A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

- D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

### 3.4 INSTALLATION OF FOUNDATION WALL INSULATION

- A. Butt panels together for tight fit.
- B. Anchor Installation: Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:
  - 1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application.
  - 2. Apply insulation standoffs to each spindle to create cavity width indicated on Drawings between concrete substrate and insulation.
  - 3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation.
  - 4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

### 3.5 INSTALLATION OF WALL INSULATION

- A. Install pads of adhesive spaced approximately 24 inches o.c. both ways on inside face and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates.
  - 1. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Section 04 20 00 "Unit Masonry."

### 3.6 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

- A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.
- B. Glass-Fiber Insulation: Install in cavities formed by framing members according to the following requirements:
  - 1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
  - 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
  - 3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
  - 4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
  - 5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings and seal each continuous area of insulation to ensure airtight installation.

- a. Exterior Walls: Set units with facing placed toward interior of construction.
  - b. Interior Walls: Set units with facing placed toward areas of high humidity.
- C. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:

### 3.7 INSTALLATION OF INSULATION FOR SOUND ATTENUATION

- A. Where mineral fiber blankets are indicated for sound attenuation, install blanket insulation solid between framed spaces in thicknesses indicated.

### 3.8 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
- B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

**END OF SECTION 07 21 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 07 21 19****FOAMED-IN- PLACE INSULATION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Closed-cell spray polyurethane foam.
2. Installation accessories.

B. Related Sections:

1. Section 03 45 00 "Precast Architectural Concrete."
2. Section 07 42 13 "Insulated Metal Wall Panels."
3. Section 08 44 13 "Glazed Aluminum Curtain Walls."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Engineered wood, not including salvaged wood, shall contain a minimum of 10% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
2. All composite wood, engineered wood, or agrifiber products (e.g., plywood, particleboard, medium density fiberboard) shall contain no added urea-formaldehyde resins. Acceptable resins and binders include, but are not limited to, phenol formaldehyde and methyl diisocyanate (MDI). Certification of these products shall be in accordance with the Submittal Requirements of this Section.

3. Laminating adhesives used to fabricate on-site and shop-applied composite wood and agrifiber assemblies shall contain no added urea-formaldehyde resins.
4. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.

#### 1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- C. Evaluation Reports: For spray-applied polyurethane foam-plastic insulation, from ICC-ES.

#### 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. On-site Facade Mockups: Include as part of on-site facade mockup required by other sections, as indicated on the drawings, work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  1. Provide complete foamed-in-place insulation installation in sizes, quantities, and configuration indicated on the drawings.
  2. Incorporate full-scale details of the architectural features, approved finished and textures, brackets and attachment components required for installation.
  3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.

- D. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

## PART 2 - PRODUCTS

### 2.1 CLOSED-CELL SPRAY POLYURETHANE FOAM

- A. Closed-Cell Spray Polyurethane Foam: ASTM C 1029, Type II, minimum density of 1.5 lbs. per cu. ft. and minimum aged R-value at 1-inch thickness of 6.5 deg F x h x sq. ft./Btu at 75 deg F.
- B. Basis of Design, Products: Subject to compliance with requirements, provide one of the following to suit project application:
  - 1. Icynene MD- C- 200, Icynene ProSeal, or Ecolcynene ProSeal LE as supplied by Icynene- Lapolla, or comparable product from one of the following, as approved by the Commissioner:
    - a. Dow Chemical Company (The); STYROFOAM Spray Polyurethane Foam Insulation.
    - b. Gaco Western LLC.
    - c. SWD Urethane Company.
    - d. Volatile Free, Inc.
    - e. Or approved equal.

### 2.2 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by insulation manufacturer where required for adhesion of insulation to substrate.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Verify that substrates are clean, dry, and free of substances that are harmful to insulation.
- B. Priming: Prime substrates where recommended by insulation manufacturer. Apply primer to comply with insulation manufacturer's written instructions. Confine primers to areas to be insulated; do not allow spillage or migration onto adjoining surfaces.

### 3.3 INSTALLATION

- A. Comply with insulation manufacturer's written instructions applicable to products and applications.

- B. Apply in multiple passes to not exceed maximum thicknesses recommended by manufacturer.  
Do not spray into rising foam.

#### 3.4 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.

**END OF SECTION 07 21 19**

## **SECTION 07 27 26**

### **FLUID-APPLIED MEMBRANE AIR BARRIERS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Vapor- permeable fluid-applied air barriers.
  - 2. Installation accessories.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

##### **1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 COORDINATION**

- A. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.

**1.7 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

**1.8 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For air-barrier assemblies.
  - 1. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

**1.9 INFORMATIONAL SUBMITTALS**

- A. Product certificates.
- B. Product test reports.
- C. Field quality-control reports.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Mockups: Build mockups to set quality standards for materials and execution.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction shall be capable of performing as a continuous air barrier. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
- B. Physical and Performance Properties:
  - 1. Air Permeance: As indicated by manufacturers product designation; per ASTM E2178.

2. Vapor Permeance: As indicated by manufacturers product designation; per ASTM E96/E96M, Desiccant Method.
3. Elongation: As indicated by manufacturers product designation; per ASTM D412, Die C.
4. Adhesion to Substrate: As indicated by manufacturers product designation; when tested according to ASTM D4541.
5. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

## 2.2 HIGH-BUILD AIR BARRIERS, VAPOR PERMEABLE

- A. High-Build, Vapor-Permeable Air Barrier: Synthetic polymer membrane with an installed dry film thickness, according to manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrate.
- B. Products: Subject to compliance with requirements, provide one of the following or equal product, as approved by the Commissioner:
  1. GCP Applied Technologies Inc.; Perm-A-Barrier VP.
  2. Henry Company; Air-Bloc 17MR.
  3. Tremco Incorporated; ExoAir 230.
  4. Or approved equal.

## 2.3 ACCESSORY MATERIALS

- A. Requirement: Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
- B. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.
- C. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.
  1. Comply with Section 07 92 00 - Joint Sealants.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
  1. Verify that substrate is sound and free of oil, grease, dirt, excess mortar, or other contaminants.

2. Verify that substrate has cured and aged for minimum time recommended in writing by air-barrier manufacturer.
3. Verify that substrate is visibly dry and free of moisture.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 SURFACE PREPARATION

- A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.
- B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
- C. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.
- D. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
- E. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

### 3.4 INSTALLATION

- A. Install materials according to air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.
  1. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
  2. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
  3. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.
- B. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.
- C. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply transition strip so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.
- D. Restore punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond restored areas in strip direction.
- E. Apply continuous unbroken air-barrier material to substrates according to the following thickness. Apply air-barrier material in full contact around protrusions such as masonry ties.
- F. Do not cover air barrier until it has been tested and inspected by testing agency.

- G. Correct deficiencies in or remove air barrier that does not comply with requirements; restore substrates and reapply air-barrier components.

### 3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Where required by project application, City of New York will engage a qualified testing agency to perform tests and inspections.
- B. Tests: As determined by testing agency from among the following tests:
  - 1. Air-barrier dry film thickness.
  - 2. Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E1186, chamber pressurization or depressurization with smoke tracers.
  - 3. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate according to ASTM E783 or ASTM E2357.
  - 4. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate according to ASTM D4541 for each 600 sq. ft. of installed air barrier or part thereof.
- C. Air barriers will be considered defective if they do not pass tests and inspections.
  - 1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
  - 2. Remove and replace deficient air-barrier components for retesting as specified above.
- D. Restore damage to air barriers caused by testing; follow manufacturer's written instructions.
- E. Prepare test and inspection reports.

### 3.6 CLEANING AND PROTECTION

- A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
- B. Remove masking materials after installation.

**END OF SECTION 07 27 26**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 07 42 13**

### **INSULATED METAL WALL PANELS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:

- 1. Foamed- insulation- core metal wall panels.
  - 2. Installation accessories.

- B. Related Sections:

- 1. 05 40 00 "Cold-Formed Metal Framing" for related metal framing at insulated metal panel wall and soffit areas.
  - 2. 07 21 00 "Thermal Insulation" for related insulating materials
  - 3. Section 07 92 00 "Joint Sealants" for elastomeric joint sealants and sealant backings.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

- 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

- 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

#### 1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
- C. Samples: For each type of metal panel indicated.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each product, tests performed by a qualified testing agency.
- C. Field quality-control reports.
- D. Sample Warranties: For special warranties.

1.10 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For metal panels to include in maintenance manuals.

1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Manufacturer Qualifications: Manufacturer providing the material used in this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- C. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- D. On-site Facade Mockup: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  - 1. Provide complete insulated metal panel system in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
  - 2. Incorporate full-scale details of the architectural features, sealant joints, and trim to be provided at full-scale building.
  - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  - 4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
- B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
- C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
- D. Retain strippable protective covering on metal panels during installation.

1.13 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

**1.14 WARRANTY**

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Two years from date of Substantial Completion.
- B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to restore finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
  - 1. Finish Warranty Period: 20 years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E72:
  - 1. Wind Loads: As indicated on Drawings.
  - 2. Other Design Loads: As indicated on Drawings.
  - 3. Deflection Limits: For wind loads, no greater than 1/240 of the span.
- B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. when tested according to ASTM E283 at the following test-pressure difference:
  - 1. Test-Pressure Difference: 6.24 lbf/sq. ft.
- C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at the following test-pressure difference:
  - 1. Test-Pressure Difference: 6.24 lbf/sq. ft...
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
  - 1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
- E. Fire-Test-Response Characteristics: Provide metal wall panels and system components with the following fire-test-response characteristics, as determined by testing identical panels and system components per test method indicated below by UL or another testing and inspecting agency acceptable to New York City Department of Buildings and New York City Department of Buildings. Identify products with appropriate markings of applicable testing agency.
  - 1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E119.
  - 2. Radiant Heat Exposure: No ignition when tested according to NFPA 268.
  - 3. Potential Heat: Acceptable level when tested according to NFPA 259.

4. Surface-Burning Characteristics: Provide wall panels with a flame-spread index of 25 or less and a smoke-developed index of 450 or less, per ASTM E84.

## 2.2 FOAMED-INSULATION-CORE METAL WALL PANELS

- A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and insulation core foamed in place during fabrication, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
  1. Insulation Core: Modified isocyanurate or polyurethane foam using a non-CFC blowing agent, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.
    - a. Closed-Cell Content: 90 percent when tested according to ASTM D6226.
    - b. Density: 2.0 to 2.6 lbs. per cu. ft. when tested according to ASTM D1622.
    - c. Compressive Strength: Minimum 20 psi when tested according to ASTM D1621.
    - d. Shear Strength: 26 psi when tested according to ASTM C273.
    - e. Thermal performance for 3 inch panel: R- 22 in accordance with ASTM C1363.
- B. Concealed-Fastener, Foamed-Insulation-Core Metal Wall Panels: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
    - a. CENTRIA Architectural Systems.
    - b. Kingspan Insulated Panels.
    - c. MBCI.
    - d. Metl-Span.
    - e. Approved equal.
  2. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A653/A653M, G90 coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A792/A792M, Class AZ50 coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A755/A755M.
    - a. Nominal Thickness: 0.028 inch.
    - b. Exterior Finish: Three-coat fluoropolymer.
      - 1) Color: As selected by Commissioner from manufacturer's full range.
    - c. Interior Finish: Siliconized polyester.
      - 1) Color: As indicated by manufacturer's designations.
  3. Panel Thickness: 3 inch nominal, unless otherwise indicated.

## 2.3 MISCELLANEOUS MATERIALS

- A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed, metallic-coated steel sheet, ASTM A653/A653M, G90 coating designation or ASTM A792/A792M, Class AZ50 aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.
- B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
  - 1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
  - 2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
  - 3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch-thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.
- D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.
- E. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
  - 1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing; 1/2-inch-wide and 1/8 inch thick.
  - 2. Joint Sealant: ASTM C920; as recommended in writing by metal panel manufacturer.
  - 3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

## 2.4 FABRICATION

- A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
- B. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.
- C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

## 2.5 FINISHES

### A. Panels and Accessories:

1. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrate, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
1. Examine framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
  2. Examine sheathing to verify that sheathing joints are supported by framing or blocking, and that installation is within flatness tolerances required by metal wall panel manufacturer.
    - a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
- B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754 and metal panel manufacturer's written recommendations.

### 3.4 INSULATED METAL WALL PANEL INSTALLATION

- A. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.
  - 1. Fasten foamed-insulation-core metal wall panels to supports with fasteners at each lapped joint at location and spacing and with fasteners recommended by manufacturer.
  - 2. Apply panels and associated items true to line for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
  - 3. Provide metal-backed washers under heads of exposed fasteners on weather side of insulated metal wall panels.
  - 4. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
  - 5. Provide sealant tape at lapped joints of insulated metal wall panels and between panels and protruding equipment, vents, and accessories.
  - 6. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weathertight.
- B. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
- C. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level. Install work with laps, joints, and seams that are permanently watertight.

### 3.5 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.
- B. Metal wall panels will be considered defective if they do not pass test and inspections.
- C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.
- D. Prepare test and inspection reports.

### 3.6 CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions.
- B. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

**END OF SECTION 07 42 13**

## **SECTION 07 52 16**

### **SBS MODIFIED BITUMINOUS MEMBRANE ROOFING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Hybrid roofing system that combines built-up ply sheets with styrene-butadiene-styrene (SBS)-modified bituminous cap sheet.
  - 2. Substrate board.
  - 3. Roof insulation.
  - 4. Cover board.
  - 5. Walkways.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 COORDINATION

- A. Coordinate attachment of rubber roof paver tile with paver manufacturer and installer to ensure proper adhesion to roof membrane. Coordinate shop drawings with rubber roof paver tile system.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing.
- B. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:
  - 1. Layout and thickness of insulation.
  - 2. Base flashings and membrane terminations.
  - 3. Flashing details at penetrations.
  - 4. Tapered insulation, including slopes.
  - 5. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
  - 6. Crickets, saddles, and tapered edge strips, including slopes.
  - 7. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
  - 8. Tie-in with adjoining air barrier.
- C. Wind Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

1.8 INFORMATIONAL SUBMITTALS

- A. Manufacturer Certificates:
  - 1. Performance Requirement Certificate: Signed by roof membrane manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
  - 2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.

1.9 CLOSEOUT SUBMITTALS

- A. Maintenance data.

1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer performing the work of this section shall be a company regularly engaged in performing roofing projects with its own workforce and have successfully completed

in a timely fashion at least three (3) roofing projects similar in scope, size and type to the required work within the last three (3) consecutive years prior to the bid opening.

1. At least one of those projects shall have been performed within the last twelve (12) months.
2. The three (3) qualifying projects shall have utilized one or more of the roofing systems specified for the project being bid herein, been installed by the company utilizing its own workforce and shall have qualified for, and have been issued, the warranty provided by the manufacturer of the roofing system.
3. In addition, the installer shall be a certified or authorized installer of selected manufacturer for this project roofing system and shall submit proof of same.

#### 1.11 WARRANTY

- A. Special Warranty: Manufacturer agrees to restore or replace components of roofing system that fail in materials or workmanship within specified warranty period.
  1. Warranty Period: 20 years from date of Substantial Completion.
- B. Include rubber roof paver tile as an overburden item in the Roof system warranty.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide one of each of the following products, as approved by the Commissioner.
- B. Asphalt Primer and Asphalt:
  1. Johns Manville Roofing Systems Group.
  2. GAF Building Materials Corp.
  3. Tamko Asphalt Products.
  4. Approved equal.
- C. Base Sheet:
  1. Johns Manville; GlasPly Premier.
  2. GAF; GAFGLAS #75.
  3. Tamko; Glass-Base.
  4. Approved equal.
- D. Vent Base Sheet:
  1. Johns Manville; Ventsulation.
  2. GAF; GAFGLAS Stratavent or Stratavent Perforated.
  3. Tamko; Vapor-Chan.
  4. Approved equal.
- E. Roofing Membrane, Vapor Barrier and Cover Strip:
  1. Johns Manville; GlasPly Premier.

2. GAF; GAFGLAS Ply 6.
3. Tamko; TamGlas Premium.
4. Approved equal.

F. Insulation, complying with project Performance Requirements:

1. Two Layer:
  - a. Base Layer
    - 1) Johns Manville; ENRGY 3 .
    - 2) GAF; GAFTEMP Isotherm R.
    - 3) Atlas Energy Products; AC Foam II .
    - 4) Approved equal.
  - b. Top Layer:
    - 1) Johns Manville; 1/2" Retro-Fit Board.
    - 2) GAF 1/2" High density fiber board.
    - 3) Atlas 1/2" Perlite Board.
    - 4) Approved equal.

G. Tapered Insulation, complying with project Performance Requirements:

1. Base layer:
  - a. Johns Manville; Tapered ENRGY 3.
  - b. GAF; GAFTEMP Tapered Foam Insulation
  - c. Atlas; AC Foam II (tapered).
  - d. Approved equal.
2. Top layer:
  - a. Johns Manville; 1/2" Retro-fit board.
  - b. GAF; 3/4" Perlite.
  - c. Atlas; 1/2" Perlite.
  - d. Approved equal.

H. Base Flashing:

1. Four base plies:
  - a. Johns Manville; GlasPly Premier.
  - b. GAF; GAFGLAS Ply 6.
  - c. Tamko; TamGlass Premium.
  - d. Approved equal.
2. One ply cap sheet:
  - a. Johns Manville; DynaKap FR T1 CR G.
  - b. GAF; RUBEROID MOP FR.
  - c. Tamko; Awaplan Premium.
  - d. Approved equal.

I. Mineral- Surfaced Asphalt Membrane:

1. Johns Manville; DynaKap FR T1 CR G.
2. GAF; GAFGLAS mineral surfaced cap sheet.
3. Tamko; Tam-cap.
4. Approved equal.

J. Flashing Cement:

1. Johns Manville; MBR two-part Flashing Cement or Type III Steep Asphalt (or equivalent by GAF or Tamko) or approved equal.

K. Elastomeric Cement:

1. Tremco Manufacturing Co.; "Poly roof".
2. Durok Bldg. Materials; "Durok Rubber Cement".
3. Karnak Chemical Corp.; "AR Elastomeric".
4. Approved equal.

L. Perlite Cant Strip:

1. Johns Manville.
2. GAF.
3. Atlas.
4. Approved equal.

M. Walkway Pads:

1. Johns Manville; "Dyna Tread Plus".
2. GAF; Equivalent product.
3. Tamko; ; Equivalent product.
4. Approved equal.

N. Raised Rubber Roof Pavers: Refer to Section 07 72 00 "Roof Accessories."

2.2 MATERIALS FOR VAPOR BARRIER

A. Vapor Barrier:

1. For asphalt vapor barriers:
  - a. Primer: Asphalt primer; ASTM D41.
  - b. Steep Asphalt: ASTM D312, Type III.
2. Asphalt Fiberglass Felt: Asphalt impregnated glass mat, ASTM D 2178, Type VI. UL Classified.

B. Asphalt Vapor Barrier Over Concrete Deck and concrete fill/screed.

1. Primer: Asphalt primer, ASTM D41.
2. Steep Asphalt: ASTM D 312, Type III.
3. Asphalt Fiberglass Felt: Asphalt impregnated glass mat, ASTM D 2178, type VI. UL Classified.

## 2.3 MATERIALS FOR BUILT-UP MEMBRANE

### A. Smooth- Surfaced Asphalt Membrane:

1. Steep Asphalt (Slopes 0" to 3" per Foot): 190°, Type III.
2. Special Steep Asphalt: 220°, Type IV, (Slopes 3" to 6" per Foot).
3. Asphalt Fiberglass Felt: Asphalt impregnated glass mat, ASTM D 2178, Type VI. UL Classified.
4. Asphalt Emulsion: Fibrated emulsion coating, ASTM D 1227, Type IV. UL Classified.
5. Aluminized Coating: Fibrated, bituminous aluminized coating, ASTM D 2824, Type III. UL Classified

### B. Mineral- Surfaced Asphalt Membrane Cap Sheet:

1. Color: White, with reflective top surface complying with either of the following:
  - a. Minimum initial solar reflectance index (SRI) in accordance with ASTM E1980: 88 and 3-year aged SRI of 77.
  - b. Minimum initial reflectivity in accordance with ASTM C 1549: 0.72.

## 2.4 FLASHINGS

### A. Built-Up Base Flashing:

1. Asphalt Fiberglass Felt: Asphalt impregnated glass mat, ASTM D 2178, Type VI. UL Classified.
2. Reinforced Modified Cap Sheet: Reinforced modified bitumen flashing that incorporates the properties of both a strong fiberglass or polyester mat with an elastomeric base material consisting of modified bitumen material and fire retardant additives: ASTM D-412; UL Classified.
3. Steep Asphalt: 190°, ASTM D312 Type III.
4. Modified Flashing Cement.

### B. Coverstrips:

1. Asphalt Fiberglass Felt: Asphalt impregnated glass mat, ASTM D 2178, Type VI. UL Classified.
2. Plastic Cement: Flashing grade, fibrated asphalt roofing cement, ASTM D 4586. UL Classified.

### C. Elastomeric Liquid-Applied Flashing Membranes:

1. Johns Manville; PermaFlash.
2. Siplast; Parapro 123 Flashing.
3. GCP Applied Technologies Inc.; PERM-A-BARRIER Liquid Flashing.
4. Approved equal.

## 2.5 INSULATION

- ### A. General:
- Provide preformed roof insulation boards that comply with requirements and referenced standards, selected from manufacturer's standard sizes and of thicknesses indicated.

1. Approval of insulation is contingent upon approval by the membrane manufacturer for use with specified roof system.
- B. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches, unless otherwise indicated.
- C. Provide preformed saddles, crickets, cant strips, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.
- D. Isocyanurate insulation shall have a 15-year time weighted average Long Term Thermal Resistance (LTTR) as determined in accordance with ASTM C1289 or CAN/ULC-S770, Standard Test Method for Determination of Long Term Thermal Resistance of Closed Cell Thermal Insulating Foams).
  1. Types as follows:
    - a. Perlite - ASTM C728
    - b. Fiberboard - ASTM C208
    - c. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class I, Grade 2, glass-fiber mat facer on both major surfaces.
  2. All insulation: Factory Mutual, Class 1 or U.L. Class A.
- E. Rigid Insulation:
  1. Two Layers of Insulation: Two layers of insulation consisting of base layer of isocyanurate insulation, and top layer of fiberboard or perlite insulation.
    - a. Base Layer Insulation: Closed cell isocyanurate foam core skinned on both sides with factory applied facers of the generic type recommended by the membrane manufacturer.
    - b. Top layer: 1/2 inch perlite board insulation complying with ASTM C-728.
    - c. Required total roof insulation thickness: 3 inch minimum at vertical and horizontal surfaces of roof curbs, as indicated on drawings, and 6 inch at thinnest point within horizontal roof field area, or as indicated on drawings.
    - d. Minimum Long-Term Thermal Resistance (LTTR) values of insulation board, by nominal thickness of flat insulation board:
      - 1) 2 inch : R- 11.4.
      - 2) 4 inch : R- 23.6.
  2. Composite Insulation Board: Consists of a base layer of isocyanurate foam integrally bonded to a layer of perlite or wood fiberboard on one side and a non- asphaltic fiberglass mat on the other.
- F. Tapered Insulation System: Insulation system has achieved project fire hazard classification when tested in conjunction with UL Classified built-up roofing membranes. Other tapered insulation systems which conform to project criteria may be submitted for approval.
  1. Tapered Insulation: 1/8 inch slope per foot factory tapered and mitered closed cell isocyanurate foam core skinned on both sides with factory applied facers of the generic type recommended by membrane manufacturer and Factory Mutual approved for direct application over steel decks. One-inch minimum thickness at drains and valleys unless shown otherwise on Contract Drawings.

2. Tapered Insulation Crickets: 1/ 2 inch slope per foot factory tapered and mitered isocyanurate insulation cricket system.
3. Overlay Insulation: Perlite UL Classified. 3/ 4 inch thick.
4. Minimum Long-Term Thermal Resistance (LTTR) values of insulation board, by nominal thickness of flat insulation board:
  - a. 2 inch at thick edge: R- 10.
  - b. 4 inch at thick edge: R- 22.1.

## 2.6 FASTENERS

- A. Fasteners for Securing Built-Up Base Flashing:
1. Wood Surfaces: Annular ring roofing nail with one-inch solid cap or equivalent fastener.
  2. Metal Surfaces: Hardened, self-tapping #10 sheet metal screw thru one-inch diameter sheet metal disk.
  3. Masonry Surfaces: Hardened, masonry nail or drive pin, thru one-inch dia. sheet metal disk.

## 2.7 MISCELLANEOUS MATERIALS

- A. Cant Strips (For built-up base Flashings)
- B. Preformed fiberboard, ASTM C 208.
- C. Tapered Edgestrips (around drains and at other areas where insulation must be feathered down)
- D. Preformed fiberboard, ASTM C 208.
- E. Walkway Pads/ Splash Pads/ Protection Pads at access equipment locations indicated.
1. Homogeneous core of asphalt, plasticizers and inert fillers, bonded by heat and pressure between two saturated and coated sheets of organic felt and coated on top surface with ceramic granules. Minimum thickness 3/ 4 inch.
  2. Size: min. 3/8 inch thick by 32 by 32 inches.
  3. Color: White, with reflective top surface complying with either of the following:
    - a. Minimum initial solar reflectance index (SRI) in accordance with ASTM E1980: 88 and 3-year aged SRI of 77.
    - b. Minimum initial reflectivity in accordance with ASTM C 1549: 0.72.
- F. Materials for Pitch Pockets:
1. Mortar: ASTM C 270, Type S.
  2. Elastomeric Cement: Non-sag, cold applied, trowel grade, single component rubber elastomer. Minimum elongation 400 percent.
- G. Broadcast Granules: Manufacturers standard material for coverage of bleed- out areas.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Verify that Work of other trades which penetrates the roof deck has been completed.
- B. Examine surfaces for inadequate anchorage, foreign material, moisture, and unevenness which would prevent the execution, and quality of application, of the built-up roofing system as specified.
- C. Do not proceed with application of built-up roofing system until defects are corrected.

**3.3 PREPARATION**

- A. Restore fill/ screed in accordance with Section 03 30 00 - Cast-in - Place Concrete.
- B. Moisture Testing for Roof Deck.
- C. All roof decks where new roofing is to be installed shall be thoroughly dried out and free of moisture before installing new membrane. There shall be two (2) test areas for every 2500 square feet of area to be roofed.
  - 1. Commissioner shall be present at tests to confirm tests have been performed and obtain test results for each area.
  - 2. Roof Deck Dryness Test per NRCA Approved Method:
    - a. Use approximately one pint of bitumen that is specified for use in the roof membrane, heated to a temperature that will ensure an application temperature of 400° F. See Built-up Roofing, Section IV-B, (Equiviscous Temperature) NRCA roofing and waterproofing manual.
    - b. Pour the bitumen on the surface of the deck. If the bitumen foams, the deck is NOT dry enough to roof.
    - c. After the bitumen has cooled, an attempt shall be made to strip the bitumen from the deck surface. If the bitumen strips clean from the deck, the deck is NOT dry enough to roof.
    - d. If the tests prove the deck is damp, it shall be allowed to dry and be retested until dry enough for the roofing to be installed.
- D. Priming for concrete decks: Prior to application of vapor barrier, and after the deck has passed the dryness test, apply asphalt primer to concrete deck surface at the rate of one gallon per square.

**3.4 HEATING BITUMEN**

- A. Preparation:
  - 1. Heating bitumen shall be performed in accordance with FDNY, NYS DOL, and New York City Department of Buildings regulations.

2. Use separate kettles or tankers for heating different types of asphalt.
3. The heating process shall be strictly regulated by means of an automatic thermostatic control of an approved type for positive temperature control. Kettles or tankers shall be the immersion tube type, fire by Liquid LP gas, and shall have 100% safety shutoff.
4. Equip each kettle or tanker with a recording thermometer that will graphically indicate and record on a chart the maximum and minimum temperatures to which materials have been heated. Recording thermometers shall be capable of accurately recording temperatures as high as 600 degrees F. and as low as 0 degrees F. The thermometers shall be properly maintained at all times.
  - a. Kettles or tankers without recording thermometers in good working condition shall not be used.
  - b. At the end of each working day, turn the chart from the thermometer on each kettle or tanker over to Commissioner.
  - c. If any bitumen is overheated, remove it from the site in the presence of Commissioner.
5. If any underheated or overheated bitumen has been applied on the roof, remove that portion of the roof.
6. On multi-storied buildings, when directed, locate the heating kettles on the roof. Place kettle on a heavy sheet metal tray on dunnage. Metal tray shall extend 18" beyond the sides and ends of the kettle and be turned up 1" at all edges.
  - a. Only one gas cylinder shall be on the roof at any one time. Locate the cylinder at least four feet away from the kettle. Vertically brace the cylinder and shade it from the sun.
  - b. Provide fire extinguishers on the roof in the vicinity of the kettles as required to ensure the safety of the roof.

**B. Heating Asphalt Bitumen:**

1. Heat the bitumen in accordance with the Equiviscous Temperature information furnished by the bitumen manufacturer for that specific run of bitumen.
  - a. In no case shall be asphalt be heated to or above the actual COC Flash Point (ANSI/ASTM D-92); or the finished blowing temperature for more than 4 hours.
  - b. Maintain the temperature of the bitumen at the point of application within the Equiviscous Temperature Range. Use insulated pipes, buckets, luggers, and other insulated roofer's equipment as required by the field conditions.
  - c. Provide a minimum of one hand- held thermometer for each crew installing hot asphalt in order to ensure compliance with EVT.
2. Application temperature: The accepted application temperature range for asphalt is the equiviscous temperature, (EVT) 25 F. All felt installation must occur in this range to be acceptable.

**3.5 INSTALLING VENT BASE SHEET**

- A. Install one ply of vent base sheet. Vent sheets shall be butted.
- B. Using vent base sheet, start at the low edge of the roof. Install vent base sheet by spot mopping. The spot mopping shall be applied by machine at the rate of approximately 7 lbs. per square. The spots shall be approximately 12" in diameter and 24" o.c. Stagger each row.

- C. Run vent base sheet up the perimeter or parapet walls to the height of the counter flashing, spot adhering as required. This will allow for proper perimeter venting detail.

### 3.6 INSTALLING VAPOR BARRIER

- A. Installing Vapor Barrier Over Concrete Deck or Light Weight Fill/Screed:
  - 1. Install 2 plies of asphalt fiberglass felt shingle fashion. Lap plies 19" over each preceding ply.
  - 2. Embed each ply in a solid mopping of hot steep asphalt applied at the rate of 20 lbs per square. Broom in each ply for complete embedment.
- B. Extend the vapor barrier beyond all edges and openings of the roof so that it can be turned up over the insulation a minimum of 6".
  - 1. If vapor barrier is punctured, restore immediately with fiberglass felt embedded in hot bitumen.
  - 2. Install the insulation and roofing membrane immediately (same day) as the vapor barrier is installed. Where not possible, protect the vapor barrier with a glaze coat of hot bitumen applied at the rate of 15 lbs. per square.

### 3.7 INSTALLING INSULATION

- A. Installing Single Layer Insulation: Install the insulation with the long joints running in a continuous straight line perpendicular to the direction of the roof membrane. Stagger end joints. Butt edges and ends snugly. "Occasional" joint widths up to 1/8" will be allowed.
  - 1. Set the insulation in a full hot mopping of Type III steep asphalt applied at the rate of 30 lbs. per square. Press the insulation into the bitumen to a firm and uniform bearing.
- B. Installing Double Layer Insulation: Install the insulation in 2 separate layers with the long joints of each layer running in the same direction in a continuous straight line perpendicular to the direction of the roof membrane. Stagger end joints. Install the top layer of insulation with joints staggered from the joints of the base layer.
  - 1. Set each layer of insulation in a full hot mopping of Type III steep asphalt applied at the rate of 30 lbs. per square. Press the insulation into the bitumen to a firm and uniform bearing.
- C. Installing Tapered Insulation: Follow the manufacturer's Shop Drawings and instructions for laying out the tapered insulation system, and cricket system (if any). Install the overlay insulation over the tapered insulation system, with joints staggered from each layer.
  - 1. Butt edges and ends snugly. "Occasional" joint widths up to 1/8" will be allowed.
  - 2. Set each layer of insulation in a full hot mopping of Type III steep asphalt applied at the rate of 30 lbs. per square. Press the insulation into the bitumen to a firm and uniform bearing.
  - 3. Install the insulation manufacturer's fiberglass roof tape over all joints of the overlay insulation. Embed the tape in hot steep asphalt.
- D. Keep insulation dry at all times. Discard insulation that contains moisture.
  - 1. Install only as much insulation as can be covered with roofing membrane the same day.

2. Discard all units with broken corners or similar defects.
3. At roof drains, terminate the insulation with tapered edge strips so that all flashing and coverstrip joint laps can be made within the tapered portion.
4. Set all cant strips in a solid application of hot bitumen so they are firmly anchored to the deck and the vertical surface.

E. Installation of insulation shall be in strict compliance with the Manufacturer's recommendations.

### 3.8 INSTALLING BUILT-UP ROOF

A. Before application of roof membrane, turn vapor barrier over insulation at all edges and openings and embed in a full hot application of bitumen. At round openings, seal the edges of the insulation with a trowel coat of plastic roof cement.

B. Installing Built-Up Roof Membrane:

1. For asphalt built-up roofs, install built-up roof membrane consisting of 5 plies of asphalt fiberglass felt. Embed each ply in solid mopping of hot asphalt applied at the rate of 25 lbs. per square.
2. Ply felts installation:
  - a. Start at low edge of the roof deck.
  - b. Apply one 12 inch wide piece of ply felt.
  - c. Apply over 12 inch felt one 24-inch wide felt.
  - d. Apply over 24 inch felt, a full 36 inch wide felt.
  - e. Install the final (4<sup>th</sup>) ply at full width.

1) Rate: 23 pounds per square for each layer of felt.

3. Install each felt so that it is firmly and uniformly set, in hot asphalt, without voids.
4. Dry edges of any depth will not be tolerated.
5. All such edges shall be cut out and patched with an equal number of plies.

C. Laying Felt:

1. Start laying felts, using split sheets as necessary to secure the required number of plies and laps. Provide 10" minimum end laps. Roll all roofing felt not more than 5'-0" behind the mop as it spreads the bitumen, brooming and pressing the felts into the bitumen from the center outward to the edges so as to ensure thorough sticking and a smooth, firm surface, free of blisters, wrinkles, or buckles.
2. Use three persons for the application of roofing felt as follows; one person to spread bitumen in front of the roll, one person to roll out the felt and one person to smooth out the felt with a stiff street broom or squeegee. The roofing may be installed with an approved applying machine and broomed or squeegeed smooth producing an equivalent result. In no case shall the felt be rolled out dry and then laid in the bitumen.
3. Where gravel stops are required, install felt pitch dam as follows: At the parallel edge to the felt runs, extend the bottom felt 4" beyond the roof edge. Across the end of the felt runs, install a 12" wide continuous starter strip, extended 4" past the roof edge. After all ply felts are installed and edge trimmed, fold the 4" extension back over the roof surface. Adhere with hot bitumen and broom smooth, leaving the exposed top surface dry.
4. Where built-up flashings are required, extend the mopped roofing felts 2" beyond the top edge of the cant.
5. Where sheet metal base flashings are required, turn up mopped roofing felts a minimum of 4" on all vertical surfaces or apply additional felt plies.

6. Where cant type gravel stops (fascia) are required, carry all membrane plies past the edge of the water dam member and cut off flush with the face of the cant.
7. Any protection ply or temporary ply shall not be deemed a part of the 5-ply system.

**D. Phasing of Roofing Membrane Installation:**

1. Phasing of ply felt application will not be allowed in any case.
2. Where necessitated by job conditions and with approval of the Commissioner, a protective glaze coating may be applied as follows:
  - a. Apply protective glaze coatings in addition to other coating or mopping indicated and required by project application. Reduction or omission of specified prime coats, mopped bitumen, flood coats or finish coats in lieu of glaze coatings is not permitted.
  - b. Gravel Surfaced Roofs: If aggregate is not applied the same day, apply glaze coating of hot bitumen at the rate of 15 lbs. per square to the completed membrane.
  - c. Smooth Surface Roofs: If permitted under the manufacturer's Specifications, apply glaze coating of hot bitumen at the rate of 15 lbs. per square, unless asphalt emulsion is applied the same day.
3. All exposed felts, regardless of type, must be protected with specified surfacing or glaze coating by the end of each working day.
4. Asphalt shall bleed out past the edge of the sheet by a minimum of 1/4 inch, then broadcast granules over bleed out area. Take great care to ensure that the roof has a consistent and monolithic look.
5. Continue the installation of roofing materials on the following work day (weather permitting). Glaze coated surfaces must be clean and dry to ensure complete bonding of felts or coatings.

**E. Temporary Flashings:**

1. Provide a temporary waterproof seal at all membrane edges, penetrations, drains, etc. Unless complete flashings are installed immediately (same working day) following the membrane application.

**F. Installing Built-Up Flashings:**

1. Apply asphalt primer to all vertical surfaces before application of built-up flashings.
2. Install built-up flashing consisting of 2 plies of asphalt fiberglass felt, topped with one ply of modified bitumen flashing membrane.
3. Cut all felts into strips not longer than 12 feet. Provide 3" minimum end laps. Stagger all end laps. Cut modified bitumen flashing membrane the width of the roll.
4. Install all plies in hot steep asphalt or if desired install felt in plastic cement, and modified flashing in MBR adhesive.
5. Fasten the top edge of the built-up flashings 8" oc.
6. Seal top edge of flashing with a trowel coat of plastic cement and fabric. If roof system is vented do not seal the top edge.

**G. Installing Metal Flashings and Coverstrips:**

1. Asphalt Roofs: Plastic Asphalt Cement.
2. Prime metal surfaces and embed portions of all metal flashing which extend over the roof surface in plastic cement.

3. Completely cover all portions of metal flashings which extend over the roof surface with two asphalt fiberglass felt cover strips, each set in plastic cement. Provide strips that are at least 8" and 12" wide respectively. In all cases, carry the strips past the edge of the metal flange and beyond the edge of the preceding felt 4" min. Seal junction of metal and coverstrip with plastic cement.
4. Coat and surface the top ply to match the adjacent roofing membrane.
  - a. Cap Sheet Joints: Asphalt must bleed out past the edge of the sheet by a minimum of 1/4" inch. Treat bleed-out as directed by Commissioner. Broadcast granules over bleed out area. Take great care to ensure that the roof has a consistent and aesthetically uniform monolithic look.
5. At roof drains, install cover strips within the slope to the drain so that they do not impede the flow of water from the roof.
6. For Gravel Surfaced Roofs: At cant type gravel stops coat the top ply of the built-up roofing membrane that extends up the cant with aluminized coating applied at the rate of 1-1/2 gal per square.

H. Installing elastomeric liquid-applied flashing membrane:

1. At pipe, vent, stanchion, and miscellaneous roofing penetrations, unless otherwise indicated.
- I. Filling Pitch Pockets: Fill bottom half of pitch pocket with cement mortar. Fill remaining half of pitch pocket with elastomeric cement. Slope surface to shed water.

3.9 FLOOD TESTING

- A. After completion of roofing work specified above, all drains shall be plugged and all roofs of above locations of Work shall be flooded with a minimum of 1" of water above the high points. Water shall remain for a minimum of 24 hours. If leaks occur, Perform necessary work to correct leaks and repeated flood testing, until no leaks occur.
- B. Refer to Sections "01 91 15 Building Enclosure Commissioning Requirements" and 01 91 17 "Building Enclosure Functional Performance Test Protocol" for testing procedures and requirements.

3.10 FIELD QUALITY CONTROL

- A. Field Samples
- B. Draw a quart sample from each load of bitumen arriving at the job site in the presence of Commissioner for laboratory analysis.
- C. Test Strip if requested by Commissioner
  1. When and where directed by Commissioner, and before surfacing is applied to the completed membrane, cut a strip 3" wide by 40" long thru all plies of the built-up roofing. Number of such test strips may be as required by the Commissioner.
    - a. After removal of the strip, immediately restore the area by applying the same number of plies of the same kind of felt and bitumen to fill the hole level.

- b. Repeat the same number of plies of the same kind of felt and bitumen over the filled strip with the first ply lapping each edge 12" and each succeeding ply lapping the preceding ply by at least 3" on all edges.
    - c. Apply surfacing material to match the adjoining roof. Turn the test strips over to Commissioner for examination.
  - 2. If the test strips indicate the roofing system complies with the project requirements, Commissioner's will bear the expense of the test strip Work.
  - 3. If the strips indicate the roofing system does not comply with the project requirements, assume expense of the test strip Work and shall restore or replace all roofing Work as required for compliance, at no expense to the City of New York.
- D. Non-Compliance: Failure of the bitumen samples or the test strip samples to meet the Specification requirements will be cause for rejection of the Work including removal and reinstallation of the work at the expense of the Contractor.
- E. Inspection: After roofing system Work is completed, an inspection shall be made by the roofing system manufacturer's representative. The representative shall certify that roofing system has been installed according to the Specifications.
- 1. Inform the Commissioner of scheduled inspection date a minimum of one (1) week in advance of the inspection.
- 3.11 CLEANING
- A. Remove bitumen from surfaces other than those requiring bituminous coatings.
  - B. Remove all debris from roof area.
  - C. Maintain roof area free from debris throughout the period of construction and during construction activities following roof insulation until date of Substantial Completion.

**END OF SECTION 07 52 16**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 07 62 00**

**SHEET METAL FLASHING AND TRIM**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Manufactured reglets with counterflashing.
  2. Formed roof-drainage sheet metal fabrications.
  3. Formed low-slope roof sheet metal fabrications.
  4. Formed wall sheet metal fabrications.
  5. Formed equipment support flashing.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.
- B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

#### 1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each of the following
  1. Underlayment materials.
  2. Elastomeric sealant.
  3. Butyl sealant.
  4. Epoxy seam sealer.
- B. Shop Drawings: For sheet metal flashing and trim.
  1. Include plans, elevations, sections, and attachment details.
  2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
  3. Include identification of material, thickness, weight, and finish for each item and location in Project.
  4. Include details for forming, including profiles, shapes, seams, and dimensions.
  5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
  6. Include details of termination points and assemblies.
  7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
  8. Include details of roof-penetration flashing.
  9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, flashings, and counterflashings.
  10. Include details of special conditions.
  11. Include details of connections to adjoining work.
- C. Samples: For each exposed product and for each color and texture specified, 12 inches long by actual width.

1.9 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For fabricator.
- B. Product Certificates: For each type of coping and roof edge flashing approved and used in project.
- C. Product Test Reports: For each product, for tests performed by a qualified testing agency.
- D. Sample Warranty: For special warranty.

1.10 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.

1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.
  - 1. For copings and roof edge flashings that are SPRI ES-1 tested, shop shall be listed as able to fabricate required details as tested and approved.
- C. On-site Facade Mockups: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  - 1. Provide complete roof edge coping and fascia installation in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
  - 1. Incorporate full-scale details of the architectural features, approved finishes, rackets, and attachments to be provided at full-scale building.
  - 2. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
  - 3. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
- B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

## 1.13 WARRANTY

- A. Special Warranty on Finishes: Manufacturer agrees to restore finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
  - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
    - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- B. Finish Warranty Period: 20 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. SPRI Wind Design Standard: Manufacture and install copings and roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:
  - 1. Design Pressure: As indicated on Drawings.
- D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
  - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

### 2.2 SHEET METALS

- A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.
- B. Aluminum Sheet: ASTM B 209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface.
  - 1. Exposed Coil-Coated Finish: Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2. Color: As selected by Commissioner from manufacturer's full range.
  3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.
- C. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed.
1. Finish: 2D (dull, cold rolled).
  2. Surface: Smooth, flat.

## 2.3 UNDERLAYMENT MATERIALS

- A. Self-Adhering, High-Temperature Sheet: Minimum 30 mils thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer.
1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Carlisle Coatings & Waterproofing Inc; CCW WIP 300HT.
    - b. GCP Applied Technologies Inc.; Grace Ice and Water Shield HT.
    - c. Henry Company; Blueskin PE200 HT.
    - d. Approved Equal.
  2. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F or higher.

## 2.4 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.
- B. Fasteners: Suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.
1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
    - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating.
    - b. Blind Fasteners: Stainless-steel rivets suitable for metal being fastened.
  2. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
- C. Solder:
1. For Stainless Steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer.
- D. Stainless-Steel Welding Rods: Type recommended by stainless-steel sheet manufacturer for type of metal sheets furnished.

- E. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2-inch-wide and 1/8 inch thick.
- F. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.
- G. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.
- H. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory-mitered and -welded corners and junctions.
  - 1. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
  - 2. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
  - 3. Masonry Type: Provide with offset top flange for embedment in masonry mortar joint.
  - 4. Products: Subject to compliance with requirements, provide products from one of the following:
    - a. Fry Reglet Corporation.
    - b. Heckmann Building Products, Inc.
    - c. Hohmann & Barnard, Inc.
    - d. Approved equal.
  - 5. Accessories:
    - a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
    - b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.
  - 6. Finish: As selected by the Commissioner.
- I. Manufactured Flashing: For use under sills and other applications indicated.
  - 1. Flashing Material: Type 304 stainless steel, 0.019 inch thick.
  - 2. Products: Subject to compliance with requirements, provide STF Sawtooth Flashing as supplied by Hohmann & Barnard, Inc. or comparable product as approved by the Commissioner from one of the following:
    - a. Cheney Flashing Company.
    - b. Fry Reglet Corporation.
    - c. Heckmann Building Products, Inc.
    - d. Approved equal.

## 2.5 FABRICATION, GENERAL

- A. General: Custom fabricate sheet metal flashing to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, geometry, metal thickness, and other characteristics of item indicated. Fabricate items at the shop to greatest extent possible.
  - 1. Fabricate sheet metal flashing in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
  - 2. Obtain field measurements for accurate fit before shop fabrication.
  - 3. Form sheet metal flashing without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
  - 4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces exposed to view.
- B. Fabrication Tolerances: Fabricate sheet metal flashing that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.
- C. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant.
- D. Fabricate attachment devices from same material as accessory being anchored.
- E. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use.
- F. Do not use graphite pencils to mark metal surfaces.

## 2.6 ROOF-DRAINAGE SHEET METAL FABRICATIONS

- A. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. Fabricate from the following materials:
  - 1. Stainless Steel: 0.019 inch thick.

## 2.7 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. Roof Edge Flashing (Gravel Stop) and Fascia Cap: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long sections. Furnish with 6-inch-wide, joint cover plates. Shop fabricate interior and exterior corners.
  - 1. Joint Style: Butted with expansion space and 6-inch-wide, concealed backup plate.
  - 2. Fabricate with scuppers spaced 10 feet apart, to dimensions required with 4-inch-wide flanges and base extending 4 inches beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper.
  - 3. Fabricate from one of the Following Materials:
    - a. Aluminum: 0.050 inch thick.
    - b. Stainless Steel: 0.019 inch thick.

- B. Copings: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of external leg and drill elongated holes for fasteners on interior leg. Miter corners, solder or weld watertight. Shop fabricate interior and exterior corners.

1. Joint Style: Butted with expansion space and 6-inch-wide, concealed backup plate.
2. Fabricate from the Following Materials:
  - a. Aluminum: 0.050 inch thick.

- C. Roof-Penetration Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

- D. Roof-Drain Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

## 2.8 WALL SHEET METAL FABRICATIONS

- A. Opening Flashings in Construction: Fabricate flashings to extend a minimum of 4 inches beyond wall openings and the same dimension onto ducts.

1. Stainless Steel: 0.016 inch thick.

## 2.9 MISCELLANEOUS SHEET METAL FABRICATIONS

- A. Equipment Support Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of the Work.
1. Verify compliance with requirements for installation tolerances of substrates.
  2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- B. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 UNDERLAYMENT INSTALLATION

- A. Felt Underlayment: Install felt underlayment, wrinkle free, using adhesive to minimize use of mechanical fasteners under sheet metal flashing and trim. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.
- B. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Prime substrate if recommended by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps and edges with roller. Cover underlayment within 14 days.

### 3.4 INSTALLATION, GENERAL

- A. General: Anchor sheet metal flashing and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
  - 1. Install sheet metal flashing true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
  - 2. Install sheet metal flashing to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
  - 3. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
  - 4. Install sealant tape where required by installation conditions.
  - 5. Torch cutting of sheet metal flashing and trim is not permitted.
  - 6. Do not use graphite pencils to mark metal surfaces.
- B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by SMACNA.
  - 1. Coat back side of stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
- C. Seal joints as shown and as required for watertight construction.
  - 1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
  - 2. Prepare joints and apply sealants to comply with requirements in Section 07 92 00 - Joint Sealants.
- D. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches, except reduce pre-tinning where pre-tinned surface would show in completed Work.
  - 1. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.

2. Stainless-Steel Soldering: Tin edges of uncoated sheets using solder recommended for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

### 3.5 ROOF-DRAINAGE SYSTEM INSTALLATION

- A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

### 3.6 ROOF FLASHING INSTALLATION

- A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.
- B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at staggered 3-inch centers.
- C. Copings: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated.
  1. Interlock exterior bottom edge of coping with continuous cleat anchored to substrate at 24-inch centers.
  2. Anchor interior leg of coping with washers and screw fasteners through slotted holes at 24-inch centers.
- D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inches over base flashing. Install stainless-steel draw band and tighten.
- E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints minimum of 4 inches. Secure in waterproof manner by means of interlocking folded seam or blind rivets and sealant unless otherwise indicated.
- F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with butyl sealant and clamp flashing to pipes that penetrate roof.

### 3.7 WALL FLASHING INSTALLATION

- A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components.

**3.8 MISCELLANEOUS FLASHING INSTALLATION**

- A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

**3.9 ERECTION TOLERANCES**

- A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines indicated on Drawings and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

**3.10 CLEANING AND PROTECTION**

- A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
- B. Clean and neutralize flux materials. Clean off excess solder.
- C. Clean off excess sealants.
- D. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, remove unused materials and clean finished surfaces. Maintain in a clean condition during construction.
- E. Replace sheet metal flashing that have been damaged or that have deteriorated beyond successful restoration by finish touchup or similar minor restoration procedures.

**END OF SECTION 07 62 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 07 72 00**

### **ROOF ACCESSORIES**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
1. Hatch- type, automatic heat and smoke vents including safety railings.
  2. Roof crossover stairs and platforms.
  3. Rubber roof paver tile.
  4. Installation accessories.
- B. Related Sections:
1. Section 05 50 00 "Metal Fabrications" for steel finish requirements.
  2. Section 07 92 00 "Joint Sealants" for elastomeric joint sealants and sealant backings.
  3. Section 07 52 16 "SBS Modified Bituminous Membrane Roofing."
  4. Division 26 sections for electrical connection and other requirements.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 COORDINATION

- A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
- B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.
- C. Coordinate attachment of rubber roof paver tile with roof membrane manufacturer and installer to ensure proper adhesion to roof membrane. Coordinate shop drawings with shop drawings for membrane roofing system.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
- B. Shop Drawings: For roof accessories. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.
- C. Samples: For each exposed product and for each color and texture specified, prepared on Samples of size to indicate color
- D. Engineering Services Submittal: For roof crossover stairs and platforms, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any contract the work.

1.8 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
  - 1. Size and location of roof accessories.
  - 2. Method of attaching roof accessories to roof or building structure.
  - 3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
  - 4. Required clearances.

- B. Warranty: Sample of special warranty.
- C. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

#### 1.10 WARRANTY

- A. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to restore finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
  - 1. Finish Warranty Period: Ten(10) years from date of Substantial Completion.
- B. Special Warranty: Include rubber roof paver tile as an overburden item in the Roof system warranty.
  - 1. Warranty Period: Manufacturer's standard from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to engineer roof crossover stairs and platforms.
  - 1. Engineering Services shall include complete design calculations required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

#### 2.2 AUTOMATIC HEAT AND SMOKE VENTS

- A. Hatch-Type Heat and Smoke Vents: Manufacturer's standard, with single- walled insulated curbs, welded or mechanically fastened and sealed corner joints, integral condensation gutter, and cap flashing. Fabricate with insulated double- walled lid and continuous weathertight perimeter lid gaskets and equip with automatic self-lifting mechanisms and UL-listed fusible links rated at 165 degrees F. Include manufacturers standard automatic smoke actuator tied to smoke detector at ceiling locations for stairs and elevators where indicated.
- B. Manufacturers: Subject to compliance with requirements, provide products as supplied by one of the following, as approved by the Commissioner:

1. Babcock-Davis.
2. BILCO Company (The).
3. Dur-Red Products.
4. Milcor; Commercial Products Group of Hart & Cooley, Inc.
5. Approved equal.

C. Type and Size: Single-leaf lid, of size indicated.

D. Loads: Minimum 40-lbf/sq. ft. external live load and 20-lbf/sq. ft. internal uplift load, unless otherwise required by project application.

E. Hatch Material: Zinc-coated (galvanized) steel sheet.

1. Thickness: Manufacturer's standard thickness for hatch size indicated.
2. Finish: Baked enamel or powder coat.
3. Color: As selected by Commissioner from manufacturer's full range.

F. Construction:

1. Board Insulation: 2- inch thick, polyisocyanurate with R- Value of 12.0 per ASTM C1363.
2. Nailer: Factory-installed wood nailer continuous around hatch perimeter.
3. Hatch Lid: Opaque, insulated, and double walled, with manufacturer's standard metal liner of same material and finish as outer metal lid.
4. Curb Liner: Manufacturer's standard, of same material and finish as metal curb.
5. Fabricate curbs to minimum height of 12 inches above roofing surface, unless otherwise indicated.

G. Hardware: Manufacturer's standard, corrosion resistant or hot-dip galvanized; with hinges, hold-open devices, and independent manual-release devices for inside operation of lids.

H. Fall Protection Safety Assembly: Manufacturer's standard meeting impact load requirements of 29 CFR 1910.23 and New York City Department of Buildings, equipped galvanized steel wire mesh screen, that is manually openable from exterior without special tools.

I. Safety Railing System: Hatch railing system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and New York City Department of Buildings:

1. Products: Subject to compliance with requirements, provide Bil-Guard 2.0 as supplied by BILCO Company (The), or comparable product from one of the following, as approved by the Commissioner:
  - a. Dur-Red Products
  - b. Kee Safety, Inc.
  - c. PS Access Solutions.
  - d. Approved equal.

## 2.3 ROOF CROSSOVER STAIRS AND PLATFORMS

A. Manufacturers: Subject to compliance with requirements, provide products as supplied by one of the following, as approved by the Commissioner:

1. EBERL Iron Works, Inc.
2. PHP Systems/ Design.

3. Miro Industries, Inc.
4. Approved equal.

- B. Treads, Platforms and Railings: Manufacturers standard. heavy- duty galvanized steel grating with slip resistant surface.
- C. Steel Framing/ Supports, Manufacturers standard. heavy- duty galvanized steel .
- D. Weighted Bases for Supports (Ballast): Manufacturers standard. recycled rubber weighted to withstand project design wind uplift, in sizes as required by project application.
- E. Steel Finish: Zinc-coated (galvanized) steel sheet.

#### 2.4 RUBBER ROOF PAVER TILE

- A. Description: Rubber roof paver tile, self-interlocking to adjacent tiles and adhered to roofing membrane.
- B. Products: Subject to compliance with requirements, provide duraSTRONG Premium Series as supplied by sofSurfaces rubber tile solutions or comparable product from by one of the following:
  1. Hanover Architectural Products
  2. RB Rubber.
  3. Or approved equal.
- C. Thickness: 4 inch nominal.
- D. Size: 24 by 24 inch, unless otherwise indicated.
- E. Color: Bedrock.
- F. Adhesives: Manufacturers standard product that is compatible with selected membrane roofing product.

#### 2.5 MISCELLANEOUS MATERIALS

- A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.
- B. Polyisocyanurate Board Insulation: ASTM C1289, thickness and thermal resistivity as indicated.
- C. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to New York City Department of Buildings and New York City Fire Department.
  1. Products shall not contain arsenic or chromium.
  2. Refer to Section 06 10 00 – Rough Carpentry for requirements.
- D. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.
- E. Elastomeric and Butyl Sealants: Refer to Section 07 92 00 "Joint Sealants."

- F. Asphalt Roofing Cement: ASTM D4586/D4586M, asbestos free, of consistency required for application.

## 2.6 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.7 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
  - 1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Zinc-Coated (Galvanized) Steel Sheet per ASTM A653, G90 coating designation
- C. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two- coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.
- B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
- C. Verify dimensions of roof openings for roof accessories.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. General: Verify dimensions of roof openings for roof accessories. Install roof accessories according to manufacturer's written instructions.
  - 1. Install roof accessories level; plumb; true to line and elevation; and without warping, jogs in alignment, buckling, or tool marks.
  - 2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.

3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
  4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.
- B. Install heat and smoke vents with safety railings in accordance with approved shop drawings and manufacturer's instructions.
  - C. Install roof crossover stairs and platforms accordance with approved shop drawings and manufacturer's instructions
  - D. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
  - E. Seal joints with elastomeric or butyl sealant as required by roof accessory manufacturer.
  - F. Adhere rubber roof paver tile to membrane roofing paver tile in accordance with approved shop drawings and manufacturer's instructions.
- 3.4 RESTORATION AND CLEANING
- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and restore galvanizing according to ASTM A780/A780M.
  - B. Clean exposed surfaces according to manufacturer's written instructions.
  - C. Replace roof accessories that have been damaged or that cannot be successfully restored by finish touchup or similar minor restoration procedures.

**END OF SECTION 07 72 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 07 81 00**

**APPLIED FIREPROOFING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
  - 1. Sprayed fire-resistive materials (SFRM).
  - 2. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

1. Review products, design ratings, restrained and unrestrained conditions, densities, thicknesses, bond strengths, and other performance requirements.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.

#### 1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Certificates: For each type of fireproofing.
- C. Evaluation Reports: For fireproofing, from ICC-ES.
- D. Field quality-control reports.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the fireproofing material manufacturer.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects to set quality standards for materials and execution.
  1. Build mockup of each type of fireproofing and different substrate as shown on Drawings.
  2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.10 FIELD CONDITIONS

- A. Environmental Limitations: Do not apply fireproofing when ambient or substrate temperature is 44 deg F or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. Ventilation: Ventilate building spaces during and after application of fireproofing, providing complete air exchanges according to manufacturer's written instructions. Use natural means or, if they are inadequate, forced-air circulation until fireproofing dries thoroughly.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Assemblies: Provide fireproofing, including auxiliary materials, according to requirements of each fire-resistance design and manufacturer's written instructions.
- B. Source Limitations: Obtain fireproofing for each fire-resistance design from single source.
- C. Fire-Resistance Design: Indicated on Drawings, tested according to ASTM E 119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Steel members are to be considered unrestrained unless specifically noted otherwise.
- D. Material Emissions and Pollutant Control: Field-applied coatings shall comply with either of the following:
  - 1. Low-Emitting Materials: VOC emissions shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." Formaldehyde emissions shall not exceed 9 mcg/cu. m or 7 ppb, whichever is less.
  - 2. VOC content shall not exceed limits of the following, unless otherwise required by the New York City Department of Buildings:
    - a. Flat Coatings: 50 g/L.
    - b. Nonflat Coatings: 100 g/L.
    - c. Primers, Sealers, and Undercoaters: 100 g/L.
- E. Asbestos: Provide products containing no detectable asbestos.

**2.2 CONCEALED SPRAYED FIRE-RESISTIVE MATERIAL**

- A. Material Composition: Manufacturer's standard product, as follows:
  - 1. Concealed Cementitious Sprayed Fire-Resistive Material: Factory-mixed, dry formulation of gypsum or portland cement binders, additives, and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.
- B. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
  - 1. Bond Strength: Minimum 430 lbf/sq. ft. per ASTM E 736 based on laboratory testing of 0.75-inch minimum thickness of sprayed fire-resistive material.
  - 2. Density: Not less than density specified in the approved fire-resistance design, for average and individual densities, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."

3. Thickness: Minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:
  - a. Where the referenced fire-resistance design lists a thickness of 1 inch or more, the minimum allowable individual thickness of sprayed fire-resistive material is the design thickness minus 0.25 inch.
  - b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of sprayed fire-resistive material is the greater of 0.375 inch or 75 percent of the design thickness.
  - c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft.
4. Combustion Characteristics: ASTM E 136.
5. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - a. Flame-Spread Index: 10 or less.
  - b. Smoke-Developed Index: 0.
6. Compressive Strength: 5.21 lbf/sq. in. minimum per ASTM E 761. Minimum thickness of sprayed fire-resistive material tested shall be 0.75 inch and minimum dry density shall be as specified but not less than 15 lbs. per cu. ft.
7. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
8. Deflection: No cracking, spalling, or delamination per ASTM E 759.
9. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
10. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. Insert value in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of sprayed fire-resistive material is 0.75 inch, maximum dry density is 15 lbs. per cu. ft., test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
11. Fungal Resistance: No observed growth on specimens per ASTM G 21.
12. Finish: Spray-textured finish.

## 2.3 AUXILIARY FIRE-RESISTIVE MATERIALS

- A. General: Provide auxiliary fire-resistive materials that are compatible with sprayed fire-resistive material and substrates and are approved by UL or another testing and inspecting agency acceptable to the New York City Department of Buildings for use in fire-resistance designs indicated.
- B. Topcoat: Type recommended in writing by manufacturer of each sprayed fire-resistive material for application over concealed sprayed fire-resistive material.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrate, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of work. A substrate is in satisfactory condition if it complies with the following:
  - 1. Substrates comply with requirements in the Section where the substrate and related materials and construction are specified.
  - 2. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, incompatible paints, incompatible encapsulants, or other foreign substances capable of impairing bond of fire-resistive materials with substrates under conditions of normal use or fire exposure.
  - 3. Objects penetrating fire-resistive material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
  - 4. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive material.
- B. Conduct tests according to fire-resistive material manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.
- B. Clean substrates of substances that could impair bond of fire-resistive material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants.
- C. Prime substrates where recommended in writing by sprayed fire-resistive material manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive sprayed fire-resistive material.

### 3.4 APPLICATION, GENERAL

- A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- B. Apply sprayed fire-resistive material that is identical to products tested as specified in Part 1 "Quality Assurance" Article and substantiated by test reports, with respect to rate of application, accelerator use, sealers, topcoats, tamping, troweling, water overspray, or other materials and procedures affecting test results.
- C. Extend fire-resistive material in full thickness over entire area of each substrate to be protected. Unless otherwise recommended in writing by sprayed fire-resistive material manufacturer, install body of fire-resistive covering in a single course.

- D. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by sprayed fire-resistive material manufacturer.
- E. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply sprayed fire-resistive material that differs in color from that of encapsulant over which it is applied.

### 3.5 APPLICATION, CONCEALED SPRAYED FIRE-RESISTIVE MATERIAL

- A. Apply concealed sprayed fire-resistive material in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition but apply in greater thicknesses and densities if specified in Part 2 "Concealed Sprayed Fire-Resistive Material " Article.
- B. Cure concealed sprayed fire-resistive material according to product manufacturer's written recommendations.
- C. Apply topcoat to concealed sprayed fire-resistive material where indicated.

### 3.6 FIELD QUALITY CONTROL

- A. Special Inspections: The City of New York will engage a qualified special inspector to perform the following special inspection and prepare reports:
  - 1. Sprayed fire-resistive material.
- B. Testing Agency: Engage a qualified testing agency to perform field tests and inspections required by fireproofing manufacturer and Building Code.
  - 1. Testing and inspecting agency will interpret tests and prepare reports as to whether tested work complies with or deviates from requirements.
- C. Tests and Inspections: Testing and inspecting of completed applications of sprayed fire-resistive material shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with application of sprayed fire-resistive material for the next area until test results for previously completed applications of sprayed fire-resistive material show compliance with requirements. Tested values must equal or exceed values indicated and required for approved fire-resistance design.
  - 1. Thickness for Floor, Roof, and Wall Assemblies: For each 1000-sq. ft. area, or partial area, on each floor, from the average of 4 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.
  - 2. Thickness for Structural Frame Members: From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.
  - 3. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from sample size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 605 or AWC Technical Manual 12-A, Section 5.4.5, "Displacement Method."

4. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: For each 10,000-sq. ft. area, or partial area, on each floor, cohesion and adhesion from one sample of size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 736.
    - a. Field test sprayed fire-resistive material that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
    - b. If surfaces of structural steel receiving sprayed fire-resistive material are primed or otherwise painted for coating materials, perform series of bond tests specified in UL's "Fire Resistance Directory." Provide bond strength indicated in referenced UL fire-resistance criteria, but not less than 150 lbf/sq. ft. minimum per ASTM E 736.
  5. If testing finds applications of sprayed fire-resistive material are not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.
- D. Remove and replace applications of sprayed fire-resistive material that do not pass tests and inspections for cohesion and adhesion, for density, or for both and retest as specified above.
- E. Apply additional sprayed fire-resistive material, per manufacturer's written instructions, where test results indicate that thickness does not comply with specified requirements, and retest as specified above.

### 3.7 CLEANING, PROTECTING, AND RESTORATION

- A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.
- B. Protect sprayed fire-resistive material, according to advice of product manufacturer and Installer, from damage resulting from construction operations or other causes so fire protection will be without damage or deterioration at time of Substantial Completion.
- C. Coordinate application of sprayed fire-resistive material with other construction to minimize need to cut or remove fire protection. As installation of other construction proceeds, inspect sprayed fire-resistive material and patch any damaged or removed areas.
- D. Restore or replace work that has not successfully protected steel.

**END OF SECTION 07 81 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 07 84 10**

### **FIRESTOPPING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Penetrations in fire-resistance-rated walls.
  - 2. Penetrations in horizontal assemblies.
  - 3. Penetrations in smoke barriers.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

##### **1.5 COORDINATION**

- A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.

- B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.
  - 1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Obtain approval from New York City Department of Buildings prior to submittal.

#### 1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Product Test Reports: For each penetration firestopping system, for tests performed by a qualified testing agency.

#### 1.9 CLOSEOUT SUBMITTALS

- A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer, that has been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

#### 1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not install penetration firestopping system when ambient or substrate temperatures are outside limits permitted by penetration firestopping system manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.
- B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

## PART 2 - PRODUCTS

### 2.1 FIRESTOPPING, GENERAL

- A. Compatibility: Provide through-penetration firestop systems that are compatible with one another; with the substrates forming openings; and with the items, if any, penetrating through-penetration firestop systems, under conditions of service and application, as demonstrated by through-penetration firestop system manufacturer based on testing and field experience.
- B. Accessories: Provide components for each through-penetration firestop system that are needed to install fill materials and to comply with Part 1 "Performance Requirements" Article. Use only components specified by through-penetration firestop system manufacturer and approved by qualified testing and inspecting agency for firestop systems indicated. Accessories include, but are not limited to, the following items:
  - 1. Permanent forming/damming/backing materials, including the following:
    - a. Slag-/rock-wool-fiber insulation.
    - b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
    - c. Fire-rated form board.
    - d. Fillers for sealants.
  - 2. Substrate primers.
  - 3. Collars.
  - 4. Steel sleeves.

### 2.2 PERFORMANCE REQUIREMENTS

- A. General: For penetrations through the following fire-resistance-rated constructions, including both empty openings and openings containing penetrating items, provide through-penetration firestop systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated.
  - 1. Fire-resistance-rated walls including fire partitions.
- B. Rated Systems: Provide through-penetration firestop systems with the following ratings determined per ASTM E 814 or UL 1479:
  - 1. F-Rated Systems: Provide through-penetration firestop systems with F-ratings indicated, but not less than that equaling, or exceeding fire-resistance rating of constructions penetrated.
- C. For through-penetration firestop systems exposed to view, traffic, moisture, and physical damage, provide products that, after curing, do not deteriorate when exposed to these conditions both during and after construction.
  - 1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.
  - 2. For floor penetrations with annular spaces exceeding 4 inches in width and exposed to possible loading and traffic, provide firestop systems capable of supporting floor loads involved, either by installing floor plates or by other means.

3. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.
- D. For through-penetration firestop systems exposed to view, provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

## 2.3 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products as indicated in other Part 2 articles or by one of the following as approved by the Commissioner:
  1. A/D Fire Protection Systems, Inc.
  2. Passive Fire Protection Partners.
  3. Tremco, Inc.
  4. Or approved equal.

## 2.4 FIRE-SAFING INSULATION

- A. Provide material tested, listed and labeled by UL and listed by UL in designs like applications indicated. Provide semi-rigid, non-asbestos mineral fiber board, rated noncombustible when tested according to ASTM E 136:
  1. k-Value: 0.25 at 75 deg F.
  2. Thickness: 4 in., unless otherwise indicated, and not less than thickness necessary to obtain required fire-rating.
  3. Density: Nominal 4 pct.

## 2.5 MINERAL WOOL FIRESTOPPING

- A. Provide loose mineral wool, rated noncombustible when tested in accordance with ASTM E 136, free of asbestos and glass fiber, and suitable for stuffing into metal deck flutes to an in-place density of 6 to 12 pcf.

## 2.6 FIRESTOPPING CAULK AND PUTTY

- A. Products: Subject to compliance with requirements, provide products by one of the following:
  1. 3M Fire Protection Products; Fire-Barrier Series.
  2. International Protective Coatings Corp.; Flamesafe.
  3. Dow Corning Corp.; Silicone Firestop Foam 2001 and Sealant 2000;
  4. Approved equal.

## 2.7 FIRESTOP COLLARS

- A. Firestop collar or wrap devices attached to assembly around combustible plastic pipe (closed and vented piping systems).
- B. Products: Subject to compliance with requirements, provide products by one of the following:
  1. Hilti, Inc.; CP 642, and CP 643 Firestop Collar.
  2. 3M Fire Protection Products; Fire Barrier PPD Plastic Pipe Device.
  3. Specified Technologies, Inc.; STI Firestop.
  4. Approved equal.

## 2.8 FIRESTOP PILLOWS

- A. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. Firestop Pillows; Bio Fireshield.
  - 2. KBS Sealbags; International Protective Coatings Corp.
  - 3. Hilti; CP 657 Fire Block.
  - 4. Approved equal.

## 2.9 CAST-IN-PLACE FIRESTOP DEVICES

- A. Cast-in place firestop devices for use with non-combustible and combustible plastic pipe (closed and vented systems) penetrating concrete floors.
- B. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. Hilti; CP 680 Cast-in Place Firestop Device.
  - 2. Metacaulk; Cast-In-Place Device (CID) Integral intumescent firestop.
  - 3. Specified Technologies Inc.; Spec Seal CID Cast-In Firestop Device.
  - 4. Approved equal.

## 2.10 SEALANTS AND CAULKING MATERIALS FOR FIRE RATED UNITS

- A. Sealants or caulking materials used for openings between structurally separate sections of wall and floor.
- B. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. Hilti CP 672 Firestop Spray.
  - 2. Hilti CP601S Elastomeric Firestop Sealant.
  - 3. Hilti CP 606 Flexible Firestop Sealant.
  - 4. 3M Fire Barrier CP 25 WB.
  - 5. Approved equal.

## 2.11 FIRESTOP FASTENERS

- A. Provide anchorage accessories complying with UL designs and other components and accessories as needed.

## 2.12 FILL MATERIALS

- A. General: Provide through-penetration firestop systems containing the types of fill materials. Fill materials are those referred to in directories of referenced testing and inspecting agencies as "fill," "void," or "cavity" materials.
- B. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.
- C. Latex Sealants: Single-component latex formulations that after cure do not re-emulsify during exposure to moisture.

- D. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.
- E. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized steel sheet.
- F. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.
- G. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.
- H. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a non-shrinking, homogeneous mortar.
- I. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives.
- J. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.
- K. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
  - 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and other surfaces requiring a nonslumping, gunnable sealant, unless indicated firestop system limits use to nonsag grade for both opening conditions.
  - 2. Grade for Horizontal Surfaces: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces.
  - 3. Grade for Vertical Surfaces: Nonsag formulation for openings in vertical and other surfaces.

## 2.13 MIXING

- A. For those products requiring mixing before application, comply with through-penetration firestop system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing through-penetration firestop systems to comply with firestop system manufacturer's written instructions and with the following requirements:
  - 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of through-penetration firestop systems.
  - 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with through-penetration firestop systems. Remove loose particles remaining from cleaning operation.
  - 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by through-penetration firestop system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent through-penetration firestop systems from contacting adjoining surfaces that will remain exposed on completion of Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestop system materials. Remove tape as soon as possible without disturbing firestop system's seal with substrates.

### 3.4 THROUGH-PENETRATION FIRESTOP SYSTEM INSTALLATION

- A. General: Install through-penetration firestop systems to comply with Part 1 "Performance Requirements" Article and with firestop system manufacturer's written installation instructions and published drawings for products and applications indicated.
- B. Install forming/damming/backing materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
  - 1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.
- C. Install fill materials for firestop systems by proven techniques to produce the following results:
  - 1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
  - 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
  - 3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

**3.5 FIELD QUALITY CONTROL**

- A. Inspecting Agency: Commissioner may engage a qualified, independent inspecting agency to inspect through-penetration firestops. Independent inspecting agency shall comply with ASTM E 2174 requirements including those related to qualifications, conducting inspections, and preparing test reports.
- B. Where deficiencies are found, restore or replace through-penetration firestop systems so they comply with requirements.
- C. Proceed with enclosing through-penetration firestop systems with other construction only after inspection reports are issued and firestop installations comply with requirements.

**3.6 CLEANING AND PROTECTING**

- A. Clean off excess fill materials adjacent to openings as Work progresses by methods and with cleaning materials that are approved in writing by through-penetration firestop system manufacturers and that do not damage materials in which openings occur.
- B. Provide final protection and maintain conditions during and after installation that ensure that through-penetration firestop systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated through-penetration firestop systems immediately and install new materials to produce systems complying with specified requirements.

**END OF SECTION 07 84 10**

**SECTION 07 92 00****JOINT SEALANTS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Nonstaining silicone joint sealants.
  2. Urethane joint sealants.
  3. Mildew-resistant joint sealants.
  4. Latex joint sealants.
- B. Related Sections:
1. 09 66 21 - Resinous Matrix Terrazzo.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 ACTION SUBMITTALS

- A. Product Data: For each joint-sealant product.
- B. Samples: For each kind and color of joint sealant required.
- C. Joint-Sealant Schedule: Include the following information:
  - 1. Joint-sealant application, joint location, and designation.
  - 2. Joint-sealant manufacturer and product name.
  - 3. Joint-sealant formulation.
  - 4. Joint-sealant color.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified testing agency.
- B. Product Test Reports: For each kind of joint sealant, for tests performed by manufacturer and witnessed by a qualified testing agency.
- C. Field-Adhesion-Test Reports: For each sealant application tested.
- D. Sample Warranties: For special warranties.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Product Testing: Test joint sealants using a qualified testing agency.
  - 1. Testing Agency Qualifications: Qualified according to ASTM C 1021 to conduct the testing indicated.
- D. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

1.9 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
  - 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
  - 2. When joint substrates are wet.

3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

#### 1.10 WARRANTY

- A. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to restore or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 JOINT SEALANTS, GENERAL

- A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing elastomeric sealants that comply with ASTM C 920 and other requirements indicated on each Elastomeric Joint Sealant Data Sheet at end of this Section, including those requirements referencing ASTM C 920 classifications for Type, Grade, Class, and Uses.
- B. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.
- C. Colors of Exposed Joint Sealants: As selected by Commissioner from manufacturer's full range.

#### 2.2 SILICONE SEALANTS

- A. One-Part Neutral Cure Silicone Sealant: Type S; Grade NS; Class 25; where specifically approved by the Commissioner. When tested per ASTM C 719, shall withstand 50 percent increase and decrease of joint width as measured at time of application.
  1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Dow Corning Corp.; Dow Corning 795.
    - b. Momentive Performance Materials; GE Construction 1200.
    - c. Tremco, Inc.; Spectrum 2.
    - d. Approved equal.
  2. Locations: General purpose use within and around windows, door frames, louvers and other junctures. Non-traffic (NT), masonry (M), glass (G), aluminum (A) and, as applicable to substrates indicated, other materials (O). For all exterior vertical joints.

- B. One-Part Mildew-Resistant Silicone Sealant: Type S; Grade NS; Class 25: Formulated with fungicide for sealing interior joints with nonporous substrates at plumbing fixtures.

1. Products: Subject to compliance with requirements, provide one of the following

- a. Dow Corning Corp.; Dow Corning 786.
- b. Momentive Performance Materials; SCS 1702.
- c. Tremco Corp.; Proglaze White.
- d. Approved equal.

2. Locations: Interior Uses; Non-traffic (NT), glass (G), aluminum (A) and nonporous joint substrates indicated. For interior joints at wet areas.

## 2.3 ACRYLIC SEALANTS

- A. Manufacturer's standard one-part, nonsag, solvent-release-curing acrylic terpolymer sealant complying with AAMA 808.3 or FS TT-S-00230 or both, with capability when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the following percentage change in joint width existing at time of application and remain adhered to joint substrates indicated for Project without failing cohesively. Products shall have 7-1/2 percent movement in both extension and compression for a total of 15 percent.

- B. Products: Subject to compliance with requirements, provide one of the following:

1. Protective Treatments, Inc.; PTI 738 or PTI 767.
2. Tremco, Inc; Mono.
3. Pecora Corp.; 60+Unicrylic.
4. Approved equal.

- C. Locations: For filling small interior joints and cracks 1/4" or less in width and where movement is limited to the amounts specified above.

## 2.4 BUTYL SEALANTS

- A. Butyl-Rubber-Based Joint Sealants: ASTM C1311.

- B. Products: Subject to compliance with requirements, provide one of the following:

1. Bostik, Inc; Chem-Calk 300.
2. Pecora Corporation; BC-158.
3. Tremco Butyl Sealant, Tremco, Inc.
4. Approved equal.

- C. Locations: For standing seam roof, roof accessories, sheet metal flashing and trim.

## 2.5 SECURITY SEALANTS

- A. Description: Pick proof sealants that contain materials and have properties to prevent idle tampering and vandalism.

B. Products: Subject to compliance with requirements, provide one of the following:

1. Pecora Corp.; Dynapoxy EP-1200.
2. SUREBOND; SB – 190 EVERSEAL
3. SIKA; EVERBUILD TECNIC STAYSEAL 75 or ANTI-PICK 109.
4. Approved equal.

## 2.6 LATEX JOINT SEALANTS

A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.

B. Products: Subject to compliance with requirements, provide one of the following:

1. Pecora Corporation; AC-20.
2. Sherwin-Williams Company (The); 850A Siliconized Acrylic Latex Caulk.
3. Tremco Incorporated; Tremflex 834.
4. Approved equal.

## 2.7 ACOUSTICAL JOINT SEALANTS

A. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834. Products shall be effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies per ASTM E 90.

B. Products: Subject to compliance with requirements, provide one of the following:

1. GE Construction Sealants; Momentive Performance Materials Inc.; RCS20 Acoustical
2. Pecora Corporation; AC-20 FTR.
3. USG Corporation; SHEETROCK Acoustical Sealant.
4. Approved equal.

## 2.8 PREFORMED FOAM SEALANTS

A. Preformed Foam Sealants: Manufacturer's standard preformed, precompressed, impregnated open-cell foam sealant manufactured from high-density urethane foam impregnated with a nondrying, water repellent agent; factory-produced in precompressed sizes and in roll or stick form to fit joint widths indicated and to develop a watertight and airtight seal when compressed to the degree specified by manufacturer; and complying with the following requirements:

B. Properties: Permanently elastic, mildew-resistant, nonmigratory, nonstaining, and compatible with joint substrates and other joint sealants.

C. Impregnating Agent: Manufacturer's standard.

D. Density: Manufacturer's standard.

E. Backing: None, unless otherwise indicated.

## 2.9 JOINT SEALANT BACKING

- A. General: Provide sealant backings of material and type that are nonstaining; are compatible with joint substrates, sealants, primers and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
- B. Plastic Foam Joint Fillers: Preformed, compressible, resilient, nonstaining, nonwaxing, nonextruding strips of flexible plastic foam of material indicated below and of size, shape, and density to control sealant depth and otherwise contribute to producing optimum sealant performance:
  - 1. Either flexible, open cell polyurethane foam or non-gassing, closed-cell polyethylene foam, unless otherwise indicated or as recommended by the sealant manufacturer.
- C. Elastomeric Tubing Joint Fillers: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, nonabsorbent to water and gas, capable of remaining resilient at temperatures down to -26 deg F. Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and otherwise contribute to optimum sealant performance.
- D. Bond-Breaker Tape: Polyethylene tape or other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

## 2.10 MISCELLANEOUS MATERIALS

- A. Joint Cleaners: Provide joint cleaning compounds as recommended by sealant manufacturer(s).
- B. Joint Prime Sealer: Provide type(s) of joint primers as recommended by sealant manufacturer(s).
- C. Bond Breaker Tape: Polyethylene tape or other plastic tape as recommended by sealant manufacturer, to be applied to sealant-contact surfaces where bond to the substrate or joint filler must be avoided for proper performance of sealant. Provide self-adhesive tape wherever applicable.
- D. Sealant Backer Rod: Compressible rod stock polyethylene foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent, durable non-absorptive material as recommended for compatibility with sealant by the sealant manufacturer. Provide size and shape of rod which will control the joint depth for sealant placement, break bond of sealant at bottom of joint, form optimum shape of sealant bead on back side, and provide a highly compressible backer to minimize possibility of sealant extrusion from compressed joint.
- E. Joint Filler: Provide expanded neoprene complying with ASTM D1056, Class SC (oil-resistant and medium swell), of 2 to 5 psi compression deflection (Grade SCE 41); except provide 13 to 17 psi compression deflection (Grade SCE 44) wherever filler is applied under sealant exposed to traffic.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
  - 1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
  - 2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air.
- B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

### 3.4 INSTALLATION

- A. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.
- B. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
  - 1. Do not leave gaps between ends of sealant backings.
  - 2. Do not stretch, twist, puncture, or tear sealant backings.
  - 3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

- C. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.
- D. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
  - 1. Place sealants so they directly contact and fully wet joint substrates.
  - 2. Completely fill recesses in each joint configuration.
  - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- E. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
  - 1. Remove excess sealant from surfaces adjacent to joints.
  - 2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
  - 3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.
  - 4. Provide flush joint profile at locations indicated on Drawings according to Figure 8B in ASTM C 1193.
  - 5. Provide recessed joint configuration of recess depth and at locations indicated on Drawings according to Figure 8C in ASTM C 1193.
    - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

### 3.5 FIELD QUALITY CONTROL

- A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
  - 1. Extent of Testing: Test completed, and cured sealant joints as follows:
    - a. Perform one test for each 1000 feet of joint length thereafter or one test per each floor per elevation.
  - 2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193.
    - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
  - 3. Inspect tested joints and report on the following:
    - a. Whether sealants filled joint cavities and are free of voids.
    - b. Whether sealant dimensions and configurations comply with specified requirements.
    - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
5. Restore sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

- B. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

### 3.6 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

### 3.7 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

**END OF SECTION 07 92 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 08 11 13**

### **HOLLOW METAL DOORS AND FRAMES**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section includes:
  - 1. Interior standard steel doors and frames.
  - 2. Exterior standard steel doors and frames.
  - 3. Security doors and frames.
  - 4. Acoustical doors and frames.
  - 5. Glass lites in doors, borrowed lites in partitions and other hollow metal work as indicated.
  - 6. Installation accessories.

##### **1.3 DEFINITIONS**

- A. Minimum Thickness: Minimum thickness of base metal without coatings according to SDI A250.8.

##### **1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirement.

#### 1.6 COORDINATION

- A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
- B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.
- C. Packaged Acoustical Doors and Frames: Coordinate with manufacturer to provide hardware, including door and jamb seals, auto door bottom, door threshold, hinges, and door seal for openings indicated.

#### 1.7 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.9 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include the following:
  1. Elevations of each door type.
  2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
  3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
- C. Product Schedule: For hollow-metal doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.10 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.12 DELIVERY, STORAGE, AND HANDLING

- A. Deliver hollow-metal doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
  - 1. Provide additional protection to prevent damage to factory-finished units.
- B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store hollow-metal doors and frames vertically under cover at Project site with head up. Place on minimum 4-inch- high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Steel Door and Frame Products: Subject to compliance with requirements manufacturers offering steel doors and frame assemblies which may be incorporated in the Work include the following, as approved by the Commissioner:
  - 1. Curries Company.
  - 2. Steelcraft Manufacturing Co.
  - 3. Ceco Corp.
  - 4. Approved equal.

2.2 PERFORMANCE REQUIREMENTS

- A. Hollow metal doors and Frames: Comply with SDI-Specifications for Standard Steel Doors and Frames (SDI-100).
- B. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to the New York City Department of Buildings and New York City Fire Department, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

1. Smoke- and Draft-Control Assemblies: Provide assemblies with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to the New York City Department of Buildings and New York City Fire Department, based on testing according to UL 1784 and installed in compliance with NFPA 105.
  2. Provide fire rated door assemblies as indicated or required by adjacent construction.
- C. Sound-Rated (Acoustical) Assemblies: Provide door and frame assemblies fabricated as sound-reducing type, tested according to ASTM E 1408, and classified according to ASTM E 413.
1. Acoustical assemblies with STC sound ratings as indicated in other Part 2 articles or on drawings, unless otherwise indicated.
- D. Thermally Rated Door Assemblies: Unless otherwise indicated and required by project application, provide door assemblies with U-factor of not more than 0.50 deg Btu/F x h x sq. ft. when tested according to ASTM C 518 or ASTM C 1363.

## 2.3 INTERIOR STEEL DOORS AND FRAMES

- A. Construct hollow- metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
- B. Maximum-Duty Interior Doors and Frames: As per SDI A250.8, Level 4; SDI A250.4, Level A.
1. Doors:
    - a. Type: As indicated in the Door and Frame Schedule.
    - b. Thickness: 1-3/4 inches.
    - c. Face: Uncoated steel sheet, minimum thickness of 0.067 inch (14-gage).
    - d. Face at 'Wet Area' Doors: Metallic-coated steel sheet, minimum thickness of 0.067 inch (14-gage), with minimum A60 coating.
    - e. Edge Construction: Model 2, Seamless unless otherwise indicated.
    - f. Reinforcing vertical sheet steel channel or interlocking Z minimum 22 gauge, full height of door, every 6 inch spot weld 4" on center.
    - g. Top and Bottom Edges: Edges shall be joined and reinforced full height with 16 gauge continuous strip. Joints ate edges shall be continuously welded, thoroughly filled with metallic filler and ground smooth.
    - h. Seams: Exposed seams on edges, corners and/or faces are not acceptable.
    - i. Core: Vertical steel stiffener.
    - j. Fire-Rated Core: Manufacturer's standard vertical steel stiffener with insulation core for fire-rated doors.
  2. Frames:
    - a. Materials: Uncoated steel sheet, minimum thickness of 0.067 inch (14-gage).
    - b. Materials: at 'Wet Area' Doors: Metallic-coated steel sheet, minimum thickness of 0.067 inch (14-gage), with minimum A60 coating.
    - c. Sidelite Frames: Fabricated from same thickness material as adjacent door frame.
    - d. Construction: Full profile welded (continuously welded).
    - e. Provide temporary spreaders on bottom of welded door frames.

3. Hardware Reinforcement: Fabricate reinforcement plates from same material as frames to comply with the following minimum sizes:

- a. Hinges Steel Plate: Minimum 3/16-inch-thick by 1-1/2 inches wide by full height of door continuously weld.

4. Exposed Finish: Prime.

C. Security Doors and Frames:

1. Type: As indicated in the Door and Frame Schedule.
2. Thickness: 2 inches.
3. Face: Uncoated Steel Sheet, nominal 0.102 inch (10 gage).
4. Frame: Uncoated Steel Sheet, nominal 0.144 inch (7 gage),
5. Exposed Finish: Prime.

D. Borrowed Lites:

1. Type/ Thickness: As indicated in the Door and Frame Schedule.
2. Materials for Frames: Uncoated steel sheet, minimum thickness of 0.067 inch (14-gage).
3. Materials for Security Frames: Uncoated Steel Sheet, nominal 0.144 inch (7 gage),
4. Exposed Finish: Prime.
5. Provide glass as indicated; refer to Division 08 sections for glazing materials and requirements.

## 2.4 EXTERIOR STEEL DOORS AND FRAMES

- A. Construct hollow- metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

- B. Custom Exterior Doors and Frames: As per SDI A250.8 and SDI A250.4,

1. Doors:

- a. Type: As indicated in the Door and Frame Schedule.
- b. Thickness: 1-3/4 inches.
- c. Face: Stainless steel sheet, minimum thickness of 0.067 inch (14-gage).
- d. Edge Construction: Model 2, Seamless unless otherwise indicated.
- e. Reinforcing vertical galvanized sheet steel channel or interlocking Z minimum 22 gauge, full height of door, every 6 inch spot weld 4" on center.
- f. Top and Bottom Edges: Edges shall be joined and reinforced full height with 16 gauge continuous strip. Joints at edges shall be continuously welded, thoroughly filled with metallic filler and ground smooth.
- g. Seams: Exposed seams on edges, corners and/or faces are not acceptable.
- h. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
- i. Bottom Edges: Close bottom edges of doors where required for attachment of weather stripping with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.

- j. Core: Polystyrene insulation, Minimum R- 18, Rating 4 or better, with fully operable minimum U-Factor 0.374 and R-Value 2.53, including insulated door and frame, as determined using CTS method in ASTM C1199.
- 2. Frames:
  - a. Materials: Stainless steel sheet, minimum thickness of 0.081 inch (12-gage).
  - b. Construction: Full profile welded (continuously welded).
  - c. Thermal Break Frames: Subject to the same compliance standards and requirements as standard hollow metal frames: Thermal performance tested in accordance with NFRC 102, and resistance to air infiltration in accordance with NFRC 400.
  - d. Where indicated, provide thermally broken frame profiles available for use in both masonry and drywall. Fabricate with 1/ 16 inch positive thermal break and integral weatherstripping.
- 3. Exposed Finish: Bright, Directional Satin No. 4, matching approved samples.
- C. Alarms: Refer to access control and hardware sections for requirements.

## 2.5 ACOUSTICAL DOORS AND FRAMES

- A. Description: Proprietary, cased hollow metal opening and steel door including hardware.
  - 1. Hardware Set: Refer to Section 08 70 00 "Finish Hardware."
- B. Products: Subject to compliance with requirements, provide the following:
  - 1. HMF Express; STC 54, 3- Sided Single Frame (Cased Open) and Sound- rated Door.
- C. Dimensions: As scheduled on drawings.
- D. Acoustical Frames: 14 gauge steel "case open" continuously welded frame.
- E. Acoustical Doors: 14 gauge flush steel door with 3/8 inch UC Core by HMF. 1-3/4" thickness. Reinforced hinge and lock channels. 14 gauge steel top and bottom channels with 16 gauge flush steel strips.
- F. Whole Opening Acoustical Rating: STC 54, as tested in accordance with ASTM E 1408, and classified according to ASTM E 413.
- G. Shop-applied Primer: Grey, Manufacturers standard baked- on product.
- H. Field-painted Finish: Color as scheduled.

## 2.6 LITES IN DOORS

- A. Provide glass lites with stops of 18 gage steel, using countersunk machine screws uniformly spaced, not more than 12 inch on centers.

1. Provide non-removable fully welded stops in one-piece lengths on outside of exterior doors and on secure side of interior doors for glass, louvers, and other panels in doors, unless otherwise indicated.
  2. Provide equal spaced security screw applied on removable glazing stops on inside of frame, louvers, and other panels in doors, removable stops shall have butt jointed corners.
    - a. Removable stops between corridor and other areas shall be not be located on the corridor side, unless otherwise indicated.
    - b. Stops shall fit hairline tight at butt edges.
    - c. Confirm spacing of stops with required glass thickness.
- B. Prepare doors for glazing as indicated; refer to Division 08 sections for glazing materials and requirements.

## 2.7 LOUVERS

- A. Provide louvers according to SDI 111C for interior doors where indicated, with blades or baffles formed of 0.0239-inch-thick cold-rolled steel sheet set into minimum 0.0359-inch-thick steel frame.
1. Sight-Proof Louvers: Stationary louvers constructed with inverted V-shaped or Y-shaped blades. Louvers shall have a minimum 50 percent free area, unless otherwise indicated.
  2. Fire-Rated Automatic Louvers: Louvers constructed with movable blades closed by actuating fusible links at 150 deg F and labeled and listed for use in fire-rated door assemblies of type and fire-resistance rating indicated by the same inspecting and testing agency who established fire-resistance rating of door assembly.

## 2.8 HOLLOW-METAL PANELS

- A. Provide hollow-metal panels of same materials, construction, and finish as adjacent door assemblies.

## 2.9 ACCESSORIES

- A. Door Silencers, Interior Doors: Except on weatherstripped frames, drill stops to receive 3 silencers on strike jambs of single-swing frames and 2 silencers on heads of double-swing frames.
- B. Grout Guards: Provide 26 gage steel boxes, welded to frame, at back of finish hardware cutouts where mortar or other materials might obstruct hardware operation and to close off openings.
- C. Weatherstripping, Exterior Doors: Refer to Division 08 Hardware section.

## 2.10 FRAME ANCHORS

- A. Jamb Anchors:
  - 1. Type: Anchors of minimum size and type required by applicable door and frame standard, and suitable for performance level indicated.
  - 2. Quantity: Minimum of three anchors per jamb, with one additional anchor for frames with no floor anchor. Provide one additional anchor for each 24 inches of frame height above 7 feet.
  - 3. Postinstalled Expansion Anchor: Minimum 3/8-inch- diameter bolts with expansion shields or inserts, with manufacturer's standard pipe spacer.
- B. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor.
- C. Floor Anchors for Concrete Slabs with Underlayment: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at top of underlayment.
- D. Material: ASTM A 879/A 879M, Commercial Steel (CS), 04Z (12G) coating designation; mill phosphatized.
  - 1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M; hot-dip galvanized according to ASTM A 153/A 153M, Class B.

## 2.11 MATERIALS

- A. Hot-Rolled Steel Sheets and Strip: Commercial quality carbon steel, pickled and oiled, complying with ASTM A 569.
- B. Cold-Rolled Steel Sheets: Commercial quality carbon steel, complying with ASTM A 366.
- C. Galvanized Steel Sheets: Zinc-coated steel sheets of commercial quality, complying with ASTM A 526, with ASTM A 525, G60 zinc coating, mill phosphatized.
- D. Stainless-Steel Sheets: Commercial-quality stainless steel, Type 304, complying with ASTM A 167. Provide not less than 14 gage sheets.
- E. Supports and Anchors: Not less than 18 gage galvanized sheet steel.
  - 1. Provide stainless steel supports and anchors at stainless steel door and frame applications.
- F. Inserts, Bolts and Fasteners: Manufacturer's standard units, except hot-dip galvanize items to be built into exterior walls, complying with ASTM A 153, Class C or D as applicable.
  - 1. Provide stainless steel fasteners at stainless steel door and frame applications.
- G. Shop Applied Primer: Rust-inhibitive paint, suitable as a base for specified finish paints. Provide zinc-rich primer complying with SSPC Paint 20 for touching up galvanized coatings.

## 2.12 FABRICATION, GENERAL

- A. Fabricate steel door and frame units to be rigid, neat in appearance and free from defects, warp or buckle. Wherever practicable, fit and assemble units in manufacturer's plant. Clearly identify work that cannot be permanently factory- assembled before shipment, to assure proper assembly at project site. Comply with ANSI/SDI-100 requirements.
  - 1. Internal Construction: Manufacturer's standard honeycomb, polyurethane, polystyrene, unitized steel grid, vertical steel stiffeners, or rigid mineral fiber core with internal sound deadener on inside of face sheets where appropriate in accordance with SDI standards.
- B. Fabricate frames, concealed stiffeners, reinforcement, edge channels, and moldings from either cold-rolled or hot-rolled steel.
  - 1. Provide stainless steel fabrications at stainless steel door and frame applications.
- C. Fabricate exterior and interior wet area doors, panels, and frames from materials specified. Close top and bottom edges of exterior doors and interior doors in wet areas as integral part of door construction or by addition of inverted steel channels.
- D. Exposed Fasteners: Where approved by Commissioner and as indicated, provide countersunk flat Phillips heads for exposed screws and bolts.
- E. Hardware Preparation: Factory prepare hollow metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware."
  - 1. Locate hardware as indicated, or if not indicated, according to ANSI/NAAMM- HMMA 861.
  - 2. Reinforce doors and frames to receive nontemplated, mortised and surface- mounted door hardware.
  - 3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
  - 4. Reinforce doors and frames to receive hardware. Drilling and tapping for surface-applied finish hardware may be done at project site.
  - 5. Locate finish hardware as shown on final shop drawings or, if not shown, in accordance with "Recommended Locations for Builder's Hardware," published by Door and Hardware Institute.
- F. Coordinate fabrication of frames indicated to receive glazing with glazing installation.

## 2.13 SHOP PAINTING

- A. Clean, treat, and paint welds and exposed surfaces of steel door and frame units, including galvanized surfaces.
- B. Clean steel surfaces of mill scale, rust, oil, grease, dirt, and other foreign materials before application of paint.
- C. Apply shop coat of prime paint of even consistency to provide a uniformly finished surface ready to receive finish paint.

## 2.14 STAINLESS STEEL FINISHES

- A. Stainless-steel Finishes: Finish designations prefixed by AISI conform with the system established by the American Iron and Steel Institute for designating finishes for stainless-steel sheet.
  - 1. Remove or blend tool and die marks and stretch lines into finish.
  - 2. Grind and polish surfaces to produce uniform, textured, polished finish indicated, free of cross scratches.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make restored area smooth, flush, and invisible on exposed faces. Touch up factory-applied finishes where spreaders are removed.
- B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

### 3.3 INSTALLATION

- A. General: Install hollow-metal doors and frames plumb, rigid, properly aligned, and securely fastened in place. Comply with approved Shop Drawings and with manufacturer's written instructions.
- B. Hollow-Metal Frames: Comply with SDI A250.11.
  - 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces without damage to completed Work.
    - a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces. Touch-up finishes.
    - b. Install frames with removable stops located on secure side of opening.
  - 2. Fire-Rated Openings: Install frames according to NFPA 80.
  - 3. Floor Anchors: Secure with postinstalled expansion anchors.
  - 4. Solidly pack mineral-fiber insulation inside frames.
  - 5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout or mortar.
  - 6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

7. Installation Tolerances: Adjust hollow-metal frames to the following tolerances:
  - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
  - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
  - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
  - d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.
- C. Hollow-Metal Doors: Fit and adjust hollow-metal doors accurately in frames, within clearances specified below.
  1. Non-Fire-Rated Steel Doors: Comply with SDI A250.8.
  2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
  3. Smoke-Control Doors: Install doors according to NFPA 105.
- D. Glazing: Comply with installation requirements in Section 08 80 00 "Glazing" and with hollow-metal manufacturer's written instructions.

### 3.4 ACOUSTICAL DOORS AND FRAMES

- A. Install in accordance with approved shop drawings and manufacturer instructions.
- B. Acoustical Frames: Fill voids solidly with mortar. Install scheduled head and jamb seals within acoustical frame with mechanical fasteners. Set in full bed of sealant per door manufacturer instructions and details.
- C. Hardware: Install in accordance with acoustical door and frame manufacturer's instructions.

### 3.5 CLEANING AND TOUCHUP

- A. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
- B. Metallic-Coated Surface Touchup: Clean abraded areas and restore with galvanizing repair paint according to manufacturer's written instructions.
- C. Factory-Finish Touchup: Clean abraded areas and restore with same material used for factory finish according to manufacturer's written instructions.

**END OF SECTION 08 11 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 08 31 13****ACCESS DOORS AND FRAMES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Access doors and frames for walls and ceilings.
  2. Security access doors and frames for walls and ceilings.
  3. Installation accessories.
- B. Related Sections:
1. Section 07 72 00 "Roof Accessories" for roof hatches.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirement.

1.5 COORDINATION

- A. Advise Installers of other work about specific requirements relating to access door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.
- B. Furnish inserts and anchoring devices for access doors that are to be built into other construction. Coordinate delivery with other work to avoid delay.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include construction details materials, individual components and profiles, and finishes.
- B. Samples: For each type of access door and frame and for each finish specified.
- C. Product Schedule: For access doors and frames. Use same designations indicated on Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection and temperature-rise limit ratings indicated, according to NFPA 252 or UL 10B.

2.2 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. Acudor Products, Inc.
  - 2. Babcock-Davis.
  - 3. Karp Associates, Inc.
  - 4. Milcor; Commercial Products Group of Hart & Cooley, Inc.
  - 5. Nystrom, Inc.
  - 6. Approved equal.

## 2.3 STAINLESS-STEEL MATERIALS

- A. Rolled-Stainless-Steel Floor Plate: ASTM A 793, manufacturer's standard finish.
- B. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 316

## 2.4 ACCESS DOORS AND FRAMES

- A. Flush, Non-Rated Access Doors with Exposed Trim: Units consisting of frame, door, hardware, and complying with the following requirements:
  - 1. Door Size: As indicated o drawings.
  - 2. Door: Minimum 0.075-inch-thick (14 gage) stainless steel sheet, set flush with surrounding finish surfaces.
  - 3. Frame: Minimum 0.075-inch-thick (14 gage) stainless steel sheet, with minimum 1" wide, surface mounted trim.
  - 4. Hinges: Continuous piano hinge.
  - 5. Locks: Mortise cylinder, self-latching device with detention lock at locations required.
- B. Flush, Insulated, Fire-Rated Access Doors with Exposed Trim: Units consisting of frame, door, hardware, and complying with the following requirements:
  - 1. Door Size: As indicated o drawings.
  - 2. Fire-Resistance Rating: As indicated to meet the fire resistance rating of the wall construction where the access door shall be installed.
  - 3. Temperature Rise Rating: 250 deg F at the end of 30 minutes.
  - 4. Door: Minimum 0.035-inch-thick (20 gage) stainless steel sheet with a core of mineral-fiber insulation, flush panel construction, or 0.060 inch thick stainless steel sheet, set flush with surrounding finish surfaces.
  - 5. Frame: Minimum 0.075-inch-thick (14 gage) stainless steel sheet with minimum 1 inch wide, surface mounted trim.
  - 6. Hinges: Continuous piano hinge.
  - 7. Automatic Closer: Spring type.
  - 8. Lock: Mortise cylinder, self-latching device with detention lock at locations required.

## 2.5 SECURITY ACCESS DOORS AND FRAMES

- A. High-Security Flush Access Doors:
  - 1. Door Size: As indicated on drawings.
  - 2. Stainless-Steel Sheet for Door: Nominal 0.141 inch (10 gage).
  - 3. Stainless-Steel Frame: Nominal 0.141 inch (10 gage); Minimum 3/16-by-2-by-2-by-3-inch angle welded with joints ground smooth.
  - 4. Hinges: Manufacturer's standard security hinge.
  - 5. Latch and Lock: Detention deadbolt with parametric key or prepared for mortise cylinder, as indicated on Drawings with interior release where required.

## 2.6 FABRICATION

- A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

- B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
- C. Stainless Steel Access Doors and Frames: Continuous welded construction. Grind welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
  - 1. Exposed Flange: Nominal 1 to 1-1/2 inches wide around perimeter of frame.
  - 2. For installation in masonry construction, furnish frames with adjustable metal masonry anchors.
- D. Locking Devices: Furnish number required to hold door in flush, smooth plane when closed.
  - 1. For cylinder lock, furnish 2 keys per lock and key all locks alike.
  - 2. Mortise Cylinder Preparation: Where indicated and required, prepare door panel to accept cylinder; refer to Section 08 70 00 "Finish Hardware."
- E. Separate dissimilar metals by painting each metal surface in area of contact with a bituminous coating or by other permanent separation as recommended by manufacturers of dissimilar metals.

## 2.7 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Stainless-Steel Finishes:
  - 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
  - 2. Polished Finish: Bright, Directional Satin No. 4 finish. Grind and polish surfaces to produce uniform finish, free of cross scratches.
    - a. Run grain of directional finishes with long dimension of each piece.
    - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 INSTALLATION**

- A. Comply with manufacturer's written instructions for installing access doors and frames.
- B. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.
- C. Install doors flush with adjacent finish surfaces.

**3.4 ADJUSTING AND CLEANING**

- A. Adjust doors and hardware after installation for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

**END OF SECTION 08 31 13**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 08 33 23**

### **OVERHEAD COILING DOORS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Insulated overheard coiling doors.
  - 2. Installation accessories.
- B. Related Sections:
  - 1. Section 05 50 00 "Metal Fabrications" for miscellaneous steel supports and door-opening framing.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirement.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type and size of overhead coiling door and accessory.
- B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
  - 1. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
  - 2. Include diagrams for power, signal, and control wiring.
- C. Samples: For each exposed product and for each color and texture specified.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Oversize Construction Certification: For door assemblies required to be fire-rated and that exceed size limitations of labeled assemblies.
- C. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Fire-Rated Door Assemblies: Complying with NFPA 80; listed and labeled by qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.
  - 1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

- D. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1.

#### 1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to restore or replace components of doors that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Two years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Basis- of- Design, Products: Subject to compliance with requirements, provide THERMISER, insulated rolling door as supplied by Cornell iron Works or comparable product from one of the following:
  - 1. Overhead Door Corporation.
  - 2. Clopay Building Products Company; a Griffon Company.
  - 3. Raynor.
  - 4. Or approved equal.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide overhead coiling doors capable of withstanding the effects of gravity loads and the following loads and stresses without evidencing permanent deformation of door components:
  - 1. Wind Loads: Determine loads based on the following minimum design wind pressures:
    - a. Uniform pressure (velocity pressure) of 30 psf, unless otherwise indicated on the Structural Drawings, acting inward and outward.
  - 2. Air Infiltration: Maximum rate not more than indicated when tested according to ASTM E 283.
    - a. Maximum Rate: 0.08 cfm at 15 mph.
  - 3. Impact Test for Flying Debris: Comply with ASTM E 1996, tested according to ASTM E 1886.
    - a. Level of Protection: Enhanced Protection.
    - b. Wind Zone One: 110 mph, pressure test to 3/4 and 1-1/2 x design pressure (positive and negative).
- B. Operation-Cycle Requirements: Provide overhead coiling door components and operators capable of operating for not less than 100,000 cycles.

#### 2.3 OVERHEAD COILING STEEL DOORS

- A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to

withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

1. Door Curtain Slats: Zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, G90 coating designation.
    - a. Minimum Base- Metal (Uncoated) Thickness: 0.036 inch (20 gage).nominal.
  2. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness.
  3. For insulated doors, provide door sections with continuous thermal-break construction, separating faces of door.
- B. Door Sizes: As indicated on the drawings.
- C. Endlocks and Windlocks for Service Doors: Malleable-iron castings galvanized after fabrication, secured to curtain slats with galvanized rivets or high-strength nylon. Provide locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.
- D. Bottom Bar for Service Doors: Consisting of two angles, each not less than 1- 1/2 by 1- 1/2 by 1/ 8 inch thick; fabricated from manufacturer's stainless steel extrusions to match curtain slats and finish.
- E. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.
- F. Weatherseals: Equip each exterior door with weather-stripping gaskets fitted to entire perimeter of door for a weathertight installation, unless otherwise indicated.
1. At door head, use 1/8-inch- thick, replaceable, continuous sheet secured to inside of hood.
  2. At door jambs and bottom, use replaceable, adjustable, continuous, bulb-style compressible EPDM gasket weatherstripping at bottom of bar, extending into guides.
- G. Thermal Insulation: Insulate inner core of steel sections with door manufacturer's standard polystyrene or polyurethane foamed-in-place insulation, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84, with Minimum thermal resistance of R- 8.0.
1. Secure insulation to door section. Enclose insulation completely within steel sections that incorporate the following inside facing material, with no exposed insulation material evident:
- H. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints and free of warp, twist, and deformation.
- I. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15 mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers,

sulfur components, and other deleterious impurities.

## 2.4 HOOD

- A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
- B. Hood Material: Zinc-coated (galvanized), cold-rolled, commercial steel (CS) sheet, complying with ASTM A 653/A 653M, G90 coating designation.
  - 1. Minimum Base- Metal (Uncoated) Thickness: 0.024 inch (24 gage).nominal.

## 2.5 LOCKING DEVICES

- A. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.
  - 1. Lock Cylinders: Provide cylinders specified in Division 08 Section "Door Hardware."
- B. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

## 2.6 CURTAIN ACCESSORIES

- A. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.
  - 1. Provide pull-down straps or pole hooks for doors more than 84 inches high.

## 2.7 COUNTERBALANCE MECHANISM

- A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.
- B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.
- C. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.
- D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.
- E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

## 2.8 ELECTRIC DOOR OPERATORS

- A. General: Provide electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycle requirements specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
- B. Comply with NFPA 70.
- C. Disconnect Device: Hand-operated disconnect device or mechanism for automatically engaging chain-and-sprocket operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount disconnect device and operator, so they are accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
- D. Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency auxiliary operator.
- E. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70, Class 2 control circuit, maximum 24-V, ac or dc.
- F. Door-Operator Type: Unit consisting of electric motor. Provide motor and drive assembly of horsepower and design as determined by door manufacturer for size of door required.
- G. Electric Motors: High-starting torque, reversible, continuous-duty, Class A insulated, electric motors complying with NEMA MG 1, with overload protection, sized to start, accelerate, and operate door in either direction from any position, at not less than 2/3 fps and not more than 1 fps, without exceeding nameplate ratings or service factor.
  - 1. Service Factor: Comply with NEMA MG 1, unless otherwise indicated.
  - 2. Coordinate wiring requirements and electrical characteristics of motors with building electrical system.
  - 3. Provide open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.
  - 4. Provide totally enclosed, nonventilated or fan-cooled motor, fitted with plugged drain, and controller with NEMA ICS 6, Type 4 enclosure where indicated.
- H. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop." Provide full-guarded, surface-mounted, heavy-duty-type interior unit with general-purpose, NEMA ICS 6, Type 1 enclosure.
  - 1. Provide 1 remote control station within Evidence Vehicles room interior wall, location as indicated on drawings.
  - 2. Provide 1 remote control station behind Main Desk in building first floor lobby / waiting area, location as indicated on drawings. Wiring runs shall be made within cable tray or within rigid conduits concealed in wall construction where wiring passes through areas with finished ceilings.
- I. Provide key-activated control mechanism where indicated.
- J. Obstruction Detection Device: Provide each motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of sensor immediately stops and reverses downward door travel.

1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction. Provide electrically actuated automatic bottom bar.
  - a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained pressure on close button.
- K. Limit Switches: Adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

## 2.9 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.10 STEEL AND IRON FINISHES

- A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.
  1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- B. Baked-Enamel or Powder-Coat Finish: After cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat to a minimum dry film thickness of 2 mils.
  1. Color: As selected by Commissioner from manufacturer's full range.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
- B. Examine locations of electrical connections.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. General: Install door, track, and operating equipment complete with necessary hardware, jamb

and head molding strips, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's written instructions, and as specified.

- B. Fasten vertical track assembly to framing, spaced not less than 24 inches apart. Hang horizontal track from structural overhead framing with angle or channel hangers fastened to framing by welding or bolting or both. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.

### 3.4 STARTUP SERVICES

- A. Engage a factory-authorized service representative to perform startup services.
  - 1. Complete installation and startup check according to manufacturer's written instructions.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

### 3.5 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free from warp, twist, or distortion and with weathertight fit around entire perimeter.
- B. Adjust belt-driven motors as follows:
  - 1. Use adjustable motor-mounting bases for belt-driven motors.
  - 2. Align pulleys and install belts.
  - 3. Tension belt according to manufacturer's written instructions.
- C. Touch-up Painting: Immediately after welding galvanized track to track supports, clean field welds and abraded galvanized surfaces and restore galvanizing to comply with ASTM A 780.

### 3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct the City of New York's service staff to adjust, operate, and maintain overhead coiling doors.

**END OF SECTION 08 33 23**

## **SECTION 08 34 63**

### **DETENTION DOORS AND FRAMES**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Swinging detention doors.
  - 2. Detention frames.
  - 3. Security sealants.
- B. Related Sections:
  - 1. Section 08 70 00 Finish Hardware

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirement.

1.5 COORDINATION

- A. Coordinate installation of anchorages for detention frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors that are to be embedded in adjacent construction. Deliver such items to Project site in time for installation.

1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: In addition to plans, elevations, sections, and attachment details, provide a schedule using same reference numbers for details and openings as those on Drawings:
- C. Samples: For each exposed finish required.

1.9 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.
- C. Product Test Reports: For each type of detention hollow-metal door and frame assembly including vision and side lights, for tests performed by manufacturer and witnessed by a qualified testing agency.
- D. Examination reports, documenting inspection of substrates, areas, and conditions.
- E. Anchor inspection reports, documenting inspections of built-in and cast-in anchors.
- F. Field quality-control reports, documenting inspections of installed products.

1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

- B. **Manufacturer Qualifications:** Manufacturer providing the material used in this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- C. **Installer Qualifications:** Installer shall be properly trained by the manufacturer.
- D. **Welding Qualifications:** Qualify procedures according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver detention hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.
- B. Deliver detention frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
- C. Store detention hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch- high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. **Source Limitations:** Obtain detention doors and frames from single source from single manufacturer.
- B. **Products:** Subject to compliance with requirements, provide products by one of the following, or equal as approved by the Commissioner:
  - 1. Ceco Door; ASSA ABLOY.
  - 2. Pioneer Industries.
  - 3. Trussbilt.
  - 4. Approved equal.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. **Fire-Rated Assemblies:** Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to New York City Department of Buildings for fire-protection ratings and temperature-rise limits where indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.
  - 1. **Smoke- and Draft-Control Assemblies:** Provide an assembly with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to the New York City Department of Buildings and New York City Fire Department, based on testing according to UL 1784 and installed in compliance with NFPA 105.

- B. Fire-Rated, Borrowed-Light Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing and inspecting agency acceptable to the New York City Department of Buildings and New York City Fire Department for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.
- C. Detention Door and Frame Assemblies: ASTM F1450 for security grades specified.
  - 1. Bullet Resistance: Level 3 rated when tested according to UL 752.
  - 2. Tool-Attack Resistance: Small-tool-attack-resistance rated when tested according to UL 437 and UL 1034.
- D. Detention Frames: Comply with ASTM F1592 and removable stop test according to NAAMM-HMMA 863.

## 2.3 DETENTION DOORS

- A. General: Provide flush-design detention doors of seamless hollow construction, 2 inches thick unless otherwise indicated. Construct detention doors with smooth, flush surfaces without visible joints or seams on exposed faces or stile edges.
- B. Core Construction: Provide the following core construction of same material as detention door face sheets, welded to both detention door faces:
  - 1. Steel-Stiffened Core: 0.042-inch-thick, steel vertical stiffeners extending full-door height, with vertical webs spaced not more than 4 inches apart, spot welded to face sheets a maximum of 3 inches o.c. Fill spaces between stiffeners with insulation.
- C. Vertical Edge Channels: 0.123-inch-thick, continuous channel of same material as detention door face sheets, extending full-door height at each vertical edge; welded to top and bottom channels to create a fully welded perimeter channel.
- D. Top and Bottom Channels: 0.123-inch-thick metal channel of same material as detention door face sheets, spot welded, not more than 4 inches o.c., to face sheets.
  - 1. Reinforce top edge of detention door with 0.053-inch-thick closing channel, welded so channel web is flush with top door edges.
- E. Hardware Reinforcement: Fabricate reinforcing plates from same material as detention door face sheets to comply with the following minimum thicknesses:
  - 1. Full-Mortise Hinges and Pivots: 0.187 inch thick.
  - 2. Maximum-Security Surface Hinges: 0.250 inch thick.
  - 3. Strike Reinforcements: 0.187 inch thick.
  - 4. Lock Fronts, Concealed Holders, and Surface-Mounted Closers: 0.093 inch thick.
  - 5. All Other Surface-Mounted Hardware: 0.093 inch thick.
  - 6. Lock Pockets: 0.123 inch thick at non-inmate side, welded to face sheet.
- F. Hardware Enclosures: Provide enclosures and junction boxes for electrically operated detention door hardware of same material as detention door face sheets, interconnected with UL-approved, 1/2-inch-diameter conduit and connectors.
  - 1. Access Plates: Where indicated for wiring installation, provide access plates to junction boxes, fabricated from same material and thickness as face sheet and fastened with at least four security fasteners spaced not more than 6 inches o.c.

- G. Interior Detention Doors: Construct interior doors to comply with NAAMM-HMMA 863 and as specified.

- 1. Provide doors with face sheets of 0.1382-inch-minimum-thickness, cold-rolled steel.

## 2.4 DETENTION FRAMES

- A. General: Provide fully welded detention frames with integral stops, of seamless construction without visible joints or seams. Fabricate detention frames with contact edges closed tight and corners mitered, reinforced, and continuously welded full depth and width of detention frame.
- B. Stop Height: Provide minimum stop height of 0.625 inch for detention door openings and minimum stop height of 1-1/4 inches in security glazing or detention panel openings.
- C. Interior Detention Frames: Construct interior frames to comply with NAAMM-HMMA 863 and as specified.
  - 1. Provide frames fabricated from 0.172-inch-minimum-thickness, cold-rolled steel.
- D. Hardware Reinforcement: Fabricate reinforcing plates from same material as detention frame to comply with the following minimum thicknesses:
  - 1. Hinges and Pivots: 0.187 inch thick by 1-1/2 inches wide by 10 inches long.
  - 2. Strikes and Closers: 0.187 inch thick.
  - 3. Surface-Mounted Hardware: 0.093 inch thick.
  - 4. Lock Pockets: 0.123 inch thick at non-inmate side, welded to face sheet. Provide 0.123-inch-thick, lock protection plate for attachment to lock pocket with security fasteners.
- E. Hardware Enclosures: Provide enclosures and junction boxes for electrically operated detention door hardware, interconnected with UL-approved, 1/2-inch-diameter conduit and connectors.
  - 1. Access Plates: Where indicated for wiring installation, provide access plates to junction boxes, fabricated from same material and thickness as face sheet and fastened with at least four security fasteners spaced not more than 6 inches o.c.
- F. Mullions and Transom Bars: Fasten mullions and transom bars at crossings and to jambs by butt welding. Reinforce joints between detention frame members with concealed clip angles or sleeves of same metal and thickness as detention frame.
- G. Jamb Anchors: Weld jamb anchors to detention frames near hinges and directly opposite on strike jamb or as required to secure detention frames to adjacent construction.
  - 1. Number of Anchors: Provide two anchors per jamb plus the following:
    - a. Detention Door Frames: One additional anchor for each 18 inches, or fraction thereof, above 54 inches in height.
    - b. Detention Frames with Security Glazing or Detention Panels: One additional anchor for each 18 inches, or fraction thereof, above 36 inches in height.
- H. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, formed of same material and thickness as detention frame, and as follows:

- I. Rubber Door Silencers: Except on weather-stripped detention doors, drill stops in strike jambs to receive three silencers on single-detention-door frames and drill head jamb stop to receive two silencers on double-detention-door frames. Keep holes clear during construction.
- J. Grout Guards: Provide factory-installed grout guards of same material as detention frame, welded to detention frame at back of hardware cutouts, silencers, and glazing-stop screw preparations to close off interior of openings and prevent mortar or other materials from obstructing hardware operation or installation.

## 2.5 DETENTION PANELS

- A. Provide fixed detention panels of same materials, construction, and finish as specified for adjoining detention door.

## 2.6 MOLDINGS AND STOPS

- A. Provide fixed moldings on inmate side of glazed openings and removable stops on non-inmate side.
  - 1. Height: As required to provide minimum 1-inch glass engagement, but not less than 1-1/4 inches.
  - 2. Fixed Moldings: Formed from same material as detention door and frame face sheets, but not less than 0.093 inch thick, and spot welded to face sheets a maximum of 5 inches on center.
- B. Coordinate rabbet width between fixed and removable stops with glass or panel type and installation type indicated.

## 2.7 MATERIALS

- A. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, CS (Commercial Steel), Type B.
- B. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, CS (Commercial Steel), Type B.
- C. Steel Plates, Shapes, and Bars: ASTM A36/A36M.
- D. Concealed Bolts: ASTM A307, Grade A.
- E. Masonry Anchors: Same steel sheet as door face.
- F. Embedded Anchors: Hot-dip galvanized according to ASTM A153/A153M.
- G. Post-Installed Anchors: Torque-controlled expansion anchors.
- H. Welding Rods and Bare Electrodes: According to AWS specifications for metal alloy welded.
- I. Grout: Comply with ASTM C476, with a slump of not more than 4 inches as measured according to ASTM C143/C143M.
- J. Insulation: Slag-wool-fiber/rock-wool-fiber or glass-fiber blanket insulation.
- K. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat.

- L. Waterborne Asphaltic Emulsion Coating: Minimum 2.5-mil dry film thickness.

## 2.8 FABRICATION

- A. Fabricate detention doors and frames rigid, neat in appearance, and free of defects, warp, or buckle.
- B. Tolerances: Comply with NAAMM-HMMA 863.
- C. Removable Jamb Faces: Provide removable jamb faces where required for access to embedded anchors. Fabricate to allow secure reattachment of removable face with security fasteners.
- D. Fabricate multiple-opening detention frames with mullions that have closed tubular shapes and with no visible seams or joints.
- E. Exterior Detention Doors: Provide weep-hole openings in bottoms of detention doors to permit entrapped moisture to escape. Seal joints in top edges of detention doors against water penetration.
- F. Hardware Preparation: Factory prepare detention doors and frames to receive mortised hardware, including cutouts, reinforcement, mortising, drilling, and tapping, according to final Door Hardware Schedule and templates provided by detention door hardware supplier.
- G. Factory cut openings in detention doors.
- H. Weld components to comply with referenced AWS standard. Weld before finishing components to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

## 2.9 STEEL SHEET FINISHES

- A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" or SSPC-SP 8, "Pickling".
- B. Factory Priming for Field-Painted Finish: Apply shop primer immediately after surface preparation and pretreatment. Apply a smooth coat of even consistency to provide a uniform dry film thickness of not less than 0.7 mil.
  - 1. Shop Primer: Manufacturer's or fabricator's standard, fast-curing, corrosion-inhibiting, lead- and chromate-free, universal primer complying with SDI A250.10.

## 2.10 SEALANTS

- A. Provide type as required by project application.
- B. Polyurethane Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with low movement.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Pecora Corporation; DynaFlex.

- b. Sika Canada, Inc; SikaBond Construction Adhesive.
  - c. BASF; MasterSeal CR 195 (formerly Sonolastic Ultra).
- C. Epoxy Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with no movement.
  - 1. Products: Subject to compliance with requirements, provide one of the following:
    - a. Pecora Corporation; DynaPox EP-1200.
    - b. Polygem Inc.; GEMLOCK FLEX 22.
    - c. Chemtron; Epocon 850 Epoxy Paste & Security Sealant.

## 2.11 SECURITY FASTENERS

- A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific fastener type.

## 2.12 ACCESSORIES

- A. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.
- B. Embedded Plate Anchors: Mild steel shapes and plates, minimum 3/16 inch thick; with minimum 1/2-inch-diameter, headed studs welded to back of plate.
- C. Welding Rods and Bare Electrodes: According to AWS specifications.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrate, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of detention frame connections before detention frame installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- D. Inspect embedded plate installations before installing detention frames to verify that plate installations comply with requirements. Prepare inspection reports.
  - 1. Remove and replace plates where inspections indicate that they do not comply with specified requirements. Reinspect after restoration or replacement has been completed.
  - 2. Perform additional inspections to determine compliance of replaced or additional work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory.
- B. Before installation and with shipping spreaders removed, adjust detention frames for squareness, alignment, twist, and plumbness to the following tolerances:
  - 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb and perpendicular to frame head.
  - 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of face.
  - 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of door rabbet.
  - 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

### 3.4 INSTALLATION

- A. Before installation and with shipping spreaders removed, adjust detention frames for squareness, alignment, twist, and plumbness to the following tolerances:
  - 1. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb and perpendicular to frame head.
  - 2. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of face.
  - 3. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of door rabbet.
  - 4. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- B. Inspect embedded plate installations before installing detention frames to verify that plate installations comply with requirements. Prepare inspection reports.
- C. Anchorage: Set detention frame anchorage devices according to details on Shop Drawings and according to anchorage device manufacturer's written instructions.
- D. Where detention frames are fabricated in sections due to shipping limitations, assemble frames and install angle splices at each corner, of same material and thickness as detention frame, and extend at least 4 inches on both sides of joint.
  - 1. Field splice only at approved locations. Weld, grind, and finish as required to conceal evidence of splicing on exposed faces.
  - 2. Continuously weld and finish smooth joints between faces of abutted, multiple-opening, detention frame members.
- E. Apply bituminous waterborne asphaltic emulsion coating to backs of frames before filling with grout.
- F. Placing Detention Frames: Install detention frames of sizes and profiles indicated. Set detention frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

- G. Grout: Fully grout detention frame jambs and heads. Completely fill space between frames and adjacent substrates. Hand trowel grout and take other precautions, including bracing detention frames, to ensure that frames are not deformed or damaged by grout forces.
- H. Swinging Detention Doors: Fit non-fire-rated detention doors accurately in their frames, with the following clearances:
- I. Fire-Rated Detention Doors: Install with clearances as specified in NFPA 80.
- J. Smoke-Control Detention Doors: Install according to NFPA 105.
- K. Installation Tolerances: Comply with NAAMM-HMMA 863.
- L. Glazing: Comply with installation requirements in Section 08 88 53 "Security Glazing" unless otherwise indicated.
- M. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including detention doors and frames that are warped, bowed, or otherwise unacceptable.

### 3.5 FIELD QUALITY CONTROL

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Detention work will be considered defective if it does not pass inspections.
- C. Perform additional inspections to determine compliance of replaced or additional work.

### 3.6 ADJUSTING AND CLEANING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including detention doors and frames that are warped, bowed, or otherwise unacceptable.
- B. Clean grout and other bonding material off detention doors and frames immediately after installation.
- C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.
  - 1. After finishing smooth field welds, apply air-drying primer.

**END OF SECTION 08 34 63**

## **SECTION 08 41 15**

### **INTERIOR ALUMINUM- FRAMED STOREFRONTS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Interior aluminum and glass storefronts.
  - 2. Anchorages, shims, fasteners, accessories, and supports.
- B. Related Sections:
  - 1. Section 08 80 00 "Glazing."

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirement.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 ACTION SUBMITTALS**

- A. Product Data: Submit manufacturer's product data including construction details, material descriptions, fabrication methods, dimensions of individual components and profiles, hardware, finishes, and operating instructions for each type of aluminum entrance and storefront indicated.
- B. Shop Drawings: For aluminum-framed systems. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Include setting drawings, templates, and directions for the installation of anchor bolts and other anchorages installed as a unit of work under other Sections.
- C. Samples for Initial Selection: Demonstrating anodized aluminum finish.
- D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.
- E. Fabrication Sample: Of each vertical-to-horizontal intersection of aluminum-framed systems, made from 12 inch lengths of full-size components and showing details of the following:
  - 1. Joinery, including concealed welds.
  - 2. Anchorage.
  - 3. Expansion provisions.
  - 4. Glazing.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Certificates: Submit certificates showing compliance with performance and 2014 NYC Building Code requirements.
- B. Test Reports: Submit material and product test reports showing compliance with performance and Building Code requirements.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Welding Qualifications: Qualify procedures according to AWS D1.2, "Structural Welding Code - Aluminum."

- C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
1. Build mockup of typical wall area as shown on Drawings.
  2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  3. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

## 1.9 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace components of aluminum-framed systems that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
1. Warranty Period: 5 years from date of Substantial Completion.
- B. Special Finish Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace components on which finishes do not comply with requirements or that deteriorate within specified warranty period.
1. Warranty Period: 10 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide interior storefront assemblies as supplied by one of the following, as approved by the Commissioner:
1. EFCO.
  2. Kawneer; an arconic company.
  3. Vistawall.
  4. Wausau Window and Wall Systems.
  5. Or approved equal.

### 2.2 MATERIALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
1. Sheet and Plate: ASTM B 209.
  2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
- B. Steel Reinforcement: Complying with ASTM A 36 for structural shapes, plates, and bars; ASTM A 1008 for cold-rolled sheet and strip; or ASTM A 1011 for hot-rolled sheet and strip.

### 2.3 FRAMING SYSTEMS

- A. Framing Members: Manufacturer's standard extruded-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Provide 4-1/2 inch by 2 inch frames, with 3/16 inch wall thickness.
- B. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
  1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
  2. Reinforce members as required to receive fastener threads.
  3. Use exposed fasteners with countersunk Phillips screw heads, fabricated from stainless steel.
- D. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts, complying with ASTM A 123 or ASTM A 153.
- E. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

## 2.4 GLAZING

- A. Glazing: Provide 1/2 inch clear tempered glazing. Refer to Division 08 Section "Interior Glazing" for materials and requirements. Fabricate to sizes required with edge clearances and tolerances that comply with manufacturer's recommendations.
- B. Glazing Gaskets: Manufacturer's standard compression types; replaceable, molded or extruded, of profile and hardness required to maintain watertight seal.
- C. Spacers and Setting Blocks: Manufacturer's standard elastomeric type.

## 2.5 ACCESSORY MATERIALS

- A. Joint Sealants: Provide silicone sealants approved by the manufacturer of the system, complying with ASTM C920, and Division 7 Section "Joint Sealants."

## 2.6 FABRICATION

- A. General: Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.
- B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Storefront Framing: Fabricate components for assembly using shear-block system.

## 2.7 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.8 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.
- B. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Notify the Commissioner in writing of conditions unsatisfactory for installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. General: Install assemblies in accordance with manufacturer's instructions and approved shop drawings, using workers specifically trained in the installation of this type of work.
- B. Set units plumb, level, and true to line, without warp or rack of framing members. Install components in proper alignment and relation to established lines and grades. Provide proper support and anchor securely in place.
- C. Metal Protection:
  - 1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
- D. Glazing: Install glazing as specified in Division 08 Section "Glazing."
- E. Install perimeter joint sealants as specified in Division 07 Section "Joint Sealants" to produce airtight installation.

### 3.4 ERECTION TOLERANCES

- A. Install aluminum-framed systems to comply with the following maximum erection tolerances:
  - 1. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet; 1/4 inch over total length.

2. Alignment:

- a. Where surfaces abut in line, limit offset from true alignment to 1/16 inch.
- b. Where surfaces meet at corners, limit offset from true alignment to 1/32 inch.
- c. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 inch.

**END OF SECTION 08 41 15**

**SECTION 08 41 23**

**FIRE-RATED STOREFRONTS AND CURTAIN WALLS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section includes:

1. Fire-rated storefront framing and entrances.
2. Fire-rated curtain wall systems,
3. Perimeter trims, stools, accessories, shims and anchors, and perimeter sealing wall framing.
4. Installation accessories.

B. Related Sections:

1. Section 05 12 00 "Structural Steel Framing:" Steel attachment members.
2. Section 05 50 00 "Metal Fabrications:" Steel attachment members inserts and anchors.
3. Section 07 21 00 - "Thermal Insulation."
4. Section 07 62 00 "Sheet Metal Flashing and Trim" Flashing between this work and other work.
5. Section 07 84 10 "Firestopping" for firestops between work of this section and other fire resistive assemblies.
6. Section 07 92 00 "Joint Sealants."
7. Section 08 80 00 –"Glazing" for Fire-rated glass requirements and types.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate the work of this section with others affected including but not limited to: other interior and/or exterior envelope components and door hardware beyond that provided by this section.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.7 ACTION SUBMITTALS**

- A. Product Data: Submit latest edition of manufacturer's product data providing product descriptions, technical data, Underwriters Laboratories, Inc. listings and installation instructions.
- B. Shop Drawings:
  1. Include plans, elevations and details of each product type showing component dimensions; framed opening requirements, dimensions, tolerances, and attachment to structure
- C. Engineering Services Submittal: For Fire-rated entrances, storefronts, and curtain walls, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.
- D. Samples: For following products:
  1. Each type of glass: Section 08 80 00 –"Glazing."
  2. Each type of frame.
  3. Finish: Each selected finish.
- E. Glazing Schedule: Refer to Section 08 80 00 –"Glazing."

**1.8 INFORMATIONAL SUBMITTALS**

- A. Warranties: Submit manufacturer's warranty.
- B. Certificates of compliance from glass and glazing materials manufacturers attesting that glass and glazing materials furnished for project comply with requirements.
  - 1. Separate certification will not be required for glazing materials bearing manufacturer's permanent label designating type and thickness of glass, provided labels represent a quality control program involving a recognized certification agency or independent testing laboratory acceptable to the New York City Department of Buildings.
- C. Maintenance data.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Manufacturer Qualifications: A firm that produces primary glass, fabricated glass or framing as defined in referenced glazing publications.
- C. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- D. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
  - 1. Do not change intended aesthetic effects, as judged solely by Commissioner, except with Commissioner's approval. If changes are proposed, submit comprehensive explanatory data to Commissioner for review.

**1.10 DELIVERY, STORAGE AND HANDLING**

- A. Deliver, store and handle under provisions in accordance with manufacturer's instructions.

**1.11 FIELD CONDITIONS**

- A. Obtain field measurements prior to fabrication of frame units. If field measurements will not be available in a timely manner, coordinate planned measurements with the work of other sections.

**1.12 WARRANTY**

- A. Special Assembly Warranty: Manufacturer agrees to restore or replace components of Fire-rated storefronts and curtain walls that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: 5 years from date of Substantial Completion.
- B. Glass Warranty: Refer to Section 08 80 00 –"Glazing."

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis of Design, Products: Subject to compliance with requirements, provide the following or equal as approved by the Commissioner:
1. Fire-Rated Narrow Profile Steel Doors & Frames and Storefront System: Fireframes Heat Barrier Series fire-rated steel frame system as manufactured and supplied by Technical Glass Products (TGP) or comparable product by one of the following:
    - a. SaftiFirst, a division of O'Keeffe's Inc.
    - b. Vetrotech Saint-Gobain
    - c. Or approved equal.
  2. Curtain Wall Frame System: Fireframes Curtainwall Series Fire-rated steel frame system with aluminum cover, as manufactured and supplied by Technical Glass Products (TGP). or comparable product by one of the following:
    - a. SaftiFirst, a division of O'Keeffe's Inc.
    - b. Vetrotech Saint-Gobain
    - c. Or approved equal.
- B. Manufacturers for glass and glazing accessories: Refer to Section 08 80 00 –“Glazing.”

### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design fire- rated storefronts and curtain walls including connections.
1. Engineering Services shall include complete calculations for fire- rated storefronts and curtain walls and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. Fire-Rated Wall Assemblies: Assemblies complying with ASTM E119 that are classified and labeled by UL, for fire ratings indicated, based on testing in accordance with UL 263, ASTM E119.
1. Fire Rating Requirements: Duration for Storefronts and Curtain Walls: Capable of providing a fire rating for 120 minutes
  2. Listings and Labels - Fire Rated Assemblies: Under current follow-up service by Underwriters Laboratories maintaining a current listing or certification. Label assemblies accordance with limits of manufacturer's listing.
- C. Structural Loads:
1. Wind Loads: As indicated on Drawings.

2. Other Design Loads: As indicated on Drawings.

D. Structural Performance:

1. System shall withstand structural forces placed upon it without damage or permanent set when tested in accordance with ASTM E330 using load 1.5 times the design wind loads and of 10 seconds in duration.
2. Member deflection: Limit deflection of the edge of the glass normal to the plane of the glass to 1/175 of the glass edge length or 3/ 4 inch, whichever is less of any framing member.
3. Accommodate movement between storefront and adjoining systems

- E. Air infiltration: Provide systems that allow a maximum air leakage through fixed glazed openings of 0.06 cfm/sq. ft. of area when tested per ASTM E 283 at a static air differential of 6.24 lbf/ per sq. ft.

- F. Water Penetration under Static Pressure: Test according to ASTM E331 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 12 lbf per sq. ft.

## 2.3 STEEL FRAMING – STOREFRONT AND DOORS

- A. Construction: Narrow-profile, roll-formed steel architectural grade.
- B. Perimeter framing face dimension: 3-1/8-inch at head, sill and jamb.
- C. Horizontal and/or vertical mullions: 4-1/8-inch on the face.
- D. Depth of perimeter and mullion: Depth varies based on rating and profile.

## 2.4 CURTAIN WALL FRAMING

- A. Steel Curtainwall Framing System 120 min

1. Framing: Profiled steel tubing permanently joined with steel bolts.
2. Insulation: Insulate framing system against effects of fire, smoke, and heat transfer from either side. Firmly pack perimeter of framing system to rough opening with mineral wool fire stop insulation or appropriately rated intumescent sealant
3. Fasteners: Type recommended by manufacturer
4. Glazing Gaskets, Compounds and tapes: Glaze with approved EPDM glazing gaskets and closed cell PVC tape, or pure silicone sealant.
5. Steel Pressure Plates: Formed stainless steel pressure plate with dimensions recommended by manufacturer to securely hold glazing material in place.
6. Cover Caps: Extruded aluminum.

- B. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221

- C. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
- D. Brackets and Reinforcements: Manufacturer's standard high-strength materials with nonstaining, nonferrous shims for aligning system components.
- E. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
  - 1. Where fasteners are subject to loosening or turn out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
  - 2. Reinforce members as required to receive fastener threads.
- F. Anchors: Three-way adjustable anchors that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
  - 1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
- G. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

## 2.5 ACCESSORIES

- A. Exposed Fasteners: Use fasteners fabricated from Type 304 or Type 316 stainless steel.
- B. Glazing Gaskets: Refer to Section 08 80 00 –“Glazing.”
- C. Intumescent Tape: As supplied by frame manufacturer.
- D. Setting Blocks: 1/ 4 inch calcium silicate.
- E. Perimeter Anchors: Steel or 316 Stainless steel when exposed.
- F. Flashings: As recommended by manufacturer; same material and finish as cover caps.
- G. Unfaced, Slag-Wool-Fiber/Rock-Wool-Fiber Board Insulation: Refer to Section 07 21 00 - “Thermal Insulation.”
- H. Silicone Sealant: Refer to Section 07 92 00 “Joint Sealants.”

## 2.6 MATERIALS - GLASS

- A. Fire Rated Glazing: Refer to Section 08 80 00 –“Glazing.”
- B. Glazing Accessories: Manufacturer's standard compression gaskets, spacers, setting blocks and other accessories necessary for a complete installation.

## 2.7 FABRICATION

- A. Obtain approved Shop Drawings prior to fabrication.
- B. Fabricate components per manufacturer's installation instructions and with minimum clearances and shim spacing around perimeter of assembly yet enabling installation and dynamic movement of perimeter seal.
- C. Accurately fit and secure joints and corners. Make joints flush and weatherproof.
- D. Prepare components to receive anchor devices.
- E. Provide physical and thermal isolation of glazing from framing members.
- F. Provide internal guttering to drain water from joints and condensation occurring within glazing pocket.
- G. Fabricate anchors.
- H. Arrange fasteners and attachments to be concealed from view.
- I. Frame assemblies shall be prewelded.
  - 1. When necessary, splice frames too large for shop fabrication or shipping or to fit in available building openings.
  - 2. Fit with suitable fasteners.
- J. Fabrication Dimensions: Fabricate fire rated assembly to field dimensions.

## 2.8 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Finish frames after assembly.
- C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable. Noticeable variations in the same piece are not acceptable.

## 2.9 STEEL POWDER COAT FINISHES

- A. Finish after fabrication.
- B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable. Noticeable variations in the same piece are not acceptable.

C. Exterior Finishes: Manufacturer's standard products.

1. Powder-Coat Finish: Polyester Super Durable powder coating which meets AAMA 2604 for chalking and fading. Apply manufacturer's standard powder coating finish system applied to factory-assembled frames before shipping, complying with manufacturer's recommended instructions for surface preparation including pretreatment, application, and minimum dry film thickness.
2. Color and Gloss: As selected by Commissioner from manufacturer's full range.

2.10 ALUMINUM FINISHES

- A. Refer to Section 08 44 13 "Glazed Aluminum Curtain Walls" for requirements.

2.11 ACCESSORY MATERIALS

- A. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30-mil thickness per coat.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates and members to which the work of this section attaches or adjoins prior to frame installation.
- B. Notify the Commissioner of any conditions that are detrimental to the integrity of the proposed fire wall systems.
- C. Do not proceed until such conditions are corrected.

3.3 INSTALLATION

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Provide framing to openings plumb, square and within allowable tolerances.
- F. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.

- G. Seal joints and exterior faces of pressure-plate fasteners watertight, unless otherwise indicated.
- H. Metal Protection:
  - 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
  - 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- I. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

### 3.4 RESTORATION AND TOUCH UP

- A. Limited to minor restoration of small scratches. Use only manufacturer's recommended products.
  - 1. Restoration shall match original finish for quality or material and view.
- B. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged.

### 3.5 PROTECTION AND CLEANING

- A. Protect glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.
  - 1. Do not clean with astringent cleaners. Use a clean "grit free" cloth and a small amount of mild soap and water or mild detergent.
  - 2. Do not use any of the following:
    - a. Steam jets
    - b. Abrasives
    - c. Strong acidic or alkaline detergents, or surface-reactive agents
    - d. Detergents not recommended in writing by the manufacturer
    - e. Do not use any detergent above 77 degrees F
    - f. Organic solvents including but not limited to those containing ester, ketones, alcohols, aromatic compounds, glycol ether, or halogenated hydrocarbons.
    - g. Metal or hard parts of cleaning equipment must not touch the glass surface
- B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.
- C. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended by glass manufacturer.

**END OF SECTION 08 41 23**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 08 43 33**

### **SECURITY STOREFRONTS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
  - 1. Ballistic and forced entry resistant aluminum storefront framing.
  - 2. Installation accessories.
- B. Related Sections:
  - 1. Section 07 92 00 "Joint Sealants" for elastomeric joint sealants and backings.
  - 2. Section 08 34 63 "Detention Doors and Frames" for security sealants.
  - 3. Section 08 88 53 "Security Glazing" for glazing requirements.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirement.

1.5 COORDINATION

- A. Coordinate the locations of conduit and wire mold to be provided within in security storefront mullions with security storefront manufacturer to ensure that reinforcement is engineered by manufacturer to accommodate their presence.
- B. Coordinate holes required in sides of security storefront mullions for electrical runs and mechanical attachments to security storefront-mounted items with manufacturer

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of framing, including manufacturer recommended installation instructions.
- B. Shop Drawings: Include plans, elevations, sections, details, attachment to other work and glazing details for field-glazed units.
- C. Engineering Services Submittal: For security storefronts, submit shop drawings and design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York .responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any contract the work.

1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Manufacturer Qualifications: Manufacturer providing the material used in this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- C. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- D. On-site Facade Mockup: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the furnishing elements for the on-site facade mockup.

1. Provide complete security storefront installation in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
2. Incorporate full-scale details of the architectural features, approved finishes, brackets, gasketing, sealants, and attachments to be provided at full-scale building.
3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

#### 1.10 WARRANTY

- A. Special Finish Warranty: Standard form in which manufacturer agrees to restore finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
  1. Deterioration includes, but is not limited to, the following:
    - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
    - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
    - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
- B. Warranty Period: 20 years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURED UNITS

- A. Basis of Design, Product: Subject to compliance with requirements, provide USAW400A as supplied by United States Bulletproofing, Inc. or comparable product from one of the following, as approved by the Commissioner:
  1. Insulgard Security Products.
  2. Total Security Solutions.
  3. Or approved equal
- B. Architectural Aluminum Framing Systems: Factory fabricated framing constructed from either 6105-T5 or 6005-T5 aluminum with integral weep design to allow water to vent to the exterior along horizontal members.
  1. Head, Jamb, Sill, Mullion and Intermediate Members: 2-1/2 inch by 7 7/8 inches.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design security storefronts including connections.
  1. Engineering Services shall include shop drawings and complete design calculations for security storefronts and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.

- b. Design calculations shall be based on Performance Requirements and product design criteria indicated.

**B. Structural Loading:**

- 1. Wind Loading: As indicated on Drawings.
- 2. Design loads.
  - a. Positive (inward) design pressure of 45 psf.
  - b. Negative (outward) design pressure of 45 psf.
- 3. Deflection Limits:
  - a. Deflection of any framing member in a direction normal to the plane of the wall when subjected to the indicated design loads shall not exceed 1/175 of its clear span or 3/4 inch, whichever is less.
  - b. For cantilevers, the span shall be taken as two times the distance between anchor centerline and end of cantilever.
  - c. The deflection shall not exceed 50 percent of the nominal joint width at sealant joints occurring between framing members and adjacent materials, unless otherwise required by sealant manufacturer.
  - d. Upon reversal of load direction at magnitudes up to and including 1.5 times design pressures, slippage at fastened and/or clamped connections, shall not exceed 1/8 inch.
  - e. Glass deflection at full design load shall not exceed 1/100 of its span, or 3/4 inch, whichever is less.
  - f. Metal panel deflection shall not exceed 1/90 of its span or 3/4 inch, whichever is less. The span shall be taken as the lesser of the distances between the horizontal or vertical support members.

**C. Thermal Movement**

- 1. Provide for expansion and contraction of component materials as will be caused by surface temperatures ranging from 20 degrees F to a high temperature of 180 degrees F.
  - a. The expansion and contraction caused by temperature differential shall not cause buckling, undue stress on glass, failure of joint seals, undue stress on structural elements, demanding loads on fasteners, reduction of performance, or other detrimental effects.

- D. Condensation Resistance:** Provide "thermal-break" construction for storefront framing, units shall be tested for thermal performance in accordance with AAMA 1503 showing condensation resistance factor (CRF) of not less than 45.

**E. Ballistic and Forced Entry Resistance:**

- 1. Minimum HPW I-B in accordance with H. P. White Laboratory Inc. Test Procedure: "Transparent Materials for Use in Forced Entry or Containment Barriers."

**2.3 GLAZING AND ACCESSORIES**

- A. Glazing Material:** Ballistic and forced entry resistance HPW I-B. See Section 08 88 53 "Security Glazing"

- B. Gaskets:
  - 1. Interior: Closed cell neoprene (40-50 Shore "A" Durometer)
  - 2. Exterior: Solid neoprene (65-75 Shore "A" Durometer)

- C. Anchors: Fully concealed as required by project application.

## 2.4 FABRICATION

- A. Provide steel reinforcement within aluminum security storefront mullions per manufacturer's requirements to achieve ballistic and forced entry resistance rating (HPW I-B), to reinforce storefront to meet structural requirements for security storefront manufacturer's warranty and security glazing manufacturer's warranty.
- B. Provide nonconductive material isolating dissimilar mullion and reinforcement metals to prevent galvanic action
- C. Tolerances: All joints and connections shall be tight, providing hairline joints and true alignment of adjacent members

## 2.5 FINISHES, GENERAL

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

## 2.6 ALUMINUM FINISHES

- A. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
  - 1. Color and Gloss: As selected by Commissioner from manufacturer's full range.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Verify field dimensions of opening prior to fabrication of framing.
- B. Coordinate structural requirements to ensure proper attachment and support.

- C. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

#### 3.4 SECURITY STOREFRONTS, GENERAL

- A. Comply with written instructions of manufacturers, unless more stringent requirements are indicated

#### 3.5 INSTALLATION

- A. Install framing in accordance with manufacturer's recommendations and approved shop drawings.
- B. Provide required support and securely fasten and set windows plumb, square, and level without twist or bow.
- C. Apply sealant in accordance with window and sealant manufacturer's recommendations as indicated in installation instructions and as indicated on drawings. Wipe off excess, and leave exposed sealant surfaces clean and smooth

#### 3.6 PROTECTION

- A. Clean and protect windows from damage during construction operations. If damage occurs, remove and replace as required to provide windows in their original, undamaged condition.

**END OF SECTION 08 43 33**

**SECTION 08 44 13****GLAZED ALUMINUM CURTAIN WALLS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section includes:

1. Glazed aluminum curtain walls.
2. GFRC sunshade fin support components.
3. Insulated glazed aluminum shadow boxes.
4. Installation accessories.

B. Related Sections:

1. Section 03 49 00 "Glass-Fiber-Reinforced Concrete (GFRC)" for sunshade fin materials.
2. Section 07 92 00 "Joint Sealants" for elastomeric joint sealants and backings.
3. Section 08 80 00 "Glazing" for glass requirements.
4. Section 08 91 19 "Fixed Louvers" for vertical mechanical louvers and insulated louver blank-off panels to be provided within curtain wall areas.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Loads of Attached Work: Coordinate with manufacturers of glazing, Glass-Fiber-Reinforced Concrete (GFRC) sunshade fins, and fixed louvers, as indicated on drawings, to confirm that curtain wall will fully support dead loads and wind loads imposed by products proposed for installation in curtain wall assembly.
- B. Coordinate curtain wall installation with flashing, trim, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.
- C. Coordinate installation of GFRC sunshade fins with brackets attached to curtain wall mullions.
- D. Coordinate installation of fixed louvers and insulated louver blank-off panels within curtain wall mullions.

#### 1.6 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Include plans, elevations, sections, full-size details, and attachments to other work.
  1. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
  2. Indicate GFRC sunshade fins and support components.
  3. Indicate locations and areas of related work to be mounted to or within curtain wall mullions, including glazing and fixed louvers.
  4. Indicate areas of insulated glazed shadow boxes and provide details including aluminum back pan and finished aluminum shadow box panel at exterior face.
- C. Samples: For each type of exposed finish required.

- D. Engineering Services Submittal: For glazed aluminum curtain walls, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York .responsible for their preparation.

- 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any contract the work.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Energy Performance Certificates: NFRC-certified energy performance values for each glazed aluminum curtain wall.
- B. Product test reports.
- C. Source quality-control reports.
- D. Field quality-control reports.
- E. Sample warranties.

#### 1.10 CLOSEOUT SUBMITTALS

- A. Maintenance data.

#### 1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer performing the work of this section shall, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
  - 1. Installer shall be properly trained by the manufacturer.
- C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
  - 1. Do not change intended aesthetic effects, as judged solely by Commissioner, except with Commissioner's approval. If changes are proposed, submit comprehensive explanatory data to Commissioner for review.
- D. On-site Facade Mockup: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  - 1. Provide complete glazed aluminum curtain wall installation in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
  - 2. Incorporate full-scale details of the architectural features, approved finishes, brackets, gasketing, sealants, and attachments to be provided at full-scale building.

3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.
4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner..
5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.12 WARRANTY

- A. Special Assembly Warranty: Manufacturer agrees to restore or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
  1. Warranty Period: 10 years from date of Substantial Completion.
- B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to restore finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.
  1. Warranty Period: 20 years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 HIGH- PERFORMANCE, GLAZED ALUMINUM CURTAIN WALLS

- A. Basis of Design, Product: Subject to compliance with requirements, provide 1600UT System 1 & 2 as supplied by Kawneer, an Arconic company or comparable product, as approved by the Commissioner, from one of the following:
  1. EFCO Corporation.
  2. Oldcastle Building Envelope.
  3. Or approved equal.
- B. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
  1. Construction: Thermally broken with fiberglass pressure plates.
  2. Glazing System: Retained mechanically with gaskets on four sides.
  3. Glazing Plane: Front.
  4. Finish: Superior-performance organic finish.
  5. Fabrication Method: Field-fabricated stick system.
  6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
  7. Steel Reinforcement: As required by manufacturer.
- C. Pressure Caps: Aluminum components that conceal fiberglass pressure plates to mechanically retain glazing.
  1. Manufacturer's standard 3/ 4 inch cap, where indicated on drawings.
  2. Stepped mullion 4 1/ 2 inch cap, where indicated on drawings.
  3. Include snap- on aluminum trim that conceals fasteners.

- D. Brackets and Reinforcement: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

## 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design security storefronts including connections.
  - 1. Engineering Services shall include complete calculations for glazed aluminum curtain walls and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. General: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
  - 1. Glazed aluminum curtain walls shall withstand movements of supporting structure, including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
  - 2. Failure also includes the following:
    - a. Thermal stresses transferring to building structure.
    - b. Glass breakage.
    - c. Noise or vibration created by wind and thermal and structural movements.
    - d. Loosening or weakening of fasteners, attachments, and other components.
    - e. Failure of operating units.
- C. Structural Loads:
  - 1. Wind Loads: As indicated on Drawings.
  - 2. Other Design Loads: As indicated on Drawings.
- D. Deflection of Framing Members: At design wind pressure, as follows:
  - 1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.
  - 2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
    - a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.
  - 3. Cantilever Deflection: Where framing members overhang an anchor point, as follows:

- a. Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4-inch for spans of greater than 11 feet 8-1/4 inches or 1/175 times span, for spans of less than 11 feet 8-1/4 inches.
- E. Structural: Test according to ASTM E330/E330M as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
  2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
  3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- F. Air Infiltration: Test according to ASTM E283 for infiltration as follows:
1. Fixed Framing and Glass Area: Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft.
  2. Operable Units: Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft.
- G. Water Penetration under Static Pressure: Test according to ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 12 lbf/sq. ft.
- H. Energy Performance: Certify and label energy performance as follows:
1. Thermal Transmittance (U-factor):
    - a. Fixed glazing and framing areas as a system shall have overall U-factor of not more than 0.25 Btu/sq. ft. x h x deg F as determined according to NFRC 100 for a system specimen size of 78-3/4 by 78-3/4 inch, when fitted with 1-3/4 inch glazing with U-factor of 0.16.
    - b. Operable (Outswing) curtain wall casement windows as a system shall have overall U-factor of not more than 0.28 Btu/sq. ft. x h x deg F as determined according to NFRC 100 for a system specimen size of 23-5/8 by 59-1/16 inch, when fitted with 1-3/4" glazing with U-factor of 0.16.
  2. Condensation Resistance:
    - a. Fixed glazing and framing areas as a system shall have an NFRC-certified condensation resistance rating of no less than 66 as determined according to NFRC 500.
    - b. Operable Units (Project-Out): With 1 inch insulating glass and aluminum spacer: Not less than 73 (frame) and 60 (glass).
- I. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

## 2.3 VENTING WINDOWS

- A. Basis of Design, Product: Subject to compliance with requirements, provide GLASSvent UT (Ultra Thermal) windows as supplied by Kawneer, an Arconic company, or equal as approved by the Commissioner.
- B. Aluminum Windows: AAMA/WDMA/CSA 101/I.S.2/A440, manufacturer's standard, with self-flashing mounting fins where required by project application, and as follows:
  - 1. Window Type: Project- out awning and outswing casement, as indicated on drawings.
  - 2. Minimum Performance Class: AW, unless otherwise indicated.
  - 3. Minimum Performance Grade: PG- 90- AP & PG- 90- C, unless otherwise indicated.
  - 4. Aluminum Extrusions: ASTM B 221, alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 0.064-inch thickness at any location for main frame and sash members.
    - a. Thermally Improved Construction: Fabricate window units with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.
  - 5. Mullions: Between adjacent windows, fabricated of extruded aluminum matching finish of window units.
  - 6. Fasteners, Anchors, and Clips: Nonmagnetic stainless steel, aluminum, or other noncorrosive material, compatible with aluminum window members, trim, hardware, anchors, and other components of window units. Fasteners shall not be exposed, except for attaching hardware.
    - a. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.128 inch thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads, or provide standard, noncorrosive, pressed-in, spline grommet nuts.
  - 7. Hardware: Manufacturer's standard; of aluminum, stainless steel, die-cast steel, malleable iron, or bronze; including the following, as required by project application:
    - a. Stainless steel, 4-bar hinges.
    - b. Cast white bronze cam locking handles.
    - c. Cast white bronze access control (custodial) locks with removable handle.
    - d. Cast white bronze cam handle with pole ring on meeting rail where rail is more than 72 inches above floor.
  - 8. Insect Screens: Provide removable insect screen on each operable exterior sash, with screen frame finished to match window unit, complying with SMA 1004 or SMA 1201, and as follows:
    - a. Extruded aluminum frames, 6063-T5 or 6063-T6 alloy and temper, joined at corners.
    - b. Glass-Fiber Mesh Fabric: 18-by-16 mesh of PVC-coated, glass-fiber threads, woven and fused to form a fabric mesh; complying with ASTM D 3656.

## 2.4 SUN CONTROL

- A. GFRC Sunshade Fin Mounting Brackets: Assemblies consisting of manufacturer's standard outrigger brackets designed for attachment to curtain wall with mechanical fasteners concealed within mullion cap.
  - 1. Orientation: Vertical.
  - 2. Projection from Wall: As indicated on Drawings.
- B. Outriggers (attachment brackets: Straight with square edges, unless otherwise indicated.
  - 1. Basis of Design, Product: Subject to compliance with requirements, provide Versoleil sunshades mounting bracket as supplied by Kawneer, an Arconic company, or equal as approved by the Commissioner.
- C. GFRC Sunshade Fin Materials: Refer to Section 03 49 00 "Glass-Fiber-Reinforced Concrete (GFRC)."
- D. Aluminum Materials: Alloy and temper recommended by manufacturer for type of use and finish indicated.
  - 1. Sheet and Plate: ASTM B 209.
  - 2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
  - 3. Extruded Structural Pipe and Tubes: ASTM B 429.
  - 4. Structural Profiles: ASTM B 308.

## 2.5 GLAZING

- A. Glazing: Comply with Section 08 80 00 "Glazing."
- B. Glazing Gaskets: ASTM C509 or ASTM C864. Compression-type, replaceable EPDM.
  - 1. Color: Black.
- C. Glazing Sealants: Comply with Section 08 80 00 "Glazing."

## 2.6 INSULATED GLAZED ALUMINUM SHADOW BOXES

- A. Aluminum Back Pans: Provide formed aluminum back pan continuously sealed with gaskets to glazing pockets on four sides. Provide formed aluminum front closure plate to back pan as indicated on drawings, with exterior-facing finish matching that of adjacent mullions. Insulate shadow boxes as indicated.

## 2.7 MATERIALS

- A. Sheet and Plate: ASTM B209.
- B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
- C. Extruded Structural Pipe and Tubes: ASTM B429/B429M.
- D. Structural Profiles: ASTM B308/B308M.
- E. Steel Reinforcement:

1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

- F. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

## 2.8 FABRICATION

- A. Form or extrude aluminum shapes before finishing.
- B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- C. Fabricate components that, when assembled, have the following characteristics:
1. Profiles that are sharp, straight, and free of defects or deformations.
  2. Accurately fitted joints with ends coped or mitered.
  3. Physical and thermal isolation of glazing from framing members.
  4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
  5. Provisions for field replacement of glazing from exterior.
  6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
- D. Fabricate components to resist water penetration as follows:
1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
  2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.
- E. Curtain-Wall Framing: Fabricate components for assembly using manufacturer's standard assembly method.
- F. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

## 2.9 FINISHES, GENERAL

- A. Comply with NAAMM's "Metal Finishes Manual" recommendations for applying and designating finishes
- B. Protect finishes on exposed surfaces from damage in accordance with coating manufacturers requirements.
- C. Apply organic finishes to formed metal after fabrication unless otherwise indicated.

- D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.10 ALUMINUM FINISHES

- A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
- B. Superior-Performance Organic Finish, Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.
  - 1. Color and Gloss: As selected by Commissioner from manufacturer's full range.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

### 3.4 INSTALLATION, GENERAL

- A. Comply with manufacturer's written instructions.
- B. Do not install damaged components.
- C. Fit joints to produce hairline joints free of burrs and distortion.
- D. Rigidly secure nonmovement joints.
- E. Anchor curtain wall to floor slabs, floor slab secondary framing, and cast-in-place roof curb, as indicated on drawings. Anchor to additional structure at points between floor slabs or to adjacent precast concrete wall panels is not permitted.
  - 1. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

- F. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
- G. Seal joints and exterior faces of pressure-plate fasteners watertight, unless otherwise indicated.
- H. Metal Protection:
  - 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
  - 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- I. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
- J. Install components plumb and true in alignment with established lines and grades.
- K. Install GFRC sunshade and brackets in accordance with approved shop drawings. Refer to Section 03 49 00 "Glass-Fiber Reinforced Concrete" for requirements.
- L. Install fixed louvers and insulated blank-off panels in accordance with approved shop drawings. Refer to Section 08 91 19 "Fixed Louvers" for requirements.

### 3.5 INSTALLATION OF GLAZING

- A. Install glazing as specified in Section 08 80 00 "Glazing."

### 3.6 FIELD QUALITY CONTROL

- A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
- B. Test Area: Perform tests on one bay at least 30 feet, by one story.
- C. Field Quality-Control Testing: Perform the following test on representative areas of glazed aluminum curtain walls.
  - 1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Commissioner shall be tested according to AAMA 501.2 and shall not evidence water penetration.
    - a. Perform a minimum of three tests in areas as directed by Commissioner.
- D. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

**END OF SECTION 08 44 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 08 70 00****FINISH HARDWARE****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 WORK INCLUDED**

- A. Work of this Section includes all labor, materials, equipment and services necessary to furnish all the finish hardware as shown on the drawings and specified herein.

**1.3 RELATED WORK**

- A. Interior Architectural Woodwork - Section 06 40 23
- B. Hollow Metal Doors and Frames - Section 08 11 13
- B. Access Doors and Frames - Section 08 31 13
- C. Detention Doors and Frames – Section 08 34 63
- D. Interior Aluminum- Framed Storefronts - Section 08 41 15
- B. Security Storefronts - Section 08 43 33
- E. Painting - Section 09 91 00

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% combined pre-consumer/post-consumer recycled content (the

percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.5 LEED BUILDING SUBMITTALS

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Hardware shall be suitable and adapted for its required use and shall fit its designated location. Should any hardware as shown, specified or required fail to meet the intended requirements or require modification to suit or fit the designated location, determine the correction or modification necessary and notify the Commissioner in ample time to avoid delay in the manufacture and delivery of hardware.
- C. For fire rated openings provide hardware complying with NFPA Standard No. 80 requirements of the New York City Department of Buildings and the New York City Fire Department.
- D. Barrier Free Requirements: Local laws complying with the American Disabilities Act and ANSI A117.1 2017 shall apply.
- E. Contractor Qualifications: The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.8 SUBMITTALS

- A. Before any finish hardware is ordered or purchased, submit catalog cuts and a complete Hardware Schedule of Finish Hardware. Each item listed in the Hardware Schedule shall be identifiable with respect to manufacture, brand, catalog number, material, and finish.
  1. Schedule of Finish Hardware shall be submitted in the Vertical Schedule Format per Door and Hardware Institute Sequence & Format for the Hardware Schedule.
- B. Where submission differs from Schedule given herein, use different color or other means of identification to bring change to the attention of the Commissioner.

- C. Contractor's hardware trade shall coordinate all product information, wiring diagrams, and electrical data with the Contractor's electrical trade.
- D. Samples: Submit samples as requested by Commissioner. Do not proceed with installation until samples have been approved. Approved samples may be installed in the work after substantial completion of work. Samples shall include one (1) each of the following samples:
  - 1. Hinge (each type)
  - 2. Intermediate Pivot
  - 3. Surface Closer
  - 4. Lockset (office function)
  - 5. Floor Stop
  - 6. Push-Pull Plates
  - 7. Push-Pull Bars
  - 8. Finish Sample of all other hardware

#### 1.9 PRODUCT HANDLING

- A. Pack finish hardware in approved manufacturer's containers, complete with trimmings, bolts, screws, washers, etc., as required for application and securement. Each container shall bear a suitable label which shall state the quantity and kind of contents of said container, as well as identifying marks relating to the approved Hardware Schedule and its location in the project.
- B. Knobs, handles, pulls and other items of finish hardware with easily damaged finishes shall be individually wrapped before placing in containers and with sufficient sheet cloth or cotton-backed paper which shall be adequately tied with heavy strings; all as necessary to protect the finishes.
- C. Finish hardware shall be delivered, as directed, to the building site or the factories of the various fabricators of metal work to which such hardware is to be applied. Deliver hardware in the order required and in ample time to permit application at the building, or fabricators' shops, within the time required for the completion of the building.

#### 1.10 JOB CONDITIONS

- A. Field Service: The hardware supplier shall assign a competent representative, acceptable to the Commissioner, to be at the jobsite each time a major shipment of finish hardware is received. Such representative shall assist in "checking in" these shipments and shall secure a receipt covering the contents of each shipment. In addition, such representative shall be available for immediate call to the jobsite when, in the opinion of the Commissioner, his presence is necessary.
- B. Templates: Promptly following approval of the Hardware Schedule by the Commissioner, furnish and deliver template information, to the fabricators, of items to which finish hardware is to be applied.
  - 1. Such deliveries shall be made in ample time to avoid delays in such work of said fabricators. Provide drawings, schedules and detailed information to other trades as

necessary for them to accommodate and prepare their work to receive the finish hardware.

**C. Cooperation and Coordination**

1. Cooperate and coordinate work with that of other trades supplying materials or performing work in contact with, connecting to, underlying, or overlaying the work of this Section.
2. Provide complete data of requirements for work of this Section to those other trades whose work is affected by or dependent upon the work of this Section.
3. Furnish all items to be built into other work in ample time to avoid delaying the progress of such work.
4. Examine all drawings covering the work of this Section and refer to all other drawings, including mechanical and electrical drawings, which may affect the work of this Section or require coordination by this trade.

- D. Existing Conditions:** Contractor shall verify all existing conditions in the field to ensure compatibility with hardware specified in the Hardware Sets herein. Any discrepancies between the existing field conditions and hardware specified shall be brought to the attention of the Commissioner immediately. Contractor shall not order any hardware until all discrepancies are rectified and written approval is granted by the Commissioner.

**1.11 WARRANTIES**

- A. Provide a letter from the manufacturer of overhead closers, warranting such closers for five (5) years from the date of substantial completion.
- B. Provide a letter from manufacturer of concealed floor closers, warranting such closers for twenty-five (25) years from the date of substantial completion.
- C. The hardware supplier shall provide a written one (1) year warranty from the date of substantial completion for the rest of the items furnished under this Section.
- D. All warranties shall be effective beginning with the date of substantial completion.

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. Requirements for design, grade, function, finish, size and other distinctive qualities of each type of finish hardware are indicated herein. Products are identified by using appropriate hardware designation numbers.
- B. Manufacturers are listed for each hardware type required. Provide either the product designated, or an approved equal.
- C. **Specific Products:** References to specific specific products are used to establish minimum standards of utility and quality. Other materials may be considered by the Commissioner in accordance with the provisions of these specifications.

- D. Notwithstanding anything to the contrary in this specification or the drawings, the finish hardware shall conform to the requirements of 2014 New York City Building Code, and ANSI A117.1.
- E. Finish hardware shall conform to the applicable requirements of Underwriters Laboratories Inc. and the 2014 New York City Construction Codes, and each such item shall bear a label or mark of Underwriters Laboratories Inc. indicating its conformity with such requirements for use in connection with its specified location.
- F. Finish hardware shall be uniform in color and finish and free from imperfections affecting its appearance, function, operation and serviceability. Such hardware shall be suited and adapted to its required use and shall fit its respective location.
- G. Where the finished shape or size of members receiving finish hardware are such as to prevent or render unsuitable the use of the specific types or sizes of such hardware, suitable types or sizes shall be furnished, having as nearly as practicable the same function, operation and quality as the specified hardware.
- H. Bolts, screws and other fastenings required for the application of the finished hardware shall be of size and type to fit requirements and shall be of the same material and finish as the exposed parts of such hardware which they adjoin. Exposed screws and bolts shall have countersunk oval heads and bolts shall be provided with cap nuts. Countersunk part of screw and bolt holes shall be finished smoothly without sharp edges and form a firm seal for such screw and bolt heads. Full threaded wood screws shall be furnished for all wood applications. No thru bolts will be allowed. Hex-nuts and bolts shall be provided on push/pulls, exit devices, closers, etc. when being attached to mineral core or particle core wood fire doors without necessary blocking.

## 2.2 PRODUCTS AND MANUFACTURERS

- A. The following two-letter abbreviations are used within the Hardware Sets of this section to indicate the basis-of-design manufacturer for all hardware products. For each hardware product specified, provide either the basis-of-design product, or an equivalent product from an approved equal manufacturer.
  - 1. AD: Ademco
  - 2. AR: Adams Rite
  - 3. CO: Corbin Russwin
  - 4. EL: Elmes
  - 5. FA: Fantom
  - 6. HA: Hafele
  - 7. IV: Ives
  - 8. LC: LCN
  - 9. MC: McKinney
  - 10. RX: Rixson

- 11. RO: Rockwood
- 12. SE: Sentrol
- 13. SC: Schlage
- 14. SD: Security Door Controls
- 15. SF: Southern Folger
- 16. ST: Stanley Access Technologies
- 17. TE: Tectus by Simonswerk
- 18. TX: Tormax USA
- 19. VD: Von Duprin
- 20. ZE: Zero International

B. For all selections: Or approved equal.

## 2.3 SPECIFIC ITEMS

### A. Hinges

- 1. Minimum of three (3) hinges per door leaf up to 7'-6" high. Provide one additional hinge per 2'-6" or fraction thereof.
- 2. Hinges shall be of types, sizes and materials as required to suit door weights thickness and fire ratings.
- 3. Unless otherwise specified hinges shall be standard weight. Doors 3'-4" in width shall receive 5 x 4½ .146 gauge hinges. Doors over 3'-4" in width shall receive 5 x 4½ .190 gauge hinges.
- 4. Hinge sizes shall be detailed so that the least amount of projection shall be visible from the frame.
- 5. Unless otherwise specified hinges shall have concealed ball bearings (combination anti-friction or oil impregnated) and five (5) knuckles.
  - a. Standard doors shall have non-rising pins.
  - b. Doors exposed to the public, and other secure areas, as determined by the Commissioner, shall have non-removable pins.
- 6. Electric Hinges: Coordinate voltage and other electrical requirements with applicable portions of Division 26.
- 7. Continuous Hinges: Unless otherwisw specified in the Hardware Sets, continuous hinges shall be stainless steel, steel, or aluminum with a full length Teflon coated stainless steel pin not less than ¼" in diameter.

**B. Pivots**

1. Provide quantities and types of pivots (offset, intermediate, or center) as required to suit door sizes and weights.
2. Pivot sets (offset and center) shall consist of top and bottom pivots, unless otherwise indicated.
3. Provide a top pivot for each floor closer unless otherwise indicated.
4. Provide fire rated pivots on all rated doors in a labeled opening.

**C. Closers**

1. Unless otherwise indicated, closers shall not be visible on the public side of doors. Closers opening into public spaces shall be provided with parallel arms and brackets to suit.
2. Closers shall be sized in accordance with the accepted manufacturer's standards to suit height, width, weight of door and draft conditions.
3. Provide a top pivot for each floor closer.
4. Provide weather sealing compound for each exterior floor closer.
5. Unless specified otherwise in the Hardware Sets, all floor closers shall have a built in dead stop.

**D. Locking and Latching Devices**

1. Mechanical: Provide types, functions, as specified. Coordinate with Commissioner's keying requirements.
  - a. Unless otherwise specified in the Hardware Sets, tubular style locksets or latchsets will not be accepted in lieu of cylindrical style sets specified.
  - b. Unless otherwise specified in the Hardware Sets, ANSI Grade 3 deadlocks will not be accepted.
2. Electric Lock: Electric locks shall be fail safe and shall be deactivated by fire suppression system and devices (local and/or remote) as determined by the Commissioner.
  - a. Coordinate voltage and other electrical requirements with applicable portions of Division 26.
3. Electric Strike: Electric locks shall be fail safe and shall be deactivated by fire suppression system and devices (local and/or remote) as determined by the Commissioner.
  - a. Coordinate voltage and other electrical requirements with applicable portions of Division 26.

**E. Keys and Keying**

1. Locking devices will be equipped with Corbin Russwin cylinder with 6 Pin removable core 8000 Series Cores using Corbin Russwin D1 Keyway, or approved equal, matching that indicated by the Commissioner. Contractor shall coordinate with the Commissioner on the final keying system design and manufacturer to be used. For security while the building is under construction, locks will be equipped with temporary brass construction cores and installed by the Contractor. Following approval by the Commissioner of the final keying schedule, install permanent cores, cut, sequentially number and tag keys and deliver cores and keys directly to the Commissioner.
  2. Provide complete key control system, including key cabinet and software, with capacity to store 175% of keys furnished. Subject to compliance with requirements, provide products by one of the following:
    - a. TelKee (Basis-of-Design)
    - b. Traka
    - c. MMF Industries
    - d. or approved equal
- F. Stops: Provide stops to limit the degree of opening, helping to prevent damage to adjacent walls, columns, equipment, the door or its hardware.
1. Overhead Stops
    - a. Size overhead stops to suit door width, height, weight and draft condition.
    - b. Overhead stops shall have stainless steel tracks with built-in shock absorber with 5-7 degree compression before dead stop. The arm shall be stainless steel with finish as noted.
  2. Floor Stops: All stops to be fastened to concrete shall use expansion shields and machine screws.
- G. Pushes and Pulls: Provide concealed fasteners where practical. Where exposed fasteners are required provide flush type finished to match push or pull.
1. Provide all Pulls with Plates.
- H. Flush Bolts: Provide top and bottom extension type flush bolts, mounted twelve (12) inches and seventy-two (72) inches respectively from the bottom of each door, where scheduled. Provide each bottom flush bolt with a dustproof strike.
- I. Silencers: Provide silencers for all non-gasketed and non-weatherstripped frames. Provide three (3) for each single swing door and two (2) for each pair of doors.
- J. Automatic Door Bottoms: Unless otherwise specified in the Hardware Sets, automatic door bottoms shall be dual actuated with an operating force not to exceed one and one-half (1½) pounds.
- 2.4 FINISHES**
- A. Provide finish hardware with the finishes:
1. Hinges:
    - a. Interior: US26D
    - b. Exterior: US32D

2. Pulls; US32D
3. Locksets and Exit Devices: US32D
4. Closers:
  - a. Surface: 689
  - b. In Floor: US26D
5. Protection Plates: US32D
6. Wall Stops: US26D
7. Overhead Stops: US32D

B. Provide Surface Door Closers with SRI Finish at Exterior Doors.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

#### 3.2 GENERAL

- A. Make periodic checks during construction in order to ascertain that the finish hardware furnished has been installed correctly. After completion of all construction work, adjust finish hardware to work properly; test all keys and adjust as required for smooth, free operation.
- B. Provide Metal Saddles by Zero International (basis of design), or a product of equivalent configuration and design by one of the following approved manufacturers, where indicated on the Door Schedule.
  1. National Guard Products
  2. Assa Abloy
  3. Or approved equal.

#### 3.3 HARDWARE SETS

- A. Hardware sets reference basis-of-design product and manufacturer. Refer to 2.2 for full list of approved manufacturers. For each hardware product specified, provide either the basis-of-design product, or an equivalent product from an approved equal manufacturer.

#### SUBSET SCHEDULE

B# Bathroom  
E# Exterior  
G# General  
M# Mechanical  
S# Security & Detention  
T# Stair

#### HW SET B1

Prs. Butts per Paragraph 2.3.A	T4B3786 4.5 x 4.5	MC
1 – Ea. Mortise Privacy Set x Indicator	ML2030-NSA-M19V	CR
1 – Ea. Surface Closer	4040XP	LC
1 – Ea. Kick Plate	8402-8" x 2" LDW-B4E-CS	IV
1 – Ea. Wall Stop	WS407CVX	IV
3 – Ea. Silencers	SR64	IV

### HW SET B2

Prs. Butts per Paragraph 2.3.A	T4B3786 4.5 x 4.5	MC
1 – Ea. Mortise Lockset (Institutional Privacy)	ML2069-NSA-CT6-M19V	CR
1 – Ea. Permanent Core	8000-D1	CR
1 – Ea. Surface Closer	4040XP	LC
1 – Ea. Kick Plate	8402-8" x 2" LDW-B4E-CS	IV
1 – Ea. Wall Stop	WS407CVX	IV
3 – Ea. Silencers	SR64	IV

### HW SET B3

Prs. Butts per Paragraph 2.3.A	T4B3786 4.5 x 4.5 NRP	MC
1 – Ea. Mortise Lockset (Institutional Privacy)	ML2069-NSA-CT6-M19V	CR
1 – Ea. Permanent Core	8000-D1	CR
1 – Ea. Surface Closer-Stop	4040XP-SCUSH	LC
1 – Ea. Kick Plate	8402-8" x 2" LDW-B4E-CS	IV
1 – Set Gasketing	188S	ZE
1 – Ea. Mortise Automatic Door Bottom	364AA	ZE

### HW SET E1

1 – Ea. ¾" Offset Floor Closer	SC-L2790N-CWF	RX
1 – Ea. ¾" Offset Pivot Set	L147	RX
2 – Ea. Intermediate Pivots	ML19	RX
2 – Sets Offset Pull & Pushbar Combo	9190HD-12" CTC-J/N Mount	IV
1 – Ea. Surface Magnetic Lock (Fail SAFE)	1512-D-B-A-L-T	SD
1 – Ea. Low Energy Power Operator	Magic Force Surface Overhead	ST
1 – Ea. Motion Sensor	MD-31D	SD
1 – Ea. Exit Switch	413MNU	SD
1 – Ea. Manual Frame Actuator	HC PTO	TX
1 – Ea. Power Supply	PS902 x 900-FA	SC

Note 1: Weather seals shall be provided and shop installed by Contractor's storefront manufacturer. Coordinate with storefront manufacturer for all hardware that shall be shop installed by the storefront manufacturer as required for security storefront's performance and warranty requirements.

Note 2: Access Control System shall be installed by the security system trade, as indicated on the drawings.

Note 3: Remote Release will be provided at the Main Desk Area by the Security System trade, as indicated on the drawings.

Note 4: Tie into Fire Alarm System for Fail SAFE operation.

Note 5: Manual Frame Actuator will release Magnetic Lock and set Power Operator into motion. Exit Switch will only release Magnetic Lock.

#### HW SET E2

1 – Ea.	Center Hung Floor Closer	SC-2890N-CWF	RX
2 – Sets	Offset Pull & Pushbar Combo	9190HD-12" CTC-J/N Mount	IV

**END OF SECTION 08 70 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 08 80 00**

**GLAZING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Glass for windows, doors and curtain walls.
  2. Fire-protection-rated glazing.
  3. Fire-resistance-rated glazing.
  4. Glazing sealants.
  5. Installation accessories.
- B. Related Sections:
1. Section 08 11 13 "Hollow Metal Doors and Frames."
  2. Section 08 41 13 "Interior Aluminum Entrances and Storefronts."
  3. Section 08 44 13 "Glazed Curtain Walls" for glazing sealants used in glazed curtain walls.
  4. Section 08 88 53 "Security Glazing."

**1.3 DEFINITIONS**

- A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
- B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.
- C. Interspace: Space between lites of an insulating-glass unit.

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.6 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Engineering Services Submittal: For glass, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.
- C. Glass Samples: For each type of glass product other than clear monolithic vision glass; 12 inches square.
- D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.9 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of glass.
- B. Product Test Reports: For coated glass, insulating glass, and glazing sealants, for tests performed by a qualified testing agency.
  1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
- C. Preconstruction adhesion and compatibility test report.

- D. Sample Warranties: For special warranties.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.
- C. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
  - 1. Install glazing in mockups specified in Section 084413 "Glazed Aluminum Curtain Walls" and other sections, to match glazing systems required for Project, including glazing methods.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.11 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
  - 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
  - 2. Use ASTM C 1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
  - 3. Test no fewer than eight Samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
  - 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
  - 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

#### 1.12 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

#### 1.13 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F.

#### 1.14 WARRANTY

- A. **Manufacturer's Special Warranty for Coated-Glass Products:** Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

- B. **Manufacturer's Special Warranty on Laminated Glass:** Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: 10 years from date of Substantial Completion.

- C. **Manufacturer's Special Warranty for Insulating Glass:** Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. **Source Limitations for Glass:** Obtain from single source from single manufacturer for each glass type.
- B. **Source Limitations for Glazing Accessories:** Obtain from single source from single manufacturer for each product and installation method.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. **Engineering Services:** Engage a qualified Professional Engineer licensed in the State of New York to design glass for project application.
  1. Engineering Services shall include complete design calculations for glass required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.

- b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- C. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined according to the 2014 New York City Building Code and ASTM E1300.
  - 1. Design Wind Pressures: As indicated on Drawings.
  - 2. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.
- D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.
- E. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
  - 1. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
  - 2. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
  - 3. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

## 2.3 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
  - 1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
  - 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.

- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.
- F. Fire- Protection- Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to the New York City Department of Buildings. Label shall indicate manufacturer's name; test standard; whether glazing is permitted to be used in doors or openings; if permitted in openings, whether or not glazing has passed the hose-stream test; whether or not glazing meets 450 deg F (250 deg C) temperature-rise limitation; and the fire-resistance rating in minutes.
- G. Fire- Resistance- Rated Glazing Labeling: Permanently mark fire-resistance-rated glazing with certification label of a testing agency acceptable to the 2014 New York City Building Code. Label shall indicate manufacturer's name, test standard, that the glazing is approved for use in walls, and the fire-resistance rating in minutes.

## 2.4 GLASS PRODUCTS

- A. Basis- of- Design, Manufacturers: Subject to compliance with requirements. provide products as indicated in other Part 2 articles or comparable product from one of the following, as approved by the Commissioner:
  - 1. Cardinal Glass Industries.
  - 2. Oldcastle BuildingEnvelope.
  - 3. Viracon, Inc.
  - 4. Vitro (formerly PPG)
  - 5. Or approved equal.
- B. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.
- C. Ultraclear, Low- iron Float Glass: ASTM C 1036, Type I, Class I (clear), Quality-Q3; and with visible light transmission of not less than 91 percent and solar heat gain coefficient of not less than 0.87.
  - 1. Basis- of- Design, Product: Subject to compliance with requirements. provide the following or equal as approved by the Commissioner:
    - a. Guardian Glass; Ultraclear low- iron glass or an equivalent product from an approved manufacturer.
- D. High Performance Reflective- Coated Vision Glass: ASTM C 1376.
  - 1. Basis- of- Design, Product: Subject to compliance with requirements. provide the following or equal as approved by the Commissioner:
    - a. Guardian Glass; Sunguard AG 50 or an equivalent product from an approved manufacturer.
- E. Low- Emissivity (Low- e) Glass: Pyrolytically coated clear Low- e coated glass.

1. Basis- of- Design, Product: Subject to compliance with requirements. provide the following or equal as approved by the Commissioner:
  - a. Guardian Glass; Sunguard SuperNeutral 68 or an equivalent product from an approved manufacturer.
- F. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
- G. Ceramic-Coated Spandrel Glass: ASTM C1048, Type I, Condition B, Quality-Q3.

## 2.5 LAMINATED GLASS

- A. Laminated Glass: ASTM C 1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
  1. Construction: Laminate glass with polyvinyl butyral interlayer, ionomeric polymer interlayer or cast-in-place and cured-transparent-resin interlayer to comply with interlayer manufacturer's written instructions.
  2. Interlayer Thickness: Provide thickness not less than that indicated and needed to comply with requirements.
  3. Interlayer Color: As indicated in Part 3 schedule.
- B. Basis- of- Design, Interlayer Products: Subject to compliance with requirements, provide McGrory Glass- DAT 041 or equal product from one of the following, as approved by the Commissioner:
  1. SentryGlas; Kuraray America, Inc.
  2. Eastman Chemical Company; Saflex.
  3. Or approved equal.

## 2.6 INSULATING GLASS

- A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E2190.
  1. Sealing System: Dual seals, with manufacturer's standard primary and secondary sealants.
  2. Perimeter Spacer: Manufacturer's standard spacer material and construction.

## 2.7 FIRE-PROTECTION-RATED GLAZING

- A. Fire-Protection-Rated Glazing: Listed and labeled by a testing agency acceptable to the New York City Department of Buildings and New York City Fire Department, for fire-protection ratings indicated, based on positive-pressure testing according to NFPA 257 or UL 9, including the hose-stream test, and shall comply with NFPA 80.
- B. Film- Faced Ceramic Glazing: Clear, ceramic flat glass; 3/ 16 inch thickness; faced on one surface with a clear glazing film; and complying with 16 CFR 1201, Category II.
  1. Products: Subject to compliance with requirements, provide the following:

- a. SAFTI FIRST Fire Rated Glazing Solutions; Pyran Platinum F.
  - b. Technical Glass Products; FireLite NT.
  - c. Vetrotech Saint-Gobain; Keralite Filmed.
  - d. Or approved equal.
- C. Laminated Ceramic Glazing: Laminated glass made from two plies of clear, ceramic glass; 5/ 16 inch (8-mm) total thickness; and complying with 16 CFR 1201, Category II.
  - 1. Products: Subject to compliance with requirements, provide the following:
    - a. SAFTI FIRST Fire Rated Glazing Solutions; Pyran Platinum L.
    - b. Technical Glass Products; FireLite Plus.
    - c. Vetrotech Saint-Gobain; Keralite Laminated.
    - d. Or approved equal.

## 2.8 FIRE-RESISTANCE-RATED GLAZING

- A. Fire-Resistance-Rated Glazing: Listed and labeled by a testing agency acceptable to the New York City Department of Buildings and New York City Fire Department, for fire-resistance ratings indicated, based on testing according to ASTM E119 or UL 263.
- B. Laminated Glass with Intumescent Interlayers: Laminated glass made from multiple plies of uncoated, ultraclear float glass; with intumescent interlayers; and complying with 16 CFR 1201, Category II.
  - 1. Basis- of- Design, Products: Subject to compliance with requirements, provide Pilkington Pyrostop, 120-minute or one of the following, as approved by the Commissioner:
    - a. SAFTI FIRST Fire Rated Glazing Solutions; SuperLite II-XLM.
    - b. Technical Glass Products; Pyrostop.
    - c. Vetrotech Saint-Gobain; Contraflam.
    - d. Or approved equal.

## 2.9 GLAZING SEALANTS

- A. General:
  - 1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
  - 2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
  - 3. Colors of Exposed Glazing Sealants: As selected by Commissioner from manufacturer's full range.
- B. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.

## 2.10 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
  - 1. AAMA 804.3 tape, where indicated.
  - 2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
  - 3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
  - 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
  - 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

## 2.11 MISCELLANEOUS GLAZING MATERIALS

- A. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- B. Setting Blocks:
  - 1. Neoprene with a Shore A durometer hardness of 85, plus or minus 5.
  - 2. Type recommended by sealant or glass manufacturer.
- C. Spacers:
  - 1. Neoprene blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
  - 2. Type recommended by sealant or glass manufacturer.
- D. Edge Blocks:
  - 1. Neoprene with a Shore A durometer hardness per manufacturer's written instructions.
  - 2. Type recommended by sealant or glass manufacturer.
- E. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
  - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
  - 2. Presence and functioning of weep systems.
  - 3. Minimum required face and edge clearances.
  - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
- B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

### 3.4 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where length plus width is larger than 50 inches.
- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

### 3.5 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Apply heel bead of elastomeric sealant.
- F. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- G. Apply cap bead of elastomeric sealant over exposed edge of tape.

### 3.6 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

### 3.7 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure.
  - 1. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

### 3.8 CLEANING AND PROTECTION

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
  - 1. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
- C. Remove and replace glass that is damaged during construction period.

### 3.9 GLASS SCHEDULE

- A. MG-1: 1/ 4 inch tempered glass.
  - 1. Application: Vision panels, borrowed lights.
- B. GL-1: 9/ 16 inch laminated, fully tempered glass.
  - 1. Application: Interior lightwell, sidelights.
- C. IG-1: 1 inch Insulated glazing unit.
  - 1. Application: Curtain wall shadow boxes.
    - a. U-value: 0.25
    - b. SHGC: 0.36
  - 2. 1/ 4 inch ultraclear low-iron float glass with high performance reflective film on no. 2 surface.
  - 3. 1/ 2 inch argon- filled air space.
  - 4. 1/ 4 inch ultraclear low-iron float glass with low-e coating on no. 3 surface.
- D. IG-2: 1 3/4 inch Insulated glazing unit.
  - 1. Application: Curtain wall vision glazing.
    - a. U-value: 0.16
    - b. SHGC: 0.27
  - 2. 1/ 4 inch ultraclear low-iron float glass with high performance reflective film on no. 2 surface.
  - 3. 1/ 2 inch argon- filled air space.
  - 4. 1/ 4 inch ultraclear low-iron float glass
  - 5. 1/ 2 inch argon- filled air space.
  - 6. 1/ 4 inch ultraclear low-iron float glass with low-e coating on no. 5 surface.

- E. IG-3: 1 3/4 inch Insulated glazing unit with tempered interior pane.
1. Application: Curtain wall vision glazing less than 18 inches above finished floor.
    - a. U-value: 0.16
    - b. SHGC: 0.27
  2. 1/4 inch ultraclear low-iron float glass with high performance reflective film on No. 2 surface.
  3. 1/2 inch argon- filled air space.
  4. 1/4 inch ultraclear low-iron float glass
  5. 1/2 inch argon- filled air space.
  6. 1/4 inch ultraclear low-iron, fully- tempered glass with low-e coating on no. 5 surface.
- F. IG- 4: 1 inch Insulated glazing unit with translucent, silkscreen white ceramic frit, white simulated acid-etch.
1. Application: Interior lightwell aluminum storefront at east, south, and west walls of lightwell.
  2. 1/4 inch ultraclear low-iron, fully- tempered glass with 5 percent opacity, frit on No. 2 surface.
  3. 1/2 inch argon- filled air space.
  4. 1/4 inch ultraclear low-iron, fully- tempered glass with low-e coating on no. 3 surface.
- G. IG- 5: 1 inch Insulated glazing unit with translucent, silkscreen white ceramic frit simulated acid-etch.
1. Application: interior lightwell aluminum storefront at north wall to conference room
  2. 1/4 inch ultraclear low-iron, fully- tempered glass with 10 percent opacity frit on No. 2 surface.
  3. 1/2 inch argon- filled air space.
  4. 1/4 inch ultraclear low-iron, fully- tempered glass with low-e coating on no. 3 surface.
- H. GF-1: 45- Minute fire rated ceramic glazing.
1. Application: Muster Room vision panels.
- I. GF-2: 90- Minute fire rated laminated ceramic safety glazing.
1. Application: Doors and sidelights at Stair A and Stair B.
- J. GF-3: 2 3/8 inch, 90- Minute fire resistance rated laminated intumescent insulated glazing.
1. Application: Roof monitor fire- resistant curtain wall exterior glazing.
  2. U-Value: 0.35.
- K. GF-4: 1-9/16 inch, 120- Minute fire resistance rated laminated intumescent glazing.
1. Application: Sidelights at doors between corridor and Stair A and B.

**END OF SECTION 08 80 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 08 88 53**

**SECURITY GLAZING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Laminated security glazing.
  2. Glass-clad polycarbonate and air-gap security glazing.
  3. Glazing sealants.
  4. Installation accessories.
- B. Related Sections:
1. Section 08 43 33 "Security Storefronts."
  2. Section 08 88 00 "Glazing."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 COORDINATION

- A. Coordinate glazing channel dimensions to provide necessary bite on security glazing, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Engineering Services Submittal: For security glazing, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any contract the work.
- C. Security Glazing Samples: For each type of security glazing; 12 inches square.
- D. Security Glazing Schedule: List security glazing types and thicknesses for each size opening and location. Use same designations indicated on Drawings. Indicate coordinated dimensions of security glazing and construction that receives security glazing, including clearances and glazing channel dimensions.

1.8 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For installers.
- B. Product Certificates: For each type of product indicated, from manufacturer.
- C. Product Test Reports: For each type of glazing sealant, for tests performed by a qualified testing agency.
  - 1. Provide test reports based on testing current sealant formulations within previous 36-month period.
- D. Preconstruction adhesion and compatibility test reports.
- E. Sample Warranties: For special warranties.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Security Glazing Testing Agency Qualifications: Subject to compliance with requirements, testing agency shall be one of the following:
  - 1. H. P. White Laboratory, Inc.
  - 2. Underwriters Laboratories, Inc.
  - 3. Wiss, Janney, Elstner Associates, Inc.

4. Approved equal.

- C. Sealant Testing Agency Qualifications: Qualified according to ASTM C 1021 for testing indicated.
- D. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Install security glazing in mockups specified in other sections to match glazing systems required for Project, including glazing methods.
  - 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.10 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each security glazing type, tape sealant, gasket, glazing accessory, and glazing-framing member for adhesion to and compatibility with elastomeric glazing sealants.
  - 1. Refer to Section 08 80 00 - Glazing for requirements.

#### 1.11 DELIVERY, STORAGE, AND HANDLING

- A. Protect security glazing and glazing materials according to manufacturer's written instructions. Prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.
- B. Comply with insulating security glazing and with air-gap security glazing manufacturers' written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

#### 1.12 FIELD CONDITIONS

- A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
  - 1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F.

#### 1.13 WARRANTY

- A. Manufacturer's Special Warranty for Glass-Clad Polycarbonate: Manufacturer agrees to replace glass-clad polycarbonate that deteriorates within specified warranty period. Deterioration of glass-clad polycarbonate is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning glass-clad polycarbonate contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glazing, blemishes exceeding those allowed by referenced glass-clad polycarbonate standard, yellowing, and loss of light transmission.
  - 1. Warranty Period: 10 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Source Limitations for Security Glazing: Obtain security glazing from single source from single manufacturer using the same types of lites, plies, interlayers, and spacers for each security glazing type indicated.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design security glazing for project application.
  - 1. Engineering Services shall include complete design calculations for security glazing and connections required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated.
  - 1. Design Procedure for Glass: ASTM E1300 and 2014 New York City Building Code.
  - 2. Design Wind Pressures: As indicated on Drawings.
- C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glazing framing members and glazing components.
  - 1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
- D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

### 2.3 SECURITY GLAZING, GENERAL

- A. Glazing Publications: Comply with published recommendations of security glazing and glazing material manufacturers and organizations below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.
  - 1. GANA Publications: "Laminated Glazing Reference Manual" and "Glazing Manual."
  - 2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Plastic Glazing Labeling: Identify plastic sheets with appropriate markings of applicable testing and inspecting agency, indicating compliance with required fire-test-response characteristics.

- C. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the Safety Glazing Certification Council or another certification agency acceptable to the New York City Department of Buildings. Label shall indicate manufacturer's name, type of glazing, glass thickness, and safety glazing standard with which glazing complies.
- D. Insulating Glazing Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the Insulating Glass Certification Council.
- E. Thermal and Optical Performance Properties: Provide security glazing with performance properties specified, as indicated in manufacturer's published test data, based on construction products indicated and on procedures indicated below:
  - 1. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F.
  - 2. Solar-Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
  - 3. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

## 2.4 GLASS PRODUCTS

- A. Float Glass: ASTM C1036, Refer to Section 08 80 00 - Glazing for material and product requirement.
- B. Ultraclear, Low- iron Float Glass: Refer to Section 08 80 00 - Glazing for material and product requirements.
- C. High Performance Reflective- Coated Vision Glass: Refer to Section 08 80 00 - Glazing for material and product requirements
- D. Fully Tempered Float Glass: Refer to Section 08 80 00 - Glazing for material and product requirement.
- E. Laminated Glass: Refer to Section 08 80 00 - Glazing for material and product requirement.

## 2.5 POLYCARBONATE SECURITY GLAZING

- A. Polycarbonate Sheet: ASTM C1349, Appendix X1, Type II, coated, mar-resistant, UV-stabilized polycarbonate with coating on exposed surfaces and Type I, standard, UV-stabilized polycarbonate where no surfaces are exposed.
- B. Laminated Polycarbonate: Polycarbonate sheets laminated with clear urethane interlayer that complies with ASTM C1349, Appendix X2, and has a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation. Provide laminated units that comply with requirements of ASTM C1349 for maximum allowable laminating process blemishes and haze.
- C. Glass-Clad Polycarbonate: ASTM C1349.
- D. Basis- of- Design, Product: Subject to compliance with requirements. provide the following or equal as approved by the Commissioner:
  - 1. Global Security Glazing; SP035.

## 2.6 INSULATING SECURITY GLAZING

- A. Insulating Security Glazing: Factory-assembled units, consisting of sealed lites of glazing material indicated separated by a dehydrated interspace, qualified according to ASTM E2190
  - 1. Sealing System: Dual seal.
- B. Basis- of- Design, Products: Subject to compliance with requirements. provide Oldcastle Building Envelope; Armorprotect Plus 121200, 11/ 16 inch, HPW Lev 1, 9mm, HPW Lev B or equal from one of the following, as approved by the Commissioner:
  - 1. Global Security Glazing – “Secur-Tem + Poly 2116” IGU.
  - 2. Saftifirst IGU.
  - 3. Or approved equal.

## 2.7 GLAZING SEALANTS

- A. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they contact, including security glazing, seals of insulating security glazing and air-gap security glazing, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
- B. Suitability: Comply with sealant and security glazing manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
- C. Glazing Sealant: Neutral-curing silicone glazing sealant complying with ASTM C920, Type S, Grade NS, Class 100/50, Use NT.

## 2.8 GLAZING TAPES

- A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and security glazing manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
  - 1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
  - 2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.
- B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:
  - 1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
  - 2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

## 2.9 MISCELLANEOUS GLAZING MATERIALS

- A. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
- B. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

- C. Spacers: Elastomeric blocks or continuous extrusions of hardness required by security glazing manufacturer to maintain security glazing lites in place for installation indicated.
- D. Edge Blocks: Elastomeric material of hardness needed to limit security glazing lateral movement (side walking).
- E. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

## 2.10 FABRICATION OF SECURITY GLAZING

- A. Fabricate security glazing in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine framing for security glazing, with Installer present, for compliance with the following:
  - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
  - 2. Presence and functioning of weep system.
  - 3. Minimum required face or edge clearances.
  - 4. Minimum required bite.
  - 5. Effective sealing between joints of framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Clean glazing channels and other framing members receiving security glazing immediately before glazing. Remove coatings not firmly bonded to substrates.

### 3.4 GLAZING, GENERAL

- A. Comply with combined written instructions of manufacturers of security glazing, sealants, gaskets, and other glazing materials unless more stringent requirements are indicated, including those in referenced glazing publications.
- B. Protect edges of security glazing from damage during handling and installation. Remove damaged security glazing from Project site and legally dispose of off Project site. Damaged security glazing includes units with edge or face damage or other imperfections that, when installed, could weaken security glazing and impair performance and appearance.

- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications unless otherwise required by glazing unit manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
- E. Do not exceed edge pressures stipulated by security glazing manufacturers for installing lites.
- F. Provide spacers for security glazing lites where the length plus width is larger than 50 inches.
- G. Provide edge blocking where indicated or needed to prevent security glazing from moving sideways in glazing channel, as recommended in writing by security glazing manufacturer and according to requirements in referenced glazing publications.

### 3.5 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by security glazing, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant.
- G. Center security glazing in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape.

### 3.6 GASKET GLAZING (DRY)

- A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.
- B. Insert soft compression gasket securely in place between glazing unit and frame or fixed stop, so it is securely in place with joints miter cut and bonded together at corners.
- C. Installation with Drive-in Wedge Gaskets: Center security glazing in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.

- D. Installation with Pressure-Glazing Stops: Center security glazing in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in security glazing. Seal gasket joints with sealant recommended by gasket manufacturer.
- E. Install gaskets so they protrude past face of glazing stops.

### 3.7 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between security glazing and glazing stops to maintain face clearances and to prevent sealant from extruding into glazing channel and blocking weep systems. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to security glazing and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from security glazing.

### 3.8 CLEANING AND PROTECTION

- A. Immediately after installation remove nonpermanent labels and clean surfaces.
- B. Protect security glazing from contact with contaminating substances resulting from construction operations, including weld splatter.
  - 1. If, despite such protection, contaminating substances do come into contact with security glazing, remove substances immediately as recommended in writing by security glazing manufacturer. Remove and replace security glazing that cannot be cleaned without damage.

### 3.9 SECURITY GLAZING SCHEDULE

- A. SG-1: Glass-clad polycarbonate; 1-1/4 inch Laminated security glazing.
  - 1. 60- minute attack WMFL Level I.
  - 2. Application: Interior security borrowed lights.
- B. SG-2: 1- 3/ 8 inch laminated security glazing with mirror pane.
  - 1. 60- minute attack WMFL Level I.
  - 2. Application: Interview room viewing windows.
- C. ISG-1: Insulated glass polycarbonate; 1-7/ 8 inch Insulated laminated security glazing.
  - 1. HPW I-B.
  - 2. Application: First floor exterior glazing.
    - a. U-value: 0.22
    - b. SHGC: 0.38

3. 1/ 4 inch fully tempered low-iron glass with high performance reflective film on no. 2 surface.
4. 1/ 2 inch argon- filled air space.
5. Glass polycarbonate security glazing with low-iron glass plies and mar-resistant coating on interior polycarbonate surface.

**END OF SECTION 08 88 53**

**SECTION 08 91 19****FIXED LOUVERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Fixed extruded-aluminum louvers.
  2. Louver screens.
  3. Insulated blank-off panels for louvers.
  4. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.
- B. Shop Drawings: For louvers and accessories. Include plans, elevations, sections, details, and attachments to other work, including surrounding aluminum curtain wall mullions at all sides of louver area. Show frame profiles and blade profiles, angles, and spacing.
- C. Engineering Services Submittal: For louvers and connections, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.
- D. Samples: For each type of metal finish required by project application.

#### 1.7 INFORMATIONAL SUBMITTALS

- A. Product Test Reports: Based on evaluation of comprehensive tests performed according to AMCA 500-L by a qualified testing agency or by manufacturer and witnessed by a qualified testing agency, for each type of louver and showing compliance with performance requirements specified.
- B. Sample Warranties: For manufacturer's special warranties.

#### 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Welding Qualifications: Qualify procedures according AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
- C. On-site Facade Mockup: Construct on-site facade mockup as indicated on the drawings, incorporating work specified in this section. All required submittals for the work specified in this section shall be submitted by the Contractor and accepted by the Commissioner prior to the Contractor furnishing elements for the on-site facade mockup.
  - 1. Provide complete fixed louver installation in sizes, quantities, and configuration indicated on the drawings for use in the on-site facade mockup.
  - 2. Incorporate full-scale details of the architectural features, approved finishes, brackets, and attachments to be provided at full-scale building.
  - 3. Approval of on-site facade mockup does not constitute approval of deviations from the Contract Documents contained in the on-site facade mockup unless the Commissioner specifically approves such deviations in writing.

4. Maintain the on-site facade mockup at the project site until directed to demolish and remove the on-site facade mockup by the Commissioner.

#### 1.9 FIELD CONDITIONS

- A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

#### 1.10 WARRANTY

- A. Special Finish Warranty: Manufacturer agrees to restore or replace components on which finishes fail in materials or workmanship within specified warranty period.

1. Warranty Period: 20 years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Source Limitations: Obtain fixed louvers from single source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

#### 2.2 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design louvers including connections.

1. Engineering Services shall include complete design calculations for louvers and connections required for this project.

- a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
- b. Design calculations shall be based on Performance Requirements and product design criteria indicated.

- B. Structural Performance: Louvers shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver-blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.

1. Wind Loads: Determine loads based on pressures as indicated on Drawings.

- C. Seismic Performance: Louvers, including attachments to other construction, shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

- D. Louver Performance Ratings: Louvers shall comply with requirements indicated, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

## 2.3 FIXED ALUMINUM LOUVERS

### A. Vertical Extreme Weather Louvers:

1. Basis of Design, Products: Subject to compliance with requirements, provide the following or equal product, as approved by the Commissioner:
  - a. Manufacturer: Construction Specialties, Inc.
  - b. Model: RS- 5605
  - c. Depth: 5 inch
2. Other Manufacturers:
  - a. Airolite Company, LLC (The).
  - b. Architectural Louvers; Harray, LLC.
  - c. Or approved equal.

### B. Acoustical Louvers: For use at emergency generator exhaust.

1. Basis of Design, Products: Subject to compliance with requirements, provide the following or equal product, as approved by the Commissioner:
  - a. Manufacturer: IAC Acoustics
  - b. Model: Noishield Acoustic Louvers Model R
  - c. Blade type: Airfoil blade
  - d. Depth: 12 inch
2. Other Manufacturers:
  - a. Airline Louvers.
  - b. Greenheck.
  - c. Riskin.
  - d. Or approved equal.

## 2.4 LOUVER SCREENS

### A. General: Provide screen at each exterior louver.

1. Screen Location for Fixed Louvers: Interior face.
2. Screening Type: Bird screening.

### B. Louver Screen Frames: Same type and form of metal as indicated for louver to which screens are attached.

### C. Louver Screening for Aluminum Louvers:

1. Bird Screening: Stainless steel, 1/2-inch-square mesh, 0.047-inch wire.

## 2.5 BLANK-OFF PANELS

### A. Insulated Blank-Off Panels: Laminated panels consisting of an insulating core surfaced on back and front with metal sheets and attached to back of louver.

1. Size: As indicated on drawings.
2. Thickness: 3 inch, unless otherwise indicated.
3. Metal Facing Sheets: Aluminum sheet, not less than 0.032-inch nominal thickness.
4. Insulating Core: Rigid, glass-fiber-board insulation or extruded-polystyrene foam meeting project energy performance requirements.
5. Edge Treatment: Trim perimeter edges of blank-off panels with louver manufacturer's standard extruded-aluminum-channel frames, not less than 0.080-inch nominal thickness, with corners mitered and with same finish as panels.
6. Seal perimeter joints between panel faces and louver frames with gaskets or sealant.
7. Panel Finish: Same finish applied to louvers.

a. Color and Gloss: As indicated on drawings.

8. Attach blank-off panels with clips or sheet metal screws.

## 2.6 MATERIALS

- A. Aluminum Extrusions: ASTM B221, Alloy 6063-T5, T-52, or T6.
- B. Aluminum Sheet: ASTM B209, Alloy 3003 or 5005, with temper as required for forming, or as otherwise recommended by metal producer for required finish.
- C. Fasteners: Use types and sizes to suit unit installation conditions.
  1. Use Phillips flat-head screws for exposed fasteners unless otherwise indicated.
  2. For fastening aluminum, use aluminum or 300 series stainless-steel fasteners.
  3. For fastening stainless steel, use 300 series stainless-steel fasteners.
  4. For color-finished louvers, use fasteners with heads that match color of louvers.
- D. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, fabricated from stainless-steel components, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing according to ASTM E488/E488M conducted by a qualified testing agency.
- E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

## 2.7 FABRICATION

- A. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
  1. Join frame members to each other and to fixed louver blades with fillet welds concealed from view, unless otherwise indicated or size of louver assembly with bolted connections between frame members, to meet project performance requirements.
- B. Fabricate louvers to accept curtain wall construction as indicated on drawings, with positive drainage from the rear of the louver to the exterior face of the building.

## 2.8 ALUMINUM FINISHES

- A. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
  - 1. Color and Gloss: As indicated on drawings.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates and openings, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

### 3.4 INSTALLATION

- A. Locate and place louvers level, plumb, and at indicated alignment with adjacent work.
- B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
- C. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- D. Protect unpainted galvanized- and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- E. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 "Joint Sealants" for sealants applied during louver installation.
- F. Include louver frame and any metal backup framing and bracing required to support louvers per manufacturer instructions. Backup framing shall be minimized and located so as to not conflict with any mechanical plenums at louvers.

**3.5 ADJUSTING AND CLEANING**

- A. Clean exposed louver surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate during construction period.
- B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to finishes. Thoroughly rinse surfaces and dry.
- C. Restore louvers damaged during installation and construction, so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Commissioner, remove damaged units and replace with new units.
  - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

**END OF SECTION 08 91 19**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 09 21 16**

### **GYPSUM BOARD SHAFT WALL ASSEMBLIES**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section includes:
  - 1. Gypsum board shaft wall assemblies.
  - 2. Installation accessories.
- B. Related Sections:
  - 1. Section 09 22 16 "Non-structural Metal Framing."
  - 2. Section 09 29 00 "Gypsum Board."

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each component of gypsum board shaft wall assembly.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

**1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and support them on risers on a flat platform to prevent sagging.

**1.9 FIELD CONDITIONS**

- A. Environmental Limitations: Comply with gypsum-shaftliner-board manufacturer's written instructions.
- B. Do not install finish panels until installation areas are enclosed and conditioned.

**PART 2 - PRODUCTS**

**2.1 PERFORMANCE REQUIREMENTS**

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E 90 and classified according to ASTM E 413 by a testing and inspecting agency.

- C. Framing Performance Characteristics: Gypsum board shaft-wall assemblies shall withstand the design loads (air pressures) without failing and while maintaining an airtight and smoke-tight seal, as required by the 2014 New York City Building Code. Apply design loads transiently and cyclically under in-service conditions for maximum heights of partitions indicated. Evidence of failure includes deflections exceeding those indicated below, bending stresses causing studs to break or to distort, and end-reaction shear causing runners to bend or to shear and studs to become crippled.
1. Structural Criteria: Limiting heights of partitions are based on L/ 240 at 510 psi. Increase gage of steel framing to maintain above criteria while not increasing the thickness of partition.
  2. Lateral Design Load: As indicated, but not less than 10 psf.
  3. Deflection Limit: As indicated, but not more than 1/ 240 of partition height, unless otherwise indicated and required.
  4. Seismic Characteristics, where required: Fabricate assemblies to comply with seismic load criteria, as required by the 2014 New York City Building Code.

## 2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

- A. Fire-Resistance Rating: As indicated
- B. STC Rating: As indicated.
- C. Gypsum Shaftliner Board:
1. Moisture- and Mold-Resistant Type X: ASTM C 1396/C 1396M; manufacturer's proprietary fire-resistive liner panels with ASTM D 3273 mold-resistance score of 10 as rated according to ASTM D 3274, 1 inch thick, and with double beveled long edges.
    - a. Products: Subject to compliance with requirements, provide one of the following:
      - 1) CertainTeed Corporation; ProRoc Moisture and Mold Resistant Shaftliner.
      - 2) Continental Building Products, LLC; Mold Defense Shaftliner Type X.
      - 3) Georgia-Pacific Gypsum LLC; Dens-Glass Ultra Shaftliner.
      - 4) National Gypsum Company; Gold Bond Brand Fire-Shield Shaftliner XP.
      - 5) USG Corporation; Sheetrock Brand Mold Tough Gypsum Liner Panel.
      - 6) Approved equal.
- D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C 645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.
1. Protective Coating: Refer to Section 09 22 16 "Non-Structural Metal Framing."
- E. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:
1. Depth: As indicated.
  2. Minimum Base-Metal Thickness: As indicated and required by project performance requirements.
- F. Runner Tracks: Manufacturer's standard J-profile track with manufacturer's standard long-leg length, but at least 2 inches long and matching studs in depth.

1. Minimum Base-Metal Thickness: Matching steel studs.
- G. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
  1. Refer to Section 09 29 00 "Non- structural Metal Framing."
- H. Elevator-Hoistway-Entrance Struts: Manufacturer's standard J-profile jamb strut with long-leg length of 3 inches, matching studs in depth, and not less than 0.033 inch thick.
- I. Finish Panels: Gypsum board, refer to Section 09 29 00 "Gypsum Board."
- J. Sound Attenuation Blankets: Refer to Section 09 29 00 "Gypsum Board."

## 2.3 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with shaft wall manufacturer's written instructions.
- B. Trim Accessories: Refer to Section 09 29 00 "Gypsum Board." Cornerbead, edge trim, and control joints of material and shapes that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.
- C. Steel Drill Screws: ASTM C 1002 unless otherwise indicated.
- D. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.
  1. Expansion Anchors: Fabricated from corrosion-resistant materials, with allowable load or strength design capacities calculated according to ICC-ES AC193 and ACI 318 greater than or equal to the design load, as determined by testing per ASTM E 488/E 488M conducted by a qualified testing agency.
  2. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with allowable load capacities calculated according to ICC-ES AC70, greater than or equal to the design load, as determined by testing per ASTM E 1190 conducted by a qualified testing agency
- E. Reinforcing: Galvanized-steel reinforcing strips with 0.033-inch minimum thickness of base metal (uncoated).
- F. Acoustical Sealant: Refer to Section 09 29 00 "Gypsum Board."
- G. Gypsum Board Cants:
  1. Gypsum Board Panels: Refer to Section 09 29 00 "Gypsum Board."
  2. Laminating adhesive: Refer to Section 09 29 00 "Gypsum Board."
  3. Non-Load-Bearing Steel Framing: Refer to Section 09 22 16 "Non-Structural Metal Framing."

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 PREPARATION**

- A. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged. Patch or replace sprayed fire-resistive materials removed or damaged during installation of shaft wall assemblies to comply with requirements specified in Section 07 81 00 "Applied Fireproofing."
- B. After sprayed fire-resistive materials are applied, remove only to extent necessary for installation of gypsum board shaft wall assemblies and without reducing the fire-resistive material thickness below that which is required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

**3.4 INSTALLATION**

- A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.
- B. Do not bridge building expansion joints with shaft wall assemblies; frame both sides of expansion joints with furring and other support.
- C. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment, services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.
  - 1. Elevator Hoistway: At elevator hoistway-entrance door frames, provide jamb struts on each side of door frame.
  - 2. Reinforcing: Provide where items attach directly to shaft wall assembly as indicated on Drawings; accurately position and secure behind at least one layer of face panel.
- D. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.

- E. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.
- F. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
- G. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Commissioner while maintaining fire-resistance rating of gypsum board shaft wall assemblies.
- H. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.
- I. Gypsum Board Cants: At projections into shaft exceeding 4 inches where indicated, install gypsum board cants covering tops of projections.
  - 1. Slope cant panels at least 75 degrees from horizontal. Set base edge of panels in adhesive and secure top edges to shaft walls at 24 inches o.c. with screws fastened to shaft wall framing.
  - 2. Where non-load-bearing steel framing is required to support gypsum board cants, install framing at 24 inches o.c. and extend studs from the projection to shaft wall framing.
- J. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

### 3.5 PROTECTION

- A. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- B. Remove and replace panels that are wet, moisture damaged, or mold damaged.
  - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
  - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

**END OF SECTION 09 21 16**

**SECTION 09 22 16****NON-STRUCTURAL METAL FRAMING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Non-load-bearing steel framing systems for interior partitions.
  2. Suspension systems for interior ceilings and soffits.
  3. Grid suspension systems for gypsum board ceilings.
- B. Related Sections:
1. Section 09 21 16 "Gypsum Board Shaft Wall Assemblies."
  2. Section 09 29 00 "Gypsum Board."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.

1.7 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of code-compliance certification for studs and tracks.
- B. Evaluation Reports: For firestop tracks and post-installed anchors, from ICC-ES or other qualified testing agency acceptable to New York City Department of Buildings and New York City Fire Department.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E 119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated on Drawings, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- C. Metal framing assemblies shall be capable of withstanding following lateral design loadings for maximum heights of partitions without failing. Evidence of failure includes deflections exceeding limits indicated, bending stresses causing studs to break or to distort, and end reaction shear causing track (runners) to bend or to shear and studs to become crippled. Comply with SA923 of United States Gypsum Company and as required by the 2014 New York City Building Code.
  - 1. Lateral Loading, Partition, Furring and Other Assemblies: 5.0 psf, unless otherwise indicated.
  - 2. Deflection Limits, Painted Assemblies: 1/360 of partition height.

3. Deflection Limits, Tile and Other Hard Finish Surfaces: 1/360 of partition height.

## 2.2 FRAMING SYSTEMS

- A. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
  1. Steel Sheet Components: Comply with ASTM C 645 requirements for metal unless otherwise indicated.
  2. Protective Coating: ASTM A 653/A 653M, G40, hot-dip galvanized unless otherwise indicated.
  3. Protective Coating where used at exterior walls and areas subject to high humidity, i.e., 'wet areas': ASTM A 653/A 653M, G90, hot-dip galvanized unless otherwise indicated.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. ClarkDietrich; ProSTUD Drywall Framing or Trakloc Deflection Stud Assembly.
  2. MarinoWARE; QuickFrame Rough Opening System, StudRite Drywall Framing, or ViperStud Drywall Framing.
  3. Telling Industries; Equivalent products.
  4. Approved equal.
- C. Studs and Tracks: ASTM C 645.
  1. Steel Studs and Tracks, to suit project application:
    - a. Minimum Base-Metal Thickness: As indicated and required by performance requirements for horizontal deflection.
    - b. Depth: As indicated on Drawings.
- D. Slip-Type Head Joints: Where indicated, provide one of the following:
  1. Single Long-Leg Track System: ASTM C 645 top track with 2-inch-deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches of the top of studs to provide lateral bracing.
  2. Double-Track System: ASTM C 645 top outer tracks, inside track with 2-inch-deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
  3. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
    - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      - 1) ClarkDietrich; MaxTrak or Slotted Deflection Track.
      - 2) Telling Industries; Vertical Slip Track or Vertical Slip Track II.
      - 3) The Steel Network, Inc.; VertiClip SLD or VertiTrack VTD.
      - 4) Approved equal.

- E. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. CEMCO; California Expanded Metal Products Co.; FAS Track.
    - b. ClarkDietrich; BlazeFrame.
    - c. Fire Trak Corp; Fire Trak System attached to studs with Fire Trak Posi Klip.
    - d. The Steel Network, Inc.; VertiTrack VT.
    - e. Approved equal.
- F. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
  - 1. Minimum Base-Metal Thickness: 0.0179 inch.
- G. Cold-Rolled Channel Bridging: Steel, 0.0538-inch minimum base-metal thickness, with minimum 1/2-inch-wide flanges.
  - 1. Depth: 1-1/2 inches.
  - 2. Clip Angle: Not less than 1-1/2 by 1-1/2 inches, 0.068-inch-thick, galvanized steel.
- H. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
  - 1. Minimum Base-Metal Thickness: 0.0179 inch.
  - 2. Depth: 7/8 inch.
- I. Resilient Furring Channels: 1/2-inch-deep, steel sheet members designed to reduce sound transmission.
  - 1. Configuration: Asymmetrical or hat shaped.
- J. Cold-Rolled Furring Channels: 0.053-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges.
  - 1. Depth: 3/4 inch.
  - 2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch.
  - 3. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.
- K. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum uncoated-metal thickness of 0.0179 inch, and depth required to fit insulation thickness indicated.

## 2.3 SUSPENSION SYSTEMS

- A. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.
- B. Hanger Attachments to Concrete:

1. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to New York City Department of Buildings, based on ICC-ES AC58 or AC308 as appropriate for the substrate.
  - a. Uses: Securing hangers to structure.
  - b. Type: Torque-controlled, , adhesive anchor or adhesive anchor.
  - c. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.
  - d. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.
- C. Flat Hangers: Steel sheet, 1 by 3/16 inch by length indicated.
- D. Carrying Channels (Main Runners): Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.0538 inch and minimum 1/2-inch-wide flanges.
  1. Depth: As indicated on Drawings.
- E. Furring Channels (Furring Members):
  1. Cold-Rolled Channels: 0.0538-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges, 3/4 inch deep.
  2. Steel Studs and Tracks: ASTM C 645.
    - a. Minimum Base-Metal Thickness: As indicated on Drawings.
    - b. Depth: As indicated on Drawings.
  3. Hat-Shaped, Rigid Furring Channels: ASTM C 645, 7/8 inch deep.
    - a. Minimum Base-Metal Thickness: As indicated on Drawings.
  4. Resilient Furring Channels: 1/2-inch-deep members designed to reduce sound transmission.
    - a. Configuration: Asymmetrical or hat shaped.
- F. Grid Suspension System for Gypsum Board Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following systems to suit project application:
    - a. Armstrong World Industries, Inc; Drywall Grid Systems.
    - b. Rockfon (Rockwool International); 640/660 Drywall Ceiling Suspension, 650/670 Fire Rated Drywall Ceiling Suspension, Radius Drywall Ceiling Suspension or.
    - c. USG Corporation; Drywall Suspension System or Wall-to-Wall Drywall Suspension System.
    - d. Approved equal.

## 2.4 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards.

1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
- B. Isolation Strip at Exterior Walls: Provide one of the following:
  1. Asphalt-Saturated Organic Felt: ASTM D 226/D 226M, Type I (No. 15 asphalt felt), nonperforated.
  2. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8-inch-thick, in width to suit steel stud size.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.3 PREPARATION

- A. Coordination with Sprayed Fire-Resistive Materials:
  1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
  2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that are required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

#### 3.4 INSTALLATION, GENERAL

- A. Installation Standard: ASTM C 754.
  1. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.
- B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
- C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.

- D. Install bracing at terminations in assemblies.
- E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

### 3.5 INSTALLING FRAMED ASSEMBLIES

- A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
- B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
- C. Install studs so flanges within framing system point in same direction.
- D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
  - 1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
  - 2. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
    - a. Install two studs at each jamb unless otherwise indicated.
    - b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
    - c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
  - 3. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
  - 4. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
    - a. Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
  - 5. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
  - 6. Curved Partitions:
    - a. Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
    - b. Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of no fewer than two studs at ends of arcs, place studs 6 inches o.c.
- E. Direct Furring: Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.

F. Z-Shaped Furring Members:

1. Erect insulation, specified in Section 07 21 00 "Thermal Insulation," vertically and hold in place with Z-shaped furring members spaced 24 inches o.c
2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.
3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches from corner and cut insulation to fit.

G. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch from the plane formed by faces of adjacent framing.

3.6 INSTALLING CEILING SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.

1. Hangers: 48 inches o.c. unless otherwise indicated.
2. Carrying Channels (Main Runners): 48 inches o.c. unless otherwise indicated.
3. Furring Channels (Furring Members): 16 inches o.c. unless otherwise indicated.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
  - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
  - a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Do not attach hangers to steel roof deck.
6. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.

7. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
  8. Do not connect or suspend steel framing from ducts, pipes, or conduit.
- D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
- E. Seismic Bracing: Sway-brace suspension systems with hangers used for support.
- F. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
- G. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

**END OF SECTION 09 22 16**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 09 29 00**

**GYPSUM BOARD**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Interior gypsum board.
  2. Tile backing panels.
  3. Installation accessories.
- B. Related Sections:
1. Section 09 21 16 "Gypsum Board Shaft Wall Assemblies."
  2. Section 09 22 16 "Non- structural Metal Framing."
  3. Section 09 30 13 "Ceramic Tiling."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Gypsum-containing products shall contain "synthetic" gypsum produced with a minimum of 75% post-industrial recycled content, if readily available.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 COORDINATION**

- A. Coordinate installation of gypsum board products and metal framing with security meh products.

1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each texture finish indicated on same backing indicated for Work

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.9 DELIVERY, STORAGE AND HANDLING

- A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.10 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
- B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. Continental Building Products, LLC
  - 2. CertainTeed Corporation.
  - 3. Georgia-Pacific Gypsum LLC.
  - 4. National Gypsum Company
  - 5. USG Corporation.
  - 6. Approved equal.

## 2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.
- B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

## 2.3 GYPSUM BOARD, GENERAL

- A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

## 2.4 INTERIOR GYPSUM BOARD

- A. Gypsum Board, Type X: ASTM C1396/C1396M.
  - 1. Long Edges: Tapered and featured (rounded or beveled) for prefilling.
- B. Gypsum Ceiling Board: ASTM C1396/C1396M.
  - 1. Thickness: 5/ 8 inch.
  - 2. Long Edges: Tapered.
- C. Abuse-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.
  - 1. Core: 5/8-inch, Type X.
  - 2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds Level 2 requirements.
  - 3. Indentation: ASTM C1629/C1629M, meets or exceeds Level 2 requirements.
  - 4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds Level 2 requirements.
  - 5. Long Edges: Tapered.
  - 6. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
- D. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
  - 1. Core: 5/ 8-inch, Type X.
  - 2. Long Edges: Tapered.
  - 3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

## 2.5 TILE BACKING PANELS

- A. Products: Subject to compliance with requirements, provide one of the following:
  - 1. CertainTeed Corporation; FiberCement BackerBoard.
  - 2. Custom Building Products; EasyBoard or Wonderboard.
  - 3. National Gypsum Company; PermaBase BRAND Cement Board.
  - 4. USG Corporation; DUROCK Cement Board or USG Durock Brand Cement Board.
  - 5. Approved equal.

- B. Core: 5/ 8-inch, Type X.
- C. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

## 2.6 TRIM ACCESSORIES

- A. Interior Trim: ASTM C1047.
  - 1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.
  - 2. Shapes, Use the following as indicated and required to suit project application:
    - a. Cornerbead.
    - b. Bullnose bead.
    - c. LC-Bead: J-shaped; exposed long flange receives joint compound.
    - d. L-Bead: L-shaped; exposed long flange receives joint compound.
    - e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
    - f. Expansion (control) joint.
    - g. Curved-Edge Cornerbead: With notched or flexible flanges.

## 2.7 DECORATIVE PROFILE TRIM AND REVEALS

- A. Description: Extruded aluminum profile trim and reveal, in sizes and configurations; "C"-reveal, "F"-reveal, "Z"-reveal, as indicated on drawings.
- B. Finish: Extruded aluminum, clear anodized finish.
- C. Basis-of-Design, Products: Subject to compliance with requirements, provide Fry Reglet, DRM/DRMF series or one of the following as approved by the Commissioner:
  - 1. Gordon, 200/300/400/500 Series Reveals
  - 2. Pittcon Industries, STR/SWR/SWR-U series.
  - 3. Approved equal.

## 2.8 JOINT TREATMENT MATERIALS

- A. General: Comply with ASTM C475/C475M.
- B. Joint Tape:
  - 1. Interior Gypsum Board: Paper.
  - 2. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
  - 3. Tile Backing Panels: As recommended by panel manufacturer.
- C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
  - 1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
  - 2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use drying-type, all-purpose compound.
    - a. Use setting-type compound for installing paper-faced metal trim accessories.
  - 3. Fill Coat: For second coat, use drying-type, all-purpose compound.

4. Finish Coat: For third coat, use drying-type, all-purpose compound.
5. Skim Coat: For final coat of Level 5 finish, use drying-type, all-purpose compound.

D. Joint Compound for Tile Backing Panels:

1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
2. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.9 AUXILIARY MATERIALS

- A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
- B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
- C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
- D. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
  1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
- E. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C834. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E90.

2.10 SECURITY MATERIALS

- A. Maximum Security Mesh: Expanded metal minimum 9 gage flattened, galvanized security mesh conforming to ASTM 1267 Type II (expanded and flattened) with Class 2, hot-dipped galvanized finish.
  1. Minimum weight: 1.40 lbs. per square foot.
  2. Overall Thickness: 0.70 inch.
  3. Open Area: 57 percent.
- B. Basis-of-Design, Products: Subject to compliance with requirements, provide "ASM .50 -13F" as supplied by Amico, A Gibraltar Industries Company or comparable product by one of the following, as approved by the Commissioner:
  1. Alabama Metal Industries Corporation.
  2. ClarkDietrich
  3. Niles Expanded Metals
  4. Approved equal.
- C. Fasteners: Mechanical fasteners and other means of attachment as recommended by the security mesh manufacturer.
- D. General: Provide other security materials for gypsum board work of the grade recommended by the manufacturer of the security materials.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 APPLYING AND FINISHING PANELS**

- A. Comply with ASTM C840.
- B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
- C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.
- D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- E. Form control and expansion joints with space between edges of adjoining gypsum panels.
- F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
  - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
  - 2. Fit gypsum panels around ducts, pipes, and conduits.
  - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.
- G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
- H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

- I. For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- J. Attachment for Decorative Profile Trim and Reveals Screw to gypsum board panels through 7/8 inch grooved mudding ramps at each side.
  - 1. Apply tape and joint compound over mudding ramps flush with adjacent finish.
  - 2. Use projecting or flush trim edges at reveal, as indicated on drawings.
- K. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- L. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.
- M. Prefill open joints, rounded or beveled edges, and damaged surface areas.
- N. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
- O. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:
  - 1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
  - 2. Level 2: Panels that are substrate for tile.
  - 3. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
  - 4. Level 5: Where indicated on Drawings.
- P. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.

### 3.4 PROTECTION

- A. Protect adjacent surfaces from joint compound and promptly remove from floors and other non-drywall surfaces. Restore surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and restore panels that are wet, moisture damaged, and mold damaged.
  - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
- D. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

**END OF SECTION 09 29 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 09 30 13**

### **CERAMIC TILING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section Includes:
1. Glazed wall tile.
  2. Waterproof membrane for thinset applications.
  3. Installation accessories.
- B. Related Sections:
1. Section 09 22 16 "Non- structural Metal Framing."
  2. Section 09 29 00 "Gypsum Board."

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Gypsum-containing products shall contain "synthetic" gypsum produced with a minimum of 75% post-industrial recycled content, if readily available.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples:
  - 1. Each type and composition of tile and for each color and finish required.

#### 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Build mockup of a single 96 inch by 96 inch mockup of patterned tile accent wall composed of four (4) glazed tile colors as indicated on drawings, in a location within one Locker Room as chosen by Commissioner.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

#### 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Store aggregates where grading and other required characteristics can be maintained, and contamination can be avoided.
- D. Store liquid materials in unopened containers and protected from freezing.

#### 1.9 FIELD CONDITIONS

- A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations for Tile: Obtain tile of each type and color or finish from single source or producer.
- B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.

**2.2 PRODUCTS, GENERAL**

- A. ANSI Ceramic Tile Standard: Provide Standard-grade tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
- B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

**2.3 CERAMIC TILE PRODUCTS**

- A. Basis of Design, Product: Subject to compliance with requirements, provide semi- gloss, glazed ceramic tile as supplied by Daltile or comparable product, as approved by the Commissioner from one of the following:
  - 1. American Marazzi Tile, Inc.
  - 2. Crossville, Inc.
  - 3. Lone Star Ceramics; Elgin Butler.
  - 4. Or approved equal.
- B. Tile Shapes:
  - 1. Square Field: 4 1/4 by 4 1/4 inch by 5/16 inch thick.
  - 2. Bullnose: 4 1/4 by 4 1/4 inch by 5/16 inch thick runner tile at exterior corner edges of tiled surfaces.

**2.4 WATERPROOF MEMBRANE**

- A. General: Manufacturer's standard product that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
- B. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
- C. Products: Subject to compliance with requirements, provide one of the following:
  - 1. Custom Building Products; REdGard Waterproofing and Crack Prevention Membrane.
  - 2. LATICRETE SUPERCAP, LLC; Laticrete Hydro Ban.
  - 3. MAPEI Corporation; Mapelastic HPG.
  - 4. Approved equal.

## 2.5 SETTING MATERIALS

- A. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.

## 2.6 GROUT MATERIALS

- A. High-Performance Tile Grout: ANSI A118.7.
- B. Water-Cleanable Epoxy Grout: ANSI A118.3, with a VOC content of 65 g/L or less.

## 2.7 MISCELLANEOUS MATERIALS

- A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- B. Vapor-Retarder Membrane: Polyethylene sheeting, ASTM D 4397, 4.0 mils thick.
- C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

# PART 3 - EXECUTION

## 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

## 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
  - 1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
  - 2. Verify that concrete substrates for tile floors installed with thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
    - a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
    - b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
  - 3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
  - 4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Commissioner.

- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with adhesives or thinset mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot toward drains.
- C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

### 3.4 INSTALLATION

- A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
- B. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

### 3.5 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

- A. Interior Wall Installations, Masonry or Concrete:
  - 1. Ceramic Tile Installation Insert designation: TCNA W222 and ANSI A108.1A; one-coat cement mortar bed (thickset) on metal lath over waterproof membrane.
    - a. Bond Coat for Wet-Set Method: Improved modified dry-set mortar.
    - b. Bond Coat for Cured-Bed Method: Improved modified dry-set mortar.
    - c. Grout: Water-cleanable epoxy grout.
- B. Interior Wall Installations, Metal Studs:
  - 1. Ceramic Tile Installation: TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units or fiber-cement backer board over vapor-retarder membrane.
    - a. Thinset Mortar: Improved modified dry-set mortar.
    - b. Grout: Water-cleanable epoxy grout.

**END OF SECTION 09 30 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 09 51 13****ACOUSTICAL PANEL CEILINGS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Acoustical ceiling panels.
  2. Perforated metal ceiling panels.
  3. Exposed suspension systems for interior ceilings.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Gypsum-containing products shall contain "synthetic" gypsum produced with a minimum of 75% post-industrial recycled content, if readily available.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Samples: For each exposed product and for each color and texture specified.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor and fastener type, from ICC-ES.

**1.8 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For finishes to include in maintenance manuals.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Build mockup of typical ceiling area as shown on Drawings.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

**1.11 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - 1. Flame-Spread Index: Class A according to ASTM E 1264.
  - 2. Smoke-Developed Index: 50 or less.

**2.3 ACOUSTICAL PANELS, GENERAL**

- A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance, unless otherwise indicated.
  - 1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4-inches away from test surface per ASTM E 795.
- B. Ceiling Panel Colors and Patterns: Match appearance characteristics indicated for each product type.
  - 1. Where appearance characteristics of panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by the Commissioner from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.
- C. Coating-Based Antimicrobial Treatment: Provide panels with face and back surfaces coated with antimicrobial treatment consisting of manufacturer's standard formulation with fungicide added to inhibit growth of mold and mildew and showing no mold or mildew growth when tested according to ASTM D 3273.

**2.4 ACOUSTICAL PANELS**

- A. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. USG Interiors Inc.
  - 2. Ecophon CertainTeed, Inc.
  - 3. Hunter Douglas Architectural Products.
  - 4. Armstrong World Industries, Inc.
  - 5. Approved equal.
- B. Refer to Drawing for acoustical panel selections.

**2.5 PERFORATED METAL CEILING PANELS**

- A. Where this designation is indicated on the Drawings, provide specified products complying with the following characteristic:

1. Sheet Metal Characteristics: Form metal panels from sheet metals selected for their surface flatness, smoothness, and freedom from surface blemishes where exposed to view in finished unit. Do not use materials whose exposed surfaces exhibit pitting, seam marks, roller marks, variations in flatness exceeding those permitted by referenced standards for stretcher-leveled metal sheet, stains, discolorations, or other imperfections.
  2. Perforations: .060-inch diameter, open area 23 percent.
- B. Basis-of-Design, Product: Subject to compliance with requirements, provide :Luxalon Model #160 as supplied by Hunter Douglas Architectural Products or an equivalent product from one of the following:
1. Armstrong World Industries, Inc.
  2. Gordon, Inc.
  3. Approved equal.

## 2.6 METAL SUSPENSION SYSTEMS

- A. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.
- B. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.
1. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.
- C. Exposed Steel Suspension System: Main and cross-runners, roll formed from or electrolytic zinc-coated cold rolled steel sheet, with 1-1/2" high by 15/16" wide exposed faces, and slotted reveal where indicated, metal flanges; other characteristics as follows:
1. Structural Classification: Intermediate-Duty System.
  2. Cap Material and Finish: Steel sheet painted to match color indicated by reference to manufacturer's standard color designations.

## 2.7 METAL EDGE MOLDINGS AND TRIM

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
1. Armstrong World Industries, Inc.
  2. Fry Reglet Corporation.
  3. Gordon, Inc.
  4. MM Systems, Inc.
  5. USG Interiors, Inc.
  6. Approved equal.
- B. Roll-Formed Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that fit acoustical panel edge details and suspension systems indicated; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.

## 2.8 ACCESSORIES

- A. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "In-Direct Hung," unless otherwise indicated.
- B. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- C. Angle Hangers: Angles with legs not less than 7/8-inch-wide; formed with 0.04-inch- thick, galvanized steel sheet complying with ASTM A 653/A 653M, G90 coating designation; with bolted connections and 5/16-inch- diameter bolts.
- D. Hold-Down Clips: Where indicated, provide manufacturer's standard hold- down clips spaced 24 inches o.c. on all cross tees.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

- A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated and comply with layout shown on reflected ceiling plans.
- B. Layout openings for penetrations centered on the penetrating items.

### 3.4 INSTALLATION

- A. General: Install acoustical panel ceilings to comply with ASTM C 636, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
- B. Suspend ceiling hangers from building's structural members and as follows:
  - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
  3. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
  4. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to postinstalled mechanical or adhesive anchors that extend into concrete.
  5. Do not attach hangers to steel deck tabs.
  6. Do not attach hangers to steel roof deck. Attach hangers to structural members.
  7. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
  8. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
- C. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed o.c. and not more than 3 inches from ends. Miter corners accurately and connect securely.
  2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
- D. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
- E. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
1. Arrange directionally patterned acoustical panels as follows:
    - a. Install all ceiling systems in accordance with reflected ceiling plan.
    - b. Ceiling systems shall align with the segment of the curve they exist within, cut on angles as required to comply with building geometry.
  2. Install hold-down clips in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.
    - a. Hold-Down Clips: Space 24 inches o.c. on all cross runners unless otherwise indicated.

### 3.5 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

- B. Remove and replace ceiling components that cannot be successfully cleaned and restored to permanently eliminate evidence of damage.

**END OF SECTION 09 51 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 09 65 00**

**RESILIENT FLOORING AND BASE**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Recycled rubber flooring for Stress Reduction Room.
  - 2. Thermoset- rubber base.
  - 3. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each exposed product and for each color and texture specified.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Coordinate mockups for each type of flooring and base, with mockups specified in other Sections.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storing.
- B. Store materials to prevent deterioration and in accordance with material manufacturers requirements.
  - 1. Store tiles on flat surfaces.
  - 2. Store rolls upright.

1.9 FIELD CONDITIONS

- A. Adhesively Applied Products:
  - 1. Maintain temperatures during installation within range recommended in writing by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive flooring 48 hours before installation, during installation, and 48 hours after installation unless longer period is recommended in writing by manufacturer.
  - 2. After post installation period, maintain temperatures within range recommended in writing by manufacturer, but not less than 55 deg F or more than 95 deg F.
  - 3. Close spaces to traffic during flooring installation.
  - 4. Close spaces to traffic for 48 hours after flooring installation unless manufacturer recommends longer period in writing.
- B. Install flooring after other finishing operations, including painting, have been completed.

## PART 2 - PRODUCTS

### 2.1 RUBBER SPORTS FLOORING

- A. Description: Rubber athletic flooring provided as rolled goods for adhered installation.
- B. Products: Subject to compliance with requirements, provide 'Sport-Fleck' as supplied by Amarco Products or one of the following, as approved by the Commissioner:
  - 1. Premier; TUFF Rolled Rubber.
  - 2. Roppe; Recoil Fitness Flooring.
  - 3. Or approved equal.
- C. Materials: Recycled rubber flooring flecked colored granules consisting of 0 to 90 percent EPDM virgin rubber.
- D. Sheet Size: 44 inch wide rolls by manufacturers standard length.
- E. Edges: Square.
- F. Thickness: 3/8 inch.
- G. Selected Product Physical Characteristics:
  - 1. Durometer, Shore A, per ASTM D2240: 60.
  - 2. Density, per ASTM D297: 64 lbs. per cu. ft.
  - 3. Compressibility at 100, psi ASTM F36: 12 percent.
  - 4. Flammability and Flame Spread: per DOC FFI- 70 CSPC: Pass.
  - 5. Indoor Abrasion, per ASTM C501: 0.24 percent material loss
- H. Color: Blue fleck over black background, as indicated on drawings.

### 2.2 THERMOSET-RUBBER BASE

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  - 1. Burke Mercer Flooring Products; a division of Burke Industries Inc.
  - 2. Johnsonite; a Tarkett company.
  - 3. Roppe Corporation, USA.
  - 4. Approved equal.
- B. Product Standard: ASTM F1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).
  - 1. Style B.
- C. Thickness: 0.125 inch.
- D. Height: 4 inches unless otherwise indicated.
- E. Lengths: Coils in manufacturer's standard length.
- F. Outside Corners: Preformed.

- G. Inside Corners: Job formed.
- H. Colors: As selected by the Commissioner from the manufacturer's full color line.

## 2.3 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.
- B. Adhesives: Type as recommended by product manufacturer for substrate conditions indicated.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
  - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
  - 1. Installation of resilient products indicates acceptance of surfaces and conditions.

### 3.3 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- C. Do not install resilient products until materials are the same temperature as space where they are to be installed.

### 3.4 RUBBER SPORTS FLOORING INSTALLATION

- A. Comply with manufacturer's installation instructions and recommendations.
- B. Glue-down Installation: Apply adhesive at a spreading in accordance with manufacturers requirements.

### 3.5 RESILIENT BASE INSTALLATION

- A. Comply with manufacturer's written instructions for installing resilient base.
- B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
- D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- E. Do not stretch resilient base during installation.
- F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- G. Preformed Corners: Install preformed corners before installing straight pieces.
- H. Job-Formed Corners:
  - 1. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches in length.
  - 2. Miter or cope corners to minimize open joints.

### 3.6 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting products.
- B. Protect rubber flooring until time of Substantial Completion.

**END OF SECTION 09 65 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 09 66 21**

**RESINOUS MATRIX TERRAZZO**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:

1. Thin-set, epoxy-resin terrazzo flooring.
2. Precast, epoxy-resin terrazzo units, including base and stair treads.
3. Installation accessories.

- B. Related Sections:

1. Section 03 30 00 "Cast-in-Place Concrete."
2. Section 05 51 13 "Metal Pan Stairs for installation of precast stair treads."
3. Section 06 40 23 "Interior Architectural Woodwork for installation of precast panels at main desk."
4. Section 07 92 00 "Joint Sealants for sealants installed with terrazzo."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review methods and procedures related to terrazzo including, but not limited to, the following:
    - a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
    - b. Review and finalize construction schedule and verify availability of materials, equipment, and facilities needed to make progress and avoid delays.
    - c. Review terrazzo designs and patterns.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work.
- C. Samples: For each exposed product and for each color and texture specified.
- D. Maintenance data.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Material Certificates: For each type of terrazzo material or product.
- C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.
- D. Preinstallation moisture-testing reports.

**1.9 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For terrazzo to include in maintenance manuals.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. **Manufacturer’s Qualifications:** Manufacturer providing the material for this section shall, for the past five (5) years, have been regularly engaged in the manufacture of material similar in type to that required for this Project. Such similar material provided by the manufacturer shall have been in satisfactory service for not less than five (5) years.
- C. **Installer’s Qualifications:** Installer performing the work of this section shall, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- D. **Mockups:** Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Build mockups for terrazzo including accessories.
    - a. Size: Minimum 100 sq. ft. of typical poured-in-place flooring and base condition for each color and pattern in locations directed by Commissioner.
    - b. Include base and first three stair treads.
    - c. Include precast panels as part of main desk mockup.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.

**1.11 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.
- B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

**1.12 FIELD CONDITIONS**

- A. **Environmental Limitations:** Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
- B. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
- C. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
- D. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and restoration materials of type and from source recommended by manufacturer of primary materials.
- B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

**2.2 PERFORMANCE REQUIREMENTS**

- A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.
- B. Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing.

**2.3 EPOXY-RESIN TERRAZZO**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Key Resin Company.
  - 2. Master Terrazzo Technologies LLC.
  - 3. Sherwin-Williams Company, General Polymers.
  - 4. Terrazzo & Marble Supply Companies.
  - 5. Approved equal.
- B. Mix Color and Pattern: 50 percent Raven black #2 and 50 percent Raven black #0- 1 matrix with 40/ 200 filler; 200 grit diamond finish and 2 coats 804 sealer.
- C. Materials:
  - 1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 3 lbs. of water/1000 sq. ft. in 24 hours.
  - 2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.
    - a. Reinforcement: Fiberglass scrim.
  - 3. Primer: Manufacturer's product recommended for substrate and use indicated.
  - 4. Epoxy-Resin Matrix: As required for use indicated and in color required for mix indicated.
  - 5. Finishing Grout: Resin based.

## 2.4 PRECAST EPOXY-RESIN TERRAZZO

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Precast Terrazzo Enterprises, Inc.
  - 2. Romoco Precast Terrazzo Products; a subsidiary of Roman Mosaic & Tile Company.
  - 3. Wausau Tile Inc.
  - 4. Approved equal.
- B. Precast Terrazzo Base: Minimum 3/8-inch- thick, epoxy terrazzo units cast in maximum lengths possible, but not less than 36 inches. Comply with manufacturer's written instructions for fabricating precast terrazzo base units in sizes and profiles indicated.
- C. Precast Terrazzo Units: Minimum 3/4-inch thick, epoxy terrazzo units. Comply with manufacturer's written instructions for fabricating precast units in sizes and profiles indicated.
  - 1. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer.
  - 2. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to 1/8-inch radius, unless otherwise indicated.
- D. Color, Pattern, and Finish: Match poured-in-place terrazzo flooring, unless otherwise indicated.

## 2.5 STRIP MATERIALS

- A. Thin-Set Divider Strips: L-type angle in depth required for topping thickness indicated.
  - 1. Material: White-zinc alloy.
  - 2. Top Width: As indicated.
- B. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

## 2.6 MISCELLANEOUS ACCESSORIES

- A. Anchoring Devices: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
- B. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- C. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- D. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.
- E. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer.
  - 1. Surface Friction: Not less than 0.6 according to ASTM D2047.
  - 2. Acid-Base Properties: With pH factor between 7 and 10.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

**3.3 PREPARATION**

- A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
- B. Concrete Slabs:
  - 1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
    - a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
    - b. Restore damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
    - c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.
- C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.
- D. Preinstallation Moisture Testing:
  - 1. Testing Agency: Engage a qualified testing agency to perform tests.
  - 2. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
    - a. Moisture-Vapor-Emission Test: Maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours when tested according to ASTM F1869 using anhydrous calcium chloride.
    - b. Relative Humidity Test: Maximum 75 percent relative humidity measurement when tested according to ASTM F2170 using in-situ probes.
  - 3. Proceed with terrazzo installation only after concrete substrates pass moisture testing or after installation of moisture-vapor-emission-control membrane on substrate areas that fail testing.

- E. Moisture-Vapor-Emission-Control Membrane: Install according to manufacturer's written instructions.
  - 1. Install on concrete substrates that incorporate lightweight aggregates.
  - 2. Install concrete substrates that fail preinstallation moisture testing.
- F. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.
  - 1. Prepare and prefill substrate cracks with membrane material.
  - 2. Install membrane to produce full substrate coverage in areas to receive terrazzo.
  - 3. Reinforce membrane with fiberglass scrim.
- G. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
  - 1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

### 3.4 EPOXY-RESIN TERRAZZO INSTALLATION

- A. Comply with NTMA's written recommendations for terrazzo and accessory installation.
- B. Strip Materials:
  - 1. Divider and Control-Joint Strips:
    - a. Locate divider strips in locations indicated.
    - b. Install control-joint strips back to back and directly above concrete-slab control joints with elastomeric joint filler between L- angles.
    - c. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
- C. Apply primer to terrazzo substrates according to manufacturer's written instructions.
- D. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.
  - 1. Installed Thickness: 3/8 inch nominal.
  - 2. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
    - a. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
    - b. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.
    - c. Fine Grinding/Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with 120-grit stones or with comparable diamond abrasives until grout is removed from surface.

3. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet; noncumulative.

- E. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.
- F. Install and finish poured-in-place terrazzo base at the same time the adjacent terrazzo flooring is installed.

### 3.5 PRECAST TERRAZZO INSTALLATION

- A. Install precast terrazzo units using method recommended in writing by NTMA and manufacturer unless otherwise indicated.
- B. Do not install units that are chipped, cracked, discolored, or improperly finished.
- C. Seal joints between units with joint sealant unless otherwise indicated.

### 3.6 RESTORATION

- A. Cut out and replace terrazzo areas that lack bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or restore panels according to NTMA's written recommendations, as approved by Commissioner.

### 3.7 CLEANING AND PROTECTION

- A. Cleaning:
  1. Remove grinding dust from installation and adjacent areas.
  2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.
- B. Sealing:
  1. Seal surfaces according to NTMA's written recommendations.
  2. Apply sealer according to sealer manufacturer's written instructions.
- C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Commissioner, that ensures that terrazzo is without damage or deterioration at time of Substantial Completion.

**END OF SECTION 09 66 21**

**SECTION 09 67 23****RESINOUS FLOORING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Resinous flooring systems.
  2. Waterproofing membrane, cold- applied self-curing liquid rubber polymer, installed in conjunction with broadcast epoxy installation at toilet floors and rooms with shower.
  3. Installation accessories.
- B. Related Sections:
1. Section 03 30 00 "Cast-in-Place Concrete."

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 COORDINATION

- A. Coordinate application of components to provide optimum adhesion of resinous flooring system to substrate, and optimum intercoat adhesion.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: For each type of exposed finish required.

1.8 INFORMATIONAL SUBMITTALS

- A. Material Certificates: For each resinous flooring component, from manufacturer.
- B. Material Test Reports: For each resinous flooring system, by a qualified testing agency.

1.9 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For resinous flooring to include in maintenance manuals.

1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  - 1. Apply full-thickness mockups on 96-inch- square floor area selected by Commissioner.
    - a. Include 96-inch length of integral cove base with inside and outside corner.
  - 2. Simulate finished lighting conditions for Commissioner's review of mockups.
  - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.11 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in original packages and containers, with seals unbroken, bearing manufacturer's labels indicating brand name and directions for storage and mixing with other components.

## 1.12 FIELD CONDITIONS

- A. Environmental Limitations: Comply with resinous flooring manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting resinous flooring application.
- B. Lighting: Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during resinous flooring application.
- C. Close spaces to traffic during resinous flooring application and for 24 hours after application unless manufacturer recommends a longer period.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Flammability: Self-extinguishing according to ASTM D 635.

### 2.2 EPOXY FLOORING

- A. Basis of Design, Products: Subject to compliance with requirements, provide the following or equal as approved by the Commissioner:
  - 1. Mechanical Equipment Rooms (EB-2): EPO-FLEX MER II" as manufactured by General Polymers.
  - 2. Broadcast Epoxy Resinous Flooring, Other Spaces (EB-1): Ceramic Carpet No. 400 as manufactured by General Polymers.
- B. Other Manufacturers:
  - 1. Stonhard, Inc.
  - 2. Dur-A-Flex, Inc.
  - 3. Approved equal.
- C. General: Resinous flooring shall be comprised of a penetrating two-component epoxy primer, a free flowing two-component, epoxy finish coating with manufacturer's well graded proprietary aggregate.
  - 1. Seamless Flooring System: Provide seamless flooring system comprised of the following components:
    - a. Primer: Universal penetrating primer, No. 3579, by "EPO-FLEX".
    - b. Monolithic Waterproofing Membrane: One coat of 3555 EPO-FLEX HD Epoxy Coating.
    - c. Top Coat: Wear course with 5310-8 Dry Silica (30 mesh) or other Hard Aggregate.
    - d. Seal Coat: 3744P High Performance CR Epoxy as the seal coat.
  - 2. Color: As selected by the Commissioner.
- D. Products other than those specified, may be incorporated in the work, provided they meet or exceed the requirements specified herein.

## 2.3 FLOORING AND BASE PHYSICAL CHARACTERISTICS

- A. Seamless flooring systems shall comply with the following physical properties, unless otherwise indicated by selected products. Flooring system in which physical properties of finish coating including aggregate, when tested in accordance with standards or procedures referenced below, are as follows:

- |                                   |                                     |
|-----------------------------------|-------------------------------------|
| 1. Solids by volume:              | 100 percent                         |
| 2. VOC (Volatile Organic Content) | -0-                                 |
| 3. Hardness (ASTM D2240/Shore D)  | 50/ 40.                             |
| 4. Tensile Strength (ASTM D412)   | 1,700 psi.                          |
| 5. Elongation (ASTMD 412)         | 80 percent.                         |
| 6. Adhesion (ACI 503R)            | 350 psi over concrete.              |
| 7. Flammability (ASTM D635)       | Self Extinguishing over concrete.   |
| 8. Thermal Cycling (ASTM C 884)   | 24 Hours, -21C to 25C. No cracking. |

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Prepare and clean substrates according to resinous flooring manufacturer's written instructions for substrate indicated. Provide clean, dry substrate for resinous flooring application.
- B. Concrete Substrates: Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with resinous flooring.
1. Remove oils, grease, wax and other hydrocarbon-based materials Any material which cannot be chemically removed, must be removed mechanically.
  2. Roughen concrete substrates as follows:
    - a. Creation of surface profile: Surface profile of horizontal concrete subjected to traffic shall be not less than 5 mils.
    - b. Restore of surface irregularities: Including spalls, cracks, deteriorated joints, slopes, areas near transition zones, such as around drains and doorways, etc. shall be restored prior to the placement of the polymer system and/or the system shall be designed to off-set the thickness irregularities.
    - c. Preferred method of preparation of concrete slabs, including the removal of dirt, dust, laitance and curing compounds is vacuum-grit blasting, sand or grit blasting or mechanical scarification.
  3. Surfaces to receive the flooring system shall be inspected after the surface is prepared to ensure that the substrate is sound and structurally durable. Areas found to be unsound or non-durable must be replaced. Dust or other detritus, not removed after the initial surface preparation, must be vacuumed or "tack wiped", leaving the surface dust free and clean.
  4. Comply with ASTM C 811, unless otherwise required by manufacturer's instructions. Surface preparation shall include vacuum-grit blasting, sand or grit blasting or mechanical scarification process as recommended by the flooring system manufacturer.

- C. Resinous Materials: Mix components and prepare materials according to resinous flooring manufacturer's written instructions.
- D. Patch and restore substrate as required to prevent telegraphy of surface irregularities through the finished coating system. Comply with the recommendations of the manufacturer. Remove any surface material that will interfere with the bond of the seamless primer. All depressions and cracks in substrates shall be filled as recommended by the flooring manufacturer. Drains and other slab fixtures shall have been properly secured in position before flooring operations begin. Maintain areas to receive flooring at temperatures recommended by the materials manufacturer.

### 3.3 APPLICATION

- A. Apply components of resinous flooring system according to manufacturer's written instructions to produce a uniform, monolithic wearing surface of thickness indicated.
  - 1. Cure resinous flooring components according to manufacturer's written instructions. Prevent contamination during application and curing processes.
  - 2. Expansion and Isolation Joint Treatment: At substrate expansion and isolation joints, comply with resinous flooring manufacturer's written instructions.
- B. Primer: Apply primer over prepared substrate at manufacturer's recommended spreading rate.
- C. Waterproofing Membrane: Apply waterproofing membrane over entire substrate surface, in manufacturer's recommended thickness.
  - 1. Apply waterproofing membrane to integral cove base substrates.
- D. Cracks: Treat cracks in concrete substrates, in accordance with manufacturer instructions.
- E. Integral Cove Base: Apply cove base mix to wall surfaces before applying flooring. Apply according to manufacturer's written instructions and details, including those for taping, mixing, priming, troweling, sanding, and topcoating of cove base. Round internal and external corners.
  - 1. Integral Cove Base: 4 inches high unless otherwise indicated.

### 3.4 CURING, CLEANING AND PROTECTION

- A. Cure flooring system materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of the installation and prior to completion of the curing process.
- B. Protect the flooring system from damage and wear during other phases of the construction operation, using temporary coverings as recommended by the manufacturer, if required. Remove temporary covering just prior to final inspection.
- C. Clean the flooring system just prior to final inspection, using materials and procedures suitable to the system manufacturer.
- D. Test each cleaner, in a small area, utilizing proposed technique, with cleaner compatible with floor system. If no deleterious effects are observed, continue with the procedure. If deleterious effects do occur, modify the cleaning material and/or procedure.

### 3.5 ACCESSORY INSTALLATION

- A. Joints: Where substrate is interrupted by expansion or control joints, provide joint in seamless flooring to comply with details indicated, or, if not otherwise indicated, as recommended by resinous flooring manufacturer.
  - 1. Apply joint sealant materials to comply with resinous flooring manufacturer's recommendations.
  - 2. Joint sealant materials and installation are specified in a Section 07 90 00 - Joint Sealants.

### 3.6 FIELD QUALITY CONTROL

- A. General: The right is reserved to invoke following material testing procedure at any time, and any number of times during period of flooring application.
- B. The City of New York will engage service of independent testing laboratory to sample materials testing used. Samples of material will be taken, identified and sealed in presence of Contractor.
- C. Testing laboratory will perform tests for any of characteristics specified, using applicable testing procedures referenced herein, or if not referenced, in manufacturer's product data.
- D. If test results show materials being used do not comply with specified requirements, Contractor may be directed by City to stop work, and remove non-complying materials; pay for testing; and reapply flooring materials to surfaces coated with rejected materials.

**END OF SECTION 09 67 23**

**SECTION 09 69 00**

**ACCESS FLOORING**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Cementitious- core steel panel access flooring.
  2. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate location of mechanical and electrical work in underfloor cavity to prevent interference with access flooring.
- B. Mark pedestal locations on subfloor to enable mechanical and electrical work to proceed without interfering with access-flooring pedestals installed after mechanical and electrical work.

**1.6 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.
  - 1. Review connections between access flooring and mechanical and electrical systems.
  - 2. Review requirements related to sealing the plenum.
  - 3. Review procedures for keeping underfloor space clean.

**1.7 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.8 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for access flooring.
  - 2. Include loading capacities.
- B. Shop Drawings: For access flooring:
  - 1. Include layout of access flooring and relationship to adjoining Work based on field-verified dimensions.
  - 2. Details and sections with descriptive notes indicating materials, finishes, fasteners, typical and special edge conditions, accessories, and understructures.
- C. Samples: For the following products:
  - 1. Floor Coverings: Full-size units for each color and texture specified.
  - 2. Exposed Metal Accessories: Approximately 10 inches in length.
  - 3. One full-size floor panel, pedestal, and understructure unit for each type of access flooring required.
- D. Engineering Services Submittal: For seismic design of access flooring, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York, responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

**1.9 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer and testing agency.
- B. Product Certificates: For each type of access flooring.
- C. Product Test Reports: For each type of access-flooring material and floor covering, performed by a qualified testing agency.
- D. Seismic Design Calculations: For seismic design of access flooring, including analysis data signed and sealed by the qualified Professional Engineer licensed in the State of New York, responsible for their preparation.
- E. Preconstruction Test Reports: For preconstruction adhesive field test.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
  - 1. Build mockup of typical access flooring, as shown on Drawings. Size to be an area no fewer than five floor panels in length by five floor panels in width.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.11 PRECONSTRUCTION TESTING**

- A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on field mockups.
  - 1. Use materials and methods of construction that will be used at Project site.
  - 2. Notify Commissioner seven days in advance of the dates and times when laboratory mockups will be tested.
- B. Preconstruction Adhesive Field Test: Before installing pedestals, field test their adhesion to subfloor surfaces by doing the following:
  - 1. In areas representative of each subfloor surface, set typical pedestal assemblies in same adhesive, and use methods required for the completed Work.
  - 2. Allow test installation to cure for manufacturer's recommended cure time, with a pressure of 25 lbf applied vertically to pedestals during this period.
  - 3. After curing, apply lateral load against a straight steel bar inserted 2 inches into pedestal stems. Measure the force needed to cause adhesive failure of pedestal base.
  - 4. Remove and discard failed pedestals and clean pedestals of adhered residue.

5. Proceed with installation only after tests show compliance with performance requirement for pedestals' capability to resist overturning moment.

## 1.12 FIELD CONDITIONS

- A. Environmental Limitations: Do not install access flooring until spaces are enclosed, subfloor has been sealed, ambient temperature is between 50 and 90 deg F, and relative humidity is not less than 20 and not more than 70 percent.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design access flooring.
  1. Engineering Services shall include complete design calculations for access flooring for seismic performance, including loads imposed on the access flooring by items and equipment installed on the access flooring required for this project.
    - a. Indicate required design loads, including live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated.
- B. Seismic Performance: Access flooring shall withstand the effects of earthquake motions determined according to ASCE/SEI 7, including loads imposed on the access flooring by items and equipment installed on the access flooring.
- C. Structural Performance, as required by project application unless otherwise indicated: Provide access flooring capable of complying with the following performance requirements according to testing procedures in CISC's "Recommended Test Procedures for Access Floors":
  1. Concentrated Loads: 900 lbf with the following deflection and permanent set:
    - a. Top-Surface Deflection: 0.10 inch.
    - b. Permanent Set: 0.010 inch.
  2. Ultimate Loads: 1800 lbf.
  3. Rolling Loads: With local or overall deformation not to exceed 0.040 inch.
    - a. CISC Wheel 1: 10 passes at 400 lbf.
  4. Stringer Load Test: 75 lbf at center of span with a permanent set not to exceed 0.010 inch.
  5. Pedestal Axial Load Test: 5000 lbf.
  6. Pedestal-Overturning-Moment Test: 1000 lbf x inches.
  7. Uniform Load Test: 200 lbf/sq. ft. with a maximum top-surface deflection not to exceed 0.040 inch and a permanent set not to exceed 0.010 inch.
  8. Drop Impact Load Test: 75 lb.

D. Fire Performance:

1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
  - a. Flame-Spread Index: 25 or less.
  - b. Smoke-Developed Index: 50 or less.

2.2 CEMENTITIOUS-CORE STEEL PANEL ACCESS FLOORING

- A. Fabricate panels from cold-rolled steel sheet, with die-cut flat top sheet and die-formed and stiffened bottom pan welded together. Protect metal surfaces against corrosion using manufacturer's standard factory-applied finish. Fully grout internal spaces of completed units with manufacturer's standard cementitious fill.
- B. Basis-of-Design, Product: Subject to compliance with requirements, provide the following or equivalent acceptable to the Commissioner:
  1. Tec-Crete 1250 as supplied by Haworth, Inc.
- C. Other Manufacturers:
  1. ASM Modular Systems, Inc.
  2. Bergvik North America, Inc.
  3. Tate Access Floors, Inc.
  4. Or approved equal.
- D. Configuration: Provide modular panels with nominal size of 24 by 24 inches, interchangeable with other field panels without disturbing adjacent panels or understructure.
- E. Attachment to Understructure: Bolted.
- F. Pedestal System Understructure: System consisting of base, column with provisions for height adjustment, and head (cap); made of steel.
  1. Base: Square or circular base with not less than 16 sq. in. of bearing area, unless otherwise required by structural performance requirements.
  2. Column: Of height required to bring finished floor to elevations indicated. Weld column to base plate.
  3. Provide vibration-proof leveling mechanism for making and holding fine adjustments in height over a range of not less than 2 inches and for locking at a selected height, so deliberate action is required to change height setting and prevent vibratory displacement.
  4. Head: Designed to support the floor panel indicated.
    - a. Provide sound-deadening pads or gaskets at contact points between heads and panels.
    - b. Bolted Assemblies: Provide head with four holes aligned with holes in floor panels for bolting of panels to pedestals.
- G. Stringer System Understructure: Modular steel stringer systems designed to bolt to pedestal heads and form a grid pattern. Protect steel components with manufacturer's standard galvanized or corrosion-resistant paint finish.

1. Continuous Gaskets: At contact surfaces between panel and stringers to deaden sound, seal off the underfloor cavity from above, and maintain panel alignment and position.
- H. Finish: Factory-applied to cover entire panel face.
  1. Selected manufacturers standard polyurethane sealer.

## 2.3 FABRICATION

- A. Fabrication Tolerances:
  1. Size: Plus or minus 0.020 inch of required size.
  2. Squareness: Plus or minus 0.015 inch between diagonal measurements across top of panel.
  3. Flatness: Plus or minus 0.035 inch, measured on a diagonal on top of panel.
- B. Panel Markings: Clearly and permanently mark floor panels on their underside with panel type and concentrated-load rating.
- C. Bolted Panels: Provide panels with holes drilled in corners to align precisely with threaded holes in pedestal heads and to accept countersunk screws with heads flush with top of panel.
  1. Captive Fasteners: Provide fasteners held captive to panels.
- D. Cutouts: Fabricate cutouts in floor panels for cable penetrations and service outlets. Provide reinforcement or additional support, if needed, to make panels with cutouts comply with structural performance requirements.
  1. Number, Size, Shape, and Location: As indicated.
  2. Grommets: Where indicated, fit cutouts with manufacturer's standard grommets; or, if size of cutouts exceeds maximum grommet size available, trim edge of cutouts with manufacturer's standard plastic molding with tapered top flange. Furnish removable covers for grommets.
  3. Provide foam-rubber pads for sealing annular space formed in cutouts by cables.

## 2.4 ACCESSORIES

- A. Post-Installed Anchors: For anchoring pedestal bases to subfloor, provide post-installed expansion anchors or threaded concrete screws, as required by project structural requirements, made from carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (5 microns) for Class SC 1 (Mild), with the capability to sustain, without failure, a load equal to 1.5 times the loads imposed by pedestal-overturning moment on fasteners, as determined by testing according to ASTM E 488/E 488, conducted by a qualified independent testing agency.
- B. Service Outlets: UL-listed and -labeled assemblies, for recessed mounting flush with top of floor panels; for power, communication, and signal services; and complying with the following requirements:
  1. Refer to Division 26 Electrical for requirements.
- C. Occupant Adjustable Diffusers: Refer to Division 23 - Heating, Ventilating, and Air Conditioning (HVAC) for requirements.

- D. Floor Grilles: Standard load-bearing grilles formed from aluminum to produce removable one-piece unit precisely fitted in factory-prepared openings of standard field panels, with adjustable/removable or without dampers as indicated and complying with the following requirements:
- E. Plenum-Wall Brush Grommets, where indicated and required by project application: Self-sealing cable brush grommet with usable area for passage of power and signal cables through plenum walls. Provide Aluminum frame with passageway of interwoven nylon filaments and intermediate layer of EPDM.
- F. Cavity Dividers, where indicated and required by project application: Provide manufacturer's standard metal dividers located where indicated to divide underfloor cavities.
- G. Fascia Closures: Where underfloor cavity is not enclosed by abutting walls or other construction, provide metal closure plates with manufacturer's standard finish.
- H. Ramps: Manufacturer's standard ramp construction of width and slope indicated, but not steeper than 1:12, with raised-disc or textured rubber or vinyl-tile floor coverings, and of same materials, performance, and construction requirements as access flooring.
- I. Steps, where indicated and required by project application: Provide steps of size and arrangement indicated with floor coverings to match access flooring. Apply nonslip aluminum nosings to treads unless otherwise indicated.
- J. Railings, where indicated and required by project application: Standard extruded-aluminum railings at ramps and open-sided perimeter of access flooring where indicated. Include handrail, intermediate rails, posts, brackets, end caps, wall returns, wall and floor flanges, plates, and anchorages where required.
- K. Panel Lifting Device: Panel manufacturer's standard portable lifting device for each type of panel required. Comply with NFPA 75 for computer rooms.
- L. Perimeter Support: Where indicated, provide manufacturer's standard method for supporting panel edge and forming transition between access flooring and adjoining floor coverings at same level as access flooring.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, with Installer and manufacturer's authorized representative present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
  - 1. Verify that substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of conditions and deleterious substances that might interfere with attachment of pedestals.

2. Verify that concrete floor sealer and finish have been applied and cured.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 PREPARATION

A. Lay out floor panel installation to keep the number of cut panels at floor perimeter to a minimum. Avoid using panels cut to less than 6 inches.

B. Locate each pedestal, complete any necessary subfloor preparation, and vacuum subfloor to remove dust, dirt, and construction debris before beginning installation.

### 3.4 INSTALLATION

A. Install access flooring and accessories under supervision of access-flooring manufacturer's authorized representative to produce a rigid, firm installation that complies with performance requirements and is free of instability, rocking, rattles, and squeaks.

B. Mechanical Attachment of Pedestals: Attach pedestals to subfloor with post-installed mechanical anchors as required to meet seismic design requirements.

C. Adjust pedestals so installed panels are flat, level, and at the proper height.

D. Stringer Systems: Secure stringers to pedestal heads according to access-flooring manufacturer's written instructions.

E. Install flooring panels securely in place, leaving them properly seated with panel edges flush. Do not force panels into place.

F. Scribe perimeter panels to provide a close fit, with adjoining construction having no voids greater than 1/8 inch where panels abut vertical surfaces.

1. To prevent dusting, seal cut edges of steel-encapsulated, wood-core panels with sealer recommended in writing by panel manufacturer.

G. Cut and trim access flooring and perform other dirt-or-debris-producing activities at a remote location or as required to prevent contamination of subfloor under installed access flooring.

H. Grounded Access Flooring: Ground access flooring as recommended by manufacturer and as needed to comply with performance requirements for electrical resistance of floor coverings.

1. Panel-to-Understructure Resistance: Unless otherwise indicated, not more than 10 ohms as measured without floor coverings.

I. Underfloor Dividers: Scribe and install underfloor-cavity dividers to closely fit against subfloor surfaces, and seal with mastic.

J. Closures: Scribe closures to closely fit against subfloor and adjacent finished-floor surfaces. Set in mastic and seal to maintain plenum effect within underfloor cavity.

K. Clean dust, dirt, and construction debris caused by floor installation, and vacuum subfloor area as installation of floor panels proceeds.

- L. Seal underfloor air cavities at construction seams, penetrations, and perimeter to control air leakage, according to manufacturer's written instructions.
- M. Install access flooring without change in elevation between adjacent panels and within the following tolerances:
  - 1. Plus or minus 1/16 inch in any 10-foot distance.
  - 2. Plus or minus 1/8 inch from a level plane over entire access flooring area.

### 3.5 PROTECTION

- A. Replace access-flooring panels that are stained, scratched, or otherwise damaged or that do not comply with specified requirements.

**END OF SECTION 09 69 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 09 77 23****FABRIC-WRAPPED PANELS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Shop- fabricated, fabric-wrapped wall panels.
  - 2. Installation accessories.

**1.3 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.5 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of fabric facing, panel edge, core material, and mounting indicated.
- B. Shop Drawings: For fabric-wrapped wall panels. Include mounting devices and details; details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge and core materials.
  - 1. Include elevations showing panel sizes and direction of fabric weave and pattern matching.
- C. Samples: For each type of fabric facing from fabric-wrapped, wall panel manufacturer's full range.
  - 1. Fabric: Full-width by approximately 36-inch- long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
  - 2. Panel Edge: 12-inch-long Sample(s) showing each edge profile, corner, and finish.
  - 3. Core Material: 12-inch-square Sample at corner.
  - 4. Mounting Devices: Full-size Samples.
  - 5. Assembled Panels: Approximately 36 by 36 inches, including joints and mounting methods.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Electrical outlets, switches, and thermostats.
  - 2. Items penetrating or covered by fabric-wrapped wall panels
  - 3. Show operation of hinged and sliding components covered by or adjacent to fabric-wrapped wall panels.
- B. Product Certificates: For each type of fabric-wrapped wall panel, from manufacturer.
- C. Warranty: Sample of special warranty.

**1.9 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For fabric-wrapped wall panels to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal recommendations.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials, fabrication, and installation.
  - 1. Build mockup of typical wall area as directed by Commissioner. Include intersection of wall and ceiling, corners, and perimeters.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.

**1.11 DELIVERY, STORAGE, AND HANDLING**

- A. Comply with fabric and fabric-wrapped, wall panel manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.
- B. Deliver materials and panels in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

**1.12 FIELD CONDITIONS**

- A. Environmental Limitations: Do not install fabric-wrapped wall panels until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
- B. Air-Quality Limitations: Protect fabric-wrapped wall panels from exposure to airborne odors such as tobacco smoke and install panels under conditions free from odor contamination of ambient air.
- C. Field Measurements: Verify locations of fabric-wrapped wall panels and actual dimensions of openings and penetrations by field measurements before fabrication.

**1.13 WARRANTY**

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of fabric-wrapped panels that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to the following:

- a. Fabric sagging, distorting, or releasing from panel edge.
  - b. Warping of core.
2. Warranty Period: Two (2) years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Source Limitations: Obtain fabric-wrapped wall panels from single source and manufacturer.
- B. Basis-Of-Design, Product: Subject to compliance with requirements, provide Soundsoak 85 as supplied by Armstrong World Industries, Inc or one of the following equivalent products, as approved by the Commissioner:
  1. Fabritrak; FabriTACK.
  2. Novawall Systems, Inc.; Novawall.
  3. Or approved equal.

### 2.2 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: Provide fabric-wrapped wall panels meeting the following as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:
  1. Surface-Burning Characteristics: As determined by testing per ASTM E 84, Class A.
    - a. Flame-Spread Index: 25 or less.
    - b. Smoke-Developed Index: 450 or less.
  2. Fire Growth Contribution: Meeting acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 or NFPA 286.
- B. Acoustical Requirement: NRC of 0.80, as determined in accordance with ASTM C423

### 2.3 FABRIC-WRAPPED WALL PANELS

- A. Fabric-Wrapped Wall Panel: Manufacturer's standard panel construction consisting of facing material stretched over front face of edge-framed core and bonded or attached to edges and back of frame.
  1. Facing Material: Woven fabric, product as indicated on Finish Schedule or selected by Commissioner.
  2. Mounting: Use one of the following to suit project application, as approved by the Commissioner.
    - a. Edge mounted with splines secured to substrate. Color at exposed edges shall be as selected by Commissioner from manufacturer's full range.
    - b. Back mounted with manufacturer's standard adhesive, secured to substrate.

3. Core: Fiberglass.
4. Core Overlay: Polyester batting manufacturer's standard thickness.
5. Edge Construction: Manufacturer's standard chemically hardened core with no frame.
6. Edge Profile: Square.
7. Corner Detail in Elevation: Square with continuous edge profile indicated.
8. Reveals between Panels, if any: Flush.
9. Nominal Overall Panel Thickness: 1 inch.
10. Panel Width: As indicated on Drawings.
11. Panel Height: As indicated on Drawings.

## 2.4 MATERIALS

- A. Core Materials: Glass-Fiber Board, ASTM C 612; Type standard with manufacturer; nominal density of 6 to 7 lbs. per cu. ft., unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
- B. Mounting Devices: Concealed on back of panel, recommended by manufacturer to support weight of panel, and as follows:
  1. Splines: Manufacturer's standard concealed metal or plastic splines that engage the kerfed edges of the panel, with other moldings and trim for interior corners, exterior corners, and exposed edges, with factory-applied finish on exposed items.
  2. Adhesives: As recommended by fabric-wrapped, wall panel manufacturer and with a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

## 2.5 FABRICATION

- A. General: Use manufacturer's standard construction except as otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.
- B. Glass-Fiber Board and Mineral-Fiber Board Cores: Chemically harden core edges and areas of core where mounting devices are attached.
- C. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.
- D. Facing Material: Apply fabric fully covering visible surfaces of panel; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.
  1. Square Corners: Tailor corners.
- E. Dimensional Tolerances of Finished Panels: Plus or minus 1/16 inch for the following:
  1. Thickness.
  2. Edge straightness.
  3. Overall length and width.
  4. Squareness from corner to corner.
  5. Chords, radii, and diameters.

**PART 3 - EXECUTION**

**3.1 EXAMINATION**

- A. Examine fabric, fabricated panels, substrates, areas, and conditions, for compliance with requirements, installation tolerances, and other conditions affecting performance of fabric-wrapped wall panels.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.2 INSTALLATION**

- A. Install fabric-wrapped wall panels in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other panels, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.
- B. Comply with fabric-wrapped, wall panel manufacturer's written instructions for installation of panels using type of mounting devices indicated. Mount panels securely to supporting substrate.
- C. Align and level fabric pattern and grain among adjacent panels.

**3.3 INSTALLATION TOLERANCES**

- A. Variation from Plumb and Level: Plus or minus 1/16 inch.
- B. Variation of Panel Joints from Hairline: Not more than 1/16 inch wide.

**3.4 CLEANING**

- A. Clip loose threads; remove pills and extraneous materials.
- B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

**END OF SECTION 09 77 23**

## **SECTION 09 91 00**

### **PAINTING**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section includes:

1. Painting of the following interior and exterior items surfaces, unless otherwise indicated.
  - a. Floor paint systems for exposed concrete floors, not finished with another material.
  - b. Walls, ceilings, doors, frames, wood trim, railings, handrails, stairs, ladders and other exposed elements.
  - c. Exposed pipes.
  - d. Ducts.
  - e. Conduit.
  - f. Hangers.
  - g. Exposed steel.
  - h. Primed metal equipment.
  - i. For items or surfaces are not specifically mentioned, paint the same as similar adjacent materials or areas.
2. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.

- B. Labels: Do not paint over code required labels, such as Underwriters' Laboratories and Factory Mutual, or any equipment identification, performance rating, name, or nomenclature plates.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Gypsum-containing products shall contain “synthetic” gypsum produced with a minimum of 75% post-industrial recycled content, if readily available.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 “INDOOR AIR QUALITY MANAGEMENT”, where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements

**1.5 COORDINATION**

- A. Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
  1. Notify the Commissioner about anticipated problems using the materials specified over substrate primed by others.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures.”

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product. Include preparation requirements and application instructions.
  1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
- B. Samples: For each type of paint system and each color and gloss of topcoat.

**1.8 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements.”
- B. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
  1. Commissioner will select one surface to represent surfaces and conditions for application of each paint system.
    - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft.
    - b. Other Items: Commissioner will designate items or areas required.
  2. Final approval of color selections will be based on mockups.

- a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Commissioner at no added expense to City of New York.

#### 1.9 DELIVERY, STORAGE, AND HANDLING

- A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F.
  1. Maintain containers in clean condition, free of foreign materials and residue.
  2. Remove rags and waste from storage areas daily.

#### 1.10 FIELD CONDITIONS

- A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 deg F.
- B. Do not apply paints in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

### PART 2 - PRODUCTS

#### 2.1 PAINT MATERIALS, GENERAL

- A. Material Compatibility: Provide primers, undercoats, and finish-coat materials that are compatible with one another and the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
- B. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified. Paint-material containers not displaying manufacturer's product identification will not be acceptable.
  1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers.
  2. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

#### 2.2 MANUFACTURERS

- A. Exterior Paint Products:
  1. Manufacturers: Subject to compliance with requirements, provide products for substrate indicated or equal product from one of the following:
    - a. PPG Paints.
    - b. Sherwin-Williams Company (The).
    - c. Valspar Corporation (The).
    - d. Approved equal.

2. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements of FS TT-P-664, selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.
  3. Galvanized Metal:
    - a. Primer (1) Coat; Tnemec 66; 4.0 to 6.0 dry mil thickness or approved equal.
    - b. Finish (2) Coat; Tnemec 70 or 71 as selected; 1.5 to 2.5 dry mil thickness or equivalent product from approved manufacturers listed.
  4. Metal, Ferrous:
    - a. High Gloss Alkyd Enamel
      - 1) Prime Coat: Benjamin Moore & Co, IronClad Retardo Rust Inhibitive Paint, 163 or equivalent product from approved manufacturers listed.
      - 2) Two Coats: Benjamin Moore & Co, Impervo Enamel, 133 or equivalent product from approved manufacturers listed.
  5. Mechanical Dunnage:
    - a. Semi-Gloss Aliphatic Acrylic Polyurethane
      - 1) Surface Preparation: SSPC-SP 6 for ferrous metal; omit surface preparation and shop primer on galvanized metal.
      - 2) Primer Coat: Tnemec 90-97; 2.5 to 4.0 mils d.f.t or equivalent product from approved manufacturers listed.
      - 3) Coat: Tnemec Series 66 Epoxoline; 3.0 to 5.0 mils d.f.t or equivalent product from approved manufacturers listed.
      - 4) Finish Coat: Tnemec Series 73 Endura-Shield; 2.0 to 3.0 mils d.f.t or equivalent product from approved manufacturers listed.
  6. Metal, Rooftop Mechanical Units:
    - a. Semi-Gloss Modified Polyamidoamine Epoxy
      - 1) Surface preparation: SSPC-SP3.
      - 2) Prime Coat: Tnemec Series 10-99; 2.5 to 3.5 mils d.f.t. or equivalent product from approved manufacturers listed.
      - 3) Finish Coat: Tnemec Series 135 Chembuild; minimum 4.0 mils d.f.t. or equivalent product from approved manufacturers listed.
- B. Interior Paint Products:
1. Manufacturers: Subject to compliance with requirements, provide products for substrate indicated or equal product from one of the following:
    - a. Behr Paint Company.
    - b. Benjamin Moore & Co.
    - c. PPG Paints (PPG).
    - d. Sherwin-Williams Company (The).
    - e. Approved equal.

2. Cast-In-Place Concrete:
    - a. Low Sheen Acrylic Epoxy Finish: 2 coats.
      - 1) Undercoat: Tnemec Series 27WB Typoxy (4.0-14.0 mils DFT) or equivalent product from approved manufacturers listed.
      - 2) Finish Coat: Tnemec Series 297 Enviro-Glaze (2.0 - 3.0 mils DFT) or equivalent product from approved manufacturers listed.
  3. Concrete Masonry Units, except surfaces of glazed CMU:
    - a. Low Sheen Acrylic Epoxy Finish: 2 coats over filled surface.
      - 1) Block Filler: Tnemec 130 modified epoxy filler. Provide Uniform Finish for varying CMU surfaces or equivalent product from approved manufacturers listed.
      - 2) Undercoat: Tnemec Series 27WB Typoxy (4.0-14.0 mils DFT) or equivalent product from approved manufacturers listed.
      - 3) Finish Coat: Tnemec Series 297 Enviro-Glaze (2.0 - 3.0 mils DFT) or equivalent product from approved manufacturers listed.
  4. Gypsum Board:
    - a. Low Sheen Acrylic Epoxy Finish: 2 coats.
      - 1) Primer: Tnemec Series 151 Elasto-Grip FC (0.7 - 1.5 mils DFT) or equivalent product from approved manufacturers listed.
      - 2) Undercoat: Tnemec 287 Enviropox (2.0 to 3.0 mils DFT) or equivalent product from approved manufacturers listed.
      - 3) Finish Coat: Tnemec Series 297 Enviro-Glaze (2.0 - 3.0 mils DFT) or equivalent product from approved manufacturers listed.
  5. Ferrous, Metal:
    - a. Semigloss Enamel Finish: 2 coats.
      - 1) Primer: Tnemec Series 115 Uni-Bond DF (2.0 - 4.0 mils DFT) or equivalent product from approved manufacturers listed.
      - 1) Finish: Tnemec Series 1029 Enduratone (2.0 - 3.0 mils DFT)
  6. Zinc-Coated Metal:
    - a. Semigloss Finish: 2 coats.
      - 1) Primer: Tnemec Series 115 Uni-Bond DF (2.0 - 4.0 mils DFT) or equivalent product from approved manufacturers listed.
      - 2) Finish: Tnemec Series 1029 Enduratone (2.0 - 3.0 mils DFT) or equivalent product from approved manufacturers listed.
- C. Colors/ Gloss: Refer to Paint Color/ Finish Schedule as indicated on the drawings.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
- B. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter, substrate shall be in accordance with coating material manufacturers requirements.
- C. Verify suitability of substrates, including surface conditions and compatibility, with existing finishes and primers.
- D. Proceed with coating application only after unsatisfactory conditions have been corrected.
  - 1. Application of coating indicates acceptance of surfaces and conditions.

**3.3 PREPARATION**

- A. Comply with manufacturer's written instructions and recommendations applicable to substrate and paint systems indicated.
- B. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of the size or weight of the item, provide surface-applied protection before surface preparation and painting.
  - 1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.
- C. Cleaning: Before applying paint or other surface treatments, clean the substrates of substances that could impair the bond of the various coatings. Remove oil and grease before cleaning.
  - 1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.
- D. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each substrate condition and as specified.
  - 1. Provide barrier coats over incompatible primers or remove and reprime.
  - 2. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.
    - a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
    - b. Prime, stain, or seal wood to be painted immediately on delivery. Prime edges, ends, faces, undersides, and backsides of wood, including cabinets, counters, cases, and paneling.

- c. When transparent finish is required, back prime with spar varnish.
  - d. Back prime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on backside.
  - e. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.
- 3. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with the Steel Structures Painting Council's (SSPC) recommendations.
  - a. Blast steel surfaces clean as recommended by paint system manufacturer and according to requirements of SSPC-SP 10.
  - b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
  - c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with the same primer as the shop coat.
- 4. Galvanized Surfaces: Clean galvanized surfaces with nonpetroleum-based solvents so surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.
- 5. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and other surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.
  - a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
  - b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
  - c. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or other etching cleaner, unless otherwise indicated. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.
- E. Materials Preparation: Mix and prepare paint materials according to manufacturer's written instructions.
  - 1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
  - 2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
  - 3. Use only thinners approved by paint manufacturer and only within recommended limits.
- F. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of the same material are applied. Tint undercoats to match the color of the finish coat, but provide sufficient differences in shade of undercoats to distinguish each separate coat.

### 3.4 APPLICATION

- A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.
1. Paint colors, surface treatments, and finishes are indicated in the schedules.
  2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
  3. Provide finish coats that are compatible with primers used.
  4. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, covers for finned-tube radiation, grilles, and similar components are in place. Extend coatings in these areas, as required, to maintain the system integrity and provide desired protection.
  5. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before the final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
  6. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
  7. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.
  8. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
  9. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
  10. Sand lightly between each succeeding enamel or varnish coat.
  11. Where facias, soffits and housings that are to be painted are exposed to exterior viewing, allow for second color selection by Commissioner, and for painting of viewable surfaces different color from adjacent surfaces, match approved samples.
- B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.
1. The number of coats and the film thickness required are the same regardless of application method. Do not apply succeeding coats until the previous coat has cured as recommended by the manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
  2. Omit primer on metal surfaces that have been shop primed and touchup painted.
  3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to ensure edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.
  4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and where application of another coat of paint does not cause the undercoat to lift or lose adhesion.
- C. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.
1. Brushes: Use brushes best suited for the type of material applied. Use brush of appropriate size for the surface or item being painted.
  2. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool as recommended by the manufacturer for the material and texture required.
  3. Spray Equipment: Use airless spray equipment with orifice size as recommended by the manufacturer for the material and texture required.

- D. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate. Provide the total dry film thickness of the entire system as recommended by the manufacturer.
- E. Mechanical and Electrical Work: Painting of mechanical and electrical work is limited to items exposed in equipment rooms and in occupied spaces.
- F. Mechanical items to be painted include, but are not limited to, the following:
  - 1. Piping, pipe hangers, and supports.
  - 2. Heat exchangers.
  - 3. Tanks.
  - 4. Ductwork.
  - 5. Insulation.
  - 6. Motors and mechanical equipment.
  - 7. Accessory items.
- G. Electrical items to be painted include, but are not limited to, the following:
  - 1. Conduit and fittings.
  - 2. Switchgear.
  - 3. Panelboards.
- H. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by the manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn through or other defects due to insufficient sealing.
- I. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.
- J. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.
- K. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

### 3.5 CLEANING AND PROTECTION

- A. At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from the site.
- B. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping. Be careful not to scratch or damage adjacent finished surfaces.
- C. Protect work of other trades, whether being painted or not, against damage by painting. Correct damage by cleaning, restoring or replacing, and repainting, as approved by the Commissioner.
- D. Provide "Wet Paint" signs to protect newly painted finishes. Remove temporary protective wrappings provided by others to protect their work after completing painting operations.

- E. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

**END OF SECTION 09 91 00**

**SECTION 10 11 00****VISUAL DISPLAY UNITS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Visual display board assemblies.
  2. Bulletin board assemblies.
  3. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures.”

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For visual display units.
  - 1. Include plans, elevations, sections, details, and attachment to other work.
  - 2. Show locations of panel joints
- C. Samples: For each type of visual display unit indicated.
- D. Product Schedule: For visual display units.

**1.7 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For qualified Installer.
- B. Sample Warranties: For special warranties.

**1.8 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For visual display units to include in maintenance manuals.

**1.9 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements.”
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
  - 1. Build mockup of typical visual display unit as directed by the Commissioner. Include accessories.
  - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
  - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

**1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

1.11 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.12 WARRANTY

- A. Special Warranty for Porcelain-Enamel Face Sheets: Manufacturer agrees to restore or replace porcelain-enamel face sheets that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
    - a. Surfaces lose original writing and erasing qualities.
    - b. Surfaces exhibit crazing, cracking, or flaking.
  2. Warranty Period: 50 years from date of Substantial Completion or Life of the building, as is standard with product manufacturer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Multi- Media Markerboards: Subject to compliance with requirements, provide the following or equal as approved by the Commissioner:
1. Claridge Products and Equipment Inc.; Series 1, LCS Markerboard with Aluminum Trim.
  2. Size, unless otherwise indicated: 4 by 4 feet.
  3. Other Manufacturers:
    - a. Ghent Manufacturing, Inc.
    - b. Marsh Industries, Inc.
    - c. MooreCo, Inc.
    - d. Approved equal.
- B. Bulletin Board Assemblies, Case with Sliding Doors: Subject to compliance with requirements, provide the following or equal as approved by the Commissioner:
1. Poblocki; Model G6063- T poster case.
  2. Product Description: Recessed unit made from aluminum alloy and 1/ 4 inch clear, laminated glass sliding doors, with grooved finger pulls and 'H' shoe rollers. Provide tumbler type locks keyed alike, with 4 keys each unit,
  3. Other Manufacturers:
    - a. Claridge Products and Equipment, Inc.
    - b. Ghent Manufacturing Inc.
    - c. Marsh Industries, Inc.
    - d. MooreCo, Inc.
    - e. Approved equal.

## 2.2 MATERIALS

- A. Board Description: 24-gage steel sheet with porcelain enamel coating, compressed fiber board core with .002 aluminum foil backing.

## 2.3 ACCESSORIES

- A. Metal Trim and Accessories: Fabricate frames and trim of not less than 0.062-inch-thick aluminum alloy, size and shape as indicated, to suit type of installation. Provide straight, single-length units wherever possible; keep joints to a minimum. Miter corners to a neat, hairline closure.
  - 1. Where the size of boards or other conditions exist that require support in addition to the normal trim, provide structural supports or modify the trim as indicated or as selected by the Commissioner from the manufacturer's standard structural support accessories to suit the condition indicated.
  - 2. Field-Applied Trim: Unless otherwise indicated, provide the manufacturer's standard snap-on trim, with no visible screws or exposed joints.
  - 3. Marker tray: Unless otherwise indicated, furnish the manufacturer's standard continuous, solid extrusion-type aluminum tray with ribbed section and smoothly curved exposed ends, for each board.
  - 4. Holder Bar: Unless otherwise indicated, provide the manufacturer's standard holder bars.
  - 5. Map Hooks and Clips: Two map hooks with flexible metal clips for each board.

## 2.4 FABRICATION

- A. Construction shall include the following layers: 24-gage steel with porcelain enamel coat face sheet 3/8-inch-thick fiberboard core material and manufacturer's standard .002-inch-thick aluminum foil backing sheet.
  - 1. Assembly: Provide factory-assembled markerboard units, except where field-assembled units are required.
  - 2. Make joints only where total length exceeds maximum manufactured length. Fabricate with the minimum number of joints, balanced around the center of the board, as acceptable to the Commissioner.
  - 3. Provide the manufacturer's standard vertical joint system between abutting sections of board.

## 2.5 GENERAL FINISH REQUIREMENTS

- A. General: Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes. Finish designations prefixed by "AA" conform to the system established by the Aluminum Association for designating aluminum finishes.
- B. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## 2.6 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work
- B. Do not proceed until unsatisfactory conditions have been corrected to the satisfaction of the Commissioner.

### 3.3 PREPARATION

- A. Prior to installation of visual display items, clean substrate to remove dust, debris, and loose particles.
- B. Verify required grounds, blocking and any miscellaneous required concealed framing, brackets and supports are installed prior to installing visual display items.

### 3.4 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Clean substrate of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.
- C. Prime wall surfaces indicated to receive visual display units and as recommended in writing by primer/sealer manufacturer and visual display unit manufacturer.

### 3.5 INSTALLATION

- A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

- B. Deliver factory-built units completely assembled in one piece without joints, wherever possible. Where dimensions exceed panel size, provide 2 or more pieces of equal length as acceptable to the Commissioner. When overall dimensions require delivery in separate units, prefabricate components at the factory, disassemble for delivery, and make final joints at the site. Use splines at joints to maintain surface alignment.
- C. Prior to installation verify infield locations to be mounted with the Commissioner and NYPD.
- D. Install units in locations and at mounting heights indicated and in accordance with the manufacturer's instructions. Keep perimeter lines straight, plumb, and level. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for a complete installation.
- E. Coordinate job-site assembled units with grounds, trim, and accessories. Join parts with a neat, precision fit.
- F. Exposed surfaces of units shall be free from dents, tool marks, warpage, buckle, glue and open joints, or other defects affecting serviceability or appearance. Accurately fit all joints, corners and miters. Conceal all fasteners. Make threaded connections up tight so that threads are entirely concealed.

### 3.6 CLEANING AND PROTECTION

- A. Clean visual display units according to manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.
- B. Touch up factory-applied finishes to restore damaged or soiled areas.
- C. Cover and protect visual display units after installation and cleaning.

**END OF SECTION 10 11 00**

## **SECTION 10 14 00**

### **SIGNAGE**

#### **PART 1 - GENERAL**

##### **1.01 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.02 SUMMARY**

- A. Signage under this section is intended to include items for identification, direction, control and information of building, and to be installed as a complete integrated system. Signs include, but are not limited to:

1. Adhesive vinyl Entrance IDs
2. Exterior metal panel Entrance IDs
3. Flat cut metal letterforms with painted finish Entrance IDs
4. Tactile Room IDs
5. Elevator and Stair IDs
6. Custom sized lockable directory
7. Magnetic panel board bulletin boards
8. Custom sized homasote panel with metal frame

- B. Related Sections:

1. Section 09 91 00 "Painting"
2. Section 08 80 00 "Glazing"
3. Section 08 88 53 "Security Glazing"

##### **1.03 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.04 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.05 REFERENCES

- A. Comply with the following codes and standards:
  1. American National Standards Institute (ANSI)
  2. 2014 NYCBC – 2014 New York City Building Code.
  3. ASTM B 209/209M – Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
  4. ASTM B 221/221M – Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
  5. American Concrete Institute ACI 301 – Specifications for Structural Concrete.
  6. American Concrete Institute ACI 347 – Guide to Formwork for Concrete.
  7. CC/ANSI A117.1 – Accessible and Useable Buildings and Facilities; 2017.
  8. USATBCB – Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG).

1.06 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.07 SUBMITTALS

- A. Product Data: Manufacturer's data sheets on each product to be used, including:
  1. Preparation instructions and recommendations.
  2. Storage and handling requirements and recommendations.
  3. Installation methods.
- B. Shop Drawings: Showing sign styles, lettering, locations and dimensions of each sign. Submit shop drawings as follows:
  1. For each sign number, indicate size, material and method of attachment to door and/or wall or suspension method.
  2. Each sign number shall be drawn to a measurable scale, fully dimensioned and detailed to clearly call out all materials, finishes and coatings.
  3. Indicate component details including, framing, anchorage, design loading, and location of fasteners, and accessories or items required of related Work.

4. Engineering Services: Submit calculations for loadings and stresses of all framing and anchorage for exterior signage under a Professional Engineer's seal from an Engineer that is licensed in the State of New York, for review by Commissioner.
5. Scaled graphic layouts for all signs shall be created by Fabricator.
6. All letter and character styles shall be accurately reproduced.
7. Shop Drawings and graphic layouts are to be submitted for review to Commissioner for approval.
8. Shop Drawings shall be submitted as a complete, unified, cross-referenced set.

C. Material and Finish Samples:

1. Formed Concrete: Submit (1) sample of form material with submittal of shop drawings of formed concrete which will be exposed in the finished work to the public view.
2. Flat-Cut Painted Metal Letterform: Submit (1) sample of a painted metal letterform illustrating font, metal thickness, and select color.
3. Flat-Cut Metal ADA: Submit (1) sample of a metal ADA illustrating font, metal thickness, and select color.
4. Color Samples: Submit (4) four 4"x4" color samples of each color used on the select material and finish as specified in the Contract Drawings.

D. Manufacturer's Installation Instructions: Submit substrate requirements, installation methods, and material analysis.

E. Schedule: A schedule of completion and sequence of delivery of the work to be furnished and installed under this Section. This schedule shall include at least:

1. Preparation of Shop Drawings and review schedule for approval.
2. Material and color sample review, final approval.
3. Construction and sequence of delivery.
4. Timetable of installation indicating start date and each phase until completion of Work.
5. Date for final inspection.

F. Submit maintenance and cleaning recommendations based on manufacturer Instructions for all sign types.

G. Furnish one (1) quart of each paint and finish color for touch-up purposes.

1.08 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Pre-installation conference: Closely coordinate tolerances required in this section for completely coordinated and smooth installation.
- C. Regulatory Requirements: Comply with requirements of ICC/ANSI A117.1 and ADAAG.

1.09 DELIVERY, STORAGE, AND HANDLING

- A. Deliver all signs packed and protected for timely installation, minimizing damage and on-site storage time.
- B. Deliver, handle, and store materials in accordance with manufacturer's instructions.
- C. Store products in manufacturer's unopened packaging until ready for installation.
- D. Individually mark each sign to match-up with sign location number.
- E. Store all signs in a secure area, protected from the weather during installation.
- F. Sign design builder shall be responsible for supplying replacement parts, on a one-for-one no charge basis, and for installation for any defective components that fail.
- G. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of New York City Department of Environmental Protection.

#### 1.10 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results.
- B. Do not install products under environmental conditions outside manufacturer's absolute limits.

### PART 2 – PRODUCTS

#### 2.01 SIGNAGE

##### A. MANUFACTURERS

- 1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:
  - a. Coyle & Company
    - i) 60 Plant Avenue, Suite 5, Hauppauge, New York 11788, (631) 780-7045
  - b. Design Communications LTD
    - i) 153 West 27<sup>th</sup> Street, Suite 707 New York, New York 10001, (212) 255-3226
  - c. I & M Architectural Signs
    - i) 20 Montesano Road, Fairfield, New Jersey 07004, (973) 575-7665
  - d. Or approved equal.

#### 2.02 GENERAL

##### A. Structural Design:

- 1. Details on the Contract Drawings indicate a design approach for sign structure, but do not necessarily include all fabricating details required for the complete structural integrity of the signs, including consideration for static and erection loads during handling, erecting, and service at the installed locations, nor do they necessarily consider the preferred shop

practices of the individual sign fabricators. Design must comply with 2014 New York City Building Code requirements, as well as testing laboratory listings where required.

**B. Loads:**

1. Interior signs shall sustain wind loads of a minimum of 10-psf.
2. Exterior signs shall sustain wind load, in any directions, or 30-psf.
3. All signs shall sustain a vertical live load of 300-pounds at any point on the sign. The vertical load is not simultaneous with the wind loads.
4. All signs shall sustain their own dead load.

**2.03 TYPOGRAPHY**

- A. Typography shown on the Drawings is intended as guidelines for layouts and type size only and is based on scale calculations of the message lengths within estimated sign areas. Should conflicts arise in the final graphic layouts, notify the Commissioner before proceeding.
- B. All typography shall be straight and true to the proportions and visual characteristics of the actual typeface(s) used for the sign inscriptions.
- C. Contractor is required to purchase all typefaces required for project.
- D. Use the following typefaces, as indicated on drawings, unless otherwise indicated.
  1. Avenir Black
  2. Futura Demi

**2.04 ARTWORK**

- A. Representative digital artwork and templates for sign inscriptions and graphics will be provided by the Commissioner in Adobe Illustrator CC 2017 (13.1.0) or higher files.
- B. Generate all scaled and full size graphic layouts in Adobe Illustrator CC 2017 (13.1.0) or higher, using Commissioner-provided digital artwork. Provide graphic layouts with indicated scale as PDF for review by Commissioner.
- C. Except as may be indicated otherwise on the Contract Drawings, position all sign graphics and inscriptions straight and true on sign units and architectural surfaces, and maintaining accurate dimensions, including margins spaces and gutters, per approved graphic layouts.
- D. Do not, under any circumstances, use signage Contract Drawings as artwork.

**2.05 TACTILE AND BRAILLE COPY**

- A. Signage requiring tactile graphics:
  1. Wall-mounted signs designating permanent rooms and spaces, such as room numbers, restrooms, electrical closets, and mechanical rooms.
  2. Individually applied characters are prohibited.
- B. Signage not requiring tactile graphics but requiring compliance to other ADA requirements: All other signs providing direction to or information about function of space, such as directional signs (signs with arrow), informational signs (operating hours, policies, etc.), regulatory signs (no smoking, do not enter) and ceiling and projected wall-mounted signs.

- C. Tactile graphics sign mounting requirements:
  - 1. Openings: Mount 60" to sign centerline above finished floor adjacent to opening.
  - 2. No wall space adjacent to latch side of door, opening or double doors: Mount 60" to centerline above finished floor on nearest adjacent wall.
  - 3. An interior sign plaque shall be installed adjacent to each new door. The final room description on each sign shall be determined prior to fabrication.
- D. Tactile and Braille Copy Requirements: Manufacturer's standard process for producing copy complying with ADA Accessibility Guidelines and ICC/ANSI A117.1. Text shall be accompanied by Grade 2 Braille. Produce precisely formed characters with square cut edges free from burrs and cut marks.
  - 1. Panel Material: Clear acrylic sheet with opaque color coating, subsurface applied.
  - 2. Raised-Copy Thickness: Not less than 1/32 inch (0.8 mm).

## 2.06 CAST-IN-PLACE CONCRETE

- A. Formwork Shop Drawings: Submit drawings that indicate the following:
  - 1. Forming system and method of erection with associated details, including bracing as required ensuring stability of formwork.
  - 2. Design calculations for the forming system.
  - 3. Concrete placement rates and ambient temperature requirements at time of concrete placement.
- B. Product Data: Provide manufacturers' data and installation requirements on form materials, form coatings, form ties, and other accessories.
- C. Lumber:
  - 1. Boards: Use dressed side of lumber for surface in contact with the concrete and use dressed or tongue-and-groove edges.
  - 2. Framing Lumber: Structural grade dressed or rough.
- D. Installation:
  - 1. Erect formwork, shoring and bracing to achieve design requirements and to maintain allowable tolerances in accordance with the requirements of ACI 301.
  - 2. Locate and set in place items that will be cast directly into concrete.
  - 3. Coordinate with related work of other Sections in forming and placing letterforms and other potential openings, slots, recesses, chases, sleeves, bolts, anchors, ties, inserts, and similar embedded items.
  - 4. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to over-stressing by construction loads.
  - 5. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping, and permit removal of remaining principal shores.

6. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place during concrete placement.
7. Verify locations, lines, and levels before proceeding with formwork. Ensure that dimensions agree with shop drawings.
8. Loosen forms carefully, and remove without hammering or prying against finished concrete surfaces.
9. Form Release Agent: Commercial formulation, silicone-free form-release agent, designed for use on all types of forms, which will not bond with, stain, nor adversely affect concrete surfaces, and which will not impair subsequent treatment of concrete surfaces requiring bond or adhesion nor impede wetting of surfaces which will be cured with water, steam, or curing compounds. Form release agent for use on steel forms shall be non- staining and rust-preventive.
10. Protect concrete surface from damage. Store removed forms for re-use, as appropriate, and dispose of damaged forms from the site.
11. As soon as the forms have been stripped and the concrete surfaces exposed, commence finishing and restoration such as removal of fins and other projections, filling recesses left by the removal of form ties, and repair defects.
12. Clean exposed concrete surfaces and adjoining work stained by leakage of concrete.

**E. Field Quality Control:**

1. Inspect erected formwork, shoring, and bracing to ensure that the work is in accordance with formwork design, and that supports, fastenings, wedges, ties, and items are secure.
2. While placing concrete, provide quality control to assure that formwork and related supports have not been displaced, that loss of cement paste through joints is prevented and that completed work will be within specified tolerances.
3. Ensure letterforms are level and flush to front surface of formed cement. Remove any excess cement and make surface smooth.
4. During removal, verify that architectural features meet the form and texture requirements of the samples approved by the Commissioner.
5. Check movement using methods, such as plumb lines, tell tales and survey equipment, as approved by the Commissioner, to detect movement of formwork during concrete placement.

**2.07 ALUMINUM**

- A. Aluminum plate and sheet shall be specified thickness and finish.
- B. Metal Thickness: Provide metal thickness indicated on Drawings. When metal thickness is not indicated on Drawings, provide thickness most appropriate for the fabrication condition to prevent warping, oil canning, or distortion. All corners and sides shall be eased and free from sharp or rough edges.

**2.08 HOMASOTE WITH ALUMINUM FRAME**

- A. Homasote sheet shall be specified thickness and finish.

- B. Thickness: Provide thickness indicated on Drawings. When thickness is not indicated on Drawings, provide thickness most appropriate for the fabrication condition to prevent warping, oil canning, or distortion.
- C. Aluminum frame to painted white as specified, fit securely around Homasote
- D. Secured to wall not visible from the front.

#### 2.09 LOCKABLE DIRECTORY

- A. Basis-of-Design Product: Subject to compliance with requirements provide Aarco Product Number DCC4836R, or comparable product by one of the following:
  - 1. Balt
  - 2. Claridge
  - 3. Or approved equal.
- B. Size: Custom, as indicated of Drawings
- C. Accessories: Removable letter board, lockable front door, with set of two keys furnished to Commissioner.
- D. Mount within prepared cabinet space for front of directory to be flush with wall.
- E. Fabricated Metal box and applied letters and to match finish and mounted to top of directory.
- F. Secured to wall not visible from the front.

#### 2.10 MAGNETIC PANEL BOARD

- A. Description: Finished stainless steel magnetic bulletin board. ¼" corner radius at all exposed corner, all edges ground smooth. Factory-drilled holes for fasteners. Cut out voids in bulletin board panel for other wall mounted items and grind void edges smooth in locations and sizes indicated on drawings.
- B. Manufacturer: Subject to compliance with requirements, provide products by one of the following:
  - 1. DiamondLife / Magpanel (Basis-of-Design)
  - 2. MMF Industries / STEELMASTER Soho Collection
  - 3. MURO / Magnetic Bulletin Board
  - 4. Or approved equal.
- C. Finish: Brushed stainless steel.
- D. Attachment: Provide double-sided foam tape at backside of panel at 6" OC and fasten to wall surface along all four sides of bulletin board using pan-head stainless steel wall anchors matching finish of bulletin board panel.
- E. Panel thickness: 0.030"
- F. Sizes: As indicated on drawings.

#### 2.11 FLAT CUT LETTERFORMS

- A. Form individual letters and numbers by laser or water-jet cutting. Produce characters with smooth flat faces, sharp corners, and precisely formed lines and profiles, free from pits, scale, sand holes, and other defects. Drill to receive threaded mounting studs. Comply with requirements indicated for finish, style, and size.

- 1. Material: Aluminum.

#### 2.12 ACRYLIC

- A. Use virgin cast acrylic sheet made with methylmethacrylate polymers, premium quality, as manufactured by Acrylite; ICI Acrylics, Rohm and Hass; or approved equal.
- B. Provide solid sheet cast acrylic in size, thickness, clarity, opacity, texture, and color required for Work indicated on the Contract Drawings.

#### 2.13 ADA COMPLIANT SOLID SURFACE SIGN PLAQUES

- A. Custom cast solid acrylic of thickness indicated, monolithic thermally formed and bonded tactile plaque constructed utilizing a high-pressure thermoforming process, which provides a fully homogeneous plaque sign. The sign body, face, raised text and Braille are compression molded to form a single dimensional component creating a sign surface, body, and graphic elements that exhibit toughness to scratching, cracking, gouging and graffiti.

#### 2.14 ADHESIVES, FASTENERS, INKS AND PAINTS

- A. All adhesives and fasteners shall be adequate for producing structurally sound joints between similar and dissimilar materials without causing undue stress, discoloration, or deformation of surfaces or joints.
- B. Joining methods shall be in accordance with best practices and recommendations made by the manufacturer of the materials to be joined, using fasteners and adhesives that will not fade, discolor, or de-laminate as a result of continued exposure to sunlight, heat, cold, or moisture. Adhesives and fasteners shall not deteriorate the materials to which they are applied.
- C. No adhesives, which will fade, discolor, or de-laminate as a result of ultra violet light or heat shall be used.
- D. All mechanical fasteners shall be of stainless steel.
- E. Mechanical fasteners shall be concealed, unless specified otherwise in Contract Drawings, and of proper type and quantity to securely attach signage components to each other and to mounting surfaces.
- F. All painted lettering and silkscreening to be custom color matched in context with all other paint and material sign finishes.
- G. All paints, inks, coatings, and finishes, including primers and other surface preparations, shall be of the highest quality manufactured specifically for the surface materials to which they are to be applied, and shall be compatible with each other and with the materials to which they are applied.
- H. All paints, inks, and coatings shall be heavy-duty exterior grade to withstand chalking, fading, discoloring, chipping, cracking, and peeling, and warranted for a minimum of 10 years.
- I. All paints, inks, and coatings shall have a satin, eggshell, or non-glare finish per ADA requirements unless otherwise specified in the Contract Drawings or Graphic Layouts.
- J. Inks for etched-and-filled and/or silkscreened message copy shall be heavy-duty, scratchproof, and epoxy-based. Inks shall not fade, bubble, or peel as a result of exposure to sunlight, heat,

cold, or moisture, nor shall inks change the color of or deteriorate the materials to which they are applied.

- K. All exterior and interior sign faces with silkscreened, direct print and/or frisket paint shall have a non-glare, matte, UV and graffiti resistant clear protective coating.

#### 2.15 VINYL

- A. All vinyl shall be as specified in the Contract Drawings.
- B. All colored/painted vinyl shall be of the highest quality.
- C. Vinyl shall not fade, bubble, or peel as a result of exposure to sunlight, heat, cold or moisture, nor vinyl change the color of or deteriorate the materials to which they are applied.

### PART 3 – EXECUTION

#### 3.01 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.02 EXAMINATION

- A. All materials and products shall be new and free from defects, which impair strength or appearance.
- B. Construct all Work to eliminate burrs, dents, cutting edges, and sharp corners.
- C. Finish welds on exposed surfaces. Any damage by welding must be restored by grinding, polishing, or buffing.
- D. Finish all surfaces smooth, except as indicated or directed otherwise. Eliminate distortions of flat surfaces to be imperceptible in the finished work. At exposed connections, all flux, oxides, slag, and discoloration shall be removed so that these areas match the finish of adjacent areas.
- E. Surfaces that are intended to be flat shall be without dents, bulges, oil canning, gaps, or other physical deformities.
- F. Except where directed otherwise by the Commissioner, conceal all fasteners. If fasteners are exposed, paint them to match adjacent surface.
- G. Where actual conditions encountered require modifications to said manufacturer's instructions, they shall be accepted by manufacturer and Contractor prior to proceeding with the Work.
- H. If substrate preparation is the responsibility of another trade, notify Commissioner of unsatisfactory preparation before proceeding.

#### 3.03 PREPARATION

- A. Clean mounting surfaces thoroughly prior to installation.
- B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

#### 3.04 INSPECTION

- A. Inspect installation locations for conditions that will adversely affect execution, permanence and quality of Work, and do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Exercise care to ensure that polished, plated, or finished surfaces are unblemished in the finished work.
- C. Conceal all identification labels and code compliance labels to comply with 2014 New York City Building Code.
- D. Carefully follow manufacturer's recommended fabricating procedures regarding expansion/contraction, fastening, and restraining of acrylic plastic.

### 3.05 FINISHES

- A. Protect finishes on exposed surfaces from damage by application of strippable temporary protective covering prior to shipment.
- B. Corrosion Protection: Coat concealed surfaces, which will be in contact with concrete, stone, masonry, wood, or dissimilar metals with a heavy or double coat of bituminous material.
- C. Graphics painted or silkscreened on-site on interior architectural surfaces shall be smooth and of uniform density, and shall not bubble, blister, peel or bleed beyond graphic edges or into stone or metal joints and seams.
- D. Graffiti resistant, scratch resistant, and UV matte clear coat required for exterior and/or interior sign faces as indicated in the Contract Drawings.

### 3.06 INSTALLATION

- A. Fabricator shall establish a timetable in conjunction with Commissioner for completion of installation by deadline date and final inspection.
- B. Install in accordance with manufacturer's instructions.
- C. Locate signs in accordance with approved shop drawings and ADA requirements.
- D. Do not begin installation until surfaces to receive signs have been finished and finishes are dry and correctly cured.
- E. Prior to installation, examine areas, surfaces, and conditions under which Work is to be installed. Inspect installation locations for conditions, which will adversely affect execution, permanence, and quality of Work, and shall not proceed with installation until unsatisfactory conditions have been corrected. Notify the Commissioner in writing of these conditions.
- F. Verify the location for all signs, which are not specifically dimensioned on the Contract Drawings. Sign location plans represent general sign location only. The indicator representing the sign is not to scale, nor does it show exact placement. Field-verify all sign locations.
- G. Except as may be indicated otherwise on the Contract Drawings, install prefabricated work plumb, level, square, and true to line.
- H. Securely anchor work in proper location using anchors, fasteners, or other methods. All anchors/fasteners shall be appropriate for the anchorage condition and be of non-corrosive type.
- I. Locate signs in a straight and aligned manner using manufactured adhesive and/or fastening methods.

- J. Surfaces under adhesive-applied signs shall be smooth, clean, and free of dust, oil, fingerprints, or other foreign matter. All adhesives required shall be used in accordance with the manufacturer's specifications. The sign shall be permanently installed and not removable unless indicated on the Contract Drawings.
- K. Contact the Commissioner if there are any questions as to suitability of the installation location or installation surface.
- L. Conform to ADA requirements for tactile graphics signage.

### 3.07 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, restore or replace damaged products before Substantial Completion.

### 3.08 CLEANING

- A. Clean-up the Work Site during and after installation to ensure the premises, adjacent and public properties is maintained free from accumulation of materials and construction debris.
- B. Final Clean-Up: All evidence of installation work or damages incurred on other surfaces shall be cleaned or restored prior to completion of Work. Protect all Work from damage.
  - 1. Remove protective materials and dispose of properly.
  - 2. Broom clean paved or concrete surfaces.
- C. Cleaning of Signs: Clean all completed and installed signs to remove fingerprints, residue, adhesives, etc. prior to Final Acceptance.

### 3.09 QUALITY CONTROL

- A. Touch-up all scratched, marred, abraded, or otherwise damaged surfaces to match original finishes.

### 3.10 WASTE MANAGEMENT

- A. Remove and dispose of all waste prior to Work completion.

**END OF SECTION 10 14 00**

## **SECTION 10 21 13**

### **TOILET COMPARTMENTS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. Section includes:
  - 1. Solid- plastic toilet compartments configured as toilet enclosure partitions, urinal screens and shower cubicles.
  - 2. Installation accessories.
- B. Related Sections:
  - 1. Section 05 50 00 "Metal Fabrications" for attachments.
  - 2. Section 06 10 00 "Rough Carpentry" for blocking.
  - 3. Section 09 30 13 "Ceramic Tiling."
  - 4. Section 10 28 00 "Toilet and Bath Accessories" for toilet tissue dispensers, grab bars, shower seats, and similar accessories mounted on toilet compartments.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.6 COORDINATION

- A. Coordinate requirements for blocking, reinforcing, and other supports concealed within wall.
- B. Coordinate requirements for Toilet and Bath Accessories mounted on partitions.

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For toilet compartments. Include plans, elevations, sections, and attachment details.
- C. Samples for each type of toilet compartment material indicated.

#### 1.8 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of toilet compartment.

#### 1.9 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For toilet compartments to include in maintenance manuals.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

#### 1.11 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Fire Performance: Tested in accordance with, and pass the acceptance criteria of, NFPA 286.
- B. Regulatory Requirements: Comply with applicable provisions in ICC A117.1 and the New York City Department of Buildings, for toilet compartments designated as accessible.

**2.2 MANUFACTURERS**

- A. Basis of Design, Product: Subject to compliance with requirements, provide products as supplied by Scranton Products, Inc., Hiney Hiders, as fabricated by Santana Toilet Partitions or comparable product from one of the following, as approved by the Commissioner:
  - 1. Accurate Partitions Corporation.
  - 2. Bobrick Washroom Equipment, Inc.
  - 3. Approved equal.

**2.3 MATERIALS**

- A. Door, Panel, Seat and Pilaster Construction: Solid, high- density polyethylene (HDPE) panel material, not less than 1 inch thick, seamless, with eased edges, and with homogenous color and pattern throughout thickness of material.
  - 1. Colors and Finish: Charcoal, with orange peel as supplied by Santana Products, Inc. or equivalent product.
- B. Pilasters: Minimum of 1 inch thick, same construction and material as panels.
- C. Brackets (Fittings): Provide full length (of juncture) continuous brackets (single ear, double ear, tee, or corner as required for condition), anodized aluminum (6463-T5 alloy) for panel-to-pilaster, panel-to-panel, and pilaster-to-pilaster connections.
  - 1. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.
  - 2. Panel-to-wall connection (at top): Provide 1-1/2 by 1-1/2 by 1/8 inch anodized aluminum angle, 6463-T5 alloy.
- D. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum strip fastened to exposed bottom edges of solid-polymer components to prevent burning.
- E. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel finished to match hardware, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use hot-dip galvanized or other rust-resistant, protective-coated steel.

**2.4 HARDWARE AND ACCESSORIES**

- A. Hardware: Provide each toilet compartment with all vandal resistant hardware, door hinges, latch stop and keeper, and all necessary fittings and fasteners for a complete installation.
  - 1. Accessible doors shall comply with Regulatory Requirements, as per Article 2.1.

2. Hinges: Full height continuous piano type, adjustable to hold door open at any angle up to 90 degrees. Provide gravity type, spring-action cam type, or concealed torsion rod type to suit manufacturer's standards.
  - a. For Accessible doors, provide heavy duty outswing wrap-around hinges. Provide 1/ 2 inch clearance between door and pilaster, in closed position.
3. Latch and Keeper: Surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper.
  - a. Door strike and keeper shall be aluminum extrusion, 6463-T5 alloy, with bright dipped anodized finish with wrap around flanges, surface mounted and through-bolted to door with one-way sex- bolts. Provide full length (of juncture) continuous wall brackets per linear foot, for all panels-to- pilasters, pilasters-to-wall and panel-to-wall connection.
    - 1) Predrill wall brackets, with holes spaced a maximum of 13 inches along full length of each leg of bracket, with a hole 3 inch maximum from each end. Stagger holes in bracket legs, so that vertical spacing between holes is not more than 6 1/ 2 inches.
    - 2) Wall brackets shall be through-bolted to panels and pilasters with one-way sex- bolts.
  - b. Slide bolt and button: heavy aluminum with "tough-coat black" finish unless otherwise indicated.
    - 1) For Accessible doors, provide latch easily- operable.
4. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent door from hitting compartment-mounted accessories.
5. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors and entrance screen doors.
6. Door Pull: Manufacturer's standard unit at out-swinging doors. Provide units on both sides of doors at compartments indicated to be accessible.
7. Shower Hooks: Stainless steel with self- lubricating nylon 6/6 slides, unless otherwise as recommended by manufacturer.
- B. Headrail (Overhead Bracing): Aluminum extrusion, 6463-T5 Alloy, with bright dipped anodized finish in anti-grip configuration weighing minimum 1.188 lbs. per linear foot. Fasten Headrail to tops of pilasters and headrail brackets by thru-bolting with star-head security pin, stainless steel barrel bolts.
  1. Headrail Brackets: 18 gauge stainless steel.
- C. Anchorages and Fasteners: Manufacturer's Standard exposed fasteners.
  1. Reinforcement: Minimum 12 gauge galvanized steel sheet.
- D. Tapping Reinforcement: Minimum 14 gauge galvanized steel sheet.

## 2.5 FABRICATION

- A. Fabrication, General: Fabricate compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.
- B. Overhead-Braced Units: Provide galvanized steel supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.
- C. Wall-Hung Screens: Provide panel units 55 inch deep by 55 inch high of same construction and finish as compartment panels. Mount bottom at 14" above floor unless otherwise indicated.
- D. Doors: Unless otherwise indicated, provide 24-inch-wide in-swinging doors for standard toilet compartments and 36-inch-wide out-swinging doors with a minimum 32-inch-wide clear opening for compartments indicated to be accessible to people with disabilities.
- E. Shower Compartment Dividers: 76 inch high above shower base, unless otherwise shown on the Drawings.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.
  - 1. Confirm location and adequacy of blocking and supports required for installation.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.
  - 1. Maximum Clearances:
    - a. Pilasters and Panels: 1/2 inch.
    - b. Panels and Walls: 1 inch.

2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.
  - a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
  - b. Align brackets at pilasters with brackets at walls.
- B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels and adjust so tops of doors are parallel with overhead brace when doors are in closed position.
- C. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb and to resist lateral impact.
- D. Shower Seats mounted to Partitions: Secure to vertical panels with stainless steel 18 inch "L" brackets and tamper-proof sex- bolts.
  1. Seat to be secured to sustain a force of 300 lbs. at any point and from any direction, except sustain a downward force of 350 lbs.

#### 3.4 ADJUSTING

- A. Hardware Adjustment: Adjust and lubricate hardware according to manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

**END OF SECTION 10 21 13**

## **SECTION 10 22 13**

### **WIRE MESH PARTITIONS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

A. Section Includes:

1. Heavy-duty wire mesh partitions.
2. Framing, supports and doors.
3. Installation accessories.

B. Related Sections:

1. Section 05 50 00 "Metal Fabrications" for attachments not provided under this section.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, details, and attachments to other work.
  - 2. Indicate clearances required for operation of service windows and doors.
- C. Samples: 12-by-12-inch panel constructed of specified frame members and wire mesh. Show method of finishing members at intersections.
- D. Engineering Services Submittal: For wire mesh partitions and supports, submit design calculations sealed and signed by the qualified Contractor's Professional Engineer, licensed in the State of New York responsible for their preparation.
  - 1. Engineering services documentation shall be submitted to Commissioner for review and approval prior to any incorporation into the work.

1.7 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For Installer.
- B. Welding certificates.

1.8 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For wire mesh partition hardware to include in maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.
- C. Welding Qualifications: Qualify procedures according to the following:
  - 1. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

**1.10 DELIVERY, STORAGE, AND HANDLING**

- A. Deliver wire mesh items with cardboard protectors on perimeters of panels and doors and with posts wrapped to provide protection during transit and Project-site storage. Use vented plastic.
- B. Inventory wire mesh partition door hardware on receipt and provide secure lockup for wire mesh partition door hardware delivered to Project site.
  - 1. Tag each item or package separately with identification and include basic installation instructions with each item or package.
- C. Deliver keys to Commissioner at Substantial Completion.

**1.11 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of construction contiguous with wire mesh partitions by field measurements before fabrication.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Stainless Steel Wire Mesh Products: Subject to compliance with requirements, provide Delta 16 as supplied by GKD Metal Fabrics or comparable product from one of the following, as approved by the Commissioner:
  - 1. McNichols Co.
  - 2. Darby Wire Mesh.
  - 3. Or approved equal.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Engineering Services: Engage a qualified Professional Engineer licensed in the State of New York to design wire mesh partitions and supports for project application.
  - 1. Engineering Services shall include complete design calculations for wire mesh partitions and supports required for this project.
    - a. Indicate required design loads, including applicable live loads, wind loads, seismic loads, and dead loads and handling stresses during shipment and erection including loads from construction procedures.
    - b. Design calculations shall be based on Performance Requirements and product design criteria indicated
- B. Structural Performance: Wire mesh partitions and supports shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated, unless otherwise required by project and 2014 New York City Building Code.
  - 1. Concentrated load of 50 lbf applied horizontally on an area of 1 sq. ft. at any location on a panel.

2. Total load of 200 lbf applied uniformly over each panel.
  3. Concentrated load and total load need not be assumed to act concurrently.
- C. Seismic Performance: Wire mesh partitions and supports shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
1. Component Importance Factor: 1.0.

## 2.3 MATERIALS

- A. Stainless Steel Bars and Shapes: ASTM A276/A276M, Type 316/ 316L.
- B. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 316, stretcher-leveled standard of flatness.
- C. Stainless Steel Castings: ASTM A743/A743M.
- D. Panel-to-Panel Fasteners: Stainless steel bolts, nuts, and washers.
- E. Post-Installed Anchors: Capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.
1. Material Where Stainless Steel Is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.
- F. Power-Driven Fasteners: ICC-ES AC70.
- G. Seismic Bracing: Angles with legs not less than 1-1/4 inch wide, formed from 0.040-inch-thick, stainless steel sheet; with bolted connections and 1/4-inch-diameter bolts.

## 2.4 HEAVY-DUTY WIRE MESH PARTITIONS

- A. Wire Mesh Panels: Stainless steel angle frames with stainless steel wire mesh secured in frame; frame joints coped at corner and securely welded and pre-drilled holes for fasteners.
- B. Rigid Mesh: 0.105 inch (12 gage), Type 316 stainless steel wire, woven into 2 by 2 inch pattern, unless otherwise indicated.
1. Weight: 2.08 lbs. per sq. ft.
  2. Open Area: 64 percent.
  3. Frame Configuration: As indicated on drawings.
- C. Vertical and Horizontal Panel Framing: 1-1/2-by-3/4-by-1/8-inch, stainless steel channels; with holes for 3/8-inch-diameter bolts not more than 12 inches o.c.
- D. Horizontal Panel Stiffeners: Two stainless steel channels, 1 by 1/2 by 1/8 inch, bolted or riveted toe to toe through mesh.
- E. Top Capping Bars: 3-by-1-inch stainless steel channels.

- F. Posts for 90-Degree Corners: 1-1/2-by-1-1/2-by-1/8-inch, stainless steel angles or 2-by-2-by-0.075-inch stainless steel tubes, with holes for 3/8-inch-diameter bolts aligning with bolt holes in vertical framing; with 1/4-inch stainless steel base plates.
- G. Posts for Other-Than-90-Degree Corners: 2-inch-OD by 1/8-inch stainless steel pipe or round tube, with holes for 3/8-inch-diameter bolts aligning with bolt holes in vertical framing; with 1/4-inch stainless steel base plates.
- H. Adjustable Corner Posts: Two 1-1/2-by-3/4-by-1/8-inch stainless steel channels or 2-by-2-by-0.075-inch stainless steel tubes connected by stainless steel hinges at 36 inches o.c. attached to posts; with 1/4-inch-diameter bolt holes aligning with bolt holes in vertical framing; with 1/4-inch stainless steel base plates.
- I. Line Posts: 3-inch-by-4.1-lb or 3-1/2-by-1-1/4-by-1/8-inch stainless steel channels; with 1/4-inch stainless steel base plates.
- J. Three- and Four-Way Intersection Posts: 2-by-2-by-0.075-inch stainless steel tubes, with holes for 3/8-inch-diameter bolts aligned for bolting to adjacent panels; with 1/4-inch stainless steel base plates.
- K. Floor Shoes: Metal, not less than 2 inches high; sized to suit vertical framing, drilled for attachment to floor, and with set screws for leveling adjustment.
- L. Swinging Doors: Fabricated from same stainless steel mesh as partitions, with framing fabricated from 1-1/4-by-1/2-by-1/8-inch stainless steel channels or 1-1/4-by-5/8-by-0.080-inch stainless steel channels, banded with 1-1/4-by-1/8-inch flat stainless steel bar cover plates on four sides, and with 1/8-inch-thick angle strike bar and cover on strike jamb.
  - 1. Hardware: Refer to Section 08 70 00 "Finish Hardware."
  - 2. Inactive Leaf Hardware: Cane bolt at bottom and chain bolt at top.
- M. Accessories:
  - 1. Adjustable Filler Panels: 0.060-inch-thick stainless steel sheet, capable of filling openings from 2 to 12 inches.
  - 2. Wall Clips/ Brackets: Stainless steel sheet; allowing minimum 1 inch of adjustment.

## 2.5 FABRICATION

- A. General: Fabricate wire mesh items from components of sizes not less than those indicated. Use larger-sized components as recommended by wire mesh item manufacturer. Furnish bolts, hardware, and accessories required for complete installation with manufacturer's standard finishes.
  - 1. Fabricate wire mesh items to be readily disassembled.
  - 2. Welding: Weld corner joints of framing and grind smooth, leaving no evidence of joint.
- B. Wire Mesh Partitions: Fabricate wire mesh partitions with cutouts for pipes, ducts, beams, and other items indicated. Finish edges of cutouts to provide a neat, protective edge.
  - 1. Mesh: Securely clinch or weld mesh to framing.

2. Framing: Fabricate framing with mortise and tenon corner construction.
  - a. Provide horizontal stiffeners as indicated or, if not indicated, as required by panel height.
  - b. Weld horizontal stiffeners to vertical framing.
3. Fabricate three- and four-way intersections using connecting clips and fasteners.
4. Fabricate partition and door framing with slotted holes for connecting adjacent panels.
5. Fabricate wire mesh partitions with 3 to 4 inches of clear space between finished floor and bottom horizontal framing, unless otherwise indicated.
6. Doors: Align bottom of door with bottom of adjacent panels.
  - a. For doors that do not extend full height of partition, provide transom over door, fabricated from same mesh and framing as partition panels.
7. Hardware Preparation: Mortise, reinforce, drill, and tap doors and framing as required to install hardware.

## 2.6 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
  1. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- C. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.
- D. Finish: Directional Satin No. 4 or Dull Satin No. 6, as selected by the Commissioner.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Examine floors for suitable conditions where wire mesh items will be installed.
- C. Examine walls to which wire mesh items will be attached for properly located blocking, grounds, and other solid backing for attachment of support fasteners.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Anchor wire mesh partitions to floor with 3/8-inch-diameter postinstalled expansion anchors at 12 inches o.c. through anchor clip or floor shoes located at each post and corner. Adjust wire mesh partition posts in floor shoes to achieve level and plumb installation.
- B. Anchor wire mesh partitions to walls at 12 inches o.c. through back corner panel framing and as follows:
  - 1. For concrete and solid masonry anchorage, use expansion anchors.
  - 2. For hollow masonry anchorage, use toggle bolts.
  - 3. For steel-framed gypsum board assemblies, fasten brackets directly to framing or concealed reinforcements using self-tapping screws of size and type required to support structural loads.
- C. Secure top capping bars to top framing channels with 1/4-inch-diameter "U" bolts spaced not more than 28 inches o.c.
- D. Provide line posts at locations indicated or, if not indicated, as follows:
  - 1. On each side of sliding-door openings.
  - 2. For partitions that are 7 to 9 feet high, spaced at 15 to 20 feet o.c.
  - 3. For partitions that are 10 to 12 feet high, located between every other panel.
  - 4. For partitions that are more than 12 feet high, located between each panel.
- E. Provide seismic supports and bracing as indicated or, if not indicated, as recommended by manufacturer and as required for stability, extending and fastening members to supporting structure.
- F. Where standard-width wire mesh partition panels do not fill entire length of run, provide adjustable filler panels to fill openings.
- G. Install doors complete with door hardware.
- H. Install service windows complete with window hardware.
- I. Weld or bolt sheet metal bases to wire mesh partitions and doors where indicated.
- J. Bolt accessories to wire mesh partition framing.

### 3.4 ADJUSTING, CLEANING, AND PROTECTION

- A. Adjust doors to operate smoothly and easily, without binding or warping. Adjust hardware to function smoothly. Confirm that latches and locks engage accurately and securely without forcing or binding.
- B. Remove and replace defective work, including doors and framing that are warped, bowed, or otherwise unacceptable.

- C. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.
- D. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
- E. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and restore galvanizing to comply with ASTM A 780/A 780M.
- F. Protect finishes of from damage during construction period with material approved by partition fabricator. Remove protective covering at time of Substantial Completion.
- G. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish items or provide new.

**END OF SECTION 10 22 13**

**SECTION 10 26 00**

**WALL AND DOOR PROTECTION**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Corner guards.
  2. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

#### 1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For each type of wall and door protection showing locations and extent.
  - 1. Include plans, elevations, sections, and attachment details.
- C. Samples: For each exposed product and for each color and texture specified, 12 inches long.

#### 1.7 INFORMATIONAL SUBMITTALS

- A. Product certificates.
- B. Material certificates.
- C. Sample warranty.

#### 1.8 CLOSEOUT SUBMITTALS

- A. Maintenance data.

#### 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

#### 1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to restore or replace components of wall- and door-protection units that fail in materials or workmanship within specified warranty period.
  - 1. Warranty Period: Five years from date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Source Limitations: Obtain wall- and door-protection products of each type from single source from single manufacturer.

#### 2.2 CORNER GUARDS

- A. Surface-Mounted, Metal Corner Guards: Fabricated as one piece from formed or extruded metal with formed edges; with 90- or custom angled corner as indicated on drawings.

1. Basis- of Design, Product: Subject to compliance with requirements, provide Model CO- 8 as supplied by C/S Acrovyn or comparable product from one of the following, as approved by the Commissioner:
    - a. Inpro Corporation.
    - b. Korogard Wall Protection Systems; a division of RJF International Corporation.
    - c. Approved equal.
  2. Material: Stainless-steel sheet, Type 304 or 430.
    - a. Thickness: Minimum 0.0625 inch (16 gage).
    - b. Finish: Directional satin, No. 4.
  3. Wing Size: Nominal 3-1/2 by 3-1/2 inches.
  4. Corner Radius: 1/8 inch.
  5. Height: Top of base to 88 inches above finished floor.
  6. Surface- Mounting: Torx pin- head, security screws through factory-drilled mounting holes at 12 inches on center.
- B. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened.

### **PART 3 - EXECUTION**

#### **3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

#### **3.2 INSTALLATION**

- A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
- B. Mounting Heights: Install wall and door protection in locations indicated on Drawings.
- C. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.
1. Provide anchoring devices and suitable locations to withstand imposed loads.
  2. Where splices occur in horizontal runs of more than 20 feet, splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches apart.
  3. Adjust end and top caps as required to ensure tight seams.

**END OF SECTION 10 26 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 10 28 00**

**TOILET AND BATH ACCESSORIES**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:

1. Public-use washroom accessories.
2. Public-use shower room accessories.
3. Warm-air dryers.
4. Childcare accessories.
5. Underlavatory guards.
6. Custodial accessories.

- B. Related Sections:

1. Section 10 21 13 "Toilet Compartments" for shower seats and similar accessories mounted on toilet partitions.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

- B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.6 COORDINATION

- A. Coordinate requirements for blocking, reinforcing, and other supports concealed within walls.

#### 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Samples: Full size, for each exposed product and for each finish specified.

#### 1.8 INFORMATIONAL SUBMITTALS

- A. Sample Warranty: For manufacturer's special warranty.

#### 1.9 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For accessories to include in maintenance manuals.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

#### 1.11 WARRANTY

- A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to restore or replace mirrors that fail in materials or workmanship within specified warranty period.
  1. Failures include, but are not limited to, visible silver spoilage defects.
  2. Warranty Period: 15 years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

### 2.2 MANUFACTURERS

- A. Basis- of Design, Toilet and Bath Accessory Products: Subject to compliance with requirements, provide products as indicated or comparable product from one of the following, as approved by the Commissioner:

- 1. American Specialties, Inc.
- 2. Bradley Corp
- 3. Approved equal.

- B. Toilet and Bath Accessories for Public-Use:

- 1. Toilet Tissue Holder (BA- 4):

- a. Basis-of-Design, Product: B-4288 by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
- b. Material and Finish: Stainless steel, No. 4 finish (satin).

- 2. Paper Towel Dispenser and Waste Receptible (BA- 5):

- a. Basis-of-Design ,Product: B-3949, 18 gallon by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.

- 3. Warm-Air Dryers (BA- 9):

- a. Basis-of-Design, Product: Model DXM5- 973 by AirMax Series or equivalent product from approved manufacturers listed.
- b. Surface mounted, stainless steel cover, push button activated, 115-volt, 20 amp, 2300 watts.

- 4. Grab Bar (BA- 1):

- a. Basis-of-Design, Product: "B-6806 Series" Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.

- 5. Sanitary Napkin Disposal Unit (BA- 6):

- a. Basis-of-Design, Product: Provide "B-270" Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.
- b. Material and Finish: Stainless steel, No. 4 finish (satin).

- 6. Mirror Unit (BA- 2):

- a. Basis-of-Design, Product: Series B-290- 2436, mirror with angle frame by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.

7. Mirror Unit ADA (BA- 2):
  - a. Basis-of-Design, Product: Series B-293- 2436, mirror with angle frame by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
8. Childcare Accessories (BA-13):
  - a. Basis-of-Design, Product: Provide “KB110- SSWM by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
  - b. Baby- changing Station: Horizontal type, stainless steel.
  - c. Material and Finish: Stainless steel, No. 4 finish (satin).
- C. Toilet and Bath Accessories for Private-Use:
  1. Paper Towel Dispenser and Waste Receptible (BA- 5):
    - a. Basis-of-Design, Product: B-3949, 18 gallon by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
  2. Medicine Cabinet (BA-8):
    - a. Basis-of-Design, Product: B-398, recessed” by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
  3. Soap Dispenser (BA-7):
    - a. Basis-of-Design, Product: B-2111 by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
  4. Mirror Unit and Shelf (BA-3):
    - a. Basis-of-Design, Product: Series B-292- 1836; mirror with angle frame by Bobrick Washroom Equipment, Inc. or equivalent product from approved manufacturers listed.
  5. Sanitary Napkin Disposal Unit (BA-6):
    - a. Basis-of-Design, Product: B-270; Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.
    - b. Material and Finish: Stainless steel, No. 4 finish (satin).
  6. Shower Rod Extra Heavy Duty and Accessories (BA-12):
    - a. Basis-of-Design, Product: B-6047; Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.
    - b. Shower Curtain Hooks: Provide “B-204-1 1” and 1-1/4” dia.” Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.
    - c. Shower Curtain: Provide “6 Gauge parquet, 48” wide x 84” long” Gary Manufacturing or equivalent product from approved manufacturers listed.

7. Shower Seat (BA- 11):
  - a. Basis-of-Design, Product: 956-30- left hand; Bradley Corporation or equivalent product from approved manufacturers listed.
8. Coat Hook (mounted on rear wall of toilet stall) (BA-10):
  - a. Basis-of-Design Product: Provide “B-211 wall mounted Coat Hook” Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.
  - b. Description: Single-prong and neoprene bumper unit.
  - c. Material and Finish: Polished chrome-plated brass.
9. Shelf with Mop and Broom Holder:
  - a. Basis-of-Design, Product: Provide “B-239-34” Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.
  - b. Provide one in each custodial closet.
10. Locker Room Dressing Mirror:
  - a. Basis-of-Design, Product: 290- 18 by 60 inch; wall mounted Mirror Bobrick Washroom Equipment, Inc or equivalent product from approved manufacturers listed.

## 2.3 MATERIALS

- A. Stainless Steel: ASTM A 666, Type 304, 0.0312-inch minimum nominal thickness, unless otherwise indicated.
- B. Galvanized Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.
- C. Fasteners: Screws, bolts, and other devices of same material as accessory unit and tamper-and-theft resistant where exposed, and of galvanized steel where concealed.
- D. Chrome Plating: ASTM B 456, Service Condition Number SC 2 (moderate service).
- E. Mirrors: ASTM C 1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.
- F. ABS Plastic: Acrylonitrile-butadiene-styrene resin formulation.

## 2.4 UNDERLAVATORY GUARDS

- A. Manufacturers: Subject to compliance with requirements, provide the following or equal as approved by the Commissioner by one of the following:
  1. LavShiel as supplied by Truebro, Inc.
- B. Other Manufacturers:
  1. TCI Products.
  2. Plumberex Specialty Products, Inc.
  3. Approved equal.

- C. Description: Rigid high-impact, stain resistant PVC guard, that prevent direct contact with and burns from piping, and allow service access by removing coverings.
- D. Color and Finish: China white, fine haircell.

## 2.5 FABRICATION

- A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
- B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to the Commissioner.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
- B. Grab Bars: Install to withstand a downward load of at least 250 lbf, when tested according to method in ASTM F 446.

### 3.3 ADJUSTING AND CLEANING

- A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
- B. Remove temporary labels and protective coatings.
- C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

**END OF SECTION 10 28 00**

**SECTION 10 28 13****DETENTION TOILET ACCESSORIES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Grab bars.
  2. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 COORDINATION

- A. Coordinate installation of anchorages for detention toilet accessories. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in adjoining construction. Deliver such items to Project site in time for installation.
- B. Coordinate size and location of recesses in wall construction to receive recessed detention toilet accessories.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.
- C. Samples: For each detention toilet accessory indicated.

1.8 INFORMATIONAL SUBMITTALS

- A. Examination reports documenting inspection of substrates, areas, and conditions.
- B. Anchor inspection reports documenting inspections of built-in and cast-in anchors.
- C. Field quality-control certification signed by Contractor.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.10 WARRANTY

- A. Special Warranty: Manufacturer agrees to restore or replace detention toilet accessories that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures including deflection exceeding 1/4 inch.
    - b. Faulty operation of hardware.
    - c. Deterioration of metals, metal finishes, and other materials.
  - 2. Warranty Period: Two years from date of Substantial Completion.

**PART 2 - PRODUCTS****2.1 MANUFACTURERS**

- A. Products: Subject to compliance with requirements, provide products as supplied by Bobrick Washroom Equipment, Inc or comparable product from one of the following, as approved by the Commissioner:
1. American Specialties, Inc.
  2. Bradley Corp
  3. PSI LLC.
  4. Approved equal.

**2.2 DETENTION GRAB BARS**

- A. Grab Bars: 1-1/2 inches in diameter; formed from 0.038-inch-thick, stainless-steel tubing, with 3-inch-diameter flanges formed from 0.125-inch-thick, stainless steel. Closure plates formed from 0.125-inch-thick, stainless steel. All-welded construction.
1. Length: As indicated on Drawings.
  2. Mounting: Front mounting with security fasteners.
- B. Materials:
1. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666 or ASTM A240/A240M, austenitic stainless steel, Type 304.
  2. Stainless-Steel Tubing: ASTM A1016/A1016M, austenitic stainless steel, Type 304, seamless.
- C. Stainless-Steel Finish: Directional Satin Finish: No. 4.

**2.3 STAINLESS-STEEL FINISHES**

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.
1. Run grain of directional finishes with long dimension of each piece.
  2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

**2.4 FABRICATION**

- A. Coordinate dimensions and attachment methods of detention toilet accessories with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
- B. Shear and punch metals cleanly and accurately. Remove burrs.
- C. Form edges and corners to be free of sharp edges and rough areas. Fold back exposed edges of unsupported sheet metal to form a 1/2-inch-wide hem on the concealed side, or ease edges to a radius of approximately 1/32 inch and support with concealed stiffeners.

- D. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Weld corners and seams continuously to comply with referenced AWS standard.
- F. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space anchoring devices to secure detention toilet accessories rigidly in place and to support expected loads.
- G. Cut, reinforce, drill, and tap detention toilet accessories to receive hardware, security fasteners, and similar items.
- H. Form exposed work true to line and level with accurate angles and surfaces. Grind off and ease edges unless otherwise indicated.
- I. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.

## 2.5 SECURITY FASTENERS

- A. Operable only by tools produced by fastener manufacturer or other licensed fabricator for use on specific type of fastener.

## 2.6 SECURITY SEALANTS

- A. Epoxy Security Sealants: Manufacturer's standard, nonsag, tamper-resistant sealant for joints with no movement.
- B. Products: Subject to compliance with requirements, provide products by one of the following:
  - 1. BASF Corp. - Construction Chemicals.
  - 2. Euclid Chemical Company (The); an RPM company.
  - 3. Pecora Corporation.
  - 4. Approved equal.

## 2.7 ACCESSORIES

- A. Concealed Bolts: ASTM A307, Grade A unless otherwise indicated.

# PART 3 - EXECUTION

## 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

## 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of detention toilet accessories.

- B. Examine roughing-in for embedded and built-in anchors to verify actual locations of detention toilet accessory connections before detention toilet accessory installation.
- C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of detention toilet accessories.
- D. Inspect built-in and cast-in anchor installations before installing detention toilet accessories to verify that anchor installations comply with requirements. Prepare inspection reports.
  - 1. Remove and replace anchors where inspections indicate that they do not comply with specified requirements. Reinspect after restoration or replacements are made.
  - 2. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.
- E. Verify locations of detention toilet accessories.
- F. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing detention toilet accessories to in-place construction. Include threaded fasteners for inserts, security fasteners, and other connectors.
- B. Provide temporary bracing or anchors in formwork for items that are to be built into construction.
- C. Apply epoxy security sealant around perimeter in a continuous ribbon on back of detention toilet accessories before installation.
- D. Security Fasteners: Install detention toilet accessories using security fasteners with head style appropriate for installation requirements, strength, and finish of adjacent materials. Provide stainless-steel security fasteners in stainless-steel materials.
- E. Grab Bars: Install to withstand a downward load of not less than 250 lbf per ASTM F446.

### 3.4 FIELD QUALITY CONTROL

- A. Inspect installed products to verify compliance with requirements. Prepare inspection reports and indicate compliance with and deviations from the Contract Documents.
- B. Remove and replace detention work where inspections indicate that work does not comply with specified requirements.
- C. Perform additional inspections to determine compliance of replaced or additional work. Prepare inspection reports.
- D. Prepare field quality-control certification that states installed products and their installation comply with requirements in the Contract Documents.

### 3.5 ADJUSTING AND CLEANING

- A. Remove temporary labels and protective coatings.

- B. Touchup Painting: Immediately after erection, clean bolted connections and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

**END OF SECTION 10 28 13**

**SECTION 10 44 13**

**FIRE PROTECTION CABINETS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Fire-protection cabinets for portable fire extinguishers.
  2. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 COORDINATION

- A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
- B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

#### 1.6 PREINSTALLATION CONFERENCE

- A. Preinstallation Conference: Conduct conference at Project site.

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: For fire-protection cabinets.
- C. Samples: For each type of exposed finish required.

#### 1.9 CLOSEOUT SUBMITTALS

- A. Maintenance data.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

### PART 2 - PRODUCTS

#### 2.1 PERFORMANCE REQUIREMENTS

- A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.
  - 1. Comply with the 2014 New York City Building Code.
- B. Accessibility Standard: Comply with applicable provisions of ICC A117.1.

#### 2.2 FIRE-PROTECTION CABINETS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following, as approved by the Commissioner:
  - 1. JL Industries, Inc.; a division of the Activar Construction Products Group.
  - 2. Larsens Manufacturing Company.
  - 3. Potter Roemer LLC.

4. Approved equal.
- B. Cabinet Type: Suitable for fire extinguisher as approved by the Commissioner.
- C. Cabinet Construction: Nonrated, unless required by partition fire- resistance rating.
  1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.043-inch-thick cold-rolled steel sheet lined with minimum 5/8-inch-thick fire-barrier material. Provide factory-drilled mounting holes.
- D. Cabinet Material: Cold-rolled steel sheet.
- E. Recessed Cabinet:
  1. Trimless with Concealed Flange: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box, to act as drywall bead.
  2. Trimless with Hidden Flange: Flange of same metal and finish as box overlaps surrounding wall finish and is concealed from view by an overlapping door.
  3. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
- F. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
  1. Square-Edge Trim: 1-1/4- to 1-1/2-inch backbend depth.
  2. Rolled-Edge Trim: 2-1/2-inch backbend depth.
- G. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim.
- H. Cabinet Trim Material: Same material and finish as door.
- I. Door Material: Stainless- steel sheet.
- J. Door Style: Vertical or horizontal duo panel with frame.
- K. Door Glazing: Tempered float glass (clear).
- L. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
- M. Accessories:
  1. Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
  2. Lettered Door Handle: One-piece, cast-iron door handle with the word "FIRE" embossed into face.
  3. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.

4. Identification: Lettering complying with the Regulatory Requirements for letter style, size, spacing, and location. Locate as directed by Commissioner.
  - a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
    - 1) Location: Applied to cabinet door or glazing, as indicated on Drawings.
    - 2) Application Process: Silk-screened.
    - 3) Lettering Color: Red.
    - 4) Orientation: Vertical, unless otherwise indicated on Drawings.
5. Alarm: Manufacturer's standard alarm that actuates when fire-protection cabinet door is opened and that is powered by low voltage, complete with transformer.

**N. Materials:**

1. Stainless Steel: ASTM A 666, Type 304.
  - a. Finish: No. 4 directional satin finish, unless otherwise indicated.
2. Tempered Float Glass: ASTM C1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

**2.3 FABRICATION**

- A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

**PART 3 - EXECUTION**

**3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine walls and partitions for suitable framing depth and blocking where cabinets will be installed.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 PREPARATION**

- A. Prepare recesses for fire-protection cabinets as required by type and size of cabinet and trim style.

**3.4 INSTALLATION**

- A. Install fire-protection cabinets in locations and at mounting heights indicated or, if not indicated, at heights in compliance with the 2014 New York City Building Code.

- B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
- C. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.

### 3.5 ADJUSTING AND CLEANING

- A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
- B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
- C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
- D. Touch up marred finishes or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.
- E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful restoration by finish touchup or similar minor restoration procedures.

**END OF SECTION 10 44 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 10 51 13****METAL LOCKERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Welded lockers.
  2. Locker benches.
  3. Installation accessories.
- B. Related Sections:
1. Division 26 – Electrical sections for connection to duplex outlets that are part of lockers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 COORDINATION**

- A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

**1.6 PREINSTALLATION MEETINGS**

- A. Preinstallation Conference: Conduct conference at Project site.

**1.7 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.8 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: For metal lockers.
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include locker identification system and numbering sequence.
- C. Samples: For each color specified.

**1.9 INFORMATIONAL SUBMITTALS**

- A. Qualification Data: For Installer.
- B. Sample Warranty: For special warranty.

**1.10 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For adjusting, restoring and replacing locker doors and latching mechanisms to include in maintenance manuals.

**1.11 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

**1.12 DELIVERY, STORAGE, AND HANDLING**

- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.

**1.13 FIELD CONDITIONS**

- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

**1.14 WARRANTY**

- A. Special Warranty: Manufacturer agrees to restore or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Structural failures.
    - b. Faulty operation of latches and other door hardware.
  - 2. Damage from deliberate destruction and vandalism is excluded.
  - 3. Warranty Period for Welded Metal Lockers: Lifetime from date of Substantial Completion.

**PART 2 - PRODUCTS**

**2.1 MANUFACTURERS**

- A. Source Limitations: Obtain metal lockers, locker benches, and accessories from single source from single locker manufacturer.
- B. Products: Subject to compliance with requirements, provide products by one of the following.
  - 1. Spacesaver. Inc.
  - 1. Penco Products, Inc.
  - 2. Lyon Workspace Products.
  - 3. Republic Storage Systems Company.
  - 4. Approved equal.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions ICC A117.1 and the 2014 New York City Building Code.

**2.3 MATERIALS**

- A. Cold-Rolled Steel Sheet: ASTM A 1008, Commercial Steel (CS) Type B, suitable for exposed applications.

- B. Extruded Aluminum: ASTM B 221, alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated.
- C. Fasteners: Zinc- or nickel-plated steel, slotless-type exposed bolt heads, and self-locking nuts or lock washers for nuts on moving parts.
- D. Anchors: Select material, type, size, and finish required for secure anchorage to each substrate.
  - 1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance.
  - 2. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

## 2.4 ALL- WELDED METAL LOCKERS

- A. Wardrobe Lockers (L-1): 8-inch high by 24-inch deep sloped top on 64-inch high by 24-inch deep on 18-inch high by 36-inch deep locking drawer base with benchtop. Total height 92 inches to high point of slope top. Configuration as indicated on drawings.
  - 1. Body Assembled by welding body components together. Fabricate from unperforated, cold-rolled steel sheet with thicknesses as follows:
    - a. Tops: 16 gauge.
    - b. Bottoms: 16 gauge.
      - 1) Provide two 16 gauge box braces across the entire length of the bottom panel spaced evenly apart welded to the underside of the bottom panel.
    - c. Backs and Sides: 22 gauge.
    - d. Shelves: 22 gauge, with double bend at front and single bend at sides and back.
      - 2) Provide two 22 gauge box braces across the entire length of the shelf panel spaced evenly apart welded to the underside of the shelf panel.
    - e. Base Closure: 18 gauge.
  - 2. Frames: Channel formed; fabricated from 16 gauge, cold-rolled steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
    - a. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
  - 3. Doors: Door of one-piece; fabricated from 16 gauge with 24 gauge reinforcing panel, cold-rolled steel sheet; formed into channel shape with double bend at vertical edges, and with right-angle single bend at horizontal edges.
  - 4. Door Frames: Formed angle, 1 inch by 1 inch, 11 gauge.
  - 5. Door Style: Vented panel with Louvered Vents: Not less than six louver openings at top and bottom for single-tier.
  - 6. Hinges: Self-closing; welded to door and attached to door frame with not less than 2 factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
    - a. Continuous Hinges: Manufacturer's standard, steel continuous hinge.

7. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry resistant, eye for padlock.
    - a. Multipoint Latching: Finger-lift latch control designed for use padlocks, minimum three point latching.
      - 1) Latching Mechanism: Manufacturer's standard rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.
  8. Equipment: Equip each metal locker with identification plate and the following, unless otherwise indicated:
    - a. Uniform Lockers: Hat shelf, coat rod, 6 single prong wall hooks (2 on each wall), 8'x10" mirror.
    - b. Wood bench with drawer.
    - c. Sloped top.
    - d. Boot tray.
    - e. Document holder.
    - f. Duplex outlet.
  9. Accessories:
    - a. Filler Panels: Fabricated from 16 gauge, cold-rolled steel sheet.
  10. Finish: Baked enamel.
    - b. Color(s): As indicated on drawings.
- B. Single Tier Lockers (L-2): Single tier locker 72 inch high on 6 inch closed base. Sizes and configuration as indicated on drawings
1. Body Assembled by welding body components together. Fabricate from unperforated, cold-rolled steel sheet with thicknesses as follows:
    - a. Tops: 16 gauge.
    - b. Bottoms: 14 gauge
    - c. Backs and Sides: 16 gauge.
    - d. Shelves: 18 gauge, with double bend at front and single bend at sides and back.
    - e. Base Closure: 16 gauge.
  2. Frames: Channel formed; fabricated from 16 gauge, cold-rolled steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
  3. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.
  4. Base: 6 inches high; fabricated from 11 gauge steel sheet; welded to bottom of locker. Included reinforcement and support required for locker.
  5. Doors: Door of one-piece; fabricated from 14 gauge with 24 gauge reinforcing panel, cold-rolled steel sheet; formed into channel shape with double bend at vertical edges, and with right-angle single bend at horizontal edges.

6. Door Frames: Formed angle, 1 inch by 1 inch, 11 gauge.
  7. Door Style: Vented panel as follows:
    - a. Louvered Vents: Not less than six louver openings at top and bottom for single-tier.
  8. Hinges: Self-closing; welded to door and attached to door frame with not less than 2 factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
    - a. Continuous Hinges: Manufacturer's standard, steel continuous hinge.
  9. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry resistant, eye for padlock.
    - a. Multipoint Latching: Finger-lift latch control designed for use padlocks.
    - b. Latching Mechanism: Manufacturer's standard rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.
  2. Equipment: Equip each metal locker with identification plate and the following, unless otherwise indicated:
    - a. Uniform Lockers: Hat shelf, coat rod, 6 single prong wall hooks (2 on each wall), 8"x10" mirror.
  3. Accessories:
    - a. Filler Panels: Fabricated from 16 gauge, cold-rolled steel sheet.
  4. Finish: Baked enamel.
    - a. Color: As indicated on drawings.
  10. Refer to diagram at the end of this section.
- C. Double Tier Lockers (L3): Double tier locker 72 inch high on 6 inch closed base.
1. Body: Assembled by welding body components together. Fabricate from unperforated, cold-rolled steel sheet with thicknesses as follows:
    - a. Tops and Sides: 16 gauge.
    - b. Bottoms: 14 gauge.
    - c. Backs: 16 gauge.
    - d. Shelves: 18 gauge, with double bend at front and single bend at sides and back.
    - e. Base Closure: 16 gauge.
  2. Frames: Channel formed; fabricated from 16 gauge cold-rolled steel sheet; lapped and factory welded at corners; with top and bottom main frames factory welded into vertical main frames. Form continuous, integral door strike full height on vertical main frames.
    - a. Cross Frames between Tiers: Channel formed and fabricated from same material as main frames; welded to vertical main frames.

3. Base: 6 inches high; fabricated from 11 gauge steel sheet; welded to bottom of locker. Included reinforcement and support required for locker.
4. Doors: One-piece; fabricated from 14 gauge, cold-rolled steel sheet; formed into channel shape with double bend at vertical edges, and with right-angle single bend at horizontal edges.
  - a. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches wide; welded to inner face of doors.
5. Door Frames: Formed angle, 1 inch by 1 inch, 11 gauge.
6. Door Style: Vented panel as follows:
  - a. Louvered Vents: Not less than three louver openings at top for double-tier lockers.
7. Hinges: Self-closing; welded to door and attached to door frame with not less than 2 factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
  - a. Hinges: Manufacturer's standard, steel continuous or knuckle type.
8. Recessed Door Handle and Latch: Stainless-steel cup with integral door pull, recessed so locking device does not protrude beyond face of door; pry resistant eye for padlock.
  - a. Multipoint Latching: Finger-lift latch control designed for use padlocks.
    - 1) Latching Mechanism: Manufacturer's standard rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.
9. Equipment: Equip each metal locker with identification plate and the following, unless otherwise indicated:
  - a. Double-Tier Units for Civilian Lockers: One coat rod in each tier.
10. Accessories:
  - a. Closures: Vertical-end type.
11. Filler Panels: Fabricated from 16 gauge, cold-rolled steel sheet.
12. Finish: Baked enamel.
  - a. Color: As indicated on drawings.

## **2.5 LOCKER ROOM BENCHES**

- A. Bench Tops: Manufacturer's standard 1-piece units 9 inch wide by 2 inch thick, with rounded corners and edges, fabricated from laminated maple with one coat of clear sealer on all surfaces, and two coats of clear lacquer on top and sides.
- B. Freestanding Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top, complete with fasteners and anchorage, and as follows

1. Freestanding Isosceles Trapezoid Base: 1/4-inch-thick by 3-inch-wide anodized aluminum bar stock, shaped into isosceles trapezoidal form; with nonskid rubber pads at bottom. Provide minimum two pedestals for each bench. Maximum spacing 6 feet.
  2. Size: 14 inches wide and 16-1/2 inches high.
- C. Custom Bench Sizes: Length and width as indicated on the Drawings.
1. Stain Color: As selected by the Commissioner.

## 2.6 FABRICATION

- A. General: Fabricate metal lockers square, rigid, and without warp; with metal faces flat and free of dents or distortion. Make exposed metal edges free of sharp edges and burrs, and safe to touch.
1. Form body panels, doors, shelves, and accessories from one-piece steel sheet, unless otherwise indicated.
  2. Provide fasteners, filler plates, supports, clips, and closures as required for a complete installation.
- B. Unit Principle: Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.
- C. All-Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections, with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds flush.
- D. Hooks: Manufacturer's standard ball-pointed type, aluminum or steel; zinc plated.
- E. Identification Plates: Manufacturer's standard etched, embossed, or stamped aluminum plates; with numbers and letters at least 3/8 inch high.
- F. Continuous Sloping Tops: Fabricated in lengths as long as practicable, without visible fasteners at splice locations; finished to match lockers.
1. Sloped top corner fillers, mitered.
- G. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip joint filler angle formed to receive filler panel.

## 2.7 STEEL SHEET FINISHES

- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- B. Factory finish steel surfaces and accessories except stainless-steel and chrome-plated surfaces.
- C. Surface Preparation: Clean surfaces of dirt, oil, grease, mill scale, rust, and other contaminants that could impair paint bond. Use manufacturer's standard methods.
- D. Baked-Enamel Finish: Immediately after cleaning, pretreating, and phosphatizing, apply manufacturer's standard thermosetting baked-enamel finish. Comply with paint manufacturer's written instructions for application, baking, and minimum dry film thickness.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
  - 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 INSTALLATION**

- A. General: Install level, plumb, and true; shim as required, using concealed shims.
  - 1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches o.c. Install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion, using concealed fasteners.
  - 2. Anchor single rows of metal lockers to walls near top and bottom of lockers.
  - 3. Anchor back-to-back metal lockers to floor.
- B. All-Welded Metal Lockers: Connect groups of all-welded metal lockers together with standard fasteners, with no exposed fasteners on face frames.
- C. Equipment and Accessories: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
  - 1. Attach hooks with at least two fasteners.
  - 2. Attach door locks on doors using security-type fasteners.
  - 3. Identification Plates: Identify metal lockers with identification indicated on Drawings.
    - a. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
  - 4. Attach filler panels with concealed fasteners. Locate fillers panels where indicated on Drawings.
  - 5. Attach sloping top units to metal lockers, with closures at exposed ends.
- D. Freestanding Locker Benches: Place benches in locations indicated on the Drawings.

**3.4 ADJUSTING, CLEANING, AND PROTECTION**

- A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding.
- B. Protect metal lockers and benches from damage, abuse, dust, dirt, stain, or paint. Do not permit metal locker use during construction.

- C. Touch up marred finishes or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal locker manufacturer.

**END OF SECTION 10 51 13**

**SECTION 10 75 00****FLAGPOLES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Aluminum flagpoles as shown on drawings and specified with components as needed for complete installation.

B. Related Sections:

1. Section 03 30 00 "Cast-in-Place Concrete"
2. Section 26 56 00 "Exterior Lighting"
3. Section 32 05 16 "Aggregate Materials"
4. Section 32 14 13 "Precast Concrete Unit Pavers"

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.6 PERFORMANCE

- A. Structural Performance: Provide flagpoles capable of withstanding the effects of wind loads as determined according to NAAMM FP 1001-07, "Guide Specifications for Design of Metal Flagpoles" for the site's region.

## 1.7 SUBMITTALS

- A. Product Data: Submit manufacturer's technical data and standard installation instructions.
- B. Shop Drawings: Show general layout, jointing, anchorage, support systems, and accessories.
- C. Samples: Finish samples for each finished metal used on flagpoles, as may be required.

## 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Deliver, handle, and store materials in accordance with manufacturer's instructions.
- C. Obtain each flagpole as a complete unit from manufacturer including fittings, accessories, bases, and anchorage devices.
- D. Drawings and installation plans to be reviewed by Commissioner.

## 1.9 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Spiral wrap flagpoles with a heavy Kraft paper or other lightweight wrapping and enclose in a hard fiber tube or other protective means. Store bare flagpoles in a dry location, protected from the weather and moisture.
- B. Ship to project site in one piece. If more than one piece is necessary, provide snug fitting precision joints with self-aligning, internal splicing sleeve arrangements for weather tight, hairline field joints.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- A. Aluminum flagpole with concealed internal halyard system and vandal proof lockable door, with components as needed for complete installation. Fabricated from seamless, extruded tubing complying with ASTM B 221, Alloy 6063-T6, having a tensile strength not less than 30,000 psi with a yield point of 25,000 psi. Heat treat after fabrication to comply with ASTM B 597, Temper T6.
- B. Dimensions:

1. Flagpole mounting height – 35'-0"
  2. Butt diameter – 8"
  3. Top Diameter – 4"
  4. Wall thickness – 0.188"
  5. Set depth – 4'-0"
- C. Max wind load with flag - 115 Mph or determined according to NAAM FP 1001-07, "Guide Specifications for Design of Metal Flagpoles, whichever is more stringent.
- D. Internal Halyard Winch System: Provide one (1) complete internal halyard 1/8" stainless steel wire cable assembly with plastic coated counterweight and beaded sling assembly.
- E. Halyard Flag Snaps: Provide two (2) stainless steel swivel snap hooks with neoprene covers.
- F. Light Fixtures: One (1) Triple upright/downlight fixture mount welded to pole, one per flagpole, as specified in Section 26 56 00 and indicated in the lighting drawings.
- G. Metal Finish: Natural Satin Finish – Provide directional-sanded satin finish (AA-M33): buff complying with AA-M20.
- H. Manufacturer
1. Basis-of-Design Product: Subject to Compliance with requirements provided; American Flagpole, 26252 Hillman Highway, Abingdon, VA 24210 (855) 530-4078.
    - a. Flagpoles Etc. 407 Hadley St., Holly, MI 48442, 1888-648-1804
    - b. Johnson Bros. Metal Forming CO., 5744 McDermott Drive, Berkeley, IL 60163-1102, 708-449-7050
    - c. Or approved equal
- I. Mounting: Ground sleeve will be set in foundation utilizing 3000 psi concrete, per manufacturer's instructions.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 INSTALLATION

- A. General: Install flagpoles where shown and according to shop drawings and manufacturer's written instruction.
- B. Do not begin installation until final grades and elevations have been established.
- C. Flagpole shall be plumbed with 1/4" for every 10 feet of pole height.
- D. Ground Sleeve Installation: Insert flagpole into ground sleeve, plumb flagpole with wooden wedges. Fill space between ground sleeve and flagpole with tamped dry sand. Fill ground sleeve 6" to 8" at a time and tamp while filling. Fill ground sleeve with sand to approx.. 2" from top. Cap off with waterproof cement.

3.3 QUALITY CONTROL

- A. After flagpole is mounted, raise and lower halyard with winch handle.

3.4 WASTE MANAGEMENT

- A. Separate and dispose of waste in accordance with the DDC General Conditions.

**END OF SECTION 10 75 00**

**SECTION 11 30 13****RESIDENTIAL APPLIANCES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Pantry appliances as schedules on drawings.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures.”

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
  - 1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
- B. Samples: For each exposed product and for each color and texture specified, in manufacturer's standard size.
- C. Product Schedule: For appliances. Use same designations indicated on Drawings.

1.7 INFORMATIONAL SUBMITTALS

- A. Product Certificates: For each type of appliance.
- B. Field quality-control reports.
- C. Sample Warranties: For manufacturers' special warranties.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements.”

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain each type of residential appliance from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

- A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design and ICC A117.1.

## 2.3 APPLIANCES

- A. Manufacturers: Subject to compliance with requirements, provide products by General Electric or equal from one of the following:
1. Maytag
  2. Kenmore
  3. Or approved equal.
- B. Basis-of-Design, Product- Refrigerators: Subject to compliance with requirements, provide General Electric GTE21GSHSS. or an equivalent product from an approved manufacturer listed.
1. Description: 21.1 Cu. Ft. Top-Freezer Refrigerator, Energy-Star Listed.
  2. Finish: Stainless Steel.
  3. Dimensions: 66 3/4" high x 34" deep x 32 7/8" wide.
  4. Features: Leveling legs, 3 clear-front drawers in refrigerator compartment, adjustable glass shelves in refrigerator, wire shelf in freezer.
- C. Basis-of-Design Product- Electric Convection Ranges: Subject to compliance with requirements, provide General Electric JS760SLSS or an equivalent product from an approved manufacturer listed.
1. Description: 30" Slide-In Electric Convection Range
  2. Finish: Stainless Steel.
  3. Dimensions: 37 1/4" high x 25 7/8" deep x 29 7/8" wide.
  4. Features: Storage drawer at bottom, oven with full-front door, control surface at front, five total heating elements on cooktop.
- D. Basis-of-Design Product- Under-the-Cabinet Range Hood: Subject to compliance with requirements, provide General Electric PVX7360SJSS. or an equivalent product from an approved manufacturer listed above.
1. Description: Recirculating under-the-cabinet range hood with metal grease filters and charcoal recirculating filter.
  2. Finish: Stainless Steel.
  3. Dimensions: 5 1/2" high x 20" deep x 35 7/8" wide.
  4. Features: Four-speed selectable fan setting. LED lighting for cooktop surfaces below. Fully enclosed bottom.
- E. Basis-of-Design Product- Microwave Ovens: Subject to compliance with requirements, provide General Electric PES7227SLSS or an equivalent product from an approved manufacturer listed.
1. Description: 2.2 Cu. Ft. 1100-Watt Microwave Oven.
  2. Finish: Stainless Steel.
  3. Dimensions: 13 1/2" high x 18 1/2" deep x 24" wide.
  4. Features: 16 1/2" recessed glass turntable.

## 2.4 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.
- B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.
- C. Examine walls, ceilings, and roofs for suitable conditions where overhead exhaust hoods and microwave ovens with vented exhaust fans will be installed.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Install appliances according to manufacturer's written instructions.
- B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.
- C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.
- D. Range Anti-Tip Device: Install at each range according to manufacturer's written instructions.

### 3.4 FIELD QUALITY CONTROL

- A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
  - 1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
  - 2. Leak Test: After installation, test for leaks. Restore areas and items with leaks and retest until no leaks exist.
  - 3. Operational Test: After installation, start units to confirm proper operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.
- B. An appliance will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### 3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct The City of New York's service staff to adjust, operate, and service residential appliances.

**END OF SECTION 11 30 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 11 82 26****FACILITY WASTE COMPACTOR****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Facility waste compactor.
  2. Odor neutralizer.
- B. Related sections:
1. Section 03 30 00 – “Cast-in-Place Concrete”.
  2. Division 26 – Electrical.

**1.3 SYSTEM DESCRIPTION**

- A. Provide facility waste compactor operationally suitable for use with the Roll-on Roll-off container type vehicles used by the New York City Department of Sanitation. Container design shall permit complete discharge by gravity without jogging the container by using the operating controls of the truck and without manual assistance of any kind. The maximum container size permitted to be used with this system is 35 cubic yard minimum.
1. Containers are to be built to (ANSI-Z 245.30) waste container safety requirements.
  2. Containers are to be built to OSHA standards.
  3. Container to have 3 inch taper for entire length of container.
  4. Container to have ram forward option.

**1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

- 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
- 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

#### 1.5 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.7 SUBMITTALS

- A. Product Data: Submit manufacturer's product specifications, performance data sheets, and installation instructions for each principal component of waste handling equipment, and include certified test reports on operation of units.
- B. Shop Drawings: Submit plans, elevations and details for work not fully shown by published product data; include rough-in dimensions and service connection details.
- C. Submit statement written by the manufacturer that their products are compatible with this specification and with requirements of the New York City Department of Sanitation.
- D. Submitting a certificate to DSNY Collection & Containerization Office stating that the facility waste compactor complies with DSNY specifications. Submit copy of this certificate to the Commissioner for review and approval. The certificate shall contain the following information:
  - 1. Container size and tare weight.
  - 2. Site name and address.
- E. Maintenance Manuals: Submit bound maintenance manuals for each major operational unit of equipment, including operating and maintenance instructions, parts listing, parts inventory listing, purchase source listing for operational/maintenance materials, emergency instructions and similar information.

#### 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Waste Compactor Standards: Comply with Federal, State and local regulations; and comply with other standards as indicated.
  - 1. Comply with ANSI Z245.1, "Safety Requirements for Refuse Collection and Compaction Equipment".
- C. Electrical Component Standards: Provide components complying with NFPA 70, "National Electrical Code"; and bearing UL labels where available.

- D. **Installer Qualifications:** Engage an experienced installer who is properly trained by the manufacturer.
- E. **New York City Requirements:** Comply with the requirements of the New York City Department of Sanitation, and with the applicable requirements of the New York City Building Code Subchapter 14, Article 18 - Refuse and Disposal Systems, including New York City Environmental Protection Administration criteria referenced therein.

#### 1.9 GUARANTEE SERVICE AND MANUFACTURER WARRANTY

- A. **Warranty Maintenance:** For a period of 12 months following the date of Substantial Completion, provide warranty maintenance service and full maintenance of compactor equipment on a periodic basis. Correct operational faults and restore/replace defective/deteriorated components and finishes. Check oil for proper level and water entrainment, clean strainers, check pressure switch and relief valves settings. At end of warranty maintenance period drain, flush and refill hydraulic system with clean oil and make final inspection of hoses, fittings, wiring and controls for drainage an undue wear.
- B. **Manufacturer's Warranty:** Provide special project warranty, signed by Manufacturer, and countersigned by Contractor, agreeing to replace/repair/restore defective materials and workmanship during warranty period, for Facility Waste Compactor and Odor Neutralizer.
  - 1. The manufacturer's warranty period is 12 months starting form date of Substantial Completion.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide Waste Equipment Specialties Model #265C35/NY (Basis-of-Design) or an equivalent product by one of the following:
  - 1. All Boro, Brooklyn, NY.
  - 2. Cooper Tank & Welding Corp., Brooklyn, NY.
  - 3. Enviro Equipment Sales Ltd., Rhine Beck, NY.
  - 4. Hillside Recycling Equip Corp., Woodside, NY.
  - 5. J.C. Industries Inc., West Babylon, NY.
  - 6. Wilkinson Hirise, Greenwich, CT.
  - 7. Vasso Waste Equip Sales Inc., Brooklyn, NY.
  - 8. Direct Environmental Corp., Bronx, NY.
  - 9. Nu-Way Compactor, Brooklyn, NY.
  - 10. Or approved equal.

## 2.2 WASTE COMPACTOR

- A. Waste Compactor: Manufacturer's standard roll on/roll off compactor-container-type stationary compactor, complying with requirements, and with components, options, and accessories needed to provide a complete, functional system.
1. Waste-Compactor Standards: ANSI Z245.21, ANSI Z245.30, and NFPA 82.
  2. Container floor and walls shall be continuously welded inside and outside. Roof shall be welded continuously outside, and stitch welded inside. All welds and edges shall be grounded smoothly, suitably reinforced with steel structural members welded in place and shall meet minimum Department of Sanitation structural standards as shown on Department of Sanitation reference drawing and as detailed below.
    - a. Overall Width: Shall not exceed 96 inches.
    - b. Overall Height: Shall not exceed 96 inches (as measured from the bottom of the rails).
    - c. Overall Chassis Length: Shall be 23 feet (not including container nose rollers).
  3. Cycle Time: Maximum 60 seconds.
  4. Electrical Characteristics:
    - a. Voltage: 460 V AC, three phase, 60 hertz.
    - b. Finish: Manufacturer's standard.
- B. Fabrication:
1. General:
    - a. Fabricate waste compactors with smooth, eased, exposed edges to prevent injury to persons in vicinity of the equipment.
    - b. Fabricate containers, hoppers, compaction chambers, unit bodies, and similar components of steel with welded joints. Reinforce with steel members sized and spaced to withstand impacts and pressures of normal operations and to prevent deformation.
    - c. Fabricate equipment with replaceable parts at points of normal wear.
  2. Head Sheet Panels: Upper side, top, and head sheet panels shall be of high tensile sheet steel (45,000 P.S.I., tensile strength) 10 gauge or heavier.
  3. Lower Side Sheet Panel: (45,000 P.S.I) to be 7 gauge or heavier.
  4. Floor: Seven (7) gauge minimum steel plate, full length of container, two piece maximum, floor to be leak proof.
  5. Cross Members: Under the floor shall be 3 inch channels 3.5 lb. Minimum, C-channels on 16 inch centers.

6. Front and Rear Rollers: Shall be constructed from standard black pipe, minimum schedule 40 and shall be a 8 inches in diameter with grease fittings.
7. Long Rails: Shall be 6 inches x 2 inches steel tubing, minimum VA inch wall thickness, one piece construction.
8. Front Nose Rollers: Shall be 4 inch O.D. x 6 inch long with grease fittings. Hollow cast rollers not acceptable.
9. Tailgate Door: Shall be 10 gauge high tensile steel reinforced, with two V" x 6" vertical plate stiffeners for full height of door with 1A inch steel plate hinges with 1 1/16" inch pins and grease fittings. Pin to be removable with cotton pin.
10. Framing: Tailgate to be surrounded with 3 inches x 6 inches x 3/16 inch rectangular tube.
11. Safety Chain: Shall be included to secure the door in the open or closed position, 3/8" minimum. Safety chain to be part of pin and sleeve assembly, attached to the container body side to provide positive door attachment in open position and also provide additional door closed safety lock in case of tailgate latch failure.
12. Tailgate Latch/ Gasket: Shall ensure a tight fit in conjunction with appropriate full door seal that shall prevent liquid leakage from the container. Gasket must be replaceable type.
  - a. Manually operated ratchet style latches shall be located on both sides of the container tailgate.
13. Tailgate Openings: Shall be full height and width of container above the sump.
  - a. Design of the hinges shall permit clean dumping of the container. Door must be provided with automatic door latch.
14. Container Hook: Shall be 1-1/2" steel plate.
15. Hook Plate: Shall be 1" steel plate with hook welded to both sides of plate.
16. Push Plate: Shall be 7/16 inch steel plate, 18 inches x 66 inches minimum, hinged and pinned to provide access and protection for compacting head. Locking pin and clip to be tethered.
17. Sides of Roof and Head Braces: Shall be (45,000 psi) 10 gauge minimum, high tensile strength at 24 inch on center.
18. Sides of Body: Containers shall have no less than two horizontal V crimps in the metal equally spaced running the full length of the container. Horizontal structural stiffeners may be used in lieu of V crimps.
19. Paint: Container shall be scraped, all sharp edges, prepped, primed and painted Green, single stage manufacturer's standard enamel, to prevent corrosion.
20. Stencil: Comply with DSNY requirements for providing painted stenciled signage.
  - a. Site Stencil: Provide site name "NYPD 116" stenciled on each side in 8"-high white stenciled letters.

- b. Safety Stencils:
  - 1) "WARNING" on all four sides in 3"-high white stenciled letters.
  - 2) "STAND CLEAR WHEN CONTAINER IS OFF GROUND", on all four sides, in 1-1/2"-high white letters, located under "WARNING".
- 21. Conspicuity Tape: Red/White alternating color self-adhesive reflective tape. Install conspicuity tape around entire upper rim of the container and the entire circumference of the tailgate. All corners to have angled 12" x 12' White tape. Subject to compliance with requirements, provide 3m #980-32 (Basis-of-Design), or an equivalent product from one of the following:
  - a. Grote industries
  - b. Heskins
  - c. Or approved equal.
- 22. Identification Plate: Each container shall be affixed with a stamped metal plate bearing the name and address of the manufacturer, the net internal capacity (cubic yards), unladen weight (can be a separate plate), and a unique serial number. The serial number is also to be welded on the main rails.

## 2.3 ODOR NEUTRALIZER

- A. Basis-of-Design: Subject to compliance with requirements, Sonozaire Odor Neutralizer Model 630 A (Basis-of-Design), or an equivalent product by one of the following:
  - 1. Envirostat Inc.
  - 2. Airscent
  - 3. Or approved equal.
- B. Description: Electric blower odor neutralizer in weather-proof enclosure. Install in accordance with manufacturer's instructions and connect to electrical power. Connect air hoses to facility waste compactor with quick-connect/disconnect hoses.
- C. Blower air volume: 100 CFM @ 60hz, 141 CFM @ 50hz.
- D. Electrical requirements: 260 watts, 115 volt, 50/60 hz, 1 ph, or 220-240 volt, 50/60 hz, 1 ph.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 INSTALLATION

- A. Set each component of work securely and accurately in place; plumb, level and properly aligned with other components and other work. Anchor as required for secure operation.

- B. Complete field assembly with joints as recommended by manufacturer. Grind welds smooth and restore finish. Comply with NECA Standards for electrical.

### 3.3 TESTING AND DEMONSTRATION

- A. Test each item of operational equipment including safety devices and fire protection equipment. Instruct Commissioner's operational personnel in proper use and maintenance of equipment, and demonstrate capacity ratings, safety features, cleaning procedures, and proper storage/handling of raw and processed waste materials. Provide raw material and bags for demonstration.
  - 1. Perform tests required by DSNY and NYCDOB. File documentation and assist in obtaining operating permits, as required.

### 3.4 WASTE MANAGEMENT

- A. Separate and dispose of waste in accordance with the DDC General Conditions.

**END OF SECTION 11 82 26**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 12 24 13****ROLLER WINDOW SHADES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Manually operated roller shades with single rollers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations.
- C. Samples: For each exposed product and for each color and texture specified.

1.7 INFORMATIONAL SUBMITTALS

- A. Product certificates.
- B. Product test reports.

1.8 CLOSEOUT SUBMITTALS

- A. Operation and maintenance data.

1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Installer Qualifications: Installer shall be properly trained by the manufacturer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Source Limitations: Obtain roller shades from single source from single manufacturer.

2.2 MANUALLY OPERATED SHADES

- A. Basis- of Design, Manufacturers: Subject to compliance with requirements, provide products as supplied by Draper Inc. or comparable product from one of the following, as approved by the Commissioner:
  - 1. DFB Sales Inc.
  - 2. MechoShade Systems, Inc.
  - 3. Or approved equal
- B. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
  - 1. Chain-Retainer Type: Chain tensioner, jamb or sill mounted.
  - 2. Spring Lift-Assist Mechanisms, where required by project application: Provide for shadebands that weigh more than 10 lbs. or for shades as recommended by manufacturer, whichever criterion is more stringent.

- C. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
  - 1. Roller Drive-End Location: As indicated on Drawings.
  - 2. Direction of Shadeband Roll: Reverse, from front (interior face) of roller.
- D. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.
- E. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.
- F. Shadebands:
  - 1. Shadeband Material: Light-filtering fabric or Light-blocking fabric, as indicated.
  - 2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
    - a. Type: Enclosed in sealed pocket of shadeband material.
    - b. Color and Finish: As selected by Commissioner from manufacturer's full range.

## 2.3 INSTALLATION ACCESSORIES

- A. Provide the following as required by project application:
  - 1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.
  - 2. Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.
  - 3. Endcap Covers: To cover exposed endcaps.
  - 4. Recessed Shade Pocket, where required: Rectangular, extruded-aluminum enclosure designed for recessed ceiling installation; with front, top, and back formed as one piece, end plates, and removable bottom closure panel.
  - 5. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recess or pocket and for snap-in attachment to wall clip without fasteners.
  - 6. Side Channels for Light- blocking Fabric: With light seals and designed to eliminate light gaps at sides of shades as shades are drawn down. Provide side channels with shadeband guides or other means of aligning shadebands with channels at tops.
  - 7. Bottom (Sill) Channel or Angle for Light-blocking Fabric: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.
- B. Color and Finish: As selected from manufacturer's full range.

## 2.4 SHADEBAND MATERIALS

- A. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- B. Light-Filtering Fabric: Woven fabric, stain and fade resistant.
  - 1. Source: Roller shade manufacturer.

2. Type: PVC-coated fiberglass and PVC-coated polyester.
3. Weave: Mesh.
4. Thickness: As indicated by selected product designation
5. Weight: As indicated by selected product designation.
6. Roll Width: As indicated by selected product designation
7. Orientation on Shadeband: As indicated on Drawings.
8. Openness Factor: 3 percent unless otherwise indicated.
9. Color: As selected by Commissioner from manufacturer's full range.

C. Light-Blocking Fabric: Opaque fabric, stain and fade resistant.

1. Source: Roller shade manufacturer.
2. Type: Fiberglass textile with PVC film bonded to both sides.
3. Thickness: As indicated by selected product designation
4. Weight: As indicated by selected product designation
5. Roll Width: As indicated by selected product designation
6. Orientation on Shadeband: As indicated on Drawings.
7. Features: Washable.
8. Color: As selected by Commissioner from manufacturer's full range.

## 2.5 ROLLER SHADE FABRICATION

A. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1

B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F:

1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch per side or 1/2-inch total, plus or minus 1/8 inch. Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch, plus or minus 1/8 inch.

C. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible, except as follows:

1. Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than 1:4, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material.
2. Railroaded Materials: Railroad material where material roll width is less than the required width of shadeband and where indicated. Provide battens and seams as required by railroaded material to produce shadebands with full roll-width panel(s) plus, if required, one partial roll-width panel located at top of shadeband.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 ROLLER SHADE INSTALLATION

- A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions.
  - 1. Opaque Shadebands: Locate so shadeband is not closer than 2 inches to interior face of glass. Allow clearances for window operation hardware.
- B. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

### 3.4 CLEANING AND PROTECTION

- A. Clean roller shade surfaces, after installation, according to manufacturer's written instructions.
- B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.
- C. Replace damaged roller shades that cannot be restored, in a manner approved by Commissioner, before time of Substantial Completion.

**END OF SECTION 12 24 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 12 48 16****ENTRANCE FLOOR GRILLES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Recessed floor grilles and frames.
  2. Installation accessories.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section or trade and sent to the Commissioner for review.

- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 COORDINATION

- A. Coordinate top of floor-grille surfaces with doors that swing across grilles to provide clearance under door.

## 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

## 1.7 ACTION SUBMITTALS

- A. Product Data: For each type of product.
- B. Shop Drawings:
  - 1. Items penetrating floor grilles and frames, including door control devices.
  - 2. Divisions between grille sections.
  - 3. Perimeter floor moldings.
- C. Samples: For each exposed product and for each color and texture specified.

## 1.8 CLOSEOUT SUBMITTALS

- A. Maintenance data.

## 1.9 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

## 1.10 FIELD CONDITIONS

- A. Field Measurements: Indicate measurements on Shop Drawings.

# PART 2 - PRODUCTS

## 2.1 MANUFACTURERS

- A. Products: Subject to compliance with requirements, provide products as supplied by C/S Group or comparable product from one of the following, as approved by the Commissioner:
  - 1. Babcock-Davis.
  - 2. Kadee Industries, Inc.
  - 3. Mats Incorporated.
  - 4. Or approved equal.

## 2.2 ENTRANCE FLOOR GRILLES, GENERAL

- A. Accessibility Standard: Comply with applicable provisions ICC A117.1 and the 2014 New York City Building Code.

## 2.3 FLOOR GRILLES

### A. Stainless-Steel Floor Grille: Type 304.

1. Surface Treads: 0.093-by-0.156-inch wire with 0.125-inch- wide openings between wires.
2. Support Rods: Spaced 1 inch o.c., welded to each wire.
3. Mat Grating: 5/8 inch deep.
4. Stainless-Steel Finish: No. 4.
5. Grille Size: As indicated on drawings.

### B. Lockdown: Hidden.

## 2.4 FRAMES

### A. Provide manufacturer's standard frames of size and style for grille type.

## 2.5 SUPPORT SYSTEM

### A. Level Bed Applications: Provide manufacturer's standard, vinyl cushion support system.

## 2.6 MATERIALS

### A. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666, Type 304.

### B. Stainless-Steel Angles: ASTM A276 or ASTM A479/A479M, Type 304.

## 2.7 FABRICATION

### A. Shop fabricate floor grilles to greatest extent possible in sizes as indicated.

### B. Fabricate frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible.

## 2.8 STAINLESS-STEEL FINISHES

### A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

### B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

#### A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine substrates and floor conditions for compliance with requirements for location, size, minimum recess depth, and other conditions affecting installation of floor grilles and frames.
- B. Examine roughing-in for drainage piping systems to verify actual locations of piping connections before floor grille and frame and drain pan installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 INSTALLATION**

- A. Install recessed floor grilles and frames to comply with manufacturer's written instructions at locations indicated and with top of floor grilles and frames in relationship to one another and to adjoining finished flooring as recommended by manufacturer.
- B. Set floor-grille tops at height for most effective cleaning action.

**3.4 PROTECTION**

- A. After completing frame installations, provide temporary filler of plywood or fiberboard in floor-grille recesses and cover frames with plywood protective flooring.
- B. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

**END OF SECTION 12 48 16**

**SECTION 12 93 00****SITE FURNISHINGS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. RPL Backless Bench "A" and "C" on precast concrete base.
2. RPL Raised Planter Bench "B" on precast concrete base.
3. RPL Bleacher on precast concrete base.
4. Bottle Filling Station
5. Bicycle Rack
6. Removable Bollard Cover
7. Litter and Recycling Receptacles
8. Stainless Steel Panel Enclosure Box Housing

B. Related Sections

1. Section 32 05 16 "Aggregate Materials"
2. Section 03 30 00 "Cast-in-Place Concrete"
3. Section 03 33 00 "Architectural Concrete"
4. Section 03 45 00 "Precast Architectural Concrete"
5. Section 03 48 00 "Precast Concrete Specialties"
6. Section 05 50 00 "Metal Fabrications"

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based

on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.6 SUBMITTALS

- A. Shop Drawing:
  - 1. Provide detailed shop drawings showing assembly methods, dimensions, and integration with adjacent materials for all furnishings prior to the start of fabrication.
- B. Samples:
  - 1. Provide samples of finish materials for all site furnishings listed in this section.
  - 2. Provide color chips of all specified colors of furnishings listed in this section.

#### 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Deliver, handle, and store materials in accordance with manufacturer's instructions.
- C. Every effort shall be made to maximize post-industrial/post-consumer recycled content. Certification of recycled content shall be in accordance with the Submittal Requirements herein.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- A. Benches and Bleachers shall be recycled plastic lumber composed of 50% recycled LDPE plastic combined with 50% recycled textile fibers, with steel "C" channel support beams and steel flat bar cover plates in-between RPL members.
  - 1. Basis-of-design Product: Subject to compliance with requirements provided: STREETLIFE Rough&Ready Crosswise Topseat, as manufactured by STREETLIFE America LLC, Philadelphia PA, (215) 247-0148, or comparable product by one of the following:
    - a. Landscape Forms, Inc. 7800 E. Michigan Ave. Kalamazoo, MI 49048, USA, (269) 381-0396
    - b. Columbia Cascade Co., TimberForm Site Furnishings, 1300 S.W. Sixth Avenue, Suite 310 Portland, Oregon 97201-3464, USA, (503) 223-4530
    - c. Or approved equal

2. Bench Components

a. Recycled Plastic Lumber Bench Toppers:

- 1) Bench "A" and "C" RPL Members 2'-0" L x 2.8" H x 2.8" W
- 2) Bench "B" RPL Members: 1'-6" L x 2.8" H x 2.8" W
- 3) Bleacher RPL Members: 3'-4" L x 2.8" H x 2.8" W
- 4) Seat Height: As indicated on drawings
- 5) Seat Surface: Flat
- 6) Arms: None
- 7) Seating Configuration: Straight
- 8) RPL Finish: Solid Series Cloudy Gray, or similar color as selected by Commissioner from manufacturer's standard range of colors.

b. Steel Mounting Rail:

- 1) Mounting Rail: Powder-coated steel "C" channels notched at regular intervals to hold RPL members.
- 2) Gauge: 9 gauge
- 3) Recessed Notch: 1" deep x 2.8" wide notches spaced 3.8" on center, to hold individual RPL members.
- 4) Fasteners: Powder Coated Steel Expansion Anchor Bolts. All holes pre-drilled
- 5) Support Option: Metal Frame Mounted to Precast Concrete Base.
- 6) Metal Finish: Polyester Powder Coating over Zinc Rich Primer:
  - a) Blasted to white metal,
  - b) Processed through a 5-stage wash system,
  - c) Coated with Zinc-rich primer.
  - d) Finished with a top coat of TGIC-polyester powder.
  - e) Cured for approximately 20 minutes.
- 7) Color: Satin Black, or similar color as selected by Commissioner from manufacturer's standard range of colors.
- 8) Location: Every RPL Seat as indicated on plans and details.

c. Metal Cover Plates Between Slats

- 1) Material: Steel Flat bar welded in place to Metal Support Frame
- 2) Bench "A" and "C" Dimensions: 1'-10 3/4" L x 1" W x 1/4" H
- 3) Bench "B" Dimensions: 1'-5 3/8" L x 1" W x 1/4" H
- 4) Bleacher Dimension: 3'-3 3/16" L x 1" W x 1/4" H
- 5) Metal Finish: Polyester Powder Coating over Zinc Rich Primer:
  - a) Blasted to white metal,
  - b) Processed through a 5-stage wash system,
  - c) Coated with Zinc-rich primer.
  - d) Finished with a top coat of TGIC-polyester powder.
  - e) Cured for approximately 20 minutes.
- 6) Color: Satin Black.
- 7) Location: Either side of support frame rail notches; in-between RPL members.

**B. Bottle filling station and Water Fountain**

1. Basis-of-design Product: Subject to compliance with requirements provided: Elkay Outdoor ezH20 Bottle Filling Station Bi-Level Pedestal Freeze Resistant, by Elkay Headquarters 2222 Camden Court, Oak Brook, IL 60523, (630) 574-8484, or comparable product by one of the following:
  - a. Halsey Taylor, 2222 Camden Court, Oak Brook, IL 60523, (630) 572-3192
  - b. Haws Co., 1455 Kleppe Lane, Sparks, NV 8943, 1-800-766-5612
  - c. Or approved equal
2. Finish
  - a. Finish: Powder coated and 316 stainless steel
  - b. Color: Gray
  - c. Bubbler Style
  - d. Mount: Surface Mounted
  - e. Dimensions: 14" x 31" x 64"

**C. Bicycle Racks**

1. Basis-of-design Product: Subject to compliance with requirements provided: Landscape Forms Loop Bike Rack, Landscape Forms, Inc. 7800 E. Michigan Ave. Kalamazoo, MI 49048, USA, (269) 381-0396, or comparable product by one of the following:
  - a. Reliance Foundry, Unit 207, 6450-148<sup>th</sup> Street, Surrey, British Columbia, Canada V3S-7G7, 1-877-789-3245
  - b. NYC DOT Standard Bike Rack
  - c. Or approved equal
2. Frame: Aluminum Casting
3. Embedded Hardware Pack: (4) 5/16-18 UNC-2A fully threaded rods, 4" Length
4. Style: Double-side parking
5. Dimensions:
6. Finish: Rust inhibitor primer; Thermosetting TGIC polyester powder coat Topcoat
7. Color: "Panguard II" Silver, or similar color as selected by Commissioner from manufacturer's standard range of colors.

**D. Removable Bollard Cover**

1. Basis-of-design Product: Subject to compliance with requirements provide: Reliance Foundry R-7315, or comparable product by one of the following:
  - a. Granger
  - b. SecureUSA, Inc.
  - c. Or approved equal
2. Locations: Type B1 and B2 M50/K12 fixed and removable bollards. Refer to structural drawings and Section 05 50 00 "Metal Fabrications".
3. Finish: 316 stainless steel.
4. Attachment: 3 hex socket set screws near bottom of bollard, in addition to adhesive foam strips near top portion of bollard.
5. Design: Flat cap, cylindrical, with no routed profiles or striping on any face.
6. Dimensions: 42" high, 10 3/4" interior diameter, 11" outside diameter.

E. Litter and Recycling Receptacles

1. Basis-of-design Product: Subject to compliance with requirements provided: "Select Recycling System" Triple Unit, Landscape Forms, Inc. 7800 E. Michigan Ave. Kalamazoo, MI 49048, USA, (269) 381-0396, or comparable product by one of the following:
  - a. DuMor, P.O. Box 142 Mifflintown, PA 17059, Phone: (800) 598-4018
  - b. mmicité, 2905 Westinghouse Blvd, Suite 300 Charlotte, NC 28273, Phone: (704) 995-1942
  - c. Or approved equal
2. Style: Triple Unit
3. Dimensions: 42" H x 17" D x 50-3/8" W
4. Locations: As indicated on Plan Drawings
5. Body Panel Style : Perforated back and side panels, top panel is solid
6. Door #1
  - a. Panel Style: Perforated panel, with lock
  - b. Opening Style: Multi-use opening, 8" x 8"
  - c. Sign #: 14 – "trash only"
7. Door #2
  - a. Panel Style: Perforated panel, with lock
  - b. Opening Style: Hole Opening, 5" diameter
  - c. Sign #: 06 – "aluminum, glass, plastic"
8. Door #3
  - a. Panel Style: Perforated panel, with lock
  - b. Opening Style: Slot opening, 10" x 4" oval shaped slot
  - c. Sign #:01 - "paper"
9. Mounting: Surface Mounted to concrete slab
10. Accessories: Locks
11. Materials
  - a. Base: Welded carbon Steel. Base bolted to unit body with stainless steel 1/4-20 hex head screws.
  - b. Unit Body: 14-gauge carbon steel sheet
  - c. Door Panel: 14-gauge carbon steel sheet
  - d. Liner: Rotomolded low density polyethylene
  - e. Door opening trim and sign medallion: Cast 319 or A413 aluminum. Secured to door panel with black nylon cup washers and carbon steel #8-32 x 1/4" socket button head cap screws with magni-coat. Vinyl graphics factory-applied to medallion.
  - f. Adjustable glides: Black nylon base, 2-3/16" diameter, with 3/8-16 thread on stainless steel stem
  - g. Hinge: Stainless steel hinges (2) per door, attached to door and unit body with stainless steel screws.
  - h. Cross braces, bin dividers: Carbon steel sheet. Bin dividers on double and triple units only.

12. Finish on Carbon Steel:

- a. Primer: Rust inhibitor
- b. Topcoat: Thermosetting polyester powdercoat. UV, chip, and flake resistant.
- c. Color: Panguard II Silver, or similar color as selected by Commissioner from manufacturer's standard range of colors.

F. Stainless Steel Panel Enclosure Box Housing

- 1. Basis-of-design Product: Subject to compliance with requirements provide: Pedestal PRO Lando-SS-10x8-E, or comparable product by one of the following:
  - a. Hoffman
  - b. APX Enclosures
  - c. Or approved equal
- 2. Dimensions: 3.15" deep back box, 3.5" deep hood (overhang), 10" wide x 8" high front face (landscape).
- 3. Description: Front face continuously hinged at its bottom edge with cam lock at top edge, allowing controlled access to interior contents from the front. EPDM rubber seals at all openings to provide a weathertight enclosure. Two keys for cam lock.
- 4. Enclosure rating: NEMA 4x
- 5. Installation: Mount to vertical face as indicated on drawings using mechanical fasteners. Seal at all rear face penetrations following wiring of enclosed devices.
- 6. Material: 14 gauge 304 stainless steel, brushed #4 finish.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 JOB CONDITIONS

- A. Verify that surfaces on which furnishings are to be installed are level, smooth, clean, and otherwise ready to receive the work of this section. Do not proceed until unsatisfactory conditions are corrected.

3.3 INSTALLATION

- A. Install benches, bottle filling station, bicycle racks and removable bollards where indicated on the plans and as per manufacturer's instructions.
  - 1. Install in accordance with manufacturer's instructions at locations indicated on the drawings.
  - 2. Unless otherwise indicated, install sit furnishings after landscaping and paving have been completed.
  - 3. Install site furnishings level, plumb, true and securely anchored at locations indicated on drawings.

3.4 QUALITY CONTROL

- A. Protect all site furnishings from damage during construction. Restore or replace damaged site furnishings at no additional expense to the City of New York.

3.5 WASTE MANAGEMENT

- A. Separate and dispose of waste in accordance with the DDC General Conditions.

**END OF SECTION 12 93 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 13 10 00**

### **VEHICLE OPERABLE BARRIERS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract City of New York Standard Construction Contract.

##### **1.2 RELATED WORK SPECIFIED IN OTHER SECTIONS:**

- A. Footings Section 31 61 00
- B. Cast-in-Place Concrete Section 03 30 00
- C. Structural Steel Section 05 12 00

##### **1.3 SUMMARY**

- A. Section includes:
  - 1. Operable beam barrier system.

##### **1.4 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.5 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Product Data:
  - 1. Submit crash test data from independent testing agency.
  - 2. Engineering calculations shall be performed and submitted for all conditions where test data is not applicable. This includes, but is not limited to, utilities, vaults, and the soil bearing capacity.
  - 3. Submit manufacturer's product data and installation instructions for each type of equipment required.
- C. Shop Drawings:
  - 1. Submit Shop Drawings showing all components for proper installation, including anchoring, supporting systems, and details.
  - 2. Include wiring diagrams.
- D. Operation and Maintenance Data:
  - 1. Submit three (3) copies of manufacturer's operation and maintenance manual.
  - 2. Include parts list and other information needed for continued use for inclusion in Project Operation and Maintenance Manual.
  - 3. Include copy of submittal in Project Operation and Maintenance Manual.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”
- B. Testing: Upon completion, mechanically operable barrier will be fully tested in the manufacturer's shop. In addition to complete cycle testing to verify function and operating speeds, the following checks shall be made:
  - 1. Identification. A nameplate with manufacturer's name, model number, serial number and year built shall be located within the maintenance access area.
  - 2. Workmanship. The Gate and subsystems shall have a neat and workmanlike appearance.
  - 3. Dimensions. Principal dimensions shall be checked against contract documents and field measurements.
  - 4. Finish. Finishes shall conform to Architectural Drawings.
- C. The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- D. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

**PART 2 - PRODUCTS****2.1 RISING BEAM BARRIER**

- A. Basis of Design Product: Subject to compliance with requirements, provide Patriot Beam Barrier by Ameristar (Basis-of-Design) or comparable product by one of the following:
  - 1. ATG Access,
  - 2. Ross Technology,
  - 3. Or approved equal.
- B. Rising beam barrier, foundation assembly, and subgrade conditions shall be in accordance with the independently verified crash test data or engineering calculations per Section 1.6-B of this specification. The operable barrier and foundation assembly are subject to the performance requirements listed in Section 2.2 herein.

**2.2 PERFORMANCE REQUIREMENTS**

- A. Barrier design shall have successfully passed actual full-scale crash tests conducted by a qualified independent agency in accordance with ASTM F2656. Alternatively, barrier design shall be based on finite element analytical methods pre-approved by the Commissioner.
- B. Stopping Capacity
  - 1. Normal Operation. Barrier(s) shall provide security and positive control of normal traffic by providing an almost insurmountable obstacle to the average passenger vehicle.
  - 2. The Barrier system shall be designed to stop a vehicle attacking from the priority direction such that the leading edge of the cargo bed does not penetrate the beam more than 3.25 feet when the vehicle is within the weight and velocity characteristics defined in paragraph 2.2.C.3. See Barrier Drawings and Civil Drawings for Barrier location.
  - 3. The Barrier shall be capable of stopping a vehicle(s) weighing 15,000 pounds traveling at 50 mph (66.7 KN at 80.5 kph), consistent M50/P1 per ASTM standards.
- C. Operation
  - 1. Environmental Data: Barricade shall operate satisfactorily under the full range and extremes of temperature, humidity, rainfall, and other environmental conditions characteristic for New York City.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**END OF SECTION 13 10 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## SECTION 14 21 23

### TRACTION ELEVATOR

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### B. RELATED SECTIONS

- |     |                        |   |
|-----|------------------------|---|
| 1.  | DDC General Conditions | Protecting hoistway during installation of equipment, LEED Reporting Form, Construction Waste Management, Sustainable Design Requirements, Indoor Air Quality Management, Volatile Organic Compound Limits. |
| 2.  | Section 03 30 00:      | Concrete pits and slabs.  |
| 3.  | Section 04 20 00:      | Shaft and control room walls.   |
| 4.  | Section 05 12 00:      | Structural steel hoistway frame, hoist beam in overhead.  |
| 5.  | Section 05 50 00:      | Access Ladders, smoke hole grating, railing and inspection platforms, intermediate support members, sump pit covers.  |
| 6.  | Division 07:           | Elevator pit waterproofing.   |
| 7.  | Section 09 67 23:      | Finished flooring.  |
| 8.  | Division 23:           | Ventilation of hoistway and control room.   |
| 9.  | Division 26:           | Power feeders to starter panels through fused main line switches  |
| 10. | Division 26:           | Branch circuits through fused disconnects for car lights.   |
| 11. | Division 26:           | Lights and GFI receptacles in control room, overhead and pit.   |
| 12. | Division 26:           | Signal wiring to initiate emergency power operation.  |
| 13. | Division 26:           | Signal wiring from smoke detectors to a junction box in the machine room.   |
| 14. | Division 26:           | Empty conduit runs for wiring required to monitor elevators from a central location.  |
| 15. | Division 26:           | Shunt trip devices to automatically disconnect the main power supply to the elevators prior to the activation of sprinkler system.  |
| 16. | Section 27 00 00       | Telephone communications wiring terminated in a junction box located next to the controller.  |
| 17. | Section 27 00 00       | Ethernet port in each elevator machine, in top end of each escalator, fire command center and building engineer's office.   |
| 18. | Section 28 31 11       | Life safety system speakers and telephone communication wiring to a junction box in the control room for each elevator.   |
| 19. | Section 28 00 00       | Card reader and CCTV Systems, device and their interface with the elevator system.  |

##### 1.2 SUMMARY

- A. Work Included: The extent of the work is indicated on the drawings.
- B. Work of this Section includes labor, materials, tools, equipment, appliances and services required to manufacture, deliver and install the units complete as shown on the drawings, as specified herein, and/or as required by job conditions.

- C. The work and /or requirements specified in all sections is described in singular with the understanding that identical work shall be performed on all units or associated systems unless otherwise specified herein.
- D. The work shall include, but is not limited to the following:
  - 1. One (1) 3,500-lb. capacity machine room-less traction passenger elevator operating at 200 fpm. (PE1)

### 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  - 2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  - 3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Recycled Content: Metal materials, products, anchors, framing, and accessories shall contain a minimum of 35% (75% for structural and reinforcing steel) combined pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 2. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 19 "INDOOR AIR QUALITY MANAGEMENT", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

### 1.5 Abbreviations and Symbols

- A. The following abbreviations, Associations, Institutions, and Societies may appear in the Project Manual or Contract Documents:

AIA	American Institute of Architects
ANSI	American National Standards Institute
ASME	American Society of Mechanical Engineers

ASTM	American Society for Testing and Materials
AWS	American Welding Society
IBC	International Building Code
IEEE	Institute of Electrical and Electronics Engineers
NEC	National Electrical Code
NEMA	National Electrical Manufacturers Association
NFPA	National Fire Protection Agency
OSHA	Occupational Safety and Health Act

#### 1.6 Codes and Ordinances / Regulatory Agencies

- A. Regulations of New York City Department of Buildings and the New York City Fire Department shall be fulfilled by the Contractor. The entire installation, when completed, shall conform with all regulations set forth in the latest editions of:
  - 1. 2014 New York City Construction Codes
  - 2. Safety Code for Elevators and Escalators, ASME A17.1 and all supplements as modified and adopted by the 2014 New York City Construction Codes
  - 3. Safety Code for Elevators and Escalators, A17.1S supplement to A17.1 as modified and adopted by the 2014 New York City Construction Codes for Machine Room Less installations (MRL).
  - 4. Guide for Inspection of Elevators, Escalators, and Moving Walks, ASME A17.2.
  - 5. Safety Code for Existing Elevators and Escalators, ASME A17.3 as modified and adopted by the 2014 New York City Construction Codes.
  - 6. Guide for emergency evacuation of passengers from elevators, ASME A17.4.
  - 7. National Electrical Code (ANSI/NFPA 70).
  - 8. Americans with Disabilities Act - Accessibility Guidelines for Building and Facilities and/or A117.1 Accessibility as may be applicable to the 2014 New York City Construction Codes.
  - 9. ASME A17.5/CSA-B44.1 - Elevator and escalator electrical equipment.
- B. Advise the Commissioner of pending code changes that could be applicable to this project.

#### 1.7 REFERENCE STANDARDS

- A. AISC - Specification for the Design, Fabrication and Erection of Structural Steel for Buildings.
- B. ANSI/AWS D1.1 - Structural Welding Code, Steel.
- C. ANSI/NFPA 80 - Fire Doors and Windows.
- D. ANSI/UL 10B - Fire Tests of Door Assemblies.

#### 1.8 DEFINITIONS

- A. Definitions in ASME A17.1 as amended or modified by the 2014 New York City Construction Codes apply to work of this Section.

1.9 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.10 PERMITS AND SUBMITTALS

A. Permits

1. Comply with the requirements of the DDC General Conditions.
2. Prior to commencing work specified by the Contract Documents, the Contractor shall, at its own expense, obtain all permits or variances as may be required by the Commissioner of the New York City Department of Buildings and provide satisfactory evidence of having obtained said permits and variances to the Commissioner.
3. File necessary drawings for approval of New York City Department of Buildings.
4. The Contractor shall undertake the necessary review and search procedure to identify open applications and/or outstanding violations for this property; and, close-out such applications and/or expunge such violations relative to the project scope as required for final acceptance by the New York City Department of Buildings and the New York City Fire Department.
  - a. Outstanding applications and violations must be indicated on the request for permit filing for this procedure to ensure such applications and/or violations are dismissed accordingly.

B. Submittals

1. Comply with the requirements of DDC General Conditions.
2. Submit the following
  - a. Samples

Item No.	Quantity	Size	Description
S1	3	12" x 12"	Exposed finishes as requested by Commissioner
S2	1	Actual	Each fixture as requested by the Commissioner
S3	1	Actual	Mitered, corner construction of entrance frame

b. The samples shall be:

- 1) Held on site after inspection and used as a standard for acceptance or rejection of subsequent production units.
- 2) Labeled to identify their intended use and relation to the documents, e.g., car finishes, control panel, etc.
- 3) Returned to the contractor at the completion of the project.

Subject to approval, where an item of equipment is a standard item, copies of the manufacturer's catalogue or brochure may be accepted provided that all dimensions and relevant information are shown in the catalogue or brochure.

- c. Shop Drawings - Submit computer generated layout drawings for approval. Include the following:
- 1) A listing of all components, devices and sub-systems including:
    - a) Manufacturer and location of plant
    - b) Size and model number
  - 2) Machine space plan indicating:
    - a) Location of equipment
    - b) Reactions
  - 3) Control Room Plan indicating:
    - a) Location of equipment and 2014 A17.1-Appendix K clearances
    - b) Service connections and disconnect switches
    - c) Passenger rescue and brake release
    - d) CCTV provisions
  - 4) Fully dimensioned hoistway plan, pit plan and section of each unit indicating:
    - a) Platform (with cab), hoistway and entrance dimensions
    - b) All running clearances
    - c) Location of fixtures
    - d) Buffers, service ladders and pit reactions
    - e) Location of inserts
    - f) Rail Reactions
  - 5) Entrance details
  - 6) Sill support detail
  - 7) Fixture details including hall lanterns, hall pushbutton stations, car operating panel, etc.
  - 8) Wiring diagrams
  - 9) Insert diagrams
  - 10) Cab details including wall, ceiling, base, handrail, lighting, fixtures, front return and transom plans and sections
  - 11) MRL criteria including:
    - a) Location of machine and governor
    - b) Structural requirements and reactions
    - c) Clearances
    - d) Access requirements
3. Calculations
- a. Rail loads
  - b. Pit and machine room reactions
  - c. Heat emissions in machine room

- d. Electrical loads including, accelerating and running currents. Include all auxiliary loads.
- e. Submit design calculations identifying seismic design forces and support capacities. Calculations shall be certified by the Contractor's professional engineer licensed in the state of New York. All work products, load diagrams, calculations, and shop drawings generated by the Contractor's engineer shall be submitted to the Commissioner for review and approval.

**C. Keys**

1. Upon substantial completion of work, deliver to the Commissioner, six (6) keys for each general key-operated device that is provided under these specifications in accordance with ASME A17.1, Part 8 standards as may be adopted and modified by the 2014 New York City Construction Codes.
2. All other keying of access or operation of equipment shall be provided in accordance with ASME A17.1 Part 8 as may be adopted and modified by the 2014 New York City Construction Codes.

**D. Diagnostic Tools**

1. Prior to seeking final acceptance of the project, deliver to the Commissioner any specialized tools required to perform diagnostic evaluations, adjustments, and/or programming changes on any microprocessor-based control equipment installed. All such tools shall become the property of The City of New York.
  - a. Commissioner's diagnostic tools shall be configured to perform all levels of diagnostics, systems adjustment and software program changes which are available to the Contractor.
  - b. Commissioner's diagnostic tools that require periodic re-calibration and/or re-initiation shall be performed by the Contractor at no additional expense to The City of New York for a period equal to the term of the maintenance agreement from the date of final acceptance of the project.
  - c. Provide a temporary replacement, at no additional expense to The City of New York, during those intervals in which the Commissioner might find it necessary to surrender a diagnostic tool for re-calibration, re-initiation or restoration of function.
2. Deliver to the Commissioner printed instructions, access codes, passwords or other information necessary to interface with the microprocessor-control equipment.

**E. Wiring Diagrams, Operating Manuals and Maintenance Data**

1. Comply with the requirements of the DDC General Conditions.
2. Deliver to the Commissioner, four (4) identical volumes of printed information organized into neatly bound manuals prior to seeking final acceptance of the project.
3. The manuals shall also be submitted in electronic format on non-volatile media, incorporating raw 'CAD' and/or Acrobat 'PDF' file formats.
4. Manuals, as well as electronic copies, shall contain the following:
  - a. Step-by-step adjusting, programming and troubleshooting procedures that pertain to the solid-state microprocessor-control and motor drive equipment.
  - b. Passwords or identification codes required to gain access to each software program in order to perform diagnostics or program changes.
  - c. A composite listing of the individual settings chosen for variable software parameters stored in the software programs of both the motion and dispatch controllers.

- d. Method of control and operation.
  - e. All the elevator components, technical assistance, operating manuals, hardware and software, etc. shall be immediately provided to the Commissioner, regardless whether the elevator maintenance contractor is the original installing contractor or manufacture.
5. Provide four (4) sets of "AS INSTALLED" straight-line wiring diagrams in both hard and electronic format in accordance with the following requirements:
- a. Displaying name and symbol of each relay, switch or other electrical component utilized including identification of each wiring terminal.
  - b. Electrical circuits depicted shall include all those which are hard wired in both the machine room and hoistway.
  - c. Supplemental wiring changes performed in the field shall be incorporated into the diagrams in order to accurately replicate the completed installation.
6. Furnish four (4) bound instructions and recommendations for maintenance, with special reference to lubrication and lubricants.
7. Manuals or photographs showing controller replacement parts with part numbers listed.

**F. Instruction**

- 1. Prior to seeking final acceptance of the project, conduct an eight-hour instruction program on-site with building service staff selected by the Commissioner.
- 2. The focus of the session shall include:
  - a. Instructions on proper safety procedures to utilize in assisting passengers that may become entrapped inside an elevator car.
  - b. Explain each control feature and its correct sequence of operation.
- 3. Control features covered shall include but, not be limited to:
  - a. Independent Service Operation.
  - b. Attendant Service Operation.
  - c. Emergency Fire Recall Operation - Phase I
  - d. Emergency In-car Operation - Phase II.
  - e. Emergency Power Operation.
  - f. Emergency Communications Equipment.
  - g. Security Operating Features.
  - h. Interactive Systems Management.
  - i. Remote Monitoring/Controls.
  - j. Emergency Hoistway Access and Rescue Features.

**1.11 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- C. The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar

in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.

**D. Structural, Mechanical and Electrical Design Parameters**

1. The mechanical and electrical systems and the building structure have been designed for the following design loads:
  - a. Structural Loads:
    - 1) The pit, machine room and rail loads are shown on the drawings.
2. Power supply: 208V - 3Ph - 60 Hz (EE to verify)
3. Electrical Loads: PE1 20 HP
  - 59 A. FLR (Full Load Running)
  - 148 A. FLA (Full Load Acceleration)
4. Heat Release: PE1 9,000 BTU/HR/UNIT
5. Submit a written statement that the above design loads and the clearance requirements shown on the Architectural drawings are acceptable for the proposed equipment. If not, specifically state the design variances.
6. If the type of equipment provided requires structure, mechanical and electrical system changes and/or revisions, the Contractor shall be responsible for all additional engineering and construction expenses.
7. Electrical equipment, motors, controllers, etc., installed under this contract shall have necessary CSA/US or UL listing as may be required by the 2014 New York City Construction Codes. Equipment shall be labeled or tagged accordingly.

**1.12 DELIVERY / STORAGE / HANDLING / COORDINATION**

**A. Delivery and Storage of Material and Tools**

1. Comply with the requirements of the DDC General Conditions.
2. Delivery, Storage and Handling:
  - a. Deliver materials to the site ready for use in the accepted manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name and manufacturer's name. Delivered materials shall be identical to accepted samples.
  - b. Store materials under cover in a dry and clean location, off the ground.
  - c. Remove delivered materials which are damaged or otherwise not suitable for installation from the job site and replace with acceptable materials.
3. The Commissioner shall bear no responsibility for the materials, equipment or tools of the Contractor and shall not be liable for any loss thereof or damage thereto.
4. Confine storage of materials on the job site to the limits and locations designated by the Commissioner and do not unnecessarily encumber the premises or overload any portion with materials to a greater extent than the structural design load of the Facility.

**B. Coordination**

1. Coordinate installation of sleeves, block outs, equipment with integral anchors, and other items that are embedded in concrete or masonry for the applicable equipment. Furnish templates, sleeves, equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
2. Coordinate sequence of installation with other work to avoid delaying the Work.
3. Coordinate locations and dimensions of other work relating to the equipment scheduled for installation including pit ladders, sumps, and floor drains in pits; entrance subsills; machine beams; and electrical service, electrical outlets, lights, and switches in pits and machine rooms, secondary levels, overhead sheave rooms and hoistways as it relates to the specific equipment.

#### 1.13 WARRANTY

##### A. Manufacturer's Warranty

1. Comply with the requirements of the DDC General Conditions.
2. Warranty:
  - a. Manufacturer shall warrant the equipment installed under these specifications against defects in material and quality of installation and correct any defects not due to ordinary wear and tear or improper use of car which may develop within one year from the date of substantial completion.

### PART 2 - PRODUCTS

#### 2.1 GENERAL DESCRIPTION

##### A. Elevator - PE1

1.	Quantity	One (1)
2.	Type	Machine-room-less/Passenger
3.	Capacity (lbs)	3,500
4.	Speed (fpm)	200
5.	Travel in Feet	28' - 6"
6.	Number of Landings	Three (3) at C, 1, 2
7.	Number of Openings	(3) at C, 1, 2
8.	Front Opening	All
9.	Rear Opening	None
10.	Operation	Simplex selective collective
11.	Control	Variable voltage variable frequency
12.	Fireman's Control	Phase I and II

13.	Number of Push Button Risers	One
14.	Cab Size	6' - 8" wide x 5' - 4" deep
15.	Guide Rails	Steel tees, provide rail backing as required
16.	Buffers	Spring
17.	Cab	As further specified.
18.	Entrance Size	3' - 6" wide x 7' - 0" high
19.	Door Operation	Single speed side opening
20.	Machine Type	Gearless traction
21.	Machine Location	Within overhead space
22.	Counterweight Safety	Not Required
23.	Power Supply	208V - 3Ph - 60 Hz (EE to verify)

## 2.2 MANUFACTURERS

### A. Equipment Manufacturers

1. Subject to compliance with requirements, provide products manufactured one of the listed manufacturers, for each product type listed, as follows:
  - a. Controller
    - 1) GAL (GALaxy),
    - 2) Motion Control Engineering,
    - 3) Elevator Controls Corporation,
    - 4) Elevator Systems, Inc.,
    - 5) Smartrise,
    - 6) Or approved equal.
  - b. Tracks, Hangers, Interlocks and Door Operators
    - 1) G.A.L.,
    - 2) ECI,
    - 3) Moline Accessories Corporation
    - 4) Or approved equal.

c. Fixtures

- 1) G.A.L.,
- 2) Adams,
- 3) EPCO,
- 4) Monitor,
- 5) E-Motive USA,
- 6) C.E. Electronics,
- 7) Innovation,
- 8) MAD,
- 9) National,
- 10) Or approved equal.

d. Door Protective Device

- 1) Janus,
- 2) Adams,
- 3) G.A.L.,
- 4) T.L. Jones,
- 5) Tri-Tronics,
- 6) Or approved equal.

e. Cabs and Entrances

- 1) CEC Elevator Cab,
- 2) EDI/ECI,
- 3) Elite Elevator Cab,
- 4) National Cab & Door,
- 5) Tyler,
- 6) Velis,
- 7) Gunderlin,
- 8) Eklund,

- 9) EMCO,
- 10) Columbia Elevator Products,
- 11) Or approved equal.
- f. Machines
  - 1) Hollister-Whitney,
  - 2) Titan,
  - 3) Imperial,
  - 4) Torin,
  - 5) Or approved equal.
- g. VVVF Power Drives
  - 1) Mitsubishi,
  - 2) MagneTek,
  - 3) Yaskawa,
  - 4) TorqMax,
  - 5) Or approved equal.
- h. VVVF Emergency Power Systems
  - 1) MCE,
  - 2) Reynolds & Reynolds Electronics,
  - 3) G.A.L
  - 4) Or approved equal.
- i. Guide Rails
  - 1) Savera,
  - 2) Monteferro,
  - 3) AFD
  - 4) or approved equal.
- j. Electrical Traveling Cables
  - 1) Draka,

- 2) James Monroe,
- 3) Prysmian
- 4) or approved equal.
- k. Guide Shoes/Rollers
  - 1) ELSCO,
  - 2) G.A.L. ,
  - 3) ELPRO
  - 4) Or approved equal.
- l. Wire Ropes
  - 1) Paulsen,
  - 2) Bethlehem,
  - 3) Wayland,
  - 4) Draka,
  - 5) Or approved equal.
- m. Intercommunications/Telephones
  - 1) Webb Electronics,
  - 2) K-Tec,
  - 3) Ring,
  - 4) Wurtec,
  - 5) Janus,
  - 6) Or approved equal.
- n. All specialized tools, equipment, software, and passwords, required to maintain, restore to working order, adjust the operation, and perform 2014 NYCBC/A17.1-Appendix K mandated inspections shall provided to the Commissioner as part of the base installation.
- o. Technical support of the product(s) shall be available to the Commissioner.

## 2.3 CONTROL FEATURES / OPERATION

### A. Motion Control

- 1. Smooth stepless acceleration and deceleration of the elevator car shall be provided in either direction of travel during both single and multiple floor runs.

2. Use digital logic to calculate optimum acceleration and deceleration patterns during each run.
  - a. The amplitude of acceleration and deceleration shall not exceed 2.6 - 2.8 ft./sec<sup>2</sup> for geared and MRL traction, and 3.5 - 4 ft./sec<sup>2</sup> for gearless traction elevators.
  - b. The maximum jerk rate shall be 1.5 to 2.0 times the acceleration and deceleration.
  - c. The maximum velocity which the elevator achieves in either direction of travel while operating under load conditions that vary between empty car and full rated load shall be within  $\pm 3\%$  of the rated speed.
3. Floor leveling accuracy of  $\pm 1/4"$  as measured between the car entrance threshold and the landing sill on any given floor shall be provided.
  - a. This accuracy standard shall be maintained under varying load conditions and without need for releveling corrections caused by overshooting or stopping short of the floor.
4. Elapsed flight time during a typical elevator one floor run shall not exceed values as further specified.
  - a. Timing, as measured between the moment door closing operations begin and when the doors are 3/4 open at the next adjacent floor, shall remain consistent under varying load conditions in either direction of travel.

**B. Simplex Selective Collective Operation**

1. Provide simplex selective collective operation from a riser of hall push button stations.
2. The registration of one or more car calls shall dispatch the car to the selected floors.
  - a. The car shall also respond to registered hall calls in the same direction of travel.
  - b. Car and hall calls shall be canceled when answered.
3. Stops in response to calls that are registered in either the car or hall push button stations shall occur in the natural order of progression in which the floors are encountered, depending on the direction of car travel, and irrespective of the order in which calls are registered.
4. When the car has responded to the highest or lowest call, and calls are registered for the opposite direction, the car shall reverse direction automatically and respond to those registered calls.
5. When the car arrives at its last stop and reverses direction of travel, all previously registered car calls shall be automatically cancelled.
6. When the car arrives at a landing where both up and down hall calls are registered, it will answer the call in the direction of travel.
  - a. After a pre-determined delay, if no car call is registered, the car shall respond to calls registered for the opposite direction. Car doors shall close immediately, re-open and respond to the call for the opposite direction.
  - b. Hall lantern operation shall always correspond to direction of service.
7. When an empty car reverses direction at a landing with no hall calls, the doors shall not open and the hall lantern shall not operate.
8. If the car has no car calls registered and arrives at a floor where both up and down hall calls have been registered, the car shall respond to the hall call corresponding to the last direction of car travel. If, after making its stop, a car call is not registered and no other hall

calls exist ahead of the car corresponding to its original direction of travel, the doors shall close and immediately reopen in response to the hall call for the opposite direction.

9. The car shall maintain its original direction at each stop until the doors are fully closed to permit a passenger to register a car call before the car reverses its direction of travel.

**C. Attendant Service Operation**

1. Arrange the elevator for operation with or without an attendant.
2. The transfer from automatic to attendant operation shall be by means of a key operated switch in the car operating panel.
  - a. Locate this switch behind a locked cover in the car station, which shall also contain an "up" and a "down" direction button and a "pass" button.
    - 1) A service demand buzzer and up and down signal lights shall also be included in the car station.
3. When the transfer switch is in the attendant position, the car shall answer calls normally except that the attendant, operating either the "Up" or the "Down" button, shall establish the direction of travel, close the doors and start the car after each stop.
4. The car and landing door opening shall be completely automatic.
  - a. The doors shall remain open until a direction is initiated by the attendant.
  - b. If the button is released before the doors are fully closed the doors shall reopen.
  - c. Continuous pressure on one of the direction buttons or the "pass" button shall cause the car to bypass hall calls and respond only to pre-registered car calls in the direction of travel.
  - d. The bypassed calls shall remain registered to be answered by another car or by the same car on another trip.
5. The up and down signal lights shall indicate that an unanswered corridor call is above or below the car and shall remain illuminated until all calls for that direction are answered.
6. Operation of an "Up" or "Down" hall push button shall momentarily sound the service demand buzzer in the car if it is stopped at a floor with its doors open.
7. Announced calls by entering passengers shall be registered by the attendant.
8. Provide an annunciator panel that shall be activated only when the elevator is in attendant operation.
  - a. Provide green LED's for "up" and red LED's for "down" hall call identifications.
  - b. An electronic buzzer shall sound momentarily when a hall call is registered.
  - c. Cancel annunciator signals as the calls are answered.
  - d. Incorporate the annunciator LED's in the car push button panel either above the car call push buttons or adjacent to the car call push buttons.

**D. Independent Service Operation**

1. The car operating station shall be equipped with a key-operated switch labeled "IND SER".
2. Locate the switch in the locked access compartment.
3. When placed in the "on" position the following shall occur:
  - a. Group elevator - the elevator shall bypass corridor calls and travel directly to any floor chosen by registration of a car call. Hall calls shall remain registered for service by another elevator in the group.

- b. Simplex elevator - existing hall call registrations shall extinguish and hall buttons shall remain inoperative as an indication to passengers that there is no elevator service.
  4. During Independent Service Operation, the elevator doors shall remain open at any landing until the door close or a car call push button is pressed and maintained until the doors are fully closed.
  5. If more than one (1) car call is registered, all registered car calls shall extinguish when the elevator stops in response to the first call.
  6. Fire Emergency Recall shall automatically override Independent Service Operation and engage Phase I - Fire Emergency Recall Operation following a period of approximately forty-five (45) seconds.
- E. Inspection Service Operation
  1. Provide a key operated switch in the main car operating panel that, when turned to the 'ON' position, shall cause the elevator to be removed from service and placed in Inspection Service Operation.
  2. Limited operation of the car shall be provided through pressing the Attendant Service up and down push buttons (if provided) or the highest or lowest car call push buttons (if up and down buttons are not provided) in the main car operating panel only.
  3. The car shall move at a speed not to exceed 150 feet per minute (0.75 meters per second) as per 2014 A17.1-Appendix K with both the hall and car door panels in the closed and locked position.
  4. The Inspection Service switch shall be keyed differently than other typical keys used in the operation of the elevator. Keying shall be in accordance with Security Group Classifications as required by 2014 A17.1-Appendix K.
  5. The top of the elevator car shall be equipped with a control for limited operation of the car during restorations, maintenance and inspection conducted in the hoistway. The transfer of control to the top of car operating device shall cause that device to be the sole means of control for the elevator.
    - a. Visual and audible indication shall be provided on the top of the car when Firefighters' Emergency Operation is initiated.
  6. Power door operating equipment shall be rendered inoperative while the car is being operated in the Inspection Service mode with the exception of power closing of the door. The control system shall maintain closing power on the door while the elevator is moving under Inspection Service Operation.
  7. The in-car Inspection Service switch shall be rendered ineffective when the top of car inspection control is activated.
  8. Machine Room Inspection Operation and Inspection Operation with open door circuits shall be provided in accordance with A17.1 Safety Code, as modified and adopted, where required or allowed by New York City Department of Buildings.
- F. Hoistway Access Operation
  1. Provisions shall be made to allow access to the hoistway through the use of hoistway access switches.
  2. Operating the access switch shall permit the car to move at a speed not to exceed 150 feet per minute (0.75 meters per second) as per 2014 A17.1-Appendix K with the hall and car doors in the open position to obtain access to the top of the car or climb-in pit.
  3. The car shall automatically stop motion when the car top is level with the hoistway door sill for access to top of car.

4. The access key switch(es) shall be keyed differently than other typical keys used in the operation of the elevator. Keying shall be in accordance with Security Group Classifications as required by 2014 A17.1-Appendix K.
5. Access operation shall be disabled when top of car inspection operation is in effect.

**G. Load Weighing Operation**

1. A positive means shall be provided to continuously monitor the amount of load being transported by the elevator car.
2. The system shall be used to;
  - a. Preload static motor drives
  - b. Activate control features that include:
    - 1) anti-nuisance operation
    - 2) load dispatch operation
    - 3) load dependent non-stop operation where applicable.
3. The anti-nuisance feature shall operate at loads not exceeding 200 lbs., whereas load dispatch and load non-stop shall be set to function at 65% of the rated loading capacity for the initial set up and adjustment procedure.

**H. Anti-Nuisance Operation**

1. In the event car loading is not commensurate with the number of car calls registered, all car calls shall be canceled.
  - a. The system shall monitor the door protection device to determine if passenger transfer has occurred.
  - b. If after the third stop a passenger transfer has not occurred, the system shall cancel all remaining registered car calls and respond to assigned hall call demand.
  - c. The number of calls registered with no passenger transfer that will trigger anti-nuisance shall be adjustable and initially set to 3 calls.

**I. Firefighters' Emergency Operation / NYC**

1. Phase I Emergency Recall Operation shall be provided in accordance with ASME A17.1 code as modified under the 2014 New York City Building Code Appendix "K".
  - a. The fire emergency operation shall include a smoke detector at the top of each hoistway in buildings classified in occupancy group R-2 for automatic recall.
2. The car operating station shall be provided with an indicator light and audible signal, each of which shall become activated when Phase I Operation is engaged.
  - a. The warning buzzer shall cease to function once the car has completed the recall sequence and is positioned at the designated recall landing.
  - b. The indicator light shall remain illuminated as long as Phase I Operation is activated.
3. A two-position key-operated switch shall be provided on the designated recall landing per local law to manually activate Phase I operation.

- a. When activated, Phase I operation shall be arranged so that in order to restore normal service, the car must first be returned to the designated recall landing, after which the Phase I key-switch must be turned to the 'OFF' position.
    - b. All fire recall switches shall be provided with an illuminated visual signal to indicate when Phase I Emergency Recall Operation is in effect.
  4. Phase II Emergency Recall In-Car Operation shall be provided in accordance with applicable ASME A17.1 code as modified under the 2014 New York City Building Code Appendix "K".
  5. The car operating panel shall be equipped with a three-position, key-operated switch to engage Phase II Operation subsequent to completing the Phase I recall sequence and parking at the designated recall landing.
  6. The car operating panel shall be provided with a 'CALL CANCEL' push button that functions only under Phase II Operating mode.
    - a. When operated, the button shall cause any previously registered car calls to cancel.
  7. The car operating panel shall be engraved with required fire control identifications per the 2014 New York City Building Code Appendix "K".
  8. The "City Wide Standard Key" (Yale #2642) and the "Fire Department Standard Key", shall be used for all Fire Emergency operating devices including car button locked access panels in Destination Dispatch elevators.
  9. Firefighters' Emergency Operation, Phase I and Phase II, shall override all car call lockout features as well as special operating features as outlined by the applicable rules defined in 2014 New York City Building Code Appendix "K".
- J. Firefighters' Emergency Operation
1. Firefighters Service Operation and devices shall meet requirements of New York City Department of Buildings and the New York City Fire Department.
  2. Comply with all aspects of Firefighters Service including, but not limited to the mode of operation, initiation of operation, operating control and signaling devices as well as fixture engraving including operating instructions applicable to and where required by New York City Department of Buildings and the New York City Fire Department.
- K. Emergency Power Operation / All Elevators Operational
1. Upon loss of normal power, and establishing of emergency power, all elevators shall automatically resume normal operation.
    - a. Elevators shall start sequentially so as to prevent overloading of the emergency power system.
    - b. Sequential transformer connection operation shall be employed where necessary to reduce half-cycle inrush currents.
  2. An illuminated signal marked "ELEVATOR EMERGENCY POWER" shall be provided in the elevator lobby at the designated level to indicate that the normal power supply has failed and the emergency power is in effect.
  3. Prior to return to normal power, the building ATS shall provide a "pre-transfer" signal to the elevator equipment that will initiate the landing of elevators prior to transfer from emergency power to normal power.
    - a. Timer of the pre-transfer signal shall be adjustable from 15 to 30 seconds.

4. The following additional requirements apply:
  - a. Firefighters' Service Operation, if in effect, will remain active at all times during emergency power operation.
  - b. Car lighting will remain active with car lighting on separate emergency power feeders in addition to battery back-up.
  - c. Communications will remain active at all times on emergency power feeders in addition to battery back-up.
  - d. Remote monitoring, where provided, will be active from each group dispatcher for selected elevators using an uninterrupted power supply (UPS) to maintain the central processing unit during power transfers.
  - e. Position indicator for each elevator will be active in the selected elevator and security room (where applicable), as well as lobby display panels.
5. Testing of elevators under emergency power shall be accomplished with the building ATS providing necessary "pre-transfer" signals to the elevator control apparatus.
  - a. Prior to testing, the building ATS shall provide a "pre-transfer" signal to initiate the landing of the elevators prior to the transfer from normal to emergency power.
  - b. After testing, the building ATS shall provide a "pre-transfer" signal to initiate the landing of the elevators prior to the transfer from emergency to normal power.

**L. Elevator Safety Requirements for Seismic Zone 2**

1. Guarding of equipment, machine supports, guide rail systems, the design of counterweight car frame and platform, safeties and signaling devices shall meet the requirements of ASME A17.1 as may be modified by the New York City Department of Buildings.
2. Guide rails, guide rail supports and their fastenings shall meet requirements for the seismic zone.

**M. Floor Lockout Feature / Keyed Security Control / Car and Hall**

1. Provide a two (2) position "on-off" key switch located in the car station adjacent to each floor call button except the primary egress floor.
  - a. Turning the key switch to the "off" (locked out) position shall prevent the registration of a call when the corresponding car call button is pressed.
2. Provide a two (2) position "on-off" key switch located in each hall call push button station at each floor as directed by the Commissioner.
  - a. Turning the key switch to the "off" (locked out) position shall prevent the registration of a hall call when the hall call button is pressed.
3. The key switches shall be individually keyed with a master as directed by the Commissioner.
4. The lockout key switches shall be of a material and finish to match the hall push button stations.
5. Firefighters' Service Operation shall override the Floor Lockout Feature.
6. Provide a label on the door of the individual car controller cabinet identifying that the control system utilizes Floor Lockout Feature.
  - a. Firefighters' Emergency Operation override of Floor Lockout Feature shall be tested in accordance with applicable requirements.

**N. Floor Lockout Feature / Keyless Security System / Car Only**

1. Provide a complete car call push button security access system for all landings, except the main floor egress, interfaced with primary dispatch signaling for automatic home landing at a designated floor.
2. The system shall utilize a programmable, card reader to enable a corresponding car station push button that would allow a passenger to register a specific call.
3. The security system shall be activated via a keyed switch located in the car operating panel and/or a controller timing device that would initiate the security function(s) during selected or predetermined hours as directed by the Commissioner.
4. The system shall allow programming by Contractor (i.e., code changes, deletion of individual access codes per landing, additional codes, etc.).
5. Locate the card reader in accordance with applicable ADA or handicapped regulations in the car operating panel fixture.
6. Design and interface security control with primary control signaling for Firefighters' Service or other emergency control override features per local law.
7. Provide a label on the door of the individual car controller cabinet identifying that the control system utilizes Floor Lockout Feature.
  - a. Firefighters' Emergency Operation override of Floor Lockout Feature shall be tested in accordance with applicable requirements.

**O. Floor Lockout Feature / Keyless - Card Reader Control / Wiring Provisions**

1. Wiring: Provide six (6) pair of 20 gauge two (2) flexible conductor low voltage cables with an overall braided shield in the traveling cable of all elevators for card reader interface.
  - a. The cables shall extend from the security interface terminal cabinet in the elevator machine room to behind the elevator return panel above the space allotted for the card reader.
  - b. Terminate the cable to dual screw barrier terminal strips on each end.
2. Card Reader Space: Allocate card reader space in each main car station as directed by the Commissioner.
3. Interface: For floor programmable card access control in all elevators, provide a pair of terminals for all floors such that application of a momentary dry (no voltage present) contact closure across those terminals by the security system shall enable the selection of the corresponding floor from the floor selector button in the elevator cab.
  - a. Locate the terminals inside an interface terminal cabinet in the elevator machine room.
  - b. Provide all relays required to interface the elevator control system to the momentary dry contact closures provided for under another section of these specifications.
  - c. If applicable, the card reader shall be operable and compatible with the issued card keys used building wide.
  - d. Coordinate system requirements with the manufacturer of the issued card key system.
4. Card Reader "Secure/Bypass" Switch: Provide separate card reader control bypass key switches for each elevator.
  - a. The bypass key switches shall be located in the Director's Control Panel.
  - b. The bypass key switches shall be a maintained contact type key switch with the key removable in the secure or bypass position.

- 1) When the key switch is in the secure position, the card reader control mode shall be initiated.
  - 2) When in the bypass position, the card reader control mode shall be bypassed and the elevator shall return to normal operation, permitting free access to any floor.
5. The card reader operation shall bypass floor cut-out switches.
  6. Firefighters' Service Operation shall override Floor Lockout Feature.
  7. Provide a label on the door of the individual car controller cabinet identifying that the control system utilizes Floor Lockout Feature.
    - a. Firefighters' Emergency Operation override of Floor Lockout Feature shall be tested in accordance with applicable requirements.

**P. Car to Lobby Operation**

1. Provide a key-operated Car-to-Lobby feature.
  - a. Provide a 3-position key-operated switch for each elevator in the lobby control panel or at a location as directed by the Commissioner to activate the Car-to-Lobby operating feature.
2. When engaged, this feature shall:
  - a. Cause the affected elevator to return non-stop to the lobby after it has discharged all registered car calls.
  - b. Open the door upon arriving at the lobby for approximately ten (10) seconds, after which the elevator shall park out of service with the door closed.
  - c. Maintain door open button function during the interval in which the car is out of service.
3. Returning the key-operated switch in the lobby panel to the "on" position shall restore the car to normal operation.
4. Override the Priority Service feature with Firefighters' Service in accordance with FDNY guidelines and 2014 NYCBC/ A17.1-Appendix K.
5. Provide a label on the door of the individual car controller cabinet identifying that the control system utilizes Executive Priority Service Operation.
  - a. Firefighters' Emergency Operation override of Car-to-Lobby shall be tested in accordance with applicable requirements.

**Q. Passenger Rescue Feature**

1. Provide a device in the control room to move the elevator car to a floor landing in the event of controller or power failure.
  - a. This device must be speed controlled to prevent an overspeed condition.
  - b. A line of sight must be provided between the Passenger Rescue Feature device and the elevator car.
    - 1) Coordinate line of sight requirements with the control room requirements.
2. Provide a manual brake release lever attached to the control cabinet for rescue of passengers.

- a. A visual display shall be provided with the control cabinet, which indicates car position, speed and directions.

**R. Door Operation**

1. Car and hoistway doors shall be arranged to operate in unison without excessive noise or slamming in either direction of travel.
  - a. Door opening speeds of two (2) feet per second shall be provided in conjunction with closing speeds of 1.0 feet per second in accordance with 2014 New York City Building Code.
  - b. Door operation shall commence as the car stops level at the floor and the machine brake is applied. Pre-door opening shall not be permitted.
2. Where the hoistway door and the car door are mechanically coupled, the kinetic energy of the closing door system shall be based upon the sum of the hoistway and the car door weights, as well as all parts rigidly connected thereto, including the rotational inertia effects of the door operator and the connecting transmission to the door panels.
3. The force necessary to prevent closing of the car and hoistway door from rest shall not exceed 30 lbf. This force shall be measured on the leading edge of the door with the door at any point between one third and two thirds of its travel.
4. Door open and door close time shall be measured between the moment car door operation in either direction begins and the instant at which that cycle is completed.
5. When responding to either a car or corridor call, the amount of time that the elevator door remains stationary in the open position shall be adjustable up to sixty (60) seconds.
  - a. Door open dwell time for a corridor call shall be separate of that for a car call, and in both cases, dwell time shall be canceled whenever the car door protection device is momentarily interrupted by passenger transfers, followed by a reduced door open dwell time of approximately one (1) second (adjustable) after the door protection device is cleared of obstructions.
6. The operation of the door protective device by physical contact (mechanical safety-edge) or the interruption of one or more infrared light beams (dual or multi-beam non-contact) during the close cycle shall cause the immediate reversing of the doors to the full open position.
7. The door closing cycle shall be arranged so that, in the event the door protective devices become continually obstructed after the normal door open dwell time has expired, and following a time interval of approximately thirty (30) seconds (adjustable), a warning tone shall sound and the door closing cycle shall commence at reduced speed and torque per 2014 NYCBC requirements.
8. Each car operating station shall be provided with a “door open” and “door close” push button.
  - a. Pressure on the “door open” button shall cause doors in the full open position to remain so and doors engaged in the close cycle to reverse direction and assume the full open position so long as pressure remains applied to the button.
  - b. The “door open” buttons shall also control the open cycle during Phase II - Emergency In-car Operation.
  - c. The “door close” push button shall function on Independent Service, Attendant Service and Phase II - Emergency In-car Operation as well as during normal automatic operations.

9. Repeated attempts by the power door operator to open or close the door at any landing shall be monitored by the control system.
  - a. In the event the door fails to cycle properly after a preset (adjustable) number of attempts, the car shall either travel to the next stop or remove itself from service, depending upon whether the malfunction is in the open or close cycle.
10. Each hoistway door shall be provided with an automatic self-closing mechanism arranged so that the door shall close and lock if the car should leave the landing while the hoistway door is unlocked.
11. Car doors shall be arranged to prevent their being manually opened from inside the car unless the elevator is positioned within a floor landing zone.

## 2.4 MACHINE ROOM / SECONDARY EQUIPMENT

### A. Controller

1. The elevator shall have a microprocessor-based controller.
2. Digital logic shall calculate optimum acceleration, deceleration and velocity patterns for the car to follow during each run.
3. Closed-loop distance and velocity feedback shall monitor the actual performance of the elevator car with the desired speed profile.
4. System operating software shall be stored in non-volatile memory.
5. Elevator control relays, contactors, switches, capacitors, resistors, fuses, circuit breakers, overload relays, power supplies, electronic circuit boards, microprocessors, static motor drive units, wiring terminal blocks and related components shall be totally enclosed inside a free-standing metal cabinet with hinged access doors.
  - a. Provide natural or mechanical ventilation for the controller cabinets.
  - b. Equip the vent openings and exhaust fans with filters.
6. Mount equipment to moisture-resistant, noncombustible panels supported from the steel frame.
7. Provide "noise filter" between hoistway wiring and controller/dispatchers to eliminate interference.
8. Optically isolate communication cables between components.
9. Wiring: Wiring on the units, whether factory or field wiring, shall be done in neat order, and all connections shall be made to studs and/or terminals by means of grommets, solderless lugs or similar connections. All wiring shall be copper.
10. Terminal Blocks: Provide terminal blocks with identifying studs on units for connection of board wiring and external wiring.
11. Marking: Identifying symbols or letters shall be permanently marked on or adjacent to each device on the unit, and the marking shall be identical with marking used on the wiring diagrams. In addition to the identifying marks, the ampere rating shall be marked adjacent to all fuse holders.
12. The manufacturer's standard on-board "LCD" display shall be incorporated on the main processor board and/or otherwise incorporated in the controller cabinet. The "LCD" shall be capable of providing alpha-numeric characters to view the operational status of the elevator and/or group functions depending on the application. The display shall provide the user with necessary information for troubleshooting and reprogramming of the basic system parameters.
  - a. Where the "LCD" is not an integral part of the controller and troubleshooting/reprogramming requires the use of a separate tool, the tool shall be

- maintained in the machine room and accessible to service installer. This tool, along with all technical documentation for the correct use of the tool, shall remain the property of the The City of New York.
- b. Password protection of critical programming features is required to prevent accidental changes to life-safety and other non-typical control settings.
  - c. Where a separate dispatch or group control panel is provided, a separate “LCD” display shall be provided to view group functions.
13. In the event diagnostics and monitoring is accomplished via Field Service Tools, provide the required Field Service Tools with related control system appurtenances for diagnostic evaluations, system monitoring and field adjustments.
- a. Provide instructions for proper use of such diagnostic tools and/or equipment with all coding and other operational requirements.
14. Microprocessor Documentation
- a. Provide and/or obtain complete information on systems' design, component parts, installation and/or modification procedures, adjusting procedures and associated computer conceptual logic circuitry and field connection.
  - b. Provide microprocessor upgrading and/or modifications to programs that have been assigned to enhance the operation of the equipment for a period of 1 year after date of substantial completion.
- B. Machine Beams
- 1. Provide support beams, angles, plates, bearing plates, blocking steel members to support machine, governors, dead end hitches, deflector and overhead sheaves.
  - 2. Provide support beams, angles, plates, rails, bearing plates, blocking steel members to support machines, governors, deflector and overhead sheaves. The machinery and deflector sheaves shall be located within the hoistway as shown on the drawings. Coordinate attachments of the machine beams to the building structure with the structural drawings.
  - 3. Mounting of the hoist machine and deflector sheaves shall incorporate isolation to minimize the transmission of noise and/or vibration to the building structure.
- C. Gearless Elevator Hoisting Machine
- 1. Provide a permanent magnet synchronous motor (PMSM) gearless traction machine, specially designed and manufactured for elevator service. The machine shall have high starting torque and low starting current, rated for 50° C (90° F) continuous operation, and a minimum of 240 starts per hour.
    - a. The traction driving sheave and brake drum shall be cast integral and bolted securely to the main armature shaft.
    - b. Securely mount the machine frame, including motor fields, bearing stands and brake on a heavy steel bedplate.
    - c. The armature shaft shall be supported in ball or roller type bearings.
    - d. The driving sheave shall be cast from the best grade of metal with a Brinell hardness of 215 to 230 and shall be machined with grooves, providing maximum traction with a minimum of rope and sheave wear.

- 1) Roping requirements and type of steel rope used as suspension means shall be engineered by the contractor and manufacturer of the equipment for maximum life of ropes and sheave.
- e. Ensure that adequate ventilation of internal stator windings and rotating element is provided to prevent overheating with thermal overload protection. (Constant velocity fan for constant cooling.)
- f. Equip housing with eyebolt(s) for lifting.
- g. Provide a spring applied and electrically released electro-mechanical brake.
- h. Swivel type brake shoes shall be applied to the braking surface simultaneously and with equal pressure by means of helical compression springs.
- i. Design the brake for quick release to provide smooth and gradual application of the brake shoes.
- 1) An emergency brake shall be an integral part of the machine design.
- j. Provide 14-gauge hoist cable guards at the car-drop and counterweight-drop side of the machine sheave.
  - 1) Guards shall cover cables from the point of slab penetration to the point where the hoist cables contact the sheave.
  - 2) Guards shall prevent access to cables at pinch points.
  - 3) Guards shall have no sharp edges.
  - 4) Guards shall be properly mounted to prevent vibration.
- k. Design and construct the hoisting machine based on passenger elevator cab enclosure weight as specified and as shown on the architectural drawings.

**D. VVVF AC Drive**

1. Provide a solid-state, variable voltage, variable frequency (VVVF), 3-phase AC hoist motor drive system as part of the microprocessor-based equipment.
  - a. VVVF drive system shall be a low-noise, flux-vector inverter device.
  - b. Include a digital LED readout and touch-key pad to facilitate software parameter adjustments, monitor system operation and display fault codes.
2. The drive shall utilize a 3-phase, full wave rectifier and capacitor bank to provide direct current power for solid-state inversion.
3. The inverter shall utilize IGBT power semiconductors and duty cycle modulation fundamental frequency of not less than one kilohertz to synthesize 3-phase, variable voltage variable frequency output.
4. The system shall be designed and configured with the following countermeasures for noise generated by the pulse-width modulated (PWM) inverters.
  - a. Control of radiated noise via inverter and/or motor cables.
  - b. Conducted noise through power lines.
  - c. Induction noise and ground noise.
5. Inverter shall be encased in metal and independently grounded.
6. A noise filter for the input power line shall be provided to prevent penetration into radios, wireless equipment and smoke detectors.
7. A 3% three-phase line reactor shall be provided on the power system rated at the utility voltage input to the drive and sized for the rated drive current.

8. The drive shall:
  - a. Be configured as a complete digital drive system.
  - b. Be totally software configurable.
  - c. Interface with external equipment/signals via either discrete local I/O connections or high speed Local Area Network (LAN).
  - d. Be located within the limits of the control cabinet (where system size allows) or separately mounted in an appropriate chassis with hinged swing-out doors with clearances equal to the cabinet width dimensions.
  - e. Provide programmable linear or S-curve acceleration.
  - f. Provide free run or programmable linear or S-curve deceleration.
  - g. Have controlled reversing.
9. Operating and Environmental Conditions:
  - a. Have a service factor of 1.0.
  - b. Rated for continuous duty.
  - c. Humidity - 90% rated humidity non condensing.
  - d. Cooling - forced air when required.
  - e. Digital display for:
    - 1) Running - output frequency, motor RPM, output current, voltage.
    - 2) Setting - Parameters values for setup and review.
    - 3) Trip - separate message for each trip, last 30 trips to be retained in memory.
10. Protective Features:
  - a. Motor overspeed.
  - b. Adjustable current limit.
  - c. Isolated control circuitry.
  - d. Digital display for fault conditions.
  - e. Selectable automatic restart at momentary power loss.
  - f. Manual restart.
  - g. Over/Under Voltage.
  - h. Line to line and line to ground faults.
  - i. Over-temperature.

**E. Overspeed Governor**

1. Provide a speed governor, located overhead, to operate the car safety.
  - a. Maintain the proper tension in the governor rope with a weighted tension sheave located in the pit.
    - 1) Springs used to develop the tension are not acceptable.
  - b. Provide rope grip jaws, designed to clamp the governor rope to actuate the car safety upon a predetermined overspeed downward.
    - 1) The centrifugal type governor shall trip and set rope jaws within 60 degrees of governor sheave rotation after reaching rated tripping speed.

- c. Design the governor rope tripping device so that no appreciable damage to or deformation of the governor rope shall result from the stopping action of the device in operating the car safety.
- d. Provide an electrical governor overspeed protective device which shall remove power from the driving machine motor and brake before or at the application of the safety.
  - 1) The setting for the overspeed switch shall be as prescribed in the ASME A17.1 Safety Code.
  - 2) Locate and enclose the switch to ensure that excess lubrication will not enter the switch enclosure.
  - 3) Overspeed switch shall operate in both direction of travel on systems employing a static power drive unit.
- e. Seal and tag the governor with the running speed, tripping speed and date last tested.
- f. Design the governor to prevent false tripping due to conditions caused by rope dynamics.
- g. Governor shall be mounted to the guide rail system or machine beam supports in the hoistway overhead.
  - 1) Coordinate access requirements and testing procedures with the New York City Department of Buildings.
  - 2) Where governor access is not required by New York City Department of Buildings, governor shall be capable of being manually reset from outside the hoistway.

**F. Equipment Isolation**

- 1. Provide effective sound isolation between machines, secondary deflector sheaves, solid state motor drive units and filters, from building structure to reduce noise transmission to occupied spaces and elevators and elevator cabs.
- 2. When operating per plans and specifications, the elevator equipment shall not generate noise levels in excess of NC-40 in occupied tenant spaces and shall be free of pure tones. For the purposes of this specification, a pure tone shall be defined as a sound level in any one-third octave band which is greater than 5 dB above both adjacent one-third octave bands, in the range 45 to 11,200 Hz.
- 3. Provide the following as a minimum:
  - a. Resiliently isolate the entire elevator/secondary deflector integral unitized base from the elevator machine room floor slab by means of effective neoprene-in-shear isolators having a minimum static deflection of 3/8".
  - b. Isolate the transformers and reactance units from the building structure by means of approved neoprene-in-shear isolators having a minimum static deflection of 3/8".
  - c. Solid state rectification units shall be mounted on 3/4" thick minimum, neoprene-in-shear pad isolators and an effective electrical filter/reactance limiting electrical noise shall be provided.
  - d. Use flexible conduit with ground wire for motor, machine, drive, governor and position/velocity transducer connections.

**G. Overhead / and Governor Stop Switches**

- 1. Provide a positive action stop switch at the following locations as required by 2014 A17.1-Appendix K:

- a. Overhead governor access panel as mandated by New York City Department of Buildings.
  2. The switch shall be arranged to prevent the application of power to the hoist motor and machine brake when placed in the “OFF” position.
    - a. Clearly identify the switch with permanent marking on the switch cover that indicates “RUN” and “STOP” positions.
- H. Ascending Car Overspeed Protection Device
  1. Provide a device designed to prevent an ascending elevator from striking the hoistway overhead structure.
  2. The device shall decelerate the car with any load up to the rated capacity by applying an emergency brake.
    - a. The device shall detect an ascending car overspeed condition of not greater than 10% higher than the speed that the car governor is set to trip.
    - b. The device, when activated, shall prevent operation of the car until the device is manually reset.
    - c. The device shall meet the requirements of the ASME A17.1 Safety Code as may be modified by New York City Department of Buildings.
- I. Unintended Car Movement Protection Device
  1. Provide a device to prevent unintended car movement away from the landing when the car and hoistway doors are not closed and locked.
    - a. The device shall prevent such movement in the event of failure of:
      - 1) The electric driving machine motor.
      - 2) The brake.
      - 3) The machine shaft or shaft coupling.
      - 4) Machine gearing.
      - 5) Control system.
      - 6) Any component upon which the speed of the car depends.
      - 7) Suspension ropes and the drive sheave of the traction machine are excluded.
    - b. The device shall prevent operation of the car until the device is manually reset.
    - c. The device shall meet the requirements of the ASME A17.1 Safety Code as may be modified by New York City Department of Buildings.
- J. Emergency Brake
  1. Provide a mechanical device, independent of the normal braking system, that will stop the elevator should it overspeed or move in an unintended manner.
  2. The device used may be arranged to apply force to the car or counterweight rails, suspension or compensation ropes, drive sheave or brake drum.
  3. The emergency brake shall be provided with a marking plate indicating the range of total masses (car with attachments and its load) for:
    - a. The range of speeds at which it is set to operate.
    - b. The criteria such as rail lubrication requirements that may be critical to the performance.

## 2.5 HOISTWAY EQUIPMENT

### A. Guide Rails / Inserts / Brackets

1. Provide machined, standard size steel "T" section guide rails with tongue and grooved joints for the car and counterweight. Use not less than 15.0-pound car rails.
2. The car guide rails shall be as follows:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Saveria Super Line,
    - 2) Monteferro S
    - 3) AFD
    - 4) Or approved equal
3. Use not less than 3/4" thick machined steel fishplates to form rail joints. Connect rails to fishplate with four (4) bolts.
4. The section modulus and moment of inertia of the fishplates shall not be less than that of the rail. Connect rails to fishplate with four (4) bolts.
5. For concrete and concrete block hoistways furnish rail brackets and provide inserts and an insert location drawing to Commissioner.
6. Brackets shall be used to support the rails from the hoistway framing and/or inserts.
  - a. The rails shall be attached to the brackets by heavy clamps or clips.
  - b. Bolting or welding rails to brackets shall only be allowed in certain instances.
  - c. Do not attach brackets to the top flange of hoistway framing steel.
7. Provide rail backing where the vertical distance between support framing is greater than 14'-0" and no intermediate support framing is shown on the drawing.
8. All guide rails shall be erected plumb and parallel to a maximum deviation of 1/8 inch (plus or minus 1/16 inch).
9. Provide oversized steel members and brackets for the rails where the distances exceed the manufacturer's standard dimensions.

### B. Counterweight Assembly / Frame

1. Counterweight shall consist of a steel frame welded or bolted together and necessary steel sub-weights.
  - a. Sub-weights shall be held within the frame by not less than 2 tie-rods passing through holes in all weights with rods equipped with locknuts, secured by washers and cotter pins at each end.
  - b. The counterweight shall be equal to the weight of the elevator car and approximately 40% of the contract (specified) capacity.
  - c. Provide the required pit counterweight guard where no compensation is used.
  - d. The bottom of the counterweight shall have a buffer striking plate and means to attach knock-off blocks to compensate for varying rope length.
  - e. Where a counterweight is located between elevators, provide a guard between the counterweight and the adjacent elevator extending the full height of the shaft as required by 2014 A17.1-Appendix K.

### C. Roller Guides

1. Provide roller guide shoes with adjustable mounting base, rigidly bolted to the top and bottom of each side of the car and counterweight frame.

- a. Roller guides shall consist of a set of sound reducing neoprene wheels in precision bearings held in contact with the three finished rail surfaces by adjustable stabilizing springs.
  - b. The bearings shall be sealed or provided with grease fittings for lubrication.
  - c. Equip roller guides with adjustable stops to control postwise float.
  - d. Fit the top car roller guides with galvanized, painted or powder coated steel guards.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- a. ELSCO Model B for car roller guides and ELSCO Model D for counterweight guides
  - b. ELPRO
  - c. Hollister Whitney
  - d. Or approved equal.

**D. Hoist Ropes**

1. Pre-formed traction steel wire rope, specifically constructed for elevator applications, shall be provided for suspension of the elevator car and counterweight assembly.
  - a. Fastenings shall be accomplished by use of individual tapered rope sockets with adjustable shackles.
  - b. General design requirements for rope shackles and the method of securing wire rope shall conform with ASME A17.1 elevator safety code and 2014 New York City Construction Codes.
  - c. Provide machine-room-less elevators with hoist ropes having steel core.
  - d. Properly select rope for the application and compatibility with the machine drive sheave hardness and groove profile. Design shall provide for a minimum service life of ten years and shall be substantiated by calculations during the submittal phase.
2. Provide anti-spinout as required by 2014 A17.1-Appendix K at all shackles where applicable.
3. Coated steel belts with steel cords embedded in polyurethane case may be used in lieu of conventional steel hoist ropes subject to approval of the Commissioner of the New York City Department of Buildings.

**E. Governor Rope**

1. Pre-formed wire rope specifically constructed for elevator applications, shall be provided for governor ropes.
  - a. Rope shall be traction steel or iron in accordance with manufacturer requirements.
  - b. Rope diameter and method of fastening shall be in accordance with ASME A17.1 Safety Code as adopted and/or otherwise modified by 2014 New York City Construction Codes.

**F. Electrical Conduit / Wiring / Traveling Cable**

1. Electrical wiring shall be provided.
  - a. All wiring shall be stranded copper conductors, manufactured in compliance with ANSI/ASTM B174-71 and UL 62 requirements, and polyvinyl chloride insulation

- complying with ETT requirements of UL 62 and Article 400 of the National Electric Code.
- b. Electrical wiring provided for hoistway interlock shall be of a flame retardant type, capable of withstanding temperatures of at least 392 degrees Fahrenheit. Conductors shall be Type SF or equivalent.
  - c. Each run of electrical conduit or duct shall contain no less than 10% spare wires and, in any case, no fewer than two (2) spare wires.
  - d. Crimp-on type wire terminals shall be used where possible.
2. Traveling cable shall be provided.
- a. Each traveling cable shall be provided with a flame and water resistant polyvinyl chloride jacket.
  - b. Electrical wiring shall consist of stranded copper conductors, manufactured in compliance with ANSI/ASTM B174-71 and UL 62 requirements, and polyvinyl chloride insulation complying with ETT requirements of UL 62 and Article 400 of the National Electric Code.
  - c. Each traveling cable shall contain no less than 10% spare wires.
  - d. Traveling cable exceeding 100' in length shall be provided with a steel wire rope support strand from which the cable shall be suspended.
  - e. Traveling cable must be contained within an approved electrical conduit to within 6' of the final suspension point in the hoistway.
  - f. Each traveling cable shall be arranged to provide no fewer than six (6) individually shielded pairs of 20 gauge wire and arranged to contain no less than one (1) CAT5e cable for CCTV remote monitoring, one (1) CAT5e for phone and all the necessary cables for security card readers as required/identified by the Commissioner.
  - g. Traveling cable conductors that terminate at a hoistway center box shall be connected to stud blocks provided for that purpose.
    - 1) Each wiring terminal shall be clearly identified by its nomenclature as shown on the "as built" wiring diagrams and solderless, crimp-on type wire terminals shall be used where possible.
  - h. The attachment of a traveling cable to the underside of the elevator car shall be performed so that a minimum loop diameter of 30x the cable diameter is provided.
  - i. Pre-hang the cables for at least 24 hours with ends suitably weighted to eliminate twisting during operation.
3. Rigidly supported EMT conduit, flexible metal conduit and galvanized steel trough shall be utilized throughout the hoistway.
- a. Both EMT and flexible conduit shall be connected on either end by use of compression fittings and secured in place with metal clamps sized in accordance with the diameter of conduit utilized.
    - 1) Wire or plastic wire ty-raps shall not constitute an acceptable means of fastening.
  - b. The use of flexible metal conduit shall be limited to runs not greater than 3' in length.

**G. Normal and Final Terminal Stopping Devices**

1. Provide normal terminal stopping devices to stop the car automatically from any speed obtained under normal operation within the top and bottom overtravel, independent of the operating devices, final terminal stopping device and the buffers.
2. Provide final terminal stopping devices to stop the car and counterweight automatically from the speed specified within the top clearance and bottom overtravel.
3. The terminal stopping devices shall have rollers with rubber or other approved composition tread to provide silent operation when actuated by the cam fixed to the top of the car.
  - a. Terminal stopping devices that are not mechanically operated (i.e.: magnetic proximity) shall be provided by the manufacturer of the control equipment, intended for use as a terminal limit, and designed for reliable operation in the hoistway environment.
4. Final terminal limits shall be pinned so as to prevent movement after final adjustment where required by New York City Department of Buildings.

## 2.6 PIT EQUIPMENT

### A. Car and Counterweight Buffers

1. Provide buffer with necessary blocking and horizontal steel braces under the car and counterweight.
2. Provide spring type buffers for elevators with operating speeds of up to and including 200 fpm. Use oil buffers for elevators with operating speeds over 200 fpm.
3. The buffer shall be tested and approved by a qualified testing laboratory.
4. Provide a permanent buffer marking plate which indicates the manufacturer's name, identification number, rated impact speed and stroke.
5. Provide a permanent data plate in the vicinity of the counterweight buffer indicating the maximum designed counterweight runby.
6. Support buffers from the pit floor level with all required blocking and bracing steel members.
7. Coordinate the installation of the buffer inspection platform and ladder with the Commissioner.

### B. Governor Rope Tension Assembly

1. Provide a governor rope tension assembly.
  - a. Maintain the proper tension in the governor rope with a weighted tension sheave located in the pit.
    - 1) Springs used to develop the tension are not acceptable.
  - b. The sheave shall be of proper diameter and set directly plumb with the governor rope drop to prevent the rope from pulling off of the sheave at an angle.
  - c. Lubrication fittings shall be provided on the assembly.
  - d. The assembly shall have necessary rope guards to prevent accidental contact of the rope/sheave by service installer and to prevent the governor rope from jumping off of the sheave.

### C. Pit Stop Switch

1. Where pit depth does not exceed 67", each elevator pit shall be provided with a push/pull or toggle switch that is conspicuously designated "EMERGENCY STOP" and located so

as to be readily accessible from the hoistway entrance on the lowest landing served at a height of approximately 18" above the floor.

- a. This switch shall be arranged to prevent the application of power to the hoist motor and machine brake when placed in the "OFF" position.
2. Where climb-in pit depth exceeds 67", each pit shall be provided with two (2) push/pull or toggle switches conspicuously designated "EMERGENCY STOP".
  - a. Both of these stop switches shall be located immediately adjacent to the pit access ladder.
    - 1) Place one stop switch approximately 47" above the pit floor.
    - 2) Place the second stop switch 18" above the hoistway entrance sill on the lowest landing served.
    - 3) These switches shall be arranged so as to prevent the application of power to the hoist motor or machine brake when either one is placed in the "OFF" position.
3. Where a walk-in pit exists, each elevator shall be provided with a push/pull or toggle switch that is conspicuously numbered and designated "EMERGENCY STOP".
  - a. The location of this stop switch shall be approximately 47" above the pit floor at the nearest point of pit entry from the access door.
  - b. This switch shall be arranged so as to prevent the application of power to the hoist motor and machine brake when placed in the "OFF" position.
4. Provide an electric contact safety switch for the pit access door if any equipment attached to the car extends within the space of the hoistway pit when the car is level at the bottom terminal landing.
  - a. Opening the pit access door shall cause the electric contact switch stop the elevator by interrupting electric power to the driving machine and brake.
  - b. Provide a sign on the pit door "WARNING – OPENING OF PIT DOOR WILL STOP ELEVATOR" using lettering a minimum of 2 inches high.

## 2.7 HOISTWAY ENTRANCES

### A. Hoistway Entrance Structure

1. Frames - The frames shall be constructed of 14-gauge sheet steel.
  - a. Passenger Elevators - Provide stainless steel with No. 4 finish unit frame with welded and mitered corners ground smooth, 2" wide square profile at all floors.
2. Doors - The doors shall be constructed of 16-gauge sheet steel, not less than 1-1/4" thick, reinforced to accept hangers, interlocks or door closers.
3. Equip all hoistway landing doors with one-piece full height non-vision wings of material and finish to match hall side of door panels. The doors shall be as follows:
  - a. Passenger Elevators - At all Floors: Stainless steel with No. 4 finish.
4. Entrances shall bear 1 ½ hour label of Underwriters Laboratories, Inc.

5. Provide each door panel with two removable laminated plastic composition guides, arranged to run in sill grooves with a minimum clearance, replaceable without removing the door from the hangers and incorporating a steel fire stop.
6. In multi-speed door arrangements, provisions shall be made to interlock the individual panels so all panels close should the normal door panel relating means fail.
7. Provide rubber bumpers at the top and bottom of the door to stop them at their limit of travel in opening direction.
8. Sills - Provide narrow-type, extruded sills with the nosing approximately one (1) inch deep and running the full length of door travel.
  - a. The sills shall be at least 3/8 inch thick.
  - b. The wearing surface shall be of a non-slip type.
  - c. Rigidly secure the sills to the building construction by means of steel sill support brackets or blocking with necessary metal shimming or adjustments.
    - 1) Passenger Elevators – At all Floors: Extruded stainless steel.
  - d. Provide and rigidly secure sill support members to the building structure after blocking and leveling them with necessary metal shimming.
    - 1) Use 4" x 4" x 1/4" angle for single speed entrances and 5" x 5" x 3/8" angle for two speed entrances.
    - 2) If formed sheet steel sill support members are used, the structural properties of these members shall match or exceed the structural properties of 4" x 4" x 1/4" angle for single speed entrances, and 5"x 5" x 3/8" angle for two speed entrances.
9. Struts - Provide 3" x 3" x 1/4" hot rolled steel angle struts.
  - a. If formed sheet steel struts are used, the structural properties of formed struts shall match or exceed the structural properties of 3" x 3"x 1/4" steel angle.
  - b. Extend the struts from top of sill to either the bottom of floor beam or intermediate framing above.
  - c. Bolt struts in place with not less than two (2) bolts at each end.
  - d. Strut clip angles or brackets shall have a thickness not less than the thickness of the supported strut.
10. Track Support - 3/16-inch-thick steel track support plate shall extend between and be bolted to the vertical steel struts with no less than two (2) bolts at each end.
11. Track Covers – 14 gauge steel cover plates shall extend the full travel of the doors.
  - a. Covers shall be made in sections for service access to hangers, sheaves, tracks and interlocks.
  - b. The sections above the door opening shall be movable from within the elevator car.
  - c. Cover fastening devices shall be non-removable from the cover.
12. Fascias – 14 gauge steel fascia plates shall extend at least the full width of the door and be secured at hanger support and sill with oval head machine screws.
  - a. Provide fascia plates where the clearance between the edge of the loading side of the platform and the inside face of the hoistway enclosure exceeds the allowed clearance per 2014 New York City Construction Code.

13. Toe Guards - Provide 14 gauge steel toe guards to extend 12 inches below any sill not protected by fascia.
  - a. The toe guards shall extend the full width of the door and shall return to the hoistway wall at a 15-degree angle and be firmly fastened.
14. Dust Covers - Provide 14 gauge steel dust covers to extend 6 inches above any header not protected by fascia.
  - a. The dust covers shall extend to a full width of travel of the doors, return to the hoistway wall at a 15-degree angle and be firmly fastened.
15. The bottom of each horizontally sliding hoistway door panel shall be equipped with guiding members and safety retainers in accordance with A17.1 Safety Code as adopted and/or modified by New York City Department of Buildings.
  - a. The bottom hoistway door panel safety retainers shall be of stainless steel "Z" bar design, or shall be otherwise designed to prevent displacement of the door panel.
  - b. Contractor must submit proof to the Commissioner, in the form of a statement certified by an engineer licensed in the State of New York, that the engineering and design of the safety retainers comply with the performance standard defined in 2014 New York City Building Code Appendix "K".

**B. Tracks / Hangers / Closers / Related Equipment**

1. Formed or extruded steel landing door hanger tracks shall be provided.
2. Each landing door panel shall be suspended from a pair of door hanger assemblies that are compatible with the hanger tracks.
  - a. Hanger assemblies shall be directly mounted to the door panel using 3/8" diameter or better hardware.
  - b. Solid steel blocks shall be used where job-site conditions dictate the use of spacers between hanger assemblies and the landing door panel.
  - c. Hanger assemblies shall be adjusted or shimmed so that door panels are suspended in a plumb manner with no more than 3/8" vertical clearance to the cab entrance threshold.
  - d. Upthrust rollers shall be adjusted for minimal operating clearance against the bottom edge of the hanger track.
  - e. Means shall be provided to prevent hangers from jumping the track.
  - f. Blocks shall be provided to prevent rollers from overrunning the end of the track.
3. Each set of multi-speed center opening or side slide landing doors shall be provided with a sill-mounted spring closing mechanism with necessary door panel relating hardware.
4. Each set of single speed side slide landing doors shall be provided with a sill-mounted spring closing mechanism.
  - a. Spirator-type spring closers shall be acceptable should prevailing sill depth or runby clearance conditions require their use.

**C. Interlocks / Unlocking Devices**

1. Each set of landing doors shall be provided with a complete electromechanical interlock assembly.

- a. Each interlock assembly shall consist of:
    - 1) A switch housing with contacts
    - 2) Lock keeper
    - 3) Clutch engagement/release subassembly
    - 4) Associated linkages
  - b. Arrange the lock so that individual leading door panels (side slide or center opening) are locked when in the closed position.
2. Non-typical mounting arrangements for interlocks and/or related mechanisms must receive prior approval from the Commissioner.
  3. Each hoistway door interlock assembly shall be provided with an emergency release mechanism utilizing a drop-leaf type access key at all landings served.
    - a. Each hoistway door shall accommodate manufacturers standard lock release key with escutcheon.
      - 1) The key hole shall be fitted with a metal ferrule that matches the door finish.
      - 2) Drilling key holes in the field will not be accepted.

## 2.8 CAR EQUIPMENT / FRAME

### A. Car Frame and Platform

1. The car frame shall be made of steel members, with the required factor of safety.
2. The car platform shall consist of a steel frame with necessary steel stringers, all securely welded together.
3. The frame and platform shall be so braced and reinforced that no strain will be transmitted to the elevator car.
  - a. Provide platform with two (2) layers of 3/4" thick marine grade plywood.
  - b. Cover the underside of the car platform with sheet steel.
4. The support frame shall carry rubber pads on which the platform shall rest without any connection to the steel frame for sound and vibration isolation.
5. Provide extruded stainless steel thresholds having non-slip surface, guide grooves.
6. Sound isolate all passenger elevator platforms with vibration isolation pads. The support frame shall carry rubber pads on which the platform shall rest without any connection to the steel frame.
7. Recess the passenger elevator platforms to receive finished flooring as selected by the Commissioner and specified under another section of their specification.
8. The car frame shall be sized for an 8' - 0" overall cab height.
9. Design the elevator frames and platforms for elevator PE1 for a Class A freight loading.

### B. Car Safety

1. Provide a governor actuated mechanical safety device mounted under the car platform and securely bolted to the car sling.
2. The car safety shall be sized for the capacity and speed noted herein.
  - a. When tripped, the safety mechanism shall engage the rails with sufficient force to stop a fully loaded car with an average rate of retardation within the limits given in

A17.1 Safety Code as adopted and/or otherwise modified by the 2014 New York City Construction Codes.

3. Install a car safety marking plate of corrosion resistant metal and, in addition to the data required by 2014 A17.1-Appendix K, indicate the manufacturer's name and manufacturer's catalog designation number for safety.
4. Make provisions to release the car safety. In no event shall the safety be released by downward motion of the car. Raising the car to reset the safety shall be allowed.
5. Provide an electrical safety plank switch that will interrupt the power to the hoist machine and apply the machine brakes when the safety is set.

**C. Automatic Leveling / Releveling / Positioning Device**

1. Equip the elevator with a floor leveling device which shall automatically bring the car to a stop within 1/4" of any floor for which a stop has been initiated regardless of load or direction of travel.
2. This device shall also provide for releveling which shall be arranged to automatically return the elevator to the floor in the event the elevator should move below or above floor level in excess of 1/4".
3. This device shall be operative at all floors served and whether the hoistway or car door is open or closed provided there is no interruption of power to the elevator.
4. A positioning device shall be part of the controller microprocessor systems.
  - a. Position determination in the hoistway may be through fixed tape in the hoistway or by sensors fitted on each driving machine to encode and store car movement.
  - b. Design the mechanical features and electrical circuits to permit accurate control and rapid acceleration and retardation without discomfort.

**D. Top-of-Car Inspection Operating Station**

1. An inspection operating station shall be provided on top of the elevator car.
2. This station shall be installed so that the controls are plainly visible and readily accessible from the hoistway entrance without stepping on the car.
3. When the station is operational, all operating devices in the car shall be inoperative.
4. Provide the following control devices and features:
  - a. A push/pull or toggle switch designated "EMERGENCY STOP" shall be arranged so as to prevent the application of power to the hoist motor or machine brake when in the "off" position.
  - b. A toggle switch designated "INSPECTION" and "NORMAL" to activate the top of car Inspection Service Operation.
  - c. Push button designated "Up", "Down" and "Enable" to operate the elevator on Inspection Service (the "Enable" button shall be arranged to operate in conjunction with either the "Up" or "Down" button).
  - d. An indicator light and warning buzzer that are subject to activation under Phase I - Fire Emergency Recall Operation.

**E. Load Weighing Device**

1. Provide means to measure the load in the car within an accuracy of  $\pm 4\%$  of the elevator capacity.
2. Provide one of the following types of devices:

- a. A device consisting of four strain gauge load cells located at each corner of the car platform and supporting a free floating car platform and cab with summing circuits to calculate the actual load under varying conditions of eccentric loading.
    - b. A strain gauge device located on the crosshead, arranged to measure the deflection of the crosshead and thus determine the load in the car.
    - c. A device consisting of four strain gauge load cells, supporting the weight of the elevator machine with summing circuits to calculate the actual load under varying conditions of load.
    - d. A device to measure the tension in the elevator hoist ropes and thus determine the load in the car.
  3. Arrange that the output signal from the load weighing device be connected as an input to the signal and motor control systems to pre-torque of the hoisting machine motors where applicable.
  4. Provide audible and visual signals in connection with the load weighing device when used as an “overload” device.
- F. Car Enclosure Work Light / Receptacle
1. The top and bottom of each car shall be provided with a permanent lighting fixture and 110 volt GFI receptacle.
  2. Light control switches shall be located for easy accessibility from the hoistway entrance.
  3. Where sufficient overhead clearance exists, the car top lighting fixture shall be extended no less than 24” above the crosshead member of the car frame.
  4. Light bulbs shall be guarded so as to prevent breakage or accidental contact.
- G. Master Door Power Operator System – VVVF/AC
1. Provide a heavy-duty master door operator on top of the elevator car enclosure for power opening and closing of the cab and hoistway entrance door panels.
  2. Operator shall utilize an alternating current motor, controlled by a variable voltage, variable frequency (VVVF) drive and a closed-loop control with programmable operating parameters.
    - a. System may incorporate an encoder feedback to monitor positions with a separate speed sensing device or an encoderless closed-loop VVVF-AC control to monitor motor parameters and vary power applied to compensate for load changes.
  3. The type of system shall be designated as a high speed operator, designed for door panel opening at an average speed of 2.0 feet per second and closing at approximately 1.0 foot per second.
    - a. Reduce the closing speed as required to limit kinetic energy of closing doors to within values permitted by ASME A17.1 as may be adopted and/or modified by the 2014 New York City Construction Codes.
  4. The door shall operate smoothly without a slam or abrupt motion in both the opening and closing cycle directions.
    - a. Provide controls to automatically compensate for load changes such as:
      - 1) Wind conditions (stack effect)
      - 2) Use of different weight door panels on multiple landings

- 3) Other unique prevailing conditions that could cause variations in operational speeds.
- b. Provide nudging to limit speed and torque in conjunction with door close signaling/closing and timing devices as permitted by ASME A17.1 as may be adopted and/or modified by the 2014 New York City Construction Codes. Nudging shall be initiated by the signal control system and not from the door protective device.
5. In case of interruption or failure of electric power from any cause, the door operating mechanism shall be so designed that it shall permit emergency manual operation of both the car and corridor doors only when the elevator is located in the floor landing unlocking zone.
  - a. The hoistway door shall continue to be self-locking and self-closing during emergency operation.
  - b. The door operator and/or car door panel shall be equipped with safety switches and electrical controls to prevent operation of the elevator with the door in the open position as per ASME A17.1 Code Standards.
  - c. Provide zone-lock devices as required by ASME A17.1 as may be adopted and/or otherwise modified by the New York City Department of Buildings
6. Construct all door operating levers of heavy steel or reinforced extruded aluminum members, designed for stress and forces imposed on the related parts, linkages and fixed components during normal and emergency operation functions.
  - a. All pivot points shall have either ball or roller-type bearings, iolite bronze bushings or other non-metallic bushings of ample size.
7. Provide operating data / data tag permanently attached to the operator as required by 2014 A17.1-Appendix K.

**H. Door Reopening Device**

1. Provide an infrared curtain door protection system.
2. The door shall be prevented from closing and reopen when closing if a person interrupts any one of the light rays.
3. The door shall start to close when the protection system is free of any obstruction.
4. The infrared curtain protective system shall provide:
  - a. Protective field not less than 71" above the sill.
  - b. Where a horizontal infrared light beam system is used:
    - 1) A minimum of 47 light beams.
    - 2) Accurately positioned infrared lights to conform to the requirements of ANSI a117.1, section 407.3.3, "Reopening Device".
  - c. Modular design to permit on board test operation and replacement of all circuit boards without removing the complete unit.
  - d. Controls to shut down the elevator when the unit fails to operate properly.

**2.9 FINISH / MATERIALS / SIGNAGE**

**A. Material, Finishes and Painting**

1. General

- a. Cold-rolled Sheet Steel Sections: ASTM A366, commercial steel, Type B
- b. Rolled Steel Floor Plate: ASTM A786
- c. Steel Supports and Reinforcement: ASTM A36
- d. Aluminum-alloy Rolled Tread Plate: ASTM B632
- e. Aluminum Plate: ASTM B209
- f. Stainless Steel: ASTM A167 Type 302, 304 or 316
- g. Stainless Steel Bars and Shapes: ASTM A276
- h. Stainless Steel Tubes: ASTM A269
- i. Aluminum Extrusions: ASTM B221
- j. Nickel Silver Extrusions: ASTM B155
- k. Bronze Sheet: ASTM B36(36M) alloy UNS No. C2800 (Muntz Metal)
- l. Structural Tubing: ASTM A500
- m. Bolts, Nuts and Washers: ASTM A325 and A490
- n. Laminated / Safety Tempered Glass: ANSI Z97.1

2. Finishes

- a. Stainless Steel
  - 1) Satin Finish: No. 4 satin, long grain
  - 2) Mirror Finish: No. 8 non-directional mirror polished
- b. Sheet Steel:
  - 1) Shop Prime: Factory-applied baked on coat of mineral filler and primer
  - 2) Finish Paint: Two (2) coats of low sheen baked enamel, color as selected by the Commissioner.
  - 3) Steel Equipment: Two (2) coats of manufacturer's standard rust-inhibiting paint to exposed ferrous metal surfaces in both the hoistway and pit that do not have galvanized, anodized, baked enamel, or special architectural finishes.

3. Painting

- a. Apply two (2) coats of paint to the machine room floor.
- b. Apply two (2) coats of clear lacquer to bronze or similar non-ferrous materials to prevent tarnishing during a period of not less than twelve (12) months after substantial completion.
- c. Identify all equipment including buffers, crosshead, safety plank, machine, controller, drive, governor, disconnect switch, etc., by 4" high numerals which shall contrast with the background to which it is applied. The identification shall be either decalcomania or stencil type.
- d. Paint or provide decal-type floor designation not less than six (6) inches high on hoistway doors (hoistway side), fascias and/or walls as required by A17.1 as may be adopted and/or modified by the 2014 New York City Construction Codes. The color of paint used shall contrast with the color of the surface to which it is applied.

B. Designation and Data Plates, Labeling and Signage.

- 1. Provide an elevator identification plate on or adjacent to each entrance frame where required by the New York City Department of Buildings.

2. Provide an elevator identification plate on or adjacent to each entrance frame at the designated landing only as required by 2014 A17.1-Appendix K.
3. Elevators shall be identified by "number" only. Where a "letter" is used to identify the elevator, the letter shall indicate the Bank the elevator is in.
  - a. The designation numeral shall be a minimum of 3" in height.
4. For MRL elevators; provide permanent signage indicating the location of the main line disconnect switch(es) for the elevator or bank of elevators.
  - a. The sign shall be located on or adjacent to the Firefighters' Emergency Phase I key switch located at the designated landing.
  - b. Lettering must be a minimum of 6 mm (0.25 in) high in red or a color contrasting with a red background.
5. Provide floor designation plates at each elevator entrance, on both sides of the jamb at a height of 60 inches to center line of plate.
  - a. Floor number designations and Braille shall be 2" high, 0.03" raised and stud mounted.
6. For Destination Based Dispatch systems, provide an elevator designation plate immediately below the floor designation plate in accordance with ANSI A117.1, A17.1-Appendix K and 2014 NYCBC.
  - a. Elevator number designations and Braille shall be 2" high, 0.03" raised and stud mounted.
7. Identify the designated medical emergency services elevator with 3" high international symbol at each elevator entrance on both sides of the jamb.
8. Provide raised designations and Braille markings to the left of the car call and control buttons of the car operating panel(s).
  - a. Designations shall be a minimum of 5/8" high, 0.03" raised and stud mounted.
9. Provide elevators with data and marking plates, labels, signages and refuge space markings complying with A17.1 Elevator Safety Code as may be adopted and/or otherwise modified by the 2014 New York City Construction Codes.
10. Commissioner shall select the designation and data plates from manufacturer's premium line of plates.

## 2.10 FIXTURES / SIGNAL EQUIPMENT

### A. General - Design and Finish

1. The design and location of the hall and car operating and signaling fixtures shall comply with the ADAAG.
2. The operating fixtures shall be selected from the manufacturer's premium line of fixtures.
3. Custom designed operating and signaling fixtures shall be as shown on the drawings or as approved by the Commissioner.
4. The layout of the fixtures including all associated signage and engraving shall be as approved by the Commissioner.
5. Where no special design is shown on the drawings, the buttons shall be as follows:

- a. Stainless steel convex type as selected by the Commissioner from the manufacturer's premium line of push buttons.
    - b. The button shall have a collar & small square indicator on the button with LED call registered light.
  6. Where no special design is shown on the drawings, the faceplates shall be as follows:
    - a. Passenger Elevator
      - 1) At all Floors: Stainless steel faceplate with No.4 finish.
  7. Mount passenger elevator fixtures with concealed fasteners. The screw and key switch cylinder finishes shall match faceplate finish.
  8. Where key-operated switch and or key operated cylinder locks are furnished in conjunction with any component of the installation, four keys for each individual switch or lock shall be furnished, stamped or permanently tagged to indicate function.
  9. All caution signs, pictographs, 2014 NYCBC/ A17.1-Appendix K mandated instructions and directives shall be engraved and filled with epoxy.
- B. Main Car Operating Panel**
1. Provide a main car operating push button panel on the inside front return panel of the car.
  2. Car operating panel shall be incorporated in the swing-front return of the elevator cab.
    - a. Coordination with car front manufacturer shall be the responsibility of the Contractor.
  3. The push buttons shall become individually illuminated as they are pressed and shall extinguish as the calls are answered.
  4. The operating panel shall include:
    - a. A call button for each floor served, located not more than 48" above the cab floor.
    - b. "Door open" / "Door close" buttons.
    - c. "Alarm" button, interfaced with emergency alarm. The alarm button shall illuminate when pressed.
    - d. "Emergency Stop" switch per local law located at 35" above the cab floor.
    - e. Self-dialing intercom with call acknowledging feature and A.D.A. design provisions.
    - f. Three (3) position firefighter key operated switch, call cancel button and illuminated visual/audible signal system with mandated signage engraved per ASME A 17.1 Standards as modified by the 2014 New York City Construction Codes.
      - 1) The "City-Wide Standard Key" (#2642) as well as the "Fire Department Standard Key" (#1620), shall be used for all Fire Emergency operating devices.
  5. Provide a locked service cabinet flush mounted and containing the key switches required to operate and maintain the elevator, including, but not limited to:
    - a. Independent service switch.
    - b. Light switch.
    - c. Fan switch.
    - d. G. F. I. duplex receptacle.
    - e. Emergency light test button and indicator.
    - f. Inspection Service Operation key switch.
    - g. Port for hand-held service tool where applicable.

- h. Dimmer for cab interior lighting.
6. Car operating panel shall incorporate:
- a. An integral (no separate faceplate) digital L.E.D. floor position indicator
  - b. Emergency light fixture (without a separate faceplate) and black-filled engraved unit I.D. number or other nomenclature, as approved by Commissioner
  - c. A "No Smoking" advisory and the rated passenger load capacity.
7. Equip the car operating panel with security car call keyed switches & proximity card reader to disconnect the corresponding floor push button.
- a. Security system shall be overridden by Phase II Firefighter's Emergency Operations in accordance with 2014 NYCBC/ A17.1-Appendix K.
8. Where posting of an advisory is permitted by the New York City Department of Buildings in lieu of the inspection certificate, engrave the following advisory on the hinged cover of the service cabinet, or where otherwise directed by the Commissioner.
- a. Inspection Certificate is On File in the Building Management Office Located on the (indicate floor).
- C. Auxiliary Car Operating Panel
1. Provide an auxiliary car operating panel that contains the following:
- a. Car call registration buttons.
  - b. Door open and close buttons.
  - c. Illuminated alarm button.
2. Operating devices shall be of the same design, material and finish as the main operating panel.
3. Design this station so as to duplicate the layout of the main operating panel.
4. Provide a digital position indicator, ID engraving to match the main car operating panel.
5. Provide auxiliary car operating panels shall be provided as indicated on the architectural drawings or as directed by the Commissioner.
- D. Car Position Indicator
1. The position of the car in the hoistway shall be indicated by the illumination of the position indicator numeral corresponding to the floor at which the car has stopped or is passing.
- a. Provide 2" high, 10-segment LED type position indicator with direction arrows, integral with the car operating panel.
  - b. Provide Lexan cover lens with hidden support frame behind fixture plate to protect the indicator readout.
  - c. Provide audible floor passing signal per ADA standards where not provided by the elevator signal control.
  - d. Flush mount fixture with cover to match selected car front or car operating panel finish as directed by the Commissioner.
- E. Voice Annunciator
1. Provide a voice annunciator in each elevator.

2. The device features shall comply with the requirements of ADAAG and A117.1 where applicable.
3. Coordinate size, shape and design with Commissioner and other trades.
4. The system shall include, but not limited to:
  - a. Solid state digital speech annunciator
  - b. A recording feature for customized messages
  - c. Playback option
  - d. Built-in voice amplifier
  - e. Master volume control
  - f. Audible indication for selected floor, floor status or position, direction of travel, floor stop and nudging.
5. Locate all associated equipment in a single, clearly labeled enclosure located either in the machine room and/or on car top.

**F. Corridor Push Button Stations / Riser**

1. A riser of push button signal fixtures shall be provided on all floors.
2. Each signal fixture shall consist of the following:
  - a. A flush-mounted faceplate.
  - b. Illuminating tamper-resistant push buttons measuring 3/4" at their smallest dimension as selected by the Commissioner.
  - c. A recessed mounting box, electrical conduit and wiring.
3. Intermediate landings shall be provided with fixtures containing two (2) push buttons while terminal landings shall be provided with fixtures containing a single push button.
4. Include firefighter key switch in the main lobby level station or other designated recall landing.
5. Push button signal fixtures shall be installed at a centerline height of 42" above the floor and shall be installed both plumb and flush to the finished wall.
  - a. Standardize the final distance on all floors.
6. Fixture faceplates shall be installed adjacent to the entrance frame on front wall.

**G. Lobby Call Fixture Cover Engraving/MRL**

1. For MRL elevators; engrave the location of the main line disconnect switch for the elevator or bank of elevators on the cover of the fixture that contains the Firefighters' Emergency Phase I key switch at the designated landing.
  - a. Lettering must be a minimum of 6 mm (0.25 in) high in red or a color contrasting with a red background.

**H. Floor Position Indicator**

1. Provide a digital LED type floor position indicator at each landing.
2. Indicator shall include 2" high numerals with integral direction arrows that will indicate the direction in which the elevator is traveling.
3. Indicator shall be integrated with hall directional lanterns located adjacent to the hoistway entrance frames.

**I. Hall Direction Lanterns**

1. Provide a visual and audible signal at each entrance to indicate the direction of travel and, where applicable, which car shall stop in response to the hall call.
  - a. Design the lantern with up and down indication at intermediate landings and a single indication at terminal landings.
  - b. Lanterns shall sound once for the up direction and twice for the down direction.
    - 1) Provide an electronic chime with adjustable sound volume.
  - c. Provide adjustable signal time (3 to 10 seconds, with 1 second increments) to notify passengers which car shall answer the hall call and preset per ADAAG distance standards.
2. Incorporate a 2" high LED floor position indicator in the hall lantern fixture with direction arrows located on both sides of the indicator.
3. Locate the lantern adjacent to the corridor entrance.

**J. Car Arrival Advanced Hall Notification Device**

1. Provide a "car here" or approved equal signal in the hall call fixture which will illuminate only where the car is about to stop or has stopped at the specified landing.
2. The signal shall remain illuminated while the car remains at the landing and shall extinguish at the beginning of the door close cycle.

**K. Hoistway Access Switch**

1. Install a cylindrical type keyed switch at top terminal in order to permit the car to be moved at slow speed with the doors open to allow authorized persons to obtain access to the top of the car.
2. Where there is no separate pit access door, a similar switch shall be installed at the lowest landing in order to permit the car to be moved away from the landing with the doors open in order to gain access to the pit.
3. Locate the switch in the terminal floor entrance jambs without faceplate at a height of 78" above the finished floor.
4. This switch is to be of the continuous pressure spring-return type and shall be operated by a cylinder type lock having not less than a five (5) pin or five (5) disc combination with the key removable only in the "OFF" position.
  - a. The lock shall not be operable by any key which operates locks or devices used for other purposes in the building and shall be available to and used only by inspectors, maintenance men and repairmen in accordance with A17.1 applicable Security Group.

**L. Lobby Control Panel/Remote Lobby Security System**

1. Provide a Lobby Control Panel, including a Remote Lobby Security System for the elevator in the main lobby as directed by the Commissioner.
2. Provide stainless steel finish faceplate with tamperproof screws.
3. Coordinate panel location with the Commissioner.
4. The panel shall include:
  - a. 2" high LED position and direction indicators

- b. Car On / Car to Lobby /Car Off three (3) position keyed switch with pilot light.
- c. Security On / Off keyed switch and card reader provision.

**M. Emergency Power Control Panel**

- 1. Provide the lobby console or other designated location with a control panel for emergency power operation as further specified.
  - a. An emergency power control panel provided at the designated location.
  - b. The panel shall contain:
    - 1) An indicator light that illuminates when a transfer to emergency power takes place.
    - 2) Indication that the elevators have arrived at the designated landing and have parked with the doors maintained in the open position.
    - 3) Key-operated override switch(es) and a manual selector switch(es) identified with positions for each elevator.
- 2. The control panel shall be engraved so as to identify the function of each control feature and device provided.
- 3. Provide all necessary electrical conduit and wiring between the elevator machine room(s), and the Emergency Power Control Panel.

**2.11 CAR ENCLOSURES**

**A. Passenger Elevator (PE1)**

- 1. Wall Panels:
  - a. 3/4" thick fire-retardant plywood or particleboard with all surfaces faced with stainless steel as directed by the Commissioner. The panels shall be constructed as the removable type.
- 2. Canopy: Paint canopy with a coat of primer and one coat of low sheen enamel paint.
- 3. Front Return Panels and Transom: Stainless steel swing type front return panel.
  - a. Provide stainless steel entrance posts having mitered, welded and ground smooth corners.
- 4. Cab Doors: Stainless steel with No. 4 finish.
- 5. Ceiling:
  - a. Suspended 3/4" thick fire-retardant plywood or particleboard with all surfaces finished in the selected stainless steel.
- 6. Handrails:
  - a. 1½" inch diameter/flat 1/4" x 4" stainless steel handrail at all walls.
- 7. Lighting:
  - a. Fully recessed LED down light fixtures with aluminum Alzak reflector. Unless otherwise shown on the drawings, provide a light fixture in each ceiling panel.

8. Base: Provide a 4" high base in the material and finish selected by the Commissioner at the sides and rear of the cab enclosure.

**B. Elevator Cab / General Design Requirements**

1. The design, materials and finishes of the cab enclosures shall be as shown on the Architectural Drawings.
2. Materials:
  - a. Particleboard: Premium grade, AWI, Section 200, fire retardant treated, equal to Duraflake FR
  - b. Plastic Laminate: Comply with NEMA LD3, 0.05" thick, color, texture and finish as selected by the Commissioner
  - c. Wood Panels: AWI Premium Grade, quarter sliced wood veneer.
  - d. Trims: AWI Premium Grade quarter sawn wood.
3. Steel Shell: 14-gauge furniture steel reinforced and designed to accept finished wall panels. Finish shell panels with one coat of rust inhibitive primer and two coats of enamel paint in accordance with Section 09 91 00 - "Painting". Apply 1/8" thick, rubberized sound deadening material to the hoistway side of the shell.
  - a. All panels shall have minimum radii. Apply sealant beads to panel joints before bolting together with lock washers.
  - b. Side emergency exit shall be of inconspicuous flush design, fitted with concealed hinges and an approved locking arrangement. Provide a three point locking system; at top, bottom and side.
4. Wood Shell: 3/4" thick particleboard with backing laminate at both sides designed to accept finished wall panels. Apply 26-gauge sheet steel or fire proofing compound to the hoistway side of the shell.
5. Canopy: Canopy construction methods shall match the shell walls. Use 12-gauge furniture sheet steel and adequately support canopy to comply with the loading requirements of 2014 NYCBC.
  - a. Provide necessary cutouts for the installation of fan and top emergency exit. Arrange exit panel to swing up using a heavy duty piano hinge.
  - b. The exit panel shall have dual locks, necessary stops and a handle.
  - c. When in the locked position, the panel shall be flush with the interior face of the canopy with hairline joints.
6. Base: Where finished base provided under another section of these specifications, recess and prepare the shell to accept the base.
  - a. Provide concealed vent slots above side and rear wall base for proper ventilation. Arrange and size vent slots for quiet operation without any whistling. Use 16 gauge baffles to protect the hoistway side of the vent slots.
  - b. The elevator cab shop drawings shall include elevator vent calculations and number, location and size of top and bottom vent holes.
7. Flooring: Where finished flooring is provided under another section of these specifications, recess and prepare sub-flooring to accept the finished flooring.

- a. Service and Freight Elevators: Provide steel or aluminum diamond plate flooring in sections of not more than 24" x 48". Install each section using flat head stainless steel screws.
8. Front Return Panels, Entrance Posts and Transom: Use 14-gauge furniture sheet steel with proper reinforcing to prevent oil canning.
  - a. Fixed type return panel shall have required cutouts for car operating and signaling fixtures.
  - b. Swing front return panels shall have required cutouts for the car call buttons, keyed switches, indicators, emergency light fixture, cabinets and the specified special control and signaling devices.
    - 1) Provide concealed full height stainless steel piano hinges of sufficient strength to support the panel, without sagging, in the open position.
    - 2) The concealed locks shall secure the panel at two points with linkage that shall be free of vibration and noise when in the locked position.
    - 3) When locked in the closed position, the front return panel shall be in true alignment with the transom and base.
    - 4) Lock release holes shall be not more than 1/4" diameter and be located at the return side jamb of the panel.
    - 5) Engrave the elevator identification number and capacity, no smoking sign, firefighter instructions, and other 2014 NYCBC mandated instructions and caution signs directly in the front return panel. Applied panels are unacceptable.
  - c. Transom shall be 14 gauge, and be reinforced and constructed the same as the front return panels.
  - d. Construct entrance posts for the passenger elevators from 12-gauge sheet steel and reinforce to maintain vertical alignment with the adjacent panels.
  - e. Provide channel post entrance jambs for the service elevators. Clad channels with 14-gauge sheet steel and through bolt channels to the floor and to the reinforced header section.
9. Cab Doors: Standard 1" thick, 14-gauge hollow metal flush construction, reinforced for power operation and insulated for sound deadening. Paint hatch side of doors black and face cab side with 16-gauge sheet steel in selected material and finish.
  - a. The door panels shall have no binder angles. All welds shall be continuous, ground smooth and invisible.
  - b. Drill and reinforce doors for installation of door operator hardware, door protective device, door gibs, etc.
10. Ceiling: Construction techniques for wall panels shall apply to ceiling panel construction. Locate top emergency exit inconspicuously. Construct and mount the exit panel to prevent light leakage around the perimeter of panel.
11. Ventilation: The ventilation system of the exhaust type shall be provided in each elevator.
  - a. The system shall include a blower driven by a direct connected motor and mounted on top of car with isolation to effectively prevent transmission of vibration to the car structure. The blower shall have not less than two operating speeds. The ventilation system shall be sized to provide one air change per minute at low speed and 1.5 air

changes per minute at high speed. The unit design and installation shall be such that the maximum noise level, when operating at high speed, shall not exceed 55 dBA approximately three feet above the car floor. A three-position switch to control the blower shall be provided in the car station.

- b. The cab ventilation fan shall be designed so that it does not consume more than .33 watts per CFM while operating at maximum speed.
  - c. The fan or blower shall start upon the pressing of a car or landing call button and shall stop a predetermined time (approximately 2 minutes) after the car has answered the last registered call.
12. Lighting: Arrange lighting fixtures and ceiling assembly to provide even illumination without hot spots and shadows. Overlap fluorescent lamps where cove lighting is specified.
- a. Design and configure lighting system to facilitate maintenance of the fixtures.
  - b. Cab lighting source shall be designed to provide a minimum output of 35 lumens per watt.
  - c. When an unoccupied elevator has remained stationary for 15 minutes, the cab lighting shall become de-energized. The control system shall automatically re-energize the lighting system upon opening of the cab door.
13. Handrails: All attachment hardware shall match the selected handrail and shall permit handrail removal from within the cab.
- a. Provide a minimum of 10-gauge plate at the hatch side of the shell, aligned with the handrail attachment points, to assure secure handrail mounting.
  - b. Design handrail attachment system to support the weight of a person (250 pounds) sitting on it without any deflection and damage to the handrail, cab panel and the shell.
14. Protective Pads and Pad Hooks: Provide pad hooks at locations as directed by the Commissioner. Protective pads shall cover the front return panels, and the side and rear walls. Provide cutouts in pads for access to the cab operating and signaling devices. Pads shall be fire-resistant canvas with two (2) layers of cotton batting padding.
- a. Identify each pad by elevator number and wall location.
15. Accessories: Construct elevator cab to accommodate the door operator, hangers, interlocks and all accessory equipment provided under other sections of these specifications, including firefighter phones, card readers and CCTV.
16. All cab materials shall conform to the 2014 NYCBC/ A17.1-Appendix K prescribed flame spread rating and smoke development requirements.

**C. Cab Fabrication and Installation**

- 1. Maintain accurate relation of planes and angles with hairline fit of contacting panels and/or surfaces.
- 2. Any shadow gaps (reveals) between panels shall be consistent and uniform.

3. Unless otherwise specified or shown on the drawings, for work exposed to view use concealed fasteners.
4. Maximum exposed edge radius at corner bends shall be 1/16". There shall be no visible grain difference at the bends.
5. Form the work to the required shapes and sizes with smooth and even curves, lines and angles. Provide necessary brackets, spacers and blocking material for assembly of the cab.
6. Interior cab surfaces shall be flat and free of bow or oil canning. The maximum overall deviation between the low and high points of 24" x 24" panel section shall not exceed 1/32".
7. Make weights of connections and accessories adequate to safely sustain and withstand stresses to which they will be subjected.
8. All steel work except stainless steel and bronze materials shall be painted with an approved coat of primer and one (1) coat of baked enamel paint.
9. Cab Finish Warranty Enhancement
  - a. Contractor shall be responsible for engineering and installing interior cab finishes in a manner that will withstand all 2014 NYCBC/ A17.1-Appendix K mandated inspections and test procedures. Failure of finishes during testing shall be restored by the contractor without expense to The City of New York. Any objections or qualifications to material selection or design shall be identified for review by the Commissioner.

## 2.12 EMERGENCY LIGHTING / COMMUNICATIONS / SIGNALING

### A. Battery Back Up Emergency Lighting Fixture and Alarm

1. Provide a self-powered emergency light unit.
  - a. Arrange all the light fixtures of the cab to operate as the emergency light system.
2. Provide a car-mounted battery unit including solid-state charger and testing means enclosed in common metal container.
  - a. The battery shall be rechargeable nickel cadmium with a 10-year minimum life expectancy. Mount the power pack on the top of the car.
  - b. Provide a 6" diameter alarm bell mounted directly to the battery/charger unit and connected to sound when any alarm push button or stop switch in the car enclosure is operated.
  - c. The bell shall be configured to operate from power supplied by the building emergency power generator. The bell shall produce a sound output of between 80-90 dBa (measured from a distance of 10') mounted on top of the elevator car.
    - 1) Activation of this bell shall be controlled by the stop switch and alarm button in the car operating station
    - 2) The alarm button shall illuminate when pressed.
3. Where required by 2014 NYCBC/ A17.1-Appendix K for the specific application, the unit shall provide mechanical ventilation for at least one (1) hour.
4. The operation shall be completely automatic upon failure of normal power supply.
5. Unit shall be connected to normal power supply for car lights and arranged to be energized at all times so it automatically recharges battery after use.

### B. Central Exchange Communication System / Intercom

1. Provide an ADA compatible, hands-free intercommunication system for all elevators for two-way, multi-path communication between the elevator car stations and master stations using a central exchange design system.
2. The communication system shall include:
  - a. A car station in the elevator.
  - b. A master station in the elevator control room to communicate with the central and satellite monitor panel, and with the elevator car.
  - c. A master station at the Main Desk area.
  - d. A master station where selected by the Commissioner.
3. The car station shall have a loudspeaker and a microphone to provide hands-free communication. The station shall be installed behind the car operating panel.
4. Master stations shall include:
  - a. Selector push buttons
  - b. Annunciator lights for each connected station
  - c. Speaker/microphone
  - d. Volume control and function buttons.
5. The master stations shall communicate with other master stations and any elevator in that group.
6. A call shall be placed from the elevator car station by pressing the emergency call or alarm button.
  - a. This action shall cause the lamp in the corresponding button of all the designated master stations to flash and an intermittent tone to be heard.
  - b. When the incoming call is answered, the flashing light shall go to a steady condition.
  - c. Disconnection of a call is simply done by depressing the designated car button once.
  - d. If a call request is placed during a conversation, it shall be indicated by a flashing light and short tone of every designated master station.
  - e. When the original conversation is completed, the normal intermittent tone shall resume.
7. A master station shall be connected to any of its designated car stations by depressing the corresponding call button.
  - a. The lamp in the button shall be illuminated while the button is depressed.
  - b. In the car station an audible tone shall be emitted and immediate communication is established.
  - c. The call shall be ended by depressing the button a second time, disconnecting the circuit.
  - d. The master stations shall call any other master station by depressing the corresponding call button.
  - e. The button shall lock in its down position and the lamp shall be lit with a steady light.
  - f. At the called master station, a short tone shall be sent out and the lamp in the button corresponding to the "calling" party shall be lit.
  - g. After the tone, immediate communication is established.
8. On all non-called master stations, the lamps corresponding to the calling and called stations shall be illuminated as an indication that those stations are busy.
9. Provide all power supplies, wire, conduit, fittings, etc., for both systems.
10. Location of the stations, in the specified rooms or areas, shall be directed by the Commissioner.

11. The intercom system shall include the following features:
  - a. Test button to verify audio circuit path.
  - b. All call buttons to initiate a call to all cars in the systems.
  - c. Priority button in the remote monitoring panel stations.
  - d. Visual acknowledgment for the hearing impaired.
12. Provide a battery backup power supply for the intercom capable of providing sufficient power to operate the complete system for a minimum of four (4) hours.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXAMINATION

- A. Inspection
  1. Study the Contract Documents with regard to the work as specified and required so as to ensure its completeness.
  2. Examine surface and conditions to which this work is to be attached or applied and notify the Commissioner in writing if conditions or surfaces are detrimental to the proper and expeditious installation of the work. Starting the work shall imply acceptance of the surfaces and conditions to perform the work as specified.
  3. Verify, by measurements at the job site, dimensions affecting the work. Bring field dimensions which are at variance with those on the accepted shop drawings to the attention of the Commissioner. Obtain the decision regarding corrective measures before the start of fabrication of items affected.
  4. Cooperate in the coordination and scheduling of the work of this section with the work of other sections so as not to delay job progress.

#### 3.3 INSTALLATION / PROJECT PHASING

- A. Installation
  1. Install the elevators, using skilled installers in strict accordance with the final accepted shop drawings and other submittals.
  2. Comply with 2014 NYCBC/ A17.1-Appendix K, manufacturer's instructions and recommendations.
  3. Coordinate work with the work of other building functions for proper time and sequence to avoid delays and to ensure right-of-way of system. Use lines and levels to ensure dimensional coordination of the work.
  4. Accurately and rigidly secure supporting elements within the shaftways to the encountered construction within the tolerance established.
  5. Provide and install motor, switch, control, safety and maintenance and operating devices in strict accordance with the submitted wiring diagrams and 2014 New York City Construction Codes.
  6. Ensure sill-to-sill running clearances do not exceed 1 ¼" at all landings served.
  7. Erect guide rails plumb and parallel with a tolerance of 1/8" (plus or minus 1/16")
  8. Install rails so joints do not interfere with brackets.
  9. Set entrance plumb in hoistway and in alignment with guide rails prior to erection of the front walls.

10. Arrange door tracks and sheaves so that no metal-to-metal contact exists.
11. Reinforce hoistway fascias to allow not more than 1/2" of deflection.
12. Install elevator cab enclosure on platform plumb and align cab entrance with hoistway entrances.
13. Sound isolate cab enclosure from car structure. Allow no direct rigid connections between enclosure and car structure and between platform and car structure.
14. Isolate cab fan from canopy to minimize vibration and noise.
15. Remove oil, dirt and impurities and give a factory coat of rust inhibitive paint to all exposed surfaces of struts, hanger supports, covers, fascias, toe guards, dust covers and other ferrous metal.
16. Prehang traveling cables for at least 24 hours with ends suitably weighted to eliminate twisting after installation.
17. After installation, touch up in the field, surfaces of shop primed elements which have become scratched or damaged.
18. Lubricate operating parts of system as recommended by the manufacturer.

### 3.4 FIELD QUALITY CONTROL

#### A. Inspection and Testing

1. Upon completion of each work phase or individual elevator specified herein, the Contractor shall, at its own expense, arrange and assist with inspection and testing as required by the NYC Department of Buildings in order to secure a Certificate of Operation.

### 3.5 PROTECTION / CLEANING

#### A. Protection and Cleaning

1. Adequately protect surfaces against accumulation of paint, mortar, mastic and disfiguration or discoloration and damage during shipment and installation.
2. Upon completion, remove protection from finished surfaces and thoroughly clean and polish surfaces with due regard to the type of material. Work shall be free from discoloration, scratches, dents and other surface defects.
3. The finished installation shall be free of defects.
4. Before final completion and acceptance, restore and/or replace defective work, to the satisfaction of the Commissioner, at no additional expense.
5. Remove tools, equipment and surplus materials from the site.

### 3.6 DEMONSTRATION

#### A. Performance and Operating Requirements

1. Passenger elevators shall be adjusted to meet the following performance requirements:
  - a. Speed: within 3% of rated speed under any loading condition.
  - b. Leveling: within 1/4" under any loading condition.
  - c. Typical Floor-to-Floor Time: (Recorded from the doors start to close on one floor until they are 3/4 open at the next floor.)  
  
Passenger Elevator PE1                      13 seconds.
  - d. Door Operating Times

Door Type	Opening	Closing
3' - 6" single side opening	2.4 sec.	4.9 sec.

- e. Door dwell time for hall calls: 4.0 sec with Advance lantern signals
- f. Door dwell time for hall calls: 5.0 sec without Advance lantern signals
- g. Door dwell time for car calls: 3.0 seconds
- h. Reduced non-interference dwell time: 1.0 seconds.

2. Maintain the following ride quality requirements for the passenger elevators:

- a. For speeds up to 1400 fpm, the speed of the car roller guides shall not exceed 500 rpm.
- b. Where pit permits, extend bottom roller guides by not less than one half the distance from the centerline of the upper roller guides to the platform.
- c. Noise levels inside the car shall not exceed the following:
  - 1) Car at rest with doors closed and fan off - 40 dba.
  - 2) Car at rest with doors closed, fan running - 55 dba.
  - 3) Car running at high speed, fan off - 50 dba.
  - 4) Door in operation - 60 dba.
- d. Vertical accelerations shall not exceed 14 milli-g.
  - 1) The accelerometer used for this testing shall be capable of measuring and recording acceleration to nearest 0.01 m/s<sup>2</sup> (1 milli-g) in the range of 0-2 m/s<sup>2</sup> over a frequency range from 0-80 Hz with ISO 8041 filter weights applied. Accelerometer should provide contact with the floor similar to foot pressure, 60 kPA (8.7psi).
- e. Amplitude of acceleration and deceleration shall not exceed 4.0 ft/sec<sup>2</sup>.
- f. A sustained jerk shall not be more than twice the acceleration.
- g. The rate of change in the acceleration/deceleration rate shall not be greater than 8.0 ft/sec<sup>3</sup>.

B. Acceptance Testing

- 1. Comply with the requirements of the DDC General Conditions.
- 2. Provide at least five (5) days prior written notice to the Commissioner regarding the exact date on which work specified in the Contract Documents will reach completion on any single unit of vertical transportation equipment.
- 3. In addition to conducting whatever testing procedures may be required by NYC Department of Buildings in order to gain approval of the completed work, and before seeking approval of said work by the Commissioner, perform certain other tests in the presence of the Commissioner.
- 4. Provide test instruments, test weights, and qualified field labor as required to safely operate the unit under load conditions that vary from empty to full rated load and, in so doing, successfully demonstrate compliance with applicable performance standards set forth in the project specifications with regard to:
  - a. Operation of safety devices.
  - b. Sustained high-speed velocity of the elevator in either direction of travel.
  - c. Brake-to-brake running time and floor-to-floor time between adjacent floors.

- d. Floor leveling accuracy.
  - e. Door opening/closing and dwell times.
  - f. Ride quality inside the elevator car.
  - g. Communication system.
  - h. Load settings at which anti-nuisance, load dispatch, and load non-stop features are activated.
5. Upon completion of work specified in the Contract Documents, and in conjunction with the aforementioned testing procedures, carry out additional testing of group dispatch/supervisory control features in the presence of the Commissioner.
6. Provide test instruments and qualified field labor as required to successfully demonstrate:
- a. The back-up operating mode for group dispatch failure
  - b. Simulated and actual emergency power operation
  - c. Firefighter, attendant and independent service operations
  - d. Restricted access security features and card reader controls
  - e. Zoning operations and floor parking assignments
  - f. Up/down peak operation
7. After hour tests of systems such as emergency generators, fire service, and security systems shall be conducted at no extra expense to The City of New York.

**END OF SECTION 14 21 23**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 00 00****COMMON WORK RESULTS FOR FIRE PROTECTION****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 21 08 00 "Commissioning of Fire Suppression"

**1.2 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.3 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.4 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.5 DEFINITIONS**

- A. "Piping": pipe, tube, fittings, flanges, valves, controls, strainers, hangers, supports, unions, traps, drains, insulation and all related accessories.

- B. "Motor Controllers": manual or magnetic starters with or without switches, individual pushbuttons or hand-off-automatic (HOA) switches controlling the operation of motors.
- C. "Control or Actuating Devices": automatic sensing and switching devices such as thermostats, pressure, float, flow operation of equipment.
- D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.
- E. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- F. Exposed, Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- G. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.
- H. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- I. The following are industry abbreviations for plastic materials:
  - 1. ABS: Acrylonitrile-butadiene-styrene plastic.
  - 2. CPVC: Chlorinated polyvinyl chloride plastic.
  - 3. NP: Nylon plastic.
  - 4. PE: Polyethylene plastic.
  - 5. PVC: Polyvinyl chloride plastic.
- J. The following are industry abbreviations for rubber materials:
  - 1. CR: Chlorosulfonated polyethylene synthetic rubber.
  - 2. EPDM: Ethylene propylene diene terpolymer rubber.

## 1.6 WORK INCLUDED

- A. The work covered by this section includes, but is not limited to the following:
  - 1. Sprinkler Systems and Equipment.
  - 2. Fire Standpipe System and Equipment.
  - 3. Piping, Valves and Fittings.
  - 4. Identification System.
  - 5. Hydraulic Calculations.
  - 6. Cutting, Patching and Equipment Painting.
  - 7. Hangers, Supports and Guides.
  - 8. Fire Pumps and Controllers.
  - 9. Electric Motors.
  - 10. Electric Motor Controllers.
  - 11. Internal Wiring of Factory-Assembled Prewired Equipment.
  - 12. Alarm Wiring, except for Fire Alarm.
  - 13. Rigging of Equipment.
  - 14. Furnishing access Doors and Frames to be installed under another section.
  - 15. Fire Stopping for Pipe Penetration.

16. Pipe Penetration.
17. Concrete Pads for Equipment.
18. Alarm Initiating Devices.

B. Related Work not Included in this Division but Specified Elsewhere:

1. Fire Alarm Wiring.
2. Finish painting, except for pre-finished equipment or as otherwise specified.
3. Concrete work, except equipment inertia and floating bases.
4. Base flashing for piping.
5. Waterproofing.
6. Power wiring for motors and motor controllers.
7. Installation of access doors and frames.

1.7 COORDINATION OF WORK

- A. The fire protection drawings show the general arrangement of piping and appurtenances. Follow these drawings as closely as the actual construction will permit. Conform the fire protection work to the requirements shown on the drawings. Provide offsets, fittings, and accessories, which may be required but not shown on the drawings. Investigate the site, structural and finish ground conditions affecting the work, and arrange the work accordingly. Provide such work and accessories as may be required to meet such conditions.
- B. Carefully check space requirements with other trades to ensure that all material can be installed in the spaces allotted thereto including finished suspended ceilings.
- C. Wherever work interconnects with work of other trades, coordinate to ensure that necessary information is presented so all the necessary connections and equipment may be properly installed. Identify all items (valves, piping, equipment, etc.) in order that other trades will know where to install access doors and panels.
- D. Consult with other trades regarding equipment so that, wherever possible, motors, motor controls, pumps and valves are of the same manufacturer.
- E. Furnish and set all sleeves for passage of pipes and conduits through structural masonry and concrete walls and floors and elsewhere as will be required for the proper protection of each pipe passing through building surfaces.
- F. Provide required supports and hangers for piping and equipment, designed so as not to exceed allowable loadings of structures.
- G. Examine and compare the contract drawings and specifications with the drawings and specifications of other disciplines and report any discrepancies between them to the Commissioner. Install and coordinate the work of this section in cooperation with the trades installing interrelated work. Before installation, take proper provisions to avoid interferences. All changes required in the work of the contractor, caused by his neglect to do so, are to be made by him at his own expense.
- H. Before commencing work, examine all adjoining work on which this work is in any way dependent for perfect workmanship and report any conditions, which prevent performance of first class work. Become thoroughly familiar with actual existing conditions to which connections must be made or which must be changed or altered.
- I. Provide required anchor bolts, sleeves, inserts and supports. Direct location of anchor bolts, sleeves, inserts and supports to insure that they are properly installed. Any expense resulting

from the improper location or installation of anchor bolts, sleeves, inserts and supports to be paid for by the contractor.

- J. Slots, chases, openings and recesses through floors, walls, ceilings, and roofs will be provided by the various trades in their respective materials. Properly locate such openings and be responsible for any cutting and patching caused by the neglect to do so.
- K. Adjust location of pipes, panels, equipment, etc., to accommodate the work to prevent interferences, both anticipated and encountered. Determine the exact route and location of each pipe prior to fabrication.
  - 1. Right-of-Way: Lines that pitch have the right-of-way over those that do not pitch, i.e., plumbing drains. Lines whose elevations cannot be changed have right-of-way over lines whose elevations can be changed.
  - 2. Make offsets, transitions and changes in direction in pipes as required to maintain proper head room and pitch on sloping lines whether or not indicated on the drawings. Furnish and install all air vents, drains, etc., as required to affect these offsets, transitions and changes in direction.
- L. Install all fire protection work to permit removal (without damage to other parts) of all other parts requiring periodic replacement or maintenance. Arrange pipes and equipment to permit access to valves, cocks, starters, motors, and control components, and to clear the openings of swinging doors and access panels.
- M. Provide access panels in equipment as required for inspection and maintenance of internal parts, etc.
- N. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing Requirements.

#### 1.8 USE OF SITE AND LOAD LIMITATIONS

- A. The contractor shall review all available data on the location and types of pipelines and other underground utilities. The contractor shall not operate equipment over the facilities and shall take care not to damage them or otherwise impair their use. The contractor shall make investigation to verify the location of these facilities before proceeding with construction and/or operations in their vicinity.

#### 1.9 CONTRACTOR'S RESPONSIBILITY FOR EVALUATION

- A. The City of New York and the Commissioner make no representations, regarding the character or extent of the subsoils, water levels, existing structural, mechanical and electrical installations, above or below ground or other subsurface conditions which may be encountered during the Work. The contractor must make his own evaluation of existing conditions, which may affect methods or expense of performing the Work, based on his own examination of the facility or other information. Failure to examine the drawings or other information shall not relieve the contractor of his responsibility for satisfactory accomplishment of the Work.
- B. The locations of existing services are believed to be as indicated on the drawings. The contractor shall verify the actual location of these services and notify the Commissioner of any discrepancies prior to commencing work.

#### 1.10 ACCESS TO FIRE PROTECTION EQUIPMENT

- A. The contractor shall not interfere with access to hydrants, fire exits, fire hose stations, fire extinguishers, and fire alarm pull stations. In no case shall the contractor's material or equipment be within twenty-five (25) feet of a hydrant or fire alarm pull station.

#### 1.11 EQUIPMENT AND MATERIALS

- A. If products and materials are specified or indicated on the drawings for a specific item or system, the contractor shall use those products or materials. If products and materials are not listed in either of the above, use first class products and materials, in accordance with shop drawings.
- B. All products and materials shall be new, clean, free of defects and free of damage and corrosion.
- C. No permanent equipment shall be used to provide temporary services during construction.
- D. Ship and store all products and materials in a manner which will protect them from damage, weather and entry of debris. If items are damaged, do not install, but take immediate steps to obtain replacement or repair.
- E. Make certain that all materials selected directly, or by suppliers, conform to the requirements of the contract drawings and specification. Transmittal of such specifications and drawings, information to persons manufacturing and supplying materials to the project, and rigid adherence thereto, is the contractor's responsibility. Acceptance of a manufacturer's name by the Commissioner does not release the contractor of the responsibility for providing materials, which comply in all respects with the requirements in the Contract Documents.
- F. Applicable equipment and materials to be listed by Underwriters' Laboratories and Manufactured in accordance with ASME, AWWA, NFPA or ANSI standards, and as approved by the local New York City Department of Buildings.
- G. Fully lubricate all equipment when installed and prior to final acceptance.
- H. Locate valves, access doors, etc., to be easily accessible, either in mechanical spaces or through access panels specified herein.
- I. Follow manufacturers' instructions for installing, connecting, and adjusting all equipment. Provide one copy of such instructions to the Commissioner before installing any equipment. Provide a copy of such instructions at the equipment during any work on the equipment. Provide all special valves, piping, wiring and accessories.

#### 1.12 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Codes Standards and Fees:
  - 1. Codes and Standards:
    - a. Comply with the requirements of the 2014 New York City Construction Codes, NFPA and other agencies or New York City Department of Buildings over any part of the Work and secure all necessary permits.
    - b. Where codes or standards are listed herein, the applicable portions apply.

- c. The codes and standards listed in the Specifications can be obtained from the organizations listed as follows:
- 1) OSHA Occupational Safety and Health Act
  - 2) ANSI American National Standard Institute, Inc.
  - 3) ASME American Society of Mechanical Engineers
  - 4) ASTM American Society for Testing and Materials
  - 5) AWWA American Water Works Association
  - 6) UL Underwriters Laboratories, Inc.
  - 7) ASHRAE American Society of Heating, Refrigerating and Air Conditioning Engineers
  - 8) NFPA National Fire Protection Association
  - 9) NEMA National Electrical Manufacturers Association
  - 10) AIA American Insurance Association
  - 11) AWS American Welding Society
  - 12) ASA American Standards Association
  - 13) IEEE Institute of Electrical and Electronics Engineers
  - 14) NEC National Electrical Code
- d. The particular specification will be identified by appropriate prefix and number only with the latest revision being applicable unless otherwise noted.
2. Furnish all materials and equipment new, free from defects and with listings or labels of Underwriter's Laboratories, Inc. or other nationally approved testing laboratory.
  3. All items of a given type shall be the product of the same manufacturer.
  4. All materials and equipment shall be the product of manufacturers regularly engaged in their manufacture.

#### 1.13 PERMITS AND FEES

- A. Refer to the DDC General Conditions for requirements related to permits and permitting fees.
- B. The Contractor shall be responsible for all required testing and inspections except for Special Inspections. Where required, the City of New York will engage a qualified testing agency to perform Special Inspections.
- C. This contractor shall prepare and file all plans, calculation, forms, etc. required for filing with all agencies required for this work including but not limited to The DEP (Department of Environmental Protection ), DEC (Department of Environmental Conservation, Bureau of Air Resources, EPA Environmental protection Agency, and FDNY.

#### 1.14 SPECIAL / CONTROLLED INSPECTION- NYC

- A. Special inspection shall be provided by the City of New York. The contractor shall coordinate with the Commissioner to accomplish all special inspections and provide any access necessary.

#### 1.15 INSPECTIONS / TESTING

- A. Independent testing and progress inspections shall be provided by the contractor.

#### 1.16 SHOP DRAWINGS

- A. Prepare and submit detailed shop drawings for piping work and other distribution services, including locations and sizes of all openings in floor walls and roofs.

- B. The work described in any shop drawing submission to be carefully checked for all clearances (including those required for maintenance and servicing), field conditions, maintenance of architectural conditions and proper coordination with all trades on the job.
- C. If submittals differ from the Contract Document requirements, make specific mention of such difference in a letter of transmittal, with request for substitution, together with reasons for same.
- D. Submit shop drawings and manufacturer's data for the following items in accordance with the Contract Documents:
  - 1. Coordinated, detailed shop layout drawings of all mechanical rooms, services and distribution systems, including plans, profiles and sections.
  - 2. Details of piping supports, elbows, anchors and miscellaneous appurtenances.
  - 3. Hangers, supports, inserts, anchors, guides and foundations.
  - 4. Valves.
  - 5. Pressure gauges.
  - 6. Corrosion protective coatings.
  - 7. Equipment and piping layouts at 3/8 in. scale for the building.
  - 8. Location and size of sleeves for openings in floors and walls.
  - 9. Certified equipment performance curves for pumps.
  - 10. Schedule of pipe and fittings, materials and application, valves, escutcheons, air vents, valve tags and schedules, strainers, and water specialties.
  - 11. Pumps and controllers.
  - 12. Pressure-reducing valves, relief valves.
  - 13. Access doors.
  - 14. Sound insulation, thermal insulation and vibration isolation.
  - 15. Motors, motor controllers and wiring diagram.
  - 16. Building automation systems including descriptions, instruments, and alarms.
  - 17. Flashing.
  - 18. Equipment identification and certificates.
  - 19. Sprinkler heads and accessories.
  - 20. Other shop drawings and submittals as requested within the specification.

#### 1.17 SAMPLES

- A. Submit samples of all items with exposed finishes for review.
- B. Allow sufficient time for consideration without interfering with job schedule.
- C. Duplicate quality and finish to type to be supplied under contract.

#### 1.18 AS-BUILTS AND EQUIPMENT OPERATION INSTRUCTIONS

- A. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing requirements.

#### 1.19 START-UP

- A. Properly lubricate all pieces of equipment.
- B. Check and clean all pipes of dirt and debris.
- C. Prepare each piece of equipment in accordance with manufacturer's installation instructions and have a copy at the equipment.

- D. Check rotation on each motor.
- E. Have representatives of each manufacturer present when hereinafter specified, so that equipment will be started up by manufacturer.

**1.20 ACCESS DOORS IN FINISHED CONSTRUCTION**

- A. Furnish access doors as required for operation and maintenance of concealed equipment and coordinate their delivery with the installing trade.
- B. Coordinate and prepare a location, size and function schedule of access doors required and deliver to the Commissioner for review.
- C. Refer to Section 08 31 13 "ACCESS DOORS AND FRAMES" for access door requirements.
- D. Unless otherwise indicated, minimum size to be 18" x 18".
- E. Furnish color coded buttons or tabs to indicate location of valves or other equipment located above removable type ceilings where access doors are not required.
- F. Access doors shall have a fire rating compatible with the wall construction in which they are located.

**1.21 SYSTEMS IDENTIFICATION**

- A. Piping:
  - 1. All exposed fire protection piping shall be finish painted red in color unless otherwise directed.
  - 2. All piping, exposed or concealed, shall be identified as to its service in accordance with OSHA and ANSI Standards by one of the following methods:
    - a. For installation of manufactured adhesive band type identification markers, provide "Quick-Label" by W.H. Brady Company (Basis of Design), or an equivalent system by one of the following approved manufacturers:
      - 1) Seton
      - 2) BradyID
      - 3) Or approved equal.
  - 3. Piping identification markings shall be installed as follows:
    - a. In each room.
    - b. All valve locations.
    - c. At shaft walls.
    - d. Every 40 feet on continuous runs.
- B. Valves:
  - 1. Valves shall be identified by tag system utilizing brass tags at 2-inch minimum diameter and attached to the valves using brass chain.
    - a. The new valve tag identification numbers shall be permanently added to all existing valve tag charts.

2. The service and function of all fire protection valves shall be identified at the valve by signs, similar to Potter Roemer Series 6300, attached to the valves by brass chains.

C. Equipment:

1. Identify all controls such as motor starters not in motor control centers, float switches, and alarms.

1.22 OPERATING & MAINTENANCE INSTRUCTION

A. Prepare an operating and maintenance instruction manual which includes the following:

1. Alphabetical list of all system components, with the name, address, and 24-hour phone number of the company responsible for servicing each item during the first year of operation.
2. Operating instructions for complete system, including:
  - a. Normal starting, operating, and shut-down.
  - b. Emergency procedures for fire or failure of major equipment.
  - c. Summer and winter special procedures.
  - d. Day and night special procedures.
3. Maintenance instructions, including:
  - a. Valve tag list and equipment tag list.
  - b. Proper lubricants and lubricating instructions for each piece of equipment, and date when lubricated.
  - c. Required cleaning, replacement and/or adjustment schedule.
4. Manufacturer's data on each piece of equipment, including:
  - a. Installation instructions.
  - b. Drawings and specifications.
  - c. Parts list, including recommended items to be stocked.
  - d. Complete wiring and temperature control diagrams.
  - e. Marked or revised prints locating all concealed parts and all variations from the original system design.
  - f. Test and inspection certificates.
5. Specific equipment data including, but not limited to, the following:
  - a. For Fire Protection System:
    - b. Pumps.
    - c. Piping.
    - d. Valves.
    - e. Accessories.
    - f. Pressure reducing valves.
    - g. Sprinkler heads.
    - h. Tamper switches.
    - i. Flow switches.
    - j. Flow measuring devices.
    - k. Electric wiring.
    - l. Controllers.
6. For Automatic Control System

- a. Drawings and description of system controlled.
    - b. Sequence of operation for each system.
    - c. Data on components.
    - d. Wiring and piping, schematic any layout, for panels and panelboards.
    - e. System operating manual, including set points.
  - B. Provide instruction of operating personnel.
    1. Instruct the City of New York's operating personnel in proper starting sequences, operation, shutdown, and maintenance procedures, including normal and emergency procedures.
    2. Instruction to be by instructors skilled in operation of equipment. Instructions for major equipment to be by equipment manufacturers' representatives.
    3. Make arrangements to give instructions by system and not by building areas.
    4. Provide five (5) instruction sessions not to exceed six (6) hours each.
    5. Instructions on automatic controls to be by manufacturer's representative.
  - C. Submittals.
    1. Shop Drawings: Submit three copies for review prior to final issuance.
    2. Provide 6 copies of each operation and maintenance manual.
      - a. Manuals to be 8-1/2" x 11" size in hard-back, 3-ring loose-leaf binders. Use more than one volume if required. Do not overfill binders.
      - b. Manuals to be completed and delivered to the Commissioner for approval at least 20 days prior to instruction of operating personnel.
    3. Prepare separate manuals for the fire protection systems.
- 1.23 TOOLS FOR OPERATION, ADJUSTMENT AND SERVICE
- A. Deliver to Commissioner all special tools needed for proper operation, adjustment and service of equipment.
- 1.24 RECORD DRAWINGS
- A. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing requirements.

PART 2 - PRODUCTS  
NOT USED.

PART 3 - EXECUTION  
NOT USED.

**END OF SECTION 21 00 00**

**SECTION 21 05 13****COMMON MOTOR REQUIREMENTS FOR FIRE SUPPRESSION EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 COORDINATION**

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
  - 1. Motor controllers.
  - 2. Torque, speed, and horsepower requirements of the load.
  - 3. Ratings and characteristics of supply circuit and required control sequence.
  - 4. Ambient and environmental conditions of installation location.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

**PART 2 - PRODUCTS****2.1 GENERAL MOTOR REQUIREMENTS**

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.

**2.2 MOTOR CHARACTERISTICS**

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

**2.3 POLYPHASE MOTORS**

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
  - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
  - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F.

J. Code Letter Designation:

1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

## 2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers:

1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

## 2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:

Permanent-split capacitor.

1. Split phase.
2. Capacitor start, inductor run.
3. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

## PART 3 - EXECUTION

### 3.1 NOT USED

### END OF SECTION 21 05 13

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 05 17****SLEEVES AND SLEEVE SEALS FOR FIRE-SUPPRESSION PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:

1. Sleeves.
2. Stack-sleeve fittings.
3. Sleeve-seal systems.
4. Sleeve-seal fittings.
5. Grout.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

**PART 2 - PRODUCTS****2.1 SLEEVES**

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.

**2.2 STACK-SLEEVE FITTINGS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Smith, Jay R. Mfg. Co.
  - 2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
  - 3. Wade Inc.
  - 4. Or approved equal.
- B. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.

**2.3 SLEEVE-SEAL SYSTEMS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Advance Products & Systems, Inc.
  - 2. CALPICO, Inc.
  - 3. Metraflex Company (The).
  - 4. Pipeline Seal and Insulator, Inc.
  - 5. Proco Products, Inc.
  - 6. Or approved equal.
- B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Carbon steel.
3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

#### 2.4 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Presealed Systems.
  2. Advance Products & Systems, Inc.
  3. CALPICO, Inc.
  4. Or approved equal.
- B. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

#### 2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch (25-mm) annular clear space between piping and concrete slabs and walls.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
  1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
  2. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level.

3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
  1. Cut sleeves to length for mounting flush with both surfaces.
  2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
  3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 07 92 00 "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 84 10 "Firestopping".

### 3.3 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
  1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
  2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 07 62 00 "Sheet Metal Flashing and Trim."
  3. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level.
  4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 84 10 "Firestopping."

### 3.4 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
- B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

### 3.5 SLEEVE-SEAL-FITTING INSTALLATION

- A. Install sleeve-seal fittings in new walls and slabs as they are constructed.
- B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

- C. Secure nailing flanges to concrete forms.
- D. Using grout, seal the space around outside of sleeve-seal fittings.

### 3.6 SLEEVE AND SLEEVE-SEAL SCHEDULE

- A. Use sleeves and sleeve seals for the following piping-penetration applications:
  - 1. Exterior Concrete Walls above Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel wall sleeves, Galvanized-steel-pipe sleeves, Sleeve-seal fittings.
    - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel wall sleeves, Galvanized-steel-pipe sleeves.
  - 2. Exterior Concrete Walls below Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel wall sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel wall sleeves with sleeve-seal system, Galvanized-steel-pipe sleeves with sleeve-seal system.
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
  - 3. Concrete Slabs-on-Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel wall sleeves with sleeve-seal system, Galvanized-steel-pipe sleeves with sleeve-seal system, Sleeve-seal fittings.
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
    - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel wall sleeves with sleeve-seal system, Galvanized-steel-pipe sleeves with sleeve-seal system, Galvanized-steel-pipe sleeves.
      - 1) Select sleeve size to allow for 1-inch (25-mm) annular clear space between piping and sleeve for installing sleeve-seal system.
  - 4. Concrete Slabs above Grade:
    - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves, Stack-sleeve fittings, Sleeve-seal fittings.
    - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-pipe sleeves, Stack-sleeve fittings.

5. Interior Partitions:
  - a. Piping Smaller Than NPS 6 (DN 150): Galvanized-steel-pipe sleeves.
  - b. Piping NPS 6 (DN 150) and Larger: Galvanized-steel-sheet sleeves.

**END OF SECTION 21 05 17**

**SECTION 21 05 18****ESCUTCHEONS FOR FIRE-SUPPRESSION PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:

1. Escutcheons.
2. Floor plates.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

**PART 2 - PRODUCTS****2.1 ESCUTCHEONS**

- A. One-Piece, Cast-Brass Type: With polished, chrome-plated finish and setscrew fastener.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.
- C. Split-Casting Brass Type: With polished, chrome-plated finish and with concealed hinge and setscrew.
- D. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed hinge, and spring-clip fasteners.

**2.2 FLOOR PLATES**

- A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.
- B. Split-Casting Floor Plates: Cast brass with concealed hinge.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 INSTALLATION**

- A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
- B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  - 1. Escutcheons for New Piping:
    - a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    - b. Chrome-Plated Piping: One-piece, cast-brass type with polished, chrome-plated finish.
    - c. Insulated Piping: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
    - d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: split-plate, stamped-steel type with concealed hinge.
    - e. Bare Piping at Ceiling Penetrations in Finished Spaces: split-plate, stamped-steel type with concealed hinge.

- f. Bare Piping in Unfinished Service Spaces: split-plate, stamped-steel type with concealed hinge.
    - g. Bare Piping in Equipment Rooms: split-plate, stamped-steel type with concealed hinge.
  - C. Install floor plates for piping penetrations of equipment-room floors.
  - D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
  - E. New Piping: One-piece, floor-plate type.
- 3.3 FIELD QUALITY CONTROL
- A. Replace broken and damaged escutcheons and floor plates using new materials.

**END OF SECTION 21 05 18**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 05 48****VIBRATION AND SEISMIC CONTROLS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 21 08 00 "Commissioning of Fire Suppression"

**1.2 SUMMARY**

- A. This section includes the following:
  - 1. All equipment and piping as noted on the drawing's schedule or in the specification shall be seismically braced if the building is so classified as listed herein. Vibration control shall apply as described in all cases herein.
  - 2. All outdoor equipment, including roof-mounted components, shall comply with section 1609, Wind Load, 2014 NYCBC. There shall be no decrease of the effects of wind load on a component due to other structures or components acting as blocks or screens.
  - 3. All below, at grade or above grade locations located in a flood hazard area as defined and located herein.
  - 4. Seismic bracing, wind, flood load and isolation materials shall be the certified products of the same manufacturing group and shall be certified by that group.
  - 5. It is the intent of the seismic and wind load portion of this specification to keep all plumbing building system components in place during a seismic or high wind event and additionally operational where the occupancy category of the building so requires as listed herein.
  - 6. All such systems must be installed in strict accordance with seismic/wind codes, component manufacturer's and building construction standards.
  - 7. This specification is considered to be minimum requirements for seismic, wind, flood and vibration control considerations.
  - 8. Any variation, which results in non-compliance with the specification requirements, shall be corrected by the contractor in an approved manner.
- B. The work in this section includes, but is not limited to, the following:
  - 1. Vibration isolation for piping and equipment, all referred to as components.
  - 2. Component isolation bases.
  - 3. Seismic restraints for isolated components.
  - 4. Seismic restraints for non-isolated components.
  - 5. Wind restraints for isolated components.

6. Wind restraints for non-isolated components.
  7. Flood restraints for isolated components.
  8. Flood restraints for non-isolated components.
  9. Certification of seismic, wind or flood restraint designs.
  10. Installation supervision.
  11. Design of attachment of housekeeping pads.
  12. All components requiring 2014 NYCBC compliance.
  13. All inspection and test procedures for components requiring 2014 NYCBC compliance.
- C. All fire suppression equipment and piping within, on or outdoors of the building and entry of services to the building, up to but not including, the utility connection, is part of this Specification.
- D. Components referred to below are typical. (Components not listed are still included in this specification.) All systems that are part of the building in any way are referred to as components, including:
1. Air Separators
  2. Equipment Supports
  3. Pipe
  4. Pumps (all types)
  5. Risers
  6. Supports
  7. Tanks (all types)
  8. Vibration Isolators

### 1.3 SUSTAINABLE DESIGN REQUIREMENTS

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
1. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

## 1.5 PERFORMANCE REQUIREMENTS

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

## 1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.7 DEFINITIONS (building and components, 2014 New York City Building Code)

- A. ESSENTIAL FACILITIES, (Occupancy Category IV, 2014 NYCBC)
  - 1. Buildings and other structures that are intended to remain operational in the event of extreme environmental loading from flood, wind, snow or earthquakes.
- B. LIFE SAFETY AND HIGH HAZARD
  - 1. All systems involved with fire protection, including sprinkler piping, jockey pumps, fire pumps, control panels, service water supply piping, water tanks, fire dampers, smoke exhaust systems and fire alarm panels. (Life Safety)
  - 2. All mechanical, electrical, plumbing or fire protection systems that support the operation of, or are connected to, emergency power equipment, including all lighting, generators, transfer switches and transformers. (Life Safety)
  - 3. All gases or fluids that must be contained in a closed system which are flammable or combustible. Any gas that poses a health hazard if released into the environment and vented Fuel Cells. (High Hazard)
  - 4. Heating systems in any facility in Occupancy Category IV, 2014 NYCBC where the ambient temperature can fall below 32 degrees Fahrenheit. (Life Safety)
- C. General
  - 1. Anchor: A device, such as an expansion bolt, for connecting equipment bracing members to the structure of a building.
  - 2. Approved Agency: An established and recognized agency, or other qualified person, regularly engaged in conducting tests or furnishing inspection services, when such agency has been approved by the AHJ as being qualified for such purposes.
  - 3. Attachment: See Positive Attachment below.
  - 4. Basic Wind Speed: The basic wind speed, in mph, for determination of the wind loads shall be as per 2014 NYCBC. Section 6.5.4 of ASCE 7-05 shall be used after determination of basic wind speed. See Section 16 09 .3 ASCE 7-05 for basic wind speed determination in non-hurricane prone regions.
  - 5. Bracing: Metal channels, cables or hanger angles that prevent components from breaking away from the structure during an earthquake or high winds. See also Longitudinal Bracing and Transverse Bracing. Together, they resist environmental loads from any direction.
  - 6. Certificate of Compliance: A certificate stating that materials and products meet specified standards or that work was done in compliance with approved construction documents, provided by an approved agency. (Certificate to be supplied by equipment component

- manufacturer.)
7. Component: A non-structural part or element of an architectural, electrical, mechanical, plumbing or fire protection system within or without of a building system.
  8. Component Importance Factor: Factor applied to a component that defines the criticality of that component. This factor is 1.5.
  9. Component, flexible: Component, including its attachments, having a fundamental period greater than 0.06 seconds.
  10. Component, rigid: Component, including its attachments, having a fundamental period less than or equal to 0.06 seconds.
  11. Consequential Damage: The functional and physical interrelationship of components, their supports and their effect on each other shall be considered so that the failure of an essential or non-essential architectural, mechanical or electrical component shall not cause the failure of an essential architectural, mechanical or electrical component.
  12. Equipment: Systems associated with ducts, pipes and conduits also called components.
  13. Flood or Flooding: A general and temporary condition or partial and complete inundation of normally dry land from:
    - a. The overflow of inland or tidal waters.
    - b. The unusual and rapid accumulation of runoff of surface waters from any source.
  14. Flood Hazard Area: The greater of the following of two areas:
    - a. The area within a flood plain subject to a 1 percent or greater chance of flooding in any year.
    - b. The area designated as a flood hazard area on a community's flood hazard map, or otherwise legally designated.
  15. Special Flood Hazard Area Subject to High Velocity Wave Action: Area within the flood hazard area that is subject to high velocity wave action and shown on a Flood Insurance Rate Map (FIRM) or other flood hazard map as zone V, VO, VE or VI-30.
  16. Flood Insurance Rate Map (FIRM): An official map of a community on which the Federal Emergency Management Agency (FEMA) has delineated both the special flood hazard areas and the risk premium zones applicable to the community.
  17. Gas pipes: For the purposes of this Specification Guide, gas pipe is any pipe that carries fuel, gas, fuel oil, medical gas, or compressed air.
  18. Hazardous Contents: A material that is highly toxic or potentially explosive or corrosive and in sufficient quantity to pose a significant life-safety threat to the general public if an uncontrolled release were to occur.
  19. Hurricane Prone Regions: Areas prone to hurricanes include the U.S. Atlantic Ocean, Gulf Coasts, Hawaii, Puerto Rico, Guam, Virgin Islands, and American Samoa where the wind speed is greater than 90 mph.
  20. Importance Factor, G: A factor that accounts for the degree of hazard to human life and damage to property.
  21. Inspection Certificate: An identification applied on a product by an approved agency containing the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the product or material has been inspected and evaluated by an approved agency (see Section 17 03 .5 and "Label" and "Manufacturer's Designation" and "Mark").
  22. Label: An identification applied on a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics, and the name and identification of an approved agency that indicates that the representative sample of the product or material has been tested and evaluated by an approved agency (see Section 17 03 .5 and "Inspection Certificate," "Manufacturer's Designation" and "Mark").
  23. Lateral forces: A force acting on a component in the horizontal plane. This force can be in any direction.

24. Longitudinal bracing: Bracing that prevents a component from moving in the direction of its run.
25. Longitudinal force: An applied force that happens to be in the same direction as the duct or pipe run.
26. Mark: An identification applied on a product by the manufacturer indicating the name of the manufacturer and the function of a product or material (see also "Inspection Certificate," "Label" and "Manufacturer's Designation").
27. Manufacturer's Designation: An identification applied on a product by the manufacturer indicating that a product or material complies with a specified standard or set of rules (see also "Inspection Certificate," "Label" and "Mark".)
28. Occupancy Category: A classification used to determine structural load requirements including those imposed by wind, flood, snow and seismic based on occupancy of the structure.
29. Positive Attachment: A mechanical device, designed to resist seismic forces, which connects a non-structural element, such as a duct, to a structural element, such as a beam. Bolts and welding are examples of positive attachments. Surface glue and friction anchorage do not constitute positive attachment. Examples of positive attachment are epoxy cast in anchors and drill in wedge shaped anchor bolts to concrete and welded or bolted connections directly to the building structure. Double-sided beam clamps, C type are not acceptable as either brace point attachments to the structure or for the support of the component at the bracing location.
30. Seismic: Related to an earthquake. Seismic loads on a structure are caused by wave movements in the earth during an earthquake.
31. Seismic Design Category: A classification assigned to a structure based on its Seismic Use Group or Occupancy Category and the severity of the design earthquake ground motion at the site.
32. Seismic Forces: The assumed forces prescribed herein, related to the response of the structure to earthquake motions, to be used in the design of the structure and its components.
33. Seismic Use Group, Occupancy Category: A classification assigned to a building based on its use as defined in Section 16 04 .516.2.
34. Site Class: A classification assigned to a site based on the types of soils present and their engineering properties as defined in Table 1613.5.2.
35. Story Drift Ratio: The story drift (Lateral displacement) divided by the story height.
36. Transverse bracing: Bracing that prevents a component from moving from side to side.
37. Wind-Borne Debris Region: Portions of hurricane-prone regions that are within 1 mile of the coastal mean high water line where the basic wind speed is 110 mph or greater.

## 1.8 GENERAL DESIGN AND PERFORMANCE REQUIREMENTS

### A. General Design Requirements.

1. SEISMIC CONSIDERATIONS: This project has seismic design requirements as follows:
  - a. Occupancy Category, III (Seismic Design Category C) essential facility.
    - 1) All Components, with the additional requirement of a manufacturer's Certificate of Compliance to prove 'on line' capability ( $I_p = 1.5$ )
2. WIND CONSIDERATIONS: This project has wind design requirements as follows:
  - a. Wind load in hurricane, tornado and/or wind-borne debris regions (90 plus mph) having a building height greater than 60 feet. Rooftop structures; Section 6.5.15.1 of ASCE 7-05 design requirements apply.

B. General Design Performance Requirements

1. Seismic and Wind Load Certification and Analysis:
  - a. Attachment calculations by the Seismic Restraint Manufacturer's licensed Engineer substantiating the mounting system, seismic or wind restraints, fasteners or ICC Certified Concrete Anchors shall be submitted for approval along with the shop drawings. Seismic loads shall have their calculations based on seismic loads as established in Specification Section 1.8, Paragraph A Design Seismic Loads. Wind loads shall have their calculations based on Section 1.8, Paragraph 2, Design Wind Loads. A registered professional engineer licensed in the State of New York shall stamp all analysis, or as required by 2014 NYC Construction Codes.
  - b. Unless otherwise specified, all equipment and piping shall be restrained to resist seismic forces. Restraints shall maintain components in a captive position. Restraint devices shall be designed and selected to meet seismic requirements as defined in the latest issue of:
    - 1) 2014 New York City Building Code, and ASCE.
    - 2) NFPA (fire protection only)
2. Importance Factor,  $I_p = 1.5$  Components:
  - a. In addition to all of the above provisions, for components having an  $I_p$  greater than 1.0, all trades shall comply with Sections 16 and 17 of the NYC Building Code.
3. All component manufacturers shall submit for approval the following as required below:
  - a. For all life safety system components noted in this specification: the Approved Agency's Certificate of Compliance for the specific equipment on this project when the Seismic Design Category is C through F. Analytical or Shaker Test certification through the component's load path to structure at its center of gravity shall include anchorage, structural and on-line capability. Use of seismic experience data shall be permitted if evidence confirms that the historical based component has the same construction and weight and accompanying center of gravity as submitted unit and basis of experience claim conforms to loads derived in testing with accompanying accelerations based on AC-156. Seismic qualification by seismic experience data based upon nationally recognized procedures acceptable to the NYC Department of Buildings and 2014 NYC Construction Codes shall be deemed to satisfy the design and evaluation requirements provided that the substantiated seismic capacities equal or exceed the seismic demands determined in accordance with Sections 13.3.1 and 13.3.2 of ASCE 7-05.
  - b. In addition, all components needed for the continued operation of the facility in the above stated categories will have the manufacturer of that component submit the Approved Agency's Certificate of Compliance for their equipment when the Seismic Design Category is C through F. Analytical or Shaker Test certification through the component's load path to structure at its center of gravity shall include on line capability. This requirement also pertains to projects that combine an emergency preparedness center within a structure of another Use Group. Where components do not affect the facility's functional operation but could affect the performance of other components should they dislodge, only anchorage of that component requires compliance. Components needed for continued operation of the building require Analytical or Shaker Test certification through the total component's load path to structure calculated at its center of gravity. Certification

- shall prove anchorage, structural and on line capability. For use of seismic experience data, see (a) above.
- c. All components containing hazardous or flammable materials will have the manufacturer of the component submit the Approved Agency's Certificate of Compliance for their equipment when used on any project having a minimum Seismic Design Category of C through F. Testing shall be conducted by Analytical or Shaker Test through the total component's load path to structure at its center of gravity and shall prove anchorage, structural capability and hazardous material containment. Testing shall prove that no internal component will rupture to insure against loss of hazardous or flammable (explosive) material that could support combustion, ignite or contaminate.
  - d. All components requiring anchorage compliance only, not listed in the above categories, shall have the manufacturer of each component submit a PE stamped calculation package stating that their project specific equipment will accept anchorage by calculating its reactions through the component's load path to structure at its center of gravity at the designated anchorage locations. This requirement is for all projects having a Seismic Design Category of C through F.
4. Occupancy Category II & III Structures, NYCBC 2014, Ip 1.0, Seismic Design Category C:
- a. Projects in these categories require seismic bracing for all life safety and high hazard components, Paragraph 1.7B sub-paragraphs 1, 2, 5 and 6. In addition, any un-braced component that could adversely affect the performance of a component that must remain functional, Ip 1.5, or could cause the failure or release of hazardous materials (gas or liquid fuel), must be braced or anchored to avoid such failure. This includes any component that could fall or move laterally. (Consequential Damage, ASCE 7-05, Section 16 .2 .3.)
5. Design Seismic Loads:
- a. Project has a minimum design load of 0.4g for statically mounted components and 0.5g for resiliently mounted components. Actual loads for both internal and external isolation and/or anchorage of components shall be as above or as calculated for the specific project location but in no event shall it be less than the above.
  - b. Exclusions for seismic restraint of piping and duct shall be according to 2014 New York City Construction Codes and as stated herein. The minimum horizontal restraint capability shall be 0.4g horizontal and 0.27g vertical (in addition to the gravity load). Life safety equipment defined above shall be designed to withstand a horizontal load of 0.9g and a vertical load of 0.6g.
  - c. Analysis for anchorage must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment depth and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in this section, acting through the equipment center of gravity.
  - d. Vertical load shall be calculated at 1/3 the horizontal load as a minimum, or, as prescribed by the code as 0.2 times Sds.
  - e. Internally isolated equipment in lieu of specified isolation and restraint systems must meet all of the requirements of this section, all articles.
  - f. A Seismic Design Errors and Omissions Insurance Certificate MUST accompany the seismic restraint equipment manufacturer's calculation. Product liability insurance certificates are not acceptable.
  - g. Whether the equipment is internally or externally isolated and restrained, the entire

unit assembly must be seismically attached to the structure. Curb or roof rail mounted equipment must not only have seismic or wind attachment of the equipment to the roof but also to the curb or rails. The attachment and certification thereof shall be by this section. Sheet metal screw attachment is acceptable provided that the following five conditions are met and verified.

- 1) Calculations support sufficient quantity and size of sheet metal screws to handle all loads including shear.
- 2) Shear and tension allowables are obtained from an accredited third-party source, such as ICC or NDS, not from the screw manufacturer.
- 3) Space or gap between the inside overhang of the rooftop unit and the curb at each of the screw locations is closed with structural material, tapered to contour to both the curb and the components' inside edge structure.
- 4) Attachment points of the roof-mounted unit to curb and the curb to structure demonstrates structural load path.
- 5) The method of attachment does not violate the NRCA rating of the curb by violating the roof member's waterproofing.

- h. Failure is defined as the discontinuance of any attachment point or load path between component and structure. Permanent deformation of the component is acceptable as long as the component continues to operate without failure and, if permanent, it is within acceptable manufacturing or structural tolerances.

6. Design Wind Loads:

- a. All outdoor mounted components shall be positively fastened to their supporting structure as discussed below. Fastening to metal deck is unacceptable.
  - 1) If component is curb mounted, article 7, Design Seismic Loads, paragraph g shall be followed for all roof-mounted components in excess of 9 sq. ft. in cross-sectional area. Curbs shall be as described in Base type B-3 if isolated, Base type B-4 if non-isolated.
  - 2) If component is support mounted, article 7, Design Seismic Loads, paragraph g shall be followed for all roof-mounted components requiring waterproofed rail supports. Equipment supports shall be Base type B-5 if isolated, Base type B-6 if non-isolated.
  - 3) If equipment is dunnage mounted, positive attachment shall occur through welding or bolting of equipment to dunnage steel.
- b. Loads and calculations shall be based on 2014 NYCBC, figure 1609 and related sections in ASCE 7-05.
- c. Where buildings are less than or equal to 60 feet in height to the top of the roof slab (not parapet walls), the force on roof-mounted components shall be based on Section 6.5.15.1, ASCE 7-05.
- d. Equivalent basic wind speed shall be based on 2014 NYCBC, Table 1609.3.1.
- e. In no event shall adjacent buildings, structures or screens be considered to diminish the calculated wind load or its effect on an outdoor component.

7. Design Flood Loads:

- a. When a building or structure is located in a flood hazard area, anchorage for all components subjected to those locations shall follow Section 1.8 B 3d. for their proper fastening to structure.
- b. Components used for anchorage purposes shall be hot dipped galvanized,

cadmium-plated or powder-coated for the purpose of anti-corrosion.

1.9 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.10 SUBMITTALS

- A. Refer to Part 1, General.
- B. Product Data: The manufacturer of vibration isolation, seismic, wind and flood restraints shall provide submittals for products as follows:

- 1. Descriptive Data:

- a. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with the specification.
- b. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and restraints by referencing numbered descriptive drawings.

- 2. Shop Drawings:

- a. Submit fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
- b. Provide all details of suspension and support for ceiling hung equipment.
- c. Where walls, floors, slabs or supplementary steel work are used for restraint locations, details of acceptable attachment methods for ducts and pipe must be included and approved before the condition is accepted for installation. Restraint manufacturer's submittals must include spacing and maximum seismic/wind loads at the restraint points.
- d. Provide specific details of restraints and anchors, include number, size and locations for each piece of equipment. Restraint and anchor allowables shall be by structural testing, shake testing, analysis or third-party certification.
- e. Calculations shall be submitted as required in Section 1.8, General Design and Performance Requirements.
- f. Contractor to submit all calculations, drawings, design and signed by New York State Professional Engineer.

1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Manufacturer of vibration isolation, seismic and wind load control equipment or manufacturer's approved representative shall have the following responsibilities:

- 1. Determine vibration isolation and restraint sizes and locations.
- 2. Provide vibration isolation and restraints as scheduled or specified.
- 3. Provide calculations and materials, if required, for restraint of non-isolated equipment.
- 4. Provide installation instructions in writing, drawings and trained field supervision, where necessary, to insure proper installation and performance.
- 5. Certify correctness of installation upon completion, in writing.
- 6. All provisions of Section 1.8, General Design and Performance Requirements.

- C. All manufacturers of any type of equipment including OEM are responsible for Section 1.8.

- D. Equipment manufacturer's substitution of internally or externally isolated and/or restrained equipment supplied by the equipment vendor, in lieu of the isolation and restraints specified in this section, is acceptable provided all conditions of this section are met. The equipment manufacturer shall provide a letter of guarantee from their engineering department, PE stamped and certified by an engineer licensed in the State of New York per the section on the Seismic Restraint Design (See Section 1.8B, article 1a), stating that the seismic restraints are in full compliance with these specifications. Manufacturer's certification proving on line capability shall be required in addition to all requirements stated in Section 1.8B.
- E. All expenses for converting to the specified vibration isolation and/or restraints shall be borne by the component vendor in the event of non-compliance with the preceding. Substitution of internal isolation is unacceptable for:
  - 1. Indoor or outdoor mounted equipment over or adjacent to:
    - a. Office locations
    - b. Assembly areas

**F. RELATED WORK**

- 1. Housekeeping pad structural design, including its attachment to building structure, shall be as shown on the contract drawings. Attachment of all components and restraints to the pad and size of the pad shall be designed and certified according to this section by the seismic/isolation supplier. Material and labor required for attachment and construction shall be by the concrete section contractor, or by the contractor where specified. Housekeeping pads shall be sized to accommodate a minimum 6" of clearance all around the equipment; or 12 times the outermost anchor bolt diameter, whichever is greater. Where exterior isolators are used, this distance shall be as measured from the outermost holes in the isolator base plate to the edge of the housekeeping pad.
- 2. Roof steel supporting roof-mounted equipment shall be designed for all seismic and wind forces including, but not limited to, tension, compression and moment loads.
- 3. Chimneys, stacks and boiler breeching passing through floors are to be attached at each floor level with a riser guide.
- 4. Where ceilings are not braced, lay-in lighting fixtures, weighing more than 20 lbs, shall have at least 2 independent corner diagonal wire ties to structure.
- 5. Lay-in ceilings in compliance with seismic code requirements may use earthquake clips or other approved means of positive attachment to brace fixtures such as panel lights and diffusers less than 40 lbs to T-bar structures. 2014 NYCBC dictates fixture support requirements.

**1.12 CODE AND STANDARDS REQUIREMENTS**

**A. Codes and Standards**

- 1. 2014 New York City Construction Codes.
- 2. SMACNA Guidelines for Seismic Restraint of Mechanical Systems, Second Edition (Standard reference, to be used for design purposes only, not code).
- 3. American Society for Testing and Materials (ASTM) (Standard).
- 4. International Conference of Building Officials (ICBO) (Standard).
- 5. ASHRAE (Standard reference, to be used for design purposes only, not code).
- 6. VISCMA (Vibration Isolation and Seismic Controls Manufacturers Association) (Standard reference, to be used for design purposes only, not code).

- B. In cases where requirements vary, the guideline for the most stringent shall be utilized.

## PART 2 - PRODUCTS

### 2.1 DESCRIPTION

- A. All vibration isolators and seismic restraints described in this Section shall be the product of a single manufacturer. Manufacturer shall be a regular member of VISCMA (Vibration Isolation and Seismic Controls Manufacturers Association). Subject to compliance with requirements, provide products manufactured by The VMC Group, including Vibration Mountings & Controls, Amber/Booth or Korfund Dynamics (Basis-of-Design), or a similar product by an approved manufacturer listed below:

1. Senior Flexonics
2. Mason Industries
3. Or approved equal.

### 2.2 VIBRATION ISOLATION TYPES

- A. Type A: Spring Isolator – Free Standing

A\*

1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded elastomeric cup or ¼" elastomeric acoustical friction pad between the bottom of isolator and the support.
2. All mountings shall have leveling bolts that must be rigidly bolted to the equipment.
3. Spring diameters shall be no less than 0.8" of the compressed height of the spring at rated load.
4. Springs shall have a minimum additional travel to solid equal to 50% of the operating deflection.

- B. Type B: Seismically and Wind Restrained Spring Isolator

1. MS, MSS, AEQM, ASCM, AMSR
2. Restrained spring mountings shall have a Type A spring isolator within a rigid housing that includes vertical limit stops to prevent spring extension if weight is removed. The housing shall serve as blocking during erection. A maximum clearance of ¼" shall be maintained around restraining bolts and internal elastomeric deceleration bushings. Limit stops shall be out of contact during normal operation. If housings are to be bolted or welded in position, there must be an internal isolation pad or elastomeric cup. Housing shall be designed to resist all seismic forces.

- C. Type C: Combination Spring/Elastomer Hanger Isolator (30° Type)

HRSA

1. Hangers shall consist of rigid steel frames containing minimum 1 ¼" thick elastomeric elements at the top and a steel spring with general characteristics as in Type A. The elastomeric element shall have resilient bushings projecting through the steel box.
2. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30° arc from side to side before contacting the rod bushing and short-circuiting the spring.
3. Submittals shall include a hanger drawing showing the 30° capability.
4. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.

D. Type D: Elastomer Double Deflection Hanger Isolator

HR

1. Molded (minimum 1 ¼" thick) elastomeric element with projecting bushing lining the rod clearance hole. Static deflection at rated load shall be a minimum of 0.35."
2. Steel retainer box encasing elastomeric mounting capable of supporting equipment up to two times the rated capacity of the element.

E. Type E: Combination Spring/Elastomer Hanger Isolator

HRS

1. Spring and elastomeric elements in a steel retainer box with the features as described for Type C and D isolators.
2. Hanger locations requiring pre-compression for holding piping at fixed elevation shall be type pre-compressed or pre-positioning for all manufacturers.
3. 30° angularity feature is not required.

F. Type F: Seismically Restrained Elastomer Floor Isolator

RSM, MB, RUD

1. Bridge-bearing elastomeric mountings shall have a minimum static deflection of 0.2" and all-directional seismic capability. The mount shall consist of a ductile iron or aluminum casting containing molded elastomeric elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock-absorbing elastomeric materials shall be compounded to bridge-bearing specifications.

G. Type G: Pad Type Elastomer Isolator (Standard)

Maxiflex

1. One layer of ¾" thick elastomeric pad consisting of 2" square modules for size required.
2. Load distribution plates shall be used as required.
3. Bolting required for seismic compliance. Elastomeric and duck washers and bushings shall be provided to prevent short-circuiting.

H. Type H: Pad Type Elastomer Isolator (High Density)

Fabri-Flex, NDB, NRC

1. Laminated canvas duck and neoprene, maximum loading 1000 psi, minimum ½" thick.
2. Load distribution plate shall be used as required.
3. Bolting required for seismic compliance. Elastomeric and duck washers and bushings shall be provided to prevent short-circuiting.

I. Type I: Thrust Restraints

RSHTR, TRK

1. A spring element similar to Type A isolator shall be combined with steel angles, backup plates, threaded rod, washers and nuts to produce a pair of devices capable of limiting

movement of air handling equipment to ¼" due to thrust forces. Contractor shall supply hardware.

2. Thrust restraints shall be installed on all cabinet fan heads, axial or centrifugal fans whose thrust exceeds 10% of unit weight.

J. Type J: Pipe Anchors

MDPA, AG

1. All-directional acoustical pipe anchor, consisting of two sizes of steel tubing or piping separated by a minimum ½" thick 60 durometer elastomer.
2. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction.
3. Applied loads on the isolation material shall not exceed 500 psi and the design shall be balanced for equal resistance in any direction.

K. Type K: Pipe Guides

PG/AG/SWP/SWX

1. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing or piping separated by a minimum ½" thickness of 60 durometer elastomer.
2. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and replaceable to allow for selection of pipe movement.
3. Guides shall be capable of ± 1 5/8" motion, or to meet location requirements.

L. Type L: Isolated Pipe Hanger System

CIH, CIR, TIH, PIH

1. Pre-compressed spring and elastomer isolation hanger combined with pipe support into one assembly. Replaces standard clevis, single or double rod roller, or double rod fixed support.
2. Spring element (same as Type A) with steel lower spring retainer and an upper elastomer retainer cup with an integral bushing to insulate support rod from the isolation hanger.
3. The elastomeric element under the lower steel spring retainer shall have an integral bushing to insulate the support rod from the steel spring retainer.
4. Hangers shall be designed and constructed to support loads over three times the rated load without failure.
5. Systems shall be pre-compressed to allow for rod insertion and standard leveling.

## 2.3 SEISMIC RESTRAINT TYPES

A. Type I: Spring Isolator, Restrained

B. MS, MSS, AEQM, ASCM, AMRS

1. Refer to vibration isolation Type B.

C. Type II: Seismically Restrained Elastomer Floor Isolator

MB, RUD

1. Refer to vibration isolation Type F.

D. Type III: All-Directional Seismic Snubber

SR, ER

1. All-directional seismic snubbers shall consist of interlocking steel members restrained by an elastomeric bushing. Bushing shall be replaceable and a minimum of ¼" thick. Applied loading shall not exceed 1000 psi. A minimum air gap of 1/8" shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Elastomeric bushings shall be rotated to insure no short circuits exist before systems are activated.

E. Type IV: Floor or Roof Anchorage

Cast-In Plates

1. Rigid attachment to structure utilizing wedge type anchor bolts, anchored plates, machine screw, bolting or welding. Power shots are unacceptable.

F. Type V: Seismic Cable Restraints

1. SB, LRC
2. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cable end connections shall be steel assemblies that swivel to final installation angle and utilize two clamping bolts to provide proper cable engagement. Cables must not be allowed to bend across sharp edges.

G. Type VI: Rigid Arm Brace

SAB

1. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two anchor bolts to provide proper attachment spaced to ICBO standards for attachment to concrete.

H. Type VII: Internal Clevis Cross Brace

ICB

1. Internal clevis cross braces at seismic locations shall be pre-cut pipe or other approved device sized for internal dimensions.

I. Type VIII: Seismic Waterproof Foundation Wall Sleeve

SWFWS

1. Seismic waterproof foundation wall sleeves shall consist of two elastomeric sleeves that shall be mounted both inside and out of the vertical foundation wall. The conical design shall have a suitably waterproof means of fastening to both concrete and to its concentric

utility pipe. Allowable vertical drift shall be  $\pm 2"$  from the installed neutral point along the vertical "y" axis. All fittings shall be stainless steel or galvanized.

## 2.4 EQUIPMENT BASES

### A. General

1. All curbs and roof rails are to be bolted or welded to the building steel or anchored to the concrete deck (minimum thickness shall be 4") for resisting wind and seismic forces in accordance with the project location. (Fastening to metal deck is unacceptable.)

### B. Base Types

1. Type B-1: Integral Structural Steel Base  
WFB, SFB, WSB
  - a. Rectangular bases are preferred for all equipment.
  - b. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split case and end suction pumps shall include supports for suction and discharge elbows.
  - c. All perimeter members shall be structural steel beams with a minimum depth equal to 1/12 of the longest dimension between isolators.
  - d. Base depth need not exceed 12" provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer.
  - e. Height saving brackets shall be employed in all mounting locations to provide a minimum base clearance of 2."
2. Type B-2: Concrete Inertia Base  
MPF, WPF, CPF
  - a. Vibration isolation manufacturer shall furnish rectangular welded or bolted modular steel concrete pouring forms for floating and inertia foundations.
  - b. Bases for split case and end suction pumps shall be large enough to provide for suction and discharge elbows.
  - c. Bases shall be a minimum of 1/12 of the longest dimension between isolators but not less than 6."
  - d. The base depth need not exceed 12" unless specifically recommended by the base manufacturer for mass or rigidity.
  - e. Forms shall include a minimum concrete reinforcing consisting of 3/8" bars welded in place a maximum of 16" on centers running both ways in a layer 1 to 1½" above the bottom.
  - f. Forms shall be furnished with steel templates to hold the component anchor bolts sleeves and anchors while concrete is being poured.
  - g. Height saving brackets shall be employed in all mounting locations to maintain a 2" minimum operational clearance below the base.
3. Type B-5: Isolated Equipment Supports  
R7200/R7300
  - a. Continuous structural equipment support rails that combine equipment support and isolation mounting into one unitized roof flashed assembly. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind and seismic forces. The lower frame must accept point

support for both seismic attachment and leveling. The upper frame must be furnished with positive fastening provisions, (welding or bolting), to anchor the component to the equipment support so as not to violate the National Roofing Contractors Association (NRCA) ratings of the membrane waterproofing. Sheet metal screws are only acceptable if all provisions in Section 1.8, Article B, paragraph 7, Design Seismic Loads, are met. Contact points between the rooftop unit, the curb and the building's structure shall show load path through those locations only.

- b. All-directional elastomeric snubber bushings shall be minimum of ¼" thick. Steel springs shall be laterally stable and rest on ¼" thick elastomeric acoustical pads or cups.
  - c. Hardware must be plated and the springs shall be powder-coated or cadmium-plated.
  - d. All spring locations shall have full spring view access ports with removable waterproof covers and all isolators shall be adjustable, removable and interchangeable.
  - e. System shall be designed for positive anchorage or welding of equipment to supports and welding of supports to the building steel, capable of carrying the design wind/seismic loads.
4. Type B-6: Non-Isolated Equipment Supports  
R7000
- a. This shall have the same provisions as Type B-5 without the spring isolation.
5. Type B-8: Plumbing Components Structural Base Frames
- a. Where roof mounted plumbing components are placed on steel platforms and are incapable of being point loaded or supported, structural frames shall be furnished which will either match the centerline dimensions of the unit's base frame rail or its curb dimensions. The structural frame shall have provisions to be welded or bolted to the unit's base frame and shall be supported on type "B" wind /seismic restrained isolation system.
  - b. Isolator deflection shall be either 1.5" or 2.5" depending on the tonnage of the roof mounted component as shown in Isolation Table "A". Structural Base Frame shall be type RTSBF as manufactured by The VMC Group.

## 2.5 FLEXIBLE CONNECTORS

### A. Type FC-2: Flexible Stainless Steel Hose

1. SS-FP, SS-FW, SS-PM, SS-WE
2. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings. Sizes 3" and larger shall be flanged. Smaller sizes shall have male nipples.

### B. Type BC-2 connector shall be braided bronze for Freon connections.

1. Minimum lengths shall be as tabulated:

a. Flanged		Male Nipples	
3 x 14	10 x 26	½ x 9	1 ½ x 13
4 x 15	12 x 28	¾ x 10	2 x 14

5 x 19	14 x 30	1 x 11	2 ½ x 18
6 x 20	16 x 32	1 ¼ x 12	
8 x 22			

2. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 EXAMINATION

- A. All areas that will receive components requiring vibration control, seismic or wind load bracing shall be thoroughly examined for deficiencies that will affect their installation or performance. Such deficiencies shall be corrected prior to the installation of any such system.
- B. Examine all “rough ins” including anchors and reinforcing prior to placement.

### 3.3 APPLICATIONS

- A. All vibration isolators and seismic, wind restraint systems must be installed in strict accordance with the manufacturer’s written instructions and all certified submittal data.
- B. Installation of vibration isolators and seismic, wind restraints must not cause any change of position of equipment, piping or ductwork resulting in stresses or misalignment.
- C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system specified herein.
- D. The contractor shall not install any isolated components in a manner that makes rigid connections with the building unless isolation is not specified. “Building” includes, but is not limited to, slabs, beams, columns, studs and walls.
- E. Coordinate work with other trades to avoid rigid contact with the building.
- F. Overstressing of the building structure must not occur due to overhead support of equipment. Contractor must submit loads to the Commissioner for approval. General bracing may occur from flanges of structural beams, upper truss cords in bar joist construction and cast in place inserts or wedge type drill-in concrete anchors.
- G. Seismic cable restraints shall be installed slightly slack to avoid short circuiting the isolated suspended equipment or piping.
- H. Seismic cable assemblies are installed taut on non-isolated systems. Seismic rigid braces may be used in place of cables on rigidly attached systems.
- I. At locations where seismic cable restraints or seismic single arm braces are located, the support rods must be braced when necessary to accept compressive loads. See Table “E.”

- J. At all locations where seismic cable braces and seismic cable restraints are attached to the pipe clevis, the clevis bolt must be reinforced with pipe clevis cross bolt braces or double inside nuts if required by seismic acceleration levels.
- K. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted.
- L. Special and Periodic Inspections for items listed in Section 1.8, Article B shall be conducted and submitted on a timely basis.

### 3.4 EQUIPMENT INSTALLATION

- A. Equipment shall be isolated and/or restrained as per Tables B-E at the end of this section.
- B. Place floor mounted equipment on 4" actual height concrete housekeeping pads properly sized and doweled or expansion shielded to the structural deck to meet acceleration criteria (see Section 1.8). Anchor isolators and/or bases to housekeeping pads. Concrete work is specified under that section of the contract documents.
- C. Additional Requirements:
  - 1. The minimum operating clearance under all isolated components bases shall be 2."
  - 2. All bases shall be placed in position and supported temporarily by blocks or shims, as appropriate, prior to the installation of the equipment, isolators and restraints.
  - 3. All components shall be installed on blocks to the operating height of the isolators. After the entire installation is complete and under full load including water, the isolators shall be adjusted so that the load is transferred from the blocks to the isolators. Remove all debris from beneath the equipment and verify that there are no short circuits of the isolation. The equipment shall be free to move in all directions, within the limits of the restraints.
  - 4. Ceilings containing diffusers or lighting fixtures must meet seismic requirements by using earthquake clips or other approved means of positive attachment to secure diffuser and fixtures to T-bar structure.
  - 5. All floor or wall-mounted equipment and tanks shall be restrained with Type V restraints.

### 3.5 PIPE

- A. Vibration Isolation of Piping:
  - 1. Plumbing Water Piping (Excludes Sanitary and Drainage Lines): All spring type isolation hangers shall be pre-compressed or pre-positioned if isolators are installed prior to fluid charge. If installed afterwards, field pre-compressed isolators can be used. All HVAC piping in the machine room shall be isolated as well as pressurized runs in other locations of the building 6" and larger. Type E hangers shall isolate horizontal pressurized runs in all other locations of the building. Floor supported piping shall rest on Type B isolators. Expansion tanks are considered part of the piping run. The first 3 isolators from the isolated equipment shall have at least the same static deflection as specified for the mountings under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces, the first 3 hangers shall have 0.75" nominal deflection or greater for pipe sizes up to and including 3," 1 3/8" nominal deflection or greater for pipe sizes greater than 3." Where column spacing exceeds 35', isolation hanger deflection shall be 2½" for pipes exceeding 3" diameter. Type L hangers may be substituted for the above where isolation hangers are required.
  - 2. Condensate Piping: All ceiling suspended piping in the mechanical equipment room shall

- be isolated with Type D hangers except where anchor or guided if connected to isolated equipment. All floor supported piping shall be supported with Type F isolators.
3. Plumbing Water Lines: Plumbing water lines in the machine room shall only be isolated if connected to isolated equipment. (See Table B.) Isolator type shall be as listed in Article 1, above.
  4. Riser Location: All risers shall be supported on Type J or K anchors or guide restraints positively attached to both the riser and structure. Spiders welded to the pipe can substitute for Type K guides using J Type anchors.
  5. Control Air Piping: Where control air piping is connected to isolated components, all piping shall be isolated and equipment shall be flexibly connected in horizontal and vertical plane with Type FC-2 flexible connectors.
  6. Gas lines shall not be isolated.
  7. Fire protection lines shall not be isolated.

**B. Seismic Restraint of Piping.**

1. All high hazard and life safety pipe regardless of size such as fuel oil piping, fire protection mains, gas piping, medical gas piping and compressed air piping and piping with an  $I_p=1.5$  shall be seismically restrained or braced. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type V seismic cable restraints or Type VI single arm braces may be used on non-isolated piping. There are no exclusions for size or distance in this category.
2. Seismically restrain piping, with an  $I_p = 1.0$ , located in boiler rooms, mechanical equipment rooms and refrigeration equipment rooms that is  $1\frac{1}{4}$ " I.D. and larger. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type V seismic cable restraints or Type VI single arm braces may be used on non-isolated piping.
3. Seismically restrain all other piping  $2\frac{1}{2}$ " diameter and larger. Type V seismic cable restraints or resilient single arm braces shall be used if piping is isolated. Type VI seismic cable restraints or single arm braces may be used on non-isolated piping.
4. See Table D for maximum seismic bracing distances.
5. Multiple runs of pipe on the same support shall have distance determined by calculation.
6. Rod braces shall be used for all rod lengths as listed in Table E.
7. Clevis hangers shall have braces placed inside of hanger at seismic brace locations.
8. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
9. For fuel oil and all gas piping, transverse restraints must be at 20' maximum and longitudinal restraints at 40' maximum spacing.
10. Transverse restraint for one pipe section may also act as longitudinal restraint for a pipe section of the same or smaller size connected perpendicular to it if the restraint is installed within 24" of the centerline of the smaller pipe or combined stresses are within allowable limits at longer distances.
11. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints. Use Type V or VI restraint, if trapeze is smaller than 48" long.
12. Branch lines may not be used to restrain main lines or cross-mains.
13. Where pipe passes through a fire-rated, seismic gypsum wall, the wall can act as a lateral/transverse brace for pipe sizes up to and including 6," provided fire stopping material is tight to the pipe.
14. Where pipe passes through a seismic block or concrete wall, the wall can act as a lateral/transverse brace.
15. Where horizontal pipe crosses a building's drift expansion joint, allowance shall be part of the design to accommodate differential motion.
16. Vertical pipe rises between floors shall have their differential movement part of the seismic design for building drift.

17. For horizontal passage of all underground utilities through building's foundation wall, all pipes shall pass freely through an oversized opening and waterproofed accordingly to accommodate maximum allowable building drift. (Seismic Restraint Type VIII).

### 3.6 EXEMPTIONS

#### A. EQUIPMENT:

1. Curb-mounted mushroom, exhaust and vent fans with curb area less than nine square feet are excluded.
2. Floor or curb-mounted equipment weighing less than 400 lbs and not resiliently mounted, where the Importance Factor,  $I_p = 1.0$  and there is no possibility of consequential damage.
3. Equipment weighing less than 20 lbs and distribution systems weighing less than 5 lbs/lineal foot, with an  $I_p = 1.0$  and where flexible connections exist between the component and associated piping.

#### B. PIPING and CONDUIT

1. All high deformability pipe 3" or less in diameter suspended by individual hanger rods where  $I_p = 1.0$ .
2. High deformability pipe in Seismic Design Category C, 2" or less in diameter suspended by individual hanger rods where  $I_p = 1.5$ .
3. High deformability pipe in Seismic Design Category D, E or F, 1" or less in diameter suspended by individual hanger rods where  $I_p = 1.5$ .
4. All clevis supported pipe runs installed less than 12" from the top of the pipe to the underside of the support point and trapeze supported pipe suspended by hanger rods having a distance less than 12" in length from the underside of the pipe support to the support point of the structure.
5. Piping systems, including their supports, designed and constructed in accordance with ASME B31.

#### C. EXEMPTIONS DO NOT APPLY FOR:

##### 1. LIFE SAFETY or HIGH HAZARD COMPONENTS

- a. Including gas, fire protection, medical gas, fuel oil and compressed air needed for the continued operation of the facility or whose failure could impair the facility's continued operation, Occupancy Category IV, 2014 NYCBC. High Hazard is additionally classified as any system handling flammable, combustible or toxic material. Typical systems not excluded are additionally listed below.

##### 2. ELECTRICAL

- a. Includes critical, standby or emergency power components including conduit (1" nominal diameter and larger) cable tray or bus duct, lighting, panels, communication lines involving 911, etc.

##### 3. PIPING

- a. Fuel oil, gasoline, natural gas, medical gas, steam, compressed air or any piping containing hazardous, flammable, combustible, toxic or corrosive materials. Fire protection standpipe, risers and mains. Fire Sprinkler Branch Lines must be end tied.

4. DUCT

- a. Smoke evacuation duct or fresh air make up connected to emergency system, emergency generator exhaust, boiler breeching or as used by the fire department on manual override.

5. EQUIPMENT

- a. Previously excluded non-life safety duct mounted systems such as fans, variable air volume boxes, heat exchangers and humidifiers having a weight greater than 75 lbs require independent seismic bracing.

3.7 FIELD QUALITY CONTROL, INSPECTION

- A. All Independent Special and Periodic Inspections must be performed and submitted by the Contractor on components as outlined in Section 1.8 B, Article 3. Note: Special Inspection services are to be supplied by the The City of New York.
- B. Upon completion of installation of all vibration isolation devices, the manufacturer's chosen representative shall inspect the completed project and certify in writing to the Contractor that all systems are installed properly, or list any that require correction. Shall submit a report to the Commissioner, including the representative's report, certifying correctness of the installation or detailing corrective work to be done.

3.8 Selection Guide for Vibration Isolation and Seismic Restraint

TABLE "B" PLUMBING EQUIPMENT										
	On Grade, Basement or Slab on Grade						Above Grade			
Equipment (See Notes)	HP	Mtg	Isol	Defl	Base	Restr	Isol	Defl	Base	Rest r
Air Compressors & Vacuum Pumps	Up to 10	Floor	B	0.75	---	IV	B	1.50	---	IV
	Over 10	Floor	B	0.75	B-2	IV	B	1.50	B-2	IV
Base Mounted Pumps	Up to 15	Floor	B	0.75	B-2	IV	B	0.75	B-2	IV
	Over 15	Floor	B	0.75	B-2	IV	B	0.75	B-2	IV

1. Roof Mounted Components use Spec Type B-5, if over occupied areas, Defl, 1.5".
2. Roof Mounted Components use Spec Type B-6 if over unoccupied areas.
3. Minimum Deflection Guide for Equipment with Low RPM

Lowest RPM of Rotating Equipment	Minimum Actual Deflection
Less Than 400	3.5"
401 thru 600	2.5"

601 thru 900	1.5"
Greater than 900	0.75"

B. General Notes for All Tables:

1. Abbreviations:

- a. Mtg = Mounting
- b. ol = Vibration Isolator Type per Section 2.2, Vibration Isolation Types
- c. Defl = Minimum Deflection of Vibration Isolator
- d. Base = Base Type per Section 2.4, Equipment Bases
- e. Restr = Seismic Restraint Type per Section 2.3 Seismic Restraint Types

- 2. All deflections indicated are in inches.
- 3. For equipment with variable speed driven components having driven operating speed below 600 rpm, select isolation deflection from minimum deflection guide.
- 4. For roof applications, use base Type B-5, and/or B-8 where applicable.
- 5. Static deflection shall be determined based on the deflection guide for Table "A."
- 6. Deflections indicated are minimums at actual load and shall be selected for manufacturer's nominal 5," 4," 3," 2" and 1" deflection spring series; RPM is defined as the lowest operating speed of the equipment.
- 7. Single stroke compressors may require inertia bases with thicknesses greater than 14" maximum as described for base B-2. Inertia base mass shall be sufficient to maintain double amplitude for 1/8."

3.9 Spacing Chart for Suspended Components

Table "D" Seismic Bracing			
(Maximum Allowable Spacing Shown – Actual Spacing to Be Determined by Calculation)			
Equipment	On center Transverse	On Center Longitudinal	Change of Direction
Pipe Threaded, Welded, Soldered or Grooved; Conduit and Conduit Racks			
16"	40 Feet	80 Feet	4 Feet
18" – 28"	30 Feet	60 Feet	4 Feet
30" – 40"	20 Feet	60 Feet	4 Feet
2.5" & Larger	10 Feet	20 Feet	4 Feet
Boiler Breeching	30 Feet	60 Feet	4 Feet
Chimneys & Stacks	30 Feet	60 Feet	4 Feet

3.10 Vertical Hanger Rod Bracing Schedule

Table "E" Hanger Rod Bracing Schedule (Stiffener to be maximum 6" from end of rod)					
Rod Dia.	Clamp Size	Maximum Un-braced Rod Length	Steel Angle Size	Clamp Spacing	Min # of Clamps per Stiffener
3/8"	SRBC-1-1/4	19"	1 x 1 x 1/4"	16"	2
1/2"	SRBC-1-1/4	25"	1 x 1 x 1/4"	20"	2
5/8"	SRBC-1-1/4	31"	1 x 1 x 1/4"	24"	2
3/4"	SRBC-1-1/2	37"	1 1/2 x 1 1/2 x 1/4"	28"	2
7/8"	SRBC-1-1/2	43"	1 1/2 x 1 1/2 x 1/4"	33"	2
1"	SRBC-1-1/2	50"	1 1/2 x 1 1/2 x 1/4"	40"	2
1 1/8"	SRBC-1-1/2	62"	1 1/2 x 1 1/2 x 1/4"	50"	2

**END OF SECTION 21 05 48**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 05 53****IDENTIFICATION FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Equipment labels.
  2. Warning signs and labels.
  3. Pipe labels.
  4. Stencils.
  5. Valve tags.
  6. Warning tags.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment-Label Schedule: Include a listing of all equipment to be labeled and the proposed content for each label.
- D. Valve Schedules: Valve numbering scheme.

1.7 CLOSEOUT SUBMITTALS

- A. Maintenance Data: For each piping system to include in maintenance manuals.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
  - 1. Material and Thickness: stainless steel, 0.025 inch (0.64 mm) thick, with predrilled holes for attachment hardware.
  - 2. Letter Color: Black.
  - 3. Background Color: Yellow.
  - 4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
  - 5. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
  - 6. Fasteners: Stainless-steel self-tapping screws.
  - 7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), and the Specification Section number and title where equipment is specified.
- C. Equipment-Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules) and the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## 2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, with predrilled holes for attachment hardware.
- B. Letter Color: Red.
- C. Background Color: White.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- F. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service and showing flow direction.
- B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- C. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings; pipe size; and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with piping-system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inches (38 mm) high.
- D. Pipe-Label Colors:
  - 1. Background Color: Red.
  - 2. Letter Color: White.

## 2.4 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping-system abbreviation and 1/2-inch (13-mm) numbers.
  - 1. Tag Material: stainless steel, 0.025 inch (0.64 mm) thick, with predrilled holes for attachment hardware.
  - 2. Fasteners: Brass wire-link chain.
  - 3. Valve-Tag Color: Red.

4. Letter Color: White.

- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

#### 3.3 LABEL INSTALLATION

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install or permanently fasten labels on each major item of mechanical equipment.
- D. Locate equipment labels where accessible and visible.
- E. Piping Color-Coding: Painting of piping is specified in Section 09 91 00 "Painting".
- F. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
1. Near each valve and control device.
  2. Near each branch connection excluding short takeoffs. Where flow pattern is not obvious, mark each pipe at branch.
  3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  4. At access doors, manholes, and similar access points that permit view of concealed piping.
  5. Near major equipment items and other points of origination and termination.
  6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
  7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

#### 3.4 VALVE-TAG INSTALLATION

- A. Install tags on valves and control devices in piping systems. List tagged valves in a valve-tag schedule.

- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below:
- C. Valve-Tag Size and Shape:
  - a. Fire-Suppression Standpipe: 2 inches (50 mm), square.
  - b. Wet-Pipe Sprinkler System: 2 inches (50 mm), square.
  - c. Dry-Pipe Sprinkler Preaction System: 2 inches (50 mm), square.
  - d. Foam-Water System: 2 inches (50 mm), square.

**END OF SECTION 21 05 53**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 21 08 00**

### **COMMISSIONING OF FIRE SUPPRESSION**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

##### **1.2 SUMMARY**

- A. This section includes commissioning process requirements for Fire Suppression systems, assemblies, and equipment.
- B. Related Sections:
  - 1. DDC General Conditions Section "General Commissioning Requirements" for general commissioning process requirements.

##### **1.3 DESCRIPTION**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for the description of commissioning.

##### **1.4 DEFINITIONS**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for definitions.

##### **1.5 SUBMITTALS**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for CxA's role.
- B. Refer to DDC General Conditions Section "Submittals" for specific requirements. In addition, provide the following:
- C. Certificates of readiness
- D. Certificates of completion of installation, prestart, and startup activities.
- E. O&M manuals
- F. Test reports

## **1.6 QUALITY ASSURANCE**

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

## **1.7 COORDINATION**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

## **PART 2 - PRODUCTS**

### **2.1 TEST EQUIPMENT**

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the plumbing system in Division 21. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be provided by the Contractor and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the The City of New York upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of The City of New York.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

## **PART 3 - EXECUTION**

### **3.1 GENERAL DOCUMENTATION REQUIREMENTS**

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems

- B. Red-lined Drawings: The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the contractor.
- D. Demonstration and Instruction: Contractor will provide demonstration and instruction as required by the specifications. A complete instruction plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any instruction. An instruction agenda for each instruction session must be submitted to the CxA one (1) week prior to the instruction session

### **3.2 CONTRACTOR'S RESPONSIBILITIES**

- A. Perform commissioning tests at the direction of the CxA.
- B. Attend construction phase coordination meetings.
- C. Participate in Fire Suppression systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
- F. Prepare preliminary schedule for Fire Suppression system orientations and inspections, operation and maintenance manual submissions, instruction sessions, flushing and cleaning, equipment start-up, and task completion for The City of New York. Distribute preliminary schedule to commissioning team members.
- G. Update schedule as required throughout the construction period.
- H. Assist the CxA in all verification and functional performance tests.
- I. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- J. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- K. Coordinate with the CxA to provide 48-hour advanced notice so that the witnessing of equipment and system start-up and testing can begin.
- L. Participate in, and schedule vendors and contractors to participate in the instruction sessions.

- M. Provide written notification to the CM/GC and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
  - 1. Fire Suppression equipment including pumps, piping, and all other equipment furnished under this Division.
  - 2. Automatic sprinkler system.
  - 3. Fire stopping in fire rated construction, including caulking, gasketing and sealing of smoke barriers.
- N. The equipment supplier shall document the performance of his equipment.
- O. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- P. Equipment Suppliers
  - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of The City of New York, to keep warranties in force.
  - 2. Assist in equipment testing per agreements with contractors.
  - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- Q. Refer to DDC General Conditions Section “General Commissioning Requirements” for additional contractor responsibilities.

### **3.3 CxA'S RESPONSIBILITIES**

- A. Refer to DDC General Conditions Section “General Commissioning Requirements” for CxA’s Responsibilities.
- B. Cx Team Meetings
  - 1. Commissioning during construction will begin with a ‘Commissioning Kick-Off Meeting – for Construction Team’ conducted by the CxA where the commissioning process is reviewed with all of the commissioning team members.
  - 2. Additional meetings will be required throughout construction, and will be scheduled by the CxA on a weekly basis with necessary parties of the commissioning team attending, in order to plan, scope, coordinate, and schedule future activities and resolve problems.
- C. Coordination and Scheduling
  - 1. Coordinate and direct commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications, and consultations with all necessary parties.
  - 2. Coordinate commissioning work with the Commissioner to ensure that commissioning activities are being scheduled into the master project schedule.
  - 3. Coordinate with the Commissioner to witness tests, inspections, and systems startup.
- D. Commissioning Progress
  - 1. Perform site visits to observe component and system installations.
  - 2. Report deficiencies to the Commissioner including but not limited to issues related to adequate accessibility required for component maintenance replacement and repair.
  - 3. Attend selected planning and jobsite meetings to obtain information on construction progress.
  - 4. Review construction meeting minutes for revisions/substitutions relating to the commissioning process.

**E. Pre-Functional Checks**

1. Verify proper installation of components, equipment, systems and assemblies. Sampling procedures may NOT be employed on systems and equipment.

**F. Equipment and System Startup and Verification**

1. Review and approve component, equipment, system, and assembly startup plan developed and submitted by the Contractor.
2. Approve system startup by reviewing startup reports, if contracted; and by selected site observation.
3. Review the Testing, Adjusting and Balancing execution plan for the project, which shall be submitted by the Contractor.
4. Verify and document the accuracy of the air and water systems balancing by spot testing the air and water reported field values with Contractor and by reviewing completed reports.

**G. Functional Performance Testing**

1. With assistance from the Contractor, write Functional Performance Testing procedures for all components, equipment or systems to be commissioned.
2. With the assistance of the Contractors, coordinate Functional Performance Testing. Witness and approve Functional Performance Testing performed by the Contractors.
3. With the assistance of the Contractors, coordinate retesting as necessary until satisfactory performance is achieved.
4. Witness seasonal or deferred Functional Performance Testing as necessary.

**H. Issue/Deficiency Logs**

1. The CxA shall prepare a formal, ongoing, online record of deficiencies, problems and concerns – and their resolution – raised by members of the Commissioning Team during the Commissioning Process.
2. Issues will be recorded on an online Commissioning Issues Log for the contractors to resolve to the satisfaction of the Commissioner. Issues will be added by the CxA. Team members are required to post their own responses to issues pertaining to their work. Team members are required to respond to issues added to the list within five (5) working days of being added by the CxA.
3. Issues will be revisited one (1) time to verify that the proper corrections have been made.
4. When issues are resolved, they will be closed on the Issues Log by the CxA

**I. Operation and Maintenance Data**

1. The CxA shall review of the documentation submitted by the Contractor as required by the Specifications for completeness and accuracy. This commissioning review supplements, but does not replace, the Commissioner's review.
2. Review equipment warranties.

**J. Instruction**

1. The Contractor will provide all documentation and qualified instruction personnel for instruction.
2. The CxA will verify through the Contractor's plan and schedule, instruction agendas, and select observations that proper instruction procedures were followed on all commissioned systems.
3. The CxA will verify that Instruction Video Recordings are executed, collected, and provided to the Commissioner.
4. See appropriate section below pertaining to instruction.

**K. Systems Manual Requirements**

1. Index of Systems Manual with notation as to content storage location if not in actual manual.
2. Executive Summary
3. A list of recommended operational record keeping procedures at the facility level, including sample forms, trend logs, or others, and a rationale for each.
4. Maintenance procedures, schedules and recommendations.
5. Ongoing Optimization
6. Other Attachments

**L. Post Occupancy Review**

1. The CxA will return to the site within the 12-month warranty period to address the following: review current building operations with facility staff and address outstanding issues related to the The City of New York's Project Requirements; Interview facility staff and identify problems or concerns with operating the building; Identify problems covered under warranty or under the original construction contract.
2. The CxA will make suggestions for improvements in the content of the O&M Manuals. Any required changes shall be made by the contractor responsible for that section.
3. The CxA shall assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

**M. Commissioning Final Report**

1. The CxA shall provide a final report following the completion of all Functional Performance Testing. The report is to outline compliance and non-compliance to the construction documents, as well as identify concerns relative to future performance.

**3.4 TESTING PREPARATION**

- A. Certify in writing to the CxA that Fire Suppression systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Fire Suppression instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- D. Inspect and verify the position of each device and interlock identified on checklists.
- E. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- F. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

**3.5 GENERAL TESTING REQUIREMENTS**

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

- B. Scope of Fire Protection testing shall include entire Fire Suppression installation. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions.
- D. The CxA along with the Fire Suppression contractor shall prepare detailed testing plans, procedures, and checklists for Fire Suppression systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Fire Suppression system, document the deficiency and report it to The City of New York. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

### **3.6 FIRE SUPPRESSION SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES**

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 21 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. Fire Suppression Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of sprinkler distribution systems.
- C. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:
  - 1. Fire Protection Piping
  - 2. Fire Pump
  - 3. Jockey Pump

### **3.7 DEFICIENCIES/NON-CONFORMANCE, RETESTING, FAILURE DUE TO MANUFACTURER DEFECT**

- A. Deficiencies/Non-Conformance
  - 1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractors on a standardized form.

2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the contract document in dispute or request further information to clarify the concern.
3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
5. As tests progress and a deficiency is identified, the CxA discusses the issue with the executing Contractor.
6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function.
7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.

**B. Failure due to Manufacturer Defect**

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable only by the Commissioner. In such case, the Contractor shall provide the Commissioner with the following.
  - i. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
  - ii. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
  - iii. The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
  - iv. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
  - v. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

**3.8 APPROVAL**

- A. Refer to DDC General Conditions Section "General Commissioning Requirements" for approval procedures.

**3.9 DEFERRED TESTING**

- A. Refer to DDC General Conditions Section “General Commissioning Requirements” for requirements pertaining to deferred testing.

**3.10 MANUFACTURER’S MANUALS**

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in DDC General Conditions.
- B. Refer to DDC General Conditions Section “General Commissioning Requirements” for the AE and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

**3.11 INSTRUCTION OF NEW YORK CITY PERSONNEL**

- A. Refer to DDC General Conditions Section “General Commissioning Requirements” for requirements pertaining to instruction.

**3.12 FUNCTIONAL BUILDING SYSTEMS DEMONSTRATION TEST (72 HOURS)**

- A. Refer to Addendum to the General Conditions Section “General Commissioning Requirements” for requirements pertaining to 72-Hour Functional Building Systems Demonstration Testing.

**END OF SECTION 21 08 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 11 00****FACILITY FIRE-SUPPRESSION WATER-SERVICE PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes fire-suppression water-service piping and related components outside the building and service entrance piping through wall into the building.
- B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.
- C. Related Sections:
  - 1. Section 21 12 00 "Fire-Suppression Standpipes" for fire-suppression standpipes inside the building.
  - 2. Section 21 13 13 "Wet-Pipe Sprinkler Systems" for wet-pipe fire-suppression sprinkler systems inside the building.
  - 3. Section 21 31 13 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and controllers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.6 SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings:
  - 1. Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
  - 2. Wiring Diagrams: For power, signal, and control wiring.
- C. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.
- D. Field quality-control reports.

**1.7 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
- B. Regulatory Requirements:
  - 1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
  - 2. Comply with standards of authorities having jurisdiction for fire-suppression water-service piping, including materials, hose threads, installation, and testing.
- C. Piping materials shall bear label, stamp, or other markings of specified testing agency.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with the "Approval Guide," published by FM Global, or UL's "Fire Protection Equipment Directory" for fire-service-main products.
- F. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-suppression water-service piping.

**1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:

1. Ensure that valves are dry and internally protected against rust and corrosion.
  2. Protect valves against damage to threaded ends and flange faces.
  3. Set valves in best position for handling. Set valves closed to prevent rattling.
- B. During Storage: Use precautions for valves, including fire hydrants, according to the following:
1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
  2. Protect from weather. Store indoors and maintain temperature higher than ambient dew point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.
- C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.
- D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.
- E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.
- F. Protect flanges, fittings, and specialties from moisture and dirt.
- G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.
- H. Coordinate connection to water main with utility company.

## PART 2 - PRODUCTS

### 2.1 COPPER TUBE AND FITTINGS

- A. Soft Copper Tube: ASTM B 88, Type K and ASTM B 88, Type L water tube, annealed temper.
- B. Hard Copper Tube: ASTM B 88, Type K and ASTM B 88, Type L, water tube, drawn temper.
- C. Copper, Solder-Joint Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- D. Copper, Pressure-Seal Fittings:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Viega; Plumbing & Heating Systems.
    - b. Or approved equal.
  2. Standard: UL 213.
  3. NPS 2 and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
  4. NPS 2-1/2 to NPS 4: Bronze fitting with stainless-steel grip ring and EPDM O-ring seal in each end.

- E. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.
- F. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

## 2.2 DUCTILE-IRON PIPE AND FITTINGS

- A. Grooved-Joint, Ductile-Iron Pipe: AWWA C151, with cut, rounded-grooved ends.
- B. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end.
- C. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end.
- D. Grooved-End, Ductile-Iron Pipe Appurtenances:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. Star Pipe Products.
    - c. Victaulic Company
    - d. Or approved equal.
  - 2. Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
  - 3. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.
- E. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
  - 1. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
- F. Push-on-Joint, Ductile-Iron Fittings: AWWA C153, ductile-iron compact pattern.
  - 1. Gaskets: AWWA C111, rubber.
- G. Flanges: ASME B16.1, Class 125, cast iron.

## 2.3 SPECIAL PIPE FITTINGS

- A. Ductile-Iron Flexible Expansion Joints:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. EBAA Iron, Inc.

- b. ROMAC Industries Inc.
  - c. Star Pipe Products.
  - d. Or approved equal.
- 2. Description: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
- 3. Pressure Rating: 250 psig minimum.

**B. Ductile-Iron Deflection Fittings:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. EBAA Iron, Inc.
  - b. Or approved equal.
- 2. Description: Compound, ductile-iron coupling fitting with sleeve and one or two flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
- 3. Pressure Rating: 250 psig minimum.

**2.4 ENCASEMENT FOR PIPING**

- A. Standard: ASTM A 674 or AWWA C105.
- B. Material: High-density, cross-laminated PE film of 0.004-inch minimum thickness.
- C. Form: Sheet or tube.
- D. Color: Black.

**2.5 JOINING MATERIALS**

- A. Gaskets for Ferrous Piping and Copper-Alloy Tubing: ASME B16.21, asbestos free.
- B. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series.
- C. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.

**2.6 PIPING SPECIALTIES**

- A. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
- B. Tubular-Sleeve Pipe Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Cascade Waterworks Manufacturing.
  - b. Dresser, Inc.; Dresser Piping Specialties.
  - c. Ford Meter Box Company, Inc. (The); Pipe Products Division.
  - d. JCM Industries.
  - e. ROMAC Industries Inc.
  - f. Smith-Blair, Inc.; a Sensus company.
  - g. Viking Johnson.
  - h. Or approved equal.
2. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners, and with ends of same sizes as piping to be joined.
3. Standard: AWWA C219.
4. Center-Sleeve Material: Manufacturer's standard.
5. Gasket Material: Natural or synthetic rubber.
6. Pressure Rating: 200 psig minimum.
7. Metal Component Finish: Corrosion-resistant coating or material.

## 2.7 CORPORATION VALVES AND CURB VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Amcast Industrial Corporation.
  2. Ford Meter Box Company, Inc. (The); Pipe Products Division.
  3. Jones, James Company.
  4. Master Meter, Inc.
  5. McDonald, A. Y. Mfg. Co.
  6. Mueller Co.; Water Products Division.
  7. Red Hed Manufacturing & Supply.
  8. Or approved equal.
- B. Corporation Valves: Comply with AWWA C800. Include saddle and valve compatible with tapping machine and manifold.
  1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
  2. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
  3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.
- C. Curb Valves: Comply with AWWA C800 for high-pressure service-line valves. Valve has bronze body, ground-key plug or ball, wide tee head, and inlet and outlet matching service piping material.
- D. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches in diameter.

1. Shutoff Rods: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.
- E. Meter Valves: Comply with AWWA C800 for high-pressure service-line valves. Include angle- or straight-through-pattern bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

## 2.8 GATE VALVES

### A. AWWA Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American AVK Company; Valves & Fittings Division.
  - b. American Cast Iron Pipe Company; American Flow Control Division.
  - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - d. American R/D.
  - e. Clow Valve Company; a division of McWane, Inc.
  - f. Crane Co.; Crane Valve Group; Stockham Division.
  - g. East Jordan Iron Works, Inc.
  - h. Kennedy Valve; a division of McWane, Inc.
  - i. M&H Valve Company; a division of McWane, Inc.
  - j. Mueller Co.; Water Products Division.
  - k. NIBCO INC.
  - l. Tyler Pipe; a division of McWane, Inc.; Utilities Division.
  - m. U.S. Pipe.
  - n. Or approved equal.
2. 200-psig, AWWA, Iron, Nonrising-Stem, Metal-Seated Gate Valves:
  - a. Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.
  - b. Standard: AWWA C500.
  - c. Pressure Rating: 200 psig.
  - d. End Connections: Mechanical joint.
  - e. Interior Coating: Complying with AWWA C550.
3. 200-psig, AWWA, Iron, Nonrising-Stem, Resilient-Seated Gate Valves:
  - a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.
  - b. Standard: AWWA C509.
  - c. Pressure Rating: 200 psig.
  - d. End Connections: Mechanical or push-on joint.
  - e. Interior Coating: Complying with AWWA C550.
4. 250-psig, AWWA, Iron, Nonrising-Stem, Resilient-Seated Gate Valves:
  - a. Description: Ductile-iron body and bonnet; with bronze or ductile-iron gate, resilient seats, bronze stem, and stem nut.
  - b. Standard: AWWA C509.

- c. Pressure Rating: 250 psig.
  - d. End Connections: Mechanical or push-on joint.
  - e. Interior Coating: Complying with AWWA C550.
- 5. 200-psig, AWWA, Iron, OS&Y, Metal-Seated Gate Valves:
  - a. Description: Cast- or ductile-iron body and bonnet; with cast-iron double disc, bronze disc and seat rings, and bronze stem.
  - b. Standard: AWWA C500.
  - c. Pressure Rating: 200 psig.
  - d. End Connections: Flanged or grooved.
- 6. 200-psig, AWWA, Iron, OS&Y, Resilient-Seated Gate Valves:
  - a. Description: Cast- or ductile-iron body and bonnet; with bronze, gray-iron, or ductile-iron gate; resilient seats; and bronze stem.
  - b. Standard: AWWA C509.
  - c. Pressure Rating: 200 psig.
  - d. End Connections: Flanged or grooved.
- 7. 250-psig, AWWA, Iron, OS&Y, Resilient-Seated Gate Valves:
  - a. Description: Cast- or ductile-iron body and bonnet; with bronze, gray-iron, or ductile-iron gate; resilient seats; and bronze stem.
  - b. Standard: AWWA C509.
  - c. Pressure Rating: 200 psig.
  - d. End Connections: Flanged or grooved.
- 8. Class 125, Bronze, Nonrising-Stem Gate Valves:
  - a. Description: Class 125, Type 1; bronze with solid wedge and malleable-iron handwheel.
  - b. Standard: MSS SP-80.
  - c. Pressure Rating: 200 psig.
  - d. End Connections: Solder joint or threaded.
- B. UL-Listed or FM-Approved Gate Valves:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. American AVK Company; Valve & Fittings Division.
    - b. American Cast Iron Pipe Company; American Flow Control Division.
    - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
    - d. Clow Valve Company; a division of McWane, Inc.
    - e. Crane Co.; Crane Valve Group; Jenkins Valves.
    - f. Crane Co.; Crane Valve Group; Stockham Division.
    - g. East Jordan Iron Works, Inc.
    - h. Hammond Valve.
    - i. Kennedy Valve; a division of McWane, Inc.
    - j. M&H Valve Company; a division of McWane, Inc.
    - k. Milwaukee Valve Company.
    - l. Mueller Co.; Water Products Division.
    - m. NIBCO INC.

- n. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
  - o. Tyco Fire & Building Products LP.
  - p. United Brass Works, Inc.
  - q. U.S. Pipe.
  - r. Watts Water Technologies, Inc.
  - s. Or approved equal.
2. 175-psig, UL-Listed or FM-Approved, Iron, Nonrising-Stem Gate Valves:
- a. Description: Iron body and bonnet, bronze seating material, and inside screw.
  - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
  - c. Pressure Rating: 175 psig minimum.
  - d. End Connections: Mechanical or push-on joint.
  - e. Indicator-Post Flange: Include on valves used with indicator posts.
3. 250-psig, UL-Listed or FM-Approved, Iron, Nonrising-Stem Gate Valves:
- a. Description: Iron body and bonnet, bronze seating material, and inside screw.
  - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
  - c. Pressure Rating: 250 psig minimum.
  - d. End Connections: Mechanical or push-on joint.
  - e. Indicator-Post Flange: Include on valves used with indicator posts.
4. 175-psig, UL-Listed or FM-Approved, Iron, OS&Y, Gate Valves:
- a. Description: Iron body and bonnet and bronze seating material.
  - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
  - c. Pressure Rating: 175 psig minimum.
  - d. End Connections: Flanged or grooved.
5. 250-psig, UL-Listed or FM-Approved, Iron, OS&Y Gate Valves:
- a. Description: Iron body and bonnet and bronze seating material.
  - b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
  - c. Pressure Rating: 250 psig minimum.
  - d. End Connections: Flanged or grooved.
6. UL-Listed or FM-Approved, OS&Y Bronze, Gate Valves:
- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - 1) Crane Co.; Crane Valve Group; Crane Valves.
    - 2) Crane Co.; Crane Valve Group; Stockham Division.
    - 3) Milwaukee Valve Company.
    - 4) NIBCO INC.
    - 5) United Brass Works, Inc.
    - 6) Or approved equal.
  - b. Description: Bronze body and bonnet and bronze stem.
  - c. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
  - d. Pressure Rating: 175 psig minimum.
  - e. End Connections: Threaded.

## 2.9 GATE VALVE ACCESSORIES AND SPECIALTIES

### A. Tapping-Sleeve Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. Clow Valve Company; a division of McWane, Inc.
  - c. East Jordan Iron Works, Inc.
  - d. Flowserve.
  - e. Kennedy Valve; a division of McWane, Inc.
  - f. M&H Valve Company; a division of McWane, Inc.
  - g. Mueller Co.; Water Products Division.
  - h. U.S. Pipe.
  - i. Or approved equal.
2. Description: Sleeve and valve compatible with drilling machine.
3. Standard: MSS SP-60.
4. Tapping Sleeve: Cast-iron, ductile-iron, or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Sleeve shall match size and type of pipe material being tapped and have recessed flange for branch valve.
5. Valve: AWWA, cast-iron, nonrising-stem, metal resilient-seated gate valve with one raised-face flange mating tapping-sleeve flange.

### B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches in diameter.

1. Operating Wrenches: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

### C. Indicator Posts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American AVK Company; Valves & Fittings Division.
  - b. American Cast Iron Pipe Company; American Flow Control Division.
  - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - d. Clow Valve Company; a division of McWane, Inc.
  - e. Crane Co.; Crane Valve Group; Stockham Division.
  - f. Kennedy Valve; a division of McWane, Inc.
  - g. Mueller Co.; Water Products Division.
  - h. NIBCO INC.
  - i. Tyco Fire & Building Products LP.
  - j. Or approved equal.
2. Description: Vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.
3. Standards: UL 789 and "Approval Guide," published by FM Global, listing.

2.10 BUTTERFLY VALVES

A. AWWA Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. DeZurik/Copes-Vulcan; a unit of SPX Corporation.
  - b. Milliken Valve Company.
  - c. Mosser Valve; a division of Olson Technologies, Inc.
  - d. Mueller Co.; Water Products Division.
  - e. Pratt, Henry Company.
  - f. Val-Matic Valve & Manufacturing Corp.
  - g. Or approved equal.
2. Description: Rubber seated.
3. Standard: AWWA C504.
4. Body Material: Cast or ductile iron.
5. Body Type: flanged.
6. Pressure Rating: 150 psig.

B. UL Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Kennedy Valve; a division of McWane, Inc.
  - b. Milwaukee Valve Company.
  - c. Mueller Co.; Water Products Division.
  - d. NIBCO INC.
  - e. Pratt, Henry Company.
  - f. Or approved equal.
2. Description: Metal on resilient material seating.
3. Standards: UL 1091 and "Approval Guide," published by FM Global, listing.
4. Body Material: Cast or ductile iron.
5. Body Type: flanged.
6. Pressure Rating: 175 psig.

2.11 CHECK VALVES

A. AWWA Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American AVK Company; Valves & Fittings Division.
  - b. American Cast Iron Pipe Company; American Flow Control Division.
  - c. APCO Willamette Valve and Primer Corporation.
  - d. Clow Valve Company; a division of McWane, Inc.
  - e. Crane Co.; Crane Valve Group; Crane Valves.
  - f. Crane Co.; Crane Valve Group; Stockham Division.
  - g. Kennedy Valve; a division of McWane, Inc.
  - h. M&H Valve Company; a division of McWane, Inc.

- i. Mueller Co.; Water Products Division.
    - j. NIBCO INC.
    - k. Watts Water Technologies, Inc.
    - l. Or approved equal.
  2. Description: Swing-check type with resilient seat; with interior coating according to AWWA C550 and ends to match piping.
  3. Standard: AWWA C508.
  4. Pressure Rating: 175 psig.
- B. UL-Listed or FM-Approved Check Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
    - b. Clow Valve Company; a division of McWane, Inc.
    - c. Crane Co.; Crane Valve Group; Stockham Division.
    - d. Globe Fire Sprinkler Corporation.
    - e. Kennedy Valve; a division of McWane, Inc.
    - f. Kidde Fire Fighting.
    - g. Matco-Norca.
    - h. Mueller Co.; Water Products Division.
    - i. NIBCO INC.
    - j. Reliable Automatic Sprinkler Co., Inc.
    - k. Tyco Fire & Building Products LP.
    - l. United Brass Works, Inc.
    - m. Victaulic Company.
    - n. Viking Corporation.
    - o. Watts Water Technologies, Inc.
    - p. Or approved equal.
  2. Description: Swing-check type with pressure rating, rubber-face checks unless otherwise indicated, and ends matching piping.
  3. Standards: UL 312 and "Approval Guide," published by FM Global, listing.
  4. Pressure Rating: 250 psig.

## 2.12 DETECTOR CHECK VALVES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  2. Badger Meter, Inc.
  3. FEBCO; SPX Valves & Controls.
  4. Globe Fire Sprinkler Corporation.
  5. Kennedy Valve; a division of McWane, Inc.
  6. Mueller Co.; Hersey Meters Division.
  7. Victaulic Company.
  8. Viking Corporation.
  9. Watts Water Technologies, Inc.
  10. Or approved equal.

- B. Description: Galvanized cast-iron body, bolted cover with air-bleed device for access to internal parts, and flanged ends. Include one-piece bronze disc with bronze bushings, pivot, and replaceable seat. Include threaded bypass taps in inlet and outlet for bypass meter connection. Set valve to allow minimal water flow through bypass meter when major water flow is required.
- C. Standards: UL 312 and "Approval Guide," published by FM Global, listing.
- D. Pressure Rating: 175 psig.
- E. Water Meter: AWWA C700, disc type, at least one-fourth size of detector check valve. Include meter, bypass piping, gate valves, check valve, and connections to detector check valve.

## 2.13 WATER METERS

- A. Water meters will be furnished by utility company.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. AMCO Water Metering Systems.
  - 2. Badger Meter, Inc.
  - 3. Carlon Meter.
  - 4. Hays Fluid Controls.
  - 5. McCrometer.
  - 6. Mueller Co.; Hersey Meters Division.
  - 7. Neptune Technology Group Inc.
  - 8. Sensus Metering Systems.
  - 9. Or approved equal.
- C. Displacement-Type Water Meters:
  - 1. Description: With bronze main case.
  - 2. Standard: AWWA C700.
  - 3. Registration: Flow in gallons.
- D. Turbine-Type Water Meters:
  - 1. Standard: AWWA C701.
  - 2. Registration: Flow in gallons.
- E. Compound-Type Water Meters:
  - 1. Standard: AWWA C702.
  - 2. Registration: Flow in gallons.
- F. Remote Registration System:
  - 1. Description: Utility company's standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
  - 2. Standard: AWWA C706.
  - 3. Registration: Flow in gallons.
- G. Remote Registration System:

1. Description: Utility company's standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
2. Standard: AWWA C707.
3. Registration: Flow in gallons.
4. Data-Acquisition Units: Comply with utility company's requirements for type and quantity.
5. Visible Display Units: Comply with utility company's requirements for type and quantity.

## 2.14 DETECTOR-TYPE WATER METERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Badger Meter, Inc.
2. Mueller Co.; Hersey Meters Division.
3. Neptune Technology Group Inc.
4. Sensus Metering Systems.
5. Or approved equal.

- B. AWWA, Detector Check Water Meters:

1. Description: Main line, turbine meter with second meter on bypass.
2. Standard: AWWA C703.
3. Registration: Flow in gallons.
4. Pressure Rating: 150 psig.
5. Bypass Meter: AWWA C702, compound-type, bronze case.

- a. Size: At least one-half nominal size of main-line meter.

- C. Fire-Protection, Detector Check Water Meters:

1. Description: Main-line turbine meter with strainer and second meter on bypass.
2. Standards: UL's "Fire Protection Equipment Directory" listing and "Approval Guide," published by FM Global, listing.
3. Registration: Flow in gallons.
4. Pressure Rating: 175 psig minimum.
5. Bypass Meter: AWWA C701, turbine-type, bronze case.

- a. Size: At least NPS 2.

- D. Remote Registration System:

1. Description: Utility company's standard; direct-reading type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.
2. Standard: AWWA C706.
3. Registration: Flow in gallons.

- E. Remote Registration System:

1. Description: Utility company's standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

2. Standard: AWWA C707.
3. Registration: Flow in gallons.
4. Data-Acquisition Units: Comply with utility company's requirements for type and quantity.
5. Visible Display Units: Comply with utility company's requirements for type and quantity.

## 2.15 PRESSURE-REDUCING VALVES

### A. Water Regulators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Cash Acme; a division of The Reliance Worldwide Corporation.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. Honeywell Water Controls.
  - d. Watts Water Technologies, Inc.
  - e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
  - f. Or approved equal.
2. Standard: ASSE 1003.
3. Pressure Rating: Initial pressure of 150 psig.
4. Body Material: Bronze with chrome-plated finish for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3.
5. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and NPS 3.

### B. Water Control Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. CLA-VAL Automatic Control Valves.
  - b. Flomatic Corporation.
  - c. OCV Control Valves.
  - d. Watts Regulator Company; Ames Fluid Control Systems.
  - e. Watts Regulator Company; Watts ACV Division.
  - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
  - g. Or approved equal.
2. Description: Pilot-operation, diaphragm-type, single-seated main water control valve with AWWA C550 or FDA-approved, interior epoxy coating. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.
3. Pressure Rating: Initial pressure of 150 psig minimum.
4. Main Valve Body: Cast or ductile iron with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
5. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.

## 2.16 BACKFLOW PREVENTERS

### A. Reduced-Pressure-Principle Backflow Preventers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

- a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. FEBCO; SPX Valves & Controls.
  - d. Flomatic Corporation.
  - e. Watts Water Technologies, Inc.
  - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
  - g. Or approved equal.
2. Standard: ASSE 1013 or AWWA C511.
  3. Operation: Continuous-pressure applications.
  4. Pressure Loss: 12 psig maximum, through middle one-third of flow range.
  5. Body Material: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved or steel with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and larger.
  6. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
  7. Configuration: Designed for horizontal, straight through flow.
  8. Accessories:
    - a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 and smaller; OS&Y gate type with flanged ends on inlet and outlet of NPS 2-1/2 and larger.
    - b. Air-Gap Fitting: ASME A112.1.2, matching backflow preventer connection.

**B. Double-Check, Backflow-Prevention Assemblies:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. FEBCO; SPX Valves & Controls.
  - d. Flomatic Corporation.
  - e. Watts Water Technologies, Inc.
  - f. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
  - g. Or approved equal.
2. Standard: ASSE 1015 or AWWA C510.
3. Operation: Continuous-pressure applications unless otherwise indicated.
4. Pressure Loss: 5 psig maximum, through middle one-third of flow range.
5. Body Material: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved or steel with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and larger.
6. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
7. Configuration: Designed for horizontal, straight through flow.
8. Accessories: Ball valves with threaded ends on inlet and outlet of NPS 2 and smaller; OS&Y gate valves with flanged ends on inlet and outlet of NPS 2-1/2 and larger.

**C. Double-Check, Detector-Assembly Backflow Preventers:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Ames Fire & Waterworks; a division of Watts Water Technologies, Inc.
  - b. Conbraco Industries, Inc.; Apollo Valves.
  - c. FEBCO; SPX Valves & Controls.
  - d. Watts Water Technologies, Inc.

- e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
    - f. Or approved equal.
  - 2. Standards: ASSE 1048 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - 3. Operation: Continuous-pressure applications.
  - 4. Pressure Loss: 5 psig maximum, through middle one-third of flow range.
  - 5. Body Material: Cast iron with interior lining complying with AWWA C550 or that is FDA approved or Steel with interior lining complying with AWWA C550 or that is FDA approved.
  - 6. End Connections: Flanged.
  - 7. Configuration: Designed for horizontal, straight through flow.
  - 8. Accessories:
    - a. Valves: UL 262, "Approval Guide," published by FM Global, listing, approved; OS&Y gate type with flanged ends on inlet and outlet.
    - b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.
- D. Backflow Preventer Test Kits:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Conbraco Industries, Inc.; Apollo Valves.
    - b. FEBCO; SPX Valves & Controls.
    - c. Flomatic Corporation.
    - d. Watts Water Technologies, Inc.
    - e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
    - f. Or approved equal.
  - 2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

## 2.17 WATER METER BOXES

- A. Description: Cast-iron body and cover for disc-type water meter, with lettering "WATER METER" on cover; and with slotted, open-bottom base section of length to fit over service piping.
  - 1. Option: Base section may be cast-iron, PVC, clay, or other pipe.
- B. Description: Cast-iron body and double cover for disc-type water meter, with lettering "WATER METER" on top cover; and with separate inner cover; air space between covers; and slotted, open-bottom base section of length to fit over service piping.
- C. Description: Polymer-concrete body and cover for disc-type water meter, with lettering "WATER" on cover; and with slotted, open-bottom base section of length to fit over service piping. Include vertical and lateral design loadings of 15,000 lb minimum over 10 by 10 inches square.

## 2.18 CONCRETE VAULTS

- A. Description: Precast, reinforced-concrete vault, designed for A-16 load designation according to ASTM C 857, and made according to ASTM C 858.
- B. Ladder: ASTM A 36/A 36M, steel ladder; or PE-encased steel steps.
- C. Manhole: ASTM A 48/A 48M, Class No. 35A minimum tensile strength, gray-iron traffic frame and cover.
  - 1. Dimension: 24-inch minimum diameter unless otherwise indicated.
- D. Manhole: ASTM A 536, Grade 60-40-18, ductile-iron traffic frame and cover.
  - 1. Dimension: 24-inch minimum diameter unless otherwise indicated.
- E. Drain: ASME A112.6.3, cast-iron floor drain with outlet of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

## 2.19 PROTECTIVE ENCLOSURES

- A. Freeze-Protection Enclosures:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AquaShield.
    - b. BF Products.
    - c. DekoRRa Products LLC.
    - d. Dunco Manufacturing, Inc.
    - e. G&C Enclosures.
    - f. Hot Box, Inc.
    - g. HydroCowl, Inc.
    - h. Piedmont Well Covers, Inc.
    - i. Watts Water Technologies, Inc.
    - j. Or approved equal.
  - 2. Description: Insulated enclosure designed to protect aboveground water piping, equipment, or specialties from freezing and damage, with heat source to maintain minimum internal temperature of 40 deg F when external temperatures reach as low as minus 34 deg F.
  - 3. Standard: ASSE 1060.
  - 4. Class I: For equipment or devices other than pressure or atmospheric vacuum breakers.
  - 5. Class I-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
    - a. Housing: Reinforced-aluminum or fiberglass construction.
      - 1) Size: Of dimensions indicated but not less than those required for access and service of protected unit.
      - 2) Drain opening for units with drain connection.
      - 3) Access doors with locking devices.
      - 4) Insulation inside housing.

5) Anchoring devices for attaching housing to concrete base.

b. Electric heating cable or heater with self-limiting temperature control.

**B. Weather-Resistant Enclosures:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AquaShield.
  - b. BF Products.
  - c. DekoRRa Products LLC.
  - d. Dunco Manufacturing, Inc.
  - e. G&C Enclosures.
  - f. Hot Box, Inc.
  - g. HydroCowl, Inc.
  - h. Piedmont Well Covers, Inc.
  - i. Watts Water Technologies, Inc.
  - j. Or approved equal.
2. Description: Uninsulated enclosure designed to protect aboveground water piping, equipment, or specialties from weather and damage.
3. Standard: ASSE 1060.
4. Class III: For equipment or devices other than pressure or atmospheric vacuum breakers.
5. Class III-V: For pressure or atmospheric vacuum breaker equipment or devices. Include drain opening in housing.
  - a. Housing: Reinforced construction.
    - 1) Size: Of dimensions indicated, but not less than those required for access and service of protected unit.
    - 2) Drain opening for units with drain connection.
    - 3) Access doors with locking devices.
    - 4) Anchoring devices for attaching housing to concrete base.

**C. Expanded-Metal Enclosures:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Backflow Prevention Device InnClosures, Inc.
  - b. BF Products.
  - c. Cross Brothers Inc.
  - d. Le Meur Welding & Manufacturing Co.
  - e. V.I.T. Products, Inc.
  - f. Or approved equal.
2. Description: Enclosure designed to protect aboveground water piping, equipment, or specialties from damage.
3. Material: ASTM F 1267, expanded metal side and top panels, of weight and with reinforcement of same metal at edges as required for rigidity.
4. Type: II, expanded and flattened.
5. Class: Class 1, uncoated carbon steel.

6. Finish: Manufacturer's enamel paint.
7. Size: Of dimensions indicated but not less than those required for access and service of protected unit.
8. Locking device.
9. Lugs or devices for securing enclosure to base.
10. Enclosure Bases: 4-inch minimum thickness precast concrete, of dimensions required to extend at least 6 inches beyond edges of enclosure housings. Include openings for piping.

## 2.20 FIRE HYDRANTS

### A. AWWA Dry-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American AVK Company; Valves & Fittings Division.
  - b. American Cast Iron Pipe Company; American Flow Control Division.
  - c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - d. American Foundry Group, Inc.
  - e. Clow Valve Company; a division of McWane, Inc.
  - f. East Jordan Iron Works, Inc.
  - g. Kennedy Valve; a division of McWane, Inc.
  - h. M&H Valve Company; a division of McWane, Inc.
  - i. Mueller Co.; Water Products Division.
  - j. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
  - k. U.S. Pipe.
  - l. Or approved equal.
2. Description: Post type, with one NPS 4-1/2 and two NPS 2-1/2 outlets; and with 5-1/4-inch main valve, drain valve, and NPS 6 mechanical-joint inlet. Include interior coating according to AWWA C550. Hydrant shall have cast-iron body and compression-type valve opening against pressure and closing with pressure.
3. Standard: AWWA C502.
4. Pressure Rating: 250 psig

### B. UL-Listed, Dry-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; American Flow Control Division.
  - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - c. American Foundry Group, Inc.
  - d. Clow Valve Company; a division of McWane, Inc.
  - e. East Jordan Iron Works, Inc.
  - f. Kennedy Valve; a division of McWane, Inc.
  - g. M&H Valve Company; a division of McWane, Inc.
  - h. Mueller Co.; Water Products Division.
  - i. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
  - j. U.S. Pipe.
  - k. Or approved equal.

2. Description: Freestanding, with one NPS 4-1/2 and two NPS 2-1/2 outlets; and with 5-1/4-inch main valve, drain valve, and NPS 6 mechanical-joint inlet. Hydrant shall have cast-iron body and compression-type valve opening against pressure and closing with pressure.
3. Standards: UL 246 and "Approval Guide," published by FM Global, listing.
4. Design: Base valve.
5. Pressure Rating: 250 psig.
6. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
7. Operating and Cap Nuts: Pentagon, 1-1/2 inches point to flat.
8. Direction of Opening: Hydrant valve opens by turning operating nut to left or counterclockwise.
9. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

C. AWWA Wet-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American AVK Company; Valves & Fittings Division.
  - b. Clow Valve Company; a division of McWane, Inc.
  - c. Jones, James Company.
  - d. Mueller Co.; Water Products Division.
  - e. Or approved equal.
2. Description: Post type, with one NPS 4-1/2 and two NPS 2-1/2 outlets and with NPS 6 threaded or flanged inlet, and base section with NPS 6 mechanical-joint inlet. Include interior coating according to AWWA C550.
3. Standard: AWWA C503.
4. Pressure Rating: 250 psig.

D. UL-Listed, Wet-Barrel Fire Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American AVK Company; Valves & Fittings Division.
  - b. Clow Valve Company; a division of McWane, Inc.
  - c. Jones, James Company.
  - d. Mueller Co.; Water Products Division.
  - e. Or approved equal.
2. Description: Freestanding, with one NPS 4-1/2 and two NPS 2-1/2 outlets and with NPS 6 threaded or flanged inlet, and base section with NPS 6 mechanical-joint inlet.
3. Standards: UL 246 and "Approval Guide," published by FM Global, listing.
4. Design: Wet barrel.
5. Pressure Rating: 200 psig.
6. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.
7. Operating and Cap Nuts: Pentagon, 1-1/2 inches point to flat.
8. Direction of Opening: Hydrant valves open by turning operating nut to left or counterclockwise.
9. Exterior Finish: Red alkyd-gloss enamel paint unless otherwise indicated.

## 2.21 FIRE-DEPARTMENT CONNECTIONS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Elkhart Brass Mfg. Company, Inc.
  - 2. Fire-End & Croker Corporation.
  - 3. Guardian Fire Equipment, Inc.
  - 4. Kidde Fire Fighting.
  - 5. Potter Roemer.
  - 6. Reliable Automatic Sprinkler Co., Inc.
  - 7. Or approved equal.
- B. Description: Freestanding, with cast-bronze body, thread inlets according to NFPA 1963 and matching local fire-department hose threads, and threaded bottom outlet. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose-connection inlet; 18-inch- high brass sleeve; and round escutcheon plate.
- C. Standard: UL 405.
- D. Connections: Two NPS 2-1/2 inlets and one NPS 6 outlet.
- E. Connections: Four NPS 2-1/2 inlets and one NPS 6 outlet.
- F. Connections: Six NPS 2-1/2 inlets and one NPS 8 outlet.
- G. Inlet Alignment: Inline, horizontal.
- H. Finish Including Sleeve: Polished chrome plated.
- I. Escutcheon Plate Marking: "AUTO SPKR & STANDPIPE."

## 2.22 ALARM DEVICES

- A. General: UL 753 and "Approval Guide," published by FM Global, listing, of types and sizes to mate and match piping and equipment.
- B. Water-Flow Indicators: Vane-type water-flow detector, rated for 250-psig working pressure; designed for horizontal or vertical installation; with two single-pole, double-throw circuit switches to provide isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal when cover is removed.
- C. Supervisory Switches: Single pole, double throw; designed to signal valve in other than fully open position.
- D. Pressure Switches: Single pole, double throw; designed to signal increase in pressure.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General conditions for execution requirements.

**3.2 EARTHWORK**

- A. Comply with excavating, trenching, and backfilling requirements in Section 31 00 00 "Earthwork".

**3.3 PIPING INSTALLATION**

- A. Water-Main Connection: Arrange with water utility company for tap of size and in location indicated in water main.
- B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.
- C. Make connections larger than NPS 2 with tapping machine according to the following:
  - 1. Install tapping sleeve and tapping valve according to MSS SP-60.
  - 2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
  - 3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
  - 4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.
- D. Make connections NPS 2 and smaller with drilling machine according to the following:
  - 1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company's standards.
  - 2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
  - 3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
  - 4. Install corporation valves into service-saddle assemblies.
  - 5. Install manifold for multiple taps in water main.
  - 6. Install curb valve in water-service piping with head pointing up and with service box.
- E. Comply with NFPA 24 for fire-service-main piping materials and installation.
- F. Install copper tube and fittings according to CDA's "Copper Tube Handbook."
  - 1. Install encasement for tubing according to ASTM A 674 or AWWA C105.
- G. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.
  - 1. Install encasement for piping according to ASTM A 674 or AWWA C105.
- H. Install PE pipe according to ASTM D 2774 and ASTM F 645.

- I. Install PVC, AWWA pipe according to ASTM F 645 and AWWA M23.
- J. Install fiberglass AWWA pipe according to AWWA M45.
- K. Bury piping with depth of cover over top at least 30 inches, with top at least 12 inches below level of maximum frost penetration, and according to the following:
  - 1. Under Driveways: With at least 36 inches of cover over top.
  - 2. Under Railroad Tracks: With at least 48 inches of cover over top.
  - 3. In Loose Gravelly Soil and Rock: With at least 12 inches of additional cover.
- L. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.
- M. Extend fire-suppression water-service piping and connect to water-supply source and building fire-suppression water-service piping systems at locations and pipe sizes indicated.
  - 1. Terminate fire-suppression water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building's fire-suppression water-service piping systems when those systems are installed.
- N. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.
- O. Comply with requirements in Division 21 Sections for fire-suppression-water piping inside the building.
- P. Comply with requirements in Division 22 Section "Domestic Water Piping" for potable-water piping inside the building.
- Q. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 21 Section "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- R. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 21 Section "Sleeves and Sleeve Seals for Fire-Suppression Piping."

### 3.4 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure rating same as or higher than systems pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in tubing NPS 2 and smaller.
- C. Install flanges, flange adaptors, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.
- D. Ream ends of tubes and remove burrs.
- E. Remove scale, slag, dirt, and debris from outside and inside of pipes, tubes, and fittings before assembly.

- F. Copper-Tubing, Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.
- G. Copper-Tubing, Pressure-Sealed Joints: Use proprietary crimping tool and procedure recommended by copper, pressure-seal-fitting manufacturer.
- H. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
- I. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts.
- J. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with bolts according to ASME B31.9.
- K. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
- L. PVC Piping Gasketed Joints: Use joining materials according to AWWA C900. Construct joints with elastomeric seals and lubricant according to ASTM D 2774 or ASTM D 3139.
- M. Fiberglass Piping Bonded Joints: Use adhesive and procedure recommended by piping manufacturer.
- N. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure.
- O. Do not use flanges or unions for underground piping.

### 3.5 ANCHORAGE INSTALLATION

- A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
  - 1. Concrete thrust blocks.
  - 2. Locking mechanical joints.
  - 3. Set-screw mechanical retainer glands.
  - 4. Bolted flanged joints.
  - 5. Heat-fused joints.
  - 6. Pipe clamps and tie rods.
- B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches in fire-suppression water-service piping according to NFPA 24 and the following:
  - 1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
  - 2. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
  - 3. Bonded-Joint Fiberglass, Water-Service Piping: According to AWWA M45.
- C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

### 3.6 VALVE INSTALLATION

- A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.
- B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.
- C. UL-Listed or FM-Approved Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.
- D. UL-Listed or FM-Approved Valves Other Than Gate Valves: Comply with NFPA 24.
- E. MSS Valves: Install as component of connected piping system.
- F. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.
- G. Pressure-Reducing Valves: Install in vault or aboveground between shutoff valves. Install full-size valved bypass.
- H. Support valves and piping, not direct buried, on concrete piers. Comply with requirements for concrete piers in Division 03 Section Cast-in-Place Concrete.

### 3.7 DETECTOR CHECK VALVE INSTALLATION

- A. Install in vault or aboveground.
- B. Install for proper direction of flow. Install bypass with water meter, gate valves on each side of meter, and check valve downstream from meter.
- C. Support detector check valves and piping on concrete piers. Comply with requirements for concrete piers in Division 03 Section Cast-in-Place Concrete.

### 3.8 WATER METER INSTALLATION

- A. Install water meters, piping, and specialties according to utility company's written instructions.
- B. Water Meters: Install turbine-type water meters NPS 2 and smaller in meter boxes with shutoff valves on water meter inlets. Include valves on water meter outlets and include valved bypass around meters unless prohibited by authorities having jurisdiction.
- C. Water Meters: Install turbine-type water meters NPS 3 and larger in meter vaults. Include shutoff valves on water meter inlets and outlets and include valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
- D. Water Meters: Install detector-type water meters in meter vault according to AWWA M6. Include shutoff valves on water meter inlets and outlets and include full-size valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.
- E. Support water meters and piping NPS 3 and larger on concrete piers. Comply with requirements for concrete piers in Division 03 Section Cast-in-Place Concrete.

**3.9 ROUGHING-IN FOR WATER METERS**

- A. Rough-in piping and specialties for water meter installation according to utility company's written instructions.

**3.10 BACKFLOW PREVENTER INSTALLATION**

- A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of plumbing and health department and authorities having jurisdiction.
- B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.
- C. Do not install bypass piping around backflow preventers.
- D. Support NPS 2-1/2 and larger backflow preventers and piping on concrete piers. Comply with requirements for concrete piers in Division 03 Section Cast-in-Place Concrete.

**3.11 WATER METER BOX INSTALLATION**

- A. Install water meter boxes in paved areas flush with surface.
- B. Install water meter boxes in grass or earth areas with top 2 inches above surface.

**3.12 CONCRETE VAULT INSTALLATION**

- A. Install precast concrete vaults according to ASTM C 891.

**3.13 PROTECTIVE ENCLOSURE INSTALLATION**

- A. Install concrete base level and with top approximately 2 inches above grade.
- B. Install protective enclosure over valves and equipment.
- C. Anchor protective enclosure to concrete base.

**3.14 FIRE HYDRANT INSTALLATION**

- A. General: Install each fire hydrant with separate gate valve in supply pipe, anchor with restrained joints or thrust blocks, and support in upright position.
- B. Wet-Barrel Fire Hydrants: Install with valve below frost line. Provide for drainage.
- C. AWWA Fire Hydrants: Comply with AWWA M17.
- D. UL-Listed or FM-Approved Fire Hydrants: Comply with NFPA 24.

**3.15 FIRE-DEPARTMENT CONNECTION INSTALLATION**

- A. Install ball drip valves at each check valve for fire-department connection to mains.

- B. Install protective pipe bollards on two sides of each fire-department connection. Pipe bollards are specified in Division 05 Section "Metal Fabrications."

### 3.16 ALARM DEVICE INSTALLATION

- A. General: Comply with NFPA 24 for devices and methods of valve supervision. Underground valves with valve box do not require supervision.
- B. Supervisory Switches: Supervise valves in open position.
  - 1. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
  - 2. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.
- C. Locking and Sealing: Secure unsupervised valves as follows:
  - 1. Valves: Install chain and padlock on open OS&Y gate valve.
  - 2. Post Indicators: Install padlock on wrench on indicator post.
- D. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch.
- E. Water-Flow Indicators: Install in water-service piping in vault. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.
- F. Connect alarm devices to building's fire-alarm system. Wiring and fire-alarm devices are specified in Division 28 Sections.

### 3.17 CONNECTIONS

- A. Connect fire-suppression water-service piping to existing water main. Use tapping sleeve and tapping valve.
- B. Connect fire-suppression water-service piping to interior fire-suppression piping.

### 3.18 FIELD QUALITY CONTROL

- A. Use test procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described below.
- B. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.
- C. Hydrostatic Tests: Test at not less than one-and-one-half times the working pressure for two hours.
  - 1. Increase pressure in 50-psig increments and inspect each joint between increments. Hold at test pressure for one hour; decrease to 0-psig. Slowly increase again to test pressure and hold for one more hour. Maximum allowable leakage is 2 quarts per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

- D. Prepare test and inspection reports.

### 3.19 IDENTIFICATION

- A. Install continuous underground warning tape during backfilling of trench for underground fire-suppression water-service piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Division 31 Section "Earth Moving."
- B. Permanently attach equipment nameplate or marker indicating plastic fire-suppression water-service piping or fire-suppression water-service piping with electrically insulated fittings, on main electrical meter panel. Comply with requirements for identifying devices in Division 22 Section "Identification for Plumbing Piping and Equipment."

### 3.20 CLEANING

- A. Clean and disinfect fire-suppression water-service piping as follows:
  - 1. Purge new piping systems and parts of existing systems that have been altered, extended, or repaired before use.
  - 2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
  - 3. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed by authorities having jurisdiction, use procedure described in AWWA C651 or do as follows:
    - a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
    - b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for three hours.
    - c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
    - d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows evidence of contamination.
- B. Prepare reports of purging and disinfecting activities.

### 3.21 PIPING SCHEDULE

- A. Aboveground and vault fire-suppression water-service piping NPS 2 and smaller shall be hard copper tube, ASTM B 88, Type K and ASTM B 88, Type L wrought- or cast-copper-alloy, solder-joint fittings; and brazed pressure-sealed joints.
- B. Aboveground and vault fire-suppression water-service piping NPS 3 and NPS 4 shall be one of the following:
  - 1. Grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.

- C. Aboveground and vault fire-suppression water-service piping NPS 5 to NPS 12 > shall be grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.
- D. Underslab fire-suppression water-service piping NPS 2 shall be hard copper tube, copper, pressure-seal fittings; and pressure-sealed joints.
- E. Underslab fire-suppression water-service piping NPS 3 and NPS 4 shall be one of the following:
  - 1. Grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.
  - 2. Mechanical-joint, ductile-iron pipe; mechanical-joint, ductile- or gray-iron, standard-pattern or ductile-iron, compact-pattern fittings; glands, gaskets, and bolts; and restrained, gasketed joints.
  - 3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and restrained, gasketed joints.
- F. Underslab fire-suppression water-service piping NPS 6 to NPS 12 shall be one of the following:
  - 1. Grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.
  - 2. Mechanical-joint, ductile-iron pipe; mechanical-joint, ductile- or gray-iron, standard-pattern or ductile-iron, compact-pattern fittings; glands, gaskets, and bolts; and restrained, gasketed joints.
  - 3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and restrained, gasketed joints.

### 3.22 VALVE SCHEDULE

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
- B. Underground fire-suppression water-service shutoff valves NPS 2 and smaller shall be corporation valves or curb valves with ends compatible with piping.
- C. Meter box fire-suppression water-service shutoff valves NPS 2 and smaller shall be meter valves.
- D. Vault fire-suppression water-service shutoff valves NPS 2 and smaller shall be UL-listed or FM-approved, OS&Y, bronze, gate valves.
- E. Underground fire-suppression water-service shutoff valves NPS 3 and larger shall be one of the following:
  - 1. 200-psig, AWWA, iron, nonrising-stem, metal-seated gate valves.
  - 2. 250-psig, AWWA, iron, nonrising-stem, resilient-seated gate valves.
  - 3. 250-psig, UL-listed or FM-approved, iron, nonrising-stem gate valves.
- F. Indicator-post underground fire-suppression water-service valves NPS 3 and larger shall be 250-psig, UL-listed or FM-approved, iron, nonrising-stem gate valves with indicator-post flange.
- G. Standard-pressure, aboveground and vault fire-suppression water-service shutoff valves NPS 3 and larger shall be one of the following:

1. 200-psig, AWWA, iron, OS&Y, metal resilient-seated gate valves.
  2. 250-psig, AWWA, iron, OS&Y, resilient-seated gate valves.
  3. 250-psig, UL-listed or FM-approved, iron, OS&Y gate valves.
  4. AWWA or UL-listed or FM-approved butterfly valves.
- H. Fire-suppression water-service check valves NPS 3 and larger shall be one of the following:
1. AWWA or UL-listed or FM-approved check valves.
  2. UL-listed or FM-approved detector check valves.

**END OF SECTION 21 11 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 12 00****FIRE-SUPPRESSION STANDPIPES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Hose connections.
4. Monitors.
5. Fire-department connections.
6. Alarm devices.
7. Manual control stations.
8. Control panels.
9. Pressure gages.

B. Related Sections:

1. Section 21 13 13 "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
2. Section 21 31 13 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
3. Section 28 31 11 "Fire Alarm and Integrated Audio/Visual Evacuation System" for alarm devices not specified in this Section.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

#### 1.6 DEFINITIONS

- A. High-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than 300 psig (2070 kPa).
- B. Standard-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure 175 psig (1200 kPa) maximum.

#### 1.7 SYSTEM DESCRIPTIONS

- A. Automatic Wet-Type, Class II Standpipe System: Includes NPS 1-1/2 (DN 40) hose stations. Has open water-supply valve with pressure maintained and is capable of supplying water demand.

#### 1.8 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure, Fire-Suppression Standpipe System Component: Listed for 175-psig (1200-kPa) minimum working pressure.
- B. High-Pressure, Fire-Suppression Standpipe System Component: Listed for 250-psig (1725-kPa) minimum 300-psig (2070-kPa) working pressure.
- C. Fire-suppression standpipe design shall be approved by New York City Department of Buildings
  1. Minimum residual pressure at each hose-connection outlet is as follows:
    - a. NPS 1-1/2 (DN 40) Hose Connections: 65 psig (450 kPa).
- D. Seismic Performance: Fire-suppression standpipes shall withstand the effects of earthquake motions determined according to NFPA 13 and ASCE/SEI 7.

**1.9 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: For fire-suppression standpipes. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Wiring Diagrams: For power, signal, and control wiring.
- C. Engineering Services Submittal: For standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer, licensed in the State of New York responsible for their preparation to be submitted to Commissioner for review and approval.

**1.10 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Fire-suppression standpipes, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Plumbing piping.
  - 2. HVAC hydronic piping.
  - 3. Electrical
- B. Qualification Data: For qualified Installer.
- C. Approved Standpipe Drawings: Working plans, prepared according to NFPA 14, that have been approved by New York City Department of Buildings, including hydraulic calculations if applicable.
- D. Welding certificates.
- E. Fire-hydrant flow test report.
- F. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 14. Include "Contractor's Material and Test Certificate for Aboveground Piping" and "Contractor's Material and Test Certificate for Underground Piping."
- G. Field quality-control reports.

**1.11 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For fire-suppression standpipes specialties to include in emergency, operation, and maintenance manuals.

**1.12 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"
- B. Installer Qualifications:

1. Installer's responsibilities include designing, fabricating, and installing fire-suppression standpipes and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
  - a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer, licensed in the State of New York to be submitted to the Commissioner for review and approval.
- C. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. NFPA Standards: Fire-suppression standpipe equipment, specialties, accessories, installation, and testing shall comply with NFPA 14, "Installation of Standpipe and Hose Systems."

## PART 2 - PRODUCTS

### 2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

### 2.2 STEEL PIPE AND FITTINGS

- A. Standard Weight Schedule 40, Galvanized- and Black-Steel Pipe: ASTM A 53/A 53M, Type E. Pipe ends may be factory or field formed to match joining method.
- B. Standard-Weight, Galvanized and Black Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, seamless steel pipe with threaded ends.
- C. Galvanized and Uncoated, Steel Couplings: ASTM A 865, threaded.
- D. Galvanized and Uncoated, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- E. Malleable- or Ductile-Iron Unions: UL 860.
- F. Cast-Iron Flanges: ASME B16.1, Class 125.
- G. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
- H. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- I. Grooved-Joint, Steel-Pipe Appurtenances:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- a. Anvil International, Inc.
  - b. Corcoran Piping System Co.
  - c. National Fittings, Inc.
  - d. Shurjoint Piping Products.
  - e. Tyco Fire & Building Products LP.
  - f. Victaulic Company.
  - g. Or approved equal.
2. Pressure Rating: 175 psig (1200 kPa) minimum.
  3. Galvanized and Uncoated, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
  4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

## 2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick.
  1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
  2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

## 2.4 LISTED FIRE-PROTECTION VALVES

- A. General Requirements:
  1. Valves shall be UL listed or FM approved.
  2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
  3. Minimum Pressure Rating for High-Pressure Piping: 300 psig (2070 kPa).
- B. Ball Valves:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. Victaulic Company.
    - c. VikingCorp
    - d. Nibco
    - e. Or approved equal.

2. Standard: UL 1091 except with ball instead of disc.
3. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
4. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
5. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.

**C. Bronze Butterfly Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fivalco Inc.
  - b. Global Safety Products, Inc.
  - c. Milwaukee Valve Company.
  - d. Or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.

**D. Iron Butterfly Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Anvil International, Inc.
  - b. Fivalco Inc.
  - c. Global Safety Products, Inc.
  - d. Kennedy Valve; a division of McWane, Inc.
  - e. Milwaukee Valve Company.
  - f. NIBCO INC.
  - g. Pratt, Henry Company.
  - h. Shurjoint Piping Products.
  - i. Tyco Fire & Building Products LP.
  - j. Victaulic Company.
  - k. Or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Cast or ductile iron.
5. Style: Lug or wafer.

**E. Check Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - c. Anvil International, Inc.

- d. Clow Valve Company; a division of McWane, Inc.
- e. Crane Co.; Crane Valve Group; Crane Valves.
- f. Crane Co.; Crane Valve Group; Jenkins Valves.
- g. Crane Co.; Crane Valve Group; Stockham Division.
- h. Fire-End & Croker Corporation.
- i. Fire Protection Products, Inc.
- j. Fivalco Inc.
- k. Globe Fire Sprinkler Corporation.
- l. Groeniger & Company.
- m. Kennedy Valve; a division of McWane, Inc.
- n. Matco-Norca.
- o. Metraflex, Inc.
- p. Milwaukee Valve Company.
- q. Mueller Co.; Water Products Division.
- r. NIBCO INC.
- s. Potter Roemer.
- t. Reliable Automatic Sprinkler Co., Inc.
- u. Shurjoint Piping Products.
- v. Tyco Fire & Building Products LP.
- w. United Brass Works, Inc.
- x. Venus Fire Protection Ltd.
- y. Victaulic Company.
- z. Viking Corporation.
- aa. Watts Water Technologies, Inc.
- bb. Or approved equal.

- 2. Standard: UL 312.
- 3. Pressure Rating: 250 psig (1725 kPa) minimum.
- 4. Type: Swing check.
- 5. Body Material: Cast iron.
- 6. End Connections: Flanged or grooved.

**F. Bronze OS&Y Gate Valves:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Stockham Division.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. United Brass Works, Inc.
  - f. Or approved equal.
- 2. Standard: UL 262.
- 3. Pressure Rating: 175 psig (1200 kPa).
- 4. Body Material: Bronze.
- 5. End Connections: Threaded.

**G. Iron OS&Y Gate Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. American Valve, Inc.
  - c. Clow Valve Company; a division of McWane, Inc.
  - d. Crane Co.; Crane Valve Group; Crane Valves.
  - e. Crane Co.; Crane Valve Group; Jenkins Valves.
  - f. Crane Co.; Crane Valve Group; Stockham Division.
  - g. Hammond Valve.
  - h. Milwaukee Valve Company.
  - i. Mueller Co.; Water Products Division.
  - j. NIBCO INC.
  - k. Tyco Fire & Building Products LP.
  - l. United Brass Works, Inc.
  - m. Watts Water Technologies, Inc.
  - n. Or approved equal.
2. Standard: UL 262.
3. Pressure Rating: 300 psig (2070 kPa).
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

**H. Indicating-Type Butterfly Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Anvil International, Inc.
  - b. Global Safety Products, Inc.
  - c. Kennedy Valve; a division of McWane, Inc.
  - d. Milwaukee Valve Company.
  - e. NIBCO INC.
  - f. Tyco Fire & Building Products LP.
  - g. Victaulic Company.
  - h. Or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Valves NPS 2 (DN 50) and Smaller:
  - a. Valve Type: Ball or butterfly.
  - b. Body Material: Bronze.
  - c. End Connections: Threaded.
5. Valves NPS 2-1/2 (DN 65) and Larger:
  - a. Valve Type: Butterfly.
  - b. Body Material: Cast or ductile iron.
  - c. End Connections: Flanged, grooved, or wafer.

6. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch indicating device.

I. NRS Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. American Valve, Inc.
  - c. Crane Co.; Crane Valve Group; Stockham Division.
  - d. Kennedy Valve; a division of McWane, Inc.
  - e. Mueller Co.; Water Products Division.
  - f. NIBCO INC.
  - g. Tyco Fire & Building Products LP.
  - h. Or approved equal.
2. Standard: UL 262.
3. Pressure Rating: 300 psig (2070 kPa).
4. Body Material: Cast iron with indicator post flange.
5. Stem: Nonrising.
6. End Connections: Flanged or grooved.

2.5 TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig (1200 kPa) minimum.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire Protection Products, Inc.
  - b. United Brass Works, Inc.
  - c. Argco
  - d. Or approved equal.

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Affiliated Distributors.
  - b. Anvil International, Inc.
  - c. Barnett.
  - d. Conbraco Industries, Inc.; Apollo Valves.
  - e. Fire-End & Croker Corporation.

- f. Fire Protection Products, Inc.
- g. Flowserve.
- h. FNW.
- i. Jomar International, Ltd.
- j. Kennedy Valve; a division of McWane, Inc.
- k. Kitz Corporation.
- l. Legend Valve.
- m. Milwaukee Valve Company.
- n. NIBCO INC.
- o. Potter Roemer.
- p. Red-White Valve Corporation.
- q. Tyco Fire & Building Products LP.
- r. Victaulic Company.
- s. Watts Water Technologies, Inc.
- t. Or approved equal.

**D. Globe Valves: Preaction**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire Protection Products, Inc.
  - b. United Brass Works, Inc.
  - c. Croker
  - d. Or approved equal.

**E. Plug Valves:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Southern Manufacturing Group.
  - b. Fire Protection Products
  - c. Croker
  - d. Or approved equal.

**2.6 SPECIALTY VALVES**

**A. General Requirements:**

- 1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- 2. Pressure Rating:
  - a. Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
  - b. High-Pressure Piping Specialty Valves: 300 psig (2070 kPa).
- 3. Body Material: Cast or ductile iron.
- 4. Size: Same as connected piping.
- 5. End Connections: Flanged or grooved.

**B. Alarm Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Globe Fire Sprinkler Corporation.
  - c. Reliable Automatic Sprinkler Co., Inc.
  - d. Tyco Fire & Building Products LP.
  - e. Venus Fire Protection Ltd.
  - f. Victaulic Company.
  - g. Viking Corporation.
  - h. Or approved equal.
2. Standard: UL 193.
3. Design: For horizontal or vertical installation.
4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages and fill-line attachment with strainer.
5. Drip Cup Assembly: Pipe drain with check valve to main drain piping.

**C. Pressure-Reducing Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. Fire-End & Croker Corporation.
  - d. Fire Protection Products, Inc.
  - e. GMR International Equipment Corporation.
  - f. Guardian Fire Equipment, Inc.
  - g. Potter Roemer.
  - h. Tyco Fire & Building Products LP.
  - i. Wilson & Cousins Inc.
  - j. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
  - k. Or approved equal.
2. UL 668 hose valve, with integral UL 1468 reducing device.
3. Pressure Rating: 300 psig (2070 kPa) minimum.
4. Material: Brass or bronze.
5. Inlet: Female pipe threads.
6. Outlet: Threaded with or without adapter having male hose threads.
7. Pattern: Angle.
8. Finish: Rough brass or bronze.

**D. Automatic (Ball Drip) Drain Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.

- b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.
  - d. Or approved equal.
- 2. Standard: UL 1726.
  - 3. Pressure Rating: 175 psig (1200 kPa) minimum.
  - 4. Type: Automatic draining, ball check.
  - 5. Size: NPS 3/4 (DN 20).
  - 6. End Connections: Threaded.

## 2.7 HOSE CONNECTIONS

### A. Adjustable-Valve Hose Connections:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. Fire-End & Croker Corporation.
  - d. Fire Protection Products, Inc.
  - e. GMR International Equipment Corporation.
  - f. Guardian Fire Equipment, Inc.
  - g. Potter Roemer.
  - h. Tyco Fire & Building Products LP.
  - i. Wilson & Cousins Inc.
  - j. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
  - k. Or approved equal.
- 3. Standard: UL 668 hose valve, with integral UL 1468 reducing or restricting pressure-control device, for connecting fire hose.
- 4. Pressure Rating: 300 psig (2070 kPa) minimum.
- 5. Material: Brass or bronze.
- 6. Size: NPS 1-1/2 or NPS 2-1/2 (DN 40 or DN 65, as indicated), as indicated.
- 7. Inlet: Female pipe threads.
- 8. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
- 9. Pattern: Angle.
- 10. Pressure-Control Device Type: Pressure reducing.
- 11. Design Outlet Pressure Setting:
- 12. Finish: Rough brass or bronze.

### B. Nonadjustable-Valve Hose Connections:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. Fire-End & Croker Corporation.
  - d. Fire Protection Products, Inc.
  - e. GMR International Equipment Corporation.
  - f. Guardian Fire Equipment, Inc.
  - g. Kennedy Valve; a division of McWane, Inc.
  - h. Mueller Co.; Water Products Division.
  - i. NIBCO INC.
  - j. Potter Roemer.
  - k. Tyco Fire & Building Products LP.
  - l. Wilson & Cousins Inc.
  - m. Or approved equal.
3. Standard: UL 668 hose valve for connecting fire hose.
  4. Pressure Rating: 300 psig (2070 kPa) minimum.
  5. Material: Brass or bronze.
  6. Size: NPS 1-1/2 or NPS 2-1/2 (DN 40 or DN 65), as indicated.
  7. Inlet: Female pipe threads.
  8. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching local fire-department threads.
  9. Pattern: Angle.
  10. Finish: Rough brass or bronze.

**2.8 NPS 1-1/2 BY NPS 2-1/2 (DN 40 BY DN 65) RACK-TYPE HOSE STATIONS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  1. AFAC Inc.
  2. American Fire Hose & Cabinet.
  3. Angus; Part of Kidde Fire Fighting Organization.
  4. Brooks Equipment Co., Inc.
  5. Elkhart Brass Mfg. Company, Inc.
  6. Fire-End & Croker Corporation.
  7. GMR International Equipment Corporation.
  8. Potter Roemer.
  9. Wilson & Cousins Inc.
  10. Or approved equal.
- C. Hose Rack:
  1. Standard: UL 47.
  2. Material: Brass or bronze with polished chrome-plated; Steel with red-enamel finish.
  3. Type: Hose-rack assembly. Include hose valve, reducer adapter, hose rack, water-retention device, hose pins, and hose.
  4. Operation: Semiautomatic.
  5. Sized to hold fire hose.

D. Hose Valve:

1. Standard: UL 668, NPS 2-1/2 (DN 65), for connecting fire hose.
2. Type: Adjustable.
3. Pressure-Control Device: required.
4. Design Outlet Pressure Setting: Not applicable.
5. Hose Valve and Trim Finish: Polished chrome plated.
6. Pressure Rating: 300 psig (2070 kPa) minimum.
7. Pattern: Angle.
8. Material: Brass or bronze.
9. Pressure-Control Device: UL 1468, integral or for field installation if indicated.
10. Size: NPS 2-1/2 (DN 65).
11. Inlet: Female pipe threads.
12. Outlet: Male hose threads according to NFPA 1963 and matching local fire-department threads.
13. Reducer Adapter: NPS 2-1/2 by NPS 1-1/2 (DN 65 by DN 40).

E. Hose:

1. Standards: NFPA 1961 and UL 219, lined fire hose with swivel inlet, coupling, gaskets, and nozzle.
2. Size: NPS 1-1/2 (DN 40).
3. Length: 125 feet.
4. Jacket: Combination of natural and synthetic threads.
5. Lining: Rubber, plastic, or combination of rubber and plastic compounds
6. Cover: Rubber, plastic, or combination of rubber and plastic compounds.
7. Nozzle: UL 401 spray nozzle unless plain nozzle is indicated.
  - a. Material: Polished brass.
  - b. Type: Plain, for nonadjustable water stream

## 2.9 FIRE-DEPARTMENT CONNECTIONS

A. Exposed-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. Fire-End & Croker Corporation.
  - d. Fire Protection Products, Inc.
  - e. GMR International Equipment Corporation.
  - f. Guardian Fire Equipment, Inc.
  - g. Tyco Fire & Building Products LP.
  - h. Wilson & Cousins Inc.
  - i. Or approved equal.
2. Standard: UL 405.
3. Type: Exposed, projecting, for wall mounting.
4. Pressure Rating: 175 psig (1200 kPa) minimum.

5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Round, brass, wall type.
9. Outlet: Back, with pipe threads.
10. Number of Inlets: Two.
11. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."
12. Finish: Polished chrome plated.
13. Outlet Size: NPS 6 (DN 150).

**B. Flush-Type, Fire-Department Connection:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. GMR International Equipment Corporation.
  - d. Guardian Fire Equipment, Inc.
  - e. Potter Roemer.
  - f. Or approved equal.
2. Standard: UL 405.
3. Type: Flush, for wall mounting.
4. Pressure Rating: 175 psig (1200 kPa) minimum.
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Rectangular, brass, wall type.
9. Outlet: With pipe threads.
10. Body Style: Horizontal.
11. Number of Inlets: Two.
12. Outlet Location: Back.
13. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."
14. Finish: Polished chrome plated.
15. Outlet Size: NPS 6 (DN 150).

**2.10 ALARM DEVICES**

**A. Alarm-device types shall match piping and equipment connections.**

**B. Water-Motor-Operated Alarm:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Globe Fire Sprinkler Corporation.

- b. Tyco Fire & Building Products LP.
    - c. Victaulic Company.
    - d. Viking Corporation.
    - e. Or approved equal.
  - 2. Standard: UL 753.
  - 3. Type: Mechanically operated, with Pelton wheel.
  - 4. Alarm Gong: Cast aluminum with red-enamel factory finish.
  - 5. Size: 10-inch (250-mm) diameter.
  - 6. Components: Shaft length, bearings, and sleeve to suit wall construction.
  - 7. Inlet: NPS 3/4 (DN 20).
  - 8. Outlet: NPS 1 (DN 25) drain connection.
- C. Electrically Operated Alarm Bell:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Fire-Lite Alarms, Inc.; a Honeywell company.
    - b. Notifier; a Honeywell company.
    - c. Potter Electric Signal Company.
    - d. Or approved equal.
  - 2. Standard: UL 464.
  - 3. Type: Vibrating, metal alarm bell.
  - 4. Size: 6-inch (150-mm) minimum diameter.
  - 5. Finish: Red-enamel factory finish, suitable for outdoor use.
- D. Water-Flow Indicators:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. ADT Security Services, Inc.
    - b. McDonnell & Miller; ITT Industries.
    - c. Potter Electric Signal Company.
    - d. System Sensor; a Honeywell company.
    - e. Viking Corporation.
    - f. Watts Industries (Canada) Inc.
    - g. Or approved equal.
  - 2. Standard: UL 346.
  - 3. Water-Flow Detector: Electrically supervised.
  - 4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
  - 5. Type: Paddle operated.
  - 6. Pressure Rating: 250 psig (1725 kPa).
  - 7. Design Installation: Horizontal or vertical.

E. Pressure Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Barksdale, Inc.
  - c. Detroit Switch, Inc.
  - d. Potter Electric Signal Company.
  - e. System Sensor; a Honeywell company.
  - f. Tyco Fire & Building Products LP.
  - g. United Electric Controls Co.
  - h. Viking Corporation.
  - i. Or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised water-flow switch with retard feature.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design Operation: Rising pressure signals water flow.

F. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire-Lite Alarms, Inc.; a Honeywell company.
  - b. Kennedy Valve; a division of McWane, Inc.
  - c. Potter Electric Signal Company.
  - d. System Sensor; a Honeywell company.
  - e. Or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled valve is in other than fully open position.

2.11 PRESSURE GAGES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AMETEK; U.S. Gauge Division.
2. Ashcroft Inc.
3. Brecco Corporation.
4. WIKA Instrument Corporation.
5. Or approved equal.

B. Standard: UL 393.

- C. Dial Size: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
- D. Pressure Gage Range: 0 to 250 psig (0 to 1725 kPa) minimum.
- E. Water System Piping Gage: Include WATER label on dial face.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 PREPARATION

- A. Perform fire-hydrant flow test according to NFPA 14 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.

### 3.3 EXAMINATION

- A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.
- B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.4 WATER-SUPPLY CONNECTIONS

- A. Connect fire-suppression standpipe piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 22 11 16 "Domestic Water Piping."
- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories at connection to water-distribution piping. Comply with requirements for backflow preventers in Section 22 11 19 "Domestic Water Piping Specialties."
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

### 3.5 PIPING INSTALLATION

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
  - 1. Deviations from approved working plans for piping require written approval from the Commissioner. File written approval with Commissioner before deviating from approved working plans.

- B. Piping Standard: Comply with requirements in NFPA 14 for installation of fire-suppression standpipe piping.
- C. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
- D. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install drain valves on standpipes. Extend drain piping to outside of building.
- F. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.
- G. Install alarm devices in piping systems.
- H. Install hangers and supports for standpipe system piping according to NFPA 14. Comply with requirements in NFPA 13 for hanger materials.
- I. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal and install where they will not be subject to freezing.
- J. Drain dry-type standpipe system piping.
- K. Pressurize and check dry-type standpipe system piping and air-pressure maintenance devices.
- L. Fill wet-type standpipe system piping with water.
- M. Connect air compressor to the following piping and wiring:
  - 1. Pressure gages and controls.
  - 2. Electrical power system.
  - 3. Fire-alarm devices, including low-pressure alarm.
- N. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 21 05 17 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- O. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 21 05 17 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- P. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 21 05 18 "Escutcheons for Fire-Suppression Piping."

### 3.6 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- I. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- J. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
  - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
- K. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.
- L. Copper-Tubing Grooved Joints: Roll rounded-edge groove in end of tube according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- M. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

### 3.7 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 14.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Specialty Valves:
  - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
  - 2. Alarm Valves: Install bypass check valve and retarding chamber drain-line connection.
  - 3. Dry-Pipe Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
    - a. Install air compressor and compressed-air supply piping.
    - b. Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range; and 175-psig (1200-kPa) maximum inlet pressure.
    - c. Install compressed-air supply piping from building's compressed-air piping system.

### 3.8 HOSE-CONNECTION INSTALLATION

- A. Install hose connections adjacent to standpipes.
- B. Install freestanding hose connections for access and minimum passage restriction.
- C. Install NPS 1-1/2 (DN 40) hose-connection valves with flow-restricting device.
- D. Install NPS 2-1/2 (DN 65) hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 (DN 65 by DN 40) reducer adapter and flow-restricting device.
- E. Install wall-mounted-type hose connections in cabinets. Include pipe escutcheons, with finish matching valves, inside cabinet where water-supply piping penetrates cabinet. Install valves at angle required for connection of fire hose. Comply with requirements for cabinets in Section 10 44 13 "Fire Protection Cabinets."

### 3.9 MONITOR INSTALLATION

- A. Install monitors on standpipe piping.

### 3.10 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire-department connections.

**3.11 IDENTIFICATION**

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 14.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

**3.12 FIELD QUALITY CONTROL**

- A. Perform tests and inspections.
- B. Tests and Inspections:
  - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - 3. Flush, test, and inspect standpipe systems according to NFPA 14, "System Acceptance" Chapter.
  - 4. Energize circuits to electrical equipment and devices.
  - 5. Start and run air compressors.
  - 6. Coordinate with fire-alarm tests. Operate as required.
  - 7. Coordinate with fire-pump tests. Operate as required.
  - 8. Verify that equipment hose threads are same as local fire-department equipment.
- C. Fire-suppression standpipe system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

**3.13 PIPING SCHEDULE**

- A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.
- B. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 4 (DN 100) and smaller, shall be one of the following:
  - 1. Standard-weight Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
- C. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 5 to NPS 8 (DN 125 to DN 200), shall be one of the following:
  - 1. Standard-weight Schedule 40 or thinwall, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
- D. High-pressure, wet-type, fire-suppression standpipe piping, NPS 4 (DN 100) and smaller, shall be one of the following:

1. Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
- E. Standard-pressure, dry-type, fire-suppression standpipe piping, NPS 4 (DN 100) and smaller, shall be one of the following:
1. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
  2. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
- F. Standard-pressure, dry-type, fire-suppression standpipe piping, NPS 5 and NPS 6 (DN 125 and DN 150) shall be one of the following:
1. Standard-weight or Schedule 30, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
  2. Standard-weight or Schedule 30, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

**END OF SECTION 21 12 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 13 13****WET-PIPE SPRINKLER SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Section 21 08 00 "Commissioning of Fire Suppression"

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Pipes, fittings, and specialties.
  - 2. Fire-protection valves.
  - 3. Fire-department connections.
  - 4. Sprinklers.
  - 5. Alarm devices.
  - 6. Manual control stations.
  - 7. Control panels.
  - 8. Pressure gages.
- B. Related Sections:
  - 1. Section 21 12 00 "Fire-Suppression Standpipes" for standpipe piping.
  - 2. Section 21 31 13 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED

Buildings” where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 DEFINITIONS

- A. High-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than 300 psig (2070 kPa).
- B. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig (1200 kPa) maximum.

#### 1.6 SYSTEM DESCRIPTIONS

- A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.

#### 1.7 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure Piping System Component: Listed for 175-psig (1200-kPa) minimum working pressure.
- B. High-Pressure Piping System Component: Listed for 300-psig working pressure.
- C. Sprinkler system design shall be approved by New York City Department of Buildings
  - 1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
  - 2. Sprinkler Occupancy Hazard Classifications:
    - a. Building Service Areas: Ordinary Hazard, Group 1.
    - b. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
    - c. General Storage Areas: Ordinary Hazard, Group 1
    - d. Laundries: Ordinary Hazard, Group 1, Industrial Area
    - e. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
    - f. Office and Public Areas: Light Hazard.
  - 3. Minimum Density for Automatic-Sprinkler Piping Design:
    - a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
    - b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. area.
    - c. Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm over 1500-sq. ft. area.
    - d. Special Occupancy Hazard: As determined by New York City Department of Buildings

4. Minimum Density for Deluge-Sprinkler Piping Design:
    - a. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm (6.1 mm/min.) over entire area.
  5. Maximum Protection Area per Sprinkler:
    - a. Office Spaces: 225 sq. ft. (20.9 sq. m).
    - b. Storage Areas: 130 sq. ft. (12.1 sq. m).
    - c. Mechanical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
    - d. Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
    - e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.
  6. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:
    - a. Light-Hazard Occupancies: 100 gpm (6.3 L/s) for 30 minutes.
  - D. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13.
- 1.8 SUBMITTAL PROCEDURES
- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- 1.9 ACTION SUBMITTALS
- A. Product Data: For each type of product indicated.
  - B. Shop Drawings: For wet-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
    1. Wiring Diagrams: For power, signal, and control wiring.
  - C. Engineering Services Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the state of New York responsible for their preparation to be submitted to Commissioner for review and approval.
  - D. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
    1. Domestic water piping.
    2. Compressed air piping.
    3. HVAC hydronic piping.
    4. Items penetrating finished ceiling include the following:
      - a. Lighting fixtures.
      - b. Air outlets and inlets.
  - E. Qualification Data: For qualified Installer.
  - F. Welding certificates.
  - G. Fire-hydrant flow test report.

- H. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
- I. Field quality-control reports.
- J. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals.

#### 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications:
  - 1. Installer's responsibilities include designing, fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
    - a. Engineering Services: Preparation of working plans, calculations, and field test reports by a qualified professional engineer licensed in the State of New York to be submitted to Commissioner for review and approval.
- C. Welding Qualifications: Qualify procedures according to ASME Boiler and Pressure Vessel Code.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
  - 1. NFPA 13, "Installation of Sprinkler Systems."
  - 2. NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."
  - 3. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

#### 1.11 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

### PART 2 - PRODUCTS

#### 2.1 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

#### 2.2 STEEL PIPE AND FITTINGS

- A. Standard Weight, Schedule 40 Black-Steel Pipe: ASTM A 53/A 53M. Pipe ends may be factory or field formed to match joining method.

- B. Malleable- or Ductile-Iron Unions: UL 860.
- C. Cast-Iron Flanges: ASME 16.1, Class 125.
- D. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.
- E. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.
- F. Grooved-Joint, Steel-Pipe Appurtenances:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. Corcoran Piping System Co.
    - c. National Fittings, Inc.
    - d. Shurjoint Piping Products.
    - e. Tyco Fire & Building Products LP.
    - f. Victaulic Company.
    - g. Or approved equal.
  - 2. Pressure Rating: 175 psig (1200 kPa) minimum.
  - 3. Galvanized, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
  - 4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

## 2.3 PIPING JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: .
  - 1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
  - 2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
- D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

## 2.4 LISTED FIRE-PROTECTION VALVES

- A. General Requirements:
  - 1. Valves shall be UL listed or FM approved.
  - 2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
  - 3. Minimum Pressure Rating for High-Pressure Piping: 300 psig (2070 kPa).
- B. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Anvil International, Inc.
  - b. Victaulic Company.
  - c. VikingCorp.
  - d. Or approved equal.
2. Standard: UL 1091 except with ball instead of disc.
3. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
4. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
5. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.

**C. Bronze Butterfly Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fivalco Inc.
  - b. Global Safety Products, Inc.
  - c. Milwaukee Valve Company.
  - d. Or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.

**D. Iron Butterfly Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Anvil International, Inc.
  - b. Fivalco Inc.
  - c. Global Safety Products, Inc.
  - d. Kennedy Valve; a division of McWane, Inc.
  - e. Milwaukee Valve Company.
  - f. NIBCO INC.
  - g. Pratt, Henry Company.
  - h. Shurjoint Piping Products.
  - i. Tyco Fire & Building Products LP.
  - j. Victaulic Company.
  - k. Or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Cast or ductile iron.
5. Style: Lug or wafer.

**E. Check Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - c. Anvil International, Inc.
  - d. Crane Co.; Crane Valve Group; Crane Valves.
  - e. Crane Co.; Crane Valve Group; Jenkins Valves.
  - f. Crane Co.; Crane Valve Group; Stockham Division.
  - g. Fire-End & Croker Corporation.
  - h. Fire Protection Products, Inc.
  - i. Globe Fire Sprinkler Corporation.
  - j. Kennedy Valve; a division of McWane, Inc.
  - k. Matco-Norca.
  - l. Metraflex, Inc.
  - m. Milwaukee Valve Company.
  - n. Mueller Co.; Water Products Division.
  - o. NIBCO INC.
  - p. Potter Roemer.
  - q. Reliable Automatic Sprinkler Co., Inc.
  - r. Tyco Fire & Building Products LP.
  - s. United Brass Works, Inc.
  - t. Venus Fire Protection Ltd.
  - u. Victaulic Company.
  - v. Viking Corporation.
  - w. Watts Water Technologies, Inc.
  - x. Or approved equal.
2. Standard: UL 312.
3. Pressure Rating: 300 psig (2070 kPa).
4. Type: Swing check.
5. Body Material: Cast iron.
6. End Connections: Flanged or grooved.

**F. Bronze OS&Y Gate Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Stockham Division.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. United Brass Works, Inc.
  - f. Or approved equal.
2. Standard: UL 262.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.

**G. Iron OS&Y Gate Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. American Valve, Inc.
  - c. Crane Co.; Crane Valve Group; Crane Valves.
  - d. Crane Co.; Crane Valve Group; Jenkins Valves.
  - e. Crane Co.; Crane Valve Group; Stockham Division.
  - f. Hammond Valve.
  - g. Milwaukee Valve Company.
  - h. Mueller Co.; Water Products Division.
  - i. NIBCO INC.
  - j. Tyco Fire & Building Products LP.
  - k. United Brass Works, Inc.
  - l. Watts Water Technologies, Inc.
  - m. Or approved equal.
2. Standard: UL 262.
3. Pressure Rating: 300 psig (2070 kPa).
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

**H. Indicating-Type Butterfly Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
  - a. Anvil International, Inc.
  - b. Global Safety Products, Inc.
  - c. Kennedy Valve; a division of McWane, Inc.
  - d. Milwaukee Valve Company.
  - e. NIBCO INC.
  - f. Tyco Fire & Building Products LP.
  - g. Victaulic Company.
  - h. Or approved equal.
2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Valves NPS 2 (DN 50) and Smaller:
  - a. Valve Type: Ball or butterfly.
  - b. Body Material: Bronze.
  - c. End Connections: Threaded.
5. Valves NPS 2-1/2 (DN 65) and Larger:
  - a. Valve Type: Butterfly.
  - b. Body Material: Cast or ductile iron.
  - c. End Connections: Flanged, grooved, or wafer.
6. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch indicating device.

**I. NRS Gate Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. American Valve, Inc.
  - c. Crane Co.; Crane Valve Group; Stockham Division.
  - d. Kennedy Valve; a division of McWane, Inc.
  - e. Mueller Co.; Water Products Division.
  - f. NIBCO INC.
  - g. Tyco Fire & Building Products LP.
  - h. Or approved equal.
2. Standard: UL 262.
3. Pressure Rating: 300 psig (2070 kPa).
4. Body Material: Cast iron with indicator post flange.
5. Stem: Nonrising.
6. End Connections: Flanged or grooved.

**J. Indicator Posts:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. American Valve, Inc.
  - c. Crane Co.; Crane Valve Group; Stockham Division.
  - d. Kennedy Valve; a division of McWane, Inc.
  - e. Mueller Co.; Water Products Division.
  - f. NIBCO INC.
  - g. Tyco Fire & Building Products LP.
  - h. Or approved equal.
2. Standard: UL 789.
3. Type: Horizontal for wall mounting.
4. Body Material: Cast iron with extension rod and locking device.
5. Operation: Hand wheel.

**2.5 TRIM AND DRAIN VALVES**

**A. General Requirements:**

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig (1200 kPa) minimum.

**B. Angle Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire Protection Products, Inc.
  - b. United Brass Works, Inc.
  - c. NIBCO
  - d. Or approved equal.

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Affiliated Distributors.
  - b. Anvil International, Inc.
  - c. Barnett.
  - d. Conbraco Industries, Inc.; Apollo Valves.
  - e. Fire-End & Croker Corporation.
  - f. Fire Protection Products, Inc.
  - g. Flowserve.
  - h. FNW.
  - i. Jomar International, Ltd.
  - j. Kennedy Valve; a division of McWane, Inc.
  - k. Kitz Corporation.
  - l. Legend Valve.
  - m. Metso Automation USA Inc.
  - n. Milwaukee Valve Company.
  - o. NIBCO INC.
  - p. Potter Roemer.
  - q. Red-White Valve Corporation.
  - r. Southern Manufacturing Group.
  - s. Stewart, M. A. and Sons Ltd.
  - t. Tyco Fire & Building Products LP.
  - u. Victaulic Company.
  - v. Watts Water Technologies, Inc.
  - w. Or approved equal.

D. Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire Protection Products, Inc.
  - b. United Brass Works, Inc.

E. Plug Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Southern Manufacturing Group.
  - b. NIBCO
  - c. Argco
  - d. Or approved equal.

2.6 SPECIALTY VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating:

- a. Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
    - b. High-Pressure Piping Specialty Valves: 300 psig (2070 kPa).
  3. Body Material: Cast or ductile iron.
  4. Size: Same as connected piping.
  5. End Connections: Flanged or grooved.
- B. Alarm Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AFAC Inc.
    - b. Globe Fire Sprinkler Corporation.
    - c. Reliable Automatic Sprinkler Co., Inc.
    - d. Tyco Fire & Building Products LP.
    - e. Venus Fire Protection Ltd.
    - f. Victaulic Company.
    - g. Viking Corporation.
    - h. Or approved equal.
  2. Standard: UL 193.
  3. Design: For horizontal or vertical installation.
  4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, and fill-line attachment with strainer.
  5. Drip Cup Assembly: Pipe drain without valves and separate from main drain piping.
  6. Drip Cup Assembly: Pipe drain with check valve to main drain piping.
- C. Deluge Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AFAC Inc.
    - b. BERMAD Control Valves.
    - c. CLA-VAL Automatic Control Valves.
    - d. Globe Fire Sprinkler Corporation.
    - e. OCV Control Valves.
    - f. Reliable Automatic Sprinkler Co., Inc.
    - g. Tyco Fire & Building Products LP.
    - h. Venus Fire Protection Ltd.
    - i. Victaulic Company.
    - j. Viking Corporation.
    - k. Or approved equal.
  2. Standard: UL 260.
  3. Design: Hydraulically operated, differential-pressure type.
  4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
  5. Wet, Pilot-Line Trim Set: Include gage to read push-rod chamber pressure, globe valve for manual operation of deluge valve, and connection for actuation device.
- D. Automatic (Ball Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.
  - d. Or approved equal.
2. Standard: UL 1726.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Type: Automatic draining, ball check.
5. Size: NPS 3/4 (DN 20).
6. End Connections: Threaded.

## 2.7 FIRE-DEPARTMENT CONNECTIONS

### A. Exposed-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. Fire-End & Croker Corporation.
  - d. Fire Protection Products, Inc.
  - e. GMR International Equipment Corporation.
  - f. Guardian Fire Equipment, Inc.
  - g. Tyco Fire & Building Products LP.
  - h. Wilson & Cousins Inc.
  - i. Or approved equal.
2. Standard: UL 405.
3. Type: Exposed, projecting, for wall mounting.
4. Pressure Rating: 175 psig (1200 kPa) minimum.
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Round, brass, wall type.
9. Outlet: Back, with pipe threads.
10. Number of Inlets: Two.
11. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."
12. Finish: Rough brass or bronze.
13. Outlet Size: NPS 6 (DN 150).

### B. Flush-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.

- b. Elkhart Brass Mfg. Company, Inc.
  - c. GMR International Equipment Corporation.
  - d. Guardian Fire Equipment, Inc.
  - e. Potter Roemer.
- 3. Standard: UL 405.
  - 4. Type: Flush, for wall mounting.
  - 5. Pressure Rating: 175 psig (1200 kPa) minimum.
  - 6. Body Material: Corrosion-resistant metal.
  - 7. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
  - 8. Caps: Brass, lugged type, with gasket and chain.
  - 9. Escutcheon Plate: Rectangular, brass, wall type.
  - 10. Outlet: With pipe threads.
  - 11. Body Style: Horizontal.
  - 12. Number of Inlets: Two.
  - 13. Outlet Location: Back.
  - 14. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE AUTO SPKR."
  - 15. Finish: Polished chrome plated.
  - 16. Outlet Size: NPS 6 (DN 150).

## 2.8 SPRINKLER SPECIALTY PIPE FITTINGS

### A. Branch Outlet Fittings:

- 1. Manufacturers: Subject to compliance with requirements, provide products by available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
  - a. Anvil International, Inc.
  - b. National Fittings, Inc.
  - c. Shurjoint Piping Products.
  - d. Tyco Fire & Building Products LP.
  - e. Victaulic Company.
  - f. Or approved equal.
- 2. Standard: UL 213.
- 3. Pressure Rating: 300 psig (2070 kPa).
- 4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
- 5. Type: Mechanical-T and -cross fittings.
- 6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
- 7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
- 8. Branch Outlets: Grooved, plain-end pipe, or threaded.

### B. Flow Detection and Test Assemblies:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AGF Manufacturing Inc.
  - b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.

- d. Victaulic Company.
    - e. Or approved equal.
  - 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - 3. Pressure Rating: 300 psig (2070 kPa).
  - 4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
  - 5. Size: Same as connected piping.
  - 6. Inlet and Outlet: Threaded.
- C. Branch Line Testers:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Elkhart Brass Mfg. Company, Inc.
    - b. Fire-End & Croker Corporation.
    - c. Potter Roemer.
    - d. Or approved equal.
  - 2. Standard: UL 199.
  - 3. Pressure Rating: 175 psig (1200 kPa).
  - 4. Body Material: Brass.
  - 5. Size: Same as connected piping.
  - 6. Inlet: Threaded.
  - 7. Drain Outlet: Threaded and capped.
  - 8. Branch Outlet: Threaded, for sprinkler.
- D. Sprinkler Inspector's Test Fittings:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AGF Manufacturing Inc.
    - b. Triple R Specialty.
    - c. Tyco Fire & Building Products LP.
    - d. Victaulic Company.
    - e. Viking Corporation.
    - f. Or approved equal.
  - 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - 3. Pressure Rating: 300 psig (2070 kPa).
  - 4. Body Material: Cast- or ductile-iron housing with sight glass.
  - 5. Size: Same as connected piping.
  - 6. Inlet and Outlet: Threaded.
- E. Adjustable Drop Nipples:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. CECA, LLC.

- b. Corcoran Piping System Co.
  - c. Merit Manufacturing; a division of Anvil International, Inc.
  - d. Or approved equal.
- 2. Standard: UL 1474.
  - 3. Pressure Rating: 300 psig (2070 kPa).
  - 4. Body Material: Steel pipe with EPDM-rubber O-ring seals.
  - 5. Size: Same as connected piping.
  - 6. Length: Adjustable.
  - 7. Inlet and Outlet: Threaded.

## 2.9 SPRINKLERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. AFAC Inc.
  - 2. Globe Fire Sprinkler Corporation.
  - 3. Reliable Automatic Sprinkler Co., Inc.
  - 4. Tyco Fire & Building Products LP.
  - 5. Venus Fire Protection Ltd.
  - 6. Victaulic Company.
  - 7. Viking Corporation.
  - 8. Or approved equal.
- B. General Requirements:
  - 1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - 2. Pressure Rating for Residential Sprinklers: 175 psig (1200 kPa) maximum.
  - 3. Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.
  - 4. Pressure Rating for High-Pressure Automatic Sprinklers: 300 psig (2070 kPa).
- C. Automatic Sprinklers with Heat-Responsive Element:
  - 1. Early-Suppression, Fast-Response Applications: UL 1767.
  - 2. Nonresidential Applications: UL 199.
  - 3. Residential Applications: UL 1626.
  - 4. Characteristics: Nominal 1/2-inch (12.7-mm) orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.
- D. Open Sprinklers with Heat-Responsive Element Removed: UL 199.
  - 1. Characteristics:
    - a. Nominal 1/2-inch (12.7-mm) Orifice: With Discharge Coefficient K between 5.3 and 5.8.
- E. Sprinkler Finishes:
  - 1. Chrome plated.
  - 2. Bronze.
  - 3. Painted.

- F. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, one piece, flat.
2. Sidewall Mounting: Chrome-plated steel, one piece, flat.

- G. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Reliable Automatic Sprinkler Co., Inc.
  - b. Tyco Fire & Building Products LP.
  - c. Victaulic Company.
  - d. Viking Corporation.
  - e. Or approved equal.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

## 2.10 ALARM DEVICES

- A. Alarm-device types shall match piping and equipment connections.

- B. Water-Motor-Operated Alarm:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Globe Fire Sprinkler Corporation.
  - b. Tyco Fire & Building Products LP.
  - c. Victaulic Company.
  - d. Viking Corporation.
  - e. Or approved equal.
2. Standard: UL 753.
3. Type: Mechanically operated, with Pelton wheel.
4. Alarm Gong: Cast aluminum with red-enamel factory finish.
5. Size: 10-inch (250-mm) diameter.
6. Components: Shaft length, bearings, and sleeve to suit wall construction.
7. Inlet: NPS 3/4 (DN 20).
8. Outlet: NPS 1 (DN 25) drain connection.

- C. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire-Lite Alarms, Inc.; a Honeywell company.
  - b. Notifier; a Honeywell company.
  - c. Potter Electric Signal Company.
  - d. Or approved equal.

2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: 8-inch (200-mm) minimum- diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

**D. Water-Flow Indicators:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. ADT Security Services, Inc.
  - b. McDonnell & Miller; ITT Industries.
  - c. Potter Electric Signal Company.
  - d. System Sensor; a Honeywell company.
  - e. Viking Corporation.
  - f. Watts Industries (Canada) Inc.
  - g. Or approved equal.
2. Standard: UL 346.
3. Water-Flow Detector: Electrically supervised.
4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
6. Pressure Rating: 250 psig (1725 kPa).
7. Design Installation: Horizontal or vertical.

**E. Pressure Switches:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Barksdale, Inc.
  - c. Detroit Switch, Inc.
  - d. Potter Electric Signal Company.
  - e. System Sensor; a Honeywell company.
  - f. Tyco Fire & Building Products LP.
  - g. United Electric Controls Co.
  - h. Viking Corporation.
  - i. Or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised water-flow switch with retard feature.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design Operation: Rising pressure signals water flow.

**F. Valve Supervisory Switches:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire-Lite Alarms, Inc.; a Honeywell company.

- b. Kennedy Valve; a division of McWane, Inc.
- c. Potter Electric Signal Company.
- d. System Sensor; a Honeywell company.
- e. Or approved equal.

- 2. Standard: UL 346.
- 3. Type: Electrically supervised.
- 4. Components: Single-pole, double-throw switch with normally closed contacts.
- 5. Design: Signals that controlled valve is in other than fully open position.

## 2.11 MANUAL CONTROL STATIONS

- A. Description: UL listed or FM approved, hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

## 2.12 CONTROL PANELS

- A. Description: Single-area, two-area, or single-area cross-zoned control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
  - 1. Panels: UL listed and FM approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
  - 2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

## 2.13 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. AMETEK; U.S. Gauge Division.
  - 2. Ashcroft, Inc.
  - 3. Brecco Corporation.
  - 4. WIKA Instrument Corporation.
  - 5. Or approved equal.
- B. Standard: UL 393.
- C. Dial Size: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
- D. Pressure Gage Range: 0 to 300 psig (0 to 2070 kPa).
- E. Water System Piping Gage: Include "WATER" label on dial face.
- F. Air System Piping Gage: Include retard feature and "AIR" label on dial face.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 WATER-SUPPLY CONNECTIONS**

- A. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements for interior piping in Section 22 11 16 "Domestic Water Piping."
- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements for backflow preventers in Section 22 11 19 "Domestic Water Piping Specialties."
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

**3.3 PIPING INSTALLATION**

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
  - 1. Deviations from approved working plans for piping require written approval from New York City Department of Buildings. File written approval with Commissioner before deviating from approved working plans.
- B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.
- C. Install seismic restraints on piping. Comply with requirements for seismic-restraint device materials and installation in NFPA 13.
- D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
- H. Install sprinkler piping with drains for complete system drainage.
- I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- J. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.
- K. Install alarm devices in piping systems.

- L. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.
- M. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal and install where they will not be subject to freezing.
- N. Fill sprinkler system piping with water.
- O. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 21 05 17 "Sleeves and Sleeve Seals for Fire-Suppression Piping."

### 3.4 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.
- B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
- I. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.
  - 1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.
- J. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

- K. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- L. Steel-Piping, Pressure-Sealed Joints: Join Schedule 5 steel pipe and steel pressure-seal fittings with tools recommended by fitting manufacturer.
- M. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

### 3.5 INSTALLATION OF COVER SYSTEM FOR SPRINKLER PIPING

- A. Install cover system, brackets, and cover components for sprinkler piping according to manufacturer's "Installation Manual" and with NFPA 13 or NFPA 13R for supports.

### 3.6 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and 2014 New York City Construction Codes.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Specialty Valves:
  - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
  - 2. Alarm Valves: Include bypass check valve and retarding chamber drain-line connection.
  - 3. Deluge Valves: Install in vertical position, in proper direction of flow, and in main supply to deluge system. Install trim sets for drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.

### 3.7 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of narrow dimension of acoustical ceiling panels.
- B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.

### 3.8 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire-department connections.
- B. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

### 3.9 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

### 3.10 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
  - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
  - 3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
  - 4. Energize circuits to electrical equipment and devices.
  - 5. Coordinate with fire-alarm tests. Operate as required.
  - 6. Coordinate with fire-pump tests. Operate as required.
  - 7. Verify that equipment hose threads are same as local fire-department equipment.
- C. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

### 3.11 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Remove and replace sprinklers with paint other than factory finish.

### 3.12 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct The City of New York's service personnel to adjust, operate, and maintain specialty valves and pressure-maintenance pumps.

### 3.13 PIPING SCHEDULE

- A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded joints.
- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 to NPS 4 (DN 65 to DN 100) shall be the following:
  - 1. Standard-weight Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
- D. Standard-pressure, wet-pipe sprinkler system, NPS 5 (DN 125) and larger shall be one of the following:
  - 1. Standard-weight Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

3.14 SPRINKLER SCHEDULE

Use sprinkler types in subparagraphs below for the following applications:

1. Rooms without Ceilings: Upright, side-wall dry head, pendant dry head.
2. Rooms with Suspended Ceilings: Concealed sprinklers.
3. Wall Mounting: Sidewall sprinklers.
4. Spaces Subject to Freezing: Upright sprinklers.
5. Special Applications: quick-response sprinklers where indicated.

B. Provide sprinkler types in subparagraphs below with finishes indicated.

1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
4. Residential Sprinklers: Dull chrome.
5. Upright Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view.

**END OF SECTION 21 13 13**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 13 16****DRY-PIPE SPRINKLER SYSTEMS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

B. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Fire-department connections.
4. Sprinkler specialty pipe fittings.
5. Sprinklers.
6. Alarm devices.
7. Manual control stations.
8. Control panels.
9. Pressure gages.

C. Related Sections:

1. Section 21 12 00 "Fire-Suppression Standpipes" for standpipe piping.
2. Section 21 13 13 "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
3. Section 21 13 39 "Foam-Water Systems" for AFFF piping.
4. Section 21 31 13 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.
5. Section 28 31 11 "Digital, Addressable Fire-Alarm System" for alarm devices not specified in this Section.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.

B. Refer to the following sections:

1. Section 01 74 19 "Construction Waste Management and Disposal"
2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

#### 1.4 LEED BUILDING SUBMITTALS:

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

#### 1.5 DEFINITIONS

- A. Standard-Pressure Sprinkler Piping: Dry-pipe sprinkler system piping engineered to operate at working pressure 175 psig (1200 kPa) maximum.

#### 1.6 SYSTEM DESCRIPTIONS

- A. Dry-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Opening of sprinklers releases compressed air and permits water pressure to open dry-pipe valve. Water then flows into piping and discharges from sprinklers that are open.
- B. Combined Dry-Pipe and Preaction Sprinkler System: Automatic sprinklers are attached to piping containing compressed air. Fire-detection system in same area as sprinklers actuates tripping devices that open dry-pipe valve without loss of air pressure and actuates fire alarm. Water discharges from sprinklers that have opened.
- C. Single-Interlock Preaction Sprinkler System: Automatic sprinklers are attached to piping containing low-pressure air. Actuation of fire-detection system in same area as sprinklers opens deluge valve, permitting water to flow into piping and to discharge from sprinklers that have opened.
- D. Double-Interlock Preaction Sprinkler System: Automatic sprinklers are attached to piping containing low-pressure air. Actuation of a fire-detection system in the same area as sprinklers opens the deluge valve permitting water to flow into the sprinkler piping; a closed solenoid valve in the sprinkler piping is opened by another fire-detection device; then water will discharge from sprinklers that have opened.

#### 1.7 PERFORMANCE REQUIREMENTS

- A. Standard-Pressure Piping System Component: Listed for 175-psig (1200-kPa) minimum working pressure.
- B. Engineering Services: Engineer sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer licensed in the State of New York, using performance requirements and criteria indicated, to be submitted to Commissioner for review and approval.

1. Available fire-hydrant flow test records indicate the following conditions:

- a. Date:
- b. Time:

- c. Performed by:
- d. Location of Residual Fire Hydrant R:
- e. Location of Flow Fire Hydrant F:
- f. Static Pressure at Residual Fire Hydrant R:
- g. Measured Flow at Flow Fire Hydrant F:
- h. Residual Pressure at Residual Fire Hydrant R:

C. Sprinkler system engineering services shall be submitted to and approved by the Commissioner.

- 1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
- 2. Sprinkler Occupancy Hazard Classifications:
  - a. Automobile Parking Areas: Ordinary Hazard, Group 1
  - b. Building Service Areas: Ordinary Hazard, Group 1
  - c. Electrical Equipment Rooms: Ordinary Hazard, Group 1
  - d. General Storage Areas: Ordinary Hazard, Group 1
  - e. Mechanical Equipment Rooms: Ordinary Hazard, Group 1
  - f. Office and Public Areas: Light Hazard
- 3. Minimum Density for Automatic-Sprinkler Piping:
  - a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
  - b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. (6.1 mm/min. over 139-sq. m) area.
- 4. Maximum Protection Area per Sprinkler: Per UL listing.
- 5. Maximum Protection Area per Sprinkler:
  - a. Office Spaces: 225 sq. ft. (20.9 sq. m).
  - b. Storage Areas: 130 sq. ft. (12.1 sq. m).
  - c. Mechanical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
  - d. Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
  - e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.
- 6. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:
  - a. Light-Hazard Occupancies: 100 gpm (6.3 L/s) for 30 minutes.
  - b. Ordinary-Hazard Occupancies: 250 gpm (15.75 L/s) for 60 to 90 minutes.

D. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13.

## 1.8 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

## 1.9 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

- B. Shop Drawings: For dry-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Wiring Diagrams: For power, signal, and control wiring.
- C. Engineering Services Submittal: For sprinkler systems indicated to comply with performance requirements and criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation, to be submitted to Commissioner for review and approval.

#### 1.10 INFORMATIONAL SUBMITTALS

- A. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Domestic water piping.
  - 2. Compressed air piping.
  - 3. HVAC hydronic piping.
  - 4. Items penetrating finished ceiling including the following:
    - a. Lighting fixtures.
    - b. Air outlets and inlets.
- B. Qualification Data: For qualified Installer and professional engineer licensed in the State of New York.
- C. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved New York City Department of Buildings including hydraulic calculations if applicable.
- D. Fire-hydrant flow test report.
- E. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
- F. Field quality-control reports.

#### 1.11 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals.

#### 1.12 1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications:
  - a. Engineering Services: Preparation of working plans, calculations, and field test reports by a qualified professional engineer licensed in the State of New York to be submitted to Commissioner for review and approval.

- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- D. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:
  - 1. NFPA 13, "Installation of Sprinkler Systems."
  - 2. NFPA 13R, "Installation of Sprinkler Systems in Residential Occupancies up to and Including Four Stories in Height."
  - 3. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."

#### 1.13 PROJECT CONDITIONS

- A. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler service to facilities occupied by The City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:
  - 1. Notify Commissioner no fewer than three days in advance of proposed interruption of sprinkler service.
  - 2. Do not proceed with interruption of sprinkler service without Commissioner's written permission.

#### 1.14 COORDINATION

- A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

### PART 2 - PRODUCTS

#### 1.15 PIPING MATERIALS

- A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and joining methods for specific services, service locations, and pipe sizes.

#### 1.16 STEEL PIPE AND FITTINGS

- A. Standard Weight Schedule 40, Galvanized-Steel Pipe: ASTM A 53/A 53M, Grade B. Pipe ends may be factory or field formed to match joining method.
- B. Galvanized-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.
- C. Galvanized, Steel Couplings: ASTM A 865, threaded.
- D. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
- E. Malleable- or Ductile-Iron Unions: UL 860.
- F. Cast-Iron Flanges: ASME B16.1, Class 125.
- G. Plain-End-Pipe Fittings: UL 213, ductile-iron body with retainer lugs that require one-quarter turn or screwed retainer pin to secure pipe in fitting.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Anvil International, Inc.
  - b. Shurjoint Piping Products.
  - c. Victaulic
  - d. Or approved equal.

**H. Grooved-Joint, Steel-Pipe Appurtenances:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following.
  - a. Anvil International, Inc.
  - b. Corcoran Piping System Co.
  - c. National Fittings, Inc.
  - d. Shurjoint Piping Products.
  - e. Tyco Fire & Building Products LP.
  - f. Victaulic Company.
  - g. Or approved equal.
2. Pressure Rating: 300 psig (2070 kPa) minimum.
3. Galvanized, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

**1.17 PIPING JOINING MATERIALS**

- A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick or ASME B16.21, nonmetallic and asbestos free.
  1. Class 125, Cast-Iron and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
  2. Class 250, Cast-Iron and Class 300, Raised-Face Flanges: Ring-type gaskets.
- B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
- C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

**1.18 LISTED FIRE-PROTECTION VALVES**

- A. General Requirements:
  1. Valves shall be UL listed or FM approved.
  2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig (1200 kPa).
- B. Ball Valves:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- a. Anvil International, Inc.
    - b. Victaulic Company.
    - c. Mfr #3
    - d. Or approved equal.
  3. Standard: UL 1091 except with ball instead of disc.
  4. Valves NPS 1-1/2 (DN 40) and Smaller: Bronze body with threaded ends.
  5. Valves NPS 2 and NPS 2-1/2 (DN 50 and DN 65): Bronze body with threaded ends or ductile-iron body with grooved ends.
  6. Valves NPS 3 (DN 80): Ductile-iron body with grooved ends.
- C. Bronze Butterfly Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Fivalco Inc.
    - b. Global Safety Products, Inc.
    - c. Milwaukee Valve Company.
    - d. Or approved equal.
  3. Standard: UL 1091.
  4. Pressure Rating: 175 psig (1200 kPa).
  5. Body Material: Bronze.
  6. End Connections: Threaded.
- D. Iron Butterfly Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Anvil International, Inc.
    - b. Fivalco Inc.
    - c. Global Safety Products, Inc.
    - d. Kennedy Valve; a division of McWane, Inc.
    - e. Milwaukee Valve Company.
    - f. NIBCO INC.
    - g. Pratt, Henry Company.
    - h. Shurjoint Piping Products.
    - i. Tyco Fire & Building Products LP.
    - j. Victaulic Company.
    - k. Or approved equal.
  3. Standard: UL 1091.
  4. Pressure Rating: 175 psig (1200 kPa).
  5. Body Material: Cast or ductile iron.
  6. Style: Lug or wafer.
  7. End Connections: Grooved.
- E. Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.
  - b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - c. Anvil International, Inc.
  - d. Clow Valve Company; a division of McWane, Inc.
  - e. Crane Co.; Crane Valve Group; Crane Valves.
  - f. Crane Co.; Crane Valve Group; Jenkins Valves.
  - g. Crane Co.; Crane Valve Group; Stockham Division.
  - h. Fire-End & Croker Corporation.
  - i. Fire Protection Products, Inc.
  - j. Fivalco Inc.
  - k. Globe Fire Sprinkler Corporation.
  - l. Groeniger & Company.
  - m. Kennedy Valve; a division of McWane, Inc.
  - n. Matco-Norca.
  - o. Metraflex, Inc.
  - p. Milwaukee Valve Company.
  - q. Mueller Co.; Water Products Division.
  - r. NIBCO INC.
  - s. Potter Roemer.
  - t. Reliable Automatic Sprinkler Co., Inc.
  - u. Shurjoint Piping Products.
  - v. Tyco Fire & Building Products LP.
  - w. United Brass Works, Inc.
  - x. Venus Fire Protection Ltd.
  - y. Victaulic Company.
  - z. Viking Corporation.
  - aa. Watts Water Technologies, Inc.
  - bb. Or approved equal.
3. Standard: UL 312
4. Pressure Rating: 300 psig (2070 kPa).
5. Type: Swing check.
6. Body Material: Cast iron.
7. End Connections: Flanged or grooved.

**F. Bronze OS&Y Gate Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Crane Co.; Crane Valve Group; Crane Valves.
  - b. Crane Co.; Crane Valve Group; Stockham Division.
  - c. Milwaukee Valve Company.
  - d. NIBCO INC.
  - e. United Brass Works, Inc.
  - f. Or approved equal.
3. Standard: UL 262.

4. Pressure Rating: 175 psig (1200 kPa).
5. Body Material: Bronze.
6. End Connections: Threaded.

G. Iron OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
  - b. American Valve, Inc.
  - c. Clow Valve Company; a division of McWane, Inc.
  - d. Crane Co.; Crane Valve Group; Crane Valves.
  - e. Crane Co.; Crane Valve Group; Jenkins Valves.
  - f. Crane Co.; Crane Valve Group; Stockham Division.
  - g. Hammond Valve.
  - h. Milwaukee Valve Company.
  - i. Mueller Co.; Water Products Division.
  - j. NIBCO INC.
  - k. Shurjoint Piping Products.
  - l. Tyco Fire & Building Products LP.
  - m. United Brass Works, Inc.
  - n. Watts Water Technologies, Inc.
  - o. Or approved equal.
3. Standard: UL 262.
4. Pressure Rating: 300 psig (2070 kPa).
5. Body Material: Cast or ductile iron.
6. End Connections: Flanged or grooved.

H. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. Anvil International, Inc.
  - b. Fivalco Inc.
  - c. Global Safety Products, Inc.
  - d. Kennedy Valve; a division of McWane, Inc.
  - e. Milwaukee Valve Company.
  - f. NIBCO INC.
  - g. Shurjoint Piping Products.
  - h. Tyco Fire & Building Products LP.
  - i. Victaulic Company.
  - j. Or approved equal.
3. Standard: UL 1091.
4. Pressure Rating: 175 psig (1200 kPa) minimum.
5. Valves NPS 2 (DN 50) and Smaller:
  - a. Valve Type: Ball or butterfly.

- b. Body Material: Bronze.
    - c. End Connections: Threaded.
  - 6. Valves NPS 2-1/2 (DN 65) and Larger:
    - a. Valve Type: Butterfly.
    - b. Body Material: Cast or ductile iron.
    - c. End Connections: Flanged, grooved, or wafer.
  - 7. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch indicating device.
- I. NRS Gate Valves:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
    - b. American Valve, Inc.
    - c. Clow Valve Company; a division of McWane, Inc.
    - d. Crane Co.; Crane Valve Group; Stockham Division.
    - e. Kennedy Valve; a division of McWane, Inc.
    - f. Mueller Co.; Water Products Division.
    - g. NIBCO INC.
    - h. Tyco Fire & Building Products LP.
    - i. Or approved equal.
  - 3. Standard: UL 262.
  - 4. Pressure Rating: 300 psig (2070 kPa).
  - 5. Body Material: Cast iron with indicator post flange.
  - 6. Stem: Nonrising.
  - 7. End Connections: Flanged or grooved.
- J. Indicator Posts:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
    - b. American Valve, Inc.
    - c. Clow Valve Company; a division of McWane, Inc.
    - d. Crane Co.; Crane Valve Group; Stockham Division.
    - e. Kennedy Valve; a division of McWane, Inc.
    - f. Mueller Co.; Water Products Division.
    - g. NIBCO INC.
    - h. Tyco Fire & Building Products LP.
    - i. Or approved equal.
  - 3. Standard: UL 789.
  - 4. Type: Horizontal for wall mounting.
  - 5. Body Material: Cast iron with extension rod and locking device.
  - 6. Operation: Wrench

**1.19 TRIM AND DRAIN VALVES****A. General Requirements:**

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig (1200 kPa) minimum.

**B. Angle Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire Protection Products, Inc.
  - b. United Brass Works, Inc.
  - c. Mfr #3.
  - d. Or approved equal.

**C. Ball Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Affiliated Distributors.
  - b. Anvil International, Inc.
  - c. Barnett.
  - d. Conbraco Industries, Inc.; Apollo Valves.
  - e. Fire-End & Croker Corporation.
  - f. Fire Protection Products, Inc.
  - g. Flowserve.
  - h. FNW.
  - i. Jomar International, Ltd.
  - j. Kennedy Valve; a division of McWane, Inc.
  - k. Kitz Corporation.
  - l. Legend Valve.
  - m. Metso Automation USA Inc.
  - n. Milwaukee Valve Company.
  - o. NIBCO INC.
  - p. Potter Roemer.
  - q. Red-White Valve Corporation.
  - r. Southern Manufacturing Group.
  - s. Stewart, M. A. and Sons Ltd.
  - t. Tyco Fire & Building Products LP.
  - u. Victaulic Company.
  - v. Watts Water Technologies, Inc.
  - w. Or approved equal.

**D. Globe Valves:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire Protection Products, Inc.
  - b. United Brass Works, Inc.
  - c. VikingCorp

- d. Or approved equal.

E. Plug Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Southern Manufacturing Group.
  - b. VikingCorp
  - c. NIBCO
  - d. Or approved equal.

1.20 SPECIALTY VALVES

F. General Requirements:

- 1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- 2. Pressure Rating:
  - a. Standard-Pressure Piping Specialty Valves: 175 psig (1200 kPa) minimum.
  - b. High-Pressure Piping Specialty Valves: 300 psig (2070 kPa).
- 3. Body Material: Cast or ductile iron.
- 4. Size: Same as connected piping.
- 5. End Connections: Flanged or grooved.

G. Dry-Pipe Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.
  - b. Globe Fire Sprinkler Corporation.
  - c. Reliable Automatic Sprinkler Co., Inc.
  - d. Tyco Fire & Building Products LP.
  - e. Venus Fire Protection Ltd.
  - f. Victaulic Company.
  - g. Viking Corporation.
  - h. Or approved equal.
- 3. Standard: UL 260
- 4. Design: Differential-pressure type.
- 5. Include UL 1486, quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
- 6. Air-Pressure Maintenance Device:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - b. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- 1) AFAC Inc.
- 2) Globe Fire Sprinkler Corporation.
- 3) Reliable Automatic Sprinkler Co., Inc.
- 4) Tyco Fire & Building Products LP.
- 5) Venus Fire Protection Ltd.
- 6) Victaulic Company.
- 7) Viking Corporation.
- 8) Or approved equal.

- c. Standard: UL 260.
- d. Type: Automatic device to maintain minimum air pressure in piping.
- e. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 300-psig (2070-kPa) outlet pressure.

7. Air Compressor:

- a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- b. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - 1) Gast Manufacturing Inc.
  - 2) General Air Products, Inc,
  - 3) Viking Corporation.
  - 4) Or approved equal.
- c. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
- d. Motor Horsepower: Fractional.
- e. Power: 120-V ac, 60 Hz, single phase.

H. Deluge Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.
  - b. BERMAD Control Valves.
  - c. CLA-VAL Automatic Control Valves.
  - d. Globe Fire Sprinkler Corporation.
  - e. OCV Control Valves.
  - f. Reliable Automatic Sprinkler Co., Inc.
  - g. Tyco Fire & Building Products LP.
  - h. Venus Fire Protection Ltd.
  - i. Victaulic Company.
  - j. Viking Corporation.
  - k. Or approved equal.
3. Standard: UL 260.
4. Design: Hydraulically operated, differential-pressure type.

5. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gages, drip cup assembly piped without valves and separate from main drain line, fill-line attachment with strainer, and push-rod chamber supply connection.
6. Dry, Pilot-Line Trim Set: Include dry, pilot-line actuator; air- and water-pressure gages; low-air-pressure warning switch; air relief valve; and actuation device. Dry, pilot-line actuator includes cast-iron, operated, diaphragm-type valve with resilient facing plate, resilient diaphragm, and replaceable bronze seat. Valve includes threaded water and air inlets and water outlet. Loss of air pressure on dry, pilot-line side allows pilot-line actuator to open and causes deluge valve to open immediately.
7. Air-Pressure Maintenance Device:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - b. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - 1) AFAC Inc.
    - 2) Globe Fire Sprinkler Corporation.
    - 3) Reliable Automatic Sprinkler Co., Inc.
    - 4) Tyco Fire & Building Products LP.
    - 5) Venus Fire Protection Ltd.
    - 6) Victaulic Company.
    - 7) Viking Corporation.
    - 8) Or approved equal.
  - c. Standard: UL 260.
  - d. Type: Automatic device to maintain minimum air pressure in piping.
  - e. Include shutoff valves to permit servicing without shutting down sprinkler piping, bypass valve for quick filling, pressure regulator or switch to maintain pressure, strainer, pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range, and 300-psig (2070-kPa) outlet pressure.
8. Air Compressor:
  - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - b. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - 1) Gast Manufacturing Inc.
    - 2) General Air Products, Inc,
    - 3) Viking Corporation.
    - 4) Or approved equal.
  - c. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - d. Motor Horsepower: Fractional.
  - e. Power: 120-V ac, 60 Hz, single phase.
- I. Automatic (Ball Drip) Drain Valves:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

- a. AFAC Inc.
  - b. Reliable Automatic Sprinkler Co., Inc.
  - c. Tyco Fire & Building Products LP.
  - d. Or approved equal.
3. Standard: UL 1726.
  4. Pressure Rating: 175 psig (1200 kPa) minimum.
  5. Type: Automatic draining, ball check.
  6. Size: NPS 3/4 (DN 20).
  7. End Connections: Threaded.

## 1.21 FIRE-DEPARTMENT CONNECTIONS

### A. Exposed-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. Fire-End & Croker Corporation.
  - d. Fire Protection Products, Inc.
  - e. GMR International Equipment Corporation.
  - f. Guardian Fire Equipment, Inc.
  - g. Tyco Fire & Building Products LP.
  - h. Wilson & Cousins Inc.
  - i. Or approved equal.
3. Standard: UL 405.
4. Type: Exposed, projecting, for wall mounting.
5. Pressure Rating: 175 psig (1200 kPa) minimum.
6. Body Material: Corrosion-resistant metal.
7. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
8. Caps: Brass, lugged type, with gasket and chain.
9. Escutcheon Plate: Round, brass, wall type.
10. Outlet: Back, with pipe threads.
11. Number of Inlets: Two.
12. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE or AUTO SPKR."
13. Finish: Polished chrome plated.
14. Outlet Size: NPS 6 (DN 150).

### B. Flush-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - a. AFAC Inc.
  - b. Elkhart Brass Mfg. Company, Inc.
  - c. GMR International Equipment Corporation.

- d. Guardian Fire Equipment, Inc.
  - e. Potter Roemer.
  - f. Or approved equal.
- 3. Standard: UL 405.
  - 4. Type: Flush, for wall mounting.
  - 5. Pressure Rating: 175 psig (1200 kPa) minimum.
  - 6. Body Material: Corrosion-resistant metal.
  - 7. Inlets: Brass with threads according to NFPA 1963 and matching local fire-department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
  - 8. Caps: Brass, lugged type, with gasket and chain.
  - 9. Escutcheon Plate: Rectangular, brass, wall type.
  - 10. Outlet: With pipe threads.
  - 11. Body Style: Horizontal.
  - 12. Number of Inlets: Two.
  - 13. Outlet Location: Back.
  - 14. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE or AUTO SPKR."
  - 15. Finish: Polished chrome plated.
  - 16. Outlet Size: NPS 6 (DN 150).

#### 1.22 SPRINKLER SPECIALTY PIPE FITTINGS

- A. General Requirements for Dry-Pipe-System Fittings: UL listed for dry-pipe service.
- B. Branch Outlet Fittings:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Anvil International, Inc.
    - b. National Fittings, Inc.
    - c. Shurjoint Piping Products.
    - d. Tyco Fire & Building Products LP.
    - e. Victaulic Company.
    - f. Or approved equal.
  - 2. Standard: UL 213.
  - 3. Pressure Rating: 300 psig (2070 kPa).
  - 4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
  - 5. Type: Mechanical-T and -cross fittings.
  - 6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
  - 7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
  - 8. Branch Outlets: Grooved, plain-end pipe, or threaded.
- C. Flow Detection and Test Assemblies:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AGF Manufacturing Inc.
    - b. Reliable Automatic Sprinkler Co., Inc.
    - c. Tyco Fire & Building Products LP.
    - d. Victaulic Company.

- e. Or approved equal.
  - 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - 3. Pressure Rating: 300 psig (2070 kPa).
  - 4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
  - 5. Size: Same as connected piping.
  - 6. Inlet and Outlet: Threaded.
- D. Branch Line Testers:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Elkhart Brass Mfg. Company, Inc.
    - b. Fire-End & Croker Corporation.
    - c. Potter Roemer.
    - d. Or approved equal.
  - 2. Standard: UL 199.
  - 3. Pressure Rating: 175 psig (1200 kPa) minimum.
  - 4. Body Material: Brass.
  - 5. Size: Same as connected piping.
  - 6. Inlet: Threaded.
  - 7. Drain Outlet: Threaded and capped.
  - 8. Branch Outlet: Threaded, for sprinkler.
- E. Sprinkler Inspector's Test Fittings:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. AGF Manufacturing Inc.
    - b. Triple R Specialty.
    - c. Tyco Fire & Building Products LP.
    - d. Victaulic Company.
    - e. Viking Corporation.
    - f. Or approved equal.
  - 2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
  - 3. Pressure Rating: 300 psig (2070 kPa).
  - 4. Body Material: Cast- or ductile-iron housing with sight glass.
  - 5. Size: Same as connected piping.
  - 6. Inlet and Outlet: Threaded.
- F. Adjustable Drop Nipples:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. CECA, LLC.
    - b. Corcoran Piping System Co.
    - c. Merit Manufacturing; a division of Anvil International, Inc.
    - d. Or approved equal.

2. Standard: UL 1474.
3. Pressure Rating: 300 psig (2070 kPa).
4. Body Material: Steel pipe with EPDM O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.
7. Inlet and Outlet: Threaded.

G. Flexible, Sprinkler Hose Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fivalco Inc.
  - b. FlexHead Industries, Inc.
  - c. Gateway Tubing, Inc.
  - d. Or approved equal.
2. Standard: UL 1474.
3. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
4. Pressure Rating: 300 psig (2070 kPa).
5. Size: Same as connected piping, for sprinkler.

1.23 SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFAC Inc.
2. Globe Fire Sprinkler Corporation.
3. Reliable Automatic Sprinkler Co., Inc.
4. Tyco Fire & Building Products LP.
5. Venus Fire Protection Ltd.
6. Victaulic Company.
7. Viking Corporation.
8. Or approved equal.

B. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating for Residential Sprinklers: 175 psig (1200 kPa) maximum.
3. Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.
4. Pressure Rating for High-Pressure Automatic Sprinklers: 300 psig (2070 kPa).

C. Automatic Sprinklers with Heat-Responsive Element:

1. Nonresidential Applications: UL 199.
2. Characteristics: Nominal 1/2-inch (12.7-mm) orifice with discharge coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

D. Sprinkler Finishes:

1. Chrome plated.

2. Bronze.
3. Factory Painted.

E. Special Coatings:

1. Wax.
2. Lead.
3. Corrosion-resistant paint.

F. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, one piece, flat.
2. Sidewall Mounting: Plastic, white finish, one piece, flat.

G. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Reliable Automatic Sprinkler Co., Inc.
  - b. Tyco Fire & Building Products LP.
  - c. Victaulic Company.
  - d. Viking Corporation.
  - e. Or approved equal.
2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

1.24 ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Water-Motor-Operated Alarm:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Globe Fire Sprinkler Corporation.
  - b. Tyco Fire & Building Products LP.
  - c. Victaulic Company.
  - d. Viking Corporation.
  - e. Or approved equal.
2. Standard: UL 753.
3. Type: Mechanically operated, with Pelton wheel.
4. Alarm Gong: Cast aluminum with red-enamel factory finish.
5. Size: 10-inch (250-mm) diameter.
6. Components: Shaft length, bearings, and sleeve to suit wall construction.
7. Inlet: NPS 3/4 (DN 20).
8. Outlet: NPS 1 (DN 25) drain connection.

C. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire-Lite Alarms; a Honeywell company.
  - b. Notifier; a Honeywell company.
  - c. Potter Electric Signal Company.
  - d. Or approved equal.
2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: 8-inch (200-mm) minimum.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

**D. Pressure Switches:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. AFAC Inc.
  - b. Barksdale, Inc.
  - c. Detroit Switch, Inc.
  - d. Potter Electric Signal Company.
  - e. System Sensor; a Honeywell company.
  - f. Tyco Fire & Building Products LP.
  - g. United Electric Controls Co.
  - h. Viking Corporation.
  - i. Or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised water-flow switch with retard feature.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design Operation: Rising pressure signals water flow.

**E. Valve Supervisory Switches:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Fire-Lite Alarms; a Honeywell company.
  - b. Kennedy Valve; a division of McWane, Inc.
  - c. Potter Electric Signal Company.
  - d. System Sensor; a Honeywell company.
  - e. Or approved equal.
2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled valve is in other than fully open position.

**F. Indicator-Post Supervisory Switches:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Potter Electric Signal Company.

- b. System Sensor; a Honeywell company.
  - c. Mfr. #3
  - d. Or approved equal.
- 2. Standard: UL 346.
  - 3. Type: Electrically supervised.
  - 4. Components: Single-pole, double-throw switch with normally closed contacts.
  - 5. Design: Signals that controlled indicator-post valve is in other than fully open position.

#### 1.25 MANUAL CONTROL STATIONS

- A. Description: UL listed or FM Global approved, hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

#### 1.26 CONTROL PANELS

- A. Description: Single-area, two-area, or single-area cross-zoned type control panel as indicated, including NEMA ICS 6, Type 1 enclosure, detector, alarm, and solenoid-valve circuitry for operation of deluge valves. Panels contain power supply; battery charger; standby batteries; field-wiring terminal strip; electrically supervised solenoid valves and polarized fire-alarm bell; lamp test facility; single-pole, double-throw auxiliary alarm contacts; and rectifier.
- 1. Panels: UL listed and FM Global approved when used with thermal detectors and Class A detector circuit wiring. Electrical characteristics are 120-V ac, 60 Hz, with 24-V dc rechargeable batteries.
  - 2. Manual Control Stations: Electric operation, metal enclosure, labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.
  - 3. Manual Control Stations: Hydraulic operation, with union, NPS 1/2 (DN 15) pipe nipple, and bronze ball valve. Include metal enclosure labeled "MANUAL CONTROL STATION" with operating instructions and cover held closed by breakable strut to prevent accidental opening.

#### 1.27 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. AMETEK, Inc.; U.S. Gauge Division.
  - 2. Ashcroft, Inc.
  - 3. Brecco Corporation.
  - 4. WIKA Instrument Corporation.
  - 5. Or approved equal.
- B. Standard: UL 393.
- C. Dial Size: 3-1/2- to 4-1/2-inch (90- to 115-mm) diameter.
- D. Pressure Gage Range: 0 to 300 psig (0 to 2070 kPa).
- E. Water System Piping Gage: Include "WATER" label on dial face.
- F. Air System Piping Gage: Include retard feature and "AIR/WATER" label on dial face.

**PART 3 - EXECUTION****1.28 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements

**1.29 PREPARATION**

- A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.
- B. Report test results promptly and in writing.

**1.30 SERVICE-ENTRANCE PIPING**

- A. Connect sprinkler piping to water-service piping for service entrance to building. Comply with requirements in Section 21 11 00 "Facility Fire-Suppression Water-Service Piping" for exterior piping.
- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping. Comply with requirements in Section 21 11 00 "Facility Fire-Suppression Water-Service Piping" for backflow preventers.
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

**1.31 WATER-SUPPLY CONNECTIONS**

- A. Connect sprinkler piping to building's interior water-distribution piping. Comply with requirements in Section 22 11 16 "Domestic Water Piping" for interior piping.
- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements in Section 22 11 19 "Domestic Water Piping Specialties" for backflow preventers.
- C. Install shutoff valve, check valve, pressure gage, and drain at connection to water supply.

**1.32 PIPING INSTALLATION**

- A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
  - 1. Deviations from approved working plans for piping require written approval from New York City Department of Buildings. File written approval with Commissioner before deviating from approved working plans.
- B. Piping Standard: Comply with requirements in NFPA 13 for installation of sprinkler piping.
- C. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.
- D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- E. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.

- F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.
- H. Install sprinkler piping with drains for complete system drainage.
- I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- J. Install automatic (ball drip) drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or to outside building.
- K. Connect compressed-air supply to dry-pipe sprinkler piping.
- L. Connect air compressor to the following piping and wiring:
  - 1. Pressure gages and controls.
  - 2. Electrical power system.
  - 3. Fire-alarm devices, including low-pressure alarm.
- M. Install alarm devices in piping systems.
- N. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements in NFPA 13 for hanger materials.
- O. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal and install where they will not be subject to freezing.
- P. Drain dry-pipe sprinkler piping.
- Q. Pressurize and check dry-pipe sprinkler system piping and air-pressure maintenance devices.
- R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 21 05 17 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- S. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 21 05 17 "Sleeves and Sleeve Seals for Fire-Suppression Piping."
- T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 21 05 18 "Escutcheons for Fire-Suppression Piping."

#### 1.33 JOINT CONSTRUCTION

- A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

- B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.
- C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.
- D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
- F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.
- G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
  - 1. Apply appropriate tape or thread compound to external pipe threads.
  - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
- H. Twist-Locked Joints: Insert plain end of steel pipe into plain-end-pipe fitting. Rotate retainer lugs one-quarter turn or tighten retainer pin.
- I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.
- J. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.
- K. Copper-Tubing Grooved Joints: Roll rounded-edge groove in end of tube according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.
- L. Copper-Tubing, Pressure-Sealed Joints: Join copper tube and copper pressure-seal fittings with tools recommended by fitting manufacturer.
- M. Extruded-Tee Connections: Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.
- N. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

#### 1.34 VALVE AND SPECIALTIES INSTALLATION

- A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and New York City Department of Buildings.
- B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.
- D. Specialty Valves:
  - 1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
  - 2. Dry-Pipe and Deluge Valves: Install trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gages, priming chamber attachment, and fill-line attachment.
    - a. Install air compressor and compressed-air supply piping.
    - b. Air-Pressure Maintenance Device: Install shutoff valves to permit servicing without shutting down sprinkler system; bypass valve for quick system filling; pressure regulator or switch to maintain system pressure; strainer; pressure ratings with 14- to 60-psig (95- to 410-kPa) adjustable range; and 175-psig (1200-kPa) maximum inlet pressure.
    - c. Install compressed-air supply piping from building's compressed-air piping system.

#### 1.35 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of narrow dimension of acoustical ceiling panels.
- B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.
- C. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

#### 1.36 FIRE-DEPARTMENT CONNECTION INSTALLATION

- A. Install wall-type, fire-department connections.
- B. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

#### 1.37 IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

#### 1.38 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
  - 1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Start and run air compressors.
6. Coordinate with fire-alarm tests. Operate as required.
7. Coordinate with fire-pump tests. Operate as required.
8. Verify that equipment hose threads are same as local fire-department equipment.

- C. Sprinkler piping system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

#### 1.39 CLEANING

- A. Clean dirt and debris from sprinklers.
- B. Remove and replace sprinklers with paint other than factory finish.

#### 1.40 PIPING SCHEDULE

- A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded for 2" or less or grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved for greater than 2" joints.
- B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.
- C. Standard-pressure, dry-pipe sprinkler system, NPS 2 (DN 50) and smaller, shall be one of the following:
  1. Schedule 40, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
  2. Schedule 40, galvanized-steel pipe with plain ends; plain-end-pipe fittings; and twist-locked joints.
  3. Schedule 40, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
- D. Standard-pressure, dry-pipe sprinkler system, NPS 2-1/2 to NPS 4 (DN 65 to DN 100) shall be one of the following:
  1. Schedule 40, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
  2. Schedule 40, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
- E. Standard-pressure, dry-pipe sprinkler system, NPS 5 and NPS 6 (DN 125 and DN 150) shall be one of the following:
  1. Schedule 40, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
  2. Schedule 40, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

**1.41 SPRINKLER SCHEDULE**

- A. Use sprinkler types in subparagraphs below for the following applications:
1. Rooms without Ceilings: Upright sprinklers
  2. Rooms with Suspended Ceilings: Dry pendent, recessed, flush, and concealed sprinklers as indicated.
  3. Wall Mounting: Dry sidewall sprinklers.
  4. Spaces Subject to Freezing: Upright, dry pendent sprinklers; and dry sidewall sprinklers as indicated.
  5. Special Applications: Extended-coverage and quick-response sprinklers where indicated.
- B. Provide sprinkler types in subparagraphs below with finishes indicated.
1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
  2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
  3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
  4. Upright Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

**END OF SECTION 21 13 16**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 24 00****DRY CHEMICAL EXTINGUISHING SYSTEM****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes:
1. Fueling station dry chemical extinguisher system.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 – CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
  2. Section 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS FOR LEED BUILDINGS
  3. Section 01 81 19 – INDOOR AIR QUALITY REQUIREMENTS FOR LEED BUILDINGS
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (Voc) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.6 SUBMITTALS**

- A. Submittals Package: Submit the shop drawings, product data and quality control submittals specified below at the same time as a package.
1. The shop drawings, product data, and quality control design data shall bear the seal of a professional engineer licensed to practice in the State of New York.
- B. Shop Drawings:
1. Reproducible scale drawing of the complete system, indicating:
    - a. Location of piping and all major components.
    - b. Detail drawings of each major component with instructions for installation into the system.
    - c. Location, type and flow rate of each nozzle.
    - d. Location and size of all pipe and fittings.
    - e. Location and size of the cylinders.
  2. Composite wiring and/or schematic diagrams of the complete system as proposed to be installed (standard diagrams will not be accepted).
- C. Product Data:
1. Catalog sheets, specifications, and installation instructions.
  2. Bill of materials.
  3. Detailed description of system operation.
  4. Name, address and telephone number of nearest fully equipped service organization, including data outlining available inspection and test programs.
- D. Quality Control Submittals:
1. Design Data:
    - a. Calculations for the quantity of dry chemical agent required.
    - b. Design concentration.
    - c. Cylinder storage pressure and internal volume.
- E. Contract Closeout Submittals:
1. System acceptance test report.
  2. Certificates:
    - a. Affidavit, signed by the Company Field Advisor and notarized, certifying that the system meets the contract requirements and is operating properly.
  3. Operation and Maintenance Data:
    - a. Deliver 2 copies, covering the installed products, to the Commissioner. Include:
      - 1) Operation and maintenance data for each product.
      - 2) Complete point to point wiring diagrams of entire system as installed. Identify all conductors and show all terminations and splices. (Identification shall correspond to markers installed on each conductor.)

- 3) Name, address, and telephone number of nearest fully equipped service organization.

## 1.7 ENGINEERING SERVICES REQUIREMENTS

- A. The dry chemical extinguishing system shall be engineered by Professional Engineers licensed in the State of New York of the Company manufacturing the system or a fire protection company that specializes in the design of dry chemical extinguishing systems. Products of engineering services shall be submitted to the Commissioner for review and approval.
  1. Design approach based on NFPA-17 Dry Chemical Extinguishing Systems, as well as the New York State Fire Code and Nassau County Fire Prevention Ordinance.

## 1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Contractor Qualifications: The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- C. Regulatory Requirements:
  1. Comply with applicable recommendations and requirements of Pamphlet No. 17 of the National Fire Protection Association, as well as the New York State Fire Code and the New York City Fire Department.
  2. Materials and equipment shall have both Underwriters Laboratories and Factory Mutual approval.
  3. Dry Chemical Cylinders: Conform to Federal Department of Transportation Specifications.
- D. Company Field Advisor: Secure the services of a Company Field Advisor for a minimum of 16 working hours for the following:
  1. Render advice regarding installation and final adjustment of the system.
  2. Witness final system test and then certify with an affidavit that the system is installed in accordance with the contract documents and is operating properly.
  3. Instruct facility service operators on the operation and service of the system (minimum of 2 one-hour sessions).
  4. Explain available service programs to facility supervisory staff for their consideration.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements provide dry chemical extinguisher system by PYROCHEM, no substitutions allowed.

### 2.2 TYPE AND DESIGN

- A. Type:
  1. Total flooding.

B. Design:

1. System may be either engineered for the project or may be a pre-engineered (package) system conforming to the NFPA-17 definition of such systems.
2. Design for both automatic and manual operation.

2.3 MATERIALS

- A. Pipe and Fittings: Schedule 40, threaded, galvanized steel pipe with standard weight, threaded malleable iron fittings.
  1. Special Fittings: Distributor fittings and restrictor fittings shall be of type and design as recommended by the manufacturer of the system.
- B. Tubing: Electrical metal tubing; conforming to ANSI C80.3, NEC and UL labeled.
- C. Dry Chemical Cylinder and Valve Assembly: Pressurized cylinder containing dry chemical extinguishing material and fitted with a brass valve assembly complete with pressure gauge and wall mounting bracket.
- D. Primary Control Head: Automatic, mechanical.
  1. Internally wired to actuate an alarm and shut down electrically operated devices.
- E. Tandem Control Head: Automatic, mechanical, activated by the primary control head.
- F. Fusible Link Actuator Kit:
  1. Heat sensitive fusible link, temperature rated at 360 degrees F.
  2. Fusible link bracket with EMT tubing adaptors.
  3. 1/16 inch stainless steel cable, crimp sleeves and crimping tool.
- G. Electric Detector: Thermostatic actuator, normally open, with heat sensing element encased in a metal housing.
  1. Detector shall be color coded for temperature rating identification.
- H. Pneumatic Heat Actuator: Brass chamber, vented to prevent normal temperature rise from tripping the system; copper pressure tubing to the control head.
- I. Nozzles: Designed for the hazard to be protected against. Types: Total flooding, local application, plenum and duct. Provide a blow-off type protective cap to protect nozzles installed in greasy atmospheres.
- J. Electric Fire Control: Manually operated remote station, to electrically release the system. The control shall consist of an enclosure with a pull handle, DPST switch, and provided with a green light to indicate "power on" and the system in the set condition, and a red "system operated" light to denote that the system has been manually released.
- K. Instructions: Provide a laminated plastic sign with white engraved lettering on a red background, attached to the cover of the enclosure, and with the following instructions:
  - a. To silence bell, operate the silencing switch.
  - b. Light will remain on, indicating that the system is in the released condition.
  - c. Light will automatically extinguish when the system is returned to the set condition.

d. To test bell and light, press test button.

L. Hazard Isolation Devices:

1. Automatic Electric Shut Off: Electric contact box designed to shut down the electric service to equipment upon the release of the system (cable operated).
  - a. Contact normally open in the system released condition.
  - b. Provide EMT tubing adaptors.

**PART 3 - EXECUTION**

**3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 INSTALLATION**

- A. Install the Work of this section in accordance with NFPA-17 Standard, manufacturer's printed installation instructions and approved shop drawings.
- B. Provide the following hazard isolation devices connected to operate upon the release of the system.
1. Fuel Pump Power
  2. Tank and Dispenser Monitoring and Control Circuits
  3. Fuel Management Power and Control Circuits
  4. Diesel Filtration System Power and Control Circuits

**3.3 FIELD QUALITY CONTROL**

- A. Approval: Obtain written approval from the New York City Fire Department.
- B. System Tests:
1. Notify the Commissioner when the Work of this Section is ready for testing.
  2. Perform the tests in the presence of the Commissioner.
  3. Perform tests in accordance with NFPA-17. Include discharge of expellant gas test.
  4. Furnish to the Commissioner with a written statement, signed and dated, affirming that the system has been tested in accordance with NFPA-17, and left ready for operation.

**END OF SECTION 21 24 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 21 31 13**

### **ELECTRIC-DRIVE, CENTRIFUGAL FIRE PUMPS**

#### **PART 1 - GENERAL**

##### **1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### **1.2 SUMMARY**

- A. This Section includes electric-drive, New York City Department of Buildings Approved Automatic Fire Pump with controllers, automatic transfer switches and accessories.

##### **1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

##### **1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

##### **1.5 PERFORMANCE REQUIREMENTS**

- A. Pump, Equipment, Accessory, Specialty, and Piping Pressure Rating: Refer to Schedule.

##### **1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

- B. Product Data: For each type of product indicated. Include rated capacities, certified pump performance curves with each selection point indicated, operating characteristics, and furnished accessories and specialties for each fire pump and pressure-maintenance pump.
- C. Shop Drawings: For fire pumps and drivers, fire-pump controllers, fire-pump accessories and specialties, pressure-maintenance pumps, pressure-maintenance-pump controllers, and pressure-maintenance-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
- D. Product Certificates - after shipment: Factory certified performance test curves for each fire pump.
- E. Field test reports.
- F. Operation and Maintenance Data: For fire pumps and drivers, pressure-maintenance pumps, controllers, accessories and specialties, alarm panels, and flowmeter systems to include in emergency, operation, and maintenance manuals.

#### 1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source Limitations: Obtain fire pumps, pressure-maintenance pumps, and controllers through one source from a single manufacturer for each type of equipment.
- C. Product Options: Drawings indicate size, profiles, and dimensional requirements of fire pumps, pressure-maintenance pumps, and controllers and are based on specific systems indicated.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to the New York City Department of Buildings, and marked for intended use.
- E. Comply with standards of 2014 New York City Construction Codes pertaining to materials, hose threads, and installation.
- F. Comply with NFPA 20, "Stationary Pumps for Fire Protection," for fire pumps, drivers, controllers, accessories, and their installation.

#### 1.8 COORDINATION

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Subject to compliance with all specified requirements, provide products as produced by the manufacture used as the basis of design, or another approved manufacturer listed, or an approved equal manufacturer.

## 2.2 CENTRIFUGAL FIRE PUMPS

- A. Description, General: New York City MEA or BS&A approved, UL 448, factory-assembled and -tested, electric-drive, centrifugal fire pumps capable of furnishing not less than 150 percent of rated capacity at not less than 65 percent of total rated head and with shutoff head limited to 140 percent of total rated head,
  - 1. Finish: Manufacturer's standard red paint applied to factory-assembled and -tested unit before shipping.
  - 2. Nameplate: Complete with capacities, characteristics, and other pertinent data.
- B. Fabricate bases for fire pumps, pressure-maintenance pumps, and controllers (unless wall mounted) with reinforcement to resist movement of pumps and controllers during a seismic event when their bases are anchored to building structure.
- C. Horizontally Mounted, Split-Case Fire Pumps with pump and driver mounted on same base and connected with coupling.
  - 1. Peerless Pump Company, or approved equal
  - 2. Pump: Axially split cast-iron casing with suction and discharge flanges machined to ASME B16.1, Class 125 dimensions, unless otherwise indicated.
    - a. Impeller: Cast bronze of construction to match fire pump, statically and dynamically balanced, and keyed to shaft.
    - b. Case Wear Rings: Replaceable, bronze.
    - c. Shaft and Sleeve: Steel shaft with bronze sleeve.
      - 1) Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
      - 2) Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.
  - 3. Coupling: UL 448A listed, flexible coupling capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.
  - 4. Driver: UL 1004-5 listed, NEMA MG 1, open-dripproof, squirrel-cage, induction motor complying with NFPA 20 and NFPA 70. Motor shall be NEMA Design B with 1.15 service factor unless otherwise noted on the Schedule or below. Include wiring compatible with controller used.
    - a. Manufacturers:
      - 1) Emerson; U.S. Electrical Motors
      - 2) Lincoln Electric Company (The).
      - 3) Marathon Electric, Inc.
      - 4) WEG Electric Motors Corp.
      - 5) Or approved equal.

## 2.3 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for fire pumps, pressure-maintenance pumps, and controllers. Refer to Division 21 Section "Common Work Results for Fire Suppression."
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.

2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

## 2.4 INSTALLATION

- A. Install and align fire pump, pressure-maintenance pump, and controller according to NFPA 20.
- B. Install pumps and controllers to provide access for periodic maintenance including removal of motors, impellers, couplings, and accessories.
- C. Set base-mounting-type pumps on concrete bases. Disconnect coupling halves before setting. Do not reconnect couplings until alignment operations have been completed.
  1. Support pump baseplate on rectangular metal blocks and shims or on metal wedges having small taper, at points near anchor bolts, to provide 3/4- to 1-1/2-inch (19- to 38-mm) gap between pump base and concrete base for grouting.
  2. Adjust metal supports or wedges until pump and driver shafts are level. Verify that coupling faces and pump suction and discharge flanges are level and plumb.
- D. Install suction and discharge piping equal to or greater than diameter of fire-pump nozzles.
- E. Install valves that are same size as piping connecting fire pumps, bypasses, test headers, and other piping systems.
- F. Install pressure gages on fire-pump suction and discharge at pressure-gage tapplings.
- G. Support pumps and piping separately so weight of piping does not rest on pumps.
- H. Install piping accessories, hangers and supports, anchors, valves, meters and gages, and equipment supports.
- I. Install flowmeters and sensors where indicated. Install flowmeter-system components and make connections according to manufacturer's written instructions.
- J. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.

## 2.5 ALIGNMENT

- A. Laser align split-case fire-pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- C. Align piping connections.

- D. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

## 2.6 CONNECTIONS

- A. Piping installation requirements are specified in Division 21. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps and equipment to allow service and maintenance.
- C. Connect water supply and discharge piping to fire pumps. Connect water supply and discharge piping to pressure-maintenance pumps.
- D. Connect drain lines to point of disposal for:
  - 1. Pump packing glands
  - 2. Relief valve discharge
  - 3. Weekly test solenoid.
  - 4. Each type of drain shall be piped independently from each other.
- E. Connect flowmeter-system sensors and meters according to manufacturer's written instructions.
- F. Connect controllers to pumps.
- G. Connect fire-pump controllers to building fire-alarm system. Refer to Section 28 31 11 "Fire Alarm and Integrated Audio/Visual Evacuation System.
- H. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
- I. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

## 2.7 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to review field-assembled components and equipment installation, including connections, and to observe field testing. Report results in writing.
- B. Perform field tests for each fire pump when installation is complete. Comply with operating instructions and procedures in the 2014 New York City Construction Codes and NFPA 20 to demonstrate compliance with requirements. Where possible, field correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or that does not perform as indicated, then retest to demonstrate compliance. Verify that each fire pump performs as indicated.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements

### 3.2 EXAMINATION

- A. Examine equipment bases and anchorage provisions, with Installer present, for compliance with requirements for installation tolerances, and other conditions affecting performance of fire pumps.
- B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.3 INSTALLATION

- A. Fire-Pump Installation Standard: Comply with NFPA 20 for installation of fire pumps, relief valves, and related components.
- B. Equipment Mounting:
  - 1. Install fire pumps on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 03 30 00 "Cast-in-Place Concrete."
  - 2. Comply with requirements for vibration isolation and seismic-control devices specified in Section 21 05 48 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment."
  - 3. Comply with requirements for vibration isolation devices specified in Section 21 05 48.13 "Vibration Controls for Fire-Suppression Piping and Equipment."
- C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NFPA 20.
- D. Support piping and pumps separately, so weight of piping does not rest on pumps.
- E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Section 21 12 00 "Fire-Suppression Standpipes".
- F. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings. Comply with requirements for pressure gages specified in Section 21 12 00 "Fire-Suppression Standpipes".
- G. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NFPA 20.
- H. Install flowmeters and sensors. Install flowmeter-system components and make connections according to NFPA 20 and manufacturer's written instructions.
- I. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.
- J. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

### 3.4 ALIGNMENT

- A. Align end-suction and split-case pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- B. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- C. Align piping connections.
- D. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

### 3.5 CONNECTIONS

- A. Comply with requirements for piping and valves specified in Section 21 12 00 "Fire-Suppression Standpipes." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to pumps and equipment to allow service and maintenance.
- C. Connect relief-valve discharge to drainage piping or point of discharge.
- D. Connect flowmeter-system meters, sensors, and valves to tubing.
- E. Connect fire pumps to their controllers.

### 3.6 IDENTIFICATION

- A. Identify system components. Comply with requirements for fire-pump marking according to NFPA 20.

### 3.7 FIELD QUALITY CONTROL

- A. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driver fire-pump controllers specified in Section 26 29 33 "Controllers for Fire-Pump Drivers."
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform the following tests and inspections with the assistance of a factory-authorized service representative.
  - 1. After installing components, assemblies, and equipment, including controller, test for compliance with requirements.
  - 2. Test according to NFPA 20 for acceptance and performance testing.
  - 3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
  - 5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

- D. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses used for this purposes are for testing only and shall be removed by the Contractor at the conclusion of testing.

### 3.8 STARTUP SERVICE

- A. Engage a factory-authorized service representative to perform startup service.
  - 1. Complete installation and startup checks according to manufacturer's written instructions.

### 3.9 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct Commissioner's personnel to adjust, operate, and service fire pumps.

**END OF SECTION 21 31 13**

**SECTION 21 34 00****PRESSURE-MAINTENANCE PUMPS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Multistage, pressure-maintenance pumps.
- B. Related Section:
  - 1. Section 21 39 00 "Controllers for Fire-Pump Drivers" for pressure-maintenance-pump controllers.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PERFORMANCE REQUIREMENTS**

- A. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig (1200 kPa) minimum unless higher pressure rating is indicated.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For pumps, accessories, and specialties. Include plans, elevations, sections, details, and attachments to other work.
  - 1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 2. Wiring Diagrams: For power, signal, and control wiring.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Field quality-control reports.

**1.9 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For pumps to include in operation and maintenance manuals.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00" Quality Requirements."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

**1.11 COORDINATION**

- A. Coordinate sizes and locations of concrete bases with actual equipment provided.

**PART 2 - PRODUCTS**

**2.1 PRESSURE-MAINTENANCE PUMPS**

- A. Pressure-Maintenance Pumps, General: Factory-assembled and -tested pumps with electric-motor driver, controller, and accessories and specialties. Include cast-iron or stainless-steel casing and bronze or stainless-steel impellers, mechanical seals, and suction and discharge flanges machined to ASME B16.1, Class 125 dimensions unless Class 250 flanges are indicated and except that connections may be threaded in sizes where flanges are not available.

1. Finish: Manufacturer's standard color paint applied to factory-assembled and -tested unit before shipping.
- B. Multistage, Pressure-Maintenance Pumps: Multiple-impeller type complying with HI 1.1-1.2 and HI 1.3 requirements for multistage centrifugal pumps. Include base.
  1. Peerless Pump Company, or approved equal by one or these Manufacturers:
    - a. Grundfos Pumps Corp.
    - b. Ebara Pump Co.
    - c. Or approved equal.
  2. Driver: NEMA MG 1, totally enclosed fan cooled or open-drip-proof, squirrel-cage, induction motor complying with NFPA 70. Include wiring compatible with controller used.
  3. Controllers Firetrol Model FTA550F having a short circuit current rating of not less than 30,000 AMPS RMS symmetrical at the operating voltages up to 480 volts.
  4. Enclosure: UL 508 and NEMA 250, Type 2 / 12, polycarbonate, wall-mounting type for field electrical wiring.
  5. Rate controller for scheduled horsepower and include the following:
    - a. Motor circuit protector disconnect switch.
    - b. Motor contactor
    - c. Hand-off-auto selector switch.
    - d. LED indicating lights for: power available, pump running and alarm
    - e. Solid state pressure transducer.
    - f. Controller shall have a password protected operator interface. It shall provide for set point adjustment, display system pressure and 3 phase motor operating conditions.
    - g. Controllers shall record historical operating data and system events.
    - h. Running period timer.
- C. Controllers: UL 508; factory-assembled, -wired, and -tested, across-the-line type for combined automatic and manual operation.
  1. Manufacturer to be the same as the Fire Pump Controller Manufacturer.
  2. Firetrol Model FTA550E having a short circuit current rating of not less than 65,000 AMPS RMS symmetrical at the operating voltages up to 480 volts.
  3. Enclosure: UL 508 and NEMA 250, Type 2, painted steel, wall-mounting type for field electrical wiring.
  4. Rate controller for scheduled horsepower and include the following:
    - a. Circuit breaker disconnect switch.
    - b. Motor starter
    - c. Hand-off-auto selector switch.
    - d. LED indicating lights for: power available, pump running and alarm
    - e. Solid state pressure transducer.
    - f. Controller shall have a password protected operator interface. It shall provide for set point adjustment, display system pressure and 3 phase motor operating conditions.
    - g. Controllers shall record historical operating data and system events.
    - h. Running period timer.
    - i. Low system pressure auxiliary alarm contact.

- D. Accessories and Specialties: Match pressure-maintenance-pump suction and discharge ratings as required for pump capacity rating. Include the following:
    - 1. Circulation relief valve, if required
    - 2. Suction and discharge pressure gages.
  - E. Pressure-Maintenance-Pump Performance Characteristics: Refer to Schedule.
- 2.2 Warranty: The Pump Manufacturer shall warranty the system for 12 months from date of start-up/Substantial Completion.

### PART 3 - EXECUTION

#### 3.2 EXECUTION REQUIREMENTS

- A. Refer to DDC General conditions for execution requirements.

#### 3.3 EQUIPMENT INSTALLATION

- A. NFPA Standard: Comply with NFPA 20 for installation of pressure-maintenance pumps.
- B. Base-Mounted Pump Mounting: Install pumps on concrete bases. Comply with requirements for concrete bases specified in Section 03 30 00 "Cast-in-Place Concrete." Section 03 30 53 "Miscellaneous Cast-in-Place Concrete."
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
  - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
  - 5. Attach pumps to equipment base using anchor bolts.
- C. Install multistage and regenerative-turbine pressure-maintenance pumps according to HI 1.4.
- D. Install submersible and vertical-turbine pressure-maintenance pumps according to HI 2.4.

#### 3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- C. Tests and Inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Pressure-maintenance pumps will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

### 3.5 ADJUSTING

- A. Lubricate pumps as recommended by manufacturer.
- B. Set field-adjustable pressure-switch ranges as indicated.

**END OF SECTION 21 34 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 21 39 00**

**CONTROLLERS FOR FIRE-PUMP DRIVERS**

**PART 1 - GENERAL**

**1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Full-service, reduced-voltage controllers rated 600 V and less.
  - 2. Controllers for pressure-maintenance pumps.
  - 3. Remote alarm panels.
  - 4. Low-suction-shutdown panels.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
  - 1. Section 01 74 19 "Construction Waste Management and Disposal"
  - 2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  - 3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
  - 1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints And Coatings for LEED Buildings" where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 DEFINITIONS**

- A. ATS: Automatic transfer switch(es).

- B. ECM: Electronic control module.
- C. MCCB: Molded-case circuit breaker.
- D. N.O.: Normally open.

#### 1.6 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Fire-pump controllers and alarm panels shall withstand the effects of earthquake motions determined according to:
  - 1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

#### 1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.8 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: For each type of product indicated. Include dimensioned plans, elevations, sections, details, and attachments to other work, including required clearances and service spaces around controller enclosures.
  - 1. Show tabulations of the following:
    - a. Each installed unit's type and details.
    - b. Enclosure types and details for types other than NEMA 250, Type 2.
    - c. Factory-installed devices.
    - d. Nameplate legends.
    - e. Short-circuit current (withstand) rating of integrated unit.
    - f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.
    - g. Specified modifications.
  - 2. Detail equipment assemblies and indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
  - 3. Schematic and Connection Diagrams: For power, signal, alarm, and control wiring and for pressure-sensing tubing.

#### 1.9 INFORMATIONAL SUBMITTALS

- A. Qualification Data: For qualified testing agency.
- B. Seismic Qualification Certificates: For each type of product indicated, from manufacturer.
  - 1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
  - 2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

- C. Product Certificates: For each type of product indicated, from manufacturer.
- D. Manufacturer's factory test reports of fully assembled and tested equipment.
- E. Source quality-control reports.
- F. Field quality-control reports.

#### 1.10 CLOSEOUT SUBMITTALS

- A. Operation and Maintenance Data: For each type of product indicated to include in emergency, operation, and maintenance manuals. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:
  1. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
  2. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.

#### 1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Testing Agency Qualifications: Member company of an NRTL.
- C. Source Limitations: Obtain fire-pump controllers and all associated equipment from single source or producer.
- D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- E. Comply with standards of New York City Department of Buildings pertaining to materials and installation.
- F. Comply with NFPA 20 and NFPA 70.
- G. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

#### 1.12 DELIVERY, STORAGE, AND HANDLING

- A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.
- B. If stored in areas subject to weather, protect controllers from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install temporary electric heating, with at least 250 W per controller.

1.13 PROJECT CONDITIONS

A. Environmental Limitations:

1. Ambient Temperature Rating: Not less than 40 deg F (5 deg C) and not exceeding 122 deg F (50 deg C) unless otherwise indicated.
2. Altitude Rating: Not exceeding 6600 feet (2010 m) unless otherwise indicated.

1.14 COORDINATION

- A. Coordinate layout and installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.
- B. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

- A. Fire-Pump Controllers, General: UL 218, NFPA 20 and New York City MEA; listed for electric-drive, fire-pump service and service entrance; combined automatic and manual operation; factory assembled wired and factory tested for capacities and electrical characteristics.
1. Firetrol Inc, or approved equal by one or these Manufacturers:
    - a. Eaton Cutler Hammer, Corp.
    - b. Master Control Systems, Inc.
  2. Rate controllers for scheduled fire-pump horsepower and short-circuit withstand rating as shown below or on the Schedule.
  3. Enclosure: UL 50, Type 2, dripproof, indoor, unless special-purpose enclosure is indicated. Include manufacturer's standard red paint applied to factory-assembled and -tested unit before shipping.
  4. Controls, devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used, and specific items listed.
    - a. Voltage surge protection
    - b. Isolating means and circuit breaker.
    - c. Motor contactors
    - d. Emergency run mechanism
    - e. "Power on" pilot lamp.
    - f. Alarm.
    - g. Fire-alarm system auxiliary contacts
    - h. Solid state pressure transducer.
    - i. Controller shall have a password protected operator interface. It shall provide for set point adjustment, display system pressure and 3 phase motor operating conditions.
    - j. Controllers shall record historical operating data and system events which may be downloaded to through its USB port.
    - k. Automatic and manual operation.
    - l. Automatic or manual shutdown with and minimum run-time relay to prevent short cycling.
    - m. Automatic weekly test timer and pressure sensing line drain solenoid valve, pipe to floor drain.

- n. Low system pressure audible alarm.
  - 5. Nameplate: Complete with capacity, characteristics, approvals and listings, and other pertinent data.
  - 6. Controller Sensing Pipes: Fabricate pipe and fittings according to NFPA 20 with nonferrous-metal sensing piping, NPS 1/2 (DN 15), with globe valves for testing controller mechanism from system to pump controller as indicated. Include two (2) bronze check valves with 3/32-inch (2.4-mm) orifice in clapper or ground-face union with noncorrosive diaphragm having 3/32-inch (2.4-mm) orifice.
- B. Full-Service Fire-Pump Controllers:
- 1. Type Starting: Reduced voltage, solid state, closed transition, soft start/stop.
  - 2. Mounting: Floor-stand type for field electrical connections.
  - 3. Subject to compliance with requirements, provide Firetrol Model FTA1930 (Basis of Design), or an equivalent product from an approved manufacturer listed below. Controller shall be a reduced voltage controller, with short circuit current withstand rating of not less than 100,000 AMPS RMS symmetrical at the operating voltage or one of these manufacturers:
    - a. Eaton Cutler Hammer, Corp.
    - b. Master Control Systems, Inc.
    - c. Or approved equal
- C. Automatic Transfer Switches: Meeting UL 218, UL 1008 and NFPA 20 requirements, transfer switches shall be furnished factory mounted and interwired with the fire pump controllers. Include enclosure complying with UL 50, Type 2, with automatic transfer switch with rating at least equal to fire-pump driver-motor horsepower. Include ampere rating not less than 115 percent of motor full-load current and suitable for switching motor-locked rotor current. The transfer switch shall be electrically operated and mechanically held, and shall be capable of being operated by a manual transfer mechanism located on the switch.
- 1. Subject to compliance with requirements, provide Firetrol Model FTA950 (Basis-of-Design), or an equivalent product from an approved manufacturer listed above under Fire-Pump Controllers, General, or an approved equal. The Automatic Transfer Switch shall be suitable for use with emergency power coming from a local electrical distribution panel, second utility feed or an emergency generator. The transfer switch shall be an ASCO 7000 series with group 5 control panel. The transfer switch short circuit current withstand rating on the normal and emergency power sides shall be the same as the fire pump controller.

## 2.2 GROUT

- A. Description: ASTM C 1107, factory-mixed and –packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
- 1. Properties: nonstaining, noncorrosive, and nongaseous.
  - 2. Design Mix: 5000-psi (34.5MPa), 28-day compressive strength.

## 2.3 SOURCE QUALITY CONTROL

- A. Test and inspect fire pumps with their controllers according to NFPA 20 for certified shop tests.
- B. Verification of Performance: Rate fire pumps according to requirements indicated.

**PART 3 - EXECUTION****3.1 EXECUTION REQUIREMENTS**

- A. Refer to DDC General Conditions for execution requirements.

**3.2 EXAMINATION**

- A. Examine areas and surfaces to receive equipment, with Installer present, for compliance with requirements and other conditions affecting performance.
- B. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

**3.3 CONTROLLER INSTALLATION**

- A. Install controllers within sight of their respective drivers.
- B. Connect controllers to their dedicated pressure-sensing lines.
- C. Wall-Mounting Controllers: Install controllers on walls with disconnect operating handles not higher than 79 inches (2006 mm) above finished floor, and bottom of enclosure not less than 12 inches (305 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For controllers not on walls, provide freestanding racks complying with Section 26 05 29 "Hangers and Supports for Electrical Systems."
- D. Floor-Mounting Controllers: Install controllers on 4-inch (100-mm) nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches (305 mm) above finished floor. Comply with requirements for concrete bases specified in Section 03 30 00 "Cast-in-Place Concrete".
  - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
  - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
  - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- E. Seismic Bracing: Comply with requirements specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."
- F. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- G. Comply with NEMA ICS 15.

### 3.4 STANDALONE ATS INSTALLATION

- A. Wall-Mounting ATS: Install ATS on walls with disconnect operating handles not higher than 79 inches (2006 mm) above finished floor, and bottom of enclosure not less than 12 inches (305 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Section 26 05 29 "Hangers and Supports for Electrical Systems."
- B. Floor-Mounting ATS: Install ATS on 4-inch (100-mm) nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches (305 mm) above finished floor. Comply with requirements for concrete bases specified in Section 03 30 00 "Cast-in-Place Concrete."
- C. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
  - 1. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
  - 2. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  - 3. Install anchor bolts to elevations required for proper attachment to supported equipment.
- D. Seismic Bracing: Comply with requirements specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."
- E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

### 3.5 REMOTE ALARM AND LOW-SUCTION-SHUTDOWN PANEL INSTALLATION

- A. Install panels on walls with tops not higher than 72 inches (1829 mm) above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall. For ATS not on walls, provide freestanding racks complying with Section 26 05 29 "Hangers and Supports for Electrical Systems."

### 3.6 POWER WIRING INSTALLATION

- A. Install power wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NFPA 20, NFPA 70, and Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

### 3.7 CONTROL AND ALARM WIRING INSTALLATION

- A. Install wiring between controllers and remote devices and facility's central monitoring system. Comply with requirements in NFPA 20, NFPA 70, and Section 26 05 23 "Control-Voltage Electrical Power Cables."
- B. Install wiring between remote alarm and low-suction-shutdown panels and controllers. Comply with requirements in NFPA 20, NFPA 70, and Section 26 05 23 "Control-Voltage Electrical Power Cables."
- C. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Section 28 31 11 "Fire Alarm and Integrated Audio/Visual Evacuation System."

- D. Bundle, train, and support wiring in enclosures.
- E. Connect remote manual and automatic activation devices where applicable.

### 3.8 IDENTIFICATION

- A. Comply with requirements in NFPA 20 for marking fire-pump controllers.
- B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NFPA 20 and as specified in Section 26 05 53 "Identification for Electrical Systems."

### 3.9 FIELD QUALITY CONTROL

- A. Testing Agency: The City of New York will engage a qualified testing agency to perform Special Inspections.
- B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- C. Perform tests and inspections.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
- D. Acceptance Testing Preparation:
  - 1. Inspect and Test Each Component:
    - a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
    - b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
    - c. Test continuity of each circuit.
  - 2. Verify and Test Each Electric-Driver Controller:
    - a. Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify Commissioner before starting the motor(s).
    - b. Test each motor for proper phase rotation.
  - 3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
  - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- E. Field Acceptance Tests:
  - 1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to Commissioner and New York City Department of Buildings.
  - 2. Prior to starting, notify Commissioner of the time and place of the acceptance testing.

3. Engage manufacturer's factory-authorized service representative to be present during the testing.
4. Perform field acceptance tests as outlined in NFPA 20.

F. Controllers will be considered defective if they do not pass tests and inspections.

G. Prepare test and inspection reports.

### 3.10 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

### 3.11 ADJUSTING

A. Adjust controllers and battery charger systems to function smoothly and as recommended by manufacturer.

B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.

C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

D. Set field-adjustable pressure switches.

### 3.12 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.

B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

### 3.13 DEMONSTRATION

A. Contractor shall instruct the City of New York's service staff to adjust, operate, and service controllers, remote alarm panels, low-suction-shutdown panels, and to use and reprogram microprocessor-based controls within this equipment.

**END OF SECTION 21 39 00**

THIS PAGE INTENTIONALLY LEFT BLANK

## SECTION 22 00 00

### COMMON WORK RESULTS FOR PLUMBING

#### PART 1 - GENERAL

##### 1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

##### 1.2 DEFINITIONS

- A. "Piping": pipe, tube, fittings, flanges, valves, controls, strainers, hangers, supports, unions, traps, drains, insulation and all related accessories.
- B. "Motor Controllers": manual or magnetic starters with or without switches, individual pushbuttons or hand-off-automatic (HOA) switches controlling the operation of motors.
- C. "Control or Actuating Devices": automatic sensing and switching devices such as thermostats, pressure, float, flow, operation of equipment.
- D. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.
- E. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- F. Exposed, Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- G. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.
- H. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.
- I. The following are industry abbreviations for plastic materials:
  - 1. ABS: Acrylonitrile-butadiene-styrene plastic.
  - 2. CPVC: Chlorinated polyvinyl chloride plastic.
  - 3. NP: Nylon plastic.
  - 4. PE: Polyethylene plastic.
  - 5. PVC: Polyvinyl chloride plastic.
- J. The following are industry abbreviations for rubber materials:

CR: Chlorosulfonated polyethylene synthetic rubber.

- 1. EPDM: Ethylene propylene diene terpolymer rubber.

##### 1.3 WORK INCLUDED

- A. The work covered by this section includes, but is not limited to the following:
1. Domestic Water Systems.
  2. Soil, Waste, Vent and Storm Water Systems.
  3. Natural Gas System
  4. Piping, Valves and Fittings
  5. Water Meters and Backflow Prevention Devices
  6. Insulation.
  7. Domestic Water Heaters.
  8. Pumps.
  9. Pressure Tanks.
  10. Identification System.
  11. Excavation and Backfill.
  12. Cutting, Patching and Equipment Painting.
  13. Hangers, Supports and Guides.
  14. Electric Motors.
  15. Electric Motor Controllers.
  16. Internal Wiring of Factory-Assembled Prewired Equipment.
  17. Alarm Wiring, except for Fire Alarm.
  18. Rigging of Equipment.
  19. Furnishing access Doors and Frames to be installed by the General Contractor.
  20. Fire Stopping for Pipe Penetration.
  21. Pipe Penetration and Drains Counterflashing.
  22. Concrete Pads for Equipment.
  23. Alarm Initiating Devices.
  24. Wiring between Water Meter Totalizer and Remote Reading Device.
  25. Concrete tank, alarms, valves, piping.
  26. Heat tracing.
  27. Rain Harvesting System.
- B. Related Work not Included in this Division but Specified Elsewhere
1. Fire alarm wiring.
  2. Finish painting, except for prefinished equipment or as otherwise specified.
  3. Concrete work, except equipment inertia and floating bases.
  4. Base flashing for piping and drains.
  5. Toilet accessories.
  6. Waterproofing.
  7. Power wiring for motors and motor controllers.
  8. Installation of access doors and frames.
- 1.4 SUSTAINABLE DESIGN REQUIREMENTS
- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

- C. **LEED BUILDING PERFORMANCE REQUIREMENTS:** The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.

1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.5 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.6 COORDINATION OF WORK**

- A. The plumbing drawings show the general arrangement of piping and appurtenances. Follow these drawings as closely as the actual construction will permit. Conform the plumbing work to the requirements shown on the drawings. Provide offsets, fittings, and accessories, which may be required but not shown on the drawings. Investigate the site, structural and finish ground conditions affecting the work, and arrange the work accordingly. Provide such work and accessories as may be required to meet such conditions.
- B. Carefully check space requirements with other trades to ensure that all material can be installed in the spaces allotted thereto including finished suspended ceilings.
- C. Wherever work interconnects with work specified of other trades, coordinate to ensure that all necessary information is presented so that all the necessary connections and equipment may be properly installed. Identify all items (valves, piping, equipment, etc.) in order that other trades know where to install access doors and panels.
- D. Consult with other trades regarding equipment so that, wherever possible, motors, motor controls, pumps and valves are of the same manufacturer.
- E. Furnish and set all sleeves for passage of pipes and conduits through structural masonry and concrete walls and floors and elsewhere as will be required for the proper protection of each pipe passing through building surfaces.
- F. Provide required supports and hangers for piping and equipment, designed so as not to exceed allowable loadings of structures.
- G. Examine and compare the contract drawings and specifications with the drawings and specifications of other disciplines and report any discrepancies between them to the Commissioner. Install and coordinate the work of this section in cooperation with the trades installing interrelated work. Before installation, take proper provisions to avoid interferences. All changes required in the work of the contractor, caused by his neglect to do so, are to be made by him at his own expense.
- H. Before commencing work, examine all adjoining work on which this work is in any way dependent for perfect workmanship and report any conditions, which prevent performance of first class work. Become thoroughly familiar with actual existing conditions to which connections must be made or which must be changed or altered.

- I. Provide required anchor bolts, sleeves, inserts and supports. Direct location of anchor bolts, sleeves, inserts and supports to ensure that they are properly installed. Any expense resulting from the improper location or installation of anchor bolts, sleeves, inserts and supports to be paid for by the contractor.
- J. Slots, chases, openings and recesses through floors, walls, ceilings, and roofs will be provided by the various trades in their respective materials. Properly locate such openings and be responsible for any cutting and patching caused by the neglect to do so.
- K. Adjust location of pipes, panels, equipment, etc., to accommodate the work to prevent interferences, both anticipated and encountered. Determine the exact route and location of each pipe prior to fabrication.
  - 1. Right-of-Way: Lines, which pitch has the right-of-way over those that do not pitch, i.e., plumbing drains. Lines whose elevations cannot be changed have right-of-way over lines whose elevations can be changed.
  - 2. Make offsets, transitions and changes in direction in pipes as required to maintain proper head room and pitch on sloping lines whether or not indicated on the drawings. Furnish and install all traps, air vents, drains, etc., as required to affect these offsets, transitions and changes in direction.
- L. Install all plumbing work to permit the removal (without damage to other parts) of water heaters and all other equipment requiring periodic replacement or service. Arrange pipes and equipment to permit access to valves, cocks, starters, motors, and control components, and to clear the openings of swinging doors and access panels.
- M. Provide access panels in equipment as required for inspection and maintenance of internal parts, etc.
- N. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing Requirements.

#### 1.7 USE OF SITE AND LOAD LIMITATIONS

- A. The contractor shall review all available data on the location and types of pipelines and other underground utilities. The contractor shall not operate equipment over the facilities and shall take care not to damage them or otherwise impair their use. The contractor shall make investigation to verify the location of these facilities before proceeding with construction and/or operations in their vicinity.

#### 1.8 CONTRACTOR'S RESPONSIBILITY FOR EVALUATION

- A. The Commissioner and The City of New York make no representations, regarding the character or extent of the subsoils, water levels, existing structural, mechanical and electrical installations, above or below ground or other subsurface conditions which may be encountered during the Work. The contractor must make his own evaluation of existing conditions, which may affect methods or expense of performing the Work, based on his own examination of the facility or other information. Failure to examine the drawings or other information shall not relieve the contractor of his responsibility for satisfactory accomplishment of the Work.
- B. The locations of existing services are believed to be as indicated on the plans. The contractor shall verify the location of these services prior to commencing any work and notify the Commissioner of any discrepancies.

#### 1.9 ACCESS TO FIRE PROTECTION EQUIPMENT

- A. The contractor shall not interfere with access to hydrants, fire exits, fire hose stations, fire extinguishers and fire alarm pull stations. In no case shall the contractor's material or equipment be within twenty-five (25) ft of a hydrant or fire alarm pull station.

#### 1.10 EQUIPMENT AND MATERIALS

- A. If products and materials are specified or indicated on the drawings for a specific item or system, the contractor shall use those products or materials. If products and materials are not listed in either of the above, use first class products and materials, in accordance with shop drawings.
- B. All products and materials shall be new, clean, free of defects and free of damage and corrosion.
- C. No permanent equipment shall be used to provide temporary services during construction.
- D. Ship and store all products and materials in a manner which will protect them from damage, weather and entry of debris. If items are damaged, do not install, but take immediate steps to obtain replacement or repair.
- E. Make certain that all materials selected directly, or by suppliers, conform to the requirements of the contract drawings and specification. Transmittal of such specifications and drawings, information to persons manufacturing and supplying materials to the project, and rigid adherence thereto, is the Contractor's responsibility. Acceptance of a manufacturer's name by the Commissioner does not release the Contractor of the responsibility for providing materials, which comply in all respects with the requirements in the Contract Documents.
- F. Applicable equipment and materials to be listed by Underwriters' Laboratories and Manufactured in accordance with ASME, AWWA, or ANSI standards, and as approved by New York City Department of Buildings
- G. Fully lubricate all equipment when installed and prior to final acceptance.
- H. Do not operate water systems until piping has been tested and cleaned.
- I. Secure equipment with bolts, washers and locknuts of ample size to support equipment. Embedded anchor bolts to have bottom plate and pipe sleeves. Grout all machinery set in concrete under the entire bearing surface. After grout has set, remove all wedges, shims and jack bolts and fill space with grout.
- J. Locate valves, traps, access doors, etc., to be easily accessible, either in mechanical spaces or through access panels specified herein.
- K. Follow manufacturers' instructions for installing, connecting, and adjusting all equipment. Provide one copy of such instructions to the Commissioner before installing any equipment. Provide a copy of such instructions at the equipment during any work on the equipment. Provide all special valves, piping, wiring and accessories.

#### 1.11 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Codes, Standards and Fees

1. Codes and Standards:
  - a. Comply with 2014 New York City Construction Codes, UL, and regulations and standards of the New York City Department of Environmental Protection.
  - b. Where codes or standards are listed herein, the applicable portions apply.
  - c. Should any change in plans or specifications be required to comply with regulations, the contractor is to notify the Commissioner.
  - d. The codes and standards listed in the Specifications can be obtained from the organizations listed as follows:
    - 1) OSHA Occupational Safety and Health Act
    - 2) ANSI American National Standard Institute, Inc.
    - 3) ASME American Society of Mechanical Engineers
    - 4) ASTM American Society for Testing and Materials
    - 5) AWWA American Water Works Association
    - 6) UL Underwriters Laboratories, Inc.
    - 7) ASHRAE American Society of Heating, Refrigerating and Air Conditioning Engineers
    - 8) NEMA National Electrical Manufacturers Association
    - 9) AIA American Insurance Association
    - 10) AWS American Welding Society
    - 11) ASA American Standards Association
    - 12) IEEE Institute of Electrical and Electronics Engineers
    - 13) NEC National Electrical Code
  - e. The particular specification will be identified by appropriate prefix and number only with the latest revision being applicable unless otherwise noted.
- C. Furnish all materials and equipment new, free from defects and with listings or labels of Underwriter's Laboratories, Inc.
- D. All items of a given type shall be the product of the same manufacturer.
- E. All materials and equipment shall be the product of manufacturers regularly engaged in their manufacture.

#### 1.12 PERMITS AND FEES

- A. Refer to the DDC General Conditions for requirements related to permits and permitting fees.
- A. The Contractor shall be responsible for all required testing and inspections except for Special Inspections. Where required, the City of New York will engage a qualified testing agency to perform Special Inspections.
- B. This contractor shall prepare and file all plans, calculation, forms, etc. required for filing with all agencies required for this work including but not limited to The DEP (Department of Environmental Protection), DEC (Department of Environmental Conservation, Bureau of Air Resources, EPA Environmental protection Agency, and FDNY.

#### 1.13 SPECIAL / CONTROLLED INSPECTION- NYC

- A. Special inspection shall be provided by the City of New York. The contractor shall coordinate with the Commissioner to accomplish all special inspections and provide any access necessary.

#### 1.14 INSPECTIONS / TESTING

- A. Independent testing and inspections shall be provided by the contractor.

#### 1.15 SHOP DRAWINGS

- A. Prepare and submit detailed shop drawings for piping work and other distribution services, including locations and sizes of all openings in floor walls and roofs.
- B. The work described in any shop drawing submission to be carefully checked for all clearances (including those required for maintenance and servicing), field conditions, maintenance of architectural conditions and proper coordination with all trades on the job.
- C. If submittals differ from the Contract Document requirements, make specific mention of such difference in a letter of transmittal, with request for substitution, together with reasons for same.
- D. Submit shop drawings and manufacturer's data for the following items in accordance with the Contract Documents:
  1. Coordinated, detailed shop layout drawings of all mechanical rooms, services and distribution systems, including plans, profiles and sections.
  2. Details of piping supports, elbows, anchors and miscellaneous appurtenances.
  3. Hangers, supports, inserts, anchors, guides and foundations.
  4. Valves.
  5. Pressure gauges and thermometers.
  6. Corrosion protective coatings.
  7. Equipment and piping layouts at 3/8 in. scale for the building.
  8. Location and size of sleeves for openings in floors and walls.
  9. Certified equipment performance curves for pumps.
  10. Schedule of pipe and fittings, materials and application, valves, escutcheons, air vents, valve tags and schedules, strainers, and water specialties.
  11. Pump system, including pumps, motors and controllers.
  12. Building automation systems including descriptions, instruments, and alarms.
  13. Flashing.
  14. Equipment identification and certificates.
  15. Pressure tanks and accessories.
  16. Water heaters and accessories.
  17. Plumbing fixture and trim.
  18. Rain Harvesting System
  19. Other shop drawings and submittals as requested within the specification.

#### 1.16 SAMPLES

- A. Submit samples of all items with exposed finishes for review.
- B. Allow sufficient time for consideration without interfering with job schedule.
- C. Duplicate quality and finish to type to be supplied under contract.

#### 1.17 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

#### 1.18 SUBMISSIONS:

- A. The work described in all shop drawing submission shall be carefully checked for all clearances (including those required for maintenance and servicing), field conditions, maintenance of architectural conditions and proper coordination with all trades on the job.
- B. Each submitted shop drawing is to include a certification that all related job conditions have been checked and verified and that there are no conflicts.
- C. If submittals differ from the contract document requirements, make specific mention of such difference in a letter of transmittal, with request for substitution, together with reasons for same.

**1.19 AS-BUILTS AND EQUIPMENT OPERATION INSTRUCTIONS**

- A. Refer to the DDC General Conditions and Section 01 32 34 "Computer Aided Design Coordination" for coordination and record drawing requirements.

**1.20 START-UP**

- A. Properly lubricate all pieces of equipment.
- B. Check and clean all pipes of dirt and debris, including strainers.
- C. Prepare each piece of equipment in accordance with manufacturer's installation instructions and have a copy at the equipment.
- D. Fill and vent all water systems.
- E. Check rotation on each motor.
- F. Have representatives of each manufacturer present when hereinafter specified, so that equipment will be started up by manufacturer.

**1.21 ACCESS DOORS IN FINISHED CONSTRUCTION**

- A. Furnish access doors as required for operation and maintenance of concealed equipment, clean-outs, valves, shock absorbers, controls, etc., and coordinate their delivery with the installing trade.
- B. Coordinate and prepare a location, size and function schedule of access doors required and deliver to the Commissioner for review.
- C. Refer to Section 08 31 13 "Access Doors and Frames" for access door requirements.
- D. Unless otherwise indicated, minimum size to be 18" x 18".
- E. Furnish color coded buttons or tabs to indicate location of valves or other equipment located above removable type ceilings where access doors are not required.
- F. Access doors shall have a fire rating compatible with the wall construction in which they are located.

**1.22 SYSTEM IDENTIFICATION**

- A. Piping:

1. All piping, exposed or concealed, shall be identified as to its service in accordance with OSHA and ANSI Standards by one of the following methods:
  - a. Installation of manufactured adhesive band type identification markers.
2. Piping identification markings shall be installed as follows:
  - a. In each room.
  - b. All valve locations.
  - c. At shaft walls.
  - d. Every 40 feet on continuous runs.
3. Valves:
  - a. Valves shall be identified by a tag system utilizing brass tags at 2-inch minimum diameter and attached to the valves using brass chain.
    - 1) The new valve tag identification numbers shall be permanently added to all existing valve tag charts within the building.
4. Equipment:
  - a. Identify all controls such as motor starters not in motor control centers, float switches, and alarms.

#### 1.23 OPERATING & MAINTENANCE INSTRUCTION

- A. Prepare operating and maintenance instructions manual including operating instructions, maintenance instructions, manufacturer's data, specific equipment data.
- B. Provide an alphabetical list of all system components, with the name, address, and 24-hour phone number of the company responsible for servicing each item during the first year of operation.
- C. Provide operating instructions for complete system, including:
  1. Normal starting, operating, and shut-down
  2. Emergency procedures for fire or failure of major equipment
  3. Summer and winter special procedures
  4. Day and night special procedures
- D. Provide maintenance instructions, including:
  1. Valve tag list and equipment tag list
  2. Proper lubricants and lubricating instructions for each piece of equipment, and date when lubricated
  3. Required cleaning, replacement and/or adjustment schedule
- E. Provide manufacturer's data on each piece of equipment, including:
  1. Installation instructions.
  2. Drawings and specifications.
  3. Parts list, including recommended items to be stocked.
  4. Complete wiring and temperature control diagrams.

5. Marked or revised prints locating all concealed parts and all variations from the original system design.
6. Test and inspection certificates.

F. Provide specific equipment data including, but not limited to, the following:

1. For Plumbing Systems:

- a. Pumps.
- b. Valves.
- c. Piping.
- d. Accessories.
- e. Pressure reducing valves.
- f. Water heaters.
- g. Water meters.
- h. Strainers.
- i. Flow measuring devices.
- j. Electric wiring.
- k. Pressure tanks.

2. For Automatic Control System:

- a. Drawings and description of system controlled.
- b. Sequence of operation for each system.
- c. Data on components.
- d. Wiring and piping, schematic any layout, for panels and panelboards.
- e. System operating manual, including set points.

G. Provide instruction of operating personnel.

1. Instruct the City of New York's operating personnel in proper starting sequences, operation, shutdown, and maintenance procedures, including normal and emergency procedures.
2. Instruction to be by instructors skilled in operation of equipment. Instructions for major equipment to be by equipment manufacturers' representatives.
3. Make arrangements to give instructions by system and not by building areas.
4. Provide five (5) instruction sessions not to exceed six (6) hours each.
5. Instructions on automatic controls to be by manufacturer's representative.

H. Submittals

1. Shop Drawings: Submit three copies for review prior to final issuance.
2. Provide six (6) copies of each operation and maintenance manual.
  - a. Manuals to be 8-1/2" x 11 size in hard-back, 3-ring loose leaf binders. Use more than one volume if required. Do not overfill binders.
  - b. Manuals to be completed and delivered to the Commissioner for approval at least 20 days prior to instruction of operating personnel.
3. Prepare separate manuals for the Plumbing system.

1.24 TOOLS FOR OPERATION, ADJUSTMENT AND SERVICE

- A. Deliver to the Commissioner all special tools needed for proper operation, adjustment and service of equipment.

1.25 RECORD DRAWINGS

- A. Refer to the DDC General Conditions and Section 01 32 34 “Computer Aided Design Coordination” for coordination and record drawing requirements.

PART 2 - PRODUCTS  
NOT USED.

PART 3 - EXECUTION

PART 4 - NOT USED.

**END OF SECTION 22 00 00**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 05 13****COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.5 COORDINATION**

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
1. Motor controllers.
  2. Torque, speed, and horsepower requirements of the load.
  3. Ratings and characteristics of supply circuit and required control sequence.

- 4. Ambient and environmental conditions of installation location.

## 1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

## PART 2 - PRODUCTS

### 2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with NEMA MG 1 unless otherwise indicated.
- B. Comply with IEEE 841 for severe-duty motors.

### 2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

### 2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, as defined in NEMA MG 1.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
  - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
  - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Multispeed Motors: Separate winding for each speed.
- F. Rotor: Random-wound, squirrel cage.
- G. Bearings: Re-greasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- H. Temperature Rise: Match insulation rating.
- I. Insulation: Class F.
- J. Code Letter Designation:
  - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
  - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

- K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

## 2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers:
  - 1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
  - 2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
  - 3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
  - 4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
- C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

## 2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
  - 1. Split phase.
  - 2. Capacitor start, inductor run.
  - 3. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION

PART 4 - Not Used

**END OF SECTION 22 05 13**

**SECTION 22 05 16****EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:
1. Flexible-hose packless expansion joints.
  2. Metal-bellows packless expansion joints.
  3. Rubber packless expansion joints.
  4. Grooved-joint expansion joints.
  5. Pipe loops and swing connections.
  6. Alignment guides and anchors.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 LEED BUILDING SUBMITTALS:**

- A. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per trade) and sent to the Commissioner for review.
- B. Refer to DDC General Conditions for LEED BUILDING Submittal requirements.

**1.5 PERFORMANCE REQUIREMENTS**

- A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.
- B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

**1.6 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

**1.7 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Engineering Services Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer, licensed in the State of New York responsible for their preparation to be submitted to Commissioner for review and approval.
  - 1. Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
  - 2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
  - 3. Alignment Guide Details: Detail field assembly and attachment to building structure.
  - 4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

**1.8 INFORMATIONAL SUBMITTALS**

- A. Welding certificates.
- B. Product Certificates: For each type of expansion joint, from manufacturer.

**1.9 CLOSEOUT SUBMITTALS**

- A. Maintenance Data: For expansion joints to include in maintenance manuals.

**1.10 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Welding Qualifications: Qualify procedures according to the following:
  - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
  - 2. ASME Boiler and Pressure Vessel Code: Section IX.

**PART 2 - PRODUCTS****2.1 PACKLESS EXPANSION JOINTS**

- A. Flexible-Hose Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings product name or designation or comparable product by one of the following:
    - a. Flex-Hose Co., Inc.
    - b. Flexicraft Industries.
    - c. Flex Pression Ltd.
    - d. Metraflex, Inc.
    - e. Unisource Manufacturing, Inc.
    - f. Or approved equal
  3. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
  4. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
  5. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.
    - a. Bronze hoses and single-braid bronze sheaths with 450 psig at 70 deg F (3100 kPa at 21 deg C) and 340 psig at 450 deg F (2340 kPa at 232 deg C) ratings.
  6. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Copper-alloy fittings with threaded end connections.
    - a. Stainless-steel hoses and single-braid, stainless-steel sheaths with 300 psig at 70 deg F (2070 kPa at 21 deg C) and 225 psig at 450 deg F (1550 kPa at 232 deg C) ratings.
- B. Metal-Bellows Packless Expansion Joints:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Adsko Manufacturing LLC.
    - b. American BOA, Inc.
    - c. Badger Industries, Inc.
    - d. Expansion Joint Systems, Inc.
    - e. Flex-Hose Co., Inc.
    - f. Flexicraft Industries.
    - g. Flex Pression Ltd.
    - h. Flex-Weld, Inc.
    - i. Flo Fab inc.
    - j. Hyspan Precision Products, Inc.
    - k. Metraflex, Inc.
    - l. Proco Products, Inc.
    - m. Senior Flexonics Pathway.
    - n. Tozen Corporation.
    - o. Unaflex.
    - p. Unisource Manufacturing, Inc.
    - q. Universal Metal Hose; a subsidiary of Hyspan Precision Products, Inc.

- r. U.S. Bellows, Inc.
    - s. WahlcoMetroflex.
    - t. Or approved equal
  - 3. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
  - 4. Type: Circular, corrugated bellows with external tie rods.
  - 5. Minimum Pressure Rating: 150 psig (1035 kPa) unless otherwise indicated.
  - 6. Configuration: Single joint class(es) unless otherwise indicated.
  - 7. Expansion Joints for Copper Tubing: Single Multi-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.
    - a. End Connections for Copper Tubing NPS 2 (DN 50) and Smaller: Solder joint.
    - b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Solder joint.
    - c. End Connections for Copper Tubing NPS 5 (DN 125) and Larger: Flanged.
- C. Rubber Packless Expansion Joints:
- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Amber/Booth Company, Inc.; a div. of Vibration Isolation Products of Texas, Inc.
    - b. Flex-Hose Co., Inc.
    - c. Flexicraft Industries.
    - d. Flex-Weld, Inc.
    - e. Garlock Sealing Technologies.
    - f. General Rubber Corporation.
    - g. Mason Industries, Inc.; Mercer Rubber Co.
    - h. Metraflex, Inc.
    - i. Proco Products, Inc.
    - j. Red Valve Company, Inc.
    - k. Tozen Corporation.
    - l. Unaflex.
    - m. Unisource Manufacturing, Inc.
    - n. Or approved equal
  - 3. Standards: ASTM F 1123 and FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
  - 4. Material: Fabric-reinforced rubber complying with FSA-NMEJ-703.
  - 5. Arch Type: Single arches with external control rods.
  - 6. Spherical Type: Single spheres with external control rods.
  - 7. Minimum Pressure Rating for NPS 1-1/2 to NPS 4 (DN 40 to DN 100): 150 psig (1035 kPa) at 220 deg F.
  - 8. Minimum Pressure Rating for NPS 5 and NPS 6 (DN 125 and DN 150): 140 psig (966 kPa) at 200 deg F.
  - 9. Minimum Pressure Rating for NPS 8 to NPS 12 (DN 200 to DN 300): 140 psig.
  - 10. Material for Fluids Containing Acids, Alkalies, or Chemicals: EPDM.
  - 11. Material for Fluids Containing Gas, Hydrocarbons, or Oil:
  - 12. Material for Water: BR.
  - 13. End Connections: Full-faced, integral steel flanges with steel retaining rings.

## 2.2 GROOVED-JOINT EXPANSION JOINTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 1. Anvil International, Inc.
  - 2. Shurjoint Piping Products.
  - 3. Victaulic Company.
  - 4. Or approved equal
- B. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.
- C. Standard: AWWA C606, for grooved joints.
- D. Nipples: Galvanized ASTM A 53/A 53M, Schedule 40, Type E or S, steel pipe with grooved ends.
- E. Couplings: Five, flexible type for steel-pipe dimensions. Include ferrous housing sections, Buna-N, and bolts and nuts.

## 2.3 ALIGNMENT GUIDES AND ANCHORS

- A. Alignment Guides:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - 2. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
    - a. Adscos Manufacturing LLC.
    - b. Advanced Thermal Systems, Inc.
    - c. Flex-Hose Co., Inc.
    - d. Flexicraft Industries.
    - e. Flex-Weld, Inc.
    - f. Hyspan Precision Products, Inc.
    - g. Metraflex, Inc.
    - h. Senior Flexonics Pathway.
    - i. Unisource Manufacturing, Inc.
    - j. U.S. Bellows, Inc.
    - k. Or approved equal
  - 3. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.
- B. Anchor Materials:
  - 1. Steel Shapes and Plates: ASTM A 36/A 36M.
  - 2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
  - 3. Washers: ASTM F 844, steel, plain, flat washers.
  - 4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.

- a. Stud: Threaded, zinc-coated carbon steel.
  - b. Expansion Plug: Zinc-coated steel.
  - c. Washer and Nut: Zinc-coated steel.
5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.
- a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
  - b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
  - c. Washer and Nut: Zinc-coated steel.

### PART 3 - EXECUTION

#### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

#### 3.2 EXPANSION-JOINT INSTALLATION

- A. Install expansion joints of sizes matching sizes of piping in which they are installed.
- B. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
- C. Install rubber packless expansion joints according to FSA-NMEJ-702.
- D. Install grooved-joint expansion joints to grooved-end steel piping

#### 3.3 PIPE LOOP AND SWING CONNECTION INSTALLATION

- A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.
- B. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.
- C. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.
- D. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

#### 3.4 ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

- A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.
- B. Install two guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.
- C. Attach guides to pipe and secure guides to building structure.

- D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.
- E. Anchor Attachments:
  - 1. Anchor Attachment to Black-Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
  - 2. Anchor Attachment to Galvanized-Steel Pipe: Attach with pipe hangers. Use MSS SP-69, Type 42, riser clamp welded to anchor.
  - 3. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.

- 4. Anchor Attachment to Steel Structural Members: Attach by welding.
  - 5. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.
- F. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

**END OF SECTION 22 05 16**

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 22 05 17****SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

**1.2 SUMMARY**

- A. Section Includes:

1. Sleeves.
2. Stack-sleeve fittings.
3. Sleeve-seal systems.
4. Sleeve-seal fittings.
5. Grout.

**1.3 SUSTAINABLE DESIGN REQUIREMENTS**

- A. This project is targeting the goal of LEED v4 Silver. The Contractor is required to follow the specified requirements and implement practices and procedures to meet the project's environmental performance goals.
- B. Refer to the following sections:
1. Section 01 74 19 "Construction Waste Management and Disposal"
  2. Section 01 81 13 "Sustainable Design Requirements for LEED Buildings"
  3. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"
- C. LEED BUILDING PERFORMANCE REQUIREMENTS: The following criteria are required for the products included in this section. Certification of these products shall be in accordance with the LEED Building Submittals requirements of this Section.
1. Adhesives, sealants, paints and coatings used for the work of this section shall meet the Volatile Organic Compound (VOC) limits specified in Section 01 81 13.13 – "Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings", where applicable. Certification of VOC content shall be in accordance with the LEED Building Submittals requirements of this section.

**1.4 QUALITY ASSURANCE**

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

**1.5 SUBMITTAL PROCEDURES**

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 ACTION SUBMITTALS

- A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVES

- A. Cast-Iron Wall Pipes: Cast or fabricated of cast or ductile iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.
- B. Galvanized-Steel Wall Pipes: ASTM A 53/A 53M, Schedule 40, with plain ends and welded steel collar; zinc coated.
- C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, with plain ends.
- D. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

2.2 STACK-SLEEVE FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
1. Smith, Jay R. Mfg. Co.
  2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
  3. Wade Inc.
  4. Or approved equal.
- C. Description: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.
1. Underdeck Clamp: Clamping ring with setscrews.

2.3 SLEEVE-SEAL SYSTEMS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
1. Advance Products & Systems, Inc.
  2. CALPICO, Inc.
  3. Metraflex Company (The).
  4. Pipeline Seal and Insulator, Inc.
  5. Proco Products, Inc.
  6. Or approved equal.

- C. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
  - 1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
  - 2. Pressure Plates: Carbon steel.
  - 3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

## 2.4 SLEEVE-SEAL FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
  - 1. Presealed Systems.
  - 2. Advance Products & Systems, Inc.
  - 3. CALPICO, Inc.
  - 4. Or approved equal.
- C. Description: Manufactured plastic, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall. Unit has plastic or rubber waterstop collar with center opening to match piping OD.

## 2.5 GROUT

- A. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
- B. Characteristics: Nonshrink; recommended for interior and exterior applications.
- C. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
- D. Packaging: Premixed and factory packaged.

## PART 3 - EXECUTION

### 3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

### 3.2 SLEEVE INSTALLATION

- A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.
- B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch (25-mm) annular clear space between piping and concrete slabs and walls.
  - 1. Sleeves are not required for core-drilled holes.
- C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.

1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
  2. Cut sleeves to length for mounting flush with both surfaces.
    - a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level.
  3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.
- D. Install sleeves for pipes passing through interior partitions.
1. Cut sleeves to length for mounting flush with both surfaces.
  2. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
  3. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Section 07 92 00 "Joint Sealants."
- E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 84 10 "Firestopping."

### 3.3 STACK-SLEEVE-FITTING INSTALLATION

- A. Install stack-sleeve fittings in new slabs as slabs are constructed.
1. Install fittings that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation.
  2. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Section 07 62 00 "Sheet Metal Flashing and Trim."
  3. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level.
  4. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
  5. Using grout, seal the space around outside of stack-sleeve fittings.
- B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Section 07 84 10 "Firestopping."

### 3.4 SLEEVE-SEAL-SYSTEM INSTALLATION

- A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
